Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24D1827-01	System Effluent	Vapor Extraction	04/26/2024	04/29/2024

General Notes for York Project (SDG) No.: 24D1827

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Attention: Scott Yanuck

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 01, 2024 and listed below. The project was identified as your project: **80 Banks Ave, Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24C0021-01	System Effluent	Waste Water	02/29/2024	03/01/2024

General Notes for York Project (SDG) No.: 24C0021

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

HT-pH HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 20, 2024 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-140-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 24C1230

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24C1230-01	System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

YORK ANALYTICAL LABORATORIES INC

York Analytical Laboratories, Inc. (YORK)'s Standard Terms & Conditions are listed on the back side of this document.
This document serves as your written authorization for YORK to proceed with the analyses requested below.
Your signature binds you to YORK's Standard Terms & Conditions.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24D1863-01	NYSDEC SPDES - System Effluent	Waste Water	04/26/2024	04/29/2024

General Notes for York Project (SDG) No.: 24D1863

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Lab ID	Client Sample ID	Volatile Sample Container
24D1863-01	NYSDEC SPDES - System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

ENVIRONMENTAL PROFESSIONAL CERTIFICATION

I declare that, to the best of my professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 of 40 Code of Federal Regulations (CFR) 312.

The Environmental Professional who directed this project has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site.

Scott A. Yanuck, P.G. (NYS 000330)
Principal Hydrogeologist

1.0 INTRODUCTION

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared this quarterly site operation maintenance and monitoring report on behalf of Avalon Bay Communities Inc. (Avalon Bay). This report documents the operational status of the groundwater extraction and treatment system during the reporting period and provides the current groundwater quality and volatile organic compound (VOC) concentrations in groundwater. This work is being performed under the NYSDEC Brownfield Cleanup Program, Site ID #C130140 located at 80-100 Banks Avenue, Rockville Centre, New York (Section 38, Block 539, Lots 27 and 30; the Site). The Site is a 7.1-acre parcel that has been re-developed with multiple story residential apartment buildings. The Site is located at the northwest corner of the intersection of Nassau Street and Banks Avenue.

2.0 SCOPE OF WORK

Laurel conducted a system-wide inspection that included checking the operation of the groundwater extraction and treatment system components, performing necessary repairs, and the collection of groundwater samples.

Laurel completed the following required tasks:

1. Inspected the groundwater extraction and treatment system on a monthly basis. This inspection included the evaluation of exposed piping for evidence of leaks. Checked all pressure gauges and flow meters for operational status and checked all valves for functionality.

2. Gauged groundwater levels in the sixteen (16) on-site monitoring wells, calculated standing water volumes, and purged a minimum of three well volumes from each well when possible. Groundwater quality readings were collected and recorded prior to the collection of each sample when possible. Samples were submitted to a NYSDOH Certified Laboratory for analysis using USEPA Method 8260 to test for VOCs. In addition to the well samples, one (1) duplicate and one (1) trip blank sample were submitted for laboratory analysis.

3. Utilized a 6-Liter Summa canister to collect one (1) air stripper tower effluent air sample. The collected sample was analyzed for VOCs utilizing EPA Method TO-15.

4. Gauged groundwater levels in the ten (10) on-site piezometric wells, and the storm water management sump.

5. Collected monthly system effluent groundwater samples in accordance with the State Pollution Discharge Elimination System (SPDES) Permit equivalent. The samples were submitted to a NYSDOH Certified Laboratory for analysis of select volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals in accordance with the NYSDEC SPDES Permit equivalent.

6. Collected continuous groundwater elevation data from six (6) shallow groundwater monitoring points to evaluate groundwater flow beneath the Site utilizing on-Site groundwater data logger.

All sampling equipment not considered disposable were decontaminated using *Alconox*, a laboratory grade detergent and standard potable water before and after each use to ensure that cross-contamination of samples was eliminated.

3.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM

The groundwater extraction and treatment (GWET) system was designed to establish and maintain hydraulic control of the shallow groundwater on-site, thereby preventing impacted groundwater from migrating off-site. **Section 3.1** provides a brief summary of the system components as they were originally designed and installed as well as modifications that were made to the system to improve its operational performance. A detailed description of the original designed and installed GWET system can be found in the Groundwater Extraction and Treatment System, System Start-up Report, prepared and submitted by P.W. Grosser Consulting Inc. (PWGC), dated February 2012. **Section 3.2** provides a brief summary of the SSWMS components and their operation. **Sections 3.3** and **3.4** describe the installation and operation of the pH adjustment system, and carbon treatment system, respectively. **Section 3.5** discusses past groundwater flow studies. **Section 3.6** describes repairs to piping associated with the GWET system.

3.1 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM COMPONENTS

The GWET system contains the following components:

- Three (3) shallow groundwater recovery wells and submersible pumps
- Three (3) pre-treatment bag filters (in parallel)
- One (1) shallow tray air stripper with blower
- Two (2) acid metering pumps
- Five (5) 55-gallon activated carbon liquid treatment drums

3.1.1 Groundwater Recovery Wells

The three (3) shallow groundwater recovery wells were installed to capture the groundwater above a clay layer encountered on-site, at a depth of approximately 12-15-feet below ground surface (bgs). The three (3) recovery wells were designed to each have an operational flow rate of approximately 5 gallons per minute (gpm) producing a 0.1 ft drawdown at a radius of 340 feet when in operation. The groundwater recovery well pumps were not in operation during the reporting period, given the previously approved use of an on-site collection sump to prevent contaminant migration, further discussed in the following section. The shallow groundwater recovery wells are still present and can be brought on-line if required.

3.1.2 Groundwater Extraction and Treatment System (GWET)

When the recovery wells are in operation, potentially impacted groundwater is piped from the recovery wells to the GWET system, where groundwater is treated utilizing an air stripping method. The treated groundwater is collected in an equalization tank at the base of the air stripper, and then pumped into the municipal storm water system. The groundwater recovery well pumps have been off-line as an active portion of the GWET since the groundwater flow study was performed in September 2019. These wells have remained off-line and, as discussed before, the Sub-Slab Water Management System (SSWMS) collection sump has been utilized to prevent the migration of contaminants off site.

3.2 SUB-SLAB WATER MANAGEMENT SYSTEM COMPONENTS

The SSWMS contains the following components:

- A subgrade water infiltration gallery and collection sump
- Two (2) submersible sump pumps
- One (1) pre-treatment bag filter located between the submersible pumps and piped to the shallow tray air stripper tower.

3.2.1 Sub-Slab Water Management System

Due to the shallow groundwater table and the partially sub-grade parking garage in the south building, parts of the garage had been experiencing flooding during times of heavy rainfall. To address this situation, a French drain system and sump were installed in the southwestern portion of the parking garage of the south building. The sump contains two (2) submersible sump pumps, which are tied into the GWET system between the bag filters and the stripper tower. The volume of water passing through the stripper tower is increased by this sub-slab water management system. In addition to the incorporation of the sub-slab water management system to the GWET system, several modifications were made, which included the addition of a liquid bypass to the transfer pump system and its associated piping[1]. The piping at the base of the stripper was formerly a two (2)-inch diameter pipe that utilized the transfer pump to push the liquid into the storm water sewer system. The two (2)-inch diameter pipe was replaced with a three (3)-inch diameter pipe, that allows the system to operate as a gravity feed system to the municipal storm sewer system. This change allows for a continuously higher volume flow through the stripper tower and into the storm sewer system. The SSWMS has the potential to add a maximum of 30 gallons of water per minute to the stripper tower. The SPDES permit equivalent was previously amended to reflect this change in flow rate.

[1] The liquid bypass is an extra treatment measure to be implemented if CVOCs in the effluent are not meeting discharge levels, the liquid can be pumped through drums of carbon filters prior to discharge.

3.3 pH Adjustment System

Elevated pH in groundwater pumped at the Site has been a longstanding issue with respect to meeting the requirements of the SPDES permit equivalent, which has been addressed with the addition of a pH reduction system. The elevated pH of the groundwater has been accompanied by scaling in the GWET system. In order to reduce the pH of groundwater entering the GWET system, ***Laurel*** obtained approval from the NYSDEC on July 23, 2019, and completed the installation of a pH adjustment system, which also aids in the reduction of scaling in the air stripper. The pH adjustment system is comprised of a 60-gallon sulfuric acid storage tank and metering pumps that inject acid into the groundwater entering the GWET system. The first metering pump is controlled by a pH sensor and programmable controller and supplies acid to the sub-slab sump influent. The second metering pump, also controlled by a pH sensor and programmable controller, is capable of supplying acid to an inline mixer at the entry point to the air stripper, where groundwater from the recovery wells and sub-slab sump combine prior to entering the air stripper. The pH adjustment system is programmed to maintain the pH of groundwater effluent within the SPDES permit equivalent pH limits of 6.5 to 8.5.

On September 10, 2019, through November 6, 2019, ***Laurel*** installed and calibrated the pH adjustment system. After the initial installation, the pH adjustment system was tested periodically to verify the acid was successfully neutralizing the groundwater influent from the recovery wells and sub-slab sump. During the testing of the pH adjustment system, the pH of groundwater was monitored to prevent over-acidification of the system effluent. After equilibrating the acid system, the system became fully operational on November 6, 2019. Acid consumption is approximately 1.5 gallons per day using 96% sulfuric acid.

3.4 Carbon Treatment System

The GWET system's air stripper has historically encountered scaling issues, which reduce the GWET system's effectiveness in reducing chemicals of concern (COC). To prevent occasional SPDES permit exceedances, ***Laurel*** installed a carbon treatment system that is used to further treat groundwater effluent when the GWET system's air stripper is not effectively reducing COCs. The carbon treatment system's design consists of a sump pump connected directly to the air stripper, which pumps groundwater from the air stripper through five (5) drums of activated carbon prior to discharge.

The carbon treatment system was not required or utilized during this quarter.

3.5 Past Groundwater flow Studies

Two (2) groundwater flow studies were previously conducted by EnviroTrac. The first was conducted in 2019, with the data collection portion being performed by PWGC. The second groundwater flow study was solely performed by EnviroTrac in 2020. The 2019 groundwater flow study was conducted to assess groundwater flow within sandy deposits overlying a clay layer located approximately 12 feet bgs. EnviroTrac analyzed the 2019 data which, when plotted on the site map, revealed a consistent groundwater flow direction converging at the SSWMS sump during the study period. Based on results of the study it appears that routine operation of the sump pump produces, on a continuous basis, a sufficient depression in the water table to maintain hydraulic control of the shallow groundwater to the west and southwest sides of the building,

extending to the property boundary. To confirm this, a more extensive groundwater study using the existing piezometers and four (4) additional piezometers was conducted during the second quarter of 2020 by EnviroTrac. The groundwater elevations collected were used to generate groundwater flow maps, which show groundwater flow direction towards the sump during the one-month period.

The adjacent property to the west of the area of concern is a public park. A refurbishing project consisting of the installation of a flood wall along the boundaries of the park and the former Darby Drugs Distribution Center site has been completed. This flood wall consists of sheet piles installed to an approximate depth of 15 feet bgs, effectively cutting off shallow groundwater flow along the entire west side of the Site. To determine impact of the new flood wall on groundwater movement below the Site, and what type of impact it may have on the SSWMS sump's ability to maintain hydraulic control across the area of concern, ***Laurel*** and EnviroTrac agreed that an active groundwater elevation and pump monitoring system should be installed to evaluate the impact of the sheet piling/flood wall on groundwater movement through the residual impact zone. The pump current logger and groundwater elevation telemetry was installed in May 2023 and the data was evaluated and discussed below.

3.6 GROUNDWATER TELEMETRY

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-6 and PZ-SUMP) at the Site. The data loggers measure changes in pressure in the wells over time and convert the reading into groundwater elevation in each of the wells. The loggers collect data every hour, except for the PZ-SUMP logger which collects data every 15 minutes. Utilizing the data generated from the loggers, ***Laurel*** generated groundwater contour maps. ***Laurel*** interprets these groundwater contour maps to determine what actions, if any, may be required to maintain hydraulic control at the Site and ensure that the remediation system functions as designed. The groundwater contour maps are included in ***Laurel's*** Groundwater Telemetry Study letters issued on August 1 and August 24, 2023, included as Appendix A.

Laurel's findings from the Groundwater Telemetry Study determined that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Note, as a result of this observation, the bag filters are now being changed on a two (2) week bases to eliminate this as a cause for a reduction in hydraulic control. In addition, ***Laurel*** observed when the sump is offline or otherwise not operating for one day or longer, hydraulic control at the Site lessens. Additionally, the data loggers installed on the two (2) pumps, that record pump operational time, show the sump pumps cycle on and off during the course of each day as needed to keep water in the sump below a set level, pumping on average approximately 50% of the time and run for extended periods during rainfall events.

4.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM OPERATIONS

The GWET system at the Site is designed to operate continuously. To evaluate the effectiveness of the GWET system, the Site is monitored by physical site inspections. A liquid effluent sample is collected on a

monthly basis to meet the state pollutant discharge elimination system (SPDES) permit equivalent requirement. In addition, liquid influent and air effluent samples are collected from the system on a quarterly basis.

This reporting period is from May 1, 2024, through July 31, 2024, a Site activity log is presented in Table I. During the reporting period, the SSWMS was operating automatically on an as-needed basis throughout the reporting period, controlled by a float switch within the sump. The hours of operation for each extraction well and sump pumps for the SSWMS are presented in Table II. As noted above, a flood wall was installed surrounding Morgan Days Park, which is immediately west of the Site, and the long-term effect of this flood wall on the local groundwater flow is being evaluated.

The SSWMS cycles on and off depending on the water level in the accumulation sump. The sump contains two (2) sump pumps that are activated by float switches. The pumps are sequenced to alternate, so that only one pump will operate at a time, when needed. During the second quarter of the 2024 operational year the sump pump meters, which record hours operated, indicated that sump pump 1 and pump 2 operated for an average of 4.7 and 7.9 hours per day, respectively. During the reporting period between May 1, 2024, through July 31, 2024, ***Laurel*** field technicians were on site to perform routine maintenance including bag filter changes and stripper tower cleaning. During the stripper tower cleaning, ***Laurel*** noted the stripper tower trays have been worn down over time and three of the five trays reached the end of their service life, requiring replacement. When ***Laurel*** was on Site, the field technicians document the sump pump totalizer readings on field forms. Based on the total gallons recorded from the sump pump totalizer between the May 30, 2024 site visit and the July 22, 2024 sampling event the calculated average pumping rate was 16.6 gallons per minute. Any liquid being discharged from the Site is subject to the requirements of the current SPDES permit equivalent that authorizes discharges from April 1, 2022, to March 31, 2027. The pumps run times and total liquids pumped through each portion of the SSWMS and GWET system are recorded during any site visit and during sampling events.

During the 2023 second quarter monitoring period on May 18, 2023, ***Laurel*** installed an amperage meter on the pumps to more accurately understand pump run times. A review of the data from the amperage meter indicates the sump pumps cycle on and off throughout the course of each day and are not continuously running. Under normal conditions, the on-off cycling throughout a 24-hour period is expected; however, there are several factors that contribute to extended periods of on-off cycling of the sump pumps including heavy rain, drought, and rate of pumping. Pump flow rates can fluctuate between 3 GPM to 25 GPM due to particulate buildup inside the bag filters. When the pumps cycle on and off over extended periods of time (e.g., drought conditions), hydraulic control does not appear to be as well maintained at the Site and the pH adjustment system does not operate as efficiently.

Table I, Site Activities Log

Date	Location	Description
5/8/24	***Laurel on site***	Changed bag filter Received an acid delivery SSWMS Totalizer Reading was 52,467,554 gallons Pump 1 and 2 run time was 40,229.5 and 42,019.0, respectively
5/17/24	***Laurel on site***	Acid pump replacement SSWMS Totalizer Reading was 52,572,458 gallons
5/30/24	***Laurel on site***	Meeting with Engineer to discuss sump design Collected SPDES sample Changed bag filter SSWMS Totalizer Reading was 52,714,492 gallons Pump 1 and 2 run time was 40,314.4 and 42,123.7, respectively
6/11/24	***Laurel on site***	Changed bag filter Pumps off upon arrival, adjusted float switches
6/28/24	***Laurel on site***	Changed bag filter Collected SPDES sample SSWMS Totalizer Reading was 53,130,010 Pump 1 and pump 2 run time was 40,375.0 and 42,436.6, respectively
7/8/24	***Laurel on site***	Stripper tower cleaning Changed bag filter
7/22/24	***Laurel on site***	Emergency Site Visit, flooding in control room Shut system down, requested line was water jetted SSWMS Totalizer Reading was 53,372,542 Pump 1 and 2 run time run time was 40,562.1 and 42,540.7, respectively
7/30/24	***Laurel on site***	Collected SPDES sample Collected quarterly groundwater samples Changed bag filter SSWMS Totalizer Reading was 53,372,542 Pump 1 and 2 run time was unable to be recorded because the panel was locked

Table II; System Operation Log

Date	**Average monthly GPM**
5/29/24	21.7*
6/29/24	18.4*
7/22/24	14.1*

Notes: *Average monthly GPM calculated using totalizer readings recorded during site visits and pump run

5.0 QUARTERLY MONITORING WELL SAMPLING

The monitoring of the ongoing GWET at the Site consists of liquid and air sampling to evaluate the effectiveness of the GWET system, on a quarterly basis. To perform this, the groundwater elevations of all onsite groundwater monitoring wells are gauged and sampled to evaluate the groundwater conditions throughout the Site. When the GWET system is in operation, composite liquid samples are collected from the influent and effluent lines of the GWET system on a quarterly basis to determine the effectiveness of the GWET system, and an effluent air sample is collected from the air discharge line of the air stripper to determine what contaminants are being removed from the groundwater, and their concentrations. As noted, the groundwater recovery wells associated with the GWET system were not in operation during this reporting period due to the use of the SSWMS to maintain hydraulic control of the shallow groundwater on-site. The SSWMS, when in operation, can pump at a rate of approximately 30-GPM. The average pumping rate has been approximately 16.6-GPM based on the total number of gallons pumped over the duration of the reporting period.

5.1 GROUNDWATER MONITORING WELL GAUGING

The groundwater levels were measured in each of the sixteen (16) monitoring wells and the five (5) piezometer wells using a water level meter. The groundwater elevations for the monitoring and piezometer wells are shown on Table III below.

Table III
Groundwater Monitoring Well Gauging

Groundwater potentiometric maps were generated for each of the well depth ranges, as presented in Figures 3.0 through 6.0, attached.

Groundwater monitoring wells 2010-01A, 2010-02A, 2020-03A-R, and 2013-04A were used to generate a groundwater potentiometric map at a 100-foot depth, attached as Figure 3.0. Groundwater elevations generally decrease in the four (4) wells from east to west, with groundwater flow towards the northwest.

Groundwater monitoring wells 2010-01B, 2010-02B, 2020-03B-R, and 2013-04B were used to generate a groundwater potentiometric map at a 70-foot depth, attached as Figure 4.0. Groundwater elevations generally decrease from north to south, groundwater flow is generally towards the northeast.

Groundwater monitoring wells 2010-01C, 2010-02C, 2020-03C-R, and 2013-04C were used to generate a groundwater potentiometric map at a 50-foot depth, attached as Figure 5.0. Groundwater elevations generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.

Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the July 2024 sampling event was towards the south with a localized depression around MW-2010-03-D in the 15-foot wells.

5.2 GROUNDWATER MONITORING WELL SAMPLING

As part of the Site GWET, quarterly groundwater sampling is performed on the sixteen (16) on-site groundwater monitoring wells. The monitoring wells are grouped into four (4) well clusters, with each cluster including four monitoring wells screened at specific depths. The monitoring wells are designated as such: MW-2010-01A, B, C, and D; MW-2010-02A, B, C, and D; MW-2020-03A, B-R, C-R; MW-2010-03-D; MW- 2013-04 A, B, C; and MW-2010-04D. Wells with an "A" designation are screened from 90 to 100 feet below ground surface (bgs), "B" designation are screened from 60 to 70 feet bgs, "C" designation are

screened from 40 to 50 feet bgs, and "D" designation are screened from 10 to 15 feet bgs. Please refer to Figure 2.0, Monitoring Well Location Map.

Groundwater samples were collected from each of the sixteen (16) groundwater monitoring wells on July 30, 2024. Prior to sampling, each well was gauged utilizing a groundwater level meter for the depth to water below the ground surface. Utilizing a down well submersible electric pump and disposable polyethylene tubing, each of the two-inch diameter wells was purged of a minimum of three (3) well volumes of water. Each one-inch diameter well was purged utilizing a peristaltic pump. The amount of water was determined by measuring the height of the water column within each well and multiplying the water column height by the known volume of water per foot of well. All water removed during the process was disposed of on-site.

Upon completion of purging, groundwater quality data were collected utilizing an YSI 600 XL MP Sonde Multiparameter water quality meter and a Hanna® turbidity meter or similar instruments. Three (3) groundwater quality readings were taken at five-minute intervals from each well. The readings were recorded and evaluated to confirm that the groundwater conditions had stabilized and that a representative groundwater sample was being obtained. Please refer to Appendix B for the groundwater quality data sheets. Each monitoring well sample was collected from dedicated polyethylene tubing connected to a variable speed peristaltic pump set to a low flow operating speed. A whale pump was used for purging deeper 2" diameter wells. Sample bottles were filled directly from dedicated tubing and were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

Samples were transported via laboratory courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for volatile organic compounds (VOCs) utilizing EPA Method 8260. All analytical results were compared to the NYSDEC Class GA Groundwater Quality Standards (AWQS) as provided in the Technical Operation and Guidance Series (TOGS 1.1.1) guidance document dated June 1998 and its addendum dated April 2000. The laboratory analytical results for the groundwater samples collected are presented in the following section.

5.3 GROUNDWATER ANALYTICAL RESULTS

The laboratory analytical results from each of the sixteen (16) groundwater samples, collected from the four (4) well clusters, are presented in Tables IV through VII on the following pages. A copy of the laboratory analytical report is attached as Appendix C.

Groundwater Samples 2010-01A, 2010-02A, 2020-03AR, & 2013-04A – Wells screened 90 to 100 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01A, 2010-02A, 2020-03A and 2013-04A were below the NYSDEC AWQS.

Groundwater samples 2010-01B, 2010-02B, 2020-03BR, & 2013-04B – Wells Screened 60 to 70 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01B, 2010-02B, 2020-03B and 2013-04B were below the NYSDEC AWQS.

Groundwater samples 2010-01C, 2010-02C, 2020-03CR, & 2013-04C – Wells Screened 40 to 50 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01C, 2010-02C, 2020-03C, and 2013-04C were below the NYSDEC AWQS.

Groundwater samples 2010-01D, 2010-02D, 2010-3D, & 2010-04D – Wells Screened 10 to 15 ft bgs

Several CVOC concentrations were identified in exceedance of their respective NYSDEC AWQS in each of the four (4) monitoring wells screened from 10 to 15 feet bgs. The highest amount of CVOC concentrations were observed in the 2010-02D well, followed by 2010-03D, 2010-01D, and 2010-04D. As such, groundwater in the 10 to 15 feet zone remains the interval of groundwater with the highest CVOC impact observed.

5.4 HISTORICAL GROUNDWATER CONCENTRATIONS

The current round of groundwater sampling has been compared with previous rounds of sampling to identify any trends in groundwater quality at the Site and to identify any anomalies in the analytical data. The comparison was made between the total CVOC concentrations in all the wells beginning in October 2011 to the present. The following constituents were tabulated for total CVOC concentrations: 1,1,1-trichloroethane; 1,1-dichloroethane; 1,1-dichloroethylene; carbon tetrachloride; chloroethane; chloroform; chloromethane; cis-1,2-dichloroethylene; dichlorodifluoromethane; methylene chloride; tetrachloroethylene; trans-1,2-dichlorethylene; trichloroethylene; vinyl chloride. A review of the analytical data for the total CVOCs concentrations for the periods when the system was in full operation under the current and previous SPDES permits equivalent up to and including the July 2024 sampling event shows results that are relatively consistent with previous monitoring event. The total CVOCs in the shallow monitoring wells increased in April 2023 and remained elevated through January 2024, as of this sampling event from July 2024 the total CVOCs remains elevated in the shallow wells but is below the previous spikes. Please refer to Appendix D for tabulated Historical Total CVOC concentrations.

Concentration graphs for each depth interval. The vertical scale of the graphs for the various monitoring wells have been adjusted to accommodate the maximum concentration detected. Please refer to Graphs 1.0 through 5.0 found at the end of this report.

5.5 GROUNDWATER INFLUENT AND EFFLUENT SAMPLING

To evaluate the effectiveness of the GWET system, influent and effluent samples are collected from the flow stream. The influent and effluent samples are compared to each other to determine the amounts of contaminants of concern (COC) being removed by the GWET system. This sampling also provides a means of monitoring the system's efficiency and determining the scheduling of system maintenance.

On July 30, 2024 ***Laurel*** staff performed quarterly groundwater sampling, including the sampling of the GWET system influent and effluent groundwater. One (1) influent sample and one (1) effluent sample were collected. The influent sample designated "System Influent" was collected from the SSWMS sump influent as a representative of the influent into the GWET system. The Sump Influent sample was collected from the sampling port installed in the system, between the SSWMS and the stripper tower. The groundwater recovery wells were not in operation during the monitoring event, therefore an influent sample from the groundwater recovery wells was not collected.

The effluent sample designated "System Effluent Liquid" was collected through the sampling port installed in the discharge line between the stripper tower and the point at which the discharge line exits the building. The influent and effluent samples were collected directly into laboratory supplied glassware and immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

The samples were transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for the presence of VOCs utilizing USEPA Method 8260.

The concentrations of VOCs detected in the Sump Influent and System Effluent Liquid groundwater samples were compared to each other and to Class GA Groundwater Quality Standards. Comparison of the groundwater samples showed the air stripper tower is removing contaminants from the groundwater in the GWET system.

Please refer to Table IX on the following page for tabulated analytical data for treatment system influent and effluent results for samples collected during the July 30, 2024, events.

Table IX Treatment System Influent and Effluent Sample Results July 2024 Sampling Events			
Parameter	**System Influent**	**System Effluent Liquid**	**Water Quality Standard**
Cis-1,2-Dichloroethylene	**21.6**	NA	5
Acetone	2.26	ND	50
Chloroform	0.45	NA	7
Tetrachloroethylene	**78**	ND	5
Trans-1,2-Dichloroethylene	0.41	ND	5
Trichloroethylene	**12.9**	ND	5
Vinyl chloride	1.16	ND	2
Total CVOCs	114.94	0.0	NS
pH	NA	7.2	NS

All results in µg/l
ND = non-detect. Concentration below laboratory method detection limit.
NA=Data not analyzed
NS=No Standard

5.6 SYSTEM EFFLUENT AIR

The groundwater pump and treat system at the Site includes a shallow tray stripper. The COC are stripped from the liquid as it passes through the system and are volatilized into the air, which is discharged to the atmosphere through the air discharge line that extends above the roof of the Site building. This discharge line is equipped with a sampling port, which allows for monitoring of the effluent air stream.

On July 31, 2024, ***Laurel*** collected an effluent air sample by direct grab. The collected sample was transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854) and analyzed for the presence of VOCs utilizing USEPA Method TO-15. The system effluent air sample collected represents the contaminants generated from the stripping of the sub-slab storm water management system liquids.

Laboratory analysis of the sample identified CVOC present in the airstream at concentrations that indicate that the GWET system is operating correctly. Please refer to Table X: Treatment System Air Effluent Sample on the following page.

Table X Treatment System Air Effluent Sample July 31, 2024

5.7 DATA VALIDATION

All groundwater samples collected as part of the quarterly groundwater sampling requirements are analyzed in accordance with EPA Method 8260. An Analytical Service Protocol Category B deliverable data package is provided by the laboratory and submitted to a third-party data validator. As of the date of this report the result of the data validation has not yet been received by ***Laurel***. Upon receipt of the data usability summary report, (DUSR) It will be forwarded to the NYSDEC in the form of an addendum to this report.

6.0 STATE POLLUTANT DISCHARGE ELIMINATION SYSTEM

The GWET system is designed to operate 24 hours per day, seven days a week, with minimal shutdown periods for maintenance. The system is designed to pump a total of approximately 15 gallons of water per minute from the SSWMS. Due to the shallow groundwater table at the Site, on-site disposal of remediated groundwater is not possible. Therefore, treated water is discharged into the municipal storm water sewer system. As required by the NYSDEC Division of Water, a state pollutant discharge elimination system (SPDES) permit equivalent is required. The permit requires monthly sampling of the liquid being discharged to the public sewer system. The SPDES permit equivalent was renewed in March 2022. At the time of the

permit renewal in 2017, the additional water generated by the sub-slab pumping system and subsequently discharged to the public sewer system was added to the SPDES permit equivalent.

6.1 SAMPLING AND ANALYSIS

Laurel staff sampled the system effluent, as required by the NYSDEC SPDES Permit equivalent on May 30, June 28, and July 31, 2024. Sample bottles were filled directly from a sampling port installed along the system effluent line. The samples were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures. Samples were delivered via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were submitted for analysis in accordance with the NYSDEC SPDES Permit equivalent requirements.

Laboratory analytical results for the system effluent samples collected in May, June, and July indicated the following exceedances:

- Copper was detected at a concentration of 381 µg/L, 300 µg/L, and 446 µg/L in May, June, and July respectively, which exceeded the discharge permit limit of 17 µg/L.
- Zinc was detected at a concentration of 829 µg/L, 650 µg/L, and 706 µg/L in May, June, and July respectively, which exceeded the discharge permit of 330 µg/L.

The pH of the system in May, June, and July 2024 was 3.06, 6.56 and 7.21, respectively. The pH was below the lower limit of 6.5 in May. The low pH is attributed to the metering pump that controls the acid releasing into the system malfunctioning in May and has since been repaired, which is shown by the pH in June/July meeting the permit limits.

Laboratory analytical results for the remaining target compounds were within the NYSDEC SPDES Permit equivalent requirements. Please refer to Table XI, XII, and XIII on the following pages for tabulated analytical data for Effluent Limits and Monitoring Requirements results. SPDES equivalent analytical results are provided in Appendix E.

7.0 CONCLUSIONS

The quarterly monitoring report covers the period between May 1, 2024 through July 31, 2024. This report covers the operational status of the groundwater treatment and extraction system, the groundwater monitoring event on July 30, 2024, and the SPDES sampling events.

Based on the work conducted to date, ***Laurel*** has determined the following:

- Groundwater samples were collected from sixteen (16) groundwater monitoring wells on July 30, 2024, as a quarterly groundwater sampling event. The samples were submitted to York Analytical Laboratories in Stratford, CT for VOC analysis. In keeping with past results, the analysis found elevated levels of chlorinated solvents present in groundwater monitoring wells screened in the 10 to 15 feet bgs interval (2010-01D, 2010-02D, 2010-03D, and 2010-04D).
- Groundwater elevations in the 100-foot groundwater monitoring wells generally decrease in the four (4) wells from east to west, with groundwater flow towards the northwest.
- Groundwater elevations in the 70-foot groundwater monitoring wells generally decrease from north to south, groundwater flow is generally towards the northeast.
- Groundwater elevations in the 50-foot groundwater monitoring wells generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.
- Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the July 2024 sampling event was towards the south with a localized depression around MW-2010-03-D in the 15-foot wells.
- The bag filter becomes clogged after roughly 14 days of service and contributes to loss of hydraulic control. ***Laurel*** continues to change the bag filter on a bi-weekly basis and as-needed.
- Hydraulic control lessens if the sump pumps turn off for one day or longer.
- Air stripper tower trays are worn down and have exceeded their service life.

8.0 RECOMMENDATIONS

Laurel recommends the following:

- Action should be taken to ensure the sump pumps do not turn off for one day or longer. Design plans to install a deeper sump are being drafted.
- Continue on-going maintenance of the GWET system; change bag filter bi-weekly; and replace and/or repair system components as needed to assure ongoing operation. Based on this quarter's observations, three of the five air stripper tower trays should be replaced.
- Continue to evaluate data from data loggers periodically.
- Continue to monitor system operations and perform routine maintenance, consisting of cleaning the stripper tower after every 4 to 6 months of operation, when the observed flow rate drops by more than 25%, or effluent sample concentrations exceeds the NYSDEC SPDES permit equivalent discharge limits.
- Continue to monitor the pH adjustment system to control pH level and reduce potential fouling of the stripper tower.
- Continue quarterly groundwater monitoring and sampling of the monitoring well network for the presence of VOCs.
- Submit a quarterly status report that documents field observations, system operational status, with current and historical groundwater analytical data.
- Utilize the carbon treatment system if needed (at stripper tower maintenance intervals which occur when under 25% efficiency) to maintain VOC concentrations within SPDES permit equivalent discharge limits.

RE: Groundwater Telemetry Study – Initial Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells. ***Laurel*** generated a set of groundwater contour maps over a three-week timeframe using the data collected from the loggers that show groundwater flow conditions. The groundwater contour maps are attached as Figures 2.0 through 13.0.

Laurel observed that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Figure 12.0 represents groundwater conditions, approximately eighteen (18) days after the bag filter had been replaced.

Based on these findings, ***Laurel*** recommends scheduling a bag filter change every fourteen (14) days to better maintain hydraulic control at the Site. Now that we have increased the interval of bag filter changes based on this data, ***Laurel*** will download the datalogger data during the next round of groundwater monitoring, scheduled to take place the week of July 24th. We will review

this data and look closely at the effects of pumping on the groundwater gradient and will produce updated maps and a summary letter.

Additionally, we noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect and the groundwater elevation is not representative of the Site. We plan to move the datalogger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.

RE: Groundwater Telemetry Study – Second Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells.

In June 2023, ***Laurel*** observed that bag filter conditions associated with the on-Site system appear to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Once the bag filter is changed, hydraulic control is regained at the Site.

For this second review of data, ***Laurel*** generated a set of groundwater contour maps over an eight day timeframe using the data collected from the loggers at the end of July 2023. The groundwater contour maps are attached as Figures 2.0 through 6.0. The purpose of this study was to determine the effect that the sump pumps have on hydraulic control of the Site when they are offline for an extended period of time. The sump pumps at the Site are designed to create a localized depression near the system to avoid groundwater leaving the Site. This study collected groundwater elevations during the following five instances:

- The pumps at the Site initially turned off (Figure 2.0);
- The pumps at the Site offline for one day (Figure 3.0);
- The pumps at the Site offline for three days (Figure 4.0);
- The pumps at the Site initially turned online (Figure 5.0); and
- The pumps at the Site online for three consecutive days (Figure 6.0).

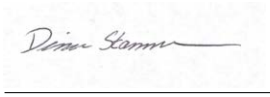

Figure 2.0 represents groundwater elevation when the sump pumps had initially gone offline and shows hydraulic control at the Site, as the pumps had been running regularly leading up to the pumps turning off. The day after the pumps go offline (Figure 3.0), hydraulic control at the Site is lost and groundwater is observed to be flowing southward and off the Site. Hydraulic control is not regained until the pumps resumed operation and continued to run for 3 days (Figure 6.0), and the localized depression around the sump returned.

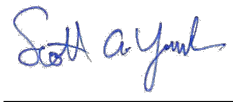
Based on these findings, ***Laurel*** recommends deepening the sump to ensure that the sump has sufficient water to keep the sump pumps running. Deepening the sump would increase the amount of water the sump pumps would be required to remove, reducing the frequency that the sump pumps would turn off. This would also ensure that during times of drought and diminished ground water elevation, that the sump pumps would remain running and maintain hydraulic control at the Site.



Additionally***, Laurel*** noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect during rain events, and the groundwater elevation is not representative of the Site. In July 2023, ***Laurel*** moved the data logger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. Due to the short time interval between the moving of the data logger and the data relevant to the study, data collected from the 2010-01D data logger was not used in this study. ***Laurel*** plans on using the data from the datalogger in upcoming investigations. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 31, 2024 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24G2005

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

YORK ANALYTICAL LABORATORIES INC

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 01, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Center NY 12-190DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24H0006-01	System Effluent Air	Vapor Extraction	07/31/2024	08/01/2024

General Notes for York Project (SDG) No.: 24H0006

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

TO-VAC	The final vacuum in the canister was less than -2" Hg. The optimum pressure range for constant flow rate is full vacuum to -2" Hg. Bias is not suspected provided there was constant flow to the can to 75% full.
TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Client Project ID: 80 Banks Avenue 12-190
York Project (SDG) No.: 24H0049

Laurel Environmental Geosciences, D.P.C.
53 W Hills Road, Suite 1
Huntington Station NY, 11746
Attention: Scott Yanuck

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 01, 2024 and listed below. The project was identified as your project: **80 Banks Avenue 12-190**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24H0049-01	System Influent	Ground Water	07/31/2024	08/01/2024

General Notes for York Project (SDG) No.: 24H0049

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 04, 2024 and listed below. The project was identified as your project: **80 Banks Ave 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24F0115-01	System Effluent	Waste Water	05/30/2024	06/04/2024

General Notes for York Project (SDG) No.: 24F0115

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24F0115-01	System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QM-04	Visual evaluation of the sample indicates the RPD is above the control limit due to a non-homogeneous sample matrix.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2024 and listed below. The project was identified as your project: **80 Bank Ave 12-190**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24G0011-01	System Effluent	Ground Water	06/28/2024	07/01/2024

General Notes for York Project (SDG) No.: 24G0011

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

HT-pH HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 01, 2024 and listed below. The project was identified as your project: **80 Banks 12-190DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24H0037-01	System Effluent	Ground Water	07/31/2024	08/01/2024

General Notes for York Project (SDG) No.: 24H0037

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

ENVIRONMENTAL PROFESSIONAL CERTIFICATION

I declare that, to the best of my professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 of 40 Code of Federal Regulations (CFR) 312.

The Environmental Professional who directed this project has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site.

Scott A. Yanuck, P.G. (NYS 000330)
Principal Hydrogeologist

1.0 INTRODUCTION

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared this quarterly site operation maintenance and monitoring report on behalf of Avalon Bay Communities Inc. (Avalon Bay). This report documents the operational status of the groundwater extraction and treatment system during the reporting period and provides the current groundwater quality and volatile organic compound (VOC) concentrations in groundwater. This work is being performed under the NYSDEC Brownfield Cleanup Program, Site ID #C130140 located at 80-100 Banks Avenue, Rockville Centre, New York (Section 38, Block 539, Lots 27 and 30; the Site). The Site is a 7.1-acre parcel that has been re-developed with multiple story residential apartment buildings. The Site is located at the northwest corner of the intersection of Nassau Street and Banks Avenue.

2.0 SCOPE OF WORK

Laurel conducted a system-wide inspection that included checking the operation of the groundwater extraction and treatment system components, performing necessary repairs, and the collection of groundwater samples.

Laurel completed the following required tasks:

1. Inspected the groundwater extraction and treatment system on a monthly basis. This inspection included the evaluation of exposed piping for evidence of leaks. Checked all pressure gauges and flow meters for operational status and checked all valves for functionality.

2. Gauged groundwater levels in the sixteen (16) on-site monitoring wells, calculated standing water volumes, and purged a minimum of three well volumes from each well when possible. Groundwater quality readings were collected and recorded prior to the collection of each sample when possible. Samples were submitted to a NYSDOH Certified Laboratory for analysis using USEPA Method 8260 to test for VOCs. In addition to the well samples, one (1) duplicate and one (1) trip blank sample were submitted for laboratory analysis.

3. Utilized a 6-Liter Summa canister to collect one (1) air stripper tower effluent air sample. The collected sample was analyzed for VOCs utilizing EPA Method TO-15.

4. Gauged groundwater levels in the ten (10) on-site piezometric wells, and the storm water management sump.

5. Collected monthly system effluent groundwater samples in accordance with the State Pollution Discharge Elimination System (SPDES) Permit equivalent. The samples were submitted to a NYSDOH Certified Laboratory for analysis of select volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals in accordance with the NYSDEC SPDES Permit equivalent.

6. Collected continuous groundwater elevation data from six (6) shallow groundwater monitoring points to evaluate groundwater flow beneath the Site utilizing on-Site groundwater data logger.

All sampling equipment not considered disposable were decontaminated using *Alconox*, a laboratory grade detergent and standard potable water before and after each use to ensure that cross-contamination of samples was eliminated.

3.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM

The groundwater extraction and treatment (GWET) system was designed to establish and maintain hydraulic control of the shallow groundwater on-site, thereby preventing impacted groundwater from migrating off-site. **Section 3.1** provides a brief summary of the system components as they were originally designed and installed as well as modifications that were made to the system to improve its operational performance. A detailed description of the original designed and installed GWET system can be found in the Groundwater Extraction and Treatment System, System Start-up Report, prepared and submitted by P.W. Grosser Consulting Inc. (PWGC), dated February 2012. **Section 3.2** provides a brief summary of the SSWMS components and their operation. **Sections 3.3** and **3.4** describe the installation and operation of the pH adjustment system, and carbon treatment system, respectively. **Section 3.5** discusses past groundwater flow studies. **Section 3.6** describes repairs to piping associated with the GWET system.

3.1 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM COMPONENTS

The GWET system contains the following components:

- Three (3) shallow groundwater recovery wells and submersible pumps
- Three (3) pre-treatment bag filters (in parallel)
- One (1) shallow tray air stripper with blower
- Two (2) acid metering pumps
- Five (5) 55-gallon activated carbon liquid treatment drums

3.1.1 Groundwater Recovery Wells

The three (3) shallow groundwater recovery wells were installed to capture the groundwater above a clay layer encountered on-site, at a depth of approximately 12-15-feet below ground surface (bgs). The three (3) recovery wells were designed to each have an operational flow rate of approximately 5 gallons per minute (gpm) producing a 0.1 ft drawdown at a radius of 340 feet when in operation. The groundwater recovery well pumps were not in operation during the reporting period, given the previously approved use of an on-site groundwater collection sump located beneath the floor of the parking garage within the identified treatment area, further discussed in the following section. The shallow groundwater recovery wells are still present and can be brought on-line if required.

3.1.2 Groundwater Extraction and Treatment System (GWET)

When the recovery wells are in operation, potentially impacted groundwater is piped from the recovery wells to the GWET system, where groundwater is treated utilizing an air stripping method. The treated groundwater is collected in an equalization tank at the base of the air stripper, the treated liquid then flows into the municipal storm water system. The groundwater recovery well pumps have been off-line as an active portion of the GWET since the groundwater flow study was performed in September 2019. These wells have remained off-line and, as discussed before, the Sub-Slab Water Management System (SSWMS) collection sump has been utilized to prevent the migration of contaminants off site.

3.2 SUB-SLAB WATER MANAGEMENT SYSTEM COMPONENTS

The SSWMS contains the following components:

- A subgrade water infiltration gallery and collection sump
- Two (2) submersible sump pumps
- One (1) pre-treatment bag filter located between the submersible pumps and piped to the shallow tray air stripper tower.

3.2.1 Sub-Slab Water Management System

Due to the shallow groundwater table and the partially sub-grade parking garage in the south building, parts of the garage had been experiencing flooding during times of heavy rainfall. To address this situation, a French drain system and sump were installed in the southwestern portion of the parking garage of the south building. The sump contains two (2) submersible sump pumps, which are tied into the GWET system between the bag filters and the stripper tower. The volume of water passing through the stripper tower is increased by this sub-slab water management system. In addition to the incorporation of the sub-slab water management system to the GWET system, several modifications were made, which included the addition of a liquid bypass to the transfer pump system and its associated piping[1]. The piping at the base of the stripper was formerly a two (2)-inch diameter pipe that utilized the transfer pump to push the liquid into the storm water sewer system. The two (2)-inch diameter pipe was replaced with a three (3)-inch diameter pipe, that allows the system to operate as a gravity feed system to the municipal storm sewer system. This change allows for a continuously higher volume flow through the stripper tower and into the storm sewer system. The SSWMS has the potential to add a maximum of 30 gallons of water per minute to the stripper tower. The SPDES permit equivalent was previously amended to reflect this change in flow rate.

[1] The liquid bypass is an extra treatment measure to be implemented if CVOCs in the effluent are not meeting discharge levels, the liquid can be pumped through drums of carbon filters prior to discharge.

3.3 pH Adjustment System

Elevated pH in groundwater pumped at the Site has been a longstanding issue with respect to meeting the requirements of the SPDES permit equivalent, which has been addressed with the addition of a pH reduction system. The elevated pH of the groundwater has been accompanied by scaling in the GWET system. In order to reduce the pH of groundwater entering the GWET system, ***Laurel*** obtained approval from the NYSDEC on July 23, 2019, and completed the installation of a pH adjustment system, which also aids in the reduction of scaling in the air stripper. The pH adjustment system is comprised of a 60-gallon sulfuric acid storage tank and metering pumps that inject acid into the groundwater entering the GWET system. The first metering pump is controlled by a pH sensor and programmable controller and supplies acid to the sub-slab sump influent. The second metering pump, also controlled by a pH sensor and programmable controller, is capable of supplying acid to an inline mixer at the entry point to the air stripper, where groundwater from the recovery wells and sub-slab sump combine prior to entering the air stripper. The pH adjustment system is programmed to maintain the pH of groundwater effluent within the SPDES permit equivalent pH limits of 6.5 to 8.5.

On September 10, 2019, through November 6, 2019, ***Laurel*** installed and calibrated the pH adjustment system. After the initial installation, the pH adjustment system was tested periodically to verify the acid was successfully neutralizing the groundwater influent from the recovery wells and sub-slab sump. During the testing of the pH adjustment system, the pH of groundwater was monitored to prevent over-acidification of the system effluent. After equilibrating the acid system, the system became fully operational on November 6, 2019. Acid consumption is approximately 1.5 gallons per day using 96% sulfuric acid.

3.4 Carbon Treatment System

The GWET system's air stripper has historically encountered scaling issues, which reduce the GWET system's effectiveness in reducing chemicals of concern (COC). To prevent occasional SPDES permit exceedances, ***Laurel*** installed a carbon treatment system that is used to further treat groundwater effluent when the GWET system's air stripper is not effectively reducing COCs. The carbon treatment system's design consists of a sump pump connected directly to the air stripper, which pumps groundwater from the air stripper through five (5) drums of activated carbon prior to discharge.

The carbon treatment system was not required or utilized during this quarter.

3.5 Groundwater flow Studies

Two (2) groundwater flow studies were previously conducted by EnviroTrac. The first was conducted in 2019, with the data collection portion being performed by PWGC. The second groundwater flow study was solely performed by EnviroTrac in 2020. The 2019 groundwater flow study was conducted to assess groundwater flow within sandy deposits overlying a clay layer located approximately 12 feet bgs. EnviroTrac analyzed the 2019 data which, when plotted on the site map, revealed a consistent groundwater flow direction converging at the SSWMS sump during the study period. Based on results of the study it appears that routine operation of the sump pump produces, on a continuous basis, a sufficient depression in the water table to maintain hydraulic control of the shallow groundwater to the west and southwest sides of the building,

extending to the property boundary. To confirm this, a more extensive groundwater study using the existing piezometers and four (4) additional piezometers was conducted during the second quarter of 2020 by EnviroTrac. The groundwater elevations collected were used to generate groundwater flow maps, which show groundwater flow direction towards the sump during the one-month period.

The adjacent property to the west of the area of concern is a public park. A refurbishing project consisting of the installation of a flood wall along the boundaries of the park and the former Darby Drugs Distribution Center site has been completed. This flood wall consists of sheet piles installed to an approximate depth of 15 feet bgs, effectively cutting off shallow groundwater flow along the entire west side of the Site. To determine impact of the new flood wall on groundwater movement below the Site, and what type of impact it may have on the SSWMS sump's ability to maintain hydraulic control across the area of concern, ***Laurel*** and EnviroTrac agreed that an active groundwater elevation and pump monitoring system should be installed to evaluate the impact of the sheet piling/flood wall on groundwater movement through the residual impact zone. The pump current logger and groundwater elevation telemetry was installed in May 2023 and the data was evaluated and discussed below.

In October 2024, ***Laurel*** and Envirotrac collected groundwater elevation data across on-site and off-site monitoring wells to create a regional groundwater flow map. The purpose of creating an updated regional groundwater flow map was to evaluate how the installation of the floodwall has affected groundwater flow at the Site and off-site. A review of the groundwater flow map indicates groundwater flow to the south-southwest, towards Smith Pond and the tributary of East Rockaway Channel with a localized depressurization around the sump in the parking garage.

3.6 GROUNDWATER TELEMETRY

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-6 and PZ-SUMP) at the Site. The data loggers measure changes in pressure in the wells over time and convert the reading into groundwater elevation in each of the wells. The loggers collect data every hour, except for the PZ-SUMP logger which collects data every 15 minutes. Utilizing the data generated from the loggers, ***Laurel*** generated groundwater contour maps. ***Laurel*** interprets these groundwater contour maps to determine what actions, if any, may be required to maintain hydraulic control at the Site and ensure that the remediation system functions as designed. The groundwater contour maps are included in ***Laurel's*** Groundwater Telemetry Study letters issued on August 1 and August 24, 2023, included as Appendix A.

Laurel's findings from the Groundwater Telemetry Study determined that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Note, as a result of this observation, the bag filters are now being changed on a two (2) week bases to eliminate this as a cause for a reduction in hydraulic control. In addition, ***Laurel*** observed when the sump is offline or otherwise not operating for one day or longer, hydraulic control at the Site lessens. Additionally, the data loggers installed on the two (2) pumps,

that record pump operational time, show the sump pumps cycle on and off during the course of each day as needed to keep water in the sump below a set level, pumping on average approximately 50% of the time and run for extended periods during rainfall events.

4.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM OPERATIONS

The GWET system at the Site is designed to operate continuously. To evaluate the effectiveness of the GWET system, the Site is monitored by physical site inspections. A liquid effluent sample is collected on a monthly basis to meet the state pollutant discharge elimination system (SPDES) permit equivalent requirement. In addition, liquid influent and air effluent samples are collected from the system on a quarterly basis.

This reporting period is from August 1, 2024, through October 31, 2024, a Site activity log is presented in Table I. During the reporting period, the SSWMS was operating automatically on an as-needed basis throughout the reporting period, controlled by a float switch within the sump. The hours of operation for each extraction well and sump pumps for the SSWMS are presented in Table II. As noted above, a flood wall was installed surrounding Morgan Days Park, which is immediately west of the Site, and the long-term effect of this flood wall on the local groundwater flow is being evaluated.

The SSWMS cycles on and off depending on the water level in the accumulation sump. The sump contains two (2) sump pumps that are activated by float switches. The pumps are sequenced to alternate, so that only one pump will operate at a time, when needed. During the third quarter of the 2024 operational year the sump pump meters, which record hours operated, indicated that sump pump 1 and pump 2 operated for an average of 7.0 and 12.5 hours per day, respectively. During the reporting period between August 1, 2024, through October 31, 2024, ***Laurel*** field technicians were on site to perform routine maintenance including bag filter changes and acid transfers. When ***Laurel*** was on Site, the field technicians document the sump pump totalizer readings on field forms. Based on the total gallons recorded from the sump pump totalizer between the July 22, 2024 site visit and the October 29, 2024 sampling event the calculated average pumping rate was 10.7 gallons per minute. Any liquid being discharged from the Site is subject to the requirements of the current SPDES permit equivalent that authorizes discharges from April 1, 2022, to March 31, 2027. The pumps run times and total liquids pumped through each portion of the SSWMS and GWET system are recorded during any site visit and during sampling events.

During the 2023 second quarter monitoring period on May 18, 2023, ***Laurel*** installed an amperage meter on the pumps to more accurately understand pump run times. A review of the data from the amperage meter indicates the sump pumps cycle on and off throughout the course of each day and are not continuously running. Under normal conditions, the on-off cycling throughout a 24-hour period is expected; however, there are several factors that contribute to extended periods of on-off cycling of the sump pumps including heavy rain, drought, and rate of pumping. Pump flow rates can fluctuate between 3 GPM to 25 GPM due to particulate buildup inside the bag filters. When the pumps cycle on and off over extended periods of time (e.g., drought conditions), hydraulic control does not appear to be as well maintained at the Site and the pH adjustment system does not operate as efficiently.

Table I, Site Activities Log

Date	Location	Description
8/20/24	***Laurel on site***	Changed bag filter Calibrated pH sensor Changed pH sensors and wiring SSWMS Totalizer Reading was 53,739,445 gallons Pump 1 and 2 run time was 40,656.4 and 42,759.8, respectively
8/28/24	***Laurel on site***	Collected SPDES sample Met with surveyor to survey casing elevations SSWMS Totalizer Reading was 53,939,419 gallons
9/23/24	***Laurel on site***	Meeting with Engineer to discuss sump design Collected SPDES sample Changed bag filter SSWMS Totalizer Reading was 54,212,862 gallons
9/30/24	***Laurel on site***	Collected depth to water and data from loggers Met with EnviroTrac about OU-II SSWMS Totalizer Reading was 54,216,175 gallons Pump 1 and 2 run time was 40,947.0 and 43,135.0, respectively
10/17/24	***Laurel on site***	Changed bag filter SSWMS Totalizer Reading was 54,351,820
10/22/24	***Laurel on site***	Acid delivery and transfer Changed bag filter SSWMS Totalizer Reading was 54,403,940
10/29/24	***Laurel on site***	Collected quarterly groundwater samples Collected SPDES sample SSWMS Totalizer Reading was 54,449,414 Pump 1 and 2 run time run time was 41,144.8 and 43,635.5, respectively

Table II; System Operation Log

Date	**Average monthly GPM**
8/20/24	19.3*
9/30/24	11.9*
10/29/24	5.6*

Notes: *Average monthly GPM calculated using totalizer readings recorded during site visits and pump run

5.0 QUARTERLY MONITORING WELL SAMPLING

The monitoring of the ongoing GWET at the Site consists of liquid and air sampling to evaluate the effectiveness of the GWET system, on a quarterly basis. To perform this, the groundwater elevations of all onsite groundwater monitoring wells are gauged and sampled to evaluate the groundwater conditions throughout the Site. When the GWET system is in operation, composite liquid samples are collected from the influent and effluent lines of the GWET system on a quarterly basis to determine the effectiveness of the GWET system, and an effluent air sample is collected from the air discharge line of the air stripper to determine what contaminants are being removed from the groundwater, and their concentrations. As noted, the groundwater recovery wells associated with the GWET system were not in operation during this reporting period due to the use of the SSWMS to maintain hydraulic control of the shallow groundwater on-site. The SSWMS, when in operation, can pump at a rate of approximately 30-GPM. The average pumping rate has been approximately 10.7-GPM based on the total number of gallons pumped over the duration of the reporting period.

5.1 GROUNDWATER MONITORING WELL GAUGING

The groundwater levels were measured in each of the sixteen (16) monitoring wells and the five (5) piezometer wells using a water level meter. The groundwater elevations for the monitoring and piezometer wells are shown on Table III below.

Table III

Groundwater potentiometric maps were generated for each of the well depth ranges, as presented in Figures 3.0 through 6.0, attached.

Groundwater monitoring wells 2010-01A, 2010-02A, 2020-03A-R, and 2013-04A were used to generate a groundwater potentiometric map at a 100-foot depth, attached as Figure 3.0. Groundwater elevations generally decrease in the four (4) wells from southwest to east, with groundwater flow towards the northeast.

Groundwater monitoring wells 2010-01B, 2010-02B, 2020-03B-R, and 2013-04B were used to generate a groundwater potentiometric map at a 70-foot depth, attached as Figure 4.0. Groundwater elevations generally decrease from north to south, with groundwater flow towards the northeast.

Groundwater monitoring wells 2010-01C, 2010-02C, 2020-03C-R, and 2013-04C were used to generate a groundwater potentiometric map at a 50-foot depth, attached as Figure 5.0. Groundwater elevations generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.

Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the October 2024 sampling event was towards the south with a localized depression around the sump.

5.2 GROUNDWATER MONITORING WELL SAMPLING

As part of the Site GWET, quarterly groundwater sampling is performed on the sixteen (16) on-site groundwater monitoring wells. The monitoring wells are grouped into four (4) well clusters, with each cluster including four monitoring wells screened at specific depths. The monitoring wells are designated as such: MW-2010-01A, B, C, and D; MW-2010-02A, B, C, and D; MW-2020-03A, B-R, C-R; MW-2010-03-D; MW- 2013-04 A, B, C; and MW-2010-04D. Wells with an "A" designation are screened from 90 to 100 feet below ground surface (bgs), "B" designation are screened from 60 to 70 feet bgs, "C" designation are

screened from 40 to 50 feet bgs, and "D" designation are screened from 10 to 15 feet bgs. Please refer to Figure 2.0, Monitoring Well Location Map.

Groundwater samples were collected from each of the sixteen (16) groundwater monitoring wells on October 29, 2024. Prior to sampling, each well was gauged utilizing a groundwater level meter for the depth to water below the ground surface. Utilizing a down well submersible electric pump and disposable polyethylene tubing, each of the two-inch diameter wells was purged of a minimum of three (3) well volumes of water. Each one-inch diameter well was purged utilizing a peristaltic pump. The amount of water was determined by measuring the height of the water column within each well and multiplying the water column height by the known volume of water per foot of well. All water removed during the process was disposed of on-site.

Upon completion of purging, groundwater quality data were collected utilizing an YSI 600 XL MP Sonde Multiparameter water quality meter and a Hanna® turbidity meter or similar instruments. Three (3) groundwater quality readings were taken at five-minute intervals from each well. The readings were recorded and evaluated to confirm that the groundwater conditions had stabilized and that a representative groundwater sample was being obtained. Please refer to Appendix B for the groundwater quality data sheets. Each monitoring well sample was collected from dedicated polyethylene tubing connected to a variable speed peristaltic pump set to a low flow operating speed. A whale pump was used for purging deeper 2" diameter wells. Sample bottles were filled directly from dedicated tubing and were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

Samples were transported via laboratory courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for volatile organic compounds (VOCs) utilizing EPA Method 8260. All analytical results were compared to the NYSDEC Class GA Groundwater Quality Standards (AWQS) as provided in the Technical Operation and Guidance Series (TOGS 1.1.1) guidance document dated June 1998 and its addendum dated April 2000. The laboratory analytical results for the groundwater samples collected are presented in the following section.

5.3 GROUNDWATER ANALYTICAL RESULTS

The laboratory analytical results from each of the sixteen (16) groundwater samples, collected from the four (4) well clusters, are presented in Tables IV through VII on the following pages. A copy of the laboratory analytical report is attached as Appendix C.

Groundwater Samples 2010-01A, 2010-02A, 2020-03AR, & 2013-04A – Wells screened 90 to 100 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01A, 2010-02A, and 2020-03A were below the NYSDEC AWQS. Monitoring well 2020-03AR had one exceedance of the NYSDEC AWQS of Benzene.

Groundwater samples 2010-01B, 2010-02B, 2020-03BR, & 2013-04B – Wells Screened 60 to 70 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01B, 2010-02B, and 2020-03B were below the NYSDEC AWQS. No CVOCs were detected in groundwater monitoring well 2013-04B.

Groundwater samples 2010-01C, 2010-02C, 2020-03CR, & 2013-04C – Wells Screened 40 to 50 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01C, 2010-02C, and 2020-03C were below the NYSDEC AWQS. No CVOCs were detected in groundwater monitoring well 2013-04C.

Groundwater samples 2010-01D, 2010-02D, 2010-3D, & 2010-04D – Wells Screened 10 to 15 ft bgs

Several CVOC concentrations were identified in exceedance of their respective NYSDEC AWQS in each of the four (4) monitoring wells screened from 10 to 15 feet bgs. The highest amount of CVOC concentrations were observed in the 2010-03D well, followed by 2010-02D, 2010-01D, and 2010-04D. As such, groundwater in the 10 to 15 feet zone remains the interval of groundwater with the highest CVOC impact observed.

5.4 HISTORICAL GROUNDWATER CONCENTRATIONS

The current round of groundwater sampling has been compared with previous rounds of sampling to identify any trends in groundwater quality at the Site and to identify any anomalies in the analytical data. The comparison was made between the total CVOC concentrations in all the wells beginning in October 2011 to the present. The following constituents were tabulated for total CVOC concentrations: 1,1,1-trichloroethane; 1,1-dichloroethane; 1,1-dichloroethylene; carbon tetrachloride; chloroethane; chloroform; chloromethane; cis-1,2-dichloroethylene; dichlorodifluoromethane; methylene chloride; tetrachloroethylene; trans-1,2-dichlorethylene; trichloroethylene; vinyl chloride. A review of the analytical data for the total CVOCs concentrations for the periods when the system was in full operation under the current and previous SPDES permits equivalent up to and including the October 2024 sampling event shows results that are relatively consistent with previous monitoring events. The total CVOCs in the shallow monitoring wells increased in April 2023 and remained elevated through January 2024, as of the sampling events from July and October 2024 the total CVOCs remains elevated in the shallow wells but is below the previous spikes. Please refer to Appendix D for tabulated Historical Total CVOC concentrations.

Concentration graphs for each depth interval. The vertical scale of the graphs for the various monitoring wells have been adjusted to accommodate the maximum concentration detected. Please refer to Graphs 1.0 through 5.0 found at the end of this report.

5.5 GROUNDWATER INFLUENT AND EFFLUENT SAMPLING

To evaluate the effectiveness of the GWET system, influent and effluent samples are collected from the flow stream. The influent and effluent samples are compared to each other to determine the amounts of contaminants of concern (COC) being removed by the GWET system. This sampling also provides a means of monitoring the system's efficiency and determining the scheduling of system maintenance.

On October 29, 2024 ***Laurel*** staff performed quarterly groundwater sampling, including the sampling of the GWET system influent and effluent groundwater. One (1) influent sample and one (1) effluent sample were collected. The influent sample designated "System Influent" was collected from the SSWMS sump influent as a representative of the influent into the GWET system. The Sump Influent sample was collected from the sampling port installed in the system, between the SSWMS and the stripper tower. The groundwater recovery wells were not in operation during the monitoring event, therefore an influent sample from the groundwater recovery wells was not collected.

The effluent sample designated "System Effluent Liquid" was collected through the sampling port installed in the discharge line between the stripper tower and the point at which the discharge line exits the building. The influent and effluent samples were collected directly into laboratory supplied glassware and immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

The samples were transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for the presence of VOCs utilizing USEPA Method 8260.

The concentrations of VOCs detected in the Sump Influent and System Effluent Liquid groundwater samples were compared to each other and to Class GA Groundwater Quality Standards. Comparison of the groundwater samples showed the air stripper tower is removing contaminants from the groundwater in the GWET system.

Please refer to Table IX on the following page for tabulated analytical data for treatment system influent and effluent results for samples collected during the October 29, 2024, events.

Table IX Treatment System Influent and Effluent Sample Results October 2024 Sampling Events

NS=No Standard

5.6 SYSTEM EFFLUENT AIR

The groundwater pump and treat system at the Site includes a shallow tray stripper. The COC are stripped from the liquid as it passes through the system and are volatilized into the air, which is discharged to the atmosphere through the air discharge line that extends above the roof of the Site building. This discharge line is equipped with a sampling port, which allows for monitoring of the effluent air stream.

On October 29, 2024, ***Laurel*** collected an effluent air sample by direct grab. The collected sample was transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854) and analyzed for the presence of VOCs utilizing USEPA Method TO-15. The system effluent air sample collected represents the contaminants generated from the stripping of the sub-slab storm water management system liquids.

Laboratory analysis of the sample identified CVOC present in the airstream at concentrations that indicate that the GWET system is operating correctly. Please refer to Table X: Treatment System Air Effluent Sample on the following page.

Table X Treatment System Air Effluent Sample October 29, 2024	
Analytes	**System Effluent**

Isopropanol	ND
Tetrachloroethylene	450
Toluene	ND
trans-1,2-Dichloroethylene	ND
Trichloroethylene	35
Vinyl Chloride	2.2

All results are in micrograms per cubic meter ($\mu g/m^3$)
* = Detection below the reporting limit but greater than or equal to the method detection limit

5.7 DATA VALIDATION

All groundwater samples collected as part of the quarterly groundwater sampling requirements are analyzed in accordance with EPA Method 8260. An Analytical Service Protocol Category B deliverable data package is provided by the laboratory and submitted to a third-party data validator. A review of the data usability summary report (DUSR) dated November 26, 2024 indicates the data is acceptable and a copy of the DUSR is included as Appendix E.

6.0 STATE POLLUTANT DISCHARGE ELIMINATION SYSTEM

The GWET system is designed to operate 24 hours per day, seven days a week, with minimal shutdown periods for maintenance. The system is designed to pump a total of approximately 15 gallons of water per minute from the SSWMS. Due to the shallow groundwater table at the Site, on-site disposal of remediated groundwater is not possible. Therefore, treated water is discharged into the municipal storm water sewer system. As required by the NYSDEC Division of Water, a state pollutant discharge elimination system (SPDES) permit equivalent is required. The permit requires monthly sampling of the liquid being discharged to the public sewer system. The SPDES permit equivalent was renewed in March 2022. At the time of the

permit renewal in 2017, the additional water generated by the sub-slab pumping system and subsequently discharged to the public sewer system was added to the SPDES permit equivalent.

6.1 SAMPLING AND ANALYSIS

Laurel staff sampled the system effluent, as required by the NYSDEC SPDES Permit equivalent on August 28, September 23, and October 29, 2024. Sample bottles were filled directly from a sampling port installed along the system effluent line. The samples were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures. Samples were delivered via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were submitted for analysis in accordance with the NYSDEC SPDES Permit equivalent requirements.

Laboratory analytical results for the system effluent samples collected in August, September, and October indicated the following exceedances:

- Copper was detected at a concentration of 22.5 µg/L, 78.1 µg/L, and 28.9 µg/L in August, September, and October respectively, which exceeded the discharge permit limit of 17 µg/L.

The pH of the system in August 2024 was 8.73 and slightly above the upper limit of 8.5. The pH for the subsequent months September and October was within the discharge permit range.

Laboratory analytical results for the remaining target compounds were within the NYSDEC SPDES Permit equivalent requirements. Please refer to Table XI, XII, and XIII on the following pages for tabulated analytical data for Effluent Limits and Monitoring Requirements results. SPDES equivalent analytical results are provided in Appendix F.

7.0 CONCLUSIONS

The quarterly monitoring report covers the period between August 1, 2024 through October 31, 2024. This report covers the operational status of the groundwater treatment and extraction system, the groundwater monitoring event on October 29, 2024, and the SPDES sampling events.

Based on the work conducted to date, ***Laurel*** has determined the following:

- Groundwater samples were collected from sixteen (16) groundwater monitoring wells on October 29, 2024, as a quarterly groundwater sampling event. The samples were submitted to York Analytical Laboratories in Stratford, CT for VOC analysis. In keeping with past results, the analysis found elevated levels of chlorinated solvents present in groundwater monitoring wells screened in the 10 to 15 feet bgs interval (2010-01D, 2010-02D, 2010-03D, and 2010-04D).
- Groundwater elevations in the 100-foot groundwater monitoring wells generally decrease in the four (4) wells from southwest to east, with groundwater flow towards the northeast.
- Groundwater elevations in the 70-foot groundwater monitoring wells generally decrease from north to south, with groundwater flow towards the northeast.
- Groundwater elevations in the 50-foot groundwater monitoring wells generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.
- Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the October 2024 sampling event was towards the south with a localized depression around the sump.
- The bag filter becomes clogged after roughly 14 days of service and contributes to loss of hydraulic control. ***Laurel*** continues to change the bag filter on a bi-weekly basis and as-needed.
- Hydraulic control lessens if the sump pumps turn off for one day or longer.
- Air stripper tower trays are worn down and have exceeded their service life.

8.0 RECOMMENDATIONS

Laurel recommends the following:

- Action should be considered to ensure the sump pumps do not regularly turn off for one day or longer. More specifically, installation of a secondary deeper sump to increase groundwater capture and treatment of chlorinated solvents and prevent CVOCs from migrating to off-site wells should be considered.
- Continue on-going maintenance of the GWET system; change bag filter bi-weekly; and replace and/or repair system components as needed to assure ongoing operation. Three of the five air stripper tower trays should be replaced.
- Continue to evaluate data from data loggers periodically.
- Continue to monitor system operations and perform routine maintenance, consisting of cleaning the stripper tower after every 4 to 6 months of operation, when the observed flow rate drops by more than 25%, or effluent sample concentrations exceeds the NYSDEC SPDES permit equivalent discharge limits.
- Continue to monitor the pH adjustment system to control pH level and reduce potential fouling of the stripper tower.
- Continue quarterly groundwater monitoring and sampling of the monitoring well network for the presence of VOCs.
- Submit a quarterly status report that documents field observations, system operational status, with current and historical groundwater analytical data.
- Utilize the carbon treatment system if needed (at stripper tower maintenance intervals which occur when under 25% efficiency) to maintain VOC concentrations within SPDES permit equivalent discharge limits.

RE: Groundwater Telemetry Study – Initial Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells. ***Laurel*** generated a set of groundwater contour maps over a three-week timeframe using the data collected from the loggers that show groundwater flow conditions. The groundwater contour maps are attached as Figures 2.0 through 13.0.

Laurel observed that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Figure 12.0 represents groundwater conditions, approximately eighteen (18) days after the bag filter had been replaced.

Based on these findings, ***Laurel*** recommends scheduling a bag filter change every fourteen (14) days to better maintain hydraulic control at the Site. Now that we have increased the interval of bag filter changes based on this data, ***Laurel*** will download the datalogger data during the next round of groundwater monitoring, scheduled to take place the week of July 24th. We will review

this data and look closely at the effects of pumping on the groundwater gradient and will produce updated maps and a summary letter.

Additionally, we noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect and the groundwater elevation is not representative of the Site. We plan to move the datalogger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.

RE: Groundwater Telemetry Study – Second Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells.

In June 2023, ***Laurel*** observed that bag filter conditions associated with the on-Site system appear to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Once the bag filter is changed, hydraulic control is regained at the Site.

For this second review of data, ***Laurel*** generated a set of groundwater contour maps over an eight day timeframe using the data collected from the loggers at the end of July 2023. The groundwater contour maps are attached as Figures 2.0 through 6.0. The purpose of this study was to determine the effect that the sump pumps have on hydraulic control of the Site when they are offline for an extended period of time. The sump pumps at the Site are designed to create a localized depression near the system to avoid groundwater leaving the Site. This study collected groundwater elevations during the following five instances:

- The pumps at the Site initially turned off (Figure 2.0);
- The pumps at the Site offline for one day (Figure 3.0);
- The pumps at the Site offline for three days (Figure 4.0);
- The pumps at the Site initially turned online (Figure 5.0); and
- The pumps at the Site online for three consecutive days (Figure 6.0).

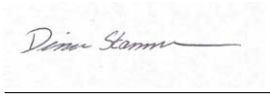

Figure 2.0 represents groundwater elevation when the sump pumps had initially gone offline and shows hydraulic control at the Site, as the pumps had been running regularly leading up to the pumps turning off. The day after the pumps go offline (Figure 3.0), hydraulic control at the Site is lost and groundwater is observed to be flowing southward and off the Site. Hydraulic control is not regained until the pumps resumed operation and continued to run for 3 days (Figure 6.0), and the localized depression around the sump returned.

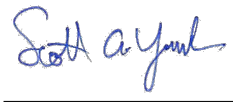
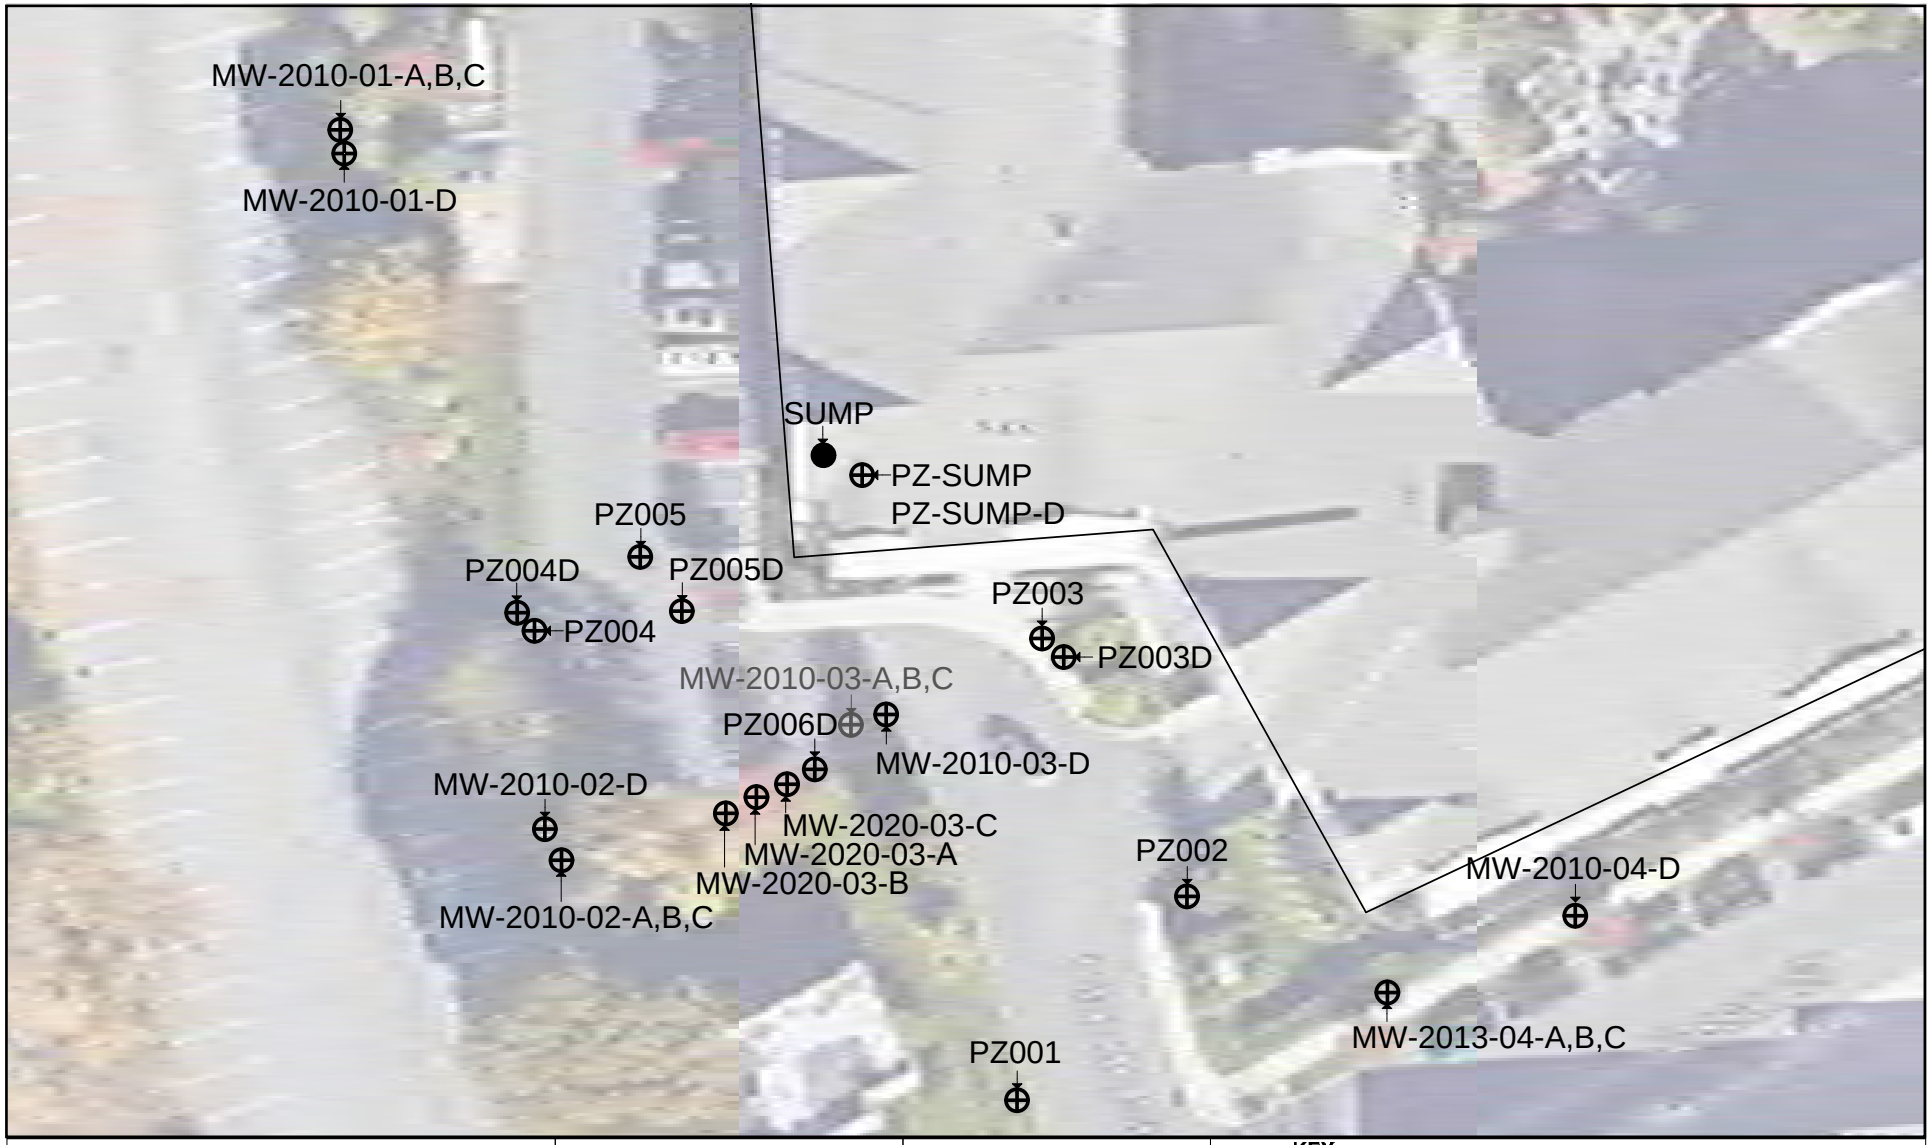
Based on these findings, ***Laurel*** recommends deepening the sump to ensure that the sump has sufficient water to keep the sump pumps running. Deepening the sump would increase the amount of water the sump pumps would be required to remove, reducing the frequency that the sump pumps would turn off. This would also ensure that during times of drought and diminished ground water elevation, that the sump pumps would remain running and maintain hydraulic control at the Site.



Additionally***, Laurel*** noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect during rain events, and the groundwater elevation is not representative of the Site. In July 2023, ***Laurel*** moved the data logger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. Due to the short time interval between the moving of the data logger and the data relevant to the study, data collected from the 2010-01D data logger was not used in this study. ***Laurel*** plans on using the data from the datalogger in upcoming investigations. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.



Environmental Scientist III
Project Manager
Mrs. Dina Stammers

Scott A. Yanuck, P.G. President

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 30, 2024 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24J1930

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 30, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY - 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24J1950-01	System Effluent	Vapor Extraction	10/29/2024	10/30/2024

General Notes for York Project (SDG) No.: 24J1950

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.

TO-CCV The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).

Definitions and Other Explanations

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

TRIP BLANK	24J1930-19	WATER

Notes:

GW – Groundwater
NA – Not Analyzed
PFAS – Polyfluoroalkyl Substances
VOCs – Volatile Organic Compounds
SVOCs – Semi-Volatile Organic Compounds
Herbs – Herbicides
PCBs – Polychlorinated Biphenyls
Pest - Pesticides
LCS – Lab Control Sample
LCSD – Lab Control Sample Duplicate

Notes Regarding Qualifiers:

The following Qualifiers are used in the lab report:

1. **U** – It is assumed that the definition is "Indicates the compound was analyzed for but not detected".
2. **D** – It is assumed that the definition indicates that the sample was "diluted".

York Analytical Laboratories Inc. – Definitions and Acronyms – please refer to laboratory report, page 120QA , for a complete list.

The data package was evaluated as per:

- New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) 10/Technical Guidance for Site Investigation and Remediation – May 3, 2010, Appendix 2B – Guidance for the Development of DUSRs.
- United States Environmental Protection Agency (USEPA) Laboratory Contract Program.

The Data Usability Summary follows for each sample.

EPA 8260D – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. Form I – METHOD BLANK DATA SHEET - EPA 8260D
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BJ42080-BLK1, BK40045-BLK1, BK40147-BLK1
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
    c. Data is Acceptable.

4. Form I – Organic Analysis Data Sheet – EPA 8260D
    a. GROUNDWATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2010-3A, MW-2010-3B, MW-2010-3C, MW-2010-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2013-04D, System Influent, DUP, Trip Blank
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
        iv. QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
        v. ICVE – The value reported is ESTIMATED.
        vi. CCVE - The value reported is ESTIMATED.
        vii. CAL- E - The value reported is ESTIMATED.
        viii. D – Assumed to mean “Dilution”, however, there is no definition for this qualifier.
    b. Dilutions:
        i. MW-2010-01D had a 10X Dilution.
        ii. MW-2010-02D had a 25X Dilution.
        iii. MW-2010-03D had a 25X Dilution.

iv. MW-2010-03D had a 100X Dilution.
v. System Influent had a 25X Dilution.

c. Reviewed Quantitation Reports for each sample.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

a. Yes, all the QC Data falls within the protocol required limits and specifications.

b. Form II – Surrogate Standard Recovery and RT Summary
   i. Qualifiers used:
      1. None.
      2. Data reviewed.
   ii. No exceptions noted - Acceptable.

c. Form III – LCS/LCS Duplicate Recovery
   i. Laboratory ID: BJ42080-BS1
      1. Seven (7) values outside of QC limits.
      2. No Exceptions noted – Acceptable.
   ii. Laboratory ID: BJ42080-BSD1
      1. Six (6) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   iii. Laboratory ID: BK40045-BS1
      1. Eight (8) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   iv. Laboratory ID: BK40045-BSD1
      1. Eight (8) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   v. Laboratory ID: BK40147-BS1
      1. Thirteen (13) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   vi. Laboratory ID: BK40147-BSD1
      1. Thirteen (13) values outside of QC limits.
      2. No exceptions noted – Acceptable.

d. Form IV – Preparation Batch Summary
   i. Observations Noted.
   ii. No Exceptions Noted – Acceptable.

e. Form V – Mass Spectrometer Instrument Performance Check
   i. Lab Sample ID: 24J2935-TUN1 – PASS
   ii. Lab Sample ID: 24J3148-TUN1 – PASS
   iii. Lab Sample ID: 24K0109-TUN1 – PASS

iv. Lab Sample ID: 24K0409-TUN1 – PASS
v. No exceptions noted – Acceptable.

f. Form V – Analysis Batch (Sequence) Summary
   i. No exceptions noted - Acceptable.

g. Form VI – Initial Calibration Data
   i. Calibration: SJ40053 – exceeded method guidelines.
   ii. Reviewed Quantitation Report.
   iii. No exceptions noted – Acceptable.

h. Second-Source Calibration Verification
   i. Laboratory ID: S4J2935-SCV1
      1. Ten (10) values found outside of QC limits.
      2. Data is acceptable.
      3. Reviewed Quantitation Report.

i. Form VII – Continuing Calibration Check
   i. Lab Sample ID: S4J3148-CCV1
      1. Ten (10) values found outside of QC limits.
      2. Data is acceptable.
   ii. Lab Sample ID: S4K0109-CCV1
      1. Six (6) values found outside of QC limits.
      2. Data is acceptable.
   iii. Lab Sample ID: S4K0409-CCV1
      1. Five (5) values found outside of QC limits.
      2. Data is acceptable.

j. Form VIII – Internal Standard Area and Retention Time Summary
   i. All samples met internal standard area and retention time criteria. No exceptions noted.
   ii. Acceptable.

6. Have all the data been generated using established and agreed upon analytical protocols?

   a. Yes, all the data has been generated using established and agreed upon analytical protocols.

7. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.

i. Reviewed VOA Raw QC Data.
ii. Reviewed Method Blank Raw Data.
iii. Reviewed LCS Raw Data.
iv. Reviewed Benchsheets.

8. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?
    a. Yes, the correct data qualifiers have been used. Any inconsistencies have been documented in the beginning of the report.

9. Have any quality control (QC) exceedances been specifically noted in the DUSR?
    a. The Quality Control data has been checked; any exceedances have been noted.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 04, 2024 and listed below. The project was identified as your project: **12-190 80 Banks**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24I0156-01	System Effluent	Ground Water	08/28/2024	09/04/2024

General Notes for York Project (SDG) No.: 24I0156

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

24I0156-01	System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-PR	Sample was prepared outside of the recommended holding time.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Attention: Scott Yanuck

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 24, 2024 and listed below. The project was identified as your project: **80 Banks Ave 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24I1401-01	System Effluent	Ground Water	09/23/2024	09/24/2024

General Notes for York Project (SDG) No.: 24I1401

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 30, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24J1928-01	System Effluent	Waste Water	10/29/2024	10/30/2024

General Notes for York Project (SDG) No.: 24J1928

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

24J1928-01	System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

ENVIRONMENTAL PROFESSIONAL CERTIFICATION

I declare that, to the best of my professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 of 40 Code of Federal Regulations (CFR) 312.

The Environmental Professional who directed this project has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site.

1.0 INTRODUCTION

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared this quarterly site operation maintenance and monitoring report on behalf of Avalon Bay Communities Inc. (Avalon Bay). This report documents the operational status of the groundwater extraction and treatment system during the reporting period and provides the current groundwater quality and volatile organic compound (VOC) concentrations in groundwater. This work is being performed under the NYSDEC Brownfield Cleanup Program, Site ID #C130140 located at 80-100 Banks Avenue, Rockville Centre, New York (Section 38, Block 539, Lots 27 and 30; the Site). The Site is a 7.1-acre parcel that has been re-developed with multiple story residential apartment buildings. The Site is located at the northwest corner of the intersection of Nassau Street and Banks Avenue.

2.0 SCOPE OF WORK

Laurel conducted a system-wide inspection that included checking the operation of the groundwater extraction and treatment system components, performing necessary repairs, and the collection of groundwater samples.

Laurel completed the following required tasks:

1. Inspected the groundwater extraction and treatment system on a monthly basis. This inspection included the evaluation of exposed piping for evidence of leaks. Checked all pressure gauges and flow meters for operational status and checked all valves for functionality.

2. Gauged groundwater levels in the sixteen (16) on-site monitoring wells, calculated standing water volumes, and purged a minimum of three well volumes from each well when possible. Groundwater quality readings were collected and recorded prior to the collection of each sample when possible. Samples were submitted to a NYSDOH Certified Laboratory for analysis using USEPA Method 8260 to test for VOCs. In addition to the well samples, one (1) duplicate and one (1) trip blank sample were submitted for laboratory analysis.

3. Utilized a 6-Liter Summa canister to collect one (1) air stripper tower effluent air sample. The collected sample was analyzed for VOCs utilizing EPA Method TO-15.

4. Gauged groundwater levels in the ten (10) on-site piezometric wells, and the storm water management sump.

5. Collected monthly system effluent groundwater samples in accordance with the State Pollution Discharge Elimination System (SPDES) Permit equivalent. The samples were submitted to a NYSDOH Certified Laboratory for analysis of select volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals in accordance with the NYSDEC SPDES Permit equivalent.

6. Collected continuous groundwater elevation data from six (6) shallow groundwater monitoring points to evaluate groundwater flow beneath the Site utilizing on-Site groundwater data logger.

7. Changed the bag filter when the filter becomes clogged, which is roughly every two weeks.

All sampling equipment not considered disposable were decontaminated using *Alconox*, a laboratory grade

detergent and standard potable water before and after each use to ensure that cross-contamination of samples was eliminated.

3.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM

The groundwater extraction and treatment (GWET) system was designed to establish and maintain hydraulic control of the shallow groundwater on-site, thereby preventing impacted groundwater from migrating off-site. **Section 3.1** provides a brief summary of the system components as they were originally designed and installed as well as modifications that were made to the system to improve its operational performance. A detailed description of the original designed and installed GWET system can be found in the Groundwater Extraction and Treatment System, System Start-up Report, prepared and submitted by P.W. Grosser Consulting Inc. (PWGC), dated February 2012. **Section 3.2** provides a brief summary of the SSWMS components and their operation. **Sections 3.3** and **3.4** describe the installation and operation of the pH adjustment system, and carbon treatment system, respectively. **Section 3.5** discusses past groundwater flow studies. **Section 3.6** describes repairs to piping associated with the GWET system.

3.1 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM COMPONENTS

The GWET system contains the following components:

- Three (3) shallow groundwater recovery wells and submersible pumps
- Three (3) pre-treatment bag filters (in parallel)
- One (1) shallow tray air stripper with blower
- Two (2) acid metering pumps
- Five (5) 55-gallon activated carbon liquid treatment drums

3.1.1 Groundwater Recovery Wells

The three (3) shallow groundwater recovery wells were installed to capture the groundwater above a clay layer encountered on-site, at a depth of approximately 12-15-feet below ground surface (bgs). The three (3) recovery wells were designed to each have an operational flow rate of approximately 5 gallons per minute (gpm) producing a 0.1 ft drawdown at a radius of 340 feet when in operation. The groundwater recovery well pumps were not in operation during the reporting period, given the previously approved use of an on-site groundwater collection sump located beneath the floor of the parking garage within the identified treatment area, further discussed in the following section. The shallow groundwater recovery wells are still present and can be brought on-line if required.

3.1.2 Groundwater Extraction and Treatment System (GWET)

When the recovery wells are in operation, potentially impacted groundwater is piped from the recovery wells to the GWET system, where groundwater is treated utilizing an air stripping method. The treated groundwater is collected in an equalization tank at the base of the air stripper, the treated liquid then flows into the municipal storm water system. The groundwater recovery well pumps have been off-line as an active portion of the GWET since the groundwater flow study was performed in September 2019. These wells have remained off-line and, as discussed before, the Sub-Slab Water Management System (SSWMS) collection sump has been utilized to prevent the migration of contaminants off site.

3.2 SUB-SLAB WATER MANAGEMENT SYSTEM COMPONENTS

The SSWMS contains the following components:

- A subgrade water infiltration gallery and collection sump
- Two (2) submersible sump pumps
- One (1) pre-treatment bag filter located between the submersible pumps and piped to the shallow tray air stripper tower.

3.2.1 Sub-Slab Water Management System

Due to the shallow groundwater table and the partially sub-grade parking garage in the south building, parts of the garage had been experiencing flooding during times of heavy rainfall. To address this situation, a French drain system and sump were installed in the southwestern portion of the parking garage of the south building. The sump contains two (2) submersible sump pumps, which are tied into the GWET system between the bag filters and the stripper tower. The volume of water passing through the stripper tower is increased by this sub-slab water management system. In addition to the incorporation of the sub-slab water management system to the GWET system, several modifications were made, which included the addition of a liquid bypass to the transfer pump system and its associated piping[1]. The piping at the base of the stripper was formerly a two (2)-inch diameter pipe that utilized the transfer pump to push the liquid into the storm water sewer system. The two (2)-inch diameter pipe was replaced with a three (3)-inch diameter pipe, that allows the system to operate as a gravity feed system to the municipal storm sewer system. This change allows for a continuously higher volume flow through the stripper tower and into the storm sewer system. The SSWMS has the potential to add a maximum of 30 gallons of water per minute to the stripper tower. The SPDES permit equivalent was previously amended to reflect this change in flow rate.

[1] The liquid bypass is an extra treatment measure to be implemented if CVOCs in the effluent are not meeting discharge levels, the liquid can be pumped through drums of carbon filters prior to discharge.

3.3 pH Adjustment System

Elevated pH in groundwater pumped at the Site has been a longstanding issue with respect to meeting the requirements of the SPDES permit equivalent, which has been addressed with the addition of a pH reduction system. The elevated pH of the groundwater has been accompanied by scaling in the GWET system. In order to reduce the pH of groundwater entering the GWET system, ***Laurel*** obtained approval from the NYSDEC on July 23, 2019, and completed the installation of a pH adjustment system, which also aids in the reduction of scaling in the air stripper. The pH adjustment system is comprised of a 60-gallon sulfuric acid storage tank and metering pumps that inject acid into the groundwater entering the GWET system. The first metering pump is controlled by a pH sensor and programmable controller and supplies acid to the sub-slab sump influent. The second metering pump, also controlled by a pH sensor and programmable controller, is capable of supplying acid to an inline mixer at the entry point to the air stripper, where groundwater from the recovery wells and sub-slab sump combine prior to entering the air stripper. The pH adjustment system is programmed to maintain the pH of groundwater effluent within the SPDES permit equivalent pH limits of 6.5 to 8.5.

On September 10, 2019, through November 6, 2019, ***Laurel*** installed and calibrated the pH adjustment system. After the initial installation, the pH adjustment system was tested periodically to verify the acid was successfully neutralizing the groundwater influent from the recovery wells and sub-slab sump. During the testing of the pH adjustment system, the pH of groundwater was monitored to prevent over-acidification of the system effluent. After equilibrating the acid system, the system became fully operational on November 6, 2019. Acid consumption is approximately 1.5 gallons per day using 96% sulfuric acid.

3.4 Carbon Treatment System

The GWET system's air stripper has historically encountered scaling issues, which reduce the GWET system's effectiveness in reducing chemicals of concern (COC). To prevent occasional SPDES permit exceedances, ***Laurel*** installed a carbon treatment system that is used to further treat groundwater effluent when the GWET system's air stripper is not effectively reducing COCs. The carbon treatment system's design consists of a sump pump connected directly to the air stripper, which pumps groundwater from the air stripper through five (5) drums of activated carbon prior to discharge.

The carbon treatment system was not required or utilized during this quarter.

3.5 Groundwater flow Studies

Two (2) groundwater flow studies were previously conducted by EnviroTrac. The first was conducted in 2019, with the data collection portion being performed by PWGC. The second groundwater flow study was solely performed by EnviroTrac in 2020. The 2019 groundwater flow study was conducted to assess groundwater flow within sandy deposits overlying a clay layer located approximately 12 feet bgs. EnviroTrac analyzed the 2019 data which, when plotted on the site map, revealed a consistent groundwater flow direction converging at the SSWMS sump during the study period. Based on results of the study it appears that routine operation of the sump pump produces, on a continuous basis, a sufficient depression in the water table to maintain hydraulic control of the shallow groundwater to the west and southwest sides of the building,

extending to the property boundary. To confirm this, a more extensive groundwater study using the existing piezometers and four (4) additional piezometers was conducted during the second quarter of 2020 by EnviroTrac. The groundwater elevations collected were used to generate groundwater flow maps, which show groundwater flow direction towards the sump during the one-month period.

The adjacent property to the west of the area of concern is a public park. A refurbishing project consisting of the installation of a flood wall along the boundaries of the park and the former Darby Drugs Distribution Center site has been completed. This flood wall consists of sheet piles installed to an approximate depth of 15 feet bgs, effectively cutting off shallow groundwater flow along the entire west side of the Site. To determine impact of the new flood wall on groundwater movement below the Site, and what type of impact it may have on the SSWMS sump's ability to maintain hydraulic control across the area of concern, ***Laurel*** and EnviroTrac agreed that an active groundwater elevation and pump monitoring system should be installed to evaluate the impact of the sheet piling/flood wall on groundwater movement through the residual impact zone. The pump current logger and groundwater elevation telemetry was installed in May 2023 and the data was evaluated and discussed below.

In October 2024, ***Laurel*** and Envirotrac collected groundwater elevation data across on-site and off-site monitoring wells to create a regional groundwater flow map. The purpose of creating an updated regional groundwater flow map was to evaluate how the installation of the floodwall has affected groundwater flow at the Site and off-site. A review of the groundwater flow map indicates groundwater flow to the south-southwest, towards Smith Pond and the tributary of East Rockaway Channel with a localized depressurization around the sump in the parking garage.

3.6 GROUNDWATER TELEMETRY

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-6 and PZ-SUMP) at the Site. The data loggers measure changes in pressure in the wells over time and convert the reading into groundwater elevation in each of the wells. The loggers collect data every hour, except for the PZ-SUMP logger which collects data every 15 minutes. Utilizing the data generated from the loggers, ***Laurel*** generated groundwater contour maps. ***Laurel*** interprets these groundwater contour maps to determine what actions, if any, may be required to maintain hydraulic control at the Site and ensure that the remediation system functions as designed. The groundwater contour maps are included in ***Laurel's*** Groundwater Telemetry Study letters issued on August 1 and August 24, 2023, included as Appendix A.

Laurel's findings from the Groundwater Telemetry Study determined that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Note, as a result of this observation, the bag filters are now being changed on a two (2) week bases to eliminate this as a cause for a reduction in hydraulic control. In addition, ***Laurel*** observed when the sump is offline or otherwise not operating for one day or longer, hydraulic control at the Site lessens. Additionally, the data loggers installed on the two (2) pumps, that record pump operational time, show the sump pumps cycle on and off during the course of each day as

needed to keep water in the sump below a set level, pumping on average approximately 50% of the time and run for extended periods during rainfall events.

4.0 GROUNDWATER EXTRACTION AND TREATMENT SYSTEM OPERATIONS

The GWET system at the Site is designed to operate continuously. To evaluate the effectiveness of the GWET system, the Site is monitored by physical site inspections. A liquid effluent sample is collected on a monthly basis to meet the state pollutant discharge elimination system (SPDES) permit equivalent requirement. In addition, liquid influent and air effluent samples are collected from the system on a quarterly basis.

This reporting period is from November 1, 2024, through January 31, 2025, a Site activity log is presented in Table I. During the reporting period, the SSWMS was operating automatically on an as-needed basis throughout the reporting period, controlled by a float switch within the sump. The hours of operation for each extraction well and sump pumps for the SSWMS are presented in Table II. As noted above, a flood wall was installed surrounding Morgan Days Park, which is immediately west of the Site, and the long-term effect of this flood wall on the local groundwater flow is being evaluated.

The SSWMS cycles on and off depending on the water level in the accumulation sump. The sump contains two (2) sump pumps that are activated by float switches. The pumps are sequenced to alternate, so that only one pump will operate at a time, when needed. During the fourth quarter of the 2024 operational year the sump pump meters, which record hours operated, were inoperable in January 2025; however, the total gallons of water pumped in January 2025 was 249,046 gallons. The sump pump meters for November and December 2024 indicated that sump pump 1 and pump 2 operated for an average of 10 and 12 hours per day, respectively. During the reporting period between November 1, 2024, through January 31, 2025, ***Laurel*** field technicians were on site to perform routine maintenance including bag filter changes and acid transfers. When ***Laurel*** was on Site, the field technicians document the sump pump totalizer readings on field forms. Based on the total gallons recorded from the sump pump totalizer between the October 29, 2024 and December 31, 2024 site visits the calculated average pumping rate was 7.0 gallons per minute. The daily run time could not be determined for January 2025 due to equipment malfunction that will be replaced during the next site visit. Any liquid being discharged from the Site is subject to the requirements of the current SPDES permit equivalent that authorizes discharges from April 1, 2022, to March 31, 2027. The pumps run times and total liquids pumped through each portion of the SSWMS and GWET system are recorded during any site visit and during sampling events.

During the 2023 second quarter monitoring period on May 18, 2023, ***Laurel*** installed an amperage meter on the pumps to more accurately understand pump run times. A review of the data from the amperage meter indicates the sump pumps cycle on and off throughout the course of each day and are not continuously running. Under normal conditions, the on-off cycling throughout a 24-hour period is expected; however, there are several factors that contribute to extended periods of on-off cycling of the sump pumps including heavy rain, drought, and rate of pumping. Pump flow rates can fluctuate between 3 GPM to 25 GPM due to particulate buildup inside the bag filters. When the pumps cycle on and off over extended periods of time

(e.g., drought conditions), hydraulic control does not appear to be as well maintained at the Site and the pH adjustment system does not operate as efficiently.

Table I, Site Activities Log

Date	Location	Description
11/12/24	***Laurel on site***	Changed bag filter SSWMS Totalizer Reading was 54,531,879 gallons Pump 1 and 2 run time was 41,144.8 and 43,976.2, respectively
11/26/24	***Laurel on site***	Collected SPDES sample Replaced section of piping between influent sampling port and acid mixer to repair a leak SSWMS Totalizer Reading was 54,634,890 gallons Pump 1 and 2 run time was 41,427.5 and 43,982.7, respectively
12/11/24	***Laurel on site***	Overseeing plumber performing additional piping repairs System is temporarily off for repairs and while pipe glue drys
12/16/24	***Laurel on site***	Restart system after pipe repairs Pump 1 and 2 run time was 41,428.0 and 43,982.7, respectively SSWMS Totalizer Reading was 54,635,582 gallons
12/31/24	***Laurel on site***	Changed bag filter Collected SPDES sample Pump1 and 2 run time was 41,783.8 and 43,982.7, respectively SSWMS Totalizer Reading was 54,801,272 gallons
1/9/25	***Laurel on site***	Changed bag filter Perform an acid transfer Pump 1 and 2 run time was 41,999.8 and 43,982.7, respectively SSWMS Totalizer Reading was 54,898,603
1/28/25	***Laurel on site***	Collected SPDES sample Changed bag filter Pump 1 and 2 run time was unavailable SSWMS Totalizer Reading was 55,050,318

Table II; System Operation Log

Date	**Average monthly GPM**
11/26/24	4.9*
12/31/24	7.8*
1/28/25	6.2

Notes: *Average monthly GPM calculated using totalizer readings recorded during site visits and pump run time
NA = not applicable due to the run time malfunction that will be repaired during the next quarter

5.0 QUARTERLY MONITORING WELL SAMPLING

The monitoring of the ongoing GWET at the Site consists of liquid and air sampling to evaluate the effectiveness of the GWET system, on a quarterly basis. To perform this, the groundwater elevations of all onsite groundwater monitoring wells are gauged and sampled to evaluate the groundwater conditions throughout the Site. When the GWET system is in operation, composite liquid samples are collected from the influent and effluent lines of the GWET system on a quarterly basis to determine the effectiveness of the GWET system, and an effluent air sample is collected from the air discharge line of the air stripper to determine what contaminants are being removed from the groundwater, and their concentrations. As noted, the groundwater recovery wells associated with the GWET system were not in operation during this reporting period due to the use of the SSWMS to maintain hydraulic control of the shallow groundwater on-site. The SSWMS, when in operation, can pump at a rate of approximately 30-GPM. The average pumping rate has been approximately 6.4-GPM based on the total number of gallons pumped between November and December of this reporting period.

5.1 GROUNDWATER MONITORING WELL GAUGING

The groundwater levels were measured in each of the sixteen (16) monitoring wells and the five (5) piezometer wells using a water level meter. The groundwater elevations for the monitoring and piezometer wells are shown on Table III below.

Table III

Groundwater Elevation (ft)	5.53	4.98	4.99	4.42

Groundwater potentiometric maps were generated for each of the well depth ranges, as presented in Figures 3.0 through 6.0, attached.

Groundwater monitoring wells 2010-01A, 2010-02A, 2020-03A-R, and 2013-04A were used to generate a groundwater potentiometric map at a 100-foot depth, attached as Figure 3.0. Groundwater elevations generally decrease in the four (4) wells from southwest to east, with groundwater flow towards the northeast.

Groundwater monitoring wells 2010-01B, 2010-02B, 2020-03B-R, and 2013-04B were used to generate a groundwater potentiometric map at a 70-foot depth, attached as Figure 4.0. Groundwater elevations generally decrease from north to south, with groundwater flow towards the northeast.

Groundwater monitoring wells 2010-01C, 2010-02C, 2020-03C-R, and 2013-04C were used to generate a groundwater potentiometric map at a 50-foot depth, attached as Figure 5.0. Groundwater elevations generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.

Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the January 2025 sampling event was towards the south with a localized depression around the sump.

5.2 GROUNDWATER MONITORING WELL SAMPLING

As part of the Site GWET, quarterly groundwater sampling is performed on the sixteen (16) on-site groundwater monitoring wells. The monitoring wells are grouped into four (4) well clusters, with each cluster including four monitoring wells screened at specific depths. The monitoring wells are designated as such: MW-2010-01A, B, C, and D; MW-2010-02A, B, C, and D; MW-2020-03A, B-R, C-R; MW-2010-03-D; MW- 2013-04 A, B, C; and MW-2010-04D. Wells with an "A" designation are screened from 90 to 100 feet below ground surface (bgs), "B" designation are screened from 60 to 70 feet bgs, "C" designation are

screened from 40 to 50 feet bgs, and "D" designation are screened from 10 to 15 feet bgs. Please refer to Figure 2.0, Monitoring Well Location Map.

Groundwater samples were collected from each of the sixteen (16) groundwater monitoring wells on January 28, 2025. Prior to sampling, each well was gauged utilizing a groundwater level meter for the depth to water below the ground surface. Utilizing a down well submersible electric pump and disposable polyethylene tubing, each of the two-inch diameter wells was purged of a minimum of three (3) well volumes of water. Each one-inch diameter well was purged utilizing a peristaltic pump. The amount of water was determined by measuring the height of the water column within each well and multiplying the water column height by the known volume of water per foot of well. All water removed during the process was disposed of on-site.

Upon completion of purging, groundwater quality data were collected utilizing an YSI 600 XL MP Sonde Multiparameter water quality meter and a Hanna® turbidity meter or similar instruments. Three (3) groundwater quality readings were taken at five-minute intervals from each well. The readings were recorded and evaluated to confirm that the groundwater conditions had stabilized and that a representative groundwater sample was being obtained. Please refer to Appendix B for the groundwater quality data sheets. Each monitoring well sample was collected from dedicated polyethylene tubing connected to a variable speed peristaltic pump set to a low flow operating speed. A whale pump was used for purging deeper 2" diameter wells. Sample bottles were filled directly from dedicated tubing and were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

Samples were transported via laboratory courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for volatile organic compounds (VOCs) utilizing EPA Method 8260. All analytical results were compared to the NYSDEC Class GA Groundwater Quality Standards (AWQS) as provided in the Technical Operation and Guidance Series (TOGS 1.1.1) guidance document dated June 1998 and its addendum dated April 2000. The laboratory analytical results for the groundwater samples collected are presented in the following section.

5.3 GROUNDWATER ANALYTICAL RESULTS

The laboratory analytical results from each of the sixteen (16) groundwater samples, collected from the four (4) well clusters, are presented in Tables IV through VII on the following pages. A copy of the laboratory analytical report is attached as Appendix C.

Groundwater Samples 2010-01A, 2010-02A, 2020-03AR, & 2013-04A – Wells screened 90 to 100 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01A, 2010-02A, and 2020-03AR were below the NYSDEC AWQS. Monitoring well 2020-04A had three (3) VOCs including cis-1,2-dichloroethylene, tetrachloroethene, and trichloroethene detected at concentrations exceeding their respective NYSDEC AWQS.

Groundwater samples 2010-01B, 2010-02B, 2020-03BR, & 2013-04B – Wells Screened 60 to 70 ft bgs

Monitoring well 2010-01B had CVOCs including cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene detected at concentrations above their respective NYSDEC AWQS and several CVOCs detected but at concentrations below their respective NYSDEC AWQS. The analytical results for both cis-1,2-dichloroethene and tetrachloroethene in monitoring well 2010-01B include a qualifier that identified the result is estimated and cannot accurately be reported due to levels encountered or interference. Monitoring well 2020-02B had CVOCs including cis-1,2-dichloroethylene and tetrachloroethene detected at concentrations exceeding their respective NYSDEC AWQS and several CVOCs detected but at concentrations below their respective NYSDEC AWQS. No CVOCs were detected in groundwater monitoring well 2010-03BR. Concentrations of CVOCs detected in groundwater monitoring wells 2010-04B were below the NYSDEC AWQS.

Groundwater samples 2010-01C, 2010-02C, 2020-03CR, & 2013-04C – Wells Screened 40 to 50 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01C and 2013-04C were below the NYSDEC AWQS. No CVOCs were detected in groundwater monitoring well 2010-02C and 2020-03CR.

Groundwater samples 2010-01D, 2010-02D, 2010-3D, & 2010-04D – Wells Screened 10 to 15 ft bgs

Concentrations of CVOCs detected in groundwater monitoring wells 2010-01D and 2010-03D were below the NYSDEC AWQS. Several CVOC concentrations were identified in exceedance of their respective NYSDEC AWQS in monitoring wells 2010-02D and 2010-04D. The highest amount of CVOC concentrations were observed in the 2010-04D. As such, groundwater in the 10 to 15 feet zone remains the interval of groundwater with the highest CVOC impact observed. The analytical results for tetrachloroethene in monitoring wells 2010-02D and 2010-04D include a qualifier that identified the result is estimated and cannot accurately be reported due to levels encountered or interference

5.4 HISTORICAL GROUNDWATER CONCENTRATIONS

The current round of groundwater sampling has been compared with previous rounds of sampling to identify any trends in groundwater quality at the Site and to identify any anomalies in the analytical data. The comparison was made between the total CVOC concentrations in all the wells beginning in October 2011 to the present. The following constituents were tabulated for total CVOC concentrations: 1,1,1-trichloroethane; 1,1-dichloroethane; 1,1-dichloroethylene; carbon tetrachloride; chloroethane; chloroform; chloromethane; cis-1,2-dichloroethylene; dichlorodifluoromethane; methylene chloride; tetrachloroethylene; trans-1,2-dichlorethylene; trichloroethylene; vinyl chloride. A review of the analytical data for the total CVOCs

concentrations for the periods when the system was in full operation under the current and previous SPDES permits equivalent up to the October 2024 sampling event shows results that are relatively consistent with previous monitoring events. In this most recent sampling event of January 2025, an increase in total CVOCs were observed in the upgradient wells and the typical elevated CVOCs that have historically been detected in cluster-02 and -03, were detected in the cluster-04 wells. Based on the majority of elevated analytical results having a qualifier indicating 'the result is estimated and cannot accurately be reported due to levels encountered or interference', these analytical results may erroneous. Please refer to Appendix D for tabulated Historical Total CVOC concentrations.

Concentration graphs for each depth interval. The vertical scale of the graphs for the various monitoring wells have been adjusted to accommodate the maximum concentration detected. Please refer to Graphs 1.0 through 5.0 found at the end of this report.

5.5 GROUNDWATER INFLUENT AND EFFLUENT SAMPLING

To evaluate the effectiveness of the GWET system, influent and effluent samples are collected from the flow stream. The influent and effluent samples are compared to each other to determine the amounts of contaminants of concern (COC) being removed by the GWET system. This sampling also provides a means of monitoring the system's efficiency and determining the scheduling of system maintenance.

On January 28, 2025 ***Laurel*** staff performed quarterly groundwater sampling, including the sampling of the GWET system influent and effluent groundwater. One (1) influent sample and one (1) effluent sample were collected. The influent sample designated "System Influent" was collected from the SSWMS sump influent as a representative of the influent into the GWET system. The Sump Influent sample was collected from the sampling port installed in the system, between the SSWMS and the stripper tower. The groundwater recovery wells were not in operation during the monitoring event, therefore an influent sample from the groundwater recovery wells was not collected.

The effluent sample designated "System Effluent Liquid" was collected through the sampling port installed in the discharge line between the stripper tower and the point at which the discharge line exits the building. The influent and effluent samples were collected directly into laboratory supplied glassware and immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures.

The samples were transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were analyzed for the presence of VOCs utilizing USEPA Method 8260.

The concentrations of VOCs detected in the Sump Influent and System Effluent Liquid groundwater samples were compared to each other and to Class GA Groundwater Quality Standards. Comparison of the groundwater samples showed the air stripper tower is removing contaminants from the groundwater in the GWET system.

Please refer to Table IX on the following page for tabulated analytical data for treatment system influent and effluent results for samples collected during the January 28, 2025, events.

Table IX Treatment System Influent and Effluent Sample Results January 2025 Sampling Events			
Parameter	**System Influent**	**System Effluent Liquid**	**Water Quality Standard**
Cis-1,2-Dichloroethylene	**2.2**	ND	5
Acetone	ND	1.6	50
Chloroform	ND	ND	7
Tetrachloroethylene	0.640	0.27	5
Trans-1,2-Dichloroethylene	ND	ND	5
Trichloroethylene	0.400	ND	5
Vinyl chloride	ND	ND	2
Total CVOCs	3.24	0.27	NS
pH	NA	7.12	NS

All results in µg/l
ND = non-detect. Concentration below laboratory method detection limit.
NA=Data not analyzed
NS=No Standard

5.6 SYSTEM EFFLUENT AIR

The groundwater pump and treat system at the Site includes a shallow tray stripper. The COC are stripped from the liquid as it passes through the system and are volatilized into the air, which is discharged to the atmosphere through the air discharge line that extends above the roof of the Site building. This discharge line is equipped with a sampling port, which allows for monitoring of the effluent air stream.

On January 28, 2025, ***Laurel*** collected an effluent air sample by direct grab. The collected sample was transported via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854) and analyzed for the presence of VOCs utilizing USEPA Method TO-15. The system effluent air sample collected represents the contaminants generated from the stripping of the sub-slab storm water management system liquids.

Laboratory analysis of the sample identified CVOC present in the airstream at concentrations that indicate that the GWET system is operating correctly. Please refer to Table X: Treatment System Air Effluent Sample on the following page.

Table X Treatment System Air Effluent Sample October 29, 2024	
Analytes	**System Effluent**
1,1-Dichloroethylene	ND
2-Butanone	3.4
2,2,4-Trimethylpentane	2.5
Acetone	8.7
Acrylonitrile	ND
Carbon tetrachloride	ND
Chloroethane	ND
Chloroform	ND
Chloromethane	1.8
cis-1,2-Dichloroethylene	49
Dichlorodifluoromethane	2.3
Methylene chloride	ND
Isopropanol	ND
Tetrachloroethylene	490
Toluene	ND
trans-1,2-Dichloroethylene	ND
Trichloroethylene	34
Vinyl Chloride	2.2

All results are in micrograms per cubic meter ($\mu g/m^3$)
* = Detection below the reporting limit but greater than or equal to the method detection limit

5.7 DATA VALIDATION

All groundwater samples collected as part of the quarterly groundwater sampling requirements are analyzed in accordance with EPA Method 8260. An Analytical Service Protocol Category B deliverable data package is provided by the laboratory and submitted to a third-party data validator. A review of the data usability summary report (DUSR) dated March 7, 2025 indicates the data is acceptable and a copy of the DUSR is included as Appendix E.

6.0 STATE POLLUTANT DISCHARGE ELIMINATION SYSTEM

The GWET system is designed to operate 24 hours per day, seven days a week, with minimal shutdown periods for maintenance. The system is designed to pump a total of approximately 15 gallons of water per minute from the SSWMS. Due to the shallow groundwater table at the Site, on-site disposal of remediated groundwater is not possible. Therefore, treated water is discharged into the municipal storm water sewer system. As required by the NYSDEC Division of Water, a state pollutant discharge elimination system

(SPDES) permit equivalent is required. The permit requires monthly sampling of the liquid being discharged to the public sewer system. The SPDES permit equivalent was renewed in March 2022. At the time of the permit renewal in 2017, the additional water generated by the sub-slab pumping system and subsequently discharged to the public sewer system was added to the SPDES permit equivalent.

6.1 SAMPLING AND ANALYSIS

Laurel staff sampled the system effluent, as required by the NYSDEC SPDES Permit equivalent on November 26, December 31, and January 28, 2025. Sample bottles were filled directly from a sampling port installed along the system effluent line. The samples were immediately placed in a cooler maintained at 4ºC, under strict chain of custody procedures. Samples were delivered via courier to York Analytical Laboratories, Inc. located in Stratford, Connecticut (ELAP #10854). The samples were submitted for analysis in accordance with the NYSDEC SPDES Permit equivalent requirements.

Laboratory analytical results for the system effluent samples collected in November, December, and January indicated the following exceedances:

- Copper was detected at a concentration of 132 µg/L, 49.9 µg/L, and 24.6 µg/L in November, December, and January respectively, which exceeded the discharge permit limit of 17 µg/L.

The pH was within the discharge permit range from November through January.

Laboratory analytical results for the remaining target compounds were within the NYSDEC SPDES Permit equivalent requirements. Please refer to Table XI, XII, and XIII on the following pages for tabulated analytical data for Effluent Limits and Monitoring Requirements results. SPDES equivalent analytical results are provided in Appendix F.

7.0 CONCLUSIONS

The quarterly monitoring report covers the period between November 1, 2024 through January 31, 2025. This report covers the operational status of the groundwater treatment and extraction system, the groundwater monitoring event on January 28, 2024, and the SPDES sampling events.

Based on the work conducted to date, ***Laurel*** has determined the following:

- Groundwater samples were collected from sixteen (16) groundwater monitoring wells on January 28, 2025, as a quarterly groundwater sampling event. The samples were submitted to York Analytical Laboratories in Stratford, CT for VOC analysis. In keeping with past results, the analysis found elevated levels of chlorinated solvents present in groundwater monitoring wells screened in the 10 to 15 feet bgs interval (2010-02D and 2010-04D).
    - An increase in chlorinated solvents was observed in the cluster-01 well screened from 60 to 70 feet bgs interval (2010-01-B); however, the elevated results were flagged with a qualifier indicating 'result is estimated and cannot be accurately reported due to levels encountered or interferences'.
    - A decrease in chlorinated solvents was observed in the 10 to 15 feet bgs interval (2010-02 and 2010-03D).
- Groundwater elevations in the 100-foot groundwater monitoring wells generally decrease in the four (4) wells from southwest to east, with groundwater flow towards the northeast.
- Groundwater elevations in the 70-foot groundwater monitoring wells generally decrease from north to south, with groundwater flow towards the northeast.
- Groundwater elevations in the 50-foot groundwater monitoring wells generally decrease in the three (3) wells from north to south, groundwater flow generally towards the southwest.
- Groundwater monitoring wells 2010-01D, 2010-02D, 2010-03D, 2010-04D, and piezometer wells PZ-1 through PZ-5, and PZ-Sump were used to generate a groundwater potentiometric map at shallow depths between 12 feet and 15 feet, attached as Figure 6.0. The overall groundwater flow direction at the time of the January 2025 sampling event was towards the south with a localized depression around the sump.
- The bag filter becomes clogged after roughly 14 days of service and contributes to a lessening of hydraulic control. Accordingly, ***Laurel*** continues to change the bag filter on a bi-weekly basis and/or as-needed.
- Hydraulic control lessens if the sump pumps turn off for one day or longer.
- Air stripper tower trays are worn down and have exceeded their service life.

8.0 RECOMMENDATIONS

Laurel recommends the following:

- Action should be taken to ensure the sump pumps do not turn off for one day or longer.
- Explore the possibility of installing of a secondary deeper sump to increase groundwater capture and treatment of chlorinated solvents and prevent CVOCs from migrating to off-site wells.
- Continue on-going maintenance of the GWET system; change bag filter bi-weekly; and replace and/or repair system components as needed to assure ongoing operation. Three of the five air stripper tower trays should be replaced.
- Continue to evaluate data from data loggers periodically.
- Continue to monitor system operations and perform routine maintenance, consisting of cleaning the stripper tower after every 4 to 6 months of operation, when the observed flow rate drops by more than 25%, or effluent sample concentrations exceeds the NYSDEC SPDES permit equivalent discharge limits.
- Continue to monitor the pH adjustment system to control pH level and reduce potential fouling of the stripper tower.
- Continue quarterly groundwater monitoring and sampling of the monitoring well network for the presence of VOCs.
    - The change in analytical results from this quarter appears to be an anomaly based on the laboratory qualifier associated with a majority of the elevated CVOCs and continued quarterly sampling should be conducted to assess the observed change in analytical data.
- Submit a quarterly status report that documents field observations, system operational status, with current and historical groundwater analytical data.
- Utilize the carbon treatment system if needed (at stripper tower maintenance intervals which occur when under 25% efficiency) to maintain VOC concentrations within SPDES permit equivalent discharge limits.

RE: Groundwater Telemetry Study – Initial Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells. ***Laurel*** generated a set of groundwater contour maps over a three-week timeframe using the data collected from the loggers that show groundwater flow conditions. The groundwater contour maps are attached as Figures 2.0 through 13.0.

Laurel observed that the bag filter conditions associated with the on-Site system appears to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Two days following the bag filter change, a localized depression formed at the sump, which resulted in groundwater flowing towards the sump and confirmed hydraulic control of the Site. Over time as the bag filter becomes clogged, the system appears to lose efficiency and hydraulic control begins to lessen. Figure 12.0 represents groundwater conditions, approximately eighteen (18) days after the bag filter had been replaced.

Based on these findings, ***Laurel*** recommends scheduling a bag filter change every fourteen (14) days to better maintain hydraulic control at the Site. Now that we have increased the interval of bag filter changes based on this data, ***Laurel*** will download the datalogger data during the next round of groundwater monitoring, scheduled to take place the week of July 24th. We will review

this data and look closely at the effects of pumping on the groundwater gradient and will produce updated maps and a summary letter.

Additionally, we noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect and the groundwater elevation is not representative of the Site. We plan to move the datalogger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.

RE: Groundwater Telemetry Study – Second Review
80 Banks Avenue, Rockville Centre
Laurel Project # 12-190

Dear Mr. Gibbons,

Laurel Environmental Geosciences, D.P.C. (Laurel) has prepared a Groundwater Telemetry Summary letter regarding ongoing monitoring of the groundwater flow conditions associated with 80 Banks Avenue in Rockville Centre, New York (the Site). The purpose of this study is to determine groundwater flow direction and evaluate hydraulic control of groundwater beneath the Site overtime, including whether additional actions may be necessary.

In May 2023, ***Laurel*** deployed a set of data loggers in the existing shallow piezometer wells (PZ-1 through PZ-5 and PZ-SUMP) at the Site. The data loggers measure groundwater elevations in each of the wells.

In June 2023, ***Laurel*** observed that bag filter conditions associated with the on-Site system appear to influence hydraulic control at the Site. When the bag filter becomes clogged, hydraulic control of groundwater at the Site appears to diminish. Once the bag filter is changed, hydraulic control is regained at the Site.

For this second review of data, ***Laurel*** generated a set of groundwater contour maps over an eight day timeframe using the data collected from the loggers at the end of July 2023. The groundwater contour maps are attached as Figures 2.0 through 6.0. The purpose of this study was to determine the effect that the sump pumps have on hydraulic control of the Site when they are offline for an extended period of time. The sump pumps at the Site are designed to create a localized depression near the system to avoid groundwater leaving the Site. This study collected groundwater elevations during the following five instances:

- The pumps at the Site initially turned off (Figure 2.0);
- The pumps at the Site offline for one day (Figure 3.0);
- The pumps at the Site offline for three days (Figure 4.0);
- The pumps at the Site initially turned online (Figure 5.0); and
- The pumps at the Site online for three consecutive days (Figure 6.0).

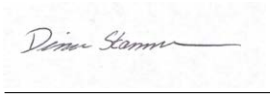

Figure 2.0 represents groundwater elevation when the sump pumps had initially gone offline and shows hydraulic control at the Site, as the pumps had been running regularly leading up to the pumps turning off. The day after the pumps go offline (Figure 3.0), hydraulic control at the Site is lost and groundwater is observed to be flowing southward and off the Site. Hydraulic control is not regained until the pumps resumed operation and continued to run for 3 days (Figure 6.0), and the localized depression around the sump returned.

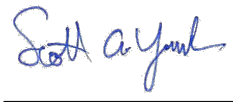
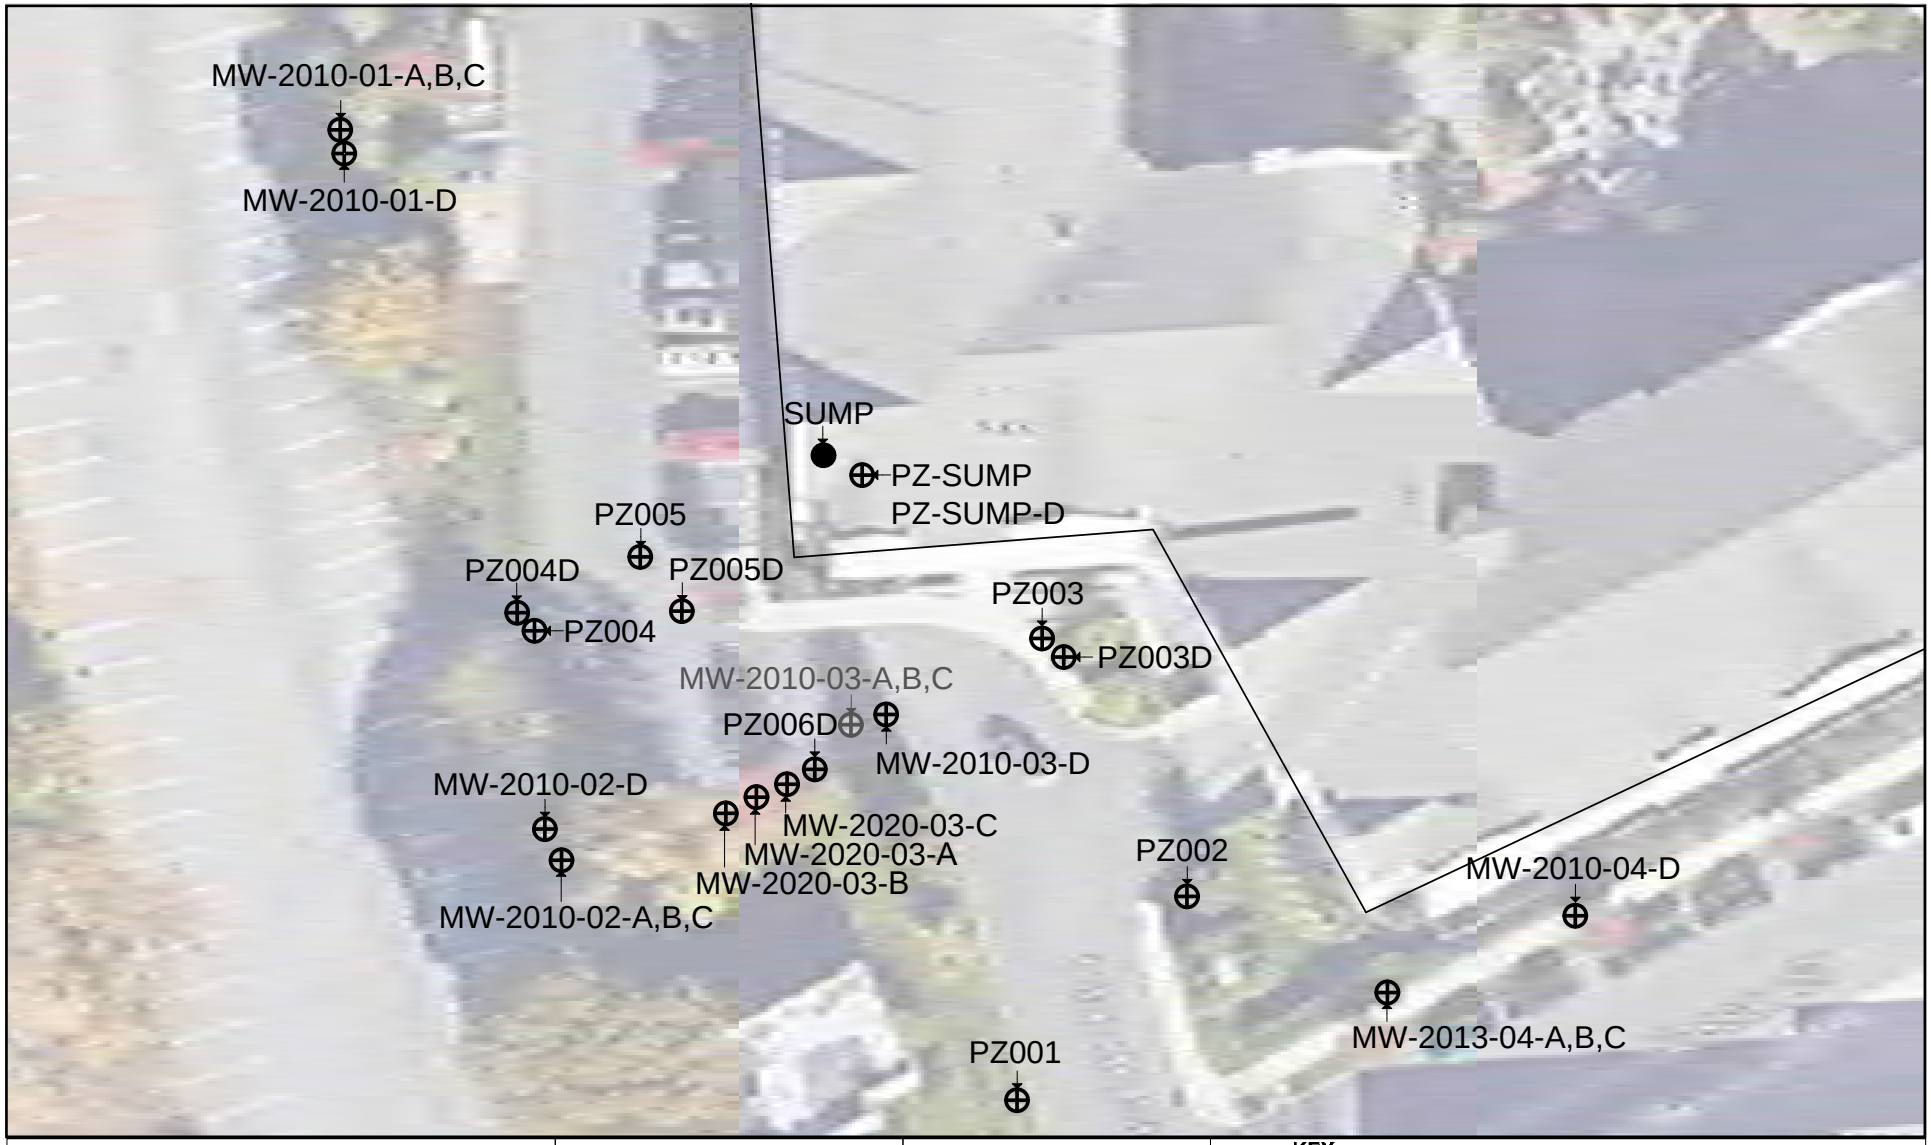
Based on these findings, ***Laurel*** recommends deepening the sump to ensure that the sump has sufficient water to keep the sump pumps running. Deepening the sump would increase the amount of water the sump pumps would be required to remove, reducing the frequency that the sump pumps would turn off. This would also ensure that during times of drought and diminished ground water elevation, that the sump pumps would remain running and maintain hydraulic control at the Site.



Additionally***, Laurel*** noticed that PZ-5 is in a drainage area that receives water from the drainage galleries that causes a temporary mounding effect during rain events, and the groundwater elevation is not representative of the Site. In July 2023, ***Laurel*** moved the data logger from PZ-5 to 2010-01D to get better coverage across a wider area of the Site. Due to the short time interval between the moving of the data logger and the data relevant to the study, data collected from the 2010-01D data logger was not used in this study. ***Laurel*** plans on using the data from the datalogger in upcoming investigations. ***Laurel*** will continue to monitor groundwater conditions at the Site and provide updates as appropriate.

Please contact me if you have any questions or require additional information.

Respectfully Submitted,
Laurel Environmental Geosciences, DPC.



Environmental Scientist III
Project Manager
Mrs. Dina Stammers

Scott A. Yanuck, P.G. President

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 29, 2025 and listed below. The project was identified as your project: **80 Banks Ave Rockville Center, NY, 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25A1615

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 29, 2025 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25A1644

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Data Usability Summary Report Introduction & Notes

Site: 80 Banks Ave, Rockville Centre, NY
Laboratory: York Analytical Laboratories Inc
Sample Collection Date: January 28, 2025
York Project (SDG) No. 25A1644

Sample Identification:

CLIENT SAMPLE ID	LAB ID	MATRIX	VOCs 8260D
MW-2010-01A	25A1644-01	Ground Water	X
MW-2010-01B	25A1644-02	Ground Water	X
MW-2010-01C	25A1644-03	Ground Water	X
MW-2010-01D	25A1644-04	Ground Water	X
MW-2010-02A	25A1644-05	Ground Water	X
MW-2010-02B	25A1644-06	Ground Water	X
MW-2010-02C	25A1644-07	Ground Water	X
MW-2010-02D	25A1644-08	Ground Water	X
MW-2020-03A	25A1644-09	Ground Water	X
MW-2020-03B	25A1644-10	Ground Water	X
MW-2020-03C	25A1644-11	Ground Water	X
MW-2010-03D	25A1644-12	Ground Water	X
MW-2013-04A	25A1644-13	Ground Water	X
MW-2013-04B	25A1644-14	Ground Water	X
MW-2013-04C	25A1644-15	Ground Water	X
MW-2010-04D	25A1644-16	Ground Water	X
DUP	25A1644-17	Ground Water	X
System Influent	25A1644-18	Ground Water	X
Trip Blank	25A1644-19	WATER	X

Notes:

GW – Groundwater
NA – Not Analyzed

PFAS – Polyfluoroalkyl Substances
VOCs – Volatile Organic Compounds
SVOCs – Semi-Volatile Organic Compounds
Herbs – Herbicides
PCBs – Polychlorinated Biphenyls
Pest - Pesticides
LCS – Lab Control Sample
LCSD – Lab Control Sample Duplicate

Notes Regarding Qualifiers:

The following Qualifiers are used in the lab report, however there is no definition provided for these:

1. **U** – It is assumed that the definition is "Indicates the compound was analyzed for but not detected".
2. **D** – It is assumed that the definition indicates that the sample was "diluted".

York Analytical Laboratories Inc. – Definitions and Acronyms – please refer to laboratory report, page 119, for a complete list.

The data package was evaluated as per:

- New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) 10/Technical Guidance for Site Investigation and Remediation – May 3, 2010, Appendix 2B – Guidance for the Development of DUSRs.
- United States Environmental Protection Agency (USEPA) Laboratory Contract Program.

The Data Usability Summary follows for each sample.

EPA 8260D – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. **Form I – METHOD BLANK DATA SHEET - EPA 8260D**
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BA51804-BLK1, BA51805-BLK1, BA51853-BLK1, BA51855-BLK1, BA51882-BLK1, BA51883-BLK1
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
    c. Data is Acceptable.

4. **Form I – Organic Analysis Data Sheet – EPA 8260D**
    a. GROUNDWATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2020-3A, MW-2020-3B, MW-2020-3C, MW-2020-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2013-04D, DUP, System Influent, Trip Blank
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
        iv. QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
        v. ICVE – The value reported is ESTIMATED.
        vi. CCVE - The value reported is ESTIMATED.
        vii. CAL- E - The value reported is ESTIMATED.
        viii. B – Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
            1. Noted on MW-2010-02D, MW-2020-03A, MW-2020-03B, MW-2020-03C for Naphthalene.
            2. Noted on MW-2010-04D for 1,2,4-Trichlorobenzene

ix. D – Assumed to mean "Dilution", however, there is no definition for this qualifier.

b. Dilutions:
   i. MW-2010-01B had a 25X Dilution.
   ii. MW-2010-02D had a 10X Dilution.
   iii. MW-2013-04A had a 5X Dilution.
   iv. MW-2010-04D had a 50X Dilution.

c. Reviewed Quantitation Reports for each sample, checked qualifiers found out of range and peaks.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

   a. Yes, all the QC Data falls within the protocol required limits and specifications.

6. **Form II – Surrogate Standard Recovery and RT Summary**
   i. Values found within %Recovery Limits with the exception of SURR: Toluene-d8 and SURR: p-Bromofluorobenzene for Calibration Check, LCS, LCS Dup, Blank and MW-20-04D.
   ii. Qualifiers used:
      1. None.
   iii. Data reviewed.
   iv. No exceptions noted - Acceptable.

7. **Form III – LCS/LCS Duplicate Recovery**
   i. Laboratory ID: BA51804-BS1
      1. Eight (8) values outside of QC limits.
      2. Data is Acceptable.
   ii. Laboratory ID: BA51804-BSD1
      1. Five (5) values outside of QC limits.
      2. Data is Acceptable.
   iii. Laboratory ID: BA51805-BS1
      1. Three (3) values outside of QC limits.
      2. Data is Acceptable.
   iv. Laboratory ID: BA51805-BSD1
      1. Three (3) values outside of QC limits.
      2. Data is Acceptable.
   v. Laboratory ID: BA51853-BS1
      1. Five (5) values outside of QC limits.
      2. Data is Acceptable.
   vi. Laboratory ID: BA51835-BSD1
      1. Eight (8) values outside of QC limits.
      2. Data is Acceptable.

vii. Laboratory ID: BA51855-BS1
   1. Seven (7) values outside of QC limits.
   2. Data is Acceptable.

viii. Laboratory ID: BA51882-BS1
   1. Three (3) values outside of QC limits.
   2. Data is Acceptable.

ix. Laboratory ID: BA51882-BSD1
   1. Two (2) values outside of QC limits.
   2. Data is Acceptable.

x. Laboratory ID: BA51883-BS1
   1. Three (3) values outside of QC limits.
   2. Data is Acceptable.

xi. Laboratory ID: BA51883-BSD1
   1. Two (2) values outside of QC limits.
   2. Data is Acceptable.

8. Form IV – Preparation Batch Summary

i. Observations Noted.
ii. Data is Acceptable.

9. Form V – Mass Spectrometer Instrument Performance Check

i. Lab Sample ID: S5A2207-TUN1 – PASS
ii. Lab Sample ID: S5A2920-TUN1 – PASS
iii. Lab Sample ID: S5A3119-TUN1 – PASS
iv. Lab Sample ID: S5A3120-TUN1 – PASS
v. Lab Sample ID: S5A3122-TUN1 – PASS
vi. Lab Sample ID: S5A3123-TUN1 – PASS
vii. Lab Sample ID: S5B0315-TUN1 – PASS
viii. Lab Sample ID: S5B0317-TUN1 – PASS
ix. Data is Acceptable.

10. Form V – Analysis Batch (Sequence) Summary

i. No exceptions noted - Acceptable.

11. Form VI – Initial Calibration Data

i. Calibration: SA50043 – exceeded method guidelines.
ii. Calibration: SA50043 – met method guidelines.
iii. Reviewed Quantitation Report.
iv. Data is Acceptable.

12. Second-Source Calibration Verification

i. Laboratory ID: S5A2207-SCV1
   1. Two (2) values found outside of QC limits.
   2. Data is acceptable.

3. Reviewed Quantitation Report.

ii. Laboratory ID: S5A2920-SCV1
1. Five (5) values found outside of QC limits.
2. Data is acceptable.
3. Reviewed Quantitation Report.

13. Form VII – Continuing Calibration Check

i. Lab Sample ID: S5A3119-CCV1
1. Four (4) values found outside of QC limits.
2. Data is acceptable.

ii. Lab Sample ID: S5A3120-CCV1
1. Ten (10) values found outside of QC limits.
2. Data is acceptable.

iii. Lab Sample ID: S5A3122-CCV1
1. Two (2) values found outside of QC limits.
2. Data is acceptable.

iv. Lab Sample ID: S5A3123-CCV1
1. Three (3) values found outside of QC limits.
2. Data is acceptable.

v. Lab Sample ID: S5B0315-CCV1
1. Forty-One (41) values found outside of QC limits.
2. Data is acceptable.

vi. Lab Sample ID: S5B0317-CCV1
1. Five (5) values found outside of QC limits.
2. Data is acceptable.

14. Form VIII – Internal Standard Area and Retention Time Summary

i. All samples met internal standard area and retention time criteria. No exceptions noted.

ii. Acceptable.

15. Holding Time Summary Reviewed.
16. Method Detection and Reporting Limits Reviewed.

17. Have all the data been generated using established and agreed upon analytical protocols?

a. Yes, all the data has been generated using established and agreed upon analytical protocols.

18. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.
    i. Reviewed VOA Raw QC Data.
    ii. Reviewed Method Blank Raw Data.
    iii. Reviewed LCS Raw Data.
    iv. Reviewed Benchsheets.

19. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?
    a. Yes, the correct data qualifiers have been used. Any inconsistencies have been documented in the beginning of the report.

20. Have any quality control (QC) exceedances been specifically noted in the DUSR?
    a. The Quality Control data has been checked; any exceedances have been noted.

APPENDIX F

Report Date: 12/05/2024
Client Project ID: 80 Banks Ave, Rockville Centre, NY 12-190-DS
York Project (SDG) No.: 24K2011

Laurel Environmental Geosciences, D.P.C.
53 W Hills Road, Suite 1
Huntington Station NY, 11746
Attention: Scott Yanuck

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 27, 2024 and listed below. The project was identified as your project: **80 Banks Ave, Rockville Centre, NY 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24K2011-01	System Effluent	Waste Water	11/26/2024	11/27/2024

General Notes for York Project (SDG) No.: 24K2011

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 02, 2025 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25A0012-01	System Effluent	Waste Water	12/31/2024	01/02/2025

General Notes for York Project (SDG) No.: 25A0012

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 29, 2025 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25A1648-01	System Effluent	Waste Water	01/28/2025	01/29/2025

General Notes for York Project (SDG) No.: 25A1648

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Notes:

GW – Groundwater
NA – Not Analyzed

PFAS – Polyfluoroalkyl Substances
VOCs – Volatile Organic Compounds
SVOCs – Semi-Volatile Organic Compounds
Herbs – Herbicides
PCBs – Polychlorinated Biphenyls
Pest - Pesticides
LCS – Lab Control Sample
LCSD – Lab Control Sample Duplicate

Notes Regarding Qualifiers:

The following Qualifiers are used in the lab report, however there is no definition provided for these:

1. **U** – It is assumed that the definition is "Indicates the compound was analyzed for but not detected".
2. **D** – It is assumed that the definition indicates that the sample was "diluted".

York Analytical Laboratories Inc. – Definitions and Acronyms – please refer to laboratory report, page 101, for a complete list.

- The Work Order Narrative can be found on page 72 of the laboratory report.
- The Quality Control Data can be found on page 88 of the laboratory report.
- Sample and Data Qualifiers Relating to This Work Order can be found on page100 of the laboratory report.
- The Chain of Custody (COC) can be found on page 104 of the laboratory report.

The data package was evaluated as per:

- New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) 10/Technical Guidance for Site Investigation and Remediation – May 3, 2010, Appendix 2B – Guidance for the Development of DUSRs.
- United States Environmental Protection Agency (USEPA) Laboratory Contract Program.

The Data Usability Summary follows for each sample.

EPA 8260D – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. **Form I – METHOD BLANK DATA SHEET - EPA 8260D.**
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BE40083-BLK1, BE40179-BLK1, BE40238-BLK1
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
    c. Data is Acceptable.

4. **Form I – Organic Analysis Data Sheet – EPA 8260D.**
    a. WASTE WATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2020-3A, MW-2020-3B, MW-2020-3C, MW-2020-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2013-04D, DUP, System Influent, Trip Blank
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
        iv. CCVE - The value reported is ESTIMATED.
        v. D – Assumed to mean "Dilution", however, there is no definition for this qualifier.
    b. Dilutions:
        i. MW-2010-02D had a 20X Dilution.
        ii. MW-2010-03D had a 20X Dilution.
    c. Reviewed Quantitation Reports for each sample, checked qualifiers found out of range and peaks.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

    a. Yes, all the QC Data falls within the protocol required limits and specifications.

6. **Form II – Surrogate Standard Recovery and RT Summary**

i. Values found within %Recovery Limits.
ii. Qualifiers used:
    1. None.
iii. Data reviewed.
iv. No exceptions noted - Acceptable.

7. Form III – LCS/LCS Duplicate Recovery

i. Laboratory ID: BE40083-BS1
    1. Two (2) values outside of QC limits.
    2. Data is Acceptable.
ii. Laboratory ID: BE40083-BSD1
    1. One (1) value found outside of QC limits.
    2. Data is Acceptable.
iii. Laboratory ID: BE40179-BS1
    1. Two (2) values outside of QC limits.
    2. Data is Acceptable.
iv. Laboratory ID: BE40179-BSD1
    1. Three (3) values outside of QC limits.
    2. Data is Acceptable.
v. Laboratory ID: BE40283-BS1
    1. Two (2) values found outside of QC limits.
    2. Data is Acceptable.
vi. Laboratory ID: BE40238-BSD1
    1. No values found outside of QC limits.
    2. Data is Acceptable.

8. Form IV – Preparation Batch Summary

i. No Observations Noted on Batch: BE40083, BE40179.
ii. Observations Noted on Batch: BE40238.
iii. Data is Acceptable.

9. Form V – Mass Spectrometer Instrument Performance Check

i. Lab Sample ID: S4A2218-TUN1 – PASS
ii. Lab Sample ID: S4E0139-TUN1 – PASS
iii. Lab Sample ID: S4E0350-TUN1 – PASS
iv. Lab Sample ID: S4E0351-TUN1 – PASS
v. Data is Acceptable.

10. Form V – Analysis Batch (Sequence) Summary

i. No exceptions noted - Acceptable.

11. Form VI – Initial Calibration Data

i. Calibration: SA40034 – met method guidelines.
ii. Reviewed Quantitation Report – Qualifiers found out of range.

iii. Data is Acceptable.

12. Second-Source Calibration Verification

i. Laboratory ID: S4A2218-SCV1
   1. No values found outside of QC limits.
   2. Data is acceptable.
   3. Reviewed Quantitation Report.

13. Form VII – Continuing Calibration Check

i. Lab Sample ID: S4E0139-CCV1
   1. Nine (9) values found outside of QC limits.
   2. Data is acceptable.

ii. Lab Sample ID: S4E0350-CCV1
   1. Thirteen (13) values found outside of QC limits.
   2. Data is acceptable.

iii. Lab Sample ID: S4E0351-CCV1
   1. Nine (9) values found outside of QC limits.
   2. Data is acceptable.

14. Form VIII – Internal Standard Area and Retention Time Summary

i. All samples met internal standard area and retention time criteria. No exceptions noted.
ii. Acceptable.

15. Holding Time Summary Reviewed.
16. Method Detection and Reporting Limits Reviewed.

17. Have all the data been generated using established and agreed upon analytical protocols?

    a. Yes, all the data has been generated using established and agreed upon analytical protocols.

18. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

    a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.
       i. Reviewed VOA Raw QC Data.
       ii. Reviewed Method Blank Raw Data.
       iii. Reviewed LCS Raw Data.
       iv. Reviewed Benchsheets.

19. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?

a. Yes, the correct data qualifiers have been used. Any inconsistencies have been documented at the beginning of the report.

20. Have any quality control (QC) exceedances been specifically noted in the DUSR?
    a. The Quality Control data has been checked; any exceedances have been noted.

The Data Usability Summary follows for each sample.

Data Usability Summary Report

EPA 8260C – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. Form I – METHOD BLANK DATA SHEET - EPA 8260C
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BG41991-BLK1, BH41992-BLK1
        - Qualifiers used:
        - U – Indicates the compound was analyzed for but not detected.
    c. Data is Acceptable.

4. Form I – Organic Analysis Data Sheet – EPA 8260C
    a. GROUNDWATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2020-3A, MW-2020-3B, MW-2020-3C, MW-2010-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2010-04D, DUP, Trip Blank
    b. Qualifiers used:
        - U – Indicates the compound was analyzed for but not detected.
        - J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
        - QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method.
        - CAL-E – The value reported is ESTIMATED.
        - CCVE – The value reported is ESTIMATED.
    c. Dilutions:
        - MW-2010-02D – 50X Dilution.
        - MW-2010-03D – 10X Dilution.
    d. Reviewed Quantitation Report for each sample.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

a. Yes, all the QC Data falls within the protocol required limits and specifications.

b. Form II – Surrogate Standard Recovery and RT Summary
   - Qualifiers used:
     - None.
     - Data reviewed.
   - No exceptions noted - Acceptable.

c. Form III – LCS/LCS Duplicate Recovery
   - Laboratory ID: BG41991-BS1
     - One (1) value outside of QC limits.
     - No Exceptions noted – Acceptable.
   - Laboratory ID: BG41991-BSD1
     - Two (2) values outside of QC limits.
     - No exceptions noted – Acceptable.
   - Laboratory ID: BH41992-BS1
     - Eight (8) values outside of QC limits.
     - No exceptions noted – Acceptable.
   - Laboratory ID: BH41992-BSD1
     - Eight (8) values outside of QC limits.
     - No exceptions noted – Acceptable.

d. Form IV – Preparation Batch Summary
   - Observations Noted.
   - No Exceptions Noted – Acceptable.

e. Form V – Mass Spectrometer Instrument Performance Check
   - Lab Sample ID: S4G2420-TUN1 – PASS
   - Lab Sample ID: S4H0644-TUN1 – PASS
   - Lab Sample ID: S4H0645-TUN1 – PASS
   - No exceptions noted – Acceptable.

f. Form V – Analysis Batch (Sequence) Summary
   - No exceptions noted - Acceptable.

g. Form VI – Initial Calibration Data
   - Calibration: SG40040 – exceeded method guidelines.
   - Reviewed Quantitation Report.

h. Second-Source Calibration Verification
   - No values found outside of QC limits.
   - Reviewed Quantitation Report.

i. Form VII – Continuing Calibration Check
   - Lab Sample ID: S4H0644-CCV1
     - Eight (8) values found outside of QC limits
     - Exceptions noted – Acceptable.
     - Reviewed Quantitation Report.

   - Lab Sample ID: S4H0645-CCV1
     - Nine (9) values found outside of QC limits
     - Exceptions noted – Acceptable.
     - Reviewed Quantitation Report.

j. Form VIII – Internal Standard Area and Retention Time Summary
   - All samples met internal standard area and retention time criteria. No exceptions noted.
   - Acceptable.

k. Holding Time Summary – No qualifiers used.
l. Method Detection and Reporting Limits Reviewed.

6. Have all the data been generated using established and agreed upon analytical protocols?

   a. Yes, all the data has been generated using established and agreed upon analytical protocols.

7. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.
   b. Reviewed Method Blank Raw Data.
   c. Reviewed LCS Raw Data.

8. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?
   a. Yes, the correct data qualifiers have been used.
   b. York Qualifiers found on page 93 of lab report. The Qualifier page does not list "U", although this qualifier is used throughout the report.

9. Have any quality control (QC) exceedances been specifically noted in the DUSR?
   a. The Quality Control data has been checked; any exceedances have been noted under the respective sections.

Notes Regarding Qualifiers:

The following Qualifiers are used in the lab report:

1. **U** – It is assumed that the definition is "Indicates the compound was analyzed for but not detected".
2. **D** – It is assumed that the definition indicates that the sample was "diluted".

York Analytical Laboratories Inc. – Definitions and Acronyms – please refer to laboratory report, page 120QA , for a complete list.

The data package was evaluated as per:

- New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) 10/Technical Guidance for Site Investigation and Remediation – May 3, 2010, Appendix 2B – Guidance for the Development of DUSRs.
- United States Environmental Protection Agency (USEPA) Laboratory Contract Program.

The Data Usability Summary follows for each sample.

EPA 8260D – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. Form I – METHOD BLANK DATA SHEET - EPA 8260D
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BJ42080-BLK1, BK40045-BLK1, BK40147-BLK1
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
    c. Data is Acceptable.

4. Form I – Organic Analysis Data Sheet – EPA 8260D
    a. GROUNDWATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2010-3A, MW-2010-3B, MW-2010-3C, MW-2010-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2013-04D, System Influent, DUP, Trip Blank
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
        iv. QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
        v. ICVE – The value reported is ESTIMATED.
        vi. CCVE - The value reported is ESTIMATED.
        vii. CAL- E - The value reported is ESTIMATED.
        viii. D – Assumed to mean “Dilution”, however, there is no definition for this qualifier.
    b. Dilutions:
        i. MW-2010-01D had a 10X Dilution.
        ii. MW-2010-02D had a 25X Dilution.
        iii. MW-2010-03D had a 25X Dilution.

iv. MW-2010-03D had a 100X Dilution.
v. System Influent had a 25X Dilution.

c. Reviewed Quantitation Reports for each sample.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

a. Yes, all the QC Data falls within the protocol required limits and specifications.

b. Form II – Surrogate Standard Recovery and RT Summary
   i. Qualifiers used:
      1. None.
      2. Data reviewed.
   ii. No exceptions noted - Acceptable.

c. Form III – LCS/LCS Duplicate Recovery
   i. Laboratory ID: BJ42080-BS1
      1. Seven (7) values outside of QC limits.
      2. No Exceptions noted – Acceptable.
   ii. Laboratory ID: BJ42080-BSD1
      1. Six (6) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   iii. Laboratory ID: BK40045-BS1
      1. Eight (8) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   iv. Laboratory ID: BK40045-BSD1
      1. Eight (8) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   v. Laboratory ID: BK40147-BS1
      1. Thirteen (13) values outside of QC limits.
      2. No exceptions noted – Acceptable.
   vi. Laboratory ID: BK40147-BSD1
      1. Thirteen (13) values outside of QC limits.
      2. No exceptions noted – Acceptable.

d. Form IV – Preparation Batch Summary
   i. Observations Noted.
   ii. No Exceptions Noted – Acceptable.

e. Form V – Mass Spectrometer Instrument Performance Check
   i. Lab Sample ID: 24J2935-TUN1 – PASS
   ii. Lab Sample ID: 24J3148-TUN1 – PASS
   iii. Lab Sample ID: 24K0109-TUN1 – PASS

iv. Lab Sample ID: 24K0409-TUN1 – PASS
v. No exceptions noted – Acceptable.

f. Form V – Analysis Batch (Sequence) Summary
   i. No exceptions noted - Acceptable.

g. Form VI – Initial Calibration Data
   i. Calibration: SJ40053 – exceeded method guidelines.
   ii. Reviewed Quantitation Report.
   iii. No exceptions noted – Acceptable.

h. Second-Source Calibration Verification
   i. Laboratory ID: S4J2935-SCV1
      1. Ten (10) values found outside of QC limits.
      2. Data is acceptable.
      3. Reviewed Quantitation Report.

i. Form VII – Continuing Calibration Check
   i. Lab Sample ID: S4J3148-CCV1
      1. Ten (10) values found outside of QC limits.
      2. Data is acceptable.
   ii. Lab Sample ID: S4K0109-CCV1
      1. Six (6) values found outside of QC limits.
      2. Data is acceptable.
   iii. Lab Sample ID: S4K0409-CCV1
      1. Five (5) values found outside of QC limits.
      2. Data is acceptable.

j. Form VIII – Internal Standard Area and Retention Time Summary
   i. All samples met internal standard area and retention time criteria. No exceptions noted.
   ii. Acceptable.

6. Have all the data been generated using established and agreed upon analytical protocols?

   a. Yes, all the data has been generated using established and agreed upon analytical protocols.

7. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?

   a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.

i. Reviewed VOA Raw QC Data.
ii. Reviewed Method Blank Raw Data.
iii. Reviewed LCS Raw Data.
iv. Reviewed Benchsheets.

8. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?
    a. Yes, the correct data qualifiers have been used. Any inconsistencies have been documented in the beginning of the report.

9. Have any quality control (QC) exceedances been specifically noted in the DUSR?
    a. The Quality Control data has been checked; any exceedances have been noted.

DATA USABILITY SUMMARY REPORT

Data Usability Summary Report Introduction & Notes

Site: 80 Banks Ave, Rockville Centre, NY
Laboratory: York Analytical Laboratories Inc
Sample Collection Date: January 28, 2025
York Project (SDG) No. 25A1644

Sample Identification:

CLIENT SAMPLE ID	LAB ID	MATRIX	VOCs 8260D
MW-2010-01A	25A1644-01	Ground Water	X
MW-2010-01B	25A1644-02	Ground Water	X
MW-2010-01C	25A1644-03	Ground Water	X
MW-2010-01D	25A1644-04	Ground Water	X
MW-2010-02A	25A1644-05	Ground Water	X
MW-2010-02B	25A1644-06	Ground Water	X
MW-2010-02C	25A1644-07	Ground Water	X
MW-2010-02D	25A1644-08	Ground Water	X
MW-2020-03A	25A1644-09	Ground Water	X
MW-2020-03B	25A1644-10	Ground Water	X
MW-2020-03C	25A1644-11	Ground Water	X
MW-2010-03D	25A1644-12	Ground Water	X
MW-2013-04A	25A1644-13	Ground Water	X
MW-2013-04B	25A1644-14	Ground Water	X
MW-2013-04C	25A1644-15	Ground Water	X
MW-2010-04D	25A1644-16	Ground Water	X
DUP	25A1644-17	Ground Water	X
System Influent	25A1644-18	Ground Water	X
Trip Blank	25A1644-19	WATER	X

Notes:

GW – Groundwater
NA – Not Analyzed

PFAS – Polyfluoroalkyl Substances
VOCs – Volatile Organic Compounds
SVOCs – Semi-Volatile Organic Compounds
Herbs – Herbicides
PCBs – Polychlorinated Biphenyls
Pest - Pesticides
LCS – Lab Control Sample
LCSD – Lab Control Sample Duplicate

Notes Regarding Qualifiers:

The following Qualifiers are used in the lab report, however there is no definition provided for these:

1. **U** – It is assumed that the definition is "Indicates the compound was analyzed for but not detected".
2. **D** – It is assumed that the definition indicates that the sample was "diluted".

York Analytical Laboratories Inc. – Definitions and Acronyms – please refer to laboratory report, page 119, for a complete list.

The data package was evaluated as per:

- New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) 10/Technical Guidance for Site Investigation and Remediation – May 3, 2010, Appendix 2B – Guidance for the Development of DUSRs.
- United States Environmental Protection Agency (USEPA) Laboratory Contract Program.

The Data Usability Summary follows for each sample.

EPA 8260D – GROUNDWATER SAMPLES

1. Is the data package complete as defined under the requirements for the most current DEC Analytical Services Protocol (ASP) Category B or USEPA CLP data deliverables?

    a. Yes, the data package is complete as per DEC ASP Category B.

2. Have all the holding times been met?
    a. Yes, all holding times have been met – Reviewed Holding Time Summary.

3. **Form I – METHOD BLANK DATA SHEET - EPA 8260D**
    a. Review of reported laboratory data for WATER samples (Blank):
    b. Water – Laboratory ID: BA51804-BLK1, BA51805-BLK1, BA51853-BLK1, BA51855-BLK1, BA51882-BLK1, BA51883-BLK1
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
    c. Data is Acceptable.

4. **Form I – Organic Analysis Data Sheet – EPA 8260D**
    a. GROUNDWATER samples – MW-2010-01A, MW-2010-01B, MW-2010-01C, MW-2010-01D, MW-2010-02A, MW-2010-02B, MW-2010-02C, MW-2010-02D, MW-2020-3A, MW-2020-3B, MW-2020-3C, MW-2020-03D, MW-2013-04A, MW-2013-04B, MW-2013-04C, MW-2013-04D, DUP, System Influent, Trip Blank
        i. Qualifiers used:
        ii. U – Indicates the compound was analyzed for but not detected.
        iii. J – Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
        iv. QL-02 – This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
        v. ICVE – The value reported is ESTIMATED.
        vi. CCVE - The value reported is ESTIMATED.
        vii. CAL- E - The value reported is ESTIMATED.
        viii. B – Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
            1. Noted on MW-2010-02D, MW-2020-03A, MW-2020-03B, MW-2020-03C for Naphthalene.
            2. Noted on MW-2010-04D for 1,2,4-Trichlorobenzene

ix. D – Assumed to mean "Dilution", however, there is no definition for this qualifier.

b. Dilutions:
   i. MW-2010-01B had a 25X Dilution.
   ii. MW-2010-02D had a 10X Dilution.
   iii. MW-2013-04A had a 5X Dilution.
   iv. MW-2010-04D had a 50X Dilution.

c. Reviewed Quantitation Reports for each sample, checked qualifiers found out of range and peaks.

5. Do all the QC data; blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?

   a. Yes, all the QC Data falls within the protocol required limits and specifications.

6. **Form II – Surrogate Standard Recovery and RT Summary**
   i. Values found within %Recovery Limits with the exception of SURR: Toluene-d8 and SURR: p-Bromofluorobenzene for Calibration Check, LCS, LCS Dup, Blank and MW-20-04D.
   ii. Qualifiers used:
      1. None.
   iii. Data reviewed.
   iv. No exceptions noted - Acceptable.

7. **Form III – LCS/LCS Duplicate Recovery**
   i. Laboratory ID: BA51804-BS1
      1. Eight (8) values outside of QC limits.
      2. Data is Acceptable.
   ii. Laboratory ID: BA51804-BSD1
      1. Five (5) values outside of QC limits.
      2. Data is Acceptable.
   iii. Laboratory ID: BA51805-BS1
      1. Three (3) values outside of QC limits.
      2. Data is Acceptable.
   iv. Laboratory ID: BA51805-BSD1
      1. Three (3) values outside of QC limits.
      2. Data is Acceptable.
   v. Laboratory ID: BA51853-BS1
      1. Five (5) values outside of QC limits.
      2. Data is Acceptable.
   vi. Laboratory ID: BA51835-BSD1
      1. Eight (8) values outside of QC limits.
      2. Data is Acceptable.

vii. Laboratory ID: BA51855-BS1
   1. Seven (7) values outside of QC limits.
   2. Data is Acceptable.

viii. Laboratory ID: BA51882-BS1
   1. Three (3) values outside of QC limits.
   2. Data is Acceptable.

ix. Laboratory ID: BA51882-BSD1
   1. Two (2) values outside of QC limits.
   2. Data is Acceptable.

x. Laboratory ID: BA51883-BS1
   1. Three (3) values outside of QC limits.
   2. Data is Acceptable.

xi. Laboratory ID: BA51883-BSD1
   1. Two (2) values outside of QC limits.
   2. Data is Acceptable.

8. Form IV – Preparation Batch Summary

i. Observations Noted.
ii. Data is Acceptable.

9. Form V – Mass Spectrometer Instrument Performance Check

i. Lab Sample ID: S5A2207-TUN1 – PASS
ii. Lab Sample ID: S5A2920-TUN1 – PASS
iii. Lab Sample ID: S5A3119-TUN1 – PASS
iv. Lab Sample ID: S5A3120-TUN1 – PASS
v. Lab Sample ID: S5A3122-TUN1 – PASS
vi. Lab Sample ID: S5A3123-TUN1 – PASS
vii. Lab Sample ID: S5B0315-TUN1 – PASS
viii. Lab Sample ID: S5B0317-TUN1 – PASS
ix. Data is Acceptable.

10. Form V – Analysis Batch (Sequence) Summary

i. No exceptions noted - Acceptable.

11. Form VI – Initial Calibration Data

i. Calibration: SA50043 – exceeded method guidelines.
ii. Calibration: SA50043 – met method guidelines.
iii. Reviewed Quantitation Report.
iv. Data is Acceptable.

12. Second-Source Calibration Verification

i. Laboratory ID: S5A2207-SCV1
   1. Two (2) values found outside of QC limits.
   2. Data is acceptable.

3. Reviewed Quantitation Report.

ii. Laboratory ID: S5A2920-SCV1
1. Five (5) values found outside of QC limits.
2. Data is acceptable.
3. Reviewed Quantitation Report.

13. Form VII – Continuing Calibration Check

i. Lab Sample ID: S5A3119-CCV1
1. Four (4) values found outside of QC limits.
2. Data is acceptable.

ii. Lab Sample ID: S5A3120-CCV1
1. Ten (10) values found outside of QC limits.
2. Data is acceptable.

iii. Lab Sample ID: S5A3122-CCV1
1. Two (2) values found outside of QC limits.
2. Data is acceptable.

iv. Lab Sample ID: S5A3123-CCV1
1. Three (3) values found outside of QC limits.
2. Data is acceptable.

v. Lab Sample ID: S5B0315-CCV1
1. Forty-One (41) values found outside of QC limits.
2. Data is acceptable.

vi. Lab Sample ID: S5B0317-CCV1
1. Five (5) values found outside of QC limits.
2. Data is acceptable.

14. Form VIII – Internal Standard Area and Retention Time Summary

i. All samples met internal standard area and retention time criteria. No exceptions noted.

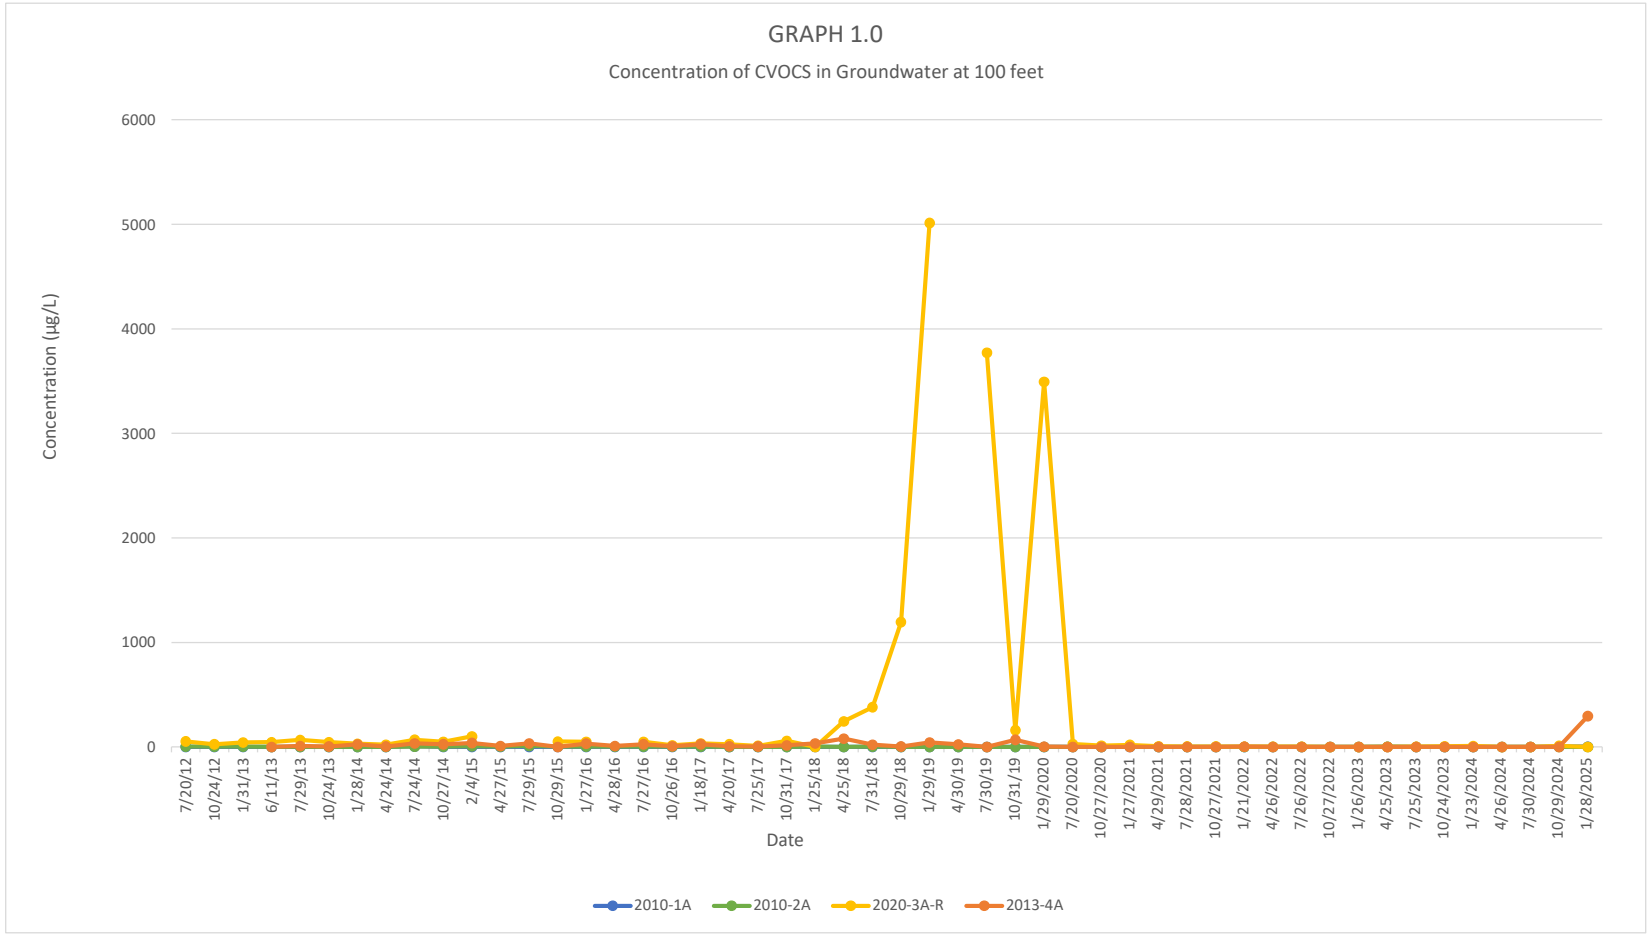
ii. Acceptable.

15. Holding Time Summary Reviewed.
16. Method Detection and Reporting Limits Reviewed.

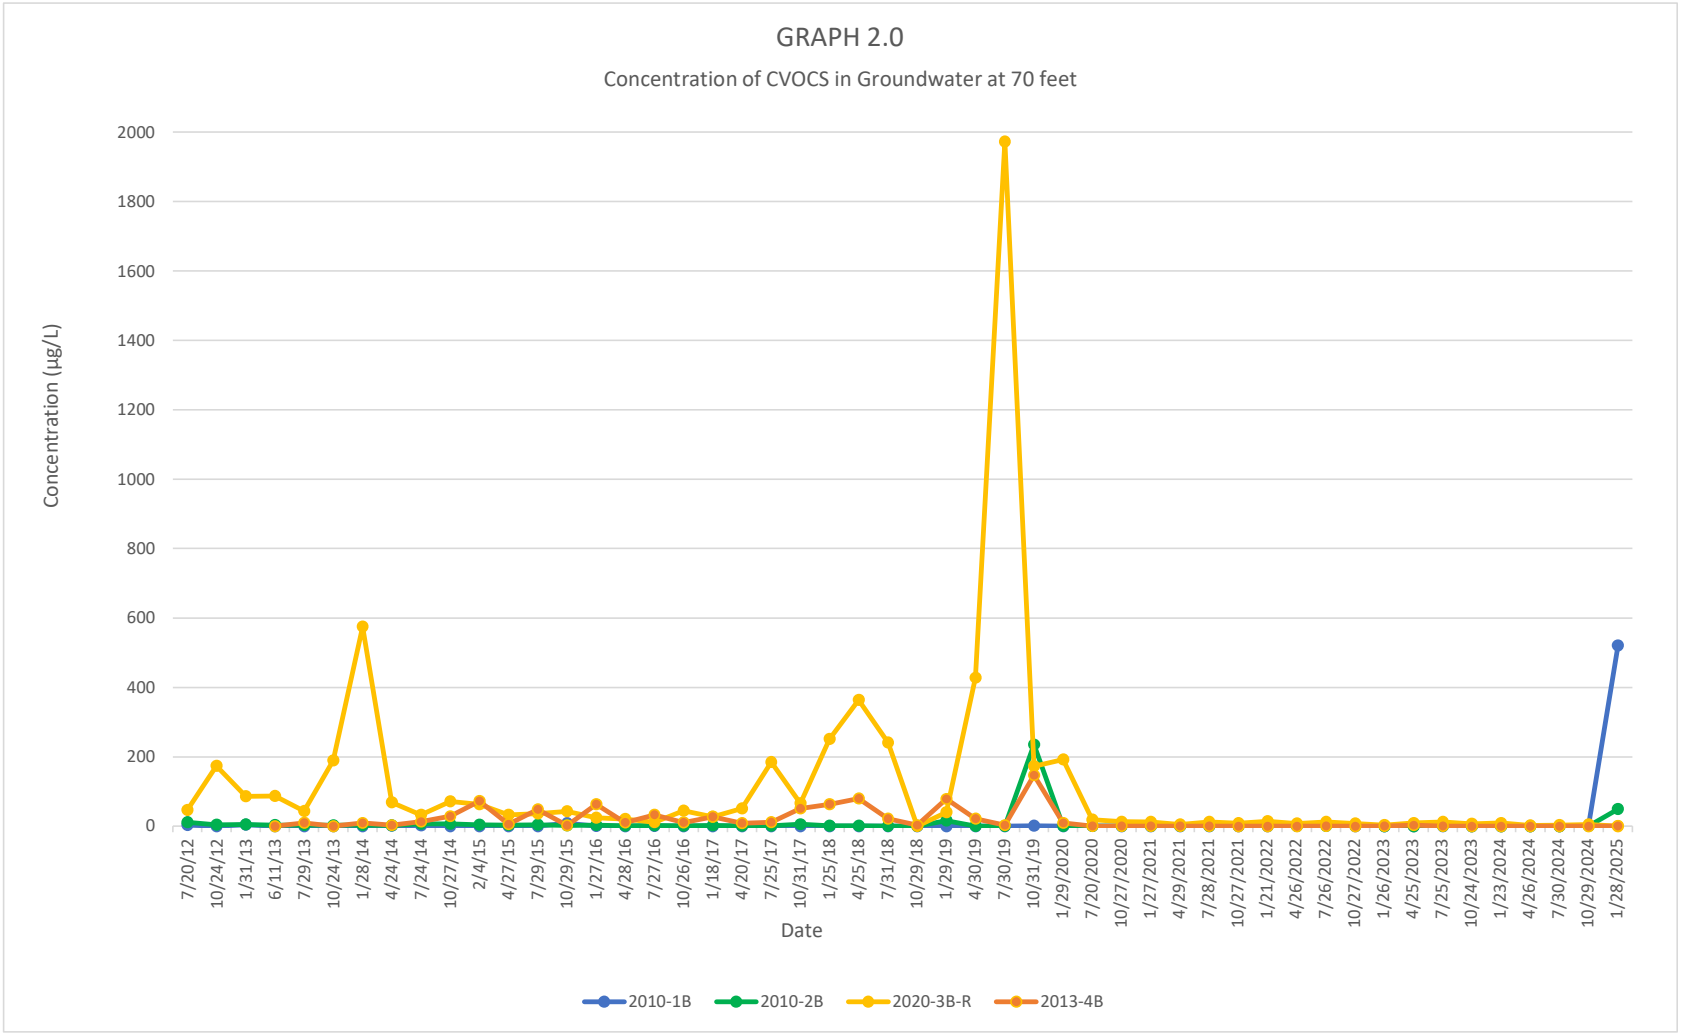
17. Have all the data been generated using established and agreed upon analytical protocols?

a. Yes, all the data has been generated using established and agreed upon analytical protocols.

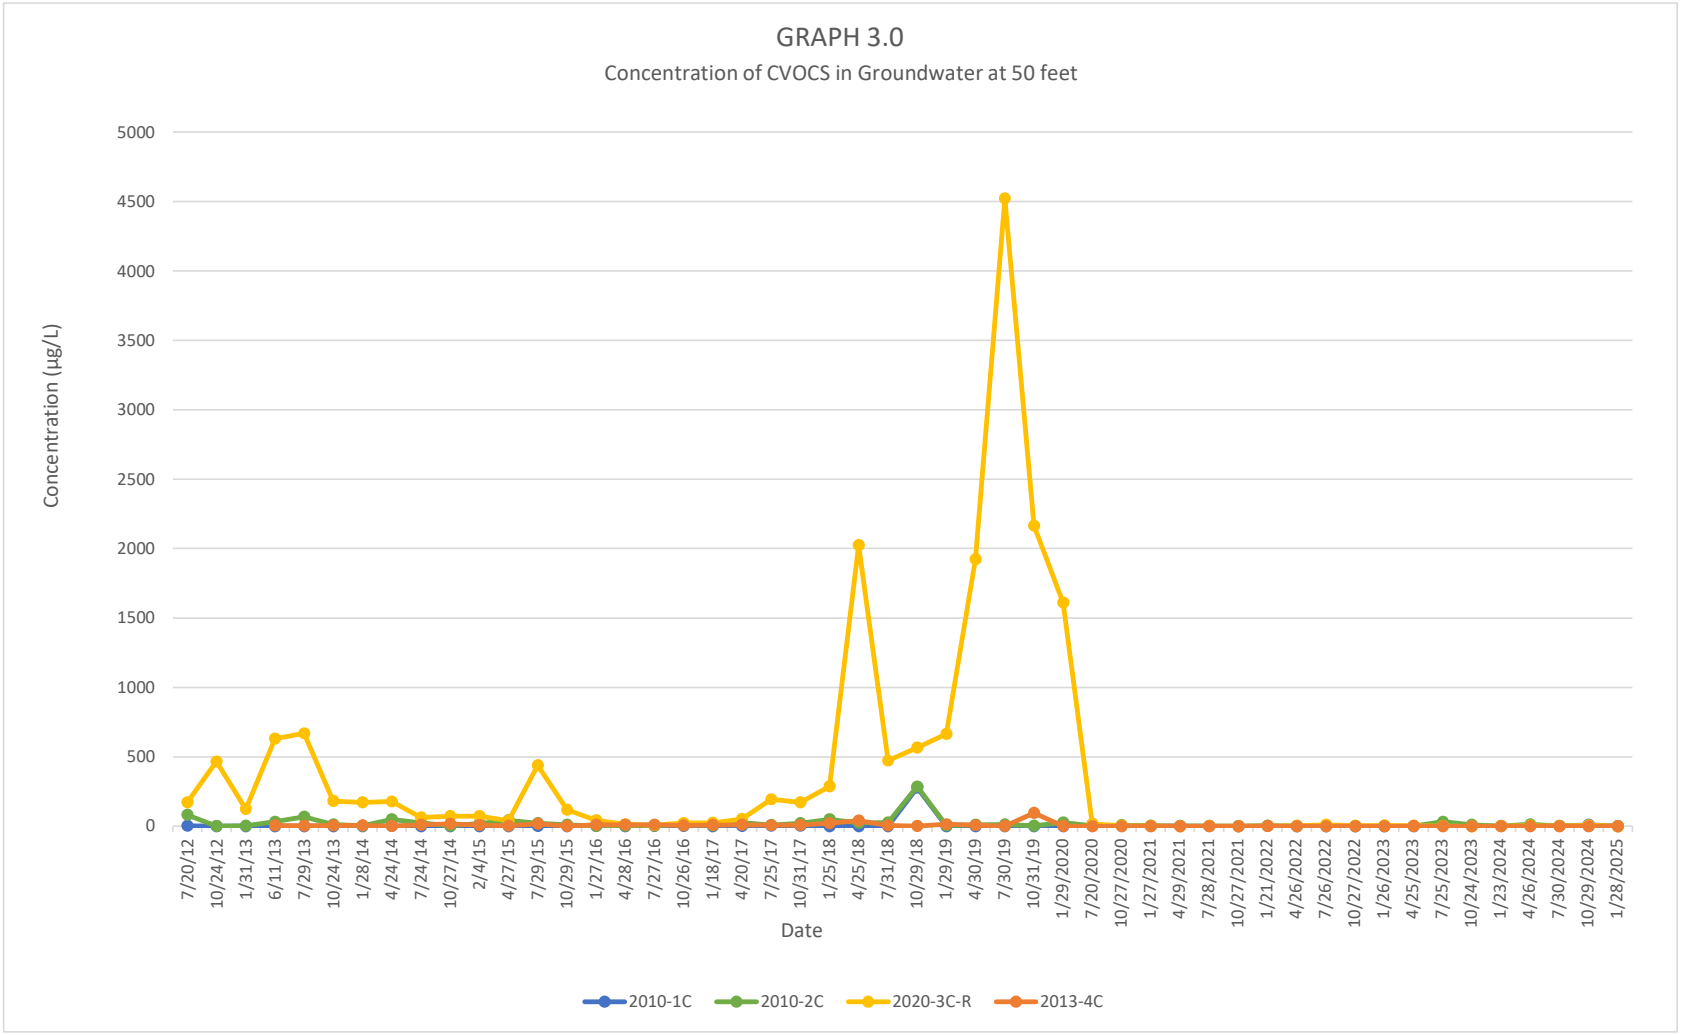
18. Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?



a. Yes, the raw data confirms the results provided in the data summary sheets and quality control verification forms.
    i. Reviewed VOA Raw QC Data.
    ii. Reviewed Method Blank Raw Data.
    iii. Reviewed LCS Raw Data.
    iv. Reviewed Benchsheets.



19. Have the correct data qualifiers been used and are they consistent with the most current DEC ASP?
    a. Yes, the correct data qualifiers have been used. Any inconsistencies have been documented in the beginning of the report.



20. Have any quality control (QC) exceedances been specifically noted in the DUSR?
    a. The Quality Control data has been checked; any exceedances have been noted.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 01, 2024 and listed below. The project was identified as your project: **80 Banks Ave, Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24C0021-01	System Effluent	Waste Water	02/29/2024	03/01/2024

General Notes for York Project (SDG) No.: 24C0021

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

HT-pH HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 20, 2024 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-140-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 24C1230

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 29, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24D1863-01	NYSDEC SPDES - System Effluent	Waste Water	04/26/2024	04/29/2024

General Notes for York Project (SDG) No.: 24D1863

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Lab ID	Client Sample ID	Volatile Sample Container
24D1863-01	NYSDEC SPDES - System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 04, 2024 and listed below. The project was identified as your project: **80 Banks Ave 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24F0115-01	System Effluent	Waste Water	05/30/2024	06/04/2024

General Notes for York Project (SDG) No.: 24F0115

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24F0115-01	System Effluent	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

QM-04	Visual evaluation of the sample indicates the RPD is above the control limit due to a non-homogeneous sample matrix.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 01, 2024 and listed below. The project was identified as your project: **80 Bank Ave 12-190**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24G0011-01	System Effluent	Ground Water	06/28/2024	07/01/2024

General Notes for York Project (SDG) No.: 24G0011

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

HT-pH HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 01, 2024 and listed below. The project was identified as your project: **80 Banks 12-190DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24H0037-01	System Effluent	Ground Water	07/31/2024	08/01/2024

General Notes for York Project (SDG) No.: 24H0037

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 04, 2024 and listed below. The project was identified as your project: **12-190 80 Banks**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24I0156-01	System Effluent	Ground Water	08/28/2024	09/04/2024

General Notes for York Project (SDG) No.: 24I0156

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-PR	Sample was prepared outside of the recommended holding time.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 24, 2024 and listed below. The project was identified as your project: **80 Banks Ave 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24I1401-01	System Effluent	Ground Water	09/23/2024	09/24/2024

General Notes for York Project (SDG) No.: 24I1401

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 30, 2024 and listed below. The project was identified as your project: **80 Banks Avenue Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24J1928-01	System Effluent	Waste Water	10/29/2024	10/30/2024

General Notes for York Project (SDG) No.: 24J1928

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 27, 2024 and listed below. The project was identified as your project: **80 Banks Ave, Rockville Centre, NY 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24K2011-01	System Effluent	Waste Water	11/26/2024	11/27/2024

General Notes for York Project (SDG) No.: 24K2011

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

YORK ANALYTICAL LABORATORIES INC

York Analytical Laboratories, Inc. (YORK)'s Standard Terms & Conditions are listed on the back side of this document.
This document serves as your written authorization for YORK to proceed with the analyses requested below.
Your signature binds you to YORK's Standard Terms & Conditions.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 02, 2025 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190-DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25A0012-01	System Effluent	Waste Water	12/31/2024	01/02/2025

General Notes for York Project (SDG) No.: 25A0012

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 29, 2025 and listed below. The project was identified as your project: **80 Banks Avenue, Rockville Centre, NY 12-190 DS**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
25A1648-01	System Effluent	Waste Water	01/28/2025	01/29/2025

General Notes for York Project (SDG) No.: 25A1648

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
