10. Is Irrigation System Flushed?	yes
11. Review Electrical and Job Trailer	Secure and Locked
12. Silt Fence	In place
13. Check Oil Collection Boom for Holes and Replace when Absorbent Material is at Capacity	OK
Date/Time of Inspection: 3/6/12 10:30am	Site: Harbor Isle - Island Park, NY
Inspection Done By: Marc Bretz	Weather Conditions: Clear 42°

Notes: Piles of feedstock soil and treated soil need to be covered with poly sheeting and weighted down. The better they are weighted down, the less the site will need to be visited to replace the covers. Until confidence in the integrity of the covers is obtained, they should be checked at least once a week and more frequently, if conditions are unusually windy.

A log of site visits and activities needs to be maintained for review by the DEC.

If sheens are detected, absorbent pads need to be placed in the sheens to remove the floating oil.

* March Inspection and DEC Visit with
Ernie Lampro
