**Re: Emerging Contaminant Sampling
486 Sunrise Highway
Rockville Centre, New York
Site No.: C130220**

Dear Mr. Reza:

We have reviewed your March 14, 2018 letter titled "Request for Sampling of Emerging Contaminants" and based on the letter and our April 16, 2018 discussion, we propose to sample three shallow wells located at the Site to provide overall definition of onsite conditions relative to the emerging contaminants as you have requested. The locations of the monitoring wells are shown on Figure 1. The samples will be collected in accordance with the two guidance documents provided in your March 14th email. These include:

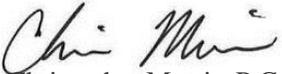

- Groundwater Sampling for Emerging Contaminants; and
- Collection of Surface Water Samples for Perfluorooctanoic Acid (PFOA) and Perfluorinated Compounds (PFCs) Protocol

Quality assurance/quality control samples will include an equipment blank, field duplicate and a matrix spike/matrix spike duplicate sample. A Category A data deliverable will be requested. Validation of the data will not be performed. The data will be transmitted via the Environmental Information Management system using EQUIS database software as required. No other deliverable will be prepared.

Please let me know if you have any questions or comments. My direct phone number is (631) 759-2967.

Sincerely,

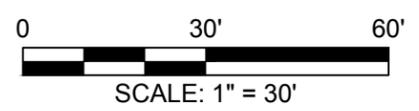

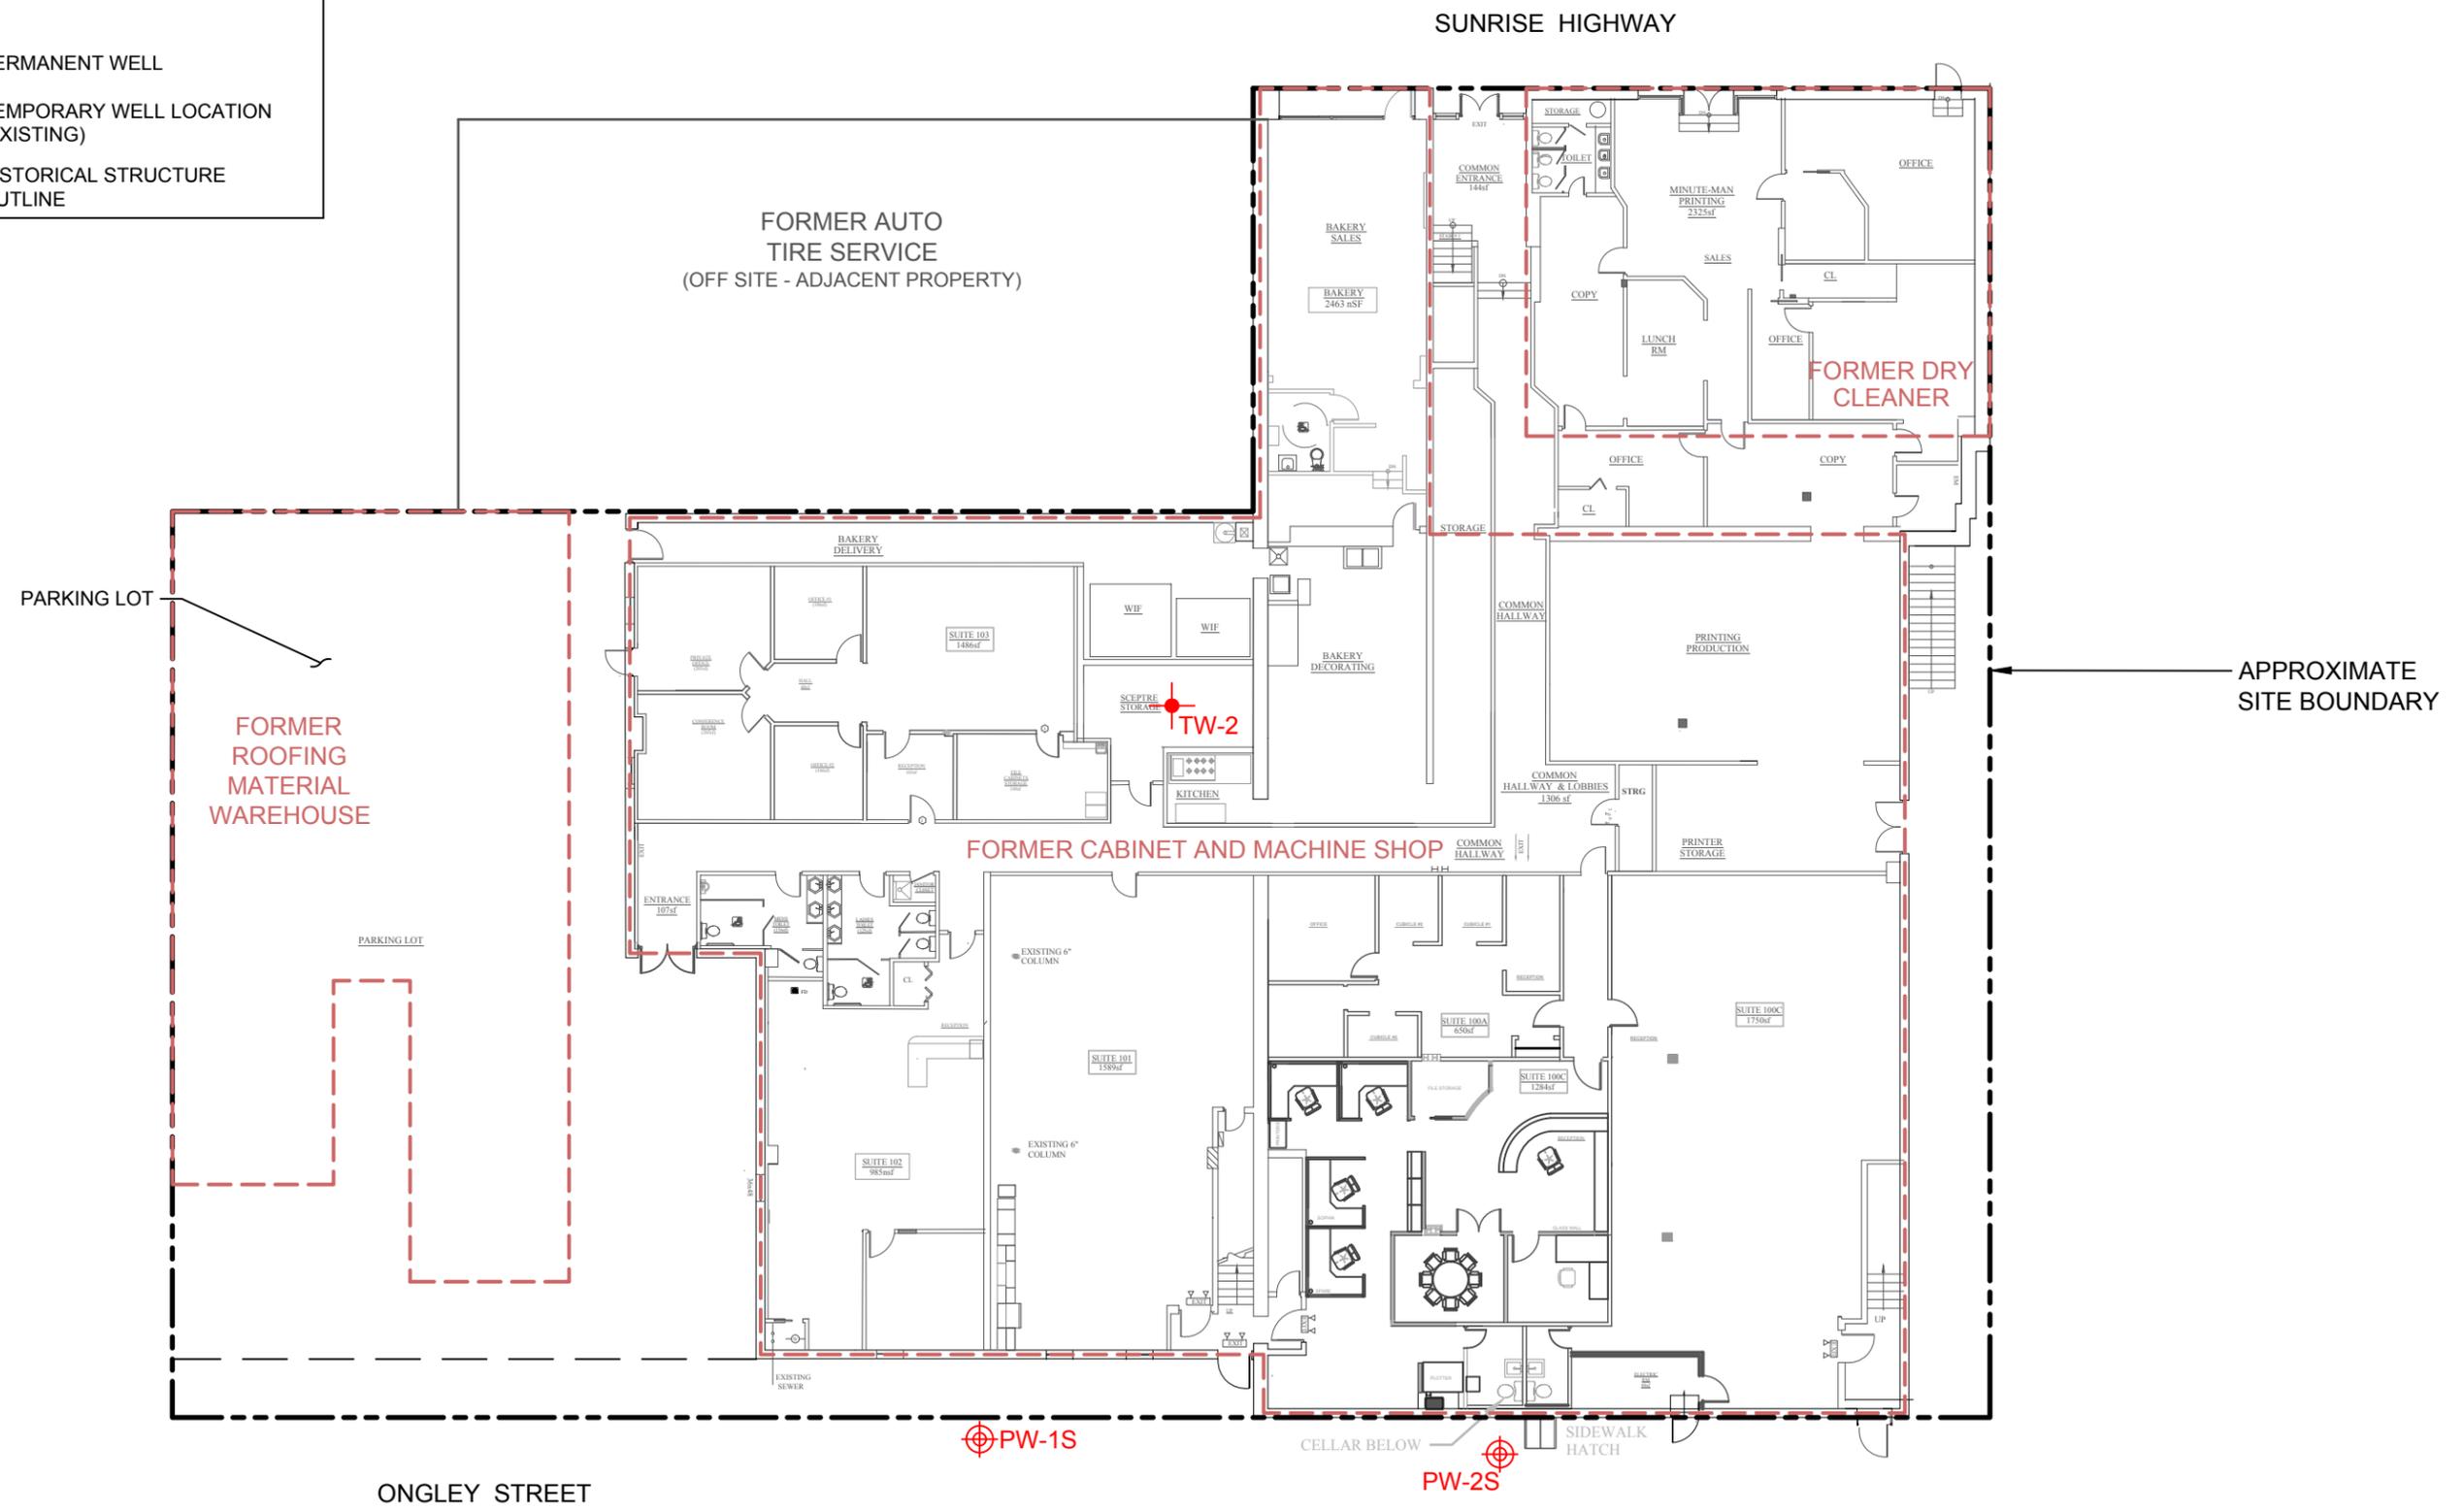

GEI CONSULTANTS, INC., P. C.

Christopher Morris, P.G.
Project Manager
