B:\Working\TERWILLIGER & BARTONE PROP\2403779 Ph I ESA_20 Jerusalem Ave_Hicksville_NY\02_PM\GEI_Phase I ESA Report 2024-04-30.docx

Executive Summary

On behalf of Terwilliger & Bartone Properties, GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) conducted a Phase I Environmental Site Assessment (ESA) of the property located 20 Jerusalem Avenue, Hicksville, Town of Oyster Bay, New York (hereinafter referred to as the "Site").

The main objective of the Phase I ESA is to determine whether there are any recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) associated with the Site. RECs are defined in American Society for Testing of Materials (ASTM) Standard Practice E1527-21.

The following table provides site identification and a description of the Site:

Property Information	
Address	20 Jerusalem Avenue, Hicksville, New York
Owner	2020 Partners LLC
Operator/Occupant(s)	Banking and Healthcare
Current Use	Office building
Parcel Size	74,872 square feet, or 1.72 acres
Building Footprint	Three-story building, approximately 4,500 square feet; and a 1-story drive-up ATM building, approximately 100 square feet
Parcel Information / Legal Description	Section 11, Block 179, Lot 7
Zoning	Hicksville District - Commercial
County	Nassau

The Site is irregular in shape and 1.72 acres in area. A 3-story (with basement) masonry and steel framed building ("the building") and a small detached drive-up ATM building are situated in the northeast quadrant of the Site. The building is currently a multi-tenant office building, occupied by a bank and a health care business. Areas of the Site not occupied by the two structures consist primarily of asphalt covered parking areas, concrete sidewalks and walkways, and landscaped areas.

From observations made during GEI's site reconnaissance, the topography of the Site is level with surrounding streets and properties. The overall area surrounding the Site slopes gently in a southerly direction. According to the United States Geological Survey (USGS) Hicksville, New York topographic map and Google Earth Pro, the general elevation for the area where the Site is located is depicted as approximately 150 feet above mean sea level

(AMSL). According to the USGS Hydrologic Conditions Maps for Long Island, New York, 2016, groundwater is expected to be encountered at depths ranging between 51 to 75 feet below ground surface.

GEI's analysis of historical information indicates that the Site was developed in 1957 with the building that exists today. The building has been utilized as a bank and multi-tenant office building ever since. There were no business occupants identified that would be considered a REC to the Site. Prior to 1957, the Site was developed with residential dwellings and a place of worship, all of which were demolished.

The Site was not identified on any United States Department of Environmental Protection Agency (USEPA) or New York State Department of Environmental Conservation (NYSDEC) databases.

Summary of Findings

There were no HRECs or CRECs identified for the Site. However, GEI identified the following RECs associated with the Site:

Stormwater Dry Wells

GEI observed numerous open grate stormwater dry wells in the parking areas. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, vehicle exhaust, degrading asphalt, or parking lot sealants. These drainage systems represent a REC. It is recommended that an assessment and evaluation of the stormwater dry wells be performed, and the bottom sediments (if impacted) be removed and properly disposed. Additionally, should the dry wells require removal to facilitate redevelopment of the Site, they should be removed/abandoned in accordance with the USEPA UIC Program.

Sanitary System

Evidence exists that the building discharges sanitary wastewater to an on-site septic/cesspool system. Given the current and historical banking and office types of operations, it is unlikely that the environmental integrity of the soils within the area of the sanitary system have been impacted; therefore, it is GEI's opinion that no testing is warranted. However, it should be noted that it is a Nassau County Public Health Ordinance requirement that the building be connected to the municipal sewer system and the on-site sanitary system must be properly closed in accordance with Nassau County Department of Health On-site Sanitary System Abandonment Procedures.

Fuel Oil Tank

No underground storage tanks (USTs) or aboveground storage tanks (ASTs) were observed on the Site or referenced in any regulatory agency database listing. Additionally, no visual evidence (e.g., fill port or vent line, plumbing, etc.) for a fuel oil tank was observed. However, the historical building and tax assessor records indicated that the building utilized fuel oil for heating at the time the building was constructed. Mr. Grossman stated that since the purchased the building in 2005, natural gas has always been utilized for heating and that he is unaware of any fuel oil tanks on the Site.

No statement can be made with regard to whether or not a fuel oil UST is buried on the Site or if it was previously removed, or if it was originally an AST that was removed. Therefore, to rule out the possibility of an UST being buried on the Site, it is GEI's opinion that a ground penetrating radar (GPR) survey be performed.

Additionally, the following de minimis condition was observed in connection with the Site:

On-Site Water Supply Well

A depiction of a well pump was observed on a piece of electrical equipment within the basement boiler room. In addition, GEI observed what appeared to be a well head in a small alcove adjacent to the boiler room. Mr. Grossman stated that he has no knowledge or information regarding this well and stated that the building gets water from the municipality. No other information regarding this well was obtained during this investigation. According to the NYSDEC, wells that are no longer in use should be properly decommissioned to eliminate potential hazards. NYSDEC recommended well abandonment methods can be found as follows: (https://www.health.ny.gov/environmental/water/drinking/regulations/fact_sheets/fs4_abandoning_wells.htm).

Additionally, the following Non-Scope ASTM Environmental Considerations were identified:

Lead-based Paint

Consumer sale of lead-based paint (containing over .06 percent metallic lead) was banned by the United States Consumer Products Safety Commission in 1977. Given the construction date of the building preceded 1977, it is considered possible that lead-based paint is present in the underlying surfaces in the building. If any construction, demolition, or renovation work is planned for the building, assessment and precautions should be taken to limit the amount of dust emissions that would be generated by such activities. Lead dust generated during renovation/ demolition activities poses a potential health threat to workers and residents and should be addressed in accordance with all applicable federal and state rules

and regulations governing such projects. Lastly, it is noted that the painted surfaces were observed to be in very good condition and that there were no large areas of peeling or deteriorated painted surfaces.

Suspected Asbestos-Containing Material

GEI's limited visual survey of the Site building identified suspected asbestos-containing pipe insulation within the boiler room. It is noted that GEI was provided a Bank of America Asbestos Notification document that indicates that asbestos-containing material (ACM) exists in some of the areas of the building occupied by the bank in the form of non-friable floor tiles and mastic and vinyl wall covering. Other ACM, including pipe insulation, floor tiles and mastic that were identified as ACMs had been abated. Furthermore, based on the age of the building, building materials in other areas of the building such as roofing, caulking, floor tiles, etc. must be assumed to contain asbestos, unless sampling and laboratory analysis documentation proving otherwise can be provided. Therefore, should demolition, construction, or renovation activities affecting these materials be planned, either sampling or laboratory analysis of these materials to determine asbestos content should be performed or the materials must be assumed to contain asbestos and addressed accordingly.

1. Introduction

1.1 Purpose and Scope of Services

On April 11, 2024, GEI Consultants Inc., DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) was retained by Terwilliger and Barton Properties to conduct a Phase I Environmental Site Assessment (ESA) of the property located 20 Jerusalem Avenue, Hicksville, Town of Oyster Bay, New York (hereinafter referred to as the "Site").

GEI has prepared this Phase I ESA Report in general compliance with the scope and limitations of ASTM Standard Practice E1527-21. This Phase I ESA involved and was limited to: research into the history of uses of the Site, checks with appropriate government and regulatory agencies, a visual inspection of the Site, and an informal survey of adjacent/contiguous and nearby properties to determine the presence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs). These are defined under ASTM E 1527-21, as follows:

Recognized Environmental Conditions (RECs)

"… the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or 3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

Historical Recognized Environmental Conditions (HRECs)

"… as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations (AULs) or other property use limitations)."

Controlled Recognized Environmental Conditions (CRECs)

"… a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with

hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, AULs or other property use limitations)."

An evaluation of business environmental risk associated with the parcel(s) of land may necessitate investigation beyond that identified in this Phase I ESA.

This Phase I ESA provides information regarding the potential presence of hazardous substances and/or petroleum products for the Site.

The scope of the Phase I ESA is described as follows:

- Conduct a municipal, state, and federal database and regulatory file review of the Site and relevant adjoining properties.
- Assess potential environmental receptors (i.e., groundwater, surface water, and water supplies).
- Describe site topography and hydrogeology.
- Perform site reconnaissance to assess visible signs of potential environmental impairment.
- Summarize the findings relative to the potential presence of hazardous substances or petroleum products at the Site.
- Recommend additional investigations at the Site, if necessary.

1.2 Limitations and Exceptions

This Phase I ESA was prepared in accordance with GEI's approved proposal dated April 10, 2024. It is noted that the scope of services did not include the assessment of considerations not within the scope of the ASTM Phase I ESA standard (i.e., Non-Scope ASTM Environmental Considerations). These include Lead in Drinking Water, Asbestos Containing Materials, Lead Based Paint, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality, Biological Agents, High Voltage Power Lines, and substances not defined as hazardous substances pursuant to CERCLA 42 U.S.C. Section 9601(14).

It is noted that not all the areas associated within the spaces occupied by the Bank of America could be inspected. The areas such as the teller's area and the safety deposit box room were off-limits to anyone but bank employees and as such, GEI did not enter those areas. This limitation will not impact the conclusion of this report.

In preparing this report, GEI relied on file information provided by state and local officials and information and representations made available to GEI at the time of the report. If such

information is incomplete or inaccurate, GEI is not responsible. GEI's professional services for this project have been performed in a manner consistent with that degree of skill and care ordinarily exercised by members of our profession currently practicing in the same locality, performing similar services under similar conditions. GEI makes no other representations and no warranties, express or implied.

1.3 Environmental Professional Statement

GEI declares that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Furthermore, GEI has developed and performed all appropriate inquiry (AAI) in conformance with the standards and practices set forth in 40 CFR Part 312. Copies of the resumes for the personnel who participated in the preparation of this report can be found in Appendix A.

1.4 Continued Viability of ESA ("Shelf Life")

Per the ASTM Standard, this ESA may be presumed to be valid if completed less than 180 days prior to the date of acquisition of the Property (i.e., the date on which a person acquires title to the Property) or, for transactions not involving an acquisition (such as a lease or refinance), the date of the intended transaction. This ESA may be presumed to be valid for a period of up to 1 year prior to the date of acquisition or intended transaction if certain components (e.g., interviews, review of government records, visual inspection of the Property, and others identified in Section 4.6 of the ASTM Standard) are conducted or updated within 180 days of the date of acquisition or the date of the intended transaction.

Table of Phase I ESA Critical Dates	
Date of Interview with Past or Present Owners, Operators and Occupants	April 23, 2024
Date of Search for Recorded Environmental Liens	Not applicable [(1)]
Date of Review of Federal, Tribal, State, and Local Government Records	April 23, 2024
Date of Visual Inspection of Property and Adjoining Properties	April 23, 2024
Date of Declaration of Environmental Professional	April 30, 2024
Earliest of Dates Listed Above	April 23, 2024
Report Issuance Date	April 30, 2024
Report Viability Date (180 days from Earliest of Dates Listed Above)	**October 20, 2024**

Note [(1)] = This is not applicable because the User did not engage GEI to review land title records or judicial records for environmental liens and AULs. This review is a User Responsibility under ASTM Standard E1527-21. However, GEI did review reasonably ascertainable state and/or county records to search for institutional and/or engineering controls (e.g., AULs), as summarized in Section 5.

1.5 Data Gaps

No significant data gaps were identified during this investigation.

1.6 Previous Environmental Reports

GEI was provided the following previous environmental report for the Site:

- Draft Phase I Environmental Site Assessment (Phase I ESA) Report, 20 Jerusalem Avenue prepared by EMG Corporation for American Financial Realty Trust, dated June 28, 2004.

This document indicated that in 2004, the building was occupied by a bank and offices and historically, the Site was a church and dwellings. The EMG Phase I concluded that there were no RECs or historical RECs identified, however, asbestos-containing pipe insulation and suspect asbestos containing materials (SACM) were present in the form of floor tile, wallboard/joint compound, and roofing materials. This report is not included with this document but can be provided under separate cover.

1.7 Property Ownership

According to information obtained from the Nassau County Land Record Lookup Web Site (www.mynassauproperty.com), the property is owned by 2020 Partners LLC. Additionally, according to Mr. David Grossman, a member of 2020 Partners LLC, they purchased the site in 2005 and, at that time, the property was occupied by a bank and offices.

2. Physical Setting

2.1 Site Location and Legal Description

The Site is located on the west side of Jerusalem Avenue, between Nelson Avenue and West Marie Street, in Hicksville, Town of Oyster Bay, Nassau County, New York (Figs. 1, 2 and 3). The following table provides site identification and a description of the Site:

Property Information	
Address	20 Jerusalem Avenue, Hicksville, New York
Owner	2020 Partners LLC
Operator/Occupant(s)	Banking and Healthcare
Current Use	Office building
Parcel Size	74,872 square feet, or 1.72 acres
Building Footprint	Three-story building, approximately 4,500 square feet; and a 1-story drive-up ATM building, approximately 100 square feet
Parcel Information / Legal Description	Section 11, Block 179, Lot 7
Zoning	Hicksville District - Commercial
County	Nassau

2.2 Adjacent Land Use

Adjacent land use is an important consideration in the evaluation of property conditions, given that the groundwater and surface water flow create possible pathways for contaminant migration. The area surrounding the Site consists of residential/commercial properties. Adjacent land use is summarized in the following table:

Direction	Property Use
North	A parcel of land undergoing redevelopment
South	A 1-story commercial building occupied by a laundromat and a deli
West (across Nelson Avenue)	Parking lots associated with commercial buildings.
East (across Jerusalem Avenue)	Multi-tenant commercial building, parking lot, funeral parlor.

2.3 Topography

From observations made during GEI's site reconnaissance, the topography of the Site is level with surrounding streets and properties.

The overall area surrounding the Site gently slopes in a southerly direction.

According to the United States Geological Survey (USGS) Hicksville, New York topographic map and Google Earth Pro, the general elevation for the area where the Site is located is depicted as approximately 150 feet above mean sea level (AMSL).

2.4 Flood Plain Information

The Site lies in Zone X, an area of minimal flooding, on the Federal Emergency Management Act (FEMA) Flood Insurance Rate Map 36059C0145G. The Site is not located within a flood hazard area.

2.5 Site Hydrogeology/Groundwater Flow

There are no surface water bodies located on the Site.

According to the USGS Hydrologic Conditions Maps for Long Island, New York, 2016, groundwater is expected to be encountered at depths ranging between 51 to 75 feet below ground surface and regional groundwater flow is likely in a southerly direction.

Site-specific hydrogeology can only be determined through a specific program of subsurface drilling to confirm groundwater depth, direction, and composition of the soil matrix. No such drilling program was undertaken as part of this Phase I ESA.

2.6 Water Supply

Potable water is provided by municipal sources within this area of Nassau County.

3. User Provided Information

"User" is defined in ASTM E1527 as "the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of the property, a potential tenant of the property, an owner of the property, a lender, or property manager." ASTM E1527 further describes that according to the AAI Final Rule (40 CFR Part 312) that tasks be performed "by or on behalf of a party seeking to qualify for Limited Liability Protection (LLP) to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability." Additionally, the environmental professional conducting the Phase I ESA shall request that the user provide results to tasks detailed in ASTM E1527 Section 6, "as such information can assist the environmental professional in identifying recognized environmental conditions" associated with the Site.

Based upon the above, a User Questionnaire was returned by Ms. Danielle Romano, Project Coordinator for Bartone & Pellerito Construction, for characterizing relative environmental risks for commercial purposes, as part of a client's regulatory requirement for conducting AAI to support any one of the three legal defenses against CERCLA liability, or other stated purposes. The User Questionnaire is included in Appendix B. The following pertinent information is documented within this Questionnaire.

- Ms. Romano stated that this Phase I ESA is part of the due diligence for a real estate purchase.
- Ms. Romano is unaware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state, or local law. In addition, Ms. Romano is unaware of any AULs, such as engineering controls (ECs), land use restrictions, or institutional controls (ICs) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law.
- Ms. Romano does not have any specialized knowledge or experience regarding any chemicals and/or processes used by current occupants of the Site or adjoining properties. Ms. Romano indicated that there are no obvious indicators that point to the presence or likely presence of contamination at the Site and that they are unaware of any property value reduction due to environmental issues.

4. Site History

Primary sources for the history of the Site include historical fire insurance/real estate maps, topographic maps, historical aerial and street photos, and address directories, as well as the available building department records concerning permits for new buildings, certificates of occupancy, alterations, demolitions, and other changes at the Site.

4.1 Historical Sanborn Maps

The Sanborn Library, LLC collection was searched by Environmental Data Resources (EDR) for the Site. The following pertinent information was obtained from a review of the available maps (Appendix C).

- The 1895 and 1902 Sanborn maps indicated the Site was primarily undeveloped land except for a small church located in the portion of the site presently occupied by the 3-story building.
- The 1908, 1917, 1925, and 1947 Sanborn maps depict the small church and the addition of several residential dwellings and associated detached auto garages. The dwellings increase in numbers as the years progress.
- 1968 Sanborn map depicts the building that exists today as occupied by the Meadowbrook National Bank. The building is shown to have a 1957 date of construction. All the former buildings have been demolished.

In summary, no information was indicated on these historic maps that would be considered a REC to the Site.

4.2 Historical Topographic Quadrangle Maps

A topographic map collection was provided by EDR for the years 1897, 1898, 1899/1900/1901, 1947, 1954, 1967, 1979, 2013, 2016, and 2019 (Appendix C). It is noted that the 1897, 1898, and 1899/1900/1901, maps depict the Site with no structures. The 1947 and 1954 maps depict several small structures and a church. After this, no structures are depicted on any of the subsequent maps.

In summary, no information was indicated on these historic topographic maps that would be considered a REC to the Site.

4.3 Aerial Photographs

An aerial photograph collection was provided by EDR and is summarized in the following table (Appendix C):

Year	Comments
1938, 1947, 1953, and 1957	**Site:** These aerials depict the Site to be occupied by the same residential and commercial structures depicted in the historical Sanborn maps. The 1957 aerial shows clearing in the area of the Site where the current building that exists today is located. **Surrounding Properties:** The surrounding properties appear to be developed with commercial and residential buildings.
1962, 1966, and 1970	**Site:** These aerials clearly depict the Site to be developed with the 3-story building and the small, detached drive-up ATM building that exists today. The 1962 aerial also shows an additional building which is not depicted in the 1966 photograph. The Site is also shown to be covered with asphalt and outlined with parking spaces. **Surrounding Properties:** No significant changes from the previous aerial photographs are depicted.
1974, 1980, 1985, 1994, 2006, 2011, 2015, and 2019	**Site:** All of these aerial photographs depict the 3-story building and the small drive-up ATM building that currently exists on the Site. **Surrounding Properties:** No significant changes are noted from previous aerials.

4.4 Historical City Directory Information

A listing of historical city, cross reference, and telephone directories was provided by EDR at approximate 5-year intervals for the years spanning 1972 through 2020 (Appendix D). Upon review, the listings associated with 20 Jerusalem Avenue were office types of listings.

4.5 Town of Oyster Bay Information

On April 23, 2024, in the company of a Town of Oyster Bay official, GEI reviewed the records that were made available at the Department of Buildings (Appendix E). The following pertinent information was observed within the records:

- Various Demolition Permits were issued in the 1950s and 1960s.
- A Certificate of Occupancy, No. 3914, dated 1956, was issued to Meadowbrook National Bank for the current 3-story structure.
- Building application information indicated that an on-site septic/sanitary system was used for sanitary wastewater, and fuel oil was used for generating heat. The indication of fuel oil use is considered a REC.

4.6 Nassau County Information

Based upon information obtained from the Nassau County Web Site (www.mynassauproperty.com), and historical tax assessor information, the Site was developed in 1957 with the 3-story building, the small detached drive-up ATM building, and black top areas for parking that exist today (Appendix E). The information also depicted that the building utilized an oil burner for heating, had an extended basement on the west side of the building, and an underground tunnel that provides access from the basement to the detached drive-up ATM building. No other pertinent information was identified.

4.7 Interviews

Mr. David Grossman, the building owner and member of 2020 Partners Inc., the ownership entity, was interviewed during GEI's site inspection and provided the following pertinent information:

Mr. Grossman stated that they purchased the property in 2005 and, at that time, it was a bank and office building. Mr. Grossman stated that they performed numerous interior alterations soon after they purchased the building. Mr. Grossman stated that the heating and cooling system within the building has been the same system since 2005. Mr. Grossman stated that the building is connected to the municipal water supply system. Lastly, Mr. Grossman stated that he is unsure whether the building is connected to the municipal sewer system since he sometimes needs to pump out the sanitary structures on the western side of the building when there are odor complaints.

4.8 Summary of Site History

GEI's analysis of historical information indicates that the Site was developed in 1957 with the buildings that exist today. The buildings have been utilized as a bank and multi-tenant office building ever since. There were no business occupants identified that would be considered a REC to the Site. Prior to 1957, the Site was developed with residential dwellings and a place of worship, all of which were demolished.

4.9 Summary of Historical Use for Adjoining Properties

Review of historical Sanborn maps and visual observations made during GEI's informal neighborhood reconnaissance indicated adjacent and neighboring properties consisted of various multi-tenant commercial office buildings and commercial and retail businesses.

5. Environmental Records Review

GEI obtained and evaluated the available and most recent environmental regulatory agency database records provided by EDR of Shelton, CT (Appendix F). This report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Environmental Site Assessments 1527.

GEI's review of available and most recent federal and state agency database records for the Site, adjacent/contiguous properties, and surrounding neighborhood was completed according to the requirements set forth in ASTM E1527. The search distances reviewed for this assessment generally meet or exceed the minimum search distances according to the requirements set forth in ASTM E1527. Any deviations from the minimum search distances are addressed in the individual database discussions presented below.

5.1 Federal Regulatory Database Search

5.1.1 NPL Sites

The USEPA National Priorities List (NPL) identifies confirmed hazardous waste sites that are ranked for clean-up under the federal Superfund program. This program was authorized by the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA" or "Superfund"), as amended by Superfund Amendments and Reauthorization Act of 1986 ("SARA") and Small Business Liability Relief and Brownfields Revitalization Act of 2002 ("Brownfields Amendments").

The Site was not identified in this database. One USEPA NPL site was listed within an approximate 1-mile radius of the Site. However, upon further review, this facility is located over an approximate ¼-mile radius from the Site and based upon the distance, it is unlikely to have the potential to impact the environmental integrity of the Site.

5.1.2 Superfund Enterprise Management Systems (SEMS) and SEMS Archive

The SEMS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Historical SEMS sites that have been granted the status of No Further Remedial Action Planned (NFRAP) (SEMS-Archive) are also included in this database.

The Site was not identified in this database. One SEMS and no SEMS-Archive sites were listed within an approximate ½-mile radius of the Site. However, upon further review, these

facilities are located over an approximate ¼-mile radius from the Site and based upon the distance, they are unlikely to have the potential to impact the environmental integrity of the Site.

5.1.3 RCRA Corrective Action Activity

The Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS) database lists hazardous waste facilities with RCRA corrective action activity reported by the USEPA.

The Site was not identified in this database. One CORRACTS site was listed within an approximate ½-mile radius of the Site. However, upon further review, this facility is located over an approximate ¼-mile radius from the Site and based upon the distance of this facility, it is deemed unlikely to have the potential to impact the environmental integrity of the Site.

5.1.4 RCRA Treatment/Storage/Disposal Facilities

The RCRA Treatment/Storage/Disposal Facilities (TSDF) database includes facilities that treat, store, and/or dispose of hazardous wastes, or have engaged in these activities in the past. TSDF operators, as with hazardous waste transporters and generators, are regulated under the RCRA.

The Site was not identified within this database. No RCRA TSDF sites were identified within an approximate ½-mile radius of the Site.

5.1.5 RCRA Hazardous Waste Generators

This list includes any operation that generates or transports hazardous waste and that must obtain a hazardous waste generator identification number or transporter permit.

The database identified five registered RCRA hazardous waste generator facilities located within an approximate ¼-mile radius from the Site, including one Large Quantity Generator (LQG), two Small Quantity Generator (SQG) and two Very Small Quantity Generator (VSQG) sites. The Site and adjoining properties were not listed on this database.

5.1.6 RCRA Non-Generators/No Longer Regulated (NLR)

This database includes selective information on sites, which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. RCRA Non-Generators (Non-Gen) do not presently generate hazardous waste.

The Site was not identified on this database; however, an adjoining property was listed within this database as follows:

40 Jerusalem Avenue – Laundromat, USEPA Facility Id: NYD114131923: The database indicated that the site is currently not a generator of hazardous waste; however, historically, it was listed as a small and large quantity generator. This listing indicated that historically, the site operated as a dry cleaner. Given that this property is no longer operating as a dry cleaner and that there are no regulatory spills or releases associated with this site, it is GEI's opinion that no further investigation or research is warranted.

Additionally, there were 16 Non-Gen sites listed within an approximate ¼-mile radius of the Site. Upon review, based upon the status, distance, and/or their hydraulic relationship of these facilities, they are unlikely to have the potential to impact the environmental integrity of the Site.

5.1.7 Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and institutional controls in place. ECs include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. ICs include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the Site. Deed restrictions are generally required as part of the ICs.

The Site was not identified within this database. One IC and EC site was listed within this database. However, upon further review, this facility is located over an approximate ¼-mile radius from the Site and based upon the distance, it is unlikely to have the potential to impact the environmental integrity of the Site.

5.1.8 Emergency Response Notification System

USEPA's Emergency Response Notification System (ERNS) database contains information from federal agencies on CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity.

The Site was not identified within this database.

5.1.9 Enforcement and Compliance History Online / Integrated Compliance Information System/ Facility Index System

Enforcement and Compliance History Online (ECHO), is a web tool developed and maintained by EPA's Office of Enforcement and Compliance Assurance for public use. The ECHO website provides environmental regulatory compliance and enforcement information for approximately 800,000 regulated facilities nationwide. It also offers information about compliance and enforcement activities at the state level. Integrated Compliance Information

System (ICIS) tracks formal civil administrative and judicial enforcement actions taken by the USEPA. The AIRS system track air emissions. The Facility Index System (FINDS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. ECHO extracts information from many databases, including ICIS and FINDS.

The Site was not listed on the FINDS and ECHO databases.

5.2 New York State Regulatory Database Search

5.2.1 New York State Inactive Hazardous Waste Disposal Sites (SHWS)

The New York State SHWS database, compiled by the NYSDEC, maintains information regarding the investigation and cleanup of suspected hazardous waste sites.

The Site and adjoining properties were not identified within the database.

Three SHWS were listed within an approximate 1-mile radius of the Site; however, these facilities are listed over an approximate ½-mile radius from the Site and at this distance are unlikely to have the potential to impact the environmental integrity of the Site.

5.2.2 Hazardous Substance Waste Disposal Sites

NYSDEC maintains a database of waste disposal sites that may pose threats to public health or the environment but cannot be remediated using monies from the Hazardous Waste Remediation Fund.

The Site was not identified within this database. No NYSDEC Hazardous Substance Waste Disposal facilities were listed within an approximate ½-mile radius of the Site.

5.2.3 Brownfields Sites (State and Local)

The New York State Brownfields database is a listing of sites that are abandoned, idled, or under-used industrial and commercial sites in New York State, where expansion or redevelopment is complicated by real or perceived environmental contamination.

The Site was not identified within this database.

No Brownfield facilities were listed within an approximate ½-mile radius of the Site.

5.2.4 Solid Waste Facilities

A review of the NYSDEC database of solid waste facilities (including, but not limited to, landfills, incinerators, transfer stations, recycling centers) determined that the Site was not identified within this database.

No solid waste facilities were listed within an approximate ½-mile radius of the Site.

5.2.5 New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKS)

The NY Spills database, including LTANKS sites, was researched to identify listings within an approximate ½-mile radius of the Site.

The NYSDEC maintains a database of spills of hazardous materials, including petroleum products and leaking tanks, reported to the agency according to its regulatory requirements. Parties found responsible for these spills are required to respond by notifying the NYSDEC's Spill Hotline, obtain a Spill Number, and eliminate the source of the spill and perform the necessary cleanup of contamination in surface and subsurface soils and groundwater. The responsible party is required to report its response actions to an assigned NYSDEC case manager and meet the applicable NYSDEC cleanup criteria for the media impacted by the spill before the NYSDEC will render a determination of "no further action" and at such time, the NYSDEC will "close" the spill number. Spill numbers listed as "active" indicate that the spill incident is either still undergoing remediation or awaiting completion of paperwork for closure. The NYSDEC Spills database records spills of unknown substances, regulated chemicals, petroleum spills, and spills due to tank failures and tank tightness test failures.

The Site was not listed within this database.

In addition, upon review of the database information, there were 80 NYSDEC spill incidents identified within an approximate ½-mile radius of the Site, of which 79 have been closed. Based upon the distance, hydraulic relationship, and characteristics of these closed and one active spill cases, all are considered unlikely to have the potential to impact the environmental integrity of the Site.

5.2.6 NYSDEC Petroleum Bulk Storage (PBS) Database

NYSDEC maintains registration records for facilities that have petroleum storage capacities more than 1,100 gallons and less than 400,000 gallons. These facilities are documented within the NYSDEC PBS databases and the Nassau County Department of Health.

The Site and adjoining properties were not listed within this database.

5.2.7 Major Oil Storage Facilities

A check was made of the NYSDEC Major Oil Storage Facilities (MOSF) database, which lists all facilities (onshore facilities or vessels) with petroleum storage capacities of 400,000 gallons or greater.

The Site was not identified within this database.

No NYSDEC MOSF sites were identified within an approximate ½-mile radius of the Site.

5.2.8 Chemical Bulk Storage (CBS) Facilities

A check was made of the NYSDEC CBS database. CBS facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

The Site was not identified within this database.

Two CBS sites were located within an approximate ¼-mile radius of the Site. However, upon further review, these CBS sites are located over 600 feet from the Site and due to this distance, are not considered likely to impact the environmental integrity of the Site.

5.3 Local Agency Records Search

5.3.1 Nassau County Department of Health (NCDOH)

A FOIL request was submitted to the NCDOH for information regarding environmental concerns associated with the Site. Additionally, GEI searched the NCDOH web site (https://www.nassaucountyny.gov) for information concerning toxic and hazardous materials and fuel oil storage. Based upon the information reviewed, no records were found for the Site.

5.3.2 Nassau County Fire Marshal (NCFM)

A FOIL request was submitted to the NCFM for information regarding environmental concerns associated with the Site (Appendix G). Based upon a response, there are no records for the Site.

5.3.3 Town of Oyster Bay Building Department

A FOIL request was submitted to the Town of Oyster Bay Building Department for information regarding environmental concerns associated with the Site (Appendix E). The Town of Oyster Bay Building Department records were reviewed as previously discussed in Section 4.

6. Interviews

6.1 Interviews

An interview was performed during the site inspection with Mr. David Grossman of 2020 Partners Inc., the ownership entity. This information was previously discussed in Section 4.

7. Site Reconnaissance

The Site was inspected on April 25, 2024, by GEI environmental professional, Mr. Richard Fasciani. Weather conditions at the time of the site reconnaissance were sunny, with an ambient temperature of 55° Fahrenheit. Photographs documenting the Site inspection are provided in Appendix H.

7.1 Building Description and Observations

7.1.1 Building Description

A 3-story (with basement) masonry and steel framed building and a small, detached drive-up ATM building are situated in the northeast portion of the Site. The 3-story building has an approximate footprint of 4,500 square feet and the detached drive-up bank ATM building is approximately 100 square feet. The drive-up bank ATM building is connected to the 3-story building by an underground tunnel, which is no longer utilized. Access to this structure is via a ground floor entrance. The 3-story building is currently a multi-tenant office building, occupied by a bank and a health care business. This building has a hydraulic elevator that is used by the bank and a mechanical elevator used for office areas. No staining or evidence of a release were noted by the hydraulic fluid tank associated with the hydraulic elevator system. The bank occupies the ground floor and portions of the basement. The healthcare business also utilizes the basement space as well as the 2nd and 3rd floors of the building. Lastly, it is noted that the basement extends out underneath part of the sidewalk area on the western side of the building.

7.1.2 Building Heating and Cooling

Building heat is generated by natural gas-fired hot water boiler systems that are located within the basement boiler and cooling system room. The hot water is circulated through radiators located along the interior perimeter walls of the building. Additionally, there are blower units within the basement that provide cooling. Supplement heating coils are also within these blower units and provide supplemental warm air when required. Hot water is generated by a natural gas-fired hot water heating storage tank located in the basement.

7.1.3 Observed Interior Stains or Corrosion

At the time of the site reconnaissance, no significant staining or corrosion was observed that would be considered a REC to the Site.

7.1.4 Observed Interior Drains, Sumps, or Pools of Liquid

One interior floor drain and two sump pumps were observed in the boiler room area. No other drains were observed in the visually accessible areas of the basement.

7.1.5 Water Supply Well

A depiction of a well pump was observed on a piece of electrical equipment within the basement boiler room. In addition, GEI observed what appeared to be a well head in a small alcove adjacent to the boiler room. Mr. Grossman stated that he has no knowledge or information regarding this well and stated that the building gets water from the municipality.

7.1.6 Wastewater

Based upon information provided by Mr. Grossman, as well as from the Town of Oyster Bay Building Department records, the building discharges sanitary wastewater to an on-site septic/cesspool system. Additionally, two sanitary pools were depicted on a 2005 Site Survey. The manhole covers to these sanitary pools were observed in the parking area on the west side of the building.

7.1.7 Waste Generation, Storage, and Disposal

Waste generated at the Site is non-hazardous (office type waste) and is collected by a private waste contractor on a weekly basis.

7.2 Property Exterior Description and Observation

7.2.1 Property Description

The Site is irregular in shape and 1.72 acres in area. Areas of the Site not occupied by the buildings consist primarily of asphalt covered parking areas, concrete sidewalks and walkways, and landscaped areas.

7.2.2 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons are present on the Site or were observed during the site reconnaissance.

7.2.3 Odors and Stressed Vegetation

No unusual odors were detected during the site reconnaissance. No areas of stressed vegetation exist on the Site.

7.2.4 Stained Soil or Pavement

The Site was relatively free from significant areas of staining or impacted/deteriorated surfaces.

7.2.5 Monitoring Wells

No monitoring wells were observed on the Site.

7.2.6 Exterior Drains

Numerous stormwater drainage structures (dry wells) are located throughout the parking areas of the Site.

7.2.7 Septic/Cesspool Systems

As stated previously, it appears that sanitary wastewater is discharged to a septic/cesspool system located on the west side of the 3-story building. This system was installed at the time the property was developed in 1957 and according to information obtained from the Town of Oyster Bay Buildings Department, there are nine cesspool units associated with this sanitary system.

7.3 Chemical Substance Use/Storage

Other than cleaning chemicals stored in small plastic containers, no other types of chemicals that would be considered a REC to the Site were observed.

7.4 On-Site Storage Tanks

7.4.1 Underground Storage Tanks (USTs)

There was no evidence of USTs on the Site or referenced in any regulatory agency database listing. Additionally, no visual evidence (e.g., fill port or vent line, plumbing, etc.) for a fuel oil tank was observed. However, the historical building and tax assessor records indicated that the building utilized fuel oil for heating at the time the building was constructed. Mr. Grossman stated that since he purchased the building in 2005, natural gas has always been utilized for heating and that he is unaware of any fuel oil tanks on the Site.

7.4.2 Aboveground Storage Tanks (ASTs)

No ASTs were observed on the Site or referenced in any regulatory agency database listing.

7.5 Non-Scope Considerations

7.5.1 Radon

Radon, a naturally occurring radioactive gas, is the product of the decay of radium. It is found most frequently in relatively high concentrations in rock formations containing uranium, granite, shale, phosphate, and pitchblende. Radon may also be found in soils contaminated with industrial waste from uranium and phosphate mining. Radon, as a gas, can move through the soil and water, and into the atmosphere, and is a potential health concern if confined in sufficiently high concentrations in indoor environments. The USEPA has set an "action level" of 4.0 picocuries per liter for continuous long-term exposure to radon gas. If radon gas is measured above this level, USEPA suggests follow-up testing and remediation measures.

According to data compiled by the Bureau of Radiation Protection, New York State Department of Health, Town of Oyster Bay has one of the lowest average levels of basement radon measurements in New York State. The latest statistics indicate an average of 1.80 picocuries/liter, compared to a statewide average of 5.0. Based on these low average levels, it is unlikely that radon gas levels at the Site exceed the USEPA action level of 4.0 picocuries per liter, and therefore, radon testing is not recommended.

7.5.2 Polychlorinated Biphenyl (PCB)-Containing Equipment

A transformer was observed on the west side of the building within an underground vault. The vault was covered by a locked metal grate. There was no label indicating PCB content in the vicinity of the vault. Additionally, this transformer was referenced in the historical Nassau County Tax Assessor Records.

7.5.3 Suspected Asbestos-Containing Insulation Materials

As part of this Phase I ESA, GEI performed a limited visual survey within accessible areas of the Site to identify the presence of suspected asbestos-containing insulation materials. Accessible areas included those areas of the subject building made available by the site contact on the date of GEI's site visit (i.e., unlocked areas which are deemed safe and which building occupants have access to).

This limited visual survey was conducted for overview purposes only. It is not to be used as a complete asbestos inspection. No sampling or laboratory analysis of SACM identified within the subject buildings for confirmation of the presence of asbestos, or destructive activities into inaccessible areas (e.g., behind plaster or sheetrock walls, ceilings, pipe chases, etc.) were performed during this Phase I ESA.

Based upon our observations, suspect asbestos-containing pipe insulation materials were observed within the boiler room in the basement of the building.

It is noted that GEI was provided a Bank of America Asbestos Notification document that indicates that ACM exists in some of the areas of the building occupied by the bank in the form of non-friable floor tiles and mastic and vinyl wall covering. Other ACM, including pipe insulation, floor tiles and mastic that were identified as ACMs had been abated.

7.5.4 Lead-Based Paint

Consumer sale of lead-based paint (containing over 0.06 percent metallic lead) was banned by the United States Consumer Products Safety Commission in 1977. Given that the subject building was constructed prior to 1977, it is likely that lead-based paint exists on the painted surfaces within the subject building that have not been removed during building renovations. However, it is noted that the building was in good condition and that there were no large areas of peeling or deteriorated painted surfaces.

7.5.5 Mold

No visual evidence of extreme, large and/or significant areas of mold spore growth were noted in the building at the time of GEI's site visit.

8. Vapor Intrusion Screening

GEI has performed a Tier 1 Vapor Encroachment Screening for the property.

Toxic, volatile substances that are spilled on the ground or released into the subsurface may migrate in the subsurface environment and eventually enter buildings as a gas or vapor by seeping through cracks in basements, foundations, sewer lines and other openings. Vapor flow toward and into a building can be influenced by several factors, including atmospheric pressure changes and building depressurization due to operation of exhaust fans or heating units within the building. The flow rate of vapors into a building often is difficult to predict but generally will depend on factors such as subsurface conditions (e.g., soil properties and contaminant characteristics), building design and condition (e.g., cracks and conduits), and differentials in air pressure across the building foundation. Upon entry into a structure, vapors normally mix with the existing air through the natural or mechanical ventilation of the building. Concentrations of indoor vapors may accumulate to a point where the health of occupants (e.g., residents, workers) in those buildings could be at risk.

Vapor intrusion (also referred to as VI) is the general term given to migration of vapors from a contaminant source in the subsurface into indoor air. VI can occur in a wide variety of building configurations (e.g., buildings with basement, crawlspace, or slab-on-grade foundations). Volatile organic compounds (VOCs) are the category of chemicals of greatest potential concern for this pathway, which among other things includes constituents of gasoline (e.g., benzene) and other petroleum fuels, as well as dry cleaning fluids (e.g., tetrachloroethylene [PCE]) and industrial degreasers and solvents (e.g., trichloroethylene [TCE]). Other vapor-forming chemicals of potential interest include certain semi volatile organic compounds (SVOCs), certain pesticides, and mercury.

GEI utilized the information collected in this Phase I ESA (e.g., standard environmental records, historical sources, general physical setting information, etc.) to assist in determining if there are known or suspect sources of contamination at the Site (on-site), as well as within the area of concern (AOC). As per Section 8.3.2 of the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the AOC is the approximate minimum search distance between the boundary of the Site and the suspect source of contamination. Therefore, for VOCs chemicals of concern (COCs), the search distance is $^{1}/_{3}$-mile and for petroleum hydrocarbon COCs, it is $^{1}/_{10}$-mile.

Based on our evaluation of current and past property uses, as well as our review of available property records during this Phase I ESA, we concluded that a vapor intrusion concern (VIC), defined as the presence or likely presence of contaminated vapors in the subsurface caused by the release of vapors from contaminated soil and groundwater at or near the Site, is unlikely to exist.

9. Findings and Opinions

This assessment was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-21.

9.1 Recognized Environmental Conditions

The objective of this assessment was to evaluate the property for evidence of RECs. The goal of ASTM E1527 is to identify: 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or 3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. GEI identified the following RECs in connection with the Site:

Fuel Oil Tank

No USTs or ASTs were observed on the Site or referenced in any regulatory agency database listing. Additionally, no visual evidence (e.g., fill port or vent line, plumbing, etc.) for a fuel oil tank was observed. However, the historical building and tax assessor records indicated that the building utilized fuel oil for heating at the time the building was constructed. Mr. Grossman stated that since he purchased the building in 2005, natural gas has always been utilized for heating and that he is unaware of any fuel oil tanks on the Site.

No statement can be made with regard to whether or not a fuel oil UST is buried on the Site or if it was previously removed or if it was originally an AST that was removed.

Stormwater Dry Wells

GEI observed numerous open grate stormwater dry wells in the parking areas. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, vehicle exhaust, degrading asphalt, or parking lot sealants. These drainage systems represent a REC.

Sanitary System

Evidence exists that the building discharges sanitary wastewater to an on-site septic/cesspool system. Given the current and historical banking and office types of operations, it is unlikely that the environmental integrity of the soils within the area of the sanitary system have been impacted; therefore, it is GEI's opinion that no testing is warranted. However, it should be noted that it is a Nassau County Public Health Ordinance requirement that the building be

connected to the municipal sewer system and the on-site sanitary system must be properly closed in accordance with Nassau County Department of Health On-site Sanitary System Abandonment Procedures.

9.2 Historical Recognized Environmental Conditions

A HREC is defined as "…as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, AULs or other property use limitations)."

GEI did not identify HRECs in connection with the Site.

9.3 Controlled Recognized Environmental Conditions

CRECs is defined as "…a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, AULs or other property use limitations)."

GEI did not identify CRECs in connection with the Site.

9.4 De Minimis Conditions

A de minimis condition is defined by ASTM as a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a REC nor a CREC.

The following de minimis condition was observed in connection with the Site:

On-Site Water Supply Well

A depiction of a well pump was observed on a piece of electrical equipment within the basement boiler room. In addition, GEI observed what appeared to be a well head in a small alcove adjacent to the boiler room. Mr. Grossman stated that he has no knowledge or information regarding this well and stated that the building gets water from the municipality. No other information regarding this well was obtained during this investigation.

9.5 Non-Scope ASTM Environmental Considerations

Non-ASTM Environmental Considerations associated with the possible presence of lead-based painted surfaces and asbestos containing materials were identified in connection with the Site.

9.6 Data-Gaps

Based upon the information obtained during the course of this investigation, it is GEI's opinion that no significant data gaps were identified that would impact our ability to identify RECs or impact the conclusions of this report.

10. Conclusions and Recommendations

GEI has performed a Phase I ESA in general conformance with the scope and limitations of ASTM Practice E1527-21 of the site located at 20 Jerusalem Avenue, Hicksville, New York (the "Site"). Exceptions to, or deletions from, this practice (if any) are described in Sections 1.1 and 1.2 of this report. There were no HRECs or CRECs identified for the Site. However, GEI identified the following RECs to be associated with the Site:

Stormwater Dry Wells

GEI observed numerous open grate stormwater dry wells in the parking areas. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, vehicle exhaust, degrading asphalt, or parking lot sealants. These drainage systems represent a REC. It is recommended that an assessment and evaluation of the stormwater dry wells be performed, and the bottom sediments (if impacted) be removed and properly disposed. Additionally, should the dry wells require removal to facilitate redevelopment of the Site, they should be removed/abandoned in accordance with the USEPA UIC Program.

Sanitary System

Evidence exists that the building discharges sanitary wastewater to an on-site septic/cesspool system. Given the current and historical banking and office types of operations, it is unlikely that the environmental integrity of the soils within the area of the sanitary system have been impacted; therefore, it is GEI's opinion that no testing is warranted. However, it should be noted that it is a Nassau County Public Health Ordinance requirement that the building be connected to the municipal sewer system and the on-site sanitary system must be properly closed in accordance with Nassau County Department of Health On-site Sanitary System Abandonment Procedures.

Fuel Oil Tank

No USTs or ASTs were observed on the Site or referenced in any regulatory agency database listing. Additionally, no visual evidence (e.g., fill port or vent line, plumbing, etc.) for a fuel oil tank was observed. However, the historical building and tax assessor records indicated that the building utilized fuel oil for heating at the time the building was constructed. Mr. Grossman stated that since he purchased the building in 2005, natural gas has always been utilized for heating and that he is unaware of any fuel oil tanks on the Site.

No statement can be made with regard to whether or not a fuel oil UST is buried on the Site or if it was previously removed or if it was originally an AST that was removed. Therefore,

to rule out the possibility of a UST being buried on the Site, it is GEI's opinion that a ground penetrating radar (GPR) survey be performed.

Additionally, the following de minimis condition was observed in connection with the Site:

On-Site Water Supply Well

A depiction of a well pump was observed on a piece of electrical equipment within the basement boiler room. In addition, GEI observed what appeared to be a well head in a small alcove adjacent to the boiler room. Mr. Grossman stated that he has no knowledge or information regarding this well and stated that the building gets water from the municipality. No other information regarding this well was obtained during this investigation. According to the NYSDEC, wells that are no longer in use should be properly decommissioned to eliminate potential hazards. NYSDEC recommended well abandonment methods can be found as follows: (https://www.health.ny.gov/environmental/water/drinking/regulations/fact_sheets/fs4_abandoning_wells.htm).

Lastly, the following Non-Scope ASTM Environmental Considerations were identified:

Lead-based Paint

Consumer sale of lead-based paint (containing over .06 percent metallic lead) was banned by the United States Consumer Products Safety Commission in 1977. Given the construction date of the building preceded 1977, it is considered possible that lead-based paint is present in the underlying surfaces in the building. If any construction, demolition, or renovation work is planned for the building, assessment and precautions should be taken to limit the amount of dust emissions that would be generated by such activities. Lead dust generated during renovation/ demolition activities poses a potential health threat to workers and residents and should be addressed in accordance with all applicable federal and state rules and regulations governing such projects. Lastly, it is noted that the painted surfaces were observed to be in very good condition and that there were no large areas of peeling or deteriorated painted surfaces.

Suspected Asbestos-Containing Material

GEI's limited visual survey of the Site building identified suspected asbestos-containing pipe insulation within the boiler room. It is noted that GEI was provided a Bank of America Asbestos Notification document that indicates that ACM exists in some of the areas of the building occupied by the bank in the form of non-friable floor tiles and mastic and vinyl wall covering. Other ACM, including pipe insulation, floor tiles and mastic that were identified as ACMs had been abated. Furthermore, based on the age of the building, building materials in other areas of the building such as roofing, caulking, floor tiles, etc. must be assumed to

contain asbestos, unless sampling and laboratory analysis documentation proving otherwise can be provided. Therefore, should demolition, construction, or renovation activities affecting these materials be planned, either sampling or laboratory analysis of these materials to determine asbestos content should be performed or the materials must be assumed to contain asbestos and addressed accordingly.

11. Limitations and Deviations

This Phase I ESA was conducted and prepared on behalf of Terwilliger & Bartone Properties. No other entity may rely upon the results of the Phase I ESA or contents of this report for any reasons or purpose.

The purpose of this Phase I ESA is to evaluate whether hazardous substances or petroleum products may be present at the site. The opinion(s) provided is based on the information described in this report. Because no soil or groundwater samples were collected or chemically analyzed as part of this evaluation, no specific opinions are made based on soil or groundwater quality. Future investigations or information that was not available to GEI may result in modification of the findings of this report.

In preparing this report, GEI relied on file information provided by state and local officials, and information and representations made available to GEI at the time of the report. If this information is incomplete or inaccurate, GEI is not responsible.

GEI performed this Phase I ESA in accordance with generally accepted practices of engineers and/or scientists providing similar services at the same time, in the same locale, and under like circumstances. No other warranty, expressed or implied, is made as to the professional opinions included by GEI in this report.

The scope of services for this project did not include the following list of "additional issues" that are non-scope considerations that are outside the scope of the ASTM Phase I practice: Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality, and High Voltage Power Lines.

ASTM E1527 states that the User of an environmental site assessment may include, without limitation, a potential purchaser of the subject property, a potential tenant of the subject property, an owner of the subject property, a lender, or the manager of the subject property. Per Section 6 of the ASTM E1527 Standard, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of RECs in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for LLPs under CERCLA. GEI makes no representations or warranties regarding a User's qualification for protection under any federal, state, or local laws, rules, or regulations.

No significant deviations from ASTM 1527 occurred during the preparation of this Phase I ESA and no additional services were provided as part of this Phase I ESA.

Resumes

Richard B. Fasciani
Lead Environmental Scientist

resume

Richard Fasciani is an Environmental Scientist specializing in Phase I and Phase II Environmental Assessments. He has performed and coordinated over 1,000 Phase I Environmental Assessments of industrial, vacant rural, residential, and commercial properties for lending institutions, legal firms, city agencies, and private clients throughout the New York area. Mr. Fasciani has also been responsible for the preparation of Phase II investigations for soil and groundwater contamination, as well as sub-slab soil vapor and indoor air quality (IAQ) testing.

PROJECT EXPERIENCE

PSEG Long Island, Environmental Site Assessment Projects. Project Manager and Lead Phase I Investigator of various sites on Long Island. Performed Phase I ESAs of a vacant land site at 92 Duryea Road, Melville; a former HBO telecommunication facility at 300 New Highway, Hauppauge, and Environmental Desk Top Study Reports of three properties in Suffolk County. Performed site inspections and interviews, reviewed state, county, and location agency documentation, developed and submitted reports.

National Grid, Phase I Environmental Site Assessments. Project Manager and Lead Phase I ESA Investigator for a vacant land site in the East Moriches; an operations facility in Riverhead; a sand pit in East Farmingdale, and a portion of a power station in Island Park. The Phase I ESA's were performed for due diligence purposes.

Mary Cali Dalton Recreation Center (2022), Phase I & II Environmental Site Assessments (Kokolakis Contracting). Hanna Street, Staten Island, NY – Project Manager for Phase I ESA and Phase II Subsurface Investigation that was concurrently performed. The Phase I ESA identified historic fill, monitoring wells, an anomaly associated with an underground storage tank (UST), and a Hazmat Environmental Restriction (E-Designation). The Phase II involved a geophysical investigation, soil and groundwater sampling, and soil vapor sampling. Coordination with the New York City Mayors Office of Environmental Remediation (NYCOER) was required for the E-Designation as well as with the New York City Department of Environmental Protection (NYCDEP) who approved the Remedial Investigation Work Plan (RIWP). GEI recommended proper handling and disposal of historical fill that would be disturbed; additional groundwater sampling if dewatering will be required for redevelopment activities; additional investigation to specifically confirm if the UST is present, and the incorporation of a vapor barrier waterproofing membrane under the slab and along the basement walls of the new building.

Port Washington North, Shore Road (2023), Phase I & II Environmental Site Assessment (Private Client). As the project manager, performed a Phase I ESA for the client interested in purchasing the property that was occupied by a restaurant operated by the client. As part of the due diligence process, it was discovered that historically, the upgradient adjoining site was a large oil distribution facility that had undergone remedial actions under state regulatory oversite and was redeveloped into a multi-tenant retail shopping center. Due to this historical recognized environmental condition (REC) and an undocumented UST, GEI performed a Phase II investigation. The findings of the Phase II revealed the existence of the UST as well as fuel oil and gasoline impacted soil and groundwater at the groundwater interface across the site. GEI recommended additional testing for soil vapor impacts and recommended that the findings be discussed with the state regulatory authority to determine if additional investigations will be required.

Radio Circle Drive, Phase I ESA (Kaufman Jacobs), Mount Kisco, NY. (2023) As the project manager, performed a Phase I ESA for the client interested in purchasing the property for redevelopment. Historically, the site was an office/warehouse structure and was renovated in the 1990's into an office building. RECs identified included on-site parking stormwater dry wells and potential soil vapor impacts from an upgradient dry cleaner listed as a hazardous waste site. GEI recommended a Phase II Environmental Site Assessment.

NYC Department of Environmental Protection (DEP), Environmental Site Assessment of Watershed Lands; Contract DEL-363A. Project Manager for this contract (held by GEI for 15 years) of the City of New York's Land Acquisition Program which is meant to preserve the City's water supply system. Performed numerous Phase I ESAs of these watershed properties in various upstate counties. As Project Manager, evaluated project assignments, assigned staff and reviewed and performed quality control of reports written by other GEI Phase I ESA team associates.

NYCEDC and NYCOER Consultant Contract for On-Call Environmental Consulting Services. Project Manager and Lead Phase I ESA Investigator for a vacant land site in the Bronx and a multi-building hospital site in Brooklyn, NY, both of which are targeted for redevelopment.

Former Oil Terminal Facility, Patchogue, NY. Performed and wrote the Phase I ESA of this site for a private client interested in determining the sites' suitability for redevelopment. This project involved a significant review of numerous records, documents and reports at the regional and local offices of the New York State Department of Environmental Conservation and Suffolk County Department of Health Services.

Trust for Public Land, Various New York City Sites, NY. Conducted Phase I ESAs under their school playground renovation program in New York City and its Boroughs. Proposed and implemented Phase II investigations based upon identified Recognized Environmental Conditions identified in the Phase I ESA reports.

Mavis Tire Corporation, NY. Conducted Phase I ESAs of gasoline service stations, automotive repair shops and vacant land sites throughout the State of New York.

Property Redevelopment: 5 Boroughs, New York City, NY. Performed Phase I and II investigations for numerous private clients of residential properties that were planned for redevelopment and rehabilitation. Some of these Phase I ESA projects lead to the identification of on-site and off-site recognized environmental conditions requiring remedial investigations including soil sampling, soil vapor investigations and subsequent corrective actions including installation of vapor barriers and sub-slab depressurization systems. Some of the projects were performed according to requirements set forth by the New York City Department of Environmental Protection and New York City Office of Environmental Remediation.

Sub Slab Depressurization System (SSDS) CLIENT, New York City, NY. Directed the design and installation of an active SSDS system within a commercial/residential building impacted by historical dry-cleaning operations that was being redeveloped under the New York City Department of Environmental Protection (NYCDEP) and New York City Housing Preservation and Development (NYCHPD) requirements.

Various Lending and Financial Institutions, Metro-New York Area, NY. Performed Phase I and II ESAs of various residential, commercial, retail and industrial properties throughout the New York City metropolitan area. Phase II investigations resulted from recognized conditions associated with the project site or from potential impacts (soil vapor) from off-site recognized conditions.

Town of North Hempstead, NY. Performed numerous Phase I ESAs of properties being planned for acquisition, as well as a land associated with the Hempstead Harbor Shoreline Trail.

Errol S. Kitt
Vice President, Principal

resume

Errol Kitt is a Vice President and Principal, as well as the Branch Manager for GEI's Long Island Office. He is an environmental engineer whose diverse background includes over 38 years of experience managing and directing environmental projects primarily located in New York, as well as New Jersey, Connecticut, and Pennsylvania. Mr. Kitt has managed and directed Remedial Investigation/Feasibility Studies (RI/FS) and Interim Remedial Measure (IRM) projects at New York State Superfund hazardous waste sites, and RIs and IRMs at former Manufactured Gas Plant (MGP) sites. He has managed numerous investigations to determine the nature, magnitude and extent of contamination in various media contaminated by petroleum hydrocarbons, solvents, volatile and semi-volatile organic compounds (VOCs and SVOCs), metals, pesticides, and polychlorinated biphenyls (PCBs), and developed appropriate remedial actions at private industrial, commercial, and institutional sites, and municipal landfills.

He has directed and managed hundreds of Phase I environmental site assessments (ESAs), Phase II environmental subsurface investigations (ESIs), and associated remediation activities for commercial and industrial real estate transactions throughout the United States, and has directed numerous underground storage tank (UST) and underground injection control (UIC) investigations, removal/closure and remediation programs. In addition to contaminated soil and groundwater remediation systems, he has designed multiple sewage treatment plants, sanitary wastewater disposal systems and industrial wastewater treatment systems.

PROJECT EXPERIENCE

Site Investigation & Remediation Under Superfund & Voluntary Cleanup Programs, Former Manufactured Gas Plant (MGP) Sites, Nassau and Suffolk Counties, New York, KeySpan Energy and National Grid. Served as Program Director, Program Manager and Lead Project Manager responsible for planning, implementation, coordination and supervision of all aspects of multimillion-dollar, multi-year contracts for the investigation and remediation of several former MGP sites under both Superfund & Voluntary Cleanup Programs.

Remedial Investigations, IRMs and Monitoring Programs at former MGP Sites, Nassau and Suffolk Counties, New York, KeySpan Energy and National Grid. Served as Program Director and Lead Project Manager responsible for conducting RIs and associated due diligence investigations, IRMs, groundwater monitoring and community response programs at three former MGP sites located in Nassau and Suffolk Counties, New York.

EDUCATION

American Red Cross CPR and First Aid Certifications

GEI Consultants

Remedial Investigations at former MGP Sites, Queens, Nassau and Suffolk Counties, New York, Keyspan Energy. Served as Program Coordinator and Lead Project Manager responsible for preparation of generic and site-specific work plans, project budgets and schedules, as well as procurement of subcontractors for RIs at six former MGP sites located in Queens, Nassau and Suffolk Counties, New York.

Due Diligence, Environmental & Ecological Assessments, Former MGP Sites, Kings, Queens, Nassau, and Suffolk Counties, New York, KeySpan Energy. Served as Program Coordinator and Lead Project Manager responsible for conducting due diligence reviews, environmental assessments, ecological and exposure evaluations and sampling programs at 18 former MGP sites, as well as due diligence reviews and environmental assessment screens at another 15 sites located in Kings, Queens, Nassau and Suffolk Counties, New York.

Environmental Site Assessments, Investigations and Remediation for Real Estate Transactions for Properties in Connecticut, Indiana, Michigan, New Jersey, New York, and Pennsylvania, Various Clients. Project Director/Manager for hundreds of Phase I ESAs, Phase II ESIs and associated remediation projects related to real estate transactions for numerous commercial and industrial properties.

Environmental Site Assessments, Investigations and Remediation, Facilities in Nassau and Suffolk Counties, New York, Northrop Grumman Corporation. Served as Program Coordinator and Lead Project Manager responsible for planning, implementation, coordination and supervision of all aspects of a multi-million dollar, multiyear contract with Northrop Grumman Corporation for the completion of Phase I ESAs, Phase II ESIs and associated remediation projects, as well as UST and UIC closure and remediation projects to facilitate real estate transactions.

New York State Brownfield Cleanup Program (BCP) Sites, Various Clients. Project Director for design, implementation and management of Phase I ESAs, Phase II ESIs and remedial investigations and remedial cleanup activities for multiple NYS BCP sites located in Nassau and Suffolk Counties on Long Island. The sites are enrolled in the NYSDEC BCP and investigation and remedial activities are being completed in accordance with NYSDEC BCP requirements.

New York City School Construction Authority (NYC SCA) On-Call Environmental Services Contract. Program Director and QA/QC Officer for contract providing environmental and regulatory compliance services throughout New York City in connection with hazardous materials and other wastes for the Industrial & Environmental Hygiene Division of NYC SCA. These services include Phase I ESAs and Phase II ESIs, including soil, groundwater, surface water, soil vapor and air sampling; remedial design and construction support services; potable water sampling for lead; and support for potable water disinfection projects.

PSEG-Long Island, Master Environmental Consulting Services Program, Environmental Consulting and Permitting Services. Program Director for contract services including natural resources permitting, ecological surveys/assessments, wetlands delineation, permitting and mitigation, SEQRA, EIS, Phase I ESAs and Phase II ESIs, SPCC plans and waste management, compliance auditing and regulatory compliance.

PSEG-Long Island/ServCo, Environmental Compliance Services to Support Transfer of Transmission & Distribution Facility Operations. Project Director for providing environmental compliance services related to the transitioning of a management services agreement to provide day-to-day management of the transmission and distribution system to a new utility provider for a major power authority. Critical technical member of the transition team working to ensure that facility compliance and essential operating permits were in place. Responsible for working with both utilities to assess regulatory compliance and permitting needs for each facility and create regulatory programs for ServCo to implement as the new responsible entity. Evaluated the environmental conditions at 18 shared operational sites and compiled, reviewed and commented on associated environmental permits, licenses and certificates in order to facilitate a seamless transition of management services. Prepared site compliance review reports for 17 facilities which included: summaries of site inspections; interviews with site operators; identification of data gaps; compliance reviews for each permit, license, and certificate; identified additional permits, licenses, and certificates that were required; and provided recommendations to bring each site/facility operations into compliance with current or pending regulatory changes, and highlighted deadlines for completing required corrective actions.

Spill Prevention, Control & Countermeasures (SPCC) Plans and Waste Facility Audits, Long Island, NY, PSEG-Long Island. Program Director for providing environmental engineering services to assist PSEG-LI with maintaining and managing SPCC plans for 190 facilities across Long Island, as well as conducting regulatory compliance audits at waste facilities used by PSEG-LI.

Remedial Investigations/Feasibility Studies (RI/FS) for Hazardous Waste Sites, New York State Department of Environmental Conservation (NYSDEC). Served as Program Coordinator and Lead Project Manager responsible for planning, implementation, coordination and supervision of all aspects of a multiyear contract with the NYSDEC, under the New York State Inactive Hazardous Waste Disposal Site Superfund Cleanup Program, for the completion of RI/FS projects for former dry cleaner sites located on Long Island.

Roxy Cleaners Superfund Site, Rensselaer County, New York, NYSDEC. Project Manager of the RI/FS and IRMs, including preparation of work plan documents and budgets, the implementation and direction of the Phase I RI field program, preparation of the Phase I RI Report and Phase I FS Report, oversight of the IRM for remediation of on-site soil contaminated by VOCs using a vacuum extraction system, and the implementation of the IRM for remediation of groundwater/water supply contaminated by VOCs using in-house granular activated carbon (GAC) treatment systems on private wells.

Becker Electronics Superfund Site, Greene County, New York, NYSDEC. Project Manager of the RI/FS and IRM, including preparation of work plan documents and budgets, implementation and direction of the Phase I RI supplemental field program, preparation of the Phase I RI Report, Phase I FS Report, Baseline Human Health Risk Assessment and Environmental Risk Assessment, and implementation of the IRM for remediation of groundwater/water supply contaminated by VOCs using in-house GAC treatment systems on private wells.

Town of Wallkill Landfill Superfund Site, Orange County, New York, NYSDEC. Project Engineer of the RI/FS, including preparation of work plan documents and budgets, preparation of Citizen Participation Plan, Project Management Plan, and implementation of the Phase I RI field activities.

Franklin Cleaners Superfund Site, Nassau County, New York, NYSDEC. Project Manager of the RI/FS, including preparation of work plan documents and budgets, implementation and direction of the RI field programs, and preparation of the RI and FS reports.

Storonske Cooperage Superfund Site, Rensselaer County, New York, NYSDEC. Project Manager of the RI/FS, including preparation of work plan documents and budgets, implementation and direction of the Phase I RI field program, and preparation of the Phase I RI Report and Phase I/II FS Report.

Bedford Village Hunting Ridge Mall and Shopping Arcade Superfund Sites, Westchester County, New York, NYSDEC. Project Engineer responsible for the development of sampling plans for monitoring well and private well sampling and preparation of RI reports as part of the RI/FS.

Groundwater Investigation and Monitoring, Suffolk County, New York, Brookhaven National Laboratory (BNL). Served as Program Director responsible for: installation and sampling of groundwater probes, vertical profiles and monitoring wells associated with the delineation of hot spot areas and groundwater plumes at the BNL facility in Upton, NY.

Peconic River Sediment Remediation, Suffolk County, New York, Brookhaven National Laboratory (BNL). Served as Program Director responsible for: assisting with preparation of plans and specifications, bid solicitation and review, and providing remedial construction oversight/management associated with the Peconic River sediment remediation project for the BNL facility in Upton, NY.

Groundwater Treatment Systems Evaluation, Suffolk County, New York, Brookhaven National Laboratory (BNL). Served as Program Director responsible for the evaluation of several groundwater treatment systems and technology reviews in accordance with CERCLA requirements for the BNL facility in Upton, NY.

New York City Transit Authority (NYCTA), Contamination Investigations at Bus Depots and Train Yards, Various Facilities in Bronx, Brooklyn, Queens and New York City, NY. Project Manager/Engineer

of investigations to determine the origin, extent, magnitude and migration of groundwater contaminated by petroleum hydrocarbons, VOCs/SVOCs at bus depots and train yards.

Oil Spill and Groundwater Contamination Investigations at Various Commercial and Industrial Sites in Connecticut, New Jersey, New York, and Pennsylvania. Project Director/Manager of investigations to determine the existence, origin, extent and magnitude, fate and movement of oil spills and groundwater contaminated by VOCs, SVOCs and metals at various commercial and industrial sites.

Ryder Transportation, Multiple Facilities in Connecticut, New Jersey, New York, and Pennsylvania. Project Director of petroleum hydrocarbon and solvent contamination investigations, hydrogeologic and groundwater investigations, and UST removal, closure and remediation projects at multiple facilities in CT, NJ, NY and PA.

Investigation, Design and Installation of Remediation Systems at Gasoline Station Sites in Westchester and Dutchess Counties New York. Project Director of petroleum-impacted soil and groundwater contamination investigations, conceptual design and installation of in-situ soil and groundwater remediation systems.

Investigation, Design and Installation of Remediation Systems at an Active Business School in Westchester County, New York. Project Director of petroleum-impacted soil and groundwater contamination investigations, conceptual design and installation of in-situ soil and groundwater remediation systems.

Proposed TV City Site in New York City, New York. Project Engineer for the groundwater and soil contamination assessment and soil gas survey.

Proposed Sportsplex Site in Flushing, New York. Project Manager of the hydrogeologic and groundwater contamination investigation and evaluation.

New York City Transit Authority (NYCTA), Various Sites in Brooklyn, Queens, Bronx, and New York City, NY. Project Manager of water quality, geohydrological and well rehabilitation studies and assessments at 17 train yards and 14 bus depots.

G**roundwater Contamination Investigation and Remediation, Electronics Manufacturing Facility in Hauppauge, New York.** Project Manager of soil, sediment, and groundwater contamination investigation and remedial cleanup of on-site soils contaminated by VOCs at a major electronics manufacturing facility.

Groundwater Contamination Assessment, Purex/Mitchel Field Site, Town of Hempstead, Nassau County, New York. Project Engineer responsible for preparation of a groundwater contamination assessment to determine the extent, magnitude and migration of groundwater contaminated by VOCs from the Purex/Mitchel Field site and to evaluate the threat to public water supply wells.

Groundwater and Water Supply Assessment, Town of Hempstead, Nassau County, New York. Project Manager/Engineer for the town-wide groundwater and water supply assessment.

Hydrogeologic and Groundwater Quality Assessment, Peconic Bay System, Long Island, New York. Project Engineer responsible for preparation of the hydrogeologic and groundwater quality assessment of the Peconic Bay System, including the Peconic River, Flanders Bay, North and South Forks, Shelter Island, and the East End regions for the Brown Tide Study, Long Island, New York.

New York City Transit Authority (NYCTA), Various Sites in Brooklyn and New York City, New York. Project Manager/Engineer of hydrogeologic investigations, pump test aquifer analysis and design, operation and maintenance of dewatering systems to alleviate subway tunnel flooding problems.

New York City Transit Authority (NYCTA), Hydrologic and Hydraulic Studies, Railway and Subway Sites in Queens and Staten Island, NY. Project Manager/Engineer for watershed, surface drainage and stormwater analysis and design studies, including water budgets for miscellaneous projects related to railway and subway flooding problems.

Hydrologic and Hydraulic Studies, Miscellaneous Clients, Nassau and Suffolk Counties, NY. Project Manager/Engineer for watershed, surface drainage, and stormwater analysis and design studies, including water budgets.

Environmental Site Assessments, Compliance Audits, and Investigations at Manufacturing Facilities in Nassau and Suffolk Counties, New York. Project Manager of environmental site assessments, RCRA compliance audits and site investigations for several major electronics manufacturing facilities and aircraft antenna and avionics systems manufacturers.

Toxic/Hazardous Materials and Liquid Storage Facilities, Industrial Clients, Nassau and Suffolk Counties, NY. Project Manager/Engineer for design of several toxic/hazardous materials and liquid storage facilities for industrial facilities.

Sewage Treatment System Design, Commercial Development Firm, Suffolk County, NY. Project Manager/Engineer for design of a sanitary wastewater denitrification treatment system for a commercial complex comprised of a restaurant and office building.

Sewage Treatment Plant Design, Nursing Home Facility, Suffolk County, NY. Project Manager/Engineer for design of a sewage treatment plant for a nursing home/health clinic complex.

Industrial Wastewater Treatment Systems Design, Printed Circuit Board Manufacturing and Electroplating Industrial Clients, NY. Project Manager/Engineer for design of industrial wastewater treatment systems, preparation of process plans and specifications for printed circuit board manufacturers and plating operations in the state of New York.

Sanitary Wastewater Treatment Systems Design, Commercial and Residential Properties, Suffolk County, NY. Project Manager/Engineer for design of multiple subsurface sanitary wastewater disposal systems consisting of septic tanks and leaching pools for commercial establishments and private residences.

Appendix B

User Questionnaire

ESA Phase I User Questionnaire

(Reference ASTM E 1527)

PROJECT SITE ADDRESS: 20 Jerusalem Avenue, Hicksville, New York

GEI PROJECT NO: 2403779

This User Questionnaire is required to be completed in order to comply with the All Appropriate Inquiry (AAI) as required by ASTM E1527. In order to qualify for one of the Landowner Liability Protections *(LLPs*) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that an appropriate inquiry is not complete.

1. In order to assist us in determining the history of and past use(s) of the property, GEI Consultants, Inc. (GEI) would like to discuss this information with the past and present owners of the subject property. If known, please supply us with their contact information so that we contact them during the course of this Phase I ESA investigation.

2020 Partners LLC, David Grossman, partner; dgrossman@thehorizongroup.com

2. As the user of this Phase I ESA Report, a title report should be obtained. This would indicate any lien records for environmental liens currently recorded against or relating to the property. Therefore, do you have a Title Report? If yes, does the Title Report depict any environmental liens? If no, then please answer question 3.

3. If a Title Report is not in your possession, to the best of you knowledge, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? If yes, please explain in detail:

no

4. Are you aware of any Activities and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? If yes, please explain in detail:

no

5. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have

specialized knowledge of the chemicals and processes used by this type of business. If yes, please explain in detail:
no

6. To the best of your knowledge is there a property value reduction due to environmental issues? If yes, please explain in detail:
no

7. Are you aware of commonly known or reasonably ascertainable information of about the property that would help the environmental professional to identify conditions? If yes, please explain in detail:

(a) Do you know past use of the property?
retail

(b) Do you know of specific chemicals that are present or once were present at the property?
no

(c) Do you know of spills or other chemical releases that have taken place at the property?
no

(d) Do you know of any environmental cleanups that have taken place at the property?
no

8. As the user of this Phase I ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
no

9. Please provide following information:

(a) The reason why the Phase I ESA is required.
Due diligence for purchase

(b) The type of property and type of transaction? For example, sale, purchase, exchange, refinance, etc.
purchase

(c) The complete and correct address for the property (if not already provided, a map, site survey or other documentation showing property location and boundaries is helpful).

(d) Please indicate how the person(s) signing below is associated with the project site (e.g., owner, owner's representative, purchaser, etc.).

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GEI Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 02/29/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CASSEL/HICKSVILL Cerclis ID:: 203974 EPA Id: NY0001095363	***SOUTHERN END OF IRIS***	***SSE 1/4 - 1/2 (0.452 mi.)***	***0***	***9***

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the

United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/29/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 02/13/2024 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 02/13/2024 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/06/2023 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 01/24/2024 has revealed that there are 22 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

NY SPILLS 80: Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

A review of the NY SPILLS 80 list, as provided by EDR, and dated 11/02/2010 has revealed that there is 1 NY SPILLS 80 site within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/28/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Cleanup Ceased:	1989-12-02
Cleanup Meets Std:	True
Last Inspection:	Not reported
Recommended Penalty:	False
UST Trust:	False
Remediation Phase:	0
Date Entered In Computer:	1988-10-26
Spill Record Last Update:	2006-06-05
Spiller Name:	Not reported
Spiller Company:	OMEGA AUTOBODY
Spiller Address:	16 JERUSALEM AVENUE
Spiller Company:	001
Contact Name:	Not reported
DEC Memo:	NCFM REC'D A CALL FROM F.D THAT OMEGA AUTOBODY IS DUMPING WASTE OIL ON GROUND. INSPECTOR MCGEE WILL CHECK SITE & WILL CALL DEC IF THERE IS A PROBLEM
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'NEILL FD 10/31/88: NCFM CHECKED SITE,CONFIRMED REPORT,DEC TO PURSUE CLEANUP.SPILLED OIL IN AREA OF DRYWELL.DRYWELL & AREA AROUND CLEANUP. FILE HAS BEEN DESTROYED ACCORDING TO STATE ARCHIVE AND RECORD ADMINISTRATOR RETENTION/DISPOSAL PROCEDURES

All Materials:

Site ID:	281839
Operable Unit ID:	923052
Operable Unit:	01

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Historic Generators:
Receive Date: 19950410
Handler Name: LAUNDROMAT
Federal Waste Generator Description: Not a generator, verified

LAUNDROMAT (Continued) **1000266167**

State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 20010801
Handler Name: LAUNDROMAT
Federal Waste Generator Description: Conditionally Exempt Small Quantity Generator
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No
Spent Lead Acid Battery Importer: No
Spent Lead Acid Battery Exporter: No
Current Record: No
Non Storage Recycler Activity: Not reported
Electronic Manifest Broker: Not reported

Receive Date: 20060101
Handler Name: LAUNDROMAT
Federal Waste Generator Description: Not a generator, verified
State District Owner: Ny
Large Quantity Handler of Universal Waste: No
Recognized Trader Importer: No
Recognized Trader Exporter: No

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Name:	CHRIS FLYNN
Spiller Company:	LINCOLN
Spiller Address:	44 DUFFY AVE
Spiller Company:	999
Contact Name:	CHRIS FLYNN
DEC Memo:	historical spill clean up is pending
Remarks:	3/20/20 1504hrs: t/c Chris Flynn (H2M). While installing drywells during March 6th, found pocket contaminated soil 21' deep. Took samples, and samples came back today with elevated SVOC's. Dark stained soil and brick. Soil removed and put in bags, approximately 2 yards of soil removed on March 6th. (JN) 10/23/20 1100hrs: t/c Chris (H2M). Asked about status of spill. Chris said wasn't closed out? On 3/23/20 JN sent Field Issue Checklist saying geoprobe needed to delineate site. Nothing has been done. Chris to talk to client. 12/7/2022 - No documentation of soil boring submitted. DTW: 69ft, Administratively closed.

DEC Memo:	Clean up pending. Need vac truck.
Remarks:	7/12/22-07:15 NH responded to the spill 08:30 NH on site. Driver hit a deadman post in the parking lot, rupturing the saddle tank, spilling diesel fuel to the pavement and a nearby catch basin. Estimated 20 gal went into the catch basin. Maggio Env service cleaned up the pavement, and power washed the parking lot. Eastern cleaned out the drain. Issued a clean up letter to RP. Maggio Services DTW-70 07:15 NH responded to spill, estimated 150 gallons spilled to pavement and catch basin. Catch basin leads to 2 other basins on site, but didn't reach the other basins. Maggio Env has their own clean crew, which addressed the pavement. Hired Eastern Env. to pump out the basin. Power washed the pavement, as the vac truck sucked up the water. Off site 12:45. Spill has been contained and cleaned up, no further action required. Manifest on file

DEC Memo:	Unknown quantity. Cleanup is pending. Nassau Co. Dept. of Health is on site.
Remarks:	11/29/33 @ 1000 hrs: WG t/c w/ Mike of Windmill Oil Tank. Per Mike, contaminated soil encountered at the site during a routine removal of a 5K #2 fuel oil UST. Tank inspected by Susan of NCDOH, who required Windmill Oil to file a spill report. No holes were found in tank but DOH inspector determined soils encountered at 9 below grade of the excavation exhibited petroleum impacts. Contaminated soil removable was not possible due to structural concerned of the property. As per request from contractor, approval to temporarily backfill granted - awaiting development of work plan to perform additional investigation/remedial action. Photos were submitted to R1Spills inbox. USGS DTW~68'

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	cleanup pending
Remarks:	11/5/21 0725 Hrs: RJP made call to Kathleen Green of LIRR. Stated overnight that a piece of service equipment operating on tracks experienced diesel line leak, spilled estimated less than 5 gal to estimated 100’ section of raised track. Track is concrete, spill is believed to be contained on the track, she will be inspecting this morning. AB was retained for cleanup, she will schedule fouling time for tomorrow morning to complete cleanup. No rain expected overnight, USGS DTW 74’. Stated she will contact BD to provide photos and update. RJP. *affected material removed for proper disposal.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

HICKSVILLE AUTO SPRING CO INC (Continued) **1000272864**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	ALSY MANUFACTURING, INC.
Address:	270/280 DUFFY AVENUE
City,State,Zip:	HICKSVILLE, NY 11801
Program:	HW
Site Code:	55767
Classification:	Site is properly closed - requires continued management.
Region:	1
Acres:	4.000
HW Code:	130027
Record Add:	11/18/1999
Record Upd:	09/25/2023
Updated By:	JLDYBER

Site Description: Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current

ALSY MANUFACTURING, INC. (Continued) **S104541551**

Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description:	Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Site Description:	Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site

ALSY MANUFACTURING, INC. (Continued) **S104541551**

buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Waste Code: D020

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: Chlordane

Waste Code: D021
Waste Description: Chlorobenzene

Waste Code: D022
Waste Description: Chloroform

Waste Code: D023
Waste Description: O-Cresol

Waste Code: D024
Waste Description: M-Cresol

Waste Code: D025
Waste Description: P-Cresol

Waste Code: D026
Waste Description: Cresol

Waste Code: D027
Waste Description: 1,4-Dichlorobenzene

Waste Code: D028
Waste Description: 1,2-Dichloroethane

Waste Code: D029
Waste Description: 1,1-Dichloroethylene

Waste Code: D030
Waste Description: 2,4-Dinitrotoluene

Waste Code: D031
Waste Description: Heptachlor (And Its Epoxide)

Waste Code: D032
Waste Description: Hexachlorobenzene

Waste Code: D033
Waste Description: Hexachlorobutadiene

Waste Code: D034
Waste Description: Hexachloroethane

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D036
Waste Description: Nitrobenzene

Waste Code: D037
Waste Description: Pentachlorophenol

Waste Code: D038
Waste Description: Pyridine

Waste Code: D039

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: D041
Waste Description: 2,4,5-Trichlorophenol

Waste Code: D042
Waste Description: 2,4,6-Trichlorophenol

Waste Code: D043
Waste Description: Vinyl Chloride

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U188
Waste Description: Phenol

Updated By: SRHEIGEL
Site Description: Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features:

SPORT STAMP & THE CLOSET (Continued) **1000323314**

The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north. Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology: Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south.

Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem:	Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Hazardous Waste Summary:

Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.
Waste Code:	F007
Waste Description:	Spent Cyanide Plating Bath Solutions From Electroplating Operations.
Waste Code:	F009
Waste Description:	Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Record Upd:	09/15/2008
Updated By:	JBSWARTO
Site Description:	The site consists of a one story masonry building located on a two acre parcel in a commercial/industrial setting in Nassau County. The site is located at the southern end of Frank Road. Historical operations at the facility consisted of importing commercial dry cleaning machinery for assembly, testing and distribution. In 1989, a spill of dry cleaning fluid (PCE) into an on-site leaching pool system contaminated subsurface soil and groundwater. The surrounding area consists of residential properties to the east and south and commercial properties to the north and west. An environmental assessment was conducted in December 1989 in response to an

BOWE SYSTEMS AND MACHINERY (Continued) **S103565986**

accidental discharge of PCE at the site. In March 1991, the NYSDEC oversaw the excavation and removal of approximately 450 tons of contaminated soil (maximum depth 29 ft bgs). In August 1992, a site screening investigation (SSI) was performed. Based on the findings interim remedial measures were performed in September 1992. The facility was connected to the municipal sewer system. The Remedial Investigation (RI) was conducted in September, 1992 (Phase I) and in September 1993 (Phase II). After the completion of an on-site and off-site remedial investigation a record of decision (ROD) was issued in March 1999. As prescribed in the ROD, groundwater sampling was conducted on a quarterly basis for three years starting in June 2000. On February 26, 2004, the site was delisted when the groundwater quality goals (NYS Drinking Water Standards) were obtained. A soil vapor intrusion evaluation was initiated in September 2006 with subsequent activities in March 2007. The vapor investigation was completed in December 2007. The investigation did not identify any unacceptable indoor air contamination, but did find levels of chlorinated solvents in sub-slab soil vapor, which triggered a recommendation for action to protect indoor air quality.

Env Problem: The primary contaminants detected at the site are tetrachloroethylene (PCE), 1,1,1 trichloroethylene (TCA), and trichloroethylene (TCE). Groundwater samples obtained at the site did not detect site contaminants in September 2006. Air samples collected in September 2006 and March 2007 detected elevated concentrations of site contaminants in the soil vapor and sub-slab soil vapor at the site. In door air levels at the on-site structure were below or slightly above background levels. Off-site structure sampling detected minimal impacts from site contaminants.

Health Problem: The site is covered by buildings and pavement so public exposures to contaminated soils are not expected unless excavation occurs on the site. Exposures to contaminated groundwater via drinking water are not expected because public water serves the area and groundwater levels are below applicable standards, criteria, and guidance values. The potential for soil vapor intrusion was investigated, and no further actions were necessary for the off-site structures; however, the potential for future exposures via soil vapor intrusion into the on-site structure exists.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

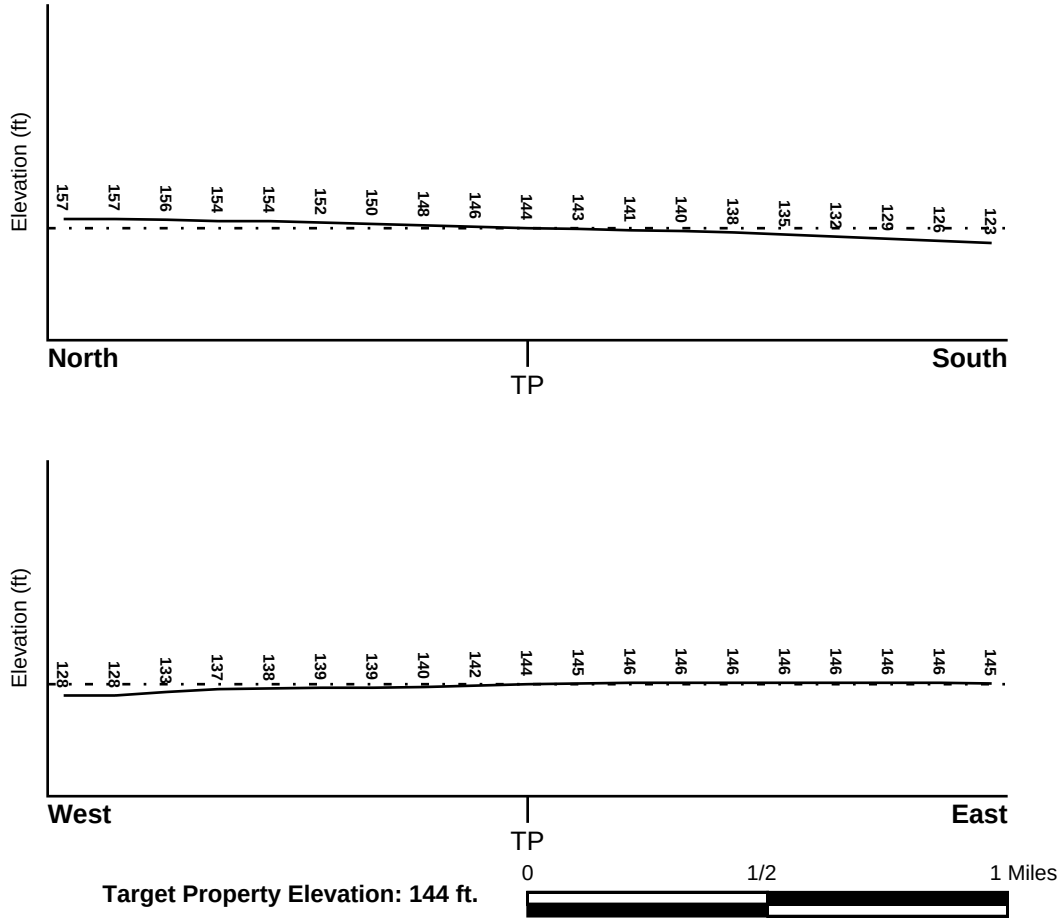

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0145F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0143F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HICKSVILLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	Alsy Manufacturing
Site EPA ID Number:	NYD981184237
Groundwater Flow Direction:	South
Inferred Depth to Water:	approximately 60 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXTERNAL EMAIL

Nassau County FOIL Request
Fire Commission - Hazardous Materials Division

Dear **Richard Fasciani**,

Regarding your Freedom of Information Law ("FOIL") request (Reference # 343390):

Please be advised that this Office has diligently searched our records and have not found any documents responsive to your request.

If you believe this request was improperly denied or the response is incomplete you have the right to appeal.

Appeals must be submitted in writing within thirty (30) days to the FOIL Appeals Officer, located at 1 West Street, Mineola, N 11501. See Public Officers Law • 89(4)(a). Please include a copy of this response along with a copy of your original request with your appeal.

Thank you.

Nassau County
