Hazardous Waste Summary:
Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

HICKSVILLE AUTO SPRING CO INC (Continued) **1000272864**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Relative:
Lower

Actual:
139 ft.

LTANKS:

Name:	HICKSVILLE JR HS
Address:	JERUSALEM AVENUE & 2ND STREET
City,State,Zip:	HICKSVILLE, NY
Spill Number/Closed Date:	8705026 / 1988-05-17
Facility ID:	8705026
Site ID:	195996
Spill Date:	1987-09-16
Spill Cause:	Tank Test Failure
Spill Source:	Institutional, Educational, Gov., Other
Spill Class:	Not reported
Cleanup Ceased:	1988-05-17
SWIS:	3024
Investigator:	KDGOERTZ
Referred To:	Not reported
Reported to Dept:	1987-09-16
CID:	Not reported
Water Affected:	Not reported
Spill Notifier:	Tank Tester
Last Inspection:	Not reported
Recommended Penalty:	False
Meets Standard:	True
UST Involvement:	False
Remediation Phase:	0
Date Entered In Computer:	1987-09-16
Spill Record Last Update:	2006-10-18
Spiller Name:	Not reported
Spiller Company:	HICKSVILLE JR HS
Spiller Address:	JERUSALEM AVE & 2ND ST
Spiller County:	001
Spiller Contact:	Not reported
Spiller Phone:	Not reported
Spiller Extention:	Not reported
DEC Region:	1
DER Facility ID:	163288
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was GOERTZ FD / / : BAIN HEATING TESTER. 05/17/88: BAIN RETESTED SYSTEM AFTER REPLACING VENT LINE WHISTLE & PASSED.DEC NOT PRESENT DURING RETEST. FILE HAS BEEN DESTROYED ACCORDING TO STATE ARCHIVE AND RECORD ADMINISTRATOR RETENTION/DISPOSAL PROCEDURES
Remarks:	10K FAILED SYSTEM TEST-GROSS FAILURE

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description: Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current

ALSY MANUFACTURING, INC. (Continued) **S104541551**

Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.
Health Problem:	Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

ALSY MANUFACTURING, INC. (Continued) **S104541551**

east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D004
Waste Description: Arsenic

Waste Code: D005
Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D010
Waste Description: Selenium

Waste Code: D011
Waste Description: Silver

Waste Code: D012
Waste Description: Endrin
(1,2,3,4,10,10-Hexachloro-1,7-Epoxy-1,4,4a,5,6,7,8,8a-Octahydro-1,4-En
do, Endo-5,8-Dimeth-Ano-Naphthalene)

Waste Code: D013
Waste Description: Lindane (1,2,3,4,5,6-Hexa-Chlorocyclohexane, Gamma Isomer)

Waste Code: D014
Waste Description: Methoxychlor (1,1,1-Trichloro-2,2-Bis [P-Methoxyphenyl] Ethane)

Waste Code: D015
Waste Description: Toxaphene (C10 H10 Cl8, Technical Chlorinated Camphene, 67-69 Percent
Chlorine)

Waste Code: D016
Waste Description: 2,4-D (2,4-Dichlorophenoxyacetic Acid)

Waste Code: D017
Waste Description: 2,4,5-Tp Silvex (2,4,5-Trichlorophenoxypropionic Acid)

Waste Code: D018
Waste Description: Benzene

Waste Code: D019
Waste Description: Carbon Tetrachloride

Waste Code: D020

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: Chlordane

Waste Code: D021
Waste Description: Chlorobenzene

Waste Code: D022
Waste Description: Chloroform

Waste Code: D023
Waste Description: O-Cresol

Waste Code: D024
Waste Description: M-Cresol

Waste Code: D025
Waste Description: P-Cresol

Waste Code: D026
Waste Description: Cresol

Waste Code: D027
Waste Description: 1,4-Dichlorobenzene

Waste Code: D028
Waste Description: 1,2-Dichloroethane

Waste Code: D029
Waste Description: 1,1-Dichloroethylene

Waste Code: D030
Waste Description: 2,4-Dinitrotoluene

Waste Code: D031
Waste Description: Heptachlor (And Its Epoxide)

Waste Code: D032
Waste Description: Hexachlorobenzene

Waste Code: D033
Waste Description: Hexachlorobutadiene

Waste Code: D034
Waste Description: Hexachloroethane

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D036
Waste Description: Nitrobenzene

Waste Code: D037
Waste Description: Pentachlorophenol

Waste Code: D038
Waste Description: Pyridine

Waste Code: D039

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichlorethylene

Waste Code: D041
Waste Description: 2,4,5-Trichlorophenol

Waste Code: D042
Waste Description: 2,4,6-Trichlorophenol

Waste Code: D043
Waste Description: Vinyl Chloride

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U188
Waste Description: Phenol

Updated By: SRHEIGEL
Site Description: Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features:

SPORT STAMP & THE CLOSET (Continued) **1000323314**

The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north. Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology: Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south.

Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem:	Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Updated By:	BFJANKAU
Site Code:	55770
Site Description:	Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north. Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology: Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision.
Health Problem:	Remedial actions taken have eliminated the potential for contact with site-related contaminants.

Hazardous Waste Summary:

Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.
Waste Code:	F007
Waste Description:	Spent Cyanide Plating Bath Solutions From Electroplating Operations.
Waste Code:	F009
Waste Description:	Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Updated By:	JBSWARTO
Site Description:	The site consists of a one story masonry building located on a two acre parcel in a commercial/industrial setting in Nassau County. The site is located at the southern end of Frank Road. Historical operations at the facility consisted of importing commercial dry cleaning machinery for assembly, testing and distribution. In 1989, a spill of dry cleaning fluid (PCE) into an on-site leaching pool system contaminated subsurface soil and groundwater. The surrounding area consists of residential properties to the east and south and commercial properties to the north and west. An environmental assessment was conducted in December 1989 in response to an

BOWE SYSTEMS AND MACHINERY (Continued) **S103565986**

accidental discharge of PCE at the site. In March 1991, the NYSDEC oversaw the excavation and removal of approximately 450 tons of contaminated soil (maximum depth 29 ft bgs). In August 1992, a site screening investigation (SSI) was performed. Based on the findings interim remedial measures were performed in September 1992. The facility was connected to the municipal sewer system. The Remedial Investigation (RI) was conducted in September, 1992 (Phase I) and in September 1993 (Phase II). After the completion of an on-site and off-site remedial investigation a record of decision (ROD) was issued in March 1999. As prescribed in the ROD, groundwater sampling was conducted on a quarterly basis for three years starting in June 2000. On February 26, 2004, the site was delisted when the groundwater quality goals (NYS Drinking Water Standards) were obtained. A soil vapor intrusion evaluation was initiated in September 2006 with subsequent activities in March 2007. The vapor investigation was completed in December 2007. The investigation did not identify any unacceptable indoor air contamination, but did find levels of chlorinated solvents in sub-slab soil vapor, which triggered a recommendation for action to protect indoor air quality.

Env Problem: The primary contaminants detected at the site are tetrachloroethylene (PCE), 1,1,1 trichloroethylene (TCA), and trichloroethylene (TCE). Groundwater samples obtained at the site did not detect site contaminants in September 2006. Air samples collected in September 2006 and March 2007 detected elevated concentrations of site contaminants in the soil vapor and sub-slab soil vapor at the site. In door air levels at the on-site structure were below or slightly above background levels. Off-site structure sampling detected minimal impacts from site contaminants.

Health Problem: The site is covered by buildings and pavement so public exposures to contaminated soils are not expected unless excavation occurs on the site. Exposures to contaminated groundwater via drinking water are not expected because public water serves the area and groundwater levels are below applicable standards, criteria, and guidance values. The potential for soil vapor intrusion was investigated, and no further actions were necessary for the off-site structures; however, the potential for future exposures via soil vapor intrusion into the on-site structure exists.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

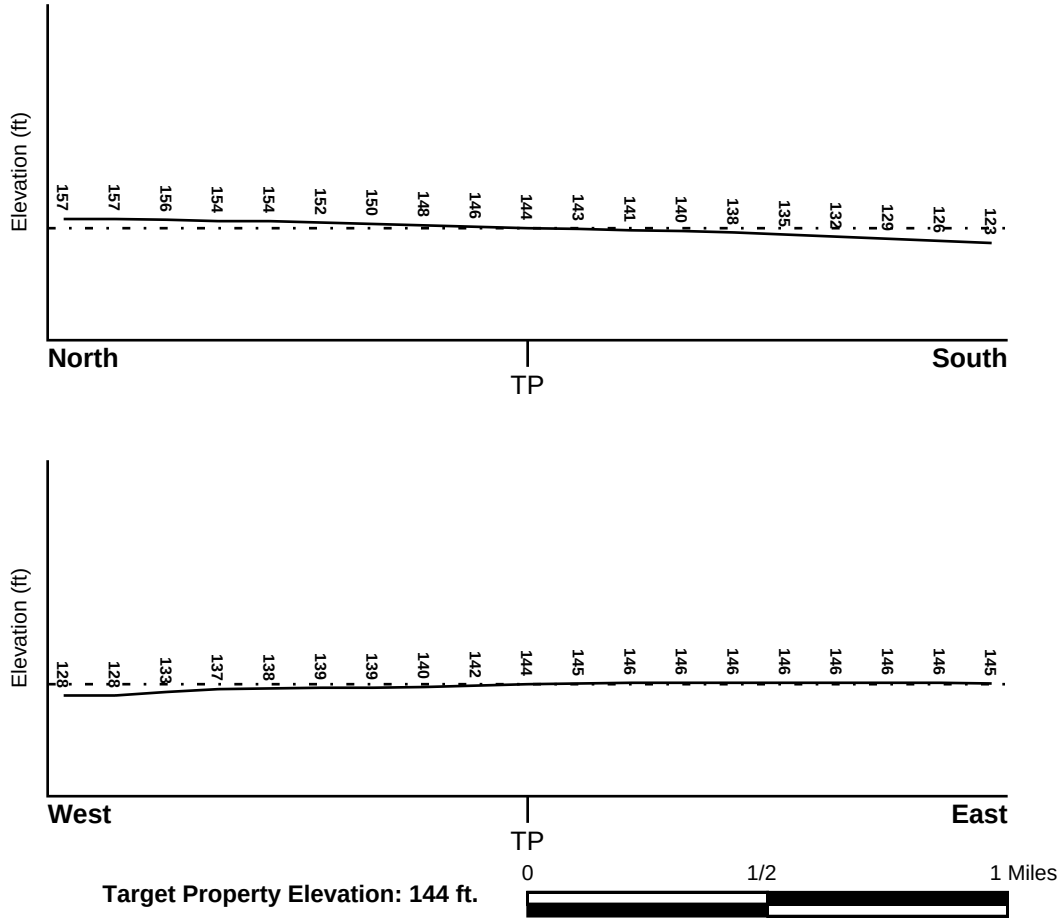
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	Alsy Manufacturing
Site EPA ID Number:	NYD981184237
Groundwater Flow Direction:	South
Inferred Depth to Water:	approximately 60 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Nassau County FOIL Request
Fire Commission - Hazardous Materials Division

Dear **Richard Fasciani**,

Regarding your Freedom of Information Law ("FOIL") request (Reference # 343390):

Please be advised that this Office has diligently searched our records and have not found any documents responsive to your request.

If you believe this request was improperly denied or the response is incomplete you have the right to appeal.

Appeals must be submitted in writing within thirty (30) days to the FOIL Appeals Officer, located at 1 West Street, Mineola, N 11501. See Public Officers Law • 89(4)(a). Please include a copy of this response along with a copy of your original request with your appeal.

Thank you.

1. Introduction

GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) was retained by Terwilliger & Bartone Properties to perform a Limited Phase II Environmental Site Assessment (ESA) at the property located at 20 Jerusalem Avenue, located in Hicksville, New York (the Site), as part of due diligence activities associated with a real estate transaction. A Site Location Map is provided as Fig. 1 and a Site Plan provided as Fig. 2. Photographs are attached as Appendix A.

The Phase II ESA scope of work was based on recognized environmental conditions (RECs) identified during a Phase I ESA completed by GEI (Project 2403779) in April 2024.

1.1. Site Description

The Site is irregular in shape and 1.72 acres in area. A 3-story (with basement) masonry and steel framed building ("the building") and a small, detached drive up ATM building are situated in the northeast quadrant of the Site. The building is currently a multi-tenant office building, occupied by a bank and a health care business. Areas of the Site not occupied by the two structures consist primarily of asphalt covered parking areas, concrete sidewalks and walkways, and landscaped areas.

1.2. Site History

GEI's analysis of historical information indicates that the Site was developed in 1957 with the buildings that exist today. The buildings have been utilized as a bank and multi-tenant office building ever since. There were no business occupants identified that would be considered a REC to the Site. Prior to 1957, the Site was developed with residential dwellings and a place of worship, all of which were demolished for the development of the bank building.

1.3. Phase I Environmental Site Assessment

GEI completed a Phase I ESA on behalf of Terwilliger & Bartone Properties on April 30, 2024. The findings and conclusions of the Phase I ESA recommended further investigation of the following RECs in connection with the Site:

- Stormwater Dry Wells/Manholes with solid covers.
- On-site Septic/Cesspool System.
- Fuel Oil Underground Storage Tank (UST).

2. Scope of Work

GEI completed the Phase II ESA investigation activities on May 30, 2024. GEI contracted Clean Globe to complete all geophysical investigation and to provide access to the drainage structures under GEI's oversight.

The purpose of this investigation was to identify potential environmental impacts associated with the open grate stormwater dry wells (and solid cover manholes, if necessary), the septic/cesspools, and to check for the presence of a fuel oil UST that was identified in historical building and tax assessor records.

This section provides a description of the completed Phase II ESA field activities and investigation methods.

2.1. Geophysical Survey

GEI contracted Clean Globe Environmental LLC (Clean Globe) of Brentwood, New York to perform a geophysical survey at the Site, to check for the presence of a fuel oil UST. The geophysical survey was completed with a Geophysical Survey Systems Inc., SIR-3000 cart-mounted GPR unit with a 400 Mhz antenna, a Radio detection RD7000 precision utility locator, and a Fisher M-Scope TW-6 pipe and cable locator using inductive mode tracing.

2.2. Stormwater Dry Well Sediment Sampling

As part of the Phase II ESA field activities and investigation, GEI identified a total of 16 stormwater dry well drainage structures that required sampling. It is noted that there was a total of 15 open grate stormwater dry wells (SW-1 through SW-15) and one manhole with a solid cover (SWMH-16) identified as drainage structures. The other manhole covers observed at the site during the Phase II ESA were not drainage structures. The sampling program involved collection of sediment samples from the bottom of each structure utilizing hand operated equipment. Each sample (SW-1 through SW-15 and SWMH-16) was screened in the field by utilizing a photoionization detector (PID) for organic vapors and by visually observing the samples for impacts.

2.3. Septic/Cesspool System Sediment Sampling

As part of the initial scope, GEI proposed taking a sediment sample from the bottom of each of the two septic/cesspools observed during the Phase I ESA. However, during field activities, it was noted that the two covers associated with the septic/cesspools were actually one interconnected septic tank. GEI attempted to obtain two samples; however, due to viscosity issues, could only collect one sediment sample from the bottom of one side of the septic tank identified as SS-1.

2.4. Laboratory Analysis

Upon collection, sediment samples were placed into an iced cooler and transported under standard Chain of Custody procedures to York Analytical Laboratories, Inc, an Environmental Laboratory

Accreditation Program (ELAP)-certified laboratory approved by the New York State Department of Health (NYSDOH) (NY Certification, No. 10854). Analytical results for sediment samples are provided in Tables 1 and 2.

The sediment samples were analyzed as follows:

- The sediment sample associated with the septic/cesspool system was analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) 8260D, semivolatile organic compounds (SVOCs) by USEPA 8270D, total analyte list (TAL) metals by USEPA 6010D and Total Petroleum Hydrocarbons (TPHs) by USEPA 8015D.
- Soil samples associated with 16 stormwater dry well drainage structures were analyzed for VOCs and SVOCs by USEPA 8260D, 8270D, and TAL metals by 6010D.

2.5. Health and Safety Plan (HASP)

GEI developed a site-specific HASP to cover all field investigation activities implemented at the Site.

The HASP assigns responsibilities, establishes personal protection standards, recommends operating procedures, and provides for contingencies which may arise during completion of fieldwork activities at the Site. The protocols in the HASP apply to all personnel, including GEI, all subcontractors, client, and/or regulatory agency personnel who may be on-site during the performance of work. Telephone numbers of emergency response units in the area are also included within the HASP. The following safety equipment was also maintained on-site for responding to potential emergency situations: portable eyewash, ABC fire extinguisher, and a first aid kit.

In addition, all personnel working at the Site are also required to receive training in respirator use, emergency procedures, equipment decontamination, and task-specific activities, as appropriate. All personnel involved with the collection of soil samples have successfully completed the 40-hour Occupational Safety and Health Administration (OSHA) Hazardous Materials Training Program.

3. Investigation Findings

3.1. Geophysical Investigation

Clean Globe surveyed the perimeter of the building and did not identify any anomalies indicative of a UST.

3.2. Sediment Sample Analytical Results

A total of 17 sediment samples were collected as part of this Limited Phase II ESA, as described above. The locations of the stormwater dry wells and septic/cesspool system are depicted on Fig. 2.

Sediment samples recovered from the stormwater dry wells consisted predominantly of black, brown and/or tan, medium to coarse sands, with some pebbles. Some sediment samples were noted with a slight organic odor and but there were no detected PID concentrations. The dry well sample depths ranged from 8 feet to 16 feet below grade surface (bgs).

The sediment sample recovered from the septic/cesspool system was consistent with human waste and had a strong sanitary or septic-like odor. The septic/cesspool system sample depth was 9.5 feet bgs.

Groundwater was not encountered during this Limited Phase II ESA.

Sediment sample analytical results from the dry wells and the septic/cesspool system were compared to NYSDEC Part 375 Protection of Groundwater Soil Cleanup Objectives (PGSCOs) and are summarized in Tables 1 and 2.

The laboratory analytical reports are provided in Appendix B.

Septic Cesspool Sediment Sample

GEI compared the sediment analytical results for SS-1 to the applicable PGSCOs.

One VOC compound, 2 butanone, was detected at 0.23 mg/kg, slightly above the PGSCO of 0.12 mg/kg; a second VOC, Acetone, was detected at 0.60 mg/kg, above the PGSCO of 0.05 mg/kg.

Metals and SVOCs were either not detected or were detected at concentrations well below their applicable PGSCOs, with the exception of mercury, which was detected at 1.76 mg/kg, above the PGSCO of 0.73 mg/kg.

TPH was detected at a concentration of 117 mg/kg. There is no guidance value for TPH.

Stormwater Dry Well Sediment Samples

VOCs were either not detected or were detected at concentrations well below the PGSCO for all sediment samples, with one exception: acetone, a common laboratory contaminant, was detected at concentrations above its PGSCO in SW-10, SW-12, and SWMH-16.

One or more of several polycyclic aromatic hydrocarbons (PAHs), a subset of SVOCs, were identified at concentrations slightly to moderately exceeding the PGSCO at 13 of the 16 stormwater dry wells. SW-7, SW-13, and SW-14 contained only Chrysene at concentrations slightly exceeding its PGSCO. These detections are consistent with normal parking lot usage and rainwater runoff.

Metals were either not detected or detected well below the PGSCOs.

4. Conclusions and Recommendations

The following conclusions and associated recommendations are presented based on the findings presented above.

4.1. Conclusions and Recommendations

In summary, field observations and sample analytical results revealed the following:

- Based upon the geophysical investigation, no anomaly associated with an UST was detected.
- No SVOCs or Metals were detected above PGSCOs in the septic tank; however, two VOC compounds, 2 butanone and acetone were detected above their PGSCOs and TPH was detected at a concentration of 117 mg/kg.
- Several PAHs exceeded the PGSCO at 13 of the 16 stormwater dry wells and SW-7, SW-13, and SW-14 contained only chrysene at concentrations slightly exceeding its PGSCO. These detections are consistent with normal parking lot usage and rainwater runoff.

Based on PAH detections and the chrysene exceedances, it is recommended that all of the dry wells be pumped, and property cleaned and maintained by a licensed and certified company and registered with the USEPA Underground Injection Control (UIC) Program. If they are to be closed, they will need to be closed in accordance with Nassau County Department of Health (NCDOH)protocols.

Based on the findings of the sediment sample collected from the septic tank, there were slight detections of VOCs and TPH that will require investigation and sampling prior to closing the system in accordance with all NCDOH protocols.

NOTES:
Any Regulatory Exceedences are color coded by Regulation
NYSDEC- New York State Department of Environmental Conservation
mg/kg - milligrams per kilogram

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
NYSDEC- New York State Department of Environmental Conservation
mg/kg - milligrams per kilogram

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
~=this indicates that no regulatory limit has been established for this analyte

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 31, 2024 and listed below. The project was identified as your project: **20 Jerusalem Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24E1994

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

24E1994

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 31, 2024 and listed below. The project was identified as your project: **20 Jerusalem Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24E1995-01	SS-1	Soil	05/30/2024	05/31/2024

General Notes for York Project (SDG) No.: 24E1995

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
24E1995-01	SS-1	40mL Vial with Stir Bar-Cool 4° C
24E1995-01	SS-1	40mL Pre-Tared Vial + 10mL MeOH; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

24E1995

Executive Summary

On behalf of Terwilliger & Bartone Properties, GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) conducted a Phase I Environmental Site Assessment (ESA) of the property located 40 Jerusalem Avenue, Hicksville, New York (hereinafter referred to as the "Site").

The main objective of the Phase I ESA is to determine whether there are any recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) associated with the Site. RECs are defined in American Society for Testing of Materials (ASTM) Standard Practice E1527-21.

The Site is located at the west side is Jerusalem Avenue, between Nelson Avenue and West Marie Street in Hicksville, Town of Oyster Bay, Nassau County, New York (Figs. 1 and 2). The following table provides site identification and a description of the Site:

Property Information	
Address	40 Jerusalem Avenue, Hicksville, New York
Owner	MJM Plus Inc.
Operator/Occupant(s)	A delicatessen business and a laundromat business
Size	Approximately 9,500 square feet
Building Footprint	A rectangular shaped one-story masonry and wood framed building structure (without basement) approximately 3,600 square feet.
Parcel Information / Legal Description	40 Jerusalem Avenue –Section 11, Block 179, Lot 102, 103, and 104
Zoning	Commercial
County	Nassau County

The Site is improved with a rectangular shaped one-story masonry and wood-00framed building structure (without basement). Half the building is used as a delicatessen and the other half is occupied by a laundromat business. This structure is located on the middle/western half the Site.

Portions of the Site not occupied by the building consist of an asphalt parking area located behind the building on the west side of the Site and an asphalt parking area located on the east side in front of the building. There is a small asphalt walkway along the northern side of the building and property line. The building abuts the southern property line.

Building heat is provided by natural gas heating systems. Historically, building heat was generated by a fuel oil-fired heating system. A fuel oil underground storage tank (UST) is located on the Site and is believed to be 1,000 gallons in size.

Sanitary wastewater currently discharges to the sewer system. The actual date the building was connected to the sewer is unknown; however, an approved 1995 interior alteration plan shows the

building to be connected to the sewer system. Historically, a septic/cesspool system and an equipment dry well system was associated with the building when it was first constructed in 1966.

According to the United States Geological Survey (USGS) Hicksville, New York topographic map and Google Earth Pro, the general elevation for the area where the Site is located is depicted as approximately 150 feet above mean sea level (AMSL). According to the USGS Hydrologic Conditions Maps for Long Island, New York, 2016, groundwater is expected to be encountered at depths ranging between 51 to 75 feet below ground surface.

GEI's analysis of historical information indicates that the Site was originally occupied by a residential dwelling that existed on the Site as early as 1926. This dwelling was demolished in 1966 for the development of the current 1-story structure. Identified uses for the Site included a dry cleaning business, a flooring retail business, a laundromat, and food type businesses (i.e., bagel store and a delicatessen). It is noted that dry cleaning operations typically involve the storage and use of significant quantities of dry cleaning solvents, including perchloroethylene. In addition, dry cleaning operations typically generate significant quantities of waste dry cleaning solvents. The historical use of a dry cleaning business is considered a REC to the Site.

E.S.1. Summary of Findings

GEI identified the following RECs in connection with the Site:

- **Historical Fuel Oil UST:** Historical records indicated that the building had a 1,000-gallon fuel oil underground storage tank (UST) that was closed in place in 1994. It is assumed that this UST was installed when the building was constructed in 1966. No testing or closure information concerning this UST was obtained or provided to GEI. The lack of testing or closure information is considered a REC.
- **Stormwater Dry Wells:** Two open grate stormwater dry wells exist on the Site. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, degrading asphalt, and parking lot sealants. These stormwater dry wells represent a REC.
- **Cesspool and Three Equipment Dry Wells:** Historically, a 1966 Site Plan depicts the Site building as having a cesspool in the front of the building and three (3) equipment dry wells which appear to be connected to the building. The actual date the septic system was closed, and the property was connected to the municipal sewer system is unknown.
- **Historical Dry Cleaner Operation**. Historically, the building had been operating as a dry cleaning business since 1966 when it was constructed. The duration of this original dry cleaning operation is unknown; however, telephone directory information depicted a dry cleaning business to be associated with the Site in the late 1980s. Dry cleaning operations typically involve the storage and use of significant quantities of dry cleaning solvents, including perchloroethylene. In addition, dry cleaning operations typically generate significant quantities of waste dry cleaning solvents. Therefore, the historical dry cleaning use represents a REC.

E.S.2. Recommendations

Based on the findings of this assessment, it is recommended that a Limited Phase II ESA be conducted. The scope of this investigation should include the following:

- A geophysical survey to identify subsurface anomalies that could be associated with the abandoned in-place fuel oil UST, and cesspool, and dry wells.
- A limited soil assessment, consisting of borings/probes and the collection and laboratory analysis of soil samples, to evaluate if impacts are present from the historical fuel oil UST as well as from the area of the historical cesspool system and three equipment dry wells.
- Soil/sediment samples be collected from within the stormwater dry wells.
- Groundwater sampling if soil/sediment impacts are noted from below the exterior drainage structures (dry wells and historical cesspool and three equipment dry wells).

1. Introduction

1.1. Purpose & Scope of Services

On October 9, 2024, GEI Consultants, Inc. DBA GEI Consultants Engineering, Geology, Architecture & Landscape Architecture (GEI) was retained by Terwilliger & Bartone Properties to conduct a Phase I ESA of the site located at 40 Jerusalem Avenue, Hicksville, New York (herein referred to as the "Site").

GEI has prepared this Phase I ESA Report in general compliance with the scope and limitations of ASTM Standard Practice E1527-21. This Phase I ESA involved and was limited to: research into the history of uses of the Site, checks with appropriate government and regulatory agencies, a visual inspection of the Site, and an informal survey of adjacent/contiguous and nearby properties to determine the presence of RECs, HRECs, and CRECs. These are defined under ASTM E 1527-21, as follows:

Recognized Environmental Conditions (RECs)

"… 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or 3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

Historical Recognized Environmental Conditions (HRECs)

"… as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations (AULs) or other property use limitations).

Controlled Recognized Environmental Conditions (CRECs)

"… a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, AULs or other property use limitations)."

An evaluation of business environmental risk associated with the parcel(s) of land may necessitate investigation beyond that identified in this Phase I ESA.

This Phase I ESA provides information regarding the potential presence of hazardous substances and/or petroleum products for the Site.

The scope of the Phase I ESA is described as follows:

- Conduct a municipal, state, and federal database and regulatory file review of the Site and relevant adjoining properties.
- Assess potential environmental receptors (i.e., groundwater, surface water, and water supplies).
- Describe site topography and hydrogeology.
- Perform a site reconnaissance to assess visible signs of potential environmental impairment.
- Summarize the findings relative to the potential presence of hazardous substances or petroleum products at the Site.
- Recommend additional investigations at the Site, if necessary.

1.2. Limitations and Exceptions

This Phase I ESA was prepared in accordance with our proposal dated October 3, 2024. It is noted that the scope of services did not include the assessment of considerations not within the scope of the ASTM Phase I ESA standard (i.e., Non-Scope ASTM Environmental Considerations). These include Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality, Biological Agents, High Voltage Power Lines, and substances not defined as hazardous substances pursuant to CERCLA 42 U.S.C. Section 9601(14).

In preparing this report, GEI relied on file information provided by state and local officials and information and representations made available to GEI at the time of the report. If such information is incomplete or inaccurate, GEI is not responsible. GEI's professional services for this project have been performed in a manner consistent with that degree of skill and care ordinarily exercised by members of our profession currently practicing in the same locality, performing similar services under similar conditions. GEI makes no other representations and no warranties, express or implied.

1.3. Environmental Professional Statement

GEI declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Furthermore, GEI has developed and performed all appropriate inquiry (AAI) in conformance with the standards and practices set forth in 40 CFR Part 312. Copies of the resumes for the personnel who participated in the preparation of this report can be found in Appendix A.

1.4. Continued Viability of ESA ("Shelf Life")

Per the ASTM Standard, this ESA may be presumed to be valid if completed less than 180 days prior to the date of acquisition of the Property (i.e., the date on which a person acquires title to the Property) or, for transactions not involving an acquisition (such as a lease or refinance), the date of the intended transaction. This ESA may be presumed to be valid for a period of up to 1 year prior to the date of

acquisition or intended transaction if certain components (e.g., interviews, review of government records, visual inspection of the Property, and others identified in Section 4.6 of the ASTM Standard) are conducted or updated within 180 days of the date of acquisition or the date of the intended transaction.

Table of Phase I ESA Critical Dates	
Date of Interview with Past or Present Owners, Operators and Occupants	October 15, 2024
Date of Search for Recorded Environmental Liens	Not applicable [(1)]
Date of Review of Federal, Tribal, State, and Local Government Records	October 11, 2024
Date of Visual Inspection of Property and Adjoining Properties	October 15, 2024
Date of Declaration of Environmental Professional	October 25, 2024
Earliest of Dates Listed Above	October 11, 2024
Report Issuance Date	October 24, 2024
Report Viability Date (180 days from Earliest of Dates Listed Above)	**April 9, 2025**

Note [(1)] = This is not applicable because the User did not engage GEI to review land title records or judicial records for environmental liens and AULs. This review is a User Responsibility under ASTM Standard E1527-21.

1.5. Data-Gaps

The following data-gaps were identified during this investigation:

GEI submitted a Freedom of Information Letter via electronic website to the Nassau County Department of Health (NCDOH). It is noted that no information from this agency has been received as of the issuance of this report. It is GEI's opinion that based upon the information obtained for this property, the lack of this information does not impact our ability to identify RECs or the conclusions of this report.

1.6. Previous Environmental Reports

No previous environmental reports were provided to GEI.

1.7. Property Ownership

According to information provided by Mr. Michael Messina, the ownership entity is SJM Plus, Inc. Mr. Messina is the Chief Executive Officer (CEO) and stated that they have owned the Site since 2003.

2. Physical Setting

2.1. Site Location and Legal Description

The Site is located at the west side is Jerusalem Avenue, between Nelson Avenue and West Marie Street in Hicksville, Town of Oyster Bay, Nassau County, New York (Figs. 1 and 2). The following table provides site identification and a description of the Site:

Property Information	
Address	40 Jerusalem Avenue, Hicksville, New York
Owner	MJM Plus Inc.
Operator/Occupant(s)	A delicatessen business and a laundromat business
Size	Approximately 9,500 square feet
Building Footprint	A rectangular shaped one-story masonry and wood framed building structure (without basement) approximately 3,600 square feet.
Parcel Information / Legal Description	40 Jerusalem Avenue –Section 11, Block 179, Lot 102, 103, and 104
Zoning	Commercial
County	Nassau County

2.2. Adjacent Land Use

Adjacent land use is an important consideration in the evaluation of property conditions, given that the groundwater and surface water flow create possible pathways for contaminant migration. The area surrounding the Site primarily consists of commercial properties. Adjacent land use is summarized in the following table:

Direction	Property Use
North	3-story commercial office building property
South	An undeveloped property used for automobile parking
West	Undeveloped property used for automobile parking associated with the property to the north
East (across Jerusalem Avenue)	1-story commercial property occupied by a funeral home

2.3. Topography

From observations made during GEI's site reconnaissance, the topography of the Site is predominantly flat and level with Jerusalem Avenue. The area surrounding the Site slopes gently in a southerly direction.

According to the USGS Hicksville, New York topographic map and Google Earth Pro, the general elevation for the area where the Site is located is depicted as approximately 150 feet above mean sea level (AMSL).

2.4. Flood Plain Information

As depicted on the Federal Emergency Management Act (FEMA) Flood Insurance Rate Map 36059C0145G, the Site is not located in a flood hazard area.

2.5. Site Hydrogeology/Groundwater Flow

There are no surface water bodies located on the Site.

According to the USGS Hydrologic Conditions Maps for Long Island, New York 2016, groundwater under the majority of the Site is expected to be encountered at a depth of 51-75 feet below land surface. In addition, the regional groundwater flow direction is depicted to be in a southerly direction.

Site-specific hydrogeology can only be determined through a specific program of subsurface drilling to confirm groundwater depth, direction, and composition of the soil matrix. No such drilling program was undertaken as part of this Phase I ESA.

2.6. Water Supply

Potable water is provided by municipal sources within this area of Nassau County.

3. User Provided Information

"User" is defined in ASTM E1527 as "the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of the property, a potential tenant of the property, an owner of the property, a lender, or property manager." ASTM E1527 further describes that according to the AAI Final Rule (40 CFR Part 312) tasks be performed "by or on behalf of a party seeking to qualify for Limited Liability Protection (LLP) to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability." Additionally, the environmental professional conducting the Phase I ESA shall request that the user provide results to tasks detailed in ASTM E1527 Section 6, "as such information can assist the environmental professional in identifying recognized environmental conditions" associated with the Site.

Based upon the above, a User Questionnaire was completed by Mr. Anthony Bartone, Managing Partner, Terwilliger & Bartone Properties, for characterizing relative environmental risks for commercial purposes, as part of a client's regulatory requirement for conducting AAI to support any one of the three legal defenses against CERCLA liability, or other stated purposes. The User Questionnaire is included in Appendix B. The following pertinent information is documented within this Questionnaire.

- Mr. Bartone stated that this Phase I ESA is part of the due diligence for a real estate purchase and that the past use of the property was a laundromat.
- Mr. Bartone is unaware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state, or local law. In addition, Mr. Bartone is unaware of any AULs, such as engineering controls (ECs), land use restrictions, or institutional controls (ICs) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law.
- Mr. Bartone does not have any specialized knowledge or experience regarding any chemicals and/or processes used by current occupants of the Site or adjoining properties. Mr. Bartone indicated that there are no obvious indicators that point to the presence or likely presence of contamination at the Site and that they are unaware of any property value reduction due to environmental issues.

4. Site History

Primary sources for the history of the Site include historical fire insurance/real estate maps, topographic maps, historical aerial and street photos, and address directories, as well as the available building department records concerning permits for new buildings, certificates of occupancy, alterations, demolitions, and other changes at the Site.

4.1. Historical Sanborn Maps

The Sanborn Library, LLC collection was searched by Environmental Data Resources (EDR) for the Site. The following pertinent information was obtained from a review of the available maps (Appendix C).

- The 1895 and 1902 Sanborn maps do not depict the Site.
- The 1908, 1917, 1925, and 1947 Sanborn maps depict the Site to be occupied by a small dwelling.
- The 1968 Sanborn map depicts the building that exists today, as occupied by a Dry Cleaning business.

In summary, the depiction of a dry cleaning business is considered a REC for the Site.

4.2. Historical Topographic Quadrangle Maps

A topographic map collection was provided by EDR for the years 1897, 1898, 1899/1900/1901, 1947, 1954, 1967, 1979, 2013, 2016, and 2019 (Appendix C).

It is noted that the 1897, 1898, and 1899/1900/1901, maps depict the Site with no structures. The 1947 map depicts a small structure that is likely the dwelling that existed on the Site prior to the construction of the current building. After this, no structures are depicted on any of the subsequent maps.

4.3. Aerial Photographs

Information obtained from an historical aerial photograph collection provided by EDR (Appendix E) is summarized in the following table:

Year	Comments
1938, 1947, 1953, 1957, and 1962	**Site:** The Site appears to be occupied by a residential dwelling. **Surrounding Properties:** The majority of the surrounding properties are occupied by residential dwellings and, as the years progress, some of the dwellings are replaced with commercial buildings.
1966 and 1970	**Site:** The Site appears to be developed with the building that exists today. **Surrounding Properties:** Increased development of nearby sites with commercial buildings is evident.
1974, 1980, 1985, 1994, 2006, 2011, 2015, and 2019	**Site:** No significant changes are noted from previous aerials. **Surrounding Properties:** No significant changes are noted from previous aerials.

4.4. Historical Nassau County Tax Assessor and 1926 Aerial Photograph Information

GEI reviewed the historical tax assessor cards and the historical 1926 aerial photograph from the Nassau County website (lrv.nassaucountyny.gov). The historical information is depicted as follows:

- The current building on the Site was constructed in 1966.
- Fashon Cleaners Shirt Launderers was listed as the occupant at the time the building was constructed.
- The dwelling that originally occupied the Site is shown on the 1926 aerial photograph.

4.5. Historical City Directory Information

EDR provided a listing of historical city, cross reference, and telephone directories at approximate 5-year intervals for the years spanning 1972 through 2020 (Appendix F). The table below summarizes the listings associated with 40 Jerusalem Avenue.

Year	Directory Information
1972	No Listing
1977	Fashion Floors
1982	Fashion Floors
1987	Kwik Discount Cleaners Fashion Floors RJ Foote Fashions
1992	Kwik Discount Cleaners
1995	Kwik Discount Cleaners Hicksville Laundry Center
2000	Harvest Deli Hicksville Laundry Center
2005	No listing
2010	Harvest Deli Hicksville Laundry Center
2014	Hicksville Laundry Center Jericho Bagels SSYJ Deli
2017	Hicksville Laundry Center Jericho Bagels
2020	Hicksville Laundry Center

4.6. Town of Oyster Bay Information

On October 15, 2024, in the company of a Town of Oyster Bay official, GEI reviewed the records that were made available at the Department of Buildings (Appendix E). The following pertinent information was observed within the records:

- Permit No. C2486 was issued for the installation of two 550-gallon fuel oil underground storage tanks (USTs) in 1966.
- Permit No. C923 was issued for demolition of the existing building, with a note indicating that all cesspools must be filled. This is likely associated with the residential dwelling that existed prior to the construction of the current building on the Site.
- A 1966 Site Plan depicts the current/proposed 1-story building at 40 Jerusalem Avenue, with one cesspool in the front of the building, and three (3) equipment dry wells which appear to be connected to the building. Additionally, a dry well is shown in the back of the building for roof drainage and a stormdrain drainage structure is shown on the front of the property.
- A copy of an approved interior alteration plan, associated with the laundromat and dated 1995, shows the property to be connected to the municipal sewer system.

4.7. Interviews

The Site was inspected on October 15, 2024. Mr. Michael Messina, the owner of the Site as well as the laundry business, was present to provide access and information. The following pertinent information was provided by Mr. Messina:

- Mr. Messina operated a laundromat business at the Site in 1994 as a tenant and then purchased the Site in 2003.
- Mr. Messina stated that a drop-off dry cleaning business occupied the portion of the Site currently occupied by the deli. The dry cleaning business moved out in 1996 and was replaced with a bagel store and deli.
- Mr. Messina stated that to the best of his knowledge the building always utilized natural gas for heating.
- Mr. Messina stated that he installed a new roof on the Site in 2018/2019.

4.8. Summary of Site History

GEI's analysis of historical information indicates that the Site was originally occupied by a residential dwelling that existed on the Site as early as 1926. This dwelling was demolished in 1966 for the development of the current one-story structure.

Identified uses for the Site included a dry cleaning business, a floor retail business, a laundromat, and food type businesses (i.e., bagel store and a delicatessen).

It is noted that dry cleaning operations typically involve the storage and use of significant quantities of dry cleaning solvents, including perchloroethylene. In addition, dry cleaning operations typically generate significant quantities of waste dry cleaning solvents. The historical use of a dry cleaning business is considered a REC to the Site.

4.9. Summary of Historical Use for Adjoining Properties

Review of historical information and visual observations made during GEI's informal neighborhood reconnaissance indicated adjacent and neighboring properties consisted of residential properties and various multi-tenant commercial office buildings and commercial and retail businesses. There were no off-site uses identified that would be considered an environmental concern.

5. Environmental Records Review

GEI obtained and evaluated the available and most recent environmental regulatory agency database records provided by EDR (Appendix H). This report was designed to assist parties seeking to meet the search requirements of the ASTM 1527 Standard Practice for ESAs.

GEI's review of available and most recent federal and state agency database records for the Site, adjacent/contiguous properties, and surrounding neighborhood was completed according to the requirements set forth in ASTM E1527. The search distances reviewed for this assessment generally meet or exceed the minimum search distances according to the requirements set forth in ASTM E1527. Any deviations from the minimum search distances are addressed in the individual database discussions presented below.

5.1. Federal Regulatory Database Search

5.1.1. NPL Sites

The USEPA National Priorities List (NPL) identifies confirmed hazardous waste sites that are ranked for clean-up under the federal Superfund program. This program was authorized by the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA" or "Superfund"), as amended by Superfund Amendments and Reauthorization Act of 1986 ("SARA") and Small Business Liability Relief and Brownfields Revitalization Act of 2002 ("Brownfields Amendments").

The Site was not identified in this database. One USEPA NPL site was listed within an approximate 1-mile radius of the Site. However, upon further review, this facility is located over approximately ¼ mile from the Site and, based upon the distance, it is unlikely to have the potential to impact the environmental integrity of the Site.

5.1.2. Superfund Enterprise Management Systems (SEMS) and SEMS Archive

The SEMS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Historical SEMS sites that have been granted the status of No Further Remedial Action Planned (NFRAP) (SEMS-Archive) are also included in this database.

The Site was not identified in this database. One SEMS facility was listed within an approximate 1-mile radius of the Site. This SEMS facility is located close to ½ mile south of the Site. Based upon the distance from the Site, this SEMS facility is considered unlikely to have the potential to impact the environmental integrity of the Site. In addition, no SEMS-Archive facilities were listed within an approximate ½-mile radius of the Site.

5.1.3. RCRA Corrective Action Activity

The Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS) database lists hazardous waste facilities with RCRA corrective action activity reported by the USEPA.

The Site was not identified within this database. Two CORRACT facility sites were listed within an approximate 1-mile radius of the Site. These CORRACT facilities are located over ½ mile to the east and west of the Site. Based upon the distance from the Site, these CORRACT facilities are considered unlikely to have the potential to impact the environmental integrity of the Site.

5.1.4. RCRA Treatment/Storage/Disposal Facilities (TSDF)

The RCRA TSDF database includes facilities that treat, store, and/or dispose of hazardous wastes, or have engaged in these activities in the past. TSDF operators, as with hazardous waste transporters and generators, are regulated under the RCRA.

The Site is not identified within this database. No RCRA TSDF sites were identified within an approximate 1-mile radius of the Site.

5.1.5. RCRA Hazardous Waste Generators

This list includes any operation that generates or transports hazardous waste and that must obtain a hazardous waste generator identification number or transporter permit.

The database identified three registered RCRA hazardous waste generator facilities located within an approximate ¼-mile radius from the Site, including one Large Quantity Generator (LQG), no Small Quantity Generator (SQG) and two Very Small Quantity Generator (VSQG) sites. The Site and adjoining properties were not listed on this database.

5.1.6. RCRA Non-Generators/No Longer Regulated (NLR)

This database includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. RCRA Non-Generators (Non-Gen) do not presently generate hazardous waste.

The Site was listed in this database for the laundromat business and the former dry cleaning operation. The listings for the dry cleaning business date back to the 1980s and depict waste disposal of spent halogenated solvents associated with dry cleaning chemicals. According to the database, the dry cleaning operation was listed as a generator under the business name Kwik Cleaners, from the late 1980s to the early 1990s.

Additionally, there were 14 Non-Gen sites listed within an approximate ¼-mile radius of the Site. Upon review, based upon the status, distance, and/or their hydraulic relationship of these facilities, they are unlikely to have the potential to impact the environmental integrity of the Site.

5.1.7. Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and Institutional Controls (ICs) in place. Engineering Controls (ECs) include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. ICs include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the Site. Deed restrictions are generally required as part of the ICs.

The Site was not identified within this database. One IC and EC site was listed within this database. However, upon further review, this facility is located over approximately ¼ mile from the Site and, based upon the distance, it is unlikely to have the potential to impact the environmental integrity of the Site.

5.1.8. Emergency Response Notification System (ERNS)

USEPA's ERNS database contains information from federal agencies on CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity.

The Site was not identified within this database.

5.1.9. Enforcement and Compliance History Online/Integrated Compliance Information System/Facility Index System

Enforcement and Compliance History Online (ECHO), is a web tool developed and maintained by EPA's Office of Enforcement and Compliance Assurance for public use. The ECHO website provides environmental regulatory compliance and enforcement information for approximately 800,000 regulated facilities nationwide. It also offers information about compliance and enforcement activities at the state level. Integrated Compliance Information System (ICIS) tracks formal civil administrative and judicial enforcement actions taken by the USEPA. The AIRS system track air emissions. The Facility Index System (FINDS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. ECHO extracts information from many databases, including ICIS and FINDS.

The Site is identified within the ECHO web tool as associated with the historical dry cleaning business and the current laundromat business.

5.2. New York State Regulatory Database Search

5.2.1. New York State Inactive Hazardous Waste Disposal Sites (SHWS)

The New York State SHWS database, compiled by the NYSDEC, maintains information regarding the investigation and cleanup of suspected hazardous waste sites.

The Site and adjoining properties were not identified within the database. There are two SHW sites listed within an approximate 1-mile radius of the Site. All are located over approximately ½ mile of the Site. These SHW sites are considered unlikely to have the potential to impact the environmental integrity of the Site based upon the distance from the Site.

5.2.2. Hazardous Substance Waste Disposal Sites

NYSDEC maintains a database of waste disposal sites that may pose threats to public health or the environment but cannot be remediated using monies from the Hazardous Waste Remediation Fund.

The Site was not identified within the database. No Hazardous Substance Waste Disposal Sites are listed within an approximate ½-mile radius of the Site.

5.2.3. Brownfields Sites (State and Local)

The New York State Brownfields database is a listing of sites that are abandoned, idled, or under-used industrial and commercial sites in New York State, where expansion or redevelopment is complicated by real or perceived environmental contamination.

The Site was not identified within this database. There are no Brownfield sites listed within an approximate ½-mile radius of the Site.

5.2.4. Voluntary Cleanup Program (VCP)

New York established its VCP to address the environmental, legal, and financial barriers that often hinder the redevelopment and reuse of contaminated properties. New York's VCP is a cooperative approach among the NYSDEC, lenders, developers, and prospective purchasers to investigate and/or remediate contaminated sites. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans. The volunteer agrees to remediate the site to a level which is protective of public health and the environment for the present or intended use of the property. Investigation and remediation are carried out under the oversight of the NYSDEC and the NYSDOH.

The Site was not listed in this database. No VCP sites were listed within an approximate 1-mile radius of the Site.

5.2.5. Solid Waste Facilities (SWF)

A review of the NYSDEC database of SWF (including, but not limited to, landfills, incinerators, transfer stations, recycling centers) determined that the Site was not identified within this database.

The Site was not listed in this database. No SWF sites were listed within an approximate ½-mile radius of the Site.

5.2.6. New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKS)

The NY Spills database, including LTANKS sites, was researched to identify listings within an approximate ½-mile radius of the Site.

The NYSDEC maintains a database of spills of hazardous materials, including petroleum products and leaking tanks, reported to the agency according to its regulatory requirements. Parties found responsible for these spills are required to respond by notifying the NYSDEC Spill Hotline, obtain a Spill Number, and eliminate the source of the spill and perform the necessary cleanup of contamination in surface and subsurface soils and groundwater. The responsible party is required to report its response actions to an assigned NYSDEC case manager and meet the applicable NYSDEC cleanup criteria for the media impacted by the spill before the NYSDEC will render a determination of "no further action" and at such time, the NYSDEC will "close" the spill number. Spill numbers listed as "active" indicate that the spill incident is either still undergoing remediation or awaiting completion of paperwork for closure. The NYSDEC Spills database records spills of unknown substances, regulated chemicals, petroleum spills, and spills due to tank failures and tank tightness test failures.

The Site was not listed within this database. Additionally, upon review of the database information, there were 69 NYSDEC spill incidents identified within an approximate ½-mile radius of the Site, all of which have been closed. Given that these off-site spills have been closed, they are considered unlikely to have impacted the environmental integrity of the Site.

5.2.7. NYSDEC Petroleum Bulk Storage (PBS) Database

NYSDEC maintains registration records for facilities that have petroleum storage capacities more than 1,100 gallons and less than 400,000 gallons. However, for Nassau County, these facilities are regulated by the NCDOH and are discussed in Section 5.3.1 below.

5.2.8. Major Oil Storage Facilities (MOSF)

A check was made of the NYSDEC MOSF database, which lists all facilities (onshore facilities or vessels) with petroleum storage capacities of 400,000 gallons or greater.

The Site was not identified within this database. No NYSDEC MOSF sites were identified within an approximate ½-mile radius of the Site.

5.2.9. Chemical Bulk Storage (CBS) Facilities

A check was made of the NYSDEC CBS database. CBS facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

The Site was not identified within this database. Two CBS sites were located within an approximate ¼-mile radius of the Site. Upon further review, these CBS sites are located over 800-feet from the Site

and due to this distance, are considered unlikely to have the potential to impact the environmental integrity of the Site.

5.2.10. Registered Dry Cleaner Facilities & Historic Cleaners

The NY Drycleaners database is a listing of registered dry-cleaning facilities. The EDR Historic Cleaners database is a proprietary database that is a listing of potential dry cleaner facilities based on a review of business directories. Dry cleaning facilities are associated with the use of tetrachloroethylene (PCE), a solvent that has the potential to infiltrate groundwater and can readily migrate to surrounding properties.

The Site was listed in the EDR Historical Cleaners databases. No other drycleaner sites were identified within an approximate ¼-mile radius of the Site.

5.2.11. EDR Registered SPDES Facilities

The Site is not listed in the EDR SPDES database.

5.3. Local Agency Records Search

5.3.1. Nassau County Department of Health (NCDOH)

A FOIL request was submitted to the NCDOH for information regarding environmental concerns associated with the Site (Appendix I). No response has been received to date. However, according to their online database, there is a record that a 1,000-gallon underground storage tank was closed in-place in 1994. This is presumably a fuel oil tank. No other information was listed.

5.3.2. Nassau County Fire Marshal Information (NCFM)

A FOIL request was submitted to the NCFM for information regarding environmental concerns associated with the Site (Appendix I). Based upon a response, there are no records for the Site.

5.3.3. Town of Oyster Bay Building Department

A FOIL request was submitted to the Town of Oyster Bay Building Department for information regarding environmental concerns associated with the Site (Appendix E). The Town of Oyster Bay Building Department records were reviewed as previously discussed in Section 4.6.

6. Interviews

6.1. Interviews

This information was previously discussed in Section 4.7.

7. Site Reconnaissance

The Site was inspected on October 15, 2024, by GEI environmental professional Mr. Richard Fasciani accompanied by Mr. Mark Messina, the property owner. Weather conditions at the time of the site reconnaissance were sunny, with an ambient temperature of 75° Fahrenheit. Photographs documenting the Site are provided in Appendix J.

7.1. Building Description and Observations

7.1.1. Building Description

The Site is improved with a 3,500 square foot rectangular shaped high one-story masonry and steel framed building structure (without basement). The building is occupied by coin operated laundromat and a delicatessen.

7.1.2. Building Heating and Cooling

Building heat for the deli is provided by a roof mounted natural gas and electric heating and cooling system. Hot water is generated by natural gas-fired hot water heating systems for both the delicatessen and the laundromat. Natural gas is utilized for the dryers within the laundromat.

7.1.3. Observed Interior Stains or Corrosion

No interior staining or corrosion was observed.

7.1.4. Observed Interior Drains, Sumps, or Pools of Liquid

No interior drains, sumps, or pools of liquid were observed.

7.1.5. Wastewater

There were no operations observed at the time of the site reconnaissance that would generate industrial or hazardous wastewater.

Wastewater discharges to the sewer system. The actual date the building was connected to the sewer is unknown; however, as stated previously, an approved 1995 interior alteration plan shows the building to be connected to the sewer system.

7.1.6. Waste Generation, Storage, and Disposal

There were no operations observed during the inspection that generated hazardous or toxic wastes. Waste generated consists of food service type of waste and waste generated by the laundromat. The wastes generated on the property are not likely to impact the environmental integrity of the Site.

7.2. Property Exterior Description and Observations

7.2.1. Property Description

The Site is rectangular in shape and is approximately 9,500 square feet in area. The building is situated on the westerly half of the Site. Areas not covered by the building consist of asphalt driveway and parking areas on the east and west sides of the building.

7.2.2. Pits, Ponds, and Lagoons

No pits, ponds, or lagoons are present on the Site or were observed during the site reconnaissance.

7.2.3. Odors and Stressed Vegetation

No unusual odors were detected during the site reconnaissance.

7.2.4. Stained Soil or Pavement

No significant staining was observed during the site reconnaissance.

7.2.5. Monitoring Wells

No monitoring wells were observed.

7.2.6. Exterior Drainage

Two open grate stormwater dry wells were observed on the west and east sides of the building structure.

7.2.7. Septic/Cesspool Systems

As stated previously, sanitary wastewater is discharged to the municipal sewer system since at least 1995. The exact date the building was connected to the sewer system is unknown. As mentioned previously, a septic/cesspool system was associated with the building when it was first constructed in 1966.

7.3. Chemical Substance Use/Storage

There was no large-scale storage of chemicals observed during the inspection that would be considered a REC, requiring additional investigation.

7.4. On-Site Storage Tanks

7.4.1. Underground Storage Tanks

No visual evidence of a UST was observed. However, as previously discussed, the NCDOH online records indicated that a fuel oil UST was closed in place in 1994. Mr. Messina had no knowledge of this UST and stated that since he purchased the building in 2003, the building has utilized natural gas for heating and hot water.

7.4.2. Aboveground Storage Tanks

No aboveground storage tanks were observed on the Site.

7.5. Non-Scope Considerations

7.5.1. Radon

Radon, a naturally-occurring radioactive gas, is the product of the decay of radium. It is found most frequently in relatively high concentrations in rock formations containing uranium, granite, shale, phosphate, and pitchblende. Radon may also be found in soils contaminated with industrial waste from uranium and phosphate mining. Radon, as a gas, can move through the soil and water, and into the atmosphere, and is a potential health concern if confined in sufficiently high concentrations in indoor environments. The USEPA has set an "action level" of 4.0 picocuries per liter for continuous long-term exposure to radon gas. If radon gas is measured above this level, USEPA suggests follow-up testing and remediation measures.

According to data compiled by the Bureau of Radiation Protection, New York State Department of Health, Town of Oyster Bay has one of the lowest average levels of basement radon measurements in New York State. The latest statistics indicate an average of 1.80 picocuries/liter, compared to a statewide average of 5.0. Based on these low average levels, it is unlikely that radon gas levels at the Site exceed the USEPA action level of 4.0 picocuries per liter, and therefore, radon testing is not recommended.

7.5.2. Suspected Asbestos-Containing Insulation Materials

As part of this Phase I ESA, GEI performed a limited visual survey within accessible areas of the Site to identify the presence of suspected asbestos-containing insulation materials. Accessible areas included those areas of the subject building made available by the site contact on the date of GEI's site visit (i.e., unlocked areas which are deemed safe and which building occupants have access to).

This limited visual survey was conducted for overview purposes only. It is not to be used as a complete asbestos inspection. No sampling or laboratory analysis of suspected asbestos-containing materials (SACM) identified within the subject buildings for confirmation of the presence of asbestos, or destructive activities into inaccessible areas (e.g., behind plaster or sheetrock walls, ceilings, pipe chases, etc.) were performed during this Phase I ESA.

No suspected asbestos-containing insulation materials were observed during the site reconnaissance.

7.5.3. Lead-Based Paint

Consumer sale of lead-based paint (containing over 0.06 percent metallic lead) was banned by the United States Consumer Products Safety Commission in 1977. Given that the subject building was constructed prior to 1977, lead-based paint was likely used during the development of the structure in 1966. However, since then the building has undergone numerous renovations any lead-based painted surfaces have likely been removed.

7.5.4. Mold

No visual evidence of extreme, large and/or significant areas of mold spore growth were noted in the building at the time of GEI's site visit.

7.5.5. Polychlorinated Biphenyl (PCB) Containing Equipment

No PCB-containing equipment was observed on the Site.

8. Vapor Intrusion Screening

GEI has performed a Tier 1 Vapor Encroachment Screening for the property.

Toxic, volatile substances that are spilled on the ground or released into the subsurface may migrate in the subsurface environment and eventually enter buildings as a gas or vapor by seeping through cracks in basements, foundations, sewer lines and other openings. Vapor flow toward and into a building can be influenced by several factors, including atmospheric pressure changes and building depressurization due to operation of exhaust fans or heating units within the building. The flow rate of vapors into a building often is difficult to predict but generally will depend on factors such as subsurface conditions (e.g., soil properties and contaminant characteristics), building design and condition (e.g., cracks and conduits), and differentials in air pressure across the building foundation. Upon entry into a structure, vapors normally mix with the existing air through the natural or mechanical ventilation of the building. Concentrations of indoor vapors may accumulate to a point where the health of occupants (e.g., residents, workers) in those buildings could be at risk.

Vapor intrusion (also referred to as VI) is the general term given to migration of vapors from a contaminant source in the subsurface into indoor air. VI can occur in a wide variety of building configurations (e.g., buildings with basement, crawlspace, or slab-on-grade foundations). Volatile organic compounds (VOCs) are the category of chemicals of greatest potential concern for this pathway, which among other things includes constituents of gasoline (e.g., benzene) and other petroleum fuels, as well as dry cleaning fluids (e.g., PCE) and industrial degreasers and solvents (e.g., trichloroethylene [TCE]). Other vapor-forming chemicals of potential interest include certain semi-volatile organic compounds (SVOCs), certain pesticides, and mercury.

GEI utilized the information collected in this Phase I ESA (e.g., standard environmental records, historical sources, general physical setting information, etc.) to assist in evaluating if there are known or suspected sources of contamination at the Site (on-site), as well as within the area of concern (AOC). As per Section 8.3.2 of the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the AOC is the approximate minimum search distance between the boundary of the Site and the suspect source of contamination. Therefore, for VOC chemicals of concern (COCs), the search distance is $^1/_3$ mile and for petroleum hydrocarbon COCs, it is $^1/_{10}$ mile.

8.1. Vapor Encroachment Condition (VEC)

Based on our evaluation of current and past property uses, as well as our review of available property records during this Phase I ESA, we concluded that a VEC, defined as the presence or likely presence of contaminated vapors in the subsurface caused by the release of vapors from contaminated soil and groundwater at the property, cannot be ruled out, based on the fact that the property had been historically utilized as a dry cleaning business.

9. Findings and Opinions

This assessment was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-21.

9.1. Recognized Environmental Conditions

The objective of this assessment was to evaluate the property for evidence of RECs. The goal of ASTM E1527 is to identify the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or 3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. As such, GEI identified the following RECs in connection with the Site:

- **Historical Fuel Oil UST:** Historical records indicated that the building had a 1,000-gallon fuel oil underground storage tank (UST) that was closed in place in 1994. It is assumed that this UST was installed when the building was constructed in 1966. No testing or closure information concerning this UST was obtained or provided to GEI. The lack of testing or closure information is considered a REC.
- **Stormwater Dry Wells:** Two open grate stormwater dry wells exist on the Site. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, degrading asphalt, and parking lot sealants. These stormwater dry wells represent a REC.
- **Cesspool and Three Equipment Dry Wells:** Historically, a 1966 Site Plan depicts the Site building as having a cesspool in the front of the building and three (3) equipment dry wells which appear to be connected to the building. The actual date the septic system was closed, and the property was connected to the municipal sewer system is unknown.
- **Historical Dry Cleaner Operation.** Historically, the building had been operating as a dry cleaning business since 1966 when it was constructed. The duration of this original dry cleaning operation is unknown; however, telephone directory information depicted a dry cleaning business to be associated with the Site in the late 1980s. Dry cleaning operations typically involve the storage and use of significant quantities of dry cleaning solvents, including perchloroethylene. In addition, dry cleaning operations typically generate significant quantities of waste dry cleaning solvents. Therefore, the historical dry cleaning use represents a REC.

9.2. Historical Recognized Environmental Conditions

A HREC is defined as "…as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, AULs or other property use limitations)."

GEI did not identify HRECs in connection with the Site.

9.3. Controlled Recognized Environmental Conditions

CRECs is defined as "…a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, AULs or other property use limitations)."

GEI did not identify CRECs in connection with the Site.

9.4. Non-Scope ASTM Environmental Considerations

No non-Scope ASTM Environmental Considerations were identified in connection with the Site.

9.5. Data-Gaps

The following data-gap was identified during this investigation:

GEI submitted a Freedom of Information Letter via electronic website to the NCDOH. It is noted that no information from this agency has been received as of the issuance of this report. It is GEI's opinion that based upon the information obtained for this property, the lack of this information does not impact our ability to identify RECs or the conclusions of this report.

9.6. Business Environmental Concerns

GEI did not identify any business environmental concerns.

10. Conclusions and Recommendations

GEI has performed a Phase I ESA in general conformance with the scope and limitations of ASTM Practice E1527-21 of the property located at 40 Jerusalem Avenue, Hicksville, Town of Oyster Bay, New York (the "Site"). Exceptions to, or deletions from, this practice (if any) are described in Sections 1.1 and 1.2 of this report. GEI identified the following RECs in connection with the Site:

- **Historical Fuel Oil UST:** Historical records indicated that the building had a 1,000-gallon fuel oil underground storage tank (UST) that was closed in place in 1994. It is assumed that this UST was installed when the building was constructed in 1966. No testing or closure information concerning this UST was obtained or provided to GEI. The lack of testing or closure information is considered a REC.
- **Stormwater Dry Wells:** Two open grate stormwater dry wells exist on the Site. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, degrading asphalt, and parking lot sealants. These stormwater dry wells represent a REC.
- **Cesspool and Three Equipment Dry Wells:** Historically, a 1966 Site Plan depicts the Site building as having a cesspool in the front of the building and three (3) equipment dry wells which appear to be connected to the building. The actual date the septic system was closed, and the property was connected to the municipal sewer system is unknown.
- **Historical Dry Cleaner Operation**. Historically, the building had been operating as a dry cleaning business since 1966 when it was constructed. The duration of this original dry cleaning operation is unknown; however, telephone directory information depicted a dry cleaning business to be associated with the Site in the late 1980s. Dry cleaning operations typically involve the storage and use of significant quantities of dry cleaning solvents, including perchloroethylene. In addition, dry cleaning operations typically generate significant quantities of waste dry cleaning solvents. Therefore, the historical dry cleaning use represents a REC.

Recommendations

Based on the findings of this assessment, it is recommended that a Limited Phase II ESA be conducted. The scope of this investigation should include the following:

- A geophysical survey to identify subsurface anomalies that could be associated with the abandoned in-place fuel oil UST, and cesspool, and dry wells.
- A limited soil assessment, consisting of borings/probes and the collection and laboratory analysis of soil samples, to evaluate if impacts are present from the historical fuel oil UST as well as from the area of the historical cesspool system and three equipment dry wells.
- Soil/sediment samples be collected from within the stormwater dry wells.
- Groundwater sampling if soil/sediment impacts are noted from below the exterior drainage structures (dry wells and historical cesspool and three equipment dry wells).

11. Limitations and Deviations

This Phase I ESA was conducted and prepared on behalf of Terwilliger & Bartone Properties. No other entity may rely upon the results of the Phase I ESA or contents of this report for any reasons or purpose.

The purpose of this Phase I ESA is to evaluate whether hazardous substances or petroleum products may be present at the Site. The opinion(s) provided is based on the information described in this report. Because no soil or groundwater samples were collected or chemically analyzed as part of this evaluation, no specific opinions are made based on soil or groundwater quality. Future investigations or information that was not available to GEI may result in modification of the findings of this report.

In preparing this report, GEI relied on file information provided by state and local officials, and information and representations made available to GEI at the time of the report. If this information is incomplete or inaccurate, GEI is not responsible.

GEI performed this Phase I ESA in accordance with generally accepted practices of engineers and/or scientists providing similar services at the same time, in the same locale, and under like circumstances. No other warranty, expressed or implied, is made as to the professional opinions included by GEI in this report.

The scope of services for this project did not include the following list of "additional issues" that are non-scope considerations that are outside the scope of the ASTM Phase I practice: Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality, and High Voltage Power Lines.

ASTM E1527 states that the User of an ESA may include, without limitation, a potential purchaser of the subject property, a potential tenant of the subject property, an owner of the subject property, a lender, or the manager of the subject property. Per Section 6 of the ASTM E1527 Standard, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of RECs in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for LLPs under CERCLA. GEI makes no representations or warranties regarding a User's qualification for protection under any federal, state, or local laws, rules or regulations.

No significant deviations from ASTM 1527 occurred during the preparation of this Phase I ESA and no additional services were provided as part of this Phase I ESA.

Appendix A Resumes

Richard B. Fasciani
Lead Environmental Scientist

resume

Richard Fasciani is an Environmental Scientist specializing in Phase I and Phase II Environmental Assessments. He has performed and coordinated over 1,000 Phase I Environmental Assessments of industrial, vacant rural, residential, and commercial properties for lending institutions, legal firms, city agencies, and private clients throughout the New York area. Mr. Fasciani has also been responsible for the preparation of Phase II investigations for soil and groundwater contamination, as well as sub-slab soil vapor and indoor air quality (IAQ) testing.

PROJECT EXPERIENCE

PSEG Long Island, Environmental Site Assessment Projects. Project Manager and Lead Phase I Investigator of various sites on Long Island. Performed Phase I ESAs of a vacant land site at 92 Duryea Road, Melville; a former HBO telecommunication facility at 300 New Highway, Hauppauge, and Environmental Desk Top Study Reports of three properties in Suffolk County. Performed site inspections and interviews, reviewed state, county, and location agency documentation, developed and submitted reports.

National Grid, Phase I Environmental Site Assessments. Project Manager and Lead Phase I ESA Investigator for a vacant land site in the East Moriches; an operations facility in Riverhead; a sand pit in East Farmingdale, and a portion of a power station in Island Park. The Phase I ESA's were performed for due diligence purposes.

Mary Cali Dalton Recreation Center (2022), Phase I & II Environmental Site Assessments (Kokolakis Contracting). Hanna Street, Staten Island, NY – Project Manager for Phase I ESA and Phase II Subsurface Investigation that was concurrently performed. The Phase I ESA identified historic fill, monitoring wells, an anomaly associated with an underground storage tank (UST), and a Hazmat Environmental Restriction (E-Designation). The Phase II involved a geophysical investigation, soil and groundwater sampling, and soil vapor sampling. Coordination with the New York City Mayors Office of Environmental Remediation (NYCOER) was required for the E-Designation as well as with the New York City Department of Environmental Protection (NYCDEP) who approved the Remedial Investigation Work Plan (RIWP). GEI recommended proper handling and disposal of historical fill that would be disturbed; additional groundwater sampling if dewatering will be required for redevelopment activities; additional investigation to specifically confirm if the UST is present, and the incorporation of a vapor barrier waterproofing membrane under the slab and along the basement walls of the new building.

Port Washington North, Shore Road (2023), Phase I & II Environmental Site Assessment (Private Client). As the project manager, performed a Phase I ESA for the client interested in purchasing the property that was occupied by a restaurant operated by the client. As part of the due diligence process, it was discovered that historically, the upgradient adjoining site was a large oil distribution facility that had undergone remedial actions under state regulatory oversite and was redeveloped into a multi-tenant retail shopping center. Due to this historical recognized environmental condition (REC) and an undocumented UST, GEI performed a Phase II investigation. The findings of the Phase II revealed the existence of the UST as well as fuel oil and gasoline impacted soil and groundwater at the groundwater interface across the site. GEI recommended additional testing for soil vapor impacts and recommended that the findings be discussed with the state regulatory authority to determine if additional investigations will be required.

Radio Circle Drive, Phase I ESA (Kaufman Jacobs), Mount Kisco, NY. (2023) As the project manager, performed a Phase I ESA for the client interested in purchasing the property for redevelopment. Historically, the site was an office/warehouse structure and was renovated in the 1990's into an office building. RECs identified included on-site parking stormwater dry wells and potential soil vapor impacts from an upgradient dry cleaner listed as a hazardous waste site. GEI recommended a Phase II Environmental Site Assessment.

NYC Department of Environmental Protection (DEP), Environmental Site Assessment of Watershed Lands; Contract DEL-363A. Project Manager for this contract (held by GEI for 15 years) of the City of New York's Land Acquisition Program which is meant to preserve the City's water supply system. Performed numerous Phase I ESAs of these watershed properties in various upstate counties. As Project Manager, evaluated project assignments, assigned staff and reviewed and performed quality control of reports written by other GEI Phase I ESA team associates.

NYCEDC and NYCOER Consultant Contract for On-Call Environmental Consulting Services. Project Manager and Lead Phase I ESA Investigator for a vacant land site in the Bronx and a multi-building hospital site in Brooklyn, NY, both of which are targeted for redevelopment.

Former Oil Terminal Facility, Patchogue, NY. Performed and wrote the Phase I ESA of this site for a private client interested in determining the sites' suitability for redevelopment. This project involved a significant review of numerous records, documents and reports at the regional and local offices of the New York State Department of Environmental Conservation and Suffolk County Department of Health Services.

Trust for Public Land, Various New York City Sites, NY. Conducted Phase I ESAs under their school playground renovation program in New York City and its Boroughs. Proposed and implemented Phase II investigations based upon identified Recognized Environmental Conditions identified in the Phase I ESA reports.

Mavis Tire Corporation, NY. Conducted Phase I ESAs of gasoline service stations, automotive repair shops and vacant land sites throughout the State of New York.

Property Redevelopment: 5 Boroughs, New York City, NY. Performed Phase I and II investigations for numerous private clients of residential properties that were planned for redevelopment and rehabilitation. Some of these Phase I ESA projects lead to the identification of on-site and off-site recognized environmental conditions requiring remedial investigations including soil sampling, soil vapor investigations and subsequent corrective actions including installation of vapor barriers and sub-slab depressurization systems. Some of the projects were performed according to requirements set forth by the New York City Department of Environmental Protection and New York City Office of Environmental Remediation.

Sub Slab Depressurization System (SSDS) CLIENT, New York City, NY. Directed the design and installation of an active SSDS system within a commercial/residential building impacted by historical dry-cleaning operations that was being redeveloped under the New York City Department of Environmental Protection (NYCDEP) and New York City Housing Preservation and Development (NYCHPD) requirements.

Various Lending and Financial Institutions, Metro-New York Area, NY. Performed Phase I and II ESAs of various residential, commercial, retail and industrial properties throughout the New York City metropolitan area. Phase II investigations resulted from recognized conditions associated with the project site or from potential impacts (soil vapor) from off-site recognized conditions.

Town of North Hempstead, NY. Performed numerous Phase I ESAs of properties being planned for acquisition, as well as a land associated with the Hempstead Harbor Shoreline Trail.

Stephen E. Tauss, P.G.
Senior Project Manager

resume

Stephen Tauss is a senior project manager in GEI's Huntington Station office. Mr. Tauss has over 21 years of professional experience covering a broad range of soil and groundwater investigation and remediation projects. Through his many years of experience, Mr. Tauss has become proficient in the planning and management of complex and aggressively scheduled projects, preparing scopes of work and associated budgets, completing, and negotiating contract change orders, preparing qualification packages and technical proposals, and is very familiar with environmental regulations and interacting with multiple regulatory agencies.

PROJECT EXPERIENCE

PREVIOUS PROJECT EXPERIENCE

Groundwater Remediation Project, Confidential Client, Bethpage, NY. Senior Project Staff/Associate Project Manager for a large groundwater remediation project which involves the Operation, Maintenance, and Monitoring (OM&M) of a large-scale 2,500 GPM on-site groundwater containment and remediation system at an expansive former aerospace manufacturing facility located in Bethpage, NY. Project responsibilities included technical and managerial support related to implementing a NYSDEC-compliant OM&M Plan; long-term system, groundwater, and air monitoring; remedial system reliability analysis; and associated third party/stakeholder communication and coordination related to on-site and off-site groundwater impacts. Provided lead and technical support roles for the routine evaluation and annual certification for remedial system effectiveness, involving synthesizing data from the multi-phased groundwater sampling program. Also responsible for leading preparation of various routine Weekly Status Reports, Monthly SPDES Reports, Quarterly OM&M Reports, Quarterly AOC Progress Reports, and Annual OM&M Reports, as well as ensuring the project OM&M Plan and associated Groundwater Sampling Plan remains current and NYSDEC-complaint. Responsibilities have also included leading biweekly Technical Review Meetings with the client. Played significant roles in the coordination with PRPs for data updates related to the ongoing off-site groundwater investigation and remediation activities, and assimilated and evaluated data to support periodic Conceptual Site Model (CSM) refinements and remedial decision-making and strategies.

Remedial Well Redevelopment, Confidential Client, Bethpage, NY. Assisted with the Management of a remedial well redevelopment effort of three deep remedial wells (up to 750 feet below grade) located within a "hot spot" of a large chlorinated VOC plume located in Bethpage, NY. Played an integral role in the devolvement and planning of the biddable scope of work, and identification of key cost cutting measures leading to award of the project. Project responsibilities include technical and managerial support related to implementing the

scope of work; providing technical expertise during all phases of well redevelopment (planning, scoping, video, acid injection, well disinfection, and setting of the remedial pump at the correct elevation); and coordination with multiple subcontractors; coordination of a large multi-disciplined project team. Provided lead technical support roles for the evaluation of well video logs and associated laboratory analytical/technical reports.

NYCT Underground Storage Tank and Environmental Remediation Program, NYCT, NY. Project Manager for the NYCT Underground Storage Tank and Environmental Remediation program, which involved the investigation and remediation of petroleum-contaminated soil and groundwater at 19 NYCT and MTABC bus depots located throughout the five boroughs of New York City. The majority of contamination at the bus depots is associated with the historical storage of diesel fuel, waste oil and other petroleum products. Project responsibilities include coordination directly with NYCT program directors, the NYSDEC and multiple subcontractors; management of project budget and expenditures; development of multiple subcontractor agreements; maintaining strict M/WBE requirement goals; preparation and implementation of investigation work plans; development and negotiation of numerous Task Orders for routine and non-routine work activities; investigation and spill closure reports; development of effective/practical remedial recommendations; leading monthly status meetings between NYCT/ MTABC and the NYSDEC; and the preparation of monthly meeting agendas/minutes and status reports. Responsible for enforcing MTA's contract documents and coordination with NYCT's various subcontractors to ensure that several former groundwater treatment/petroleum recovery systems were properly operated and maintained, while operating.

Substation Remediation Program, LIRR, NY. Project Manager for the LIRR Substation Remediation program. This program involved the investigation and remediation of mercury-contaminated soil at 20 electric substations where mercury-containing rectifiers were historically used to manage electrical power for LIRR's electrified rail system. The project generally includes the delineation and remediation of on/offsite soil and UIC structures, drainage surveys and qualitative exposure assessments to identify potential on-site exposure issues. Responsibilities include coordinating directly with multiple LIRR departments, representatives from NYSDEC, NCDH and SCDHS, and various subcontractors; management of project budget and expenditures; development of multiple subcontractor agreements; and the development of multiple Work Plans and Supplemental Work Plans, Delineation Phase II Site Assessment Reports, Remedial Action Work Plans, Final Engineering Reports and Site Management Plans for each substation. Responsible for the development of remedial design plans and specifications for each substation and assisting the LIRR with the implementation and management of the overall remedial efforts completed at the substations.

Active Industrial and Franklin Cleaners, NYSDEC, Lindenhurst and Hempstead, NY. Project Manager for the NYSDEC Active Industrial and Franklin Cleaners groundwater extraction and treatment remedial programs. The treatment systems at each site were installed to capture and treat groundwater contaminated by PCE and its various breakdown products resulting from spills at the dry-cleaning facilities which historically operated at each site. Project responsibilities included coordinating directly with the NYSDEC project manager; development of project scoping and 2.11 budget packages; management of project budget and expenditures; soliciting and managing OM&M contractors and the management of various subcontractors; analysis of system operating data; preparation of numerous Quarterly, Annual, Periodic Review Reports; and the development of Site Management Plans for each site. Responsible for the development and implementation of comprehensive Remedial System Optimization efforts at each site, to assess the efficiency, effectiveness, and net environmental benefit of each remedy, following approximately two decades of operation.

Site Characterization of the East Garden City Former Gas Holder Station, National Grid, Garden City, NY. Project Manager for the Site Characterization of the East Garden City Former Gas Holder Station. The overall goal of the Site Characterization was to define the extent of MGP-related contamination associated with the former gas holder and historical site filling and re-grading activities, and formulate recommendations based on the investigation findings. Responsibilities included coordinating directly with multiple National Grid departments, the NYSDEC and various National Grid subcontractors; management of project budget and expenditures; and the development of multiple subcontractor agreements. Managed an IRM excavation in a

portion of the site where mercury, arsenic and PAH contamination was identified, and several pipe trench soil characterization and CAMP efforts implemented pursuant to worker and community safety. Responsible for the development and implementation of an annual groundwater sampling program implemented based on the results of the Site Characterization program, and development of a comprehensive Site Management Plan to manage remaining contamination throughout the site.

Appendix B User Questionnaire

ESA Phase I User Questionnaire

(Reference ASTM E 1527)

PROJECT SITE ADDRESS: 40 Jerusalem Avenue, Hicksville, New York

GEI PROJECT NO: RF 10/9/2024

This User Questionnaire is required to be completed in order to comply with the All Appropriate Inquiry (AAI) as required by ASTM E1527. In order to qualify for one of the Landowner Liability Protections *(LLPs*) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that an appropriate inquiry is not complete.

1. In order to assist us in determining the history of and past use(s) of the property, GEI Consultants, Inc. (GEI) would like to discuss this information with the past and present owners of the subject property. If known, please supply us with their contact information so that we contact them during the course of this Phase I ESA investigation.
Michael Messina, 516-984-5944, email- sortman123@aol.com

2. As the user of this Phase I ESA Report, a title report should be obtained. This would indicate any lien records for environmental liens currently recorded against or relating to the property. Therefore, do you have a Title Report? If yes, does the Title Report depict any environmental liens? If no, then please answer question 3.
No

3. If a Title Report is not in your possession, to the best of you knowledge, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? If yes, please explain in detail:
No

4. Are you aware of any Activities and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? If yes, please explain in detail:
No

5. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have

specialized knowledge of the chemicals and processes used by this type of business. If yes, please explain in detail:
No

6. To the best of your knowledge is there a property value reduction due to environmental issues? If yes, please explain in detail:
No

7. Are you aware of commonly known or reasonably ascertainable information of about the property that would help the environmental professional to identify conditions? If yes, please explain in detail:

(a) Do you know past use of the property?
Laundromat

(b) Do you know of specific chemicals that are present or once were present at the property?
No

(c) Do you know of spills or other chemical releases that have taken place at the property?
No

(d) Do you know of any environmental cleanups that have taken place at the property?
No

8. As the user of this Phase I ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
No

9. Please provide following information:

(a) The reason why the Phase I ESA is required.
Acquisition

(b) The type of property and type of transaction? For example, sale, purchase, exchange, refinance, etc.
Purchase

(c) The complete and correct address for the property (a map, site survey or other documentation showing property location and boundaries is helpful).
40 Jerusalem Ave. Hicksville, NY 11590

(d) Please indicate how the person(s) signing below is associated with the project site (e.g., owner, owner's representative, purchaser, etc.).
Purchaser

(e) If this is a refinance, please indicate the name of the entity that owns the project site and how long have you/the borrower/entity owned the property.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 08/27/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CASSEL/HICKSVILL Cerclis ID:: 203974 EPA Id: NY0001095363	***SOUTHERN END OF IRIS***	***SSE 1/4 - 1/2 (0.472 mi.)***	***0***	***24***

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/24/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CASSEL/HICKSVILL Site ID: 0203974 EPA Id: NY0001095363	***SOUTHERN END OF IRIS***	***SSE 1/4 - 1/2 (0.472 mi.)***	***0***	***24***

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 07/24/2024 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 21 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 27 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 26 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 80: Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

A review of the NY SPILLS 80 list, as provided by EDR, and dated 11/02/2010 has revealed that there is 1 NY SPILLS 80 site within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 8 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NEW CASSEL/HICKSVILLE GROUND WATER CONTAMINATION (Continued) **1000984411**

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

OMEGA AUTO BODY INC (Continued) **1000232399**

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	3/20/20 1504hrs: t/c Chris Flynn (H2M). While installing drywells during March 6th, found pocket

SOIL (Continued) **S126221182**

contaminated soil 21' deep. Took samples, and samples came back today with elevated SVOC's. Dark
stained soil and brick. Soil removed and put in bags, approximately 2 yards of soil removed on
March 6th. (JN) 10/23/20 1100hrs: t/c Chris (H2M). Asked about status of spill. Chris said wasn't
closed out? On 3/23/20 JN sent Field Issue Checklist saying geoprobe needed to delineate site.
Nothing has been done. Chris to talk to client. 12/7/2022 - No documentation of soil boring
submitted. DTW: 69ft, Administratively closed.

Remarks: historical spill clean up is pending

DEC Memo:	7/12/22-07:15 NH responded to the spill 08:30 NH on site. Driver hit a deadman post in the parking lot, rupturing the saddle tank, spilling diesel fuel to the pavement and a nearby catch basin. Estimated 20 gal went into the catch basin. Maggio Env service cleaned up the pavement, and power washed the parking lot. Eastern cleaned out the drain. Issued a clean up letter to RP. Maggio Services DTW-70 07:15 NH responded to spill, estimated 150 gallons spilled to pavement and catch basin. Catch basin leads to 2 other basins on site, but didn't reach the other basins. Maggio Env has their own clean crew, which addressed the pavement. Hired Eastern Env. to pump out the basin. Power washed the pavement, as the vac truck sucked up the water. Off site 12:45. Spill has been contained and cleaned up, no further action required. Manifest on file
Remarks:	Clean up pending. Need vac truck.

DEC Memo:	11/29/33 @ 1000 hrs: WG t/c w/ Mike of Windmill Oil Tank. Per Mike, contaminated soil encountered at the site during a routine removal of a 5K #2 fuel oil UST. Tank inspected by Susan of NCDOH, who required Windmill Oil to file a spill report. No holes were found in tank but DOH inspector determined soils encountered at 9 below grade of the excavation exhibited petroleum impacts. Contaminated soil removal was not possible due to structural concerned of the property. As per request from contractor, approval to temporarily backfill granted - awaiting development of work plan to perform additional investigation/remedial action. Photos were submitted to R1Spills inbox. USGS DTW~68' 4/26/2024 A portion of contaminated soil removal scheduled for 4/30/2024. Contaminated soil removal to be performed in phases during construction process. CS Backfill inspection 6/14/2024 with Roux. ***7/23/2024 Contaminated soil excavated to clean endpoints in the phases concurrent with redevelopment construction at the property. A total of 559 tons soil generated during petroleum contaminated soil excavation disposed of at Posillico. Waste manifests and closure documentation received. No further action required. CS
Remarks:	Unknown quantity. Cleanup is pending. Nassau Co. Dept. of Health is on site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
