Date

1. Background and Site Description

1.1. Introduction

GEI Consultants, Inc. (GEI) has prepared this Remedial Investigation Work Plan (RIWP) for the Site located at 20 & 40 Jerusalem Avenue [Section 11, Block 179, Lots 324 (p/o) and 325, and Lot 102] in Hicksville, New York (the "Site"), in accordance with New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) requirements, as further described below. A Site Location Map is provided as Figure 1 and a Site plan is provided as Figure 2.

Information regarding Site conditions and contaminant distribution and concentrations was obtained from an April 2024 Phase I Environmental Site Assessment (ESA) prepared by GEI for 20 Jerusalem Avenue, , an October 2024 Phase I ESA prepared by GEI for 40 Jerusalem Avenue, a March 2025 Phase II ESA prepared by GEI for 40 Jerusalem Avenue, a July 2025 Supplemental Phase I ESA prepared by GEI for 20 & 40 Jerusalem Avenue, a February 2026 Phase I ESA for 20 & 40 Jerusalem Avenue, and a March 2026 Phase II ESA prepared by GEI for 20 Jerusalem Avenue. Previous Environmental Reports are included as Appendix A.

1.2. Objective of the Remedial Investigation Work Plan

Per the requirements of NYSDEC's DER-10 guidance document (Section 1.3(b)59 and Section 3.1(c)1), which states the purpose of RI is to fully delineate the areal and vertical nature and extent of contamination in all media at the Site along with other goals, the Remedial Investigation (RI) for the Site has been planned to further delineate previously identified contaminants and to address remaining data gaps in accordance with the requirements of the NYSDEC BCP.

Based on the historical use of the Site and documented characterization results, the following work scope has been developed to further investigate environmental conditions at the Site. This RIWP details specific tasks that will facilitate Site characterization in compliance with NYSDEC BCP requirements. In conjunction with the findings of the previous investigations, the findings of the RI will be used to:

- Describe the location, concentration, persistence, mobility, form (e.g., solid, liquid, vapor), and other significant characteristics of the contamination present at the Site.
- Define hydrogeological factors (e.g., depth to saturated zone, and hydrologic gradients, if practical).
- Define the thickness and areal extent of the Site contaminated fill material and characterize the chemical composition of the contaminated fill.
- If applicable, define the extent of which the contaminants of concern have potential to migrate, and whether potential future migration may pose a threat to human health or the environment.
- Determine the extent to which contaminant levels pose an unacceptable risk to public health and the environment.

- Provide sufficient information to allow for the identification of potentially feasible remedial alternatives.
- Develop Remedial Action Objectives (RAOs) for the Site based on the contaminant characterization results, exposure pathways, and risk evaluation.

1.3. Background

The 20-40 Jerusalem Ave Dry Cleaner Dry Wells Site consists of two full tax lots and a portion of a third lot [Section 11, Block 179, Lots 324 (p/o) and 325 and Lot 102] and is located in Hicksville, New York. The Site is located on the western side of Jerusalem Avenue and the eastern side of Nelson Avenue, between Nelson Avenue to the north and West Marie Street to the south. The Site comprises approximately 1.74 acres. Lot 325 and the portion of Lot 324 included in the proposed BCP Site are utilized as a contiguous asphalt paved parking lot associated with the address 20 Jerusalem Avenue. Lot 102 is occupied by a contiguous, rectangular-shaped single-story masonry and wood-framed commercial building and associated parking lot, associated with the address 40 Jerusalem Avenue. This building is presently occupied by a deli and laundromat.

GEI's analysis of historical information indicates that the northern portion of the Site (identified by the address of 20 Jerusalem Avenue) was developed by 1908 with a church and later several residential dwellings. Additional residential dwellings were added throughout the years, and by 1957 they were demolished and replaced with the present-day parking lot. The middle/eastern portion of the Site (identified by the 40 Jerusalem Avenue address) was originally occupied by a residential dwelling that existed on the Site as early as 1926. This dwelling was demolished in 1966 for the development of the current single-story structure. Historical identified uses for the 40 Jerusalem Avenue portion of the Site included a dry-cleaning business, a floor retail business, a laundromat, and food type businesses (i.e., bagel store and a delicatessen).

1.4. Lithology and Hydrogeology

According to previous Phase II environmental assessments, the Site is underlain by brown to tan widely graded sand with varying amounts of silt and fine gravel. Evidence of fill material, including brick and concrete fragments, were observed from approximately 1 to 2 ft. bgs. Groundwater was identified at approximately 55 ft. bgs.

1.5. Summary of Available Previous Investigations

Previous investigations performed at the Site include an April 2024 Phase I ESA prepared by GEI for 20 Jerusalem Avenue, an October 2024 Phase I ESA prepared by GEI for 40 Jerusalem Avenue, a March 2025 Phase II ESA prepared by GEI for 40 Jerusalem Avenue, a July 2025 Supplemental Phase I ESA prepared by GEI for 20 & 40 Jerusalem Avenue, a February 2026 Phase I ESA for 20 & 40 Jerusalem Avenue, and a March 2026 Phase II ESA prepared by GEI for 20 Jerusalem Avenue. A summary of the findings of the previous investigations is provided below:

Stormwater Dry Wells (20 and 40 Jerusalem Avenue)

GEI observed numerous open grate stormwater dry wells in the parking areas of both 20 and 40 Jerusalem Avenue. Stormwater dry wells are often impacted by automotive lubricants and fluids, tire particles, vehicle exhaust, degrading asphalt, or parking lot sealants. These drainage systems represent a REC. During previous Phase II Investigations performed in 2024 and 2025, GEI confirmed that the stormwater dry wells are heavily impacted by SVOCs. It is recommended the bottom sediments be removed and properly disposed as part of a BCP Site remediation. The plan is to remove the dry wells require to facilitate redevelopment of the Site, in accordance with the USEPA UIC Program.

Sanitary System (20 Jerusalem Avenue)

Evidence exists that the 20 Jerusalem Avenue building discharges sanitary wastewater to an on-site septic/cesspool system. During the Phase II ESA performed by GEI as reported in March 2026, a sediment sample was collected from the septic tank. This sample displayed a detection of mercury of 1.76 mg/kg, above the Protection of Groundwater Soil Cleanup Objective (PGWSCO), as well as detections of VOCs and TPH. Further investigation and sampling prior to closing the system in accordance with all NCDOH protocols is required. Additionally, it should be noted that it is a Nassau County Public Health Ordinance requirement that the building be connected to the municipal sewer system and the on-site sanitary system must be properly closed in accordance with NCDOH On-site Sanitary System Abandonment Procedures.

Cesspool and Three Equipment Dry Wells (40 Jerusalem Avenue)

Historically, a 1966 Site Plan depicts the 40 Jerusalem Avenue building as having a cesspool in the front of the building and three equipment dry wells, which appear to be connected to the building. The actual date the septic system was closed, and the property was connected to the municipal sewer system is unknown. The equipment dry wells were inspected and sampled as part of the July 2025 Phase II ESA performed by GEI. Several chlorinated VOCs (cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene) were detected significantly above the PGSCOs in one of the equipment dry wells, with tetrachloroethene also detected slightly above its PGSCO in the same equipment dry well. The upper approximately 4 to 6 inches of the sediment within this equipment dry well, consisted of a black sludge-like material. Several PAHs (benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, and chrysene) were also detected above the PGSCOs in this equipment dry well. No other exceedances of the PGSCOs were identified in any of the other subsurface drainage structures investigated.

Fuel Oil Tanks (20 and 40 Jerusalem Avenue)

No USTs or ASTs were observed on the Site and no visual evidence (e.g., fill port or vent line, plumbing, etc.) for a fuel oil tank was observed. However, the historical 20 Jerusalem Avenue building and tax assessor records indicated that the 20 Jerusalem Avenue building utilized fuel oil for heating at the time the building was constructed. Mr. David Grossman, the building owner and member of 2020 Partners, Inc, stated during an interview for the April 2024 Phase I ESA that since he purchased the building in 2005, natural gas has always been utilized for heating and that he is unaware of any fuel oil tanks on this portion of the Site. A geophysical survey was conducted on this portion of the Site as part

of the March 2026Phase II ESA report. Based upon thus geophysical investigation, no anomaly associated with an UST was detected.

Historical records indicated that the 40 Jerusalem Avenue building had a 1,000-gallon fuel oil UST that was closed in place in 1994. It is assumed that this UST was installed when the building was constructed in 1966. A geophysical survey was conducted as part of the March 2025 Phase II ESA performed by GEI on this portion of the Site as well. Based upon this geophysical investigation, an anomaly indicative of an UST was identified on the southern side of the front parking lot area along Jerusalem Avenue. It should be noted that no VOCs, SVOCs or metals were detected above applicable SCOs in the soil samples collected to date in proximity to this UST anomaly. However, no further testing or closure information concerning this UST was obtained by the Freedom of Information Act request to the Nassau County Department of Health (NCDOH), which did have a record of this tank being closed in place but no other records, and no other records were able to be located by GEI.

Historical Dry Cleaner Operation (40 Jerusalem Avenue)

Historically, the 40 Jerusalem Avenue building had been operating as a dry-cleaning business since 1966 when it was constructed. The exact duration of this original dry-cleaning operation is unknown; however, telephone directory information depicted a dry-cleaning business to be associated with the Site in the late 1980s. Other records suggest the dry cleaning operations were present until approximately 1994 when the facility appears to have converted into a laundromat. No dry-cleaning activities are presently conducted on-site. Dry-cleaning operations typically involve the storage and use of significant quantities of dry-cleaning solvents, including perchloroethylene. In addition, dry-cleaning operations typically generate significant quantities of waste dry-cleaning solvents. Soil vapor sampling was conducted as part of the March 2025 Phase II ESA performed by GEI, in exterior areas of the Site. Multiple chlorinated VOCs (1,1-dichloroethylene, cis-1,2-dichloroethylenewere, tetrachloroethylene, trichloroethylene, and vinyl chloride) were detected at concentrations well above the “mitigate” threshold in one or more of all collected soil vapor samples. The greater concentrations and occurrences of VOCs were detected in the soil vapor point located in the northwest corner of the front parking lot area along Jerusalem Avenue, in the vicinity of the equipment dry wells. Elevated Chlorinated CVOC detections were also identified during soil vapor sampling performed as part of the July 2025 Supplemental Phase II ESA performed by GEI on both the 20 and 40 Jerusalem Avenue properties. In general, the greater chlorinated VOC concentrations in soil vapor were identified in the vicinity of the equipment dry wells at 40 Jerusalem Avenue.

In addition, it is noted that concentrations of the above chlorinated VOCs on the 20 Jerusalem Avenue property were generally detected in all SV probes. These detections are likely associated with the former dry-cleaning operations at the Site.

Previous environmental reports are included as Appendix A. Previous Investigation Soil Exceedances and Previous Investigation Elevated Soil Vapor Detections are included on Figures 3 and 4.

1.6. Proposed Future Use of Site

As discussed previously, the Site is presently occupied by a parking lot and small single-story commercial building. Following further investigation and potential remediation, the Site will be developed into a 4-story mixed use residential and commercial building with associated parking. The redevelopment program includes much-needed multi-family housing, responding to a well-documented regional shortage. The project will deliver 106 units of housing including 11 units of workforce/affordable housing at 80% Area Mean Income (AMI), supporting local employees, first responders, veterans, and young professionals, while contributing to Hicksville's broader affordability objectives. This housing aligns with the Hicksville Downtown Revitalization Initiative (DRI), which plan was designed to catalyze transit-oriented redevelopment, infrastructure enhancements, and environmental remediation of underutilized properties in Downtown Hicksville. The DRI Strategic Investment Plan identifies the Jerusalem Avenue corridor as a priority redevelopment sub-area intended for "enhanced walkability, pedestrian-oriented street frontage, and mixed-use housing." Multiple DRI strategies emphasized converting aging commercial structures into modern, code-compliant, environmentally remediated residential buildings to support economic vitality and the long-term repositioning of Downtown Hicksville. Therefore, as a prominently located infill parcel in the Jerusalem Avenue corridor, remediation of this property directly advances the DRI goals.

1.7. Project Organizational Structure and Responsibility

GEI will coordinate with NYSDEC for review and approval of the RIWP. Approval of the RIWP will be obtained prior to commencement of the RI.

The drilling subcontractor will be responsible for all drilling activities to include, but not be limited to, compliance with all applicable Occupational Safety and Health Administration (OSHA) regulations, personnel health and safety, installation of soil borings, groundwater monitoring wells, and soil vapor probes, and any other tasks specified in this RIWP.

GEI will be responsible for project management, subcontractor oversight, RIWP compliance, determination of corrective measures when needed, monitoring for health and safety, collection of analytical samples, maintenance of Site sampling logs, and preparation of daily field activities and monthly progress reports. GEI will also serve as the Site Health and Safety Officer.

The following are the key personnel or agencies involved with RIWP activities at the Site:

NYSDEC:	Sankavi Sampath Division of Environmental Remediation NYSDEC 625 Broadway Albany, New York, 12233

NYSDOH	Project Manager to be Assigned. Public Health Specialist Bureau of Environmental Exposure Investigation NYSDOH Empire State Plaza – Corning Tower, 17th Floor Albany, New York 12237
Drilling Subcontractor:	To be Selected
GEI:	Gary Rozmus, P.E. Program Manager 1000 New York Avenue, Suite B Huntington Station, NY 11746 631.760.9300 William J. Fitchett Project Manager 1000 New York Avenue, Suite B Huntington Station, NY 11746 631.760.9300
Remedial Party Contact:	Anthony Bartone Cornerstone Hicksville, LLC c/o Terwilliger and Bartone Properties 141 Merritts Rd., 2nd Floor Farmingdale, NY 11735

Resumes of key GEI personnel for this project are included in Appendix B.

2. Scope of Work

All field work will be performed in accordance with the Field Sampling Plan (FSP) methods included in Appendix C. Analytical sampling will be performed in accordance with the Quality Assurance Project Plan (QAPP) included in Appendix E. A CAMP, consistent with the provisions of NYSDOH's Generic CAMP (included in Appendix E), will be implemented during field activities.

Proposed soil, groundwater, and soil vapor sample locations are provided on Figure 5.

2.1. Execution of the RIWP

Site work consisting of preparation activities will commence daily at 7 am Monday through Friday. All work will be completed, and the work area closed for the evening, at 5 pm, unless otherwise authorized by the Site owner. During working hours, the drilling subcontractor will make every effort to minimize potential community impacts, including minimization of noise and traffic concerns. Site work will not be conducted on weekends or holidays without prior approval by the Site owner. Daily Field Reports for each workday will be submitted to NYSDEC and NYSDOH by the end of the next business day. Daily Field reports will include air monitoring results (including summary of any exceedances and corrective measures taken, if any) in the daily report. A figure will be included showing where work was conducted during the reporting period and where prior work has occurred. NYSDEC and NYSDOH will be notified at least 7 days prior to mobilization to the Site for the RIWP.

2.2. Areas of Concern

The Areas of Concern (AOC) identified for this Site are:

1. Stormwater drywells across the Site where elevated concentrations of SVOCs and metals were previously detected.
2. The sanitary system on the northern portion of the property displayed an elevated concentration of mercury.
3. The area near the former dry cleaner equipment dry wells elevated concentrations of PCE were detected in soil and soil vapor.
4. The area of the previously abandoned UST.
5. The potential presence of historic fill across the Site.

2.3. Mobilization and Site Access

The selected drilling subcontractor will submit a Site-specific Health and Safety Plan (HASP) meeting the minimum requirements of GEI's HASP, provided in Appendix F. All work will be performed in accordance with OSHA, state, and industry safety standards. All on-site personnel performing intrusive activities which present the potential for contact with impacted materials will have the requisite 1910.120 OSHA HAZWOPER 40-hour and 8-hour refresher training. Supervisory personnel will also have supervisory

training. All personnel will be in a medical surveillance program. Also, Site-specific training will be given to all personnel performing fieldwork at the Site on a daily basis. This Site-specific training will include a review of potential Site hazards, required PPE, and Site warning and evacuation procedures.

The drilling subcontractor will apply for and obtain all necessary federal, state, and local permits associated with the RIWP. These permits may include, but are not limited to, traffic routing, road opening, construction/zoning, etc. Conditions of these permits will be complied with during the construction.

The drilling subcontractor will be responsible for coordinating One-Call utility mark-outs prior to implementation of any intrusive activities. The Contractor is responsible for resolving all potential utility conflicts. Underground utility protection will be the responsibility of the selected Contractor. When all utilities have been verified/confirmed/ protected, then intrusive activities may be initiated.

The selected drilling subcontractor will mobilize all necessary labor, equipment, supplies, and materials to complete the RIWP. Lay down areas for equipment, supplies and materials, the appropriate exclusion zone(s) and support area(s) will be identified, as necessary, to conduct the planned activities safely and effectively. All equipment will be inspected prior to utilization for the RIWP and checked periodically for performance and corrective repair. All equipment will be cleaned prior to arrival on the Site.

The Site owners have provided access to the Site for all RIWP activities. However, the Site is still utilized by activity tenants. Therefore, investigation activities will be respectful of the ongoing operations on the Site.

2.4. Site Preparation

Site preparation activities include the establishment of work zones, support facilities, decontamination facilities, and installation of temporary security measures around work areas, as necessary. The work area may change daily based on the locations of the sampling points.

2.5. Geophysical Survey

Another geophysical survey, including a magnetometer and ground penetrating radar survey, will be performed across accessible areas of the Site to investigate for the presence of potential USTs, buried drums, etc. and for the potential presence of underground utilities within the work area.

2.6. Soil Boring Installation and Sampling

As depicted on Figure 5, a total of 24 soil borings are planned for advancement at strategic locations throughout the Site. The soil borings will attempt to vertically and horizontally delineate the known contamination to better understand the most suitable remedy for the Site. Soil borings will be advanced utilizing either a skid-mounted Geoprobe®, limited-access Geoprobe, or hand augers. Soil cores will be obtained using a stainless-steel macro-core sampler with an internal acetate liner. Soil cores will be examined for lithology and screened impacts using a photoionization detector (PID) with an 11.7 eV lamp, as well as by visual and olfactory methods.

Two soil borings (RISB-17 and RISB-22) will be installed within the single-story commercial building. One soil boring (RISB-17) will be installed within the tenant space presently occupied by the laundromat (former dry cleaner space) and one soil boring (RISB-22) will be installed within the tenant space presently occupied by the deli. These soil borings will be installed to the maximum depth feasible based upon the accessibility of the boring location to a portable indoor drilling rig machine. From the interior soil borings, a sample will be collected from the 0 to 2-foot interval, and the 2-foot interval at the deepest extent of the soil boring, expected to be approximately 8 to 10 ft. bgs.

The exterior soil borings will be advanced to the depth of the surrounding stormwater dry wells, which is between approximately 8 and 16 ft. bgs. In the event that no evidence of soil contamination is identified, two soil samples will be collected at each soil boring. One soil sample will be collected from the 0 to 2-foot interval, and one soil sample will be collected from the 2-foot interval which corresponds to the depth of the nearest storm drain, in an attempt to delineate the known impacts within each storm drain at this depth. If visual or olfactory/observations and PID readings reveal the presence of contamination, the soil boring will be extended until the vertical extent of contamination is reached.

Additionally, during previous investigations GEI observed a septic/cesspool system in the parking lot of 20 Jerusalem Avenue, numerous open grate stormwater dry wells and manholes with solid covers in the parking areas of both 20 and 40 Jerusalem Avenue, as well as three equipment dry wells located at 40 Jerusalem Avenue. To vertically delineate the previously identified contaminants within the storm drains, septic /cesspool system and one of the equipment dry wells, one soil sample will be collected from the 2-foot interval beginning at 5 feet below the bottom of each structure. An additional sample will be collected from 5 feet below this sample, which will be placed on hold pending results of the shallow sample.

Appendix C details the Field Sampling Standard Operation Procedures (SOPs) for logging and sample acquisition.

Soil samples will be properly transported to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory under chain-of-custody (COC) procedures and analyzed for the following:

- VOCs by United States Environmental Protection Agency (USEPA) Method 8260C.
- SVOCs by USEPA Method 8270D.
- Target Analyte List (TAL) Metals by USEPA Method 6010D and Mercury by USEPA Method 7471B.
- Pesticides by USEPA Method 8081B.
- Polychlorinated Biphenyls (PCBs) by USEPA Method 8082A.
- Perfluoroalkyl and polyfluoroalkyl substances (PFAS) using modified USEPA Method 1633A.

A total of approximately 48 soil samples will be collected from the soil borings. A total of 20 soil samples will be collected from the septic/cesspool system, stormwater dry wells, and one equipment dry well. Additional soil samples are not planned for the two remaining equipment dry wells that did not display exceedances during the previous investigations. An additional 20 deeper soil samples will be collected and placed on hold, pending the results of the shallower soil samples.

In addition, quality assurance/quality control (QA/QC) samples such as trip blanks, equipment/field blanks, matrix spike and field duplicate samples will be collected, per the QAPP and NYSDEC requirements. Additional laboratory analyses may be included based on field observations. The data will be provided in a Category B data deliverable.

All non-dedicated, downhole sampling equipment will be decontaminated between soil boring locations in accordance with accepted drilling practices using a high-pressure hot water "steam" cleaner or scrubbed using Alconox followed by clean potable water rinse.

2.7. Groundwater Monitoring Well Installation and Sampling

2.7.1. Site Hydrogeological Conditions

Based on information obtained during previous site investigations, groundwater is anticipated to be encountered at a depth approximately 55 ft. bgs across the Site and is assumed to flow in a southerly direction.

2.7.2. Monitoring Well Installation

Groundwater samples collected during previous investigations were collected from temporary monitoring wells which no longer exist on the Site. As shown on Figure 5, five permanent monitoring wells will be installed throughout the Site as part of this RI in similar locations. The monitoring well screens will be positioned to straddle the groundwater surface. The nomenclature of each monitoring well will highlight the monitoring well location, e.g., RIMW-01, RIMW-02, etc.

Each monitoring well will be constructed of 2-inch outside diameter (OD), flush joint, SCH 40 polyvinylchloride (PVC) equipped with 10 feet of 0.020-inch slot well screen and a PVC riser pipe extending to the surface. The wells will be completed with a Morie #2 sand pack to 2 feet above top-of-screen, 2 feet of wetted bentonite pellets, and tremie-grout to surface. The monitoring wells will be completed with a J-plug and a flush mounted protective casing in a concrete pad.

2.7.3. Monitoring Well Development

The newly installed monitoring wells will be developed no sooner than 24 hours following construction completion. The development procedure will be completed using a submersible pump and purging a minimum of three-well volumes and periodically surging the water in the monitoring well to loosen and remove suspended fines from the well screen and sandpack.

2.7.4. Groundwater Sample Collection

Groundwater sampling will be completed utilizing the USEPA's low-flow (minimal drawdown) procedures with dedicated and decontaminated sampling equipment. Prior to collecting the groundwater samples, the depth to groundwater and the total well depth will be measured at each of the groundwater monitoring wells using a multi-parameter interface probe attached to a measuring tape accurate to 0.01 foot. Field parameters (e.g., turbidity, pH, oxidation-reduction potential, and dissolved oxygen) will be measured during completion of the groundwater sampling event.

The monitoring wells will be sampled for the following analytical:

- VOCs using USEPA Method 8260C.
- Perfluoroalkyl and polyfluoroalkyl substances (PFAS) using USEPA Method 1633A.
- 1,4-Dioxane using a modified USEPA Method 8270 (with selective ion monitoring [SIM] to be used during analysis).
- SVOCs using USEPA Method 8270D.
- TAL metals (including mercury) via USEPA Method 6010D and Method 7473.
- Pesticides via USEPA Method 8081B.
- PCBs via USEPA Method 8082.

In addition, quality QA/QC samples such as equipment/field blanks, matrix spike and field duplicate samples will be collected, per the QAPP and NYSDEC requirements. Additional laboratory analyses may be included based on field observations. The data will be provided in a Category B data deliverable.

All new monitoring wells will be surveyed by a New York State-Licensed Land Surveyor. The elevation of each monitoring well will be determined to an ±0.01-foot accuracy and all monitoring well locations and elevations will be tied to the New York State Plane Coordinate System.

2.8. Soil Vapor Point Installation and Sampling

As depicted on Figure 5, 12 soil vapor probes are proposed to be installed throughout the Site, to further delineate previously identified contaminants in Site soil vapor. One outdoor ambient air sample will be collected concurrently with the soil vapor samples.

All samples will be collected in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006) and associated updates. Conditions in the field may require adjustment to the sampling locations. The Site building is slated for demolition and as such, sub-slab soil samples and co-located indoor air samples are not proposed.

The temporary soil vapor probes will be installed to the planned excavation depth, approximately 15 ft. bgs. The soil vapor points will be advanced using direct push drilling methods and will consist of 1-inch diameter steel rods with a prefabricated 3-inch perforated steel vapor probe tip attached to ⅜-inch diameter low-density polyethylene (LDPE) plastic tubing. Once driven to depth, the rods will be removed leaving only the perforated tip and tubing. The vapor probe borehole will be backfilled with #2 Morie well grade gravel and a surface seal will be constructed using an impermeable bentonite clay seal at the last 6 inches of the annulus from surface grade. The vapor well will be purged using a hand pump or equivalent device after installation.

Samples will be collected in 6-liter Summa canisters which have been batch-certified clean by the laboratory and analyzed for VOCs using USEPA Method TO-15. Flow rate of both purging and sampling will not exceed 0.2 liters per minute (L/min). Sampling will occur for a duration of 2 hours. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection,

sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols. The indoor air samples and the outdoor air sample will be collected concurrently with the soil vapor sampling.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC device to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas and a box will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a 10% presence of the tracer, the probe seals will be adjusted to prevent infiltration. As the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals. Samples will be analyzed using TO15 methodology.

2.9. Material Handling

Investigation derived waste (IDW) produced during the RI, including soil cuttings, groundwater, and decontamination waters will be collected and stored in 55-gallon drums for proper off-site transportation and disposal (T&D). An approved storage area will be established on-site for IDW storage. The drums will be placed on secondary containments and will be kept covered.

2.10. Site Restoration

The drilling subcontractor will restore all disturbed areas to pre-existing conditions, as necessary. Restoration actions shall include, but may not be limited to:

- Removal of all temporary facilities, including decontamination areas, and unused materials.
- Replacement or repair of all removed or damaged asphalt and concrete surfaces, as appropriate.

3. Quality Assurance/Quality Control Protocols

QA/QC protocols are included in Appendix D.

4. Health and Safety Protocols

Health and safety protocols are detailed in the site-specific HASP, included in Appendix F.

5. Remedial Investigation Report/Remedial Action Work Plan

Following receipt of the validated analytical results from the RI, GEI will prepare a Remedial Investigation Report (RIR) and Remedial Action Work Plan (RAWP), as described below.

5.1. Remedial Investigation Report

The RIR will include a summary of RI fieldwork performed, soil/groundwater/soil vapor sample analytical data tables, soil boring and well construction logs, groundwater levels and flow directions, photos, and sample location figures. The RIR will also include recommendations for further characterization or remediation of the Site, as necessary. Key objectives and/or specific components of the RIR are further described below, as necessary. A Fish and Wildlife Exposure Assessment will be performed (if needed) based on the RI results in accordance with Section 3.10 of DER-10, and the Fish and Wildlife Resources Impact Analysis Decision key in DER-10, Appendix 3C.

5.1.1. Geologic/Hydrogeologic Characteristics

Geologic and hydrogeologic characterization of the Site will be accomplished through review of the RI and associated historical soil boring logs, soil and groundwater sampling results, and groundwater levels and flow directions. The RIR will include conclusions established based on review of soil and fill characteristics and the direction, gradients, and potential fluctuations or anomalies of shallow groundwater at and in the immediate vicinity of the Site.

5.1.2. Data Evaluation

Sample analytical data generated during the RI will be summarized and evaluated in the RIR to determine the extents of soil, groundwater, and soil vapor impacts, and to ensure that data are adequate in quantity and quality, pursuant to project objectives. In order to make this determination, the data will be reviewed for quality of data coverage, compatibility of data collection methods, and completeness.

To facilitate the data evaluation process, the data will be tabulated in data summary tables. Figures showing sampling locations with corresponding analytical results and comparison to applicable regulatory criteria (as discussed below) will also be prepared to enhance the overall understanding of Site conditions, with regard to the magnitude, location, and flow and transport of contamination at the Site.

Upon receipt, the analytical data will be validated in accordance with the USEPA Region II Functional Guidelines for Evaluating Organic Analyses (September 2006) and the USEPA Region 2 Standard Operating Procedure for the Evaluation of Metals for the Contract Laboratory Program, SOP HW-2, Revision 13 (September 2006), modified, as necessary, to accommodate the non-Contract Laboratory Program methodologies used. Analytical results for the soil, groundwater, and soil vapor samples will be compared to the NYSDEC Part 375 SCOs, the NYSDEC Class GA groundwater standards, and the NYSDOH soil vapor guidance values, respectively.

Laboratory data will be provided as Category B deliverables, and a DUSR will be prepared for each laboratory data package and any quality control non-conformances and associated impact to the usability of the analytical data will be identified. In addition, all data will be submitted to NYSDEC in the appropriate Electronic Data Deliverable (EDD) format.

Based on review of the RI analytical sample results, recommendations for further characterization of the Site will be provided, if necessary. In the event that no additional characterization is required, the RIR will include a Qualitative Human Health Risk Assessment (QHHRA). In the event that additional investigation is determined to be required, the QHHRA will be completed following the receipt of validated results of any additional characterization needed.

5.1.3. Qualitative Human Health Risk Assessment

The purpose of the QHHRA is to determine if the presence and concentrations of chemicals in the environmental media at the Site pose potential human health concerns.

The QHHRA will consist of the evaluation of five elements associated with exposure pathways, and how each of these elements pertains to the Site. The five exposure pathway elements to be evaluated include:

- A description of the contaminant source(s), including the location of the contaminant release to the environment (any waste disposal area or point of discharge, or if the original source is unknown), and the contaminated environmental medium (soil, groundwater, soil vapor, etc.) at the point of exposure.
- An explanation of the contaminant release and transport mechanisms to the exposed population.
- Identification of all potential exposure point(s) where actual or potential human contact with a contaminated medium may occur.
- Description(s) of the route(s) of exposure (i.e., ingestion, inhalation, dermal absorption).
- A characterization of the receptor populations who may be exposed to contaminants at a point of exposure.

5.1.4. Additional Field Investigations

The RIR will identify whether further characterization of the Site may be required, based on the findings and conclusions of the RI. Conditions that would warrant additional investigation include data gaps, identification of unexpected areas or concentrations of contamination, or to gather additional data necessary to properly evaluate the effectiveness of a proposed remedial technology.

If additional investigation is warranted, such will be discussed with the NYSDEC and an additional investigation work plan will be prepared and submitted to the NYSDEC for review and approval, as necessary, prior to the implementation of any additional investigation activities.

5.1.5. Interim Remedial Measures

The RIR will identify whether any Interim Remedial Measures (IRMs) may be warranted to be implemented at the Site, based on the findings and conclusions of the RI, prior to development and implementation of the RAWP described below. As such, the RIR may include recommendations to implement one or more IRMs at the Site to address any identified imminent risks to human health or the environment. In such cases, preliminary results from the RI would be used to evaluate the necessity for such an immediate response associated with a particular medium, route of exposure, or potential sensitive receptor.

If an IRM is determined to be necessary, an IRM work plan would be submitted to NYSDEC for review and approval. The IRM would be selected with the understanding that the measure should be compatible with the overall project objectives and long-term RA goals, and the IRM Work Plan would describe the proposed measure, justification for its selection, and a schedule for the activities associated with its implementation.

5.2. Remedial Action Work Plan

Based on the findings and conclusions of the RI, any required further investigation activities, and/or implementation of any IRMs, a RAWP will be developed for the Site. The RAWP will include an evaluation of remedial alternatives, based on the results of the RI, any required further investigation activities, and/or implementation of any IRMs, as well as the planned layout of the new building to be constructed at the Site.

Multiple remedial alternatives will be identified, evaluated, and ultimately selected to be implemented at the Site. The goal of these remedial measures is to be protective of human health and the environment under the proposed future use scenario. As part of this effort, potential Site constituent migration pathways for soil/fill, groundwater, soil vapor/indoor air and airborne dust will be evaluated. Once the degree of contamination associated with these media and other Site characteristics are established, General Response Alternatives for Site remediation will be defined.

The General Response Alternatives to be considered will include the “no action” measure, which will be utilized as a baseline against which other remedial measures, if necessary, will be compared and a Track 1 alternative. Proposed SCOs for the Site will also be presented in the RAWP based on the proposed future use of the Site. SCOs will be based on published SCGs and other NYSDEC and NYSDOH accepted values as appropriate. The RAWP will also include a Soil/Fill Management Plan, which will describe a plan for characterization and handling of excavated soil/fill based on NYSDEC SCOs as specified in 6 NYCRR Subpart 375-6.

6. Green and Sustainable Remediation

DER-31 requires that green remediation concepts and techniques be considered during all stages of the remedial program. As such, this work plan was prepared in a manner that considers all environmental effects of remedy implementation and incorporates Best Management Practices (BMP) to minimize the environmental footprint of remedial cleanups, in compliance with DER-31. BMPs and subsequent reporting methods are described below.

- DER-31 outlines best practices and techniques that can be applied throughout all stages of the remediation process, including the RI. In compliance with DER-31, the techniques identified below will be implemented unless a site-specific evaluation demonstrates impracticability or favors an alternative green approach. *Use of renewable energy to offset electricity demand at the site to the extent feasible.*
- *Reduce vehicle idling. All vehicles, both on and off road (including construction equipment) will be shut off when not in use for more than 5 minutes, consistent with 6 NYCRR Part 217 Motor Vehicle Emissions, Subpart 217-3 Idling Prohibition for Heavy Duty Vehicles.*
- *Design cover systems, to the extent possible, to be usable for alternate uses such as habitat or passive recreation, require minimal maintenance (e.g. less mowing), allow for infiltration of storm water and/or be integrated with the next use of the site.*
- *Beneficially reuse materials that would otherwise be considered a waste (e.g. crushed clean concrete as base or fill).*
- *Use of Ultra Low Sulfur Diesel (ULSD).*

During the implementation of this RI, the only applicable technique listed above is bullet point two: reducing vehicle idling. Heavy equipment, including drilling rigs, will be shut off during any break in use lasting more than 5 minutes.

DER-31 requires that all work reports submitted to the DEC include a description of green remediation and sustainability efforts. Accordingly, each daily field report will document the Green and Sustainable Remediation (GSR) practices and techniques employed, as outlined above. A comprehensive summary of all GSR measures implemented during the RI will also be included in the RIR.

7. Citizen Participation Activities

A Citizen Participation Plan (CPP) will be developed and deposited by GEI in the Community Information Repository. As part of this effort, GEI will provide personnel and materials to assist the NYSDEC in providing the community with information related to the RI at the Site.

GEI will complete the following related activities:

- Establish a Community Information Repository at the local library, or other community center.
- Participate in public meetings that the NYSDEC deems necessary to apprize the community of the current or proposed activities.
- Identify public and elected officials who may have a need to be informed.
- Identify the affected or interested public.
- Disseminate the approved Fact Sheets to the Site Contact List.

In addition to the CPP, the following historical and future documents will be filed in the repository, and the public will be so notified with a Fact Sheet, as necessary:

- Phase I ESA Reports
- Supplemental Investigation Report
- Project HASPs
- Final RIWP
- Draft and Final RIR
- Draft and Final IRM Plan, if necessary
- Draft and Final RAWP
- Draft and Final Engineering Report (FER)
- Draft and Final Site Management Plan

Following completion and filing of the RIR, a Fact Sheet and notice of public meeting, if necessary, will be distributed by mailing. Public comments will be solicited to aid in the preparation of the Final RAWP. A public meeting will be conducted, if required. Following the public comment period, NYSDEC will issue a Decision Document, and the RAWP will then be finalized.

Following completion of the RA or actions, two Fact Sheets will be prepared. The first will summarize the findings of the FER and the second will announce the issuance of the Certificate of Completion. The two Fact Sheets will be combined if the FER and Certificate of Completion issuance occur concurrently.

Following completion and filing of the FER, an SMP will be drafted and filed, if not pursuing a Track 1 status. The SMP will describe any required ongoing post-remedial site monitoring activities which may be

required to ensure that operation of the Site remains protective of human health and the environment under the proposed future use scenario.

8. Schedule

The project schedule for implementation of the RIWP activities is presented below. It should be noted that the below schedule assumes that no further characterization or IRM activities will be required at the Site.

The below schedule may be affected by regulatory review time periods, contractor response timeframes, time needed to negotiate access agreements with property owners and/or tenants, community issues, permit review and approval timeframes, or other unknown factors. In addition, in the event that the proposed RIWP scope changes as a result of the above, additional effort may be required to reschedule and/or renegotiate with subcontractors, which has the potential to further impact the below schedule. Every effort will be made to keep the project on the anticipated schedule.

Milestone	Estimated Schedule	
	Estimated Weeks	Estimated End Date
Submittal of Draft RIWP to NYSDEC with BCP Application	0	2026-March
30 day Public Comment Period	8	2026-July
NYSDEC Approves Final RIWP / Issue Fact Sheet	4	2026-August
Implementation of RIWP	2	2026-August-September
Submittal of RIR and RAWP to NYSDEC	8	2026-October
RAWP Comment Period	7	2026-November-December
NYSDEC Approves RIR		2026-December
NYSDEC Approves RAWP and issues Decision Document	8	22026-December
Remediation	8	2027-January
Submittal of SMP to NYSDEC		2027-September
Submittal of FER to NYSDEC	8	2027-October
NYSDEC Approves FER/Issuance of COC	40	2027-December

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name:	ALSY MANUFACTURING, INC.
Address:	270/280 DUFFY AVENUE
City,State,Zip:	HICKSVILLE, NY 11801
Program:	HW
Site Code:	55767
Classification:	Site is properly closed - requires continued management.
Region:	1
Acres:	4.000
HW Code:	130027
Record Add:	11/18/1999
Record Upd:	09/25/2023
Updated By:	JLDYBER

Site Description: "Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the

ALSY MANUFACTURING, INC. (Continued) **S104541551**

movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Updated By:	RWSTRANG
Site Code:	55767
Site Description:	"Location: The ALSY site is a 4-acre site located in an urban/suburban portion of Nassau County. The site is located approximately 4000 feet east of the Wantaugh State Parkway at 270/280 Duffy Avenue in Hicksville. Site Features: The main Site features include several large one-story buildings surrounded by asphalt parking areas. The Site is bounded on the north by the Long Island Railroad and a construction and demolition (C&D) debris reclaimer; on the south by Duffy Avenue and a residential neighborhood; and on the east and west by active and vacant industrial or commercial operations. Current Zoning and Land Use: The Site buildings are presently used for commercial business. Surrounding land uses include residential, commercial and industrial uses. Past Use of the Site: Prior to 1975, Metalab, a laboratory furniture manufacturer, conducted operations at the Site. ALSY Manufacturing manufactured electric lamps and lampshades at this facility from 1975 through 1991. ALSY s manufacturing processes included bronze plating, electroplating, and antiquing. Waste material that was generated included metals plating waste, wastewater treatment sludge, paint thinner, acidic paint stripper, alkaline paint stripper, and 1,1,1-trichloroethane. Site Geology and Hydrogeology: The site is underlain by glacially derived sand and gravel deposits. Groundwater is found approximately 50 feet below the ground surface and flow is in a southerly direction. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were arsenic, chromium, copper, nickel and zinc in the soil and nickel in the groundwater. Chlorinated solvents were also found in soil vapor on-site, triggering mitigation of overlying structures. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Access to the site is unrestricted and a majority of the site is covered by buildings and pavement. However, contact with contaminated soil or groundwater is unlikely unless they dig below the surface materials. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Subslab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in both of the on-site buildings to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling

ALSY MANUFACTURING, INC. (Continued) **S104541551**

	indicates soil vapor intrusion is not a concern for off-site buildings."

Waste Description:	1,2-Dichloroethane
Waste Code:	D029
Waste Description:	1,1-Dichloroethylene
Waste Code:	D030
Waste Description:	2,4-Dinitrotoluene
Waste Code:	D031
Waste Description:	Heptachlor (And Its Epoxide)
Waste Code:	D032
Waste Description:	Hexachlorobenzene
Waste Code:	D033
Waste Description:	Hexachlorobutadiene
Waste Code:	D034
Waste Description:	Hexachloroethane
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	D036
Waste Description:	Nitrobenzene
Waste Code:	D037
Waste Description:	Pentachlorophenol
Waste Code:	D038
Waste Description:	Pyridine
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	D040
Waste Description:	Trichloroethylene
Waste Code:	D041
Waste Description:	2,4,5-Trichlorophenol
Waste Code:	D042
Waste Description:	2,4,6-Trichlorophenol
Waste Code:	D043
Waste Description:	Vinyl Chloride
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

HICKSVILLE OPERATIONS CENTER-PSEG (Continued) **1000178398**

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U188
Waste Description: Phenol

SHWS:

Name:	MAGNUSONICS DEVICES
Address:	290 DUFFY AVENUE
City,State,Zip:	HICKSVILLE, NY 11801
Program:	HW
Site Code:	55770
Classification:	C
Region:	1
Acres:	3.000
HW Code:	130031
Record Add:	11/18/1999
Record Upd:	02/19/2014
Updated By:	SRHEIGEL
Site Description:	"Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north. Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology: Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south. "
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision. "

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Health Problem:	"Remedial actions taken have eliminated the potential for contact with site-related contaminants. "

Site Code: 55770
Site Description: "Location: Magnusonics is a 3 acre site located at 290 Duffy Avenue, in the Hicksville section of the Town of Oyster Bay. Site Features: The entire site is paved or covered by the building structure. The northernmost and southernmost portions of the site are used as parking areas. Current Zoning and land use: Site is zoned light industrial and is presently occupied by Custom Closets and the Daily News. The site is located within a mixed use area that consists of commercial/industrial properties to the north, east and west and residential properties to the south. The Long Island Railroad tracks border the site to the north. Historical Uses: Magnusonics Devices manufactured computer tape recording heads, an operation which generated both hazardous and non-hazardous wastes. Processes included photographic etching of thin sheet metal as well as copper and chrome electroplating. The facility used a physical chemical treatment system that processed rinse waters from its plating and chemical milling operations, and discharged the treated wastewater, which contained metals and solvents, into on-site leaching pools. Plating wastes containing chromium and lead were discharged into a leaching pool. A ferric hydroxide sludge which contained lead and iron was generated as part of the facility's processes and discovered beneath the parking lot at the northern portion of the site. Site Geology and Hydrogeology: Groundwater was encountered at a depth of approximately 60 feet below land surface. Groundwater flow direction was determined to be to the south. "

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. The primary site contaminants of concern were metals in soils and groundwater. The selected remedy was performed and met the remediation goals identified in the Record of Decision. "
Health Problem:	"Remedial actions taken have eliminated the potential for contact with site-related contaminants. "

Hazardous Waste Summary:

Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006

SPORT STAMP & THE CLOSET (Continued) **1000323314**

Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/27/2024
Date Data Arrived at EDR: 09/03/2024

Next Scheduled EDR Contact: 01/06/2025
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/07/2024
Date Data Arrived at EDR: 06/25/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

ENV RES DECL: Environmental Restrictive Declarations
The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List

The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 12/30/2013
Number of Days to Update: 182

Source: Department of Environmental Conservation

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/05/2024
Date Data Arrived at EDR: 05/07/2024
Date Made Active in Reports: 08/01/2024
Number of Days to Update: 86

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

South Map:	14115948 FREEPORT, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

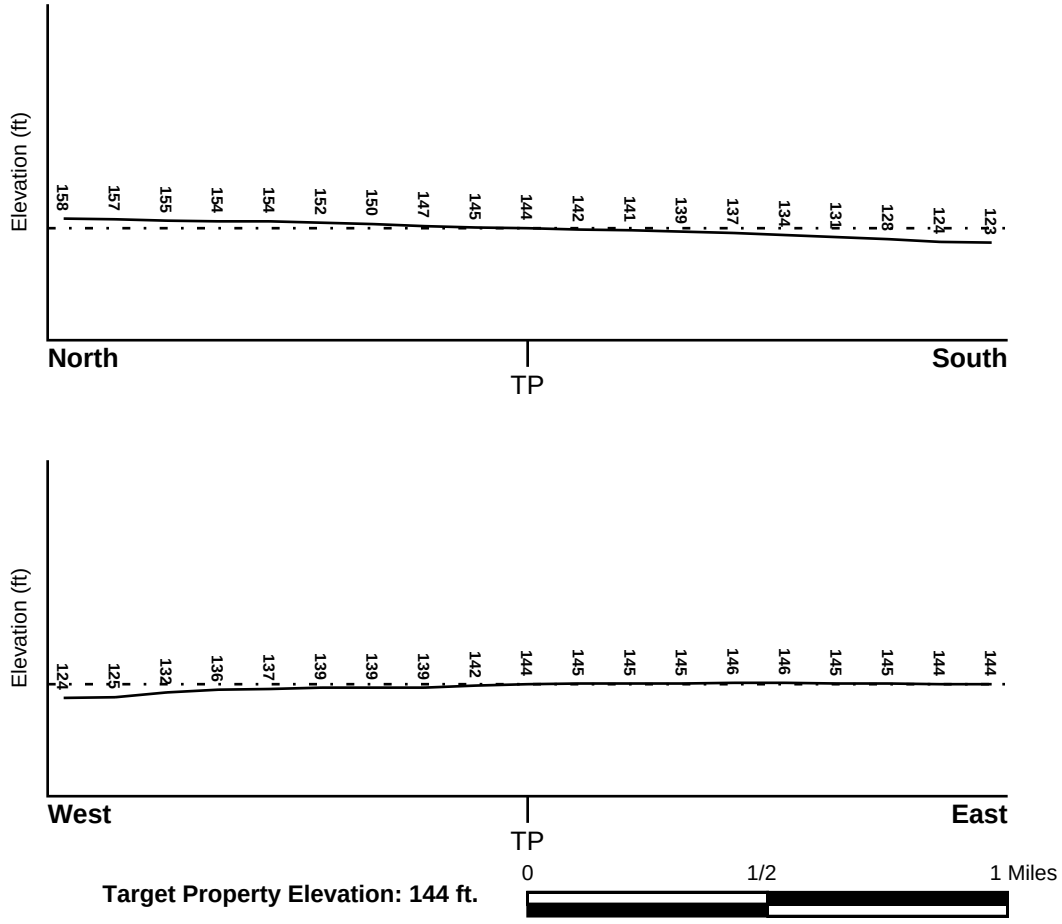
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36059C0145F	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36059C0143F	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HICKSVILLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	Alsy Manufacturing
Site EPA ID Number:	NYD981184237
Groundwater Flow Direction:	South
Inferred Depth to Water:	approximately 60 feet.
Hydraulic Connection:	The surficial aquifer and underlying aquifer are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Nassau County FOIL Request
Fire Commission - Hazardous Materials Division

Dear **Richard Fasciani**,

Regarding your Freedom of Information Law ("FOIL") request (Reference # 357600):

Please be advised that this Office has diligently searched our records and have not found any documents responsive to your request.

If you believe this request was improperly denied or the response is incomplete you have the right to appeal.

Appeals must be submitted in writing within thirty (30) days to the FOIL Appeals Officer, located at 1 West Street, Mineola, N 11501. See Public Officers Law • 89(4)(a). Please include a copy of this response along with a copy of your original request with your appeal.

Thank you.

Nassau County

Appendix J Photographs

Photo 1. View of the 1-story building on the Site.

Photo 2. View looking west along the north side of the building.

Photo 3. View looking south along the western (rear) side of the building. Note the dry well.

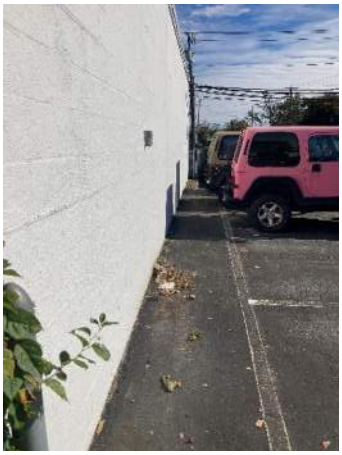

Photo 4. View looking toward the east along the south side of the building. The building is the end of the property line.

Photo 5. Typical view of the laundromat.

Photo 6. View of the kitchen area of the deli.

Photo 7. Another view of the deli.

Photo 8. Sewer connection cleanout in rear parking area.

Photo 9. Chimney that is no longer being used. Behind this area of the building is the kitchen for the deli.

Photo 10. Front parking area along Jersusalem Avenue.

Photo 11. Looking west at the adjoining parking lot to the south of the builidng.

Photo 12. View of the adjacent property to the west.

Photo 13. View of the property to the east, across Jerusalem Avenue.

Photo 14. Looking at the adjacent property located to the north.

Appendix C User Questionnaire

ESA Phase I User Questionnaire

(Reference ASTM E 1527)

PROJECT SITE ADDRESS: 20 and 40 Jerusalem Avenue, Hicksville, NY

GEI PROJECT NO: 2408313

This User Questionnaire is required to be completed in order to comply with the All Appropriate Inquiry (AAI) as required by ASTM E1527. In order to qualify for one of the Landowner Liability Protections *(LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that an appropriate inquiry is not complete.

1. In order to assist us in determining the history of and past use(s) of the property, GEI Consultants, Inc. (GEI) would like to discuss this information with the past and present owners of the subject property. If known, please supply us with their contact information so that we contact them during the course of this Phase I ESA investigation.

2020 PARTNERS, DAVID GROSSMAN

2. As the user of this Phase I ESA Report, a title report should be obtained. This would indicate any lien records for environmental liens currently recorded against or relating to the property. Therefore, do you have a Title Report? If yes, does the Title Report depict any environmental liens? If no, then please answer question 3.

NO ENVIRO LIENS ON TITLE REPORT

3. If a Title Report is not in your possession, to the best of you knowledge, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? If yes, please explain in detail:

N/A

4. Are you aware of any Activities and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? If yes, please explain in detail:

NO

5. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business. If yes, please explain in detail:

NO

6. To the best of your knowledge is there a property value reduction due to environmental issues? If yes, please explain in detail:

NO

7. Are you aware of commonly known or reasonably ascertainable information of about the property that would help the environmental professional to identify conditions? If yes, please explain in detail:

(a) Do you know past use of the property?

OFFICE

(b) Do you know of specific chemicals that are present or once were present at the property?

NO

(c) Do you know of spills or other chemical releases that have taken place at the property?

NO

(d) Do you know of any environmental cleanups that have taken place at the property?

NO

8. As the user of this Phase I ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

NO

9. Please provide following information:

(a) The reason why the Phase I ESA is required.

ACQUISITION (+) RE DEVELOPMENT

(b) The type of property and type of transaction? For example, sale, purchase, exchange, refinance, etc.

SALE

(c) The complete and correct address for the property (a map, site survey or other documentation showing property location and boundaries is helpful).

20 JERUSALEM AVE, HICKSVILLE, NY

(d) Please indicate how the person(s) signing below is associated with the project site (e.g., owner, owner's representative, purchaser, etc.).

CONTRACT VENDEE TO ACQUIRE

(e) If this is a refinance, please indicate the name of the entity that owns the project site and how long have you/the borrower/entity owned the property.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

APPLICATION FOR NEW BUILDING PERMIT

4087

TOWN OF OYSTER BAY, OYSTER BAY, N. Y.

Issued Pursuant to the Provisions of the Building Zone Ordinance and Building Code

Zone Bus. G Checked ..... School Dist. ..... Section 11 Block 179

Date Sept. 12, 1956 Map Plot on Newbridge Rd.& Jerusalem Ave. Lots 7-21 incl.

Location S/W cor. of the intersection of Newbridge Road & Jerusalem Avenue, Hicksville, N. Y.

Residence - Garage ..... Business Yes

New Building Yes Alteration ..... Repair .....

Size of lot—Feet Front Irregular (see plot plan) Feet Deep .....

Size of existing buildings—Feet Front 44 90 Feet Deep 95 76 % of lot occupied 23.2

NOTE: Bldgs. to be removed 29 42

Size of proposed buildings—Feet Front 101 Feet Deep 60 % of lot occupied 19.75

Existing buildings used for Stores & Residence Proposed buildings used for Bank & Offices

Number of Stories—Existing Buildings 1 & 2 Proposed Buildings Three see drawings

Material of Footings Reinf. Conc. Size under Walls ..... Under Columns .....

Material of Foundation Walls Reinf. Conc. Thickness 16" see drawings Height 14'-6" Max.

Material of Exterior Walls Brick of ins. panels Thickness 8" - 1½" panels

Kind of Framing—Balloon ..... Western ..... Corner Braced .....

Exterior Wall Sheathing—Type ..... Thickness .....

Diagonally Sheathed ..... Horizontally Sheathed .....

Wood Studs—Size ..... o. c. ..... Height .....

Size of Beams:
1st floor ..... o. c. ..... 2nd floor ..... o.c. ..... 3rd floor ..... o.c. .....

Size of rafters or roof beams ..... o.c. ..... Size of Collar Beams .....

Size of corner posts ..... Sills ..... Plates ..... Bridging .....

Size of basement girders ..... No. and size of columns .....

Floor Construction—Fireproof Yes ..... Wood ..... Fire stopped at all floors .....

Maximum liveload per sq. ft. each floor—1st 100 2nd 75 3rd 75 4th .....

Roof Sheathing—Type ..... Thickness ..... Pitch of Roof Flat

Roof. Material Built-up

All structural steel shapes must be indicated on plans by both size and weight .....

Plumbing Yes (Yes or No) Lighting Electric (Electric or Other)

Heating Oil (Oil, Gas or Other) Type Hot Water (Steam, Hot Water, Hot Air)

Does work include installation of any automatic gas-fired appliances? .....

If so, give details .....

Chimney—Materials and dimensions 3'-8" x 4'-8" brick

No. and size of flue linings one 6x20 - one 8x12

Estimated cost of proposed buildings, alterations or etc.

$250,000.00

Estimated value of existing improvements .....

Note: Roof pitch less than 4" must be checked with Building Dept. first.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 10/30/2025 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Site Code: 55784

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/30/2025 has revealed that there are 27 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 37 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: #57346

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/30/2025 has revealed that there are 34 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 80: Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

A review of the NY SPILLS 80 list, as provided by EDR, and dated 11/02/2010 has revealed that there is 1 NY SPILLS 80 site within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NEW CASSEL/HICKSVILL EPA ID:: NY0001095363	***SOUTHERN END OF IRIS***	***SSE 1/4 - 1/2 (0.452 mi.)***	***0***	***25***

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 11 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

IGLE GAS CORP.	118 NEWBRIDGE RD.	SSW 1/8 - 1/4 (0.158 mi.)	M99	182

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 7 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	7/12/22-07:15 NH responded to the spill 08:30 NH on site. Driver hit a deadman post in the parking lot, rupturing the saddle tank, spilling diesel fuel to the pavement and a nearby catch basin. Estimated 20 gal went into the catch basin. Maggio Env service cleaned up the pavement, and power washed the parking lot. Eastern cleaned out the drain. Issued a clean up letter to RP. Maggio Services DTW-70 07:15 NH responded to spill, estimated 150 gallons spilled to pavement and catch

HICKSVILLE HIGH SCHOOL (Continued) **S128912855**

basin. Catch basin leads to 2 other basins on site, but didn't reach the other basins. Maggio Env has their own clean crew, which addressed the pavement. Hired Eastern Env. to pump out the basin. Power washed the pavement, as the vac truck sucked up the water. Off site 12:45. Spill has been contained and cleaned up, no further action required. Manifest on file

Remarks: Clean up pending. Need vac truck.

DEC Memo:	11/29/33 @ 1000 hrs: WG t/c w/ Mike of Windmill Oil Tank. Per Mike, contaminated soil encountered at the site during a routine removal of a 5K #2 fuel oil UST. Tank inspected by Susan of NCDOH, who required Windmill Oil to file a spill report. No holes were found in tank but DOH inspector determined soils encountered at 9 below grade of the excavation exhibited petroleum impacts. Contaminated soil removal was not possible due to structural concerned of the property. As per request from contractor, approval to temporarily backfill granted - awaiting development of work plan to perform additional investigation/remedial action. Photos were submitted to R1Spills inbox. USGS DTW~68' 4/26/2024 A portion of contaminated soil removal scheduled for 4/30/2024. Contaminated soil removal to be performed in phases during construction process. CS Backfill inspection 6/14/2024 with Roux. ***7/23/2024 Contaminated soil excavated to clean endpoints in the phases concurrent with redevelopment construction at the property. A total of 559 tons soil generated during petroleum contaminated soil excavation disposed of at Posillico. Waste manifests and closure documentation received. No further action required. CS
Remarks:	Unknown quantity. Cleanup is pending. Nassau Co. Dept. of Health is on site.

DEC Memo:	11/5/21 0725 Hrs: RJP made call to Kathleen Green of LIRR. Stated overnight that a piece of service equipment operating on tracks experienced diesel line leak, spilled estimated less than 5 gal to estimated 100' section of raised track. Track is concrete, spill is believed to be contained on the track, she will be inspecting this morning. AB was retained for cleanup, she will schedule fouling time for tomorrow morning to complete cleanup. No rain expected overnight, USGS DTW 74'. Stated she will contact BD to provide photos and update. RJP. *affected material removed for proper disposal.
Remarks:	cleanup pending

DEC Memo:	3/20/20 1504hrs: t/c Chris Flynn (H2M). While installing drywells during March 6th, found pocket contaminated soil 21' deep. Took samples, and samples came back today with elevated SVOC's. Dark stained soil and brick. Soil removed and put in bags, approximately 2 yards of soil removed on March 6th. (JN) 10/23/20 1100hrs: t/c Chris (H2M). Asked about status of spill. Chris said wasn't closed out? On 3/23/20 JN sent Field Issue Checklist saying geoprobe needed to delineate site. Nothing has been done. Chris to talk to client. 12/7/2022 - No documentation of soil boring submitted. DTW: 69ft, Administratively closed.

Environmental Interest/Information System:

The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and

OMEGA AUTO BODY INC (Continued) **1000232399**

local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%
Waste Code:	P123
Waste Description:	Toxaphene
Waste Code:	U001
Waste Description:	Acetaldehyde (I) (Or) Ethanal (I)

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Hazardous Waste Summary:

Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D004
Waste Description: Arsenic

Waste Code: D005
Waste Description: Barium

Waste Code: D006
Waste Description: Cadmium

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D010
Waste Description: Selenium

Waste Code: D011
Waste Description: Silver

Waste Code: D016

CVS PHARMACY #1931 (Continued) **1014927006**

Waste Description:	2,4-D (2,4-Dichlorophenoxyacetic Acid)
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D024
Waste Description:	M-Cresol
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%
Waste Code:	P012
Waste Description:	Arsenic Oxide As2o3 (Or) Arsenic Trioxide
Waste Code:	P042
Waste Description:	1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine
Waste Code:	P075
Waste Description:	Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts
Waste Code:	P081
Waste Description:	1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)
Waste Code:	P188
Waste Description:	Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate
Waste Code:	U002
Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U010
Waste Description:	Azirino [2',3':3,4]Pyrrolo[1,2-A]Indole-4,7-Dione, 6-Amino-8-[[(Aminocarbonyl)Oxy]Methyl]-1,1a,2,8,8a,8b-Hexahydro-8a-Methoxy-5-Methyl-, [1as-(1aalpha, 8beta, 8aalpha, 8balpha)]- (Or) Mitomycin C
Waste Code:	U031
Waste Description:	1-Butanol (I) (Or) N-Butyl Alcohol (I)
Waste Code:	U034
Waste Description:	Acetaldehyde, Trichloro- (Or) Chloral
Waste Code:	U035

CVS PHARMACY #1931 (Continued) **1014927006**

Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U070
Waste Description: Benzene, 1,2-Dichloro- (Or) O-Dichlorobenzene

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U089
Waste Description: Diethylstilbesterol (Or) Phenol, 4,4'-(1,2-Diethyl-1,2-Ethenediyl)Bis, (E)-

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U132
Waste Description: Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U151
Waste Description: Mercury

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

CVS PHARMACY #1931 (Continued) **1014927006**

Waste Code: U204
Waste Description: Selenious Acid (Or) Selenium Dioxide

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U206
Waste Description: D-Glucose, 2-Deoxy-2-[[(Methylnitrosoamino)-Carbonyl]Amino]- (Or) Glucopyranose, 2-Deoxy-2-(3-Methyl-3-Nitrosoureido)-,D- (Or) Streptozotocin

Waste Code: U210
Waste Description: Ethene, Tetrachloro- (Or) Tetrachloroethylene

Waste Code: U279
Waste Description: U279

Waste Code: U411
Waste Description: U411

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
