Attn: Curtis L. Michael

RE: Phase I Environmental Site Assessment
Newsday
235 Pinelawn Road
Melville, New York 11747
VERTEX Project No. 51921

Dear Mr. Michael:

The Vertex Companies, Inc. (VERTEX) is pleased to submit this Phase I Environmental Site Assessment (ESA) report for the above referenced property (the site). The purpose of this assessment was to identify Recognized Environmental Conditions (RECs) in connection with the site. A REC is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." It does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Our work was conducted in general conformance with proposal P.1728.18, executed by Mr. Curt L. Michael on July 26, 2018, and in accordance with the general provisions of the E 1527-13 American Society for Testing and Materials (ASTM) document entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" for commercial real estate, as well as the U.S. Environmental Protection Agency's (USEPA) All Appropriate Inquires (AAI) Final Rule of November 1, 2005, as amended December 30, 2013. To the best of our knowledge, this Phase I ESA report is true and accurate.

VERTEX also assessed the site for the potential presence of asbestos-containing materials (ACMs) and lead-based paint (LBP).

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in 40 C.F.R. Part 312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Please do not hesitate to contact us at your convenience should you have any questions or comments regarding this report or our recommendations. It has been a pleasure working with you on this project.

Sincerely,

The Vertex Companies, Inc.

Christopher K. Cook
Senior Project Manager

Stephen P. McCarthy
Vice President – Due Diligence

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Newsday
235 Pinelawn Road
Melville, New York 11747
VERTEX Project No. 51921

1.0 SUMMARY

On July 26, 2018, The Vertex Companies, Inc. (VERTEX) was contracted by Hartz Mountain Industries, Inc. to conduct a Phase I Environmental Site Assessment (ESA) of the Newsday facility located at 235 Pinelawn Road, Melville, New York (the site). According to the Town of Huntington Assessor's Office, the site consists of two parcels of land totaling 53.17 acres, which are identified Tax Map Numbers 0400-270.00-01.00-008.001 and 0400-270.00-01.00-024.001. The site is improved with a one and two-story Newsday facility (main building), a wastewater treatment plant (WWTP) building, and three guard shacks. The main building was constructed in 1978 and 1986 and consists of approximately 523,000 square feet of space. The site currently is owned by Tribune ND Inc. Newsday currently leases the site from Tribune ND, Inc.

The purpose of this assessment was to identify Recognized Environmental Conditions (RECs), including controlled RECs (CRECs) and Historical (HRECs), in connection with the site as part of due diligence activities related to the planned acquisition of the site.

ASTM Findings

- According to available historical information, the site was primarily unimproved agricultural land with farm-related structures from the late 1800s to the mid-1970s. An unpaved road also traversed the site from at least the 1940s to early 1970s. The original portion of the current site building was constructed in 1978, which was expanded in 1986 bringing the site building into its current configuration. The site building has been occupied by Newsday since it was developed. Operations included newspaper printing until June 2018, when the

operations were reduced to administrative and packaging only. The historic printing operations from 1978 to June 2018 are considered a REC.

- The site is utilized by Newsday as a newspaper production facility. Operations at the time of site inspection included newspaper packaging and administrative functions. Newspaper printing operations were discontinued in June 2018. Hazardous substances and petroleum products utilized at the site include printing press oils, fuel oil, diesel fuel, and other general maintenance materials and lubricants. These products are stored within underground storage tanks (USTs), aboveground storage tanks (ASTs), 55-gallon drums, or smaller containers.

- At the time of site inspection, VERTEX observed a hazardous materials storage shed to the north of the WWTP. Several 55-gallon drums of press waste oil were observed within the shed. The shed appeared contained with no evidence of releases. The shed was historically utilized for the storage of hazardous substances. Given the historical use of the shed without documentation of subsurface investigations, it is considered a REC.

- Numerous ASTs were observed during the site inspection. Many of these ASTs have been emptied since printing operations are no longer performed on-site. Chemicals currently or formerly stored within these ASTs included diesel fuel, ink, parts washer solvent, water treatment chemicals, lube oil, methanol, hydraulic fluid, fountain solution, and press waste oil. According to the site contact, 60 ASTs are in the process of being decommissioned and will be removed from the site in near future.

- Four USTs are currently located at the site including three 20,000-gallon diesel fuel USTs that were previously utilized to fuel company vehicles (southern fueling area) and one 2,500-gallon No. 2 fuel oil UST associated with an emergency generator (western emergency generator area). The diesel fuel USTs were empty at the time of site inspection and are no

longer utilized. The No. 2 fuel oil UST was in operation and is used to power an emergency generator. Reportedly, the USTs recently passed tank tightness testing. No releases have been reported in associated with these USTs, which were installed in 2010 (diesel USTs) and 1987 (No. 2 fuel oil). These current USTs are considered an environmental concern.

- Records reviewed indicate 11 USTs were formerly in operation at the site. These included three 20,000-gallon diesel fuel USTs (Tanks 1-3), one 12,000-gallon gasoline UST (Tank 4), one 2,000-gallon spill containment/solvent UST (Tank 5), one 25,000-gallon No. 6 fuel oil UST (Tank 6), one 25,000-gallon No. 2 fuel oil UST (Tank 7), one 4,000-gallon spent fixer and developer waste UST (Tank 8), and three 20,000-gallon diesel fuel USTs (Tanks 14-16).

  Tanks 1 through 4 were located to the northeast of the fire suppression pond in a former fueling station area. These USTs were installed in 1978 and removed in 1986 prior to building expansion activities. No closure documentation associated with these former USTs was identified during this assessment. These former USTs without closure documentation are considered a REC. However, the USTs were located under a current structure, shallow impacted soils, if present, would have likely been removed during building expansion activities.

  Tank 5 was located to the east of the fire suppression pond in the area of the current 2,500-gallon diesel fuel UST. The UST was installed in 1979 and reportedly closed by removal in 1988. No additional details on this former UST was provided. This former UST without closure documentation is considered a REC.

  Tanks 6 and 7 were installed in 1978 and abandoned in place in 2014. These tanks are located to the southeast of the site building. A tank tightness test was performed on these tanks in 2012, which resulted in a failed leak test (Spill #1203029). According to a subsequent spill closure report, concentrations of contaminants were found below cleanup levels. Therefore, the New York State Department of Environmental Conservation (NYSDEC) closed the tanks

and spill case on April 7, 2014 without requiring remedial action. These USTs and associated spill case are considered a HREC.

Tank 8 was located to the southeast of the site building before basement boiler room expansion, which now covers the location of this former tank. The UST was installed in 1978 and was closed by removal in 1989. According to information obtained, this tank was removed with no evidence of releases identified.

Tanks 14 through 16 were located in the area of the current fueling station on the southern portion of the site. These tanks were installed in 1985 and closed by removal in 2010. During removal of these USTs, impacted soil was identified triggering Spill #1000551. Impacted soils were removed during closure and a subsequent soil sampling investigation did not find impacts over cleanup standards. Therefore, the NYSDEC closed the spill case on March 30, 2011. These USTs and associated spill case are considered a HREC.

- In addition to the two spill incidents described above, 18 additional spill incidents were reported at the facility from 1989 to 2017. These incidents were primarily associated with releases from generators, fuel tanks, wastewater treatment operations, and ink tanks. All of these spill incidents were remediated and closed by the NYSDEC with no further action required. Based on the case closed status, these former spill incidents are considered HRECs.

- A WWTP is currently located on the western portion of the site. Wastewater generated from current and former operations is/was discharged through floor drains to an oil/water separator before treatment at the WWTP. The wastewater is treated using a combination of pre-equalization screens, rotary aerators, membrane clarifiers, and sludge settling tanks. Treated wastewater is discharged to underground cistern systems including 11 underground leaching pools to the west of the WWTP and to discharge leaching basins to the north of the WWTP. The WWTP area appeared to be in good condition at the time of site inspection. However, according to the State Pollution Discharge Elimination System (SPDES) permit

documentation provided, several discharge outfall exceedances were reported historically including 1,1,1-trichloroethane (TCA), 1,2,4,5-tetramethylbenzene, 1,3,5-trimethylbenzene, benzene, cyanide, flow, total nitrogen, oil and grease, p-ethyltoluene, pH, total recoverable phenolics, silver, total dissolved solids, toluene, total toxic organics, and xylenes. Given the historical exceedances of wastewater discharge allowable limits to leaching basins, the operations of the WWTP are considered a REC.

- Numerous stormwater dry wells are located on-site, primarily in parking areas and driveways. In addition, three dry wells were observed in the ventilated basement area. These dry wells are part of the existing SPDES permit. Staining was observed on concrete in the area of one dry well located in the southern ventilated basement area. The staining observed adjacent to this dry well is considered a REC.

- Septic systems including septic tanks and leaching fields are located adjacent to guard houses located on the southeastern and northern portions of the site. Discharges to these septic systems are limited to guard shack restrooms. Based on the sanitary nature of the discharge directed to the septic systems, they do not represent a REC.

- A closure workplan for the Resource Conservation and Recovery Act (RCRA) permitted hazardous waste areas was approved by the NYSDEC on August 10, 2018. RCRA closure activities will reportedly be completed in the near future. Closure activities will include the removal of all hazardous wastes, decontamination of the hazardous waste storage areas, confirmatory rinsate and subsurface soil sampling, and removal of all wastes generated during closure.

- The site is identified on numerous databases in the Environmental Data Resources, Inc. (EDR) database report associated with tanks, hazardous waste generation, air compliance, spill incidents, and wastewater discharges. Concerns associated with former tanks, hazardous,

waste, spill incidents, and wastewater discharges are described above. No active violations associated with regulatory permits or open release cases were identified. Refer to Section 6.1 for additional discussion of these listings.

- The site is located in an area of commercial and residential properties. VERTEX conducted a regulatory review that included a search of state and federal regulatory databases to identify environmental concerns for the site and surrounding properties. Numerous facilities were identified within the ASTM search distances of the site. Based on distance, apparent gradient relationship, regulatory status, and/or other facility-specific characteristics, no RECs in connection with the site were identified with respect to these facilities.

Non-ASTM Additional Services

In accordance with the scope of work, VERTEX conducted additional services as discussed in Section 9.0 of this report, including the assessment of: asbestos-containing materials (ACMs) and lead-based paint (LBP). The following Business Environmental Risks (BERs) were identified during this assessment:

- Suspect ACMs were identified within the site building, which included thermal systems insulation, pipe wrap, ceiling tile, vinyl floor tile and associated mastics, and wallboard. These materials appeared to be in primarily good condition. During an ACM survey completed in June 2018, regulated ACMs (greater than 1% asbestos) were identified within the site building including vinyl floor tile mastic and adhesives. These materials were found in undamaged, non-friable condition. Materials found to contain less than 1% asbestos included black mastic and spray-on fireproofing.

Conclusions

VERTEX has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, of the Newsday facility located at 235 Pinelawn Road, Melville, New York. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed no evidence of RECs in connection with the site, except for the following:

- Historical printing operations on-site from 1978 to 2018.
- Former diesel fuel and gasoline USTs located to the northeast of the fire suppression pond, which were removed in 1986. No closure documentation associated with these USTs was provided.
- A former 2,000-gallon spill containment/solvent UST to the east of the fire suppression pond, which was removed in 1988. No closure documentation associated with this UST was provided.
- Historical wastewater discharge exceedances to on-site leaching basins.
- Staining adjacent to the dry well located in the southern basement area.
- The historical use of the hazardous materials storage shed.

The following HRECs were identified during this assessment:

- Twenty spill cases from 1989 to 2017, which have been closed by the NYSDEC. These include releases associated with USTs removed or abandoned in place in 2010 and 2014.

The following environmental concerns were identified during this assessment:

- The three 20,000-gallon diesel fuel USTs and one 2,500-gallon No. 2 fuel oil UST located at the site.
- The two 25,000-gallon fuel oil USTs, which were abandoned in place in 2014.
- The stormwater dry wells located throughout the site.
- The active WWTP at the facility.
- Ongoing RCRA closure activities at the site.

Based on the findings of this assessment, VERTEX recommends the following:

- A subsurface investigation should be completed to evaluate subsurface soil and groundwater quality.
- The active USTs should be closed by removal in accordance with applicable regulations.
- The 25,000-gallon fuel oil USTs previously abandoned in place should be removed as part of site redevelopment activities.
- If the stormwater dry wells will be removed during site redevelopment, they should be closed in accordance with applicable regulations.
- During site redevelopment activities, the current septic systems should be abandoned in accordance with applicable regulations.
- The WWTP operations and associated permits should be transferred to future owners of the property. If the WWTP will no longer be utilized, it should be closed in accordance with applicable regulations.
- The RCRA Closure Plan should be implemented and completed with no further action by the NYSDEC.
- Prior to demolition, an ACM survey should be completed to supplement the previous ACM survey completed at the site in 2018. Suspect or known ACMs should be appropriately managed prior to demolition activities in accordance with applicable regulations.

2.0 SITE AND VICINITY CHARACTERISTICS

2.1 Site Description

The site is located at 235 Pinelawn Road, Melville, New York. According to the Town of Huntington Assessor's Office, the site consists of two parcels of land totaling 53.17 acres, which are identified Tax Map Numbers 0400-270.00-01.00-008.001 and 0400-270.00-01.00-024.001. The site location is shown on Figure 1 - Site Locus Map.

2.2 Site Improvements

The site is improved with a one and two-story Newsday facility (main building), a WWTP building, and three guard shacks. The main building was constructed in 1978 and 1986 and consists of approximately 523,000 square feet of space situated on the central portion of the site. The main building is constructed of steel framing with concrete block, corrugated metal, exterior finishes and a flat roof on a primarily slab-on-grade foundation. A small section of the eastern portion of the main building is underlain by a basement. Interior finishes in the main building consist of ceiling tiles, wallboard, vinyl floor tile, wood, carpet, and concrete. Cooling for the main building is provided by heating, ventilation and air conditioning (HVAC) units located on the roof of the building. Heating is provided by boiler systems, which utilize No. 2 fuel oil.

The WWTP building was constructed in 1978 and consists of approximately 900 square feet of floor space situated on the western portion of the site. The WWTP building is constructed of steel framing with concrete block exterior finishes and a flat roof on a slab-on-grade foundation.

Three guard shacks are located on the northern, west-central, and southeastern portions of the site. These buildings were constructed in the 2000s and consist of less than 600 square feet of combined floor space.

Exterior areas include asphalt-paved parking areas and driveways, a WWTP and associated tanks, aerators, and membranes, storage sheds, landscaped areas, concrete sidewalks, a ball field, loading areas, emergency generators, tanks, and a truck fueling area. The site is surrounded by fencing. For a layout of the site, please refer to Figure 2 – Site Schematic. Photographic documentation of the site and surrounding areas is presented in Appendix A.

2.3 Tenant Operations

The site is currently utilized by Newsday for newspaper packaging and administrative functions. Printing operations at the facility ceased on June 9, 2018. The administrative areas are primarily located within the northern and eastern portions of the main building. The central and northwestern portions of the building include numerous printing presses, which were out of operation during the inspection. The southern portion of the main building primarily includes packaging, loading, and storage areas. The WWTP is utilized treat and dispose of wastewater generated at the site and the guard shacks are utilized for security.

Hazardous substances and petroleum products utilized at the site include various oils, diesel fuel, No. 2 fuel oil, and other general maintenance and lubrication products. These products are stored within USTs, ASTs, 55-gallon drums, or smaller containers. Refer to Section 7.2 for additional information on the current use of hazardous substances and petroleum products associated with site operations.

2.4 Current Uses of Adjoining Properties

The site is located in a commercial and light industrial area. Adjoining properties were observed (from the site or from public access areas) for signs of RECs and their potential to pose an environmental concern to the site. The uses and features of adjoining properties are described

in the following table. The locations of these properties relative to the site are depicted on Figure 2 – Site Schematic.

NEARBY/ADJOINING PROPERTY SUMMARY		
DIRECTION	**PROPERTY USE**	**CONCERNS**
North	Ruland Road, followed by an office building and wooded land.	None
Northeast	Half-Hollow Hills Racquet Club (100 County Route 5), followed by the intersection of Ruland Road and Pinelawn Road.	None
Northwest	Ruland Road, followed by residential areas.	None
East	Pinelawn Road, followed by Pinelawn Cemetery.	None
South	Three light industrial buildings including Clare Rose beer distributor (99 Marcus Drive), Baby King and Pet King (101 Marcus Drive), and a vacant building (103 Marcus Drive).	None
West	Deshon Drive, followed by a vacant light industrial building (80 Ruland Road), BAPS temple (2 Deshon Drive), and The Club at Melville Condominiums (25 Deshon Drive).	None

2.5 Physical Setting Source(s)

Physical setting sources specified in Section 12.0 of this report were reviewed to provide information about the geology and hydrogeology of the site.

2.5.1 Topography

A review of the 2013 United States Geologic Survey (USGS) Topographic Quadrangle Map of Huntington, New York indicates that the surface elevation of the site is approximately 100 to 110 feet above mean sea level. The topography of the site gradually slopes to the south and southeast. The surrounding properties slope to the southeast.

2.5.2 Surface Water

No naturally-occurring surface water bodies were observed on or adjoining the site. Based on the Federal Emergency Management Agency (FEMA), Flood Insurance Rate Map (FIRM) 3604970038F, the site is not located in a 100- or 500-year floodplain.

2.5.3 Geologic Conditions

According to the United States Department of Agriculture (USDA) Web Soil Survey, soils at the site consist of Haven, highly decomposed plant material. These soils are well drained with moderate infiltration rates. Bedrock outcrops were not observed during the site reconnaissance.

According to previous subsurface investigations completed at the site, fill materials in the form of crushed stone, sand, and gravel were present at the site to depths of four feet below grade. These fill materials were underlain by native sand and gravel with cobbles to depths of 26 feet below grade.

2.5.4 Groundwater

Based on surface topography and information obtained from previous subsurface investigations, groundwater is anticipated to flow to the southeast. Groundwater has been encountered at the site between approximately 38 and 46 feet below grade. Actual local groundwater flow direction can be influenced by factors such as local surface topography, underground structures, seasonal fluctuations, soil and bedrock geology, and production wells, none of which were considered during this study.

3.0 USER-PROVIDED INFORMATION

VERTEX requested the following information about the site from the Client (User):

- An evaluation of the presence of environmental cleanup liens for the site;
- Activity and use limitations (AULs) such as engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place for the site;
- Specialized knowledge that includes personal knowledge or experience related to the site or nearby properties based on professional experience or knowledge of the site;
- Fair market value (FMV) to evaluate whether the purchase price of any parcel was significantly below FMV;
- Obvious indicators that involve past or present spills, stains, releases, cleanups on or near the site;
- Common knowledge about use of specific chemicals, possible contamination, or past use of the site and surrounding area; and
- Reason for performing the ESA.

The Phase I ESA was conducted in support of the planned acquisition of the site. No other responsive information regarding the site was provided by the Client. VERTEX interviewed Mr. Stephen Zimmerman with Newsday, who provided information regarding environmental conditions of the site, which are discussed throughout this report. In addition, previous environmental reports and associated documentation were provided, which are generally discussed in Section 5.3.

4.0 INTERVIEWS

VERTEX conducted interviews regarding site history and the current on-site operations with the following individuals:

INTERVIEWS		
NAME/COMPANY	**TITLE/POSITION**	**INFORMATION PROVIDED**
Mr. Stephen Zimmerman / Newsday	Director Engineering Services	Provided information regarding site history and operations. Mr. Zimmerman escorted VERTEX during the site visit and answered questions regarding site operations.
Mr. Tim Winter / Newsday	Manager Security	Provided information regarding site history and operations. Mr. Winter escorted VERTEX during the site visit and answered questions regarding site operations.
Municipal Officials	Various	Provided municipal information.

Information obtained from these interviews is discussed in relevant sections of this report. Please refer to Section 6.3 for a summary of information obtained from municipal inquiries.

5.0 HISTORICAL RECORDS REVIEW

Past land uses for the site and adjoining properties were assessed to identify historical practices or conditions that may have impacted the site. This was accomplished by reviewing historical information from several sources including but not limited to interviews with site representatives, review of available previous environmental reports and ownership records, and review of historical information obtained from regulatory sources, aerial photographs, city directories, and historical maps.

5.1 Historical Site Use Summary

According to available historical information, the site was primarily unimproved agricultural land with farm-related structures from the late 1800s to the mid-1970s. An unpaved road also traversed the site from at least the 1940s to early 1970s. The original portion of the current site building was constructed in 1978, which was expanded in 1986 bringing the site building into its current configuration. The site building has been occupied by Newsday since it was developed. Operations included newspaper printing until June 2018, when the operations were reduced to administrative and packaging only. Given the length of former printing operations, the historical operations at the site are considered a REC.

5.2 Historical Adjoining Properties Use Summary

The site is in an area of commercial and residential properties. According to available historical information, the surrounding areas consisted of primarily unimproved agricultural land, residences, and roads from the late 1800s to 1960s. By the late 1960s, the current cemetery was developed to the east of the site. By 1970, light industrial development began to the south of the site, which increased in coverage through the 1980s. These structures have been occupied by distribution companies, publishing companies, and news companies. The current fitness center was developed to the northeast in the late 1970s. Light industrial development began to

the west in the 1970s and office building development began to the north in the 1990s. The light industrial building to the west at 25 Deshon Drive was historically occupied by Newsday. No environmental concerns associated with the current or historical uses of surrounding properties were identified during this assessment.

5.3 Previous Environmental Reports

VERTEX was provided with the following previous environmental reports for review:

Phase I Environmental Site Assessment – DRAFT, Newsday, 235 Pinelawn Road, Melville, NY, prepared by RPS, dated July 2017

At the time of this previous assessment, the site was operated by Newsday as a newspaper publishing and distribution company. Operations consisted of printing, plate development, digital photographic development, ink mixing, and newspaper sorting, bundling, and distribution. Newsday stored inks in ten ASTs and operated three large printing presses, five digital photo developing lines, and four plate development lines. Maintenance included cleaning plates and parts washing, and fluid replenishing for printing presses. Fueling of vehicles via the 20,000-gallon diesel fuel USTs was also performed on-site during this previous assessment.

Chemical storage areas included three bermed areas for fountain solution ASTs, press oil, and degreasers; ink AST storage rooms in the production area on the first floor, and an ink reclamation room and maintenance rooms on the second floor.

RPS identified the historical site operations (printing operations, wastewater discharge, historical release incidents) and an open release incident (compressor oil release in 2016) as RECs. According to RPS, no previous sampling was provided for three diesel fuel USTs, one gasoline UST, one spill containment UST, and an industrial waste UST.

RPS identified the three 20,000-gallon diesel fuel USTs closed in 2010 as a CREC. During removal, evidence of impacts was identified and reported to the NYSDEC. After additional investigation, the spill case and USTs were closed by the NYSDEC.

VERTEX generally concurs with this report with the following exceptions:

- The former 20,000-gallon diesel fuel USTs removed in 2010 and associated spill case with closure from the NYSDEC is a HREC, not a CREC.
- RPS did not identify dry wells at the site.
- RPS did not identify the current septic systems associated with the guard shacks.

Limited Phase II Investigation Report – DRAFT, Newsday, 235 Pinelawn Road, Melville, NY, prepared by RPS, dated March 8, 2018

RPS performed Phase II activities at the site in January 2018, which included six soil borings, five sub-slab soil vapor sampling points, three additional soil-gas sampling points, and two temporary monitoring wells. Borings were advanced to evaluate the historical industrial operations (two soil borings and five soil-gas sampling points), the WWTP/former USTs (one soil boring and one temporary monitoring well), presumed location of former gasoline and diesel fuel USTs (one soil boring and one soil-gas point), and areas to the north of the site building (two soil borings and two soil-gas points). Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), and total or dissolved RCRA metals. Soil vapor samples were analyzed for VOCs. The following sampling results were identified:

- Soil analytical results did not identify targeted compounds above NYSDEC standards. RPS recommended no additional action for site soils.

- No VOCs or metals were detected above NYSDEC standards in the groundwater samples. One PAH was detected in a groundwater sample above NYSDEC standards; however, this detection was attributed to method blank contamination. Based on this and the lack of potable well receptors, RPS recommended no additional action for site groundwater.
- Carbon tetrachloride and 1,2,4-trimethylbenzene were detected in soil vapor sampling collected underneath the site building in excess of the applicable NYSBCP toxicity value. Based on the "hit or miss" detections and the lack of "severe or widespread VOC detections below the floor slab," no additional action for soil gas underneath the building was recommended.
- 1,2,4-trimethylbenzene and 1,3-butadiene were detected in exterior soil gas samples above United States Environmental Protection Agency (USEPA) OSWER values. These detections were not considered a concern as they would not be indicative of a groundwater impact.

Summary of Environmental Conditions, Newsday Media Group Facility, 235 Pinelawn Road, Melville, New York 11747, prepared by RPS, dated May 22, 2018

This report summarized the Phase I and II environmental assessments discussed above. The report indicated that subsequent to the Phase I ESA, the open spill case associated with the release of four gallons of compressor oil had been closed by the NYSDEC on November 9, 2017. Based on these findings, RPS did not recommend additional assessment or mitigation.

Asbestos-Containing Material Survey, Newsday, 235 Pinelawn Road, Melville, NY, prepared by RPS, dated June 2018

An ACM survey was completed at the facility by RPS between April 18 and 21, 2018. A total of 238 bulk samples of suspect ACMs from 65 homogenous materials were collected. A total of 188 samples were submitted for laboratory analysis. The following building materials containing greater than 1% asbestos were identified during the survey:

- Approximately 30 square feet of 12”X12” black adhesive mastic was found on the first floor below a raised floor at a ramp outside the intermediate distribution frame. This material was found in good condition and not friable.
- Approximately 25 square feet of 12”X12” black mastic associated with vinyl floor tile was found on a first-floor cafeteria closet. This material was found in good condition and not friable.

The following building materials were found to contain less than 1% asbestos:

- Approximately 15,000 square feet of black mastic associated with vinyl floor tile was found throughout the building. This material was found in good condition and not friable.
- Approximately 45,000 square feet of tan spray-on fireproofing was found throughout the building. This material was found in good condition.

The ACM Survey focused on accessible interior building systems and components within the production/office structure with the potential to contain asbestos and did not include the assessment or sampling of any suspect exterior building materials or systems, including (but not limited to) roofing and all other suspect ACMs on the roof level. WJE Engineers and Architects was separately retained to obtain roof core samples and submit them for laboratory analysis. The laboratory analysis data associated with these roof samples was provided to RPS and is presented alongside RPS’s findings in the body of the ACM survey report. RPS noted that the data provided by WJE Engineers and Architects was not obtained through conventional protocols, and therefore could not be relied upon in connection with renovation and demolition, because an insufficient number of samples were collected to characterize the roofing system. These samples were non-detect for ACM, however, RPS noted that roofing and other exterior materials may require additional sampling to confirm the non-detect finding prior to renovation or demolition involving exterior materials.

RCRA Closure Plan, Newsday LLC, 235 Pinelawn Road, Melville, New York 11747, prepared by H2M, dated July 18, 2018

This closure plan was created to formally cease and document completion of regulated waste activities. The purpose of completing the closure is to eliminate post-closure maintenance of hazardous waste generation sources and hazardous waste storage areas at the site and to minimize the potential for a post-closure release of hazardous waste to the environment. Hazardous waste streams generated by Newsday included ink waste, spent photographic developer, and spent photographic fixer. The closure of the facility will include the removal of all hazardous wastes, decontamination of the hazardous waste storage areas, confirmatory rinsate and subsurface soil sampling, and removal of all wastes generated during closure. The plan outlined proposed rinsate and soil sampling procedures in the former silver recovery room and photo waste room, and in the ink recovery room. The plan also described proposed removal and sampling of several areas of industrial waste piping associated with spent fixer and developer.

It should be noted that the closure plan described the 4,000-gallon spent fixer and developer waste UST, which was closed by removal in June 1989. The UST was located on the exterior of the building and was removed prior to expansion of the basement boiler area. The area of the former spent fixer and developer waste UST was over excavated to a depth of 18.5 feet below grade. No contaminated soil was identified during closure of this UST.

Closure of Facility, Newsday LLC, 235 Pinelawn Road, Melville, NY, prepared by the NYSDEC, dated August 10, 2018

This letter approved the RCRA Closure Plan described above. The approval required public notice of the closure plan.

Facility Drawings provided by Newsday, various dates

In addition to the documentation summarized above, VERTEX was provided with various drawings of the facility from the late 1970s to 2000s. The majority of the information was related to building expansions, alterations, and mechanical systems. According to a Site Demolition Plan from 1983, which was created as part of the facility expansion, a fueling station was located to the northeast of the fire suppression pond. This fueling station consisted of three 20,000-gallon diesel fuel USTs and one 12,000-gallon gasoline UST. In addition, a 2,000-gallon solvent storage tank was identified to the east of the fire suppression pond in the proximal location of the current 2,500-gallon fuel oil UST. The proposed expansion of the building included the area of this former fueling station. The fueling station was to be relocated to the southern portion of the site where the current fueling area is located.

Refer to Appendix B for a copy of select previous environmental documentation.

5.4 Prior Ownership

VERTEX obtained site ownership information from the Suffolk County Clerk's Office. The site currently is owned by Tribune ND Inc. Newsday currently leases the site from Tribune ND, Inc. Available ownership information for this property is summarized below.

DEED RECORDS REVIEW				
GRANTOR	**GRANTEE**	**DOCUMENT TYPE**	**LIBER/PAGE**	**DATE**
Tribune Company	Tribune ND Inc.	Deed	D00012573 / 072	11/26/2008
TMCT LLC	Tribune Company	Deed	D00012549 / 224	4/30/2008
Newsday Inc.	TMCT LLC	Deed	D00011845 / 801	8/12/1997

Deed records dated prior to 1997 were unavailable for review. No environmental liens or AULs were noted through review of ownership records. Prior owners of the site were not available to be interviewed.

5.5 City Directories

VERTEX reviewed historical city directory information for the site and adjoining properties. Excerpts from the city directory report are included in Appendix C. A summary of listings is presented below.

CITY DIRECTORY REVIEW (PINELAWN ROAD)			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
1972	No listings	130: Herman Heinlein 146: E. Reckner 255: Britannc & Erpn Auto, Unex Prods Corp.	None
1977	No listings	130: Ward Reilly 146: E. Reckner 255: Imperial News Co., NAPA Imports	None
1982	235: Newsday Inc.	130: John Goze 255: Cable News, Imperial News Company, NAPA Imports, Select Magazine	On-site printing
1987	235: Newsday Inc.	130: John Goze Tennis, George E. Hoffman, Pinelawn Supply Co. 135: Charles Schwab, Chase Manhattan Bank, Greenway Plaza, Northern Telecom, RK&L Enterprises 255: Cable News, Imperial News Company, NAPA Imports, Select Magazine, Warner Publisher	On-site printing
1992	235: Newsday Inc.	255: TV Guide	On-site printing
1995	235: Corporate Travel Consultants, Distribution Systems of America, Newsday Community Service Fund, Newsday Inc, The Times Mirror Company	255: Clare Rose of Nassau Inc., TV Guide	On-site printing
2000	235: Corporate Travel Consultants, Distinction Magazine, Inc., Distribution Systems of America, Newsday Community Service Fund, Newsday LLC, Star Community Pubg Group LLC, This Week/Pennysaver	255: Clare Rose Inc., Dee Gee Express, News America Publications	On-site printing

CITY DIRECTORY REVIEW (PINELAWN ROAD)			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
2005	235: Distinction Magazine, Inc., Long Island Parents & Children of New York City, Newsday Community Service Fund, Newsday LLC, This Week/Pennysaver	255: Clare Rose Inc.	On-site printing
2010	235: Distinction Magazine, Inc., Long Island Parents & Children, Newsday Community Service Fund, Newsday Employee Recreation Fund, Newsday LLC, Star Community Pubg Group LLC, Tribune NM Inc.	255: Clare Rose Inc.	On-site printing
2014	235: Distinction Magazine, Inc., Newsday LLC, Star Community Pubg Group LLC	255: Clare Rose Inc.	On-site printing

The review of city directories did not identify environmental concerns associated with the site and surrounding property listings with the exception of the on-site Newsday printing facility from 1982 to 2014. Additional information on the operations and environmental concerns associated with the historical printing operations on-site are discussed throughout this report.

5.6 Aerial Photography

VERTEX reviewed aerial photographs including the site and adjoining properties. Copies of the aerial photographs are included in Appendix D. A summary of information obtained from the review is provided in the table below.

AERIAL PHOTOGRAPHY REVIEW			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
1938 1947 1953	The site appears to be primarily agricultural land with a road bisecting the central portion of the property from east to west. What appears to be two structures, possibly residential and farm-related, is visible on the southeastern portion of the site.	Roads, agricultural land, and residences are located on adjacent properties.	None
1957	Similar to the 1953 aerial photograph with additional small structures added to the southeastern portion of the site. What appear to be storage areas are visible on the northeastern corner of the site.	Similar to the 1953 aerial photograph. Additional residences are visible to the northwest.	None

AERIAL PHOTOGRAPHY REVIEW			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
1962 1966	Similar to the 1957 aerial photograph.	Similar to the 1957 aerial photograph. The adjacent property to the northeast has been cleared for redevelopment. The current cemetery to the east is now visible.	None
1970	Similar to the 1966 aerial photograph.	Similar to the 1966 aerial photograph. One of the current light industrial buildings has been developed to the south.	None
1976	Similar to the 1970 aerial photograph. The road previously located on the central portion of the site is overgrown and abandoned. What appear to be greenhouses or chicken coops are visible on the southeastern corner of the site.	Roads and residences are visible to the north. The current structure occupied by a gym adjoins the site to the northeast. A road is visible to the east, followed by a cemetery. Two light industrial buildings are visible to the south. A road is visible to the west, followed by a light industrial building to the southwest and cleared land to the west.	None
1980	The northern portion of the site is agricultural land. The central portion of the site is developed with a large portion of the current main building. The WWTP and fire pond are located on the western portion of the site. Parking areas are visible to the south and northwest of the site building. A possible fueling pad is located to the northeast of the fire pond.	Similar to the 1976 aerial photograph. The current light industrial building to the southwest is now visible.	On-site industrial operations
1985	Similar to the 1980 aerial photograph. The northern portion of the site appears to be under construction with a parking lot. Areas to the south of the main building appear to be disturbed and possibly under construction.	Similar to the 1980 aerial photograph. A light industrial building has been developed to the northwest.	On-site industrial operations
1994	The main building has been expanded into its current configuration. The parking lots on the northern portions of the site have been completed. The far northwestern portion of the site is a vacant field. The current fueling area on the southwestern portion of the site is visible. The remaining portions of the site appear similar to the 1985 aerial photograph.	Similar to the 1985 aerial photograph.	On-site industrial operations.
2008 2011	The site is developed similar to current configuration.	Similar to the 1994 aerial photograph.	On-site industrial operations.
2015	Similar to current configuration.	Similar to current configuration. The current townhomes and BAPS buildings to the west have been constructed.	On-site industrial operations.

The review of historical aerial photographs identified the site as agricultural land with a road and small structures likely associated with agricultural operations from 1938 to 1976. By 1980, the site was redeveloped with the current industrial building, which was expanded by 1994. The historical industrial uses of the site are discussed throughout this report. The historical uses of surrounding properties were not identified as environmental concerns in the aerial photographs reviewed.

5.7 Topographic Maps

VERTEX reviewed historical topographic maps including the site and surrounding areas. Copies of the topographic maps are included in Appendix E. A summary of information obtained from the review is provided in the table below.

TOPOGRAPHIC MAP REVIEW			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
1901 1903 1904	The site is primarily depicted as unimproved. Two small structures are visible along the eastern site boundary.	Roads and small structures are visible on surrounding properties.	None
1942	A road is depicted traversing the central portion of the site. The remainder of the site is depicted as unimproved.	Roads and unimproved land are depicted on surrounding properties.	None
1947	An unpaved road is depicted traversing the central portion of the site. Two small structures are visible on the southeastern corner of the site.	Roads and small structures are visible to the north. A road and small structures are visible to the east. Two small structures are visible to the southeast. Unimproved land is visible to the south and southwest. An unpaved road and two small structures are visible to the west.	None
1954	Similar to the 1947 map.	Similar to the 1947 map. The Long Island National Cemetery is depicted to the east.	None
1967	Similar to the 1954 map. The road on the central portion of the site has been replaced with powerlines.	Similar to the 1954 map with the addition of small structures and man-made ponds to the north and northeast.	None

TOPOGRAPHIC MAP REVIEW			
YEAR	**SUMMARY (ON-SITE)**	**SUMMARY (OFF-SITE)**	**CONCERNS**
1979	Similar to the 1967 map.	Ruland Road is depicted to the north, followed by several small structures. The current gym building is depicted to the northeast. Wellwood Avenue is depicted to the east, followed by the Long Island National Cemetery. Two light industrial buildings are depicted to the south. One light industrial building is depicted to the southwest.	None
2013	Roadways are depicted on-site. Specific structures are not depicted on this version of topographic map.	The surrounding properties included roads and the Long Island National Cemetery. Specific structures are not depicted on this version of topographic map.	None

The review of historical topographic maps did not identify environmental concern in connection with the site.

5.8 Sanborn Fire Insurance Maps

Sanborn fire insurance maps that include the site were requested from EDR; however, EDR indicated that no historical map coverage is available for the site. A copy of EDR's statement of no coverage is provided in Appendix F.

6.0 REGULATORY RECORDS REVIEW

VERTEX obtained a regulatory database report as specified in Section 12.0. Review of databases and files from federal, state, and local environmental regulatory agencies was used to identify use, generation, storage, treatment, or disposal of hazardous materials and chemicals, or release incidents of such materials that might have impacted the site. The databases discussed in the following sections address ASTM requirements. Additional federal and state databases may have also been reviewed, and if so, are listed in the table below. A copy of the database report is included in Appendix G.

VERTEX's review of these listings assessed the potential for soil, groundwater, and/or soil vapor impacts to the site from on-site listings or listings at surrounding facilities, taking into account such factors as the groundwater depth and inferred flow direction, regulatory status, distance from the site, and other information reported by the regulatory database(s) and/or other sources of information.

A summary of the database information is provided in the following table.

Database	Radius	Subject Site	Surrounding Facilities
National Priorities List (NPL)	1 Mile	0	1
Delisted NPL	1 Mile	0	1
Proposed NPL	1 Mile	0	0
Record of Decision (ROD)	1 Mile	0	2
RCRA Corrective Action (CORRRACTS) Facilities	1 Mile	0	1
Superfund Enterprise Management System (SEMS)	½ Mile	0	0
SEMS-ARCHIVE	½ Mile	1	0
RCRA Treatment, Storage & Disposal Facilities (TSDF)	½ Mile	0	0
RCRA Large Quantity Generators (LQG)	¼ Mile	1	1
RCRA Small Quantity Generators (SQG)	¼ Mile	0	4
RCRA Conditionally Exempt SQGs (CESQG)	¼ Mile	0	1
RCRA NonGen/NLR (Former Generators)	¼ Mile	1	10
US Institutional & Engineering Controls (INST/ENG CONTROLS)	½ Mile	0	0
Emergency Response Notification System (ERNS)	Target Property	0	

Database	Radius	Subject Site	Surrounding Facilities
US BROWNFIELDS	½ Mile	0	0
NY Brownfields	½ Mile	0	0
State Hazardous Waste Sites (SHWS)	1 Mile	0	7
NY Delisted SHWS (DEL SHWS)	1 Mile	0	1
State Solid Waste Facilities/Landfills (SWF/LF)	½ Mile	0	0
Indian Leaking Underground Storage Tank (LUST)	½ Mile	0	0
New York Leaking Tanks (NY LTANKS)	½ Mile	1	20
New York UST (NY UST)	¼ Mile	2	23

NY Restrictive Declarations Listings (RES DECL)	⅛ Mile	0	0
Spills Information Database (NY SPILLS)	⅛ Mile	3	12
NY Environmental Restoration Program (ERP)	½ Mile	0	0
Facility and Manifest Data (MANIFEST)	¼ Mile	3	25
Enforcement & Compliance History Online (ECHO)	Target Property	2	
Facility Index System (FINDS)	Target Property	2	
Integrated Compliance Information System (ICIS)	Target Property	1	
US AIRS	Target Property	1	
NY AIRS	Target Property	1	
NY DRYCLEANERS	¼ Mile	0	0
NY SPDES	Target Property	1	
NY VAPOR REOPENED	½ Mile	0	2
EDR Manufactured Gas Plant	1 Mile	0	0
EDR Historical Auto Stations	⅛ Mile	0	0
EDR Historical Dry Cleaners	⅛ Mile	0	0

The database report includes an orphan summary. This summary identifies facilities that are listed on one of the above-referenced databases or lists but do not include complete or accurate geographic data. Consequently, EDR was unable to map the facilities in relation to the site. VERTEX reviewed the orphan summary prior to inspecting the site and surrounding properties. Orphan properties located within ASTM search distances of the site (if any) were incorporated into VERTEX's review.

6.1 On-Site Listings

The site was identified in several databases in the EDR database report. These listings are summarized below.

- **NY UST**: The site is listed for several USTs currently or formerly operated on-site. These include the following:
    - Three 25,000-gallon diesel fuel USTs installed in 1978 and identified as removed in 1986.
    - One 12,000-gallon gasoline UST installed in 1978 and identified as removed in 1986.
    - One 2,000-gallon spill containment UST installed in 1978 and identified as removed.
    - One 4,000-gallon industrial waste UST installed in 1978 and identified as removed.
    - Two 20,000-gallon diesel fuel USTs installed in 1985 and identified as removed in 2010.
    - Two 25,000-gallon fuel oil USTs installed in 1978 and abandoned in place in 2014.
    - One 2,500-gallon fuel oil UST installed in 1985 and identified as active.
    - Three 20,000-gallon diesel fuel USTs identified as active.

Additional details on former and current USTs in operation at the site is summarized in Section 7.2.

- **NY AST**: The site is listed for several ASTs currently or formerly operated on-site. Based on information obtained from EDR, site contacts, site observations, and other historical information provided, a table summarizing these ASTs was created and can be found in Section 7.2.
- **RCRA-LQG, NY MANIFEST, NJ MANIFEST**: Newsday was registered as a LQG of hazardous waste from 1980 to 2014. Hazardous wastes generated at the site included corrosive waste, silver waste, spent halogenated solvents, spent nonhalogenated solvents, 2-propanone, acetic acid, formaldehyde, benzene, 1,1,2-trichloroethane, ethane. Chlorinated solvent

waste was generated at the site in 1980, 1981, 2004, 2006, 2008, and 2014. Newsday received several Notices of Violations (NOVs) related to regulations, records/reporting, manifests, contingency plan/emergency procedures, general facility standards, small quantity handlers, container use and management, and pre-transporting of hazardous waste from 1986 to 2015, all of which have achieved compliance.

- **SEMS-ARCHIVE**: A CERCLIS Preliminary Assessment was conducted at the site in 1989. The site was not placed on the NPL and in 1998 the site was issued No Further Remedial Action Planned (NFRAP) status. No other information was available regarding the reason for the Preliminary Assessment or the basis for issuing the NFRAP status.
- **NY SPILLS/NY LTANKS:** The site was identified several times on these databases associated with releases, including releases from tanks. These listings are summarized below. It should be noted that VERTEX received several spill files for the facility from the NYSDEC as part of this assessment. Additional details provided by the NYSDEC can be found in Section 6.3.
    - Spill #8907176 was generated on October 20, 1989 for a release from an emergency generator, which impacted a nearby dry well. The spill was cleaned up and closed by the NYSDEC on August 23, 1990.
    - Spill #9201246 was generated on April 30, 1992 due to a failed tank test associated with a 25,000-gallon diesel fuel UST. Two yards of contaminated soil was removed. The spill case was closed by the NYSDEC on May 27, 1998.
    - Spill #9312349 was generated on January 21, 1994 for a release of 50-gallons of petroleum oil due to a broken line on a fuel truck. The spill was cleaned up and the case was closed on March 28, 1994.
    - Spill #9706042 was generated on August 18, 1997 for the release of 20 gallons of hydraulic oil. Corrective action was taken, and the incident was closed by the NYSDEC on December 1, 1997.
    - Spill #9709711 was generated on November 20, 1997 for a failed tank test due to interference when testing. Following tests passed and the spill case was closed by the NYSDEC on December 11, 2009.
    - Spill #0008603 was reported at the site on October 23, 2000 for the release of 1,600-

gallons of diesel fuel due to a tank overfill. A third-party contractor was notified to clean up the release and the incident was closed with the NYSDEC on December 14, 2000. Refer to Section 6.3 for additional information on this release case.

- Spill #0125175 was generated on August 27, 2001 for the release of 20 gallons of hydraulic oil from a dumpster truck. Corrective action was taken, and the incident was closed by the NYSDEC on September 16, 2004.
- Spill #0203990 was generated on July 17, 2002 associated with a spill of 20-gallons
- of hydraulic oil due to a ruptured line in a truck. The spill was cleaned up and the case was closed by the NYSDEC on the same date.
- Spill #0507524 was generated on September 22, 2005 for the release of 100 gallons of ink from the ink reclamation machine. The released ink was filtered and recycled. The area of the release was bermed and the incident was closed by the NYSDEC on March 14, 2006.
- Spill #1000551 was generated on April 13, 2010 due to impacted soils identified during the removal of three 20,000-gallon diesel fuel USTs. A total of 166.83 tons of petroleum-impacted soils were removed. The spill case was closed by the NYSDEC on March 30, 2011.
- Spill #1108374 was generated on October 1, 2011 for the release of six gallons of diesel fuel from a fleet vehicle (not owned by Newsday) as it was exiting the site. No drains were reportedly affected and a third-party contractor cleaned up the release. The incident was closed by the NYSDEC on October 3, 2011.
- Spill #1200716 was generated on April 23, 2012 for the release of 500 gallons of combined industrial/sanitary wastewater sewage at the site. The spill was cleaned up on-site and closed by the NYSDEC on October 22, 2012.
- Spill #1203029 was generated on June 26, 2012 for a tank test failure associated with a 25,000-gallon UST. The tank was listed as abandoned in place. The spill case was closed by the NYSDEC on April 7, 2014.
- Spill #1205313 was generated on August 26, 2012 due to a release of 2,000-gallons of ink from a broken ink feeding tube on a printing machine. All of the material was

reportedly contained within the printing shop and no floor drains were affected. The incident was closed by the NYSDEC on October 3, 2012.

- Spill #1402877 was generated on June 17, 2014 for a release of five gallons of diesel fuel from a generator day tank. The spill was not reported to have migrated outside and was subsequently closed by the NYSDEC on August 12, 2014.
- Spill #1508951 was generated on December 2, 2015 for a release of 60 gallons of antifreeze due to a burst on a generator inside the site building, which migrated to a dry well outside. The dry well was confirmed to have no outlets and a sand bottom. The NYSDEC confirmed the sand soaked up the entire product, and the incident was subsequently closed On December 9, 2015.
- Spill #1606790 was generated on October 11, 2016 for a release of four gallons of compressor oil due to equipment failure. Drains in the production areas are connected to an oil/water separator and discharge to the on-site wastewater treatment plant. According to information obtained during this assessment, the spill area was cleaned and closed by the NYSDEC on November 9, 2017.
- Spill #1610337 was generated on February 15, 2017 due to a release of 1,000-gallons of printing ink into a containment area. The entire spill was contained and closed by the NYSDEC on November 9, 2017.
- Spill #1703192 was generated on July 1, 2017 for a spill of wastewater into a drain. The drain was pumped out and the spill case was closed by the NYSDEC on July 3, 2017.

- **ICIS**: This listing is associated with a formal administrative violation associated with the facility's SPDES permit. No additional relevant information was provided.
- **US AIRS, NY AIRS**: This listing is associated with air permitting requirements for facility operations. No violations were reported.
- **FINDS, ECHO:** These listings are associated with Federal and state environmental tracking systems.

- **NY SPDES**: This listing is associated with the active SPDES permit for wastewater discharges from the facility. Additional information on the permit is summarized in Section 6.3.
- **RCRA NonGen/NLR, FINDS, ECHO, NY MANIFEST**: Nalco Chemical was registered as a SQG of corrosive waste in 1996 with no violations found. Nalco Chemical was registered as a non-generator of hazardous waste in 2007. Based on the lack of spills or released associated with the hazardous waste generation and the nature of the listings, no concerns were identified. The FINDS, ECHO and NY MANIFEST listings are related to environmental compliance and not indicative of impact.

6.2 Off-Site Listings

A review of state and federal regulatory records revealed several facilities within ASTM-specified search radii of the site. Facilities located proximal to the site are discussed further in the table below. The remaining facilities are not a concern based on the current regulatory status, relative distance from the site, and/or inferred direction of groundwater flow.

OFF-SITE STATE AND FEDERAL LISTINGS			
FACILITY	**DISTANCE AND DIRECTION/ GRADIENT**	**REGULATORY STATUS**	**CONCERNS**
Eastern Athletic 100 Ruland Road	Adjoining northeast / Crossgradient	**NY UST**: Listed for two active 1,000-gallon No. 2 fuel oil USTs. **NY Spills**: Spill #0910535 was generated in 2009 for a release of 15 gallons of No. 2 fuel oil when a plow hit an UST fill pipe. The spill was cleaned up and closed on December 28, 2009.	None
Business 255 Pinelawn Road	Adjoining southeast / Downgradient	**NY Spills**: Spill #1303748 was generated in 2013 due to a release of three gallons from a transformer. The spill was cleaned up and closed on December 16, 2013.	None

OFF-SITE STATE AND FEDERAL LISTINGS			
FACILITY	**DISTANCE AND DIRECTION/ GRADIENT**	**REGULATORY STATUS**	**CONCERNS**
Imperial News Company 255 Pinelawn Road	Adjoining southeast / Downgradient	**NY Spills**: Spill #0906309 was generated in 2009 due to a 10-gallon release of fuel oil from a truck. The spill was cleaned up and closed on March 22, 2010. Spill #8603300 was generated in 1986 due to a failed tank tightness test. The tank re-passed the test and was closed on October 1, 1986. Spill #9308159 was reported in 1993 due to leakage from the bottom of a tank. The spill was cleaned up and closed on June 2, 2004. **RCRA NonGen/NLR, FINDS, ECHO, NY MANIFEST**: Listed for the historical generation and disposal of hazardous waste from facility operations. No violations were reported.	None
Clare Rose 255 Pinelawn Road	Adjoining southeast / Downgradient	**NY Spills**: Spill #0890480 was generated in 2008 due to a release reported during the removal of an UST. The spill was remediated, and the case was closed on June 12, 2008. Spill #9402856 was reported in 1994 associated with impacted soils found during removal of a 10,000-gallon No. 2 fuel oil UST. The spill was cleaned up and closed on November 9, 1994. **NY UST**: Listed for 10 removed USTs. The USTs contained No. 2 fuel oil, waste oil, diesel fuel, and gasoline, and were also associated with two oil/water separators. **NY AST**: Listed for five ASTs storing No. 2 fuel oil, diesel fuel, motor oil, and gasoline. The ASTs appear to be active but specific details were not provided.	None
MRP Family Holdings LLC 101 Marcus Drive	Adjoining south / Downgradient	**NY UST**: Listed for a 15,000-gallon No. 2 fuel oil, which was removed. No releases were reported.	None
Pergament Home Center 101 Marcus Drive	Adjoining south / Downgradient	**NY Spills**: Spill #0013423 was reported in 2001 for a release of No. 2 fuel oil from a boiler room. The spill was cleaned up and closed on October 3, 2001.	None
Linotype – Hell Co. 80 Ruland Road	~100 feet northwest / Upgradient	**NY AST**: Listed for a drum storage area and a photo wastewater tank. No releases were reported.	None
Heidelberg Publishing Services 80 Ruland Road	~100 feet northwest / Upgradient	**RCRA NonGen/NLR, FINDS, ECHO, NY MANIFEST**: Listed for the historical generation and disposal of hazardous waste from facility operations. No violations were reported.	None
Tribune Company 25 Deshon Drive	~250 feet southwest / Crossgradient	**RCRA NonGen/NLR, FINDS, ECHO, NY MANIFEST**: Listed for the historical generation and disposal of hazardous waste from facility operations. No violations were reported.	None

OFF-SITE STATE AND FEDERAL LISTINGS			
FACILITY	**DISTANCE AND DIRECTION/ GRADIENT**	**REGULATORY STATUS**	**CONCERNS**
Newsday 25 Deshon Drive	~250 feet southwest / Crossgradient	**NY AST**: Listed for 12 ASTs containing boiler chemicals, cooling tower chemicals, No. 2 fuel oil, industrial waste, motor oil, and a boiler additive. No releases were reported. **NY UST**: Listed for three removed No. 2 fuel oil USTs. The USTs were removed in 1989 and 2013. No releases were reported. **NY Spills**: Spill #9309731 was reported in 1993 due to a 15-gallon spill of diesel fuel from a vehicle. The spill was cleaned and closed on December 24, 1993. Spill #0550849 was reported in 2005 due to a release of 50-gallons of petroleum oil from a boiler room to a drain leading to a septic system. The area was remediated, and the spill was closed on September 9, 2005.	None
Patterson Building 25 Deshon Drive	~250 feet southwest / Crossgradient	**NY Spills**: Spill #0106454 was reported in 2001 for a release of 10-gallons of petroleum from a truck. The spill was cleaned up and closed on September 27, 2001.	None
Unknown Pinelawn and Ruland Road	~370 feet northeast / Crossgradient	**NY Spills**: Spill #8600899 was generated in 1986 due to a release of 50-gallons of diesel fuel during a traffic accident. The spill was cleaned up and closed on April 22, 1987. Spill #0303103 was reported in 2003 associated with a release of 40 gallons of diesel fuel from a truck. The spill was cleaned up and closed on July 2,2 003.	None
Otto Keil Florist 107 Ruland Road	~500 feet west-northwest / Upgradient	**NY AST**: Listed for a 5,000-gallon No. 2 fuel oil AST. No releases were reported.	None

Based on apparent gradient relationship, regulatory status, and/or other facility-specific characteristics, no RECs to the site were identified with respect to the off-site listings.

6.3 Additional Environmental Record Sources

VERTEX contacted local agencies to request information relevant to the site and vicinity. A summary of the agencies contacted, and the information obtained is included in the following table.

LOCAL RESEARCH SUMMARY		
OFFICE	**INFORMATION OBTAINED**	**CONCERNS**
Town of Huntington Assessor's Office	VERTEX obtained parcel information via the Town of Huntington online portal. Information obtained can be found throughout this report.	None
Town of Huntington Building and Housing Department	VERTEX submitted a request to this department on August 1, 2018. According to a response, available building department records are available through the Town of Huntington website. A summary of these permits is provided below.	See below
Town of Huntington Office of the Fire Marshal	VERTEX submitted a request to this department on August 1, 2018. According to a response, no relevant documentation is on file with this department.	None
Suffolk County Department of Health, Office of Wastewater Management	VERTEX received site plans for the property from this department. See below for a discussion of these site plans.	See below
Suffolk County Department of Health, Office of Pollution Control	VERTEX submitted a request to the department on August 6, 2018. As of the date of this report, a response to this request has not been received. According to the SCDHS FOIL coordinator, due to backlog of FOIL requests, a response from this office may not be received until November or December 2018.	Response pending
Suffolk County Department of Health, Office of Water Resources	According to a response from the department, requested environmental records are not maintained by this department.	None
Suffolk County Clerk's Office	VERTEX obtained historical property ownership records from this department.	Refer to Section 5.4
New York State Department of Environmental Conservation (NYSDEC)	VERTEX was provided with documentation associated with historic spill incidents at the facility as well as documentation associated with the SPDES permit. Relevant documentation provided is summarized below.	See below

Town of Huntington Building and Housing Department

Numerous permits were listed online through the Town of Huntington Land Management Site History Report. Relevant permits listed included the following:

- November 18, 1977 – Erect a sewage plant control building and treatment units.
- November 11, 1978 – Install three 25,000-gallon and one 12,000-gallon diesel fuel tanks.

- November 5, 1981 – Removal and relocation of four 10,000-gallon gasoline storage tanks and dispensers. According to the excerpt, the tanks were removed and relocated with Permit #625854, which is the permit issued on December 11, 1985 discussed below.
- December 11, 1985 – Replacement of existing fueling station including the installation of three 20,000-gallon USTs and associated appurtenances.
- August 21, 1986 – Erect a three-story addition to the existing newspaper plant.
- September 16, 1986 – Installation of one hydraulic freight elevator.
- September 8, 1988 – Demolish one 2,000-gallon UST.

It should be noted that several of the permits listed did not list the specific reason for the permit.

Suffolk County Department of Health, Office of Wastewater Management

VERTEX was provided three drawings from this department, which included the following:

Proposed Plumbing and Septic System Plan and Notes, Newsday, prepared by Cameron Engineering & Associates, LLP, dated February 6, 2004

This site plan included diagrams of exterior wastewater features at the site. This included three proposed septic systems at guard houses located on the southeastern, northern, and northwestern portions of the site. The systems included 1,000-gallon tanks and leaching pools. The diagram also depicted three existing leaching pools on the southwestern portion of the site. Reportedly, the proposed septic system located on the northwestern portion of the site was never installed and the remaining two proposed septic systems depicted on this figure are currently located on-site.

Areas 1, 2, and 3 Security Booth and Main Office Basement Plumbing Plans, Newsday, prepared by Cameron Engineering & Associates, LLP, dated February 6, 2004

This drawing depicted additional details on the proposed septic system plans for the guard booths and a plumbing plan for the basement area within the site building. The basement detail included connection of the paint booth area to the domestic water line. No additional relevant information was provided in this drawing.

Proposed Plumbing and Septic System Details, Newsday, prepared by Cameron Engineering & Associates, LLP, dated February 6, 2004

This drawing provided additional details for the proposed septic systems at the guard houses. No additional relevant information was provided in this drawing.

New York State Department of Environmental Conservation

As part of this assessment, VERTEX requested available files for the facility from the NYSDEC. The NYSDEC provided documentation pertaining to the SPDES permit and historical spill incidents. Relevant information is discussed below.

SPDES Documentation

The following SPDES documents were provided:

- *Newsday Violations Report, undated* – This document listed effluent gross discharge exceedances of the SPDES permit from 1996 to 2012. Chemicals exceeding included 1,1,1-TCA, 1,2,4,5-tetramethylbenzene, 1,3,5-trimethylbenzene, benzene, cyanide, flow, total nitrogen, oil and grease, p-ethyltoluene, pH, total recoverable phenolics, silver, total dissolved solids, toluene, total toxic organics, and xylenes.
- *SPDES Discharge Permit, dated October 16, 1996* – The permit outlined the effluent limitations and monitoring requirements. Outfall 001 is identified as the industrial and

sanitary wastewater outfall. Outfall 002 is identified as the stormwater outfall. Industrial wastewater sources include platemaking rinse, photographic rinse, and porters slop sinks, which discharge to the sewage treatment plant before distribution to leaching pools. Photographic wastewater goes through silver reclamation, which is transported off-site by a licensed transporter.

- *SPDES Permit Renewal, dated September 7, 2001* – This was the five-year SPDES permit renewal.
- *SPDES Permit Modification Approval, dated November 2, 2001* – This modification included a new outfall, Outfall 003. Outfall 003 is associated with non-contact compressor cooling water, which is discharged to leaching basins located to the northwest and southeast of the main building.
- *SPDES Permit Modification Approval, dated September 14, 2005* – This modification included the additional of sanitary wastewater discharges from two security booths. Sanitary wastewater from the booths is discharged to adjacent leaching basins. Outfall 004 is located adjacent to the security guard booth on the southeastern portion of the site. Outfall 005 is located on the northern portion of the site adjacent to a security guard booth.
- *SPDES Permit Renewal, dated March 14, 2006* – This renewal included modifications to the WWTP. The industrial photo chemistry process was eliminated.
- *Report of Noncompliance Event, dated December 2007* – This was a self-reported non-compliance pH limits, total nitrogen, and toluene. Corrective actions were identified and implemented.
- *SPDES Permit Modification, dated May 30, 2008* – This modification included new requirements for discharge monitoring reports.
- *SPDES Permit Renewal, dated December 1, 2011* – This permit renewal included removal of the monitoring requirements for phenol, silver, toluene, and cyanide. These were removed due to the elimination of many chemicals associated with photo wet chemistry. The current SPDES permit expires in 2021.

Spill Incident Documentation

VERTEX was provided files for 20 spill incidents at the site. These included the following:

- **Spill #8907176** was generated on October 20, 1989 for a release of approximately 40-gallons of diesel fuel from an emergency generator, which impacted a nearby dry well underneath the fresh air intakes of the basement. The spill occurred during testing of the day tanks associated with the emergency generators. Five yards of impacted soil were remediated from the dry well. No post-excavation soil samples were collected. The spill case was subsequently closed by the NYSDEC on August 23, 1990.
- **Spill #9201246** was generated on April 30, 1992 due to a failed tank test associated with a 25,000-gallon diesel fuel UST. Two yards of contaminated soil was removed. No post-excavation soil samples were collected. The spill case was closed by the NYSDEC on May 27, 1998.
- **Spill #9312349** was generated on January 21, 1994 for a release of 50-gallons of petroleum oil due to a broken line on a fuel truck. The spill was cleaned up and the case was closed on March 28, 1994.
- **Spill #9706042** was generated on August 18, 1997 for the release of 20 gallons of hydraulic oil from a trash compactor. Corrective action was taken, and the incident was closed by the NYSDEC on December 1, 1997.
- **Spill #9709711** was generated on November 20, 1997 for a failed tank test due to interference when testing. Following tests passed and the spill case was closed by the NYSDEC on December 11, 2009.
- **Spill #9825125** was generated on November 12, 1998 due to the observation of diesel fuel on soil during station upgrade activities. The soil was removed and placed into drums for off-site disposal. Additional contaminated soil below dispenser and above the tank were unable to be excavated. Soil borings around the perimeter tank area did not identify soil contamination. Based on these observations, the NYSDEC closed the spill case on August 17,

1999.

- **Spill #0008603** was reported at the site on October 23, 2000 for the release of 1,600-gallons of diesel fuel due to a tank overfill of two 25,000-gallon USTs. Product entered nearby catch basins, leaching basins, and dry wells on-site. Remediation included removal of free product, contaminated sediment from five drains, and post-excavation soil sampling. The majority of free product entered catch basin CB-114. The drains were remediated to five feet below the bottoms of the drains. Catch basin CB-114 was remediated to a depth of 30 feet below grade and approximately 60 cubic yards of soil was removed for off-site disposal. Post-excavation soil sample results were found below applicable cleanup levels. The incident was closed by the NYSDEC on December 14, 2000.
- **Spill #0125175** was generated on August 27, 2001 for the release of 20 gallons of hydraulic oil from a dumpster truck. Corrective action was taken, and the incident was closed by the NYSDEC on September 16, 2004.
- **Spill #0203990** was generated on July 17, 2002 associated with a spill of 20-gallon of hydraulic oil due to a ruptured line in a truck. The spill was cleaned up and the case was closed by the NYSDEC on the same date.
- **Spill #0507524** was generated on September 22, 2005 for the release of 100 gallons of ink from the ink reclamation machine. The released ink was filtered and recycled. The area of the release was bermed and the incident was closed by the NYSDEC on March 14, 2006.
- **Spill #1000551** was generated on April 13, 2010 due to impacted soils identified around a dispenser as part of the removal of three 20,000-gallon diesel fuel USTs. A total of 166.83 tons of petroleum-impacted soils were removed. Post-excavation soil and groundwater samples were collected, and the results were found below applicable cleanup levels. The spill case was closed by the NYSDEC on March 30, 2011.
- **Spill #1108374** was generated on October 1, 2011 for the release of six gallons of diesel fuel from a fleet **v**ehicle (not owned by Newsday) as it was exiting the site. No drains were reportedly affected and a third-party contractor cleanup up the rele**a**se. The incident was closed by the NYSDEC on October 3, 2011.

- **Spill #1200716** was generated on April 23, 2012 for the release of 500 gallons of combined industrial/sanitary wastewater sewage at the site due to a weather-related malfunction. The spill was cleaned up and closed by the NYSDEC on October 22, 2012.
- **Spill #1203029** was generated on June 26, 2012 for a tank test failure associated with a 25,000-gallon UST. The tank was listed as abandoned in place. The spill case was closed by the NYSDEC on April 7, 2014.
- **Spill #1205313** was generated on August 26, 2012 due to a release of 2,000-gallons of ink from a broken ink feeding tube on a printing machine. All of the material was reportedly contained within the printing shop and no floor drains were affe**c**ted. The incident was closed by the NYSDEC on October 3, 2012.
- **Spill #1402877** was generated on June 17, 2014 for a release of five gallons of diesel fuel from a generator day tank, which entered a catch basin. Endpoint samples were reportedly clean. The spill was not reported to have migrated outside and was subsequently closed by the NYSDEC on August 12, 2014.
- **Spill #1508951** was generated on December 2, 2015 for a release of 60 gallons of antifreeze due to a burst on a generator inside the site building, which migrated to a dry well outside. The dry well was located in the vented areas in the southern portion of the basement. The dry well was confirmed to have no outlets and a sand bottom. The NYSDEC confirmed the sand soaked up the entire product. No endpoint samples were collected. The incident was subsequently closed On December 9, 2015.
- **Spill #1606790** was generated on October 11, 2016 for a release of four gallons of compressor oil due to equipment failure. Drains in the production areas are connected to an oil/water separator and discharge to the on-site wastewater treatment plant. According to information obtained during this assessment, the spill area was cleaned and closed by the NYSDEC on November 9, 2017.
- **Spill #1610337** was generated on February 15, 2017 due to a release of 1,000-gallons of printing ink into a containment area. The entire spill was contained and closed by the NYSDEC on November 9, 2017.

- **Spill #1703192** was generated on July 1, 2017 for a spill of wastewater into a storm drain. The drain was pumped out and the spill case was closed by the NYSDEC on July 3, 2017.

7.0 SITE RECONNAISSANCE

A site visit was conducted by VERTEX representative Mr. Christopher K. Cook, Senior Project Manager, on September 6, 2018 between 8:00 a.m. and 12:30 p.m. Messrs. Steve Zimmerman and Tim Winter with Newsday escorted VERTEX during the site visit and answered questions regarding site operations.

During the site visit, the weather was sunny with a temperature of approximately 85^{o} Fahrenheit. The site visit consisted of a walk-through of the site and visual reconnaissance of neighboring properties from curbside. Photographic documentation of the site visit is included in Appendix A.

7.1 Access Restrictions

VERTEX visually and physically observed accessible areas of the site. The majority of the interior and exterior of the site building were observed. Due to parked vehicles in property driveways and parking areas, visual observation of some exterior portions of the site were limited. No other limitations imposed by physical obstructions or other limiting conditions were observed.

7.2 Site Observations

Observations of site conditions were made during the site reconnaissance and are summarized in the table below. Issues of concern are discussed in greater detail following the table.

SITE OBSERVATIONS		
DESCRIPTION	**REPORTED/ OBSERVED ON-SITE Y/N**	**COMMENTS**
Hazardous Substances and Petroleum Products	Y	Hazardous substances and petroleum products observed during the site inspection are discussed below. <u>Ink Reclamation Room of Main Building</u> Tanks formerly utilized for the storage and reclamation of inks were identified in this room. According to the site contact, these tanks have been emptied. Ink staining was observed on the epoxy-coated flooring in this room. <u>Former Press Rooms of Main Building</u> One 55-gallon drum of used oil was observed in former printing press area. This drum was observed within containment and no spills were identified. Propane cylinders for forklifts were also observed in former press rooms. <u>Second Floor Maintenance Shop of Main Building</u> Acetylene and oxygen cylinders were observed in the second maintenance shop. In addition, general maintenance chemicals were observed, which included spray lubricants, paints, cleaners and degreasers. Stained concrete in an area of a former parts washer and in a former wash area were observed in this maintenance area. The concrete in stained areas appeared to be in good condition. <u>Tank #68 Drum Storage Area of Main Building</u> Several empty 55-gallon drums were observed in this area. De minimis staining of epoxy coated flooring was observed in this former drum storage area. <u>Tank #90 Oil/Water Separator Area of Main Building</u> De minimis staining on concrete was observed adjacent to the Tank #90 oil/water separator area. The concrete in this area appeared to be in good condition. <u>Tank #17 Area of Main Building</u> Staining adjacent to a diesel fuel generator Tank #17 in the basement. Oil absorbent material was observed in this area. The concrete in this area appeared to be in good condition. <u>Hazardous Materials Storage Shed</u> Several 55-gallon drums of press waste oil were observed in this shed, which is also identified as Tank #84. These containers were located within containment and no concerns were identified. <u>WWTP Building</u> The methanol drum storage room (Tank #65) included drums of methanol and citric acid. These containers were located within containment and no concerns were identified.

SITE OBSERVATIONS		
DESCRIPTION	**REPORTED/ OBSERVED ON-SITE Y/N**	**COMMENTS**
		The remaining chemicals observed at the site included small quantities of maintenance materials, diesel fuel and fuel oil in tanks, water treatment chemicals in tanks, and hydraulic fluid in tanks. See below for a discussion of tanks identified at the site.
UST(s)	Y	See below for a discussion of USTs currently and formerly in operation at the site.
AST(s)	Y	See below for a discussion of ASTs currently and formerly in operation at the site.
Strong, Pungent, or Noxious Odors	N	Not identified during the site visit.
Pools of Liquid	N	Not identified during the site visit.
Drums	Y	Drums observed on-site are discussed above.
Unidentified Substance Containers	N	Not identified during the site visit.
Polychlorinated Biphenyls (PCB)-containing Equipment	Y	Two pad-mounted transformers were observed to the north of the site building, which are owned by PSEG. The transformers were not labeled for PCB-content. However, based on utility ownership, it is assumed these transformers are non-PCB containing. In the event of a release, PSEG would be responsible for cleanup.
Utilities (Electricity/ Natural Gas)	Y	Electricity – supplied by PSEG Natural gas – supplied by National Grid
Hydraulic Equipment	Y	Four hydraulic elevators are located within the site building, which include three freight and one passenger elevator. The elevator pits were not accessible at the time of site inspection. No concerns associated with the operation of these elevators was identified.
Water Supply	Y	Water is currently supplied to the site by the South Huntington Water District. The facility was connected to the municipal water supply when developed in 1978.
Wells	Y	Several dry wells are located on-site. See the stormwater discussion below for additional information.

SITE OBSERVATIONS		
DESCRIPTION	**REPORTED/ OBSERVED ON-SITE Y/N**	**COMMENTS**
Wastewater	Y	Wastewater generated from the main building production areas is directed through floor drains to an oil/water separator before being treated in the WWTP. Sanitary wastewater from the main building is also directed to the WWTP. Wastewater is treated using a combination of pre-equalization screens, rotary aerators, membrane clarifiers, and sludge settling tanks. The wastewater is discharged to an underground cistern system including 11 underground pools from where it is discharged to the ground surface west of the WWTP and to leaching basins located to the north of the WWTP. Since printing operations ceased in June 2018, wastewater generated from the production areas is minimal. No additional treatment of process wastewater and floor wash water is required. Non-contact cooling water from the facility is discharged to leaching basins located to the southeast of the main building (Outfall 003). Current and former discharges at the site are currently regulated under the existing SPDES permit, which was originally created in 1980. The SPDES permit will be transferred to Tribune in the near future.
Septic	Y	Two septic systems are located on-site, one adjacent to the southeast guard shack and the second adjacent to the northern guard shack. The systems include 1,000-gallon tanks and leaching pools. The septic discharges are identified as Outfalls 004 and 005 in the SPDES permit. Based on the sanitary nature of the discharge directed to the septic system, these systems do not represent a REC.
Stormwater	Y	Stormwater from roof drains and parking areas discharges to greater than 100 dry wells located primarily in parking areas and driveways of the site. VERTEX also observed three dry wells in open areas of the basement. These stormwater discharges are regulated under the existing SPDES permit and are identified as Outfall 002.
Flood Plain	N	According to the FEMA FIRM, the site is not located in a 100- or 500-year floodplain.
Pits, Ponds, Lagoons	Y	A fire suppression pond is located to the west of the site building.
Stained Soil, Stained Pavement, Corrosion to Pavement	N	Not identified during the site visit.
Stressed Vegetation	N	Not identified during the site visit.

SITE OBSERVATIONS		
DESCRIPTION	**REPORTED/ OBSERVED ON-SITE Y/N**	**COMMENTS**
Solid Waste	Y	Sources of solid waste at the site included general trash and recycling, cardboard, and used rags. General refuse and recyclables are stored in two 40-yard dumpsters and transported off-site by Selmark. Cardboard is stored in a compactor, which is transported off-site by Selmark. Scrap metal is stored in two 40-yard dumpsters and transported off-site by Two Brothers Scrap Metal. No evidence of staining or a release of hazardous substances or petroleum was identified around the dumpsters or compactor.
Hazardous Waste Management	Y	According to the site contact, hazardous waste is no longer generated at the site. Used oil is transported off-site as a non-hazardous waste on a regular basis by United Industrial Services. No concerns associated with current hazardous and non-hazardous waste management was identified.
Heating/Cooling	Y	The office area of the site building is cooled by roof-mounted HVAC units. The office and production areas of the site building are heating via oil-fired boiler systems. No concerns were identified.
Drains, Sumps, Oil/Water Separators/Sand Traps	Y	Floor drains were observed in the warehouse and production areas of the main building, which are connected to subsurface piping with an eventual discharge to the WWTP. Three above grade oil/water separators associated with air compressors are located on-site. No concerns were identified. An out of use above-grade grease trap was observed within the site building. No concerns were identified.
Vapor Intrusion	N	As part of this assessment, VERTEX assessed the potential for impacts to the site from potential on- and off-site sources of vapor intrusion. The potential for impacts from off-site properties included a review of current off-site operations (see Section 2.4), a review of historical operations (see Section 5.2), and a review of regulatory database records (see Section 6.2). Potential sources of on- or off-site vapor intrusion were not identified.

Aboveground Storage Tanks

The following is a list of current or former ASTs in operation at the site.

Tank ID	Capacity (Gallons)	Substance	Location	Status
9	275	Diesel Fuel	Fire Pump Room	Active
10	8,000	Black Ink	Basement	Inactive. Installed in 1978.
11	8,000	Black Ink	Basement	Inactive. Installed in 1978.
12	8,000	Black Ink	Basement	Inactive. Installed in 1978.

Tank ID	Capacity (Gallons)	Substance	Location	Status
13	100	Industrial Waste	Unknown	Removed in 2001. Installed in 1978.
17	100	Diesel Fuel	Basement	Active. Installed in 1978.
21	4,675	Drum Storage	Not Applicable	Never Installed
22	1,380	Drum Storage	Inside – Solvent Storage Area	Inactive. Installed in 1991.
23	200	Black Ink - Reclaim	Inside – Solvent Storage Area	Inactive. Installed in 1991.
24	200	Black Ink - Reclaim	Inside – Solvent Storage Area	Inactive
25	500	Black Ink - Reclaim	Inside – Solvent Storage Area	Inactive
26	2,000	Industrial Waste	Unknown	Removed in 2002. Installed in 1989.
27	2,000	Industrial Waste	Unknown	Removed in 2002. Installed in 1989.
28	250	Industrial Waste	Unknown	Removed in 2003. Installed in 1989.
29	2,640	Drum Storage	Unknown	Removed. Installed in 1992.
30	1,500	Caustic	Unknown	Removed in 2006
31	7,900	Black Ink	Inside – Tank Ink Room	Inactive
32	7,900	Black Inc	Inside – Tank Ink Room	Inactive
33	7,900	Black Ink	Inside – Tank Ink Room	Inactive
34	1,900	Cyan Ink	Inside – Tank Ink Room	Inactive
35	1,900	Yellow Ink	Inside – Tank Ink Room	Inactive
36	1,900	Red Ink	Inside – Tank Ink Room	Inactive
37	1,900	Magenta Ink	Inside – Tank Ink Room	Inactive
38	125	Diesel Fuel	Basement – Day Tank Emergency Generator	Active
39	300	Cooling Tower Blow Down	Unknown	Removed in 2003
40	25	Diesel Fuel	2nd Floor – Day Tank Emergency Generator	Active
41	550	Cooling Water Blow Down	Unknown	Removed
42	50	Industrial Waste	Unknown	Removed in 2002. Installed in 1998.
43	100	Industrial Waste	Unknown	Removed in 2002. Installed in 1998.
45	100	Developer	Unknown	Removed
46	100	Fixer	Unknown	Removed
47	100	Fixer	Unknown	Removed
50	40	Parts Washer Solvent	Inside – Substation B	Inactive
51	330	Fountain Solution	Unknown	Removed in 2002
52	330	Fountain Solution	Unknown	Removed in 2002
53	330	Fountain Solution	Unknown	Removed in 2002
54	330	Fountain Solution	Unknown	Removed in 2002

Tank ID	Capacity (Gallons)	Substance	Location	Status
55	1,250	Diesel Fuel	Unknown	Removed in 2006
56	1,250	Diesel Fuel	Unknown	Removed in 2006
57	80	Water Treatment Chemicals	Basement	Active
58	80	Water Treatment Chemicals	Basement	Active
59	80	Water Treatment Chemicals	Basement	Active
60	80	Water Treatment Chemicals	Basement	Active
61	80	Water Treatment Chemicals	Basement	Active
62	140	Water Treatment Chemicals	Basement	Active
63	80	Water Treatment Chemicals	MER 3	Active
64	140	Water Treatment Chemicals	MER 3	Active
65	220	Methanol	Inside	Active
66	595	Lube Oil	Inside	Active

According to the site contact, 60 permitted ASTs are scheduled to be decommissioned with the SCDHS in the near future. Since printing operations ceased in June 2018, the majority of the ASTs have been emptied and are no longer utilized (described as inactive above). No concerns associated with the current use of ASTs was identified during the site inspection. Refer to Section 6.3 for a discussion of historical spill incidents from ASTs.

Underground Storage Tanks

The following is a list of current or former USTs in operation at the site.

Tank ID	Substance	Capacity (Gallons)	Location	Install Date	Tank Construction	Piping Construction	Tank Leak Detection	Piping Leak Detection	Status
1	Diesel Fuel	25,000	Northeast of fire pond	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1986
2	Diesel Fuel	25,000	Northeast of fire pond	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1986
3	Diesel Fuel	25,000	Northeast of fire pond	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1986
4	Gasoline	12,000	Northeast of fire pond	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1986
5	Spill Containment / Solvent	2,000	East of fire pond	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1988
6	No. 6 Fuel Oil	25,000	Southeast exterior of building	1978	Unknown	Unknown	Unknown	Unknown	Closed in place in 2014
7	No. 2 Fuel Oil	25,000	Southeast exterior of building	1978	Unknown	Unknown	Unknown	Unknown	Closed in place in 2014
8	Industrial Waste	4,000	Under current basement	1978	Unknown	Unknown	Unknown	Unknown	Removed in 1989
14	Diesel Fuel	20,000	South-central fueling area	1985	Unknown	Unknown	Unknown	Unknown	Removed in 2010

Tank ID	Substance	Capacity (Gallons)	Location	Install Date	Tank Construction	Piping Construction	Tank Leak Detection	Piping Leak Detection	Status
15	Diesel Fuel	20,000	South-central fueling area	1985	Unknown	Unknown	Unknown	Unknown	Removed in 2010
16	Diesel Fuel	20,000	South-central fueling area	1985	Unknown	Unknown	Unknown	Unknown	Removed in 2010
18	No. 2 fuel oil	2,500	West exterior of building	1987	Double-walled fiberglass	Steel	Electronic leak probes	Tightness testing	Active
93	Diesel fuel	20,000	South-central fueling area	2010	Double-walled fiberglass	Fiberglass reinforced plastic	Electronic leak probes	Electronic leak probes and auto line detection	Out of Use
94	Diesel fuel	20,000	South-central fueling area	2010	Double-walled fiberglass	Fiberglass reinforced plastic	Electronic leak probes	Electronic leak probes and auto line detection	Out of Use
95	Diesel fuel	20,000	South-central fueling area	2010	Double-walled fiberglass	Fiberglass reinforced plastic	Electronic leak probes	Electronic leak probes and auto line detection	Out of Use

In addition to the above, a building permit with the Town of Huntington indicated four 10,000-gallon gasoline USTs and associated dispensers were to be removed and relocated at the site in 1981. However, the permit references an additional permit to replace an existing fueling station with three 20,000-gallon USTs installed on the southern portion of the site in 1985. No additional information on these potential former gasoline USTs was obtained during this assessment. However, based on the information reviewed during this assessment, it is likely these USTs were related to the three diesel fuel USTs and one gasoline UST located to the northeast of the fire pond, which were removed in 1986. The tanks were likely not relocated in 1981 and the permit remains on file in error. The fueling operations were later relocated to the current area on the southern portion of the site.

Tanks 18, 93, 94, and 95 (Current Diesel Fuel USTs and No. 2 Fuel Oil UST)

Tanks 93, 94, and 95 include three dispensers. According to the site contact, the diesel fuel USTs have been emptied and are no longer utilized. Reportedly, the ownership of these USTs will be transferred to Tribune in the near future. According to the site contact, these USTs were recently tightness tested and passed. VERTEX was not provided with a copy of these tightness testing results.

Tank 18 remains active and is associated with an emergency generator. According to the site contact, this UST was recently tightness tested and passed. VERTEX was not provided with a copy of these tightness testing results.

While releases have not been reported, these USTs are considered an environmental concern and should be closed by removal in accordance with applicable regulations.

Several former USTs operated at the site. Closure, sampling, and removal information associated with these USTs, if any, is discussed below.

Tanks 1, 2, 3, and 4 (25,000-Gallon Diesel Fuel USTs and 12,000-Gallon Gasoline UST)

Based on a review of historical information, these USTs and associated dispensers were located to the northeast of the current fire suppression pond. Due to building expansion in the mid-1980s, the USTs were removed and fueling operations were relocated to the southern portion of the site. No closure documentation associated with these former USTs was identified during this assessment. These former USTs without closure documentation are considered a REC. However, the USTs were located under a current structure, shallow impacted soils, if present, would have likely been removed during building expansion activities.

Tank 5 (2,000-Gallon Spill Containment/Solvent UST)

According to previous reports and facility drawings from the 1980s, this UST was located to the east of the fire suppression pond proximal to the current 2,500-gallon No.2 fuel oil UST. The UST was reportedly closed by removal in 1988. No additional details on this former UST was provided. This former UST without closure documentation is considered a REC.

Tanks 6 and 7 (25,000-Gallon No. 6 and 2 Oil USTs)

According to a spill closure report prepared in April 2014 by ERM, these USTs were originally proposed for abandonment in 2013. Prior to abandonment, tightness testing was performed on the tanks. Tank 6 passed the tightness test; however, Tank 7 failed and was immediately pumped out. Tank 6 remained in service for emergency generator fuel storage until early 2014 when it was replaced by an AST, emptied, and abandoned. Four soil samples were obtained beneath fuel oil Tank 7 and analyzed for VOCs and SVOCs prior to tank abandonment. No samples were obtained from beneath Tank 6 prior to its abandonment and no groundwater sampling was obtained. Soil sampling results for Tank 7 met cleanup levels except for benzo(a)anthracene and chrysene, which were above cleanup levels in two samples; however, in accordance with New York regulations, since the concentration of total PAH was below 500 milligrams per kilogram (mg/kg) in each sample, then the sample was considered to meet the cleanup level even with individual constituents exceeding their associated cleanup levels. Based on these sampling results, the NYSDEC allowed the tanks to be abandoned in place without requiring remedial actions. Based on the information provided, these USTs are not considered a REC to the site. However, as part of redevelopment activities, these USTs should be removed. Any residual subsurface impacts identified during removal should be remediated at that time.

Tank 8 (4,000-Gallon Industrial Waste UST)

According to the RCRA Closure Plan dated July 18, 2018, former spent developer and fixer drained directly into this former 4,000-gallon fiberglass UST. The UST was located outdoors near the southeast portion of the building. The 4,000-gallon UST was removed by Tyree Bros. Environmental Services, Inc. (Tyree) on June 12, 1989 and disposed of at Gershow Recycling in Medford, New York. The UST was removed as part of a basement boiler room expansion project. The basement foundation slab extended 18.5 feet below the first-floor slab. The 4,000-gallon UST had a diameter of seven feet and the bottom of the tank was situated at approximately 12.5 feet below grade. Therefore, at the time of the basement expansion project, the area with the former spent fixer and developer UST was over-excavated to a minimum depth of 18.5 feet below grade. No contaminated soil was identified during the tank excavation.

Tanks 14, 15, and 16 (20,000-Gallon Diesel Fuel USTs)

Three 20,000-gallon diesel USTs were installed in 1985 and removed in 2010 from the southern portion of the site. A LUST incident was reported upon removal of these USTs. A subsurface investigation was subsequently conducted, which included sampling the soil and groundwater around the former USTs and laboratory analysis of the samples for VOCs and SVOCs. Results of the 2010 sampling indicate that contaminant concentrations were below applicable cleanup standards. The results of the 2010 subsurface investigation were used to obtain regulatory closure of this LUST incident through the NYSDEC.

Refer to Appendix B for a copy of documents obtained from the NYSDEC.

8.0 DATA GAPS/DEVIATIONS

Significant data gaps that would affect VERTEX's ability to identify RECs at the site were not encountered during this assessment.

Deviations or deletions from the scope of work defined by ASTM E 1527-13 were not made. Our conclusions regarding the potential environmental impact of nearby, off-site facilities on the site are based on readily ascertainable information from the environmental databases and the assumed groundwater flow direction as inferred from the topography of the site and surrounding area. A detailed file review for these facilities was beyond the scope of work.

9.0 ADDITIONAL SERVICES

The following additional (non-ASTM) services were performed as part of this assessment.

9.1 Asbestos-Containing Materials (ACMs)

A visual survey of limited building areas was performed to assess major classes of accessible suspect ACM that may be present. Suspect ACM observed in the site building included thermal systems insulation, pipe wrap, vinyl floor tiles and associated mastics, ceiling tiles, and wallboard. The materials assessed were observed to be in primarily good physical condition. According to a June 2018 ACM survey completed at the site, ACMs (greater than 1%) were identified including approximately 30 square feet of 12”X12” black adhesive mastic on the first floor below a raised floor at a ramp outside the intermediate distribution frame and approximately 25 square feet of 12”X12” black mastic associated with vinyl floor tile in a first-floor cafeteria closet. These materials were found to be in good condition and non-friable. In addition, approximately 15,000 square feet of black mastic associated with vinyl floor tile and approximately 45,000 square feet of tan spray-on fireproofing was found throughout the building containing less than 1% asbestos. These materials were found to be in good condition.

While an ACM survey was recently completed, prior to demolition/renovation activities or other activities that could potentially disturb suspect ACM, including those areas/materials not tested during the previous ACM survey, additional sampling and analysis of suspect ACM will need to be conducted. Future activities that involve disturbance or removal of confirmed or suspect ACM are required to be conducted in accordance with NESHAP and other applicable local, state, and federal regulations. VERTEX has found that a written O&M Program assists owners in maintaining compliance with these applicable regulations.

9.2 Lead-Based Paint (LBP)

Based on the ages of the site buildings, LBP may be present in buildings at the site. LBP, if present, should be appropriately managed during proposed renovations or demolitions of site structures.

10.0 CONCLUSIONS

VERTEX has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, of the Newsday facility located at 235 Pinelawn Road, Melville, New York. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed no evidence of RECs in connection with the site, except for the following:

- Historical printing operations on-site from 1978 to 2018.
- Former diesel fuel and gasoline USTs located to the northeast of the fire suppression pond, which were removed in 1986. No closure documentation associated with these USTs was provided.
- A former 2,000-gallon spill containment/solvent UST to the east of the fire suppression pond, which was removed in 1988. No closure documentation associated with this UST was provided.
- Historical wastewater discharge exceedances to on-site leaching basins.
- Staining adjacent to the dry well located in the southern basement area.
- The historical use of the hazardous materials storage shed.

The following HRECs were identified during this assessment:

- Twenty spill cases from 1989 to 2017, which have been closed by the NYSDEC. These include releases associated with USTs removed or abandoned in place in 2010 and 2014.

The following environmental concerns were identified during this assessment:

- The three 20,000-gallon diesel fuel USTs and one 2,500-gallon No. 2 fuel oil UST located at the site.
- The two 25,000-gallon fuel oil USTs, which were abandoned in place in 2014.
- The stormwater dry wells located throughout the site.
- The septic systems located adjacent to guard shacks.
- The active WWTP at the facility.
- Ongoing RCRA closure activities at the site.

Based on the findings of this assessment, VERTEX recommends the following:

- A subsurface investigation should be completed to evaluate subsurface soil and groundwater quality.
- The active USTs should be closed by removal in accordance with applicable regulations.
- The 25,000-gallon fuel oil USTs previously abandoned in place should be removed as part of site redevelopment activities.
- If the stormwater dry wells will be removed during site redevelopment, they should be closed in accordance with applicable regulations.
- During site redevelopment activities, the current septic systems should be abandoned in accordance with applicable regulations.
- The WWTP operations and associated permits should be transferred to future owners of the property. If the WWTP will no longer be utilized, it should be closed in accordance with applicable regulations.
- The RCRA Closure Plan should be implemented and completed with no further action by the NYSDEC.
- Prior to demolition, a comprehensive ACM survey should be completed. Suspect or known ACMs should be abated prior to demolition activities.

11.0 SCOPE AND LIMITATIONS

11.1 Purpose

The primary purpose of this assessment is to identify, to the extent feasible pursuant to the processes prescribed in ASTM E 1527-13, RECs in connection with the site. As defined in ASTM E 1527-13, a REC is "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." It does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A "historical REC" is defined in ASTM E 1527-13 as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." ASTM E 1527-13 defines the term "controlled REC" as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

In conducting this assessment, VERTEX followed ASTM E 1527-13, as well as the U.S. Environmental Protections Agency's All Appropriate Inquires (AAI) Final Rule of November 1, 2005 as amended December 30, 2013. There were no exceptions to or deletions from this

practice, as described in Section 8.0 of the report. ASTM defines good commercial and customary practice for conducting an ESA of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. This practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability. The practice constitutes "all appropriate inquiries into the previous ownership and uses of the facility in accordance with generally accepted good commercial and customary standards and practices" as defined at 42 U.S.C. 9601(35)(B).

As part of ASTM E 1527-13, Phase I ESAs must be conducted by or under the supervision of a qualified Environmental Professional. The AAI Final Rule defines an Environmental Professional as someone who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors of the rule. We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 C.F.R. 312.10. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

11.2 Detailed Scope-of-Services

As part of this Phase I ESA, and in accordance with the provisions of ASTM E 1527-13, VERTEX performed a visual reconnaissance of the site, noted use of adjoining properties, and conducted historical and regulatory records research. The following provides a more detailed description of the scope of services:

- Visual assessment of the site building(s), if present, and grounds to identify potential for on-site petroleum or hazardous material release(s).

- Visual assessment and categorization of the use of abutting and adjoining properties as potential off-site sources of petroleum or hazardous material contamination to the site.

- Review of reasonably ascertainable state and federal regulatory records related to on-site activities and to potential off-site activities to identify sources of petroleum or hazardous material contamination to the site.

- Review of reasonably ascertainable historical information to assess for potential on-site and off-site sources of petroleum or hazardous material contamination to the site.

- Review of reasonably ascertainable local records related to historical site ownership, usage, and development. This includes obtaining information from local environmental authorities to identify complaints, violations, citations, inspections, environmental liens, AULs, or institutional and engineering controls related to the site.

- Review of reasonably ascertainable documents and other resources for the site and site vicinity to evaluate current and historical development and renovation activities.

- Visual assessment for suspect Polychlorinated Biphenyl (PCB) containing equipment, e.g., transformers, elevators. Please note, this scope of work does not include an evaluation for or testing of suspect PCBs in building materials such as caulking, mastic/adhesives, oil-based paints, coatings and sealants. Currently, there are no regulatory requirements to test in-place building materials for the presence of PCBs. Although testing is not required for in place materials, owners are required to know the content of the waste streams that they generate and potentially sign waste profiles prior to disposal facility acceptance. Therefore, if

renovation or demolition activities are to be conducted at the site that will result in the generation of demolition debris, a contractor or waste disposal facility may request certification of knowledge of the waste stream or testing to determine if the material(s) contain PCBs for proper handling and disposal purposes.

- Visual assessment of the accessible areas of the site and review of available public records to assess the presence or absence of the following ASTM E 1527-13 non-scope considerations: ACMs and LBP.

- Preparation of a Phase I ESA report.

11.3 Significant Assumptions

Information obtained from the Client, the Client's representative, site representatives, individuals interviewed, and prior environmental reports is considered to be accurate unless VERTEX's reasonable inquiries clearly revealed otherwise.

Conditions observed were considered to be representative of areas that were not observed unless otherwise indicated.

The primary direction of groundwater flow is assumed to follow topography, unless otherwise indicated by measurement of the potentiometric surface or other quantifiable data.

VERTEX reviewed reasonably ascertainable public records with respect to past operations and ownership of the site in an attempt to determine past site usage. VERTEX is not a professional title insurance firm and makes no guarantee, express or implied, that the listing reviewed represented a comprehensive delineation of past site ownership or tenancy for legal purposes. The accuracy and completeness of information maintained in public records by public agencies

or other entities is assumed to be sufficient for the purposes of this Phase I ESA, and independent verification of its validity is beyond the scope of this investigation.

11.4 Limitations and Exceptions

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. The findings within this ESA utilized information that was practically reviewable per ASTM Practice E 1527-13, meaning that only relevant data relating to the subject site has been incorporated into the findings, disregarding extraordinary analysis of irrelevant data. The investigation conducted for this ESA was limited to data that were reasonably ascertainable, meaning that the information was publicly available, obtainable within the cost and time constraints under the scope of services for this project, and practically available. VERTEX is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. Subsurface conditions were not field-investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. VERTEX does not warrant against future operations or conditions, or against operations or conditions present of a type or at a location not investigated. VERTEX does not assume responsibility for other environmental issues that may be associated with the subject site.

This study is not intended to assess or otherwise determine if soil contamination, waste emplacement, or groundwater contamination exists. These data are accessible only by sampling

of subsurface material and groundwater through the completion of soil borings and the installation of monitoring wells and the chemical analyses of soil and groundwater samples. The scope of work, determined by the client, did not include these activities.

In view of the rapidly changing status of environmental laws, regulations and guidelines, VERTEX cannot be responsible for changes in laws, regulations, or guidelines that occur after the study has been completed and that may affect the subject site.

It must be noted that no investigation can absolutely rule out the existence of hazardous materials at a given site. This assessment has been based upon prior site history and observable conditions. Existing hazardous materials and contaminants can escape detection using these methods.

There were no significant data gaps or accessibility limitations that would affect VERTEX's ability to identify RECs at the sites, as discussed in Section 8.0.

While VERTEX may comment on environmental compliance matters that fall under the scope of this assessment, this study does not constitute a regulatory compliance audit, and does not document compliance with applicable state, federal, or local regulations.

11.5 Special Terms and Conditions

No special Terms and Conditions were agreed upon between the User and the Environmental Professional.

11.6 User Reliance

This report is for the exclusive use of the following entities:

- Hartz Mountain Industries, Inc., a New York corporation
- 235 Pinelawn Road South LLC, a Delaware limited liability company
- 235 Pinelawn Road North LLC, a Delaware limited liability company
- Hartz Mountain Associates, a New Jersey general partnership
- Ridge Associates II Limited Partnership, a New Jersey limited partnership
- API Stewart Holdings LLC, a California limited liability company
- Asset Preservation, Inc., a California corporation

No other party shall have the right to rely on any service provided by VERTEX without prior written consent. Use of this report by any other party shall be at such party's sole risk.

EXECUTIVE SUMMARY

Tribune Media Company retained GaiaTech Incorporated dba RPS GaiaTech to conduct a Phase I Environmental Site Assessment (ESA) of the Newsday facility located at 235 Pinelawn Road in Melville, Suffolk County, New York (the site). RPS GaiaTech conducted the Phase I ESA to identify Recognized Environmental Conditions (RECs), as defined by ASTM International *Standard Practice for Environmental Site Assessments* - E 1527-13 (ASTM-13). RPS GaiaTech performed the Phase I ESA to constitute all appropriate inquiry consistent with good commercial and customary practice.

The site is owned by Tribune ND, Inc. (successor-in-interest to Tribune Company). Newsday leases the site from Tribune ND, Inc. Newsday operates a newspaper publishing and distribution company producing approximately 350,000 newspapers per day. Operations consist of the printing, plate development, digital photographic development, ink mixing, and newspaper sorting, bundling, and distribution. Newsday stores inks in ten aboveground storage tanks (ASTs) and operates three large printing presses, five digital photo developing lines and four plate development lines. Printing equipment maintenance conducted at the site includes cleaning (plate cleaning and parts washing) and fluid replenishing (press oil for printing presses and propane cylinders for forklifts). Newsday operates approximately 30 electric forklifts, 2 propane forklifts, 8 clamp trucks, 1 maintenance truck and 1 van. The forklifts are serviced on-site by Newsday employees; no other vehicles are serviced on site and no vehicle washing occurs on site. Fueling of fleet vehicles is conducted on site using three underground storage tanks (UST) systems. Treatment of process wastewater and floor wash water is conducted in an on-site wastewater treatment plant located outside the building, which ultimately discharges to the exterior ground surface. The UST systems and wastewater treatment plant are discussed further below.

The approximately 50-acre site is developed with an approximately 539,000-square-foot production building, which is divided between an office area and production areas, and a wastewater treatment plant. The production areas contain a packaging and bundling area, a reel room (where paper reels are fed to the printing lines), two levels of printing presses (including the printing presses, photo developing lines, and plate developing lines discussed above), boiler rooms, emergency generator rooms, a cooling tower room, various chemical storage areas, mechanical rooms, electrical rooms, maintenance shops, and a paper reel storage warehouse. Chemical storage areas include three bermed areas (containing fountain solution ASTs, press oil and degreasers), and ink AST storage rooms on the first floor of the production area, and in an ink reclamation room and maintenance rooms on the second floor. Exterior features include two emergency generators (with two associated 1,100-gallon diesel fuel ASTs), trash compactors, scrap metal dumpsters, pallet storage and two pad-mounted transformers to the north of the building. To the west of the building is the wastewater treatment plant, a chemical storage shed (containing glycol, oil and paints), a fire suppression pond, out of use equipment (trash compactors, 40-yard dumpsters, pallets, etc.), a 40-yard recycling dumpster, a trash compactor, and a semi-enclosed emergency generator (with one 2,500-gallon fuel oil UST); the wastewater treatment plant includes sludge settling tanks, aerators and membranes, 11 underground pools, and a building containing two air compressors, a storage area for

wastewater treatment chemicals, and a laboratory. Three 20,000-gallon diesel fuel USTs with associated fuel dispensers (for vehicle fueling) are located to the southwest of the building and one 15,000-gallon fuel oil AST used to fuel boilers is located to the east of the building. Security guard stands, a baseball field and basketball court are present on the northern portion of the site.

By the early 1900s, the site consisted of agricultural land with a road traversing the central portion from east to west. Also at this time, associated farmstead residences were present on the southeast corner of the site. The site remained unchanged until the early 1950s, when an additional residence was constructed on the northeast corner of the site. In the mid-1970s the farmsteads on the southeast and northeast corners of the site were razed and in 1977, the site was redeveloped with the original portion of the current production building, the fire suppression water pond, the chemical storage shed, and the wastewater treatment plant. By the early 1990s, the production building was expanded to the south and west and the fuel pump island was constructed on the southern portion of the site. By the mid-2000s, a baseball field was constructed on the northwest corner of the site, bringing the site into its current configuration. According to the site representative, the site converted from chemical to digital photo development and has downsized in printing operations over the last 10 years. Historical site operations including current and historical use of USTs and ASTs are discussed further below.

Based on available historical records, RPS GaiaTech was able to identify a total of 15 underground tanks that are currently or were formerly operated at the site. Eight of these tanks were installed for Newsday in 1978, which include three 25,000-gallon diesel USTs, one 12,000-gallon gasoline UST and one 2,000-gallon underground spill containment tank (all removed in 1986); a 25,000-gallon No. 6 fuel oil UST and a 25,000-gallon No. 2 fuel oil UST (abandoned in place in 2010); and a 4,000-gallon industrial waste UST removed in 1987. One 2,500-gallon fuel oil UST was installed in 1987 currently still in use at the site. Three 20,000-gallon diesel USTs were installed in 1985 and replaced in 2010 with three new 20,000-gallon diesel USTs, which remain active. These USTs are discussed further below.

The site is located in an area currently characterized by residential development, commercial warehouses, and light industrial developments. In the early 1900s, the site area was agricultural land with associated farmsteads. Rural residential development expanded between the early 1950s and the early 1960s. By the mid-1960s, Ruland Road was constructed to the north and Pinelawn Road was constructed to the east of the site. Also at this time, light industrial and commercial development began to the north and farther south of the site. Light industrial development along Ruland Road and Deshon Drive continued through the 1990s including facilities on the northeast, south, southwest and west-adjacent properties. By the mid-2000s, residential development expanded farther west. The west-adjacent light industrial building was razed by 2013, and the current west-adjacent apartment complex and light industrial building were constructed by 2016, bringing the surrounding properties into their current configuration. Surrounding properties with a potential for impact are discussed below.

Findings

RPS GaiaTech has performed this Phase I ESA in conformance with the scope and limitations of ASTM-13 of the Newsday facility located at 235 Pinelawn Road in Melville, Suffolk County, New York. Environmental conditions and issues associated with the site are characterized as RECs, Controlled RECs (CRECs), Historical RECs (HRECs), de minimis conditions, noteworthy condition, or other issues as defined in Section 1.0 of this report. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

This assessment identified the following RECs in connection with the site:

- **Historical Site Operations:** Newsday has operated as a newspaper printing facility since the late 1970s. Printing operations have included the use of inks, washes, oils, and chlorinated solvents, the generation of hazardous wastes such as silver and spent chlorinated and non-chlorinated solvents, use of several current and historical USTs, and wastewater treatment operations; treated wastewater has been discharged to the exterior ground surface. Additionally, records of several release incidents were identified in historical records with regulatory closure. Many of these releases involved limited quantities of material, but also included incidents in 2000 related to a release of 1,600 gallons of diesel and in 2012 related to release of 500 gallons of combined industrial/wastewater sewage. Although regulatory closure was achieved for these releases, confirmatory sampling information was not provided to demonstrate no impacts remain from these incidents. Subsurface investigations were conducted around three former diesel fuel USTs and two fuel oil USTs (discussed further below); however, it appears that no subsurface investigations have been conducted to specifically address the other six former USTs. The long duration of printing operations involving the on-site discharge of treated wastewater, historical use of chlorinated solvents, operation of USTs, and history of repeated release incidents represents a potential for impact to the site.

- **Open Release Incident:** A release of 4 gallons of compressor oil was reported at the site in 2016 due to equipment failure. Drains in the production areas are connected to an oil/water separator before discharging to the on-site wastewater treatment plant. The spill was not listed as closed on the New York Department of Environmental Conservation (NYDEC) spills database. Because the spill involved a very limited quantity of oil and the release was captured by the wastewater treatment plant the potential for environmental impact from this release is low. However, it appears that the incident has not received regulatory closure; therefore, additional regulatory action may be required.

This assessment identified the following CREC in connection with the site:

- **Recently Closed USTs:** Three 20,000-gallon diesel USTs were installed in 1985 and removed in 2010 from the southern portion of the site. A Leaking UST (LUST) incident was reported upon removal of these USTs. A subsurface investigation was subsequently conducted, which included sampling the soil and groundwater around the former USTs and laboratory analysis of the samples for volatile organic compounds (VOCs) and Semi-VOCs (SVOCs). Results of the 2010 sampling results indicate that contaminant

concentrations were below applicable cleanup standards; however, because the full closure report was not provided for RPS GaiaTech's review, the exact location of the samples could not be determined. The results of the 2010 subsurface investigation were used to obtain regulatory closure of this LUST incident through the NYDEC. Additional subsurface soil sampling was conducted in 2014 after the abandonment of two 25,000-gallon fuel oil USTs. The investigation was conducted beneath one of the two USTs and identified two individual polycyclic aromatic hydrocarbons (PAHs) in the soil above applicable cleanup standards, but because total PAH was below 500 milligrams/kilograms (mg/kg) in each sample, the samples are considered to meet the cleanup standards even with individual exceedances; groundwater was not sampled during this investigation. Based on the sampling results, the USTs were given clean closure with no reported release. Available sampling data indicates that remaining contaminant concentrations around these former USTs are below applicable risk-based screening levels and regulatory closure has been granted for the reported release incidents, full UST closure documents to confirm the location sampling; therefore, RPS GaiaTech cannot confirm that confirmation sampling was conducted adequately to identify potential impacts.

This assessment identified the following noteworthy condition in connection with the site:

- **Surrounding Properties:** The surrounding area has been occupied by various light industrial facilities since at least the mid-1960s. Four adjacent facilities were identified with ASTs, USTs, hazardous waste generation, and releases. Records of 17 USTs and 10 reported releases were identified on these four facilities. The long history of industrial operations in the surrounding area with USTs and reported releases represents a potential for impact; however, because each of the reported releases were issued regulatory closure, the potential for impact to the site appears to be low.

This assessment identified the following other consideration in connection with the site:

- **Asbestos Containing Materials (ACMs):** RPS GaiaTech identified suspect and presumed ACMs in the form of drywall systems, drop ceiling tiles, vinyl floor tile and associated mastics and thermal system insulation (TSI) pipe wrapping in the production area of the building. Since the building was constructed prior to 1981 and due to the presence of vinyl floor tile, surfacing material and TSI, the OSHA regulations regarding management of vinyl floor tile and presumed ACMs (PACMs) in building materials apply to the site. It does not appear that there are programs in place at the site to address these requirements.

This Executive Summary is not intended to be used as a "stand alone" document, but is a summary of the complete Phase I ESA report. Information included in the Executive Summary is subject to the scope of services and limitations noted in the proposal and complete report text.

ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my/our professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR Part 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 INTRODUCTION

Tribune Media Company retained GaiaTech Incorporated dba RPS GaiaTech to conduct a Phase I Environmental Site Assessment (ESA) of the Newsday facility located at 235 Pinelawn Road in Melville, Suffolk County, New York (the site).

The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs), as defined by the ASTM International *Standard Practice for Environmental Site Assessments* - E 1527-13 (ASTM-13) or the existence of hazardous substances under the federal AAI standards. RPS GaiaTech performed the Phase I ESA to constitute all appropriate inquiry consistent with good commercial and customary practice.

Based on the Environmental Professional's (EP's) evaluation of available information, findings of this report are classified and defined as follows:

- REC: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.
- Controlled REC (CREC): a REC that resulted from a past release that has been addressed to the satisfaction of the applicable regulatory authority, with contamination allowed to remain in place subject to the implementation of required controls;
- Historical REC (HREC): a past release that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls;
- De minimis condition: a condition that could otherwise be considered a REC but in the EP's opinion does not appear to represent a threat to human health or the environment and/or would not likely be the subject of an enforcement action if brought to the attention of appropriate governmental agencies;
- Noteworthy condition: a contingent site risk that does not clearly fall within the ASTM definition of a REC, HREC, or de minimis condition and/or a risk that can have a material environmental or environmentally-driven impact on the business.
- Other consideration: an environmental issue or condition (e.g. asbestos, radon, or mold) at a property that falls outside of the scope of the ASTM-13 practice.

1.1 Scope of Work

RPS GaiaTech conducted the Phase I ESA in overall accordance with industry standards, including the requirements of ASTM-13 or the federal All Appropriate Inquiry (AAI) standard.

This report documents the research methodology used by qualified environmental professionals of RPS GaiaTech to conduct the Phase I ESA of the site and presents the findings of the assessment. The Phase I ESA included the following activities, subject to any limitations noted in this report:

1. Interviews with site owner(s), key site manager(s), and major occupant(s) and a review of site records with regard to current and former site operations that may have impacted the site.

   Information was provided to RPS GaiaTech by:

   - Mr. Stephen Zimmerman, Director of Engineering Services for Newsday, associated with the site for 33 years
   - Ms. Joe Marino, Senior Facilities Manager for Newsday, associated with the site for 19 years

2. A comprehensive site inspection to identify and evaluate potential sources of environmental impact, including but not limited to waste and chemical storage areas, underground storage tanks (USTs), aboveground storage tanks (ASTs), equipment containing polychlorinated biphenyls (PCBs), and wastewater and stormwater discharges. The inspection included observations for evidence of chemical spills, releases, or on-site waste disposal. A Site Location Map and a Site Layout and Area Map are included in Appendix A. Photographs of the site are included in Appendix B.

3. A review of historical information for potential on- or off-site sources of impact to the site. To the extent feasible under the conditions of the assessment, the historical information obtained included: verbal information and records from site and/or local agency representatives; previous reports; construction plans; building permits; property record cards; topographic maps; fire insurance maps; historical city directories; and aerial photographs. Copies of relevant historical documentation are included in Appendix C.

4. A visual survey of the properties in the vicinity of the site as observed from the site boundaries and public rights-of-way to evaluate the potential for impact to the site from these properties. A Site Layout and Area Map is included in Appendix A.

5. A review of tribal, state, and federal environmental database information, provided by Environmental Data Resources, Inc. (EDR) supplemented by agency interviews and record review, where appropriate. The database search was conducted using ASTM-designated search parameters; for parameters requiring a search of the site and adjacent properties only, the search radii were extended to ensure that ASTM-13 required search distances from the property boundary were met. Facilities listed in the database report as "unplottable" were reviewed to evaluate whether any are located in the immediate vicinity of the site, based on field observations. The database search report is included as Appendix D.

6. As determined necessary by the EP and beneficial in determining the environmental risk associated with nearby facilities, supplemental research (potentially including the review

of agency files, interviews with agency representatives, or others familiar with surrounding properties) was conducted.

7. Review of public health records and records of institutional and engineering controls pertaining to the site, as available through state listings provided by EDR, recorded on the current deed, or readily available in land title records. RPS GaiaTech notes this is not a professional lien search. The User of this report (as defined by ASTM-13) did not provide a professional environmental liens search for the site and did not request RPS GaiaTech to obtain one.

8. Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM-13 include the following: asbestos-containing materials (ACMs), lead-based paint (LBP), radon, lead in drinking water (LIDW), mold and wetlands. These issues may affect environmental risk at the site and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 8.0.

9. A review of vapor migration associated with on and off-site sources of known and potential environmental impact.

Information sources used to develop the conclusions of this report are presented in Section 10.0.

1.2 Project-Specific Limitations

No project-specific limitations were identified that would constitute a data gap or potentially affect the ability of the EP to form a conclusion regarding the site.

1.3 User Reliance

RPS GaiaTech performed this Phase I ESA on behalf of and exclusively for Tribune Media Company. This report and the findings shall not be relied upon, in whole or in part, by any other party, except by or with the express consent of RPS GaiaTech and an authorized representative of Tribune Media Company.

Any reliance upon this report by third parties beyond its intended purpose shall be at the parties' sole risk. In the event reliance on this report to additional parties is authorized in writings, these parties may become "users" as defined by ASTM-13 and should independently confirm that they have addressed the User requirements outlined in ASTM-13. Reliance by authorized parties is subject to RPS GaiaTech's standard terms and conditions.

2.0 CURRENT SITE DESCRIPTION

2.1 Site Location and Ownership

The approximately 50-acre site is located at 235 Pinelawn Road in Melville, Suffolk County, New York. The site is accessible from Ruland Road, Deshon Drive and Pinelawn Road which border the site to the north, east and west, respectively.

The site is currently owned by Tribune ND, Inc. (successor-in-interest to Tribune Company). The most recent deed identified in the records reviewed was a Deed to Tribune ND, Inc. from Tribune Company, dated December 26, 2008. No environmental liens or Activity and Use Limitations (AULs) were attached to the deed or otherwise identified in the historical resources.

Newsday leases the site from Tribune ND, Inc. RPS GaiaTech reviewed a lease agreement dated May 11, 2008 between Tribune Company and Newsday.

2.2 Current Occupants and Operations

Newsday operates a newspaper publishing and distribution company producing approximately 350,000 newspapers per day. Operations consist of the printing, plate development, digital photographic development, ink mixing, and newspaper sorting, bundling, and distribution. Newsday stores inks in ten aboveground storage tanks (ASTs) and operates three large printing presses, five digital photo developing lines and four plate development lines. Printing equipment maintenance conducted at the site includes cleaning (plate cleaning and parts washing) and fluid replenishing (press oil for printing presses and propane cylinders for forklifts). Newsday operates approximately 30 electric forklifts, 2 propane forklifts, 8 clamp trucks, 1 maintenance truck and 1 van. The forklifts are serviced on-site by Newsday employees; no other vehicles are serviced on site and no vehicle washing occurs on site. Fueling of fleet vehicles is conducted on site using three underground storage tanks (UST) systems. Treatment of process wastewater and floor wash water is conducted in an on-site wastewater treatment plant located outside the building, which ultimately discharges to the exterior ground surface.

2.3 Site Layout

The general site layout depicting buildings, structures and other pertinent features is shown in the Site Layout and Area Map, Appendix A. These features are briefly described in the following sections.

2.3.1 Buildings and Interior Features

The approximately 50-acre site is developed with an approximately 539,000-square-foot production building, which is divided between an office area and production areas, and a wastewater treatment plant. The production areas contain a packaging and bundling area, a reel room (where paper reels are fed to the printing lines), two levels of printing presses (including

the printing presses, photo developing lines, and plate developing lines discussed above), boiler rooms, emergency generator rooms, a cooling tower room, various chemical storage areas, mechanical rooms, electrical rooms, maintenance shops, and a paper reel storage warehouse. Chemical storage areas include three bermed areas (containing fountain solution ASTs, press oil and degreasers), and ink AST storage rooms on the first floor of the production area, and in an ink reclamation room and maintenance rooms on the second floor. These features are further described in Section 3.0, as needed.

2.3.2 Exterior Features

Exterior features include two emergency generators (with two associated 1,100-gallon diesel fuel ASTs), trash compactors, scrap metal dumpsters, pallet storage and two pad-mounted transformers to the north of the building. To the west of the building is the wastewater treatment plant, a chemical storage shed (containing glycol, oil and paints), a fire suppression pond, out of use equipment (trash compactors, 40-yard dumpsters, pallets, etc.), a 40-yard recycling dumpster, a trash compactor, and a semi-enclosed emergency generator (with one 2,500-gallon fuel oil UST); the wastewater treatment plant includes sludge settling tanks, aerators and membranes, 11 underground pools, and a building containing two air compressors, a storage area for wastewater treatment chemicals, and a laboratory. Three 20,000-gallon diesel fuel USTs with associated fuel dispensers (for vehicle fueling) are located to the southwest of the building and one 15,000-gallon fuel oil AST used to fuel boilers is located to the east of the building. Security guard stands, a baseball field and basketball court are present on the northern portion of the site. These features are further described in Section 3.0, as needed.

2.3.3 Paving, Landscaping and Unimproved Areas

The majority of the site is paved and landscaping is present around building perimeters and at various locations throughout the site.

2.4 Utilities

The building is heated with natural gas and diesel-fueled boilers and cooled electrically. Water and sanitary sewer services are municipally provided. No current or historical potable wells or septic systems were identified at the site.

2.5 Physical Setting

Topography and Drainage

The 7.5-minute topographic map of the area (*Huntington, New York* quadrangle, 2013) indicates that the site is located at an approximate elevation of 100 feet above mean sea level. The site is located in a relatively flat area that drains in various directions toward local drainage features that discharge southeast into the Carlls River, located approximately three miles to the southeast. The Carlls River then flows south into Great South Bay.

Soil and Geology

According to information provided in the environmental database search report and the *Web Soil Survey* (published on-line by the Natural Resource Conservation Service), the soils in the site area consist primarily of the Haven loam, which consists of well-drained silty clay with a moderate infiltration rate. Based on the 2008 report, the near-surface geology is composed of sandy materials mingled with outwash sand and gravel. Depth to bedrock was not available.

Hydrogeology
Area topography indicates that groundwater flow in the site area is likely to the southeast, and properties to the northwest are presumed to be upgradient. Site-specific groundwater depth information was not available. Based on the online Long Island Depth to Water Viewer, groundwater is approximately 31 to 50 feet bgs.

2.6 Water Resources and Wells

Drinking water is provided to the site and surrounding properties by the Dix Hills Water District, which obtains water from municipal wells and the Glacial and Magothy aquifers. Fifteen private water wells were noted within one mile from the site. No municipal or public water supply wells were identified within 1-mile of the site.

3.0 SITE INSPECTION AND RECONNAISSANCE

RPS GaiaTech conducted the site inspection on June 26, 2017, and the following sections present RPS GaiaTech's observations at that time. The site reconnaissance was limited to readily accessible areas and did not include areas beneath floors, above ceilings or behind walls.

3.1 Aboveground Storage Tanks (ASTs)

ASTs present during the site inspection are provided below. Unless otherwise described, no leaks, spills, stains or other evidence of releases were identified in connection with the ASTs. No evidence of historical ASTs was identified during the site reconnaissance.

Currently In-Use AST Summary			
Contents	***Capacity***	***Location***	***Storage Conditions***
Printing ink	Four 2,000-gallon and six 8,000-gallon ASTs	Various ink storage rooms	On epoxy-coated concrete floors
No. 2 fuel oil	One 25-gallon AST, and one 15,000-gallon AST	Within emergency generators/boiler rooms inside and east of the building	Within the emergency generators with secondary containment
Diesel fuel	One 275-gallon AST, two 100-gallon ASTs, two 1,110-gallon ASTs and one 125-gallon AST	Within emergency generators inside and north of the building	Within secondary containment
Industrial waste	Two 50-gallon, one 60-gallon, two 200-gallon ASTs, two 500-gallon AST	Press room storage areas	Within secondary containment
Cooling tower blow down water	One 550-gallon AST	Cooling tower room	Within secondary containment
Fountain solution	Six 500-gallon ASTs	Printing press area	Within secondary and tertiary containment
Descaling fluid	Four 8-gallon reservoirs and four 80 to 140-gallon ASTs	Boiler rooms and the cooling tower room	Within secondary and tertiary containment

The following historical ASTs were identified at the site:

UST System(s) Summary				
Tank ID	*Contents*	*Capacity*	*Installment Date*	*Removal Date*
13	Industrial Waste	100	1978	2001
26	Industrial Waste	2,000	1989	2002
27	Industrial Waste	2,000	1989	2002
28	Industrial Waste	250	1989	2003
30	Caustic	1,500	Unknown	2006

39	Cooling tower blow down	300	Unknown	2003
43	Industrial Waste	100	1998	2002
45	Developer	100	Unknown	Unknown
46	Fixer	100	Unknown	Unknown
47	Fixer	100	Unknown	Unknown
50	Parts washer solvent	200	Unknown	2005
51	Fountain solution	330	Unknown	2002
52	Fountain solution	330	Unknown	2002
53	Fountain solution	330	Unknown	2002
54	Fountain solution	330	Unknown	2002
55	Diesel	1,250	Unknown	2006
56	Diesel	1,250	Unknown	2006
65	Methanol	225	Unknown	Unknown
71	Hydraulic oil	81	Unknown	2013
72	Hydraulic oil	600	Unknown	2001

3.2 Underground Storage Tanks (USTs)

Newsday currently operates UST systems at the site that consist of four USTs, four fuel dispensers, and associated underground piping. Three of the UST systems are located on the southern portion of the site near the fuel pump island, and the fourth UST is located west of the building, as depicted in Appendix A. The following UST system information summary was developed based on information obtained from the New York Department of Environmental Conservations (NYDEC) and the site representatives:

UST System(s) Summary				
Item	*Tank 1*	*Tank 2*	*Tank 3*	*Tank 4*
Tank ID	*93*	*94*	*95*	*18*
Status and Registration	Currently in use; registered	Currently in use; registered	Currently in use; registered	Currently in use; registered
Contents	Diesel	Diesel	Diesel	#2 Fuel Oil
Date of installation	2010	2010	2010	1987
Capacity	20,000 gallons	20,000 gallons	20,000 gallons	2,500 gallons
Tank Construction	Double-walled Fiberglass	Double-walled Fiberglass	Double-walled Fiberglass	Double-walled Fiberglass
Piping Construction	Fiberglass-reinforced plastic (FRP)	Fiberglass-FRP	Fiberglass-FRP	Steel
Piping Type	Unknown	Unknown	Unknown	Unknown
Tank Leak Detection	Electronic Leak Probes	Electronic Leak Probes	Electronic Leak Probes	Electronic Leak Probes
Piping Leak Detection	Electronic Leak Probe & Auto Line	Electronic Leak Probe & Auto Line	Electronic Leak Probe & Auto	Tightness Testing

	Leak Detector	Leak Detector	Line Leak Detector	
Spill and Overfill Protection	Overfill or spill bucket and/or sump	Overfill or spill bucket and/or sump	Overfill or spill bucket and/or sump	Overfill or spill bucket and/or sump

The following historical USTs were identified at the site:

UST System(s) Summary				
Tank ID	*Contents*	*Capacity*	*Installment Date*	*Removal Date*
1	Diesel	25,000	1978	1986
2	Diesel	25,000	1978	1986
3	Diesel	25,000	1978	1986
4	Gasoline	12,000	1978	1986
5	Spill containment	2,000	1978	1988
6	No. 6 fuel oil	25,000	1978	Abandoned 2010
7	No. 2 fuel oil	25,000	1978	Abandoned 2010
8	Industrial Waste	4,000	1978	1987
14	Diesel	20,000	1985	2010
15	Diesel	20,000	1985	2010
16	Diesel	20,000	1985	2010

The status of the current and historical USTs are discussed is Section 6.1.

3.3 Petroleum and Hazardous Substances

In addition to materials stored in ASTs and/or USTs, described above, the types and quantities of chemicals used and stored on site are listed in the following table. Unless otherwise described below, no leaks, spills, stains or other evidence of releases were identified in the chemical storage areas.

Material	***Use***	***Location***	***Container Type and Maximum Quantity***
EZ Blue Cleaner	Degreaser	Caged drum storage within the first floor of the printing press	20, 55-gallon drums
Welding gases (acetylene and oxygen)	Welding operations	Welding room in the second floor press shop	9 cylinders
Propane	Forklifts	Rack within the press room	10 cylinders
Press Oil	Machine maintenance	Printing press	30, 55-gallon drums
Dowfrost glycol	Compressors	Hazardous materials storage building	4, 55-gallon drums
Biological phosphorus removal additive	Wastewater treatment	Wastewater treatment building	5, 55-gallon drums

Material	*Use*	*Location*	*Container Type and Maximum Quantity*
Plate cleaning solvent (non-chlorinated)	Plate cleaner	Ink reclaiming area	16, 55-gallon drums
Parts washer solvent (non-chlorinated)	Parts cleaning	Maintenance shop	One 200-gallon and two 40-gallon parts washers
Hydraulic oil	Fueling and maintaining elevator equipment	Elevator equipment room and elevator pits	Approximately 30-gallon equipment reservoir

3.4 Solid and Hazardous Waste

The following non-hazardous solid and special wastes are generated and managed at the site:

Waste Stream	*On-Site Storage*	*Transporter*
Trash and recycling	2, 40-yard dumpsters	City of Melville
Scrap metal	2, 40-yard dumpsters	Two Brothers Scrap Metal
Cardboard	Compactor	City of Melville
Used rags	5-yard dumpster	United Industrial Services
Grease trap solids	Grease trap	Local hauler
Used oil, empty drums and used containers	Within drum storage areas of the production areas	United Industrial Services
Parts washer fluid (petroleum distillates)	One 200-gallon and two 40-gallon parts washers	Safety Kleen

3.5 Stormwater

Stormwater infiltrates into soil, landscaped and gravel covered areas, or discharges into on-site stormwater collection features. These features include storm drains in the paved parking lots and a fire suppression water pond west of the building. No visual indications of oil or other pollutants were noted in the vicinity of the drains or the pond. No staining or stressed vegetation was noted; no sheen was noted on the surface of the water in the pond.

3.6 Spills, Releases, and Distressed Vegetation

RPS GaiaTech did not observe evidence of spills, releases, or stressed/dead vegetation.

3.7 Other Pertinent Site Features and Conditions

Additional pertinent features and conditions identified at the time of the site reconnaissance are listed in the following table. Additional discussion pertaining to those features and/or conditions observed is provided below the table.

Item	*Identified?*	
	Yes	*No*
Potential PCB-Containing Equipment	X	

On-Site Waste Disposal or Miscellaneous Debris		X
Septic Systems		X
Wastewater Discharges (Non-Sanitary)	X	
Sinks, Drains, Sumps	X	
Oil-Water Separators, Sand Traps, Clarifiers	X	
Pits, Ponds, Lagoons	X	
Strong, Pungent or Noxious Odors		X
Fill Material (Non-Structural), Terrain Anomalies		X
Unidentified Substances or Containers		X

Potential PCB-Containing Equipment

Two pad-mounted oil-filled transformers were observed at the site. The transformers were not labeled as "non-PCB". No leaks or stains were observed around the base of the transformers. The transformers are owned by ComEd.

Wastewater Discharges

Wastewater generated from newspaper production and wastewater in the production areas is directed through floor drains in the production areas to an oil/water separator before being treated at the wastewater treatment plant west of the building. Wastewater is treated using a combination of pre-equalization screens, rotary aerators, membrane clarifiers and sludge settling tanks. The treated wastewater is discharged to an underground cistern system (including 11 underground pools) from where it is discharged to the ground surface west of the wastewaster treatment plant. No spills or stains were observed near the wastewater treatment plant.

Grease Trap

The sinks located within the food preparation and cooking areas of the cafeteria discharge through an aboveground grease trap located in the basement before being discharged to the sanitary sewer system. Grease from the trap is pumped out and removed from the site by an outside contractor as needed basis. The site representative was unaware of how long the grease trap has been in use at the site. Given the environmentally benign nature of materials discharged to the grease trap, and because the grease trap is routinely cleaned, the grease trap does not represent a potential for impact.

Sinks, Drains, Sumps

RPS GaiaTech observed floor drains in the warehouse and production areas of the building. According to the site representative, the floor drains are connected to subsurface piping are discharge to the on-site wastewater treatment plant (discussed above). No spills or stains were observed near the drains. No materials or liquid chemicals are stored near the drains.

Fire Suppression Water Pond

A large pond is present west of the building and used to store water for firefighting purposes. No drains are discharged to the pond from the production area. No spills or stains were observed near the pond and no materials or liquid chemicals are stored near the pond.

4.0 USER PROVIDED INFORMATION

The purpose for performing this Phase I ESA was assumed to be (at least in part) to satisfy one of the requirements for the User to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability.

A questionnaire consistent with Appendix X3 of the ASTM-13 Standard was provided to Tribune Media Company to be completed as User of the report. At the time of issuance of this report, RPS GaiaTech had not received the completed questionnaire.

5.0 ENVIRONMENTAL DATABASE REVIEW

EDR was retained to provide an environmental database search report of ASTM-required federal, state and tribal environmental databases to identify whether the site, adjoining or nearby properties represent a known or potential impact. This review also included an evaluation of vapor migration using available historical, subsurface, and regulatory information, as well as published regulatory guidance, industry standards (including critical screening distances) and our professional experience.

Detailed descriptions of the environmental databases that were searched and definitions of acronyms are included within the Executive Summary Section and the Government Records Section of the environmental database search report (Appendix D).

5.1 Site Listings

A summary of the database listings identified for the site address is provided below:

Site Occupant	*Database Listing*	*Discussion*
Newsday	RCRA-LQG	Newsday was registered as a Large Quantity Generator (LQG) in 1980. Hazardous wastes generated at the site include corrosive waste, silver waste, spent halogenated solvents, spent nonhalogenated solvents, 2-propanone, acetic acid, formaldehyde, benzene, 1,1,2-trichloroethane, ethane. The site was subsequently registered as a NonGen in 1981, and registered again as a LQG from 1980 to 2014. Chlorinated solvents were generated at the site in 1980, 1981, 2004, 2006, 2008 and 2014. Newsday received several Notices of Violations (NOVs) related to regulations, records/ reporting, manifests, contingency plan/ emergency procedures, general facility standards, small quantity handlers, container use and management and pre-transporting of hazardous waste from 1986 to 2015, all of which have achieved compliance. The long history of chlorinated solvent waste generation represents a potential for impact to the site
Newsday	SEMS-ARCHIVE,	A CERCLIS Preliminary Assessment was conducted at the site in 1989. The site was not placed on the National Priority List (NPL) and in 1998 the site was issued No Further Remedial Action Planned (NFRAP) status. No other information was available regarding the reason for the Preliminary Assessment or the basis for issuing the NFRAP status. However, based on the regulatory status, it appears that this listing is not related to known subsurface impacts.
Newsday	NY AST, NY UST, NY LTANKS, NY Spills,	A spills incident was reported at the site in 1997 for the release of 20 gallons of hydraulic oil. Corrective action was taken and the incident was closed in 1997. A spills incident was reported at the site in 2000 for the release of 1,600-gallons of diesel. A third party contractor was notified to clean

		up the release and the incident was closed with the NYDEC in 2000; however associated spill documents were not available. A spills incident was reported for the site in 2001 for the release of 20 gallons of hydraulic oil. Corrective action was taken and the incident was closed in 2002. A spills incident was reported for the site in 2001 for the release of 20 gallons of hydraulic oil due to a failure of the hydraulic hose on a dumpster truck. Corrective action was taken and the incident was closed in 2004. A spills incident was reported for the site in 2005 for the release of 100 gallons of ink from the ink reclamation machine. The released ink was filtered and recycled. The area of the release was bermed and the incident was closed in 2006. A spills incident was reported in 2010 during the removal of three 20,000-gallon diesel USTs. Contamination was identified under the dispenser pumps and 166.83 tons of petroleum-impacted soil were excavated and disposed off-site. According to the database listing, laboratory analysis indicated all compounds were identified within acceptable concentrations (i.e. below applicable cleanup standards). The spill incident was closed in 2011. This release incident is discussed further in Section 6.1. A spills incident was reported in 2011 for the release of 6 gallons of diesel fuel from a fleet vehicle (not owned by Newsday) as it was exiting the site. No drains were reportedly affected and a third party contractor cleanup up the release. The incident was closed in 2011. A spills incident of 2,000-gallons of ink was reported for the site in 2012 due to a broken ink feeding tube on a printing machine. All of the material was reportedly contained within the printing shop and no floor drains were affected. The incident was closed in 2012. A spills incident was reported for the site in 2012 for the release of 500 gallons of combined industrial/sanitary wastewater sewage at the site. The spill was cleaned up on-site and closed in 2012; however, according to the NYDEC spill database, soil was affected. No other information or documents on the release were provided. A spills incident was reported for the site in 2014 for a release of 5 gallons of diesel fuel from a generator day tank. The spill was not reported to have migrated outside and was subsequently closed in 2014. A spills incident was reported for the site in 2015 for a release of 60 gallons of antifreeze due to a burst on a generator inside of the site,

		but the spill was reported to have migrated to a drain outside. The drywell was confirmed to have no outlets and a sand bottom. The DEC also confirmed the sand soaked up the entire product, and the incident was subsequently closed in 2015. A spills incident was reported for the site in 2016 for a release of 4 gallons of compressor oil due to equipment failure. Drains in the production areas are connected to an oil/water separator and discharge to the on-site wastewater treatment plant. The spill was not listed as closed on the EDR or the NYDEC spills database. While the quantity of oil released was limited, given the active status of the spill, the potential for impact exists. While 11 of the 12 releases at the site achieved regulatory closure, documentation for several of the releases were not provided through the resources reviewed; therefor the potential for impact to the site from the spills listings exists. Details regarding the ASTs and USTs installed at the site are discussed in Section 3.1 and 3.2.
Newsday	ICIS, US AIRS, FINDS, ECHO, NY MANIFEST, NJ MANIFEST, NY SPDES	The ICIS, US AIRS, FINDS, ECHO, NY MANIFEST, NJ MANIFEST and NY SPDES listings are related to environmental compliance and not indicative of impact.
Nalco Chemical (appears to be a subcontractor related to operation of boilers)	RCRA NonGen/NLR, FINDS, ECHO, NY MANIFEST	Nalco Chemical was registered as a Small Quantity Generator (SQG) of corrosive waste in 1996 with no violations found. Nalco Chemical was registered as a NonGen in 2007. Based on the lack of spills or released associated with the hazardous waste generation, the potential for impact is low. The FINDS, ECHO and NY MANIFEST listings are related to environmental compliance and not indicative of impact.

5.2 Adjacent and Surrounding Properties

Relevant listings for adjacent and surrounding properties are presented in the following table. Although other properties may be listed in the environmental database search report, based on location and/or regulatory status, these other properties do not have a potential for environmental significance to the site. Details regarding these properties are presented in the database search report. Unless noted below, the EP determined that a file review was not necessary for the facilities discussed in the following section.

Facility	***Relative Location/Gradient***	***Database Listing(s)***	***Discussion***
Imperial	southeast adjacent;	NY Spills, RCRA	Clare Rose was registered with one 1,000-

Facility	Relative Location/Gradient	Database Listing(s)	Discussion
News/ Clare Rose 255 Pinelawn Road	presumed downgradient	NonGen/NLR, NY UST, NY AST, FINDS, ECHO, NY MANIFEST	gallon #2 fuel oil UST installed in 1972 and removed in 1994, one 1,000-gallon #2 fuel oil UST installed in 1979 and removed in 1994, one 3,000-gallon #2 fuel oil UST installed in 1978 and removed in 1994, one 500-gallon waste oil UST installed in 1978 and removed in 1991, one 12,000-gallon diesel UST installed in 1979 and removed in 1991, one 2,000-gallon gasoline UST installed in 1979 and removed in 1991, one 12,000-gallon diesel UST installed in 1978 and removed in 1991, one 8,000-gallon gasoline UST installed in 1979 and removed in 1991 and two 550-gallon oil/water separators installed on an unknown date and removed in 1993. Clare Rose was registered with one 1,000-gallon diesel AST that is listed as never being installed. Additionally, this facility is listed with one 275-gallon #2 fuel oil AST, one 275-gallon motor oil AST, one 275-gallon waste oil AST and one 651-gallon diesel fuel AST that were installed in 1982. A spill incident was reported in August 1986 for an unknown amount of diesel fuel. The spill achieved closure in October 1986. A spill incident was reported in October 1993 for an unknown amount of waste oil; long term leaking from three or four holes in the bottom of a tank during which time the building was abandoned. Soil was excavated and the spill achieved closure in June 2004. A spill incident was reported in May 1994 for an unknown amount of fuel oil during tank removal. There were no holes in the tank and the spillage came from the top of the tanked. Cleanup actions were performed and the spill achieved closure in November 1994. A spill incident was reported in June 2008. During excavation a previously abandoned 1,000-gallon tank was encountered. The tank contained water and had a gasoline odor, and some of the water inside the tank spilled into

Facility	Relative Location/Gradient	Database Listing(s)	Discussion
			the excavation. The tank was removed in June 2008 and the spill achieved closure in April 2009. A spill incident was reported in August 2009 involving the release of ten gallons of diesel due to a vandalized broken meter on the diesel fuel pump. The report states that the spill was to asphalt and a small amount may have entered a catch basin on the property. The spill to the asphalt was cleaned up. The spill achieved closure in March 2010. A spill incident was reported in July 2013. A pad-mounted transformer released 3-gallons of transformer oil onto cement bottom and surrounding soil. Cleanup action was performed and the spill achieved closure in December 2013. Hazardous waste in the form of ignitable waste was generated at the facility for the years 1991 and 2006. No violations were found. The FINDS, ECHO, and NY MANIFEST listings indicates the facility is identified on other environmental databases. This is not indicative of impact to the site. Given the lack of spills or releases related to the ASTs and USTs, closure status of the spills listings and gradient, the potential for impact is reduced.
Tribune/ Newsday/ J.M Albrizzio 25 Deshon Drive	west adjacent; presumed downgradient	NY UST, NY AST, NY Spills	Hazardous waste in the form of ignitable waste and spent non-halogenated solvents were generated and reported at the facility in 1986, 1999, and 2006. The facility registered with non-generator status in 2007. One 15,000-gallon #2 fuel oil UST was removed in 1989. One 6,000-gallon #2 fuel oil UST was installed in 1991, and removed in 2013. Two 2,000-gallon #2 fuel oil USTs with an unknown installation date are currently in-use at the facility. The Newsday facility was registered with one

Facility	Relative Location/Gradient	Database Listing(s)	Discussion
			550-gallon industrial waste AST installed in 1983 and removed in 1992. One 100-gallon #2 fuel oil AST was installed in 1991 and is still in use. Four 80-gallon boiler chemical ASTs, two 80-gallon cooling tower chemical ASTs, and one 140-gallon boiler additive AST with unknown installation dates are still present at the facility. The Tribune facility was registered with two 60-gallon motor oil ASTs that were removed in 2013 and a 100-gallon #2 fuel oil AST that was removed in 2013. A spill incident was reported in November 1993. A driver transporting diesel hit a curb and approximately 15-gallons of diesel spilled on the road and parking lot. Corrective action was taken and the spill incident was closed in December 1993. A spill incident was reported in August 2005. Approximately 50-gallons of #2 fuel oil spilled in the boiler room. Corrective action was taken and the spill incident was closed in September 2005.
Eastern Athletic Club 100 Ruland Road	North adjacent; presumed upgradient	NY Spills, NY UST	The facility has two 1,000-gallon #2 fuel oil USTs that were installed in 1984, and are currently in-use. A spill incident was reported on December 26, 2009. Approximately 15-gallons of #2 fuel oil leaked from a fill pipe. Corrective action was taken and the site reached closure on December 28, 2009.
Heidelberg Publishing/ Linotype-Hell Co 80 Ruland Road	West-adjacent; presumed cross-gradient	RCRA NonGen / NLR, FINDS, ECHO, NY MANIFEST, NY AST	Hazardous waste in the form of corrosive waste and silver was generated and reported at the facility for the years 1998, 2001, and 2006. The facility was listed as a non-generator in 2007. The facility is registered with one 1,000-gallon drum storage AST and one 100-gallon photo wastewater AST, which are currently in-use.

Facility	Relative Location/Gradient	Database Listing(s)	Discussion
Pergament/ MRP Family Holdings 101 Marcus Drive	South-adjacent	NY Spills, NY MANIFEST, NY UST	The facility is registered with a 15,000-gallon #2 fuel oil UST that was removed in 2003. A spill incident was reported at the facility in March 2001. Approximately 300 gallons of #2 fuel oil leaked from the boiler room into the parking lot. Corrective action was taken and the spill incident was closed in December 2001.

6.0 SITE HISTORY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous occupants and uses of the site that are likely to have resulted in RECs in connection with the site. Historical data reviewed included, but was not limited to, aerial photographs, historical city directories, Sanborn fire insurance maps, building department records, and other agency files and documents. Historical resources are referenced in Section 10.0.

6.1 Site History Summary

By the early 1900s, the site consisted of agricultural land with a road traversing the central portion from east to west. Also at this time, associated farmstead residences were present on the southeast corner of the site. The site remained unchanged until the early 1950s, when an additional residence was constructed on the northeast corner of the site. In the mid-1970s the farmsteads on the southeast and northeast corners of the site were razed and in 1977, the site was redeveloped with the original portion of the current production building, the fire suppression water pond, the chemical storage shed, and the wastewater treatment plant. By the early 1990s, the production building was expanded to the south and west and the fuel pump island was constructed on the southern portion of the site. By the mid-2000s, a baseball field was constructed on the northwest corner of the site, bringing the site into its current configuration. According to the site representative, the site converted from chemical to digital photo development and has downsized in printing operations over the last 10 years. Historical site operations including current and historical use of USTs and ASTs are discussed further below.

Based on available historical records, RPS GaiaTech was able to identify a total of 15 underground tanks that are currently or were formerly operated at the site. Eight of these tanks were installed for Newsday in 1978, which include three 25,000-gallon diesel USTs, one 12,000-gallon gasoline UST and one 2,000-gallon underground spill containment tank (all removed in 1986); a 25,000-gallon No. 6 fuel oil UST and a 25,000-gallon No. 2 fuel oil UST (abandoned in place in 2010); and a 4,000-gallon industrial waste UST removed in 1987. One 2,500-gallon fuel oil UST was installed in 1987 currently still in use at the site. Three 20,000-gallon diesel USTs were installed in 1985 and replaced in 2010 with three new 20,000-gallon diesel USTs, which remain active..

Newsday has operated as a newspaper printing facility since the late 1970s. Printing operations have included the use of inks, washes, oils, and chlorinated solvents, the generation of hazardous wastes such as silver and spent chlorinated and non-chlorinated solvents, use of several current and historical USTs, and wastewater treatment operations; treated wastewater has been discharged to the exterior ground surface. Additionally, records of several release incidents were identified in historical records with regulatory closure. Many of these releases involved limited quantities of material, but also included incidents in 2000 related to a release of 1,600 gallons of diesel and in 2012 related to release of 500 gallons of combined industrial/wastewater sewage. Although regulatory closure was achieved for these releases,

confirmatory sampling information was not provided to demonstrate no impacts remain from these incidents. Subsurface investigations were conducted around three former diesel fuel USTs and two fuel oil USTs (discussed further below); however, it appears that no subsurface investigations have been conducted to specifically address the other six former USTs. The long duration of printing operations involving the on-site discharge of treated wastewater, historical use of chlorinated solvents, operation of USTs, and history of repeated release incidents represents a potential for impact to the site.

A release of 4 gallons of compressor oil was reported at the site in 2016 due to equipment failure. Drains in the production areas are connected to an oil/water separator before discharging to the on-site wastewater treatment plant. The spill was not listed as closed on the NYDEC spills database. Because the spill involved a very limited quantity of oil and the release was captured by the wastewater treatment plant the potential for environmental impact from this release is low. However, it appears that the incident has not received regulatory closure; therefore, additional regulatory action may be required.

Three 20,000-gallon diesel USTs were installed in 1985 and removed in 2010 from the southern portion of the site. A Leaking UST (LUST) incident was reported upon removal of these USTs. A subsurface investigation was subsequently conducted, which included sampling the soil and groundwater around the former USTs and laboratory analysis of the samples for volatile organic compounds (VOCs) and Semi-VOCs (SVOCs). Results of the 2010 sampling results indicate that contaminant concentrations were below applicable cleanup standards; however, because the full closure report was not provided for RPS GaiaTech's review, the exact location of the samples could not be determined. The results of the 2010 subsurface investigation were used to obtain regulatory closure of this LUST incident through the New York Department of Environmental Conservation (NYDEC). Additional subsurface soil sampling was conducted in 2014 after the abandonment of two 25,000-gallon fuel oil USTs. The investigation was conducted beneath one of the two USTs and identified two individual polycyclic aromatic hydrocarbons (PAHs) in the soil above applicable cleanup standards, but because total PAH was below 500 milligrams/kilograms (mg/kg) in each sample, the samples are considered to meet the cleanup standards even with individual exceedances; groundwater was not sampled during this investigation. Based on the sampling results, the USTs were given clean closure with no reported release. Available sampling data indicates that remaining contaminant concentrations around these former USTs are below applicable risk-based screening levels and regulatory closure has been granted for the associated reported release incident; however, sampling was only conducted beneath one of the abandoned fuel oil USTs and full UST closure documents were not provided to RPS GaiaTech to confirm sampling locations; therefore, RPS GaiaTech cannot confirm that adequate confirmation sampling was conducted to identify potential impacts.

6.2 Historical Maps and Photographs

RPS GaiaTech reviewed available historical aerial photographs, and topographic maps from the sources listed in Section 10.0. According to EDR, no Sanborn fire insurance maps were available for the site area. The information from these sources is summarized below. Copies of key maps and photographs are provided in Appendix C.

Source	Site Use Description
1903 Topo 1912 Topo 1924 Topo 1938 Aerial 1938 Topo 1947 Aerial	The site consisted of agricultural land with a road running through the central portion, from east to west. An associated farmstead residence is present on the southeast corner of the site.
1953 Aerial 1956 Topo 1962 Aerial 1966 Aerial 1969 Topo 1970 Aerial 1976 Aerial	Additional farmstead residences have been constructed on the northeast corner of the site.
1980 Aerial 1985 Aerial 1989 Topo	The farmsteads on the southeast and northeast corners of the site are no longer present. The original portion of the production building is present with associated parking areas to the south and southwest. The fire suppression water pond, chemical storage shed, wastewater treatment plant (with associated building) have been constructed west of the production building. The northern portion of the site appears undeveloped.
1994 Aerial 2001 Aerial 2004 Aerial	The production building was expanded to the south and west. Paved parking areas were added to the northern half of the site. The fuel pump island has been constructed on the southern portion of the site.
2006 Aerial 2007 Aerial 2008 Aerial 2009 Aerial 2011 Aerial 2013 Topo 2013 - 2017 Aerials	A baseball field is present on the northwest corner of the site and an additional building west of the wastewater treatment plant has been constructed, bringing the site into its current configuration.

6.3 Agency Record Review

RPS GaiaTech contacted or filed Freedom of Information Act (FOIA) requests with various agencies to obtain environmentally relevant information regarding the site. As of the date of this report, the following agencies had not responded to the FOIA requests:

- Town of Huntington Fire Prevention Bureau
- Suffolk County Department of Health Services
- New York Department of Environmental Conservation (NYDEC)

Pertinent information obtained from the agency resources is summarized as follows:

Town of Huntington Assessor: The production building was originally constructed in 1977.

Town of Huntington Building and Housing Department: According to a property record file for the site, construction permits and plans were identified for the following actions:

-1978: alterations to existing building and new construction of a lobby
-2005: installation of an antenna/dish
-2016: installation of one 100-gallon liquid petroleum tank
-2017: installation of one 100-gallon liquid petroleum tank

Additionally, various building addition, electrical, utilities and plumbing permits were issued between 1976 and 2017.

6.4 Prior Environmental Reports

Tribune Media Company provided historical documentation in connection with the site. A copy of the text and pertinent appendices of the reports are provided in Appendix C. A summary of this information follows:

Phase I Environmental Site Assessment, Newsday Main, 235 Pinelawn Road, Melville, New York, prepared by Geomatrix Consultants, Inc. (Geomatrix) for Tribune Company, dated March 2008 (the 2008 Phase I).

The 2008 Phase I was conducted for the purposes of a property transaction that included the site. At the time of the 2008 Phase I, the site was occupied by Newsday and operations were generally consistent with present day operations. The 2008 Phase I identified two 25,000-gallon #2 fuel oil USTs near the southeastern entrance of the building. The USTs were not present during RPS GaiaTech's inspection, and no evidence of a release from the former USTs was observed.

The 2008 Phase I indicated that minor staining was identified around the base of some of the ink ASTs; however, the associated spilled material appeared to be contained and the epoxy coating on the floor was in good condition. RPS GaiaTech also observed ink staining around the base of the ASTs at the time of the site inspection. The floor and base of the ASTs also appeared in good condition at the time of RPS GaiaTech's inspection. The 2008 Phase I did not identify any RECs; however, at the time of the 2008 report and at the time of RPS GaiaTech's inspection, UST removal and abandon reports pertaining to the leaking USTs/ spills listings for the site were not available. The 2008 Phase I also indicated the site is located in an area with several hazardous waste generators and/or petroleum storage facilities; however, the 2008 report did not expect these facilities to present a potential for impact to the site.

Tank Island Upgrade Construction Review, Newsday Main, 235 Pinelawn Road, Melville, New York, prepared by ERM for Tribune Company, dated July 2010 (the limited 2010 UST removal report).

According to the limited UST removal report, in 2010, three 20,000-gallon diesel USTs were removed from the site and replaced with three new 20,000-gallon USTs. A Tank

Commissioner's report provided to RPS stated that no holes were noted on the USTs and no soil staining was observed during UST removal. A diesel spill incident provided by the NYDEC (through the NYDEC spills database) in 2010 reported several rounds of soil and groundwater samples were obtained after the removal of the three USTs. While a full UST removal report was not provided, soil and groundwater samples for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were available. Sampling results indicated that contaminant concentrations in soil and groundwater were identified below New York Department of Environmental Conservation soil cleanup levels and the spill release incident, provided by the NYDEC spills database, was subsequently closed in March 2011. While the sampling results were below soil cleanup levels, based on the lack of UST removal documentation, it is not known where the soil and groundwater samples were obtained.

Spill Closure Report, Newsday Main, 235 Pinelawn Road, Melville, New York, prepared by ERM for Tribune Company, dated April 2014 (the 2014 spill closure report).

In the 2014 spill closure report, two 25,000-gallon #2 fuel oil USTs (Tanks 6 and 7) were proposed for abandonment south of the building at the site. Tank 6 passed the tightness test; however, Tank 7 failed and was immediately pumped out. Tank 6 remained in service for emergency generator fuel storage until early 2014 when it was replaced by an AST, emptied and abandoned. Four soil samples were obtained beneath fuel oil Tank 7 and analyzed for VOCs and SVOCs prior to tank abandonment. No samples were obtained from beneath tank 6 prior to its abandonment and no groundwater sampling was obtained. Soil sampling results for Tank 7 met cleanup levels except for benzo(a)anthracene and chrysene, which were above cleanup levels in two samples; however, in accordance with New York regulations, since the concentration of total PAH was below 500 milligrams/kilograms (mg/kg) in each sample, then the sample is considered to meet the cleanup level even with individual constituents exceeding their associated cleanup levels. Based on these sampling results, the State allowed the tanks to be abandoned in place without requiring remedial actions.

6.5 Interviews

6.5.1 Site Representative and Occupants

Mr. Stephen Zimmerman indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the site; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Mr. Joe Mariano indicated that two major additions have been constructed to the building to include a larger printing floor to add printing presses and an expansion to the newspaper bundling and palletizing area and shipping docks on the south side of the building. Mr. Mariano

also indicated that 10 years ago the site converted from chemical to digital photo development. Mr. Mariano noted that since Newsday stopped using fixer and developer chemicals for photo development, the site has not since generated any silver waste. Mr. Mariano also indicated Newsday historically operated 10 printing presses in the press room, but within the last 5 years, 4 of the printing presses were abandoned in place and the 4 remaining presses were combined to make the 3 large printing presses currently operating at the site.

6.5.2 Site Owner

Mr. Stephen Zimmerman is also a representative of the site owner, Tribune Media Company.

6.5.3 Past Owners, Operators and Occupants

Interviews with past owners and occupants regarding historical on-site operations were not reasonably ascertainable.

6.6 City Directories and Other Historical Sources

RPS GaiaTech reviewed available historical city directories obtained from the Environmental Database Report for the years 1973 to 2013 at approximately five-year intervals. Information from these sources is summarized below.

Year	*Description*
1973 to 1978	No Listings
1981 to 1988	Newsday Inc.
1992	New York Newsday Advertising, New York Newsday Circulation, Newsday in Education, Newsday Inc.
1995	Newsday
1999	Distinction Magazine, Newsday Incorporated, This Week Publications
2003	Distinction Magazine, DSA Community Publishing LLC, Long Island Parents & Children, Newsday, Newsday Community Service Fund, Newsday Riverhead Bureau, This Week Publications
2008	Corporate Travel Consultants, Distinction Inc., Newsday Community Service Fund, Newsday Inc. Advertising, Newsday Inc. Circulation, Newsday Medical Group, Newsday Long Island Parents & Childe, Riverhead Chamber
2013	Newsday

7.0 SURROUNDING PROPERTIES

7.1 Surrounding Property Summary

The site is located in an area currently characterized by residential development, commercial warehouses, and light industrial developments. In the early 1900s, the site area was agricultural land with associated farmsteads. Rural residential development expanded between the early 1950s and the early 1960s. By the mid-1960s, Ruland Road was constructed to the north and Pinelawn Road was constructed to the east of the site. Also at this time, light industrial and commercial development began to the north and farther south of the site. Light industrial development along Ruland Road and Deshon Drive continued through the 1990s including facilities on the northeast, south, southwest and west-adjacent properties. By the mid-2000s, residential development expanded farther west. The west-adjacent light industrial building was razed by 2013, and the current west-adjacent apartment complex and light industrial building were constructed by 2016, bringing the surrounding properties into their current configuration.

The surrounding area has been occupied by various light industrial facilities since at least the mid-1960s. Four adjacent facilities were identified with ASTs, USTs, hazardous waste generation, and releases. Records of 17 USTs and 10 reported releases were identified on these four facilities. The long history of industrial operations in the surrounding area with USTs and reported releases represents a potential for impact; however, because each of the reported releases were issued regulatory closure, the potential for impact to the site appears to be low.

7.2 Current Use of Adjoining and Nearby Properties

The site reconnaissance included a visual survey of the properties adjoining and in the vicinity of the site as observed from the site boundaries and public rights-of-way. The site is located in an area characterized by commercial warehouse developments and residential developments. The current uses of adjoining properties were observed:

North: Eastern Athletic Clubs (sports complex) and Ruland Road, followed by single family residences and commercial warehouses.

East: Pinelawn Road, followed by Pinelawn Memorial Park and Cemetery. Farther east is agricultural land.

South: An unnamed road, Clare Rose Inc. (beer distributor), Regent Baby Products Corporation (baby products manufacturer and distributor), and a distribution warehouse (formerly occupied by a Newsday inserting facility), followed by additional light industrial developments.

West: Deshon Drive, followed by a multi-tenant light industrial building, a temple, apartments and single-family residences.

7.3 Historical Maps and Photographs

Reasonably ascertainable historical sources were used to determine previous occupants and uses of adjacent and surrounding properties that are likely to have resulted in RECs in connection with the site. The summary below was developed based on information obtained from available resources that may have included aerial photographs, and historical topographic maps. According to EDR, no Sanborn fire insurance maps were available for the site area. Historical resources are referenced in Section 10.0.

Source	*Description*
1903 Topo 1912 Topo 1924 Topo 1938 Aerial 1947 Aerial	Surrounding properties consist of agricultural land with associated farmsteads.
1953 Aerial 1956 Topo 1957 Aerial 1962 Aerial	Single-family residences and farm silo/farm equipment are scattered throughout the properties to the north.
1966 Aerial	Ruland Road has been constructed to the north and Pinelawn Road has been constructed east of the site. Light industrial and commercial warehouse developments are present farther south of the site. A cemetery is present to the southeast and a retail structure is present farther north.
1969 Topo 1970 Aerial	The south-adjacent property is developed with a light industrial warehouse; light industrial developments are also present on properties farther to the south.
1976 Aerial	Deshon Drive has been constructed to the west, an unnamed road has been constructed to the south, and Marcus Drive has been constructed farther south of the site. Three industrial/warehousing buildings are present on the south-adjacent property (the former Newsday inserting facility), the northeast-adjacent property, and the southwest-adjacent property.
1980 Aerial	Light industrial buildings fill in to the south and southwest properties. Light industrial and commercial buildings are present farther north.
1985 Aerial 1989 Topo 2001 Aerial 1994 Aerial	A light industrial building/warehouse is present on the west-adjacent property

7.4 City Directories

RPS GaiaTech reviewed available historical city directories as presented in Section 6.6. The following summarizes the surrounding properties identified in the records reviewed:

Facility	Period	Occupant
255 Pinelawn Road ***Southeast adjacent; presumed cross-gradient***	1973	Britannc & ERPN Auto; NAPA Imports; Unex Prods Carr
	1978	Imperial News Co.; NAPA Imports
	1983	Cable News; Imperial News Co.; NAPA Imports; Select Magazine
	1988	Cable News; Imperial News Co.; NAPA Imports; Select Magazine; Warner Publisher
	1992	No Listings
	1995 - 2013	Clare Rose of Naussau Inc.; Dee Gee Express
25 Deshon Drive ***West-adjacent presumed cross-gradient***	1976	Belmil Computer
	1981 - 1986	Apt. Advertising; Belmil Computer; Belwin Mills Pub; CSG Creative SVC; Music Boutique
	1986	Dal Moline MSC Typ
	2007	Newsday Inc.

The Clare Rose was identified on the environmental database and is discussed further in Section 5.2.

7.5 Interviews and Other Historical Sources

No additional pertinent information concerning adjacent or surrounding properties was identified during the review of historical resources.

8.0 NON-ASTM SCOPE OF WORK

In addition to the Phase I ESA, Tribune Media Company requested RPS GaiaTech to conduct an assessment of certain additional non-ASTM scope items which may affect the environmental risk at the site. These non-ASTM scope items are discussed in the following sections.

8.1 Asbestos-Containing Materials (ACMs)

Previous Asbestos Surveys

Mr. Stephen Zimmerman was not aware of asbestos surveys for the site and none were identified in available site records.

Current Site Conditions

RPS GaiaTech identified suspect and presumed ACMs in the form of drywall systems, drop ceiling tiles, and vinyl floor tile and associated mastics throughout the interior of the building. Thermal system insulation (TSI) pipe wrapping was also identified on piping observed around the boilers. Suspect and presumed ACMs were observed to be in good condition.

Based on the date of construction (1977), before asbestos stopped being commonly used in the construction industry, there is potential for the materials identified to contain asbestos. It should be noted that additional suspect or presumed ACMs may be present in inaccessible areas of the site structure, such as above fixed ceilings, behind walls or in roofing systems, and were therefore not observed during the site reconnaissance.

Since the building was constructed prior to 1981 and due to the presence of vinyl floor tile, surfacing material and TSI, the OSHA regulations regarding management of vinyl floor tile and presumed ACMs (PACMs) in building materials apply to the site. It does not appear that there are programs in place at the site to address these requirements.

8.2 Mold

RPS GaiaTech performed a limited visual inspection for the presence of mold, water-damaged materials, and other evidence of water infiltrations at the site. The limited survey was conducted by observing interior areas of the building to identify the presence of mold and focused on areas of restricted air circulation such as storage spaces and utility closets, areas under sinks and around bathroom fixtures, areas at elevated risk of water intrusion such as exterior walls and windowsills, and common areas.

RPS GaiaTech did not note obvious visual or olfactory indications of the presence of mold, nor did RPS GaiaTech observe obvious indications of significant water infiltration or damage in accessible areas. In addition, site representatives were not aware of water infiltration or mold issues at the site.

8.3 Wetlands

Based on a review of the EDR Radius Map Report and the US Fish and Wildlife Service National Wetlands Inventory Map, provided by the City of Melville, it does not appear that mapped wetlands are present at the site. Other than the man-made pond on the western portion of the site, no obvious physical evidence of wetlands indicators was identified during RPS GaiaTech's site reconnaissance. The site observations and review of wetlands documentation provides an indication of the potential for wetlands at the site and does not constitute a wetlands determination or delineation.

9.0 FINDINGS

RPS GaiaTech has performed this Phase I ESA in conformance with the scope and limitations of ASTM-13 for the Newsday facility located at 235 Pinelawn Road in Melville, Suffolk County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

This assessment identified the following RECs in connection with the site:

- **Historical Site Operations:** Newsday has operated as a newspaper printing facility since the late 1970s. Printing operations have included the use of inks, washes, oils, and chlorinated solvents, the generation of hazardous wastes such as silver and spent chlorinated and non-chlorinated solvents, use of several current and historical USTs, and wastewater treatment operations; treated wastewater has been discharged to the exterior ground surface. Additionally, records of several release incidents were identified in historical records with regulatory closure. Many of these releases involved limited quantities of material, but also included incidents in 2000 related to a release of 1,600 gallons of diesel and in 2012 related to release of 500 gallons of combined industrial/wastewater sewage. Although regulatory closure was achieved for these releases, confirmatory sampling information was not provided to demonstrate no impacts remain from these incidents. Subsurface investigations were conducted around three former diesel fuel USTs and two fuel oil USTs (discussed further below); however, it appears that no subsurface investigations have been conducted to specifically address the other six former USTs. The long duration of printing operations involving the on-site discharge of treated wastewater, historical use of chlorinated solvents, operation of USTs, and history of repeated release incidents represents a potential for impact to the site.

- **Open Release Incident:** A release of 4 gallons of compressor oil was reported at the site in 2016 due to equipment failure. Drains in the production areas are connected to an oil/water separator before discharging to the on-site wastewater treatment plant. The spill was not listed as closed on the NYDEC spills database. Because the spill involved a very limited quantity of oil and the release was captured by the wastewater treatment plant the potential for environmental impact from this release is low. However, it appears that the incident has not received regulatory closure; therefore, additional regulatory action may be required.

This assessment identified the following CREC in connection with the site:

- **Recently Closed USTs:** Three 20,000-gallon diesel USTs were installed in 1985 and removed in 2010 from the southern portion of the site. A LUST incident was reported upon removal of these USTs. A subsurface investigation was subsequently conducted, which included sampling the soil and groundwater around the former USTs and laboratory analysis of the samples for VOCs and SVOCs. Results of the 2010 sampling results indicate that contaminant concentrations were below applicable cleanup standards; however, because the full closure report was not provided for RPS

GaiaTech's review, the exact location of the samples could not be determined. The results of the 2010 subsurface investigation were used to obtain regulatory closure of this LUST incident through the NYDEC. Additional subsurface soil sampling was conducted in 2014 after the abandonment of two 25,000-gallon fuel oil USTs. The investigation was conducted beneath one of the two USTs and identified two individual PAHs in the soil above applicable cleanup standards, but because total PAH was below 500 mg/kg in each sample, the samples are considered to meet the cleanup standards even with individual exceedances; groundwater was not sampled during this investigation. Based on the sampling results, the USTs were given clean closure with no reported release. Available sampling data indicates that remaining contaminant concentrations around these former USTs are below applicable risk-based screening levels and regulatory closure has been granted for the reported release incidents, full UST closure documents to confirm the location sampling; therefore, RPS GaiaTech cannot confirm that confirmation sampling was conducted adequately to identify potential impacts.

This assessment identified the following noteworthy condition in connection with the site:

- **Surrounding Properties:** The surrounding area has been occupied by various light industrial facilities since at least the mid-1960s. Four adjacent facilities were identified with ASTs, USTs, hazardous waste generation, and releases. Records of 17 USTs and 10 reported releases were identified on these four facilities. The long history of industrial operations in the surrounding area with USTs and reported releases represents a potential for impact; however, because each of the reported releases were issued regulatory closure, the potential for impact to the site appears to be low.

This assessment identified the following other consideration in connection with the site:

- **Asbestos Containing Materials (ACMs):** RPS GaiaTech identified suspect and presumed ACMs in the form of drywall systems, drop ceiling tiles, vinyl floor tile and associated mastics and TSI pipe wrapping in the production area of the building. Since the building was constructed prior to 1981 and due to the presence of vinyl floor tile, surfacing material and TSI, the OSHA regulations regarding management of vinyl floor tile and PACMs in building materials apply to the site. It does not appear that there are programs in place at the site to address these requirements.

10.0 REFERENCES

The following sources were used in conducting the Phase I Environmental Site Assessment detailed in this report. Where information obtained from these sources was determined to be useful by the Environmental Professional, it is summarized in the body of this report.

11.0 LIMITATIONS, EXCEPTIONS, AND SIGNIFICANT ASSUMPTIONS

This assessment is subject to the stated limitations of ASTM-13 or the federal AAI standard, as applicable, and other qualifications as described within the report.

This review was based on the time frame, budget and scope of the project. The review was intended to identify issues of relevance to the contemplated transaction that this report was prepared to support.

This assessment was conducted by or under the supervision of an individual(s) meeting the definition of an Environmental Professional under ASTM-13 and the federal AAI standard. Tasks not performed by an Environmental Professional were performed by individuals qualified based on education, training and experience to conduct such tasks for a property of the nature, history and setting of the site.

ASTM defines "data gaps" as an inability to obtain information required for the review despite good faith efforts (such as the lack of historical information back to 1940 or to the first developed use of the property [whichever is earlier]) or as an incompleteness in any of the activities required for the review (such as limited site accessibility or the inability to interview a key site representative). Unless otherwise described in the body of this report, if any one or more of the standard sources under ASTM-13 was not reviewed, this was due to information from the source not being readily available or a determination by the Environmental Professional that the standard source was not likely to be useful. Similarly, unless otherwise noted in this report, any incompleteness in connection with the review was determined not to affect the Environmental Professional's ability to form conclusions regarding the site.

Unless otherwise indicated herein, RPS GaiaTech was not made aware of any specialized knowledge of the landowner or client, any relationship of the purchase price to the fair market value of the site that may be indicative of an environmental concern, or any environmental liens or other activity and use limitations known by the client or user of the report. In the absence of this information, RPS GaiaTech is not able to form conclusions about the environmental condition of the site that may otherwise have been evident had any such information been made available. Unless otherwise indicated herein, the reason for performing this Phase I ESA is assumed to be (at least in part) to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser liability defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

It should be noted that past agricultural use is considered a developed use under ASTM; any past use of the site for agricultural purposes suggests a potential for residual agricultural chemicals at the site. Unless otherwise stated in this report, no evidence or reports of chemical spills or misuse of agricultural chemicals at the site was identified.

During this Phase I ESA, RPS GaiaTech relied upon the information provided by site representatives, regulatory officials and other informed individuals. RPS GaiaTech has assumed,

where reasonable, that the information reviewed is true and accurate but assumes no responsibility or liability for its accuracy or completeness.

RPS GaiaTech's site observations are of the conditions observed at the time of the assessment. RPS GaiaTech did not observe areas of the site or features of the site where that inspection would have interfered with operations. Additionally, RPS GaiaTech did not enter confined spaces. Pits, trenches or other subsurface features were inspected as thoroughly as possible from access points, vault openings, and through grated drains/lids. RPS GaiaTech did not test the integrity or engineering adequacy of subsurface pits, trenches, sewers, or containment features, aboveground containment systems or tanks. RPS GaiaTech's observations of such equipment/systems are limited to visual evidence of releases or significant deterioration.

RPS GaiaTech reviewed an environmental database search report. RPS GaiaTech's conclusions based on the search report are limited to the accuracy of that report. To the extent practicable, RPS GaiaTech's field observations were used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the site, consistent with the federal AAI standard.

RPS GaiaTech evaluates environmental database listings and the potential for additional documentation maintained by regulatory authorities to materially alter the Environmental Professional's opinion with regard to the environmental condition of the site. Except where otherwise described in this report, the pursuit of additional documentation either through regulatory agency file reviews or requests for additional information from the site operator, site owner or the owners/operators of nearby properties, was determined to be unnecessary as it would not alter the findings of the assessment.

Conclusions provided with regard to subsurface soil and groundwater impacts are limited to those that can be formed based on a non-intrusive investigation. RPS GaiaTech has considered all the information collected during this assessment to ascertain the potential presence of a release or threatened release of hazardous substances at the property. Based on the totality of information, RPS GaiaTech has assessed whether or not an obvious conclusion may be drawn that there are conditions indicative of a release or threatened release, and considered whether the parties should be able to detect the release by conducting a subsurface investigation. Where RPS GaiaTech concludes that the potential for impact is present, it should be understood that such impact can only be identified or ruled out through subsurface investigation. The absence of environmental hazards in the subsurface cannot be guaranteed based on conditions observed on the surface. The scope of this project did not include subsurface soil or groundwater sampling.

RPS GaiaTech evaluates the potential for the presence or likely presence of COC vapors in the subsurface of the site using our professional judgment and evaluation of the available information and may use portions of ASTM E2600-10 as a guide. Note that this evaluation is not a full Vapor Encroachment Screen (VES) pursuant to ASTM E2600-10. The vapor evaluation is not exhaustive and cannot wholly eliminate uncertainty regarding the presence or potential presence of COC vapors in the subsurface of the site.

The estimated groundwater gradients (flow directions) referenced throughout this report are based on field observations of the topography of the area, review of topographic map(s), information in the database search report, and other information as available. It should be noted that groundwater flow directions can be highly variable in neighboring areas, and can be influenced by factors such as water production wells or re-grading or development in the area.

ASTM does not include an assessment of wetlands. Unless otherwise noted, a wetlands assessment was not conducted. If conducted, the review of available wetlands information was intended for purposes of evaluating risks associated with potential on-site impacts and does not represent a jurisdictional wetlands delineation. A certified wetlands delineation may be necessary prior to further site development.

ASTM does not include an assessment of mold. Unless otherwise noted in this report, an inspection for mold was not conducted. If conducted, the visual assessment for water infiltration, water-damaged building materials, or the presence of mold or other microbial contamination was limited to easily accessible, visible areas for the purpose of identifying the potential need for additional review/sampling. Unless otherwise noted, sample collection or materials testing for water or microbial presence is also excluded from this assessment.

ASTM does not include an assessment of asbestos-containing materials (ACMs). Unless otherwise noted in this report, an inspection for ACMs was not conducted. The visual inspection for suspect ACMs included materials that have historically been shown to have a potential to contain asbestos. Unless otherwise noted in this report, RPS GaiaTech's review of ACMs is limited to interior building materials. The limited visual survey for suspect ACMs is intended to provide an indication of the potential for significant environmental issues associated with ACMs and should not be regarded as a comprehensive survey for demolition or other purposes. Testing should generally be conducted to identify regulated ACMs prior to remodeling or demolition of the site structures.

ASTM does not include an assessment of lead-based-paint (LBP). Unless otherwise noted in this report, an assessment or testing for LBP was not conducted. If conducted, RPS GaiaTech's review of LBP was limited to easily accessible and visible painted building materials. The limited visual survey for potential LBP is intended to provide an indication of the potential for significant environmental issues associated with LBP and should not be regarded as a comprehensive survey.

ASTM does not include an assessment of lead-in-drinking water (LIDW). Unless otherwise noted in this report, an assessment of LIDW was not conducted. LIDW testing, if performed, is intended as a limited screening for LIDW; additional testing may be required. Identified LIDW is limited to the areas tested and should not be relied on as a comprehensive survey for all water-related piping associated with the building(s).

ASTM does not include an assessment of radon. Unless otherwise noted in this report, an assessment of radon was not conducted. If conducted, the radon evaluation and/or screening,

was intended to provide available data or limited screening results within a defined scope and is not intended as a comprehensive radon survey.

The scope of this report is limited to matters expressly covered. Implementation or use of the recommendations, findings or conclusions of this report does not preclude the potential for present or future environmental liability or ensure the fulfillment of a property owner's obligation to provide full environmental disclosure in accordance with any local, state or federal laws.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Newsday Main
235 Pinelawn Road
Melville, New York

1.0 INTRODUCTION

Geomatrix Consultants, Inc. (Geomatrix) has prepared this report to identify potential environmental concerns and to report key findings from a Phase I Environmental Site Assessment (ESA) of the Newsday Main (Newsday) facility located at 235 Pinelawn Road in Melville, New York (the Site or Subject Property). The Site location is shown on Figure 1. The ESA was performed at the request of Tribune Company (Tribune) and was conducted in conformance with the ASTM International (ASTM) E1527-05 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-05). ASTM E 1527-05 complies with U.S. Environmental Protection Agency (EPA) All Appropriate Inquiries (AAI) Final Rule (40 CFR 312), which was promulgated November 1, 2005 and took effect November 1, 2006.

1.1 PURPOSE

The purpose of the ESA is to compile and review available information about the Site and immediate vicinity to identify *recognized environmental conditions* (RECs) to the extent feasible pursuant to ASTM E1527-05. According to ASTM E1527-05, an REC is defined as:

> "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The AAI Final Rule applies to:

> "…conditions indicative of releases and threatened releases of hazardous substances…(and) petroleum or petroleum products are excluded from the definition of hazardous substance…" (as referenced in 40 CRF 312.1).

1.2 REASON FOR PERFORMING THE ESA

Geomatrix understands that Tribune has commissioned this ESA as part of a potential property transaction and that Tribune may provide this ESA to potential buyers of the Subject Property as part of the disclosure documents when appropriate. As such, we understand that Tribune has commissioned this ESA to identify and summarize information required to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability (referred to as the landowner liability protections or LLPs). This ESA has been prepared using ASTM E1527 and constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 United States Code (U.S.C.) §9601(35)(B).

1.3 SCOPE OF SERVICES

The scope of services for this ESA included the following tasks:

- conducting site reconnaissance to observe and document current conditions and activities at the Site;
- conducting a visual survey of immediately adjacent parcels from the Site or from public streets;
- interviewing the Site owner/occupant;
- interviewing past owners and occupants of the Site if identified by the current owner;
- interviewing a representative of a local environmental regulatory agency regarding potential environmental conditions, if applicable;
- reviewing historical documents, state, tribal, and local government records or other restrictions on the Site going back to the first time the Site had structures or was used for residential, agricultural, commercial, industrial, or governmental purposes, if readily available;
- reviewing available historical aerial photographs for the Site and vicinity;
- reviewing available Sanborn Fire Insurance (Sanborn) maps for the Site and vicinity;
- reviewing available historical topographic maps for the Site and vicinity;

- obtaining a regulatory database search report to identify reported on-site and off-site chemical releases that may affect soil or groundwater conditions at the Site;
- reviewing selected agency files identified in the regulatory database search report to obtain current status of environmental assessments and/or remediation at the Site and nearby properties;
- reviewing environmental documents related to the Site provided by Tribune;
- evaluating the data and identifying data gaps, open issues, and key uncertainties; and
- preparing a report documenting these activities and identified RECs, including our opinions on the significance of the data gaps insofar as they impact the ability to identify possible contamination.

1.4 EXCLUSIONS

ASTM E1527-05 includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing building materials; radon; lead-based paint; lead in drinking water; wetlands; regulatory compliance; cultural and historic resources; industrial hygiene; health and safety; ecological resources; endangered species; indoor air quality; and biologic agents and mold. These additional items were not included in our assessment of the Site: collection and chemical analysis of samples of bulk materials, wastes, soil, water, or air; or an evaluation of seismic or geotechnical characteristics.

1.5 SIGNIFICANT ASSUMPTIONS

Based on regional groundwater information reviewed and discussed in Section 2.2.2 of this report, the assumed direction of horizontal groundwater flow beneath the Site and in the Site vicinity is generally toward the southeast. Geomatrix did not measure groundwater elevations in any wells during this Phase I ESA to confirm groundwater flow direction in the Site vicinity.

1.6 LIMITATIONS

This report does not constitute legal advice. In addition, Geomatrix makes no determination or recommendations regarding the decision to lease, purchase, sell, or provide financing for the Subject Property.

Time Constraint

An ESA report is required to meet the transaction deadlines. The opinions and conclusions presented in this report are only based on the Site conditions observed and information reviewed at the time of this assessment. Information pertaining to Site conditions or changes may exist that Geomatrix is not aware of, or which we have not had the opportunity to evaluate within the time available for this ESA.

Uncertainty Not Eliminated

As acknowledged in ASTM E1527-05, no ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The use of ASTM E1527-05 is intended to reduce, but not eliminate, this uncertainty.

Within the limitations of the agreed-upon scope of work and ASTM E1527-05, Geomatrix has conducted this ESA in a professional manner in accordance with generally accepted practices, using the degree of skill and care ordinarily exercised by environmental consultants under similar circumstances. Due to physical limitations inherent to this or any environmental assessment, Geomatrix does not warrant that the Site is free of pollutants or that all pollutants have been identified. As such, no absolute determination of environmental risks can be made. No other warranties, expressed or implied, are made.

Reliance on Information Provided by Others

Geomatrix has relied upon information provided by others in the evaluation of environmental site conditions reported herein. Geomatrix did not attempt to independently verify the accuracy or completeness of that information. To the extent that the opinion and conclusions in this report are based in whole or in part on such information, those conclusions are contingent on its accuracy and validity. Geomatrix assumes no responsibility for any consequence arising from any information or condition that was concealed, withheld, misrepresented, or otherwise not fully disclosed or available to Geomatrix.

1.7 USER RELIANCE

This ESA report has been prepared by Geomatrix for the express use of Tribune. No other parties shall rely on this report without the written consent from Geomatrix and Tribune. Tribune may release this report to third parties; however, such third party in using this report agrees that it shall have no legal recourse against Geomatrix or subsidiaries.

2.0 SITE DESCRIPTION

The characteristics and uses of the Site and vicinity are described in the following sections.

2.1 LOCATION AND LEGAL DESCRIPTION

The Site is located at 235 Pinelawn Road in Melville, New York. The Site is approximately 50 acres in size and is occupied by a building totaling approximately 539,000 square feet.

Title records were not provided to Geomatrix for review during this ESA, and a review of environmental liens is excluded from the scope of services for this ESA. Tribune is handling this matter with its counsel.

2.2 SUBJECT PROPERTY AND VICINITY GENERAL CHARACTERISTICS

The general Site setting and the geology and hydrogeology in the vicinity of the Site are summarized in the following subsections.

2.2.1 General Site Setting

The Site was identified on the United States Geological Survey (USGS) Huntington quadrangle topographic map, dated 1967 and photo-revised in 1979 (USGS, 1979). The USGS topographic map was used as the source for Site setting information.

The Site is located at an elevation of approximately 106 feet above mean sea level. The Site is located in a topographic low between higher elevations to the north, west, and east. The topography in the vicinity of the Site slopes to the southeast. The topography of the Site itself is relatively flat. The Site is in an urban area that has been developed for commercial and industrial land use.

2.2.2 Geology and Hydrogeology

The geology of the vicinity of the Site is described in the USGS document "Surficial and Northern Atlantic Coastal Plain Aquifer Systems, Long Island" (USGS, 1995). The vicinity of the Site is dominated by two sub-parallel ridges consisting of the Harbor Hill Terminal Moraine and the Ronkonkoma Terminal Moraine deposited during the Wisconsinian glacial age. The Ronkonkoma Terminal Moraine is closest to the Site. The moraines are dominated by sandy materials mingled with outwash sand and gravel. Coastal Plain sediments from the Cretaceous and Pleistocene ages underlie the moraines. The depth to bedrock is nearly 2,000 feet.

From shallowest to deepest, the Upper Glacial, the Magothy, and the Lloyd aquifers comprise the three main Long Island aquifers. Groundwater is the primary source of potable water on Long Island. Based on potentiometric maps of the aquifers, regional groundwater in the vicinity of the Site flows in a southeasterly direction.

2.3 CURRENT USE OF THE SITE AND ADJOINING PARCELS

The Site consists of 50 acres of land that was developed in 1977 as a newspaper printing facility. The Site layout is shown on Figure 2. Newsday publishes daily newspapers with a circulation of approximately 1.9 million readers weekly. Newsday also circulates flyers in the newspaper. The flyers are inserted at a separate facility located at the adjacent property to the west of the Site at 25 Deshon Drive in Melville, New York. The activities that are performed at the Site are described in greater detail below.

Photographic Development

Photographic development is currently performed using digital technology. Most of the chemical-based photo-processing equipment has been decommissioned (either removed from the Site or is scheduled to be removed in the near future). Mr. Joseph Marino, Manager, Facilities Engineering, Newsday, indicated that silver waste is no longer generated.

Platemaking

In platemaking, the copy is developed onto aluminum plates. A pre-coated plate is exposed to ultraviolet light. Developing solution is applied to the plates, followed by a gum-based sealing solution. The developed plates are bent to fit onto the plate cylinder on the presses. The used plates are recycled off-site.

Printing

The plates from platemaking are fixed to the plate cylinders on the printing presses. The printing process involves transfer of the image in ink from the plate to the cylindrical rubber blankets. The image then is transferred from the rubber blankets to a paper web (a continuously fed roll of paper) at high speed. The units on a Colorliner press use an ink injector system that automatically provides a measured amount of ink to the ink rail. A series of rollers takes the ink from the rail, works it into an even film, and transfers the ink to the printing plate. The printing plate in turn transfers the ink to the rubber blanket cylinder, which

prints the image onto the paper web. Ink volume settings are made at the operator's console that automatically controls the ink addition.

The Colorliner unit uses the Goss Spray Bar System with direct-to-plate dampener rollers that apply a dampening solution (a mixture of water and fountain solution) directly to the plate cylinder. The dampening solution is automatically mixed and pressurized for distribution to the spray bars through eight high-pressure spray nozzles. Dampener settings also are made at the operator's console.

Ink Mixing

Infrequently, colors that cannot be readily matched using the four-color printing process are custom mixed, placed in canisters, and attached to the ink injector system on various press units. The mixing canisters are cleaned by scraping excess ink out and placing the ink into a slop ink collection bin. These canisters are cleaned in a water washer. The slop ink is pumped out of the collection bins into a storage tank for reclaiming on site.

The Site is located in an area that appears to be primarily used for light industrial and commercial purposes. Ruland Road, commercial properties, and properties under development are present to the north of the Site. Parklawn Road and Long Island National Cemetery are present to the east of the Site. An unnamed service road and light industrial and office buildings are present to the south of the Site. Deshon Drive and the Newsday Patterson building are present to the west of the Site, with residential development beyond. Several surrounding properties were identified in the regulatory database search report prepared for this ESA, and environmental issues associated with these properties are further discussed in Section 4.1.2.

3.0 INFORMATION PROVIDED BY TRIBUNE

The following subsections present information provided by Tribune, the user of this Phase I ESA.

3.1 ENVIRONMENTAL LIENS

Title records were not provided to Geomatrix for review during this ESA, and a review of environmental liens is excluded from the scope of services for this ESA. Tribune is handling this matter with its counsel.

3.2 SPECIALIZED KNOWLEDGE

No specialized knowledge was provided by Tribune.

The following items of environmental interest were identified during review of Newsday's environmental files:

- A Compliance Stack Test Report, dated December 6, 2007, indicated that the air discharges from the Site met the requirements contained in the State Facility Air Permit 1-4726-00157/00003.
- Newsday received a letter from the New York State Department of Environmental Conservation (DEC) on January 2, 2008, citing 11 violations for a storage tank in the wastewater treatment plant (WWTP). Newsday responded to DEC on January 8, 2008, stating that the storage tank had been removed and the Site was in compliance.
- Newsday submitted an Annual Hazardous Waste Report to the DEC on February 22, 2007. Newsday reported that 30.2 tons of hazardous wastes were generated at the Site in 2006.
- A spill occurred in the solvent storage room in 2007. Approximately 55 gallons of C&W New Age L-50 WMB (blanket wash fluid) spilled from a drum. The fluid was collected and approximately 3 cubic yards of absorbent material were used to clean up the fluid.
- The 2007 annual report for State Pollutant Discharge Elimination System (SPDES) NY0136751 identified the following non-compliance events:
  - December 2007 – non-compliance for alkalinity (6.1 milligrams per liter [mg/L]).
  - March 2007 – non-compliance for nitrogen (48 mg/L).
  - February 2007 – non-compliance for nitrogen (41 mg/L).
- The following summarizes the most recent list of tanks for the Operating Permit Renewal for Registration No. 4-0094 as submitted to the DHS:

Tank ID	Capacity (gallons)	Product
6	25,000	No. 2 fuel oil
7	25,000	No. 2 fuel oil
9	275	No. 2 fuel oil

Tank ID	Capacity (gallons)	Product
10	8,000	black ink
11	8,000	black ink
12	8,000	black ink
14	20,000	diesel
15	20,000	diesel
16	20,000	diesel
17	100	No. 2 fuel oil
18	2,500	No. 2 fuel oil
22	1,380	drum storage
23	200	industrial waste
24	165	industrial waste
25	500	industrial waste
31	8,000	black ink
32	8,000	black ink
33	8,000	black ink
34	2,000	cyan ink
35	2,000	yellow ink
36	2,000	red ink
37	2,000	magenta ink
38	125	No. 2 fuel oil
40	25	No. 2 fuel oil
41	550	blowdown
42	550	industrial waste
44	55	developer
45	55	developer
46	55	fixer
47	55	fixer
48	66	photo chemicals
49	200	dry photo chemicals
57	80	boiler chemical
58	80	boiler chemical
59	80	boiler chemical
60	80	boiler chemical
61	80	cooling tower chemical
62	140	cooling tower chemical
63	80	cooling tower chemical
64	140	cooling tower chemical
65	220	methanol
66	660	drum storage
68	5,280	drum storage
70	120	elevator hydraulic oil

Tank ID	Capacity (gallons)	Product
71	80	compressor hydraulic oil
74	275	miscellaneous drums
75	500	fountain solution
76	500	fountain solution
77	500	fountain solution
78	500	fountain solution
79	660	transfer facility
80	60	industrial waste
81	60	industrial waste
82	50	industrial waste
83	500	industrial waste
84	2,860	unknown
85	200	degreaser
86	1,100	diesel
87	1,100	diesel
--	186,706	Total Gallons Storage

4.0 ENVIRONMENTAL RECORDS REVIEW

The findings of environmental records research and review are presented in the following subsections.

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Geomatrix retained Environmental Data Resources, Inc. (EDR), of Milford, Connecticut to search federal, state, and tribal environmental regulatory databases to identify properties located within ASTM-specified radii of the Site with documented environmental releases and/or those properties that use, store, or dispose of regulated chemicals. The entire facility and all surrounding properties were captured by this search radius. A list of the regulatory databases searched and the results are presented in the EDR report provided in Appendix A.

4.1.1 Subject Site

The Site was identified by EDR as being listed on the following regulatory databases – Facility Index System/Facility Registration System (FINDS), New York Manifest (NY Manifest), Resource Conservation and Recovery Act Non-Hazardous Waste Generators (RCRA-NonGen), Aboveground Storage Tank (AST), Leaking Storage Tank Incident Reports (LTANKS), NY Spills, NY Historical Spills, Historical LTANKS (HIST LTANKS), RCRA Large Quantity

Generators (RCRA-LQG), Comprehensive Environmental Response, Compensation, and Liability Information System No Further Remedial Action Planned (CERCLIS-NFRAP), State Pollutant Discharge Elimination System (SPDES), and Underground Storage Tank (UST).

Summaries of the listings are described below.

4.1.2 FINDS

The FINDS database contains both facility information and 'pointers' to other sources that contain more detail. Nalco Chemical (provider of boiler and cooling tower descaler) at 235 Pinelawn Road is listed in NY Manifest and RCRA-NonGen databases as further discussed below.

4.1.3 NY Manifest

The NY Manifest database lists and tracks hazardous waste from the generator through transporters to a treatment storage, and disposal facility (TSDF). Nalco Chemical is listed for the Site's boiler house. The database lists the waste code as D002 (non-corrosive wastes) that are stored in metal drums or barrels. The wastes likely relate to the boiler descaler used at the Site. No violations or records of spills were reported for these wastes. Based on this information, the listing of NY Manifest is not expected to represent a significant environmental concern.

4.1.4 RCRA-NonGen

The RCRA-NonGen database contains records of non-generators that do not presently generate hazardous waste. Nalco Chemical is listed for the Site's boiler house. The database lists Nalco Chemical as a verified non-generator with no violations found. Based on the lack of violations, the listing of RCRA-NonGen is not expected to represent a significant environmental concern.

4.1.5 AST

The AST database contains information on ASTs that are registered with the DEC. A total of 70 AST records were recovered by EDR. These records relate to the storage of diesel fuel for the emergency generators, ink storage, descaler storage, and other materials related to the publishing process. Environmental issues pertaining to the ASTs are discussed further in Section 8.0.

4.1.6 LTANKS

The LTANKS database contains records of leaking storage tank incident reports from April 1, 1986 through to the most recent update. The following records were identified in the database:

- A failed tightness test for a 25,000-gallon UST was reported to the DEC on November 11, 1997. The "spill closed date" was not listed in the EDR report.
- A failed tightness test for a 25,000-gallon UST was reported to the DEC on April 30, 1992. The affected media was reported as soil. The tank and lines passed a tightness test on May 15, 1992. The release reportedly occurred from a compression pipe clamp below the surface-mounted fill cap. The fill box was replaced and approximately 2 cubic yards of contaminated soil were removed. The spill was closed on May 27, 1998.

Geomatrix was not provided with reports/documents pertaining to the leaking UST. In lieu of these documents, Geomatrix cannot rule out the possibility of residual subsurface contamination from the reported leaking UST(s).

4.1.7 NY Spills

The NY Spills database contains records of spills reported to the DEC. The following records were listed in the database:

- A release of 1,000 to 1,500 gallons of diesel fuel (initially reported as 100 to 200 gallons) occurred to the blacktop and storm drain on October 23, 2000. A remedial contractor was retained to clean the storm drain. The spill was closed on December 14, 2000.
- A release of 100 gallons of ink was reported to the DEC on September 22, 2005. The release reportedly occurred in a bermed area within a sealed floor. The spill was closed on March 14, 2006.
- A release of 40 gallons of No. 2 fuel oil was reported to DEC on October 20, 1989. The release reportedly occurred when a pump over-ran near an emergency generator and the fuel oil was released. The spill was closed on October 23, 1989.
- A release of 20 to 35 gallons of hydraulic oil was reported to DEC on August 18, 2007. The release reportedly occurred when a hydraulic line on a trash compactor was ruptured. The hydraulic oil was cleaned up using absorbent, which was subsequently placed into drums and disposed off-site. The spill was closed on December 1, 1997.

Based on regulatory closures, the listings of NY Spills are not expected to represent a significant environmental concern.

4.1.8 NY Historical Spills

The NY Historical Spills database contains records of chemical and petroleum spill incidents. The NY Historical Spills contains fields that are no longer available from the DEC as of January 1, 2002.

- A release of 100 to 200 gallons of diesel fuel occurred to the blacktop and storm drain on October 23, 2000. A remedial contractor was retained to clean the storm drain. The spill was closed on December 14, 2000. This release appears to be the same release discussed above in NY Spills.

- A release of 20 gallons of hydraulic oil from a truck was reported to the DEC on August 27, 2001. The spill reportedly was cleaned with speedy dry. The spill closed date was not listed in the EDR report.

- A release of 50 gallons of diesel fuel from a truck was reported to the DEC on January 21, 1994. The release was reportedly contained and cleaned up. The spill close date was March 29, 1994.

- A release of 40 gallons of No. 2 fuel oil was reported to DEC on October 20, 1989. The release reportedly occurred when a pump over-ran near an emergency generator and the fuel oil was released. The spill was closed on October 23, 1989. This release appears to be the same release discussed in NY Spills.

- A release of 20 to 35 gallons of hydraulic oil was reported to DEC on August 18, 2007. The release reportedly occurred when a hydraulic line on a trash compactor was ruptured. The hydraulic oil was cleaned up using absorbent, which was subsequently placed into drums and disposed off-site. The spill was closed on December 1, 1997. This release appears to be the same release discussed in NY Spills.

Based on regulatory closures, the listings of NY Historical Spills are not expected to represent a significant environmental concern.

4.1.9 HIST LTANKS

The HIST LTANKS database contains records of leaking USTs and ASTs. This database was no longer updated as of January 1, 2002. The following records were identified in the database:

- A failed tightness test for a 25,000-gallon UST was reported to the DEC on November 11, 1997. This release appears to be the same incident discussed in LTANKS.

- A failed tightness test for a 25,000-gallon UST was reported to the DEC on April 30, 1992. This release appears to be the same incident discussed in LTANKS.

Geomatrix was not provided with reports/documents pertaining to the leaking UST. In lieu of these documents, Geomatrix cannot rule out the possibility of residual subsurface contamination from the reported leaking UST(s).

4.1.10 RCRA-LQG

The RCRA-LQG database contains records of large-quantity generators of hazardous waste as defined by RCRA. LQGs generate over 1,000 kilograms of hazardous waste or over 1 kilogram of acutely hazardous wastes per month. The Site is listed as a LQG for batteries, lamps, ignitable hazardous wastes, corrosive hazardous wastes, and spent halogenated solvents. The EDR report indicates that Newsday has received 13 notices of violations. All of the violations are listed as having "written informal" enforcement action, with compliance being achieved for all violations. No documented releases of these wastes were reported. Based on the absence of documented releases, the RCRA listing is not expected to represent a significant environmental concern.

4.1.11 CERCLIS-NFRAP

The CERCLIS-NFRAP database lists sites that have been delisted due to completion of assessment activities where no further action will be taken to list the sites on the National Priorities List (NPL). The CERCLIS-NFRAP assessment process for the Site reportedly was completed on October 21, 1998. Based on the delisted status of the Site, the CERCLIS-NFRAP listing is not expected to represent a significant environmental concern.

4.1.12 SPDES

The SPDES database contains records of controlled wastewater and stormwater discharges in accordance with the Clean Water Act, including discharges to groundwater. The SPDES permit for the Site's WWTP expires on September 30, 2011. The average flow is listed as 45,000 gallons per day. The treated effluent reportedly is discharged to groundwater. No documented releases from the WWTP were reported. Based on the absence of documented releases, the SPDES listing is not expected to represent a significant environmental concern.

4.1.13 UST

The UST database contains records of facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons. The UST database lists 14 registered USTs at the Site as follows:

Tank ID	Capacity (gallons)	Product	Comment
1	25,000	Diesel	Removed on 1/1/86
2	25,000	Diesel	Removed on 1/1/86
3	25,000	Diesel	Removed on 1/1/86
4	12,000	Gasoline	Removed on 1/1/86
5	2,000	Spill containment	Abandoned on 6/28/88
6	25,000	No. 2 fuel oil	Testing was due in 1997
7	25,000	No. 2 fuel oil	Next test due in 2008
8	4,000	Industrial waste	Removed on 1/1/87
14	20,000	Diesel	Permit runs out in 1990
15	20,000	Diesel	Permit runs out in 1990
16	20,000	Diesel	Permit runs out in 1990
18	2,500	No. 2 fuel oil	Permit runs out in 1992
19	4,000	Industrial waste	Never installed
20	10,000	Gasoline	Never installed

At the time of this report, DEC has not responded to Geomatrix's Freedom of Information Law (FOIL) request to review their records. In addition, previous environmental investigation reports to evaluate the potential for impact from the former USTs at the Site were not provided to Geomatrix. In lieu of these documents, Geomatrix cannot confirm the presence or absence of contaminated subsurface conditions at the Site relating to abandoned or removed USTs. Geomatrix reviewed UST registration and tightness testing records contained in Newsday's files. UST registration with the Suffolk County Department of Health Services (DHS) and tank tightness testing requirements appeared to be current and up-to-date. In addition, all operating USTs at the Site passed the most recent tank tightness test.

4.1.14 Surrounding Properties

Migration of contaminants to sites other than the release location generally is via groundwater. Therefore, only those contaminant release sites located hydrogeologically up gradient relative to the Site are expected to pose a significant potential for environmental concern to the Site. Contaminated sites located hydrogeologically down gradient of the Site are not expected to

represent a potential threat to the groundwater quality beneath the Site. Sites that are situated hydrogeologically cross gradient relative to the Site also are not expected to represent a concern unless close proximity allows for the potential of lateral migration. As discussed in Section 2.2.2, groundwater in the vicinity of the Site is assumed to flow to the southeast.

Based on a review of the EDR database search report, Geomatrix identified the following properties that required explanations in regards to their potential for adverse impact on the Site.

25 Deshon Drive (Newsday/Belwin Mills/J.M. Abrizzio)

This facility is located adjacent to the west (hydrogeologically cross gradient) of the Site across Deshon Drive. This facility is identified in the EDR report in the following databases: NY Manifest, RCRA, AST, NY Spills, Historical Spills, UST, and FINDS. Environmental issues at this property are not expected to represent significant environmental concern based on the assumed direction of groundwater flow. Environmental issues specifically targeting this property are presented in more detail in Geomatrix's separate Phase I ESA for this property.

255 Pinelawn Road (Imperial News Co./Clare Rose/Abandoned Building)

This facility is located within the immediate vicinity to the south (hydrogeologically cross gradient) of the Site. This facility is identified in the EDR report in the following databases: LTANK, LTANKS, NY Manifest, NY Spills, and Historical Spills. Environmental issues at this property are not expected to represent significant environmental concern based on the assumed direction of groundwater flow.

Based on the reported information in the EDR report, no other properties are expected to represent significant environmental concern. For additional regulatory database information of surrounding properties, refer to the database search report provided in Appendix A.

4.2 ADDITIONAL RECORDS REVIEW

Geomatrix submitted written FOIL requests to the DEC and Melville Fire District on February 1, 2008. The purpose of the FOIL requests was to obtain records that may provide information with respect to known environmental conditions at the Site. The Melville Fire District responded on February 19, 2008 with information regarding flammable material storage and fire suppression systems at the Site. The DEC responded on February 25, 2008 that they would provide a decision regarding access to files by March 27, 2008.

5.0 HISTORICAL DOCUMENT REVIEW

Geomatrix reviewed historical aerial photographs, historical topographical maps, and city directory abstracts to identify the historical use of the Site and adjacent properties.

The following sources of information were obtained and used to compile historical information about the Site:

- Aerial photographs dated 1957, 1966, 1976, 1980, and 1994;
- Topographic maps dated 1903, 1904, 1947, 1967, and 1979; and
- City directory abstracts dated 1971, 1976, 1981, 1986, 2002, and 2007.

No Sanborn maps were available for the Site and surrounding area. Below is a summary of the historical information review

5.1 AERIAL PHOTOGRAPHS

Geomatrix reviewed historical aerial photographs of the Site and vicinity from the years stated above. A summary of the information observed for the Site and surrounding areas is presented below. Copies of the aerial photographs are presented in Appendix D.

Date ***Description of Site and Surrounding Area***

1957 The Site and surrounding area appear to be in use for agricultural purposes.

1966 The Site still appears to be used for agricultural purposes. A cemetery is visible to the southeast of the Site. Commercial/industrial development is visible to the south of the Site. No other significant changes are evident on this aerial photograph.

1976 The Site is still in use for agricultural purposes. Commercial/industrial development is present at the adjoining property to the south of the Site. The current Newsday inserting facility at 25 Deshon Drive is evident to the west of the Site. A building is present at the property to the north of the Site. No other significant changes are evident on this aerial photograph.

1980 The Site appears to be developed. The original building is visible on the east side of the Site. A parking lot is present on the south side of the Site. The fire pond is visible on

the west side of the Site. The area to the north of the building appears undeveloped. Additional buildings have been constructed at the adjoining properties to the southwest of the Site. No other significant changes are evident on this aerial photograph.

1994 Additions are evident on the west and south sides of the original building. The WWTP is visible on the west side of the Site. A parking lot is visible on the north side of the Site. No other significant changes are evident on this aerial photograph.

5.2 HISTORICAL TOPOGRAPHIC MAPS

Topographic maps from 1903, 1904, 1947, 1967, and 1979 were provided by EDR. The topographic map scales ranged from 1:24000 to 1:125000. A description of the observations from the historical map review is presented below. Copies of the historical maps are included in Appendix C.

Date Description of Site and Surrounding Area

1903 Small structures (presumably farmhouses) are shown along the road in the vicinity of the Site. No other significant details are evident on this topographic map.

1904 The scale of the map (1:125000) precludes any observations regarding the use of the Site and surrounding area.

1947 No significant changes are evident compared to the 1903 topographic map.

1967 Small structures (presumably farmhouses) are still visible at the Site location. Industrial/commercial development is visible to the south of the Site. Long Island National Cemetery is present to the southeast of the Site.

1979 Additional industrial/commercial structures are visible, including 25 Deshon Drive and buildings at the adjoining property to the south of the Site. The Site appears to be undeveloped.

5.3 HISTORICAL SANBORN MAPS

No Sanborn maps were available for the Site and surrounding area. A copy of EDR's search results is provided in Appendix C.

5.4 CITY DIRECTORIES

Geomatrix reviewed a historical city directory abstract for the Site and surrounding area for the years listed in Section 5.0. The complete EDR listings are provided in the abstract in Appendix D. A review of past businesses of interest is discussed below.

Target Address (235 Pinelawn Drive, Melville, New York)

The Site is not listed in the city directory abstract until 1981. Newsday Inc. appears as the Site occupant in 1981, 1986, and 1991. Long Parents & Children, This Week Publications, and Wage Co. are listed as the Site occupants in 2002. "Office Building" is listed for 2007.

Surrounding Properties

The occupants of surrounding properties were not listed in the city directory abstract until 1976. A description of significant listings from the city directory review is presented below.

Address	*Date(s)*	*Listing*
25 Deshon Drive	1976	Belmil Computer

6.0 SITE RECONNAISSANCE

Mr. Rob Hoag of Geomatrix conducted reconnaissance of the Site on February 6, 2008. The following individuals accompanied Geomatrix on the Site reconnaissance:

- Mr. Joseph Marino, Manager, Facilities Engineering, Newsday.
- Mr. Mark Anderson, Director, Environmental Affairs, Tribune.

6.1 METHODOLOGY AND LIMITING CONDITIONS

The Site visit included a walk-through of the Site to observe current operations. No limitations were placed on access to the Site and Site personnel were cooperative. Selected photographs are provided in Appendix E. The weather was overcast and windy, with a temperature of approximately 64 degrees Fahrenheit. Geomatrix did not access the roof due to high winds. A description of the Site, as observed by Geomatrix, is provided in the following sections.

6.2 ON-SITE OBSERVATIONS

The following is a summary of on-site observations and information provided by Messrs Marino and Anderson during the reconnaissance:

- The Site is approximately 50 acres in size and is occupied by a building totaling approximately 539,000 square feet. Mr. Marino indicated that two additions have been constructed at the plant. The printing floor was expanded to the west approximately 15 years ago in order to accommodate additional printing presses. The newspaper bundling and palletizing area and shipping docks were expanded at the south side of the building.

- Ten printing presses are present. Six of the presses are the original presses that were installed when the facility was first developed. Four of presses were installed approximately six years ago. The presses and associated equipment are present over two floors. The lower floor consists of the support structures for the presses, ink storage areas, paper roll storage area, a boiler room, mechanical rooms, and emergency generators. The upper floor consists of the presses, mechanical rooms, and electrical rooms. Mr. Marino indicated that all transformers are dry-type and do not contain polychlorinated biphenyls. Descaling fluid is stored in plastic ASTs with secondary and tertiary containment in each of the boiler rooms (four 80-gallon ASTs) and the cooling tower room (four 80- to 140-gallon ASTs).

- Two 25,000-gallon, one 6,000-gallon, and one 2,000-gallon USTs and four small indoor ASTs (day tanks) are present to store No. 2 fuel oil in support of the boilers and emergency generators. Current permits from the DHS were displayed where ASTs were present.

- Printing ink is stored in several ASTs installed at various locations at the Site. Four 2,000-gallon ASTs are present for color ink (one each for cyan, magenta, yellow, and red) and six 8,000-gallon ASTs are present for black ink. Approximately 80 percent of the ink used is black, with cyan, magenta, and yellow inks used to create color print. All ink storage areas were observed to have secondary containment consisting of concrete floors and walls with epoxy coatings. The floors and walls in containment areas were observed to be in good conditions with no obvious signs of wear or cracking. All entrances to the ink storage areas are either

from an elevated doorway with staircase or raised threshold. A release of red ink reportedly occurred recently from a failed fitting associated with one of the ASTs. Red ink staining was observed on the piping and support structures in the vicinity of the release; however, the release appeared to have been contained and the epoxy coating on the floor and walls was in good condition. In general, the ink is relatively viscous and does not flow readily at ambient temperatures. Current permits from the DHS were displayed where ASTs were present.

- Geomatrix observed 55-gallon drums of lubricating oil at several locations throughout the printing area, including the machine shop, a mechanical room, adjacent to the printing presses, and a containment area on the first floor. All drum storage areas had secondary containment greater than 110-percent of the volume of oil stored. Current permits from the DHS were displayed in all storage areas.

- Newsday reportedly converted to digital photographic development approximately one year ago. Mr. Marino reported that minimal waste silver is currently produced at the facility. Geomatrix observed that the unused photo processing equipment and associated photochemical ASTs were either not in use or had already been removed.

- Offices are present on the first and second floors on the east side of the Site. The office areas are divided according to function, and include reporting and editorial staff, administration, accounting, marketing, classifieds, and engineering. A cafeteria is present near the northeast corner of the building.

- Outdoor surfaces consist of landscaped areas, concrete, and asphalt. Employee parking is provided on the north and southeast sides of the Site. The northwest area of the property appears to be undeveloped.

- Semi-enclosed emergency generators are present on the north and west sides of the Site. The USTs are supported by day tanks. Secondary containment of the day tanks was observed to be present. Mr. Marino indicated that UST tightness testing was up-to-date and that the USTs met regulatory requirements.

- Two trailer-mounted emergency generators are present outside on the north side of the building. Each trailer contains a 1,250-gallon AST with secondary containment.

- A vehicle refueling area is present on the southwest side of the Site. Three 20,000-gallon USTs are present to store diesel for refueling Newsday delivery vehicles. Three fuel dispensers are present. The tanks are equipped with leak detection probes at each end of the tanks. Mr. Marino indicated that UST tightness testing was up-to-date and that the USTs met regulatory requirements. A spill containment kit was present. The attendant indicated that daily reconciliation records are maintained and that no discrepancies have been noted. All USTs at the Site are connected to a Veeder Root automatic leak detection system. Two of the spill bucket lids in this area were observed to be cracked and in need of replacement.

- A large pond is present on the west side of the Site to store water for firefighting purposes.

- A reported explosion-proof structure is present in a fenced enclosure on the west side of the Site. Newsday stores hazardous and flammable materials in drums and pails inside this structure. An explosion-proof tote is stored in the fenced enclosure and is used to transport hazardous and flammable materials from the facility to the explosion-proof structure.

- An unused building is present on the west side of the Site near the security gate. The building was formerly used to screen incoming mail for biological agents after September 11, 2001.

- All wastewater generated at the Site is treated in the on-site WWTP. The WWTP operates under SPDES permit NY0136751. The WWTP reportedly was recently upgraded to improve treatment efficiency and has a design flow of 45,000 gallons per day per train. Wastewater is treated using a combination of screens, two rotary aerators, and two membrane clarifiers. Two sludge holding tanks are present. Treated wastewater is discharged to an underground cistern system. SPDES non-compliance issues occurred during changes to the WWTP. Newsday indicated that no significant SPDES violations had occurred since substantial completion of the WWTP upgrades. Geomatrix noted a non-compliance report in December 2007 for exceeding alkalinity limits.

- Newsday leases part of the parking lot on the west side to a snow-removal contractor for storage of snow-removal equipment.

6.3 SURROUNDING PROPERTIES

The Site is located in an area that appears to be primarily used for light industrial and commercial purposes. Ruland Road, commercial properties, and properties under development are present to the north of the Site. Parklawn Road and Long Island National Cemetery are present to the east of the Site. An unnamed service road and light industrial and office buildings are present to the south of the Site. Deshon Drive and the Newsday Patterson building are present to the west of the Site, with residential development beyond. No environmental issues were identified in viewing the surrounding properties from publicly accessible areas.

7.0 INTERVIEWS

Geomatrix interviewed the following personnel during the Site visit:

- Mr. Joseph Marino, Manager, Facilities Engineer, Newsday.

- Mr. Mark Anderson, Director, Environmental Affairs, Tribune.

Findings from interviews with Site personnel are included in Section 6.2. Mr. Marino indicated that he viewed the operation as clean and well-run with minimal risk of environmental impact. A Property Owner/Representative Questionnaire was completed by Mr. Joseph Marino, whose responses were consistent with the findings in the EDR report. A user questionnaire was completed by Mr. Mark Anderson. Copies of the completed questionnaires are provided in Appendix F.

8.0 FINDINGS

No RECs or historical RECs (HRECs) were identified at the Site. The following are findings of our ESA.

Potential environmental concerns include issues identified by Geomatrix that warrant discussion but are not considered RECs, as defined by ASTM E1527-05. The following potential environmental concerns associated with the Site and/or the surrounding properties were identified by Geomatrix:

- The EDR report identifies the Site on the FINDS, NY Manifest, RCRA-NonGen, AST, LTANKS, NY Spills, NY Historical Spills, HIST LTANKS, RCRA-LQG, CERCLIS-NFRAP, SPDES, and UST databases. Based on the reported information from the EDR report, overall good housekeeping observed, and reviews of agency records and historical information, these listings, except for the LTANKS with associated HIST LTANKS, UST, and NY Spills listings, are not expected to represent a significant environmental concern. At the time of this report, DEC has not responded to Geomatrix's FOIL request. In addition, previous environmental investigation reports to evaluate the potential for impact from the removed/abandoned USTs and the leaking UST at the Site were not provided to Geomatrix. Environmental issues pertaining to these USTs are discussed in Section 10.0.

- The EDR report identifies several properties within the respective search radii as having handled and or generated hazardous waste, and/or as having reported releases of hazardous substances or petroleum products. Based on the reported information about these properties, the identification of responsible parties, and/or the assumed groundwater flow direction, these properties are not expected to represent a significant environmental concern to the Site.

- The Site operates a WWTP, which discharges effluent to a cistern. Minor exceedances of SPDES discharge limits has occurred in the past. The exceedances appeared to have been addressed to the satisfaction of the DEC.

- Two spill bucket lids associated with the USTs in the vehicle refueling area are cracked and should be replaced.

- There has been long-term storage of materials, including diesel fuel, No. 2 fuel oil, inks, photo-processing chemicals, boiler and cooling tower descalers, and other potentially hazardous materials in USTs and ASTs. All permits were up-to-date. Site management procedures appeared to be appropriate. Based on the good housekeeping observed and the absence of significant spills of these materials, the presence of these chemicals is not expected to represent a significant environmental concern.

- The Site was previously used for agricultural purposes in 1957 and possibly earlier. By the late 1970's, the facility was under construction and newspaper publishing operations began. Environmental issues pertaining to the former agricultural use are discussed in Section 10.0.

- According to the EDR database search report, historic spills were identified at 255 Pinelawn Road, which is located immediately adjacent to the Site. The spills reportedly were remediated and closed by the DEC.

9.0 OPINIONS

ASTM E1527 requires the environmental professional's opinion of the potential impacts on the Subject Property of REC(s) identified. No RECs or historical RECs were identified for the Site. Our opinion regarding other findings is discussed below.

- The Site was identified by EDR as being listed on LTANKS with associated HIST LTANKS, UST, and NY Spills databases. A leaking UST was reported on April 30, 1992 and on November 20, 1997 from the 25,000-gallon UST. The leak from April 30, 1992, which reportedly impacted soil only, was closed on May 27, 1998. The current status of the leak from November 20, 1997, which reportedly impacted groundwater, is unknown. In addition, six former USTs were removed or abandoned-in-place between 1986 and 1988. Previous environmental investigation reports to evaluate the potential for impact from the removed/abandoned USTs and the leaking UST at the Site were not provided to Geomatrix. In lieu of these documents, Geomatrix cannot rule out the possibility of subsurface contamination from the USTs.

- The agricultural use of the Site prior to development may have included agricultural chemicals. No evidence of a release of agricultural chemicals was discovered during this ESA; therefore, the historical use alone does not represent a REC. In addition, the Site is either paved or covered by improvements that make direct contact with any potential residual agricultural chemicals in the soil unlikely. Furthermore, the Site is developed and used for commercial purposes. No further assessment related to the former agricultural use of the Site is recommended.

10.0 DATA GAPS

The DEC indicated that they would respond to our FOIL request to review their files by March 27, 2008, which is after the due date of this Phase I ESA. As required by ASTM E1527-05 Geomatrix has identified two data gaps:

- at the time of this report, DEC has not responded to Geomatrix's FOIL request; and
- previous environmental investigation reports to evaluate the potential for impact from the former USTs and the leaking UST at the Site were not provided to Geomatrix.

These data gaps preclude Geomatrix from ruling out the potential for as yet unrecognized RECs or other environmental concerns related to these matters.

11.0 CONCLUSIONS

Geomatrix performed a Phase I ESA of the Newsday facility located at 235 Pinelawn Road in Melville, New York in conformance with the scope and limitations of ASTM Standard E1527-05. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This ESA has not revealed any RECs or HRECs in connection with the Site; however, two data gaps were identified, as discussed in Section 10.0.

12.0 DEVIATIONS

No deviations or deletions from ASTM E1527-05 were made during preparation of this ESA.

13.0 ADDITIONAL SERVICES

No additional services were provided as part of this ESA.

15.0 ENVIRONMENTAL PROFESSIONAL SIGNATURE AND STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in section 312.10 of 40 Code of Federal Regulations (CFR) 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes for the environmental professionals are included in Appendix G.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.

J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Method Detection Limit (MDL).

U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA
AS - Semi-automated Spectrophotometric
AV - Automated Cold Vapor AA
C - Manual Spectrophotometric
F - Furnace AA
P - ICP
T - Titrimetric

Case Narrative

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:
Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and 300 ppb levels.
Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.
Tert Butyl Alcohol (TBA) was calibrated at 50,200,500,1000 and 1500 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

Case Narrative

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:
Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and 300 ppb levels.
Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.
Tert Butyl Alcohol (TBA) was calibrated at 50,200,500,1000 and 1500 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

1005075-1 and -2 were analyzed at 1:2 dilutions. Results indicate high concentrations of non-target compounds present in the samples (mainly hydrocarbons).

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.

J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Method Detection Limit (MDL).

U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA
AS - Semi-automated Spectrophotometric
AV - Automated Cold Vapor AA
C - Manual Spectrophotometric
F - Furnace AA
P - ICP
T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.

J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Method Detection Limit (MDL).

U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA
AS - Semi-automated Spectrophotometric
AV - Automated Cold Vapor AA
C - Manual Spectrophotometric
F - Furnace AA
P - ICP
T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

Case Narrative

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:
Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and 300 ppb levels.
Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.
Tert Butyl Alcohol (TBA) was calibrated at 50,200,500,1000 and 1500 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.

J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Method Detection Limit (MDL).

U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA
AS - Semi-automated Spectrophotometric
AV - Automated Cold Vapor AA
C - Manual Spectrophotometric
F - Furnace AA
P - ICP
T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:

Acetone

2-Butanone

4-Methyl-2-pentanone

2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and 300 ppb levels.

Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.

Tert Butyl Alcohol (TBA) was

	calibrated at 50,200,500,1000				
	and 1500 ppb levels.				
	All other compounds were				
	calibrated at 5, 20, 50, 100 and				
	150 ppb levels.

Case Narrative

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100,
150 and 200 ppb levels in the initial calibration curve:
Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and
300 ppb levels.
Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.
Tert Butyl Alcohol (TBA) was calibrated at 50,200,500,1000 and 1500 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.

J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Method Detection Limit (MDL).

U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA
AS - Semi-automated Spectrophotometric
AV - Automated Cold Vapor AA
C - Manual Spectrophotometric
F - Furnace AA
P - ICP
T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

Re: Spill #12-03029, Newsday, 235 Pinelawn Rd., Melville, NY

Dear Ms. DeBoer:

The Department has reviewed the records and data submitted by you regarding the tank test failure at the above referenced site. Based on such review, the Department determined that you have completed all necessary actions, and no further activities are necessary.

Nothing contained herein shall be construed as barring, diminishing, or in any way limiting Department's authority under the Navigation Law or the Environmental Conservation Law, including the authority to require additional remedial work, if necessary.

Should you have any questions concerning this matter, you may call me at (631) 444-0324 or e-mail me at hmcirrit@gw.dec.state.ny.us.

Sincerely,
Hugh Cirrito

Re: Spill Case No. 1203029
Spill Closure Report
235 Pinelawn Road, Melville, NY

Dear Mr. Cirrito:

On behalf of Tribune Company (Tribune), ERM Consulting & Engineering, Inc. (ERM) has prepared this summary letter report to document the investigation, and abandonment of two (2) 25,000-gallon fuel oil underground storage tanks (USTs) located at 235 Pinelawn Road, Melville, NY (the Property).

PROJECT BACKGROUND

On 15 November 2011, tightness testing was performed on adjacent Tank Nos. 6 & 7 located in a loading dock area south of the main building. A site plan showing the tank locations is provided as Figure 1. Both USTs were registered with the New York State Department of Environmental Conservation (NYSDEC) through the Suffolk County Department of Health Services (SCDOHS).

Tank No. 6 tested "tight" while Tank No. 7 failed the tightness test and was immediately pumped out. The NYSDEC was notified and NYSDEC Spill No. 1203029 was assigned. Subsequently, Tank No. 7 was cleaned and 4 soil samples were collected from beneath the tank invert and analyzed for Volatile Organic Compounds (VOCs) and Semi-VOCs (SVOC) on 25 October 2012. The analytical results were provided to the NYSDEC and authorization was given to abandon Tank No. 7 on 14 November 2012 (Appendix A). The sampling locations are identified in Figure 1 and a summary of the analytical results from the 25 October 2012 sampling event are provided as Table 1. A complete analytical data report is provided as Appendix B.

Although Tank No. 6 had tested tight, Tribune elected to preemptively abandon this tank and replace it with an above ground storage tank (AST). On 26 June 2013, an abandonment request for both tanks was submitted to SCDOHS which was subsequently approved by the SCDOHS on 13 September 2013. Copies of the abandonment request and approval letters are provided as Appendix C.

ABANDONMENT ACTIVITIES

Tank No. 6 remained in service for emergency generator fuel storage until early 2014 when it was replaced by an AST. Tank No. 6 was emptied on 7 March 2014 so that it could be abandoned along with Tank No. 7.

On 17 March 2014, ERM and its UST contractor, Metro Environmental Contracting Corporation (Metro) mobilized to the Site to abandon the two tanks. Metro Environmental vacuumed out the residual product and cleaned the interior of Tank No. 6. Three equidistant saw cuts were then made in the concrete above each tank and the soil was excavated to expose the tank tops. The tanks were then cut at each location to expose their interiors, and the vent pipes, fill ports and tank alarms were removed.

On 20 March 2014, Mr. Mike Seaman from SCDOHS inspected the tanks prior to backfilling to confirm that their interiors were clean and ready for abandonment. The SCDOHS was satisfied with the condition of the tanks and authorized the abandonment. The tanks were subsequently abandoned with 296-tons of clean sand. The bills of lading for the sand from 110 Sand Company is provided in Appendix D.

On 21 March 2014, Mr. Seaman (SCDOHS) returned to the Site to observe the backfilled tanks and issued the completed Tank Removal Checklist, which is provided in Appendix E. The open excavations were then backfilled using clean sand installed in compacted lifts, and finished to grade with 6-inches of 4,000 psi-rated concrete. The concrete patches were keyed into the existing pad/reinforced with rebar and steel mesh. The vent line for each tank was cut flush to grade and filled with concrete. The fill ports were directly atop each UST and were removed when the tanks were cut open and accessed. Pictures documenting the tank closure and restoration work are provided in Appendix F.

Waste Disposal

A total of 10 cubic yards of un-impacted concrete and soil from above the tanks was excavated and transported to Con Strux in Lindenhurst, NY, for recycling. Approximately 300 gallons of combined tank sludge and wash water were collected in the vacuum truck and transported to Advanced Waste and Water Technology in Farmingdale, NY. The adsorbant (SpeedyDry) used to clean the residual fuel oil in Tank No. 6 was collected in one (1) 55-gallon drum and transported to Republic Environmental Systems in Hatfield, PA, for disposal. The associated waste manifests are provided in Appendix G.

CONCLUSIONS AND RECOMMENDATIONS

The tank abandonment activities were completed under the supervision of SCDOHS and in accordance with all NYSDEC and SCDOHS regulations. On behalf of Tribune, ERM respectfully requests that NYSDEC Spill Case No. 1203029 be closed as soon as possible.

We look forward to your expeditious approval of this closure request. If you have any additional questions or comments, please do not hesitate to contact me at (631) 756-8900.

Sincerely,

Eugene Gabay
Senior Consultant

Hello Hugh,

As discussed, ERM drilled core holes at 4 locations in the spine of the tank in order to obtain soil samples. The soil samples were collected from the soil just below the tank and analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) via EPA methods 8260 and 8270 by a New York State Department of Health-certified laboratory. The laboratory results are attached for your review. ERM's intention is to abandon the tank in place. Once you have had a chance to review the data could you please call me to discuss? My number is listed at the bottom of this email.

Thanks,
Gene

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	ERM, Inc.	**Job No**	JB20289
Site:	Tribune, Pinelawn Avenue, Melville, NY	**Report Date**	11/12/2012 4:09:42 P

On 10/26/2012, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 3 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB20289 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO **Batch ID:** VO5784

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB20133-2MS, JB20133-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: SO **Batch ID:** OP61052

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB20508-1MS, JB20508-1MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Acenaphthylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike Duplicate Recovery(s) for Acenaphthylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike Recovery(s) for Acenaphthene, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Naphthalene, Phenanthrene, Pyrene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- JB20289-4: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-3: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-3: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-2: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-1: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.

Wet Chemistry By Method SM2540 G-97

Matrix: SO **Batch ID:** GN74854

- The data for SM2540 G-97 meets quality control requirements.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

ACCUTEST LABORATORIES

Subject: Sample Storage – Tropical Storm

Date: November 2, 2012

To: Valued Clients

From: Phillip M. Worby
Director, Corporate Quality Assurance

As a result of the extraordinary damage from the Tropical Storm that hit the East Coast late Monday evening October 29, 2012, Accutest Laboratories Dayton, New Jersey had to temporarily suspend analytical operations until power could be restored.

While the laboratory did not sustain any physical damage, it was left without power as utility companies assessed the overall damage caused by the storm and as they continue restore power throughout the state.

Accutest Laboratories has endeavored to minimize the impact of the storm on lab operations. To that end, extra staff was brought in before the storm to work ahead and secure the building. After the storm, as soon as it was possible to safely bring staff in, external generators were put in place on storage refrigeration units to help maintain sample integrity in accordance with preservation requirements set by either the regulatory program or method specification.

Despite our efforts and planning, a storage temperature excursion above 6 degrees C. has been noted and documented. The affected analyte and/or test method is qualified in accordance with our quality system procedures and is indicated in the report.

To our valued clients, we appreciate your patience and understanding during this difficult period, and hope that your recovery efforts are also moving forward. We stand ready to help you with any and all sample needs as a result of this powerful storm.

*if additional space is needed, attach addendum.

Instructions

For All Requests, submit the following:

1. A site plan showing the location of the tank(s) as well as utilities and other structures that may interfere with removal. A sketch is acceptable with the initial application but a more detailed site plan may be required by the Department.

2. A check, per SCHDS Fee Schedule. $100/tank
3. Return the application to the address listed below. You will be contacted to schedule an appointment

For Abandonment Requests, in addition to the above, provide a submittal that includes the following:

1. For requests based upon Utility Infringement, provide diagram and photographs of the mark outs. Photos must indicate tank location.
2. For requests based upon Building Infringement, provide:
   (a) Burial depth of tank. Measure from grade to top of tank.
   (b) Distance of tank center line to any adjacent structure.
   (c) Diameter of tank.
   (d) Depth below grade of footings supporting the adjacent structure(s)
3. Diagrams and Photographic evidence of any other item(s) that are claimed to prevent removal of any tank.

If you have questions, call 854-2536

Submit all Information to:

Re: **Application for In Place - Permanent Closure of Underground Storage Tank**
Facility Name: Newsday Inc.
File Reference No. 02037
Facility I.D. No. 4-0094

Dear Mr. Gabay:

Your application for in place permanent closure of underground storage tank is under review process and you are required to submit following information:

1. Provide a site plan to indicate the location and depth of any underground structures, such as septic tanks, leaching pools, storm drains, and dry wells, within 50' radius of the tank.
2. You are required to perform site assessment as pre NYS DEC S.P.O.T.S. 14 which pump out, clean and vapor free the Tank #7. You need to take 8 soil samples through the bottom of the Tank #7, 4' and 8' below tank bottom respectively and each sample must pass STARS 8620/8270 analysis in approved laboratory.

If you have any questions, please feel free to contact our office.

Sincerely,

Chris Wong

Re: **Application for In Place - Permanent Closure of Underground Storage Tank**
Facility Name: Newsday Inc.
File Reference No. 02037
Facility I.D. No. 4-0094

Dear Mr. Gabay:

Your application for in place permanent closure of underground storage tank is approved for following tank(s)

Tank #	Volume	Contents	Disposition
6	25,000 Gals.	#2 Fuel Oil	Abandonment
7	25,000 Gals.	#2 Fuel Oil	Abandonment

The Office of Pollution Control must be contacted at (631)854-2523 at least 2 business days prior to commencement of any work to arrange for the required inspections.

Contact the local building department and/or fire safety enforcement office for any additional requirements that may apply to your project.

The Office of Pollution Control reserves the right to revoke this permit as allowable by law.

Special Condition(s): Tanks must be filled with concrete slurry or clean sand.

If you have any questions, please feel free to contact our office.

Sincerely,

Chris Wong

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/05/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CIRCUITRON CORP.	***82 MILBAR BOULEVARD***	***SW 1/2 - 1 (0.967 mi.)***	***U101***	***736***

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 04/05/2017 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

TRONIC PLATING CO.,	***168 CENTRAL AVENUE***	***S 1/2 - 1 (0.510 mi.)***	***93***	***548***

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1

CORRACTS site within approximately 1 mile of the target property.

TRONIC PLATING CO.,	*168 CENTRAL AVENUE*	*S 1/2 - 1 (0.510 mi.)*	*93*	*548*

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

COMAX FLAVORS	*130 BAYLISS RD*	*NNW 1/8 - 1/4 (0.142 mi.)*	*J47*	*253*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 06/01/2016 has revealed that there are 3 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 20 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 24 NY UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 3 NY VCP sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

DEC Memo:	"10/11/16 @ 1130 AM -WG called Mr. Marino (Newsday LLC) -No answer. Left message. 10/11/16 @ 1230 PM--Rob was dispatched to the site. 10/11/16 1250 Hrs: RJP on location. Marino did not answer phone, RJP requested him at reception desk. Electric air compressor, 12 gal capacity of synthetic compressor oil, SAE 30 non-detergent. Failure of weld at joint, release of approx. 4 gallons. 4 gallons remains in equipment, 4 gallons recovered in buckets. Release to base of compressor, concrete floor, and floor drain. Absorbent pads placed, compressor out of service pending repairs. Drain connected to on-site wastewater collection and treatment facility. Facility operates oil/water separator and utilizes mechanical, chemical, and bacteriological treatment prior to discharge. Incident was also referred to the Water Unit."
Remarks:	"the spill went into the waste treatment plant that will go into underground pools. The cleanup is pending. It would be process or clean in the treatment plant."

DEC Memo:	"12/02/15 1050 Hrs (A): Called Marino- he said a hose burst on a generator INSIDE their facility, but the fluid spilled outside to a drywell. He confirmed that the drywell has no outlets and a sand bottom, and that MEG is responding. 12/02/15 1050 Hrs (B): DEC informed him that this office might have RJP (currently in Farmingdale) respond when finished there. DR 12/02/15 1052 Hrs: RJP called- he just finished in Farmingdale and saw this report, so he will respond at this time. DR 12/02/15 approx noon: As per RJP- ALL the product appears to have soaked into the sand at the bottom of the drywell. He will obtain a copy of the MSDS sheet from Newsday. DR 12/2/15 1135 Hrs: RJP on location w/ MEG. No recoverable liquid, no DEC action. Documents on D2. RJP"
Remarks:	"Spill contained to drive well, Miller environmental enroute for pump out of fluid."

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of

NEWSDAY, LLC (Continued) **1000378809**

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CLARE ROSE (Continued) **S109208314**

DEC Memo: "***THIS SITE IS JUST NORTH OF THE HUNTINGTON/BABYLON TOWN LINE. WHEN PINELAWN CROSSES INTO BABYLON, IT BECOMES WELLWOOD AVE.*** DEC INFORMED HIM WE MUST INSPECT THE TANK AND EXCAVATION, THAT WE DID NOT HAVE AN INSPECTOR AVAILABLE TODAY, AND THAT HE SHOULD CALL THIS OFFICE TOMORROW TO DISCUSS THE SCHEDULING OF THE INSPECTION. DEC FURTHER INFORMED HIM THAT HE COULD HAVE THE TANK EMPTIED, REMOVE THE TANK, AND LEAVE THE TANK ON SITE AND THE EXCAVATION OPEN PENDING INSPECTION IF HE FELT IT WAS SAFE TO DO SO. 6/18/08 TJD 1400-1500 Site inspection. Excavation contractor (Tully Drainage) onsite completing installation of sanitary system (cesspool rings). Upon initial notification, DEC Dave Raymond required contractor to schedule inspection with DEC prior to closure of tank grave. Contractor did not follow DEC directive and installed sanitary system in area of tank grave. Site supervisor for Tully (Mike Lucia) refused to provide specific information regarding former tank location stating that no spill occurred and DEC was wasting its time. DeMeo contacted Claire Rose representative (Patrick Costanzo) who provided contact information to Nelson & Pope surveyor (Tom Lembo) who was onsite for removal. Nelson & Pope was contacted and provided additional information required to access reported spill event including: SCDOH inspector visited site following tank removal, ESI was contractor who pumped tank & site plan was updated to include former tank location. A copy of updated site plan was requested. DEC contacted SCDOH Bob Seafarth stated his inspector (Zachary Baldwin) was onsite for removal and he would forward a copy of tank removal report. 6/19/08 TJD T/C with Joe Parisi @ ESI. Joe states he was hired to pump liquid contents from tank upon its discovery. He further states tank was filled to capacity with water following pump out he remained onsite for tank removal. Tank reported to be in good condition with no reported holes. 4/30/09 TJD File review. Updated survey depicting tank location received from Nelson & Pope. Tank removal checklist received from SCDOH no contamination noted. Based upon review of available information no further action is required. TOM LEMBO NELSON & POPE 631-427-5665 C 516-524-3535 JANET 854-2513 BOB 854-2518 PATRICK CONSTANZO SAFETY 631-454-2337 X155 MIKE LUCION ZACHARY BALDWIN "

Remarks: "THEY WERE EXCAVATING FOR A NEW CESSPOOL AND ENCOUNTERED A PREVIOUSLY ABANDONED TANK. HE BELIEVES IT MAY BE 1000 GAL IN SIZE. THE TANK CONTAINED WATER AND HAD A GASOLINE ODOR, AND SOME OF THE WATER INSIDE THE TANK SPILLED INTO THE EXCAVATION. HE HAD INITIALLY CALLED JOE PARISI OF ESI, WHO ADVISED HIM TO CALL DEC."

FINDS:

Registry ID: 110004466809

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110004440123

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019811220

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FINDS:

Registry ID: 110004356740

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110004562875

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

PRECIPART CORPORATION (Continued) **1004761475**

discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004566979

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource

PRECIPART CORP (Continued) **1004762133**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LTANKS:
Site ID: 288842
Spill Number/Closed Date: 8706743 / 1988-02-09
Spill Date: 1987-11-06
Spill Cause: Tank Test Failure
Spill Source: Commercial/Industrial
Spill Class: Known release with minimal potential for fire or hazard. DEC Response. Unable/unwilling Responsible Party. Corrective action taken. (ISR)
Cleanup Ceased: 1988-02-09
Cleanup Meets Standard: True
SWIS: 5226
Investigator: KDGOERTZ
Referred To: Not reported
Reported to Dept: 1987-11-09
CID: Not reported
Water Affected: Not reported
Spill Notifier: Tank Tester
Last Inspection: Not reported
Recommended Penalty: False
UST Involvement: False
Remediation Phase: 0
Date Entered In Computer: 1987-11-13
Spill Record Last Update: 2015-05-12
Spiller Name: Not reported
Spiller Company: SEDCO

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FINDS:

Registry ID: 110004349232

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FINDS:

Registry ID: 110004341285

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By:	JBSWARTO

Site Description: Location: This site is a former metal forming facility consisting of a one-story industrial building on a 2.28 acre parcel. The Building is located on Smith Street in the unincorporated Hamlet of East Farmingdale, Suffolk County.Site Features: The Minmilt site is located on the glacial outwash plain of southern-central Long Island. The geology consists mailnly of unconsoliated sand deposits intermixed with smaller, generally non-continuous lower permiability clay and/or silt mix confining units. The upper aquifer is the Upper Glacial aquifer that overlays the Magothy aquifer.Current Zoning and Land Use: The area surrounding the Minmilt Realty site has been zoned entirely commercial/industrial. All the surrounding structures are commercial/industrial as well. Past Use of The Site: Industrial activities at this site included the use of vapor degreasers containing tetrachloroethylene or perchlorethene(PCE). The spent degreasers were disposed into a leaching pool on-site without a SPDES permit. Nature and Extent of Contamination: Minmilt Realty signed an original order with Suffolk County to clean out the dry well. Subsequently, a Consent Order (CO) was signed on November 7, 1994 between the NYSDEC and the current owner to conduct a RI/FS and an

MINMILT REALTY (HYGRADE METAL MOULDING) (Continued) **S106780916**

Interim Remedial Action (IRM). The RI found that soils and groundwater on the east side of the building were highly contaminated with PCE. An IRM consisting of soil vapor extraction (SVE) and groundwater pump and treat were installed in February 1997 and have run continuously, since that time. The remedial systems continue to operate and perform successfully.The Suffolk County Department of Health Services, in July 1997, installed a monitoring well and took hydro-punch samples on Central Avenue, about 1500 feet downgradient of the site to supplement the Minmilt offsite remedial investigation. The PRP investigation of the off-site groundwater plume commenced in December 1998.In summary the off-site RI/FS was approved and a ROD calling for the continued operation of the SVE system to address the soil contamination and the extraction and treatment of the groundwater to address the groundwater contamination was signed on March 3, 2002. The potential responsible party (PRP) signed the remedial design and remedial action order on consent with DEC shortly thereafter. The groundwater pump and treat system contains the plume and continues to contain and remove PCE from the Upper Glacial and Magothy aquifers. Operation, maintenance and monitoring. The shallow monitoring wells on site and downgradient of the source area have cleaned by orders of magnitude and are now below, or are approaching, groundwater standards. Vapor phase activated carbon treatment was removed from the SVE off gas in April 1999 as it was no longer required based on Air Guide 1 stack emission review. The PRPs investigated the potential for soil vapor intrusion into buildings in the area to the satisfaction of NYSDEC/NYSDOH. Results indicated that mitigation for vapor intrusion would not be required. Current Status: All the program elements are in place that allowed the site to be reclassified to class 4. This means the remedial program specified in the ROD is in place and operating and performing successfully. The continued operation, maintenance and monitoring (O,M&M) will be required. Once the remedial system is finished, and additional vapor intrusion testing completed per DEC and DOH requirements, the Minmilt Realty site will be delisted.

Env Problem: Soils and groundwater at the site have been contaminated. The PRP implemented an SVE and near offsite groundwater pump and treat IRM. The O&M data shows that the SVE is nearly complete in removing PCE from soils. To date, more than 5,200 pounds of PCE has been removed via the soil vapor extraction system. The system continues to operate to remove any resiual vapors to prevent the potential for soil vapor intrusion. To date, more than 30,000 pounds of solvent have been removed via the groundwater extraction and treatment system. Vertical profiling verified that the clay layers inhibited the vertical migration of the Minmilt Plume to the deeper part of the Magothy aquifer in the vicinity of the source area.

Health Problem: Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not coming into contact site related contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The soil vapor extraction system in operation at the site has been successful in preventing the indoor air quality of the on-site building and an adjacent off-site building from being

Site Description: This is now Registry site # 152147.This site is a metal forming facility consisting of a one-story industrial building on a 2.28 acre parcel. Industrial activities at this site included the use of vapor degreasers containing tetrachloroethylene (PCE). The spent degreasers were disposed into a leaching pool on-site without a SPDES permit. A Consent Order (CO) was signed on November 7, 1994 between the NYSDEC and the current owner to conduct a RI/FS and an IRM. The RI found that soils on the east side of the building were highly contaminated with PCE at levels up to 820 ppm, and groundwater contained PCE at levels up to 140,000 ppb. An Interim Remedial Measure (IRM) consisting of soil vapor extraction (SVE) and groundwater pump and treat were installed in February 1997 and are now operating. The Suffolk County Department of Health Services installed a monitoring well and took hydro punch samples on Central Avenue, about 1500 feet downgradient of the site, in July 1997. This sampling revealed an extensive PCE plume migrating from the site. An investigation of the off-site groundwater plume commenced in December 1998. Vapor phase activated carbon treatment was removed from the SVE off gas in April 1999 as it was no longer required. The groundwater component is containing the plume and is presently removing a significant mass of PCE from the Upper Glacial and Magothy aquifers. The off-site RI/FS was approved and a ROD calling for the continued operation of the SVE system to address the soil contamination and the extraction and treatment of the groundwater to address the groundwater contamination was signed on March 3, 2002. Operation, maintenance and monitoring

	continues and shallow monitoring wells on site and downgradient of the source area are beginning to clean up.
Env Problem:	Minmilt used a vapor degreaser with Tetrachloroethlyene (PCE) that discharged directly to a drywell on the east side of the building. The PRP implemented an SVE and near offsite groundwater pump and treat IRM. The O&M data shows that the SVE is nearly complete in removing PCE from soils. To date, more than 5,200 pounds of PCE has been removed from the soils and 20,000 pounds from the groundwater. Vertical Profiling verified that the clay layers inhibiting the vertical migration of the Minmilt Plume in the vicinity of the source were continuous.

Site Description:	Site Location: The site is located in both Melville, in the Town of Huntington and Farmingdale within the Town of Babylon, Suffolk County. The current site address is 50 Marcus drive, Huntington, Suffolk County. Prior to the site being redeveloped by the volunteer, the site's address was 333 Smith Street, Farmingdale, Suffolk County. Site Features: The site is approximately 13.0 acres in size. The site is bordered to the north by Marcus Drive and to the south by Smith Street. The property is occupied by a two-story 164,000 square foot building. The volunteer purchased the property and converted the vacated manufacturing building into an office building. The remainder of the site consists of asphalt and concrete paved parking area with limited area of grass cover. Current Zoning/Use: The property is zoned for commercial use and is occupied by an office building in a primarily commercial urban area.Past Use of the site: The site was used by a textile manufacturer (Fairfield Noble) that apparently did some dry cleaning in their operations until 1969. The site was then by Gould Electronics for the manufacture of circuit boards. In the northwest corner of the former building, the soils underlying the former dry cleaning area were contaminated by tetrachloroethylene (PCE). The separator wastes were apparently discharged next to the dry cleaning machines in small hand-dug dry wells inside the building. Some PCE wastes were also discharged to outdoor dry wells. Additionally, run-off from the parking lots entered into various dry wells that resulted in petroleum and metals contamination. Finally, both former operations discharged wastewater to a network of pools

RECKSON ASSOCIATES (Continued) **1001961566**

along the western side of the site. Discharge was managed via a State Pollutant Discharge Elimination System (SPDES) permit. Some of the pools had antimony and cadmium contamination from dyes. The areas identified as impacted have been remediated as part of the VCP.Site Geology/Hydrogeology: The site is primarily flat and soils consist of fine and medium sands. Depth to groundwater is approximately 45 feet below grade and flows south/southeast, consistent with regional groundwater flow.

Env Problem: Nature and Extent of Contamination: Soil contamination in dry wells, leaching pools and in soils by the northwestern portion of the site building have been remediated. Periodic on-site groundwater monitoring has been terminated due to very minimal contributions from this site. In the fall of 2009, the existing sub-slab depressurization system was modified from passive to active mode of operation in order to improve the amount of sub-slab vapors being captured by the system. The system was installed to address the elevated concentrations of tetrachloroethene present beneath the slab of the building. Based on the Indoor Air Quality (IAQ) sampling conducted in March 2010, when operating, the system is effectively preventing any residual sub-slab vapors from entering the occupied building and adversely effecting indoor air quality.The building is currently vacant and the system is not operational and in need of repair.The potential exist for residual soil contamination to remain under the building. Any residual soil that may exist will be addressed by an excavation plan work plan that will be incorporated into the projects site management plan.

Health Problem: People are not drinking contaminated water because the area is served by a public water system that obtains water from a source not affected by this contamination. Since contaminated soils may remain at the site below the existing building, people will not come into contact with contaminated soils unless the building foundation is removed or they dig below the surface material. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A combination of positive pressure within the on-site building, an epoxied floor, and an active sub-slab depressurization system (a system that ventilates/removes the air beneath the building) are operating to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building.

DEC Memo:	"ROUTINE REMOVAL OF 2-7500 GAL TANKS 12/07/07: CALLED JR HOLZMACHER-THE TANKS WERE OK. LESS THAN 1 GAL OF OIL LEAKED OUT OF A LINE DURING

CITICORP CREDIT SERVICE (Continued) **S100491449**

THE REMOVAL. APPROXIMATELY 8CY OF SOIL WAS REMOVED AND ENDPOINT SAMPLES WERE TAKEN. THE SUFFOLK COUNTY HEALTH DEPARTMENT(ZACH BALDWIN) WAS ON SITE. 12/13/07: Left message for Baldwin- requested copy of his report. 12/26/07: Again left message for Baldwin. 01/16/08: Baldwin left message- looking for the report. 01/31/08 (A): Received Holzmacher's report. ACCORDING TO THE REPORT, MIKE SEAMAN OF SCHD WAS ON SITE TO INSPECT THE FIRST TANK, AND BALDWIN REPLACED HIM TO INSPECT THE SECOND TANK. 01/31/08 (B): It said the tanks were 8,000gal each, not 7,500gal and were laying adjacent to each other. Both were reportedly intact, and endpoint samples were taken from the tank bed. The endpoint data was acceptable. 01/31/08 (C): The report also said an unused fill line was removed FROM ALONGSIDE THE TANKS, and it was from this line that the oil spilled."

Remarks: "while removing tank there was oil left in a line and it spilled out"

Site Description: Location: The former Cantor Brothers Site is located at 55 Engineers Lane in Suffolk County, the Town of Babylon in the unincorporated Hamlet of East Farmingdale. Site Features: The former Cantor Brothers Site (site) was a chemical repackaging and handling facility that had been in operation since 1964. The facility building is located in a flat, industrial park setting.Current Zoning/Use: The zoning for this site is commercial/industrial and residential use in this area is prohibited by the Town of Babylon. The former Cantor Building is surrounded by manufacturing and commercial facilities. The current use of the property is warehousing.Past Use(s) of the Site: Substances including organic solvents, creosote and fuel oils were previously observed on the ground surface as a result of leaks from drums and storage tanks. Site inspections by the Suffolk County Department of Health Services (SCDHS) documented numerous spills, illegal discharges and improper storage conditions beginning in 1980. SCDHS arranged to have five monitoring wells installed near the

CANTOR BROTHERS (Continued) **S104541575**

southern boundary of the site. Phase I and Phase II Investigations were completed. Operations at the facility ceased in 1990 and the Responsible Party filed for bankruptcy in 1993.An Interim Remedial Measure (IRM) Investigation was completed in 1997, after the NYS Attorney General's Office represented the NYSDEC in Bankruptcy Court seeking funding for the investigation. The final IRM Summary Report lead to a final agreement and a Stipulated Order for final site remediation. Money totaling $200,000 from the bankruptcy proceedings was set aside in escrow to cover the storm drain cleaning and soil vapor extraction (SVE) remediation programs at the site. These activities were completed using escrow monies under the SSF program. The SVE system operated from 1998 until 2001. The storm drain cleaning was completed in 1998. A Record of Decision was signed in March of 2000. Remedial work involved the removal of soils contaminated with semi-volatile organic compounds from discrete locations on the south side of the building. Installation of a sub-slab depressurization system was completed in 2005. This system ran for eight years and was subsequently removed by new tenants in 2013. All the adjacent buildings have been investigated for the potential for soil vapor intrusion (VI) under the adjacent Minmilt Realty Site (DEC Site No. 152147). There are no VI impacts to these buildings. A Voluntary Cleanup Agreement (VCA), signed by the current owner, is the mechanism currently being utilized to manage the site (i.e., long-term site management). Site Geology and Hydrogeology: The site is located on the glacial outwash plain of the south shore of Long Island. The underlying formation consists mainly of fine sands intermixed, at varying depths of low permeability units, mainly of clay, that exist in continuous and non-continuous segments. The shallow groundwater aquifer is known as the Upper Glacial Aquifer. This overlies the next significant hydro-geologic unit known as the Magothy Aquifer. General groundwater flow is to the south southeast.

Env Problem: Remediation at the site is complete and there are no environmental concerns associated with this site. Prior to remediation, the primary contaminants of concern were non-chlorinated volatile organic compounds.A Site Management Plan has been developed and approved and is implemented under the Voluntary Cleanup Program (ref. Site ID No. V00193).

Health Problem: Soil vapor intrusion is a process by which contaminants in the soil vapor (air spaces within the soil), may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Given the levels of volatile organic compounds detected beneath the on-site building, there is a potential for people to inhale site-related contaminants in indoor air through soil vapor intrusion. However, sampling results indicate the levels detected in indoor air are commonly found in similar structures and do not represent a current health concern. Monitoring of the on-site structure will continue to ensure that the indoor air quality is not impacted. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Site Description: This site was a Class 2 Registry site (#152021) at the time of the Volunteer's (LJM Associates) application. Cantor Brothers was a chemical repackaging and handling facility until 1990. The PRP filed for Bankruptcy in 1993. The site is surrounded by manufacturing and commercial facilities. It consisted of a building with drum storage areas, and 16 underground tanks. Organic solvents, creosote, and fuel oils have been observed leaking from drums and storage tanks at the facility. Numerous spills, illegal discharges, and improper storage conditions have been documented since 1980. Investigation showed the presence of VOC soil contamination. The NYSDEC obtained $200,000 in contractual funds from Bankruptcy Court settlement to to cover storm drain cleaning and soil vapor extraction (SVE) remediation. LJM Associates, the new owner, entered the Voluntary Program to take over

CANTOR BROTHERS (Continued) **S104541575**

O&M of the SVE system upon depletion of the contractual escrow funds.The SVE system operated since its construction in 1998 until 2001. The storm drain cleaning was completed in 1998. A Record of Decision was signed in March of 2000. Remedial work since that time has involved the removal of soils contaminated with semivolatile organic compounds from discrete locations on the south side of the building. Installation of a sub-slab depressurization system was completed in 2005. The volunteer submitted a revised work plan to test whether the SSD system is still required. The consultant hired by the volunteer completed the soil Vapor Investigation (SVI) and the SVI report was approved by the DEC (11/2014). The subsequent Voluntary Cleanup Agreement (VCA) sampling included the necessary confirmatory sampling of the sub-slab depressurization (SSD) system to allow for the site reclassification determination. The Minmilt Realty site is adjacent to the former Canotor Brothers building. Monitoring for soil vapor and tersting adjacent buildings for soil vapor intrusion fell under the Minmilt Realty site. Therefore, this has been addressed.

Env Problem: Organic solvents, fuel oil and creosote leaked from drums and tanks and contaminated soils and drywells on site. The contaminated storm drains were addressed by excavation and removal of contaminated sediments. Contaminated soils beneath and near the site building were addressed by a soil vapor extraction (SVE) system. A sub-slab depressurization (SSD) system was installed in the building to prevent soil vapor intrusion. The system ran its course and was dismantled by a recent tenant. A site monitoring plan is being put in place by the volunteer.

Health Problem: Soil vapor intrusion is a process by which contaminants in the soil vapor (air spaces within the soil), may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Given the levels of volatile organic compounds detected beneath the on-site building, there is a potential for people to inhale site-related contaminants in indoor air through soil vapor intrusion. However, sampling results indicate the levels detected in indoor air are commonly found in similar structures and do not represent a current health concern. Monitoring of the on-site structure will continue to ensure that the indoor air quality is not impacted. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Summary Details:

Conditions at proposal October 15, 1984): Tronic Plating Co., Inc. occupies 0.5 acre in Farmingdale, New York. The site is in southwestern Suffolk County, approximately l.5 miles east of the Nassau County line. Tronic occupies the southeast corner of a long building in an industrial park area. The site consists of the building, two inside above-ground storage tanks, four underground leaching pools, and a storm drain in the paved area to the northeast of the building. Tronic hasprovided electroplating and anodi ing services to the electronics industry since July 1968. State and county authorities have determined that ha ardous wastes, consisting primarily of heavy metals, were discharged from storage tanks and leaching pools on the site. The State issued a Pollutant Discharge Elimination System permit to Tronic on April l, l980. In June l980, the State issued a Consent Order to Tronic for discharging industrial wastes to ground water from leaching pools. Tronic agreed to obtain a permit and clean out the leaching pools. Tests conducted by the State on one of the leaching pools detected copper, silver, iron, inc, lead, and cadmium. Heavy metals also were detected in the storm drain. The site is in a generally flat area with an average slope of less than 3 percent. There is no surface water in the vicinity. The surrounding area is paved, and run-off flows to existing storm drains. The site is surrounded by manufacturing and commercial facilities. Large cemeteries are located to the south and east. Wells within 3 miles of the site provide drinking water to about l6,000 people and are the only water supply in the area. Status June 10, 1986): EPA is considering various alternatives for this site.

Alias ID: 103
Alias Name: TRONIC PLATING CO., INC.
Alias Address: 168 CENTRAL AVENUE
FARMINGDALE, NY 11735
Alias Comments: Not reported
Site Description: The Tronic Plating Company Site (Site) is located at 168 Central Avenue in Farmingdale, Town of Babylon, Suffolk County, Long Island, New York. The Site occupies the southeast portion of a building owned by Commerce Holding Company, Inc. situated on Commerce Drive and the surrounding property, an area of approximately 7,200 square feet within a 117,000 square-foot lot. This Site is a rectangular, flat, commercially developed property. With the exception of a 50 by 75 foot landscaped front lawn, the area surrounding the building at the Site is paved for parking and shipping access. The southern boundary of the Site is the southern edge of the front lawn adjacent to Central Avenue. The Site surroundings consist of light industrial businesses to the north, west, and northeast. The Pinelawn Cemetery is located to the south and southeast. A wooded area owned by the Pinelawn Cemetery and separated from the Site by Central Avenue and an industrial lot, is located approximately 500 feet to the south. The area north of the Site, lower Melville, has no municipal sewer service and virtually all industries discharge their wastewater to ground-water infiltration systems, thereby impacting the ground-water quality in the area. The relatively level surface of the Site slopes gently to the south-southeast at a grade of approximately 3 percent. Except for the lawn, the Site surface is primarily impermeable given the presence of the building and paved areas. Surface water from precipitation drains from the building and the paved areas into a system of 12 storm drains located along the parking area (Commerce Drive). There are 3 major aquifers underlying the Site. These are: the unconfined Upper Glacial aquifer; the semi-confined Magothy aquifer; and, the confined Lloyd Sand aquifer. The total thickness of these three aquifers beneath the Site is approximately 1,200 feet. The two aquifers of environmental concern for this Site are the Upper Glacial and the Magothy, since the Lloyd Sand is a deep aquifer (1000 feet) and not hydrogeologically connected to the above aquifers. Studies have indicated that the Upper Glacial and Magothy aquifers may be hydrogeologically connected under the Site. The Magothy aquifer is totally dependent upon downward percolating rainfall and recharge from the overlying Upper Glacial deposits for its surface replenishment. The Raritan Formation of Late Cretaceous age is the deepest geologic formation of unconsolidated deposits beneath the Site. It rests directly on the crystalline bedrock and is overlain by the Magothy Formation. The Raritan Formation occurs beneath the entire area of Long Island but does not outcrop near the Site or within Suffolk County. Formation thickness ranges from 300 to 600 feet. The Raritan Formation is divided into a lower unit, the Lloyd Sand aquifer, and the upper unit, the Raritan Clay. The Raritan Clay functions as an aquiclude, separating the groundwater within the Lloyd Sand from the groundwater within the overlying Magothy Formation. Beneath the Site, the Lloyd Sand is approximately 200 to 300 feet thick and the relatively impermeable Raritan Clay is approximately 175 feet thick. The direction and relatively rapid rate of shallow (near the water table) ground-water flow beneath the Site is southerly at approximately 2 feet per day. This information was developed from a series of water level measurements collected from piezometers installed on-site and agrees with literature describing the hydrologic conditions for the area. The water table at the Site was found to be between 28 to 35 feet below the surface. Groundwater supplies the public and private needs of the entire population of Suffolk County. The two most commonly tapped aquifers for water supply purposes are the Upper Glacial and the Magothy. The Magothy aquifer is the primary source of potable drinking water in the area of the Site. Two water companies purvey water pumped from municipal wells to the homes and businesses

TRONIC PLATING CO., INC. (Continued) **1009968611**

in the vicinity of the Site. The East Farmingdale Water District supplies the businesses at the Site as well as areas to the south. The Suffolk County Water Authority also supplies some areas to the south of the Site. Each municipal supply well generally supplies one million gallons or more per day when in full-scale operation. All of the local public supply wells are advanced to and completed within the Magothy aquifer. The nearest municipal well field is located partially downgradient at 0.9 miles southwest of the Site. The ground-water flow is to the south. Another municipal supply well is located 2.4 miles south (downgradient) of the Site and a third municipal well field is located partially downgradient at 2.8 miles south-southeast of the Site. Private wells exist in the Site vicinity; these are completed within either the upper Magothy or the Upper Glacial aquifer. Some are used to supply drinking water to businesses, but most are used for irrigation or for process and cooling water. The nearest private well used for drinking water supply services an office at the St. Charles Cemetery and is located partially downgradient at 0.9 miles south-southwest of the Site. Wells located downgradient closer to the Site are solely used for irrigation. The Tronic Plating Company, Inc. operated an electroplating and metal anodizing facility at the Site from July 1968 to March 1984. The facility was serviced by 4 industrial leaching pools, 1 sanitary leaching pool and 1 drywell. The 4 industrial pools are located below the front lawn of the building, and the sanitary pool is located under the driveway adjacent to the front lawn. The dry well (a former sanitary leaching pool that was disconnected from the building) is located in the rear of the former Tronic facility. There are 3 on-site storm drains, with 2 overflow drains, located in the driveway adjacent to the building and the front lawn. The Suffolk County Department of Health Services (SCDHS) records indicate that in November 1983, the Tronic Plating Company arranged to pump out, clean, and backfill the industrial leaching pools. There was no indication that the Tronic Plating Company removed the contents of the storm drains, sanitary leaching pool, or drywell. Also, during 1983 the building on the Site was connected to the Suffolk County municipal sewer system. In March and April of 1984, the Tronic Plating Company ceased operating at the Site and moved its facility to Nassau County. Approximately 1.25 million gallons of waste water were produced by the Tronic Plating Company each year. The sources of these wastes were rinse waters from the electroplating, anodizing and etching processes. Between 1972 and 1982, the SCDHS collected and performed chemical analyses of fluid samples collected from the Tronic Plating Company's industrial discharges, as well as from the on-site leaching pools and an on-site storm drain. The analyses indicated the presence of metals (cadmium, chromium, copper, cyanide, iron, lead, nickel, silver, zinc) with concentrations characteristic of waste streams generated by a typical electroplating facility. Under the supervision of EPA, Commerce Holding Company Inc.'s consultant, C.A. Rich Consultants, performed the RI in two consecutive phases. The Phase I RI included: 1) a geophysical survey; 2) soil sampling associated with monitoring well installation; 3) groundwater sampling; 4) sampling of sediments and water from storm drains; 5) permeability testing; 6) a topographic survey; and, 7) numerical modeling of groundwater. The Phase II RI included: 1) soil and sediment sampling from storm drains; 2) soil sampling adjacent to storm drains; 3) an installation of additional monitoring wells; 4) sampling of groundwater; and, 5) an additional topographic survey. The samples collected during these studies were analyzed for organic and metal contaminants on EPA's Target Compound List. The results of the two phases of the RI indicated that groundwater, soils and storm-drain sediments at the Site were contaminated with volatile organic compounds (VOCs) and metals. The following summary presents the RI results for site soils and the groundwater directly below and in the vicinity of the Site. However, these data represent conditions at the Site prior to the removal action that was

TRONIC PLATING CO., INC. (Continued) **1009968611**

recently conducted. Levels of contaminants in the storm drains and associated overflow drains, the sanitary leaching pool and the drywell are now much lower. Table G in Appendix II contains the post removal sampling results for soils in the above-mentioned areas. A Record of Decision (ROD) addressing operable unit 1 (OU 1) was prepared in September 1993.

Record Upd: 02/02/2016
Updated By: GTBOBERS
Site Description: Location: The Astro Electroplating site is located in an urban portion of Suffolk County, NY. The Astro Electroplating site is located at 170 Central Avenue in the Town of Babylon, Suffolk County, New York. The 2.9-acre site is located on the north side of Central Avenue in a commercial/industrial area. Site Features: The site contains one multi-tenant industrial building. A paved parking lot surrounds the building. Astro Electroplating is an inactive electroplating facility that occupied 9,700 square feet of space at the north end of the industrial building. Current Zoning and Land Use: The site has been decommisioned and the surrounding parcels are currently used for a combination of commercial and light industrial processes.Past Use of the Site: Astro Electroplating specialized in plating nickel, chromium and copper to pre-molded plastic components. Contamination was due to wastewater being discharged to five subsurface leaching pools. Operable Units: The site was divided into

ASTRO ELECTROPLATING, INC. (Continued) **S108131276**

two operable units in 2007. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1)is the site soils. OU2 consists of site related groundwater.Site Geology and Hydrogeology: The upper glacial deposits are located directly below the surface and extend to a depth of 144 feet bgs. The soil consists primarily of coarse grained sand and is characteristic of outwash plain deposits. The water table is located atapproximately 37 feet bgs, and flows south-southeast.

Env Problem:	Nature and Extent of Contamination: The primary contaminants of concern at the site known at this time include plating metals such as nickel, zinc, chromium and copper. These are the contaminants that exceed Standards, Criteria and Guidance values. OU1 & OU2:Groundwater & Soil - Investigations indicate contamination in saturated and unsaturated soils and a plume of groundwater contamination that extends south to the property border. Groundwater and soil contamination is due to wastewater discharged to leaching pools. Significant Threat: The site presents a significant environmental threat due to the ongoing releases from source areas of contaminants into groundwater.
Health Problem:	The Astro Electroplating facility's past practice of subsurface wastewater disposal has contaminated groundwater and soil with heavy metals. In 1986, contaminated liquids and sludges were removed from the former leaching pools on-site. The remedial investigation indicated soil contamination with heavy metals in the leaching pool area below 15 feet. Exposures are unlikely due to the depth of contamination. Since homes and businesses near the site are connected to public drinking water, exposure to site-related contaminants in groundwater is not expected.

Assessment of Health:	Site-related contamination was removed from on-site leaching pits and storm drains to reduce the potential for contamination of the groundwater and exposure to contaminated soil during routine maintenance of the storm drains. The remediated areaswere backfilled with 10 to 30 feet of clean soil and subsequently paved over. Exposure to the site-related contaminants, copper,chromium, and cyanide, in groundwater is not expected since homes and businesses in the vicinity of this site are connected topublic water.
Description:	The Tronic Plating Co. operated a metal electroplating and anodizing facility at 168 Central Avenue from July 1968 to March 1984. The

TRONIC PLATING CO., INC. (Continued) **S108667330**

facility was served by four industrial leaching pools, one sanitary septic leaching pool, and one drywell. It is possible that some of the on-site storm drains may have also received discharges from the site. Contamination levels documented in the RI include sediments from storm drains and a septic system at a maximum of: cadmium at 1130 ppm; cyanide at 92 ppm; chromium at 1580 ppm; and, lead at 2,290 ppm. Borings conducted during the RI indicated that high levels of contamination were not widespread, and the groundwater investigation showed only a limited impact from the site. A soils removal action was completed in August 1993 and all known disposal areas have been cleaned to USEPA and NYSDEC approved levels. A Record Of Decision (ROD) was issued in September 1993, calling for no further action at this site. Site related groundwater contamination was limited to one shallow monitoring well. Post-remedy Groundwater monitoring was conducted by the Responsible Party following the completion of remedial activities, and all results were forwarded to the NYSDEC. The results confirmed that the remedial action was effective, and a delisting package was prepared in 1996 and finalized in 1997.

Site Description: A former sod farm which used a buried 550 gallon tank to store waste motor oil from equipment used in their farming operation. Also pesticides were stored on site. In August 1985, Hewlett-Packard had the tank removed. During excavation, visible discoloration of surface and subsurface soil was observed. Soil samples were collected and analyzed indicating hydrocarbons, pesticides and metals. Remediation of site has been completed. Hewlett-Packard has performed 4 soil excavations, taking a total of 590 cubic yards, and 5 soil sampling events. The final soil sampling results indicate that the site has been remediated. Site has been delisted 12/89.
Env Problem: This site has been remediated.
Health Problem: All contamination at the site has been remediated or removed. There are no known exposures, and therefore no known health concerns
Dump: False
Structure: True

Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area.Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west.Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the

I.W. INDUSTRIES, INC. (Continued) **S105054992**

depth of contamination. In 2011, an environmental easement was placed on the property.Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 is reducing infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.

Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Code: 55868
Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area.Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west.Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property.Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 is reducing infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.

I.W. INDUSTRIES, INC. (Continued) **S105054992**

Health Problem:	It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area.Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots

I.W. INDUSTRIES, INC. (Continued) **S105054992**

are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west.Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property.Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 is reducing infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.

Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Code: 55868
Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area.Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west.Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site

I.W. INDUSTRIES, INC. (Continued) **S105054992**

disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property.Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 is reducing infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.

Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Description: Location: The New York Twist Drill Loading Dock Area is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main facility feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Past Use of the Site: The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permitted discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units (OU): The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU 01 covers on-site activities for this class 2 site which are undertaken under the Voluntary Cleanup Program (Site number V00128). Remedial actions are being performed on-site to address contamination and prevent the migration of contamination off-site in accordance with the Record of Decision, dated March 2004. Site remedial actions include reductive dechlorination, free-phase product removal and a vapor control system. OU 02 covers off-site activities, which are being conducted under the State Superfund Program. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 100 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is

ARCHON GROUP (Continued) **1009234856**

approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern for OU 02 include tetrachlorethene (PCE), trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), trans-1,2-dichloroethene, 1,1 dichloroethene, 1,1,1-trichloroethane and 1,1-dichloroethane. Groundwater - Based on the groundwater monitoring results from 2012, PCE and its associated degradation products TCE and DCE are considered the primary contaminants, which were detected above the groundwater standard of 5 parts per billion. The leading edge of the PCE contamination was detected approximately 4,600 feet downgradient of the site along Ruland Road at a concentration of 180 parts per billion (ppb). However, a subsequent sample detected PCE at 23 ppb. The depth of contamination is approximately 50 feet below ground surface (bgs) at the site and descends to approximately 300 feet bgs downgradient of the site south of Bayliss Road. The width of the groundwater contamination plume is approximately 400 feet near Bayliss Road where the highest detections of PCE (211 ppb) and DCE (286 ppb) were located. The detection of DCE within the plume at a greater concentration than PCE indicates that natural degradation of PCE is occurring, since PCE is the primary contaminant detected on-site and DCE is a known degradation product of PCE. On-site remedial activities conducted since 2003 have significantly reduced site impacts to off-site groundwater, as a result groundwater conditions near the site have improved and reduced the length of the plume to 4,300 feet. Groundwater contamination is attenuating further down-gradient of the site based on low levels detected at the furthest monitoring well from the site located along Ruland Road, the decreasing trend of site related contamination detected at MW-09 from 2008 to 2012 and the detection of the final degradation product of PCE, known as ethane/ethene, within the plume. Vapor Intrusion - One structure down-gradient of the site has been evaluated for vapor intrusion. Sampling has detected elevated PCE, TCE and DCE concentrations beneath the building, but has not detected PCE, TCE or DCE within the indoor air. In 2007, sub-slab soil vapor concentrations of PCE, TCE and DCE were detected at 1,010 micrograms per cubic meter (ug/m3), 67 ug/m3 and 14.6 ug/m3, respectively. Subsequent sub-slab soil vapor sampling in 2014 detected PCE up to 74 ug/m3, but TCE and DCE were not detected. Clean groundwater is located above the zone of contaminated groundwater further downgradient of the site, therefore, soil vapor will not be impacted from this sites groundwater contamination.

Health Problem: Exposures associated with contamination on Operable Unit 1 (on-site) have been assessed as part of remedial activities for Site #V00128. Exposures to off-site contamination are being assessed as part of Operable Unit 2. People will not come into contact with groundwater contamination unless they dig or drill below the surface. Contaminated groundwater in the area is not used for drinking and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion does not appear to be currently occurring off-site; however, the potential for exposures via soil vapor intrusion should

ARCHON GROUP (Continued) **1009234856**

	be monitored.

Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is

ARCHON GROUP (Continued) **1009234856**

presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the

ARCHON GROUP (Continued) **1009234856**

site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Description:	Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or

ARCHON GROUP (Continued) **1009234856**

exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of

ARCHON GROUP (Continued) **1009234856**

buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Code: 56832
Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985,

ARCHON GROUP (Continued) **1009234856**

the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.
Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.
Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that

ARCHON GROUP (Continued) **1009234856**

is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and

Site Code: 57693
Site Description: Location: The New York Twist Drill Loading Dock Area is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main facility feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Past Use of the Site: The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permitted discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units (OU): The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU 01 covers on-site activities for this class 2 site which are undertaken under the Voluntary Cleanup Program (Site number V00128). Remedial actions are being performed on-site to address contamination and prevent the migration of contamination off-site in accordance with the Record of Decision, dated March 2004. Site remedial actions include reductive dechlorination, free-phase product removal and a vapor control system. OU 02 covers off-site activities, which are being conducted under the State Superfund Program. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 100 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.
Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern for OU 02 include tetrachlorethene (PCE), trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), trans-1,2-dichloroethene, 1,1 dichloroethene, 1,1,1-trichloroethane and 1,1-dichloroethane. Groundwater - Based on the groundwater monitoring results from 2012, PCE and its associated degradation products TCE and DCE are considered the primary contaminants, which were detected above the groundwater standard of 5 parts per billion. The leading edge of the PCE contamination was detected approximately 4,600 feet downgradient of the site along Ruland Road at a concentration of 180 parts per billion (ppb). However, a subsequent sample detected PCE at 23 ppb. The depth of contamination is approximately 50 feet below ground surface (bgs) at the site and descends to approximately 300 feet bgs downgradient of

ARCHON GROUP (Continued) **1009234856**

the site south of Bayliss Road. The width of the groundwater contamination plume is approximately 400 feet near Bayliss Road where the highest detections of PCE (211 ppb) and DCE (286 ppb) were located. The detection of DCE within the plume at a greater concentration than PCE indicates that natural degradation of PCE is occurring, since PCE is the primary contaminant detected on-site and DCE is a known degradation product of PCE. On-site remedial activities conducted since 2003 have significantly reduced site impacts to off-site groundwater, as a result groundwater conditions near the site have improved and reduced the length of the plume to 4,300 feet. Groundwater contamination is attenuating further down-gradient of the site based on low levels detected at the furthest monitoring well from the site located along Ruland Road, the decreasing trend of site related contamination detected at MW-09 from 2008 to 2012 and the detection of the final degradation product of PCE, known as ethane/ethene, within the plume. Vapor Intrusion - One structure down-gradient of the site has been evaluated for vapor intrusion. Sampling has detected elevated PCE, TCE and DCE concentrations beneath the building, but has not detected PCE, TCE or DCE within the indoor air. In 2007, sub-slab soil vapor concentrations of PCE, TCE and DCE were detected at 1,010 micrograms per cubic meter (ug/m3), 67 ug/m3 and 14.6 ug/m3, respectively. Subsequent sub-slab soil vapor sampling in 2014 detected PCE up to 74 ug/m3, but TCE and DCE were not detected. Clean groundwater is located above the zone of contaminated groundwater further downgradient of the site, therefore, soil vapor will not be impacted from this sites groundwater contamination.

Health Problem: Exposures associated with contamination on Operable Unit 1 (on-site) have been assessed as part of remedial activities for Site #V00128. Exposures to off-site contamination are being assessed as part of Operable Unit 2. People will not come into contact with groundwater contamination unless they dig or drill below the surface. Contaminated groundwater in the area is not used for drinking and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion does not appear to be currently occurring off-site; however, the potential for exposures via soil vapor intrusion should be monitored.

violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Environmental Interest/Information System
SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: Location:The Circuitron Site is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is .95 acres and is flat with commercial properties on all sides.Current Zoning/Use(s): The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity.Historical Use(s): Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron engaged in photographic, riston, and silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning SPDES permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt.Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination.Operable unit 1 (OU1) is the on-site source area removal of soil and sediments. Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The Site is located on the outwash plain of Long Island. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site.

Env Problem: Samples were taken from the SPDES discharge pools, two leach pools found in the plating room, storm drains on the west side of the building and from another abandoned SPDES discharge pool at the site. The results conformed the presence of heavy metals and organics. Based on these findings, the site was found to represent a significant threat to the environment and was placed on the National Priorities List in March 1989 with USEPA as the lead agency. A Phase I Investigation and a RI/FS was completed at this site. The March 1991 ROD for Operable unit 1 (OU1) is the on-site source area removal of soil and sediments. The September 1994 ROD for Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.In September of 1996, the groundwater 100% design was approved. The source removal portion of the OU-1 soil remediation program was completed in January of 1997. The building was demolished and the contaminated sediments were removed. Construction of the groundwater treatment system was completed on June 28, 2000. A single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE) was installed and completed 2/2008 and began operation 3/2008. This system addresses the contaminated subsurface soils and groundwater located in the southwest corner of the site. The GCW/IVS/SVE system achieve the OU2 remedy goals sooner and replaces the groundwater extraction and treatment facility, which was treating only the groundwater. The groundwater extraction and treatment system is being removed.The overall project is currently in the site management phase.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Site Code: 55856
Site Description: Location:The Circuitron Site is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is .95 acres and is flat with commercial properties on all sides.Current Zoning/Use(s): The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity.Historical Use(s): Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron engaged in photographic, riston, and silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning SPDES permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt.Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination.Operable unit 1 (OU1) is the on-site source area removal of soil and sediments.

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The Site is located on the outwash plain of Long Island. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site.

Env Problem: Samples were taken from the SPDES discharge pools, two leach pools found in the plating room, storm drains on the west side of the building and from another abandoned SPDES discharge pool at the site. The results conformed the presence of heavy metals and organics. Based on these findings, the site was found to represent a significant threat to the environment and was placed on the National Priorities List in March 1989 with USEPA as the lead agency. A Phase I Investigation and a RI/FS was completed at this site. The March 1991 ROD for Operable unit 1 (OU1) is the on-site source area removal of soil and sediments. The September 1994 ROD for Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.In September of 1996, the groundwater 100% design was approved. The source removal portion of the OU-1 soil remediation program was completed in January of 1997. The building was demolished and the contaminated sediments were removed. Construction of the groundwater treatment system was completed on June 28, 2000. A single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE) was installed and completed 2/2008 and began operation 3/2008. This system addresses the contaminated subsurface soils and groundwater located in the southwest corner of the site. The GCW/IVS/SVE system achieve the OU2 remedy goals sooner and replaces the groundwater extraction and treatment facility, which was treating only the groundwater. The groundwater extraction and treatment system is being removed.The overall project is currently in the site management phase.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

A single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE) was installed and completed 2/2008 and began operation 3/2008. This system addresses the contaminated subsurface soils and groundwater located in the southwest corner of the site. The GCW/IVS/SVE system achieve the OU2 remedy goals sooner and replaces the groundwater extraction and treatment facility, which was treating only the groundwater. The groundwater extraction and treatment system is being removed.The overall project is currently in the site management phase.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Site Code: 55856
Site Description: Location:The Circuitron Site is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is .95 acres and is flat with commercial properties on all sides.Current Zoning/Use(s): The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity.Historical Use(s): Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron engaged in photographic, riston, and silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning SPDES permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt.Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination.Operable unit 1 (OU1) is the on-site source area removal of soil and sediments. Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The Site is located on the outwash plain of Long Island. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site.

Env Problem: Samples were taken from the SPDES discharge pools, two leach pools found in the plating room, storm drains on the west side of the building and from another abandoned SPDES discharge pool at the site. The results conformed the presence of heavy metals and organics. Based on these findings, the site was found to represent a significant threat to the environment and was placed on the National Priorities List in March 1989 with USEPA as the lead agency. A Phase I Investigation and a RI/FS was completed at this site. The March 1991 ROD for Operable unit 1 (OU1) is the on-site source area removal of soil and sediments. The September 1994 ROD for Operable unit 2 (OU2) OU2 consists of the extraction, treatment and reinjection of the on-site and off-site groundwater.In September of 1996, the groundwater 100% design was approved. The source removal portion of the OU-1 soil remediation program was completed in January of 1997. The building was demolished and the contaminated sediments were removed. Construction of the groundwater treatment system was completed on June 28, 2000. A single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE) was installed and completed 2/2008 and began operation 3/2008. This system addresses the contaminated subsurface soils and groundwater located in the southwest corner of the site. The GCW/IVS/SVE system achieve the OU2 remedy goals sooner and replaces the groundwater extraction and treatment facility, which was treating only the groundwater. Summary Details:

Conditions at proposal June 24, 1988): Circuitron Corp. manufactured circuit boards during 1961-86 on about 1 acre at 82 Milbar Boulevard, East Farmingdale, Suffolk County, New York. The site is in a densely populated industrial/commercialarea of Long Island east of Route 110 and the State University of New York Farmingdale Campus. The property is owned by 82 Milbar Boulevard Corp. Circuitron was a subsidiary of FEE Industries, which ADI Electronics, Inc., bought in 1984.The facility discharged thousands of gallons of metal-containing plating wastes to an underground leaching pool permitted under the State Pollutant Discharge Elimination System SPDES), to unauthori ed leaching pools beneath the floor of the plating room, and to a storm drain. After ADI Electronics purchased the facility, the Suffolk County Department of Health Services SCDHS) identified the discharge to the SPDES pool and the storm drain. Since 1984, SCDHS has issued Circuitron numerous notices of violations. On June 12, 1984, Circuitron agreed to an Order on Consent from SCDHS requiring removal of all ha ardous substances from the site. On March 7, 1985, SCDHS issued a Stipulated Agreement in which Circuitron agreed to install three monitoring wells, analy e ground water, and clean out one of the unauthori ed leaching pools. In mid-1986, the company vacated the facility without complying with all SCDHS requirements. In addition, Circuitron received one of the largest fines ever in the State for environmental pollution. The original owner has been convicted of a felony as a result of illegal waste discharges. Extensive sampling of the site by SCDHS detected heavy metals and chlorinated organic solvents in the SPDES leaching pool, the unauthori ed leaching pools, and the storm drains. Analyses of the monitoring wells installed as part of the Stipulated Agreement detected 1,1,1-trichloroethane in on-site wells downgradient of themanufacturing building. In May 1987, EPA found potentially explosive conditions at the site. From 125 to 150 drums, most unmarked and one bulging, were left hapha ardly throughout the building when it was vacated. Incompatible andreactive wastes were not segregated. Some drums were marked sulfuric acid, hydrochloric acid, sodium hydroxide, and caustic soda. Other smaller containers were strewn outside. Six concrete holding tanks

CIRCUITRON CORP. (Continued) **1009968701**

containing unknown materials were belowthe floor and three aboveground storage tanks were behind the building. The aquifers underlying Long Island have been designated as Sole Source Aquifers under the Safe Drinking Water Act. At least 15 municipal wells serving over 215,000people are within 3 miles of the site, the nearest 1,000 feet in the direction ground water flows. The shallow well has been closed since 1978 due to volatile organic chemical contamination from an unknown source. The building is not fenced or guarded. Employees of other businesses in the area use the site for parking. Status March 31, 1989): EPA is preparing a workplan for a remedial investigation/feasibility study to determine the type and extent of contamination atthe site and identify alternatives for remedial action.

Site Description: In 1984, an owner of Circuitron Corporation, Mario Lombardo, was charged for discharging organic solvents to unpermitted "hidden" leaching pools between March 1, 1982 and March 22, 1984. In 1985, Mr. Lombardo pleaded guilty to unlawful dumping of hazardous wastes, under New York State Environmental Conservation Law Section 27, Subsection 09-14. An Order of Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the Site including drums, tanks, and piping; and a groundwater quality study be performed. To comply with the order, Circuitron Corporation cleaned out and backfilled the unpermitted leaching pool in the southern part of the plating room and installed and sampled 5 on-Site monitoring wells. There are no records available regarding the amount of waste removed from this leaching pool or the existence and the extent of contaminated soil in and around the leaching pool. In 1987, EPA initiated an emergency removal of some of the more than 100 chemical containers and storage tanks on-Site. In 1988, EPA conducted another emegency cleanup action and removed approximately 20 waste drums from inside the building, 3 aboveground tanks from the rear of ther building, the contents of 7 undergground storage tanks, 2 below-surface treatment basins, and several leaching basins. The Site was proposed for teh National Priorities List in June 1988 and was listed on thr NPL in March 1989. The first RI/FS of the Site was initiated by EPA in september 1988 and was completed in January 1991. In 1984, an owner of Circuitron Corporation, Mario Lombardo, was charged for discharging organic solvents to unpermitted "hidden" leaching pools between March 1, 1982 and March 22, 1984. In 1985, Mr. Lombardo pleaded guilty to unlawful dumping of hazardous wastes, under New York State Environmental Conservation Law Section 27, Subsection 09-14. An Order of Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively,

CIRCUITRON CORP. (Continued) **1009968701**

required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the Site including drums, tanks, and piping; and a groundwater quality study be performed. To date, only the unpermitted leaching pool in the southern part of the plating room has been cleaned out and backfilled. This work was performed by Circuitron Corporation. There are no records available regarding the amount of waste removed from this leaching pool or the existence and the extent of contaminated soil in and around the leaching pool. In 1987, EPA initiated an emergency removal of some of the more than 100 chemical containers and storage tanks on-Site. In 1988, EPA conducted another emegency cleanup action and removed approximately 20 waste drums from inside the building, 3 aboveground tanks from the rear of ther building, the contents of 7 undergground storage tanks, 2 below-surface treatment basins, and several leaching basins. The Site was proposed for teh National Priorities List in June 1988 and was listed on thr NPL in March 1989. The first RI/FS of the Site was initiated by EPA in september 1988 and was completed in January 1991. The Circuitron Corporation site is located at 82 Milbar Boulevard, East Farmingdale, Suffolk County, New York. The site is situated near the Nassau County-Suffolk County border in central Long Island. The site encompasses approximately 1 acre in an industrial/commercial area just east of Route 110 and the State University of New York, Agricultural and Technical College campus in Farmingdale. The site is generally flat and has a slight slope up to the southeast of less than 1 percent. The site elevation is approximately 85 to 90 feet above mean sea level. The Circuitron Corporation site consists of an abandoned 23,500 square foot building that was used between 1961 and 1986 for the manufacture of electronic circuit boards. Aside from the building, the site is primarily asphalt paved, with the exception of a small area in the rear of the building. The paved area in front of the building was used in the past as a parking lot for the employees of Circuitron Corporation and is presently used for parking by employees of nearby companies. Approximately 95% of the site is paved or covered by the building.
At least two unauthorized leaching pools exist below the concrete floor in the plating room inside the building. A circular depression in the concrete floor towards the front of this room indicates the presence of other unauthorized leaching pools. A series of leaching pools lies beneath the parking lot in the front of the building. These leaching pools include an authorized wastewater discharge pool below a manhole located on the north side of the property in front of the laboratory, and two old abandoned leaching pools located in the northeast corner of the site. At least two sanitary cesspools have been documented to exist below the parking lot in front of the northwest corner of the building. A line of interconnected storm drains exists on the western portion of the site. The storm drains range from 10 feet to approximately 13 feet in depth. Circuitron Corporation is located in an industrial area surrounded by similar small manufacturers and is several miles away from any residential area. There are no schools or any recreational facilities in the immediate vicinity. Approximately 15 municipal wells serving over 215,000 people are within 3 miles of the site, the nearest being approximately 1500 feet to the southeast of the site in the direction of groundwater flow. One shallow well in this field has been closed since 1978 due to organic chemical contamination from an unknown source. Circuitron Corporation was incorporated in New York State in 1961 and operated a manufacturing facility at the site between 1961 and 1986. Circuitron Corporation ceased operations and vacated the site some time between May and June 1986. During this time period, Circuitron Corporation removed all equipment of value and left the facility in its present condition. The current owner of the site is 82 Milbar Blvd., Inc., a New York corporation incorporated in 1968. Circuitron Corporation filed for bankruptcy in 1986. 82 Milbar Blvd., Inc. filed for bankruptcy in 1987. Both of these bankruptcy proceedings were

CIRCUITRON CORP. (Continued) **1009968701**

dismissed or closed in 1988. At the request of the New York State Department of Environmental Conservation (NYSDEC), an emergency response action was performed by the EPA at the site in mid-1989, prior to the Remedial Investigation/Feasibility Study (RI/FS) investigation. This action included removal of 20 waste drums from inside the building, the emptying of 2 underground tanks containing various volatile organic and inorganic compounds, cleaning and removing of 3 aboveground tanks from the rear of the building and general clean-up of the suspected contaminated debris from inside the building. The facility had an approved New York State Pollutant Discharge Elimination System (SPDES) permit, No. NY-007 5655, to discharge industrial wastewater to a leaching pool located below the parking lot in front of the building. This SPDES permit expired on September 12, 1986, based on a July 1, 1986 inspection by NYSDEC, indicating that the discharge had ceased. Circuitron Corporation had received numerous warnings from both the Suffolk County Department of Health Services (SCDHS) and NYSDEC concerning SPDES permit violations and unauthorized discharges. An Order of Consent and the Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. Circuitron Corporation installed 5 monitoring wells at the site; however, there are no engineering or well installation reports available concerning the construction of these wells. In addition, the analytical results from the Circuitron Corporation and the SCDHS groundwater sampling of these wells are in conflict with each other. To date, only the unauthorized leaching pool in the southern part of the plating room has been cleaned out and backfilled. This work was performed by Circuitron Corporation. There are no records available regarding the amount of waste removed from the unauthorized leaching pool or the existence and the extent of contaminated soil in and around the leaching pool. In 1984, a former owner of Circuitron Corporation, Mario Lombardo, was charged for discharging organic solvents to unauthorized, "hidden" leaching pools between March 1, 1982 and March 22, 1984. He was indicted on 6 felony counts of unlawful dumping of hazardous wastes, under New York State (NYS) Environmental Conservation Law (ECL) Section 27, Subsection 09-14; 19 felony counts of offering a false instrument for filing, under Suffolk County Penal Law Section 175, Subsection 135; and 20 misdemeanor counts of violating NYS ECL Section 17, Subsection 03-01 and 05-01. On May 9, 1985, Mario Lombardo pleaded guilty to unlawful dumping of hazardous wastes, NYS ECL Section 27, Subsection 09-14. He was fined $50,000 and sentenced to 700 hours of community service. When Circuitron Corporation informed SCDHS that it would be vacating the facility, SCDHS informed Circuitron Corporation that a cleanup of toxic and hazardous materials and a groundwater study would be required. SCDHS also required further off-site groundwater monitoring. Circuitron Corporation refused to comply with the off-site groundwater monitoring requirement. EPA sent a general notice letter and a request for information to the identified potentially responsible parties (PRPs) on July 24, 1987. EPA sent another general notice letter to the PRPs on August 15, 1988 inviting them to conduct a RI/FS. The site was proposed for the National Priorities List in June, 1988 and finalized in March, 1989. The RI/FS was initiated in September, 1988 and the field work started in May, 1989. A Record of Decision addressing Operable Unit 1 was completed in March 1991.

Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: CIRCUITRON SITE
Classification: Not a generator, verified

Date form received by agency: 06/29/1998
Site name: CIRCUITRON SITE
Classification: Large Quantity Generator

Violation Status: No violations found

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017

Next Scheduled EDR Contact: 07/17/2017
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/12/2016
Date Data Arrived at EDR: 12/28/2016

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/12/2016

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
