State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

USGS TOPOGRAPHIC MAP

Target Property Map:	5940609 HUNTINGTON, NY
Version Date:	2013
South Map:	5940593 AMITYVILLE, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

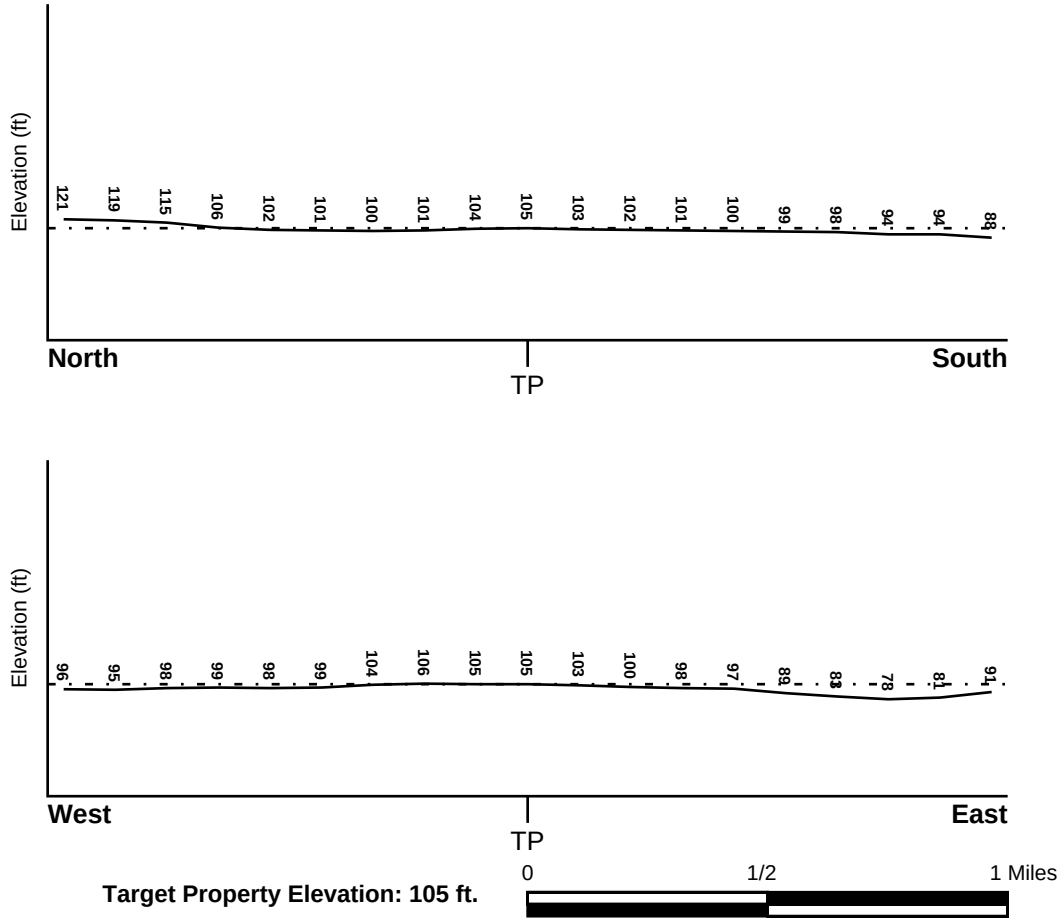
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36103C0620G	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
36103C0835G	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HUNTINGTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	Tronic Plating Co., Inc
Site EPA ID Number:	NYD002059517
Groundwater Flow Direction:	South-Southeast
Measured Depth to Water:	not available.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Haven

Soil Surface Texture: highly decomposed plant material

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	1 inches	highly decomposed plant material	A-8	Highly organic soils, Peat.	Max: 42 Min: 1.4	Max: 5.5 Min: 4.5
2	5 inches	18 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5
3	1 inches	5 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5
4	18 inches	27 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
5	27 inches	59 inches	stratified gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 141	Max: 6 Min: 4.5

Soil Map ID: 2

Soil Component Name: Plymouth

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 5.5 Min: 3.6
2	3 inches	27 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 5.5 Min: 3.6

Soil Layer Information

ROBERT B. ANDERSON
SENIOR ENVIRONMENTAL CONSULTANT -
TRANSACTION ADVISORY SERVICES GROUP
DENVER, COLORADO

SUMMARY

- Completed Phase I ESAs for commercial, residential, and industrial sites
- Conducted compliance audits at industrial facilities
- Performed Phase II ESAs
- Prepared regulatory reporting leading to site closures
- Conducted remedial activities at contaminated sites
- Prepared SPCC and SWPPP Plans
- Prepared annual Tier II reports

EDUCATION

Bachelor of Arts in Physics, Amherst College, Amherst, Massachusetts, 2006

ADDITIONAL TRAINING

OSHA 40 Hour HAZWOPER

OSHA 8 Hour Annual HAZWOPER Refreshers

Environmental Professional as defined by ASTM standards

PROFILE

Mr. Anderson is a Senior Environmental Consultant and a member of the Transactional Services group in RPS GaiaTech's west region. In this role, he is responsible for conducting Phase I Environmental Site Assessments (ESAs) and compliance audits of commercial and industrial facilities. Mr. Anderson has performed Phase II subsurface investigations and prepared regulatory reports leading to site closures. He has performed site remediation activities including the design and installation of remediation systems, subsurface chemical injection, UST removals with closure sampling, and soil and groundwater monitoring activities. Mr. Anderson has conducted facility inspections and prepared reports for SPCC and SWPPP plans for quarries. He has also prepared annual Tier II reports for a client with locations across several different states.

EXAMPLE PROJECT EXPERIENCE

Phase I ESAs

- Performed and managed 150+ Phase I ESAs for commercial, residential, and industrial sites.

Compliance Audits

- Performed 80+ compliance audits of industrial facilities.

Deal Coordination

- Coordinated environmental due diligence for deals including 37 automotive maintenance facilities, five industrial sites, and several smaller portfolios.

Subsurface Investigations

- Managed and performed Phase II subsurface investigations based on RECs identified in Phase I ESAs.
- Prepared regulatory reports leading to site closures with the environmental regulatory agencies.
- Prepared Baseline Environmental Assessments based on subsurface sampling for due diligence protection with the Michigan Department of Natural Resources and Environment.

Remedial Activities

- Assisted in the design and installation of air sparge and soil vapor extraction remediation systems.
- Planned and conducted subsurface chemical injection activities.
- Perform UST removals, excavation of contaminated soil, and closure sampling.
- Conducted soil and groundwater sampling to monitor the progress of remediation systems.

Environmental Compliance

- Conducted inspections and prepared reports for SPCC and SWPPP plans for quarries.
- Prepared annual Tier II reports for a client with locations across several different states.

GRACE RIORDAN
ENVIRONMENTAL CONSULTANT -
DUE DILIGENCE GROUP
CHICAGO, ILLINOIS

SUMMARY

- Completed and reviewed Phase I ESAs for commercial, and residential sites
- Assisted in the research and investigation of multiple Phase I ESAs

EDUCATION

Bachelors of Arts in Geography: Sustainable Systems, Minor in Public and Environmental Affairs from Indiana University, 2014

PROFILE

Ms. Riordan is an Associate Environmental Consultant and a member of the Due Diligence group in RPS GaiaTech's Chicago office. In this role, she is responsible for conducting Phase I Environmental Site Assessments (ESAs) for stock purchase, asset purchase, refinancing, and foreclosure transactions. She has performed radon surveys as a non-ASTM part of Phase I ESAs, as requested by clients. She has also been responsible for creating scopes of work, budgets, and tracking the status of various types of environmental reports.

EXAMPLE PROJECT EXPERIENCE

Corporate Reviews and Desktop Audits

- Reviewed environmental policies, procedures, and compliance obligations.
- Researched environmental claims or enforcement actions formerly or currently filed against the company or its facilities.
- Reviewed State and Federal environmental databases for former and current facilities to identify environmental impact or compliance concerns.
- Evaluated the potential of future liability associated with off-site disposal facilities and Potentially Responsible Party (PRP) claims.
- Conducted environmental due-diligence and quantified potential environmental liabilities associated with site operations.

Phase I ESAs

- Performed and managed Phase I ESAs
- Assisted with Phase I ESAs and environmental compliance audits for facilities in North America.
- She has performed radon surveys as a non-ASTM part of Phase I ESAs, as requested by clients.

Re: Limited Phase II Site Investigation Report - DRAFT
Newsday Media Group
235 Pinelawn Road
Melville, New York 11747

Dear Mr. Lawrence:

GaiaTech Incorporated dba RPS performed a limited Phase II Site Investigation (Phase II) at the Newsday Media Group facility located at 235 Pinelawn Road, Melville, New York, Suffolk County, New York (the "Site"). The Site location is identified on the attached Figure 1 located in Appendix A. The investigation was conducted in accordance with the approved proposal dated November 29, 2017. This investigation was completed to assess potential impacts identified in the Phase I Environmental Site Assessment (ESA) completed at the site by RPS in July 2017. A summary of the sampling activities and findings of the limited Phase II investigation are summarized below.

BACKGROUND

The roughly 50-acre site is developed with an approximately 539,000 square foot production building, which is divided between an office area, production areas and a wastewater treatment plant. The production areas contain a packaging and bundling area, a reel room where paper reels are fed to the printing lines, two levels of printing presses, boiler rooms, emergency generator rooms, a cooling tower room, various chemical storage areas, mechanical rooms, electrical rooms and maintenance shops. Chemical storage areas include three bermed areas (containing fountain solution aboveground storage tanks [ASTs], press oil and degreasers) and ink ASTs. Based on the available historical records, the Phase I report identified 15 underground storage tanks (USTs), including three 20,000-gallon diesel USTs, one 2,500-gallon fuel oil UST, and 11 historical USTs operated at the site. The four active USTs were reported to be in good working condition and in compliance with current UST regulations.

The Phase I site assessment conducted by RPS in July 2017 and including additional follow-up research revealed the following potential concerns in connection with the Site:

Potential Subsurface Concerns

- **Historical Site Operations and Former USTs**: Newsday has operated as a newspaper printing facility since the late 1970s. Printing operations have included the use of petroleum-

based inks, washes, oils and chlorinated solvents. The facility has also generated hazardous waste including silver and spent solvents. While limited soil and groundwater investigations have been performed in the vicinity of a two former fuel oil USTs (indicating no actionable impacts), a few other former USTs were present in agency records for which no post-removal sampling was conducted, and the exact locations of these former tanks was uncertain.

- Twelve current or historical USTs were identified as follows:

UST System(s) Summary					
Tank ID	*Contents*	*Capacity (gallons)*	*Installation Date*	*Removal Date*	*Comment*
1	Diesel	25,000	1978	1986	Former location believed to be in the paved parking area near the wastewater treatment plant; No historical sampling performed.
2	Diesel	25,000	1978	1986	Same as above
3	Diesel	25,000	1978	1986	Same as above
4	Gasoline	12,000	1978	1986	Same as above
5	Spill containment	2,000	1978	1988	Location unknown; believed to be near the wastewater treatment building; No historical sampling is known to have occurred.
6	No. 6 fuel oil	25,000	1978	Abandoned 2010	SE corner of building; **No concerns; previous sampling conducted.**
7	No. 2 fuel oil	25,000	1978	Abandoned 2010	SE corner of building; **No concerns; previous sampling conducted.**
8	Industrial Waste	4,000	1978	1987	Location unknown; No historical sampling is known to have occurred.
14	Diesel	20,000	1985	2010	South side of property, replaced in 2010 with new USTs; **No concerns; previous sampling conducted during UST upgrade activities.**

15	Diesel	20,000	1985	2010	Same as above; **No concerns; previous sampling conducted during UST upgrade activities.**
16	Diesel	20,000	1985	2010	Same as above; **No concerns; previous sampling conducted during UST upgrade activities.**
18	Diesel	2,500	NA	NA	Double wall fiberglass tank; Active tank with leak/over fill detectors. **No concerns noted.**

Of the 12 current and historical USTs, the exact former locations of tanks #1 through #5, and #8 were unknown, and no previous sampling was performed. The other USTs are either currently in operation and/or proper sampling and closure/abandonment has been performed. Due to the nature of the on-site operations, Tanks #1 through 4 were likely used for vehicle refueling services at the site. Based upon RPS' review of aerial photo from 1980, the refueling is believed to have been conducted in the western parking lot area (in the general vicinity off the wastewater treatment plant). It appears that these refueling services were relocated to the southwestern portion of the site where tanks #14 through 16 were installed in 1985.

COMPLETED SCOPE OF WORK

As a result of the Phase I findings, RPS conducted a Limited Phase II Investigation to assess potential concerns identified in the July 2017 Phase I ESA. This included the potential for impacts to soil, groundwater and/or soil-gas from historical on-site operations (including solvent use) and the former removed or abandoned on-site USTs for which no previous sampling was performed.

As described in the November 29, 2017 proposal, RPS completed six soil borings, five sub-slab soil vapor sampling points, three additional soil-gas sampling points and two temporary wells at the Site. Additional groundwater sampling points were planned, however, due to the presence of hard, compacted sand, gravel and cobbles, the Geoprobe unit was unable to reach groundwater in most locations. As such, soil gas sampling was substituted for groundwater sampling in 3 locations.

Per the approved proposal, the property was subdivided into a northern portion and southern portion. As the northern portion had not historically contained industrial operations, the investigation was focused on the southern portion only. The borings/wells were advanced to evaluate potential impacts to the subsurface related to the potential concerns identified in the Phase I, including:

- Historic use of inks, washes, oils and chlorinated solvents throughout the production area:
  - two soil borings
  - five soil-gas sampling points
- Wastewater Treatment Plant Area (also the general vicinity of Tanks 1through 5) :

  - one soil boring
  - one temporary well
- Presumed Location of former Tanks 1 through 4 (10K & 20K-gallon gasoline & diesel USTs):
  - one soil boring
  - one soil-gas point
- Along Northern Boundary of Southern Portion
  - two soil borings
  - two soil-gas points (with one of the two samples analyzed)

All soil and groundwater samples were analyzed for volatile organic compounds (VOCs) by USEPA Method 5035/8260C, polycyclic aromatic hydrocarbons (PAHs) by US EPA 8270D-SIM, and total or dissolved Resource Conservation and Recovery Act (RCRA) metals by US EPA 6010C & 7471A . The soil-gas and sub-slab vapor point samples were analyzed for VOCs by US EPA Method TO-15. The approximate sample locations are shown in Figure 2.

Field Activities

RPS cleared public subsurface utilities through the Dig Safely New York one call locating system. For safety purposes and prior to installing any soil borings, RPS also retained a private utility locating company (Ground Penetrating Radar Systems, LLC, GPRS) to verify that the proposed soil boring and temporary monitoring well locations were clear of underground utilities. The GPRS used a combination of radio-frequency locators, magnetometers and ground penetrating radar to clear each boring location. On January 17 to 19, 2018, RPS installed a total of six borings at the Site, with a few driven down to the water table and converted to temporary monitoring wells. Five sub-slab vapor samples and three soil-gas samples were also collected. The locations of the borings and temporary monitoring wells are shown on Figure 2 (Appendix A).

Soil Sampling

Borings were advanced around the Site to investigate the potential subsurface impacts from the reported historical operations. Two of the borings (GP-1 and GP-2) were completed inside the building. In most cases, soil samples were collected on a continuous basis using the direct-push probe. Each soil interval was field screened for VOC vapors using a photoionization detector (PID). Where field screening results suggested impact in soil, soil samples were selected for possible analysis. In the event field screening results do not indicate contamination, soil samples will be selected from a depth interval most likely to be impacted or at a location under an identified structure or UST.

The boring locations and sampling rationale are provided in the table below.

Boring Name	Depth (feet)	Rationale
GP-1	15	Historic use of inks, washes, oils and chlorinated solvents
GP-2	20	Historic use of inks, washes, oils and chlorinated solvents
GP-3	26	Former UST location (Tanks 1-4)
GP-4	25	Wastewater treatment area & Vicinity of tanks 1 through 4
GP-5	25	Northern parking lot area/boundary between northern and southern parcels
GP-6	25	Northern parking lot area/ boundary between northern and southern parcels

Soil borings were advanced to depths ranging from 15 and 26 feet below ground surface (bgs) using a Geoprobe® rig. Generally, continuous soil samples were collected from ground surface the bottom of each borehole using 5-foot stainless steel sampling tubes lined with plastic sample liners. In some cases, a spilt spoon sampler was used due to borehole caving and rocky soils. Due to the difficult drilling conditions the Duel Tube, Macrocore and discreet sampler were used with varying success. Upon retrieval from the sampling tube, each soil sample was visually inspected for evidence of contamination and logged in accordance with the Unified Soil Classification System. Portions of each soil sample were collected in separate sample bags for field-screening with a handheld, MiniRAE 3000 PID. The PID was equipped with a 10.6eV lamp and was calibrated to a 100 volumetric parts per million (Vppm) isobutylene standard. The field screening was used to provide an indication of the potential presence of volatile organic vapors to aid in the selection of samples for laboratory analysis. Soil boring logs, which include the PID readings, are included in Appendix B.

One soil sample from each location was submitted to the laboratory for analysis. Soil samples were collected directly into appropriate laboratory-supplied bottles, secured in a sample cooler and preserved with ice. The selected soil samples were analyzed for VOCs, PAHs, and total RCRA metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver). These analytical parameters were selected based on known materials used at the Site. The sample interval from each boring was selected for analysis based on the following criteria:

- The soil sample that exhibited the highest headspace concentration and/or visual evidence of impact; or

- A depth likely to display the presence of impact or corresponding to the base of a sub-grade structure or UST.

Under standard sample chain-of-custody procedures, all soil samples were delivered via FedEx to ESC Lab Sciences (ESC) in Mount Juliet, Tennessee, a New York accredited chemical analytical laboratory. The soil samples were analyzed using U.S. Environmental Protection Agency (USEPA) Methods 5035/8260C (VOCs), 8270D-SIM (PAHs), and 6010B/7470A (RCRA metals).

Groundwater Sampling

RPS proposed to collect groundwater samples from each of the six borings at the Site. However, since groundwater was not encountered above 26 feet bgs, the maximum depth explored using the Geoprobe rig, Temporary well points were installed and groundwater samples were collected from two borings (GP-4 and GP-6), advanced to depths of 50 and 60 feet bgs, respectively. These locations were selected for overall site coverage. Due to the difficulty in advancing the boreholes with caving dry soils, cobbles and rocky materials, a temporary well point was installed via drive casing. The wells were constructed of one inch diameter, 0.010 inch slotted polyvinyl chloride (PVC) screen and one inch diameter PVC riser casing. The well screens were placed at the base of the boring to intercept groundwater present within the unconsolidated zone.

Temporary well GP-4 was installed at a depth of 50 feet bgs with a 10 foot long screen in the sewage treatment area. Well GT-6 was installed in the northern parking lot area at a depth of 60 feet bgs and also constructed with a 10 foot long screen. Groundwater was encountered at depths of 40-42 feet at GP-4 and 52 feet at GP-6. The difference in water levels between the two wells is attributed to the variation in surface elevation between the two well points.

Following well installation, the wells were purged of sediment with a check valve with the assistance of a peristaltic pump. The wells were developed by removing enough water (approximately 3-gallons) until the groundwater was relatively free of turbidity. A groundwater sample from each temporary well was then collected shortly after development. Under standard sample chain-of-custody procedures, the collected groundwater samples were delivered via FedEx to ESC. The groundwater samples were analyzed using USEPA Methods 8260C (VOCs), 8270D (PAHs), and 6010B/7470A (dissolved RCRA metals – lab filtered).

Sub-slab and Soil-gas Sampling

Sub-slab Vapor Points - To evaluate the potential for interior soil vapor intrusion, five sub-slab vapor points (SS-1 through SS-5) were installed in the building. One sub-slab soil vapor point sample (SS-1) was located in a utility area in the middle of the office area, while another sample (SS-2)was installed in the newsprint paper storage area/near the printing area and the final three samples (SS-3, SS-4 and SS-5) were installed in the general printing area of the plant. The vapor point locations were selected for overall building coverage (Figure 2). Installation of the points, connection testing and sampling were consistent with the 2006 New York State Department of Heath Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York.

All interior sub-slab vapor points were installed by drilling a 3/8 inch whole through the floor slab and installing a vapor pin sealed with a silicone rubber outer seal set within the drill hole. The vapor pin was further sealed with clay on the concrete top surface to ensure a good seal. Teflon hosting was connected to the pin and by swage lock nut to a 30-minute flow regulator attached to a laboratory supplied 6-liter Summa canister and a peristaltic pump. The peristaltic pump was used to purge the air under the slab and to test the various sampling train connections by inducing a vacuum to test the floor connection. The entire sampling train assembly and vapor pin floor seal was next tested by releasing helium into a plastic enclosure sealed to the floor surface. Within this enclosure the sampling train was inserted to test all of the connections. The pump air output was then tested via a helium meter to ensure all seals were acceptable for sampling. The testing at all vapor pin locations determined that the seals were found to be acceptable and sampling could be completed.

The sub-slab vapor testing began by removing the peristaltic pump/hose from the assembly and subsequently turning on the valve to the Summa canister. The starting time and initial vacuum pressure were noted on the canister label. The flow regulator was allowed to run for approximately 30-minues at each location. The final time and canister vacuum was noted on the label and the 30-minute period was complete and the summa valve was shutoff. Following valve shutoff, the flow regulator was removed and the canister sealed above the valve with the supplied nut. The canister was then placed in a box for transport to the laboratory. The samples were then, shipped to ESC laboratory under standard chain-of-custody protocol and analyzed for VOCs using USEPA Method TO-15.

Soil-gas Sampling

Due to the time and difficulty of obtaining deep groundwater samples at the site, soil-gas samples were collected to evaluate three of the exterior boring locations in lieu of a groundwater sample. Samples were collected generally to look for any high concentration anomalous readings that could indicate groundwater impact. Three soil-gas samples were collected near (6 feet away) from soil borings GP-3, GP-5 and GP-6. GP-6 was not analyzed since a groundwater sample was later collected from this location.

Soil-gas points were installed at a depth of between 5 and 6 feet below the ground surface. A macrocore Geoprobe boring was initially advanced to the stated depth and a soil-gas screen was installed at the base of the boring and attached to a Teflon hose. Clean sand was placed around the soil-gas inlet screen and also several inches above the screen. Above the sand, granulated bentonite was hydrated up and above the ground surface to provide a good seal. The seal and sampling assembly was tested as previously described above. All seals in the sampling train were found to be acceptable and testing began with the Teflon hose connected directly to the flow regulator and 6-liter summa canister. Testing was also completed similar to the sub-slab samples with a 30-minute testing period. The samples were then, shipped to ESC laboratory under standard chain-of-custody protocol and analyzed for VOCs using USEPA Method TO-15.

Site Restoration

Upon completion of sampling activities, and between uses to avoid cross contamination, all down-hole soil boring and non-dedicated sampling equipment was decontaminated. The decontamination train included an Alconox®/water wash and scrubbing, followed by a potable water rinse. Once the samples were collected, the boreholes were back-filled with soil cuttings and bentonite chips. The surface was then restored (to the extent feasible) to its original condition.

FINDINGS AND RESULTS

The following section summarizes the findings of the limited Phase II investigation conducted by RPS on January 17 to 19, 2018.

Geology, Hydrogeology and Field Screening Results

Soil borings were advanced in both the interior and exterior areas of the Site. Concrete and asphalt pavement were present at four of the six soil boring locations. Crushed stone, sand or sand and gravel fill were present under the pavement to a depth of approximately 1to 4 feet bgs. Native sand and gravel with cobbles were encountered between from base of the fill materials to a depth of 26 feet, the deepest level reached via the Geoprobe rig. No obvious visual, olfactory or elevated PID readings were found at any boring location.
The soil boring logs are presented in Appendix B.

Onsite Newsday personnel stated that when the wastewater plant was constructed, groundwater was present at approximately 45 feet below ground surface in geotechnical borings completed in the area Groundwater was not encountered in the upper 26 feet (the maximum depth explored) during the standard soil borings activities. In order to sample the groundwater, in two locations near the former Tanks 1 through 4, drive casing was pushed by the Geoprobe rig to a depth of 50 feet and a temporary well was installed with a reported water level of approximately 40-42 feet bgs. The second temporary well was installed at boring GP-6 by pushing the drive casing to a

depth of 60 feet. The water level in this temporary well was measured at approximately 52 feet bgs

Topography in the area varies considerably across the site, with the northern parking lot area as the highest point, with the ground surface generally sloping to the south. The lowest point on the property is in the area of the sewage treatment plant that appears to be around 10 to12 feet lower in elevation than the northern parking lot. The area topography and likely groundwater flow is to the south and towards Oster Bay of the Atlantic Ocean around 7.5 miles from the Site.

Soil Analytical Results

RPS compared all soil analytical results to the New York State Department of Environmental Conservation (NYDEC) Soil Cleanup Objectives for Unrestricted Use and Restricted Use, Protection of Public Health for Restricted Residential, Commercial, Industrial, Protection of Ecological Resources and Protection of Groundwater. The results of the soil analysis are summarized in Table 1 (in Appendix C) and are discussed below. The laboratory analytical report is provided in Appendix D.

VOCs

The soil analysis detected acetone in soil samples collected from two borings (GP-5 and GP-6). Although NYSDEP does not have soil cleanup standards for acetone, the detected concentrations are generally low and are not believed to pose a concern. The soil analysis did not detect other VOCs at concentrations in excess of laboratory detection limits or NYSDEC soil cleanup objectives.

PAHs

Several PAHs were detected in soil samples collected from four borings (GP-1, GP-2, GP-3 and GP-5); however, none of the PAHs were present at concentrations in excess of NYSDEC soil cleanup objectivities.

Total Metals

Several metals (arsenic, barium, chromium, lead, mercury and/or cadmium) were detected in soil collected from all six borings (GP-1 through GP-6). All concentrations, however, were below the NYSDEC soil cleanup objectives.

Groundwater Analytical Results

RPS compared all groundwater sample results to the NYDEC Section 701.15 Class GA – Fresh Groundwater Quality Standards (GAs) within the New York State Technical and Operational Guidance Series (TOGS) for ambient water quality values. The laboratory analytical results are summarized in Table 2 (included in Appendix C) and are discussed below. The laboratory analytical report is provided in Appendix D.

VOCs

The groundwater analysis detected one VOC (dichlorodifluoromethane) in samples collected from the two temporary wells (GP-4 and GP-6). The concentrations (1.51 and 0.749 micrograms per liter [ug/L], respectively) did not exceed the GA (5 ug/L). The groundwater analysis did not detect other VOCs at concentrations in excess of laboratory detection limits or GAs.

PAHs

The groundwater analysis detected several PAHs in samples collected from the two temporary wells (GP-4 and GP-6). Benzo(b)flouranthene was present in samples collected from both temporary (GP-4 and GP-6) at concentrations of 0.00424 ug/L and 0.00255 ug/L, respectively, which exceed the GA (0.002 ug/L). The two exceedances were noted in the qualifiers in the lab report as being found in the method blank (B qualifier) and the value was estimated (J qualifier). With the Exception of B(b)P, no other PAHs exceeded the NYSDEC GAs.

Dissolved Metals

The groundwater analysis detected two RCRA metals, (barium and mercury) in samples collected from the temporary wells (GP-4 and GP-6). The concentrations of barium (24.7 ug/L and 85.6 ug/L, respectively) did not exceed the NYSDEC GA (1,000 ug/L). Similarly, the concentration of mercury detected in the sample collected from GP-4 (0.0514 mg/L) did not exceed its GA (0.7 ug/L).

Sub-slab Soil Vapor and Soil-gas Sampling Results

The sub-slab soil vapor and soil-gas samples were compared to both the September 2006 New York State Brownfield Cleanup Program Technical Support Document's Inhalation Toxicity Values for Priority Contaminants and to the 2002 US EPA Office of Solid Waste and Emergency Response (OSWER) shallow soil-gas vapor intrusion guidance values as no New York values have been established for outside soil gas. The OSWER levels were used for a qualitative review of the soil gas sample results. The 2006 New York State Department of Heath Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York was also used to evaluate the significance of any exceedance to the toxicity values.

The results of the sub-slab vapor and exterior soil-gas analysis are summarized in Table 3 (included in Appendix C) and are discussed below. The laboratory analytical report is provided in Appendix D.

Interior Sub-slab VOC Results

Several VOC compounds were detected in the five interior sub-slab vapor points (SS-1 through SS-5). The vapor analysis detected two compounds (carbon tetrachloride and 1,2,4-trimethylbenzene) at concentrations that exceed the Toxicity Values for Priority Contaminants (TVPC). The 1,2,4-trimethylbenzene (1,2,4-TMB) concentration (11 micrograms per cubic meter (ug/m^3)) exceeded the TVPC guidance level of 6 ug/m^3 in sample location SS-2 (located in the newsprint paper warehouse). The carbon tetrachloride concentration (6.67 ug/m^3) also exceeded the TVPC concentration of 2 ug/m^3 collected at sample location SS-3 (located in the middle of the plant).

Exterior Soil-gas VOC Results

The soil-gas analysis detected several VOCs in the two exterior soil-gas samples (SG-1 and SG-2). New York State does not have regulatory limits for exterior soil-gas concentrations; therefore,

RPS used the US EPA OSWER vapor intrusion guidance as a qualitative tool to evaluate the exterior soil-gas concentrations. The soil-gas analysis detected two compounds, 1,2,4-TMB (63.8 ug/m^3) and 1,3-butadiene (8.8 ug/m^3) in sample SG-2 at concentrations that slightly exceeds US EPA OSWER concentrations of 60 ug/m^3 and 8.7 ug/m^3, respectively. RPS does not consider these slight exceedances of the US EPA OSWER to be significant that would be indicative of any groundwater impact.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the above findings, RPS provides the following conclusions and recommendations:

Conclusions

During the completion of the limited Phase II investigation six soil, two groundwater, five sub-slab vapor points and two soil-gas samples were collected and analyzed during the investigation. All soil and groundwater samples were analyzed for VOCs, PAHs and RCRA metals. The sub-slab and soil-gas samples were analyzed for VOCs. Based on the sampling results the following conclusions were drawn:

Soils

- Soils at the site were found to consist of 1 to 4 feet of sandy fill or topsoil underlain by sand and gravel with cobbles to a depth of 26 feet. Area geology information indicates that the sandy units extend into the groundwater. Groundwater was found to be present at approximately 42 to 52 feet bgs.

- The soil analysis did not detect VOCs, PAHs, or RCRA metals at concentrations in excess of any NYSDEC soil cleanup objectives.

Groundwater

- The groundwater sampling identified no VOCs or RCRA metals at concentrations in excess of GAs. With the exception of benzo(b)flouranthene, the groundwater analyses did not detect PAHs at concentrations in excess of GAs. RPS notes that due to the presence of benzo(b)flouranthene (B(b)F) in the lab-produced blank sample, it appears likely that the B(b)F detection is a laboratory artifact, rather than an actual constituent of the groundwater sample. Additionally, even if present, groundwater at the Site is not used as a potable supply source, and as such, low-level detections such as these are not believed to pose ingestion or other significant exposure concerns or any likely threat of off-site migration. According to agency records, the nearest down-gradient (south) potable well is present at a distance of greater than ½ mile from the boundary of the property. Due to the relative distance from the site and the low B(b)F concentration detected, the B(b)F, if present in the groundwater beneath the Newsday site, appears to pose no significant risk to the any down gradient sources

Soil-Gas and Sub-slab Vapor

- Analysis of sub-slab vapor samples detected VOCs at concentrations in excess of TVPCs in

two of five samples. The analysis detected 1,2,4-TMB in one sample and carbon tetrachloride in another sample at concentrations in excess TVPCs. The compound exceedances were generally isolated to one sample out of five and "hit and miss" detections.

- Based upon these results, RPS concludes that the analysis did not detect severe or wide-spread presence of VOCs below the floor slab.

- Analysis of two soil-gas samples collected in outdoor areas detected several VOCs. New York State does not have regulatory limits for exterior soil-gas concentrations; therefore, RPS used the US EPA OSWER vapor intrusion guidance as a qualitative tool to evaluate the exterior soil-gas concentrations. The soil-gas analysis detected low levels of two petroleum compounds (1,2,4-TMB and 1,3-butadiene) in one sample at concentrations that slightly exceeds US EPA OSWER concentrations. Due to the relatively low concentrations and the exterior location, RPS does not consider these slightly elevated detections to be significant.

The soil, groundwater and soil gas/vapor sampling performed by RPS to investigate potential spills and releases from historical site operations did not identify any significant subsurface impacts. While minor detections of VOCs were present in the vapors beneath the building in isolated locations, their "hit or miss" dispersion suggests that no widespread impacts are present. Additionally, the potential for vapor intrusion into the building is low. The building slab is 8 to 10 inches thick, which serves to retard vapor migration into the plant, and the plant generally has high (15 to 20 ft.) ceilings throughout, which serves to dissipate and dilute any vapors that might migrate into the building. Based on these findings, no further investigation is warranted.

LIMITATIONS

This report is prepared for the sole benefit of Orrick, Herrington & Sutcliffe LLP, approved parties or any of its affiliates and their respective successors and assigns who may each rely on this report. This report and the findings shall not, in whole or in part, be relied upon by any other party, nor used by any other party, without the prior written consent of RPS and an authorized representative of Orrick, Herrington & Sutcliffe LLP.

RPS has conducted these professional services in accordance with current scientific principles and industrial standards of practices in the fields of environmental science and engineering on the date the work was conducted and in the same geographical area of the subject Site for similar studies. RPS's findings must be considered as professional opinions based upon the limited data collected during the course of the environmental Site investigation, which is limited in time and scope.

Independent laboratories qualified to perform analyses have performed analytical laboratory analyses. RPS has derived the findings, in part, from the analytical reports. These findings are contingent upon the validity of the analytical reports, provided RPS exercised the applicable standard of care in reviewing and assessing the analytical reports.

CLOSING

We appreciate the opportunity to be of service on this project.

Sincerely,

RPS | Environmental Risk

ANALYTICAL REPORT

January 29, 2018

GAIA Tech - Chicago, IL

Sample Delivery Group:	L964604
Samples Received:	01/20/2018
Project Number:	16785542000
Description:	Melville, NY
Site:	NY
Report To:	Larry Bertsch 135 S. LaSalle St, Ste 3500 Chicago, IL 60603

Entire Report Reviewed By:

Jason Romer
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

ANALYTICAL REPORT

January 24, 2018

GAIA Tech - Chicago, IL

Sample Delivery Group:	L964491
Samples Received:	01/20/2018
Project Number:	16785542000
Description:	Melville, NY
Site:	NY
Report To:	Larry Bertsch 135 S. LaSalle St, Ste 3500 Chicago, IL 60603

Entire Report Reviewed By:

Jason Romer
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J4	The associated batch QC was outside the established quality control range for accuracy.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

RE: Summary of Environmental Conditions
Newsday Media Group Facility
235 Pinelawn Road
Melville, New York 11747

Dear Mr. Lawrence:

Tribune Media Company (Tribune) retained GaiaTech Incorporated (dba RPS) to conduct environmental studies at its Newsday facility located at 235 Pinelawn Road in Melville, New York (the Site). This work included a Phase I Environmental Site Assessment (Phase I ESA) and a limited Phase II Environmental Site Assessment (Phase II). The following is an overview of environmental conditions at the Site.

Phase I Environmental Site Assessment – Summary of Findings

The Phase I ESA was completed at the Site in July 2017 in preparation for the sale of the Site. The Phase I ESA identified two Recognized Environmental Conditions (RECs) and one Controlled RECs (CRECs). The first REC RPS identified in the ESA related to historical facility operations, which included the use of inks, oils, solvents (including chlorinated solvents), generation of hazardous waste and wastewater treatment operations. The second REC was identified as an open release incident for the release of 4-gallons of compressor oil to the concrete floor and in-plant containment system. The CREC related to several recently closed underground storage tank (UST) systems. In addition to the REC findings, RPS identified concerns related to prior spill events on or near the Site that have been "closed" by relevant regulatory authorities. Refer to RPS's Phase I ESA report dated January 2017 for additional Information regarding the findings of the Phase I assessment.

Based on the REC and CREC findings, and other concerns identified in the Phase I, Tribune engaged RPS to conduct additional investigations with respect to the potential concerns associated with the RECs, CREC and historical spills and releases.

To further evaluate potential residual impacts associated with the items identified in the Phase I ESA and to confirm the closure of selected releases, RPS completed a Phase II ESA at the Site.

Phase II Environmental Site Assessment – Summary of Findings

The Phase II ESA included collection of soil samples from six borings, collection of groundwater from two borings/temporary wells, and collection of seven soil-vapor samples. Groundwater was encountered in two of the six borings. [1]

Field screening of soil samples did not identify any evidence of staining, odors or volatile emissions (measured using a photoionization detector). Since indications of soil impacts were not encountered throughout the entire depth of the soil boring, a representative soil sample was collected from each boring for confirmatory analysis.

Each soil and groundwater sample was analyzed for volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), and Resource Conservation and Recovery Act (RCRA) metals[2]. The soil-vapor samples were analyzed for VOCs. The sample locations are shown in the attached figure.

The results of the soil analysis were compared to New York State Department of Environmental Conservation (NYDEC) Soil Cleanup Objectives (SCOs) for unrestricted (residential) use, restricted (generally considered commercial and industrial) use and for the protection of groundwater and ecological resources. VOCs, PAHs and/or total RCRA metals were not detected in any of the soil samples at concentrations exceeding the most restrictive of the SCOs.

The results of groundwater analysis were compared to NYDEC Ambient Water Quality Standards and Guidance Values (WQS). The two groundwater samples did not contain VOCs or dissolved RCRA metals at concentrations exceeding WQSs. The groundwater analysis detected one PAH compound, benzo(b)fluoranthene (BbF), at concentrations that slightly exceed GQS as summarized below:

Compound	Concentrations in micrograms per Liter			
	GP-4	GP-6	Lab Method Blank	GQS
benzo(b)fluoranthene	0.00424	0.00255	0.00294	0.002

[1] Groundwater was encountered in two borings (GP-4 and GP-6), at depths of 42 and 52 feet below ground surface (bgs), respectively. Probe refusal was encountered in four borings at depths less than 26 feet bgs.
[2] Arsenic, Barium, Cadmium, Chromium, Lead, Mercury, Selenium and Silver

Due to the presence of BbF in the laboratory method blank, pursuant to the National Functional Guidelines for Organic Data Review, this data should be qualified as non-detect at the noted concentrations. The presence of BbF in the laboratory method blank at concentrations similar to those in the groundwater samples indicates that the BbF detections are due to laboratory contamination/error and are not present in Site groundwater.

Results of Soil-Vapor Analysis

In October 2006, the New York State Department of Health (NYSDOH) issued the Guidance for Evaluation of Soil Vapor Intrusion in New York State (as updated through May 2017). This guidance establishes a recommended action levels for sub slab vapor and indoor air concentrations of eight selected chlorinated solvents. One sub slab vapor sample contained carbon tetrachloride (CT) at a concentration slightly above the sub slab guidance contained in Matrix A of the NYSDOH guidance. There are no records that indicate that the facility historically utilized CT in routine operations. Soil and groundwater samples did not contain CT. As a result, the CT detection is considered an isolated occurrence and not indicative of widespread impacts.

For constituents that were not part of the NYSDOH guidance, RPS compared the results of the soil-vapor analysis to the US EPA Office of Solid Waste and Emergency Response (OSWER) shallow soil-gas vapor intrusion guidance values (OSWER values). Analysis of sub-slab vapor samples collected inside the building (SS-1 through SS-5) did not detect VOCs at concentrations exceeding OSWER values.

Analysis of soil-gas (vapor) samples collected from outdoor areas (SG-1 and SG-2) did not detect VOCs at concentrations exceeding OSWER values, except for two VOCs that slightly exceeded the OWSER values in one sample. These VOCs were not detected in any of the other site soil or groundwater samples collected at the Site. As a result, these detections are considered an isolated occurrence and not indicative of widespread impacts. Refer to RPS's report dated July 2017 for additional Information regarding the results of the Phase II subsurface assessment.

OPEN SPILL REPORT

Subsequent to the Phase I, RPS initiated closure activities associated with the open spill incident REC. These activities included a reinspection of the spill area by the NYSDEC. Based on the remedial activities completed by the facility and the reinspection of the spill area, on November 9, 2017, NYSDEC closed the spill incident.

SUMMARY AND CONCLUSIONS

The Phase II investigation did not identify impacts in Site soil and groundwater at concentrations above the NYSDEC's most restrictive environmental screening levels. Selected constituents were identified in soil vapor that exceeded certain environmental screening criteria. These data were not consistent across the Site and none of these constituents were detected in site soil or groundwater. The data therefore do not appear to represent significant site contamination conditions that require further investigation or remediation.

Based on the Phase II results, the conditions identified in the Phase I ESA have been addressed and/or adequately characterized, and additional assessment or mitigation is not required. Prior to the closing of any transfer of the Site to a new owner, we recommend that the Phase I ESA be updated and/or performed again, in order to meet the 6-month validity criteria generally applicable to Phase I ESAs.

If you have any questions or require further information, please feel free to contact us.

Sincerely,
RPS Group

EXECUTIVE SUMMARY

Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. (Client) retained RPS to conduct a limited Asbestos-Containing Material Survey (ACM Survey) of the Newsday facility located at 235 Pinelawn Road in Melville, Suffolk County, New York (the site).

RPS performed this ACM Survey as described in the authorized Agreement between the Client and RPS dated March 29, 2018 and in general accordance with applicable sections of ASTM E 2356-10 "*Standard Practice for Comprehensive Building Asbestos Surveys",* as it relates to a commercial real estate transaction.

The ACM Survey was conducted to categorize the different homogeneous materials within the interior of the Newsday facility's production and office structure, to assess the condition of suspect asbestos-containing materials (ACMs), to develop and implement an asbestos sampling plan, and identify or negate the presence of asbestos through laboratory analysis.

The site is owned by Tribune ND, Inc. (successor-in-interest to Tribune Company). Newsday leases the site from Tribune ND, Inc. Newsday operates a newspaper publishing and distribution company producing approximately 350,000 newspapers per day. Operations consist of the printing, plate development, digital photographic development, ink mixing, and newspaper sorting, bundling, and distribution.

The approximately 50-acre site is developed with an approximately 539,000-square-foot production building, which is divided between an office area and production areas, and a wastewater treatment plant. The production areas contain a packaging and bundling area, a reel room (where paper reels are fed to the printing lines), two levels of printing presses (including the printing presses, photo developing lines, and plate developing lines discussed above), boiler rooms, emergency generator rooms, a cooling tower room, various chemical storage areas, mechanical rooms, electrical rooms, maintenance shops, and a paper reel storage warehouse.

The survey of the structure's interior was conducted on April 18-21, 2018 by Mr. Aaron Paik, New York State Department of Labor (NYSDOL) Certified Asbestos Inspector (12-04000). RPS collected a total of 238 bulk samples of suspect ACMs from 65 homogeneous materials at the Newsday facility. In consultation with the Client, 50 samples from the 238 collected were withheld from analysis, resulting in a total of 188 samples submitted. All samples withheld represented extraneous samples collected in excess of regulatory requirements. No homogenous material identified during the survey was excluded from analysis by the omission of the withheld samples. In addition, it is important to note that additional material layers (i.e. mastics/glues/adhesives/layers) associated with the 188 bulk samples submitted were also analyzed where applicable.

Asbestos includes chrysotile, amosite, crocidolite, anthophyllite, tremolite and actinolite (fibrous minerals). The analytical report relates only to the samples tested. Samples were analyzed using polarized light microscopy (PLM) and transmission electron microscopy (TEM) via New York State Environmental Laboratory Approval Program (NYS ELAP) methods for bulk asbestos materials 198.1, 198.4 and 198.6. In addition, where vermiculite was noted in spray-applied

coatings and surfacing materials, further analysis by NYS ELAP method 198.8 was utilized. The reliable limit of detection of these methods is one percent (1%) asbestos content. If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*. When no asbestos is detected in the sample submitted, the results are reported as *None Detected.* If a sample contains greater than 1% asbestos, it is considered to be ACM by United States Environmental Protection Agency-National Emissions Standards for Hazardous Air Pollutants (EPA-NESHAPs), the United States Occupational Safety and Health Administration (OSHA), New York State Department of Health (NYSDOH), and NYSDOL.

The following building materials were identified as containing greater than 1% asbestos; therefore, they are required to be treated as regulated ACMs:

NEWSDAY – MELVILLE, NY – SUMMARY OF CONFIRMED ACMS					
Sample Number(s)	**Sample Description**	**Material Location**	**Laboratory Results***	**Friability/ Condition**	**Estimated Quantity**
25, 26	12"x12" black w/multi-color streaks + assoc. adhesive - Mastic	1st Fl. Below raised floor @ ramp outside IDF	2.30% Chrysotile	Not friable/good condition	30 SF
28, 29	Black mastic to 12"x12" mottled red VFT	1st Fl. Cafeteria – closet	1.90% Chrysotile	Not friable/good condition	25 SF

IDF = Intermediate Distribution Frame (IT/Server Room)
SF = Square Feet
VFT = Vinyl Floor Tile
None Detected = When no asbestos is detected in the sample submitted, the results are reported as *None Detected.*
Trace = If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*.
* Highest result for samples of the identified material reported.

The following building materials were identified as containing less than 1% or trace amounts of asbestos; therefore, certain work practice requirements and prohibitions of the OSHA Asbestos in Construction Standard (29 CFR 1926.1101) must be followed:

NEWSDAY – MELVILLE, NY – SUMMARY OF <1% (TRACE) AMOUNTS OF ASBESTOS					
Sample Number (s)	**Sample Description**	**Material Location**	**Laboratory Results***	**Friability/ Condition**	**Estimated Quantity**
73, 74	Black mastic to 12"x12" mottled brown VFT	Throughout	<1% Chrysotile	Not friable/good condition	15,000 SF
209-217	Tan spray-on fireproofing (SF-2)	Throughout; west portion of structure (c. 1986-1989 construction), containing portions of reel room, production floor and west penthouse MER**	0.016% Amphibole/ Trace	Friable/good condition	45,000 SF

NEWSDAY – MELVILLE, NY – SUMMARY OF <1% (TRACE) AMOUNTS OF ASBESTOS					
Sample Number (s)	**Sample Description**	**Material Location**	**Laboratory Results***	**Friability/ Condition**	**Estimated Quantity**
218-226	Tan spray-on fireproofing (SF-3)	Throughout; south portion of structure (unknown construction date), containing portions of the collating/receiving floor, south office wing, and basement mechanical spaces **	0.055% Amphibole/ Trace	Friable/good condition	37,500 SF

SF = Square Feet
VFT = Vinyl Floor Tile
MER = Mechanical Equipment Room
None Detected = When no asbestos is detected in the sample submitted, the results are reported as *None Detected*.
Trace = If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*.
* Highest result for samples of the identified material reported.
** In the execution of the survey, homogenous types were identified on the basis of appearance, color and texture in accordance with applicable regulations and industry standards. In assessing spray-on fireproofing, information provided by Newsday staff with regards to construction history was further utilized to subdivide the "Tan spray-on fireproofing" into sub-types (SF1 through SF3).

Vermiculite was detected in the initial analysis of some of the spray-on fireproofing (SFP) samples collected at the site. In consultation with the Client, representative samples were selected from the homogenous materials identified as containing vermiculite, and re-analyzed in accordance with the New York State Department of Health Environmental Laboratory Accreditation Program (NYSDOH ELAP) requirements. A total of ten (10) samples from the four (4) homogenous types/sub-types of spray-on fireproofing identified as containing vermiculite were submitted for further analysis via method 198.8. Reanalysis indicated that three (3) samples contained trace amounts of asbestos (<1%).

In accordance with the Agreement and the Client's instructions, this ACM Survey focused on accessible interior building systems and components within the production/office structure with the potential to contain asbestos, and did not include the assessment or sampling of any suspect exterior building materials or systems, including (but not limited to) roofing and all other suspect ACMs on the roof level. WJE Engineers and Architects separately contracted with the Client to obtain roof core samples and submit them for laboratory analysis. The laboratory analysis data associated with these roof samples has been provided to RPS and is presented alongside RPS's findings in the body of this report. The data provided by WJE Engineers and Architects was not obtained through conventional protocols, and cannot be relied upon in connection with renovation and demolition, because an insufficient number of samples were collected to characterize the roofing system. These samples were non-detect for ACM, but roofing and other exterior materials may require additional sampling to confirm the non-detect finding prior to renovation or demolition involving exterior materials.

It is possible that additional suspect or assumed ACMs may be present within inaccessible areas of the building, such as above fixed ceilings, within wall systems, behind walls, beneath layers of flooring, within pipe chases, in mechanical equipment insulation, in electrical components, and

within HVAC equipment; therefore, these materials may not have been observed or sampled during this ACM Survey. Any suspect materials that may not have been sampled as part of this ACM Survey should be assumed to be ACM until proven otherwise prior to future renovation or demolition activities.

1.0 INTRODUCTION

1.1 Purpose

The purpose of this Asbestos-Containing Material Survey (ACM Survey) was to satisfy the authorized Agreement between Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. (Client) and RPS and dated March 29, 2018 and to substantially satisfy the requirements of ASTM E 2356-10 "*Standard Practice for Comprehensive Building Asbestos Surveys",* as it relates to a commercial real estate transaction.

1.2 Scope of Work

There are several types of asbestos surveys depending upon the ultimate disposition of the site and the local/state regulatory environments. Currently, ASTM Standard E 2356-10 "Standard Practice for Comprehensive Building Asbestos Surveys" codifies and effectively differentiates hazard assessment, pre-demolition, and pre-asbestos abatement design surveys that have historically been described independently in:

- Asbestos Hazard Emergency Response Act (AHERA; 40 CFR Part 763), EPA's governing regulations asbestos management in schools;
- National Emission Standards for Hazardous Air Pollutants (NESHAPS; 40 CFR Part 61), EPA regulations for demolition and renovation;
- OSHA Asbestos in Construction Standard (29 CFR 1926.1101), OSHA's regulations requiring building survey to control asbestos exposure to construction personnel; and
- "Guidance for Controlling Asbestos-Containing Materials in Buildings", (EPA 560/5-85-024,), EPA's guidelines prescribing minimal sampling and hazard assessment protocols.

The scope of purpose of this ACM Survey was to adequately identify and sample suspect ACMs in substantial accordance with applicable sections of ASTM 2356-10 and appropriate Federal, State and/or local requirements, as it relates to a commercial real estate transaction. This type of survey involves both the employment of visual and slightly invasive sampling methods which may be necessary to collect material samples that may be hidden beneath multiple layers of flooring and/or other finishes; to assess the condition of suspect ACMs, PACMs, and/or other assumed ACMs; to implement a strategic asbestos sampling plan, and to confirm or negate the presence of ACMs through laboratory analysis.

RPS's field activities were conducted on April 18-21, 2018 utilizing modified EPA Asbestos Hazard Emergency Response Act (AHERA), and New York State Department of Labor (NYSDOL) requirements by NYSDOL Certified Asbestos Inspector Mr. Aaron Paik (12-04000).

Site access was provided by Mr. Joseph Marino, and Mr. Stephen Zimmerman of Newsday. RPS conducted the scope of work in accordance with the authorized Agreement between Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. (Client) and RPS dated March 29, 2018.

RPS collected a total of 238 bulk samples of suspect ACMs from 65 homogeneous materials at the Newsday facility. In consultation with the Client, 50 samples from the 238 collected were withheld from analysis, resulting in a total of 188 samples submitted. All samples withheld represented extraneous samples collected in excess of regulatory requirements. No homogenous material identified during the survey was excluded from analysis by the omission of the withheld samples. In addition, it is important to note that additional material layers (i.e. mastics/glues/adhesives/layers) associated with the 188 bulk samples submitted were also analyzed where applicable.

1.3 Sampling Protocol

The ACM Survey was conducted to satisfy the authorized Agreement between the Client and RPS dated March 29, 2018.

Bulk samples of each material suspected to contain asbestos were collected utilizing a modified Asbestos Hazard Emergency Response Act (AHERA) sampling protocol (AHERA, 40 CFR 763.86), in accordance with OSHA General Industry Standard 29 CFR 1910.1001, OSHA Asbestos Construction Standard 29 CFR 1926.1101, and State of New York requirements.

Suspect ACMs were identified and bulk samples were collected from the interior of the structure by Mr. Aaron Paik, NYSDOL Certified Asbestos Inspector (12-04000) and submitted for laboratory analysis. The EPA, OSHA, and State of New York define ACM as a material that contains greater than one percent (1%) asbestos.

Bulk samples of suspect ACM were collected as per the EPA definition of "homogenous area" (similarity of suspect material as indicated by age, type, color, and/or use). Samples were submitted to the analytical laboratory under chain of custody, and analyzed for the presence of asbestos via Polarized Light Microscopy (PLM) with dispersion staining in accordance with NYSDOH ELAP approved methodologies. In accordance with NYSDOH ELAP, non-friable organically bound samples that tested negative for asbestos via PLM were further analyzed via Transmission Electron Microscopy (TEM). Additionally, spray-on fireproofing was analyzed for the presence of vermiculite. Due to the potential for low level asbestos contamination in vermiculite, NYSDOH regulatory notices stipulate specific vermiculite analysis as summarized below.

1.4 Laboratory Analysis

Asbestos includes chrysotile, amosite, crocidolite, anthophyllite, tremolite and actinolite (fibrous minerals). The analytical report relates only to the samples tested. Samples were analyzed using polarized light microscopy (PLM) and Transmission Electron Microscopy (TEM) via New York State Environmental Laboratory Approval Program (NYS ELAP) methods for bulk asbestos materials 198.1, 198.4 and 198.6. In addition, where vermiculite was noted in spray-applied coatings and surfacing materials, further analysis by NYS ELAP method 198.8 was utilized. The reliable limit of detection of these methods is one percent (1%) asbestos content. If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*. When no

asbestos is detected in the sample submitted, the results are reported as *None Detected.* If a sample contains greater than 1% asbestos, it is considered to be ACM by EPA-NESHAPs, OSHA, NYSDOH, and NYSDOL.

Polarized Light Microscopy (PLM) via NY State ELAP 198.1 Method: The standard analytical protocol for bulk sample analysis as described above utilizes optical properties of the sampled material to provide an estimate of asbestos content as well as other minerals such as vermiculite. In New York State, only friable materials can be analyzed using the PLM method. Where thermal systems insulation (TSI), surfacing material, presumed ACM (PACM), or miscellaneous suspect ACM contain greater than 10% vermiculite, NYSDOH requires additional analysis via Environmental Laboratory Accreditation Program (ELAP) Method 198.6 (PLM-NOB) as described below.

PLM for Non-Friable Organically-Bound Materials (PLM-NOB) via NYS ELAP 198.6 Method: Certain types of building materials, such as vinyl asbestos floor tile (VAT), roofing materials, mastics, caulking, and glazing contain inherent interferences for accurate identification via standard PLM Method 198.1. These materials are classified as non-friable organically bound (NOB) materials, and require special preparation before analysis via PLM ELAP Method 198.6. The method has subsequently been permitted for vermiculite (when encountered) and other specified materials. Method 198.6 prescribes a more detailed examination of samples under what is termed "point counting" than what is employed in normal "area estimation" technique under ELAP 198.1. If results for materials analyzed via ELAP 198.6 are deemed to be inconclusive, samples are required to be analyzed using TEM methodology per NYS ELAP 198.4 as described below.

Transmission Electron Microscopy (TEM) via NYS ELAP 198.4 Method: Due to limitations of PLM to detect asbestos fibers of very small sizes (0.2 micrometers in diameter), NOB samples that are inconclusive or reveal trace amounts of asbestos via PLM methods require confirmation by a secondary analysis through Transmission Electron Microscopy (TEM) via ELAP 198.4. TEM is state-of-the-art analysis for asbestos determination due to its very high magnification (i.e., 20,000X) and its ability to positively identify the elemental composition of material being tested.

Vermiculite in Spray-Applied Coatings and Surfacing Materials: In the event that vermiculite is detected in these materials via 198.1 or 198.6 analysis, the sample must then be submitted for analysis via Method 198.8 or RJ Lee method 055 in order to provide valid results for New York State regulatory purposes. If vermiculite is not detected, no disclaimer is needed for Surfacing Material Containing Vermiculite (SM-V), defined as spray-on, troweled-on, or otherwise applied-to surfaces, if approved methods are followed. Disclaimers are still required for all other vermiculite-containing materials tested that are reported as non-ACM. These requirements are currently specific to New York State in connection with renovation, demolition and compliance requirements applicable to ACM.

1.5 Special Terms and Conditions

RPS performed this ACM Survey on behalf of and exclusively for Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. (Client). This ACM Survey and the findings contained herein shall not be relied upon, in whole or part, by any other party, except by or with the express written consent of a responsible official of RPS or the Client.

1.6 Limitations and Exceptions of Survey

During the preparation of this ACM Survey, RPS relied upon building construction information and diagrams provided by the Client. RPS has assumed, where reasonable, that the information reviewed is true and accurate but assumes no responsibility or liability for its accuracy or completeness. Site observations are of the conditions observed at the time of the site reconnaissance.

The ACM Survey was conducted to categorize the different homogeneous materials within the building, to assess the condition of suspect asbestos-containing materials (ACMs), to develop and implement an asbestos sampling plan, and identify or negate the presence of asbestos through laboratory analysis. The scope of the survey conducted was limited to the primary (production & office) structure, and did not include an assessment of any outbuilding, garage, or shed associated with the facility.

It shall be noted that where possible, RPS collected samples in inconspicuous and/or unoccupied locations of the building in coordination with Newsday administrative staff. Furthermore, RPS is not responsible for damage and/or repairs to slightly damaged materials resulting from the collection of bulk samples.

The ACM Survey executed by RPS focused on interior building systems and components with potential to contain asbestos. The scope of work associated with this survey did not include the assessment or sampling of any suspect exterior building materials or systems, including (but not limited to) roofing and all suspect ACM on the roof level.

Limited probing of interior finishes was conducted as part of this survey to identify and sample readily accessible concealed ACM. Any concealed ACM accessible only through extensive structural or mechanical demolition was not evaluated as part of this survey. No disassembly of installed equipment was conducted as part of this survey. This survey did not include probes of the perimeter masonry.

It is possible that additional suspect or assumed ACMs may be present within inaccessible areas of the building, such as above fixed ceilings, within wall systems, behind walls, beneath layers of flooring, within pipe chases, in mechanical equipment insulation, in electrical components, and within HVAC equipment; therefore, these materials may not have been observed or sampled during this ACM Survey. Any suspect materials that may not have been sampled as part of this ACM Survey should be assumed to be ACM until proven otherwise prior to future renovation or demolition activities.

2.0 SITE DESCRIPTION

2.1 Site Location and Description

The approximately 50-acre site is located southwest of the intersection of Ruland Road and Pinelawn Road at 235 Pinelawn Road in Melville, Suffolk County, New York. The site area is characterized as developed with a mix of industrial, commercial, and residential properties.

2.2 Building Description

The approximately 50-acre site is developed with an approximately 539,000-square-foot production building, which is divided between an office area and production areas, and a wastewater treatment plant. The production areas contain a packaging and bundling area, a reel room (where paper reels are fed to the printing lines), two levels of printing presses (including the printing presses, photo developing lines, and plate developing lines discussed above), boiler rooms, emergency generator rooms, a cooling tower room, various chemical storage areas, mechanical rooms, electrical rooms, maintenance shops, and a paper reel storage warehouse.

The site was redeveloped circa 1977 with the original portion of the current production building, the fire suppression water pond, the chemical storage shed, and the wastewater treatment plant. By the early 1990s, the production building was expanded to the south and west and the fuel pump island was constructed on the southern portion of the site. By the mid-2000s, a baseball field was constructed on the northwest corner of the site, bringing the site into its current configuration.

2.3 Prior Environmental Documentation

No prior environmental documentation was provided to RPS.

3.0 RESULTS

3.1 Survey Methods and Results

Bulk sampling of homogeneous areas containing suspect ACMs was conducted at the site. A homogeneous area is defined as an area of surfacing material, thermal system insulation material or miscellaneous material that is uniform in appearance, color and texture, and was applied at the same time.

Prior to collection of suspect materials, the sample location was sprayed with amended water to minimize fiber release and to soften the building material being sampled. Bulk materials were sampled from the center of the wetted area. After the sample was taken, the bulk material was placed in a sample bag which was sealed to prevent escape or contamination of outside sources. A unique sample number was assigned to each sample and the sample bag was labeled with that number.

Respiratory protection and Tyvek suits were available but not used during collection of suspect non-friable ACMs. Background fiber concentrations were not determined at the time of this ACM Survey. Potential exposures were based upon previous similar surveys indicated the permissible exposure limit (PEL) for asbestos would not be exceeded.

The survey of the facility's interior was conducted on April 18-21, 2018 by Mr. Aaron Paik, New York State Department of Labor (NYSDOL) Certified Asbestos Inspector (12-04000). RPS collected a total of 238 bulk samples of suspect ACMs from 65 homogeneous materials at the Newsday facility. In consultation with the Client, 50 samples from the 238 collected were withheld from analysis, resulting in a total of 188 samples submitted. All samples withheld represented extraneous samples collected in excess of regulatory requirements. No homogenous material identified during the survey was excluded from analysis by the omission of the withheld samples. In addition, it is important to note that additional material layers (i.e. mastics/glues/adhesives/layers) associated with the 188 bulk samples submitted were also analyzed where applicable.

Asbestos includes chrysotile, amosite, crocidolite, anthophyllite, tremolite and actinolite (fibrous minerals). The analytical report relates only to the samples tested. Samples were analyzed using polarized light microscopy (PLM) and Transmission Electron Microscopy (TEM) via New York State Environmental Laboratory Approval Program (NYS ELAP) methods for bulk asbestos materials 198.1, 198.4 and 198.6. In addition, where vermiculite was noted in spray-applied coatings and surfacing materials, further analysis by NYS ELAP method 198.8 was utilized. The reliable limit of detection of these methods is one percent (1%) asbestos content. If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*. When no asbestos is detected in the sample submitted, the results are reported as *None Detected*. If a sample contains greater than 1% asbestos, it is considered to be ACM by EPA-NESHAPs, OSHA, NYSDOH, and NYSDOL.

The following table describes materials sampled, locations, analytical results, friability, condition, and quantity estimates of materials sampled.

NEWSDAY – MELVILLE, NY – RPS SAMPLE COLLECTION SUMMARY TABLE					
Sample Number	**Sample Description**	**Material Location**	**Laboratory Results**	**Friability/ Condition**	**Estimated Quantity**
1	Yellow mastic to 12"x12" white w/black streaks VFT	2nd Fl. Executive pantry	None Detected	Non-Friable/ Good	N/A
2	Yellow mastic to 12"x12" white w/black streaks VFT	2nd Fl. Executive pantry	None Detected	Non-Friable/ Good	N/A
4	12"x12" white w/black streaks VFT	2nd Fl. Executive pantry	None Detected	Non-Friable/ Good	N/A
6	12"x12" white w/black streaks VFT	1st Fl. Pantry @ east	None Detected	Non-Friable/ Good	N/A

ACT = Acoustical Ceiling Tile
CMU = Concrete Masonry Unit
IDF = Intermediate Distribution Frame
MER = Mechanical Equipment Room
N/A = Not Applicable
SF = Square Feet
VFT = Vinyl Floor Tile
None Detected = When no asbestos is detected in the sample submitted, the results are reported as *None Detected*.
Trace = If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*.

The scope of the survey executed by RPS included no assessment of suspect ACM on the exterior or roof level of the inspected properties. The table below presents sampling and analysis performed by WJE Engineers and Architects on behalf of the Client with respect to roofing materials at the site. The laboratory analysis data associated with these roof samples has been provided to RPS and is presented here in this table. Although the results are favorable (non-detect for all samples), the number of samples and methodology of collection did not comply with regulations and protocols applicable to sampling performed in connection with demolition or renovation, and therefore cannot be relied upon for such purposes. Additional sampling and analysis would be required prior to any renovation or demolition of such exterior materials.

If a material contains 1% or less asbestos, certain work practice requirements and prohibitions of the OSHA Asbestos in Construction Standard (29 CFR 1926.1101) must be followed. Standard 29 CFR 1926.1101 regulates asbestos exposure in all work as defined in 29 CFR 1910.12(b), including (but not limited to) demolition, construction, alteration, repair, maintenance, or renovation in structures that contain asbestos. The regulation also regulates transportation, disposal, storage, containment of and housekeeping activities involving asbestos or products

containing asbestos. Among other requirements, the regulation outlines employer responsibilities in monitoring and ensuring that employee exposure asbestos fall below acceptable thresholds. These thresholds are defined by a permissible exposure limit (PEL) of 0.1 fibers per cubic centimeter of air, calculated as an eight (8) hour time-weighted average (TWA), and an excursion limit defined as an airborne concentration of asbestos in excess of 1.0 fiber per cubic centimeter of air as averaged over a thirty (30) minute period. Other requirements include (but are not limited to): training, hazard communication, notification, medical surveillance, appropriate work practices, required personal protective equipment (PPE), and engineering controls.

The following materials were identified to contain asbestos in amounts of 1% or less (trace):

NEWSDAY – MELVILLE, NY – SUMMARY OF <1% (TRACE) AMOUNTS OF ASBESTOS					
Sample Number (s)	**Sample Description**	**Material Location**	**Laboratory Results***	**Friability/ Condition**	**Estimated Quantity**
73, 74	Black mastic to 12"x12" mottled brown VFT	Throughout	<1% Chrysotile	Not friable/good condition	15,000 SF

None Detected = When no asbestos is detected in the sample submitted, the results are reported as *None Detected*.
Trace = If less than 1% asbestos is present in the sample submitted, the results are reported as <1% or *Trace*.
* Highest result for samples of the identified material reported.
** In the execution of the survey, homogenous types were identified on the basis of appearance, color and texture in accordance with applicable regulations and industry standards. In assessing spray-on fireproofing, information provided by Newsday staff with regards to construction history was further utilized to subdivide the "Tan spray-on fireproofing" into sub-types (SF1 through SF3).

Vermiculite was detected in the initial analysis of some of the spray-on fireproofing (SFP) samples collected at the site. In consultation with the Client, representative samples were selected from the homogenous materials identified as containing vermiculite, and re-analyzed in accordance with the New York State Department of Health Environmental Laboratory Accreditation Program (NYSDOH ELAP) requirements. A total of ten (10) samples from the four (4) homogenous types/sub-types of spray-on fireproofing identified as containing vermiculite were

submitted for further analysis via method 198.8. Reanalysis indicated that three (3) samples contained trace amounts of asbestos (<1%).

3.2 Inspector Comments

In the event of building renovation or demolition activities, EPA-NESHAP and OSHA requirements for the management of identified ACMs or untested materials assumed to be ACM will apply. Therefore, a licensed asbestos abatement contractor should be retained to repair, remove, encapsulate, or encase the materials in accordance with applicable EPA-NESHAP, OSHA, and NYSDOL rules and regulations for proper asbestos management activities.

It should be noted that the EPA has not prohibited the manufacture of non-friable ACMs, such as vinyl floorings, mastics, joint compounds, and roofing materials as well as materials imported from other countries.

4.0 FINDINGS AND CONCLUSIONS

Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. (Client) retained RPS to conduct an ACM Survey of the Newsday facility, located at 235 Pinelawn Road in Melville, Suffolk County, New York (the facility or building).

RPS conducted this ACM Survey as described in the authorized Agreement between the Client and RPS dated March 29, 2018 and in general accordance with applicable sections of ASTM E 2356-10 "*Standard Practice for Comprehensive Building Asbestos Surveys",* as it relates to a commercial real estate transaction.

The following building materials were identified as containing greater than 1% asbestos; therefore, they are required to be treated as regulated ACMs:

NEWSDAY – MELVILLE, NY - SUMMARY OF CONFIRMED ACMS					
Sample Number (s)	**Sample Description**	**Material Location**	**Laboratory Results***	**Friability/ Condition**	**Estimated Quantity**

5.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This ACM Survey was performed as described in the authorized Agreement between Orrick, Harrington & Sutcliffe LLP, as attorneys for Tribune ND, Inc. and RPS dated March 29, 2018 and documents the sampling methodology used by qualified environmental professionals of RPS to obtain, identify, and summarize information pertaining to ACMs located at the Newsday facility, located at 235 Pinelawn Road in Melville, Suffolk County, New York.

1.0 GENERAL INFORMATION

Facility Name:	Newsday LLC
Address:	235 Pinelawn Road Melville, New York 11747
Facility Contact:	Stephen Zimmerman Director of Engineering Services
Telephone No.:	(631) 843-2032
Facility Owner:	Tribune ND, LLC 435 N. Michigan Avenue Chicago, Illinois 60611
Facility Operator:	Newsday LLC 235 Pinelawn Road Melville, New York 11747
RCRA Status:	Large Quantity Generator (LQG)

1.1 Location and Facility Description

The Newsday facility occupies a 50-acre site located at 235 Pinelawn Road in Melville, Long Island, within the Town of Huntington, County of Suffolk, New York. The facility is bounded to the east by Pinelawn Road, to the north by Ruland Road, to the west by Deshon Drive, and to the South by a private service road. Properties surrounding the facility include undeveloped land to the north, Clare Rose Distributor to the south, Pinelawn Cemetery to the east, and Town Apartments to the west. A site location map is provided as **Figure 1**. The facility is improved with one (1) two-story building with a partial basement which was built in 1979 and some later additions.

Operations at the facility include printing, publishing, preparing and distributing a daily newspaper edition. Most recent activities have included, but are not limited to the following: photo platemaking, collating, printing press operation, press maintenance, facility maintenance, housekeeping, wastewater treatment, boiler treatment, cooling tower treatment, and fleet vehicle fueling. Past activities included photographic film development. The facility was historically a Large Quantity Generator (LQG) of hazardous waste, but operated as a Small Quantity Generator (SQG) since approximately 2012. Wastes predominantly include

flammable and corrosive press wastes from printing operations. Other wastes that were historically generated at the facility primarily included ink waste, spent photographic developer and spent photographic fixer. The USEPA Hazardous Waste ID is NYD052782497 and the SCDHS Hazardous Material Storage Permit ID is 02037.

1.2 Scope

This Closure Plan has been prepared by H2M architects + engineers (H2M) on behalf of Newsday LLC in accordance with the requirements outlined in 6 NYCRR Part 373-3.7, Closure and Post-Closure. This Closure Plan shall be implemented to formally cease and document completion of regulated waste activities. The purpose of completing the closure is to eliminate post-closure maintenance of hazardous waste generation sources and hazardous waste storage areas at the subject property and to minimize the potential for a post-closure release of hazardous waste to the environment. The Newsday facility location is shown in **Figure 1**, Site Location Map. The facility site plan is shown in **Figure 2**.

1.3 Process Operations – Hazardous Waste Streams

The Newsday facility generated three hazardous waste streams in its daily operations. The hazardous waste streams included ink waste, spent photographic developer and spent photographic fixer. A brief description of the processes and the wastes generated is provided below:

Ink Waste: The ink waste stream is generated from the cleaning of the printing presses at the end of each day's press run. The presses are washed with a solution of detergent, water and a naphtha solvent. The spent solution is containerized into 55-gallon drums, and then processed in an ink recycler unit. Wastes generated from the recycler unit include the ink waste, the water and naphtha with some residual ink, and a sludge byproduct consisting primarily of paper fibers. The ink that is recovered is re-used for printing. The resulting wastes are drummed and stored in the Ink Recovery Room. Due to the flashpoint and trace amounts of methylene chloride detected in the wastes, the drums were historically listed as D001 and F001 hazardous waste. Most recently these wastes have been non-hazardous. The drums are properly disposed of on a weekly basis by a licensed hauler to a permitted disposal facility.

Spent Photographic Developer and Fixer: Photographic developing was performed in a series of compartments or sinks located in five areas on the second floor of the facility. The compartments or sinks consisted of water rinses, developer and fixer solutions, each with separate drainage systems. The water rinses drained into the industrial waste system that led to the on-site Sewage Treatment Plant. The developer drainage system consisted of glass and polyethylene piping, which drained directly into a 4,000-gallon fiberglass underground storage tank (UST, SCDHS Tank No. 8). The spent fixer solution, which contained silver, also drained through glass and polyethylene piping. The fixer drainage system led to a former 100-gallon polyethylene holding

tank (SCDHS Tank No. 13) located in the Former Silver Recovery Room in the basement. The layout of the Former Silver Recovery Room is shown on **Figure 6**. The spent fixer solution was then circulated through a cathode/anode type electroplating unit to separate the entrained silver before being pumped into the 4,000-gallon UST, mixing with the developer waste. The silver was sold to a reclaimer on a monthly basis.

The 4,000-gallon UST was subsequently removed in June 1989, and the waste stream was subsequently redirected to two 2,000-gallon polyethylene aboveground storage tanks (ASTs, SCDHS Tank Nos. 26 and 27) located in a Former Photo Waste Room that was constructed circa 1989, shown in **Figures 7a and 7b**. One of the two 2,000-gallon ASTs was for emergency use only. The Former Photo Waste Room also consisted of a 100-gallon holding tank (SCDHS Tank No. 43) which held fixer solution that processed through silver reclamation equipment prior to being pumped into the 2,000-gallon ASTs. The developer solution drained directly into the ASTs. When the Former Photo Waste Room was first set up, the fixer/developer waste was pumped out two or three times a month and disposed of at a permitted disposal facility. The fixer/developer mixture that was stored in the ASTs contained elevated levels of cadmium and silver with traces of mercury and selenium. This waste was considered hazardous due to EP Toxicity; however, exact concentrations depended upon composition and silver recovery efficiency. Eventually, in an effort to reduce the volume of wastes, the waste solutions from the two 2,000-gallon ASTs were pumped into a 250-gallon holding tank (SCDHS Tank No. 28) which was then processed through wastewater treatment equipment and discharged through the industrial drain to the on-site wastewater treatment plant (WWTP).

The Former Photo Waste Room was subsequently modified circa 2002, and is shown in **Figure 8**. The two 2,000-gallon ASTs were removed. The fixer solution after running through silver recovery equipment along with the developer solution were pumped into the existing 250-gallon holding tank and a 500-gallon holding tank. From the two holding tanks, the waste mixture was discharged to the on-site WWTP. The Former Photo Waste Room was decommissioned in late 2008. A copy of the

All tanks associated with the fixer and developer wastes have been removed from the facility. Table 1 below shows the year removed for each of the aforementioned tanks. A copy of a SCDHS tank listing, dated April 10, 2014, highlighting the tanks below is provided in **Appendix B**.

Table 1. Tanks Associated with Fixer and Developer Waste.

SCDHS Tank No.	Location	Tank Capacity (gallons)	Year Removed
8	Underground, Outdoor	4,000	1989 (Tyree)
13	Aboveground, Former Silver Recovery Room	100	2001
26	Aboveground, Former Photo Waste Room	2,000	2002
27	Aboveground, Former Photo Waste Room	2,000	2002
28	Aboveground, Former Photo Waste Room	250	2003
43	Aboveground, Former Photo Waste Room	100	2002
83	Aboveground, Former Photo Waste Room	500	2009

2.0 CLOSURE

The closure of Newsday facility will include the removal of all hazardous wastes, decontamination of the hazardous waste storage areas, confirmatory rinsate and subsurface soil sampling, and removal of all wastes generated during closure.

2.1 Closure Description

Facility closure will initiate with the discontinuation of all routine process operations that generate hazardous wastes. Upon shutting down the process operations, all inventories of hazardous wastes will be disposed of in accordance with all applicable federal, state, and local regulations. Wastewaters that are generated during decontamination activities will be collected, containerized, and disposed of in accordance with federal, state and local regulations.

2.2 Closure Performance Standard

This Closure Plan is designed to ensure that the Newsday facility will require no further maintenance or controls following closure of its hazardous waste activities. The contents of the plan are structured to prevent threats to human health and the environment.

Confirmatory sampling will be conducted as part of the closure activities to document that no hazardous materials remain that can adversely impact public health or the environment. Sampling shall include floor surface rinsate sampling and subsurface soil sampling in the areas where hazardous wastes were handled and stored including the Former Silver Recovery Room and the Ink Recovery Room. In addition, rinsate sampling will be performed as necessary for the spent photographic developer, spent photographic fixer waste, and industrial waste piping to confirm that no hazardous materials remain within the piping.

When available, applicable, federal, state, and local environmental quality standards are to be used to determine the adequacy of closure. For rinsate sampling of floors and piping conducted as part of Newsday facility's RCRA Closure, the closure performance standard shall be the NYS Groundwater Effluent Limitations (Class GA), as identified in NYSDEC TOGS 1.1.1 or 6 NYCRR Part 703.6. If any rinsate sample exceeds the groundwater effluent limitations, then the corresponding area shall be re-cleaned and subsequently re-sampled. This procedure shall be repeated until all parameters are within the closure performance standards. Rinsate samples will be collected following the completion of cleaning activities and analyzed for the target analyte list (TAL) of metals, including mercury (Hg), and target compound list (TCL) of volatile organic compounds (VOCs) plus tentatively identified compounds (TICs).

For soil sampling, the closure performance standard shall be the 6 NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives. All soil samples will be analyzed for TAL metals/Hg, and TCL VOCs + TICs.

In order to determine whether the waste piping is characterized as non-hazardous or hazardous, sampling results from the interior deposits of the piping will be compared with the 6 NYCRR Part 371.1(e) Table 1 Maximum Concentration of Contaminants for the Toxicity Characteristic (TCLP Limits). Piping deposit samples will be analyzed for TCLP metals, should sufficient material be collected.

2.3 Maximum Waste Inventory

During the closure of the Newsday facility, any existing hazardous wastes will be properly disposed of off-site. A RCRA regulated facility must identify the maximum inventory of hazardous waste stored on-site over the active life of the facility. Implementation of this closure plan may create additional wastes requiring off-site disposal such as decontamination rinse waters, analytical equipment and contaminated structures, if any. However, the maximum inventory determination excludes wastes generated as a result of facility closure. Based upon the fact that Newsday actively maintains the facility and a licensed hazardous waste transporter routinely hauls hazardous material on a regular basis, the maximum waste inventory that is expected to be on-site at any time is based on the storage capacity of the hazardous storage areas or tanks, and is shown in the following table:

Table 2. Maximum Waste Inventory of On-Site Hazardous Wastes.

Process Generating Waste	Type of Waste	Max. Quantity On-Site
Ink Waste	EPA Waste Codes: D001 & F001 (e.g., Naptha, Methylene Chloride)	1,380 Gallons[1]

(1) Maximum storage capacity of solvent storage area. Most recent ink wastes have been non-hazardous.

2.4 Closure Requirements

The activities to be performed as part of the RCRA Closure at the Newsday facility are described in the following sections:

2.4.1 Former Silver Recovery Underground Storage Tank

As described in Section 1.3, a former 4,000-gallon fiberglass underground storage tank (UST) was utilized to store spent photographic developer and spent photographic fixer waste. The UST was located outdoors near the southeast portion of the building, as shown on **Figure 3**. Following decommissioning of the 4,000-gallon UST in January 1989, the two photographic waste streams were subsequently directed into the two 2,000-gallon polyethylene aboveground storage tanks (ASTs) located in the basement of the facility. The 4,000-gallon UST was removed by Tyree Bros. Environmental Services, Inc. (Tyree) on June 12, 1989 and disposed of at Gershow Recycling in Medford, New York. The UST was removed as part of a basement boiler room expansion project. **Figure 4** shows the basement boiler expansion area and a section view of one of the basement walls. As shown on Figure 4, the basement foundation slab extended 18.5 feet below the first floor slab. The 4,000-gallon UST had a diameter of 7 feet and the bottom of the tank was situated at approximately 12.5 feet below grade. Therefore, at the time of the basement expansion project, the area with the former silver recovery UST was over-excavated to a minimum depth of 18.5 feet below grade. Copies of a request for proposal (Newsday to Tyree, dated April 17, 1989), proposal from Tyree (dated April 25, 1989), a purchase order issued by Newsday to Tyree (dated May 5, 1989), a tank removal confirmation letter (Tyree, dated June 15, 1989), and invoice (Tyree, dated June 15, 1989) are provided in **Appendix C**. As shown on Tyree's invoice, no contaminated soil was identified during the tank excavation.

2.4.2 Former Silver Recovery Room & Photo Waste Room

Hazardous wastes derived from spent photographic developer and fixer solutions generated at the Newsday facility were handled or stored within the Former Silver Recovery Room and Former Photo Waste Room. The locations of the two rooms are shown on **Figure 5**. **Figure 6** shows the layout of the Former Silver Recovery Room. **Figures 7a, 7b and 8** show the two layouts of the Former Photo Waste Room. All silver recovery and waste processing equipment, including the holding tanks, had previously been removed from the two rooms. The Former Silver Recovery Room is currently occupied by a large air compressor, while the Former Photo Waste Room is utilized for the storage of fire extinguishers. Closure of the two rooms shall include decontamination and power washing of the floors, rinsate sampling, and subsurface soil sampling. Specific tasks include the following:

1. Remove and/or properly dispose of all equipment and wastes.
2. Decontaminate and power wash the floors. Contain and collect all decontamination rinse waters and fluids for characterization and proper disposal.

3. Collect one (1) rinsate sample from each room. The proposed rinsate sampling locations in the Former Silver Recovery Room and Former Photo Waste Room are shown on **Figures 6 and 8**, respectively. The rinsate sample shall be collected and analyzed according to the Rinsate Sample Collection Protocol, the Closure Performance Standards as detailed in Section 2.2, and the site-specific Quality Assurance Project Plan (QAPP) provided in **Appendix A**. Should the sampling results exceed the Closure Performance Standards, decontamination of the floors will be repeated until subsequent confirmatory rinsate samples meet the standard.

4. Following completion of the rinsate sampling, one (1) soil boring will be advanced in each of the three former holding tank locations to sample and characterize subsurface soils below the floor slab. Since the tanks are no longer present, the soil boring locations will be approximated. The proposed soil boring locations are shown on **Figures 6 and 8**, and may be adjusted at the discretion of the NYSDEC representative on-site at the time of the closure investigation. The concrete floor shall be core drilled. Using a remote access Geoprobe® 420, or equivalent, direct-push drill rig, the soil borings will be advanced to a total depth of 8 feet below the floor slab. Representative soil samples shall be collected from depth intervals of 0-2, 2-4. 4-6 and 6-8 feet. Soils will be screened for lithology and screened with a portable photo-ionization detector (PID, MiniRAE 3000 or equivalent with a 10.6 eV lamp). The core holes will be backfilled and repaired with cement upon completion of the boring activity. Analytical sampling details are provided in the site-specific QAPP.

2.4.3 Ink Recovery Room

Ink waste is derived from the cleaning of the presses at the end of each day's press run. The waste is collected in pails and transferred to 55-gallon drums stored in the Ink Recovery Room. The location of the Ink Recovery Room on the second floor of the facility is shown in **Figure 9**. Closure of The Ink Recovery Room shall include decontamination and power washing of the floors, and collecting rinsate samples. Specific tasks include the following:

1. Remove and/or properly dispose of all equipment and wastes.

2. Decontaminate and power wash the floors. Contain and collect all decontamination rinse waters and fluids for characterization and proper disposal.

3. Collect two (2) rinsate samples from the recovery equipment area and two (2) rinsate samples from the drum storage area. The proposed rinsate sampling locations are shown on **Figure 9**. The rinsate sample shall be collected and analyzed according to the Rinsate Sample Collection Protocol, the Closure Performance Standards as detailed in Section 2.2, and the site-specific QAPP provided in **Appendix A**. Should the sampling results exceed the

Closure Performance Standards, decontamination of the floors will be repeated until subsequent confirmatory rinsate samples meet the standard.

2.4.4 Fixer, Developer, and Industrial Waste Piping

Waste piping throughout the facility included photographic fixer piping, photographic developer piping, and industrial waste piping. **Figures 10.1 to 10.5** highlight the fixer, developer and industrial waste piping throughout the entire facility. The photographic fixer waste stream contained entrained silver, while the photographic developer waste stream contained little or no entrained silver. The industrial waste stream includes the rinses from photographic developing operations and leads into the on-site sewage treatment plant. It is estimated that the fixer, developer and industrial waste piping each total approximately 1,000 feet of piping.

On April 24, 2018, three (3) 4- to 5-foot sections of the fixer piping were sampled in general accordance with the Rinsate Sample Collection Protocol. The piping was removed from three representative areas of the building, including the mail center, MER-1 room and the basement. Silty deposits were observed along the inside of the piping. In order to collect the rinsate samples, one end of each section of piping was capped utilizing a 3-inch rubber cap (i.e., Fernco). While situated in an empty 55-gallon drum, approximately 0.75 gallons of deionized water was then poured into the piping. Following a contact time of 10 minutes, the samples were transferred from the piping into laboratory-supplied sample bottles. An equipment blank was also collected by pouring the deionized water into the rubber cap. The rinsate samples were analyzed for TAL metals and VOCs. The sampling results are tabulated in **Tables 3.1 and 3.2** and compared with the NYSDEC 6 NYCRR Part 703.6 and TOGS 1.1.1 Groundwater Effluent Limitations (Class GA). The laboratory analytical report is provided as **Appendix D**. As shown in the tables, no VOCs were detected at concentrations above the Class GA Standards. Aluminum was detected in the Fixer Basement sample at a concentration of 3.21 mg/l, exceeding the Class GA Standard of 2 mg/l. Iron was detected in the Fixer MER-1 sample at a concentration of 11.7 mg/l, exceeding the Class GA Standard of 0.6 mg/l. Based on these sampling results, decontamination of the sections of piping in the basement and MER-1 room is necessary. Subsequent rinsate sampling will also be performed.

An additional seventeen (17) representative sections of piping throughout the building will be removed and sampled, as necessary. Visual inspections of the interior of the piping will be conducted in order to determine whether additional rinsate sampling is necessary. If the interior of the piping is observed to show significant differences in comparison to the three sections of fixer piping that were sampled, such as quantity, texture, odor, or discoloration of the silty deposits, the piping will be sampled and analyzed. If the silty deposits are observed to be similar, a sample will not be collected. Sampling and analysis will be performed in general accordance with the Rinsate Sample Collection Protocol, the Closure Performance Standards as detailed in Section 2.2, and the site-specific QAPP provided in **Appendix A**. Should the

sampling results exceed the Closure Performance Standards, decontamination of the piping will be repeated until subsequent confirmatory rinsate samples meet the standard.

In addition, the seventeen sections of piping will also be inspected to determine if sufficient material can be scraped from the interior deposits to analyze for TCLP metals. Should there be sufficient material, a sample will be collected from the piping section. If there is not sufficient material, then no sample will be collected. The samples will be analyzed for TCLP metals via EPA Method 1131/6010. The sampling results will be compared with the TCLP Limits identified in 6 NYCRR Part 371.3(e) in order to determine whether the piping is characterized as non-hazardous or hazardous. Should the sampling results exceed the TCLP Limits, the hazardous sections of piping will be removed and properly disposed of in accordance with federal, state and local regulations. If the sampling results indicate that the piping is non-hazardous, the piping will be left in place and handled as C&D debris during future building demolition or renovation**.**

3.0 CLOSURE CERTIFICATION

Following completion of the closure activities identified herein, a Closure Certification Report will be prepared to document all procedures and the results of sampling and analysis. The Closure Certification Report will be signed by the owner or operator and an independent licensed Professional Engineer, and submitted to the NYSDEC for approval. The proposed outline for the Closure Certification Report is provided below:

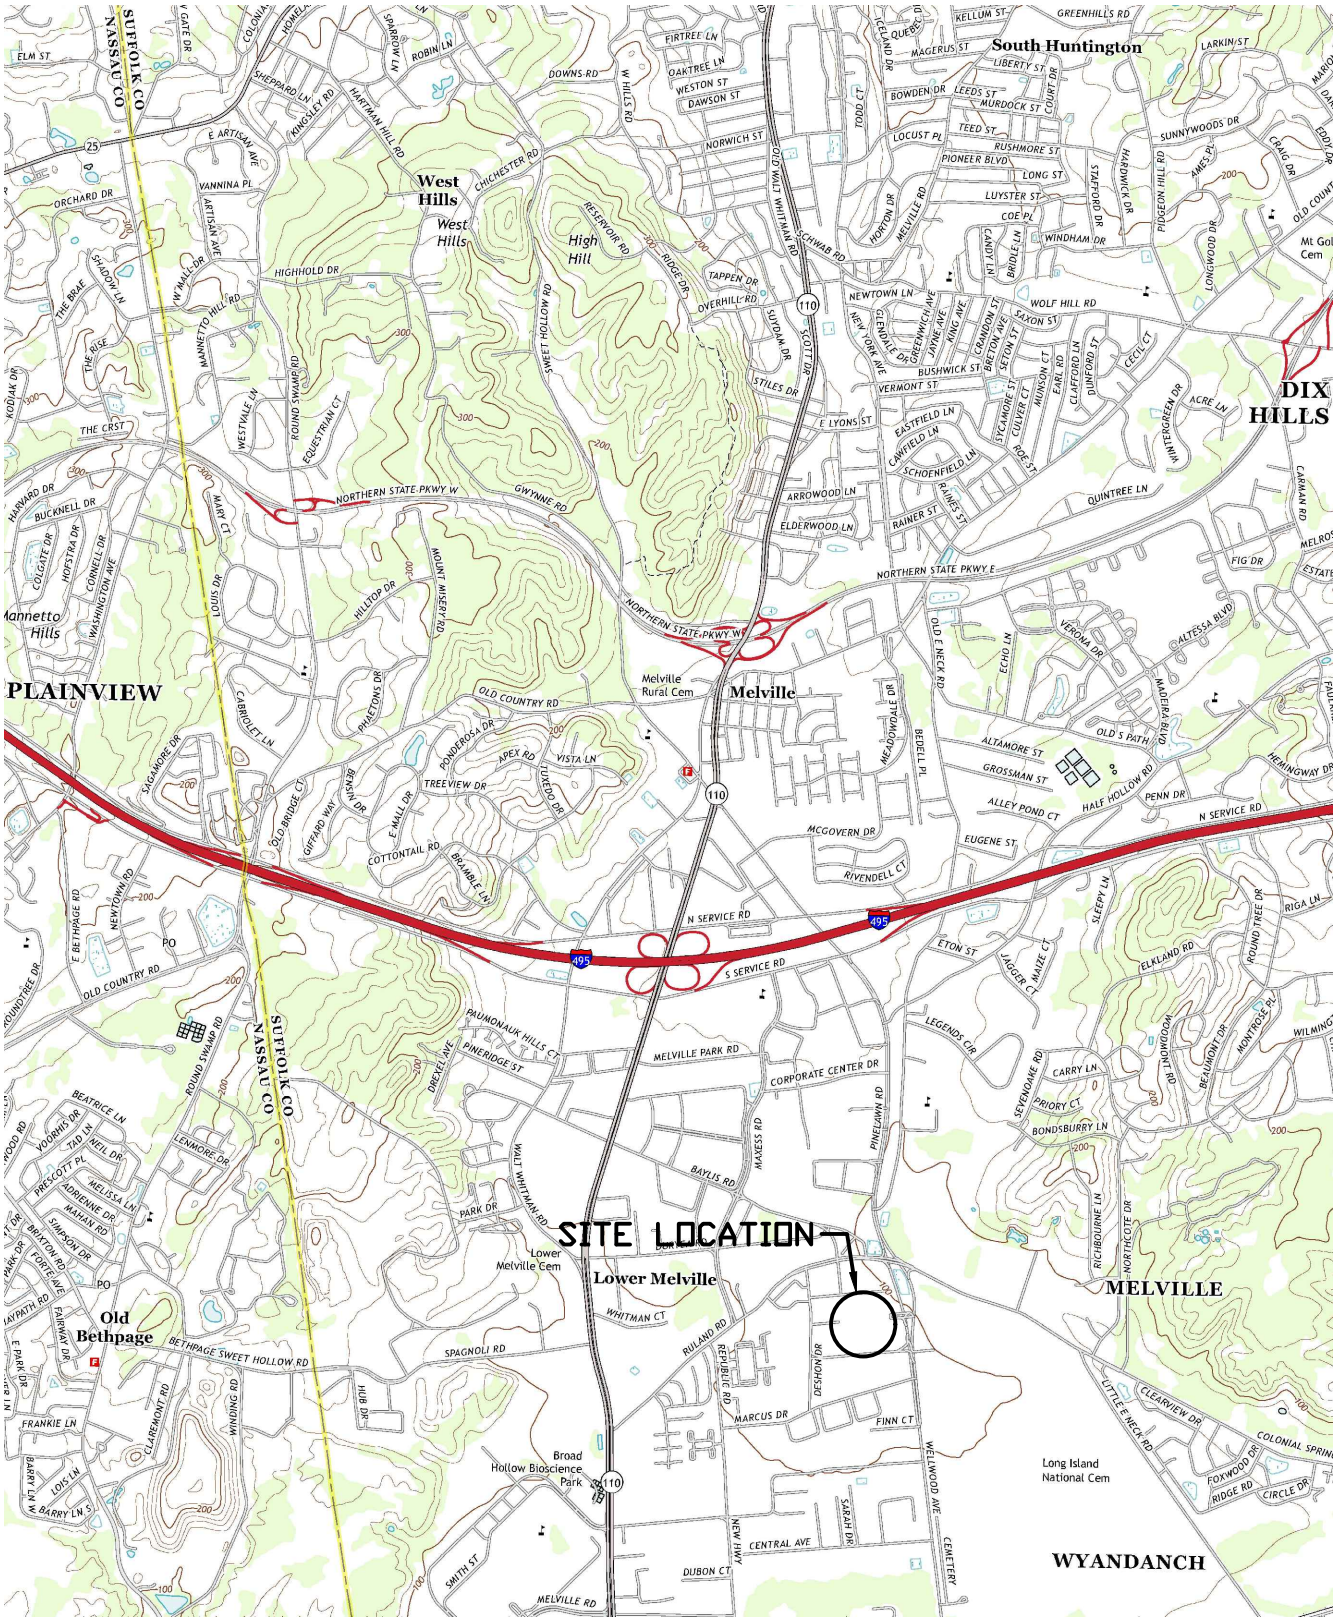
1.0 GENERAL INFORMATION
- 1.1 Location and Facility Description
- 1.2 Scope
- 1.3 Process Operations

2.0 CLOSURE ACTIVITIES

3.0 CLOSURE PROCEDURES

4.0 SAMPLING PROGRAM
- 4.1 Sampling Objective
- 4.2 Sampling Methodology
- 4.3 Sampling Results
- 4.4 Quality Assurance/Data Validation

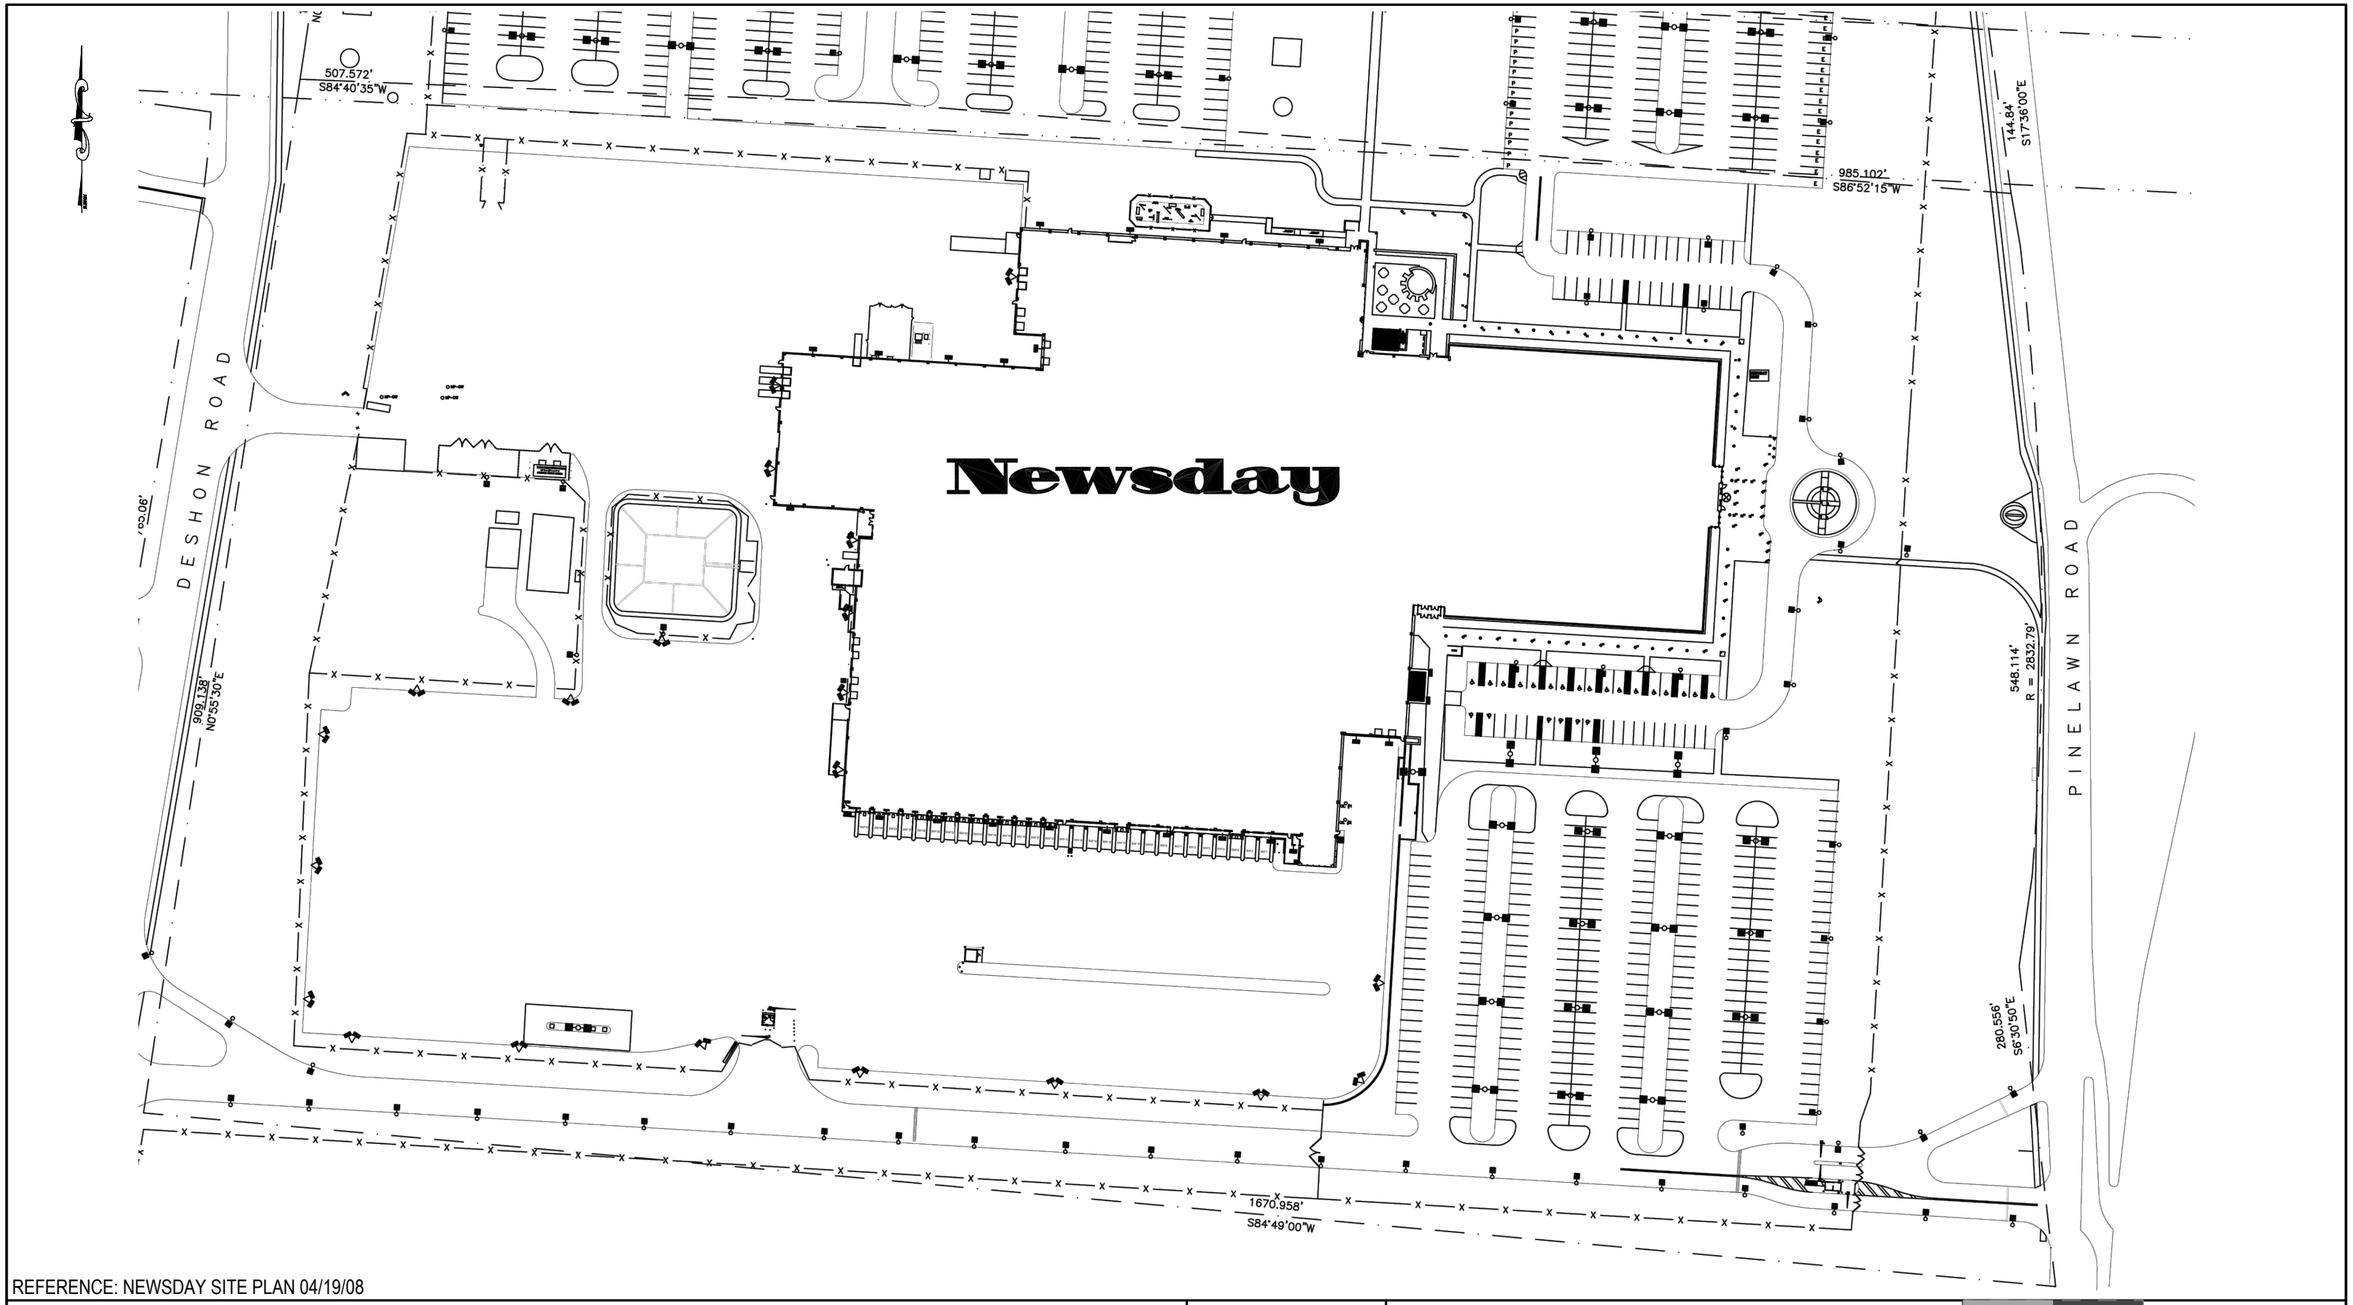
4.0 CLOSURE PERFORMANCE GUIDELINES



6.0 ENGINEER'S CERTIFICATION

7.0 FACILITY OWNER'S CERTIFICATION

4.0 CLOSURE SCHEDULE



Closure of the Newsday facility is expected to require approximately eight weeks for completion. This includes two weeks for closure activity, four weeks for confirmatory sample analysis, and two weeks for reporting. If the confirmatory sampling results indicate that additional closure activities are required (i.e., additional decontamination, piping removal, etc.), then the closure schedule will be revised at that time.

QUALITY ASSURANCE PROJECT PLAN (QAPP)

JULY 18, 2018, REV 1

1.0 PROJECT DESCRIPTION

H2M architects + engineers (H2M) has prepared this Quality Assurance Project Plan (QAPP) to address sampling activities to be performed as part of the RCRA Closure of the Newsday LLC facility located at 235 Pinelawn Road in Melville, New York.

This QAPP presents procedures to be followed during the sampling and analysis program as well as project organization and personnel responsibilities necessary to carry out these practices. Quality Assurance / Quality Control (QA/QC) and data validation requirements are also summarized in this plan. The closure of the facility will be performed in accordance with a New York State Department of Environmental Conservation (NYSDEC)-approved RCRA Closure Plan.

Operations at the Newsday facility include printing, publishing, preparing and distributing a daily newspaper edition and limited contract printing. The facility is bounded to the east by Pinelawn Road, to the north by Ruland Road, to the west by Deshon Drive, and to the South by a private service road. Properties surrounding the facility include undeveloped land to the north, Clare Rose Distributor to the south, Pinelawn Cemetery to the east, and Town Apartments to the west. A site location map is provided as **Figure 1** and facility site plan is provided as **Figure 2.**

Regulated wastes were generated at the Newsday facility as part of routine printing operations. All hazardous wastes were stored and disposed of in accordance with local, state and federal regulations. Hazardous wastes primarily included ink waste, spent photographic developer and spent photographic fixer. The ink waste is containerized in 55-gallon drums stored in the Ink Recovery Room. Spent photographic developer and fixer solutions drained into holding tanks located in the Former Silver Recovery and Photo Waste Rooms where they were processed through silver recovery equipment. The processed developer and fixer mixture was then pumped into a 4,000-gallon fiberglass underground storage tank, which was subsequently replaced by two (2) 2,000-gallon polyethylene aboveground storage tanks. Following decommissioning of the storage tanks, the developer and fixer waste was eventually discharged to the on-site wastewater treatment plant.

2.0 PROJECT ORGANIZATION AND RESPONSIBILITY

H2M, a professional engineering corporation, has been retained by Newsday for the oversight of the RCRA Closure of the Newsday facility including providing for all sampling services. An organizational chart for the closure activities and field investigation program is provided as **Figure 3**.

For projects involving a field investigation program, a project team is assembled with each team member responsible for specific elements of the work. To ensure that every project is completed with the highest degree of quality, each member of the project team must be aware of the quality assurance objectives for his/her specific element of the work.

As indicated in **Figure 3**, the Principal-in-Charge is the direct contact between the consultant and the client. The Principal-in-Charge is responsible for overall project technical direction and quality assurance, including:

- Defining project objectives;
- Allocation of resources;
- Establishing chains of command; and
- Periodic evaluation of project.

The consultant's Project Manager is responsible for directing and overseeing all technical and administrative elements of the project. This includes:

- Day to day direction, communication and coordination with the project team;
- Review of all project documents;
- Monitoring overall work progress, schedules, project costs; and
- Day to day direction of QA/QC activities.

Reporting directly to the Project Manager is the Field Team Supervisor, who is responsible for directing all field investigation activities. Depending upon the specific project requirements, the field investigation/sampling work is carried out by staff engineers, geologists, hydrogeologists, wetlands specialists, wildlife specialists and/or field technicians.

The Field Team Supervisor is responsible for ensuring that the work performed by the field investigation staff is carried out in a manner consistent with the project QA requirements. Project QA requirements are specified by the NYSDEC and/or the approved closure plan. The Field Team Supervisor is also responsible for direction and coordination of subcontractors, which may be utilized for surveying, drilling and geophysical investigations, and acts as an intermediary between the field staff and the analytical laboratory.

The Quality Assurance Officer (QAO) operates independently of the Project Manager, reporting directly to the Principal-in-Charge. The primary responsibilities of the QAO are as follows:

- Assist in the development of the work plan and evaluate its effectiveness;
- Monitor work to ensure conformance with the requirements of the work plan;
- Evaluate the need for and, if necessary, conduct field and laboratory QA audits;
- Supervise data validation and review all report deliverables.

3.0 QA OBJECTIVES FOR DATA MEASUREMENT

The primary aim of this plan is to establish the procedures to be followed by project personnel when conducting field sampling and analysis. Quality assurance requires careful planning, organization and the dedication of every member of the firm to the concepts of QA/QC. This must be accompanied by the understanding and coordination of the roles of all personnel involved in a particular project, if this quality objective is to be met. The overall QA objective for the closure sampling and analysis associated with the Newsday buildings is to produce data at the highest level to provide direct support for determining the environmental quality of the areas in question.

4.0 FIELD SAMPLING

The field sampling plan associated with the closure of the Newsday facility is anticipated to include the collection and analysis of rinsate samples and subsurface soil samples in the areas where hazardous wastes were handled and stored including the Former Silvery Recovery Room, Former Photo Waste Room and the Ink Recovery Room. Waste piping throughout the facility, including the photographic fixer piping, photographic developer piping and industrial waste piping, will also be visually inspected and sampled, as necessary. The purpose of sampling is to document that no hazardous materials remain following facility closure.

4.1 Sampling Methodology

4.1.1 Floor Rinsate Sampling

Following decontamination of the floors, rinsate sampling will be conducted. The rinsate sampling will be performed in accordance with the Rinsate Sample Collection Protocol provided in **Appendix A**. Rinsate samples will be collected by placing deionized water in contact with the subject surface. A temporary containment area will be created on the surface at the designated sampling area using an inert, pre-cleaned sampling container. Deionized water will then be poured into this temporary collection area. The volume of deionized water will be sufficient to collect all the sample and QC parameters. If the designated sampling area is sloped, the deionized water will be poured starting at the highest elevation. Following a contact time of 10 minutes, the samples will be collected from the temporary collection area using a peristaltic pump

and new dedicated sample tubing, or by an equivalent method. Field personnel will transfer the samples directly into dedicated containers provided by the analytical laboratory. The samples will be transferred to the sample containers with minimal mixing and disruption since the laboratory analysis will include volatile organic compounds (VOCs). The sample containers required for VOC analysis will be filled so that there is no headspace in the sample container. Water sample containers for VOCs will be sealed with Teflon lined septum caps.

4.1.2 Soil Sampling

Soil borings and subsurface soil sampling will be conducted utilizing direct-push sampling methods in accordance with American Society for Testing and Materials (ASTM) D6282-98, Standard Guide for Direct Push Soil Sampling for Environmental Site Characterizations. A remote access Geoprobe® 420, or equivalent, unit will be employed in conjunction with 2-inch outside diameter (OD) cylindrical "macro-core" barrels. The core barrels, fitted with a cutting shoe, will be advanced with a hydraulic drive hammer into the ground to the desired sampling depth. The macro-core sampler will extract samples into the barrel fitted with an acetate liner. As the barrels are removed from the ground, the acetate liner will be removed to permit field screening, fill or soil classification and sample collection. Field screening will include an inspection for visual and olfactory evidence of contamination and field testing with a portable photoionization detector (PID, MiniRAE 3000 or equivalent with a 10.6 eV lamp).

Borings will be recorded by the on-site field personnel. Physical characteristics will be documented using preprinted boring log forms and will include the following:

- Project name, location and job number,
- Date of boring (start, finish),
- Boring number and driller,
- Sample number and depth,
- Method of advancing sampler,
- Type and size of sampler,
- Description of soil or fill,
- Thickness of observed layers,
- Type and make of equipment (i.e., drill rig, etc.) used, and
- Identification of any samples collected and submitted for laboratory analysis.

Subsurface boring descriptions will be made in accordance with the Unified Soil Classification System (USCS).

4.1.3 Piping Rinsate Sampling

Representative sections of the waste piping throughout the building will be removed and visually inspected. Based upon visual inspections, rinsate sampling of the piping will be conducted as necessary. If the interior of the piping is observed to show significant differences in comparison to the three sections of fixer piping that were sampled on April 24, 2018, the piping will be sampled. If the piping interior is observed to be

similar, a sample will not be collected. The rinsate sampling will be performed in general accordance with the Rinsate Sample Collection Protocol. One end of each section of piping will be capped utilizing an inert, pre-cleaned rubber cap (i.e., Fernco). Deionized water will then be poured into the piping. The volume of deionized water will be sufficient to collect all the sample and QC parameters. Following a contact time of 10 minutes, the samples will be transferred directly from the piping into laboratory-supplied bottleware.

In addition to rinsate sampling, the sections of piping will also be inspected to determine if sufficient material can be scraped from the interior deposits to analyze for TCLP metals. Should there be sufficient material, a sample will be collected from the piping section. If there is not sufficient material, then no sample will be collected.

4.1.4 Sampling Equipment Decontamination and Waste Characterization

All non-dedicated sampling equipment that requires re-use will be cleaned and decontaminated using the following procedure:

1) Detergent wash (e.g., Alconox®) and potable tap water rinse,
2) Double rinse with distilled deionized water.

All contaminated disposable field sampling equipment, decontamination fluids and rinse water will be collected and characterized for proper disposal.

4.2 Sampling Plan

All samples will be submitted to the analytical laboratory for analysis in accordance with NYSDEC ASP Category B protocols. As stated, hazardous wastes generated at the Newsday facility were handled or stored within the building in the Former Silver Recovery Room, Former Photo Waste Room, the Ink Recovery Room, and within the fixer, developer, and industrial waste piping. Closure of these areas shall include decontamination of the hazardous waste storage areas, rinsate sampling and subsurface soil sampling.

4.2.1 Floor Rinsate Sampling

Following sweeping, power washing and decontamination of the floor surfaces in these areas, a total of six rinsate samples will be collected, including one from the Former Silver Recovery Room, one from the Former Photo Waste Room, two from the recovery equipment area in the Ink Recovery Room and two from the drum storage area in the Ink Recovery Room. The exact locations of the rinsate samples will be determined in the field in coordination with the NYSDEC. Additional QA/QC samples, i.e., blank, duplicate and spike samples, will also be collected to satisfy the NYSDEC Category B standards for Data Quality Assessments. Rinsate samples will be analyzed for TAL metals/Hg and TCL VOCs + TICs. Sampling

results will be compared with the NYS Groundwater Effluent Limitations (Class GA), as identified in NYSDEC TOGS 1.1.1 or 6 NYCRR Part 703.6. Should the sampling results exceed the Class GA standards, decontamination of the floors will be repeated until subsequent confirmatory rinsate samples meet the Class GA standards.

4.2.2 Soil Sampling

Three (3) subsurface borings will be advanced in the three former holding tank locations in these areas to sample and characterize subsurface soils from below the floor slab to a depth of 8 feet. The former holding tanks included a 100-gallon polyethylene tank in the Former Silver Recovery Room, a 500-gallon HDPE and a 250-gallon HDPE tank in the Former Photo Waste Room. It is anticipated that the precise sampling location will be dictated by a NYSDEC representative on-site at the time of the closure investigation. The concrete floor, estimated to be 4-6 inches thick, shall be core drilled. As discussed in Section 4.1.2, a remote access direct-push drilling unit will be used to advance the subsurface borings to a total depth of 8 feet below the floor slab. Representative soil samples shall be collected from depth intervals of 0-2, 2-4, 4-6 and 6-8 feet. Additional QA/QC samples, i.e., blank, duplicate and spike samples, will be collected to satisfy the NYSDEC Analytical Services Protocol (ASP) standards for Data Quality Assessments. As the fill media is expected to have low sample recovery due to an anticipated low moisture content, additional borings immediately adjacent may be used for the same collection depths. All samples submitted to the analytical laboratory will be tested for TAL metals/Hg and TCL VOCs + TICs. Soil sampling results will be compared with the 6 NYCRR Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives. The soil VOC samples shall be collected in conformance with EPA Method 5035 – Terra Core Sampling.

Once all samples are collected, initially only the 0-2 and 2-4 feet samples from each soil boring location will be analyzed by the analytical laboratory. These samples will be analyzed on an accelerated turnaround time, while ensuring compliance with analytical holding times. Should no contamination be identified, then the 4-6 and 6-8 feet samples will not be analyzed.

4.2.3 Piping Rinsate Sampling

Seventeen (17) representative sections of the waste piping throughout the building will be removed and visually inspected. As stated in Section 4.1.3, rinsate sampling of the piping will be conducted as necessary based on visual inspections of the piping. Additional QA/QC samples, i.e., blank, duplicate and spike samples, will also be collected to satisfy the NYSDEC Category B standards for Data Quality Assessments. The piping rinsate samples will be analyzed for TAL metals/Hg and TCL VOCs + TICs. Sampling results will be compared with the NYS Groundwater Effluent Limitations (Class GA), as identified in NYSDEC TOGS 1.1.1 or 6 NYCRR Part 703.6. Should the sampling results exceed the Class GA standards, decontamination of the piping will be repeated until subsequent confirmatory rinsate samples meet the Class GA standards.

5.0 DOCUMENTATION AND CUSTODY

Sample preparation, documentation and custody are important elements of any QA/QC program. Without proper sample preparation and accurate documentation and tracking of sample custody, even well planned and properly implemented field sampling programs can generate data open to interpretation. For the purposes of this QA Plan, sample preparation and custody include containerization, preservation, container transfer to field personnel, field handling and sample custody, sample transfer to the laboratory, and internal laboratory custody during sample analysis.

Sample custody is initiated at the designated laboratory where appropriate sample containers and preservatives, if required, are compiled for use by field personnel.

5.1 Sample Containers

Sample containers are provided by the designated laboratory. Generally, the wide scopes of analyses performed during field and sampling investigations necessitate the use of several different types of sample containers. Container materials are selected so that there will be no interference with the analysis to be performed on the given sample. Each sample container will have a label that contains the information necessary to identify the sample. Care must be taken to ensure that the sample locations identified on the Sample Request Form precisely match those on the container and the Chain of Custody. The information to be provided on the container label will include the following, at a minimum:

- A unique laboratory identification number,
- Sample identification,
- Sample location (and depth, if appropriate),
- Sampler's name,
- Date and time of collection, and
- Identification of any preservatives, if applicable.

CLP bottles, as used during this closure sampling effort, are prepared using only CLP approved cleaning techniques with quality control certified by the vendor. The bottles used will be verified as non-contaminated by filling representative bottles with distilled water and analyzing the bottles for the parameters that would be analyzed using the specific bottle type. If any analytes are detected, the entire affected lot will be discarded and not used until the source of contamination is identified and remedied. Verification data is maintained on file at the laboratory.

5.2 Sample Preservation

Sample preservation is dependent upon the specific type or suite of analyses to be performed. A summary of sample container types and preservation methods is presented in Tables 7.2.1 and 7.2.2. Sample preservatives will be added in the laboratory prior to shipment and identified on the sample bottle labels. Field personnel are responsible for verifying the addition of preservatives by visually examining the sample bottles, sample bottle labels, and the chain of custody. Any discrepancies will be reported immediately to the laboratory and field personnel will not use the bottles in question.

After samples are collected and transferred into their respective sample bottles by field personnel, the samples are packed on ice, maintained at 4°C, and delivered to the laboratory within twenty-four hours of collection. Samples will be maintained in a refrigerator (4°C) in the laboratory prior to analysis.

5.3 Preparation of Sample Bottles and Coolers

Coolers used for sample transport will be scrubbed clean prior to use with a non-contaminating detergent followed by a thorough rinse with organic-free distilled water. Coolers will then be dried before packing and use. All sample bottles are purchased new and specially cleaned and certified by the vendor. As per CLP requirements, the sample bottles for this sampling program will be used once for the specific job intended. Non-CLP projects permit the sample bottles to be re-used after thorough cleaning and verification of non-contamination as discussed earlier. All glass containers to be used will be individually packaged in “bubble-wrap” to prevent breakage during transport.

5.4 Custody Transfer to Field Personnel

A standard chain of custody form is utilized for documenting the receipt, tracking and compilation of sample data. The chain of custody (COC) procedure begins with the preparation of the sample bottles. After the sample bottles have been prepared, the cooler to be used will be sealed with custody tape and an external chain of custody form prepared. At a minimum, the following information will be included on the COC at the time of shipment to field personnel:

- Container types including preservatives, if required;
- Number of containers required at each sample location for each analysis, including matrix spike/matrix spike duplicates (MS/MSD), trip blanks and field blanks;
- Any distinctive sample identification requirements;
- Sample custodian's signature with a date and time of relinquishment;
- Receiver's signature with a date and time of receipt.

Sample coolers will be picked up by field personnel at the laboratory. At this point, field personnel are in custody of the sample bottles.

5.5 Custody Transfer to Laboratory

Upon completion of field sampling, field personnel pack sample bottles, including any blank or duplicate samples, and seal the cooler with custody tape. Any breakage of bottles must be noted on the comment section of the COC. If lab prepared glassware is not to be submitted back to the laboratory for analysis, the line designating the unused sample bottles must be crossed-out with a single line through the entry, and the correction initialed by the person in custody of the samples. All corrections to the COC must be made with a single line through the incorrect entry and must be accompanied by the initials of the person in custody of the samples.

Field personnel must verify that the identification labels on the sample bottles and the COC are identical, and that all sample bottles are accounted. Any discrepancies must be resolved before relinquishing custody of the samples. Once the field personnel are satisfied that the samples are ready for submittal to the lab, the cooler will be returned to the laboratory.

Upon receipt of the sample cooler at the laboratory, the sample custodian examines the exterior of the cooler to ensure that sample integrity has not been impacted. Once the laboratory is satisfied that the sample integrity has not been compromised, a lab sample custodian signs and dates the COC to acknowledge receipt of the samples. The field personnel, when hand delivering samples, shall also sign and date the COC acknowledging that they have transferred custody of the samples to the laboratory.

6.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

There are generally three types of QA/QC samples collected during field sampling programs: blank samples, duplicate samples, and spiked samples. Each of these types of samples serves a specific purpose. Blank samples provide a measure of contamination that may have been introduced into a sample set in either of two ways:

- in the field while the samples were being collected or transported, or
- in the laboratory during sample preparation or analysis.

Duplicate samples provide a quantitative measurement of the reproducibility of sample results and as such, provide a mechanism for measuring the accuracy of sample collection and laboratory analysis procedures. Spiked samples can be used in several ways; the most common of which are the determination of parameter recoveries and reproducibility of results. Parameter recoveries are important in discussing data usability and the possible use of pseudo-correction factors for site sample results.

6.1 Blanks

There are four basic types of blank samples: trip blanks, field blanks, equipment blanks, laboratory calibration blanks, and laboratory reagent (or method) blanks. Only trip blanks and equipment blanks are utilized by field sampling personnel.

Trip blanks are used to indicate potential contamination due to migration of volatile organic compounds (VOCs) from the air on the site or in the sample shipping containers into the sample. A trip blank consists of laboratory distilled and deionized water in a 40 ml glass vial sealed with a Teflon septum. The blank accompanies the empty sample bottles to the field as well as the samples returning to the laboratory for analysis.

Equipment blanks are used to determine if certain field sampling or cleaning procedures (e.g., decontamination of field equipment) result in cross-contamination of site samples. Like the trip blank, the equipment blank is a sample of distilled and deionized water taken to the field with empty sample bottles and analyzed with the site samples. However, unlike the trip blank, the equipment blank sample is prepared in the field. The equipment blank will be poured through or over the sampling equipment after the equipment has been decontaminated. The equipment blank is collected after cleaning the equipment and before next use. The equipment blank will be containerized and labeled in the same manner as other site samples. One (1) equipment blank per 20 field samples will be collected for each matrix type and submitted to the laboratory for the same analysis parameters as the field samples.

6.2 Duplicate Samples

Duplicate samples are used to assess the accuracy and repeatability of field procedures and laboratory analytical procedures. Duplicate site samples are generally collected so that the laboratory is “blind” to the source of the duplicate. Duplicate samples should be collected by sampling the given matrix in accordance with the procedures established for the project, except that approximately double the quantity of sample should be collected. Since sample recoveries are often a limiting factor as to which samples can be collected as duplicates, initial planning is important to ensure that sufficient sample volume is available for an accurate duplicate.

After collection of the sample, the sample will be divided evenly so that each 'half' sample is representative of the whole (i.e., the two samples should be as close to identical as possible). Each sample will then be labeled. The first sample will be labeled with the actual sample location and description. The second sample will be labeled with a fictitious sample identifier known only to the sampler and those responsible for data interpretation. The laboratory should not be informed of the presence of a duplicate sample. Both samples will then submitted in an identical manner and documented on the COC. Analysis should include

all parameters required for the original site sample. One (1) duplicate sample per 20 field samples will be collected over the course of the field sampling program.

6.3 Matrix Spiked Samples

Spiked samples are utilized to potentially improve combined sampling and analytical accuracy. The two spiked samples are identified as matrix spike and matrix spike duplicate (MS/MSD). For matrix spiked samples, a selected field sample is collected in triplicate following the same procedure as used for duplicate samples, discussed in Section 6.2. In the laboratory, two of the field samples are spiked with a known concentration of a contaminant of interest. The recovery of the spiked compound is determined after laboratory analysis. The recovery serves as an indicator of the efficiency of the laboratory analysis, and more importantly from the standpoint of the field sampling personnel; the percent recovery can be used as a pseudo-correction factor for other sample results. Sample recoveries outside of a pre-determined control limit can also be used by the personnel responsible for data interpretation to assess the usability of site data. One (1) set of MS/MSD samples will be collected per 20 field samples as part of the field sampling program.

A summary of spiking compounds, method, low and high QC limits for spike recovery and relative percent difference values (RPD) for all matrices are included in **Appendix B**. Tables listing surrogate compounds, method, and acceptability QC limits for all samples matrices are also included.

7.0 ANALYTICAL PROCEDURES AND LABORATORY TESTING

7.1 Analytical Laboratory

Environmental samples will be analyzed by American Analytical Laboratories LLC in Farmingdale, New York, a New York State ELAP-accredited laboratory.

7.2 Sample Analysis

All rinsate and soil samples will include a NYSDEC ASP category B data package that documents the quality of the analytical work. A summary of the desired parameters, methods of analyses, required sample container, preservative and maximum holding time is shown in Table 7.2.1 for water matrices and Table 7.2.2 for soil and solid matrices. An Analytical Methods/Quality Assurance summary including information pertaining to all environmental, performance evaluation and quality control samples is provided in Table 7.2.3.

8.0 CALIBRATION PROCEDURES

8.1 Calibration Practices

Instruments and equipment to be used in the analytical laboratory are controlled by a formal calibration program. The program verifies that equipment is of the proper type, range, accuracy and precision to provide data compatible with the desired requirements. All instruments and equipment that measure a quantity with performance expected at a stated level are subject to calibration. Calibration may be performed by lab personnel using reference standards or externally by calibration agencies or equipment manufacturers.

Implementation of the laboratory calibration program is the responsibility of the Laboratory Manager and Analysts. The Laboratory QA Manager shall review the implementation of the program.

There are two types of calibration pertinent to the laboratory procedures to be utilized during the analysis of samples from the Newsday Facility closure. These are operational and periodic.

1.) Operational calibration which is routinely performed as part of the instrument usage, such as the development of a standard curve for use with an Atomic Absorption (AA) Spectrophotometer or Inductively Coupled Plasma (ICP) Spectrophotometer. Operation calibration is generally performed for instrument systems.

2.) Periodic calibration is performed at prescribed intervals for equipment such as balances and controlled ovens. In general, equipment that can be calibrated periodically is considered a distinct single purpose unit and is relatively stable in performance.

Whenever possible recognized procedures, such as those published by ASTM, USEPA, or the equipment manufacturers shall be utilized.

8.2 Calibration Frequency

Instruments and equipment shall be calibrated at prescribed intervals and/or as part of the operational use of the equipment. Frequency shall be based on the type of equipment, inherent stability, manufacturer's recommendations, values provided in recognized standards, intended use, effect of error upon the measurement process, and prior experience.

8.3 Calibration Reference Standards

Two (2) types of reference standards are used by American Analytical for calibration. These are physical and chemical.

1.) Physical Standards, such as weights for calibrating balances and certified thermometers for calibrating working thermometers and ovens, are generally used for periodic calibration.

2.) Chemical Standards are primarily used for operational calibration.

Whenever possible, physical and chemical reference standards shall have known relationships to nationally recognized standards (e.g., National Bureau of Standards) or accepted values of natural physical constants. If national standards do not exist, the basis for the reference standard shall be documented.

8.4 Calibration Failure

Equipment that fails calibration or becomes inoperable during use shall be removed from service and segregated to prevent inadvertent use, or shall be tagged to indicate it is out of calibration. Such equipment shall be repaired and satisfactorily recalibrated before reuse.

8.5 Calibration Records

Records shall be prepared and maintained for each piece of equipment subject to calibration. Records demonstrating accuracy of reference standards shall also be maintained.

For instruments and equipment that are calibrated on an operational basis, calibration generally consists of determining instrumental response against compounds of known composition and concentration or the preparation of a standard response curve of the same compound at different concentrations. Records of these calibrations can be maintained in several ways:

1.) The calibration data can be kept with analytical sample data.

2.) A logbook can be prepared for each instrument that contains all calibration data.

Method 1 provides response factor information, etc., directly with the analytical data so that the data can be readily processed and verified. Also, the raw data package is completed as a unit.

Method 2 provides an on-going record of calibration undertaken for a specific instrument. However, to process and verify the analytical data, the log must be used in conjunction with the raw data.

For operational calibration of instrumentation used for this project, calibration data will be included with the raw analytical data and maintained in project files.

9.0 DATA REDUCTION, VALIDATION AND REPORTING

9.1 Data Reduction

Laboratory data reduction and analysis for organic analyses involves relating a "peak area" to the mass of a constituent. This is accomplished by digital computers. The computer hardware and software is designed

to allow the analyst to create libraries or files of calibration standards, and then compare raw sample data against these libraries to produce a report that contains the identification and qualification of constituents present in the sample. The analysts manually check the computer-reduced data.

Inorganic analyses are performed with instruments of varying electronic sophistication, but in all instances, data reduction and analysis involves essentially the generation of a standard calibration curve, and then comparing the instrument readout against the calibration curve to obtain a "Quantity" of constituent. The concentration is then manually calculated. The calculated results are manually entered into the computer system.

9.2 Data Validation

Data validation is a process in which field and analytical data quality is assessed relative to the data quality objectives. The validation process examines the acceptability or validity of data, and assesses data usability. Although data validation usually refers to analytical laboratory data, the same review process is applied to all field-generated data.

In order to ensure that data collected in the field is consistent and accurate, standard reporting forms are utilized. These forms are then checked by the Field Team Supervisor to confirm that the information is complete and that any calculations are correct. A minimum of 20% of the field data reports is checked in this manner. If, during the initial review process, errors are identified, the remaining 80% of the data set are reviewed. Items to be checked by the reviewer will be dependent on the type of data being reported, but in general include the following:

- Proper sampling methods and equipment were employed
- Proper sample preservation methods were followed
- Chain of custody information is complete
- Proper QA/QC samples were utilized.
- Equipment decontamination procedures were followed, and
- Instruments were properly calibrated.

The final analytical laboratory category B data package generated as part of the planned closure activities at Newsday will be evaluated for data validation by a third party. For this project, outside validation services will be provided by Nancy Potak. A copy of Ms. Nancy Potak's resume is provided as **Appendix C**.

9.3 Data Reporting

The following are applicable to data presentation:

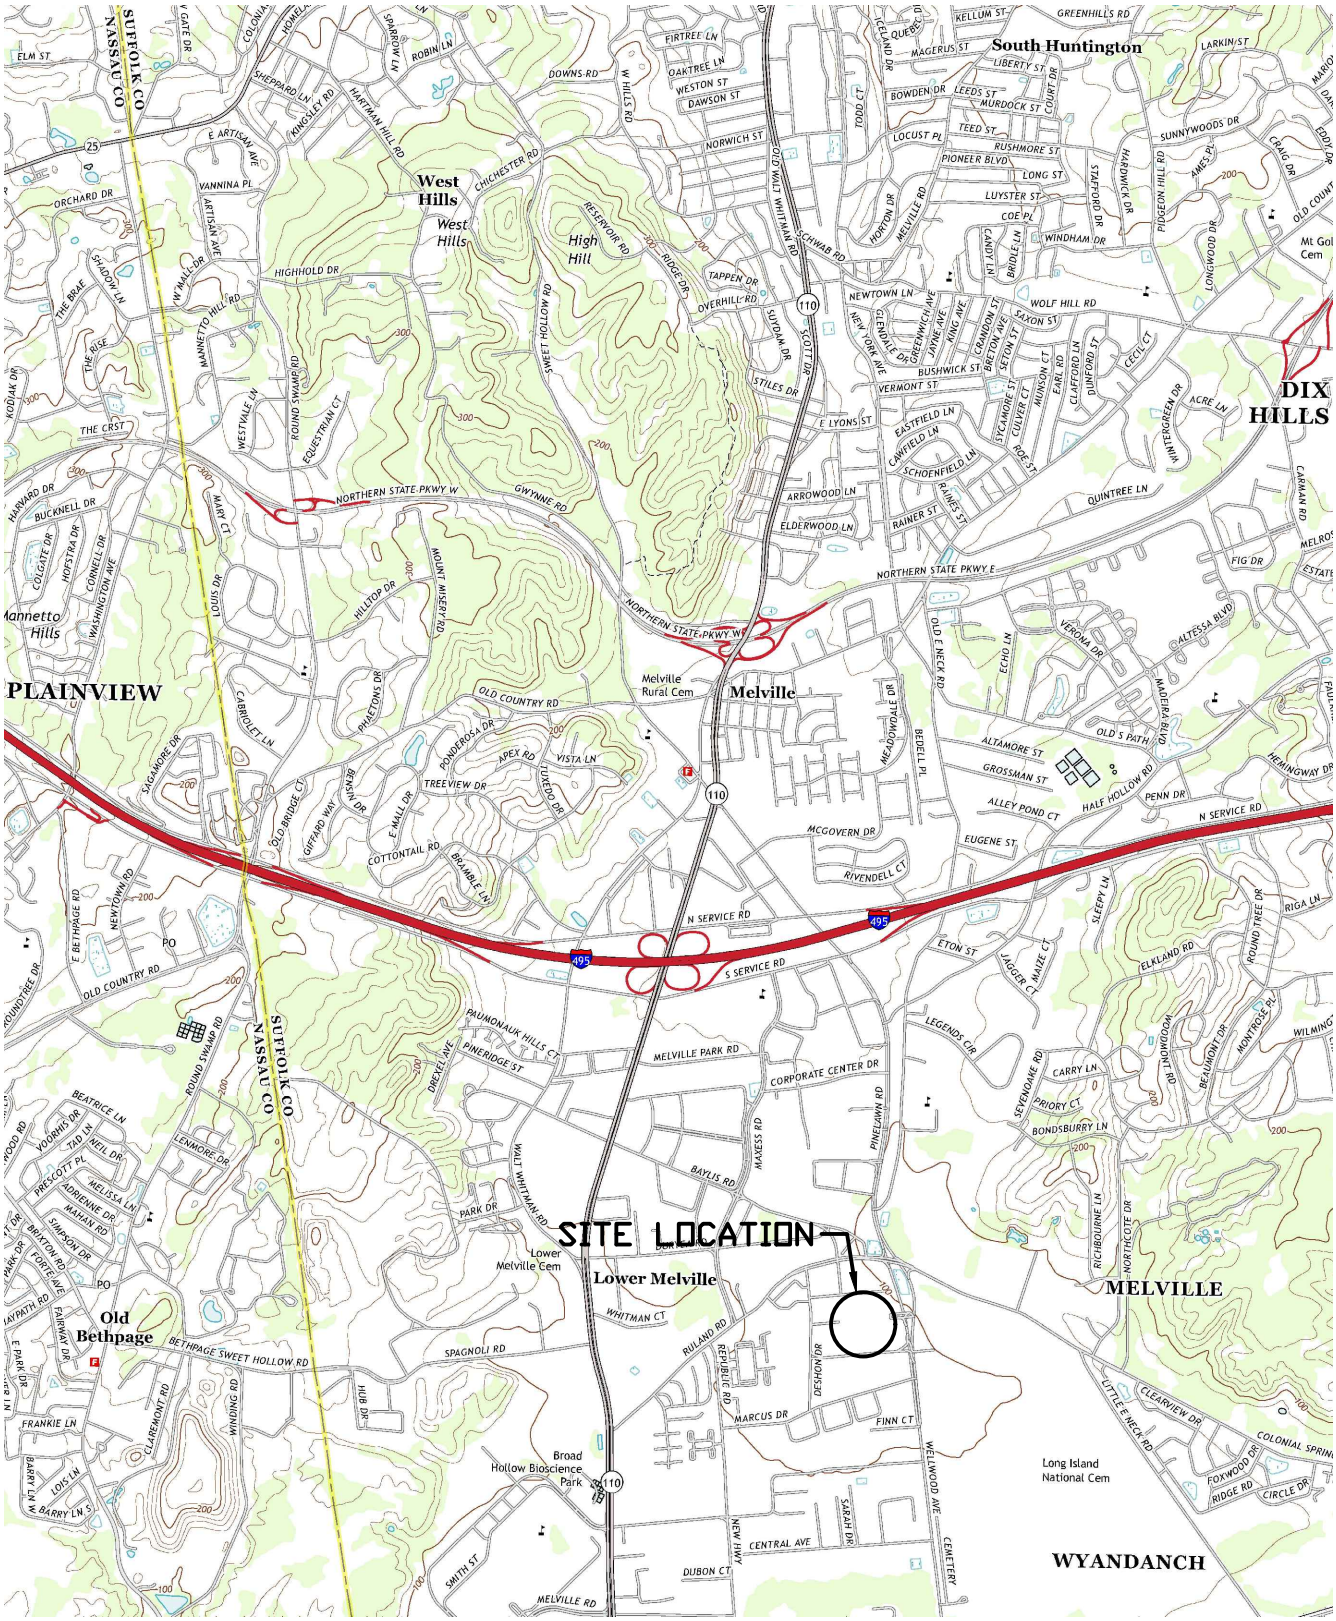
1.) The final presentation shall be checked in accordance with data verification requirements and approved by the Laboratory QA Manager.

2.) Data presentation will include:

a) Sample identification number used by American Analytical and/or the sample identification provided to the laboratory (if different).

b) Chemical parameters analyzed reported values, and units of measurements.

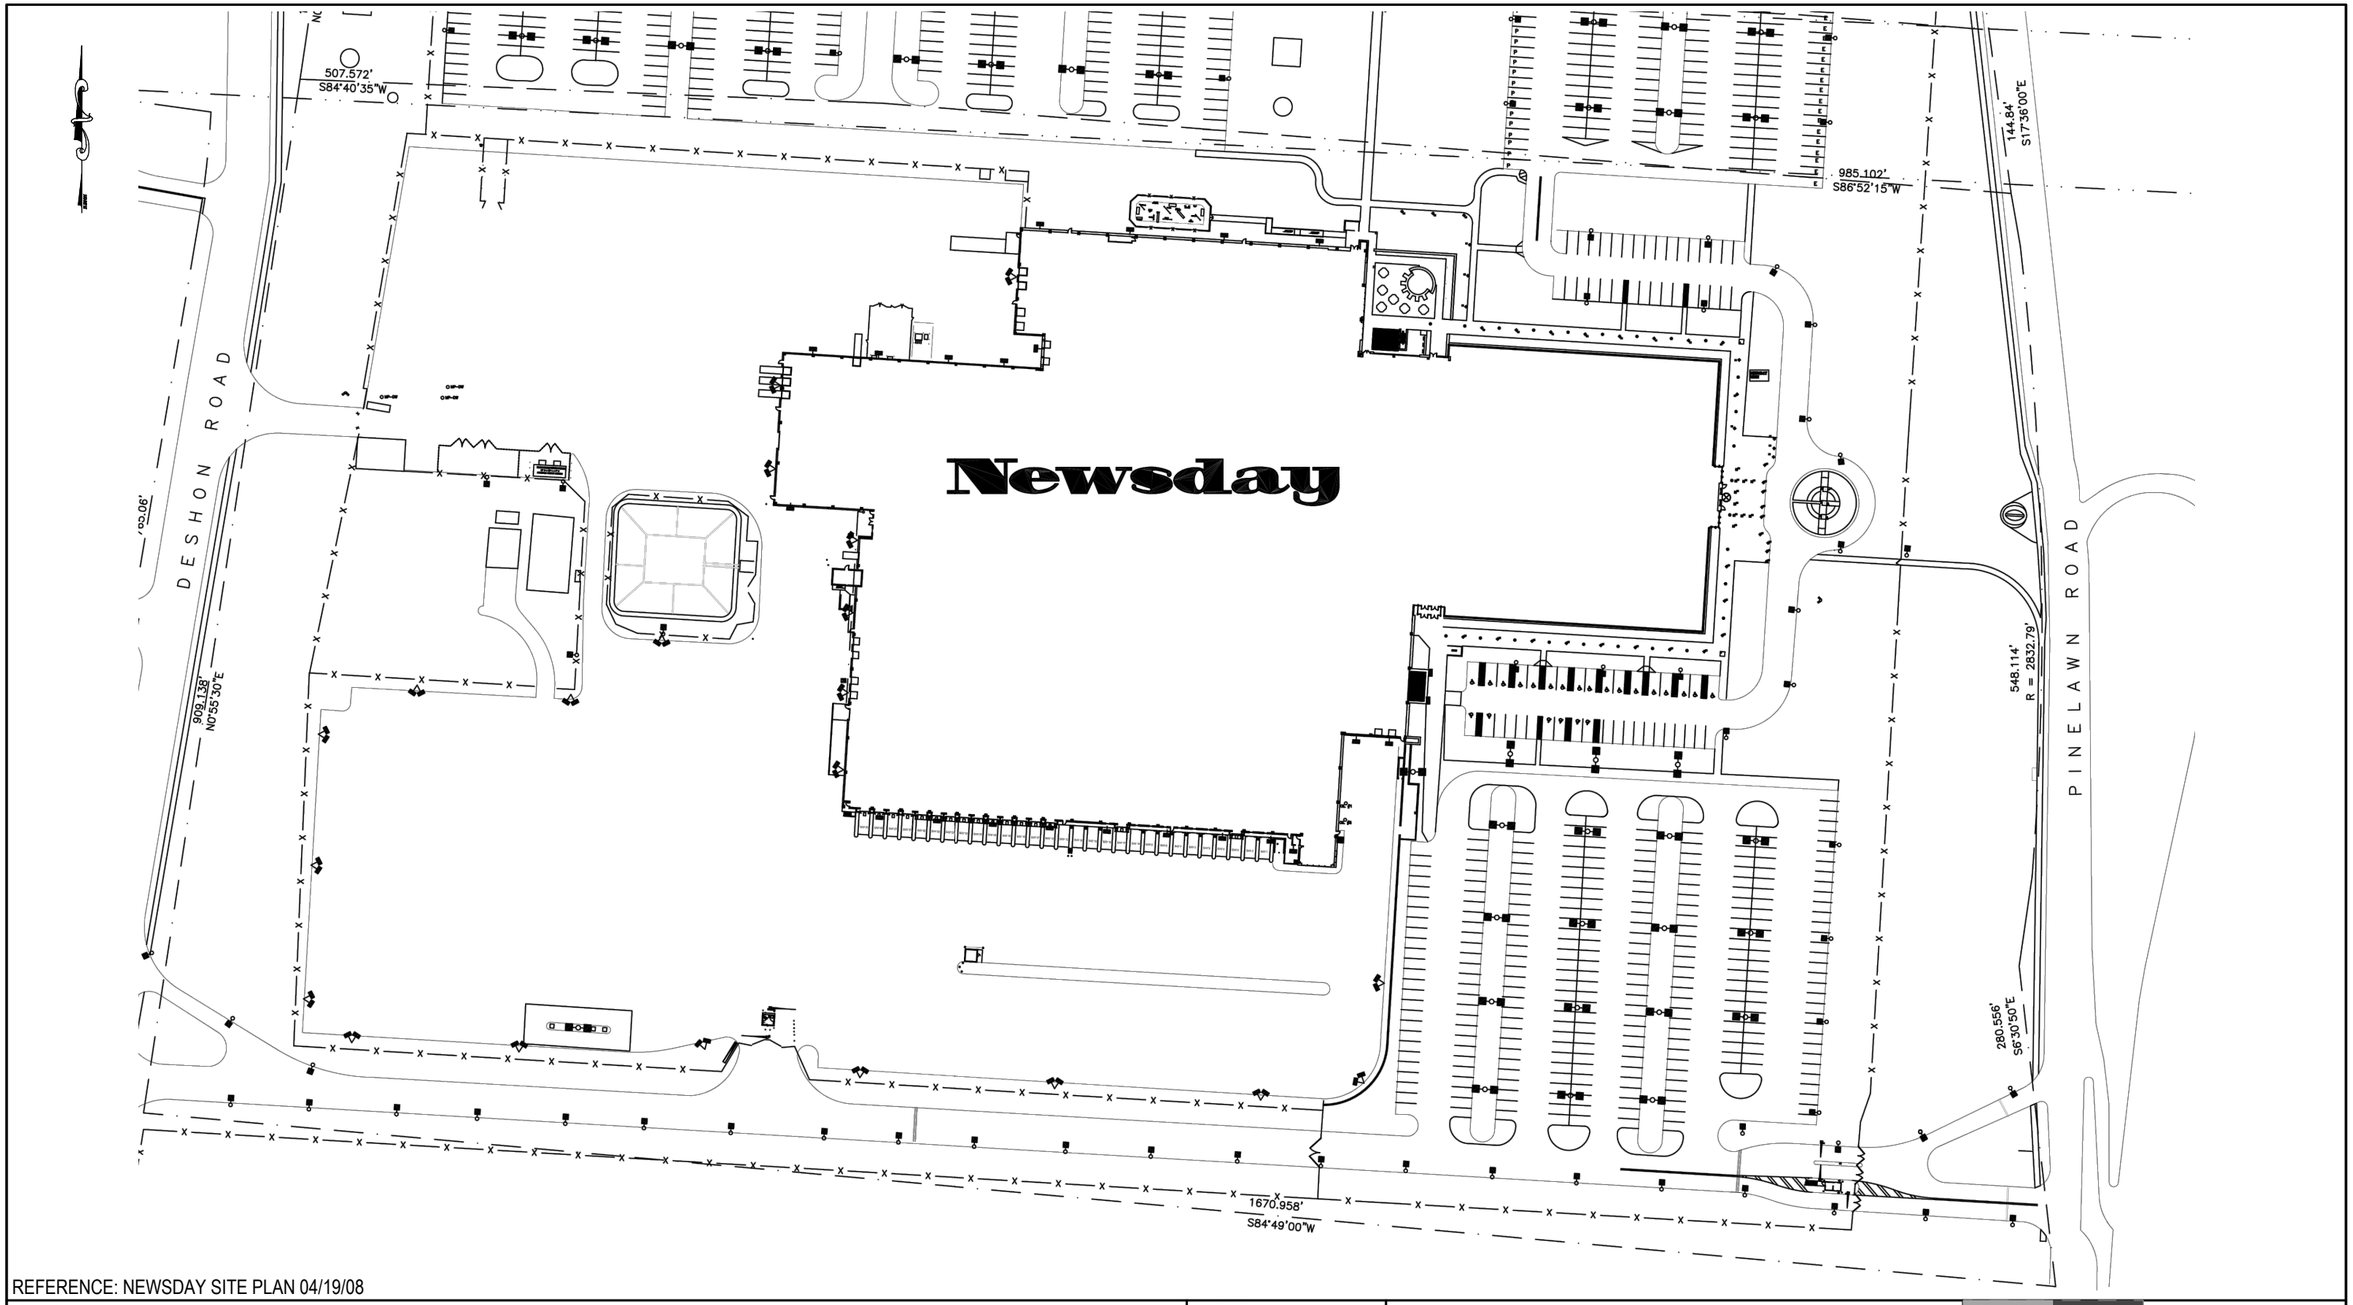
c) Detection limit of the analytical procedure, if the reported value is less than the reporting limit.



d) Reporting limit for non-detects flagged with the “U” qualifier.

e) Data for a chemical parameter are reported with consistent significant figures for all samples.

f) Results of QA/QC sample analysis, if appropriate.



g) Footnotes referenced to specific data, if required to explain reported values.

The format for reporting will follow the NYSDEC ASP category B data package. All data will be made available in EQuIS Electronic Data Deliverable (EDD) Format.

[1] Soil samples collected using EPA Method 5035 will be collected in duplicate.

[2] One trip blank per day.

[3] Minimum of one set of QA samples per sample delivery group (SDG), i.e., 1 per 20.

QAPP APPENDIX A

RINSATE SAMPLE COLLECTION PROTOCOL

Attachment A

Rinsate Sample Collection Protocol

This procedure is intended to be used to collect samples for analysis of concrete floors, secondary containment areas and sumps, including surfaces that have been coated, to establish whether or not there is any contamination on the concrete surfaces. This procedure is to be performed after the surfaces have been cleaned and decontaminated pursuant to the approved closure plan. This procedure may also be suitable for use on other surfaces on a case-by-case basis.

1. Mark areas to be sampled on a facility floor plan for the area(s) to be closed. Sketches should include locations of building columns, walls, fixed equipment, and the rinsate sampling locations themselves to accurately locate the rinsate sampling points within the buildings.

2. Assemble and clean all equipment necessary for sample collection. Equipment needs to be cleaned, if not already pre-cleaned by the laboratory.

3. Create a temporary containment area on the floor using an inert, pre-cleaned, flexible boom.

4. Label the sample containers with a unique sample code, information on the site, sample location and date/time sample was collected. Affix appropriate labels for test parameters on the sample containers. Put on a new pair of disposable nitrile gloves.

5. At each sampling location, slowly pour the minimum quantity of de-ionized water (start with one gallon for metals analysis, much less for only volatiles) needed to collect all sample parameters, including QC samples, onto the concrete area. If the individual area is sloped, start pouring at the highest elevation. The de-ionized water may be provided by the analytical laboratory, purchased, or generated on-site.

6. Allow de-ionized water to collect and remain in the sample location for 10 minutes.

7. Collect the number of samples as specified in the closure plan along with appropriate QA/QC samples. Samples may be collected using dedicated, sterile glass pipettes provided by the laboratory, or any other suitable device approved in the closure plan. The pipettes are used to transfer the sample fluids into the appropriate laboratory supplied containers. Volatile sample containers shall be filled first to minimize loss of volatiles.

8. Samples must not be composited.

9. Cap the sample container and place sample containers in a cooler with ice to maintain a temperature of 4 °C.

10. Remove and discard the gloves. Place all disposable gloves into a plastic bag designated

for proper disposal.

11. Fill out sampling details in field log book. Photographs of the sample locations, wetted areas, equipment, and actual sampling events may be taken by the facility or Department staff and a list of the photographs shall be recorded in the field book.

12. Fill out the chain-of-custody and any other sample forms. Prepare the samples for storage and shipping in the cooler with ice to maintain a temperature of 4 $\pm$ 2°C. Ship overnight to the laboratory for analysis.

13. Follow the chain-of custody procedures as detailed in the Quality Assurance Project Plan.

QAPP APPENDIX B

QC LIMITS FOR SPIKING AND SURROGATE COMPOUNDS

Volatile Organic Compounds (VOCs), Method 8260B - Water (ug/l)

Lab Fortified Blank (LFB)		QC Limits (%R)	
Analyte	Spike Concentration	Low	High
1,1,1-Trichloroethane	50	66	126
1,1,2,2-Tetrachloroethane	50	77	120
1,1,2-Trichloroethane	50	82	116
1,1-Dichloroethane	50	77	114
1,1-Dichloroethene	50	67	120
1,2-Dichloroethane	50	76	120
1,2-Dichloroethene (total)	100	78	128
1,2-Dichloropropane	50	81	115

1989 - 1993 **EDER ASSOCIATES**, Locust Valley, New York

- Perform independent third party data validations for NY CLP projects.
- Review analytical data from projects in several states for appropriate methodology, detection limits, and quality assurance practices.
- Compose laboratory analytical contracts detailing methods, deliverables and laboratory quality assurance requirements.
- Advise on potential analytical problems which may be encountered at specific sites.

1988 -1993 **WOODWARD CLYDE CONSULTANTS,** Wayne, New Jersey

- Perform independent third party data validation for CLP analyses of all samples collected for the Pelham Bay Landfill.
- Design data validation documentation for dioxin and furan analyses.

1989 - 1990 **SMC MARTIN**, Valley Forge, PA

- Perform independent data validations for the New Jersey CLP program.

1987 - 1988 **KILLAM ASSOCIATES**, Millburn, New Jersey
Laboratory Director
Supervise a staff of 14 chemists and technicians in methodologies for GC/MS, GC, and inorganic analyses.
Responsible for the quality of all data and the final review of all analytical reports produced by the laboratory.
Developed the laboratory quality assurance program
Responsible for the hiring of all technical and administrative personnel.

1982 - 1987 **GENERAL TESTING CORPORATION**, Hackensack, NJ
Laboratory Director, 1986 through 1987
Coordinate all analytical and field projects originating in the New York metropolitan area involving water quality analyses, site investigation, and industrial monitoring.

Laboratory Manager, 1983 - 1986
Hired, trained, and evaluated all technical personnel.
Directly responsible for all data originating at the New Jersey laboratory.
Extensive experience in all aspects of large scale water quality monitoring studies.

1982 **HUDSONIA**, Annandale, NY
Consultant
Assisted in a study to determine the feasibility of the use of apple cider wastes as a soil amendment and fuel.

HUDSON RIVER SLOOP CLEARWATER, Poughkeepsie, NY
Consultant
Studied the effectiveness of the NY SPDES program. Examined the engineering files of the major dischargers in the Hudson River valley to determine the reasons for permit violations.

1981 **LAWLER, MATUSKY, AND SKELLY ENGINEERS**, Pearl River, NY
Analyst: Performed wet chemical analyses for environmental monitoring.

1977 - 1979 **UNIVERSITY OF GEORGIA**, Athens, GA
Research assistant in several projects involving soil and water chemistry. Extensive experience in inorganic analyses.

1972 - 1976 **UNIVERSITY OF MASSACHUSETTS**, Amherst, MA
Assisted in experiments designed to study the effects of sludge on plant growth and heavy metal uptake. Performed all of the inorganics analyses for the project.

EDUCATION

University of Massachusetts, Amherst, MA
B.S. - Plant and Soil Sciences, Honors Program, 1976

University of Georgia, Athens, GA
Graduate work in environmental chemistry and ecology

APPENDIX C

FORMER SILVER RECOVERY UST REMOVAL DOCUMENTATION

Newsday

Long Island, NY 11747

April 17, 1989

Mr. Larry Lucks
Tyree Environmental Services
208 Route 109
Farmingdale, NY 11735

Dear Mr. Lucks:

Please provide a price quotation for the removal of the following underground storage tanks:

1) 4000 Gallon Single Wall Fiberglass Tank
Installed 1980
Contained Photographic Wastewater
7' Diameter, 14' Length
12'- 6" Inverted Elevation

2) 550 Gallon Steel Tank
Installed 1980
Contained Methanol Solution
4' Diameter, 6' Length
5'- 6" Inverted Elevation

Work is to be performed in accordance with all applicable regulations of the New York State Department of Environmental Conservation, Suffolk County Department of Health, and the Town of Huntington. Notifications and permits are to be the responsibility of Tyree Environmental Services.

The proposal is to include:

- Excavation
- Tank Removal and Disposal
- Tank Cleaning
- Remove vent pipes to grade
- Seal connecting piping
- Permits
- Backfill and compact to grade
- Waste Disposal (Waste generated from Tank number one is to be removed by Newsday's present waste hauler. Waste generated from Tank number two is to be disposed of into Newday's Sewage Treatment Plant is directed).
- Opening repair to be completed by others.

A Times Mirror
Newspaper

Please provide two price quotations: one for the removal of Tank number one and a second for the removal of Tank number two. Contact me at 756-3833 for a site visit.

Sincerely,

John Tillotson
Environmental Coordinator

Re: Premises

We propose to make the following installation at the above location:

Excavate, remove and properly dispose of one (1) - 4,000 gallon tank: cut open and clean tank of up to one (1) D.O.T. drum of bottom sludge; properly dispose of tank steel and bottom sludge; backfill excavation to grade with clean fill material; lay bluestone base over excavation:

TOTAL: $2,600.00
Plus all applicable taxes

NOTE: (1) Pumping and disposal of oil/gas/contaminated water, add $76.00 per hour trucking and .85 per gallon disposal.

(2) Removal and disposal of tank bottom sludge in excess of drum in base bid, add $475.00 per drum

(3) Excavation and disposal of contaminated soil, if required by N.Y.S. Dept. of Environmental Conservation, add
1-5 cubic yards $1,500.00
over 5 cubic yards-add $125.00 per yard

(4) TERMS: 50% down prior to commencement of job, balance due upon completion of all work

PLEASE NOTE
THIS ESTIMATE MAY BE SUBJECT
TO ADDITIONAL COSTS DUE TO
ENVIRONMENTAL REGULATIONS
BOARD CONTROL

All the above work to be completed in a first class workmanlike manner. Any unforseen conditions encountered such as rock or water will be billed as an extra on a time and material basis.

RE: Fixer Pipe Sampling, RCRA Closure, Melvi Order No.: 1804167

Dear Joseph Spinelli:

American Analytical Laboratories, LLC. received 4 sample(s) on 4/24/2018 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

Case Narrative

WO#: **1804167**
Date: **4/30/2018**

CLIENT: H2M Architects & Engineers
Project: Fixer Pipe Sampling, RCRA Closure, Melville,

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion of this report.

Volatile LCS are analyzed with preservatives - HCL/NaHSO4/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

The test results meet the requirements of the NYSDOH and NELAC standards, except where noted. The information contained in this analytical report is the sole property of American Analytical Laboratories, LLC. or the client for which this report was issued. The results contained in this report are only representative of the samples received. The sample receipt checklist is included as part of this lab report. Conditions can vary at different times and at different sampling conditions. American Analytical is not responsible for the use or interpretation of the data included herein.

Definition Only

WO#: **1804167**
Date: **4/30/2018**

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports
ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.
LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.
LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.
PQL - Practical Quantitation Limit; the lowest level that can be reliably achieved within the specific limits of Precision and accuracy. Listed on the QC Summary Forms.
m - Analyte was manually integrated for GC/MS.
+ - Concentration exceeds regulatory level for TCLP

Mr. Stephen Zimmerman
Director of Engineering Services
235 Pinelawn Road
Melville, NY 11747

Re: Closure of Facility: Newsday LLC
235 Pinelawn Road
Melville, NY
EPA Identification Number: NYD052782497

Dear Mr. Zimmerman:

The revised Closure Plan/QAPP for this facility dated July 18, 2018 is acceptable.

Under the provisions of the New York State regulations, 6NYCRR Part 373-3.7, when the owner or operator of a facility submits a closure plan, opportunity must be provided through a newspaper notice for the affected public to comment prior to Departmental approval.

Therefore, to satisfy the aforementioned regulatory requirements in conjunction with closure of the facility, the enclosed Public Notice must be published unedited in its entirety for one day, either in the official newspaper for the town in which the facility is located, or in Newsday.

The notice should not be revised or edited unless you have been authorized to do so by this office. Minor revisions may be authorized by telephone if necessary.

Please instruct the newspaper publisher to provide this office with an affidavit of publication. You are responsible for the cost of publication.

Once the 30-day comment period has expired and, if no comments are received, a letter approving your closure plan will be sent.

If you have any questions, please contact me at 631-444-0233.

Sincerely,

Tatiana Klappas, P.E.
Professional Engineer 1

Eclosure

91-20-2 (1/89)

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION

State Pollutant Discharge Elimination System (SPDES)

DISCHARGE PERMIT

Special Conditions (Part l)

Industrial Code: 2711
Discharge Class (CL): 01
Toxic Class (TX): T
Major Drainage Basin: 17
Sub Drainage Basin: 02
Water Index Number: Groundwater
Compact Area:

SPDES Number: NY - 0136751
DEC Number: 1-4726-00157/00001-0
Effective Date (EDP): 10/16/ 1996
Expiration Date (ExDP): 10/15/ 2001
Modification Date(s):
Attachment(s): General Conditions (Part ll) Date: 11/90

This SPDES permit is issued in compliance with Title 8 of Article 17 of the Environmental Conservation Law of New York State and in compliance with the Clean Water Act as amended, (33 U.S.C. Section 1251 et. seq.)(hereafter referred to as "the Act").

PERMITTEE NAME AND ADDRESS

Attention: John Tillotson, Envir. Coord.

Name: Newsday, Inc.
Street: 235 Pinelawn Road
City: Melville State: NY Zip Code: 11747
is authorized to discharge from the facility described below:

FACILITY NAME AND ADDRESS

Name: Newsday, Inc.
Location (C,T,V): Huntington (T) County: Suffolk
Facility Address: 235 Pinelawn Road
City: Melville State: NY Zip Code: 11747
NYTM - E: . NYTM - N: 4 .
From Outfall No.: 001 at Latitude: 40° 15′ 14" & Longitude: 73° 22′ 34"
into receiving waters known as: Groundwater Class: GA
and; (list other Outfalls, Receiving Waters & Water Classifications)

Outfall 002:
Groundwater - GA

Suffolk County Tax Map #'s:

District: 0400 Section: 20
Block: 2 Lot: 1

in accordance with the effluent limitations, monitoring requirements and other conditions set forth in Special Conditions (Part l) and General Conditions (Part ll) of this permit.

DISCHARGE MONITORING REPORT (DMR) MAILING ADDRESS

Mailing Name: Newsday, Inc.
Street: 235 Pinelawn Road
City: Melville State: NY Zip Code: 11747
Responsible Official or Agent: Mr. Dave Krueger, Engineer Phone: (516)843-5437

This permit and the authorization to discharge shall expire on midnight of the expiration date shown and the permittee shall not discharge after the expiration date unless this permit has been renewed, or extended pursuant to law. To be authorized to discharge beyond the expiration date, the permittee shall apply for a permit renewal no less than 180 days prior to the expiration date shown above.

DISTRIBUTION: R. Hannaford
R. Schneck
J. Myslinski
J. Maloney/R. Seyfarth

Permit Administrator: Roger Evans, Deputy RPA	
Address: Building 40 - SUNY Stony Brook, New York 11790-2356	
Signature: Roger Evans	Date: 9/27/96

EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning EDP 10/16/1996

and lasting until EDP + 5 YEARS 10/15/2001

the discharges from the permitted facility shall be limited and monitored by the permittee as specified below:

Outfall Number & Effluent Parameter	Discharge Limitations Daily Avg.	Daily Max.	Units	Minimum Monitoring Requirements Measurement Frequency	Sample Type
Outfall 001: Industrial and Sanitary Wastewater					
Flow	0.045	NA	MGD	Continuous	Record
Oil & Grease	NA	15	mg/l	Monthly	Grab
Ph (Range)	NA	6.5 - 8.5	SU	Monthly	Grab
Solids, Total Dissolved (TDS)	NA	1000	mg/l	Monthly	Grab
Cyanide	NA	0.4	mg/l	Monthly	Grab
Nitrogen, total (expressed as N)	NA	10	mg/l	Monthly	Grab
Phenols, Total	NA	0.008	mg/l	Monthly	Grab
Silver, Total	NA	0.1	mg/l	Monthly	Grab
Benzene*	NA	0.7	µg/l	Monthly	Grab
Chloroform*	NA	7	µg/l	Monthly	Grab
P-Ethyltoluene*	NA	5	µg/l	Monthly	Grab
Methylene Chloride*	NA	5	µg/l	Monthly	Grab
1,2,4,5-Tetramethylbenzene*	NA	5	µg/l	Monthly	Grab
Toluene*	NA	5	µg/l	Monthly	Grab
1,1,1-Trichloroethylene*	NA	10	µg/l	Monthly	Grab
1,1,2-Trichloroethane*	NA	5	µg/l	Monthly	Grab
1,3,5-Trimethylbenzene*	NA	5	µg/l	Monthly	Grab
Xylene*	NA	5	µg/l	Monthly	Grab
Total Organic Chemicals(1)	NA	100	µg/l	Monthly	Grab
Outfall 002: Storm Water - No Process Wastes Allowed					
No monitoring required.					

Footnotes:

(1) The value reported for Total Organic Chemicals shall be the sum of the reported values for those substances indicated by asterisks (*) above.

SCHEDULE OF COMPLIANCE

a) The permittee shall comply with the following schedule.

Action Code	Outfall Number(s)	Compliance Action	Due Date
	All	Submit Best Management Practices (BMP) Plan as outlined on Special Conditions on page 4 of 6.	EDPM + 3 mos.
		Implement non-structural measures specified by the BMP Plan.	EDPM + 6 mos.
		Complete construction of structural measures specified by the BMP Plan.	EDP + 12 mos
	001	Submit a complete response to the Department's October 19, 1995 Request for Information under the Environmental Benefit Permit Strategy (EBPS) (copy attached), to the following locations: NYSDEC Bureau of Water Permits 50 Wolf Rd, Room 338 Albany, New York 12233-3505 and Regional Permit Administrator, DCS NYSDEC Region 1 Building 40, SUNY @ Stony Brook Stony Brook, New York 11790 NOTE: The due dates for the implementation of non-structural measures and completion of the structural measures specified by the BMP Plan may be modified at the discretion of the Department to allow the permittee reasonable time to design and construct these measures.	EDPM + 60 days

b) The permittee shall submit a written notice of compliance or non-compliance with each of the above schedule dates no later than 14 days following each elapsed date, unless conditions require more immediate notice under terms of the General Conditions (Part II), Section 5. All such compliance or non-compliance notification shall be sent to the locations listed under the section of this permit entitled RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS. Each notice of non-compliance shall include the following information:

1. A short description of the non-compliance;
2. A description of any actions taken or proposed by the permittee to comply with the elapsed schedule requirements without further delay and to limit environmental impact associated with the non-compliance;
3. A description or any factors which tend to explain or mitigate the non-compliance; and
4. An estimate of the date the permittee will comply with the elapsed schedule requirement and an assessment of the probability that the permittee will meet the next scheduled requirement on time.

c) The permittee shall submit copies of any document required by the above schedule of compliance to NYSDEC Regional Water Engineer at the location listed under the section of this permit entitled RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS, unless otherwise specified in this permit or in writing by the Department.

SPECIAL CONDITIONS - BEST MANAGEMENT PRACTICES

1. The permittee shall develop and implement a Best Management Practices (BMP) plan, within one year of EDP to prevent, or minimize the potential for, release of significant amounts of toxic or hazardous pollutants to the waters of the State through plant site runoff; spillage and leaks; sludge or waste disposal; and storm water discharges including, but not limited to, drainage from raw material storage. Completed BMP plans shall be submitted to the Regional Water Engineer within six months of EDP.

2. The permittee shall review all facility components or systems (including material storage areas; in-plant transfer, process and material handling areas; loading and unloading operations; storm water, erosion, and sediment control measures; process emergency control systems; and sludge and waste disposal areas) where toxic or hazardous pollutants are used, manufactured, stored or handled to evaluate the potential for the release of significant amounts of such pollutants to the waters of the State. In performing such an evaluation, the permittee shall consider such factors as the probability of equipment failure or improper operation, cross-contamination of storm water by process materials, settlement of facility air emissions, the effects of natural phenomena such as freezing temperatures and precipitation, fires, and the facility's history of spills and leaks. For hazardous pollutants, the list of reportable quantities as defined in 40 CFR, Part 117 may be used as a guide in determining significant amounts of releases. For toxic pollutants, the relative toxicity of the pollutant shall be considered in determining the significance of potential releases.

   The review shall address all substances present at the facility that are listed as toxic pollutants under Section 307(a)(1) of the Clean Water Act or as hazardous pollutants under Section 311 of the Act or that are identified as Chemicals of Concern by the Industrial Chemical Survey.

3. Whenever the potential for a significant release of toxic or hazardous pollutants to State waters is determined to be present, the permittee shall identify Best Management Practices that have been established to minimize such potential releases. Where BMPs are inadequate or absent, appropriate BMPs shall be established. In selecting appropriate BMPs, the permittee shall consider typical industry practices such as spill reporting procedures, risk identification and assessment, employee training, inspections and records, preventive maintenance, good housekeeping, materials compatibility and security. In addition, the permittee may consider structural measures (such as secondary containment and erosion/sediment control devices and practices) where appropriate.

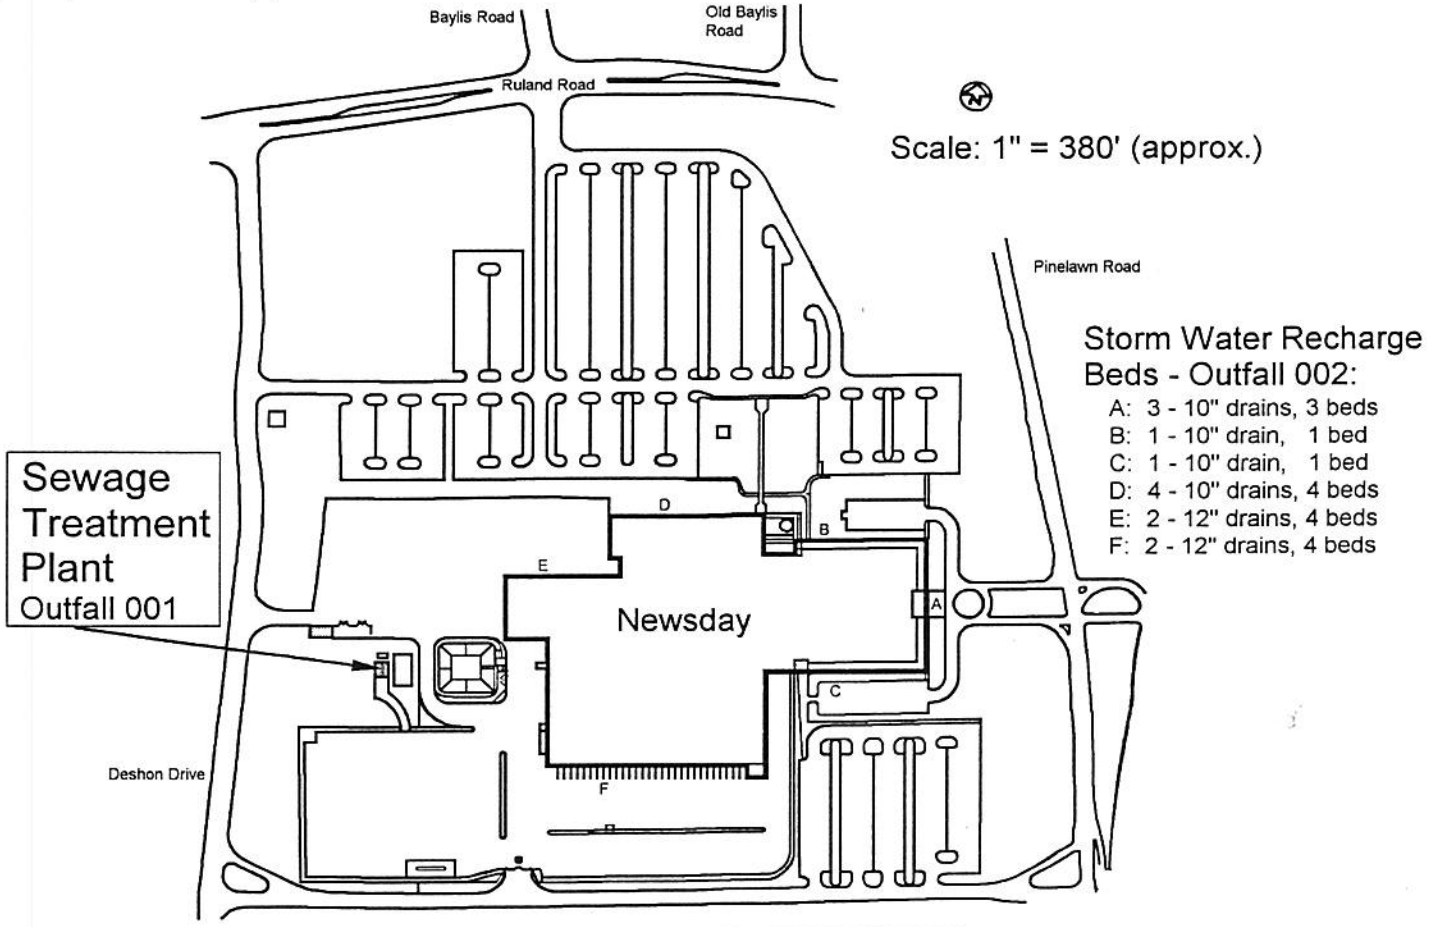
4. Development of the BMP plan shall include sampling of waste stream segments for the purpose of toxic "hot spot"* identification. The economic achievability of technology-based end-of-pipe treatment will not be considered until plant site "hot spot" sources have been identified, contained, removed or minimized through the imposition of site specific BMPs or application of internal facility treatment technology.

5. The BMP plan shall be documented in narrative form and shall include any necessary plot plans, drawings or maps. Other documents already prepared for the facility such as a Safety Manual or a Spill Prevention, Control and Countermeasure (SPCC) plan may be used as part of the plan and may be incorporated by reference. USEPA guidance for development of storm water elements of the BMP is available in the September 1992 manual "Storm Water Management for Industrial Activities," USEPA Office of Water Publication EPA 832-R-92-006 (available from NTIS, (703)487-4650, order number PB 92235969). A copy of the BMP plan shall be maintained at the facility and shall be available to authorized Department representatives upon request. As a minimum, the plan shall include the following BMP's:

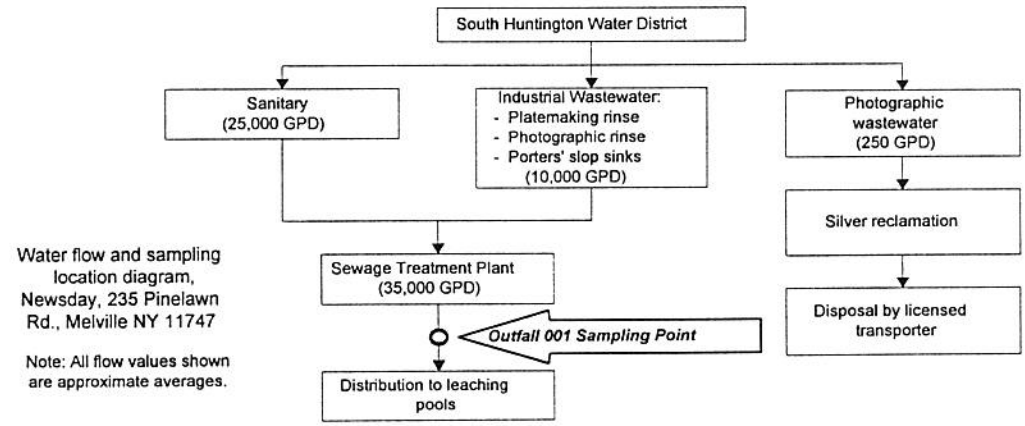
a.	BMP Committee	e.	Inspections and Records	i.	Security
b.	Reporting of BMP Incidents	f.	Preventive Maintenance	j.	Spill prevention & response
c.	Risk Identification & Assessment	g.	Good Housekeeping	k.	Erosion & sediment control
d.	Employee Training	h.	Materials Compatibility	l.	Management of runoff

6. The BMP plan shall be modified whenever changes at the facility materially increase the potential for significant releases of toxic or hazardous pollutants or where actual releases indicate the plan is inadequate.

* A "hot spot" is a segment of an industrial facility; including but not limited to soil, equipment, material storage areas, sewer lines etc.; which contributes elevated levels of problem pollutants to the wastewater and/or storm water collection system of that facility. For the purposes of this definition, problem pollutants are substances for which end of pipe treatment to meet a water quality or technology requirement may, considering the results of wastestream segment sampling, be deemed unreasonable. For the purposes of this definition, an elevated level is a concentration or mass loading of the pollutant in question which is sufficiently higher than the end of pipe concentration of that same pollutant so as to allow for an economically justifiable removal and/or isolation of the segment and/or B.A.T. treatment of wastewaters emanating from the segment.



DEFINITIONS OF DAILY AVERAGE AND DAILY MAXIMUM



The daily average discharge is the total discharge by weight or in other appropriate units as specified herein, during a calendar month divided by the number of days in the month that the production or commercial facility was operating. Where less than daily sampling is required by this permit, the daily average discharge shall be determined by the summation of all the measured daily discharges in appropriate units as specified herein divided by the number of days during the calendar month when measurements were made.

The daily maximum discharge means the total discharge by weight or in other appropriate units as specified herein, during any calendar day.

MONITORING LOCATIONS

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit, at the location(s) indicated below:

Water flow and sampling location diagram, Newsday, 235 Pinelawn Rd., Melville NY 11747

Note: All flow values shown are approximate averages.

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

a) The permittee shall also refer to the General Conditions (Part II) of this permit for additional information concerning monitoring and reporting requirements and conditions.

b) The monitoring information required by this permit shall be summarized, signed and retained for a period of three years from the date of the sampling for subsequent inspection by the Department or its designated agent. **Also**;

[X] (if box is checked) monitoring information required by this permit shall be summarized and reported by submitting completed and signed Discharge Monitoring Report (DMR) forms for each one month reporting period to the locations specified below. Blank forms are available at the Department's Albany office listed below. The first reporting period begins on the effective date of this permit and the reports will be due no later than the 28th day of the month following the end of each reporting period.

Send the **original** (top sheet) of each DMR page to:

Department of Environmental Conservation
Division of Water
Bureau of Water Compliance Programs
50 Wolf Road
Albany, New York 12233-3506

Phone: (518) 457-3790

Send the **second copy** (third sheet) of each DMR page to:

Suffolk County Department of Health Services
15 Horseblock Place
Farmingville, New York 11738
Attn: Mr. Jim Maloney, P.E.

Include a copy of the laboratory analysis with the NYSDEC - Region 1 and SCDHS copies.

Send the **first copy** (second sheet) of each DMR page to:

Department of Environmental Conservation
Regional Water Engineer - Region 1
Building 40 - SUNY @ Stony Brook
Stony Brook, New York 11790-2356

c) A monthly "Wastewater Facility Operation Report..." (form 92-15-7) shall be submitted (if box is checked) to the [ ] Regional Water Engineer and/or [ ] County Health Department or Environmental Control Agency listed above.

d) **Noncompliance** with the provisions of this permit shall be reported to the Department as prescribed in the attached General Conditions (Part II)

e) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

f) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring shall be included in the calculations and recording of the data on the Discharge Monitoring Reports.

g) Calculation for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

h) Unless otherwise specified, all information recorded on the Discharge Monitoring Report shall be based upon measurements and sampling carried out during the most recently completed reporting period.

i) Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section five hundred two of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be sent to the Environmental Laboratory Accreditation Program, New York State Health Department Center for Laboratories and Research, Division of Environmental Sciences , The Nelson A. Rockefeller Empire State Plaza, Albany, New York 12201.

FACILITY INFORMATION

NEWSDAY
LOCATION : HUNTINGTON (T)
COUNTY : SUFFOLK
DEC NO : 1-4726-00157-00001-
SPDES NO : NY 013 6751

Dear SPDES Permittee:

Enclosed please find your renewed State Pollutant Discharge Elimination System (SPDES) permit. This renewal permit together with the previously issued valid permit constitute authorization to discharge wastewater in accordance with all terms, conditions and limitations specified in your previously issued permit, including any valid modifications.

The instructions and other information that you received with the NOTICE/RENEWAL APPLICATION/PERMIT package fully described procedures for renewal and modification of your SPDES permit under the Environmental Benefit Permit Strategy (EBPS). As a reminder, SPDES permits are renewed at a central location in Albany in order to make the process more efficient. All other concerns with your permit such as applications for permit modifications, permit transfers to a new owner, name changes, and other questions should be directed to the Regional Permit Administrator at the following address:

John Pavacic
NYSDEC REGION 1
Bldg 40 SUNY @ Stony Brook
Stony Brook, NY 11790-2356
(516) 444-0355

If you have already filed an application for modification of your permit, it will be processed separately through our regional office. If you have questions concerning this permit renewal, please contact Erin L. Burns at (518) 402-9170.

Sincerely,

Barbara B. Rinaldi

NOTICE / RENEWAL APPLICATION / PERMIT

Please read **ALL** instructions on the back before completing this application form. Please **TYPE** or **PRINT** clearly in ink.

PART 1 - NOTICE 12/18/2000

Permittee Contact Name, Title, Address

NEWSDAY INC
STEPHEN CLUFF
235 PINELAWN RD.
MELVILLE NY 11747

Facility and SPDES Permit Information

Name: NEWSDAY INC
Ind. Code: 2711 County: SUFFOLK
DEC No.: 1-4726-00157/00001
SPDES No.: NY 013 6751
Expiration Date: 10/15/2001
Application Due By: 04/18/2001

Are these name(s) & address(es) correct? if not, please write corrections above.

The State Pollutant Discharge Elimination System Permit for the facility referenced above expires on the date indicated. You are required by law to file a complete renewal application **at least 180 days prior to expiration of your current permit. Note the "Application Due By" date above.**

CAUTION: This short application form and attached questionnaire are the only forms acceptable for permit renewal. Sign Part 2 below and mail only this form and the completed questionnaire using the enclosed envelope. *Effective April 1, 1994 the Department no longer assesses SPDES application fees.*

If there are changes to your discharge, or to operations affecting the discharge, then in addition to this renewal application, you must also submit a separate permit modification application to the Regional Permit Administrator for the DEC region in which the facility is located, as required by your current permit. See the reverse side of this page for instructions on filing a modification request.

PART 2 - RENEWAL APPLICATION

CERTIFICATION: I hereby affirm that under penalty of perjury that the information provided on this form and all attachments submitted herewith is true to the best of my knowledge and belief. False statements made herein are punishable as a Class A misdemeanor pursuant to section 210.45 of the Penal Law.

SPDES RENEWAL APPLICATION
QUESTIONNAIRE

THIS PAGE MUST BE COMPLETED AND RETURNED WITH YOUR COMPLETED APPLICATION

Please **TYPE** or **PRINT** neatly using adequate pressure to make ALL copies legible. Keep the GOLD copy for your records.

1. Has the SPDES permit for your facility been modified in the past 5 years ☒ YES ☐ NO

2. Dischargers who use, manufacture, store, handle or discharge toxic or hazardous pollutants are subject to Industrial Best Management Practices (BMP) plan requirements for toxic or hazardous substances. A BMP plan prevents or minimizes the potential for release of pollutants to receiving waters from such ancillary industrial activities, including material storage areas; plant site runoff; in-plant transfer; process and material storage areas; loading and unloading operations, and sludge and waste disposal areas.

   Does your facility conduct ancillary activities as described above, which are not covered by BMP requirements in your current permit? ☐ YES ☒ NO

Please indicate which of the following best describes the situation at your facility:

☐ None of the concerns on the "Self Evaluation List" seem to apply to my facility at this time and I will not be applying for a modification of the SPDES permit in the foreseeable future.

☒ Yes, some of the items on the "Self Evaluation List" have led me to believe my permit needs to be modified. I already have a complete modification application pending with the Department.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the SPDES permit for this facility may need to be Modified. I have requested the appropriate forms by phone OR I have completed and attached the "Request For SPDES Application Forms" (included in this renewal package) to allow me to submit a permittee-initiated Modification application.

☐ The items on the "Self Evaluation List" have left me unable to conclude whether my permit needs to be modified at this time. I am reporting the following general concerns about my permit:

DISCHARGES WITHIN SOLE SOURCE AQUIFERS

Facility Name:	SPDES Number:
NEWSDAY, INC.	NY 0136751

Your facility may be located in a sole source aquifer area, which is an area designated by Federal or State statutes. Maps showing the designated sole source areas can be found on the internet at: www.epa.gov/region02/water/ssamap.htm.

Chapter 663 of the Laws of 1983 added Section 17-0828 to the Environmental Conservation Law which requires that any person seeking a SPDES permit or a renewal hereunder, within an area designated pursuant to any federal or state statute as a sole source aquifer, shall include as a part of the required information, the name and address of all public water purveyors with a service area or portion thereof located within a three mile radius of the applicant's facility.

For purposes of this section "public water purveyor" shall mean any person, partnership, public or private corporation, municipality, or public authority which sells water derived from a sole source aquifer to at least five service connections or at least twenty-five individuals.

MEMORANDUM

TO: John Pavacic, Regional Permit Administrator, Region 1

FROM: Erin Burns, Agency Program Aide Erin

SUBJ: **SPDES Renewal Application**
Permittee: Newsday Inc.
Facility: Newsday
SPDES #: NY-013-6751
DEC #: 1-4726-00157/00001

DATE: August 14, 2001

On July 3, 2001, I received an EBPS SPDES renewal application for the above-referenced facility. It appears from the comments on their questionnaire that they might be considering a modification to their existing SPDES permit.

Attached is a copy of the renewal application and questionnaire for your review. I will continue processing the renewal of this permit.

Attach.

PERMIT LIMITS, LEVELS AND MONITORING DEFINITIONS

C:\FacilityFiles\Newsday\0136751P.BB.wpd

OUTFALL	WASTEWATER TYPE	RECEIVING WATER	EFFECTIVE	EXPIRING
	This cell describes the type of wastewater authorized for discharge. Examples include process wastewater, storm water, non-contact cooling water.	This cell lists classified waters of the state to which the listed outfall discharges.	The date this page starts in effect.	The date this page is no longer in effect

PARAMETER	MINIMUM	MAXIMUM	UNITS	SAMPLE FREQ.	SAMPLE TYPE
	The minimum level that must be maintained at all times.	The maximum level that may not be exceeded at any time.			

PARAMETER	COMPLIANCE LIMIT	ACTION LEVEL	UNITS	SAMPLE FREQUENCY	SAMPLE TYPE
	Daily Max. and Daily Avg. are defined below. All determinations of compliance with substance specific discharge limits are made by comparing monitoring results to the compliance level.	Type I or Type II Action Levels are monitoring requirements, as defined below, that trigger additional monitoring and permit review when exceeded.	This can include units of flow, pH, Temperature, mass or concentration. Examples include SU, °F, µg/l, lbs/d, etc.	Examples include Daily, 3/week, weekly, 2/month, monthly, quarterly, 2/yr and yearly.	Examples include grab, 24 hour composite and 3 grab samples collected over a 6 hour period.

DAILY DISCHARGE.: The discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for the purposes of sampling. For pollutants expressed in units of mass, the 'daily discharge' is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the 'daily discharge' is calculated as the average measurement of the pollutant over the day.

DAILY MAX.: The highest allowable daily discharge.

DAILY AVG.: The highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

ACTION LEVELS: Routine Action Level monitoring results, if not provided for on the Discharge Monitoring Report (DMR) form, shall be appended to the DMR for the period during which the sampling was conducted. If the additional monitoring requirement is triggered as noted below, the permittee shall undertake a short-term, high-intensity monitoring program for the parameter(s). Samples identical to those required for routine monitoring purposes shall be taken on each of at least three consecutive operating and discharging days and analyzed. Results shall be expressed in terms of both concentration and mass, and shall be submitted no later than the end of the third month following the month when the additional monitoring requirement was triggered. Results may be appended to the DMR or transmitted under separate cover to the same address. If levels higher than the Action Levels are confirmed, the permit may be reopened by the Department for consideration of revised Action Levels or effluent limits. The permittee is not authorized to discharge any of the listed parameters at levels which may cause or contribute to a violation of water quality standards.

TYPE I : The additional monitoring requirement is triggered upon receipt by the permittee of any monitoring results in excess of the stated Action Level.

TYPE II: The additional monitoring requirement is triggered upon receipt by the permittee of any monitoring results that show the stated action level exceeded for four of six consecutive samples, or for two of six consecutive samples by 20 % or more, or for any one sample by 50 % or more

No monitoring required.				

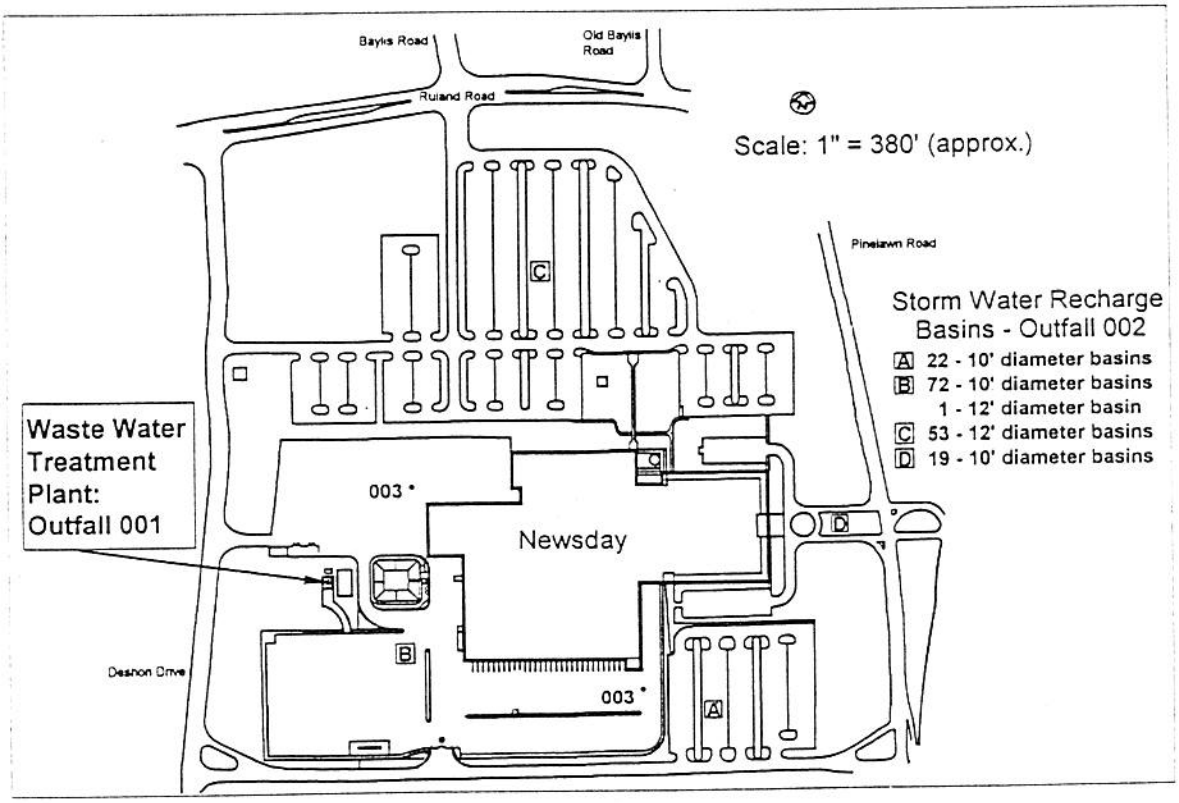
Notes:



1. BMP Plan: The completed Best Management Practices (BMP) plan submitted to this Department on August 29, 1997 shall be reviewed by the permittee on an annual basis. The BMP Plan shall be modified whenever changes at the facility materially increase the potential for significant releases of toxic or hazardous pollutants or where actual releases indicate that the plan is inadequate.

C:\FacilityFiles\Newsday\0136751P.BB.wpd

MONITORING LOCATIONS

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit, at the location(s) specified below:

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

a) The permittee shall also refer to the General Conditions (Part II) of this permit for additional information concerning monitoring and reporting requirements and conditions.

b) The monitoring information required by this permit shall be summarized, signed and retained for a period of three years from the date of the sampling for subsequent inspection by the Department or its designated agent. **Also, monitoring information required by this permit shall be summarized and reported by submitting;**

[X] (if box is checked) completed and signed Discharge Monitoring Report (DMR) forms for each 1 month reporting period to the locations specified below. Blank forms are available at the Department's Albany office listed below. The first reporting period begins on the effective date of this permit and the reports will be due no later than the 28th day of the month following the end of each reporting period.

[ ] (if box is checked) an annual report to the Regional Water Engineer at the address specified below. The annual report is due by February 1 and must summarize information for January to December of the previous year in a format acceptable to the Department.

[ ] (if box is checked) a monthly "Wastewater Facility Operation Report..." (form 92-15-7) to the [ ] Regional Water Engineer and/or [ ] County Health Department or Environmental Control Agency specified below.

Send the **original** (top sheet) of each DMR page to:

Department of Environmental Conservation
Division of Water, Bureau of Watershed Compliance Programs
50 Wolf Road
Albany, New York 12233-3506

Phone: (518) 457-8954

Send the **second copy** (third sheet) of each DMR page to:

Suffolk County Department of Health Services
15 Horseblock Place
Farmingville, New York 11738
Attn: Mr.A.Santino, P.E.

Send the **first copy** (second sheet) of each DMR page to:

Department of Environmental Conservation
Regional Water Engineer
Building 40 - SUNY @ Stony Brook
Stony Brook, NY 11790-2356

NOTE: Include a copy of the laboratory analysis with the NYSDEC - Region 1 and SCDHS copies.

c) Noncompliance with the provisions of this permit shall be reported to the Department as prescribed in the attached General Conditions (Part II).

d) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

e) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring shall be included in the calculations and recording of the data on the Discharge Monitoring Reports.

f) Calculation for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

g) Unless otherwise specified, all information recorded on the Discharge Monitoring Report shall be based upon measurements and sampling carried out during the most recently completed reporting period.

h) Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section five hundred two of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be sent to the Environmental Laboratory Accreditation Program, New York State Health Department Center for Laboratories and Research, Division of Environmental Sciences , The Nelson A. Rockefeller Empire State Plaza, Albany, New York 12201.

Re: NYSDEC Permit # 1-4726-00157/00001
SPDES Facility # NY-0136751

Dear Permittee:

The Department has reviewed your request to modify this permit. A determination has been made to modify your permit as requested. Please conform your copy of the permit by replacing the appropriate page(s) with the enclosed.

Please direct any inquiries you may have to this office to my attention at the number listed above.

Sincerely,

Roger Evans

PERMIT LIMITS, LEVELS AND MONITORING DEFINITIONS

H:\My Files\Elliott\Bellport\Brookhaven\Permit\SanMod05.wpd

OUTFALL	WASTEWATER TYPE	RECEIVING WATER	EFFECTIVE	EXPIRING
	This cell describes the type of wastewater authorized for discharge. Examples include process wastewater, storm water, non-contact cooling water.	This cell lists classified waters of the state to which the listed outfall discharges.	The date this page starts in effect.	The date this page is no longer in effect

PARAMETER	MINIMUM	MAXIMUM	UNITS	SAMPLE FREQ.	SAMPLE TYPE
	The minimum level that must be maintained at all times.	The maximum level that may not be exceeded at any time.			

PARAMETER	COMPLIANCE LIMIT	ACTION LEVEL	UNITS	SAMPLE FREQUENCY	SAMPLE TYPE
	Daily Max. and Daily Avg. are defined below. All determinations of compliance with substance specific discharge limits are made by comparing monitoring results to the compliance level.	Type I or Type II Action Levels are monitoring requirements, as defined below, that trigger additional monitoring and permit review when exceeded.	This can include units of flow, pH, Temperature, mass or concentration. Examples include SU, °F, µg/l, lbs/d, etc.	Examples include Daily, 3/week, weekly, 2/month, monthly, quarterly, 2/yr and yearly.	Examples include grab, 24 hour composite and 3 grab samples collected over a 6 hour period.

DAILY DISCHARGE.: The discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for the purposes of sampling. For pollutants expressed in units of mass, the 'daily discharge' is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the 'daily discharge' is calculated as the average measurement of the pollutant over the day.

DAILY MAX.: The highest allowable daily discharge.

DAILY AVG.: The highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

ACTION LEVELS: Routine Action Level monitoring results, if not provided for on the Discharge Monitoring Report (DMR) form, shall be appended to the DMR for the period during which the sampling was conducted. If the additional monitoring requirement is triggered as noted below, the permittee shall undertake a short-term, high-intensity monitoring program for the parameter(s). Samples identical to those required for routine monitoring purposes shall be taken on each of at least three consecutive operating and discharging days and analyzed. Results shall be expressed in terms of both concentration and mass, and shall be submitted no later than the end of the third month following the month when the additional monitoring requirement was triggered. Results may be appended to the DMR or transmitted under separate cover to the same address. If levels higher than the Action Levels are confirmed, the permit may be reopened by the Department for consideration of revised Action Levels or effluent limits. The permittee is not authorized to discharge any of the listed parameters at levels which may cause or contribute to a violation of water quality standards.

TYPE I : The additional monitoring requirement is triggered upon receipt by the permittee of any monitoring results in excess of the stated Action Level.

TYPE II: The additional monitoring requirement is triggered upon receipt by the permittee of any monitoring results that show the stated action level exceeded for four of six consecutive samples, or for two of six consecutive samples by 20 % or more, or for any one sample by 50 % or more

No monitoring required.				

Notes:

1. BMP Plan: The completed Best Management Practices (BMP) plan submitted to this Department on August 29, 1997 shall be reviewed by the permittee on an annual basis. The BMP Plan shall be modified whenever changes at the facility materially increase the potential for significant releases of toxic or hazardous pollutants or where actual releases indicate that the plan is inadequate
2. Outfalls 004 & 005 Discharge via Septic Tanks and Leaching Pools.

MONITORING LOCATIONS

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit, at the location(s) specified below:

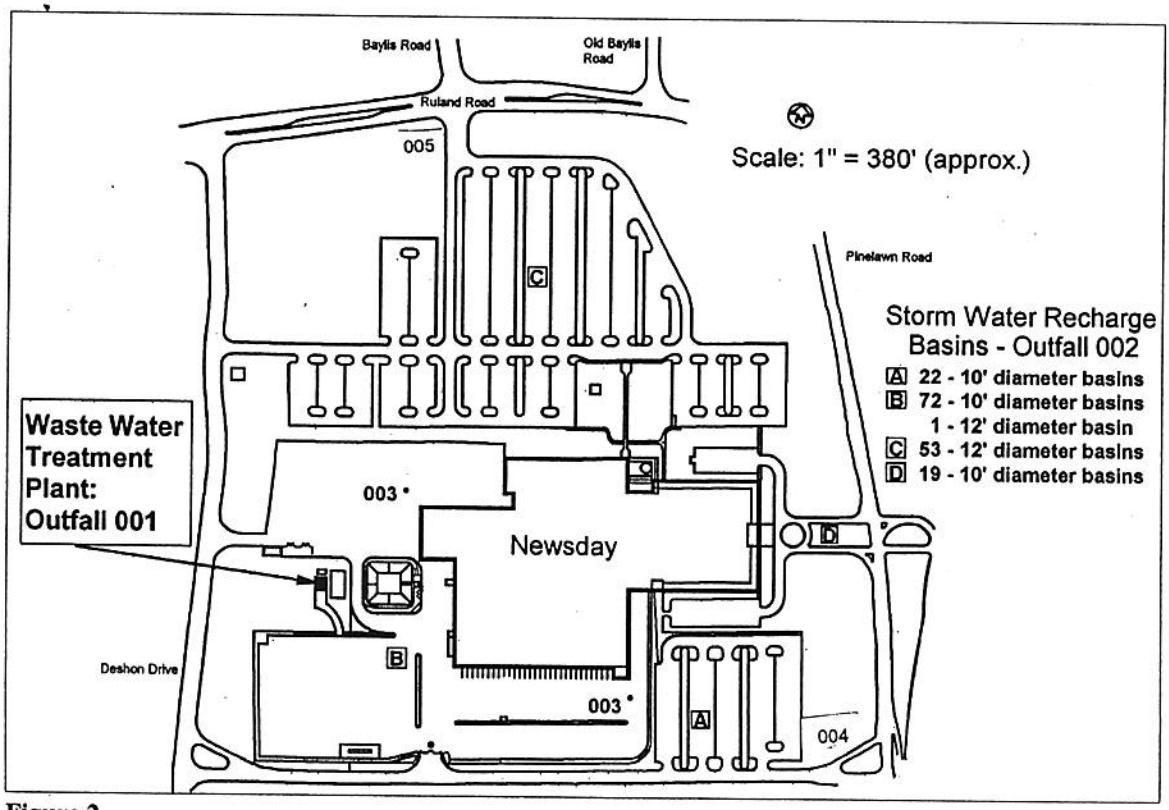

Figure 2

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

a) The permittee shall also refer to 6NYCRR Part 750-1.2(a) & 750-2 for additional information concerning monitoring and reporting requirements and conditions.

b) The monitoring information required by this permit shall be summarized, signed and retained for a period of three years from the date of the sampling for subsequent inspection by the Department or its designated agent. **Also, monitoring information required by this permit shall be summarized and reported by submitting;**

☒ (if box is checked) completed and signed Discharge Monitoring Report (DMR) forms for each 1 month reporting period to the locations specified below. Blank forms are available at the Department's Albany office listed below. The first reporting period begins on the effective date of this permit and the reports will be due no later than the 28th day of the month following the end of each reporting period.

☐ (if box is checked) an annual report to the Regional Water Manager at the address specified below. The annual report is due by February 1 and must summarize information for January to December of the previous year in a format acceptable to the Department.

☐ (if box is checked) a monthly "Wastewater Facility Operation Report..." (form 92-15-7) to the ☐ Regional Water Manager and/or ☐ County Health Department or Environmental Control Agency specified below.

Send the **original** (top sheet) of each DMR page to:

Department of Environmental Conservation
Division of Water, Bureau of Watershed Compliance Programs
625 Broadway
Albany, New York 12233-3506

Phone: (518) 402-8177

Send the **second copy** (third sheet) of each DMR page to:

Suffolk County Department of Health Services
15 Horseblock Place
Farmingville, New York 11738
Attn: Mr. Alex Santino P.E.

Send the **first copy** (second sheet) of each DMR page to:

Department of Environmental Conservation
Regional Water Manager
Building 40 - SUNY @ Stony Brook
Stony Brook, NY 11790-2356

NOTE: Include a copy of the laboratory analysis with the NYSDEC - Region 1 and SCDHS copies.

c) Noncompliance with the provisions of this permit shall be reported to the Department as prescribed in 6NYCRR Part 750-1.2(a) & 750-2.

d) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

e) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring shall be included in the calculations and recording of the data on the Discharge Monitoring Reports.

f) Calculation for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

g) Unless otherwise specified, all information recorded on the Discharge Monitoring Report shall be based upon measurements and sampling carried out during the most recently completed reporting period.

h) Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section five hundred two of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be sent to the Environmental Laboratory Accreditation Program, New York State Health Department Center for Laboratories and Research, Division of Environmental Sciences, The Nelson A. Rockefeller Empire State Plaza, Albany, New York 12201.

FACILITY INFORMATION

NEWSDAY, INC
JOSEPH MARINO MGR
235 PINELAWN RD
MELVILLE NY 11747-4250

NAME: NEWSDAY INC
LOCATION: (T) HUNTINGTON
COUNTY: SUFFOLK
SPDES NO: NY 013 6751
DEC ID NO. 1-4726-00157-00001

Dear SPDES Permittee:

Enclosed please find a validated NOTICE/RENEWAL APPLICATION/PERMIT form renewing your State Pollutant Discharge Elimination System (SPDES) permit for the referenced facility. This validated form, together with the previously issued permit (see issuance date of this permit in Part 3 of the NOTICE/RENEWAL APPLICATION/PERMIT form), and any subsequent permit modifications constitute authorization to discharge wastewater in accordance with all terms, conditions and limitations specified therein.

The instructions and other information that you received with the NOTICE/RENEWAL APPLICATION/PERMIT package fully described procedures for renewal and modification of your SPDES permit under the Environmental Benefit Permit Strategy (EBPS). As a reminder, SPDES permits are renewed at a central location in Albany in order to make the process more efficient. All other concerns with your permit such as applications for permit modifications, permit transfers to a new owner, name changes, and other questions should be directed to the Regional Permit Administrator at the following address:

John Pavacic
NYSDEC REGION 1
Building 40, Room 121
SUNY at Stony Brook
Stony Brook, NY 11790-2356
(631) 444-0365

If you have already filed an application for modification of your permit, it will be processed separately through our regional office. If you have questions concerning this permit renewal, please contact Lynn Kaplan at (518) 402-9165.

Sincerely,

William R. Adriance

Chief Permit Administrator

Are these name(s) & address(es) correct? if not, please write corrections above.

The State Pollutant Discharge Elimination System Permit for the facility referenced above expires on the date indicated. You are required by law to file a complete renewal application **at least 180 days prior to expiration of your current permit Note the "Application Due By" date above**

CAUTION: This short application form and attached questionnaire are the only forms acceptable for permit renewal. Sign Part 2 below and mail only this form and the completed questionnaire using the enclosed envelope. *Effective April 1, 1994 the Department no longer assesses SPDES application fees.*

If there are changes to your discharge, or to operations affecting the discharge, then in addition to this renewal application, you must also submit a separate permit modification application to the Regional Permit Administrator for the DEC region in which the facility is located, as required by your current permit. See the reverse side of this page for instructions on filing a modification request.

PART 2 - RENEWAL APPLICATION

CERTIFICATION: *I hereby affirm that under penalty of perjury that the information provided on this form and all attachments submitted herewith is true to the best of my knowledge and belief. False statements made herein are punishable as a Class A misdemeanor pursuant to section 210.45 of the Penal Law.*

SPDES RENEWAL APPLICATION
QUESTIONNAIRE

THIS PAGE MUST BE COMPLETED AND RETURNED WITH YOUR COMPLETED APPLICATION

Please **TYPE** or **PRINT** neatly using adequate pressure to make ALL copies legible. Keep the GOLD copy for your records.

1 Has the SPDES permit for your facility been modified in the past 5 years ☒ YES ☐ NO

2. Dischargers who use, manufacture, store, handle or discharge toxic or hazardous pollutants are subject to Industrial Best Management Practices (BMP) plan requirements for toxic or hazardous substances. A BMP plan prevents or minimizes the potential for release of pollutants to receiving waters from such ancillary industrial activities, including material storage areas; plant site runoff; in-plant transfer; process and material storage areas; loading and unloading operations, and sludge and waste disposal areas.

Does your facility conduct ancillary activities as described above, which are not covered by BMP requirements in your current permit? ☐ YES ☒ NO

Please indicate which of the following best describes the situation at your facility:

☐ None of the concerns on the "Self Evaluation List" seem to apply to my facility at this time and I will not be applying for a modification of the SPDES permit in the foreseeable future.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe my permit needs to be modified. I already have a complete modification application pending with the Department.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the SPDES permit for this facility may need to be Modified. I have requested the appropriate forms by phone OR I have completed and attached the "Request For SPDES Application Forms" (included in this renewal package) to allow me to submit a permittee-initiated Modification application.

☒ The items on the "Self Evaluation List" have left me unable to conclude whether my permit needs to be modified at this time. I am reporting the following general concerns about my permit:

- On site waste water treatment plant is undergoing modification. The new design is complete and has been approved by Suffolk County Department of Health Services. The local NYSDEC Region 1 Engineer is aware of the new design. Upgrade is scheduled for completion in 2007.

- Industrial photo chemistry process will be eliminated within the next few years. The Region 1 Engineer will be notified at that time.

- SPDES permit modified by DEC Department initiated modification (amendment of 6NYCRR 750-2) dated 23February, 2004.

No monitoring required.				

Notes:

1. BMP Plan: The completed Best Management Practices (BMP) plan submitted to this Department on August 29, 1997 shall be reviewed by the permittee on an annual basis. The BMP Plan shall be modified whenever changes at the facility materially increase the potential for significant releases of toxic or hazardous pollutants or where actual releases indicate that the plan is inadequate
2. Outfalls 004 & 005 Discharge via Septic Tanks and Leaching Pools.

MONITORING LOCATIONS

The permittee shall take samples and measurements, to comply with the monitoring requirements specified in this permit, at the location(s) specified below:

RECORDING, REPORTING AND ADDITIONAL MONITORING REQUIREMENTS

a) The permittee shall also refer to 6NYCRR Part 750-1.2(a) & 750-2 for additional information concerning monitoring and reporting requirements and conditions.

b) The monitoring information required by this permit shall be summarized, signed and retained for a period of three years from the date of the sampling for subsequent inspection by the Department or its designated agent. **Also, monitoring information required by this permit shall be summarized and reported by submitting;**

☒ (if box is checked) completed and signed Discharge Monitoring Report (DMR) forms for each 1 month reporting period to the locations specified below. Blank forms are available at the Department's Albany office listed below. The first reporting period begins on the effective date of this permit and the reports will be due no later than the 28th day of the month following the end of each reporting period.

☐ (if box is checked) an annual report to the Regional Water Manager at the address specified below. The annual report is due by February 1 and must summarize information for January to December of the previous year in a format acceptable to the Department.

☐ (if box is checked) a monthly "Wastewater Facility Operation Report..." (form 92-15-7) to the ☐ Regional Water Manager and/or ☐ County Health Department or Environmental Control Agency specified below.

Send the **original** (top sheet) of each DMR page to:

Department of Environmental Conservation
Division of Water, Bureau of Watershed Compliance Programs
625 Broadway
Albany, New York 12233-3506

Phone: (518) 402-8177

Send the **second copy** (third sheet) of each DMR page to:

Suffolk County Department of Health Services
15 Horseblock Place
Farmingville, New York 11738
Attn: Mr. James Meyers P.E.

Send the **first copy** (second sheet) of each DMR page to:

Department of Environmental Conservation
Regional Water Manager
50 Circle Road SUNY @ Stony Brook
Stony Brook, NY 11790-3409

c) Noncompliance with the provisions of this permit shall be reported to the Department as prescribed in 6NYCRR Part 750-1.2(a) & 750-2.

d) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

e) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR Part 136 or as specified in this permit, the results of this monitoring shall be included in the calculations and recording of the data on the Discharge Monitoring Reports.

f) Calculation for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this permit.

g) Unless otherwise specified, all information recorded on the Discharge Monitoring Report shall be based upon measurements and sampling carried out during the most recently completed reporting period.

h) Any laboratory test or sample analysis required by this permit for which the State Commissioner of Health issues certificates of approval pursuant to section five hundred two of the Public Health Law shall be conducted by a laboratory which has been issued a certificate of approval. Inquiries regarding laboratory certification should be sent to the Environmental Laboratory Accreditation Program, New York State Health Department Center for Laboratories and Research, Division of Environmental Sciences , The Nelson A. Rockefeller Empire State Plaza, Albany, New York 12201.

NOTICE / RENEWAL APPLICATION / PERMIT

Please read **ALL** instructions on the back before completing this application form. Please **TYPE** or **PRINT** clearly in ink.

PART 1 - NOTICE

11/15/2010

Permittee Contact Name, Title, Address

NEWSDAY ~~INC.~~ LLC (name change completed 7/15/2008)
JOSEPH MARINO MGR
235 PINELAWN RD.
MELVILLE NY 11747-4250

FEE updated 8/22/11

Facility and SPDES Permit Information

Name: NEWSDAY ~~INC~~ LLC
Ind. Code: 2711 County: SUFFOLK
DEC No.: 1-4726-00157/00001
SPDES No.: NY 013 6751
Expiration Date: 09/30/2011
Application Due By: 04/03/2011

Are these name(s) & address(es) correct? if not, please write corrections above.

The State Pollutant Discharge Elimination System Permit for the facility referenced above expires on the date indicated. You are required by law to file a complete renewal application **at least 180 days prior to expiration of your current permit**. **Note the "Application Due By" date above.**

CAUTION: This short application form and attached questionnaire are the only forms acceptable for permit renewal. Sign Part 2 below and mail only this form and the completed questionnaire using the enclosed envelope. *Effective April 1, 1994 the Department no longer assesses SPDES application fees.*

If there are changes to your discharge, or to operations affecting the discharge, then in addition to this renewal application, you must also submit a separate permit modification application to the Regional Permit Administrator for the DEC region in which the facility is located, as required by your current permit. See the reverse side of this page for instructions on filing a modification request.

PART 2 - RENEWAL APPLICATION

CERTIFICATION: I hereby affirm that under penalty of perjury that the information provided on this form and all attachments submitted herewith is true to the best of my knowledge and belief. False statements made herein are punishable as a Class A misdemeanor pursuant to section 210.45 of the Penal Law.

SPDES Number: NY 013 6751

SPDES RENEWAL APPLICATION
QUESTIONNAIRE

THIS PAGE MUST BE COMPLETED AND RETURNED WITH YOUR COMPLETED APPLICATION

Please **TYPE** or **PRINT** neatly using adequate pressure to make ALL copies legible. Keep a copy for your records.

1. Has the SPDES permit for your facility been modified in the past 5 years ☒ YES ☐ NO

2. Dischargers who use, manufacture, store, handle or discharge toxic or hazardous pollutants are subject to Industrial Best Management Practices (BMP) plan requirements for toxic or hazardous substances. A BMP plan prevents or minimizes the potential for release of pollutants to receiving waters from such ancillary industrial activities, including material storage areas; plant site runoff; in-plant transfer; process and material storage areas; loading and unloading operations, and sludge and waste disposal areas.

   Does your facility conduct ancillary activities as described above, which are not covered by BMP requirements in your current permit? ☐ YES ☒ NO

Please indicate which of the following best describes the situation at your facility:

☐ None of the concerns on the "Self Evaluation List" seem to apply to my facility at this time and I will not be applying for a modification of the SPDES permit in the foreseeable future.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the permit for this facility needs to be modified. I already have a complete modification application pending with the Department.

☐ Yes, some of the items on the "Self Evaluation List" have led me to believe that the SPDES permit for this facility may need to be Modified. I have requested the appropriate forms by phone OR I have completed and attached the "Request For SPDES Application Forms" (included in this renewal package) to allow me to submit a permittee-initiated Modification application. See The "Request For SPDES Application Forms" page for a toll-free 800 number.

☒ The items on the "Self Evaluation List" have left me unable to conclude whether my permit needs to be modified at this time. I am reporting the following general concerns about my permit:

NEWSDAY LLC HAS ELIMINATED MANY CHEMICALS ASSOCIATED WITH PHOTO WET CHEMISTRY DUE TO DIGITAL PRINTING EQUIPMENT. SUBSQUENTLY, THE EFFLUENT FROM THE WASTEWATER TREATMENT PLANT HAS BEEN IN CONSISTENT COMPLIANCE WITH SOME OF THE PERMIT PARAMETERS THAT WERE ASSOCIATED WITH THE OLDER PHOTO WET CHEMISTRY AND OTHER MISCELLANEOUS CHEMICALS THROUGHOUT THE FACILITY SUCH AS PHENOL, SILVER, TOLUENE AND CYANIDE. WE REQUEST THAT THESE BE REMOVED FROM THE PERMIT.

State Pollutant Discharge Elimination System (SPDES)

Application Supplement B
DISCHARGES WITHIN SOLE SOURCE AQUIFERS

Facility Name: Newsday LLC	SPDES Number: NY 0136751

Your facility may be located in a sole source aquifer area, which is an area designated by Federal or State statutes. Maps showing the designated sole source areas can be found on the internet at: www.epa.gov/Region02/water/aquifer/index.html.

Chapter 663 of the Laws of 1983 added Section 17-0828 to the Environmental Conservation Law which requires that any person seeking a SPDES permit or a renewal hereunder, within an area designated pursuant to any federal or state statute as a sole source aquifer, shall include as a part of the required information, the name and address of all public water purveyors with a service area or portion thereof located within a three mile radius of the applicant's facility.

For purposes of this section "public water purveyor" shall mean any person, partnership, public or private corporation, municipality, or public authority which sells water derived from a sole source aquifer to at least five service connections or at least twenty-five individuals.

---

1. Water Purveyors within a three mile radius of your facility:

Report of Noncompliance Event

To: DEC Water Contact **Robert Schneck, RWE** DEC Region: **1**

Report Type ___ 5 Day **X** Permit Violation ___ Order Violation ___ Anticipated Noncompliance ___ Bypass/Overflow ___ Other ___

SECTION 2

SPDES #: **0136751** Facility: **Newsday**

Date of noncompliance: **December 2007** Location (**Outfall**, Treatment Unit, or Pump Station): ___

Description of noncompliance(s) and cause(s): **PH (6.1)**

Due to a drop in alkalinity due to the nitrification process.

Has event ceased? (**Yes**) (No) If so, when? **unknown** Was event due to plant upset? (Yes) (**No**) SPDES limits violated? (**Yes**) (No)

Start date, time of event: / / , : (AM) (PM) End date, time of event: / / , : (AM) (PM)

Date, time oral notification made to DEC? / / , : (AM) (PM) DEC Official contacted: ___

Immediate corrective actions:

Add Soda Ash to the process to raise the alkalinity as well as raise the pH back into compliance.

Preventive (long term) corrective actions:

To continue monitoring the process and supplement with an alkalinity source, (Soda Ash).

SECTION 3

Complete this section if event was a bypass:

Bypass amount: ___ Was prior DEC approval received for this event? (Yes) (No)

DEC Official contacted: ___ Date of DEC approval: / /

Describe event in "Description of noncompliance and cause" area in Section 2. Detail the start and end dates and times in Section 2 also.

Report of Noncompliance Event

To: DEC Water Contact **Robert Schneck, RWE** DEC Region: **1**

Report Type ___ 5 Day **X** Permit Violation ___ Order Violation ___ Anticipated Noncompliance ___ Bypass/Overflow ___ Other ___

SECTION 2

SPDES #: **0136751** Facility: **Newsday**

Date of noncompliance: **2/2006** Location (**Outfall**, Treatment Unit, or Pump Station): ___

Description of noncompliance(s) and cause(s): **Nitrogen (14 mg/l)**

Due to cold temperatures, total nitrogen exceeded the permitted value with a reported value of 14 mg/l. Extensive BOD loading in influent flow stream process was unable to completely oxidize the BOD.

Has event ceased? (**Yes**) (No) If so, when? **unknown** Was event due to plant upset? (Yes) (**No**) SPDES limits violated? (**Yes**) (No)

Start date, time of event: / / , : (AM) (PM) End date, time of event: / / , : (AM) (PM)

Date, time oral notification made to DEC? / / , : (AM) (PM) DEC Official contacted: ___

Immediate corrective actions:

We shall increase recycle flow rate to increase process detention time.

Preventive (long term) corrective actions:

We shall increase Aerotor process detention time for complete nitrification.

SECTION 3

Complete this section if event was a bypass:

Bypass amount: ___ Was prior DEC approval received for this event? (Yes) (No)

DEC Official contacted: ___ Date of DEC approval: / /

Describe event in "Description of noncompliance and cause" area in Section 2. Detail the start and end dates and times in Section 2 also.

Re: March DMR
Nitrogen Exceedance
CE 761C

Dear Mr. Marino:

Cameron Engineering & Associates, LLP has reviewed the operating data for the Newsday Wastewater Treatment Plant and has noted the maximum nitrogen discharge concentration of 38 mg/l in the month of March. In discussions with the plant operations firm, Severn Trent Environmental Services, we are in agreement that a number of factors may have caused this exceedance.

Potential and most likely cause of the nitrogen exceedance is the recent start-up of the pilot BNR system (funded by NYSERDA) located in one of the aeration tanks. Coupled with extremely low wastewater temperatures, the start-up of the innovative technology was severely hampered. STES fed all wastewater for the first few weeks only into the aeration tank having diffused air. The aeration tank with the aerator was filled with raw sewage and put into "idle" status while awaiting growth of biomass. Once the biomass began to appear, forward flow was put into the Aerotor tank with the effluent from the tank directed back into the other aeration tank to ensure that no untreated waste left the system.

Under these operating conditions, the detention time in the diffused air aeration tank was reduced significantly and total nitrogen loading to that reactor was greater than the loading to the Aerotor reactor. This imbalance of loading is believed to have impacted the nitrification process. The downstream denitrification process in the deep bed filter was most likely impacted by the low temperatures as well.

At this time, the Aerotor has continued to advance biologically and is showing almost total nitrification. In the coming weeks, the system will be adjusted to determine its denitrification capabilities within the Aerotor reactor.

It would be advisable to attach this letter to the Non-Compliance Report and DMR for March as it would apprise the regulatory agencies of the current situation. We will continue to coordinate the pilot operations with STES and your office. The data being collected will be shared with the Suffolk County Department of Health Services as well.

Should you have any questions or require further information, please do not hesitate to contact our office.

Very truly yours,

Mark Wagner
Associate

Report of Noncompliance Event

To: DEC Water Contact **Robert Schneck, RWE** DEC Region: **1**

Report Type ___ 5 Day **X** Permit Violation ___ Order Violation ___ Anticipated Noncompliance ___ Bypass/Overflow ___ Other

SECTION 2

SPDES #: **NY 0136751** Facility: **Newsday**

Date of noncompliance: **3-31-04** Location (Outfall, Treatment Unit, or Pump Station):

Description of noncompliance(s) and cause(s): **Total nitrogen was exceeded with a reported value of 38 mg/L. Cold weather conditions inhibited the denitrification project. Also a full scale pilot project is being proven. All influent flow is being directed into one aeration basin, thus reducing the detention time by an order of magnitude**

Has event ceased? (Yes) (No) If so, when? ___ Was event due to plant upset? (Yes) (No) SPDES limits violated? (Yes) (No)

Start date, time of event: / / , : (AM) (PM) End date, time of event: / / , : (AM) (PM)

Date, time oral notification made to DEC? / / , : (AM) (PM) DEC Official contacted:

Immediate corrective actions: **The pilot project is now nitrifying almost completely, thus reducing the impact upon the aeration basin.**

Preventive (long term) corrective actions: **The pilot project must be able to completely nitrify for the facility to meet total nitrogen. With warmer temperatures arriving, the nitrification process will be increased to effluent standards**

SECTION 3

Complete this section if event was a bypass:

Bypass amount: ___ Was prior DEC approval received for this event? (Yes) (No)

DEC Official contacted: ___ Date of DEC approval: / /

Describe event in "Description of noncompliance and cause" area in Section 2. Detail the start and end dates and times in Section 2 also.

Contact Person(s): STEPHEN CLUFF

FINDINGS: OVERFILL OF 1X25,000 TANK DUE TO HUMAN ERROR CAUSING PRODUCT TO ENTER ON SITE DRAINAGE.

WORK TO BE PERFORMED: REMOVE ALL FREE PRODUCT; REMOVE CONTAMINATED SEDIMENT FROM DRAINS LB-31; SD-01; TWLB-116, TWLB-117 & CB 114 - POST EXCAVATION SOIL SAMPLING MUST BE COMPLETED FOR ALL DRAINS & TWLB #115. UTILIZING 8021 & 8270 TOTALS. PROVIDE DISPOSAL RECEIPTS FOR ALL.

This letter serves as notice that the Department is directing you or your company to proceed with a cleanup of the above-referenced site within the time frame indicated. You may either hire a contractor or do the work yourself. However, you must use a contractor with a 364 Transporter Permit to transport the contaminated material to a proper disposal facility.

If you do not proceed with the required cleanup within the time frame noted above, this office will proceed with the cleanup of the site, and the New York State Department of Law will seek reimbursement along with an assessment of penalties from you in accordance with Article 12 of the New York State Navigation Law.

Stephen Cluff — Responsible Party/Agent — 10/24/00 — Date — (Signature acknowledges receipt only)

Date	Time	Inspection Narrative
10/25/00	14:16	- ACAMPORA ON SITE:
		- MET W/ ABOVE REFERENCED REPS.
		- CLEAN-UP STILL IN PROGRESS.
		- DRAIN CB-114 HAS BEEN CLEANED TO EXTENT PRACTICAL.
		SOIL REMOVED AT LEAST FIVE FEET BELOW BOTTOM
		PRECAST RING. TOTAL DEPTH APPROX 30' B.L.S.
		- ANY ADD'L SOIL REMOVAL WITHIN TIME MAY
		CAUSE RINGS TO COLLAPSE.
		- BOTTOM SOIL SAMPLE IS REQ'D.
		- DEPLOYED BARS IN TWLB 117
		- CREWS TO BEGIN ON LB-31
		- ADVISED ITEM AGAIN THAT BOTTOM SAMPLES WILL
		BE REQ'D. FAST TURNAROUND DUE TO FORCASTED
		RAIN EVENT THIS WEEKEND.
		- SURFACE SPILLAGE CLEANED UP STAIN REMAINS IN
		ASPHALT.
		- CAUSE OF INCIDENT: ADD'L INFO.:
		BOILER WAS DRAWING PRODUCT FROM SOUTH TANK BUT
		DUE TO HUMAN ERROR, PRODUCT WAS DIRECTED THRU
		NORTH TANK RETURN LINE, AS RESULT NORTH TANK
		WAS OVERFILLED.
		- ALSO CHECKED MANWAY ACCESS FOR NORTH TANK. →

Analysis

CC:

Urgent For Review X Please Comment Please Reply Please Recycle

Mr. Acampora,

I am faxing you EPA 8021 and 8270 analysis completed for endpoint samples after evacuating contaminated pools CB#114, TWLB#115, TWLB#116 and TWLB#117 "DRY WELL W/PUMP" and LB-31; note, SD-01 is a dry well that was completely evacuated leaving no contaminated soil remaining. I will be out Wednesday, November 1, 2000. Should you need to get a hold of someone to visit the site, please contact Timothy McGarry at 843-2036; otherwise, I will be back on Thursday to go over the analysis and clean-up.

Regards,

Stephen Cluff
Environmental Engineer

COVER SHEET

FAX

To: Mr. Steve Cluff, Environmental Engineer, Newsday
Fax #: (631) 843-3444
Re: Spill #00-08603, Newsday Building, Melville.
Date: 1, November, 2000
Pages: 1 of 1

COMMENTS:

This office is in receipt of the end point sample results for the clean-up at the above referenced site. Based on review of the, this office has the following comments:

1. Was all floating product and water removed from TWLB #117 prior to sampling? If this was the case, was any bottom sediment removed as well?

2. Was the contaminated soil in the man way access for the north tank removed. If so, was the work completed and/or was it sampled?

3. Approximately how much soil was removed for disposal?

If you have any questions or comments regarding this matter, please call me at the number listed below.

Nick Acampora

Urgent For Review X Please Comment Please Reply Please Recycle

Mr. Acampora,

I am faxing you remaining Non-Hazardous Waste Manifests for Spill # 00-08603 and will send a hardcopy of originals once I receive them in the mail. The (4) ESI Manifests should read:

1. Contaminated Soil: 10.76 Tons
2. Oil Soaked Debris: 600 Pounds
3. Oily Water Mixture: 2005 Gallons
4. Oil/Water Mixture 3000 Gallons

Also, I'd like to follow-up with Spill #9906045 which occurred on August 20, 1999. Brian Austin was the DEC representative with whom I was corresponding; I am sending you fax/disposal Fenley & Nicol receipts for this spill as well for your reference.

Regards,

Stephen Cluff
Environmental Engineer

REG 1 - OIL SPILLS

December 4, 2000

Mr. Nick Acampora
New York State DEC
Spills Response Unit
Building 40 SUNY
Stony Brook, New York 11790-2356

Subject: Spill #00-08603 Waste Manifests

Mr. Acampora,

Enclosed are the remaining Non-Hazardous Waste Manifests for clean-up of TWLB #117 and manways for Diesel Fuel Tanks.

Should you need further information, feel free to call me at (631)-843-3631.

Sincerely,

Stephen Cluff
Environmental Engineer

RE: Spill #00-08603, Diesel Fuel Release, Newsday Building, 235 Pinelawn Road, Melville.

Dear Mr. Cluff :

Based upon a review of the file, you have completed the investigation/remediation for the referenced site.

This office has no further requirements for the referenced spill at this time. Should additional environmental problems be discovered at this site, this office will require further action at that time. The spill file has been removed from our active spill list.

If you have any questions please call me at (631) 444-0322.

Sincerely,

Nick Acampora

Environmental Engineer

July 26, 2002

Ms. Karen Gomez
NY State Department of Environmental Conservation
Division of Environmental Remediation, Region 1
Spill Prevention and Response
Stony Brook, New York 11790-2356

Subject: Spill #020-3990 Waste Manifests

Ms. Gomez,

On July 17th, 2002 at approximately 6:00 AM, a hydraulic hose on a Waste Contractor (Jamaica Ash) vehicle let loose under pressure dispensing 15-20 gallons of hydraulic fluid to pavement in Newsday's Truck Parking Lot. The hydraulic fluid was immediately contained posing no threat to groundwater, the nearest storm drain over 100' from the spill. Jamaica Ash immediately cleaned up and discarded the spill contents into (1) 55 gallon drum through the use of absorbent material, deck brooms and a street cleaner by 2:00 PM on the same day as instructed by Dave Remy from the Department of Environmental Conservation. (1) drum of speedy dry/hydraulic fluid was removed for disposal. Enclosed is the Non-Hazardous Waste Manifest.

Should you need further information, feel free to call me at (631)-843-3631.

Sincerely,

Stephen Cluff, P.E.
Environmental Engineer

Stony Brook, NY 12561

Re: Spill Case No. 1203029
Spill Closure Report
235 Pinelawn Road, Melville, NY

Dear Mr. Cirrito:

On behalf of Tribune Company (Tribune), ERM Consulting & Engineering, Inc. (ERM) has prepared this summary letter report to document the investigation, and abandonment of two (2) 25,000-gallon fuel oil underground storage tanks (USTs) located at 235 Pinelawn Road, Melville, NY (the Property).

PROJECT BACKGROUND

On 15 November 2011, tightness testing was performed on adjacent Tank Nos. 6 & 7 located in a loading dock area south of the main building. A site plan showing the tank locations is provided as Figure 1. Both USTs were registered with the New York State Department of Environmental Conservation (NYSDEC) through the Suffolk County Department of Health Services (SCDOHS).

Tank No. 6 tested "tight" while Tank No. 7 failed the tightness test and was immediately pumped out. The NYSDEC was notified and NYSDEC Spill No. 1203029 was assigned. Subsequently, Tank No. 7 was cleaned and 4 soil samples were collected from beneath the tank invert and analyzed for Volatile Organic Compounds (VOCs) and Semi-VOCs (SVOC) on 25 October 2012. The analytical results were provided to the NYSDEC and authorization was given to abandon Tank No. 7 on 14 November 2012 (Appendix A). The sampling locations are identified in Figure 1 and a summary of the analytical results from the 25 October 2012 sampling event are provided as Table 1. A complete analytical data report is provided as Appendix B.

Although Tank No. 6 had tested tight, Tribune elected to preemptively abandon this tank and replace it with an above ground storage tank (AST). On 26 June 2013, an abandonment request for both tanks was submitted to SCDOHS which was subsequently approved by the SCDOHS on 13 September 2013. Copies of the abandonment request and approval letters are provided as Appendix C.

ABANDONMENT ACTIVITIES

Tank No. 6 remained in service for emergency generator fuel storage until early 2014 when it was replaced by an AST. Tank No. 6 was emptied on 7 March 2014 so that it could be abandoned along with Tank No. 7.

On 17 March 2014, ERM and its UST contractor, Metro Environmental Contracting Corporation (Metro) mobilized to the Site to abandon the two tanks. Metro Environmental vacuumed out the residual product and cleaned the interior of Tank No. 6. Three equidistant saw cuts were then made in the concrete above each tank and the soil was excavated to expose the tank tops. The tanks were then cut at each location to expose their interiors, and the vent pipes, fill ports and tank alarms were removed.

On 20 March 2014, Mr. Mike Seaman from SCDOHS inspected the tanks prior to backfilling to confirm that their interiors were clean and ready for abandonment. The SCDOHS was satisfied with the condition of the tanks and authorized the abandonment. The tanks were subsequently abandoned with 296-tons of clean sand. The bills of lading for the sand from 110 Sand Company is provided in Appendix D.

On 21 March 2014, Mr. Seaman (SCDOHS) returned to the Site to observe the backfilled tanks and issued the completed Tank Removal Checklist, which is provided in Appendix E. The open excavations were then backfilled using clean sand installed in compacted lifts, and finished to grade with 6-inches of 4,000 psi-rated concrete. The concrete patches were keyed into the existing pad/reinforced with rebar and steel mesh. The vent line for each tank was cut flush to grade and filled with concrete. The fill ports were directly atop each UST and were removed when the tanks were cut open and accessed. Pictures documenting the tank closure and restoration work are provided in Appendix F.

Waste Disposal

A total of 10 cubic yards of un-impacted concrete and soil from above the tanks was excavated and transported to Con Strux in Lindenhurst, NY, for recycling. Approximately 300 gallons of combined tank sludge and wash water were collected in the vacuum truck and transported to Advanced Waste and Water Technology in Farmingdale, NY. The adsorbant (SpeedyDry) used to clean the residual fuel oil in Tank No. 6 was collected in one (1) 55-gallon drum and transported to Republic Environmental Systems in Hatfield, PA, for disposal. The associated waste manifests are provided in Appendix G.

CONCLUSIONS AND RECOMMENDATIONS

The tank abandonment activities were completed under the supervision of SCDOHS and in accordance with all NYSDEC and SCDOHS regulations. On behalf of Tribune, ERM respectfully requests that NYSDEC Spill Case No. 1203029 be closed as soon as possible.

We look forward to your expeditious approval of this closure request. If you have any additional questions or comments, please do not hesitate to contact me at (631) 756-8900.

Sincerely,

Eugene Gabay
Senior Consultant

Hello Hugh,

As discussed, ERM drilled core holes at 4 locations in the spine of the tank in order to obtain soil samples. The soil samples were collected from the soil just below the tank and analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) via EPA methods 8260 and 8270 by a New York State Department of Health-certified laboratory. The laboratory results are attached for your review. ERM's intention is to abandon the tank in place. Once you have had a chance to review the data could you please call me to discuss? My number is listed at the bottom of this email.

Thanks,
Gene

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	ERM, Inc.	**Job No**	JB20289
Site:	Tribune, Pinelawn Avenue, Melville, NY	**Report Date**	11/12/2012 4:09:42 P

On 10/26/2012, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 3 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB20289 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO **Batch ID:** VO5784

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB20133-2MS, JB20133-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: SO **Batch ID:** OP61052

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB20508-1MS, JB20508-1MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Acenaphthylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike Duplicate Recovery(s) for Acenaphthylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike Recovery(s) for Acenaphthene, Anthracene, Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Naphthalene, Phenanthrene, Pyrene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- JB20289-4: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-3: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-3: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-2: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.
- JB20289-1: Storage temperature exceeded 6 degrees C due to power outage from the tropical cyclone of Oct. 29th and 30th, 2012.

Wet Chemistry By Method SM2540 G-97

Matrix: SO **Batch ID:** GN74854

- The data for SM2540 G-97 meets quality control requirements.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

ACCUTEST LABORATORIES

Subject: Sample Storage – Tropical Storm

Date: November 2, 2012

To: Valued Clients

From: Phillip M. Worby
Director, Corporate Quality Assurance

As a result of the extraordinary damage from the Tropical Storm that hit the East Coast late Monday evening October 29, 2012, Accutest Laboratories Dayton, New Jersey had to temporarily suspend analytical operations until power could be restored.

While the laboratory did not sustain any physical damage, it was left without power as utility companies assessed the overall damage caused by the storm and as they continue restore power throughout the state.

Accutest Laboratories has endeavored to minimize the impact of the storm on lab operations. To that end, extra staff was brought in before the storm to work ahead and secure the building. After the storm, as soon as it was possible to safely bring staff in, external generators were put in place on storage refrigeration units to help maintain sample integrity in accordance with preservation requirements set by either the regulatory program or method specification.

Despite our efforts and planning, a storage temperature excursion above 6 degrees C. has been noted and documented. The affected analyte and/or test method is qualified in accordance with our quality system procedures and is indicated in the report.

To our valued clients, we appreciate your patience and understanding during this difficult period, and hope that your recovery efforts are also moving forward. We stand ready to help you with any and all sample needs as a result of this powerful storm.

*if additional space is needed, attach addendum.

Instructions

For All Requests, submit the following:

1. A site plan showing the location of the tank(s) as well as utilities and other structures that may interfere with removal. A sketch is acceptable with the initial application but a more detailed site plan may be required by the Department.

2. A check, per SCHDS Fee Schedule. $100/tank
3. Return the application to the address listed below. You will be contacted to schedule an appointment

For Abandonment Requests, in addition to the above, provide a submittal that includes the following:

1. For requests based upon Utility Infringement, provide diagram and photographs of the mark outs. Photos must indicate tank location.
2. For requests based upon Building Infringement, provide:
   (a) Burial depth of tank. Measure from grade to top of tank.
   (b) Distance of tank center line to any adjacent structure.
   (c) Diameter of tank.
   (d) Depth below grade of footings supporting the adjacent structure(s)
3. Diagrams and Photographic evidence of any other item(s) that are claimed to prevent removal of any tank.

If you have questions, call 854-2536

Submit all Information to:

Re: **Application for In Place - Permanent Closure of Underground Storage Tank**
Facility Name: Newsday Inc.
File Reference No. 02037
Facility I.D. No. 4-0094

Dear Mr. Gabay:

Your application for in place permanent closure of underground storage tank is under review process and you are required to submit following information:

1. Provide a site plan to indicate the location and depth of any underground structures, such as septic tanks, leaching pools, storm drains, and dry wells, within 50' radius of the tank.
2. You are required to perform site assessment as pre NYS DEC S.P.O.T.S. 14 which pump out, clean and vapor free the Tank #7. You need to take 8 soil samples through the bottom of the Tank #7, 4' and 8' below tank bottom respectively and each sample must pass STARS 8620/8270 analysis in approved laboratory.

If you have any questions, please feel free to contact our office.

Sincerely,

Chris Wong

Re: **Application for In Place - Permanent Closure of Underground Storage Tank**
Facility Name: Newsday Inc.
File Reference No. 02037
Facility I.D. No. 4-0094

Dear Mr. Gabay:

Your application for in place permanent closure of underground storage tank is approved for following tank(s)

Tank #	Volume	Contents	Disposition
6	25,000 Gals.	#2 Fuel Oil	Abandonment
7	25,000 Gals.	#2 Fuel Oil	Abandonment

The Office of Pollution Control must be contacted at (631)854-2523 at least 2 business days prior to commencement of any work to arrange for the required inspections.

Contact the local building department and/or fire safety enforcement office for any additional requirements that may apply to your project.

The Office of Pollution Control reserves the right to revoke this permit as allowable by law.

Special Condition(s): Tanks must be filled with concrete slurry or clean sand.

If you have any questions, please feel free to contact our office.

Sincerely,

Chris Wong

Re: Spill #12-03029, Newsday, 235 Pinelawn Rd., Melville, NY

Dear Ms. DeBoer:

The Department has reviewed the records and data submitted by you regarding the tank test failure at the above referenced site. Based on such review, the Department determined that you have completed all necessary actions, and no further activities are necessary.

Nothing contained herein shall be construed as barring, diminishing, or in any way limiting Department's authority under the Navigation Law or the Environmental Conservation Law, including the authority to require additional remedial work, if necessary.

Should you have any questions concerning this matter, you may call me at (631) 444-0324 or e-mail me at hmcirrit@gw.dec.state.ny.us.

Sincerely,
Hugh Cirrito

Spill Number: 14-02877

Representatives:

Steve Zimmerman - Newsday
Hugh Cirrito - DEC

Date	Time	Narrative
8/5/14	11:26	HC on site: met with Zimmerman. Apparently, solenoid that stops the transfer from the main tank to the day tank did not stop the flow. The day tank overflowed and once the secondary containment filled, the oil went into a drywell located about 20 feet from the day tank. MEG was hired to clean drain and once completed, an end point sample was taken. Zimmerman was verbally told the sample results met standards, however he has not received the report yet. Once he gets the report, he will forward it to my attention. The cleanup appears satisfactory. As long as the sample results meet standards, the file can be closed.   

MILLER ENVIRONMENTAL GROUP INC.

Melville, NY 11747
Attn: Joseph Marino

Re: Emergency Spill Response
Generator: Newsday
Date of Incident: June 17, 2014
Product Involved: Diesel
Location: 235 Pinelawn Rd., Melville, NY 11747
NYSDEC Spill No.: 1402877

Dear Mr. Marino:

On June 17, 2014, Miller Environmental Group, Inc. (MEG) received a phone call from Newsday regarding a diesel spill at the above referenced facility.

MEG immediately dispatched an Operations Supervisor, an Equipment Operator and two (2) Haz-Mat Technicians along with a guzzler truck, rack truck and response truck to the Newsday facility located at 235 Pinelawn Road, Melville, NY.

Apparently the spill originated from a generator fuel tank that had a faulty shut off switch which caused it to overflow into the secondary containment and eventually into an outside below grade storm sewer adjacent to the generator room.

Prior to arrival on site Newsday recovered the standing product from within the secondary containment. The product (approximately 90-gallons) was containerized within NYSDOT approved 55-gallon drums.

MEG entered the storm drain utilizing proper confined space entry procedures and Level C PPE. Impacted soil was recovered from the storm drain via a guzzler truck. Additionally, MEG applied speedy dry to the impacted asphalt areas between the generator tank and the storm drain. The speedy dry was worked into the spill and then recovered. The recovered speedy dry was containerized within NYSDOT approved 55-gallon drums along with petroleum impacted debris and spent PPE. Photos are attached.

On June 23, 2014 MEG disposed of the soil within the guzzler at Tradebe Treatment Recycling (Bridgeport, CT) under non-hazardous waste manifest (52279)

On June, 26, 2014 MEG brought the soil and liquid drums for disposal to Tradebe Treatment Recycling (Bridgeport, CT) under non-hazardous waste manifest (52281 and 52280 respectively). A copy of the waste manifests are attached.

Upon completion of the remediation MEG collected two (2) confirmatory endpoint samples from within the storm sewer. The samples were containerized within laboratory issued glassware, placed in a cooler filled with ice and transported to a NYSDOH accredited laboratory for analysis. The samples were analyzed for the presence of volatile organic compounds (VOCs) via USEPA Method 8260 (NYSDEC CP-51 analyte list) and semi-volatile organic compounds (SVOCs) via USEPA Method 8270 (NYSDEC CP-51 analyte list).

A review of the laboratory analysis indicated that all targeted compounds were below the laboratory's method detection limit and their respective NYSDEC guidance values (see Tables 1 and 2). The complete laboratory analysis report is attached.

Based upon a review of the laboratory analysis it appears that the impacted soil within the storm drain has been successfully removed. Accordingly, MEG recommends that the NYSDEC be petitioned for closure of the assigned spill and that a "No Further Action" letter be issued for the site.

Sincerely,

Robert J. Ferguson

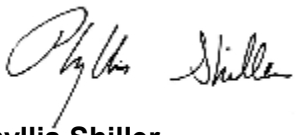
Project ID: NEWS DAY
Sample ID#s: BG62179, BG62189

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.



This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

BRL=Below Reporting Level

Comments:

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

Melville, NY 11747

Re: Spill # 14-02877, Newsday, 235 Pinelawn Rd., Melville, NY

Dear Mr. Marino:

The Department has reviewed the records and data submitted by you regarding cleanup actions at the above referenced petroleum spill site. Based on such review, the Department determined that you have completed the necessary cleanup and removal actions, and no further remedial activities are necessary.

Nothing contained herein shall be construed as barring, diminishing, or in any way limiting Department's authority under the Navigation Law or the Environmental Conservation Law, including the authority to require additional remedial work, if necessary.

Should you have any questions concerning this matter, you may call me at (631) 444-0324 or e-mail me at hmcirrit@gw.dec.state.ny.us.

Sincerely,

Hugh Cirrito, PE
Environmental Engineer 2

DEC REMARKS:

06/17/14 1210 Hrs: Left message for Libuser. DR

06/17/14 1250 Hrs (A): Libuser called- apparently, a "test" of some sort was performed overnight on the day tank for this generator. The solenoid which opens and closes the line failed and caused the spill.

06/17/14 1250 Hrs (B): At this time, Miller believes only a few gallons of oil spilled. THE CATCH BASIN IS INSIDE THE BUILDING, AND MILLER DOES NOT BELIEVE IT HAS ANY OUTLETS.

06/17/14 1250 Hrs (C): Miller is cleaning up the floor with speedi dri, and is bringing a "guzzler" truck to clean out the basin.

06/17/14 1250 Hrs (D): DEC directed Miller to keep this office updated. DR

DRAIN CLEANED OUT, ENDPOINT SAMPLES ARE CLEAN, NO FURTHER ACTION REQUIRED

MacGuard® 2792 Heavy Duty Product Data Sheet

Inhibited Ethylene Glycol Antifreeze/Coolant

MacGuard® 2792 Heavy Duty Antifreeze/Coolant is a fully formulated heavy duty antifreeze/coolant requiring no additive (SCA) precharge. It provides corrosion protection for all heavy duty cooling systems and is formulated to be compatible with antifreeze/coolants of all major producers.

For health and safety information for this product, contact Houghton for a Material Safety Data Sheet (MSDS).

MacGuard® 2792 Heavy Duty (MAC)

Typical Properties by Concentration

Typical Properties	Conc. (~volume of EG) Item #0001	50%(~v/v of MAC) Item #0809
Ethylene Glycol	95	48
Performance Additives and Water	5	52
Color	Green	Green
Clarity	Clear	Clear
Specific Gravity (15/15^{0}C 60/60^{0}F)	1.12-1.14	1.06-1.09
pH 50%	7.5-11.0	7.5-11.0
Reserve Alkalinity (min)	6	3
Freeze Point (^{0}F) Max @ 50%	-34	-34

Typical properties, not to be construed as specifications. As use conditions are not within its control, Houghton does not guarantee results from use of the information or products herein; and gives no warranty, express or implied.

Use Recommendation: MacGuard® 2792 HD meets or exceeds performance requirements for both automotive and Heavy Duty cooling systems, including those with aluminum heat-rejecting components such as aluminum cylinder heads, water pumps and radiators. It provides corrosion protection for all cooling system metals and is formulated to be compatible with antifreeze/coolants of all major producers. It is SCA pre-charged with nitrite to protect heavy duty truck engine cooling components such as wet sleeve liners.

MacGuard® 2792 HD antifreeze/coolant should not be used in concentrated form in your vehicle. A 50% dilution is generally recommended for best balanced protection against corrosion and summer boiling. Do not dilute to less than 33-1/3%. (Maximum freeze protection is at 70% if required.) Water quality can be an important factor affecting the long-term corrosion protection of any antifreeze. Use only water of good quality (see ASTM D3306, General Requirements for water quality). Test coolant annually or at maintenance intervals, replace when depleted or, if testing is not done, replace every two years. For HVAC systems, recreational vehicles, and protection of other Hydronic systems, please consult the heat transfer fluids section of our website or call us for suggestions.

Formulated to Satisfy: ASTM D5216 and the corrosion limits in ASTM D3306, ASTM D4985, and ASTM D6210, SAE/J1034, SAE/J1941, and Federal Specification OA548D; satisfying both Hot Surface Aluminum protection requirements of ASTM test D4340 and Cummins Heavy Duty Low Silicate requirements, and is designed to meet the requirements of TMC RP-329, GM1825M, GM1899M, Chrysler MS7170, Ford ESEM97B44A, Cummins CES 14603.

Cautionary Information: Ethylene glycol, the major component of MacGuard® 2792 Heavy Duty, is poisonous to humans and animals when ingested. Store only in closed containers with complete cautionary information thereon, in a cool, secure place, out of reach of children. Do not use in any system connected with potable water. Ask us about other Houghton Chemical products specifically designed for this purpose.

NOTICE: No freedom from any patent owned by Seller or others is to be inferred. Because use conditions and applicable laws may differ from one location to another and may change with time, Customer is responsible for determining whether products and the information in this document are appropriate for Customer's use and for ensuring that Customer's workplace and disposal practices are in compliance with applicable laws and other governmental enactments. Seller assumes no obligation or liability for the information in this document. Houghton Chemical Corporation

Safety Data Sheet

MACGUARD® 2792 Antifreeze

Section 1 - Identification	
Manufacturer Address	Houghton Chemical Corporation 52 Cambridge Street, Allston, MA 02134 1-617-254-1010 or 1-800-777-2466
Emergency Telephone	**CHEMTREC: 1-800-424-9300**
Chemical Name & Synonyms	Antifreeze/Inhibited Ethylene Glycol
Chemical Family	Ethylene Glycol Mixture
Recommended Use	Antifreeze Fluid
Restrictions on Use	Dilution to 50% is generally recommended: dilute to meet local condition.
Section 2 – Hazard(s) Identification	
Hazard Classification	OSHA: Acute Toxicity, Oral, Category 4 Skin Corrosion / Irritation, Category 2 Serious Eye Damage / Eye Irritation, Category 2A Sensitization – Skin, Category 1 Toxic to Reproduction, Category 2 Specific Target Organ Toxicity (Single Exposure), Category 1 Specific Target Organ Toxicity (Repeated Exposure), Category 2
Signal Word	DANGER
Hazard Statement	Harmful if swallowed. Causes skin irritation. Causes serious eye irritation. May cause an allergic skin reaction. Suspected of damaging fertility of the unborn child. Caused damage to the central nervous system (CNS) and kidneys if swallowed. May cause damage to kidneys through prolonged or repeated exposure if swallowed.
Pictogram Description	GHS: Health Hazard, Exclamation Point
Precautionary Statement	Prevention: Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wash hands and any other contaminated skin after handling. Do not eat, drink or smoke when using this product. Wear eye protection (splash goggles or full face shield), protective gloves and protective clothing (chemically impervious). Do not breathe mist or spray. Contaminated work clothing must not be allowed out of the workplace. Response: If swallowed: Call a poison control center or doctor. Rinse mouth. If on skin: Wash with plenty of water. If skin irritation or rash occurs: Get medical attention. Take off contaminated clothing and wash it before reuse. If in eyes: Rinse eyes cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention. If exposed or concerned: Get medical advice. Get medical attention if you feel unwell. Storage: Store locked up. Disposal: Contact local sewer, municipal, state and/or federal agencies to determine appropriate disposal options for the product. Dispose of this container with a registered reconditioner or as otherwise appropriate.
Any other Hazard not otherwise classified	Not Applicable

Section 3 – Composition and Information on Ingredients			
Chemical Name	Common name and synonyms	CAS #	% by weight
Ethylene Glycol	Monoethylene Glycol	107-21-1	95%
Water	N/A	7732-18-5	2.5%
Inhibitors & Dye	N/A	Proprietary	3%

Section 4 – First aid Measures	
Symptoms of Exposure	
Acute	Irritation of affected area with symptoms of reddening, itching, swelling, burning, possible permanent damage, nausea, vomiting, weakness, and death

Delayed	Irritation of affected area with symptoms of reddening, itching, swelling, burning, possible permanent damage, nausea, vomiting, weakness, abdominal pain, muscle tenderness, repiratory failure, severe metabolic acidosis, hypocalcemictetany and death
Inhalation	Vapors and mists cause respiratory irritation and may be harmful if inhaled.
Skin	Irritation may result. May be harmful if absorbed through skin.
Eye Contact	Irritation may cause transitory stinging and tearing.
Ingestion	Toxic: may be harmful or fatal if swallowed.
First Aid Instructions	
Inhalation	Remove to fresh air. Administer oxygen if breathing is difficult. Give artificial respiration if victim is not breathing. Seek medical attention.
Skin	Wash skin with soap and water for at least 20 minutes. Remove any contaminated clothing. Seek medical attention immediately if symptoms or irritation develops.
Eye Contact	Flush with water for at least 20 minutes. Seek medical attention if irritation develops or persists.
Ingestion	DO NOT induce vomiting, seek medical attention immediately. If swallowed give 2 to 3 glasses of water if victim is conscious and alert. Do not give anything by mouth to an unconscious person. To prevent aspiration of swallowed product, lay victim on side with head lower than waist. Vomiting may occur spontaneously. If vomiting occurs and the victim is conscious, give water to victim to further dilute the chemical.
Other	Consult a physician. Show safety data sheet to the doctor in attendance.
Section 5 – Fire Fighting Measures	
Suitable Extinguishing Material	**Water, water fog, water spray, alcohol foam, dry chemical or carbon dioxide.**
Unsuitable Extinguishing Material	No Data Available
Hazards from Combustion	Smoke may contain the original material in addition to but not limited to: Carbon Monoxide, Carbon Dioxide.
Special Protective Equipment for Firefighters	Wear self-contained breathing apparatus and protective suit. Evacuate personnel to safe areas and keep upwind of fire.
Section 6 – Accidental Release Measures	
Use of personal precautions	Ventilate area of leak or spill. Remove all sources of ignition. Wear appropriate personal protective equipment.
Protective equipment to prevent the contamination of skin, eyes, and clothing.	Usage of safety glasses or googles is recommended. Chemical resistant gloves, chemical resistant apron, boots, and full suit will be necessary depending on the extent of clean up task. If ventilation does not control airborne concentration then respiratory protection equipment that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements should be used.
Methods and materials used for containment	Collect liquid in an appropriate container or absorb with inert material and place in chemical waste container.
Cleanup procedures	Do not flush to sewer. Comply with all federal, state, and local regulations.
Section 7 – Handling and Storage	
Precautions for safe handling	Protect container from physical damage. Wear appropriate personal protection equipment. Do not expose containers to open flame, excessive heat, or direct sunlight. Use local exhaust over processing area. Do not eat, drink or smoke around products.
Recommendations on the conditions for safe storage, Storage/handling incompatibilities.	Store in a cool, dry and ventilated area away from sources of heat, moisture and incompatible materials. Observe all warnings and precautions listed for the product. Keep container closed to prevent contamination.
Section 8 – Exposure Controls/Personal Protection	
OSHA Permissible Exposure Limits (PELs)	Not Applicable
American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values	ACGIH TLV: 100 mg/m3
Other Exposure Limits	OSHA - Table Z-1 Limits for air contaminants - 1910.1000: 50 ppm 125 mg/m3 .
Engineering Control	Use mechanical (general) ventilation to control airborne levels below exposure guidelines.

Individual Protection Measures	Wear protective safety glasses or goggles, gloves, apron, vapor respirator.

Section 9 – Physical and Chemical and Chemical Properties

Appearance (physical state, color, etc.)	Liquid, Clear,Green
Upper/lower flammability or explosive limits	Not Explosive; LOWER: 3.2% (v) UPPER: 15.3% (v)
Odor	Slight to no odor
Vapor pressure	134 Pa / 0.1 mmHg
Odor threshold	No data available
Vapor density (air = 1)	2.14
pH	7.5 - 11.0
Relative density	1.120 - 1.140
Freezing point (as 50%)	-34°F / -37°C
Solubility(ies)	Miscible in water
Initial boiling point and boiling range	385°F / 196°C
Flash point	232°F / 111°C
Evaporation rate (Butyl Acetate = 1)	<1
Flammability (solid, gas)	This material is Not Flammable but can burn if heated
Partition coefficient: n-octanol/water	Log Pow: -1.36
Auto-ignition temperature	> 700°F / > 370°C
Decomposition temperature; and	Not Applicable
Viscosity	~16 cps at 60°F

Section 10 – Stability and Reactivity

Reactivity	Product is stable under typical use temperatures.
Chemical Stability	Product is stable under typical use temperatures.
Hazardous Reactions	Avoid contact with oxidizing materials strong bases and strong acids.
Conditions to Avoid	Heat, flames, ignition sources and incompatibles.
Incompatible Materials	Avoid contact with oxidizing agents, strong bases and strong acids.
Decomposition Products	Carbon dioxide and carbon monoxide may form when heated to decomposition.

Section 11 – Toxicological Information

Likely Routes of Exposure	Eyes / Skin / Ingestion / Inhalation

	Effects from Short Term Exposure	Effects from Long Term Exposure
Delayed Effects	Irritation of affected area	Irritation of affected area
Immediate Effects	Irritation of affected area	Irritation of affected area
Chronic Effects	Not Applicable	Teratogenic effects
The numerical measures of toxicity (e.g., acute toxicity estimates such as the LD50 (median lethal dose)) - the estimated amount [of a substance] expected to kill 50% of test animals in a single dose.		Skin: LD50 - Rabbits - >10600 mg/kg Ingestion: LD50 - Rats - 7712 mg/kg; Lethal Dose Human Adult - 90mL
Description of the symptoms. This description includes the symptoms associated with exposure to the chemical including symptoms from the lowest to the most severe exposure.		Irritation, nausea, vomiting, abdominal pain, weakness, muscle tenderness, respiratory failure, convulsions, cardiovascular collapse, pulmonary edema, hypocalcemictetany, metabolic acidosis, death.

Listed in the National Toxicology Program (NTP) Report on Carcinogens?	No	**Found to be a potential carcinogen in the International Agency for Research on Cancer (IARC) Monographs?**	No	**Found to be a potential carcinogen by OSHA?**	No

Section 12 – Ecological Information

Ecotoxicity	Low Ecotoxicity
Persistence and Degradability	Biodegradable
Bioaccumulation	Does not bioaccumulate significantly
Mobility in Soil	Dissolves in water. If product enters soil, it will be highly mobile and may contaminate ground water

Other Adverse Effects	No Data Available

Section 13 – Disposal Considerations

Do not dump into sewers, on ground or into any bodies of water. Contact local sewer, municipal, state and/or federal agencies to determine appropriate disposal options

Section 14 – Transport Information

Is product DOT regulated in Non-Bulk packaging?	No

DOT BULK

UN number	UN3082
UN proper shipping name	Environmentally hazardous substances, liquid, n.o.s.
Transport hazard class(es)	9
Packing group number	III
Environmental hazards (e.g., identify if it is a marine pollutant according to the International Maritime Dangerous Goods Code (IMDG Code))	Not Regulated
Guidance on transport in bulk (according to Annex II of MARPOL 73/783 and the International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (International Bulk Chemical Code (IBC Code))	Not Regulated
Any special precautions which an employee should be aware of or needs to comply with, in connection with transport or conveyance either within or outside their premises	Reportable Quantity (RQ): 5000 lbs Ethylene Glycol

Section 15 – Regulatory Information (Not indicated anywhere else on this SDS)

Safety Regulations	OSHA Hazard Communication Standard: This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.	
Health Regulations	Not Available	
Environmental Regulations	Not Available	
SARA 311/312	Based upon available information, this material is classified as the following health and/or physical hazards according to Section 311 & 312	Superfund Amendments and Reauthorization Act of 1986 Title III (SARA) Sections 311 and 312: Immediate (Acute) Health Hazard - Yes; Delayed (Chronic) Health Hazard - Yes; Fire Hazard - No; Reactive Hazard - No; Sudden Release of Pressure Hazard - No. Section 313: Product contains the following substances which are subject to reporting requirements and are listed in 40 CFR 372 - Component: Ethylene Glycol CAS#: 107-21-1 Amount: >=99.0%.
HMIS	Blue/Health	2
	Red/Flammability	1
	Orange/Physical Hazard	0
	White/Personal Protection	x
NFPA 0(no hazard) to 4(severe risk)	Health (Blue)	2
	Flammability (Red)	1
	Instability/Reactivity (Yellow)	N/A
	Special (White)	0
US Toxic Substance Control Act	All components of this product are on the TSCA Inventory or are exempt from TSCA Inventory requirements under 40 CFR 720.30	
CEPA – Domestic Substances List (DSL)	All substances contained in this product are listed on the Canadian Domestic Substances List (DSL) or are not required to be listed.	

Section 16 – Other Information

This SDS is applicable for all dilutions and containers for this brand of product. The information herein is provided in good faith and believed to be accurate as of the effective revision date shown. However, no warranty, express or implied, is given. Regulatory requirements are subject to change and may differ between various locations. It is the buyer's/ user's responsibility to ensure that activities comply with all federal, state, provincial or local law.

HOUGHTON CHEMICAL CORPORATION
MATERIAL SAFETY DATA SHEET

"MACGUARD 2792 ANTIFREEZE/COOLANT CONCENTRATE"

SECTION 1
IDENTIFICATION

MANUFACTURER:	Houghton Chemical Corporation
ADDRESS:	52 Cambridge Street, Allston, MA 02134
EMERGENCY TELEPHONE:	(617) 254-1010, 1-800-777-2466 or Chemtrec 1-800-424-9300
CHEMICAL NAME & SYNONYMS:	Permanent Antifreeze and Summer Coolant
CHEMICAL FAMILY:	Ethylene Glycol Based
FORMULA:	Trade Secret
CAS REGISTRY NUMBER:	Not applicable for blended product
DOT SHIPPING CLASSIFICATION:	Not regulated in quantities containing less than 5,000 pounds of ethylene glycol
PRODUCT NUMBER:	61001, 62001

SECTION 2
HAZARDOUS INGREDIENTS

MATERIAL	CAS #	%	TLV (Units)
Ethylene Glycol	107-21-1	90-95	50 ppm
Diethylene Glycol	111-46-6	≤ 5	50 ppm
Sodium Tetraborate	1303964	<1	1 mg/m^3
Sodium Nitrite	7632000	<1	Not applicable
Sodium Toiytriazole	64665572	<1	Not applicable
Sodium Hydroxide	1310732	<1	2 mg/m^3

SECTION 3
PHYSICAL DATA

BOILING POINT:	@760 mm Hg. 325°F
FREEZING POINT:	-4° F
SPECIFIC GRAVITY:	1.12
VAPOR PRESSURE AT 20°C:	0.1
VAPOR DENSITY (air = 1):	2.1
SOLUBILITY IN WATER:	Complete

% VOLATILE BY VOLUME:	Greater than 95%
EVAPORATION RATE:	Less than 1
APPEARANCE AND ODOR:	Fluorescent green; mild odor

SECTION 4
FIRE AND EXPLOSION HAZARD DATA

FLASH POINT:	250°F - TOC 225°F - TCC
AUTO IGNITION TEMPERATURE:	Not applicable
FLAMMABLE LIMITS IN AIR:	LEL = 3.0 UEL = 16 (calculated)
EXTINGUISHING MEDIA:	Water, fog, alcohol foam, dry chemical or CO_2 for small fires
SPECIAL FIRE FIGHTING PROCEDURES:	A solid stream of water directed into hot burning liquid can cause frothing.
UNUSUAL FIRE AND EXPLOSION HAZARDS:	None

SECTION 5
REACTIVITY DATA

STABILITY:	This material is stable.
INCOMPATIBILITY:	Keep away from strong oxidizing agents.
HAZARDOUS DECOMPOSITION PRODUCTS:	Burning can produce carbon dioxide or carbon monoxide.
HAZARDOUS POLYMERIZATION:	Will not occur.

SECTION 6
HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE:	50 ppm (vapor or mist)
EFFECTS OF OVEREXPOSURE:	Irritating to eyes and skin. Inhalation irritates nose and throat. High vapor concentration causes nausea, vomiting and headaches.
Eye Contact:	Irritation may result.
Skin:	May be mildly irritating to skin. Slightly toxic on prolonged or repeated contact.
Inhalation:	Exposure to high vapor concentration from heated antifreeze coolant or exposure to mists may produce

nausea, vomiting, headache, dizziness and irregular eye movements.

Ingestion: *Swallowing causes abdominal discomfort or pain, dizziness, lumbar pain, oliguria, uremia and central nervous system depression. Large volumes cause kidney damage and can be fatal.*

EMERGENCY AND FIRST AID PROCEDURES:

Eyes: Flush with plenty of water for at least 15 minutes.

Skin: Flush with plenty of water, wash with mild soap if available.

Inhalation: Remove to fresh air and give artificial respiration if breathing has stopped.

Ingestion: If swallowed, IMMEDIATELY contact a poison control center, emergency treatment center, or physician.

SECTION 7
SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE THE MATERIAL IS SPILLED OR RELEASED:

Wear suitable protective equipment. Large spills should be contained and collected. Small spills can be collected or may be absorbed with appropriate liquid absorbing materials. All spill response and disposal should be carried out in accordance with federal, state and local requirements.

WASTE DISPOSAL METHOD: Consult with local sewer, municipal, state and/or federal agencies to determine appropriate current disposal options.

SECTION 8
SPECIAL PROTECTIVE INFORMATION

RESPIRATORY PROTECTION: Provide adequate ventilation with local exhaust system.

VENTILATION: Mechanical or other

PROTECTIVE GLOVES: Rubber gloves recommended.

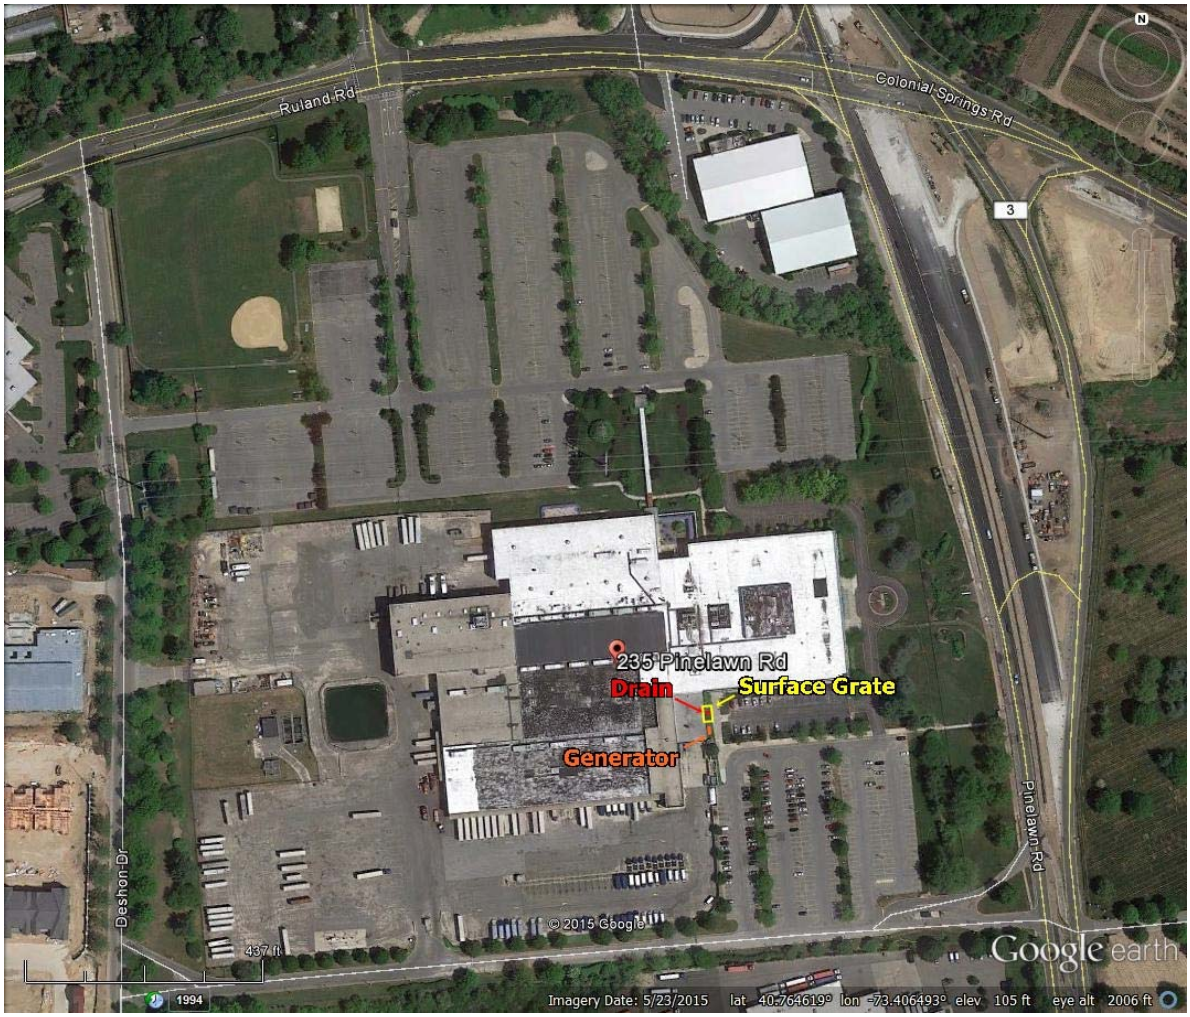
EYE PROTECTION: Safety glasses or goggles.

OTHER PROTECTIVE EQUIPMENT: Normally not required

SECTION 9
SPECIAL PRECAUTIONS

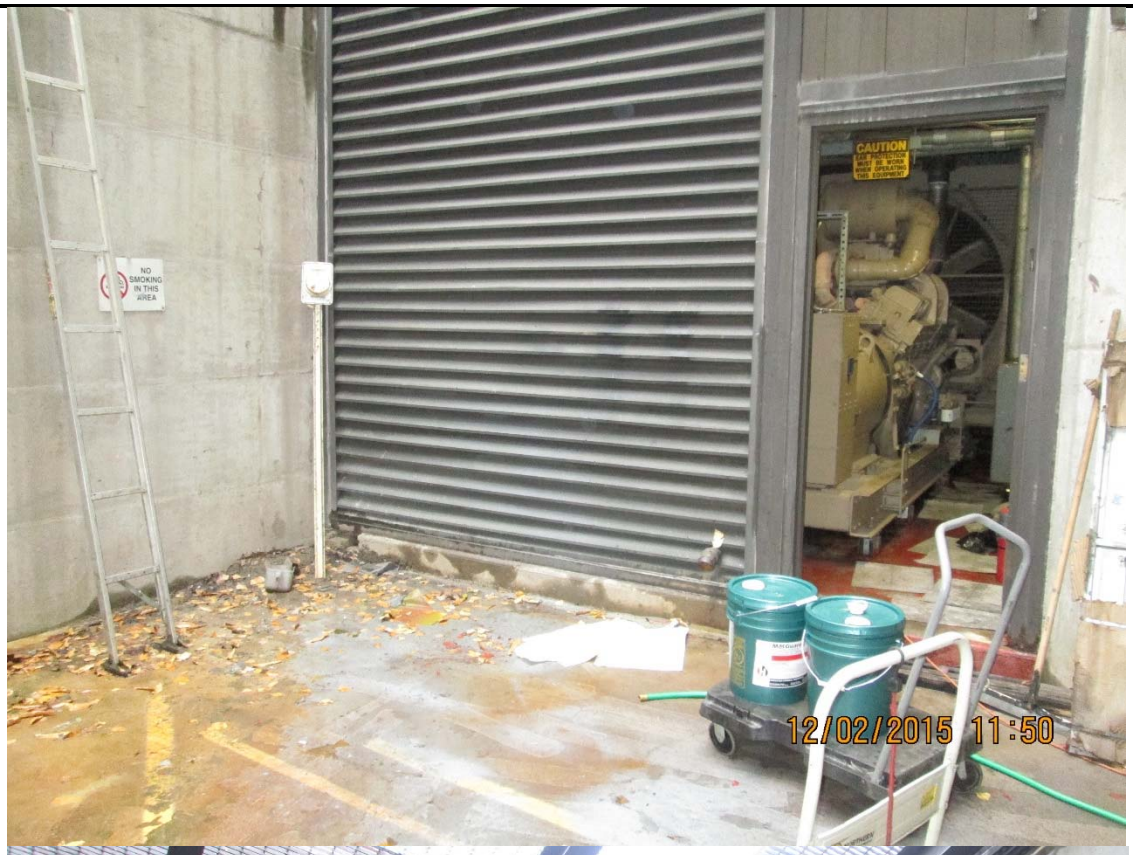
PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE:

Do not breathe mist or spray. Follow good work/hygiene practices. Provide safety shower and wash in immediate area. Workers should wash with soap and water before eating, smoking or using toilet facilities. Launder contaminated clothing before re-use.



Site Notes

Spill Number: 1508951



Representatives:

Robert Poczkalski, Pat Mclaughlan-MEG, Joseph Marino- Newsday

Date	Time	Narrative
12/2/15	1135	RJP on location. Release of 50-60 gallons of coolant from generator. Hose fitting failed during routine maintenance, system was powered down immediately. Impact to floor drain. Spill location is approx 15' below grade, and is open to air. Removable grates allow access of large equipment to mechanical room. Coolant is 50% concentration of MacGuard 2792 ethylene glycol mixture. SDS states water-miscible solution is biodegradable and has low ecotoxicity. No recoverable product remaining on location, liquid drained through sand base of floor drain. Surface spill was cleaned with absorbents. USGS DTW 42'. No DEC action, SDS and product information available on D2. RJP.
	1200	RJP off location.

DEC REMARKS:

12/02/15 1050 Hrs (A): Called Marino- he said a hose burst on a generator INSIDE their facility, but the fluid spilled outside to a drywell. He confirmed that the drywell has no outlets and a sand bottom, and that MEG is responding.

12/02/15 1050 Hrs (B): DEC informed him that this office might have RJP (currently in Farmingdale) respond when finished there. DR

12/02/15 1052 Hrs: RJP called- he just finished in Farmingdale and saw this report, so he will respond at this time. DR

12/02/15 approx noon: As per RJP- ALL the product appears to have soaked into the sand at the bottom of the drywell. He will obtain a copy of the MSDS sheet from Newsday. DR

12/2/15 1135 Hrs: RJP on location w/ MEG. No recoverable liquid, no DEC action. Documents on D2. RJP

Hello Robert,

Follow-up to the magenta ink spill (on 2/14/2017) inside secondary containment (Spill Number 1610337). The Newsday Operations Department captured all the ink and put in drums and labeled. All ink will be recycled - filtered via our on-site ink reclaim equipment (no ink will be sent off site for disposal) and pumped back into ink tanks. You may close out the spill, please call me should you have any questions, or require anything else.

Regards.

Joseph Marino

Re: Oil Spill Number 92-01246, Contaminated Soil Stockpile at Newsday, 235 Pinelawn Road, Melville

Dear Mr. Mr. Tillotson:

On May 15, approximately two (2) cubic yards of #2 fuel oil contaminated soil were excavated and stockpiled at the above referenced site.

In accordance with Article 12 of the New York State Navigation Law, the contaminated soil must be expeditiously removed in order to effect a prompt and complete cleanup. A contractor with a Part 364 (waste transporter) Permit is required for such removal. You may contact our Division of Solid and Hazardous Waste at (516) 751-7900 for further information concerning the legal transport and disposal of the contaminated soil.

The soil may be temporarily stored on site while final transport and disposal is arranged. An impermeable liner must remain both above and below the soil to prevent further contamination to the site.

This site has been placed on the Department's active petroleum spill site list. It has been assigned the above referenced spill number. The site will remain on the active list until copies of the disposal receipts are received and, if necessary, all additional clean-up/remedial work is performed.

If you have any questions or comments regarding this matter, please call me at (516)751-7725 or 751-7900.

Sincerely,

Cathy A. Gibbons

Re: Oil Spill No: 92-01246

Dear Mr. Tyree:

I am writing to you to remind you that as of today, I have not received confirmation of the disposition of the debris removed from Newsday. As you recall, after the new fill pipes were installed onto our two fuel oil tanks, there was a minimal amount of soil. The project was completed on May 22, 1992.

It was not until June 4 that a crew removed the old concrete, piping, fittings, and some of the dirt removed from the opening. The remaining soil, approximately three cubic feet, was covered with plastic. A follow-up visit was made by an individual from your lab, on June 17, to take a sample from the pile. By the time a second person from your lab showed up to take another sample, the soil had been removed.

According to the New York State Department of Environmental Conservation, this project is still on their active petroleum spill site list. They are awaiting confirmation from you as to the disposition of the material. I would appreciate your attention and a rapid conclusion to this project.

Sincerely,

John Tillotson

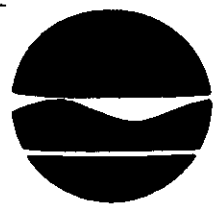
Re: Spill #92-01246, Newsday, 235 Pinelawn Road, Melville, N.Y.

Dear Mr. Krueger:

This letter if to confirm our telephone conversation of May 22, 1998, regarding the above referenced site. Based on this conversation, you have advised this office that you and/or your contractor have not been able to provide documentation pursuant to Cathy Gibbon's letter of May 26, 1992, to prove disposal of approximately 2 yards of contaminated soil stockpiled during this cleanup.

Please be advised that you may be subject to future liability if you do not have adequate documentation verifying proper disposal. Should additional environmental problems be discovered at this site, this office will require future action at that time. At this time, the spill file has been removed from our active spill list.

Sincerely,



Mary M. Henning

Re: Spill #92-01246, Newsday, 235 Pinelawn Road, Melville, NY

Dear Mr. Tillotson:

This office has been informed by Dry-As-A-Bone that one (1) 25,000 gallon #26 fuel oil tank failed a Horner EZY Check systems test on April 30, 1992. In accordance with Article 12 of the New York State Navigation law, I must determine if there has been any harm to the groundwaters of the State. In order for me to make this determination, you have three options:

1. Prove that it was not a leaking tank by removing all the piping from the tank and separately Horner test the tank. If the tank passes the Horner test, it is a piping leak. The tank may then be abandoned or the piping can be repaired, attached to the tank, and the system Horner E-Zy check tested. If at any time contaminated soil is found, this office must be notified immediately and the contaminated soil removed and stockpiled on site.

2. Excavate and remove the tank in the presence of a representative from this office so that an inspection of the tank and the soil can be made. If the tank is sound, and there is no evidence of product loss, nothing further need be done. If there is a problem, proceed as in 3 below.

3. Abandon the tank in-place and install several four(4) inch diameter PVC site wells extending ten(10) feet into the groundwater with a screen length of twenty(20) feet, with slot size of .020 inches. The exact location and number of wells will be determined by a representative from this office. These wells must be checked by you or your contractor, with the monitoring data submitted to this office. If no floating/dissolved product appears in the wells for twelve consecutive months, then this office will review the case for possible removal from our active list. If floating/dissolved product appears, recovery must begin immediately.

printed on recycled paper

Please be advised that the in-place abandonment of underground tanks may be prohibited in some areas. You should check with the appropriate local or county authority (health department, fire marshal, environmental control unit) regarding local laws governing the storage of petroleum products.

Please call Karen DeRosa at 516-751-7900 ext. 269 or me at ext. 365, to let us know which option you will select to resolve this problem. If no response is received from you by May 15, 1992, this office will proceed with the installation of observation wells and will seek reimbursement from you in accordance with Article 12 of the New York State Navigation Law.

Sincerely,

Cathy A. Gibbons

A.	Tank Ect. to Grade	154"
B.	Tank Top to Grade	27"
C.	Tank Diameter	126"
D.	Test Level above grade	57.30"
E.	Depth of water in tank	0"
F.	Depth for taking sample	80"
G.	Temp. Probe depth (connector)	29"
H.	Test level to Tank Ect.	184"
I.	Groundwater above tank bottom	0
J.	Product Pressure per 1" height	.031 PSI

Test Pressure Formula

184 (H) × .031 (J) − (____ (I) × .036) = 5.7 NET TEST PRESSURE

NEWSDAY FAC ID 4-0094
235 PINELAWN RD.
MELVILLE
TANK TESTER VER 2.01
FUEL TYPE: TANK# 6 #2 OIL
CAPACITY TANK 1: 25128 GALLONS
TEMPERATURE COEFFICIENT: 455 ppm/deg F
TEST CRITERIA: +0.000 GPH TO +0.000 GPH

04/30/92 TEST TIME FROM 16:13 TO 17:20
DATA ANALYSIS INDICATES:

A GROSS VOLUME CHANGE OF: -0.494 GALLONS
A VOLUME CHANGE DUE TO TEMPERATURE OF: +0.049 GALLONS

A LIQUID VOLUME RATE OF CHANGE OF: -0.493 GPH
WITH A 95 % CONFIDENCE INTERVAL OF: +/-0.002 GPH
(-0.492 TO -0.495 GPH)

Re: Spill No: 92-01246 .....CERTIFIED, RETURN RECEIPT REQUESTED

Dear Ms. Gibbons:

I am responding to your correspondence of May 6 that was received at Newsday on May 11. Newsday has contracted with Tyree Environmental to expose all tank penetrations and disconnect all piping from the tank. The excavations were performed on Friday May 8 and Monday May 11.

The testing company of Dry-As-A-Bone, Inc. has scheduled a tank-only test for Friday, May 15. After completion of the tank-only test, each leg of the piping will be reconnected and tested independently. The final test will be a full system test with all piping attached. Through this procedure, we will be able to identify which of the components may have caused the previous test results.

As we had discussed during our telephone conversation of May 11, I will notify you as to the results of the above tests that will be performed on May 15.

Sincerely,

John Tillotson

Re: Spill No: 92-01246... CERTIFIED, RETURN RECEIPT REQUESTED

Dear Ms. Gibbons:

As we had discussed, and as described in my correspondence of May 11, a tank-only and systems test was performed on Newsday's 25,000 gallon No: 2 fuel oil storage tank (Tank No: 6) on Friday May 15.

Excavations were made at each of the tank penetrations. The piping was disconnected and a tank-only tightness test was performed. The tank passed this test, see attached results.

All piping was reconnected and a system tightness test was performed. The system passed this test, see attached results.

During excavation at the fill line, there was an indication of oil leakage at a compression pipe clamp located immediately below the surface mounted fill cap. Prior to the system test, this connection was replaced with a pipe-pipe joint from the tank to the surface. It is believed that this compression joint may have been the cause of the original test failure. The compression joint would have been leaking only during the tightness test since it is above the top of the tank, i.e., the tank's operating level.

The amount of contaminated soil is estimated at less than two cubic yards and will be properly removed by Tyree Environmental as part of their contract responsibilities.

Sincerely,

John Tillotson

RE: NEWSDAY TANK TEST RESULTS
SPILL #9201246

Enclosed is the data regarding the two (2) tank tests performed at the above site .

On 5/15/92, a tank only test was performed. Since the problem was the fill box, prior to testing, Tyree Brothers excavated to tank top and replaced fill box. The tank passed test criteria with a -.045 GPH at which time all piping was reconnected (feed return and vent). A systems test was performed passing test criteria with a -.014 GPH.

There is approximately one to two yards of contaminated soil from old fill box leakage which will be disposed of by Tyree Brothers.

If you have any questions regarding the above, please do not hesitate to call.

Very truly yours,

Jerry Curtin

SITE ARRIVAL TIME 6 00 am, pm

CONTACT PERSON John Tolliver

TIME OF PRODUCT DELIVERY 4 20 am, pm

AMOUNT OF PRODUCT TO TOP OFF _____

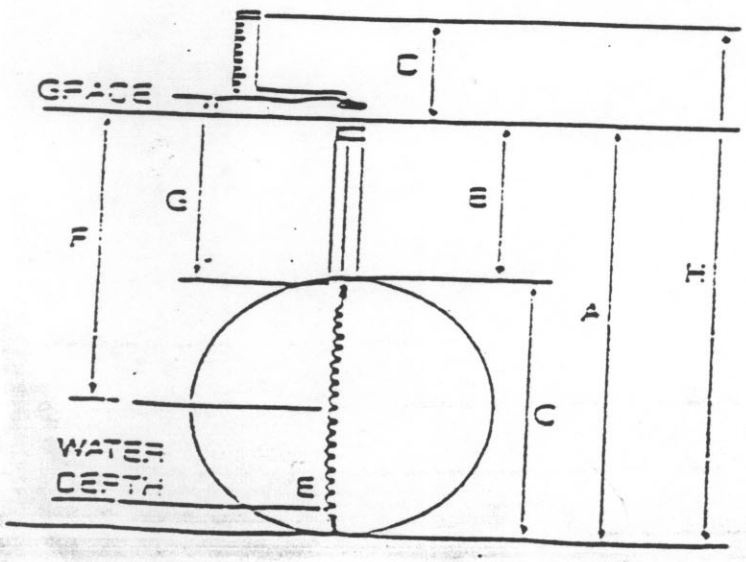
TIME OF EQUIPMENT SET UP 6'5 am, pm

CHANGES TO TANK SYSTEM Connect all piping for System Test

ESTIMATED AMOUNT OF PRODUCT TO MAINTAIN TEST LEVEL _____

TIME TEST LEVEL WAS MAINTAINED 13 00 am, pm

TIME OF .4 PSI DROP 13 00 am, pm



TIME OF CALIBRATION 16 00 am, pm

TIME OF TEST COMPLETION _____ am, pm

DEPTH OF WATER TABLE 0

REMARKS System Test

OPERATOR Jerry Cutts

A. Tank Ect. to Grade	154
E. Tank Top to Grade	27
C. Tank Diameter	126
D. Test Level above grade	57 30
E. Depth of water in tank	0
F. Depth for taking sample	80
G. Temp. Probe depth (connector)	29
H. Test level to Tank Ect.	184
I. Groundwater above tank bottom	0
J. Product Pressure per 1" height	031 PS

Test Pressure Formula

184 (H) × 031 (J) − (____ (I) × .036) = 5.7 NET TEST PRESSURE

TANK TESTER VER 2.01
FUEL TYPE: SYSTEM TEST TANK#6 #2 OIL
CAPACITY TANK 1: 25133 GALLONS
TEMPERATURE COEFFICIENT: 457 ppm/deg F
TEST CRITERIA: +0.000 GPH TO +0.000 GPH

05/15/92 TEST TIME FROM 16:43 TO 17:49
DATA ANALYSIS INDICATES:

A GROSS VOLUME CHANGE OF: +0.060 GALLONS
A VOLUME CHANGE DUE TO TEMPERATURE OF: +0.075 GALLONS

A LIQUID VOLUME RATE OF CHANGE OF: -0.014 GPH
WITH A 95 % CONFIDENCE INTERVAL OF: +/-0.002 GPH
(-0.012 TO -0.016 GPH)

Re: Spill Report No: 93-12349
Spill Date: January 21, 1994

Dear Mr Austin:

As requested, I am enclosing a copy of the completed New Jersey Hazardous Waste Manifest (NJA 1854425) used to dispose of waste generated from the diesel fuel spill from one of Newsday's trucks on January 21, 1994. As we had discussed,

Newsday's policy is to respond quickly and thoroughly in the event of any type of accident. If there is any other information required to close out this episode, please contact me as soon as possible. Thank you for your time and cooperation.

Yours truly,

John Tillotson

Mr. Dave Krueger
Newsday
235 Pinelawn Road
Melville, New York 11747

Re: Spill #97-09711, Newsday
235 Pinelawn Road, Melville, N.Y.

Dear Mr. Krueger:

This office has been informed by Fenley & Nicol that one (1) 25,000 gallon #2 fuel oil tank failed a Horner Ezy Check systems test on November 20, 1997. In accordance with Article 12 of the New York State Navigation Law, I must determine if there has been any harm to the groundwaters of the State. In order for me to make this determination, you have three options:

1. Prove that the tank is not leaking by removing all of the piping from the tank and separately testing the tank alone using a state and county approved test method. If the tank fails this test you must notify this office within two hours of the failure. The tank must then be emptied immediately and you will have to proceed as in 2 or 3 below. If the tank passes this test, it may then be abandoned and the piping further investigated or the piping can be repaired, reattached to the tank, and the system retested. If at any time contaminated soil is found, this office must be notified immediately and the soil must be removed and stockpiled properly on site until proper disposal. The excavation cannot be backfilled until authorization to do so is given by the NYSDEC. Be advised that the soil can only be removed from site by a hauler possessing a Part 364 Permit.

2. Excavate and remove the tank in the presence of a representative from this office so that an inspection of the tank and the surrounding soil can be made. The removal must be scheduled with this department at least 48 hours prior to the date of removal and is on a first come first served availability basis. If evidence of contamination is found, you will be required by this office to remediate the said contamination.

Melville

2/3

TL

Dave Krueger

Newsday

843 5437

Petro Tite
tank passed
suction line problem

9709711

3. Abandon the tank in-place in accordance with county procedures, and install several four (4) inch diameter PVC site wells extending at least ten (10) feet into the groundwater with a minimum screen length of twenty (20) feet, and a recommended slot size of .020 inches. The location, number of wells and monitoring schedule will be determined by a representative from this office. These wells must be checked by you or your contractor, and the monitoring data submitted to this office periodically. If floating/dissolved product appears, recovery must begin immediately.

Please be advised that the above work must be done by a county fire marshall and/or health department approved tester and/or contractor. The in-place abandonment of underground tanks may be prohibited in some areas. Check with the appropriate local or county authority regarding their laws governing the storage of petroleum products. All documentation, including all test results (failing and passing) and descriptions of repairs and soil condition (in regard to contamination), must be forwarded to this office.

Please call me at (516) 444-0333 to advise me of how you will proceed to resolve this problem. If no response is received from you by December 19, 1997 this office will have no choice but to proceed with further investigation of your site and will then seek reimbursement from you for all costs associated with the investigation/remediation in accordance with Article 12 of the New York State Navigation Law.

Should you have any questions or comments, please contact me at the above telephone number.

Sincerely,

Mary M. Henning

Re: Tank Failure
Newsday, 235 Pinelawn Rd, Meville NY
Spill #97-09711, SCDHS Fac.ID#4-0094

Dear Sir/Madam:

This office has been informed by Fenley & Nicol. that the following tank system(s) failed the tank system tightness test on November 20, 1997:

Tank#1 - 25,000 gallon #2 fuel oil tank

Section 1210F of Article 12 of the Suffolk County Sanitary Code requires that any underground storage facility, or part thereof, which is found to be leaking, must immediately be emptied of all contents and removed from service. It is unlawful to permit a leaking underground storage facility or part thereof to remain in service or to continue to retain its toxic or hazardous contents after it has been found to be leaking.

Your storage tank system has failed the initial tank system tightness test. You have **ten days** from receipt of this letter to make the necessary repairs to any piping associated with the particular line and retest the line and the piping as a system to show that the underground storage facility is tight. **Repairs to metal tank(s) are prohibited by code.**

If all associated piping has been disconnected from the tank, and a subsequent tank tightness test proves that the tank is leaking, you must immediately remove the contents of the tank.

The tank must then be removed from service per the enclosed guidance document "Removal of Underground Storage Facilities from Service" within **ninety days** from the date of this notice.

Prior to removing any underground storage facility from service, all remaining liquid and residue must be cleaned and hauled away for proper disposal by a New York State licensed industrial hauler. A list of such haulers may be obtained from the New York State Department of Environmental Conservation (NYSDEC) at (516)444-0230.

Tank removal must be coordinated with this office. You must notify this office within **ten days** of receipt of this letter advising of your intention to remove the tank and then again at least 48 hours prior to the removal, as a department representative **must be present** during the procedure. Please contact John Gladysz at 854-2524 for this purpose.

Failure to comply with the above requirements constitutes a violation of Article 12 and may subject you to fines and penalties of up to $500 per day per violation for each day the violation(s) exists.

Very truly yours,

Kenneth A Clunie

REG 1 - OIL SPILLS

SUBJECT: **Spill #97-09711 Tank System Tightness Testing**

Dear Mrs. Henning:

Newsday's UST testing contractor, Fenley & Nicol Environmental, was unable to stabilize their testing equipment in our 25,000 gallon UST. The testing equipment, Horner EZY-Check II, requires an acceptable Confidence Interval Number (standard of deviation) obtained from the testing data for the results to be considered valid. During testing, the tank temperature probe would fluctuate significantly causing an out of specification CIN. Since the CIN was out of specification, Fenley & Nicol was unable to perform a valid system tank tightness test.

Fenley & Nicol attempted testing the tank on several occasions. The following actions have been taken to eliminate known interference with the testing equipment:

1. Product Stabilization -- the product has been left undisturbed in the 100% full tank for over 4 weeks;
2. FM Interference -- all above-ground testing cable, data gathering panels and associated hardware have been shielded with foil to resist FM interference;
3. Stray Current – the testing equipment was grounded to eliminate effects of stray current;
4. Ground Vibration – testing was scheduled on a Saturday to eliminate vehicles from driving on or near the tank.

Fenley & Nicol has attempted three system tests with their EZY-Check II equipment. As the next step, a new UST testing contractor, Dry As A Bone Inc., is scheduled to test on Saturday, January 3, 1998. Dry As A Bone will test the tank system with their Horner EZY-Check II testing equipment to eliminate the possibility of equipment malfunction.

Currently, 1) there is no evidence of tank leakage or ground contamination in the areas associated with the tank/piping and 2) the volume of the tank's product has maintained its level in the fill port since monitoring commenced two weeks ago.

Newsday will contact you after the January 3rd testing. Please contact me for any questions and/or comments.

Sincerely,

David Krueger

Attn: Ken Clunie

Subject: 25,000 gallon #2 oil tank; #002

Ken,

As per our conversation enclosed is the tank tightness test performed at; Newsday, 235 Pine Lawn Rd., Melville, NY.11747.

As you can see be the enclosed data there is no loss of product, however, the temperature is very erratic. These erratic temperature readings could possibly be caused by radio interference, disrupting the Horner II temperature probe.

According to Dave Krueger at Newsday the stick readings do not show any loss of product. Therefore, it is the writers opinion that this tank is tight. I also agree with you to confirm that this tank is tight, therefore a Petro-tite Systems test should be performed in the near future.

Any further questions please do not hesitate to call our office.

Sincerely,

Jerry Curtin

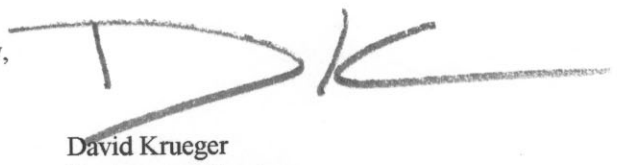
SUBJECT: **Spill #97-09711 Tank System Tightness Retest With Petro-Tight II**



Dear Mrs. Henning:

As per today's conversations with Mr. Tony Leung of your office and Mr. Ken Clunie of SCDHS, both NYSDEC and SCDHS are allowing Newsday to replace the Horner EZY-Check II with the Petro-Tight II for Spill #97-09711 tank testing. The premise of this decision was based on the inability to test the tank system with the Horner EZY-Check II due to electrical interference.

Fenley and Nicol Environmental is scheduled to test the tank system on Saturday, January 17th, 1998 with the Petro-Tight II.

Thank you for your help with this matter and please contact me for any questions and/or comments.

Sincerely,

David Krueger

SUBJECT: **Spill #97-09711 Tank Testing Status**

Dear Mrs. Henning:

The tank associated with Spill #97-09711 passed a "tank only" test on January 31, 1998. Fenley and Nicol Environmental will be sending their results to your office and to Mr. Ken Clunie of SCDHS within the next week.

The tank will remain out of service while the condition of the suction line is being investigated. Currently, the suction line is empty of all liquid and isolated from the tank.

Again, thank you for your assistance with this matter. Please contact me for any questions and/or comments.

Sincerely, DK

David Krueger

COVER SHEET FAX

To: Mr. Stan Sucharski, Fenley & Nicol Environmental
Fax #: 586-4920
RE: Spill# 98-25125, Newsday, 235 Pilelawn Rd, Melville
Date: January 12, 1999
Pages: 1, including this cover sheet.

Comments:

During a telephone conversation earlier today, you informed this Department of diesel soil contamination in the dispenser area which was discovered during upgrade work at the above referenced location.

You had stated that all of the contamination could not be removed. Therefore, end point soil samples must be retrieved and analyzed; the samples must be analyzed by a NYS Certified Laboratory for EPA Methods 8021 and 8270(B.N.).

Please arrange to have the sample analysis and soil disposal documentation submitted to the NYSDEC investigator for the above referenced spill, Matthew Darcangelo, who can be reached at (516) 444-0336.

SECTION 4 TRANSPORTER 2 - (Complete if applicable)

a) Transporter's Name:
b) Transporter's Address:
c) Telephone Number: ( )
d) Vehicle License No./State:
e) Trailer or Container No.:
f) Name of Driver (print/type)
g) I hereby warrant that the above named and described material was received on the date of receipt referenced below.
Signature of Driver — Date of Receipt
h) I hereby warrant that the above named and described material was delivered on the delivery date referenced below.
Signature of Driver — Date of Delivery

SECTION 5 DESTINATION (Disposal Facility)

a) Disposal Facility's Name: Chambers Inc
b) Physical Address: Fredonia, NY
c) Telephone Number: (607) [illegible]
d) Mailing Address:
e) Name of Disposal Facility's Authorized Agent (print/type)
f) The material delivered by the Transporter has been received at the Disposal Facility.
Signature of Disposal Facility's Authorized Agent — 2-5-99 Date of Receipt
g) The material delivered by the Transporter has been rejected for disposal at the Disposal Facility.
Signature of Disposal Facility's Authorized Agent — Date of Rejection
Signature of Driver — Date of Return

SECTION 6 ASBESTOS (operator to complete)

"Operator" is defined as the company which owns, leases, operates, controls, or supervises the facility being demolished or renovated, or the demolition or renovation operation or both.

a) Operator's Name:
c) Telephone Number: ( )
d) Operator's Address:
f) Recommended special handling instructions and additional information:
g) Operator's Certification: I hereby warrant and declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and domestic law, regulations, ordinances, orders, rules and/or standards.

Operator's Name (print/type) — Signature of Operator's Authorized Agent — Date

Responsible Agency Name and Address:

Fenley & Nicol Environmental Inc.

Re: Spill# 98-25125
Newsday
235 Pinelawn Rd
Melville NY

Dear Mr. Darcangelo

Attached please find copies of the analytical report for the end point samples collected under the three-diesel fuel dispensers at above referenced site.

Sincerely yours

Stan Sucharski
Project Manager

SS/kb

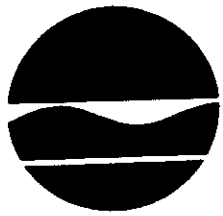
Re: Spill # 98-25125, Pinelawn Road, Melville, NY 11747

Dear Mr. McGarry:

I have reviewed the laboratory data for the soil samples collected after the excavation of soil, which occured during upgrade operations of your fuel dispenser area. The results indicate that several volatile and semi-volatile organic compounds are present above levels listed in STARS Memo #1 for groundwater quality protection. It was also reported that soil contamination was found in the area around the diesel tanks during upgrade operations, however no data from endpoint soil samples has been received by this office.

New York State Department of Environmental Conservation (NYSDEC) is directing you to perform a subsurface investigation in the vacinity of the dispensers and tank area. This investigation should identify the complete horizontal and vertical extent of the contamination. Soil samples should be collected, field screened and certain samples should be selected for laboratory analysis via EPA method 8021 and method 8270 with TCLP extraction. Based on the findings during the subsurface investigation in may be necessary to collect and analyze groundwater samples via EPA methods 8021 and 8270. Please advise me at least two days prior to conducting the investigation so that I may arrange to be present.

If you do not contact this office within ten days of receipt of this letter, this office may proceed with the investigation of the site; and the New York State Department of Law will seek reimbursement and an assessment of penalties from you according to Article 12 of the New York State Navigation Law.



Please contact me at (516) 444-0336 if you have any questions.

Sincerely,

Matthew J. Darcangelo

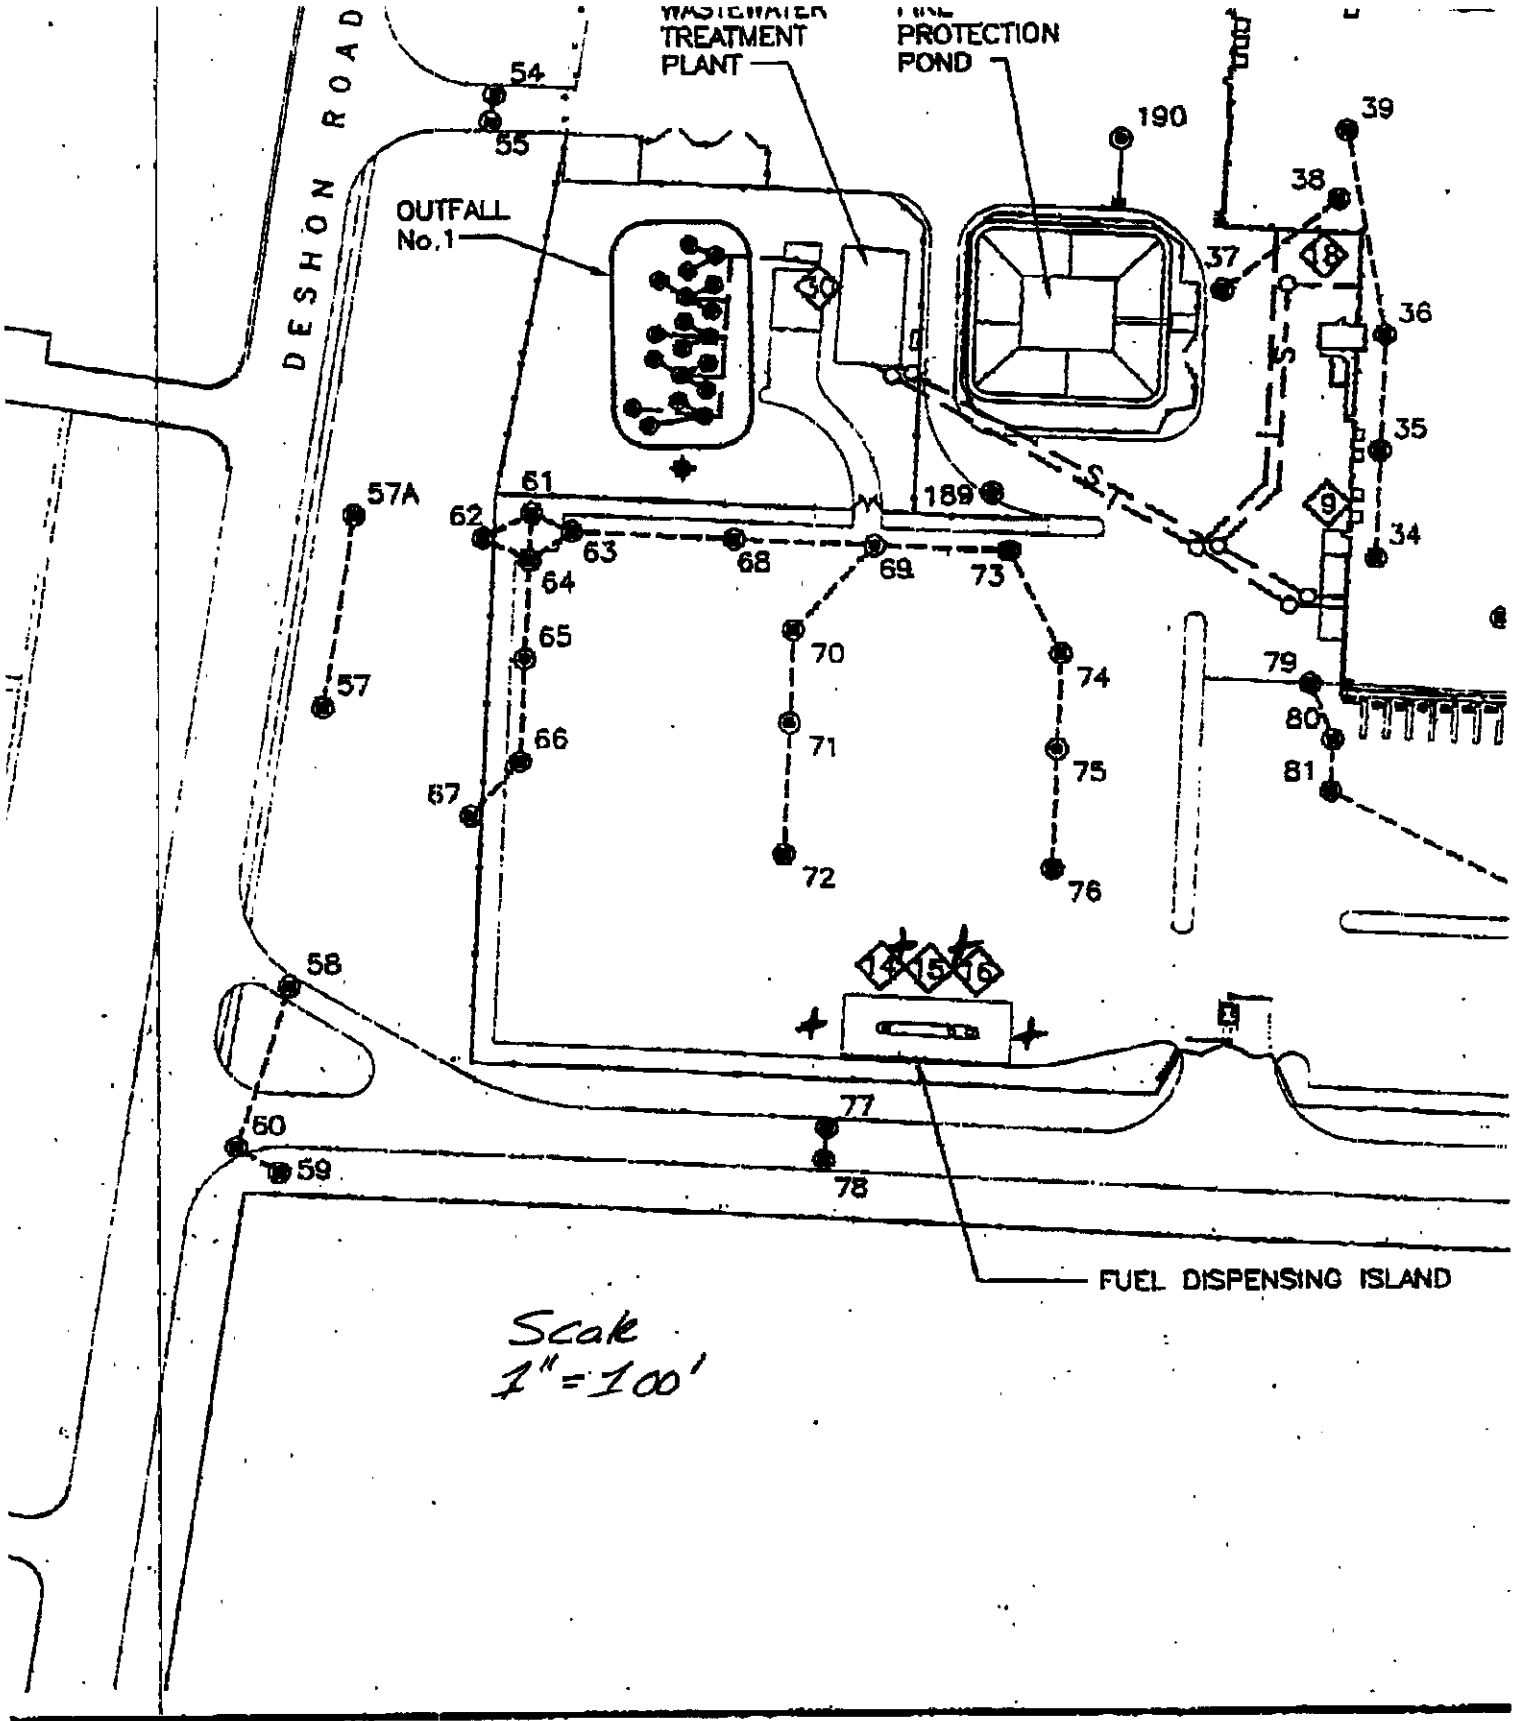
Re: Newsday, 235 Pinelawn Road, Melville, NY



Matt:

As requested, enclosed please find a diagram depicting the location of the proposed locations of the soil borings at the above-referenced site. The borings will be installed in the vicinity of the fuel dispensing island area. The borings are scheduled to be installed on Wednesday, June 30, 1999, commencing at approximately 8:00 a.m.

An estimated four (4) soil borings will be installed. Split spoon samples will be obtained in each boring at five (5) foot intervals from ground surface until three (3) consecutive "clean" samples are obtained. I will be prepared to obtain soil samples where necessary.

Please call me should you have any questions or comments.

Mark

RE: Spill # 98-25125, Newsady Fueling Facility, Pinelawn Road, Melville, NY 11747

Dear Mr. Cluff:

Based upon a review of the file, site inspections, and the information supplied on your behalf, including laboratory data and disposal documents for contaminated soil, you have completed the cleanup for the above referenced site.

This office has no further requirements for the referenced spill at this time. Should future environmental problems be discovered at this site, this office will require further action at that time. The spill file has been removed from our active spill list.

Please contact me at (516) 444-0336 if you have any questions.

Sincerely,

Matthew Darcangelo
Environmental Engineer I

Fenley & Nicol Environmental Inc.

1.0 INTRODUCTION

Fenley & Nicol Environmental (F&N) has been retained by Newsday to install and sample soil borings at the property located at 235 Pinelawn Road in Melville, New York (herein after referred to as *"the site"*). The site consists of the Newsday facility and is located along the west side of Pinelawn Road. The area surrounding the site is utilized for commercial and industrial purposes. Pinelawn Cemetery is located to the east of the subject site.

The topographic elevation of the site is approximately 90 feet above sea level (USGS 7.5 Minute Topographic Map, Amityville Quadrangle). The depth to ground water beneath the site is estimated to be approximately 42 feet. The regional ground water flow is toward the south-southeast.

The scope of work for the field portion of the assessment consisted of the installation and sampling of soil borings associated with a recent spill. The spill consisted of the identification of petroleum-contaminated soil on top of underground storage tanks during the installation of spill prevention equipment.

2.0 FIELD WORK

The installation of soil borings was performed on June 30, 1999. The fieldwork was performed under the guidance of Mr. Matthew Darcangelo, Case Manager for the NYSDEC. Figure 1 provides a Site Plan indicating the locations of each soil boring. All soil samples were obtained utilizing a hollow stem auger and a split spoon.

Soil boring B-01 was installed immediately to the northeast of the concrete tank pad. Soil samples were collected in boring B-01 at 5-foot intervals from 10 feet to 44 feet. The water table was encountered at approximately 43 feet. Soil boring B-02 was installed to the northwest of the concrete tank pad and soil-boring B-03 was installed to the southeast of the concrete tank pad. Soil samples were collected in borings B-02 and B-03 at 5-foot intervals from 14 feet to 26 feet.

3.0 SOIL BORINGS

The soils encountered during the installation of the borings consisted of a fine to medium, yellow to light brown sand with traces of pebbles, cobbles, and gravel. Each soil sample was inspected for evidence of petroleum contamination. None of the soil samples exhibited visual or olfactory evidence of contamination.

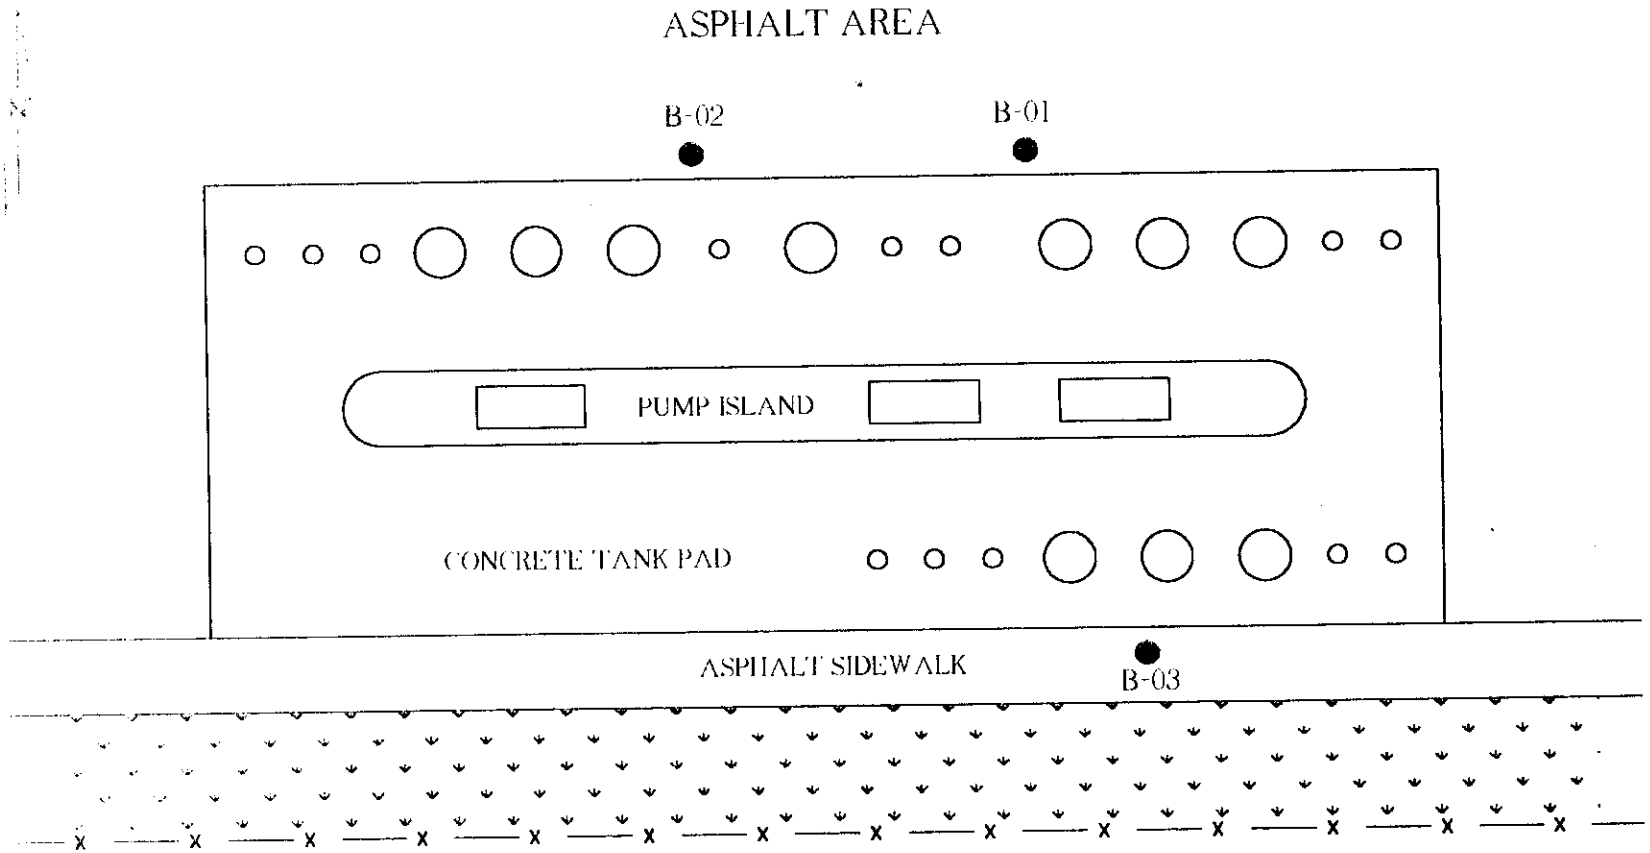
In addition to visual observations, each soil sample was screened in the field for volatile organic compounds (VOCs) utilizing a Photoionization Detector (PID). The PID has a detection limit of 0.1 parts per million (ppm). The results of the field screening are presented in **Table 1**. As Table 1 indicates, trace levels of VOCs were identified in the soil samples from 14 feet to 26 feet in soil boring B-01. No other detectable levels of VOCs were identified in the remaining soil samples. These trace levels can be attributed to background levels and should not be of any concern.

Table 1
PID Screening Results
235 Pinelawn Road, Melville, NY

Boring #	Sampling Depth (feet)	VOC Reading (ppm)
B-01	10 – 12	0.0
	14 – 16	0.3
	19 – 21	0.4
	24 – 26	2.5
	29 – 31	0.0
	34 – 36	0.0
	42 – 44	0.0
B-02	14 – 16	0.2
	19 – 21	0.0
	24 – 26	0.0
B-03	14 – 16	0.0
	19 – 21	0.0
	24 – 26	0.0

The 14 to 16 foot sample from each boring was transmitted to an outside laboratory and analyzed for VOCs in accordance with NYSDEC STARS 8021 and semi-

VOCs in accordance with NYSDEC STARS TCLP 8270. The results of these analyses indicate that no detectable levels of VOCs or semi-VOCs were identified in any soil sample. The laboratory reports from the analyses are provided as **Appendix A**.



The results of the soil borings indicate that the soils in the immediate vicinity of the underground storage tanks has not been impacted by the petroleum-contaminated soil identified on top of the underground storage tanks. Furthermore, the results of soil boring B-01 indicate that the petroleum-contaminated soil has not impacted the ground water beneath the site.

4.0 CONCLUSIONS

The results of the soil borings indicate that the petroleum contamination identified during the construction work associated with the underground storage tanks has not migrated to the soils in the immediate vicinity of the underground storage tanks or to the ground water beneath the site.

5.0 RECOMMENDATIONS

F&N recommends that the spill file be closed pertaining to the site and documentation to that effect be provided to site representatives. At the time that additional construction work is performed associated with the underground storage tanks, a new spill file should be opened and the petroleum-contaminated soil should be excavated and disposed of at that time.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by The Vertex Companies, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 04B2-4B46-8081

Project Newsday

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 04B2-4B46-8081

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

The Vertex Companies, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

235 PINELAWN ROAD
MELVILLE, NY 11747

COORDINATES

Latitude (North):	40.7634510 - 40° 45' 48.42''
Longitude (West):	73.4066480 - 73° 24' 23.93''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	634487.5
UTM Y (Meters):	4513508.0
Elevation:	105 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CIRCUITRON CORP.	***82 MILBAR BOULEVARD***	***SW 1/2 - 1 (0.968 mi.)***	***T100***	***592***

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
TRONIC PLATING CO.,	***168 CENTRAL AVENUE***	***S 1/2 - 1 (0.608 mi.)***	***S95***	***472***

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1

CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/14/2018 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/14/2018 has revealed that there are 20 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 23 NY UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2018 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 0.5 miles of the target property.

DEC Memo:	"12/02/15 1050 Hrs (A): Called Marino- he said a hose burst on a generator INSIDE their facility, but the fluid spilled outside to a

NEWSDAY (Continued) **S118460063**

drywell. He confirmed that the drywell has no outlets and a sand bottom, and that MEG is responding. 12/02/15 1050 Hrs (B): DEC informed him that this office might have RJP (currently in Farmingdale) respond when finished there. DR 12/02/15 1052 Hrs: RJP called- he just finished in Farmingdale and saw this report, so he will respond at this time. DR 12/02/15 approx noon: As per RJP- ALL the product appears to have soaked into the sand at the bottom of the drywell. He will obtain a copy of the MSDS sheet from Newsday. DR 12/2/15 1135 Hrs: RJP on location w/ MEG. No recoverable liquid, no DEC action. Documents on D2. RJP"

Remarks: "Spill contained to drive well, Miller environmental enroute for pump out of fluid."

FINDS:

Registry ID: 110004525443

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	JOSEPH MARINO
DEC Memo:	"10/11/16 @ 1130 AM -WG called Mr. Marino (Newsday LLC) -No answer. Left message. 10/11/16 @ 1230 PM--Rob was dispatched to the site. 10/11/16 1250 Hrs: RJP on location. Marino did not answer phone, RJP requested him at reception desk. Electric air compressor, 12 gal capacity of synthetic compressor oil, SAE 30 non-detergent. Failure of weld at joint, release of approx. 4 gallons. 4 gallons remains in equipment, 4 gallons recovered in buckets. Release to base of compressor, concrete floor, and floor drain. Absorbent pads placed, compressor out of service pending repairs. Drain connected to on-site wastewater collection and treatment facility. Facility operates oil/water separator and utilizes mechanical, chemical, and bacteriological treatment prior to discharge. Incident was also referred to the Water Unit. 10/13/17 1130 Hrs: RJP made call to Marino. Surface spill cleaned up, equipment repaired and returned to service, no issues noted with water treatment facility. No Further Action. RJP. "
Remarks:	"the spill went into the waste treatment plant that will go into underground pools. The cleanup is pending. It would be process or clean in the treatment plant."

FINDS:

Registry ID: 110000807761

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

NEWSDAY INC (Continued) **1000378809**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FINDS:

Registry ID: 110004337511

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019617887

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"***THIS SITE IS JUST NORTH OF THE HUNTINGTON/BABYLON TOWN LINE. WHEN PINELAWN CROSSES INTO BABYLON, IT BECOMES WELLWOOD AVE.*** DEC INFORMED HIM WE MUST INSPECT THE TANK AND EXCAVATION, THAT WE DID NOT HAVE AN INSPECTOR AVAILABLE TODAY, AND THAT HE SHOULD CALL THIS OFFICE TOMORROW TO DISCUSS THE SCHEDULING OF THE INSPECTION. DEC FURTHER INFORMED HIM THAT HE COULD HAVE THE TANK EMPTIED, REMOVE THE TANK, AND LEAVE THE TANK ON SITE AND THE EXCAVATION OPEN PENDING INSPECTION IF HE FELT IT WAS SAFE TO DO SO. 6/18/08 TJD 1400-1500 Site inspection. Excavation contractor (Tully Drainage) onsite

CLARE ROSE (Continued) **S109208314**

completing installation of sanitary system (cesspool rings). Upon initial notification, DEC Dave Raymond required contractor to schedule inspection with DEC prior to closure of tank grave. Contractor did not follow DEC directive and installed sanitary system in area of tank grave. Site supervisor for Tully (Mike Lucia) refused to provide specific information regarding former tank location stating that no spill occurred and DEC was wasting its time. DeMeo contacted Claire Rose representative (Patrick Costanzo) who provided contact information to Nelson & Pope surveyor (Tom Lembo) who was onsite for removal. Nelson & Pope was contacted and provided additional information required to access reported spill event including: SCDOH inspector visited site following tank removal, ESI was contractor who pumped tank & site plan was updated to include former tank location. A copy of updated site plan was requested. DEC contacted SCDOH Bob Seafarth stated his inspector (Zachary Baldwin) was onsite for removal and he would forward a copy of tank removal report. 6/19/08 TJD T/C with Joe Parisi @ ESI. Joe states he was hired to pump liquid contents from tank upon its discovery. He further states tank was filled to capacity with water following pump out he remained onsite for tank removal. Tank reported to be in good condition with no reported holes. 4/30/09 TJD File review. Updated survey depicting tank location received from Nelson & Pope. Tank removal checklist received from SCDOH no contamination noted. Based upon review of available information no further action is required.
TOM LEMBO NELSON & POPE 631-427-5665 C 516-524-3535 JANET 854-2513 BOB 854-2518 PATRICK CONSTANZO SAFETY 631-454-2337 X155 MIKE LUCION ZACHARY BALDWIN "

Remarks: "THEY WERE EXCAVATING FOR A NEW CESSPOOL AND ENCOUNTERED A PREVIOUSLY ABANDONED TANK. HE BELIEVES IT MAY BE 1000 GAL IN SIZE. THE TANK CONTAINED WATER AND HAD A GASOLINE ODOR, AND SOME OF THE WATER INSIDE THE TANK SPILLED INTO THE EXCAVATION. HE HAD INITIALLY CALLED JOE PARISI OF ESI, WHO ADVISED HIM TO CALL DEC."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110058270115

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110006448692

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110019770666

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110004390631

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110004344246

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019180358

Environmental Interest/Information System

GENOVESE DRUG STORES HQ (Continued) **1000343746**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Evaluation Action Summary:
Evaluation date: 12/01/2000
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: 03/05/2001
Evaluation lead agency: State

Evaluation date: 02/22/1991
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

Evaluation date: 02/22/1991
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: 04/24/1991
Evaluation lead agency: State

FINDS:

Registry ID: 110004450969

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019835749

Environmental Interest/Information System
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"07/18/17 1300 Hrs: Checked Google Earth and the internet- this appears to be a commercial/office building (apparently medical). DR 07/18/17 1305 Hrs: Left message for Schlageter. DR 07/18/17 1305 Hrs (A): Schlageter called- he pointed out that this occurred 7/5, and said he just found out that the incident was reported to the local officials but not to DEC. 07/18/17 1305 Hrs (B): There was an out-of-service diesel tank ('capacity perhaps 15-20gal?') and generator on the roof. The tank leaked, and some fuel stayed on the roof but some entered a drywell. 07/18/17 1305 Hrs (C): 'There were some odors inside at that time, and AARCO etc cleaned the roof, but he was just informed that the drywell had been impacted.' 07/18/17 1305 Hrs (D): Schlageter is also notifying the Suffolk County Health Department, and does not know when the cleanup of the drywell will be performed. 07/18/17 1305 Hrs (E): DEC directed him to call back tomorrow to determine who had been assigned to the case. DR CONTAMINATED SOIL EXCAVATED, CLEANUP COMPLETE, NO FURTHER ACTION REQUIRED"
Remarks:	"roof top generator leaked fuel to gutter and into dry well/clean up pending"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110004562875

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004551173

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

FALA CCG INC (Continued) **1001460264**

corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FINDS:

Registry ID: 110004566979

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By: JBSWARTO
Site Description: Location: This site is a former metal forming facility consisting of a one-story industrial building on a 2.28 acre parcel. The Building is located on Smith Street in the unincorporated Hamlet of East Farmingdale, Suffolk County. Site Features: The Minmilt site is located on the glacial outwash plain of southern-central Long Island. The geology consists mailnly of unconsoliated sand deposits intermixed with smaller, generally non-continuous lower permiability clay and/or silt mix confining units. The upper aquifer is the Upper Glacial aquifer that overlays the Magothy aquifer. Current Zoning and Land Use: The area surrounding the Minmilt Realty site has been zoned entirely commercial/industrial. All the surrounding structures are commercial/industrial as well. Past Use of The Site: Industrial activities at this site included the use of vapor degreasers containing tetrachloroethylene or perchlorethene(PCE). The spent degreaser solvent was disposed into a leaching pool on-site without a SPDES permit. Nature and Extent of Contamination: Minmilt Realty signed an original order with Suffolk County to clean out the dry well. Subsequently, a Consent Order (CO) was signed on November 7,

MINMILT REALTY (HYGRADE METAL MOULDING) (Continued) **S106780916**

1994 between the NYSDEC and the current owner to conduct a RI/FS and an Interim Remedial Action (IRM). The RI found that soils and groundwater on the east side of the building were highly contaminated with PCE. An IRM consisting of soil vapor extraction (SVE) and groundwater pump and treat were installed in February 1997 and have run continuously, since that time. The PRP investigation of the off-site groundwater plume commenced in December 1998. The remedial systems continue to operate and perform successfully with periodic routine maintenance. In summary, the off-site RI/FS reports were approved. The ROD calling for the continued operation of the SVE system to for soil contamination and the extraction and treatment of the groundwater to for groundwater contamination was signed on March 3, 2002. The potential responsible party (PRP) signed the remedial design and remedial action (RD/RA) order on consent with DEC shortly thereafter. The groundwater pump and treat system contains the plume and continues to contain and remove PCE from the Upper Glacial and Magothy aquifers. Operation, maintenance and monitoring. The shallow monitoring wells on site and downgradient of the source area have cleaned by orders of magnitude and are now below, or are approaching, groundwater standards. Vapor phase activated carbon treatment was removed from the SVE off gas in April 1999 as it was no longer required based on Air Guide 1 stack emission review. The PRPs investigated the potential for soil vapor intrusion into buildings in the area to the satisfaction of NYSDEC/NYSDOH. Results indicated that mitigation for vapor intrusion would not be required. Current Status: All the program elements are in place that allowed the site to be reclassified to class 4. This means the remedial program specified in the ROD is in place and operating and performing successfully. The continued operation, maintenance and monitoring (O,M&M) will be required. Once the remedial system is finished, and additional vapor intrusion testing completed per DEC and DOH requirements, the Minmilt Realty site will be delisted.

Env Problem: Soils and groundwater at the site have been contaminated. The PRP implemented an SVE and near offsite groundwater pump and treat IRM. The O&M data shows that the SVE is nearly complete in removing PCE from soils. As of December 2016, more than 5,500 pounds of PCE has been removed via the soil vapor extraction system. The system continues to operate to remove any resiual vapors to prevent the potential for soil vapor intrusion. As of December 2016, more than 80,000 pounds of solvent have been removed via the groundwater extraction and treatment system. Vertical profiling verified that the clay layers inhibited the vertical migration of the Minmilt Plume to the deeper part of the Magothy aquifer in the vicinity of the source area.

Health Problem: Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not coming into contact site related contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The soil vapor extraction system in operation at the site has been successful in preventing the indoor air quality of the on-site building and an adjacent off-site building from being affected by the contamination in soil vapor.

Site Description: This is now Registry site # 152147. This site is a metal forming facility consisting of a one-story industrial building on a 2.28 acre parcel. Industrial activities at this site included the use of vapor degreasers containing tetrachloroethylene (PCE). The spent degreasers were disposed into a leaching pool on-site without a SPDES permit. A Consent Order (CO) was signed on November 7, 1994 between the NYSDEC and the current owner to conduct a RI/FS and an IRM. The RI found that soils on the east side of the building were highly contaminated with PCE at levels up to 820 ppm, and groundwater contained PCE at levels up to 140,000 ppb. An Interim Remedial Measure (IRM) consisting of soil vapor extraction (SVE) and groundwater pump and treat were installed in February 1997 and are now operating. The Suffolk County Department of Health Services installed a monitoring well and took hydro punch samples on Central Avenue, about 1500 feet downgradient of the site, in July 1997. This sampling revealed an extensive PCE plume migrating from the site. An investigation of the off-site groundwater plume commenced in December 1998. Vapor phase activated carbon treatment was removed from the SVE off gas in April 1999 as it was no longer required. The groundwater component is containing the plume and is presently removing a significant mass of PCE from the Upper Glacial and Magothy aquifers. The off-site RI/FS was approved and a ROD calling for the continued operation of the SVE system to address the soil contamination and the extraction and treatment of the groundwater to address the groundwater contamination was signed on March 3, 2002. Operation, maintenance and monitoring continues and shallow monitoring wells on site and downgradient of the source area are beginning to clean up.
Env Problem: Minmilt used a vapor degreaser with Tetrachloroethlyene (PCE) that discharged directly to a drywell on the east side of the building. The PRP implemented an SVE and near offsite groundwater pump and treat IRM. The O&M data shows that the SVE is nearly complete in removing PCE from soils. To date, more than 5,200 pounds of PCE has been removed from the soils and 20,000 pounds from the groundwater. Vertical Profiling verified that the clay layers inhibiting the vertical migration of the Minmilt Plume in the vicinity of the source were continuous.

Site Description:	Site Location: The site is located in both Melville, in the Town of Huntington and Farmingdale within the Town of Babylon, Suffolk County. The current site address is 50 Marcus drive, Huntington, Suffolk County. Prior to the site being redeveloped by the volunteer, the site's address was 333 Smith Street, Farmingdale, Suffolk County. Site Features: The site is approximately 13.0 acres in size. The site is bordered to the north by Marcus Drive and to the south by Smith Street. The property is occupied by a two-story 164,000 square foot building. The volunteer purchased the property and converted the vacated manufacturing building into an office building. The remainder of the site consists of asphalt and concrete paved parking area with limited area of grass cover. Current Zoning/Use: The property is zoned for commercial use and is occupied by an office building in a primarily commercial urban area. Past Use of the site: The site was used by a textile manufacturer (Fairfield Noble) that apparently did some dry cleaning in their operations until 1969. The site was then by Gould Electronics for the manufacture of circuit boards. In the northwest corner of the former building, the soils underlying the former dry cleaning area were contaminated by tetrachloroethylene (PCE). The separator wastes were apparently discharged next to the dry cleaning machines in small hand-dug dry wells inside the building. Some PCE wastes were also discharged to outdoor dry wells. Additionally, run-off from the parking lots entered into various dry wells that resulted in petroleum and metals contamination. Finally, both former operations discharged wastewater to a network of pools along the western side of the site. Discharge was managed via a State Pollutant Discharge Elimination System (SPDES) permit. Some of the pools had antimony and cadmium contamination from dyes. The areas identified as impacted have been remediated as part of the VCP. Site Geology/Hydrogeology: The site is primarily flat and soils consist of fine and medium sands. Depth to groundwater is approximately 45 feet below grade and flows south/southeast, consistent with regional groundwater flow. The project is currently entering into the Site Management Phase. The FER and SMP were approved on April 20, 2016.
Env Problem:	Nature and Extent of Contamination: Soil contamination in dry wells, leaching pools and in soils by the northwestern portion of the site building have been remediated. Periodic on-site groundwater monitoring has been terminated due to very minimal contributions from this site. In the fall of 2009, the existing sub-slab depressurization system was modified from passive to active mode of operation in order to improve the amount of sub-slab vapors being captured by the system. The system was installed to address the elevated concentrations of tetrachloroethene present beneath the slab

STELLAE INTERNATIONAL (Continued) **1001961566**

	of the building. Based on the Indoor Air Quality (IAQ) sampling conducted in March 2010, when operating, the system is effectively preventing any residual sub-slab vapors from entering the occupied building and adversely effecting indoor air quality. The building is currently vacant. Prior to occupancy the system, which was recently repaired, will be tested and evaluated for mitigation effectiveness. The potential exist for residual soil contamination to remain under the building. Any residual soil that may exist will be addressed by the excavation plan work plan which is part of the approved site management plan.
Health Problem:	People are not drinking contaminated water because the area is served by a public water supply that is not affected by this contamination. People will not contact contaminated soils unless they dig below the surface. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a concern at this time. Furthermore, a sub-slab depressurization system (systems that ventilate/remove the sir beneath the building), and an epoxy sealant on the concrete building slab are in place to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building should the building become re-occupied in the future. Environmental sampling indicates that vapor intrusion is not a concern for off-site structures.

Site Code: 58757
Site Description: Site Location: The site is located in both Melville, in the Town of Huntington and Farmingdale within the Town of Babylon, Suffolk County. The current site address is 50 Marcus drive, Huntington, Suffolk County. Prior to the site being redeveloped by the volunteer, the site's address was 333 Smith Street, Farmingdale, Suffolk County. Site Features: The site is approximately 13.0 acres in size. The site is bordered to the north by Marcus Drive and to the south by Smith Street. The property is occupied by a two-story 164,000 square foot building. The volunteer purchased the property and converted the

STELLAE INTERNATIONAL (Continued) **1001961566**

vacated manufacturing building into an office building. The remainder of the site consists of asphalt and concrete paved parking area with limited area of grass cover. Current Zoning/Use: The property is zoned for commercial use and is occupied by an office building in a primarily commercial urban area. Past Use of the site: The site was used by a textile manufacturer (Fairfield Noble) that apparently did some dry cleaning in their operations until 1969. The site was then by Gould Electronics for the manufacture of circuit boards. In the northwest corner of the former building, the soils underlying the former dry cleaning area were contaminated by tetrachloroethylene (PCE). The separator wastes were apparently discharged next to the dry cleaning machines in small hand-dug dry wells inside the building. Some PCE wastes were also discharged to outdoor dry wells. Additionally, run-off from the parking lots entered into various dry wells that resulted in petroleum and metals contamination. Finally, both former operations discharged wastewater to a network of pools along the western side of the site. Discharge was managed via a State Pollutant Discharge Elimination System (SPDES) permit. Some of the pools had antimony and cadmium contamination from dyes. The areas identified as impacted have been remediated as part of the VCP. Site Geology/Hydrogeology: The site is primarily flat and soils consist of fine and medium sands. Depth to groundwater is approximately 45 feet below grade and flows south/southeast, consistent with regional groundwater flow. The project is currently entering into the Site Management Phase. The FER and SMP were approved on April 20, 2016.

Env Problem: Nature and Extent of Contamination: Soil contamination in dry wells, leaching pools and in soils by the northwestern portion of the site building have been remediated. Periodic on-site groundwater monitoring has been terminated due to very minimal contributions from this site. In the fall of 2009, the existing sub-slab depressurization system was modified from passive to active mode of operation in order to improve the amount of sub-slab vapors being captured by the system. The system was installed to address the elevated concentrations of tetrachloroethene present beneath the slab of the building. Based on the Indoor Air Quality (IAQ) sampling conducted in March 2010, when operating, the system is effectively preventing any residual sub-slab vapors from entering the occupied building and adversely effecting indoor air quality. The building is currently vacant. Prior to occupancy the system, which was recently repaired, will be tested and evaluated for mitigation effectiveness. The potential exist for residual soil contamination to remain under the building. Any residual soil that may exist will be addressed by the excavation plan work plan which is part of the approved site management plan.

Health Problem: People are not drinking contaminated water because the area is served by a public water supply that is not affected by this contamination. People will not contact contaminated soils unless they dig below the surface. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a concern at this time. Furthermore, a sub-slab depressurization system (systems that ventilate/remove the sir beneath the building), and an epoxy sealant on the concrete building slab are in place to prevent the

STELLAE INTERNATIONAL (Continued) **1001961566**

indoor air quality from being affected by the contamination in soil vapor beneath the building should the building become re-occupied in the future. Environmental sampling indicates that vapor intrusion is not a concern for off-site structures.

subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a concern at this time. Furthermore, a sub-slab depressurization system (systems that ventilate/remove the sir beneath the building), and an epoxy sealant on the concrete building slab are in place to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building should the building become re-occupied in the future. Environmental sampling indicates that vapor intrusion is not a concern for off-site structures.

Site Description: Site Location: The site is located in both Melville, in the Town of Huntington and Farmingdale within the Town of Babylon, Suffolk County. The current site address is 50 Marcus drive, Huntington, Suffolk County. Prior to the site being redeveloped by the volunteer, the site's address was 333 Smith Street, Farmingdale, Suffolk County. Site Features: The site is approximately 13.0 acres in size. The site is bordered to the north by Marcus Drive and to the south by Smith Street. The property is occupied by a two-story 164,000 square foot building. The volunteer purchased the property and converted the vacated manufacturing building into an office building. The remainder of the site consists of asphalt and concrete paved parking area with limited area of grass cover. Current Zoning/Use: The property is zoned for commercial use and is occupied by an office building in a primarily commercial urban area. Past Use of the site: The site was used by a textile manufacturer (Fairfield Noble) that apparently did some dry cleaning in their operations until 1969. The site was then by Gould Electronics for the manufacture of circuit boards. In the northwest corner of the former building, the soils underlying the former dry cleaning area were contaminated by tetrachloroethylene (PCE). The separator wastes were apparently discharged next to the dry cleaning machines in small hand-dug dry wells inside the building. Some PCE wastes were also discharged to outdoor dry wells. Additionally, run-off from the parking lots entered into various dry wells that resulted in petroleum and metals contamination. Finally, both former operations discharged wastewater to a network of pools along the western side of the site. Discharge was managed via a State Pollutant Discharge Elimination System (SPDES) permit. Some of the

STELLAE INTERNATIONAL (Continued) **1001961566**

pools had antimony and cadmium contamination from dyes. The areas identified as impacted have been remediated as part of the VCP. Site Geology/Hydrogeology: The site is primarily flat and soils consist of fine and medium sands. Depth to groundwater is approximately 45 feet below grade and flows south/southeast, consistent with regional groundwater flow. The project is currently entering into the Site Management Phase. The FER and SMP were approved on April 20, 2016.

Env Problem: Nature and Extent of Contamination: Soil contamination in dry wells, leaching pools and in soils by the northwestern portion of the site building have been remediated. Periodic on-site groundwater monitoring has been terminated due to very minimal contributions from this site. In the fall of 2009, the existing sub-slab depressurization system was modified from passive to active mode of operation in order to improve the amount of sub-slab vapors being captured by the system. The system was installed to address the elevated concentrations of tetrachloroethene present beneath the slab of the building. Based on the Indoor Air Quality (IAQ) sampling conducted in March 2010, when operating, the system is effectively preventing any residual sub-slab vapors from entering the occupied building and adversely effecting indoor air quality. The building is currently vacant. Prior to occupancy the system, which was recently repaired, will be tested and evaluated for mitigation effectiveness. The potential exist for residual soil contamination to remain under the building. Any residual soil that may exist will be addressed by the excavation plan work plan which is part of the approved site management plan.

Health Problem: People are not drinking contaminated water because the area is served by a public water supply that is not affected by this contamination. People will not contact contaminated soils unless they dig below the surface. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a concern at this time. Furthermore, a sub-slab depressurization system (systems that ventilate/remove the sir beneath the building), and an epoxy sealant on the concrete building slab are in place to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building should the building become re-occupied in the future. Environmental sampling indicates that vapor intrusion is not a concern for off-site structures.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"ROUTINE REMOVAL OF 2-7500 GAL TANKS 12/07/07: CALLED JR HOLZMACHER- THE TANKS WERE OK. LESS THAN 1 GAL OF OIL LEAKED OUT OF A LINE DURING THE REMOVAL. APPROXIMATELY 8CY OF SOIL WAS REMOVED AND ENDPOINT SAMPLES WERE TAKEN. THE SUFFOLK COUNTY HEALTH DEPARTMENT(ZACH BALDWIN) WAS ON SITE. 12/13/07: Left message for Baldwin- requested copy of his report. 12/26/07: Again left message for Baldwin. 01/16/08: Baldwin left message- looking for the report. 01/31/08 (A): Received Holzmacher's report. ACCORDING TO THE REPORT, MIKE SEAMAN OF SCHD WAS ON SITE TO INSPECT THE FIRST TANK, AND BALDWIN REPLACED HIM TO INSPECT THE SECOND TANK. 01/31/08 (B): It said the tanks were 8,000gal each, not 7,500gal and were laying adjacent to each other. Both were reportedly intact, and endpoint samples were taken from the tank bed. The endpoint data was acceptable. 01/31/08 (C): The report also said an unused fill line was removed FROM ALONGSIDE THE TANKS, and it was from this line that the oil spilled."
Remarks:	"while removing tank there was oil left in a line and it spilled out"

Record Upd: 05/17/2017
Updated By: JBSWARTO
Site Description: Location: The former Cantor Brothers Site is located at 55 Engineers Lane in Suffolk County, the Town of Babylon in the unincorporated Hamlet of East Farmingdale. Site Features: The former Cantor Brothers Site (site) was a chemical repackaging and handling facility that had been in operation since 1964. The facility building is located in a flat, industrial park setting. Current Zoning/Use: The zoning for this site is commercial/industrial and residential use in this area is prohibited by the Town of Babylon. The former Cantor Building is surrounded by manufacturing and commercial facilities. The current use of the property is warehousing. Past Use(s) of the Site: Substances including organic solvents, creosote and fuel oils were previously observed on the ground surface as a result of leaks from drums and storage tanks. Site inspections by the Suffolk County Department of Health Services (SCDHS) documented numerous spills, illegal discharges and improper storage conditions beginning in 1980. SCDHS arranged to have five monitoring wells installed near the southern boundary of the site. Phase I and Phase II Investigations were completed. Operations at the facility ceased in 1990 and the Responsible Party filed for bankruptcy in 1993. An Interim Remedial Measure (IRM) Investigation was completed in 1997, after the NYS Attorney General's Office represented the NYSDEC in Bankruptcy Court seeking funding for the investigation. The final IRM Summary Report lead to a final agreement and a Stipulated Order for final site remediation. Money totaling $200,000 from the bankruptcy proceedings was set aside in escrow to cover the storm drain cleaning and soil vapor extraction (SVE) remediation programs at the site. These activities were completed using escrow monies under the SSF program. The SVE system operated from 1998 until 2001. The storm drain cleaning was completed in 1998. A Record of Decision was signed in March of 2000. Remedial work involved the removal of soils contaminated with semi-volatile organic compounds from discrete locations on the south side of the building. Installation of a sub-slab depressurization system was completed in 2005. This system ran for eight years and was subsequently removed by new tenants in 2013. A Voluntary Cleanup Agreement (VCA), signed by the current owner, was the mechanism utilized to complete the site remedial work and issue a release to the volunteer. Site Geology and Hydrogeology: The site is located on the glacial outwash plain of the south shore of Long Island. The underlying formation consists mainly of fine sands intermixed, at varying depths of low permeability units, mainly of clay, that exist in continuous and non-continuous segments. The shallow groundwater aquifer is known as the Upper Glacial Aquifer. This overlies the next significant hydro-geologic unit known as the Magothy Aquifer. General groundwater flow is to the south southeast.
Env Problem: Remediation at the site is complete and there are no environmental concerns associated with this site. Prior to remediation, the primary contaminants of concern were non-chlorinated volatile organic compounds.
Health Problem: Soil vapor intrusion is a process by which contaminants in the soil vapor (air spaces within the soil), may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Given the levels of volatile organic compounds detected beneath the on-site building, there is a potential for people to inhale site-related contaminants

CANTOR BROTHERS (Continued) **S104541575**

in indoor air through soil vapor intrusion. However, sampling results indicate the levels detected in indoor air are commonly found in similar structures and do not represent a current health concern. Monitoring of the on-site structure will continue to ensure that the indoor air quality is not impacted. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Site Description:	This site was a Class 2 Registry site (#152021) at the time of the Volunteer's (LJM Associates) application. Cantor Brothers was a chemical repackaging and handling facility until 1990. The PRP filed for Bankruptcy in 1993. The site is surrounded by manufacturing and commercial facilities. It consisted of a building with drum storage

CANTOR BROTHERS (Continued) **S104541575**

areas, and 16 underground tanks. Organic solvents, creosote, and fuel oils have been observed leaking from drums and storage tanks at the facility. Numerous spills, illegal discharges, and improper storage conditions have been documented since 1980. Investigation showed the presence of VOC soil contamination. The NYSDEC obtained $200,000 in contractual funds from Bankruptcy Court settlement to to cover storm drain cleaning and soil vapor extraction (SVE) remediation. LJM Associates, the new owner, entered the Voluntary Program to take over O&M of the SVE system upon depletion of the contractual escrow funds. The SVE system operated since its construction in 1998 until 2001. The storm drain cleaning was completed in 1998. A Record of Decision was signed in March of 2000. Remedial work since that time has involved the removal of soils contaminated with semivolatile organic compounds from discrete locations on the south side of the building. Installation of a sub-slab depressurization system was completed in 2005. The volunteer submitted a revised work plan to test whether the SSD system is still required. The consultant hired by the volunteer completed the soil Vapor Investigation (SVI) and the SVI report was approved by the DEC (11/2014). The subsequent Voluntary Cleanup Agreement (VCA) sampling included the necessary confirmatory sampling of the sub-slab depressurization (SSD) system to allow for the site reclassification determination. The Minmilt Realty site is adjacent to the former Cantor Brothers building. Monitoring for soil vapor and testing adjacent buildings for soil vapor intrusion fell under the Minmilt Realty site. Therefore, this concern has been addressed.

Env Problem: Historically Organic solvents, fuel oil and creosote leaked from drums and tanks and contaminated soils and drywells on site. The contaminated storm drains were addressed by excavation and removal of contaminated sediments. Contaminated soils beneath and near the site building were addressed by a soil vapor extraction (SVE) system.

Health Problem: Soil vapor intrusion is a process by which contaminants in the soil vapor (air spaces within the soil), may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Given the levels of volatile organic compounds detected beneath the on-site building, there is a potential for people to inhale site-related contaminants in indoor air through soil vapor intrusion. However, sampling results indicate the levels detected in indoor air are commonly found in similar structures and do not represent a current health concern. Monitoring of the on-site structure will continue to ensure that the indoor air quality is not impacted. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

FINDS:

Registry ID: 110004332623

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description: Location: The Astro Electroplating site is located in an urban portion of Suffolk County, NY. The Astro Electroplating site is located at 170 Central Avenue in the Town of Babylon, Suffolk County, New York. The 2.9-acre site is located on the north side of Central Avenue in a commercial/industrial area. Site Features: The site contains one multi-tenant industrial building. A paved parking lot surrounds the building. Astro Electroplating is an inactive electroplating facility that occupied 9,700 square feet of space at the north end of the industrial building. Current Zoning and Land Use: The site and the surrounding parcels are currently used for a combination of commercial and light industrial processes. Past Use of the Site: Astro Electroplating specialized in plating nickel, chromium and copper to pre-molded plastic components. Contamination was due to wastewater being discharged to five subsurface leaching pools. Operable Units: The site was divided into two operable units in 2007. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1)is the site soils. OU2 consists of site related groundwater. Site Geology and Hydrogeology: The upper glacial deposits are located directly below the surface and extend to a depth of 144 feet below ground surface (bgs). The soil consists primarily of coarse grained sand and is characteristic of outwash plain deposits. The water table is located at about 37 feet bgs, and flows south-southeast.
Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site known at this time include plating metals such as nickel, zinc, chromium and copper. These are the contaminants that exceed Standards, Criteria and Guidance values. OU1 & OU2: Groundwater & Soil - Investigations indicate contamination in saturated and unsaturated soils and a plume of groundwater contamination that extends south to the property border. Groundwater and soil contamination is due to wastewater discharged to leaching pools.
Health Problem: The Astro Electroplating facility’s past practice of subsurface wastewater disposal has contaminated groundwater and soil with heavy metals. In 1986, contaminated liquids and sludges were removed from

ASTRO ELECTROPLATING, INC. (Continued) **S108131276**

the former leaching pools on-site. The remedial investigation indicated soil contamination with heavy metals in the leaching pool area below 15 feet. Exposures are unlikely due to the depth of contamination. Since homes and businesses near the site are connected to public drinking water, exposure to site-related contaminants in groundwater is not expected.

Summary Details:

Conditions at proposal October 15, 1984): Tronic Plating Co., Inc. occupies 0.5 acre in Farmingdale, New York. The site is in southwestern Suffolk County, approximately l.5 miles east of the Nassau County line. Tronic occupies the southeast corner of a long building in an industrial park area. The site consists of the building, two inside above-ground storage tanks, four underground leaching pools, and a storm drain in the paved area to the northeast of the building. Tronic hasprovided electroplating and anodi ing services to the electronics industry since July 1968. State and county authorities have determined that ha ardous wastes, consisting primarily of heavy metals, were discharged from storage tanks and leaching pools on the site. The State issued a Pollutant Discharge Elimination System permit to Tronic on April l, l980. In June l980, the State issued a Consent Order to Tronic for discharging industrial wastes to ground water from leaching pools. Tronic agreed to obtain a permit and clean out the leaching pools. Tests conducted by the State on one of the leaching pools detected copper, silver, iron, inc, lead, and cadmium. Heavy metals also were detected in the storm drain. The site is in a generally flat area with an average slope of less than 3 percent. There is no surface water in the vicinity. The surrounding area is paved, and run-off flows to existing storm drains. The site is surrounded by manufacturing and commercial facilities. Large cemeteries are located to the south and east. Wells within 3 miles of the site provide drinking water to about l6,000 people and are the only water supply in the area. Status June 10, 1986): EPA is considering various alternatives for this site.

Assessment of Health:	Site-related contamination was removed from on-site leaching pits and storm drains to reduce the potential for contamination of the groundwater and exposure to contaminated soil during routine maintenance of the storm drains. The remediated areaswere backfilled with 10 to 30 feet of clean soil and subsequently paved over. Exposure to the site-related contaminants, copper,chromium, and cyanide, in groundwater is not expected since homes and businesses in the vicinity of this site are connected topublic water.
Description:	The Tronic Plating Co. operated a metal electroplating and anodizing facility at 168 Central Avenue from July 1968 to March 1984. The facility was served by four industrial leaching pools, one sanitary septic leaching pool, and one drywell. It is possible that some of the on-site storm drains may have also received discharges from the site. Contamination levels documented in the RI include sediments from storm drains and a septic system at a maximum of: cadmium at 1130 ppm; cyanide at 92 ppm; chromium at 1580 ppm; and, lead at 2,290 ppm. Borings conducted during the RI indicated that high levels of contamination were not widespread, and the groundwater investigation showed only a limited impact from the site. A soils removal action was completed in August 1993 and all known disposal areas have been cleaned to USEPA and NYSDEC approved levels. A Record Of Decision (ROD) was issued in September 1993, calling for no further action at this site. Site related groundwater contamination was limited to one shallow monitoring well. Post-remedy Groundwater monitoring was conducted by the Responsible Party following the completion of remedial activities, and all results were forwarded to the NYSDEC. The results confirmed that the remedial action was effective, and a delisting package was prepared in 1996 and finalized in 1997.

Site Description:	A former sod farm which used a buried 550 gallon tank to store waste motor oil from equipment used in their farming operation. Also pesticides were stored on site. In August 1985, Hewlett-Packard had the tank removed. During excavation, visible discoloration of surface and subsurface soil was observed. Soil samples were collected and analyzed indicating hydrocarbons, pesticides and metals. Remediation of site has been completed. Hewlett-Packard has performed 4 soil excavations, taking a total of 590 cubic yards, and 5 soil sampling events. The final soil sampling results indicate that the site has been remediated. Site has been delisted 12/89.
Env Problem:	This site has been remediated.
Health Problem:	All contamination at the site has been remediated or removed. There are no known exposures, and therefore no known health concerns

Updated By: JBSWARTO
Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area. Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west. Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 stopped the infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.
Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is

Site Description:	Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area. Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west. Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table,

I.W. INDUSTRIES, INC. (Continued) **S105054992**

and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 stopped the infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.
Health Problem:	It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Code: 55868
Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area. Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west. Historic

I.W. INDUSTRIES, INC. (Continued) **S105054992**

Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 stopped the infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.

Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

I.W. INDUSTRIES, INC. (Continued) **S105054992**

Updated By: BFJANKAU
Site Code: 55868
Site Description: Location: The I.W. Industries, Inc. site is located at 35 Melville Park Road in the Hamlet of Melville. The 6 acre site is situated in a suburban area. Site Features: The main site feature is a one-story masonry structure that covers 97,000 square feet. Paved parking lots are located to the east and west of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for industrial use and currently used for offices and warehousing. The surrounding parcels are currently used for a combination of commercial and industrial uses. The nearest residential area is approximately 0.5 miles to the west. Historic Use(s): The site was initially developed in 1966 and occupied by I.W. Industries, which manufactured threaded metal parts until 2005. Industrial wastewater (i.e. cutting oils and degreasing solvents) from site operations was discharged to on-site leaching pools until 1980's under a State Pollutant Discharge Elimination System (SPDES) permit. In 1986 site operations contained wastewater for off-site disposal. Suffolk County Department of Health Services conducted inspections at the site, which resulted in the cleaning of leaching pools in 1983 and 1984. I.W. Industries conducted initial site investigations between 1981 and 1994 and a Focused Remedial Investigation between 1994 and 1997. A Record of Decision was issued in March 2000, which selected removal of source soils from leaching pools, removal of free phase product from the top of the water table, and groundwater monitoring. In July 2000, material was removed from the selected leaching pools. As part of facility closure equipment was removed from the building, samples were collected, and contaminated material was removed from an interior trench and select leaching pools. Three leaching pools, identified as LP-1, LP-2, and LP-3, were abandoned in place and covered in January 2010 due to the depth of contamination. In 2011, an environmental easement was placed on the property. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were volatile organic compounds (xylene and toluene), semi-volatile organic compounds (benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3)perylene, fluoranthene, phenanthrene, phenol, dibenzofuran and pyrene) and metals (arsenic, cadmium, chromium, copper, iron, lead, manganese, mercury, nickel and zinc) and in groundwater were metals (chromium, iron, lead and manganese). The abandonment and capping of leaching pools LP-1, LP-2, and LP-3 stopped the infiltration of free phase product into the groundwater. Monitoring wells at the site do not contain measurable amounts of free phase product.
Health Problem: It is unlikely that people will come in contact with the contaminated soils unless they remove the concrete caps covering the leaching pools and dig through the backfill soil in the leaching pools. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Site Description: Location: The New York Twist Drill Loading Dock Area is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main facility feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Past Use of the Site: The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist

25 MELVILLE PARK ROAD (Continued) **1009234856**

drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permitted discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units (OU): The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU 01 covers on-site activities for this site which are undertaken under the Voluntary Cleanup Program (Site number V00128). Remedial actions are being performed on-site to address contamination and prevent the migration of contamination off-site in accordance with the Record of Decision, dated March 2004. Site remedial actions include reductive dechlorination, free-phase product removal and a vapor control system. OU 02 covers off-site activities, which are being conducted under the State Superfund Program. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 100 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature of Contamination: Based upon investigations conducted to date, the off-site groundwater contamination (OU02) primarily includes tetrachlorethene (PCE), trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), trans-1,2-dichloroethene, 1,1 dichloroethene, 1,1,1-trichloroethane and 1,1-dichloroethane. This site is in the site management phase and no longer presents a significant threat to the environment. Site remediation continues on-site (OU01) and groundwater monitoring continues off-site (OU02).

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion does not appear to be currently occurring off-site; however, continued monitoring of this building will determine if additional actions are needed to address future potential exposures.

1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Description:	Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit

25 MELVILLE PARK ROAD (Continued) **1009234856**

represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Code: 56832
Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to

25 MELVILLE PARK ROAD (Continued) **1009234856**

investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

#1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

Site Code: 56832
Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. Site Description: Location: The New York Twist Drill Loading Dock Area is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main facility feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Past Use of the Site: The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permitted discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units (OU): The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU 01 covers on-site activities for this site

25 MELVILLE PARK ROAD (Continued) **1009234856**

which are undertaken under the Voluntary Cleanup Program (Site number V00128). Remedial actions are being performed on-site to address contamination and prevent the migration of contamination off-site in accordance with the Record of Decision, dated March 2004. Site remedial actions include reductive dechlorination, free-phase product removal and a vapor control system. OU 02 covers off-site activities, which are being conducted under the State Superfund Program. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 100 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature of Contamination: Based upon investigations conducted to date, the off-site groundwater contamination (OU02) primarily includes tetrachlorethene (PCE), trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), trans-1,2-dichloroethene, 1,1 dichloroethene, 1,1,1-trichloroethane and 1,1-dichloroethane. This site is in the site management phase and no longer presents a significant threat to the environment. Site remediation continues on-site (OU01) and groundwater monitoring continues off-site (OU02).

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion does not appear to be currently occurring off-site; however, continued monitoring of this building will determine if additional actions are needed to address future potential exposures.

25 MELVILLE PARK ROAD (Continued) **1009234856**

remedial actions include reductive dechlorination, free-phase product removal and a vapor control system. OU 02 covers off-site activities, which are being conducted under the State Superfund Program. Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 100 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature of Contamination: Based upon investigations conducted to date, the off-site groundwater contamination (OU02) primarily includes tetrachlorethene (PCE), trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), trans-1,2-dichloroethene, 1,1 dichloroethene, 1,1,1-trichloroethane and 1,1-dichloroethane. This site is in the site management phase and no longer presents a significant threat to the environment. Site remediation continues on-site (OU01) and groundwater monitoring continues off-site (OU02).

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination that remains on-site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates soil vapor intrusion does not appear to be currently occurring off-site; however, continued monitoring of this building will determine if additional actions are needed to address future potential exposures.

Site Description: Location: The 25 Melville Park Road site is located at 25 Melville Park Road in a large commercial/industrial area immediately south of the Long Island Expressway in Melville, New York. Site Features: The main site feature is a two-story office building. Paved parking lots are located to the east and north of the building and a grass lawn is located to the south. Current Zoning/Use(s): The property is presently zoned for commercial use and currently used for offices. Historical Use(s): The site was initially developed in 1966 and occupied by the New York Twist Drill Company (NYTD) until 1984. NYTD manufactured carbon steel and other hardened metal twist drills. Operations included heat treatment with salt baths, nitriding, and vapor degreasing with chlorinated solvents. A State Pollutant Discharge Elimination System (SPDES) permit was in place from the mid 1960's to early 1980's, which permited discharging industrial wastewater from site operations to the environment. Several SPDES violations were issued to NYTD for unacceptable discharges. In 1985, the building was converted into a two-story office complex. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit #1 covers the on-site investigation and remediation being performed under a Voluntary Cleanup Agreement (Site #V00128) with a property owner not involved in the disposal. A Record of Decision (ROD) dated March 2004 selected enhanced reductive dechlorination with recovery

25 MELVILLE PARK ROAD (Continued) **1009234856**

of nonaqueous phased liquids (NAPL) as the primary components of the on-site remedy. A sub-slab depressurization system was installed and currently operational under the former manufacturing area to prevent soil vapor migration into the site building. A Site Management Plan and Environmental Easement define current site activities. Operable Unit #2 covers off-site activities, which are presented under the State Superfund Program (Site #152169). Site Geology and Hydrogeology: Glacial deposits consisting of stratified sand and gravel are present from the surface to a depth of approximately 50 feet. The Magothy formation underlies the glacial deposits and consists of fine grained sand with interbedded layers of clayey sand, silty sand, and clay. Groundwater is approximately 45 feet below ground surface and flows southeast.

Env Problem: Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include tetrachlorethene (PCE) and associated breakdown products trichloroethene (TCE), cis-1,2 Dichloroethene (DCE), and vinyl chloride (VC). Dense non-aqueous phase liquid (DNAPL) consisting mostly of PCE and light non-aqueous phase liquid (LNAPL) consisting of waste oils are being recovered by hand bailing groundwater monitoring wells located beneath the loading dock area on the eastern side of the building. Due to the DNAPL on-site, elevated concentrations of PCE have been detected in the groundwater on-site. The selected remedy, enhanced reductive dechlorination, continues to be applied at the site to reduce groundwater contamination on-site.

Health Problem: People will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/removes air from beneath the building) was installed in northeastern corner of the site building. Positive indoor air pressure serves to prevent soil vapor intrusion from occurring in the western portion of the site building. Vapor intrusion concerns are limited to this one building. Off-site contaminated groundwater and associated potential exposures are assessed as part of activities for Operable Unit 2, Site #152169.

CIRCUITRON CORP. (Continued) **1009968701**

Scoring: 2

Summary Details:

Conditions at proposal June 24, 1988): Circuitron Corp. manufactured circuit boards during 1961-86 on about 1 acre at 82 Milbar Boulevard, East Farmingdale, Suffolk County, New York. The site is in a densely populated industrial/commercialarea of Long Island east of Route 110 and the State University of New York Farmingdale Campus. The property is owned by 82 Milbar Boulevard Corp. Circuitron was a subsidiary of FEE Industries, which ADI Electronics, Inc., bought in 1984.The facility discharged thousands of gallons of metal-containing plating wastes to an underground leaching pool permitted under the State Pollutant Discharge Elimination System SPDES), to unauthori ed leaching pools beneath the floor of the plating room, and to a storm drain. After ADI Electronics purchased the facility, the Suffolk County Department of Health Services SCDHS) identified the discharge to the SPDES pool and the storm drain. Since 1984, SCDHS has issued Circuitron numerous notices of violations. On June 12, 1984, Circuitron agreed to an Order on Consent from SCDHS requiring removal of all ha ardous substances from the site. On March 7, 1985, SCDHS issued a Stipulated Agreement in which Circuitron agreed to install three monitoring wells, analy e ground water, and clean out one of the unauthori ed leaching pools. In mid-1986, the company vacated the facility without complying with all SCDHS requirements. In addition, Circuitron received one of the largest fines ever in the State for environmental pollution. The original owner has been convicted of a felony as a result of illegal waste discharges. Extensive sampling of the site by SCDHS detected heavy metals and chlorinated organic solvents in the SPDES leaching pool, the unauthori ed leaching pools, and the storm drains. Analyses of the monitoring wells installed as part of the Stipulated Agreement detected 1,1,1-trichloroethane in on-site wells downgradient of themanufacturing building. In May 1987, EPA found potentially explosive conditions at the site. From 125 to 150 drums, most unmarked and one bulging, were left hapha ardly throughout the building when it was vacated. Incompatible andreactive wastes were not segregated. Some drums were marked sulfuric acid, hydrochloric acid, sodium hydroxide, and caustic soda. Other smaller containers were strewn outside. Six concrete holding tanks containing unknown materials were belowthe floor and three aboveground storage tanks were behind the building. The aquifers underlying Long Island have been designated as Sole Source Aquifers under the Safe Drinking Water Act. At least 15 municipal wells serving over 215,000people are within 3 miles of the site, the nearest 1,000 feet in the direction ground water flows. The shallow well has been closed since 1978 due to volatile organic chemical contamination from an unknown source. The building is not fenced or guarded. Employees of other businesses in the area use the site for parking. Status March 31, 1989): EPA is preparing a workplan for a remedial investigation/feasibility study to determine the type and extent of contamination atthe site and identify alternatives for remedial action.

Site Description: Location: The Circuitron Site a 0.95-acre site and is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is flat with commercial properties on all sides. Current Zoning and Land Use: The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity. Past Use of the Site: Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron employed photographic and dry film photoresist process, silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning State Pollution Discharge Elimination System (SPDES) permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site source area, which includes soil and sediments. Operable unit 2 (OU2) OU2 consists of the on-site and off-site groundwater. Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site. Groundwater flow in both aquifers is toward the southeast.

Env Problem: Remediation at the site is complete but requires continued management. Prior to remediation, the primary contaminants of concern were heavy metals and organics in groundwater and soil. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Site Description:	Location: The Circuitron Site a 0.95-acre site and is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is flat with commercial properties on all sides. Current Zoning and Land Use: The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity. Past Use of the Site: Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron employed photographic and dry film photoresist process, silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning State Pollution Discharge Elimination System (SPDES) permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site source area, which includes soil and sediments. Operable unit 2 (OU2) OU2 consists of the on-site and off-site groundwater. Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site. Groundwater flow in both aquifers is toward the southeast.

Env Problem: Remediation at the site is complete but requires continued management. Prior to remediation, the primary contaminants of concern were heavy metals and organics in groundwater and soil. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

1 (OU1) is the on-site source area, which includes soil and sediments. Operable unit 2 (OU2) OU2 consists of the on-site and off-site groundwater. Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site. Groundwater flow in both aquifers is toward the southeast.

Env Problem: Remediation at the site is complete but requires continued management. Prior to remediation, the primary contaminants of concern were heavy metals and organics in groundwater and soil. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Site Description: Location: The Circuitron Site a 0.95-acre site and is located at 82 Milbar Boulevard in Farmingdale, Long Island, in an urban, industrial park. Site Features: The main site features include one treatment building housing the extraction and treatment system and one treatment trailer for the single integrated groundwater circulating well with an in-well vapor stripping and SVE (GCW/IVS/SVE)system. The rest of the site consists of paved, stoned or grassed areas. The site is flat with commercial properties on all sides. Current Zoning and Land Use: The site is currently inactive, and is zoned for industrial/commercial use. The surrounding parcels are currently used for a combination of commercial, industrial, and manufacturing. The nearest residential area is 0.56 miles north on Cinnamon Court. Except for the State University, there are no schools or any recreational facilities in the immediate vicinity. Past Use of the

UNITED STATES DEPT OF ENVIRONEMNTAL (Continued) **1007204997**

Site: Circuitron Corporation, a circuit board manufacturing facility operating from 1961 to 1986 and occupied a single building at this site. Circuitron employed photographic and dry film photoresist process, silk screen processes as well as some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Circuitron had received numerous warnings from both the Suffolk County Deaprtment of Health Services (SCDHS) and NYSDEC concerning State Pollution Discharge Elimination System (SPDES) permit violations and unauthorized discharges. An Order on Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the site including drums, tanks, and piping; and a groundwater quality study be performed. In 1986 Circuitron abandoned the property leaving behind various storage tanks and drums and went bankrupt. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site source area, which includes soil and sediments. Operable unit 2 (OU2) OU2 consists of the on-site and off-site groundwater. Site Geology and Hydrogeology: The Site is generally flat and has a slight slope up to the southeast of less than 1 percent. The Site elevation is approximately 85 to 90 feet above mean sea level. The uppermost aquifer, the Upper Glacial, is estimated to be 80 feet thick beneath the Site. The depth to the water table is approximately 30 feet below grade. The saturated portion of the Upper Glacial aquifer, with a thickness of 50 feet, begins at the water table and extends down to 80 feet below grade. The Upper Glacial aquifer is underlain by the Magothy aquifer which is approximately 700 feet thick in the vicinity of the Site. Groundwater flow in both aquifers is toward the southeast.

Env Problem: Remediation at the site is complete but requires continued management. Prior to remediation, the primary contaminants of concern were heavy metals and organics in groundwater and soil. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with paved, stoned or grassed areas and is fenced to restrict access. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Currently there are no occupied buildings on the site. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

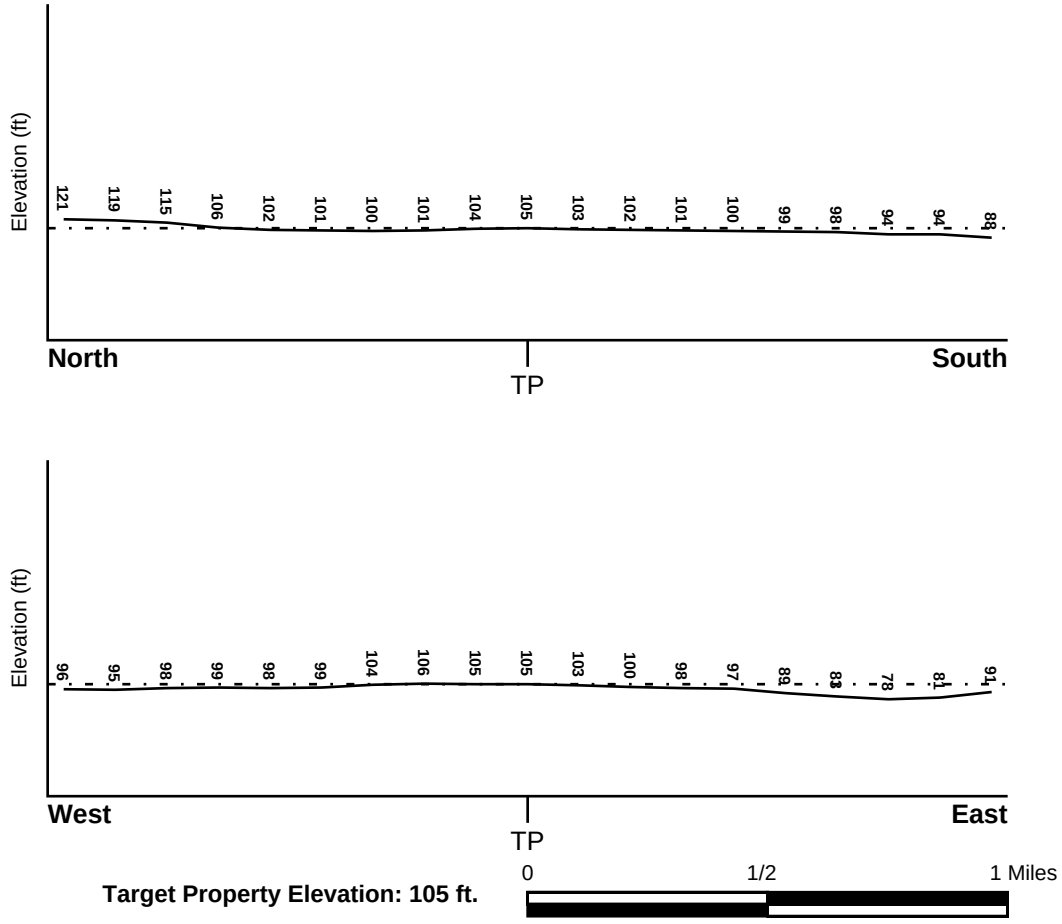
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	Tronic Plating Co., Inc
Site EPA ID Number:	NYD002059517
Groundwater Flow Direction:	South-Southeast
Measured Depth to Water:	not available.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Haven

Soil Surface Texture: highly decomposed plant material

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	1 inches	highly decomposed plant material	A-8	Highly organic soils, Peat.	Max: 42 Min: 1.4	Max: 5.5 Min: 4.5
2	5 inches	18 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5
3	1 inches	5 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5
4	18 inches	27 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
5	27 inches	59 inches	stratified gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 141 Min: 141	Max: 6 Min: 4.5

Soil Map ID: 2

Soil Component Name: Plymouth

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 5.5 Min: 3.6
2	3 inches	27 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 5.5 Min: 3.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

RESUMES OF ENVIRONMENTAL PROFESSIONALS

Christopher Cook
Project Manager

[ccook@vertexeng.com / 908-333-4303]

Highlights:

Subsurface Investigation Expertise
Nationwide Due Diligence Experience
Project Management Experience Nationwide

Expertise:

Mold
Compliance Audits
Database Review
Environmental Portfolio Reviews
Letter of Reliance
Peer Review
Phase I ESAs
Phase II LSI
Transaction Screen
Pollution Claim Management
Environmental Health & Safety
Groundwater & Soil Characterization
Hazardous Materials/Waste
PCB
Remediation & Construction Management
Site Characterization
UST Removal

Education/Training:

B.S., Environmental Health Science, University of Georgia, 2002

Biography:

Mr. Cook has 12 years experience working in the environmental consulting field. Mr. Cook's experience includes extensive work in due diligence including: Phase I Environmental Site Assessments (ESAs), Phase II Limited Subsurface Investigations, compliance audits, desktop reviews, and peer reviews. In addition, Mr. Cook has performed and completed site investigations and remedial investigations per strict United States Environmental Protection Agency (USEPA) and New Jersey Department of Environmental Protection (NJDEP) guidelines. Mr. Cook has also completed numerous water intrusion assessments, asbestos-containing material (ACM) assessments, and environmental insurance audits.

As Project Manager, Mr. Cook offers both organizational and technical support to the strategic environmental management team at VERTEX. Specific duties include: conducting site visitations and environmental investigations, project oversight, technical writing, report preparation, and client consultation. Organizational responsibilities include: scheduling, subcontractor management, and subcontractor oversight.

Licenses/Certifications:

IATA Dangerous Goods
First Aid/CPR
OSHA HAZWOPER 40 hour course
EPA/AHERA/ASHARA (TSCA Title II) Building Inspector and Assessor, 3108
OSHA 30-Hour Construction Safety Trained, May 2010
OSHA Excavation Competent Person, May 2010
Environmental Professional as defined by the USEPA in §312.10 of 40 CFR 312
OSHA Hazardous Waste Supervisor, May 2010
OSHA Confined Space Entry Supervisor, May 2010

Relevant Experience:

[PHASE I ENVIRONMENTAL SITE ASSESSMENTS] -

Mr. Cook has completed hundreds of Phase I Environmental Site Assessments for various clients including lending institutions, large corporations, and private clients on sites including filling stations, dry cleaning establishments, large industrial facilities, commercial shopping centers, and multi-family residential properties throughout the United States.

[PHASE II LIMITED SUBSURFACE INVESTIGATIONS] -

Mr. Cook has completed multiple Phase II Limited Subsurface Investigations for various clients including lending institutions, large corporations, and private clients on sites including filling stations, dry cleaning establishments, large industrial properties, commercial properties, and multi-family residential properties throughout the United States.

[SOIL/GROUNDWATER] -

Mr. Cook has field experience including oversight of installation of soil borings and groundwater monitoring wells; and sampling of soil, soil gas, groundwater, sediment, and surface water. Mr. Cook has performed and field managed sampling events at several military installations and at industrial, commercial, and residential properties.

[PROJECT MANAGEMENT] -

Mr. Cook has served as the Project Manager for various Environmental Investigation and Remediation projects. Projects included Phase I ESAs, Phase II Limited Subsurface Investigations, Asbestos Building Inspections, NJDEP Known Contaminated Sites, UST Closures/Compliance, and additional property assessments.

[COMPLIANCE AUDITING/HEALTH & SAFETY] -

Mr. Cook has experience with health and safety planning, and compliance auditing at sites including major industrial facilities.

[DUE DILIGENCE/REMEDIATION] *Walgreens, Northeast and Mid-Atlantic United States.*

Ms. Cook conducted numerous Phase I ESAs, Phase II Limited Subsurface Investigations, remedial investigations, and regulatory correspondence and compliance of numerous Walgreen pre-development sites between 2006 and 2009. Mr. Cook worked with Walgreens and associated developers to provide correspondence throughout the due diligence process.

[FEDERAL ENVIRONMENTAL SITES] -

Mr. Cook has performed environmental investigations at several Federally-regulated environmental sites. This has included the performance of regulatory audits at Federal Emergency Management Agency (FEMA) sites, investigation of soil and groundwater at Superfund sites, and multi-phase investigations at military installations.

[ENVIRONMENTAL INSURANCE AUDITS] -

Mr. Cook has performed environmental insurance-based audits for a major environmental insurance carrier including site inspections, thorough site interviews, and detailed reports to assist the client in making risk-based insurance decisions.

[INDUSTRIAL HYGIENE] -

Mr. Cook has performed several industrial hygiene evaluations included asbestos inspections, lead-based paint inspections, and water intrusion/mold inspections.

[SAFETY] -

As the Certified Site Safety Officer for the local company office, Mr. Cook was responsible for the oversight of sampling, excavation, trenching, and drilling. In addition, responsibilities included preparation of health and safety plans, job safety analyses, and maintaining safety documentation and certifications for office personnel.

[STATE REGULATED PETROLEUM SITES] -

Mr. Cook performed soil and groundwater investigations at several state regulated petroleum release sites in Georgia and Alabama.

[PHASE I BUSINESS DEVELOPMENT] -

Mr. Cook has experience in marketing, sales, management, and billing of due

diligence investigations.

[DUE DILIGENCE/SITE INVESTIGATION] *Extra Space Storage, Mahwah, New Jersey.*

Extra Space Storage, Mahwah, New Jersey. Mr. Cook performed a Phase I ESA, Phase II Limited Subsurface Investigation, and subsequent NJDEP-required investigations under the NJDEP Site Remediation Program at a historic fill site. A Response Action Outcome (RAO) was achieved for the site which brought it to regulatory closure with limited groundwater-use restrictions.

[DUE DILIGENCE/REMEDIATION] *Former Landscaping Company, Somerset, New Jersey.*

Former Landscaping Company, Somerset, New Jersey. Mr. Cook performed a Phase I ESA, Phase II Limited Subsurface Investigation, and subsequent NJDEP-required investigations under the NJDEP Site Remediation Program at a former landscaping company property. Investigation activities led to remedial activities which included removal and disposal of petroleum-impacted soil. The site received an unrestricted-use RAO in 2014.

[DUE DILIGENCE/SITE INVESTIGATION] *Flomatic, Glens Falls, New York.*

Mr. Cook performed a Phase I ESA at a large industrial facility which resulted in a Phase II Limited Subsurface Investigation and frequent Client interaction. Based on the results and regulatory discussions, the Client was able to secure a loan to purchase the property.

[PHASE 1 ESA] *Morristown Municipal Airport, Morristown, New Jersey.*

Mr. Cook a Phase I ESA on a large airport property which included inspection of greater than ten structures, review and summary of hundreds of regulatory documents, and frequent interaction with the Client. The project was completed and the Client was able to secure a loan for additional development projects.

[SOIL/GROUNDWATER INVESTIGATION AND REMEDIATION] *GE Fairfield, Fairfield, NJ*

Mr. Cook performed soil and groundwater investigation activities in an attempt to identify "hot-spot" areas for future remedial activities. Impacted source areas were identified and subsequently remediated via excavation and removal activities.

Stephen McCarthy
Vice President, Due Diligence

[smccarthy@vertexeng.com / 781-952-6067]

Highlights:

Nationwide Due Diligence Experience
Project Management Experience Nationwide

Expertise:

Asbestos
Mold
Compliance Audits
PCA
Environmental Health & Safety
Remediation & Construction Management

Education/Training:

B.A., History, Providence College, 1986

Biography:

Mr. McCarthy has over 25 years of experience in Environmental Consulting. He has routinely managed several hundred environmental assessment due diligence projects per year for financial, commercial and institutional clients. These projects included Phase I and Phase II Environmental Site Assessments, asbestos surveys and abatement, mold assessments, removal of underground storage tanks and site investigations.

As Vice President, Mr. McCarthy is responsible for project and staff management, document review, quality control and client management. He is responsible for sales, client interaction, proposal preparation and quality assurance of product. In addition, Mr. McCarthy is also responsible for managing the set up and timely completion of due diligence services including Phase I ESAs, planning and management of Phase II subsurface investigations and remediation projects. Specifically this work includes observation of properties and operations, historic site research, delineation of contaminated media, coordinating UST removals, oversight of excavation activities, development of remediation strategies and serving as the liaison between clients, contractors and regulatory agencies.

Licenses/Certifications:

OSHA 40 Hour HAZWOPER

Relevant Experience:

[PHASE I ESAS] *Wisconsin*

Prepared Phase I Environmental Site Assessmets to assess seven gasoline stations located in Wisconsin. Project included review of the site history and regulatory records to evaluate the potential for recognized environmental conditions in connection with the sites.

[PHASE I ESA AND PCA] *12-Story Multi-Tenant Office Building, Philadelphia, PA.*

Mr. McCarthy managed and oversaw all aspects of a Phase I ESA and Property Condition Assessment (PCA) performed at an 12-story multi-tenant office building located in Philadelphia. The site had a long history of industrial operations dating back to the 1890s. Responsibilities included staff/project management, document review and quality control and client interface on all aspects of the project.

[PHASE I ESAS] *35 Site Gasoline Portfolio*

Prepared Phase I Environmental Site Assessmets to assess 35 gasoline stations located in four states. Project included review of the site history and regulatory records to evaluate the potential for recognized environmental conditions and any obvious regulatory compliance issues in connection with the sites.

[PORTFOLIO EVALUATION] *New Jersey Gas Station Portfolio*

As part of a plan acquistion of 17 gasoline stations in New Jersey, VERTEX was retained to review the environmental reports for each of the gasoline stations to evaluate known release cases as well as potential unknown issues and provide a risk quantification based on review of the avaialble documentation. In addition, VERTEX conducted a review and evaluation of remedial cost estimates that were prepared for each of the facilites. Managed the team of Engineers and Scientists who performed the document review and prepared an evaluation of the portfolio and potential liabilities.

[ENVIRONMENTAL DUE DILIGENCE] *Nationwide Experience*

[PHASE I & II ESAs] *Nationwide Due Diligence Program, Confidential Client.* Developed and managed a nationwide due diligence program which included conducting Phase I Environmental Site Assessments (ESAs) at over 400 company owned properties to assess environmental risk. Developed a risk rating matrix, which summarized key findings from the ESAs and provided a risk quantification estimate for each property. Follow-up activities at select properties included subsurface investigations, tank closures, and removal/repair of damaged asbestos-containing materials. Responsibilities included staff/project management, document review and quality control and client interface on all aspects of the project.

[PHASE I ESAs] *Phase I ESAs of 350 properties, Confidential Client.* Coordinated and oversaw all aspects of environmental assessments of a 350-site portfolio of commercial properties nationwide. Responsibilities included staff/project management, document review and quality control and client interface on all aspects of the project.

[PHASE I ESAs/ENVIRONMETAL CHECKLIST] *Nationwide, Confidential Client.* Coordinated and oversaw all aspects of environmental assessments, including Phase I ESAs and Environmental Checklists, of over 400 commercial and residential properties nationwide. Responsibilities included staff/project management, document review and quality control and client interface on all aspects of the project.

[PHASE I ESA] *15,000 acres in Georgia, Confidential Client.* Coordinated and oversaw all aspects of a Phase I ESA completed on 15,000 acres in southern Georgia in support of a real estate transaction. Responsibilities included develop of the assessment strategy, staff/project management, document review and quality control and client interface on all aspects of the project.

[UST CLOSURE] *Pittsburgh, PA, Confidential Client.* Coordinated and oversaw all aspects of the removal of six underground storage tanks (USTs) associated with a former gasoline station and subsequent remediation of releases associated with the USTs. Responsibilities included staff/project management, document review and quality control and client interface on all aspects of the project.

[ASBESTOS ABATEMENT] *Dallas, TX.* Managed a $2 million dollar asbestos abatement project at an occupied high rise office building. Responsibilities included project design, specification preparation, conducting pre-bid conferences, collection and analysis of air samples, daily inspections of abatement contractor's work practices and consultation with owner's representative on all aspects of the abatement project.

[ASBESTOS SURVEYS] *Bank and Office Buildings, TX.* Performed asbestos-containing material surveys of a 110 building portfolio containing over 8 million square feet of space located throughout the State of Texas. Responsibilities included design of the survey strategy, on-site inspection and collection of bulk material samples, assessment of asbestos-containing materials,

interpretation of data, and preparation of final reports. Project included recommendations for further action at each facility, if warranted, development of associated cost estimates and development and implementation of an asbestos management program.

[PORTFOLIO REVIEW] *California Gas Station Portfolio*

As part of a plan acquistion of 52 gasoline stations in California, VERTEX was retained to review the environmental reports for each of the gasoline stations to evaluate known release cases as well as potential unknown issues and provide a risk quantification based on review of the avaialble documentaiton. Managed the team of Engineers and Scientists who performed the document review and prepared an evaluation of the portfolio and potential liabilities.
