IXPER® 70C Calcium Peroxide

IXPER® 70C Calcium Peroxide Granules

Application Data Sheet

Introduction

Calcium peroxide products are typically very fine powders. This allows their use in a variety of applications, including in toothpaste, for dough conditioning, and to make a slurry for injection in soil for groundwater remediation.

In other applications, however, the dust created by these fine powders causes some handling challenges. In these cases, a granular calcium peroxide product is highly desirable.

Properties

IXPER® 70C Calcium Peroxide Granules is a unique material offered by Solvay Chemicals, Inc. It is specifically designed to avoid the dust generated from handling other calcium peroxide products.

Its chemistry is similar to IXPER 75C Calcium Peroxide powder (see IXPER 75C Calcium Peroxide Properties technical datasheet for details), but the formulation provides even lower solubility in water. This leads to a further reduction in the release rate of actives, and an extension of effectiveness over time.

IXPER® 70C Calcium Peroxide

IXPER® 70C Calcium Peroxide Granules

Application Data Sheet

Environmental Applications

Soil and Groundwater Remediation

IXPER products can be used to cost-effectively accelerate the natural attenuation of contaminated soils. The capability of aerobic microbes to biologically degrade contaminants, such as petroleum hydrocarbons, can be limited by inadequate levels of oxygen. IXPER products offer a passive approach to aerobic bioremediation of target contaminants, ensuring that adequate oxygen is present over an extended period of time. Without this supplemental oxygen source, the degradation of contaminants may either stop or proceed by much slower anaerobic processes.

IXPER 70C Calcium Peroxide Granules is particularly suitable during the excavation of contaminated soil, where it is used to line pits before clean soil is introduced. It is also the product of choice in cases of ex-situ soil remediation, or for in-situ treatment of shallow contaminated soils.

Lakes

IXPER 70C Calcium Peroxide Granules can be used to oxygenate the lower parts of artificial or natural lakes. Oxygen concentration near the bottom of lakes can be very low, and many methods of increasing dissolved oxygen are unsatisfactory, either because they require excessive agitation, which moves phosphates to the surface, or because they do not ensure sufficient oxygenation.

By sinking to the bottom and releasing oxygen over a period of time, IXPER 70C Calcium Peroxide Granules can provide a more satisfactory method of oxygenating the lower layers. A well oxygenated body of water has many obvious advantages to the ecosystyem such as healthy environment for fish, elimination of unpleasant odor, and improvement in water clarity. Phosphate immobilization is another crucial and patented advantage of the use of inorganic peroxides in bodies of water.

The use of IXPER 70C Calcium Peroxide Granules is particularly advantageous because the granules sink quickly to the waterbed and are less easily washed away by water currents. The advantages of granules are many.

- Optimum phosphate immobilization, due to granules' effect on sediment chemistry
- Longer lasting results
- Difficult to re-suspend with mechanical activity, eliminating swings of anoxic conditions at bottom
- Slow oxygen/peroxide release, providing a long lasting effect requiring less frequent applications
- Released oxygen/peroxide undergo chemical reactions such as conversion of sulfides to sulfates and nitrites to nitrates
- Increased dissolved oxygen enhances microbial activity leading to degradation of organic matter and reduced turbidity and odor.

IXPER® 70C Calcium Peroxide Granules

Application Data Sheet

Oil Field Applications

In this field, a polysaccharide polymer is often incorporated downhole to help in either fracturing the rock or to form a filter cake. After the polymer achieves its purpose, it must be degraded by a "breaker" to lower its viscosity so that it can be easily removed.

IXPER 70C Calcium Peroxide Granules has unique advantages in this field as the granules are more stable than the powder, allowing a greater retention of the active ingredient during the injection process. At the desired time, these products can be activated by the addition of an acid, or by other means, resulting in the generation of hydrogen peroxide, the actual oxidizing agent.

Agriculture

Low oxygen in soil is often generated by heavy rainfall or bad irrigation techniques. Soils that are low in organic matter are more difficult to aerate naturally, and crops growing at high temperatures have very high oxygen demand at the roots.

Under these conditions, the lack of enough oxygen reduces root growth and makes them more susceptible to attack by soil-borne pathogens. Lack of oxygen also enhances the growth of anaerobic bacteria which further exacerbates the situation. The result is stunted growth, poor yields, diseases, lack of seed germination, etc.

IXPER 70C Calcium Peroxide Granules can be used in agricultural, horticultural and forestry applications. The product slowly decomposes in the moist soil, generating oxygen and the corresponding hydroxide. This can have the following advantages.

- Modification of the soil's biological activity:
  - Avoid anaerobic conditions.
  - Speed the aerobic biological activity at high moisture content.
  - Enhance enzyme diversity.
  - Increase total soil microbial population.
- Improvement of the hydraulic conductivity of the soil, allowing more efficient movement of oxygen and nutrients. This effect is especially useful in heavy soils.
- Easier water and nutrients absorption, allowing plants to use them more efficiently.

For further information about IXPER 70C Calcium Peroxide Granules, please contact Solvay Chemicals Inc. at 1-800-765-8292.

IXPER® 75C Calcium Peroxide

IXPER® 75C CALCIUM PEROXIDE

Product Data Sheet

Introduction

IXPER® 75C Calcium Peroxide is a fine, very pale yellow, odorless amorphous powder that consists primarily of calcium peroxide. The balance consists of calcium hydroxide and other inorganic fillers. IXPER® 75C Calcium Peroxide is Kosher certified and meets the Food Chemicals Codex requirements for use in dough conditioning.

Technical Information

INCI Name	Calcium Peroxide
Formula	CaO_2
CAS Number	1305-79-9
Molecular Weight	72.08

Bulk Density (g/mL)	0.50 ± 0.075	-
Solubility in Water @ 20°C (%)	<0.01	-

** Determined by laser method*

*** Measured by moisture balance*

Effect of Temperature

IXPER® 75C Calcium Peroxide is one of the most temperature stable inorganic peroxides. It decomposes at a temperature >350°C.

- Under dry and cool conditions, IXPER® 75C Calcium Peroxide remains very stable with a relative active oxygen loss of ~1% per year. This is equivalent to an absolute drop in calcium peroxide content of less than 1%.
- Under dry conditions and elevated temperatures, the product is slightly less stable. When stored continuously at 32°C for 6 weeks in polyethylene containers, the relative active oxygen loss is about 2% per year. This is equivalent to an absolute reduction in calcium peroxide content of about 1.5% per year.

Effect of Moisture

IXPER® 75C Calcium Peroxide is only slightly hygroscopic and slightly soluble in water (<0.01% @ 20°C). The pH value of an IXPER® 75C Calcium Peroxide suspension depends upon its concentration.

Concentration in slurry (%)	pH
0.05	8
0.2	11
1	11.7
10	12.7
25	12.8

SOLVAY Chemicals

SOLVAY

IXPER® 75C CALCIUM PEROXIDE

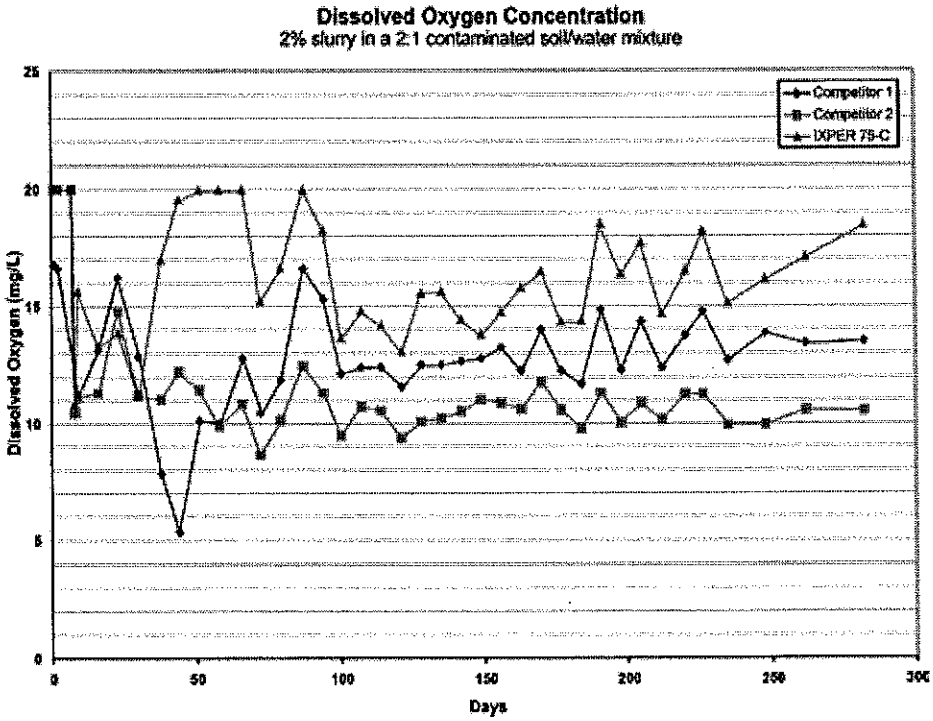

Product Data Sheet

IXPER® 75C Calcium Peroxide decomposes slowly in contact with atmospheric moisture with the generation of oxygen and heat. Decomposition occurs in a similar way when the product is suspended in water. Typically H_2O_2 is not generated under these conditions due to the high pH.

$$2CaO_2 + 2H_2O \longrightarrow 2Ca(OH)_2 + O_2\,(g)$$

The rate of generation of gaseous oxygen is influenced by the physical and chemical properties of the surrounding medium such as pH, temperature and turbulence. In pure water, at room temperature, oxygen generation can continue for more than six months.

The following graph was generated using a 2% calcium peroxide slurry in a 1:2 water to soil mixture. The soil was contaminated with petrochemical residues. Results show that IXPER® 75C Calcium Peroxide can retain its activity for many months. After nine months, the amount of dissolved oxygen is equivalent to that obtained at the beginning of the test indicating IXPER 75C Calcium Peroxide has a very slow release profile and can continue to release oxygen for a very long time at a concentration higher than competitors' products. The pH of all competitive calcium peroxide products was in the same range for all products tested.

IXPER® 75C CALCIUM PEROXIDE

Product Data Sheet

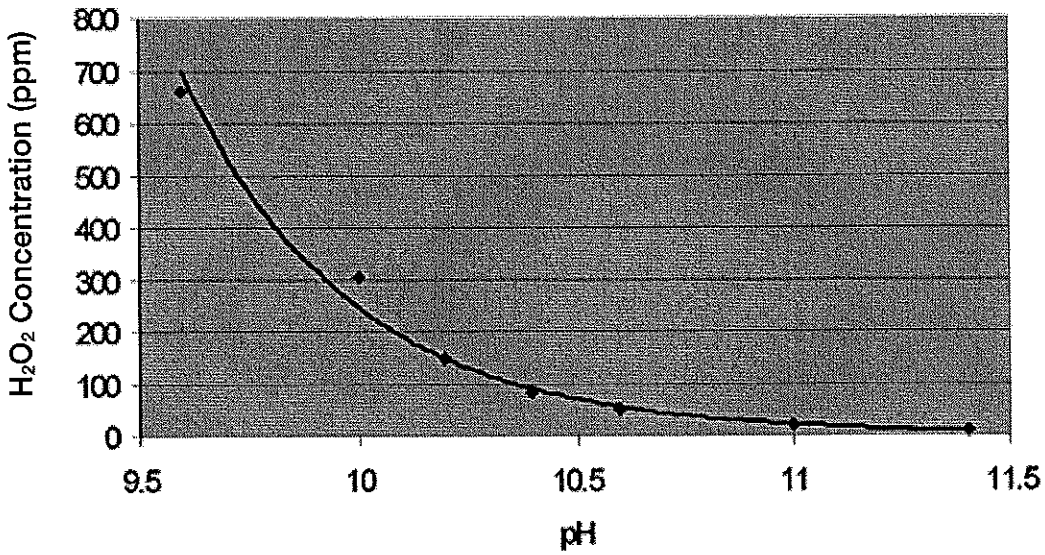

Effect of Acids

In buffered systems with a pH substantially lower than 12, IXPER® 75C Calcium Peroxide exhibits a different behavior. As the pH drops, the product becomes more soluble, and generates progressively higher ratios of hydrogen peroxide (active oxygen) to gaseous oxygen. Under acidic conditions, the available oxygen can be liberated within minutes.

$$CaO_2 + 2H^+ \longrightarrow Ca^{2+}(aq) + H_2O_2$$

$$Ca(OH)_2 + 2H^+ \longrightarrow Ca^{2+}(aq) + 2H_2O$$

The following graph was generated by acidifying a 2% slurry of IXPER® 75C to a pH of 9.5 with nitric acid. The content in hydrogen peroxide was determined over time as the pH drifted back up close to its original value of 11.7. As pH increased, the H_2O_2 produced from IXPER® 75C dropped to non-detectable levels at the natural pH of the suspension.

IXP-04-001 Revised 1-2008 CGR4010
www.solvaychemicals.us 1-800-765-8292

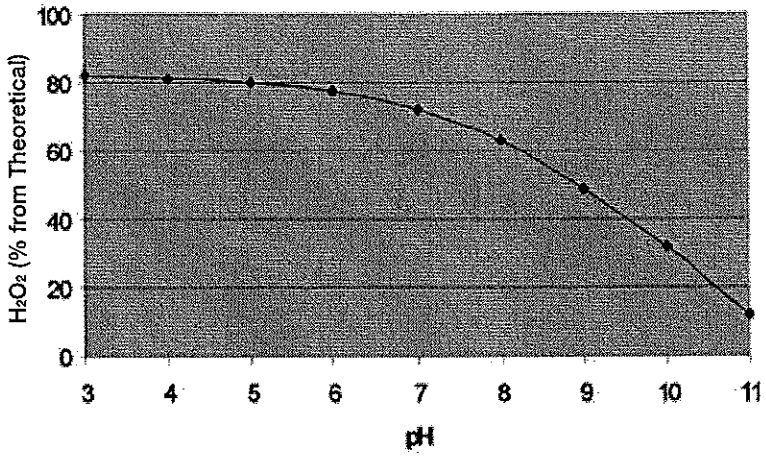

SOLVAY Chemicals

SOLVAY

IXPER® 75C CALCIUM PEROXIDE

Product Data Sheet

The following graph was generated by adding sulfuric acid to a 0.2% slurry of IXPER® 75C Calcium Peroxide in water. After proper mixing, the slurry was immediately filtered, and the aqueous phase tested for its H_2O_2 content. Additional acid was then added to the remaining slurry to reach a lower pH, and the process was repeated.

It was observed that H_2O_2 generation increased as the pH dropped. At pH 8, about 60% of the active oxygen content of IXPER® 75C Calcium Peroxide was generated as H_2O_2. H_2O_2 production leveled off at about pH 5.

The H_2O_2 generated from acidified calcium peroxide slurries can further react in a variety of ways:

$$H_2O_2 + OH^- \longrightarrow H_2O + HOO^-$$

$$HOO^- + \text{substrate} \longrightarrow \text{Oxidized Substrate} + HO^- \quad \text{(oxidation)}$$

$$2H_2O_2 \longrightarrow 2H_2O + O_2 \quad \text{(decomposition)}$$

Effect of Metal Impurities

As with other peroxygens, IXPER® 75C Calcium Peroxide is decomposed by transition metals. The extent of decomposition depends upon the type of impurity, the degree of contamination and contact time. This is important not only during storage, but also in formulations. Ingredients in a formulation containing IXPER® 75C Calcium Peroxide might contain high levels of metal impurities than can lead to the decomposition of the product.

IXPER® 75C CALCIUM PEROXIDE

Product Data Sheet

Chemical Reactivity

The reactivity of IXPER® 75C Calcium Peroxide is due to its ability to generate H_2O_2 and oxygen.

- The H_2O_2 released can be used for various oxidation reactions.

  Examples include:

  - Bleaching of stains, as IXPER® 75C Calcium Peroxide can be a component of whitening toothpastes.
  - Bleaching of hair as a component of hair bleaches.
  - Formation of disulfide bonds, as the product can be used as a dough conditioner (see technical datasheets IXP-03-001 and 002 for details), for curing sealants, and to reduce odors in grease traps.
  - Amine and phenol oxidation, such as the oxidation of hair colors.
  - Metal oxidation, such as the oxidation of aluminum in metallurgical processes or immobilization of toxic metals in remediation.
  - Degradation of organic products and polymers as in soil remediation and the use as breaker in oil exploration.

- The oxygen released can be used in a variety of applications.
  - In soil and groundwater assisted natural attenuation, it can maintain the aerobic conditions necessary to enhance biological activity.
  - In agriculture, it provides the oxygen needed for seed germination and root growth.
  - In grease traps, it can keep the system aerobic.
  - In bodies of water, it can replenish dissolved oxygen.

Additional benefits include the regulation of pH in various systems such as pond water and sediments.

Several precautions must be taken in formulating a product containing IXPER® 75C Calcium Peroxide.

- Avoid the use of reducing agents.
- Minimize the incorporation of transition metals.
- IXPER® 75C Calcium Peroxide should be the last component to be added in a formulation after adequate mixing of all other ingredients.
- Since organic compounds can be oxidized by calcium peroxide, proper hazard evaluation must be conducted before mixing IXPER® 75C Calcium Peroxide with any organic compound.

SOLVAY

IXPER® 75C CALCIUM PEROXIDE

Product Data Sheet

Determination of the Concentration of Calcium Peroxide

Principle

This method is suitable for the determination of the available oxygen and calcium peroxide contents of IXPER® 75C Calcium Peroxide. The sample is dissolved in mixed acid (phosphoric acid and hydrochloric acid), and the available oxygen content is determined by titration with potassium permanganate ($KMnO_4$) solution.

Reagents

All reagents should be of analytical reagent grade.

- $KMnO_4$ solution (0.5N)
- Mixed acid: Add 100mL 85% orthophosphoric acid and 100mL 37% hydrochloric acid consecutively with stirring to 600mL demineralized water.

Warning: Check MSDSs of all reagents and wear appropriate personal protective equipment.

Procedure

- Weigh ~0.5g sample (to ~0.001g) of IXPER® 75C Calcium Peroxide into a 250mL conical flask. Let the mass of sample be Wg.
- Add, by means of a measuring cylinder, 100mL of the mixed acid and swirl until the sample is completely dissolved.
- Immediately titrate with $KMnO_4$ solution (0.5N) to the appearance of a faint permanent pink color. Let the volume of the $KMnO_4$ solution (0.5N) used be A mL.

Calculation

Available oxygen (%w/w) = A x N x 0.8/W

Calcium peroxide content (%w/w) = A x N x 3.604/W

Where N = normality of the $KMnO_4$ solution
A = volume of $KMnO_4$ used in titration (mL)
W = weight of sample (g)

Packaging

The product is packaged in 50kg fiberboard kegs. There are 9 kegs to a pallet.

Storage and Handling

- Store in a dry location away from heat and out of direct sunlight in original containers. Storage temperature: <104°F (40°C).
- Store in an area away from acids, bases, metals, metal salts, reducing agents, organic materials or flammable substances.
- Never return unused product to the storage container.
- Rotate inventories - first in, first out.
- Do not stack pallets. Maintain two feet spacing between pallets of drums.
- Equipment used for handling this material should be made of plastic, stoneware, glass or stainless steel. Enameled or resin coated equipment is also suitable. Copper and copper alloys should be avoided.
- Holding equipment must be adequately vented to prevent any pressure build up in the event of product decomposition.

Safety

- Ensure all personnel who may come in contact with this material are aware of the potential hazards, first aid measures and the proper storage and use techniques outlined in the most recent Material Safety Data Sheet (MSDS).
- Storage and use areas should be equipped with a safety shower and eye wash station.
- Use appropriate eye and skin protection.
- Dispose of according to applicable federal, state and local regulations.

Danger: OXIDIZER - CALCIUM PEROXIDE CAN CAUSE SEVERE EYE DAMAGE AND SKIN IRRITATION. IN CASE OF REPEATED CONTACT WITH SKIN, PRODUCT MAY CAUSE DERMATITIS. Prevent contact with eyes and avoid skin contact. Wash hands and skin thoroughly after handling. Damp product in contact with combustible materials may cause fires.

Water is the preferred extinguishing medium in case of fire involving this product.

First Aid

Eye contact: Flush eyes with running water for 15 minutes, while keeping eyelids wide open. Consult with an ophthalmologist in all cases.

Skin contact: Wash the affected skin with water. Remove and clean contaminated clothing. Call a physician in case of persistent pain or redness.

Inhalation: Remove the victim from the dusty environment. Call a physician in case of respiratory symptoms.

Ingestion: Consult with a physician in all cases. DO NOT induce vomiting. If victim is conscious, rinse mouth and give fresh water. Never give anything by mouth to an unconscious person.

1.0 INTRODUCTION AND PROJECT DESCRIPTION

1.1 INTRODUCTION

This Construction Quality Assurance Project Plan (CQAPP) has been developed as part of the Remedial Action Workplan (RAWP) for the Courtlandt Corner Brownfield sites (NYSDEC BCA Index Nos. A2-0592-07-07 and A2-0593-07-07 Site Nos. C203040 and C203041) located on East 161st Street between Melrose Avenue and Courtlandt Avenue in Melrose Commons, Bronx County New York. (the "Site".) The CQAPP has been prepared on behalf of Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. Volunteers in the Brownfield Cleanup Program (BCP) in accordance with the requirements of NYSDEC.

The BCP requires the submission of a CQAPP, in conjunction with the other Remedial Design Plans for the use of NYSDEC and its representatives, other regulatory personnel having jurisdiction, and the Remedial Engineer. All construction activities to be performed by the Contractor during Site remediation are completely defined in the final RAWP.

1.2 PROJECT DESCRIPTION SUMMARY

The Site is part of the Melrose Commons Urban Renewal Area. As such a plan to redevelop the Site into a mix of residential and commercial use has been approved by the City of New York. The Site consists of former service station, repair shop and previously demolished residential and commercial buildings. During a series of remedial investigations it was determined portions of the Site soils were impacted by urban fill, petroleum compounds, pesticides and heavy metals. The RAWP for the site calls for:

1. All soil within the boundaries of the Site that exceeds 6NYCRR Part 375-6 Track 1 Unrestricted SCOs will be excavated. Soils exceeding criteria below the water table will be accessed via the use of sheeting/shoring and dewatering.
2. Groundwater from dewatering operations will be treated as necessary prior to discharge to the New York City combined stormwater and sanitary sewer.
3. Residual groundwater contamination will be treated in situ via the addition of a calcium peroxide compound to the dewatered portions of the affected aquifer.
4. All soil, fill, fluids and other material removed from the property under this Plan will be transported and disposed of in accordance with all local, State and Federal laws and requirements. All exported material will be taken to facilities

licensed to accept this material in full compliance with all Federal, State and local laws.

5. As a precaution against vapor intrusion either from residually contaminated groundwater or regional groundwater issues (it should be noted that no regional issues have been identified) a soil vapor barrier will be installed in all building areas along with a passive sub slab depressurization system (SSD).
6. A composite cover system consisting of soil cover on open areas, asphalt or concrete pavement on walkways, roads and parking lots, and concrete building slabs will cover the entire Site. The soil cover layer will be two-feet thick and will consist of clean soil that meets 6NYCRR Part 375-6 Track 1 Unrestricted SCOs. The top six inches of the soil cover will be of sufficient quality to support vegetation. Slabs and paving systems (buildings, roadways, parking lots, etc.) will be at least 4-inches thick.

1.3 Construction Quality Assurance Project Plan Summary

This CQAPP outlines the approach to quality assurance during construction activities at the Site. The follow sections present the plan for implementation of the remedial action (RA) for the Site, a proposed methodology for performing the RA, quality assurance methods to verify the effectiveness of the remedial action, the lines of responsibility during the RA, a detail of construction oversight, and the submission of required documentation to NYSDEC. A summary of each of these sections is outlined below.

Section 2.0: Remedial Construction Plan:

The Remedial Construction Plan contains a general plan for Contractor site mobilization, surveying, stockpiling of clean soil, soils exceeding criteria, and soils exhibiting RCRA hazardous characteristics. Section 2.0 also describes the transportation and disposal methods. Finally, the potential Contractor's project organization, as well as any quality control methods to be performed by the Contractor are included in this section.

Section 3.0: Construction Oversight:

This Section defines the scope of work for the Remedial Engineer performing the construction oversight, as well describing the organization of oversight personnel. Construction oversight will be provided by a team of individuals with specific responsibilities. Field personnel will include; the Site Superintendent, Site Safety Officer, and other field personnel, subordinate to the Remedial Engineer, as necessary to oversee and inspect the work.

Section 4.0: Documentation Required by NYSDEC

The documentation and submittals reviews for NYSDEC review are defined in this section. The Remedial Engineer will coordinate the submittals and comments by NYSDEC with the Contractor.

Section 5.0: Role of Regulatory Agencies

NYSDEC will provide oversight of the project to implement the selected remedy documented in the RAWP.

Section 6.0: Remedial Action Construction Schedule

The Remedial Action Construction Schedule estimates the overall construction schedule and duration of each phase of the work with detailed task break down by area.

2.0 REMEDIAL CONSTRUCTION PLAN

The Remedial Construction Plan includes plans necessary for; preparation of the Site prior to the RA; installation of the necessary site improvements for implementation of the work plan; and the sequence of work to be performed in achieving the remedial goals and objectives. The sequence of work will detail a general approach for performing the excavation, stockpiling and sampling of excavated soils, transporting and disposing of impacted soils, and site restoration. This sequence of work is not intended to limit the Contractor from their own means and methods for performing the work, or developing innovative methods subject to approval by the Remedial Engineer, Courtlandt Corners I Associates, L.P., Courtlandt Corners II Associates, L.P., and NYSDEC.

2.1 REMEDIAL ACTION OBJECTIVES

The Objectives and Goals for the Remedial Action include; excavation and off-site disposal of all soils containing constituents above 6NYCRR Part 375-6 Track 1 Unrestricted SCOs.

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) have been identified for this Site.

Groundwater

1. Groundwater RAOs for Public Health Protection

    - Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
    - Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

2. Groundwater RAOs for Environmental Protection

    - Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
    - Prevent the discharge of contaminants to surface water.
    - Remove the source of ground or surface water contamination.

Soil

1. Soil RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

2. Soil RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.2 CONSTRUCTION DRAWINGS

The Construction Drawings have been prepared, reflecting the limits of excavation as determined by remedial investigations conducted at the Site. The Construction Drawings show the vertical and horizontal limits for soils above 6NYCRR Part 375-6 Track 1 Unrestricted SCOs.

Water level data indicate that saturated conditions will be encountered at approximately 12-17 ft below grade. Excavation to greater depths will require dewatering.

2.3 CONSTRUCTION OVERVIEW

The contractor shall perform excavation of Site soils at the locations shown on the Construction Drawings. The Site has been divided into a number of sub-areas. Each sub area will be cleared of debris and grubbed of brush, trees and other vegetation necessary to perform the soil excavation.

As necessary, the Contractor will install temporary haul roads to facilitate soil removal while maintaining the Site as dust free as possible. The Contractor will identify and call to the attention of the Remedial Engineer any variation in the design drawings, regardless of impacts to the scope of work, prior to excavation of Site soils.

Site soils will be excavated downwards in 5 ft layers and to the horizontal limits shown on the Construction Drawings. Excavation sidewalls will be sloped at a minimum of 1-ft horizontal to 1 ft vertical. Excavated soils will be stockpiled separately in the following method:

- Overburden soils that will be cut-back to access to impacted soils and provide slope stability. These soils will be presumed clean and shall be removed and stockpiled separately from impacted soils for potential re-use as backfill material, pending confirmation sampling. Overburden soils from each sub area shall be windrowed separately from each other according to the location of removal. The windrowed overburden will then be sampled in accordance with the RAWP, to confirm the horizontal limits of excavation and subsequently used as backfill material. Windrowed soils that exhibits concentrations of constituents above the performance standard will be removed to the impacted soil stockpiling area. The location of origin of these soils will be noted for further excavation in that sub area.

- Soil excavated from areas above the performance standard, but non hazardous characteristics, will be removed and stockpiled in designated locations. The impacted soils will be segregated into sufficient stockpiles according to the location of excavation. The stockpiled impacted soils will be sampled according to the RAWP and as required by the TSDF. If sampling results show a soil stockpile to exhibit hazardous characteristics, then the stockpile will be handled as RCRA characteristic hazardous waste and the location of removal noted for future excavation.

2.4 SEQUENCE OF WORK

This section details the proposed sequence of work starting with the necessary temporary Site improvements (roadways, soil stockpile area(s), soil erosion control methods), clearing and grubbing of areas requiring excavation, performing Site surveys, means for performing excavation, remediation of subsurface features, transportation and disposal, performing onsite stabilization of soils exhibiting RCRA hazardous characteristics (optional), and performing confirmatory sampling.

2.4.1 Temporary Site Improvements:

Field Office

Office space for the Contractor and Remedial Engineer shall be located at the Site. The office space shall be equipped with electric, telephone, fax, cable Internet service including wireless router, and potable water. Additional requirements for the Field Office are specified in the Technical Specifications.

Roadways

Due to the condition and expanse of the Site, temporary roadways will be required to facilitate truck and equipment access to each sub area. Temporary access roads will be routed such that they will not interfere with the excavation of contaminated soils. The temporary roadways shall be constructed by removing the top soil (~6'') installing non-woven geo-textile the full width (20ft) of the roadway followed by the placement and compaction of 8'' of crusher-run. Details concerning the construction of temporary roadways are shown on the Construction Drawings and in the Technical Specifications.

Construction Zone Exit Pad

This will include the construction of entrance and exit pads from non-paved to paved areas, to limit tracking of Site soils outside the contamination reduction zones. The construction zone exit pad will be constructed using #2 crushed stone and shall be a minimum of 8-inches thick. The construction zone exit pad will be constructed in accordance with the New York Standards and Specifications for Erosion and Sediment Control, and detailed on the Construction Drawings and in the technical specifications. The number and location of construction zone exit pads will be determined by the Contractor, and included in the Contractor's Work Plan.

Decontamination Pad

The Contractor will be responsible for the construction of a truck and equipment decontamination pad. All construction equipment exiting the contamination reduction zone must first be decontaminated regardless if the equipment has come in contact with contaminated materials. Upon inspection, if transportation vehicles are determined by the Remedial Engineer to be impacted with soils from the exclusion zone, then such vehicles must undergo decontamination.

Soil Stockpile Areas

Soil staging areas shall be constructed as shown on the contract drawings or in alternative configuration(s) as approved by the Remedial Engineer. The soil staging areas shall be constructed to allow sufficient area for multiple segregated piles or windrows of soils. Separate stockpile locations shall be prepared for soils above the performance standard, and soils exhibiting RCRA hazardous characteristic.

Storage areas for the impacted soils and soils exhibiting RCRA hazardous characteristics shall be constructed on the existing concrete slabs, formerly used as building slabs, as shown on the Drawings. Temporary storage bins may be constructed using concrete barriers (jersey barriers) as sidewalls. The storage area shall be covered at all times to the extent practicably. The Contractor will have the alternative for building a structural cover can be provided for the stockpile of soils exhibiting RCRA

hazardous characteristics, to eliminate the need to maintain temporary polyethylene cover(s) and to minimize the effects of precipitation and subsequent management of storm water run-off.

Soil and Sediment Erosion Control Methods

Soil Erosion Control measure will be installed around areas that have been cleared and grubbed, active excavations, and soil stockpiles. Soil and sediment erosion control methods will be as described in the New York Standards and Specifications for Erosion and Sediment Control. The erosion control methods will include silt fences, straw bales, temporary swales, and other best management practices.

2.4.2 Clearing and Grubbing

Portions of the Site are overgrown with brush and small trees. The Contractor shall be responsible for clearing and removing all brush and trees that impact the sequence of work. The cleared vegetative material shall be chipped/mulched and stockpiled on Site at a locations approved by the Remedial Engineer. Vegetative material that is contact with impacted soils shall be stockpiled separately and sampled prior to offsite disposal. Clearing and grubbing will be performed in stages, to limit the extent of bare areas requiring erosion control and/or dust suppression.

Soil erosion control methods will be employed at all areas that are cleared and grubbed or disturbed otherwise.Site Survey

After clearing of an area or sub-area the contractor shall have the limits of excavation surveyed. The contractor will employ a New York licensed surveyor to establish the limits of each excavation. Offsets of 15 and 20 ft from the rim of the each excavation shall be identified in the event the limits become distorted due to soil removal efforts.

The Surveyor shall layout the limits of each excavation, delineating cut-lines for clean cutback soils, soils above clean-up (non-hazardous) and soils expected to be hazardous shown on the Drawings. The contractor will also be responsible for surveying the actual excavated limits after post excavation sample results have confirmed excavation has been performed to clean soil. The progress of excavation shall be periodically surveyed and included in the Contractor's progress drawings.

The Surveyor shall be employed at sufficient time for redefining the excavation limits or limits of contamination, re-establishing off sets, and to develop as-built drawings

2.4.3 Soil Excavation

The Site has been divided a number of sub areas. Each sub area will be cleared of debris, grubbed and cleared of vegetative material prior to excavation of soils. After the vegetative cover has been removed, the sub areas shall be surveyed and the limits of excavation marked out, as described above.

For sub areas with impacted soils present at depths to 20 feet below grade, excavation will start at the center of each sub area and will be advanced vertically to the approximate depth and horizontally to the limits of impact, as defined on the Construction Drawings and marked out by the surveyor. Once the limits of impacted soil are reached, as defined by the survey, the excavation/windrowing of eligible clean soil will be performed and the sidewalls will be cut back at a minimum of one-foot vertical to one-foot horizontal slope. Soils removed by the sidewall cutbacks from these excavations will be windrowed into stockpiles in proximity to the sub area of origin as proposed clean backfill material. These soils will be sampled per the RAWP. The sampling of cutback soils will achieve two objectives; 1) serve as confirmation of the horizontal limits of excavation, and 2) provide verification needed for use as backfill material. If sampling of clean cutback soil indicates further impact of constituents above the performance standards in the horizontal direction, additional soils will be removed and windrowed from the sidewall of sub-area of origin and sampled. This process will continue in each 5-ft elevation level until soils exhibit concentrations for constituents below the performance standard.

For sub areas that require the removal of clean overburden; excavation will be performed to the prescribed depth below grade and to the limits of excavation as shown on the drawings, including sidewall stabilization of one foot vertical to one foot horizontal. The proposed clean overburden and sidewall cutback soils will be windrowed into stockpiles as proposed clean backfill material, pending confirmation sampling, as previously described. Excavation in these sub areas will precede in this method until the impacted layer is reached.

After excavation has been performed to the prescribed depth and soils are stockpiled as described above, the area will be re-surveyed to delineate cut-lines for the next excavation that will be conducted through the next 5-foot interval. Soils shown on the Construction Drawings as clean overburden and soil removed as excavation cutback soils will be stockpiled separately as proposed backfill, pending confirmation sampling.

2.4.4 Subsurface Features

Should any subsurface feature (such as unknown USTs) be encountered during excavation the remedial approach for subsurface features and USTs is as follows:

1. Locate and uncover subsurface features and USTs and trace any connecting pipes.

2. Sample (aqueous and/or solid) from subsurface features and USTs for waste characterization and, if necessary initial characterization (i.e., those not previously sampled).

3. Determine if subsurface features and USTs contain liquids or solids in excess of criteria.

4. Remove liquid and solid contents with concentrations of constituents above criteria from subsurface features via Vacuum or equivalent method.

5. Confirmation samples shall be collected from remediated subsurface features to confirm cleanup

6. Disposal of subsurface feature and UST contents according to results of characterization sampling.

7. Access and clean USTs if necessary, rendering UST vapor free, and remove USTs identified. Removal of petroleum product will be performed in accordance with 6NYCRR Part 611. After UST is removed, it shall be recycled and/or disposed of in accordance with 6NYCRR Part 611. Soil samples shall be collected from the UST excavation sidewalls and excavation bottom and compared to the performance standards for verification of subsurface feature remediation.

8. Verify and document UST closure following removal with NYSDEC.

9. Backfill UST excavations to grade following closure confirmation sampling.

2.4.5 Transportation and Disposal

Soils that are excavated, as shown on the Contract Drawings, or determined to be above criteria, but not a RCRA characteristic hazardous waste, by confirmatory sampling shall be disposed at a RCRA Subtitle D permitted TSDF. On-site soil that exhibit RCRA hazardous waste characteristics will be disposed of at a RCRA Subtitle C TSDF.

Upon award of the contract, the Contractor shall submit each disposal facility for review and approval by the Remedial Engineer and NYSDEC. The Contractor will be responsible for coordinating the means and methods of transportation and disposal, as well as procuring all associated permits.

All soils exhibiting RCRA hazardous characteristics shall be removed from the site within 90 days of excavation and properly disposed of at a RCRA Subtitle C permitted TSDF.

2.4.6 Storm Water Management

Due to the size of the excavations a chance exists for the accumulation of storm water within excavations during the soil removal action. Best management practices, as outlined in the New York Standards and Specifications for Erosion and Sediment Control, will be used to prevent the inflow of stormwater into such excavations. If necessary, excavations that fill with water may be pumped dry. If the sequence of work warrants, the contractor will pump all water from the excavation into the frac tank with additional treatment prior to discharge.

The contractor will be responsible for acquiring all permits related to excavation dewatering.

2.4.7 On-Site Soil Stabilization (Optional)

On-site stabilization of soils with hazardous characteristics may be performed prior to offsite disposal. Soils shown on the Construction Drawings, and any stockpiled soils with sample results exhibiting hazardous characteristics may be stabilized to meet certain performance criteria prior to its removal for land disposal at an off-site Subtitle D TSDF. These performance criteria include but are not limited too:

- Acceptable physical properties for materials handling;
- RCRA land ban treatment requirements for D007 (Chromium) hazardous waste and D006 (Cadmium) hazardous waste; and
- Chemical limits for land disposal of materials in Subtitle D (or C at the discretion of the contractor) TSDF.

The Contractor will submit for approval the stabilization method to be used, as well as the results of a treatability study documenting the feasibility of the solidification/stabilization method. The stabilization method shall (at a minimum) determine the ability of solidification to meet TCLP requirements and determine the optimum ratio of solidification

agent to soil. The Contractor will also perform any tests that may be required by the receiving TSDF.

2.4.8 Post Excavation Confirmation Sampling

Post excavation confirmation samples will be collected when the extents of soil removed, in the vertical or horizontal direction, have been reached and it is anticipated that soils with concentrations below the site cleanup levels have been encountered.

During excavation, once the horizontal limits of soil removal, as shown on the drawings, are reached for each elevation, sufficient soils will be removed for slope stability of the excavation sidewalls. This cutback soil will be windrowed in proximity to the excavation and sampling will be performed to verify the horizontal limits of removal have been met and the soil is eligible to be reused as backfill material.

Post excavation samples will only be collected from the sidewall and bottom of the excavation once the vertical limit of soil removal have been achieved as detailed in the Construction Drawings. Bottom excavation samples will not be collected if the bottom of excavation elevation coincides with the elevation of groundwater. Soils below the elevation of groundwater will not be excavated or sampled and will be addressed in Remedial Element III (onsite and offsite groundwater), and as such not part of this Remedial Design

The RAWP details further the post excavation sampling. The data collected during the course of the Remedial Action at the Site will be used to confirm that the various components of the Remedial Action have been properly implemented. Therefore, the data must be sufficiently accurate to determine whether performance standards have been achieved.

2.5 CONSTRUCTION QUALITY ASSURANCE OBJECTIVES

The three quality assurance objectives for the construction of the Remedial Design are:

1. To ensure that all construction activities are implemented in accordance with the ROD, Order (and SOW), and Remedial Design; which includes the Construction Drawings, Specifications, CQAPP, RAWP, T&D and a HASP. These construction activities include but are not limited to:

    - the use of appropriate construction practices, means, methods and techniques;

- the use of materials of construction as required by the final Drawings and Specifications or as commonly accepted in the construction industry;

- the use of specified or approved testing methods to ensure that all earthwork activities are performed and/or installed as required by the Remedial Design;

- the use of specified or approved sampling and analytical methods and procedures, and quality assurance protocols as required by the Drawings, Specifications and RAWP; and

- the preparation of documentation (as outlined in the CQAPP) to track and identify that all activities related to the construction of the Remedial Design are conducted in accordance with the Remedial Design Contract Documents.

2. To ensure that all Site activities are implemented safely, in accordance with the ROD, Order (and SOW), and Remedial Design documents (including the Drawings, Specifications, and plans). These activities include but are not limited to:

   - the implementation of appropriate OSHA requirements during construction activities;

   - the implementation of all applicable federal and state requirements when personnel are working on-Site in areas of potential exposure to the chemicals of concern; and

   - the execution of proper Site-specific health and safety measures to prevent the injury of individuals at or near the Site who are not directly involved with the construction activities being conducted.

3. To ensure that the constructed Remedial Design functions in accordance with the intent of the ROD, Order (and SOW), and the Remedial Design, and meets the performance standards established for the Site.

The following Contractor personnel will have specific duties regarding the quality assurance of the construction.

Project Director

The Contractor's project director is responsible for the overall direction of the implementation of the RA. The responsibilities of the Contractor's project director generally include administrative review and interaction

with the Remedial Engineer. The Contractor's project director is also responsible for overseeing the construction activities, schedule and budget maintenance.

Project Manager

The Contractor's project manager is responsible for general administration of the contract to carry out implementation of the RA. The Contractor's project manager will supervise and direct the construction of the Remedial Design competently and efficiently, devoting such attention there to and applying such skills and expertise as may be necessary to perform the construction in accordance with the Contract Documents. The Contractor's project manager will be responsible for the means, methods, techniques, sequences and procedures of construction except as otherwise specified in the Contract Documents, and is responsible for ensuring that the finished Work complies accurately and completely with the Contract Documents.

The responsibilities of the Contractor's project manager will include providing technical guidance and resolution of technical issues, schedule and budget maintenance, and review of project deliverables.

Superintendent

The Contractor will have on-Site at all times during the RA, a competent superintendent. The Contractor's Superintendent will not be replaced without written notice to and approval from the Remedial Engineer. The superintendent will be the Contractor's representative at the Site and will have authority to act on behalf of the Contractor. The Contractor's superintendent will act as directed by and under the supervision of the Contractor's project manager. The Contractor's superintendent will be the main contact between the Contractor and the Remedial Engineers Resident Project Representative regarding all on-Site Work. The Contractor selected to perform the RA will determine the specific duties and responsibilities of the Contractor's superintendent.

The Contractor's superintendent may also be the Contractor's Site safety representative or another individual may be selected for the Site safety role.

3.0 CONSTRUCTION OVERSIGHT

The implementation of the RA at the Site will require the Group to select a Remedial Engineer to oversee the construction, and perform inspection and certification services, as well as other Construction Quality Assurance Tasks. The Remedial Engineer will perform the construction oversight in accordance with the CQAPP and the General Conditions of the Specifications. The Remedial Engineer will have a number of people associated with these tasks.

The Remedial Engineer will oversee the construction and will ensure that all provisions of the construction Contract Documents (the "Contract" or the "Work") are enforced. The Remedial Engineer will have no authority to order additional work to be performed or to alter any term or condition of the Contract, including technical provisions, and will have no authority to waive or lessen any requirement of the Contract.

The Remedial Engineer will staff the project with the following Staff members:

- Resident Project Representative (RPR) with overall responsibility for overseeing daily construction activities and measurement and daily logging of contractors work efforts;
- Site Safety Officer (SSO) with responsibility for ensuring that all Work at the Site is performed in accordance with the HASP; and
- Additional construction inspectors, technicians, and clerks as needed.

The qualifications and specific roles and responsibilities of the personnel who will perform these construction oversight activities are set forth in the contract documents. The remainder of this section describes the construction oversight activities that will be implemented by the Remedial Engineer during the RA. These activities are:

- Observation, inspection and certification of the Contractor's work;
- Implementation of the HASP (including remedial air monitoring elements);
- Confirmatory sampling and monitoring as outlined in the RAWP; and
- Preparation of documentation and record keeping including measurement (of quantities), daily logging and as-built drawings.

- Perform Independent Quality Assurance of the Remedial Action including filed performance testing.

3.1 PROJECT ORGANIZATION AND RESPONSIBILITY

General project responsibilities, management structure and roles for the Remedial Engineer and key personnel titles have been established based on previous approaches and experiences on similar projects.

Project Manager

The Project Manager will be responsible for general administration of the contract to implement the Remedial Action. The CQAPP related responsibilities of the project manager include:

- supervision of field and office support staff;
- interfacing with the Contractor's project director;
- ensuring that all requirements of the RAWP are being followed in the field;
- responding to technical questions from field and laboratory oversight personnel;
- making visits to the Site to observe progress and quality of the Contractor's and Remedial Engineer's work;
- supervision of field and office support staff;
- interfacing with the Contractor's project director;
- ensuring that all requirements of the HASP are being followed in the field;
- overseeing coordination of construction contracts and the Site remediation contract requirements;
- responding to technical questions from field and laboratory oversight personnel;
- ensuring that the completed work of the Contractor conforms to the requirements of the RAWP;
- disapproving or rejecting Work of the Contractor which does not conform to the requirements of the RAWP or accepted construction practices;

- issuing interpretations and clarifications of the RAWP and receiving and approving change orders as necessary;

- reviewing shop drawings submitted by the Contractor and evaluating and determining acceptability of substitute materials proposed by the Contractor;

- requiring special inspections or testing and reviewing all certificates of inspections or testing required by the RAWP or other rules or laws;

- reviewing the Contractor's applications for payment and recommending payments to the Contractor;

- reviewing the Contractor's final completion documents and performing final inspection to determine if the Contractor's Work is complete and in accordance with the RAWP.

- approving the preparation of the Record ("As-Built") Documents;

- preparation of the Final Remedial Engineering Report; and

- preparation of monthly progress reports, review of invoices to the Owner and budget tracking.

Site Superintendent

The Site Superintendent will be the lead site representative provided by the Remedial Engineer to ensure that the Work is performed in accordance with the approved Remedial Action submittals. He or she will be the main contact between Remedial Engineer and the Contractor regarding all on-Site Work, and will act as directed by and under the supervision of the project manager. The Site Superintendent will be on-Site when construction activities associated with the RA are being performed, and will oversee daily construction activities. The duties and responsibilities of the Site Superintendent related to the CQAPP will include:

- supervision of the field support staff;

- assuring that all field team members are familiar with the RAWP and HASP, as appropriate;

- overseeing sampling activities and ensuring that approved sampling and QA/QC methods and protocols are followed, and that pertinent sampling information is obtained, including the appropriate logging and documentation of these activities;

- overseeing the proper collection, preservation, packaging, documentation and chain of custody samples until released to another party for transport to the analytical laboratory;
- evaluating samples furnished at the Site by the Contractor;
- assisting the project manager in executing his responsibilities as outlined above.
- inspection of the Contractor's Work to determine if the Work is proceeding in accordance with the requirements of the RAWP;
- disapproval or rejection of the Contractor's Work which does not conform to the requirements of the RAWP;
- forwarding interpretations and clarifications of the RAWP from the Remedial Engineer to the Contractor;
- maintaining orderly files of Contract Documents, meeting minutes, submittals and other construction correspondence;
- maintaining a daily log and completing daily reports which will include but may not be limited to the following information:
  - a summary of work performed by the Contractor each day;
  - conditions at the Site;
  - instructions given to the Contractor;
  - field problems encountered and resolution;
  - all personnel on-Site including employees of the Contractor, subcontractor(s) and Remedial Engineer and visitors to the Site;
  - all equipment on-Site and equipment used that day;
  - all materials or equipment delivered to the Site;
  - preliminary (i.e., unverified) quantities of pay items placed;
  - field tests performed and results;
  - Quality of the Work including identification of any materials or Work which do not conform to the requirements of the Contract Documents;
  - References to surveys made that day, if any;
  - Unusual occurrences or accidents;

  - Events that have an impact on the performance of the Work;
  - Observation of Contractor's compliance with the HASP;
  - The daily activities of each of the Remedial Engineer's own forces in terms of locations where the Contractor's Work was inspected, items of Work inspected, results of such inspections and similar data;
  - Results of follow-up inspections of previously reported deficiencies; and
  - Any other project-related events not identified above.

- Running Site construction progress meetings (once every two weeks) and preparation of meeting minutes;
- Evaluating samples furnished at the Site by the Contractor;
- Advising the Remedial Engineer's project manager if special inspections or testing are required and reviewing all certificates of inspections or testing required by the Contract Documents or other rules or laws;
- Reviewing Contractor's applications for payment with Contractor before forwarding to project manager;
- Performing final inspection to determine if the Contractor's Work is complete and in accordance with the Contract Documents;
- Interfacing with on-Site regulatory personnel; and
- Assisting the project manager in executing his responsibilities as outlined above.

The Site Superintendent will interface closely with the Remedial Engineer, and SSO, as well as on-Site regulatory personnel and the Remedial Design support team, as appropriate.

Quality Assurance Officer

The Quality Assurance Officer (QAO) reports to the Project Director and is responsible for the development and implementation of this QAPP. The project QAO holds a B.S. in Chemistry and has received their 40-hr OSHA and subsequent 8-hr OSHA refresher training. The QAO will review sampling procedures and certify that the data was collected and analyzed using the appropriate procedures. In addition, the QAO or their designee shall conduct periodic field and sampling audits, interface with the analytical laboratory to make requests and resolve problems, and develop a project specific data usability report (DUSR). The QAO will also oversee

the data validator who will be responsible for auditing and validating all analytical data generated during the RA as described herein.

Remedial Engineer

The Remedial Engineer is a registered professional engineer licensed by the State of New York. The Remedial Engineer will have primary direct responsibility for implementation of the remedial program for the Courtlandt Corners Site (NYSDEC BCA Index Nos. A2-0592-07-07 and A2-0593-07-07 Site Nos. C203040 and C203041). The Remedial Engineer will certify in the Final Engineering Report that the remedial activities were observed by qualified environmental professionals under [his/her] supervision and that the remediation requirements set forth in the Remedial Action Work Plan and any other relevant provisions of ECL 27-1419 have been achieved in full conformance with that Plan. Other Remedial Engineer certification requirements are listed later in this RAWP.

The Remedial Engineer will coordinate the work of other contractors and subcontractors involved in all aspects of remedial construction, including soil excavation, stockpiling, characterization, removal and disposal, air monitoring, emergency spill response services, import of back fill material, and management of waste transport and disposal. The Remedial Engineer will be responsible for all appropriate communication with NYSDEC and NYSDOH.

The Remedial Engineer will review all pre-remedial plans submitted by contractors for compliance with this Remedial Action Work Plan and will certify compliance in the Final Remediation Report.

The Remedial Engineer will provide the certifications listed in Section 10.1 in the Final Engineering Report.

Health and Safety Coordinator

The health and safety coordinator is responsible for:

- Administering and tracking the Site employee's health monitoring program and other mandated OSHA record keeping (OSHA 200 and 101 Forms);

- Implementation of the HASP prepared for the RA;

- Providing industrial hygiene/OSHA/safety guidelines for all appropriate Remedial Engineer activities (e.g., selection, maintenance, use of protective gear; use of dangerous equipment, etc.)

- Developing procedures that facilitate project planning and implementation; and

- Conducting all required training programs.

Site Safety Officer

The Remedial Engineer's Site Safety Officer (SSO) will have the following duties:

- Ensure that the Remedial Engineer's field team members have completed the health and safety training required by the HASP;

- Ensure that the Contractor's field team members have submitted documentation confirming the completion of the health and safety training required by the HASP;

- Observe all construction activities to determine whether work at the Site is being conducted in accordance with the HASP;

- Perform dust monitoring and be responsible for the Contractor's health and safety where the potential exposure to chemical hazards exists;

- Oversee the performance of all Site perimeter air monitoring;

- Have authority to stop work if Site conditions exceed allowable limits (as identified in the HASP) and, as appropriate, will assume certain sampling responsibilities;

- Coordinate with the Owner's Project Coordinator, the Remedial Engineer's health and safety coordinator, project manager, and Site Superintendent, the Contractor's superintendent, and the emergency responder, as appropriate in the event problems arise; and

- Coordinate with emergency response personnel;

- Maintain a daily log.

As described in the HASP, the SSO will oversee the performance of full time environmental monitoring, including particulate monitoring. The SSO will be responsible for the Contractor's health and safety associated only with potential exposure to OSHA contaminants. All other guidelines and requirements of the HASP and OSHA (i.e., construction safety) must be implemented and performed by the Contractor. The SSO will not be responsible for full-time supervision of the Contractor's compliance with these construction safety requirements, but will notify the Contractor's site superintendent, Remedial Engineer's project manager and Site Superintendent, and the Owner's Project Coordinator if deficiencies are observed.

Field Support Team

The Remedial Engineer's field support team will consist of construction inspectors, and field technicians as required by the Site Superintendent and SSO.

Office Support Team

The Remedial Engineer's office support team will consist of the project engineer, data validator, staff engineer(s), word processing and drafting/CADD support as required by the project manager.

Laboratory Subcontractor(s)

The analytical laboratory subcontractor is responsible for supplying properly cleaned and prepared glassware and analyte-free water for field use, and for analysis of all samples collected during the implementation of the RA and for completion of chain-of-custody forms for all samples. The laboratory is also responsible for following analytical and quality control procedures outlined in this RAWP and for interfacing with the data validator to ensure data meets the RA data quality objectives.

3.2 OBSERVATION AND INSPECTION OF CONTRACTOR'S WORK

The Remedial Engineer is responsible for observing inspecting, and documenting the Work of the Remedial Contractor. In addition to the responsibilities stated for each member of the project oversight team, the Remedial Engineer's responsibilities include:

- Observation and inspection of the Contractor's Work to determine if the Work is proceeding in accordance with the requirements of the Remedial Design Contract Documents;

- Disapproving or rejecting Work performed by the Contractor which does not conform to the requirements of the Contract Documents;

- Reviewing Shop Drawing submittals to ensure that materials and equipment to be provided by the Contractor meet the requirements of the Contract Documents and to determine acceptability of substitute materials proposed by the Contractor;

- Informing Contractor if special inspections or testing are required, overseeing the performance of special inspections or testing ordered by the PRP and, and reviewing all certificates of inspection or testing results required by the Contract Documents or other rules or laws;

- Observing Contractor's stabilization performance (if onsite stabilization is performed) and waste disposal characterization sampling and testing activities and ensuring that approved and/or specified methods are followed, and that all sampling and testing activities are logged and documented appropriately (refer to the RAWP.);

- Overseeing the Contractor's coordination of off-Site transportation and disposal of all Site media;

- Issuing interpretations and clarifications of the Contract Documents (including field orders);

- Performing inspections to determine if Contractor's work meets the requirements for substantial completion in accordance with the Contract Documents;

- Reviewing Contractor's final completion documents and performing final inspection to determine if, and ensure that, Contractor's work is complete and conforms to the requirements of the Contract Documents; and

- Serving as liaison for the Owner with authorized regulatory personnel on all matters, including but not limited to, progress of Work, Contractor performance, regulatory sampling activity and/or disputes pertaining to the requirements of the Contract Documents and actual work.

The Remedial Engineer (except for its own activities and those of its subcontractors) will not have control of, and will not be responsible for, Contractor's construction means, methods, sequences, or safety precautions and programs in connection with the work, for the acts or omissions of the Contractor, or for the failure of the Contractor to carry out work in accordance with the Contract Documents. However, the Remedial Engineer will observe and review completion of the project by the Contractor, will require the Contractor to conform to the requirements

of the Contractor's Contract Documents and will report to the Owner any deviations by the Contractor, of which the Remedial Engineer becomes aware.

3.3 IMPLEMENTATION OF THE HEALTH AND SAFETY CONTINGENCY PLAN

The Health and Safety Plan (HASP) for the RA, required by the pre-final/final design has been prepared as a separate pre-final design deliverable. The HASP conforms to the applicable Occupational Safety and Health Administration (OSHA) and NYSDEC requirements including, but not limited to, 29 C.F.R. § 1910.120, and was prepared to ensure the protection of persons at and in the vicinity of the Site during remedial activities.

A SSO will be on Site at all times during remedial activities involving potentially contaminated media, who will ensure that the HASP is being followed by the Contractor and authorized on-Site personnel. The SSO will oversee the performance of Work by the Contractor when the potential exposure of on-Site personnel to OSHA contaminants exists. The SSO will perform monitoring to ensure that: (1) exposures of on-Site personnel to potential releases of contaminants generated by construction activities are minimized; and (2) airborne particulates containing Site related constituents are not released beyond the Site boundary as a result of Work activities at the Site. Refer to the RAWP and HASP for identification of specific responsibilities of the SSO.

The Contractor must adhere to all guidelines and requirements of the HASP and all other authorized personnel on-Site at all times. As described in the HASP, the SSO will oversee the performance of full time environmental monitoring, including particulate monitoring. The SSO will also monitor the Contractor's compliance with their own Site Specific Health and Safety Plan associated only with potential exposure to OSHA contaminants. All other guidelines and requirements of the HASP and OSHA (i.e., construction safety) must be implemented and performed by the Contractor. The SSO will not be responsible for full-time supervision of the Contractor's compliance with these construction safety requirements, but will notify the Contractor's Site superintendent, Remedial Engineer's project manager and RPR, if deficiencies are observed.

The Remedial Engineer will be authorized by the Owner to issue stop work orders, if in the Remedial Engineer's opinion, the Contractor is violating the HASP, OSHA regulations, any other applicable regulations

concerning safety, or is otherwise conducting work in an unsafe, unhealthy or environmentally unsound manner.

3.4 CONFIRMATORY SAMPLING AND MONITORING

Confirmatory Sampling and Monitoring is included in the RAWP. The RAWP addresses the sampling methods and analytical procedures to be used for confirmatory sampling of Site soil, and subsurface structures, as applicable, as well as quality assurance protocols to be followed for all sampling and analytical procedures.

The Remedial Engineer will perform all confirmatory sampling, monitoring and analytical work in accordance with the RAWP. The Remedial Engineer, on behalf of the PRP, to perform the required analytical work for all samples, will retain a laboratory.

3.5 PREPARATION OF DOCUMENTATION AND RECORD KEEPING

This section identifies the documentation that will be prepared, and records that will be collected and maintained by the Remedial Engineer during implementation of the RA. The records will describe essential work elements such as methods of construction, daily activities and the quality and quantity of materials excavated or used and of the work performed. The specific types of records that the Remedial Engineer will prepare and/or maintain are:

- Daily logs (including safety logs);
- Submittal log;
- Material delivery records;
- Material shipment records;
- Survey records;
- Change orders;
- Accident reports;
- Miscellaneous documents; and
- Punch list.

The work associated with the preparation and/or maintenance of these records and documents is described in the following sections. The final format of the record keeping system will be selected before construction activities are initiated. All

records will be available on-Site for review by NYSDEC during implementation of the RA.

Daily Logs

The Site Superintendent, assisted by members of the field support team, will maintain a daily log that will include the following information:

- Conditions at the Site;
- All personnel on Site, including employees of Contractor, subcontractor(s), Remedial Engineer, and NYSDEC and other Government Agencies representatives and regulatory oversight contractors;
- Visitors to the Site;
- All equipment on Site and equipment used that day;
- All materials or equipment delivered to the Site;
- References to and documentation of surveys and field tests made that day, if any;
- Instructions given to the Contractor;
- Summary of work performed by Contractor each day, including progress of Site remediation activities (e.g., areas of excavation completed);
- Approximate quantities of pay items (e.g., volume of Soil excavated, and transported);
- The daily activities of the Remedial Engineer's on-Site personnel including identification of locations where the Contractor' Work was inspected, items of Work inspected, results of such inspections and similar data;
- Identification of any materials or work which does not conform to requirements of the Contract Documents;
- Unusual occurrences, accidents and other events that have an impact on the performance of the work;
- Field problems encountered and resolution;

- Results of follow-up inspections of previously reported deficiencies; and

- Any other pertinent daily project-related events not identified above.

The SSO will maintain a separate daily site safety log for health and safety activities. The daily site safety log will include:

- Conditions at the Site;

- Topic of Site safety tailgate meeting, if any;

- Details of daily safety inspections;

- Work area and perimeter air monitoring data; and

- Personal protective equipment information.

The daily logs will be kept in the field office/trailer and no entries will be deleted. The RPR and SSO will keep their daily logs current and will sign and date each day's log, and initial each page. At the completion of the construction phase, the logs will be incorporated into the project files.

The Contractor will also be required to prepare a daily log for submission to the Remedial Engineer at the end of each day. The log will summarize the work completed each day and will identify the number of workers on-Site working for the Contractor and each subcontractor (broken down by craft), and the major equipment items on Site. The Contractor's daily report will also identify dates of commencement and completion of all aspects of the work, and will be maintained at the Site.

3.5.1 Submittal Log

The Remedial Engineer will have the responsibility for performing and coordinating the review of all submittals (e.g., work plans, Shop Drawings, etc.). The Remedial Engineer will receive, log, review, and distribute all Contractor submittals required by the Specifications. A submittal log will be established and maintained using a spreadsheet program such as Excel. All submittals will be assigned a tracking number based on the Specification reference. The submittal log will include a description of the submittal and will identify the submittal review status, key milestone dates (e.g., received, reviewed, due and return dates), identification of the reviewer(s) and any appropriate comments/remarks. A current submittal log will be available for review at the Site and will also be distributed with the monthly progress report.

3.5.2 Material Delivery Records

The Contractor will be required to submit copies of material delivery records to the Remedial Engineer for all materials delivered to the Site. The Remedial Engineer will maintain a file of these records and, if the specifications require that the material to be used on the Project be certified by an outside testing laboratory prior to delivery, the Contractor will be required to submit this certification to the Remedial Engineer before the material is delivered to the Site. The Remedial Engineer will keep this information on file at the Site.

3.5.3 Transportation and Disposal

Copies of all documents required for transport and disposal of materials off-Site will be maintained on file at the Site. These documents will include hazardous manifest and non-hazardous bills of ladings, and "Land Disposal Notification and Certification Forms" (LDR Forms) if necessary. The Remedial Engineer will compare the quantity of materials shipped off-Site to the quantities identified in the Contractor's applications for payment. Copies of each manifest or bill of lading and any LDR form will be will be available for review by NYSDEC at the Site.

3.5.4 Survey Records

The contract documents require that the Contractor employ a New York licensed surveyor who will lay out the locations of all Work and who will perform all surveying required by the Contract Documents. Use of a licensed surveyor will ensure that the Contractor has conducted all Work items to the limits established on the Drawings. Surveys are also necessary to determine the quantity of Work performed by the Contractor, and to document the final location of all Work. Survey information will be used for payment purposes and preparation of record drawings.

The performance of all surveys will be the responsibility of the Contractor. The Remedial Engineer will maintain copies of all surveys conducted during the project. The Contractor will be required to show all applicable survey information on the record drawings to be submitted at the end of the project.

3.5.5 Changes In Work

Written Amendment, Work Change Directive, or Change Order may authorize addition, deletion or revision in the Contract Documents, scope of work, or an adjustment in the contract price or times. Management of such changes will be the responsibility of the Remedial Engineer. Change orders requested or proposed by the Contractor will be reviewed to

determine if it is additional work which is not included in the scope of work of the Contract Documents. Changes in work will only be considered as a result of one of the following criteria:

- Differing Site condition;
- Error or omission in plans or specifications;
- Change instituted by regulatory agency or the PRP;
- Field emergency; and
- Other factors affecting time of completion not under control of Contractor.

The Remedial Engineer will provide recommendations on change order requests by the Contractor to the Owner. All change orders issued by the PRP will be consistent with the scope of the remedy selected in the ROD. In the event a proposed change order covers work outside the scope of the remedy selected in the ROD, it will also be subject to NYSDEC approval prior to authorization by the Owner. Copies of each change order will be forwarded to the Owner and will be available for review by NYSDEC upon request.

3.5.6 Accident Reports

NYSDEC's on-Site representative will be immediately notified of any accidents at the Site. If the NYSDEC, or NYSDEC's designated representative, is not on-Site, NYSDEC will be notified by telephone.

Accident reports will be generated by the Remedial Engineer as soon as possible and no later than one week after an incident resulting in injury to humans or a release of contamination has occurred. Accident reports will contain a description of the injury or release, the current status of the situation and the steps taken, or planned to be taken, in response to the accident.

Copies of each injury related accident report will be forwarded to the PRP and will be available on-Site for review by NYSDEC. Accident reports regarding releases of potentially contaminated materials will be prepared and distributed in accordance with the "Notification Requirements" sections of the Contingency Plan.

3.5.7 Punch List

When the Work is considered ready for its intended use (approximate 95 percent of the Work has been completed), the project will be considered

substantially complete, and the Remedial Engineer will develop a punch list. The punch list will be used to identify all deficiencies in work items that must be corrected or work items that must be completed before the project is complete and the final payment can be made to the Contractor.

The Contractor will be given a specific length of time to complete or correct the items. At the end of this period, the Remedial Engineer will inspect the work in general and the punch list items in particular. If all items are acceptable, the Remedial Engineer will approve final payment and closeout of the Contract. If there are still items that are deficient or outstanding, the Remedial Engineer will generate an updated punch list and the process repeated until all work items are completed in accordance with the Contract Documents. Copies of each punch list will be forwarded to the Owner and will be available on-Site for review by NYSDEC.

3.5.8 Miscellaneous Documents

Copies of meeting minutes, shop drawings, submittals, applications for payment and other construction documents and correspondence will be maintained in orderly files on-Site.

4.0 PREPARATION OF DOCUMENTATION FOR NYSDEC

In addition to the documentation and records which will be prepared and/or collected and maintained by the Remedial Engineer during construction, the RAWP requires that certain construction related reports or documents be prepared and submitted to NYSDEC. These documents include:

- Written identification of all proposed contractors for the Remedial Action;
- Written notification of any off-Site shipment of waste material to an out-of-state waste management facility;
- Progress reports;
- A Final Engineering Report.

4.1 OFF-SITE SHIPMENT OF WASTES

The identity and location (State) of the disposal facilities that will receive materials from the Site will be determined following the award of the Contract. NYSDEC will be provided with this information as soon as practicable after the award of the Contract and before any Site media are shipped off-Site.

In accordance with the Order, prior to any off-Site shipment of Hazardous Substances from the Site to an out-of-state waste management facility, written notification will be provided to the appropriate state environmental official in the receiving facility's state and to the NYSDEC Remedial Project Manager of such shipment of Hazardous Substances. .

The above referenced notification will be provided as soon as practicable after the award of the Contract, but in no case less than fourteen (14) days before the Hazardous Substances are actually shipped. This notification requirement does not apply to any off-Site shipments when the total volume of all such shipments does not exceed 10 cubic yards.

The following information will be included in the written notification, where available:

- The name and location of the facility to which the Hazardous Substances is to be shipped;
- The type and quantity of the Hazardous Substances to be shipped;
- The expected schedule for the shipment of the Hazardous Substances; and
- The method of transportation.

The state in which the planned receiving facility is located will be notified of major changes in the shipment plan, such as a decision to ship the waste material to another facility within the same state, or to a facility in another state, or of a significant change in volume or shipment schedule.

4.2 PROGRESS REPORTS

Written progress reports will be submitted monthly to NYSDEC. Progress reports will continue to be submitted on a monthly basis in the same

format, during construction activities until NYSDEC notifies the Owner otherwise.

4.3 FINAL ENGINEERING REPORT

Following completion of the RA and attainment of the performance standards, a Final Engineering Report (FER) will be prepared and submitted to NYSDEC pursuant to Section XI of the SOW. The report will be submitted to NYSDEC for approval within 30 days of NYSDEC's determination that the Remedial Action is complete.

The purpose of the report is to document the activities that occurred to implement the Remedial Action selected for the Site. The FER provides documentation that the Remedial Action has met its objectives (Performance Standards) as well as summary information for subsequent inclusion in the Superfund Site Close Out Report to be prepared by NYSDEC.

The elements that will be included in the FER include:

- Introduction;
- Chronology;
- Performance standards and construction quality control;
- Construction activities;
- Final inspection;
- Certification that remedy is operational and functional;
- Summary of Project costs

It is anticipated that the following appendices will also be incorporated into the FER:

- Monthly progress reports;
- Minutes of project progress meetings;
- Key project memoranda;
- Results of sampling activities conducted during construction; and
- Record ("As-Built") drawings.

In the Final Engineering Report, a registered professional engineer and a representative of Owner will certify that the Remedial Action has been completed in full satisfaction of the requirements of the BCP.

The FER will include record drawings signed and stamped by a registered professional engineer. The record drawings will contain all recorded construction information, and will reflect changes to the final engineering Drawings and Specifications in order to respond to actual field conditions, or other modifications that were made during the remediation phase of the project. The record drawings will show all applicable survey information generated during construction of the Remedial Design.

5.0 ROLE OF REGULATORY AGENCIES

NYSDEC and its representatives will have access to the Site at all times. It is anticipated that there will be a NYSDEC representative on-Site during certain phases of the remedial action.

All authorized visitors to the Site must be thoroughly familiar with the HASP and will have full responsibility for compliance with the HASP. All authorized visitors will be required to sign a Site entry log as well as an acknowledgment that they have read the HASP.

As described in the HASP, the SSO will oversee the performance of full time environmental monitoring, including particulate monitoring. The SSO will be responsible for all authorized visitors' health and safety associated only with potential exposure to OSHA contaminants. All other guidelines and requirements of the HASP and OSHA (i.e., construction safety) are the responsibility of the visitor. The Remedial Engineer will not be responsible for full-time supervision of authorized visitors. The RPR and/or SSO will document any non-compliant incidents in the daily logs and will notify the Remedial Engineer's project manager and Site Superintendent, and Owner's Project Coordinator of any such incidents.

6.0 REMEDIAL ACTION CONSTRUCTION SCHEDULE

The contractor will be required to submit a construction schedule as part of the submittal package. A preliminary schedule is presented as Figure 4-2 of the RAWP to show the approximate duration of the project.

The number of days within which, or the dates by which, the Work is to be substantially completed and also completed and ready for final payment will be set forth in the Agreement between the Owner and the selected Contractor.

Agreement Index Numbers: A2-0592-07-07 and A2-0593-07-07
Site Nos. C204030 & C204031
Monthly Progress Report 6
Prepared By: Edward Wong, P.E.

Period Covered: March 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Final soil classification and disposal facility selection. As per Section 5.4.5 of the RAWP the final disposal location will be reported to the NYSDEC Project Manager.
- Installation of optical monitoring at CCI.
- Asphalt and concrete slab removed and begun excavation support installation
- Completed pile installation at CCII.
- Installation of lagging and soil removal at CCII.
- Tank removal at CCII (two 4,000-gallon tanks).
- Pile installation at CCI.

Anticipated Work Efforts for April 2009:

Work Activities

- Installation of tie-backs at CCII and complete lagging installation at CCII.
- Finish piles and caisson installation at CCI.
- Begin dewatering at CCII.
- Complete soil removal at CCII.
- Complete post-excavation sampling at CCII and submit to NYSDEC for review. Note: Current plan is to get clearance of CCII and allow construction contractor access to the site to begin backfilling and footer installations.
- Complete dewatering at CCII and mobilize dewatering equipment to CCI.
- Begin excavation and installation of tie-backs and underpinning at CCI.

ERM - Remediation & Construction Management

Agreement Index Numbers: A2-0592-07-07 and A2-0593-07-07
Site Nos. C204030 & C204031
Monthly Progress Report 7
Prepared By: Edward Wong, P.E.

Period Covered: April 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Installation of tie-backs at CCII and lagging installation at CCII.
- Excavation of soils and offsite disposal at CCII.
- Begin dewatering at CCII.
- Post-excavation soil sampling at CCII.
- Tank removal at CCI.
- Piles and caisson installation at CCI.

Estimated quantities through April 30, 2009:

Through April 30, 2009:
Soil CC2: 4,800 tons
Soil CC1: 0 tons
Rock CC2: 52 tons
Rock CC1: 104 tons
Concrete CC2: 175 tons
Concrete CC1: 446 tons
Tanks CC2: Two (2) 4,000-gallon
Tanks CC1: Five (5) 4,000-gallon, thirteen (13) 550-gallons, Two (2) 250-gallon tanks.

Please note that Track 4 contingency may be necessary for Courtlandt Corners II (CCII). Currently we are unable to meet the unrestricted use criteria in an area where the excavation can not be expanded due to structural concerns for adjacent buildings. Pending a complete set of post-excavation analytical results for CCII, which will be included in next month's report, our approach to the remediation in this area will be reviewed.

Anticipated Work Efforts for May 2009:

Work Activities

- Dewatering continues at CCII.
- Complete lagging at CCII.
- Complete soil removal at CCII.
- Complete post-excavation sampling at CCII and submit to NYSDEC for review. Note: Current plan is to get clearance of CCII and allow construction contractor access to the site to begin backfilling and footer installations.
- Complete dewatering at CCII and mobilize dewatering equipment to CCI.
- Begin excavation and installation of tie-backs and underpinning at CCI.
- Completion of soil excavation support systems at CCI.
- Dewatering begins at CCI.
- Excavation of soils and offsite disposal at CCI.
- Post-excavation sampling at CCI.

Site Nos. C204030 & C204031
Monthly Progress Report 8
Prepared By: Edward Wong, P.E.

Period Covered: May 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Completion of tie-backs at CCII and lagging installation at CCII.
- Excavation of soils and offsite disposal at CCII.
- Dewatering at CCII.
- Post-excavation soil sampling at CCII.
- Piles and caisson installation at CCI.

Estimated quantities through May 31, 2009:

Soil CC2: 7,922 tons
Soil CC1: 1,958 tons
Rock CC2: 52 tons
Rock CC1: 104 tons
Concrete CC2: 175 tons
Concrete CC1: 578 tons
Tanks CC2: Two (2) 4,000-gallon
Tanks CC1: Five (5) 4,000-gallon, thirteen (13) 550-gallons, Two (2) 250-gallon tanks.

Please note that we have attached post-excavation sampling results for Courtlandt Corners II (CCII), which indidcate all samples are less than Track 4 concentration values (see attached Table 1). Since some values exceed Track 1 concentration values and we are unable to expanded the excavation due to structural concerns for adjacent buildings, this site is categorized a Track 4 site.

Anticipated Work Efforts for June 2009:

Work Activities

- Complete soil removal at CCII.
- Backfill to footings at CCII (note: Current plan is to get clearance of CCII and allow construction contractor access to the site to begin backfilling and footer installations.)
- Dewatering continues at CCII during backfill activities.
- Continued installing tie-backs and lagging at CCI.
- Complete dewatering at CCII and mobilize dewatering equipment to CCI.
- Dewatering begins at CCI.
- Begin underpinning at CCI.
- Completion of soil excavation support systems at CCI.
- Continued excavation of soils and offsite disposal at CCI.
- Post-excavation sampling at CCI (sidewalls and exposed bottoms).

Monthly Progress Report 9
Prepared By: Edward Wong, P.E.

Period Covered: June 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Follow-up slope soil removal at CCII (6/11/2009).
- Backfilled to footings at CCII.
- Dewatering continued at CCII during backfill activities.
- Continued installing tie-backs and lagging at CCI.
- Completed dewatering at CCII and mobilized dewatering equipment to CCI.
- Continued excavation of soils and offsite disposal at CCI.
- Installation of tie-backs at CCI.

Estimated quantities through May 31, 2009:

Soil CC2: 9,028 tons
Soil CC1: 5,970 tons
Rock CC2: 52 tons
Rock CC1: 158 tons
Concrete CC2: 206 tons
Concrete CC1: 758 tons
Tanks CC2: Two (2) 4,000-gallon
Tanks CC1: Five (5) 4,000-gallon, fifteen (15) 550-gallons, Two (2) 275 -gallon tanks.

Anticipated Work Efforts for July 2009:

Work Activities

- Begin dewatering at CCI.
- Complete tie-backs and lagging at CCI.
- Complete underpinning at CCI.
- Complete excavation at CCI.
- Complete post-excavation sampling and begin backfilling at CCI.
- Continued dewatering at CCI.

Monthly Progress Report 10
Prepared By: Edward Wong, P.E.

Period Covered: July 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Begin dewatering at CCI.
- Complete tie-backs and lagging at CCI.
- Complete underpinning at CCI.
- Excavation at CCI.
- Post-excavation sampling and begin backfilling at CCI.
- Continued dewatering at CCI.

Estimated quantities through July 31, 2009:

Soil CC2: 9,028 tons
Soil CC1: 12,500 tons
Rock CC2: 52 tons
Rock CC1: 158 tons
Concrete CC2: 206 tons
Concrete CC1: 758 tons
Tanks CC2: Two (2) 4,000-gallon
Tanks CC1: Five (5) 4,000-gallon, fifteen (15) 550-gallons, Two (2) 275 -gallon tanks.

Anticipated Work Efforts for August 2009:

Work Activities

- Continued dust and VOC monitoring.
- Continued odor suppression.
- Continue dewatering at CCI.
- Completion of soil removal at CCI.
- Post-excavation sampling at CCI
- Installation of calciuim peroxide, demarcation layer and backfilling at CCI.
- Demobilization

Monthly Progress Report 11
Prepared By: Edward Wong, P.E.

Period Covered: August 2009

This progress report is being submitted pursuant to Paragraph XI, Progress Reports, of the Brownfield Site Cleanup Agreement (BCA) between the New York State Department of Environmental Conservation (NYSDEC) and Courtlandt Corners I Associates, L.P. and Courtlandt Corners II Associates, L.P. (A2-0592-07-07 and A2-0593-07-07).

The following: (1) summarizes the work completed during the period; and (2) forecasts anticipated work efforts for the next month.

Work Efforts Completed this Month:

Work Activities

- Continued dust and VOC monitoring.
- Continued odor suppression.
- Completion of soil removal at CCI on 8/18/2009.
- Post-excavation sampling at CCI
- Installation of calcium peroxide, demarcation layer and backfilling at CCI.
- Eliminated underpinning at CCI.
- Demobilization (8/20/2009) except for dewatering system.
- Continued dewatering at CCI (ended September 4, 2009).

Estimated quantities through August 31, 2009:

Soil CC2: 9,028 tons
Soil CC1: 15,150 tons
Rock CC2: 52 tons
Rock CC1: 158 tons
Concrete CC2: 206 tons
Concrete CC1: 758 tons
Tanks CC2: Two (2) 4,000-gallon
Tanks CC1: Five (5) 4,000-gallon, fifteen (15) 550-gallons, Two (2) 275 -gallon tanks.

Anticipated Work Efforts for September 2009:

Work Activities

- Administrative and collection and review of final documentation.
- Preparation of Final Engineering Report and Site Management Plan.

* * * * *

Note: *The information presented in this Citizen Participation Plan was current as of the date of its approval by the New York State Department of Environmental Conservation. Portions of this Citizen Participation Plan may be revised during the remedial process.*

Applicant: **COURTLANDT CORNERS I ASSOCIATES, L.P. And COURTLANDT CORNERS II ASSOCIATES, L.P.**
Site Name: **Courtlandt Corners**
Site Number: **C203040 & C203041**
Site Address: **East 161 Street**
Site County: **Bronx, NY**

1. What is New York's Brownfield Cleanup Program?

New York's Brownfield Cleanup Program (BCP) is designed to encourage the private sector to investigate, remediate (clean up) and redevelop brownfields. A brownfield is any real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. A brownfield typically is a former industrial or commercial property where operations may have resulted in environmental contamination. A brownfield can pose environmental, legal and financial burdens on a community. If the brownfield is not addressed, it can reduce property values in the area and affect economic development of nearby properties.

The BCP is administered by the New York State Department of Environmental Conservation (NYSDEC) which oversees Applicants accepted into the BCP as they conduct brownfield site remedial activities. The BCP contains strict investigation and remediation (cleanup) requirements, ensuring that cleanups protect public health and the environment based on the intended use of the brownfield site. When NYSDEC certifies that these requirements have been met, the property can be reused or redeveloped for the intended use. For more information about the BCP, go online at: http://www.dec.ny.gov/chemical/brownfields.html

2. Citizen Participation Plan Overview

A Citizen Participation (CP) Plan provides members of the affected and interested public with information about how NYSDEC will inform and involve them during the investigation and remediation (cleanup) of a site under the BCP.

This CP Plan has been developed for the Courtland Corners I and II Brownfield Cleanup Program sites (hereinafter "Site" or "the Site") under the BCP. Appendix D contains a map locating the Site. NYSDEC is committed to informing and involving the public concerning the investigation and remediation (cleanup) of the Site. This CP Plan describes the public information and involvement program that will be carried out with assistance from the Applicant.

Appendix A of this CP Plan identifies NYSDEC project contact(s) to whom the public may address questions or request information about the Site's remedial program. The locations of the Site's document repositories also are identified in Appendix A. The document repositories provide convenient access to important project documents for public review and comment.

Appendix B contains the brownfield Site contact list. This list has been developed to keep the community informed about, and involved in, the Site's remediation process. The brownfield Site contact list includes, at a minimum:

- chief executive officer and zoning board of each county, city, town and village in which the Site is located;

- residents on and/or adjacent to the Site;
- the public water supplier which services the area in which the Site is located;
- any person who has requested to be placed on the Site contact list;
- the administrator of any school or day care facility located on and/or adjacent to the Site for purposes of posting and/or dissemination at the facility;
- document repositories and their contacts.

The brownfield Site contact list will be used periodically to distribute fact sheets that provide updates about the status of the project, including notifications of upcoming remedial activities at the Site (such as fieldwork), as well as availability of project documents and announcements about public comment periods.

The brownfield Site contact list will be reviewed periodically and updated as appropriate. Individuals and organizations will be added to the Site contact list upon request. Such requests should be submitted to the NYSDEC project contact(s) identified in Appendix A.

Appendix C identifies the CP activities that have been and will be conducted during the Site's remedial program.

The CP activities are designed to achieve the following objectives:

- Help the public understand contamination issues related to a particular brownfield site, and the nature and progress of an Applicant's efforts, under State oversight, to investigate and, if appropriate, remediate (clean up) a brownfield site.

- Ensure open communication between the public and project staff throughout a brownfield site's remedial process.

- Create opportunities for the public to contribute information, opinions and perspectives that have potential to influence decisions about a brownfield site's investigation and remediation (cleanup).

This CP Plan may be revised due to changes in major issues of public concern or in the nature and scope of remedial activities. Modifications may include additions to the Site contact list, updates to major issues of concern to the public, and changes in planned citizen participation activities. The public is encouraged to discuss its ideas and suggestions about the citizen participation program with the project contact(s) listed in Appendix A.

3. Site Information

Site Description

The entire Site is located on East 161st Street in Bronx, New York. The Site, which is bounded by Melrose Avenue and Courtlandt Avenue to the east and west and East 162nd

Street and East 160th Street to the north and south, respectively: is legally defined as Tax Block 2408, Lots 1, 2, 5, 6, 7, 8, 9,10, 12, 13, 14, p/o 16, 20, 25, 27, 28, 29 and 31, and Tax Block 2407, Lots 5, 8, 10, 11, 12, 31 and 32. It should be noted that the entire site was not eligible for the NYSDEC BCP and therefore will not be addressed in this CP. The area addressed in this CP is legally defined as Block 2408 Lots 20 and Block 2407 Lots 5, 8, 10, 11 and 12. A Site location map is presented as Appendix D. The Site is located in a mixed-use residential and commercial area and currently contains two filling stations, one parking lot, one vacant three-story warehouse, one three-story vacant residential building, a community garden and several two-to-three story residential buildings with first-floor commercial lots. The neighboring land uses are primarily residential and commercial.

Site History

According to a May 2007 Fleming-Lee Shue, Inc. Phase II Report, Block 2408 Lot 20 was occupied by residential dwellings, and a filling station between 1891 and 1989. A portion of Block 2408 was demolished between 1978 and 1989. Between 1891 and 1989 Block 2407 Lot 5 contained residential buildings and a filling station, Lots 11 and 12 contained an auto repair shop, and later Lots 8, 10, 11, and 12 contained parking lots. Most of the buildings on Block 2407 were demolished between 1978 and 1989.

Environmental History

A Phase I Environmental Assessment was conducted in May 2006 by AKRF, Inc. to identify any potential environmental concerns resulting from past and present usage of the Site and neighboring properties.

The Phase I Report, as it relates to the Blocks and Lots associated with this BCP project, identified several potential environmental concerns resulting from past and present land uses:

- Block 2407 Lot 5 contains a filling station listed in the NY SPILLS database for having one active status tank failure and one closed status spills. The Site is also listed as a RCRA conditionally exempt small generator for hazardous waste.

- Block 2407 Lots 8, 10, 11, and 12 either once contained an automobile repair shop or are in close proximity to a former automobile repair shop, and have the potential for contaminated soil and/or groundwater. In addition, the demolished buildings on all the above Lots may have contained unregistered underground storage tanks (UST's) and aboveground storage tanks (AST's) which may not have been properly removed during demolition, which would pose environmental concerns.

- Block 2408 Lot 20 contains a filling station listed in the NY SPILLS database for having one active status tank failure and two closed status spills.

- The surrounding land uses include gasoline filling stations, automobile repair shops, parking lots, industrial manufacturing and storage facilities and a dry cleaner which is listed as a small quantity generator. While these lots are outside the subject property, activities on these properties have the potential to affect the soil and groundwater within the subject property.

A Phase II Environmental Site Investigation was conducted in May 2007 by Fleming-Lee Shue, Inc. to determine whether any soil and/or groundwater contamination is present at the Site and to assess the Site's eligibility for entry into the NYSDEC BCP.

The investigation, as it relates to this CP Plan, included the installation of 9 borings (SB-1 to SB-8 and SB-15) via direct push methods. From the nine borings 18 soil samples were collected, one at 0-2 feet below surface and the other at the interval exhibiting the most contamination (as determined by field screening with a Photo Ionization Detector). The samples were analyzed for target compound list volatile organic compounds (TCL-VOCs) by EPA Method 8260, target compound list semi-volatile compounds (TCL-SVOCs) by EPA Method 8270, Pesticides/PCBs by EPA 8081/8082 and TAL metals by EPA Method 6010.

In addition, 5 groundwater samples (GW-1 to GW-5) were collected from boring locations exhibiting elevated PID reading in soil and analyzed for target compound list volatile organic compounds (TCL-VOCs) by EPA Method 8260, target compound list semi-volatile compounds (TCL-SVOCs) by EPA Method 8270, Pesticides/PCBs by EPA 8081/8082 and total and dissolved TAL metals by EPA Method 6010. Due to insufficient sample volume, groundwater sample GW-2 was only analyzed for TCL VOCs by USEPA Method 8260.

Both soil and groundwater data were compared to applicable standards and/or guidance values to assess environmental impacts. The following tables summarize the soil and groundwater analytical results of the Phase II investigation as they relate to the Blocks and Lots associated with the BCP:

Phase II Soil Analytical Results
Courtlandt Corners
BCP Sites - C203040 & C203041

Constituent	Range of Detections Above Unrestricted Use Criteria	Units	Brownfield Cleanup Program Unrestricted Use Criteria
Volatile Organic Compounds (VOCs)

Manganese	569 - 1600	(ug/l)	300
Sodium	146000 - 236000	(ug/l)	20000

4. Remedial Process

The Applicant has applied for and been accepted into New York's Brownfield Cleanup Program as a Volunteer. This means that the Applicant was not responsible for the disposal or discharge of the contaminants and their ownership or operation of the Site took place after the discharge or disposal of the contaminants of concern.

In its Application, the Applicant indicates that future use of the Site will be restricted.

To achieve this goal, the Applicant will conduct remedial activities at the Site with oversight provided by NYSDEC. The Brownfield Cleanup Agreement provides the responsibilities of each party in conducting a remedial program at the Site.

It should be noted that the Applicant has entered into the Brownfield Cleanup Agreement after the Remedial Investigation Stage, and therefore will begin the process with the submission of the Remedial Action Work Plan (RAWP).

The Applicant will submit the results of a previously completed remedial investigation along with the RAWP and conduct remedial action (RA) at the Site with NYSDEC oversight The goals of the remedial investigation are to:

1) Define the nature and extent of contamination in soil, groundwater, soil vapor and any other impacted media;

2) Identify the source(s) of the contamination;

3) Assess the impact of the contamination on public health and/or the environment; and

4) Provide information to support the development of a RAWP to address the contamination, or to support a conclusion that the contamination does not need to be addressed.

The Applicant will prepare the RAWP. This RAWP will summarize the results of the RI and will include the Applicant's recommendation as to whether remediation (cleanup) is needed to address Site-related contamination. The RAWP is subject to review and approval by NYSDEC.

NYSDEC determines whether the Site poses a significant threat to public health and/or the environment. If NYSDEC determines that the Site is a "significant threat," a qualifying community group may apply for a TAG. The purpose of a TAG is to provide funds to the qualifying community group to obtain independent technical assistance. This assistance helps the TAG recipient to interpret and understand existing environmental information about the nature and extent of contamination related to the Site and the development/implementation of a remedy.

For more information about the TAG Program and the availability of TAGs, go online at: http://www.dec.ny.gov/environmentdec/19063.html

After NYSDEC receives the RAWP, the Site contact list would be sent a fact sheet that describes the Remedial Action Work Plan and announces a 45-day public comment period. NYSDEC would factor this input into its decision to approve, reject or modify the RAWP.

Approval of the RAWP by NYSDEC would allow the Applicant to design and construct the alternative selected to remediate (clean up) the Site. The Site contact list would receive notification before the start of Site remediation. When the Applicant completes remedial activities, it will prepare a Final Engineering Report (FER) that certifies that remediation (cleanup) activities have been achieved or will be achieved within a specific time frame. NYSDEC will review the report to be certain that the remediation is

protective of public health and the environment for the intended use for the Site. The Site contact list would receive a fact sheet that announces the completion of remedial activities and the review of the FER.
NYSDEC would then issue the Applicant a Certificate of Completion. This Certificate states that remediation (cleanup) goals have been achieved, and relieves the Applicant from future remedial liability, subject to statutory conditions. If the Applicant used institutional controls or engineering controls to achieve remedial objectives, the Site contact list would receive a fact sheet discussing such controls.

An institutional control is a non-physical means of enforcing a restriction on the use of real property that limits human or environmental exposure, restricts the use of groundwater, provides notice to potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of a remedial program or with the effectiveness and/or integrity of site management at or pertaining to a brownfield site. An example of an institutional control is an environmental easement.

An engineering control is a physical barrier or method employed to actively or passively contain, stabilize, or monitor contamination, restrict the movement of contamination to ensure the long- term effectiveness of a remedial program, or eliminate potential exposure pathways to contamination. Examples include caps and vapor barriers.

Site management will be conducted by the Applicant as required with appropriate NYSDEC oversight.

Activities required to be conducted to inform and involve the public during the Site's remedial process are introduced in section 5 and identified in the chart in Appendix C.

5. Citizen Participation Activities

CP activities that have already occurred and are planned during the investigation and remediation of the Site under the BCP are included in Appendix C: Summary of Citizen Participation Activities. NYSDEC will ensure that these CP activities are conducted, with appropriate assistance from the Applicant.

All CP activities seek to provide the public with significant information about Site findings and planned remedial activities, and some activities announce comment periods and request public input about important draft documents such as the Proposed Remedial Action Work Plan.

The CP Plan for the Site may be revised based on changes in the Site's remedial program or major issues of public concern.

All written materials developed for the public will be reviewed and approved by NYSDEC for clarity and accuracy before they are distributed. To accommodate Limited English Proficient (LEP) community members, Fact Sheets will be available in English and Spanish-language versions.

6. Major Issues of Public Concern

There are no major issues of public concern as they relate to the Site. Major issues of public concern may be identified during the Site's remedial process if they arise.

Appendix A – Project Contacts and Document Repositories

Project Contacts

For information about the Site's remedial program, the public may contact the following NYSDEC project contacts:

Ms. Dana Kaplan
Project Manager
NYSDEC
Division of Environmental Remediation
1 Hunter's Point Plaza
47-40 21st Street
Long Island City, NY 11101 – 5407
Phone: (718) 482-6405

Document Repositories

The document repositories identified below have been established to provide the public with convenient access to important project documents:

NYSDEC Region 2 Office
1 Hunter's Point Plaza
47-40 21st Street
Long Island City, NY 11101 – 5407
Phone: (718) 482-6405
Hours: Monday through Friday: 9:00 AM to 5:00 PM (call for appointment)

Community Board 3:
Mr. John Dudley, District Manager
Ms. Gloria Alston, Chairperson
Bronx Community Board 3
1426 Boston Road
Bronx, New York 10456

Appendix C – Identification of Citizen Participation Activities

Required Citizen Participation Activity	CP activity(ies) occur at this point	Date Completed
Application Process:		
• Prepare brownfield Site contact list (BSCL) • Establish document repositories • Publish notice in Environmental Notice Bulletin (ENB) announcing receipt of application and 30-day comment period • Publish above ENB content in local newspaper • Mail above ENB content to BSCL	At time of preparation of application to participate in BCP When NYSDEC determines that BCP application is complete. The 30-day comment period begins on date of publication of notice in ENB. End date of comment period is as stated in ENB notice. Therefore, ENB notice, newspaper notice and notice to the BSCL should be provided to the public at the same time.	**N/A** **N/A** **May 18, 2007**
After Execution of Brownfield Site Cleanup Agreement:		
• Prepare citizen participation (CP) plan	Draft CP Plan must be submitted within 20 days of entering Brownfield Site Cleanup Agreement. CP Plan must be approved by NYSDEC before distribution	**Draft submitted May 2008.**
After Remedial Work Plan (RWP) Received:		
• Mail fact sheet to BSCL about proposed RWP and announcing 45-day comment period • Public meeting by NYSDEC about proposed RWP (if requested by public)	Before NYSDEC approves RWP. 45-day comment period begins/ends as per dates identified in fact sheet. Public meeting would be held within the 45-day comment period.	**TBD** **TBD**
After Approval of RWP:		
• Mail fact sheet to BSCL summarizing upcoming remedial construction	Before the start of remedial construction	**TBD**
After Remedial Action Completed:		
• Mail fact sheet to BSCL announcing that remedial construction has been completed • Mail fact sheet to BSCL announcing issuance of Certificate of Completion (COC)	At the time NYSDEC approves Final Engineering Report. These two fact sheets should be combined when possible if there is not a delay in issuance of COC	**TBD** **TBD**

4.0 Key Personnel

4.1 Officers

Michael Veraldi, President, Laboratory Director Long Island Analytical Laboratories, Inc.

4.2 Resumes

Michael Veraldi, Chemist, Laboratory Director

Mr. Veraldi has 20 years experience as a chemist in the environmental field and has been a New York State Department of Health (NYSDOH) Certified Environmental Laboratory Director for over 18 years. Mr. Veraldi founded Long Island Analytical Laboratories, Inc. (LIAL), a NYSDOH certified laboratory and consulting firm in Holbrook, New York.

Mr. Veraldi has over 10 years of experience working for four New York State Licensed Hazardous Waste Treatment Storage and Disposal facilities (TSDF) on Long Island (KBF Pollution Management Inc., of Farmingdale, and Republic Environmental Systems of New York). Mr. Veraldi has established an excellent rapport with NYSDEC, EPA, SCDH, and NCDH over the years by working interactively with these agencies. Mr. Veraldi has worked with regulatory agencies on groundwater remediation projects, underground storage tank removals, and installations, large and small releases of petroleum projects, and/or hazardous materials.

Mr. Veraldi has testified as an expert witness in over 100 cases involving environmental issues including lead exposure, landfills, asbestos, and air emissions. Mr. Veraldi is currently on retainer by Empire Insurance as an environmental expert.

CERTIFICATIONS/AFFILIATIONS:

NYS Department of Health Environmental, Laboratory Director
Department of Health and Human Services, Laboratory Director
American Industrial Hygiene Association, Laboratory Director
Occupational Safety and Health Administration 40 hour course
Occupational Safety and Health Administration Supervisor course
Member of the Chemical Society
Member of Applied Chemist Society
Member of national Groundwater Association

Mr. Veraldi is a Chemical Engineering graduate of SUNY, Stony Brook and has completed a second degree in Biological Sciences at SUNY, Farmingdale.

James Turecamo, Assistant Laboratory Director

Mr. Turecamo earned his Bachelor of Science in Chemistry from SUNY College at Cortland in 1982.

Mr. Turecamo has over 20 years experience as an Organic Chemist, and is the Assistant Laboratory Director of LIAL. Mr. Turecamo has worked in three New York State Certified Laboratories and has held supervisory positions in the Organics Department. Mr. Turecamo is familiar with many types of analytical instrumentation including GC/MS, GC, ICP, Graphite Furnace, TOX, TOC, IR, UV and HPLC.

Raisa Zeltser, Quality Assurance Officer

Mrs. Zeltser completed her Master of Science from Kiev Polytechnical Institute in 1975 (Ukraine).

Mrs. Zeltser has worked at 2 New York State environmental labs prior to her employment at LIAL. She has over 15 years experience in Analytical Chemistry and Quality Assurance. Mrs. Zeltser has been employed at LIAL since December 2005 and currently oversees the Quality Control and Quality Assurance Department.

Louis Bascelli, Sales

Mr. Bascelli completed his Associates in Applied Science from Suffolk Community College in 1986.

Mr. Bascelli has worked as the Senior Project Manager, Client Services Manager and in Marketing and Sales at a New York State environmental lab for the past 9 years. Currently, Mr. Bascelli runs LIAL's Sales Department.

Jim Zhou, Chemist

Mr. Zhou completed his Bachelor of Science degree in Geology from the China University of Geoscience in 1982. Mr. Zhou also has completed his Master of Science degree in 1989 from the same university.

Mr. Zhou has been working as an organic chemist, concentrating in the analysis of pesticides, PCBs and herbicides and has acquired considerable experience in this field. Mr. Zhou also performs asbestos analysis at LIAL.

Xiaoyon Wang, Semi-Volatile Supervisor

Dr. Wang received her BS in Chemical Physics from University of Science and Technology of China in 1998 and Ph.D in Environmental Science from New Jersey Institute of Technology in 2005.

She has been employed at LIAL since October 2005 and is responsible for the extraction and analysis of Semi-Volatile Organic Compounds.

Joe Ledermann, Chemist

Mr. Ledermann completed his Associates Degree in Lab Sciences at Suffolk Community College in 1993.

Mr. Ledermann has over 11 years of analytical experience including 8 years of Volatile GC/MS. Mr. Ledermann has been employed at LIAL since September 2005 and is responsible for the analysis of Volatiles.

Gary Saunders, Chemist

Mr. Saunders received his Bachelor of Arts in Natural Science from Dowling College, New York in 1983.

Mr. Saunders has 13 years of analytical experience. Mr. Saunders has been employed at LIAL since 2001. At LIAL, he is responsible for Mercury analysis, graphite furnace technique and various wet chemistry analysis.

Neda Babinsky, Chemist

Ms. Babinsky received her Bachelor Degree in Environmental Science from Kaunas University of Technology, Lithuania in 1995.

Ms. Babinsky has 6 years of analytical experience. Ms. Babinsky has been employed at LIAL since January 2007. At LIAL, she is responsible for ICP analysis, graphite furnace technique and various wet chemistry analysis.

Mike Matulock, Chemist

Mr. Matulock received his Bachelor of Science Degree in Biology from SUNY New Paltz in December of 2004.

Mr. Matulock has been employed at LIAL since September 2005, and is responsible for semi-volatile prep and analysis. Mr. Matulock has previously worked at another New York State laboratory where he was responsible for Wet Chemistry analysis.

Kevin Sheridan, Chemist

Mr. Sheridan received his Bachelor of Science in Environmental Science from Unity College, Maine in 1988.

Mr. Sheridan has over 14 years of analytical experience including Inorganic analysis. Mr. Sheridan has been employed at LIAL since January of 2002 and is responsible for the analysis of a variety of Inorganic analytes including cyanide, nitrate, nitrite, sulfate and Biochemical Oxygen Demand.

Riying He, Chemist

Ms. He received her Degree in Chemical Engineering from Jilin Chemical Institute, China in 1981.

Ms. He has over 8 years of experience in Chemical Engineering. Ms. He has been employed at LIAL since January of 2002 and is responsible for extraction of Herbicide, Pesticide, PCB, and Semi-volatile samples.

Valeria Niculescu, Chemist

Mrs. Niculescu received her Bachelors in Chemistry and Master Degree in Geology from Bucharest Institute of Petroleum and Geology in 1968 (Romania).

Mrs. Niculescu has worked at 2 environmental labs prior to her employment at LIAL. She has over 17 years experience in Analytical Chemistry. Mrs. Niculescu has been employed at LIAL since March 2005 and is responsible for the preparation and analysis of various wet chemistry methods along with cyanide, TOC, Ammonia, TKN, MBAS, Oil & Grease, Phenols and Reactivity.

George McCleary, Technician

Mr. McCleary has been employed at LIAL since October 2004 and is responsible for the prep of inorganic samples.

Mr. McCleary has previously worked at 2 New York State laboratories and has experience in Inorganics.

Ben Lamberson, Technician

Mr. Lamberson has been employed at LIAL since May 2005 and is responsible for the prep and analysis of Microbiology samples.

Mr. Lamberson has previously worked at another New York State laboratory and has experience with microbiology, MBAS, Oil & Grease, as well as various other laboratory tasks.

Christopher P. Ortiz, Technician, Sample Collection

Mr. Ortiz received his Associates Degree in Natural Resource Conservation at Morrisville University in 1998.

Mr. Ortiz has over 5 years of field experience in sample collection, preservation, shipment and storage including lead sampling, air monitoring and asbestos inspection and sampling. Has extensive experience with all levels of government including but not local, state, and federal agencies. Mr. Ortiz is a New York Department of Labor licensed asbestos inspector, and lead paint risk assessor. Mr. Ortiz has also completed the HazWopper 24 hour training course and takes a yearly 8 hour refresher course. Mr. Ortiz has undergone extensive training with respect to proper sampling collection and preservation techniques as required by New York State Department of Health, and the United States Environmental Protection Agency.

5.0 Laboratory Certifications/Accreditations

- NYSDOH ELAP # 11693
- EPA Lab # NY01273
- CTDOH # PH-0284
- AIHA # 164456
- PADEP # 68-2943
- NJDEP # NY012
- Member of the Chemical Society
- Member of the Applied Chemist Society
- Member of the National Groundwater Association
- Participating member in the PAT and ELPAT programs

Appendix IV: Major Equipment

Equipment

Field Equipment

As part of our efforts to provide the most comprehensive laboratory field services, **LIAL** maintains:

- An Emergency Response Spill Containment Unit
- 80 Allegro High Volume Air Sampling Pumps
- 8 SKC Model 224-44XR Personal Air sampling Pumps
- Photovac Microtip – Photo-Ionization Detector (PID) (2)
- 2 SKC Low Flow Diaphragm Pumps
- 5 HI-Q PM-10 High Volume Sampling Pumps
- Sensidyne Detector Tube Pump
- Dragger Direct Reading Detector Pump
- Jerome Mercury Analyzer
- Hach Dissolved Oxygen Meter
- Hach Turbidity Meter
- Beckman pH Meter
- Arizona Instruments Soil Conductivity Meter

Laboratory Equipment

Long Island Analytical Laboratories, Inc. operates a fully equipped in-house laboratory, with the ability to conduct analysis for asbestos, wet chemistry, volatile and semi-volatile organic compounds, metals, and microbiology.

Appendix VII

Uncertainty

This expression of uncertainty was based on the approach taken in the ISO "Guide to the Expression of Uncertainty in Measurement".

The definition of the term uncertainty (of measurement) was taken from the current version adopted for the International Vocabulary of Basic and General Terms is:

"Uncertainty is a parameter associated with the result of a measurement, that characterizes the dispersion of the values that could reasonably be attributed to the measurand".

NOTE 1: This parameter may be a **standard deviation** or a given multiple of it, or the width of a confidence interval.

The ultimate use of such **uncertainty** estimates is to:
1. Be able to state just how good a test result is.
2. Allow the client or end user of data to properly interpret data in the report.

Approaches to Uncertainty: There are two (2) contributors to measurement **uncertainty** (refer to ISO Guide to the Expression of **Uncertainty** in Measurement):

- Type A contributors are those that may be determined statistically (random contributors).
- Type B contributors are those that must be determined by non-statistical methods (see below).

Type A contributors may be estimated by estimating the overall **uncertainty** in the entire analytical process by measuring the dispersion of values obtained from well-chosen standards or samples. It is not necessary to break down the Type A contributors any further, i.e., how much is digestion error, weighing error, instrument error, etc., although such a breakdown may be useful in improving analytical precision.

Taking a Type A Approach:

Since accredited Labs must do Statistical Quality Control for all tests wherever possible (ISO 17025:1999, 5.9), the data generated from this effort (precision and bias) also serves the measure of **uncertainty**; a separate effort is not required

Taking a Type B Approach: Some procedures are best handled by step-by-step uncertainty calculations.

Uncertainty of measurement comprises, in general, many components. Some of these components may be evaluated from the statistical distribution of the results of series of measurements and can be characterized by standard deviations.

In estimating the overall uncertainty, it is necessary to take each source of uncertainty and treat it separately to obtain the contribution from that source. Each of the separate contributions to uncertainty is referred to as an uncertainty component. When expressed as a standard deviation, an uncertainty component is known as a **standard uncertainty.**

For a measurement result y, the total uncertainty, termed **combined standard uncertainty** and denoted by $u_c(y)$, is an estimated standard deviation equal to the positive square root of the total variance obtained by combining all the uncertainty components.
For most purposes in analytical chemistry, an **expanded uncertainty** U, should be used. The expanded uncertainty provides an interval within which the value of the measurand is believed to lie with a higher level of confidence. U is obtained by multiplying $u_c(y)$, the combined standard uncertainty, by a **coverage factor** k. The choice of the factor k is based on the level of confidence desired. For an approximate level of confidence of 95%, k is 2.

The process of measurement uncertainty

step 1: specify measurand
Write down a clear statement of what is being measured, including the relationship between the measurand and the parameters (e.g. measured quantities, constants, calibration standards etc.) upon which it depends.

step 2: identify uncertainty sources
List the possible sources of uncertainty. This will include sources that contribute to the uncertainty on the parameters in the relationship specified in step 1, but may include other sources and must include sources arising from chemical assumptions.

step 3: quantify uncertainty components
Measure or estimate the size of the uncertainty component associated with each potential source of uncertainty identified. Estimate or determine a single contribution to uncertainty associated with a number of separate sources.

step 4 calculate combined uncertainty
The information obtained in step 3 will consist of a number of quantified contributions to overall uncertainty, whether associated with individual sources or with the combined effects of several sources. The contributions have to be expressed as standard deviations, and combined according to the appropriate rules, to give a combined standard uncertainty. The appropriate coverage factor should be applied to give an expanded uncertainty.

Calculating the Combined Uncertainty

1. Before combination, all uncertainty contributions must be expressed as standard uncertainties, that is, as standard deviations. This may involve conversion from some other measure of dispersion.

2. Where the uncertainty component was evaluated experimentally from the dispersion of repeated measurements, then it can readily be expressed as a standard deviation. For the contribution to uncertainty in single measurements, the standard uncertainty is simply the observed standard deviation; for results subjected to averaging, the standard deviation of the mean is used.

EXAMPLE

> A specification states that a balance reading is within ±0.2 mg with 95% confidence. From standard tables of percentage points on the normal distribution, a 95% confidence

interval is calculated using a value of 1.96σ. Using this figure gives a standard uncertainty of (0.2/1.96) ≈ 0.1.

EXAMPLE

A 10 ml Grade A volumetric flask is certified to within ±0.2 ml. The standard uncertainty is $0.2/\sqrt{3} \approx 0.11$ ml.

EXAMPLE

A 10 ml Grade A volumetric flask is certified to within ±0.2 ml, but routine in-house checks show that extreme values are rare. The standard uncertainty is $0.2/\sqrt{6} \approx 0.08$ ml.

Following the estimation of individual or groups of components of uncertainty and expressing them as standard uncertainties, the next stage is to calculate the combined standard uncertainty using the procedure described below.

For models involving only a sum or difference of quantities, e.g. y=(p+q+r+...), the combined standard uncertainty $u_c(y)$ is given by

$$u_c(y(p,q,..)) = \sqrt{u(p)^2 + u(q)^2 + ...}$$

Expanded uncertainty

The final stage is to multiply the combined standard uncertainty by the chosen coverage factor in order to obtain an expanded uncertainty. The expanded uncertainty is required to provide an interval which may be expected to encompass a large fraction of the distribution of values which could reasonably be attributed to the measurand.

For most purposes it is recommended that k is set to 2. However, this value of k may be insufficient where the combined uncertainty is based on statistical observations with relatively few degrees of freedom (less than about six). The choice of k then depends on the effective number of degrees of freedom.

8.3.4. Where the combined standard uncertainty is dominated by a single contribution with fewer than six degrees of freedom, it is recommended that k be set equal to the two-tailed value of Student's t for the number of degrees of freedom associated with that contribution, and for the level of confidence required (normally 95%). Table 1 gives a short list of values for t.

Student's t for 95% confidence (2-tailed)

Degrees of freedom v	t
1	12.7

2	4.3
3	3.2
4	2.8
5	2.6
6	2.5

Reporting:

Where necessary for the interpretation of the test results, the estimate of **uncertainty** shall be reported to the client (ISO 17025:1999, 5.10.3.1c).

When using laboratory QC data to estimate measurement **uncertainty**, **uncertainty** should be reported as bias and precision. Bias may be determined using LCS % yield data. For example, an analysis having an average LCS yield equal to 107% has a bias of +7%. Precision may be determined using relative percent difference (RPD) as determined from duplicate analyses or from % yield of LCS measurements. For example, precision, represented by the 95% confidence interval for duplicates (or the range in which the result should fall 95% of the time) can be estimated to be ± 2 times the RPD. The LCS 95% confidence interval is equal to ± 2 times the standard deviation of the % yield. When using the mathematical approach to the step-by-step **estimation** of measurement **uncertainty**, a single, overall ± value should be reported.

When uncertainty is expressed as the combined standard uncertainty u_c (that is, as a single standard deviation), the following form is recommended:
"(Result): x (units) [with a] standard uncertainty of u_c (units)"

NOTE: The use of the symbol ± is not recommended when using standard uncertainty as the symbol is commonly associated with intervals corresponding to high levels of confidence.

EXAMPLE:

Total nitrogen: 3.52 %w/w
Standard uncertainty: 0.07 %w/w *
*Standard uncertainty corresponds to one standard deviation.

When uncertainty is expressed as the expanded uncertainty the following form is recommended:
(Result): x ± U (units)

where the reported uncertainty is calculated using a coverage factor of 2, [which gives a level of confidence of approximately 95%]

EXAMPLE:

Total nitrogen: 3.52 ± 0.14 %w/w *

*The reported uncertainty is an expanded uncertainty calculated using a coverage factor of 2 which gives a level of confidence of approximately 95%.

Appendix VIII

Traceability

1.1 Definition

Traceability has been defined as "the property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties."
Achieving traceability to the *International System of Units (SI)* for physical measurements (length, mass, etc.) is therefore established through an unbroken chain of comparisons with a stated uncertainty.

1.2 Terms and Explanations

A *Certified Reference Material* is a reference material, accompanied by a certificate, one or more of whose property values are certified by a procedure which establishes traceability to an accurate realization of the unit in which the property values are expressed, and for which each certified value is accompanied by an uncertainty to a stated level of confidence (VIM: 1995, ISO Guide 30).

A *Standard* is a chemical reference material intended to define the concentrations of specified components (i.e. - 'measurement standard').

NIST (National Institute of Standards and Technology) is "responsible for developing, maintaining, and disseminating national standards"

SRM (Standard Reference Material) is a federally registered trademark of NIST and the US Federal Government. This term describes the certified reference materials distributed specifically by NIST.

1.3 Calculation

The definition of traceability requires that a statement of uncertainty be made with each comparison in the chain.

Stated uncertainty of the standards from a commercial supplier cannot be smaller than the uncertainty of the SRM used by the commercial manufacturer for comparison. This is due to the fact that the comparison process has a standard uncertainty that must be added onto the standard uncertainty of the NIST SRM, which is used in making the comparison.

Combined Standard Uncertainty $u_c(y)$

Standard uncertainty of the result y of a measurement when the result is obtained from the values of a number of other quantities, equal to the positive square root of a sum of terms, the terms being the variances of these other quantities weighted according to how the measurement result varies with these quantities.

Example: A commercial supplier certifies a 10,008 µg/mL solution of Pb and determines that the standard deviation of all systematic and random errors in their certification process is ± 0.2%. In addition the NIST SRM used for comparison has a certified value of 10,000 ± 0.18% Pb. NIST uses a coverage factor of 2 for a 95% confidence interval in reporting the uncertainty. Therefore the standard deviation of the SRM is 0.09%. The reported uncertainty of the CRM produced by the commercial supplier would then be calculated taking into account the standard deviation of their production process and the standard deviation of the NIST SRM. The expanded uncertainty, using a coverage factor of 2, is calculated taking the square root of the sum of the squares, i.e., $\sqrt{((0.20)^2 + (0.09)^2)} * 2 = 0.44\%$.

1.4 Documentation

Traceability shall be documented for all Certified Reference Materials including NIST SRM uncertainty, manufacturer CRM uncertainty and combined uncertainty.

Traceability shall be documented for all materials used to perform internal or external calibrations on testing equipment. Documentation should include a statement by the manufacturer regarding traceability, and a certificate of analysis, containing, at minimum:

- The manufacturer
- Its address
- Its accreditation number (if applicable)
- How the traceability was achieved
- The traceable values
- Their associated uncertainty

It is possible to have more than one chain of traceability. For example, a balance may demonstrate traceability either through its own traceable calibration, or by verifying the balance with traceable weights. Either is acceptable, and only one is required, although for balances both are recommended.

1.5 Balances

Balances should be cleaned/repaired/calibrated on a regular yearly schedule using acceptable methods, such as ASTM E898, over the entire range of use. Service organization sticker with date of service should be fixed to each balance.

The weights used by the calibration agency to bring the balance into specifications shall be traceable to NIST. The cleaning/repair/calibration shall be documented as having used traceable materials. In addition, weights used by the laboratory as check standards shall have calibration certificates stating traceability, uncertainty, etc.

Balances must be calibrated by an entity accredited for such calibration by a suitable agency, such as NVLAP, A2LA, or another NACLA recognized accrediting body. In the event that no accreditation program exists for this type of calibration, then the calibrating entity shall adhere to ISO 17025 traceability requirements (ISO/IEC 17025, section 5.6). This includes the calculation of uncertainty.

Analytical balances should be checked in the working range daily with 2 NIST traceable class S weights. The range selected should reflect the routine use of the balance and the actual class S weights used should test the optical scale at mid-point.
The results of accuracy checks, the date performed and the name of the analyst have to be recorded in a logbook which is dedicated to the balance.

Top-load or Pan Balances should be capable of detecting 100 mg at a 150 gram load when used for bacteriological media preparation and solid sample preparation.

1.6 Thermometers

The laboratory should have NIST traceable, factory certified thermometer or one that meets the requirements of NIST Monograph SP 250-23. After the first year of service and annually thereafter, the certified thermometer should be checked at the ice-point and the correction factors adjusted accordingly. Records showing date, ice-point reading, adjustment to be made to the correction factors, new correction factors and analyst's initials should be made in the bound notebook.

A certified ("NIST traceable") thermometer is defined as one which has documentation showing that it has been compared against a National Institute of Standards and Technology (NIST) thermometer for the temperature range in which it is to be used.

Each working thermometer should be uniquely identified by number and calibrated at the temperature(s) if interest prior to being placed into service and quarterly thereafter. A calibration logbook showing the date and analyst name, the readings of the two thermometers and any correction factor should be maintained. A correction tags should be attached to the thermometers. Solvent filled thermometers can be used in refrigerators. Mercury in glass thermometers that have separated columns should be removed from the service.

Geoprobe Model 7720DT

The Geoprobe® Model 7720DT is a high-capacity direct push machine with a narrow platform for limited access areas and a longer stroke for added work space under the hammer. This machine is equipped with many of the features Geoprobe® customers are accustomed to, and with many new advantages to offer customers flexibility in all types of field conditions.

This product is featured in the Probing Times Newsletter
www.probingtimes.com

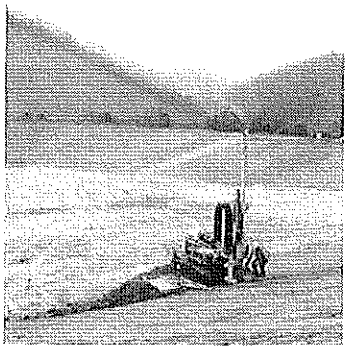

Versatility Part of Model 7720DT's Appeal

The Geoprobe® Model 7720DT combines a 77-in. stroke from a 7730DT machine with a 6620DT's undercarriage design. The result: additional working space under the hammer for dual tube and augering work with a more compact and lighter weight package than the 7730DT.

This combination has quickly made the Model 7720DT a popular machine. "The common scope of work calls for soil sampling and monitoring wells; it's nice to take one machine to the project site. Overall, the performance is good and we really like its versatility," said a North Carolina 7720DT owner.

Another 7720DT owner said, "We completed our project with 3-ft. dual tube tooling the same day we arrived. It was just another limited access, shallow, dual tube soil sampling job for us, but to our client it meant the difference between finishing and not finishing the project on time. His observation: 'Your crew was outstanding and that track rig was just amazing!'"

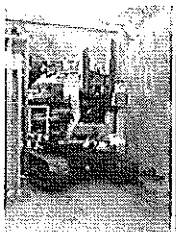

"If I could have only ONE Geoprobe®, it would have to be the 7720DT!"
Dennis Samsel, Owner - Geo Logic, Inc., New Albany, IN

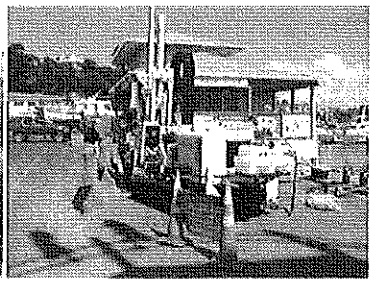

Model 7720DT Features:

- 77-in. probe cylinder
- Allows use of 60 in. probe rods and samplers
- Over 20-ton pulling capacity
- Equipped with powerful GH62 Hammer
- Heavy-duty undercarriage
- Wireless remote control
- Built-in rotary spindle
- Hydraulic winch
- Two-speed probe cylinder
- Hydraulic movement in all three axes
- Auxiliary hydraulic power ports
- Compatible with Geoprobe® tooling and logging equipment

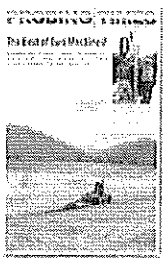

(above) Dennis Samsel, Geo Logic, Inc., works with his 7720DT machine on a Superfund site near St. Clairsville, OH. According to Dennis, the "cool" geology on the other side of the river shows the bedrock at a much higher elevation than where they were working.

Lee Hauber with Geo Logic guides the 7720DT through the opening of the Rhino Exhibit at the Indianapolis Zoo. The narrow width of the machine... 60 in. ... allowed it to squeeze through the opening designed for the rhinos to fit through. No rhinos or Geoprobe® operators were harmed during this filming!

With onboard water storage tank to decon tools and a hydraulic liner extruder mounted above the left side track, this 7720DT provides a compact work area for the field team. This machine, owned by Brown Bros Drilling in Hamilton, New Zealand, is at a monitoring well installation site at a marina in the "City of Sails", New Zealand.

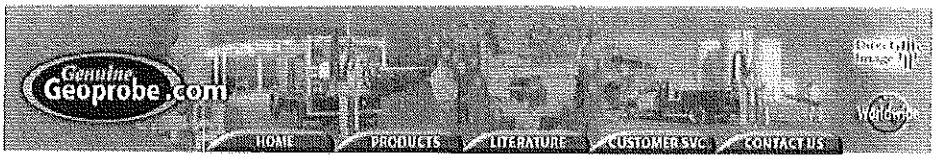

The Probing Times Newsletter, Fall 2006 Edition, includes more customer experiences with the Model 7720DT and other Geoprobe tools and equipment. [Read more...]

Geoprobe Model 7720DT

This product is featured in the Probing Times Newsletter www.probingtimes.com

Stroke	77 in.	1956 mm
Weight	6,850 lbs.	3110 kg
Width	60 in.	1524 mm
Length (folded)	96 in.	2438 mm
Height (folded)	89 in.	2260 mm
Height (unfolded)	177 in.	4496 mm
Lateral Movement (side-to-side)	33 in.	838 mm
Foot Travel	39 in.	991 mm
Extension	15 in	381 mm
Down Force	35,000 lbs.	160 kN
Retraction Force	47,000 lbs.	214 kN
Hydraulic Pressure (system)	2,460 psi	169 bar
Hydraulic Flow Rate (system)	30 gpm	114 Lpm
Hammer System	GH62	GH62
Percussion Rate	32 Hz	32 Hz
Torque (hammer motor)	560 ft. lbs.	759 Nm
Rotation Rate (hammer motor)	0-240 rpm (bi-directional)	
Fuel Capacity (diesel)	15 gal.	57 L
Engine (diesel)	Kubota, 4-cylinder turbo	
Engine Power	54 hp	40 Kw
Ground Speed	0-4.5 mph	0-7.2 kph
Surface Load	3.7 lb/in2	0.26 kg/cm2
Water Transport Capacity	50 gal.	190 L
Winch Rating	2,350 lb.	1,066 kg
Winch Speed	0-110 fpm	0-34 m/min

153 in. (3886 mm)

60 in. (1524 mm)

Augerhead Specifications

Torque (high torque/low speed)	3,000 ft. lb.	4067 Nm
Torque (low torque/high speed)	1,500 ft. lb.	2034 Nm
Hex adapter	1-5/8 in.	41 mm
Rotation speed (low speed/high torque)	0-105 rpm	0-105 rpm
Rotation speed (high speed/low torque)	0-150 rpm	0-150 rpm

AFFIDAVIT

James Giustiniani being duly sworn, certifies that two (2) 4,000 gallon gasoline underground storage tanks located at the above referenced site address were **PERMANENTLY REMOVED** on April 14, 2009.

- Tanks were purged and cleaned.
- All lines were removed.
  Vent Lines were removed.
  Fill Lines were removed.
  Suction Lines were removed.
- Tanks were disposed of in a legal manner.
- This affidavit is issued to attest the proper **Environmental Removal Procedure** in accordance with the guidelines outlined in **Section (c)/(d) of Title 3, RCNY Chapter 21-02**, and is issued by a **LICENSED New York City Fire Department Underground Tank Installer.**

Certificate of Fitness Number: 61431136 **Expiration Date: 06/01/10**
