DATA USEABILITY SUMMARY REPORT (DUSR)
COURTLANDT CORNERS I
364 EAST 161ST STREET, BRONX, NEW YORK
ENDPOINT SOIL SAMPLING
ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)
ACCUTEST LABORATORIES JOB NUMBERS
JA22090, JA23207, JA23638, JA23843 JA24059,
JA24443, JA24692, JA25087, JA25246, JA25522, AND JA25638

Deliverables

The above referenced data packages for thirty-five (35) soil samples, one (1) blind field duplicate sample, one (1) field blank, one (1) trip blank, and one (1) set of matrix spike/matrix spike duplicate (MS/MSD) sample contains all required deliverables as stipulated under the 2005 New York State Analytical Services Protocols (ASP) for Category B deliverables. The sample specific analysis included Target Compound List (TCL) Volatile Organic Compounds (VOC), analyzed in accordance with United States Environmental Protection Agency (USEPA) SW-846 Method 8260B, TCL Semivolatile Organic Compounds (SVOCs) analyzed in accordance with USEPA SW-846 Method 8270C, TCL Pesticides analyzed in accordance with USEPA SW-846 Method 8081A, and Target Analyte List (TAL) Metals analyzed in accordance with USEPA SW-846 Methods 6010B and 7471B. The TCL and TAL are consistent with Exhibit C of the USEPA Contract Laboratory Program Statement of Work (CLP SOW) for organics analysis Multi-Media, Multi-Concentration OLM04.2, May 1999 and inorganics analysis Multi-Media, Multi-Concentration ILM05.3, February 2004.

The data have been validated according to the protocols and quality control (QC) requirements of the following documents and the reviewer's professional judgment:

- the NYSDEC ASP;
- the USEPA CLP National Functional Guidelines for Organic Data Review (October 1999);
- the USEPA Region II Data Review Standard Operating Procedure (SOP) Number HW-24, Revision 2, October 2006: Validating Volatile Organic Compounds by SW-846 Method 8260B;
- the USEPA Region II Data Review SOP Number HW-22, Revision 3, October 2006: Validating Semivolatile Organic Compounds by SW-846 Method 8270C;
- the USEPA Region II Data Review SOP Number HW-44, Revision 1: Data Validation SOP of Organochlorine Pesticides by Gas

Chromatography SW-846 Method 8081B - October 2006;
- the USEPA CLP National Functional Guidelines for Inorganic Data Review (October 2004); and
- the USEPA Region II Data Review SOP Number HW-2, Revision 13, September 2006: Evaluation of Metals Data for the CLP Program.

This DUSR pertains to the following soil samples collected from June 30, 2009 through August 14, 2009:

Samples

JA22090	*JA22307*	*JA23638*		*JA23843*

TRIP BLANK (shipped on June 30, 2009)

Chain-of-Custody

- The Chains-of-Custody (COC) were reviewed for completeness and accuracy. There were no discrepancies observed with the samples presented on the COC except those listed below. All tests specified on the COC were performed for the designated samples.

- Samples B-CCI-01, B-CCI-005(20'), B-CCI-008(20'), B-CCI-009(20'), B-CCI-011(22'), B-CCI-014(22'), B-CCI-020(02'), and B-CCI-021(08'), collected on June 25, 2009, July 15, 2009, July 22, 2009, July 22, 2009, July 27, 2009, July 27, 2009, August 3, 2009, and August 3, 2009 respectively are not part of this review. They do appear on the COCs for Accutest Job Numbers JA21788, JA23207, JA23843, JA23843, JA24059, JA24059, JA24619, and JA24619 respectively. These samples were recollected. No qualification of the sample data is required.

- The COC for the samples collected on July 27, 2009 included samples B-CCI-012(24') and B-CCI-015(24'). The analysis for these samples was cancelled per request.

Organics

The following items/criteria were reviewed:

- Case narrative and deliverables compliance
- Chains-of-Custody
- Holding times both technical and procedural and sample preservation (including pH and temperature)
- Surrogate Compound recoveries, summary and data
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, summary and data
- Blank Spike Sample (BSS) recoveries, summary and data
- Method blank summary and data
- Gas Chromatography/Mass Spectroscopy (GC/MS) tuning and performance
- Initial and continuing calibration summaries
- Internal standard areas, retention times, summary and data
- Organic analysis data sheets (Form I)
- Blind Field Duplicate sample results
- Field Blank results
- Trip Blank results
- GC/MS and GC chromatograms, mass spectra and quantitation reports
- Quantitation/detection limits
- Qualitative and quantitative compound identification

The items listed above were in compliance with the analytical methods

methods and with the ASP and USEPA criteria with the exceptions discussed in the text below. The data have been validated according to the procedures outlined above and qualified accordingly.

Volatiles

- The laboratory has reported m+p-Xylene and o-Xylene as well as Xylene (total) on the Form Is. The TCL only requires Xylene (total) be reported. The m+p-Xylene and o-Xylene compounds have not been reviewed and will not be included in the summary tables or any electronic deliverable. Results for m+p-Xylene and o-Xylene have not been modified on the Form Is.

- The percent recovery (%R) for the surrogate compound 4-bromofluorobenzene (BFB) was slightly below QC criteria in the initial analysis of sample B-CCI-019(26') (57%; QC criteria 62-138%). The sample was reanalyzed further diluted and all surrogate %R were within QC criteria. All results have been reported from the initial analysis. All results are possibly biased low. Positive results are considered estimated and qualified "J" while non-detects are also considered estimated and qualified "UJ".

- The collection of MS/MSD was tracked in the field. Typically an MS/MSD set was collected and sent to the laboratory per twenty field samples collected. In many cases no MS/MSD was submitted to the laboratory with a particular group of samples. In these instances, the laboratory provided batch QC data to fulfill the protocol obligations. In some instances the laboratory analyzed an MS/MSD on a sample from this project. The batch QC is not utilized to qualify sample data. The blank spike sample serves as a better indicator of spike compound recovery.

- The %R for methyl acetate in the MS/MSD analysis of sample B-CCI-013(10') was above QC criteria. No qualification of the sample data is required as methyl acetate was not positively identified in sample B-CCI-013(10'). Results are valid and useable.

- The %R for 2-butanone, chloromethane, and vinyl chloride in the MSD analysis and vinyl chloride in the MS analysis of sample B-CCI-028(2') were below QC criteria. Qualification of sample data

data is not performed based on MS/MSD results alone. These compounds are possibly biased low. These compounds were not positively identified in sample B-CCI-028(2'). Results for these compounds in the unspiked portion of the sample only are considered estimated and qualified "UJ".

- The %R of 1,1,2-trichloroethane was slightly above QC criteria for the blank spike sample in Accutest Job Number JA24692 applicable to samples B-CCI-022, B-CCI-023, and B-CCI-024. Results for 1,1,2-trichloroethane for these samples may be biased high. No qualification of the sample data is required as 1,1,2-trichloroethane was not positively identified in these samples. Results are valid and useable.

- The %R of chloroform was slightly above QC criteria for the blank spike sample in Accutest Job Number JA25522 applicable to sample SW-CCI-013. Results for chloroform for sample SW-CCI-013 may be biased high. No qualification of the sample data is required as chloroform was not positively identified in sample SW-CCI-013. Results are valid and useable.

- Methylene chloride was detected in several method blanks at relatively low concentrations. Concentrations of methylene chloride in associated samples less than ten (10) times the concentration in the associated method blank are considered to be attributable to lab contamination and have been negated and qualified "U". Results are valid and useable as non-detects.

- The following table includes samples that were either analyzed initially at a dilution based on screening data and samples that were reanalyzed at a dilution due to the concentration of target compounds exceeding the calibration range of the instrument in the initial analysis. Samples that were reanalyzed at a dilution have been listed in this table with a "DL" suffix after the sample identification (ID). If the initial analysis was performed at a dilution and the dilution was justified and all target compounds were within the calibration range, then no further action was required and no qualification of the sample data is necessary. No compounds have been listed in the table for this occurrence. If the sample required reanalysis at a dilution, the laboratory has reported the final result for all compounds on the Form I. Only the target

target compounds listed in the table below are reported from the diluted analysis. Again, no qualification of the sample data is required.

Sample ID	Compound (s) Requiring Dilution	Dilution Factor
SW-CCI-002(18.5')	NA	medium level
SW-CCI-002(18.5') DL	1,2,4-trimethylbenzene 1,3,5-trimethylbenzene xylene (total)	medium level 20x
SW-CCI-003(18.5')	NA	medium level
B-CCI-007(20')	NA	medium level
DUPLICATE	NA	medium level
B-CCI-019(26')	NA	5x
B-CCI-019(26') DL	NA *	medium level
B-CCI-025	NA	medium level

* - no compounds reported from this analysis. Used only for confirmation due to surrogate deficiencies.

Semivolatiles

- The collection of MS/MSD was tracked in the field. Typically an MS/MSD set was collected and sent to the laboratory per twenty field samples collected. In many cases no MS/MSD was submitted to the laboratory with a particular group of samples. In these instances, the laboratory provided batch QC data to fulfill the protocol obligations. In some instances the laboratory analyzed an MS/MSD on a sample from this project. The batch QC is not utilized to qualify sample data. The blank spike sample serves as a better indicator of spike compound recovery.

- The %R for bis(2-ethylhexyl)phthalate was above QC criteria in the BSS associated to the field blank in Accutest Job Number JA23638. Bis(2-ethylhexyl)phthalate was not positively identified in the field blank therefore no qualification of the sample data is required.

- Bis(2-ethylhexyl)phthalate was detected in the method blank associated to the field blank in Accutest Job Number JA23638. Bis(2-ethylhexyl)phthalate was not positively identified in the field blank therefore no qualification of the sample data is required.

- All samples in Accutest Job Number JA25522 were reanalyzed to confirm positive detections due to a QC issue with the batch MS/MSD. No qualification of the sample data is required and results are valid and useable.

- Several method blanks contained system artifacts as Tentatively Identified Compounds (TICs). TICs were not reported for the samples and the TICs identified in the method blanks did not interfere with the reporting of any target compound in the samples. No qualification of the sample data is required.

- Naphthalene was positively identified in sample B-CCI-007(20), but not in the associated blind field duplicate sample, DUPLICATE. Benzo(b)fluoranthene and Indeno(1,2,3-cd)pyrene were not positively identified in sample B-CCI-007(20), but were in the associated blind field duplicate sample, DUPLICATE. Results for Naphthalene, Benzo(b)fluoranthene, and Indeno(1,2,3-cd)pyrene in both samples are considered possibly biased and have been qualified "J" for positive results and "UJ" for non-detects. The results are still valid and useable.

Pesticides

- The collection of MS/MSD was tracked in the field. Typically an MS/MSD set was collected and sent to the laboratory per twenty field samples collected. In many cases no MS/MSD was submitted to the laboratory with a particular group of samples. In these instances, the laboratory provided batch QC data to fulfill the protocol obligations. In some instances the laboratory analyzed an MS/MSD on a sample from this project. The batch QC is not utilized to qualify sample data. The blank spike sample serves as a better indicator of spike compound recovery.

- The %R for the surrogate compound decachlorobiphenyl (DCB) was above QC criteria for sample B-CCI-027(2'). The sample was reanalyzed at a dilution and exhibited a similar %R. Positive results for all compounds in sample B-CCI-027(2') are considered estimated and qualified "J".

- The %R for 4,4'-DDT, heptachlor, and methoxychlor were above QC criteria in the BSS applicable to all samples in Accutest Job Number

Number JA23207. Results for these compounds in all samples in Accutest Job Number JA23207 are possibly biased high. No qualification of the sample data is required as these compounds were not positively identified in any sample in Accutest Job Number JA23207.

- The relative percent difference (RPD) for 4,4'-DDE, endosulfan sulfate, endrin aldehyde, endosulfan I, and endrin ketone were above QC criteria in the MS/MSD analyzed on sample SW-CCI-005(18.5). Qualification of sample data is not performed based on MS/MSD results alone. The result for these compounds in the unspiked sample only are considered estimated and qualified "J" for positive detects and "UJ" for non-detects.

- The following table includes samples that were reanalyzed at a dilution due to the concentration of target compounds exceeding the calibration range of the instrument in the initial analysis. The laboratory has reported the final result for all compounds on the Form I. Only the target compounds listed in the table below are reported from the diluted analysis. No qualification of the sample data is required.

Sample ID	Compound (s) Requiring Dilution
B-CCI-027(2')	4,4'-DDE 4,4'-DDT

- The RPD of the concentration of the compounds listed in the table below differed by more than 25% on the two analytical GC columns for the following samples. The results for these compounds are possibly biased in the samples listed and have been qualified with a "J". The results are valid and useable.

Sample ID	Compound
B-CCI-02(08)	dieldrin
SW-CCI-007(19')	4,4'-DDD
B-CCI-013(10')	4,4'-DDD
B-CCI-027(2')	dieldrin, heptachlor epoxide
B-CCI-030(4')	dieldrin

Sample ID	Compound
SW-CCI-012	4,4'-DDT

- The concentration for 4,4'-DDT in sample B-CCI-02(08) has been reported from a two-fold (2x) diluted analysis. This analysis was required due to the concentration of 4,4'-DDT exceeding the calibration range of the instrument in the initial analysis of sample B-CCI-02(08). Only the result for 4,4'-DDT has been reported from this diluted analysis. All other results for sample B-CCI-02(08) have been reported from the initial analysis. No qualification of the sample data is required. Results are valid and useable.

- The laboratory has noted in several instances that results have been reported from the second analytical GC column due to percent difference (%D) issues with the first GC column. No qualification of the sample data is required as the %D on the second GC column meet QC criteria. Results are valid and useable.

Inorganics

The following items/criteria were reviewed:

- Case narrative and deliverable requirements
- Holding times and sample preservation
- Detection limits
- Inorganic analysis data sheets (Form I)
- Initial and continuing calibration verifications
- Contract Required Detection Limit (CRDL) standard analysis
- Lab blank data
- ICP interference check sample analysis
- Matrix spike and matrix spike duplicate analysis
- Laboratory control sample (LCS) results
- ICP serial dilution analysis
- Blind Field Duplicate sample results
- Field Blank results

The items listed above were in compliance with the analytical methods and with the ASP and USEPA criteria with the exceptions discussed in the text below. The data have been validated according to the procedures outlined above and qualified accordingly.

Metals

- The collection of MS/MSD was tracked in the field. Typically an MS/MSD set was collected and sent to the laboratory per twenty field samples collected. In many cases no MS/MSD was submitted to the laboratory with a particular group of samples. In these instances, the laboratory provided batch QC data to fulfill the protocol obligations. In some instances the laboratory analyzed an MS/MSD on a sample from this project. The batch QC is not utilized to qualify sample data. The blank spike sample serves as a better indicator of spike compound recovery.

- The following table lists samples whose associated matrix spike and/or matrix spike duplicate contained analytes where the percent recovery (%R) was outside QC criteria (75-125%). For a %R above criteria the results are possibly biased high and positive detections are qualified "J" while non-detects do not require qualification. For a %R below criteria the results are possibly biased low and positive detections are qualified "J" while non-detects are qualified "UJ". All data are still valid and useable for project objectives.

Accutest Job Number	Metal	%R (high/low)	Associated Samples

2051-24-3	Decachlorobiphenyl	88%		22-156%

(a) More than 40 % RPD for detected concentrations between the two GC columns.

ND = Not detected MDL - Method Detection Limit
RL = Reporting Limit
E = Indicates value exceeds calibration range
J = Indicates an estimated value
B = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound
