AIR - GC/MS VOA BY INTERNAL STANDARD - INITIAL CALIBRATION DATA  
CURVE EVALUATION

Lab Name: TestAmerica Burlington

Job No.: 200-46353-1

Analy Batch No.: 137783

SDG No.: 200-46353-1

Instrument ID: CHC.i

GC Column: RTX-624

ID: 0.32 (mm)

Heated Purge: (Y/N) N

Calibration Start Date: 12/04/2018 20:51

Calibration End Date: 12/05/2018 09:17

Calibration ID: 40721

CURVE EVALUATION

Lab Name: TestAmerica Burlington

Job No.: 200-46353-1

Analy Batch No.: 137447

SDG No.: 200-46353-1

Instrument ID: CHG.i

GC Column: RTX-624

ID: 0.32 (mm)

Heated Purge: (Y/N) N

Calibration Start Date: 11/27/2018 20:22

Calibration End Date: 11/28/2018 02:15

Calibration ID: 40668

**Reagents:**

ATTO15LCSW\_00790

Amount Added: 200.00

Units: mL

ATTO15CISs\_00010

Amount Added: 20.00

Units: mL

Run Reagent

TestAmerica Burlington

Data File: \\chromna\Burlington\ChromData\CHC.i\20181207-33574.b\33574-4A.D

Injection Date: 07-Dec-2018 14:59:30

Instrument ID: CHC.i

Operator ID: ggg

Lims ID: lcs

Worklist Smp#: 5

Client ID:

Purge Vol: 200.000 mL

Dil. Factor: 1.0000

ALS Bottle#: 8

Method: TO15\_MasterMethod\_(v1)\_CHC.i

Limit Group: AI\_TO15\_ICAL

Column: RTX-624 (0.32 mm)

Y Scaling: Method Defined: Set to Absolute Y Value

| 200-46353-8   | 6                   | -4.6                       | 0.85                       | 5.08                   | 14.9                     | 2.01                    | 12.08               |                     | 2.38            | 2.38                  | 12/05/18 | 21:18 | Pham, Vu T       |

**Formulae:**

- Preadjusted Volume (L) = ( Preadjusted Pressure ("Hg) + 29.92 "Hg \* Vol L ) / 29.92 "Hg
- Adjusted Volume (L) = ( Adjusted Pressure (psig) + 14.7 psig \* Vol L ) / 14.7 psig
- Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

**Where:**

- 29.92 "Hg = Standard atmospheric pressure in inches of Mercury ("Hg)
- 14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

<sup>1</sup> Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

<sup>3</sup> Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If same frame was not met, the PM must authorize shipment of canister PM Authorization Date:

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

CURVE EVALUATION

Lab Name: TestAmerica Burlington

Job No.: 200-45925-1

Analy Batch No.: 134490

SDG No.: \_\_\_\_\_

Instrument ID: CHG.i

GC Column: RTX-624

ID: 0.32 (mm)

Heated Purge: (Y/N) N

Calibration Start Date: 09/25/2018 19:24

Calibration End Date: 09/26/2018 14:32

Calibration ID: 40146

| Question  | Answer | Comment   |
|---|--------|---|
| Radioactivity wasn't checked or is <math>\leq</math> background as measured by a survey meter.      | True   | Lab does not accept radioactive samples.                |
| The cooler's custody seal, if present, is intact.   | True   | Not present   |
| Sample custody seals, if present, are intact.   | True   |   |
| The cooler or samples do not appear to have been compromised or tampered with.                      | True   |   |
| Samples were received on ice.   | N/A    | Thermal preservation not required.                      |
| Cooler Temperature is acceptable.   | True   |   |
| Cooler Temperature is recorded.   | N/A    | Thermal preservation not required.                      |
| COC is present.   | True   |   |
| COC is filled out in ink and legible.   | True   |   |
| COC is filled out with all pertinent information.   | True   |   |
| Is the Field Sampler's name present on COC?   | True   | VC  |
| There are no discrepancies between the containers received and the COC.                             | True   |   |
| Samples are received within Holding Time (excluding tests with immediate HTs)                       | True   |   |
| Sample containers have legible labels.  | True   |   |
| Containers are not broken or leaking.   | True   |   |
| Sample collection date/times are provided.  | True   |   |
| Appropriate sample containers are used.   | True   |   |
| Sample bottles are completely filled.   | N/A    |   |
| Sample Preservation Verified.   | True   |   |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs                    | True   |   |
| Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4"). | True   |   |
| Multiphasic samples are not present.  | True   |   |
| Samples do not require splitting or compositing.  | True   |   |
| Residual Chlorine Checked.  | N/A    | No analysis requiring residual chlorine check assigned. |

**APPENDICES:**

- A. Chain of Custody Documents
- B. Case Narrative
- C. Data Summary Form Is with Qualifications

**Introduction:**

A validation was performed on five (5) sub-slab and six (6) ambient/indoor air samples for volatile Organic analysis collected by AKRF, Inc. and submitted to TestAmerica Laboratories, Inc. (Burlington, VT) for subsequent analysis under chain of custody documentation. This report contains the laboratory and validation results for the eleven (11) field samples itemized below. The samples were collected on November 19, 2018 through November 20, 2018.

The samples were analyzed by TestAmerica Burlington utilizing EPA Method TO-15 and in accordance with NYSDEC Analytical Services Protocol and submitted under NYSDEC ASP Category B equivalent deliverable requirements for the associated analytical methodology employed. The analytical testing consisted of the selected TO-15 Target Compound List (TCL) of analytes for Volatile Organics listed in Appendix C.

The data was evaluated in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (Publication 9240.1-05), EPA SOP #HW31 (Revision 6) and in conjunction with the analytical methodology for which the samples were analyzed, where applicable and relevant.

The data validation report pertains to the following air samples:

| <b>Sample Identification</b> | <b>Laboratory Identification</b> | <b>Sample Matrix</b> | <b>Collection Date</b> |
|------------------------------|----------------------------------|----------------------|------------------------|
| AA-1 20181120                | 200-46353-1                      | Ambient Air          | 11/19/18-11/20/18      |
| IA-1 20181120                | 200-46353-2                      | Indoor Air           | 11/19/18-11/20/18      |
| IA-2 20181120                | 200-46353-3                      | Indoor Air           | 11/19/18-11/20/18      |
| IA-3 20181120                | 200-46353-4                      | Indoor Air           | 11/19/18-11/20/18      |
| IA 4 20181120                | 200-46353-5                      | Indoor Air           | 11/19/18-11/20/18      |
| IA-5 20181120                | 200-46353-6                      | Indoor Air           | 11/19/18-11/20/18      |
| MP-1 20181120                | 200-46353-7                      | Sub-Slab             | 11/19/18-11/20/18      |
| MP-2 20181120                | 200-46353-8                      | Sub-Slab             | 11/19/18-11/20/18      |
| MP-3 20181120                | 200-46353-9                      | Sub-Slab             | 11/19/18-11/20/18      |
| MP-4 20181120                | 200-46353-10                     | Sub-Slab             | 11/19/18-11/20/18      |
| MP-5 20181120                | 200-46353-11                     | Sub-Slab             | 11/19/18-11/20/18      |

**Data Qualifier Definitions:**

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

**U** - The analyte was analyzed for but was not detected above the reported sample quantitation limit.

**J** - The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

**J+** - The result is an estimated quantity, but the result may be biased high.

**J-** - The result is an estimated quantity, but the result may be biased low.

**NJ** - The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

**UJ** - The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

**R** - The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

**D** - Analyte concentration was obtained from diluted analysis.

**Sample Receipt:**

The Chain of Custody documents indicate that the air samples were shipped via Federal Express to TestAmerica Burlington and received on 11/23/18 following completion of the sampling event. Sample login notes and the chain of custody indicate that at the Validated Times of Sample Receipt (VTSR) no discrepancies were noted and therefore the integrity of the samples is assumed to be good.

Summa Canisters were leak tested prior to collection of each sample. Initial pressure gauge is recorded on the chain of custody and is required to be approximately 30 psi with zero air. Additionally, post sampling Hg canister pressure should be between -1 and -10 ("Hg). Acceptable initial canister pressure was observed for IA-1\_20181120, IA-2\_20181120, IA-3\_20181120, IA-4\_20181120, IA-5\_20181120, MP-2\_20181120 and MP-3\_20181120 as documented on the chain of custody. Elevated vacuum pressure was recorded on the post =sampling air canister pressure check record for AA-1\_20181120 (-15.3"Hg), MP-1\_20181120 (-16.5"Hg). Results for detections have been qualified, "J" and non-detects, "UJ" for these samples. MP-4\_20181120 and MP-5\_20181120 were received at ambient pressure. These sample results were not qualified.

The data summary Form I's included in Appendix C and Equis deliverable includes all usable (qualified) and unusable (rejected) results for the samples identified above. The Form I's summarize the detailed narrative section of the report. All data validation qualifications have been reported on the Form I's and onto the excel spreadsheet for ease of review and verification.

**NOTE:**

L.A.B. Validation Corp. believes it is appropriate to note that the data validation criteria utilized for data evaluation is different than the method requirements utilized by the laboratory. Qualified data does not necessarily mean that the laboratory was non-compliant in the analysis that was performed.

## **1.0 Volatile Organics by EPA Compendium Method TO-15**

The following method criteria were reviewed: holding times, LCS, Blanks, Tunes, Calibrations, Internal Standards, Target Component Identification and Quantitation, Reported Quantitation Limits and Overall System Performance. The volatile results were valid and useable as noted on the data summary Form I's in Appendix C and within the following text:

### **1.1 Holding Time**

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the technical holding time is exceeded, the data may not be considered valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimates, "J". The non-detects (sample quantitation limits) are required to be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

**Air samples pertaining to this SDG were performed within the method and technical required holding times of thirty (30) days from sample collection for analysis. No qualifications were required based upon holding time criteria.**

### **1.2 Matrix Spikes (MS)/ Matrix Spike Duplicates (MSD)/Duplicate Analysis**

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices.

**Matrix Spike/Matrix Spike Duplicate analysis was not performed on samples pertaining to this SDG. The laboratory performed LCS with each batch which is acceptable per the methodology. Acceptable recoveries (70-130%) were observed for all reported/spiked analytes.**

**No qualifications to the data were required based on MS/MSD data.**

**Field duplicate analysis was not conducted for this sampling event.**

### **1.3 Laboratory Control Sample**

The LCS data for laboratory control samples (LCS) are generated to provide information on the accuracy of the analytical method and on the laboratory performance.

The following table summarizes the LCS criteria and the data qualification guidelines for all associated field samples.

| LCS                                       | NOT QUALIFIED | J           | R      |
|---|---------------|-------------|--------|
| <b>% Recovery:</b>                        |               |             |        |
| <b>Detects</b>                            | 70-130%       | <70%, >130% |        |
| <b>Non-Detects</b>                        | >=130%        | 50-69%      | <50%   |
| <b>Absolute RT of LCS Compounds:</b>      |               |             |        |
| <b>LCS Compounds in samples RT: (min)</b> | +/-0.33       |             | >=0.33 |

**Acceptable LCS was analyzed with this SDG pertaining to this sampling event. Recovery values for all spiked compounds was determined to be >70 %-< 130% for all analytes.**

#### **1.4 Blank Contamination**

Quality assurance (QA) blanks; i.e. method, trip and field blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field blanks measure cross-contamination of samples during field operations. Storage blanks measure cross-contamination during sample storage of the field samples and are not required for TO15 analysis. Canister blanks measure cross-contamination from the sampling media.

The following table was utilized to qualify target analyte results due to method blank contamination. The largest value from all the associated blanks is required to be utilized. The largest value from all the associated blanks is required to be utilized:

| Blank Type                               | Blank Result | Sample Result  | Action for Samples                                   |
|--|--------------|--|--|
| Method, Storage, field, Trip, Instrument | Detects      | Not Detected   | No qualification required                            |
|  | <CRQL*       | <CRQL*   | Report CRQL value with a U                           |
|  |              | >= CRQL* and <2x the CRQL**                          | No qualification required                            |
|  | >CRQL*       | <= CRQL*   | Report CRQL value with a U                           |
|  |              | >=CRQL* and <= blank concentration                   | Report blank value for sample concentration with a U |
|  |              | >= CRQL* and > blank concentration                   | No qualification required                            |
|  | =CRQL*       | <= CRQL*   | Report CRQL value with a U                           |
| >CRQL*                                   |              | No qualification required                            |  |
| Gross Contamination**                    | Detects      | Report blank value for sample concentration with a U |  |

- \*2x the CRQL for methylene chloride, 2-butanone and acetone.
- \*\*4x the CRQL for methylene chloride, 2-butanone, and acetone
- \*\*\*Qualifications based on instrument blank results affect only the sample analyzed immediately after the sample that has target compounds that exceed the calibration range or non-target compounds that exceed 100 ug/L.

The table below is utilized to qualify samples with target compound results also present in certification blanks:

| Certification Contamination | Sample Result  | Action for Sample                  |
|-----------------------------|--|------------------------------------|
| >/=detect limit             | >5x certification contamination                              | No qualification required          |
| >/=detect limit             | <detect limit  | Detection limit "U"                |
| >/=detect limit             | >/=detect limit and </= 5x certification contamination level | 5x certification contamination "U" |
| <detect limit               | </=detection limit and >/= detection limit                   | No qualification                   |

Below is a summary of the compounds in the sample and the associated qualifications that have been applied:

**A) Method Blank Contamination:**

**Method and Canister blanks were determined to be free of any contamination. Canister cleaning documentation met QC requirements.**

**B) Field Blank Contamination:**

**Field Blank analysis was not required.**

**C) Trip Blank Contamination:**

**Trip Blank was not required.**

**1.5 GC/MS Instrument Performance Check**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The Tuning standard for volatile organics is Bromofluorobenzene (BFB).

**Instrument performance was generated within acceptable limits and frequency (24 hours) for Bromofluorobenzene (BFB) for all analyses conducted for this SDG.**

## **1.6 Initial and Continuing Calibrations**

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The GC/MS must be calibrated at 5 concentrations that span the monitoring range of interest in an initial calibration sequence to determine the sensitivity and the linearity of the GC/MS response for the target compounds.

The continuing calibration checks document that the instrument is giving satisfactory daily performance.

### **A) Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for all compounds must be  $\geq 0.05$  in both initial and continuing calibrations. A value  $< 0.05$  indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound in the corresponding samples will be rejected, "R".

The following compounds can be  $> 0.01$  without qualification:

2-Butanone  
Carbon Disulfide  
Chloroethane  
Chloromethane  
1,2-Dibromoethane  
1,2-Dichloropropane  
1,4-Dioxane  
1,2-Dibromo-3-chloropropane  
Methylene Chloride

**All the response factors for the target analytes reported were found to be within acceptable limits ( $\geq 0.05$ ) [or  $\geq 0.01$  for the 9 compounds above], for the initial and continuing calibrations.**

**B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentrations. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be <30% (with poor responding compounds allowed to be up to 40%) and %D must be <30%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria (>90%), non-detect data may be qualified, "R", unusable. Additionally, in cases where the %RSD is >30% and eliminating either the high or the low point of the curve does not restore the %RSD to less than or equal to 30% then positive results are qualified, "J". In cases where removal of either the low or high point restores the linearity, then only low or high-level results will be qualified, "J" in the portion of the curve where non-linearity exists. Acceptable ICV was analyzed (<30%) for all compounds.

**Initial Calibrations: The initial calibrations provided and the %RSD was within acceptable limits (30%) for all reported target compounds.**

**Continuing Calibrations: The continuing calibrations provided and the %D was within acceptable limits (30%) for all reported target compounds.**

**1.7 Internal Standards**

Internal Standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by (-60% to +140%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than +/-20 seconds from the associated continuing calibration standard. If the area count is outside the (-60% to +140%) range of the associated standard, all the positive results for compounds quantitated using that IS are qualified as biased high, estimated, "J+", and all non-detects as "R."

If an internal standard retention time varies by more than 20 seconds, professional judgment will be used to determine either partial or total rejection of the data for that sample fraction.

**Internal Standard area responses met QC requirements for all analysis pertaining to this SDG.**

#### **1.8 Target Compound List Identification**

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within  $\pm 0.06$ RRT units of the standard compound and have an ion spectrum which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound.

**GC/MS spectra met the qualitative criteria for identification. All retention times were within required specifications.**

#### **1.10 Compound Quantification and Reported Detection Limits**

GC/MS quantitative analysis is acceptable. Correct internal standards and response factors and air volumes were used to calculate final concentrations.

**Sample results have been presented in ug/m<sup>3</sup> as well as ppbv in the laboratory package. Equis deliverable results are presented in ug/m<sup>3</sup>.**

**All samples were analyzed at the volumes presented on the Form I's. Reporting limits have been adjusted accordingly. IA-1\_20181120 and IA-5\_20181120 required reanalysis due to Acetone concentrations over the linear calibration range. The laboratory reported concentrations for this compound have been qualified, "D" as required and must be obtained from diluted reanalysis.**

**MP-1\_20181120 (1:50) and MW-2\_20181120 (1:20) were analyzed at dilutions due to non-target presence. Review of the raw data indicates dilution was appropriate. Analysis at higher concentration could not be performed. There is potential that lower level detections were lost in dilution. Reporting limits have been adjusted accordingly.**

**1.11 Overall System Performance**

**GC/MS analytical methodology was acceptable for this analysis. The data reported agrees with the raw data provided in the final report. The laboratory provided a complete data package and reported all data using acceptable protocols and laboratory qualifiers as defined in the report package.**

| Question  | Answer | Comment   |
|---|--------|---|
| Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.           | True   | Lab does not accept radioactive samples.                |
| The cooler's custody seal, if present, is intact.   | True   | Not present   |
| Sample custody seals, if present, are intact.   | True   |   |
| The cooler or samples do not appear to have been compromised or tampered with.                | True   |   |
| Samples were received on ice.   | N/A    | Thermal preservation not required.                      |
| Cooler Temperature is acceptable.   | True   |   |
| Cooler Temperature is recorded.   | N/A    | Thermal preservation not required.                      |
| COC is present.   | True   |   |
| COC is filled out in ink and legible.   | True   |   |
| COC is filled out with all pertinent information.   | True   |   |
| Is the Field Sampler's name present on COC?   | True   | VC  |
| There are no discrepancies between the containers received and the COC.                       | True   |   |
| Samples are received within Holding Time (excluding tests with immediate HTs)                 | True   |   |
| Sample containers have legible labels.  | True   |   |
| Containers are not broken or leaking.   | True   |   |
| Sample collection date/times are provided.  | True   |   |
| Appropriate sample containers are used.   | True   |   |
| Sample bottles are completely filled.   | N/A    |   |
| Sample Preservation Verified.   | True   |   |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs              | True   |   |
| Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ ( $1/4''$ ). | True   |   |
| Multiphasic samples are not present.  | True   |   |
| Samples do not require splitting or compositing.  | True   |   |
| Residual Chlorine Checked.  | N/A    | No analysis requiring residual chlorine check assigned. |

**Appendix B**  
**Case Narrative**

## CASE NARRATIVE

Client: AKRF Inc

Project: Elton Crossing

Report Number: 200-46353-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### RECEIPT

The samples were received on 11/23/2018; the samples arrived in good condition.

During the canister pressure check performed upon receipt, it was observed that sample AA-1\_20181120 (200-46353-1) was received at an elevated residual vacuum level, while samples MP-4\_20181120 (200-46353-10) and MP-5\_20181119 (200-46353-11) were found to be received at ambient pressure. The associated flow controllers were evaluated upon receipt and was found to be within the acceptable flow range as compared to the original set flow rate.

During the canister pressure check performed upon receipt, it was observed that sample MP-1\_20181120 (200-46353-7) was received at an elevated residual vacuum level. The associated flow controller was evaluated upon receipt and was found to be outside the set flow and possible clogged.

### VOLATILE ORGANIC COMPOUNDS

Samples AA-1\_20181120 (200-46353-1), IA-1\_20181120 (200-46353-2), IA-2\_20181120 (200-46353-3), IA-3\_20181120 (200-46353-4), IA-4\_20181120 (200-46353-5), IA-5\_20181120 (200-46353-6), MP-1\_20181120 (200-46353-7), MP-2\_20181120 (200-46353-8), MP-3\_20181120 (200-46353-9), MP-4\_20181120 (200-46353-10) and MP-5\_20181119 (200-46353-11) were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 12/06/2018 and 12/07/2018.

Samples IA-1\_20181120 (200-46353-2)[10X], IA-5\_20181120 (200-46353-6)[4X], MP-1\_20181120 (200-46353-7)[50X] and MP-2\_20181120 (200-46353-8)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Samples MP-1\_20181120 (200-46353-7) and MP-2\_20181120 (200-46353-8) were diluted due to the abundance of non-target analytes. A more concentrated analysis was not possible.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**APPENDIX C**  
**SITE-WIDE INSPECTION LOG**

**ANNUAL SITE-WIDE INSPECTION LOG**

**NYSDEC BCP SITE NO. C203073**

**432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York**

**Overview of Annual Site-Wide Inspection requirements:**

- 1) General Site conditions at time of inspection;
- 2) Site Cover System Inspection;
- 3) Any Site activities currently being conducted;
- 4) Last SMP-related Site Activity conducted, upcoming SMP-related tasks;
- 5) Institutional Control Checklist (SMP, EWP maintained on-Site, routine SMP tasks being conducted);
- 6) Evaluation of Engineering Controls (in office); and
- 7) Site Documentation.

**1) General Site conditions at time of inspection:**

|   |                                    |
|---|------------------------------------|
| NAME: <b>VICTOR CHANG, AKRF</b>   | DATE: <b>03/21/2019</b>            |
| TIME: <b>07:30</b>  | WEATHER: <b>43 °F, CLOUDY/RAIN</b> |
| Annual Inspection or Emergency Inspection (if emergency, specify nature)?<br><b>ANNUAL INSPECTION</b> |                                    |

Notes: REDEVELOPMENT ACTIVITIES CONTINUED TO OCCUR AT THE SITE. CURRENT WORK INCLUDED GENERAL CLEANING AND CONSTRUCTION PUNCH LIST ITEMS.

**2) Site Cover System Inspection**

SITE COVER SYSTEM INSPECTION OCCURRED CONCURRENTLY WITH THE SITE-WIDE INSPECTION. NO SIGNIFICANT ISSUES WERE NOTED DURING THE INSPECTION. PLEASE REVIEW THE SITE COVER SYSTEM INSPECTION FORM (APPENDIX D) FOR SPECIFIC DETAILS ON INSPECTION LOCATIONS WITHIN THE SITE.

**3) Any SMP-related site activities currently being conducted (including active AS/SVE)**

SUB-SLAB DEPRESSURIZATION SYSTEM (SSDS) WAS CONNECTED AND PASSIVE VENTING OF SUB-SLAB SOIL VAPOR WAS OCCURRING PROPERLY. SOIL VAPOR WAS DISCHARGED VIA THE SSDS STACK ABOVE THE SITE BUILDING ROOF. THE SITE COMPOSITE COVER SYSTEM REMAINS IN-PLACE AND EFFECTIVE.

**4) Last SMP-related Site Activity conducted, next SMP-related task**

A SOIL VAPOR INTRUSION EVALUATION (SVIE) WAS PERFORMED IN NOVEMBER 2018. NO VIOLATIONS OF THE SMP WERE NOTED. PLEASE SEE THE PRR TEXT FOR FULL DETAILS. ROUTINE INSPECTION, MAINTENANCE, AND MONITORING OF THE SITE COVER

SYSTEM AND PASSIVE SSDS WILL CONTINUE TO OCCUR IN ACCORDANCE WITH THE SMP.

**5) IC Checklist (SMP, EWP maintained on-Site, routine SMP tasks being conducted)**

|                      |     |
|----------------------|-----|
| Copy of SMP on-Site? | YES |
| Copy of EWP on-Site? | YES |

*Routine SMP tasks being conducted?*

Composite cover system monitoring YES

SSDS monitoring YES

Notes: SEE PERIODIC REVIEW REPORT TEXT

**6) Evaluation of ECs**

SSDS operations summary to be provided as part of annual PRR.

Notes: SEE PERIODIC REVIEW REPORT TEXT

**7) Site documentation**

Including updates regarding new Site hazardous materials to local agencies, notification to NYSDEC regarding any changes to Site conditions/operations, annual hazardous waste tax filings, routine reporting to NYSDEC).

Notes: AN SVIE WAS CONDUCTED IN NOVEMBER 2018 IN ACCORDANCE WITH THE OCTOBER 2018 NYSDEC-APPROVED VAPOR INTRUSION ASSESSMENT WORK PLAN (VIWP) TO DETERMINE THE NEED FOR ACTIVATION OF THE PASSIVELY OPERATING SSDS. THE SVIE REPORT WAS SUBMITTED TO THE NYSDEC IN FEBRUARY 2019. THE RESULTS OF THE SVIE DETERMINED THE SSDS SYSTEM CAN REMAIN OPERATING AS A PASSIVE SYSTEM.

**Interior First Floor Area (Ground Level)**

Description of floor condition:

CONCRETE SLAB WAS NOTED TO BE IN GOOD CONDITION. NO SURFICIAL BREAKS OR CRACKS THAT BREACHED THE STRUCTURAL SLAB WERE NOTED. ALL SSDS MONITORING POINTS WERE IN GOOD CONDITION.

Note any changes to or any unusual conditions of Site cover system component:

NO UNUSUAL CONDITIONS TO THE SITE COVER WERE NOTED.

**Interior Courtyard**

Description of surface condition:

CONCRETE SLAB WAS NOTED TO BE IN GOOD CONDITION. NO SURFICIAL BREAKS OR CRACKS THAT BREACHED THE STRUCTURAL SLAB WERE NOTED.

Note any changes to or any unusual conditions of Site cover system component:

NO UNUSUAL CONDITIONS TO THE SITE COVER WERE NOTED.

**Interior Courtyard (Landscaped Areas)**

Description of surface condition:

PERMEABLE PAVERS AND TOPSOIL WERE NOTED TO BE IN GOOD CONDITION. NO BREACH TO THE UNDERLYING DEMARCATION BARRIER OR COMPACTED SUBGRADE WERE OBSERVED.

Note any changes to or any unusual conditions of Site cover system component:

NO UNUSUAL CONDITIONS TO THE SITE COVER WERE NOTED.

### Cellar Floor Area

Description of floor condition:

CONCRETE SLAB WAS NOTED TO BE IN GOOD CONDITION. NO BREACH TO THE STRUCTURAL SLAB INTEGRITY OR UNDERLYING VAPOR BARRIER WERE OBSERVED. NO SIGNIFICANT CRACKING OR DAMAGE OBSERVED TO CELLAR SLAB IN OTHER AREAS WERE IDENTIFIED.

Note any changes to or any unusual conditions of Site cover system component:

NO CHANGES OR UNUSUAL CONDITIONS WERE NOTED.

**Provide images to document conditions of each area and any unusual conditions.**

NO UNUSUAL CONDITIONS WERE OBSERVED. NO CORRECTIVE ACTIONS ARE RECOMMENDED.

**Periodic Review Report (PRR) Certification Statements**

1. I certify by checking "YES" below that:

a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and complete.

YES    NO  
   

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

(a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

(b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

(c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

(d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

(e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES    NO  
   

**IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.**

**A Corrective Measures Work Plan must be submitted along with this form to address these issues.**
