## P.E. CERTIFICATION

I, Michelle Lapin, P.E., am currently a registered Professional Engineer licensed by the State of New York. I had primary direct responsibility for implementation of the Site Management Plan (SMP) protocols, and I certify that the documentation of site management activities is accurately presented in the Periodic Review Report (PRR) for the Elton Crossing (Melrose C – Family) site, [BCP Site No. C203073 (the “Site”)].

For each Institutional Control (IC) and Engineering Control (EC) identified for the Site, I certify that all of the following statements are true:

- The inspection of the Site to confirm the effectiveness of the ICs and ECs (collectively, the “controls”) required by the remedial program was performed under my direction;
- The controls employed at this Site are unchanged from the date they were put in place, or last approved by the New York State Department of Environmental Conservation (the “Department”);
- Nothing has occurred that would impair the ability of the controls to protect the public health and environment;
- Nothing has occurred that would constitute a violation or failure to comply with any SMP for the controls;
- Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of the controls;
- If a financial assurance mechanism is required under the oversight document for the Site, the mechanism remains valid and sufficient for the intended purpose under the document;
- Use of the Site is compliant with the Environmental Easement (EE);
- The EC systems are performing as designed and are effective;
- To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the Site remedial program and generally accepted engineering practices; and
- The information presented in this report is accurate and complete.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Michelle Lapin, P.E., of 440 Park Avenue South, 7<sup>th</sup> Floor, New York, NY 10016, am certifying as the Owner’s Designated Site Representative for the Site.

Michelle Lapin, P.E.  
NYS Professional Engineer

## **EXECUTIVE SUMMARY**

This Periodic Review Report (PRR) was prepared for the Elton Crossing (Melrose C – Family) site located at 432 East 162<sup>nd</sup> Street (899 Elton Avenue) in the Bronx, New York, hereafter referred to as the “Site”. The Site is identified on the New York City Tax Map as Bronx Borough Block 2383, Lot 19 (former Lots 19, 25, 27, 30, 35, 8900, and a formerly unmapped section of Melrose Crescent from East 161<sup>st</sup> Street to East 162<sup>nd</sup> Street). The Site is an approximately 0.695-acre parcel bounded by: East 162<sup>nd</sup> Street to the north, followed by a construction site; East 161<sup>st</sup> Street to the south, followed by residential and commercial buildings; Elton Avenue, followed by Boricua College and the O’Neill Triangle Park to the east; and residential apartment buildings and open land to the west. The development project included the construction of an approximately 171,017-gross square foot mixed-use commercial and residential building with an interior parking area on the northwestern portion, a partial cellar on the northeastern portion, and a central exterior parking area and courtyard. The building contains: mechanical space in the partial cellar; a residential lobby, commercial spaces, parking, and a courtyard on the ground floor; and residential apartments above. A Site Location Map is provided as Figure 1 and a Site Plan is provided as Figure 2.

The Site was investigated and remediated under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) in accordance with Brownfield Cleanup Agreement (BCA) Index No. C203073-11-14, which was executed in November 2014 and amended in October 2016. The Site was remediated to Track 4 Site-Specific Soil Cleanup Objectives (SSSCOs) in accordance with the NYSDEC-approved June 2015 Remedial Action Work Plan (RAWP) and Decision Document (DD), as documented in the December 2016 Final Engineering Report (FER). Following completion of remediation and submission of the FER, NYSDEC issued the Certificate of Completion (COC) in December 2016. Post-remedial Site monitoring requirements were established in the December 2016 Site Management Plan (SMP).

The purpose of this PRR is to document and certify that the Site’s Engineering Controls (ECs) and Institutional Controls (ICs) have been implemented in accordance with the SMP and all relevant Brownfield Cleanup Program (BCP) requirements during the 12-month periodic review reporting period from April 16, 2018 to April 16, 2019. This PRR also documents the soil vapor intrusion evaluation (SVIE) conducted at the Site in November 2018. The SVIE was performed to determine whether the sub-slab depressurization system (SSDS) required activation or if it could remain in a passive state. The SVIE was conducted in accordance with the October 2018 NYSDEC-approved Vapor Intrusion Assessment Work Plan (VIWP), and the Site-specific Quality Assurance Project Plan (QAPP) and Health and Safety Plan (HASP), included as Appendices J and H of the SMP, respectively.

The results of the PRR and SVIE are included herein. The remedy remains effective and protective of human health and the environment, and remains in compliance with the requirements established in the SMP. Periodic inspections, including the annual Site-wide composite cover system and SSDS inspections, will continue to be performed in accordance with the SMP.

## 1.0 SITE OVERVIEW

### 1.1 Site History

The Site was developed historically with: an automobile garage from 1927 to 1940; a factory in 1945; freezer and oven mobile units in 1961; a metal works from at least 1969 to 1978; and Blasco Supply Company from 2000 to 2005 on former Lot 19. Former Lot 25 was developed with an automobile garage in 1921 and a funeral home from at least 1927 to 1984. Former Lot 27 was developed with an undertaker and a multi-story residential building from at least 1969 to 1979. Former Lot 29 was developed with a beauty shop, a lawyers' office, a dentist, and a multi-story residential building from 1927 to 1971. Former Lot 35 was developed with: the Elton Glass Works, Soenning Plumbing and Heating, and a butcher and glazer in 1927; and stores and a multi-story residential building in 1965. The remaining former lots (southern and eastern portion of the Site) were developed historically as multi-story residences with cellars that likely contained petroleum storage tanks. A Site Location Map is provided as Figure 1.

### 1.2 Site Redevelopment

The former building on the northwestern portion of the Site (former Lot 19) was demolished in June 2015. The remediation allowed for redevelopment of the Site for restricted residential use as described in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375-1.8(g)(2)(ii), which may include industrial, commercial, and certain institutional uses, including but not limited to, multi-family residential, educational, and child care uses. The development project included the construction of an approximately 171,017-gross square foot, mixed-use, commercial and residential building with an interior parking area on the northwestern portion, a partial cellar on the northeastern portion and a central exterior courtyard. The building contains: mechanical space in the partial cellar; a residential lobby, commercial spaces, parking, and a courtyard on the ground floor; and residential apartments above. A Site Plan showing the extent of the Site building is provided as Figure 2.

### 1.3 Geology and Hydrogeology

The Site elevation is approximately 30 feet above the National Geodetic Vertical Datum of 1929 (NGVD) (an approximation of mean sea level). The topography of the Site is relatively level.

Based on subsurface investigations conducted at the Site prior to development, soil/fill at the Site was composed of between approximately 3 to 9 feet of fill comprising sand, silt, gravel, concrete, brick, plastic, glass, concrete, and asphalt, underlain by apparent native sand and gravel on top of Inwood Marble bedrock. A February 2014 geotechnical investigation by Tectonic Engineering and Surveying Consultants identified bedrock beneath the Site at depths ranging between 7.5 and 23 feet below grade, which was observed during general excavation activities at the Site.

During AKRF's February and March 2015 Supplemental Remedial Investigation (SRI), groundwater was encountered within bedrock fractures between 14.72 and 17.15 feet below grade. Based on Site-specific groundwater measurements, groundwater flow beneath the Site is generally to the northwest. Regional groundwater flow is generally to the south towards the Harlem River, located approximately 1.7 miles south of the Site. Groundwater in the Bronx is not used as a source of potable water.

### 1.4 Nature and Extent of Contamination Prior to Remediation

Based on the Remedial Investigation (RI) conducted in April 2014 and the SRI conducted in February and March 2015, the fill layer across the Site was contaminated with polycyclic aromatic hydrocarbons (PAHs), pesticides, polychlorinated biphenyls (PCBs), and metals. In addition, petroleum-contaminated soil/fill was encountered from approximately 8 to 17 feet below surface grade on former

Lot 29 (northeastern portion of the Site). The petroleum contamination was attributed to the former fuel oil use at the Site. The elevated levels of pesticides indicated the prior usage and possible storage of pesticides in the cellar(s) of the former Site structure(s). The contaminants in the soil/fill were not observed to be migrating and were documented to have no adverse effect on groundwater quality. Elevated levels of volatile organic compounds (VOCs) were detected in soil vapor beneath former Lot 19 (northwestern portion of the Site) and on the southern portion of the Site.

**1.4.1 Pre-Remedial Soil/Fill Contamination**

A total of 43 soil/fill samples were submitted for laboratory analysis during the RI and SRI. Soil sample analytical results were compared to the 6 NYCRR Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). RI and SRI soil/fill sample concentrations above respective UUSCOs and/or RRSCOs are summarized in Table 1.

**Table 1**  
**Pre-Remedial Soil/Fill Exceedances of Soil Cleanup Objectives (SCOs)**

| Analyte              | Soil Sample ID | UUSCO (mg/kg) | RRSCO (mg/kg) | Concentration (mg/kg) |

|         | SSB-2 (8-10)   |               |               | 633                   |
|         | SS-1           |               |               | 833                   |

Notes:  
 mg/kg – milligrams per kilogram = parts per million (ppm)  
 b – The reported concentration is from the second analytical run on the sample.  
 c – Elevated detection limit due to dilution required due to the presence of a high-interfering element.  
 J – The analyte was detected above the laboratory reporting limit; the reported concentration is estimated and may be inaccurate or imprecise.  
 D – The reported concentration is the result of a diluted analysis.  
 Jb – The reported concentration is from the second analytical run and is estimated.  
 JD – The reported concentration is the result of a diluted analysis and is estimated.

Additionally, soil/fill containing lead at a toxic characteristic leaching procedure (TCLP) concentration of 5.7 milligrams per liter (mg/L) in test pit TP-4 on the northeastern portion of the Site, above the hazardous waste threshold of 5 mg/L, was identified during in-situ waste classification sampling. The hazardous waste was subsequently delineated to an approximately 30- by 40-foot area on the northeastern portion of the Site.

#### 1.4.2 Pre-Remedial Groundwater Contamination

Three groundwater samples were collected for laboratory analysis during the SRI. Laboratory analytical results were compared to NYSDEC Division of Water – Technical and Operational Guidance Series 1.1.1 (TOGS) Ambient Water Quality Standards and Guidance Values (AWQSGVs), although groundwater in the Bronx is not used as a potable water source.

The VOC chloroform was detected in one groundwater sample above its AWQSGV. Four metals in the total (unfiltered) analysis (iron, magnesium, manganese, and sodium) and three metals in the dissolved (filtered) analysis (iron, magnesium, and sodium) were detected in at least one of the groundwater samples above their respective AWQSGV. These metals are naturally occurring, are typical of groundwater quality in the Bronx, and were not likely related to a spill or release.

#### 1.4.3 Pre-Remedial Soil Vapor Contamination

Although there are currently no regulatory or published guidance values for VOCs in soil vapor, soil vapor data was used to assess the potential for exposure to receptors and to help define the nature and extent of contamination at the Site. Six soil vapor samples were collected for laboratory analysis during the RI and one soil vapor sample was collected for laboratory analysis during the SRI.

Thirty-one VOCs were detected in the samples collected during the RI and 13 VOCs were detected in the sample collected during the SRI. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4- and 1,3,5-trimethylbenzene, cyclohexane, n-heptane, n-hexane, 4-ethyltoluene, and 2,2,4-trimethylpentane] were detected at concentrations up to 123,000 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ). Solvent-related VOCs (including styrene, PCE, and toluene) were detected at concentrations up to 871  $\mu\text{g}/\text{m}^3$ .

## 2.0 SITE REMEDIATION

Site remediation was conducted in accordance with the June 2015 NYSDEC-approved RAWP, as documented in the December 2016 NYSDEC-approved FER. Remedial activities included: (1) a Track 4 cleanup to achieve SSSCOs; and (2) implementation of ICs and ECs. All post-excavation soil/fill endpoint samples met the Track 4 SSSCOs. A list of the SSSCOs for the primary contaminants of concern and applicable land use for the Site are provided in Table 2.

**Table 2**  
**Track 4 Site-Specific Soil Cleanup Objectives (SSSCOs)**

| Compound   | Track 4 SSSCO                                  |
|--|--|
| VOCs   | Restricted Residential Soil Cleanup Objectives |
| Total SVOCs  | 500 ppm  |
| Lead   | 1,200 ppm                                      |
| Mercury  | 3 ppm  |
| Pesticides   | Commercial Soil Cleanup Objectives             |
| Polychlorinated Biphenyls  | Commercial Soil Cleanup Objectives             |
| Other Metals   | Commercial Soil Cleanup Objectives             |
| Notes:<br>VOCs – volatile organic compounds<br>SVOCs – semivolatile organic compounds<br>ppm – parts per million |  |

The completed remedy was documented in the NYSDEC-approved December 2016 FER and post-remediation Site management requirements were established in the NYSDEC-approved December 2016 SMP.

### 2.1 Contaminated Materials Removal and Endpoint Sampling

To achieve Track 4 SSSCOs, soil/fill was excavated and either disposed of off-site or re-used on-site to meet the required Site grades for redevelopment. The required in-situ pre-characterization sampling or ex-situ sampling for re-use was conducted prior to disposal or re-use, respectively. The following materials were removed from the Site (in addition to the materials associated with the demolition of the former Site structures): 14,068.21 tons of non-hazardous and 342.74 tons of hazardous soil/fill; five underground storage tanks (USTs) (one 550-gallon UST, one 1,000-gallon UST, two 275-gallon USTs, and one 1,080-gallon UST); and one 550-gallon aboveground storage tank (AST) and associated contents [1,950 gallons of a petroleum product/water mixture from the USTs, 200 gallons of a petroleum product/water mixture from the AST, and one 55-gallon drum (weighing approximately 300

pounds) of tank sludge]. Hazardous soil/fill excavation for disposal occurred within an approximately 30- by 40-foot area in Disposal Grid TP-4 in the northeastern portion of the Site from surface grade to a depth of approximately 14 feet below surface grade. Non-hazardous soil/fill excavation occurred across the Site from surface grade to bedrock at the deepest locations (approximately 8 to 20 feet below surface grade). Table 3 summarizes the quantity of soil/fill excavated and facilities where the material was disposed of off-site.

**Table 3**  
**Off-Site Soil/Fill Disposal Summary**

| Disposal Facility                   | Disposal Facility Location      | Waste Stream                        | Tons             |
|-------------------------------------|---------------------------------|-------------------------------------|------------------|
| Phase III Environmental, LLC        | Palmerton, Pennsylvania         | PA Clean                            | 6,134.00         |
|                                     |                                 | PA Regulated                        | 7,423.88         |
| Impact Environmental                | Lyndhurst, New Jersey           | NJ Residential                      | 423.29           |
| Republic Environmental Systems      | Hatfield, Pennsylvania          | Hazardous Lead                      | 342.74           |
| Atlantic County Utilities Authority | Egg Harbor Township, New Jersey | Elevated Pesticides (non-hazardous) | 68.26            |
|                                     |                                 | Elevated Mercury (non-hazardous)    | 18.78            |
| <b>Total</b>                        |                                 |                                     | <b>14,410.95</b> |

Following the removal of five USTs encountered during remedial excavation, tank excavation endpoint samples were collected in accordance with the NYSDEC-approved RAWP and the NYSDEC Technical Guidance for Soil Investigation and Remediation (DER-10). One soil/fill sample was collected from each of the four sidewalls and at the bottom of each tank grave, with the exception of the 1,000-gallon UST in Disposal Grid TP-12, where the tank excavation extended to bedrock and a bottom sample could not be collected. The tank excavation endpoint samples were designated with the prefix “UST”, a number (1-5 in the order the tank was encountered during excavation activities), an “N”, “S”, “E”, “W”, or “B” for the cardinal directions north, east, south, west, and the bottom of the excavation that the sample was collected from, and the sampling date. UST endpoint soil samples were analyzed for the Commissioner’s Policy (CP)-51 List of VOCs and SVOCs, as approved by the NYSDEC project manager.

UST Endpoint Sampling

All of the UST endpoint soil sample results met SSSCOs. Estimated concentrations of VOCs at concentrations below UUSCOs were detected in soil/fill samples UST-1/2-S-V 20150728, UST-3/4-N-V 20150820, and UST-5-S-V 20150824. The SVOCs benzo(k)fluoranthene and chrysene were detected above UUSCOs in soil/fill sample UST-3/4-W-C 20150824. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected above UUSCOs and RRSCOs in soil/fill samples UST-3/4-W-C 20150824, UST-5-B-C 20150824, UST-5-E-C 20150824, UST-5-N-C 20150824, and/or UST-5-S-C 20150824.

Remedial Performance Site-Wide Endpoint Sampling

After completion of soil/fill excavation in October and December 2015, and February and March 2016, the residual management zone (RMZ) elevation was surveyed and endpoint samples were collected and analyzed to assess soil/fill concentrations relative to the NYSDEC UUSCOs, RRSCOs, and SSSCOs beneath the new Site building concrete foundation slabs. Analysis of the samples indicated that residual soil/fill complied with the SSSCOs. The PAHs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were detected in soil/fill sample EP-4 20160311 at concentrations above UUSCOs and/or RRSCOs, but below SSSCOs. The pesticides cis-chlordane, dieldrin, endrin, heptachlor, 4,4'-DDD, 4,4'-DDE, and/or 4,4'-DDT were detected at concentrations (some estimated) above UUSCOs in endpoint soil/fill samples EP-1 20160311, EP-2 20160225, EP-4 20160311, EP-5 20160311, EP-6 20160311, EP-7-B 20151023, EP-7-E 20151023, EP-7-N 20151023, EP-7-S 20151023, EP-7-W 20151023, and EP-X 20160311 (blind duplicate of EP-3 20160311). The pesticide dieldrin was also detected above the RRSCO in soil/fill sample EP-7-E 20151023 and the associated blind duplicate sample EP-X 20151023. The metals copper, lead, and/or mercury were detected in the endpoint soil/fill samples EP-X 20151023, EP-7-E 20151023, EP-5 20160311, and EP-7-W 20151023 at concentrations above respective UUSCOs, but below RRSCOs and SSSCOs.

Endpoint samples with concentrations exceeding their respective UUSCOs and RRSCOs are shown on Figure 8 of the SMP.

## 2.2 Import Soil/Fill Sample Analytical Results

Approximately 5,100 cubic yards of soil/fill were imported for use as backfill across the Site. Prior to importation, soil/fill samples were collected in accordance with the NYSDEC-approved RAWP and DER-10. The import soil samples were designated with the prefix "ISP" (import stockpile), a number, the letter "V" for the volatile grab samples or a "C" for the five-point composite samples, and the sampling date in "yyyymmdd" format. The six soil/fill samples (ISP-1 through ISP-6) were analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, PCBs by EPA Method 8082, pesticides by EPA Method 8081, TAL metals by EPA Method 6000/7000 series, total cyanide, and hexavalent chromium by EPA Method 7196. VOCs were not detected in samples ISP-2-V1 0151016, ISP-2-V3 0151016, ISP-2-V4 0151016, and ISP-2-V5 0151016 and PCBs were not detected in samples ISP-5-CX 20160425, ISP-5B-C2 20160425, ISP-6A-C1 20150512, and ISP-6-CX 20150512. Several VOCs were detected in the remainder of the soil/fill samples at estimated concentrations below UUSCOs, RRSCOs, and SSSCOs. Acetone was detected in sample ISP-2-V7 20151016 at a concentration of 0.087 mg/kg, above its UUSCO of 0.05 mg/kg. SVOCs were detected at concentrations in the samples below UUSCOs, RRSCOs, and SSSCOs. Pesticides were detected in all samples. The pesticide P,P'-DDT was detected above its UUSCO of 0.0033 mg/kg, but below RRSCOs and SSSCOs in all import soil samples (except ISP-2-C1 20151016) at concentrations between 0.0049 mg/kg and 0.0149 mg/kg. The pesticide P,P'-DDE was detected above its UUSCO of 0.0033 mg/kg in samples ISP-1-C1 20150930, ISP-1-C2 20150930, ISP-3-C1 20160118, and ISP-5B-C2 20160425 at concentrations ranging from 0.00381 mg/kg to 0.00526 mg/kg. Dieldrin was also detected in import sample ISP-5B-C2 20160425 at a concentration of 0.0551 mg/kg, above its UUSCO, but below its RRSCO and its SSSCO. The remaining pesticides were detected below UUSCOs. Metals were not detected at concentrations above UUSCOs, RRSCOs, or SSSCOs in the following import samples: ISP-1-C2 20150930, ISP-2-C3 20151016, ISP-6A-C1 20160512, and ISP-6-CX 20160512. Select metals, including copper in two samples, lead in eight samples, mercury in six samples, and zinc in two samples were detected above UUSCOs, but below RRSCOs and SSSCOs, in the following samples: ISP-1-C1 20150930, ISP-2-C1 20151016, ISP-2-C2 20151016, ISP-3-C1 20160118, ISP-3-X 20160118, ISP-3-C2 20160118, ISP-3-C3 20160118, ISP-5A-C1 20160425, ISP-5-CX 20160425, ISP-5B-C2 20160425,

and ISP-6B-C2 20160512. Metals were not detected in any of the reuse samples above RRSCOs or SSSCOs.

A summary of import sample analytical results is provided in Tables 12a through 12e of the FER.

### 2.3 Reuse Soil/Fill Sample Analytical Results

Fourteen stockpiles were sampled at the Site for use as backfill in areas that were over-excavated for the installation of foundation elements. The reuse soil/fill sample analytical results were designated with the prefix "SP" (stockpile), a number (3-15 in the order the stockpile was sampled), a "V" for the volatile grab samples and a "C" for the five-point composite samples, and the sampling date. Stockpiles SP-5, SP-6B, SP-7, and SP-8 were deemed unacceptable for reuse on-site and were disposed of off-site in accordance with the NYSDEC-approved RAWP at approved disposal facilities.

VOCs and SVOCs were not detected above UUSCOs or RRSCOs in any of the soil/fill stockpiles reused on-site. Select PCBs were detected in reuse sample SB-7B-C1 20150924 at a total concentration of 0.226 mg/kg, above the total PCBs UUSCO of 0.1 mg/kg, but below the RRSCO of 0.226 mg/kg. No other PCBs were detected in the soil/fill approved for on-site reuse above UUSCOs or RRSCOs. Pesticides were not detected above UUSCOs or RRSCOs in the following reuse samples: SP-12-C1 20151221, SP-13A-C1 20160204, or SP-15A-C1 20160225. Dieldrin, P,P'-DDD, P,P'-DDE, and P,P'-DDT were detected above the UUSCO of 0.0033 mg/kg, but below their respective RRSCOs of 13 mg/kg, 8.9 mg/kg, and 7.9 mg/kg at concentrations ranging between an estimated 0.00338 mg/kg and 0.151 mg/kg in the following reuse samples: SP-3A-C1 20150911, SP-3B-C1 20150911, SP-4A-C1 20150914, SP-4A-C-2 20150914 and associated blind duplicate sample SP-4A-XC-2 20150914, SP-5A-C1 20150917, SP-5B-C1 20150917, SP-6A-C1 20150924, SB-6B-C1 20150924, SB-7A 20150924, SB-7B-C1 20150924, SP-9-C1 20151116 and associated blind duplicate sample SP-9-XC 20151116, SP-10A-C1 20151120, SP-10B-C1 20151120, SP-11A-C1 20151221, SP-11B-C1 20151221 and associated blind duplicate sample SP-11B-CX 20151221, SP-13B-C1 20160204 and associated blind duplicate sample SP-13B-CX 20160204, SP-14-C1 20160219 and associated blind duplicate sample SP-14-CX 20160219, SB-15-C1 20160727 and associated blind duplicate sample SP-15-CX 20160727, and SP-15B-C1 20160225.

A summary of reuse soil/fill sample analytical results is provided in Tables 11a through 11e of the FER.

### 2.4 Completion of Remediation Activities

Remedial activities at the Site concluded in October 2016. The Site was remediated to Track 4 SSSCOs in accordance with the June 2015 NYSDEC-approved RAWP, as documented in the December 2016 NYSDEC-approved FER. As a condition of completing a Track 4 cleanup, long-term Site management requires the implementation of an SMP with ICs and ECs.

### 2.5 Post-Remedial Construction Activities

As documented in the NYSDEC approved September 2018 PRR, post-remedial construction activities occurred at the Site between December 2016 and June 2018. The activities included sampling and import of soil/fill, the removal and replacement of portions of the composite cover system, and the installation of aboveground components of the SSDS. Procedures outlined in the EWP and SMP were strictly adhered to for the work, as detailed in the SMP. Work involving subsurface disturbance was also conducted in accordance with the procedures defined in the Site-specific HASP and CAMP. All post-remedial construction activities were detailed in Section 5.0 of the September 2018 NYSDEC-approved PRR.

### 3.0 SITE MANAGEMENT REQUIREMENTS

The SMP provides a detailed description of all procedures required to manage remaining contamination at the Site after completion of the remedial action (RA). Documented procedures include the following: (1) implementation and management of all ICs and ECs; and (2) performance of periodic inspections, certification of results, and submittal of annual PRRs.

#### 3.1 Institutional Controls (ICs)

Two ICs, the Environmental Easement (EE) [city file review number (CFRN) No. 2015000273271] and an SMP, were required by the RAWP to: (1) implement, maintain, and monitor the ECs; (2) prevent future exposure to any remaining contamination; and (3) limit the use and development of the Site to restricted residential uses only. Adherence to the ICs is required by the EE and is being implemented under the SMP. ICs identified in the EE may not be discontinued without an amendment to, or an extinguishment of the EE. The ICs include:

- The Site may be used for restricted residential use.
- All ECs must be operated and maintained as specified in the SMP.
- All ECs must be inspected at a frequency and in a manner defined in the SMP.
- The use of groundwater underlying the Site is prohibited without necessary water quality treatment as determined by the New York State Department of Health (NYSDOH) or the New York City Department of Health and Mental Hygiene (NYCDOH) to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from NYSDEC.
- All applicable environmental or public health monitoring must be performed as defined in the SMP.
- Data and information pertinent to Site management must be reported at the frequency and in a manner as defined in the SMP.
- All activities that will disturb any remaining contaminated material must be conducted in accordance with the SMP.
- Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP.
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed as defined in the SMP.
- Access to the Site must be provided to agents, employees, or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the EE.
- In-ground vegetable gardens and farming activities on the Site are prohibited.

#### 3.2 Engineering Controls (ECs)

Two ECs, a composite cover system and a vapor mitigation system, were implemented as part of the RA to prevent exposure to residual subsurface contamination.

##### 3.2.1 Composite Cover System

Exposure to any residual contaminated soil/fill is being prevented by an engineered composite cover system. The composite cover system was initially installed in September 2016 during remedial activities, and was modified between January and June 2018. The modifications documented in the September 2018 PRR were completed in accordance with the SMP and EWP, and are shown on Figure 3. The composite cover system includes the following cover types:

1. Building Slabs: 6 inches of concrete underlain by Grace Florprufe® 120R vapor barrier underlain by a 6-inch to 4-foot layer of ¾-inch gas-permeable aggregate (GPA) stone bedding underlain by geotextile fabric.
2. Elevator Pits: 6 inches of concrete underlain by Grace Preprufe® 300R vapor barrier/waterproofing underlain by a 6-inch to 4-foot layer of ¾-inch GPA underlain by geotextile fabric.
3. Exterior Foundation Walls: concrete foundation wall adjacent to Grace Preprufe® 300R vapor barrier/waterproofing adjacent to compacted subgrade.
4. Parking Area – Type 1: 6 inches of concrete underlain by Florprufe® 120R vapor barrier underlain by compacted subgrade.
5. Parking Area – Type 2: 6 inches of concrete underlain by a demarcation barrier (orange snow fence) underlain by compacted subgrade.
6. Walkway: 6 inches of concrete underlain by a demarcation barrier (orange snow fence) underlain by compacted subgrade.
7. Landscaped Area – Type 1: two feet of clean fill/soil underlain by a demarcation barrier (geotextile fabric), underlain by compacted subgrade.
8. Landscaped Area – Type 2: two feet of clean fill/soil underlain by a demarcation barrier (orange snow fence), underlain by compacted subgrade.
9. Courtyard: permeable pavers underlain by 2 inches of virgin gravel underlain by two feet of clean fill/soil underlain by a demarcation barrier (orange snow fence) underlain by compacted subgrade.

The compacted subgrade underneath the composite cover system constitutes the RMZ, which includes all soil/fill that requires adherence to special conditions during any post-remedial disturbance, excavation, or handling as part of on-site activities. The elevation of the RMZ is provided in Appendix B of the FER. Subgrade utilities for the building, SSDS piping and GPA are also located within the RMZ. The vapor barrier, geotextile fabric, and orange construction snow fence act as demarcation barriers, which separate the composite cover system from the RMZ. The two-foot thick clean fill buffer consists of imported fill that complies with the lower of the protection of groundwater or the protection of public health soil cleanup objectives (SCOs) for restricted residential use, as outlined in 6 NYCRR Part 375-6.7(d) and table 375-6.8(b), in accordance with the requirements stated in Section 5.4.9 of the NYSDEC-approved RAWP.

### 3.2.2 Sub-Slab Depressurization System (SSDS)

A SSDS was installed to mitigate the potential for soil vapor intrusion into the new building. The sub-slab components of the SSDS were installed between November 2015 and March 2016, as documented in the FER. The aboveground components were installed between January 2018 and June 2018, as documented in the September 2018 PRR. The components of the SSDS include:

- One 0.02-inch slotted, 4-inch diameter Schedule 40 polyvinyl chloride (PVC) pipe section (VR-1A) in the northeastern portion of the Site beneath the partial cellar;
- Three 0.02-inch slotted, 4-inch diameter Schedule 40 PVC pipe sections in the southern and southeastern portions of the Site (VR-1B, VR-1C, and VR-1D);

- One galvanized steel header in the partial cellar, which manifolds the four 4-inch diameter galvanized steel aboveground pipes into one 6-inch diameter galvanized steel riser pipe (VR-1) that extends the roof;
- A 10-foot, 10-inch diameter pipe extension above the rooftop fitted with a rain cap;
- Communication and pipe sleeves through concrete foundation elements;
- Two sub-slab condensate drains; and
- Five vacuum monitoring points (MP-1 through MP-5).

The SSDS “as-built” drawings are provided as Appendix A.

## 4.0 SOIL VAPOR INTRUSION EVALUATION (SVIE)

Following the completion of the new building envelope, an SVIE was conducted in accordance with the October 2018 NYSDEC-approved Vapor Intrusion Assessment Work Plan (VIWP) to determine whether contaminated vapor concentrations below the foundation slab and concentrations present in indoor air necessitate activation of the SSDS. The SVIE included: a pre-sampling inspection; chemical inventory; and collection and laboratory analysis of five sub-slab soil vapor samples, five indoor air samples, and one ambient (outdoor) air sample.

### 4.1 Pre-Sampling Building Inspection and Chemical Inventory

On November 19, 2018, prior to sampling, AKRF completed a pre-sampling inspection to document interior Site building characteristics, building occupancy, air flow patterns, utilities, building operations, chemical and maintenance product inventory, and any other known factors that may affect indoor air quality. AKRF personnel also visually inspected the building slabs to confirm their integrity. In addition, AKRF completed a pre-sampling questionnaire based on an interview with Mr. Ruddy Cabral of Briarwood Organization, Inc., construction superintendent for the Site, who answered pertinent questions about the building's age, construction characteristics, the heating venting and air conditioning (HVAC), and factors that may potentially influence indoor air quality.

A ppbRAE™ photoionization detector (PID) capable of detecting VOCs in the parts per billion (ppb) range equipped with a 10.6 electron Volt (eV) lamp was used to field-screen the indoor air for the presence of organic vapors. Relevant sections of a NYSDOH Indoor Air Quality Questionnaire and Chemical Inventory form were completed to document the results of the inspection.

### 4.2 Soil Vapor, Indoor, and Ambient Air Sampling

On November 19 and 20, 2018, five soil vapor samples (MP-1\_20181120 through MP-4\_20181120, and MP-5\_20181119), five indoor air samples (IA-1\_20181120 through IA-5\_20181120), and one ambient air sample (AA-1\_20181120) were collected from the locations shown on Figure 2 of the SVIE Report (SVIER). The soil vapor and indoor air samples were co-located and the ambient air sample was collected from the exterior courtyard. During sampling, the building remained sealed (all windows and doors closed), the HVAC was not operating, and the building was occupied by a minimal number of building staff on the ground and cellar floors.

Prior to sampling, each of the sub-slab soil vapor points (MP-1 through MP-5) was purged using a GilAir Plus sampling pump. During purging, a shroud was placed over the sampling point and helium gas was introduced through a small hole in the shroud to saturate the atmosphere around the sample port with helium gas. The purged vapors were collected in a 1-Liter Tedlar® bag and monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point, and to verify the adequacy of the seal. Helium was not detected at any of the installed soil vapor points indicating that all of the points passed the seal integrity tests. Purged vapors from the soil vapor samples were field-screened for VOCs using a calibrated PID. After purging, the probe was connected via Teflon™ lined tubing to a laboratory-supplied 6-Liter SUMMA® canister equipped with a 24-hour flow controller.

The indoor and ambient air samples were collected concurrently with the sub-slab soil vapor samples. The SUMMA® canisters were placed approximately 3 to 5 feet above the floor to simulate the breathing zone. Sampling information was recorded on sampling logs. Table 4 summarizes sample locations and IDs.

**Table 4**  
**Soil Vapor, Indoor Air, and Ambient Air Sample Summary**

| Sample Location ID | Sample ID                   | Location                                   |
|--------------------|-----------------------------|--|
| MP-1/IA-1          | MP-1_20181120/IA-1_20181120 | Partial Cellar, Electric Room              |
| MP-2/IA-2          | MP-2_20181120/IA-2_20181120 | Ground Floor, Northeastern Retail Location |
| MP-3/IA-3          | MP-3_20181120/IA-3_20181120 | Ground Floor, Central Retail Location      |
| MP-4/IA-4          | MP-4_20181120/IA-4_20181120 | Ground Floor, Southwestern Retail Location |
| MP-5/IA-5          | MP-5_20181119/IA-5_20181120 | Ground Floor, Recreation Room              |
| AA-1               | AA-1_20181120               | Ground Floor, Exterior Courtyard           |

**4.3 Soil Vapor Intrusion Evaluation (SVIE) Results**

Sub-slab soil vapor and indoor air sample analytical results were compared to the Soil Vapor/Indoor Air Matrices included in the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006, updated May 2017. Decision matrices have only been developed for eight VOCs [1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), carbon tetrachloride, cis-1,2-dichloroethene (cis-1,2-DCE), methylene chloride, PCE, TCE, and vinyl chloride].

Of the VOCs detected, only PCE, TCE, carbon tetrachloride have established NYSDOH Soil Vapor/Indoor Air matrices. The remaining compounds with established decision matrices were not detected in the sub-slab soil vapor or indoor air samples. Matrix A is the applicable matrix for TCE and carbon tetrachloride and Matrix B is the applicable matrix for PCE. Tables 5, 6, and 7 show the comparison of sub-slab soil vapor to indoor air for carbon tetrachloride, PCE, and TCE, respectively.

**Table 5**  
**Comparison of Sub-Slab to Indoor Air Carbon Tetrachloride Concentrations and Matrix Results**

| Sample Location ID | Sub-Slab Soil Vapor Concentrations ( $\mu\text{g}/\text{m}^3$ ) | Indoor Air Vapor Concentrations ( $\mu\text{g}/\text{m}^3$ ) | Matrix Result     |
|--------------------|---|--|-------------------|
| MP-1/IA-1          | ND  | 0.37   | No further action |
| MP-2/IA-2          | ND  | 0.44   | No further action |
| MP-3/IA-3          | 0.33  | 0.34   | No further action |
| MP-4/IA-4          | 0.50  | 0.29   | No further action |
| MP-5/IA-5          | 0.59  | 0.39   | No further action |

Note: ND = Not Detected Above the Reporting Limit

**Table 6**  
**Comparison of Sub-Slab to Indoor Air PCE Concentrations and Matrix Results**

| Sample Location ID                                | Sub-Slab Soil Vapor Concentrations (µg/m <sup>3</sup> ) | Indoor Air Vapor Concentrations (µg/m <sup>3</sup> ) | Matrix Result     |
|---|---|--|-------------------|
| MP-1/IA-1   | ND  | ND   | No further action |
| MP-2/IA-2   | ND  | ND   | No further action |
| MP-3/IA-3   | 12  | ND   | No further action |
| MP-4/IA-4   | 2.2   | ND   | No further action |
| MP-5/IA-5   | 2.4   | ND   | No further action |
| Note: ND = Not Detected Above the Reporting Limit |   |  |                   |

**Table 7**  
**Comparison of Sub-Slab to Indoor Air TCE Concentrations and Matrix Results**

| Sample Location ID                                | Sub-Slab Soil Vapor Concentrations (µg/m <sup>3</sup> ) | Indoor Air Vapor Concentrations (µg/m <sup>3</sup> ) | Matrix Result     |
|---|---|--|-------------------|
| MP-1/IA-1   | ND  | ND   | No further action |
| MP-2/IA-2   | ND  | ND   | No further action |
| MP-3/IA-3   | 1.2   | ND   | No further action |
| MP-4/IA-4   | ND  | ND   | No further action |
| MP-5/IA-5   | ND  | ND   | No further action |
| Note: ND = Not Detected Above the Reporting Limit |   |  |                   |

When comparing the analytical results for TCE, PCE, and carbon tetrachloride in the sub-slab soil vapor samples and the co-located indoor air samples using NYSDOH Soil Vapor/Indoor Air Matrix A (the applicable matrix for TCE and carbon tetrachloride) and NYSDOH Soil Vapor/Indoor Air Matrix B (the applicable matrix for PCE), the matrix indicates a result of “no further action”.

The results of the SVIE were presented in the February 2019 SVIER). In an April 3, 2019 email, NYSDEC determined that the SSDS does not need to be activated and can remain in a passive state. The SVIER and a copy of the NYSDEC approval notification are included in Appendix B.

## **5.0 REMEDY PERFORMANCE EVALUATION AND MAINTENANCE**

The SMP describes the measures for evaluating the performance and effectiveness of the ICs and ECs. The annual Site-wide, composite cover system, and SSDS inspection were conducted in accordance with the SMP.

### **5.1 Site-Wide Inspection**

The Site-wide inspection was conducted on March 21, 2019 to ensure that all aspects of the remedy were in-place and effective. Based on the inspection results, all ICs and ECs remain in compliance with the SMP and remain effective and protective of human health and the environment. The Site-Wide Inspection Log is included in Appendix C.

### **5.2 Composite Cover System Inspection and Maintenance**

The composite cover system inspection was conducted concurrently with the Site-wide inspection on March 21, 2019. The composite cover system inspection consisted of checking all surficial components of the Site cover system, including the landscaped areas and concrete slabs, for holes, cracking and/or other signs of damage. During the inspection, all observed Site cover system components were found to be intact, with no signs of significant cracking or damage. No corrective actions were recommended. The Composite Cover System Inspection Logs and the Photographic Log documenting the inspection are included in Appendix D.

### **5.3 Sub-Slab Depressurization System (SSDS) Inspection**

As the SSDS operates as a passive system, monitoring of quantitative operational parameters was not required. The accessible components of the SSDS were inspected visually on March 21, 2019 during the annual Site-wide and composite cover system inspections, and is documented in the Composite Cover System Inspection Log, included in Appendix D. The above-grade components of the SSDS and the vapor monitoring points (VMPs) appeared to be in good condition with no visible signs of damage and/or breaches that would constitute a short circuit of the vapor pathway. No substantive issues were identified during the April 16, 2018 through April 16, 2019 reporting period. Visual inspection of the SSDS will continue to be conducted as part of the Site-wide and composite cover system inspections.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

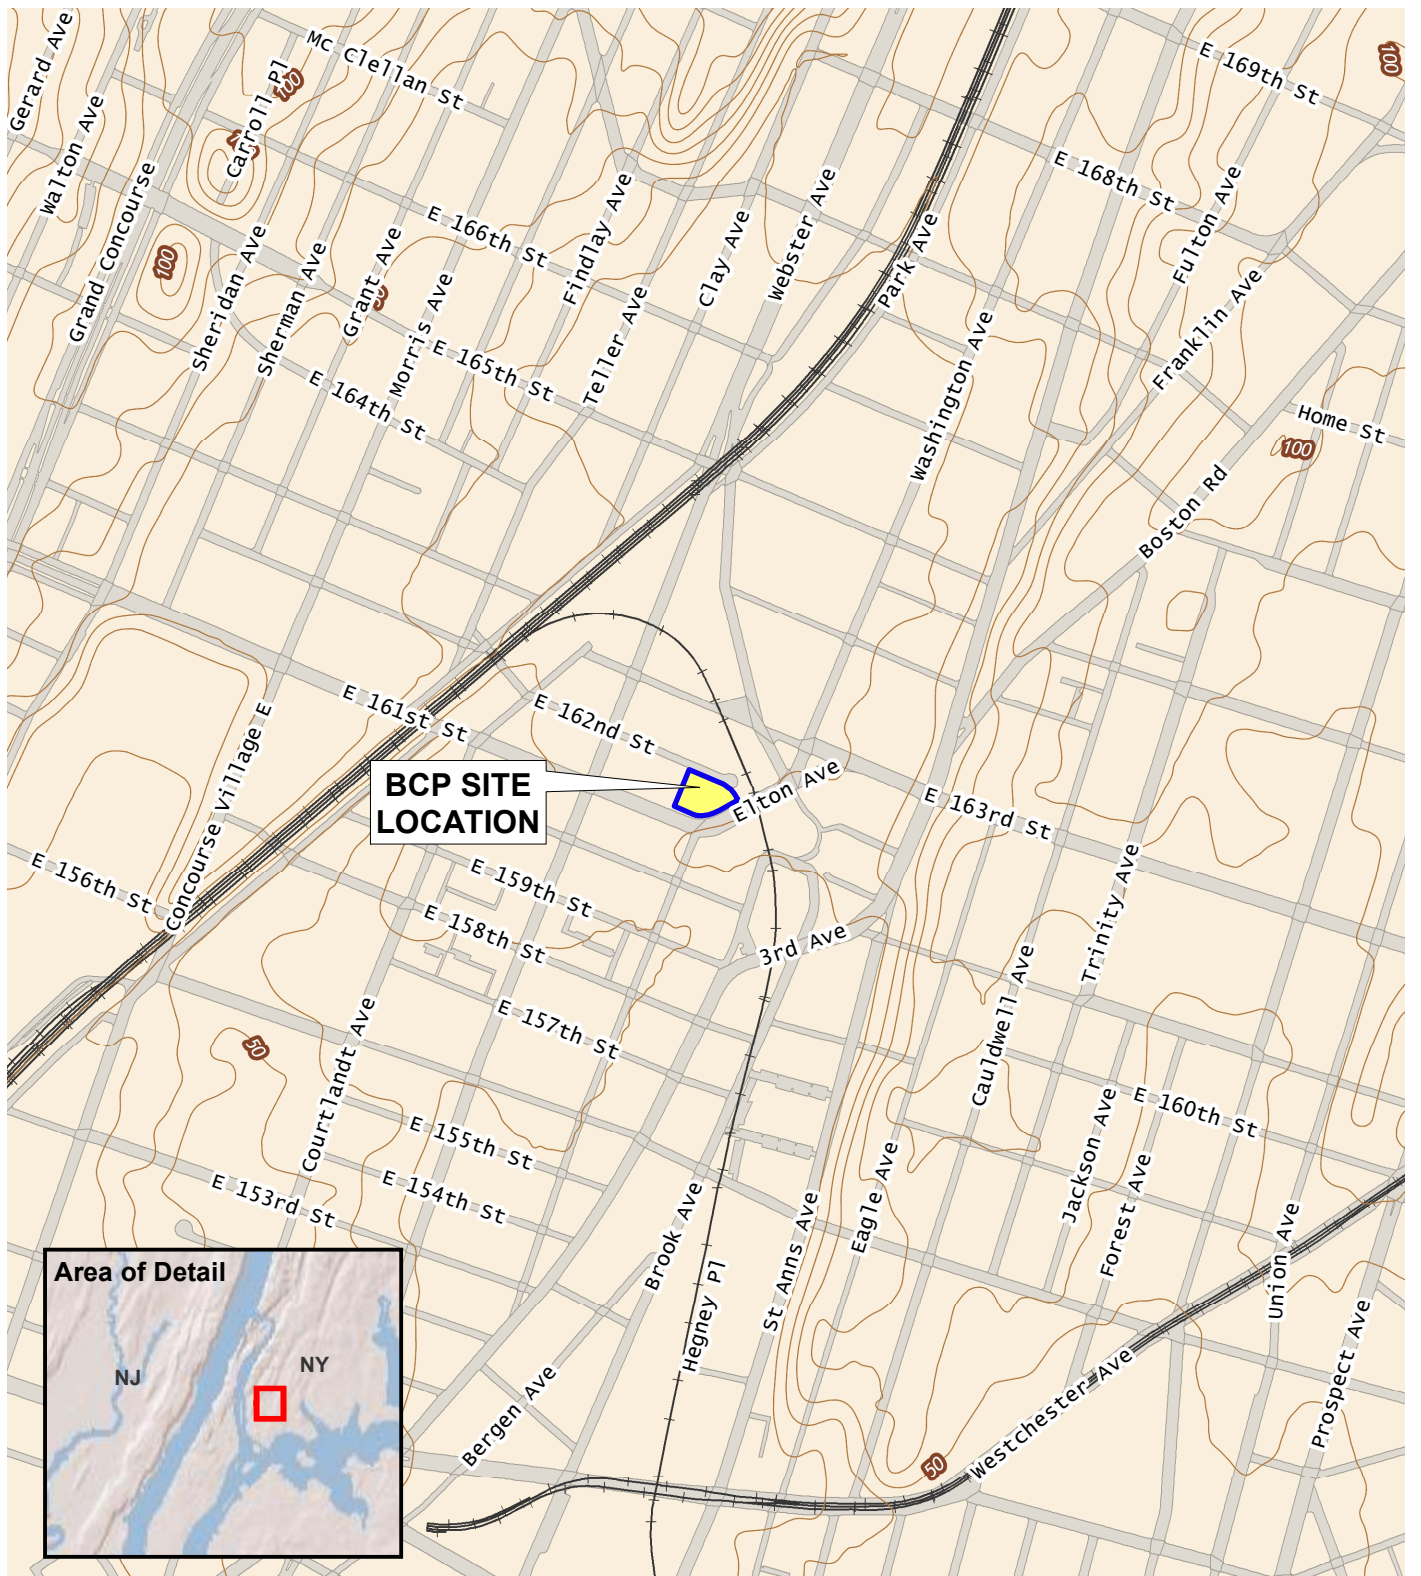

The purpose of this PRR is to document the Site management activities and findings associated with the ICs and ECs, and to certify that the controls are being implemented in accordance with the NYSDEC-approved SMP 12-month periodic review reporting period from April 16, 2018 to April 16, 2019. This PRR also documents work conducted in November 2018, which included an SVIE to determine the need for possible activation of the SSDS. The IC/EC Certification Form is provided in Appendix E.

Based on the inspections and data summarized in this report, the following conclusions were developed:

- The IC/EC Certification Form for the Site was completed based on results from Site monitoring and inspections described in this report. The monitoring and inspection findings indicate that all ICs/ECs at the Site remain in place and effective.
- The engineered composite cover system and SSDS components are in good condition.

In summary, the remedy remains effective and protective of human health and the environment and remains in compliance with the requirements set forth in the SMP. Additionally, based on the conclusions of the SVIER and concurrence by NYSDEC and NYSDOH, the SSDS will continue to operate in a passive state. Periodic inspections, including annual Site-wide, composite cover system and SSDS inspections will continue to be performed in accordance with the SMP.

**APPENDIX B**  
**SOIL VAPOR INTRUSION EVALUATION REPORT (SVIER) AND NYSDEC APPROVAL**

**MacCabe, Michael (DEC)**

to Dawn, me, Deborah ▾

Wed, Apr 3, 2:24 PM

Amy,

The February 2019 Soil Vapor Intrusion Evaluation Report for the new building at the Elton Crossing site documents the lack of intrusion of site-related contaminant into indoor air at concentrations that would require mitigation.

Therefore, based on the findings of the SVI Evaluation Report, it is deemed acceptable that the SSDS remain in its current passive state.

Thanks

**Michael D. MacCabe, P.E.**

## 1.0 INTRODUCTION

This Soil Vapor Intrusion Evaluation Report (SVIER) has been prepared by AKRF, Inc. (AKRF) on behalf of Elton Crossing Associates, L.P., Elton Crossing Moderate Associates, LLC, and Elton Crossing Low-Income Housing Tax Credit (LIHTC) Associates, LLC (collectively, the Volunteer) for the property located at 432 East 162<sup>nd</sup> Street (899 Elton Avenue) in the Bronx, New York, hereafter referred to as the “Site”. The Site is identified on the New York City Tax Map as Bronx Borough Block 2383, Lot 19 (former Lots 19, 25, 27, 30, 35, 8900, and the formerly unmapped section of Melrose Crescent from East 161<sup>st</sup> Street to East 162<sup>nd</sup> Street). The Site is an approximately 0.695-acre parcel bounded by: East 162<sup>nd</sup> Street to the north, beyond which is a construction site (Melrose Commons Site B, aka Bronx Commons); East 161<sup>st</sup> Street to the south, beyond which are residential and commercial buildings; Elton Avenue, followed by Boricua College and the O’Neill Triangle Park, to the east; and residential buildings and open land to the west. A Site Location Map is provided as Figure 1 and a Site and Sample Location Plan is provided as Figure 2.

The Site was investigated and remediated under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) in accordance with Brownfield Cleanup Agreement (BCA) Index No. C203073-11-14, which was executed in November 2014 and amended in October 2016. The Site was remediated to Track 4 Site-Specific Soil Cleanup Objectives (SSSCOs) in accordance with the NYSDEC-approved June 2015 Remedial Action Work Plan (RAWP) and Decision Document (DD), as documented in the December 2016 Final Engineering Report (FER). After receipt of the Certificate of Completion (COC) in December 2016, the Site was redeveloped into an approximately 171,017-gross square foot residential building with retail on the first floor, at-grade parking, and a centrally-located exterior courtyard. Post-remedial Site monitoring requirements were established in the NYSDEC-approved December 2016 Site Management Plan (SMP). The inaugural Periodic Review Report (PRR), submitted to NYSDEC in August 2018 and approved in October 2018, documented and certified that the Site’s Engineering Controls (ECs), Institutional Controls (ICs), and all relevant BCP requirements during the inaugural 18-month reporting period from December 16, 2016 to April 16, 2018 were adhered to in accordance with the SMP.

This SVIER describes the sampling methodology, analytical results, and conclusions of the Soil Vapor Intrusion (SVI) Evaluation (SVIE) conducted at the Site. The results of the SVIE were used to determine whether the sub-slab depressurization system (SSDS), currently operating in a passive state, required activation. The SVIE included: a pre-sampling inspection; chemical inventory; and collection and laboratory analysis of five sub-slab soil vapor samples, five indoor air samples, and one ambient (outdoor) air sample. The work described in this SVIER was conducted in accordance with the NYSDEC-approved Vapor Intrusion Assessment Work Plan (VIWP), and the Quality Assurance Project Plan (QAPP) and Health and Safety Plan (HASP), included as Appendices J and H of the SMP, respectively.

## 2.0 PREVIOUS INVESTIGATIONS

Phase I Environmental Site Assessment (ESA) Report – 432-440 East 162<sup>nd</sup> Street, 446 East 162<sup>nd</sup> Street, 448-450 East 162<sup>nd</sup> Street, 903 Elton Avenue, 901 Elton Avenue, 899 Elton Avenue, 897 Elton Avenue, 433-435 East 161<sup>st</sup> Street, 429-431 East 161<sup>st</sup> Street, and 425 East 161<sup>st</sup> Street (Block 2383, Lots 19, 25, 27, 29, 30, 31, 35, 37, 39, 8900, a section of Melrose Crescent between East 161<sup>st</sup> and East 162<sup>nd</sup> Streets, frontage on the north side of East 161<sup>st</sup> Street, west side of Melrose Crescent and a portion of old Lot 33, and part of unbuilt Melrose Crescent between East 162<sup>nd</sup> Street and East 161<sup>st</sup> Street comprising old lots 22, 23, 24, and a portion of old Lot 33 as well as part of former Lots 25, 30, and 31), Bronx, New York, Environmental Health Investigations, Inc. (EHI), February 2011

The Phase I ESA prepared by EHI identified several on- and off-site environmental conditions that may have affected the Site, including the following historic uses: a factory, metal works, automobile garage, glass works, freezer and oven mobile unit warehouse, glazer, plumbing and heating store, undertaker, beauty shop, dentist, and funeral home. The use of oils and other petroleum-containing fluids, acids, solvents, formaldehyde, phenol, methanol, and heavy metals are commonly associated with these historic uses. Suspect asbestos-containing material (ACM), lead-based paint (LBP), mercury-containing fluorescent light bulbs, and polychlorinated biphenyl (PCB)-containing fluorescent light ballasts were also identified in the former building on former Lot 19.

The surrounding area was historically mixed-use and included: a gasoline station, automotive repair facilities, and a paint store south of the Site along East 161<sup>st</sup> Street; a dry cleaner west of the Site along East 161<sup>st</sup> Street; and a BCP Site south of the Site across East 161<sup>st</sup> Street. The Phase I ESA also noted that, due to past residential development at the Site, there was a possibility that underground storage tanks (USTs) may have existed at the Site. However, no information regarding the status of former petroleum storage tanks on the Site was included in the Phase I ESA.

Inspection for Asbestos Containing Materials (ACM) – 440 East 162<sup>nd</sup> Street, Bronx, New York, ALC Environmental, Inc., (ALC) July 2011

ALC conducted an asbestos survey within the former Site building. A total of 57 bulk samples were collected and analyzed for asbestos. The findings of the asbestos survey identified chrysotile, a type of asbestos, within the former building in 9-inch by 9-inch vinyl floor tiles and mastic in the front room, 12-inch by 12-inch vinyl floor tile and mastic in the office area, roof membrane, and parapet roof mastic.

Geotechnical Investigation Report – East 161<sup>st</sup> Street and Elton Avenue, Bronx, New York, Tectonic Engineering and Surveying Consultants (Tectonic), February 2014

Tectonic conducted a geotechnical engineering investigation of the Site, which included the advancement of 46 borings and the excavation of 4 test pits. Two observation wells were installed within two of the borings. The report noted that one of the observation wells was dry. Unconsolidated fill was reportedly encountered at depths ranging from 2 to 14 feet below grade, generally consisting of sand with varying amounts of silt and gravel. The fill was underlain by native sand, silt, gravel, cobbles, and boulders, typically encountered between 4 and 13 feet below grade. At several locations, abundant brick, debris, and refuse were encountered at depths extending to bedrock, which was encountered between 7.5 and 23 feet below grade. Groundwater was observed within bedrock fractures at approximately 20.5 feet below grade; no surficial groundwater encountered.

*Sampling Protocol and Health and Safety Plan (HASP) – Melrose Commons Site C – Family, Tax Block 2383, Lots 19, 25, 27, 29, 30, 31, 35, and 8900, and a section of Melrose Crescent, between East 161<sup>st</sup> Street and East 162<sup>nd</sup> Street, AKRF, February 2014*

AKRF prepared a Sampling Protocol and associated HASP for the Site. The Sampling Protocol proposed a geophysical survey across accessible areas of the Site, advancement of 13 soil borings with continuous sample collection and laboratory analysis of up to 3 soil samples from each boring, the installation of four 2-inch diameter groundwater monitoring wells with the collection and laboratory analysis of 4 groundwater samples, and the installation of 6 temporary soil vapor probes with the collection and laboratory analysis of 6 soil vapor samples. The HASP provided Site-specific health and safety measures during implementation of the investigation. The scope of the investigation was based on the previous reports and investigations for the Site.

*Remedial Investigation (RI) Report (RIR) – Melrose Commons Site C – Family, Block 2328, Lots 19, 25, 27, 29, 30, 31, 35, 8900, and section of Melrose Crescent between East 161<sup>st</sup> Street and East 162<sup>nd</sup> Street, AKRF, April 2014*

AKRF conducted an RI at the Site that included the advancement of 14 soil borings and installation of 6 temporary soil vapor probes, with collection and laboratory analysis of soil, soil vapor, and ambient air samples. Groundwater was not encountered during the investigation. The results of the soil sampling identified some elevated semivolatile organic compounds (SVOCs), metals, and polychlorinated biphenyls (PCBs) in soil; and some elevated concentrations of petroleum- and solvent-related volatile organic compounds (VOCs) in soil vapor. Based on an evaluation of the data and information from the investigation, AKRF concluded that contaminated soil and soil vapor were present at the Site. The elevated concentrations of xylenes, photoionization detector (PID) readings, staining, and petroleum odors were attributed to former fuel oil use at the Site. The SVOCs, PCBs, and metals concentrations and chemical-like odor observed in soil; and the VOCs in the soil vapor were attributed to the historic use at the Site and subsequent demolition of the former structures. The elevated levels of pesticides indicated the prior usage of pesticides at the Site and possible storage in the cellars of the former structures.

*Brownfield Cleanup Program (BCP) Application – Elton Crossing/Site C – Family, AKRF, August 2014*

AKRF prepared a BCP Application for the Site that summarized findings of previous investigations conducted and attributed soil and soil vapor contamination to the Site's historic uses. The BCP Application identified the threat of contamination as a major obstacle in redevelopment of the Site. The Site was entered into the BCP in November 2014.

*Citizen Participation Plan (CPP) – Elton Crossing (Melrose C Family), 899 Elton Avenue, Bronx, New York, AKRF, December 2014*

AKRF prepared a CPP for the Site in December 2014, which provided details on citizen participation activities that occurred at several milestones during the project to encourage citizen involvement in decisions being made about the Site regarding their health.

*Supplemental Remedial Investigation Work Plan (SRIWP) – Melrose Commons Site C – Family/ Elton Crossing, Bronx, New York, AKRF, January 2015*

AKRF prepared an SRIWP and associated HASP for the Site. The SRIWP proposed the advancement of three soil borings with continuous sample collection and laboratory analysis of two soil samples per boring, the installation of three bedrock groundwater monitoring wells with collection and analysis of three groundwater samples, installation of one temporary soil vapor point with collection and laboratory analysis of one soil vapor sample and one ambient air sample, and collection of soil samples from two sump pits and one floor drain discovered within the western portion of the former Site building on former Lot 19.

The HASP provided Site-specific health and safety measures during implementation of the investigation. The scope of the investigation was based on the previous reports and investigations for the Site.

Phase I Environmental Site Assessment (ESA) Report, Elton Crossing (Melrose C Family), 899 Elton Avenue, Bronx, New York, AKRF, April 2015

AKRF prepared a Phase I ESA Report for the Site. As noted in the report, the Site was developed historically as a factory, a metal works, an automobile garage, a glass works, a freezer and oven mobile unit warehouse, a glazer, a plumbing and heating store, an undertaker, a beauty shop, a dentist, and as a funeral home. A vent, possibly related to a current or former heating oil tank, was observed on the sidewalk north-adjacent to the former Site building on former Lot 19. Certificates of Occupancy were issued for cellar-level boiler rooms, including: former Lot 19 in 1945 and 1963, former Lot 29 in 1961, and former Lot 35 in 1958 and 1965. The regulatory database identified proximal current and/or historical facilities that may have affected the Site subsurface. Additionally, the Site was enrolled in the NYSDEC BCP (Site No. C203073). Subsurface investigations conducted at the Site under the BCP identified elevated levels of VOCs, SVOCs, metals, PCBs, and pesticides in soil and elevated levels of VOCs in soil vapor, which were attributed to the historic use of the Site. Other environmental concerns identified in the report included ACM throughout the former Site building interior and on exterior built-up roofing materials, which were reported to be in poor condition. At the time of the Site inspection, asbestos abatement was ongoing. The report noted that, based on the building's age, LBP may have been present. Painted surfaces were reported to be in fair to poor condition. Based on the building's age, fluorescent lighting fixtures and electrical equipment on the Site may have contained mercury and/or PCBs.

Based on the findings of the Phase I ESA Report, AKRF recommended implementation of a NYSDEC-approved RAWP under the BCP. AKRF also recommended the proper handling and disposal of any soil and debris excavated as part of redevelopment and that dewatering, if necessary, should be conducted in accordance with a New York City Department of Environmental Protection (NYCDEP) permit.

Supplemental Remedial Investigation (SRI) Report (SRIR) – Elton Crossing/Site C – Family, AKRF, June 2015

AKRF conducted an SRI at the Site in February and March 2015 in general accordance with the SRI Work Plan and HASP. The investigation included: collection and laboratory analysis of one soil sample from a floor drain within the building; advancement of three soil borings with continuous sample collection and laboratory analysis of ten soil samples; installation of three bedrock groundwater monitoring wells with collection and laboratory analysis of three groundwater samples; installation of one temporary soil vapor probe with collection and laboratory analysis of one soil vapor sample and one ambient air sample. The two sump pits within the former building were concrete-paved and could not be sampled. Bedrock was encountered between approximately 9 and 17 feet below grade and groundwater was encountered within bedrock between approximately 14.7 and 17.2 feet below grade. Based on Site-specific groundwater measurements collected during the SRI, groundwater flow was generally to the northwest; however, regional groundwater flow was noted to be generally to the south towards the Harlem River, located approximately 1.7 miles south of the Site. No surficial groundwater was encountered.

According to the report, several SVOCs, metals, PCBs, and pesticides were detected above applicable standards in the soil samples. Several VOCs and metals were detected above applicable standards in the groundwater samples, although the detected metals were typical of Bronx groundwater quality and not indicative of Site-specific concerns. Several petroleum- and solvent-related VOCs were detected at elevated concentrations.

Remedial Action Work Plan (RAWP) and Decision Document (DD) – Elton Crossing/ Site C – Family, 899 Elton Avenue, Bronx, New York, AKRF, June 2015

AKRF prepared a RAWP for the Site. The RAWP outlined the remedial action objectives, which established procedures and cleanup objectives for the protection of public health and the environment. The RAWP established Track 4 SSSCOs and soil handling procedures, required the installation of a vapor barrier and sub-slab depressurization system (SSDS) to address potential vapor intrusion into the proposed building, a Site-wide composite cover system to prevent direct exposure to residual contamination in soil, and outlined a project schedule for construction. The RAWP included a HASP and CAMP for Site worker and community safety. The NYSDEC-issued DD described the selected remedy outlined in the RAWP.

Soil Waste Characterization Results (Reports 1 and 2) – Elton Crossing/ Site C – Family, 899 Elton Avenue, Bronx, New York, AKRF, July 2015

AKRF conducted soil waste characterization sampling for disposal purposes. Thirteen test pits were excavated to varying depths based on proposed excavation depths across the Site. One soil sample was collected per approximately 800 cubic yards of soil proposed to be disposed of and analyzed for VOCs, SVOCs, PCBs, pesticides, Target Analyte List (TAL) and Toxic Characteristic Leaching Potential (TCLP) metals, hexavalent chromium, total cyanide, total sulfur, ignitability, reactivity, corrosivity, diesel range organics (DRO), gasoline range organics (GRO), and extractable petroleum hydrocarbons (EPH).

The analytical results were used to gain approval for off-site disposal at several facilities, including soil containing hazardous levels of lead on the northern portion of the Site.

Brownfield Cleanup Agreement (BCA) Amendment – Elton Crossing (Melrose C Family), 432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York, AKRF, October 2016

AKRF prepared a BCA Amendment Application for the Site in October 2016. The BCA Amendment Application documented: (1) the transfer of property ownership, (2) the addition of two Applicants - Elton Crossing Moderate Associates, LLC; and Elton Crossing LIHTC Associates, LLC, (3) the change of address, and (4) the merger of the former property lots into one lot to support the redevelopment plan. The BCA Amendment was executed on November 3, 2016.

Final Engineering Report (FER) – Elton Crossing (Melrose C Family), 432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York, AKRF, December 2016

AKRF prepared an FER for the Site. The FER included: a summary of the Track 4 remedy; a description of the remedial actions performed; installation details for the vapor barrier, composite cover system, and SSDS; a summary of ICs; and a summary of deviations from the RAWP. The FER was approved by NYSDEC in December 2016.

Site Management Plan (SMP) – Elton Crossing (Melrose C Family), 432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York, AKRF, December 2016

AKRF prepared an SMP for the Site. The SMP included Site-specific implementation procedures for the ICs and ECs required by the Environmental Easement (EE), including use restrictions and detailed media-specific maintenance requirements to ensure the ICs and ECs remain in-place and effective. The SMP was approved by NYSDEC in December 2016.

*Periodic Review Report (PRR) – Elton Crossing (Melrose C Family), 432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York, AKRF, August 2018*

AKRF prepared the inaugural PRR for the Site. The PRR documented and certified that the Site’s ECs and ICs were implemented in accordance with the SMP and all relevant BCP requirements during the inaugural 18-month reporting period from December 16, 2016 to April 16, 2018. The PRR also documented additional work conducted from April 16, 2018 to June 13, 2018 under the SMP, including the installation and pressure testing of the SSDS aboveground piping and accessories, and the excavation and replacement of certain elements of the composite cover system. The PRR was approved by NYSDEC in October 2018.

*Vapor Intrusion Assessment Work Plan (VIWP) – Elton Crossing (Melrose C Family), 432 East 162<sup>nd</sup> Street (899 Elton Avenue), Bronx, New York, AKRF, September 2018*

AKRF prepared a VIWP for the Site. The VIWP described the pre-sampling survey, soil vapor, indoor air, and ambient air sampling procedures, laboratory analysis, and reporting requirements that were used during the SVIE. The results of the SVIE, described in this document, were used to determine whether the SSDS, currently operating in a passive state, requires activation. The VIWP was approved by NYSDEC in October 2018.

### 3.0 SUB-SLAB DEPRESSURIZATION SYSTEM (SSDS)

Installation of an SSDS was required as part of the Track 4 remedy to mitigate the potential for soil vapor intrusion into the new Site building. The sub-slab components of the SSDS were installed between November 2015 and March 2016 and the aboveground piping and accessories were installed between January and June 2018 in conjunction with construction of the superstructure. The components of the SSDS include the following, which are shown on Figure 2:

- One 0.02-inch slotted, 4-inch diameter Schedule 40 polyvinyl chloride (PVC) pipe section (VR-1A) in the northeastern portion of the Site beneath the partial cellar;
- Three 0.02-inch slotted, 4-inch diameter Schedule 40 PVC pipe sections in the southern and southeastern portions of the Site beneath the slab-on-grade portions of the building (VR-1B, VR-1C, and VR-1D);
- One manifold, which combines the four 4-inch diameter galvanized steel aboveground pipes into one 6-inch diameter galvanized steel riser pipe (VR-1);
- One galvanized steel header, which extends from the manifold in the partial cellar to the roof ;
- A 10-foot, 10-inch tall, 6-inch diameter galvanized steel rooftop exhaust stack fitted with a rain cap;
- Communication and pipe sleeves through concrete foundation elements;
- Two sub-slab condensate drains; and
- Five vacuum monitoring points (MP-1 through MP-5).

The sub-slab SSDS piping runs within the approximately 5,000-square foot zone beneath the partial cellar in the northeastern portion of the Site and the approximately 12,000-square foot zone beneath the ground floor in the southern, southeastern, and eastern portions of the Site. Piping in these locations consists of 4-inch diameter PVC with 0.020-inch slots, with solid PVC piping installed between the slotted segments. A 6-inch to 4-foot thick, ¾-inch gas permeable aggregate (GPA) stone bedding was installed under, around, and above all sub-slab PVC piping (and under the vapor barrier) to promote passive movement of sub-slab soil vapor towards the slotted pipe segments.

Five vacuum monitoring points (MP-1 through MP-5) were installed at the perimeter of the treatment areas for sub-slab vapor collection and to monitor induced vacuum within the sub-slab if system activation becomes necessary. The monitoring points are constructed with 1-inch diameter solid Schedule 80 PVC pipe with a threaded PVC cap and a male quick connect fitting with ¼-inch threads and a shut off valve with a Viton seal. The PVC pipe terminates approximately three inches below the bottom of the concrete slab within the GPA. Penetrations through the concrete slab are air tight to prevent the potential migration of sub-slab vapors into the building. Each monitoring point is finished with a 6-inch diameter cast iron, flush-mount cleanout with an affixed metal tag engraved with the monitoring point identification number (i.e., MP-1 through MP-5).

The slotted PVC piping transitions to riser pipes VR-1A, VR-1B, VR-1C, and VR-1D within the telecommunications/SSDS manifold room in the partial cellar. Pipe material within the room consists of 4-inch diameter solid galvanized steel. All solid pipe segments (aboveground and belowground) are pitched a minimum of ⅛-inch vertical per one foot horizontal run (i.e., a minimum 1% slope) towards the slotted pipe sections or to the condensation drains to minimize accumulation of condensation within piping.

The four horizontal riser pipes (VR-1B, VR-1C, and VR-1D) and one vertical riser pipe (VR-1A) connect to a 6-inch diameter galvanized steel header within the telecommunications/SSDS cellar room, which manifolds the network into one 6-inch diameter galvanized steel vertical riser pipe (VR-1) extending to the roof of the 12-story building. The SSDS exhaust stack rises 10 feet, 10 inches high above the 10<sup>th</sup> floor roof and is fitted with a rain cap. The stack complies with requirements established in the 2008 NYC

Mechanical Code Section 512, “Subslab Soil Exhaust Systems”. SSDS as-built drawings are provided as Appendix A.

## 4.0 FIELD ACTIVITIES

On November 19 and 20, 2018, AKRF conducted an SVIE to determine whether the SSDS, which is currently operating in a passive state, should be activated to prevent contaminated vapors from entering the Site building. The SVIE included: a pre-sampling inspection and chemical inventory; and collection and laboratory analysis of five soil vapor air samples, five indoor air samples, and one ambient (outdoor) air sample. The SVIE was conducted in general accordance with the October 2018 NYSDEC-approved VIWP.

The sample locations are shown on Figure 2. A photographic log documenting the field activities is included as Appendix B and the New York State Department of Health (NYSDOH) Pre-Inspection Survey and chemical inventory is included as Appendix C.

### 4.1 Pre-Sampling Building Inspection and Chemical Inventory

On November 19, 2018, AKRF completed a pre-sampling inspection to document interior Site building characteristics, building occupancy, air flow patterns, utilities, building operations, chemical and maintenance product inventory, and any other known factors that may affect indoor air quality. AKRF personnel also visually inspected the building slabs to confirm their integrity. The building slabs were in good condition with no cracks or penetrations observed. One sump pump was observed in the telecommunications room of the partial cellar. No other apparent preferential pathways for vapor intrusion were observed. At the time of the inspection, the heating venting and air conditioning (HVAC) system was not in operation and air flow patterns were indiscernible. In addition, AKRF completed a pre-sampling questionnaire based on an interview with Mr. Cabral, who answered pertinent questions about the building's age, construction characteristics, HVAC, and factors that may potentially influence indoor air quality.

A ppbRAE™ PID capable of detecting VOCs in the parts per billion (ppb) range equipped with a 10.6 electron Volt (eV) lamp was used to field-screen the indoor air for the presence of organic vapors. Background PID readings up to 63 ppb were detected in the partial cellar, and PID readings up to 2,873 ppb were detected in the ground floor lobby. According to Mr. Ruddy Cabral of Briarwood Organization, Inc., construction superintendent for the Site, the lobby floors were cleaned immediately prior to inspection of the ground floor lobby, which is believed to account for the elevated PID readings in the lobby.

Relevant sections of a NYSDOH Indoor Air Quality Questionnaire and Chemical Inventory form were completed to document the results of the inspection. A copy of the form is included as Appendix C.

### 4.2 Soil Vapor, Indoor, and Ambient Air Sampling

Five soil vapor samples (MP-1\_20181120 through MP-4\_20181120, and MP-5\_20181119), five indoor air samples (IA-1\_20181120 through IA-5\_20181120), and one ambient air sample (AA-1\_20181120) were collected on November 19 and 20, 2018 from the locations shown on Figure 3. The soil vapor and indoor air samples were co-located and the ambient air sample was collected from the exterior courtyard. During sampling, the building remained sealed (all windows and doors closed), the HVAC was not operational, and the building was occupied by a minimal number of building staff on the ground and cellar floors. The samples were collected over an approximately 24-hour period, with the exception of sample MP-5\_20181119, which achieved pressure of -3.0 inches of mercury (in Hg) after approximately 2 hours.

Prior to sampling, each of the sub-slab soil vapor points (MP-1 through MP-5) were purged using a GilAir Plus air sampling pump. During purging, a shroud was placed over the sampling point and helium gas was introduced through a small hole in the shroud to saturate the atmosphere around

the sample port with helium gas. The purged vapors were collected in a 1-Liter Tedlar® bag and monitored using a portable helium detector to check for short-circuiting of ambient air into the vapor sampling point, and to verify the adequacy of the seal. Helium was not detected at any of the installed soil vapor points indicating that all of the points passed the seal integrity tests. Purged vapors from the soil vapor samples were field-screened for VOCs using a calibrated PID. PID readings of 101 ppb, 56.4 ppb, 50.4 ppb, 19.9 ppb, and 5,093 ppb were detected at monitoring points MP-1, MP-2, MP-3, MP-4, and MP-5, respectively. After purging, the probe was connected via Teflon™ lined tubing to a laboratory-supplied 6-Liter SUMMA® canister equipped with a 24-hour flow controller set to restrict the flow to not more than 3.4 mL/min.

The indoor and ambient air samples were collected concurrently with the sub-slab soil vapor samples. The SUMMA canisters were placed approximately 3 to 5 feet above the floor to simulate the breathing zone. Sampling information was recorded on sampling logs, which are provided in Appendix D. Sample locations are shown on Figure 2. In-Text Table 1 summarizes sample locations and IDs.

**In-Text Table 1**  
**Soil Vapor, Indoor Air, and Ambient Air Sample Summary**

| Sample Location ID | Sample ID                       | Location                                   |
|--------------------|---------------------------------|--|
| MP-1/IA-1          | MP-1_20181120/<br>IA-1_20181120 | Partial Cellar, Electric Room              |
| MP-2/IA-2          | MP-2_20181120/<br>IA-2_20181120 | Ground Floor, Northeastern Storefront Area |
| MP-3/IA-3          | MP-3_20181120/<br>IA-3_20181120 | Ground Floor, Central Storefront Area      |
| MP-4/IA-4          | MP-4_20181120/<br>IA-4_20181120 | Ground Floor, Southwestern Storefront Area |
| MP-5/IA-5          | MP-5_20181119/<br>IA-5_20181120 | Ground Floor, Recreation Room              |
| AA-1               | AA-1_20181120                   | Ground Floor, Exterior Courtyard           |

## 5.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

The SUMMA<sup>®</sup> canisters were delivered with a chain-of-custody (COC) by courier to Test America Laboratories, Inc. (Test America) of South Burlington, Vermont, an Environmental Laboratory Approval Program (ELAP)-certified laboratory. The samples were analyzed for VOCs by Environmental Protection Agency (EPA) Method TO-15 with Category B deliverables. Third-party data validation was performed by L.A.B. Validation Corp. of Northport, New York and a data usability summary report (DUSR) was prepared. The laboratory analytical report is provided in Appendix E and the DUSR is provided in Appendix F.

Chemical analytical work has been performed under a quality assurance program that includes the following:

| Factor                         | Description  |
|--------------------------------|--|
| Quality Assurance Officer      | The chemical analytical QA/QC was directed by Deborah Shapiro, QEP of AKRF.  |
| Third Party Data Validator     | The third-party data validation was performed by Lori Beyer of L.A.B. Validation Corp.   |
| Chemical Analytical Laboratory | The chemical analytical laboratory used in this investigation was Test America, Inc. of South Burlington, Vermont, an ELAP-certified laboratory. |
| Chemical Analytical Methods    | Soil vapor, indoor air, and ambient air analytical method: VOCs by EPA Method TO-15  |

QA/QC procedures were used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analyses for the SVIE. Laboratory QA/QC procedures and analyses were used to demonstrate whether analytical results were biased, either by interfering compounds in the sample matrix or by laboratory techniques that may have introduced systematic or random errors to the analytical process.

The DUSR indicated that the Gas Chromatography/Mass Spectrometry (GC/MS) analytical methodology was acceptable for the analysis. The reported data agrees with the raw data provided in the final report. The laboratory provided a complete data package and reported all data using acceptable protocols and laboratory qualifiers as defined in the report package.

## 6.0 FINDINGS

Sub-slab soil vapor and indoor air sample analytical results were compared to the Soil Vapor/Indoor Air Matrices included in the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006, updated May 2017. Decision matrices have only been developed for eight VOCs [1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), carbon tetrachloride, cis-1,2-dichloroethene (cis-1,2-DCE), methylene chloride, PCE, TCE, and vinyl chloride].

### 6.1 Sub-Slab Soil Vapor Sample Analytical Results

Low concentrations of VOCs were detected in the sub-slab soil vapor samples. Solvent-related VOCs [including acetone, carbon disulfide, carbon tetrachloride, chloroform, chloromethane, cyclohexane, dichlorodifluoromethane, methyl ethyl ketone (MEK), methyl isobutyl ketone, trichlorofluoromethane, PCE, and TCE] were detected at individual concentrations up to 300 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) (chloroform) from a diluted analysis. Petroleum-related VOCs [including benzene, toluene, ethylbenzene, and xylene (collectively referred to as BTEX), 1,2,4-trimethylbenzene, 2,2,4-trimethylpentane, 2-hexanone, n-heptane, and n-hexane] were detected at individual concentrations up to  $18 \mu\text{g}/\text{m}^3$ . Of the VOCs detected, only PCE, TCE, carbon tetrachloride have Soil Vapor/Indoor Air matrices. Detections of PCE, TCE, and carbon tetrachloride in sub-slab soil vapor are summarized in In-Text Table 2. Sample locations are shown on Figure 2 and a summary of all sub-slab detections are shown on Figure 3. Complete analytical results are shown in Attached Table 1.

**In-Text Table 2**  
**Sub-Slab Soil Vapor Sample Detections for Compounds with Soil Vapor/Indoor Air Matrices**

| Sample Location ID                                | MP-1                     | MP-2                     | MP-3                     | MP-4                     | MP-5                     |

| Compound  | $\mu\text{g}/\text{m}^3$ | $\mu\text{g}/\text{m}^3$ | $\mu\text{g}/\text{m}^3$ | $\mu\text{g}/\text{m}^3$ | $\mu\text{g}/\text{m}^3$ |
| Carbon Tetrachloride                              | ND                       | ND                       | 0.33                     | 0.50                     | 0.59                     |
| Trichloroethylene (TCE)                           | ND                       | ND                       | 1.2                      | ND                       | ND                       |
| Tetrachloroethylene (PCE)                         | ND                       | ND                       | 12                       | 2.2                      | 2.4                      |
| Note: ND – Not Detected Above the Reporting Limit |                          |                          |                          |                          |                          |

### 6.2 Indoor Air Sample Analytical Results

Low concentrations of VOCs were detected in the indoor air samples. Solvent-related VOCs (including acetone, carbon tetrachloride, chloroform chloromethane, cyclohexane, dichlorodifluoromethane, MEK, methyl isobutyl ketone, and trichlorofluoromethane) were detected at individual concentrations up to  $310 \mu\text{g}/\text{m}^3$  (acetone) from a diluted analysis. VOCs typically associated with petroleum (including BTEX, 1,2,4-trimethylbenzene, 2,2,4-trimethylpentane, n-heptane, n-hexane, and styrene) were detected in the soil vapor samples at individual concentrations up to  $46 \mu\text{g}/\text{m}^3$ . The only compound detected with Soil Vapor/Indoor Air matrices was carbon tetrachloride. PCE and TCE were not detected in the indoor air samples. Detections of carbon tetrachloride in sub-slab soil vapor are summarized in In-Text Table 3. Sample locations are shown on Figure 2 and a summary of all indoor air detections are shown on Figure 3. Complete analytical results are shown in Attached Table 1.

**In-Text Table 3**  
**Indoor Air Sample Detections for Compounds with Soil Vapor/Indoor Air Matrices**

| Sample Location ID                                   | IA-1              | IA-2              | IA-3              | IA-4              | IA-5              |
|--|-------------------|-------------------|-------------------|-------------------|-------------------|
| Compound   | µg/m <sup>3</sup> | µg/m <sup>3</sup> | µg/m <sup>3</sup> | µg/m <sup>3</sup> | µg/m <sup>3</sup> |
| Carbon Tetrachloride                                 | 0.37              | 0.44              | 0.34              | 0.29              | 0.39              |
| Note:<br>ND = Not Detected Above the Reporting Limit |                   |                   |                   |                   |                   |

**6.3 Ambient (Outdoor) Air Sample Analytical Results**

Low estimated concentrations of VOCs were detected in the ambient air sample. Detected VOCs included acetone, benzene, carbon tetrachloride, chloromethane, cyclohexane, dichlorodifluoromethane, MEK, n-heptane, n-hexane, toluene, and trichlorofluoromethane. Neither PCE nor TCE were detected in the ambient air sample. The greatest VOC concentration was acetone at an estimated concentration of 16 µg/m<sup>3</sup>. Sample locations are shown on Figure 2 and a summary of all ambient air detections are shown on Figure 3. Complete analytical results are included in Attached Table 1.

**6.4 Comparison of Soil Vapor/Indoor Air Analytical Results using NYSDOH Matrices**

Of the VOCs detected, only PCE, TCE, carbon tetrachloride have established NYSDOH Soil Vapor/Indoor Air matrices. The remaining compounds with established decision matrices were not detected in the sub-slab soil vapor or indoor air samples. Matrix A is the applicable matrix for TCE and carbon tetrachloride and Matrix B is the applicable matrix for PCE. In-text Table 4 shows the comparison of sub-slab soil vapor to indoor air for carbon tetrachloride. In-text Table 5 shows the comparison of sub-slab soil vapor to indoor air for TCE. In-text Table 6 shows the comparison of sub-slab soil vapor to indoor air for TCE.

**In-Text Table 4**  
**Comparison of Sub-Slab to Indoor Air Carbon Tetrachloride Concentrations and Matrix Results**

| Sample Location ID                                | Sub-Slab Soil Vapor Concentrations (µg/m <sup>3</sup> ) | Indoor Air Vapor Concentrations (µg/m <sup>3</sup> ) | Matrix Result     |

When comparing the analytical results for TCE, PCE, and carbon tetrachloride in the sub-slab soil vapor samples and the co-located indoor air samples using NYSDOH Soil Vapor/Indoor Air Matrix A (the applicable matrix for TCE and carbon tetrachloride) and NYSDOH Soil Vapor/Indoor Air Matrix B (the applicable matrix for PCE), the matrix indicates a result of “no further action”.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF conducted a Soil Vapor Intrusion Evaluation (SVIE) at the Elton Crossing (Melrose C Family) Site located at 432 East 162<sup>nd</sup> Street (899 Elton Avenue) in the Bronx, New York. The SVIE included: a pre-sampling inspection; chemical inventory; and collection and laboratory analysis of five sub-slab soil vapor samples, five indoor air samples, and one ambient (outdoor) air sample. The SVIE was conducted in accordance with a New York State Department of Environmental Conservation (NYSDEC)-approved Vapor Intrusion Assessment Work Plan (VIWP). The results of the SVIE were used to determine whether the sub-slab depressurization system (SSDS), currently operating in a passive state, required activation.

Low level concentrations of volatile organic compounds (VOCs) were detected in the sub-slab soil vapor and indoor air samples. Sub-slab soil vapor and indoor air sample analytical results were compared to the Soil Vapor/Indoor Air Matrices included in the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006, updated May 2017. Decision matrices have only been developed for eight VOCs [1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), carbon tetrachloride, cis-1,2-dichloroethene (cis-1,2-DCE), methylene chloride, PCE, TCE, and vinyl chloride]. Of the VOCs with established decision matrices, only PCE, TCE, and carbon tetrachloride were detected in the sub-slab soil vapor samples.

When comparing the analytical results for TCE, PCE, and carbon tetrachloride in the sub-slab soil vapor samples and the co-located indoor air samples using NYSDOH Soil Vapor/Indoor Air Matrix A (the applicable matrix for TCE and carbon tetrachloride) and NYSDOH Soil Vapor/Indoor Air Matrix B (the applicable matrix for PCE), the matrix indicates a result of “no further action”. As “no further action” is warranted based on the sub-slab soil vapor and indoor air concentrations, AKRF recommends that the SSDS remain in a passive state and respectfully requests NYSDEC and NYSDOH concurrence.

**Sub-Slab Soil Vapor, Indoor Air, and Ambient Air Analytical Results**

**GENERAL**

- NS** : A standard has not been established for the analyte.
- ND** : The sample was not detected above the laboratory reporting limit.
- NA** : Not applicable.
- U** : The analyte was not detected above laboratory reporting limits.
- J** : The analyte was detected at a concentration above the laboratory reporting limit; the reported concentration is approximate and may be inaccurate or imprecise.
- D** : The reported concentration is the result of a diluted analysis.

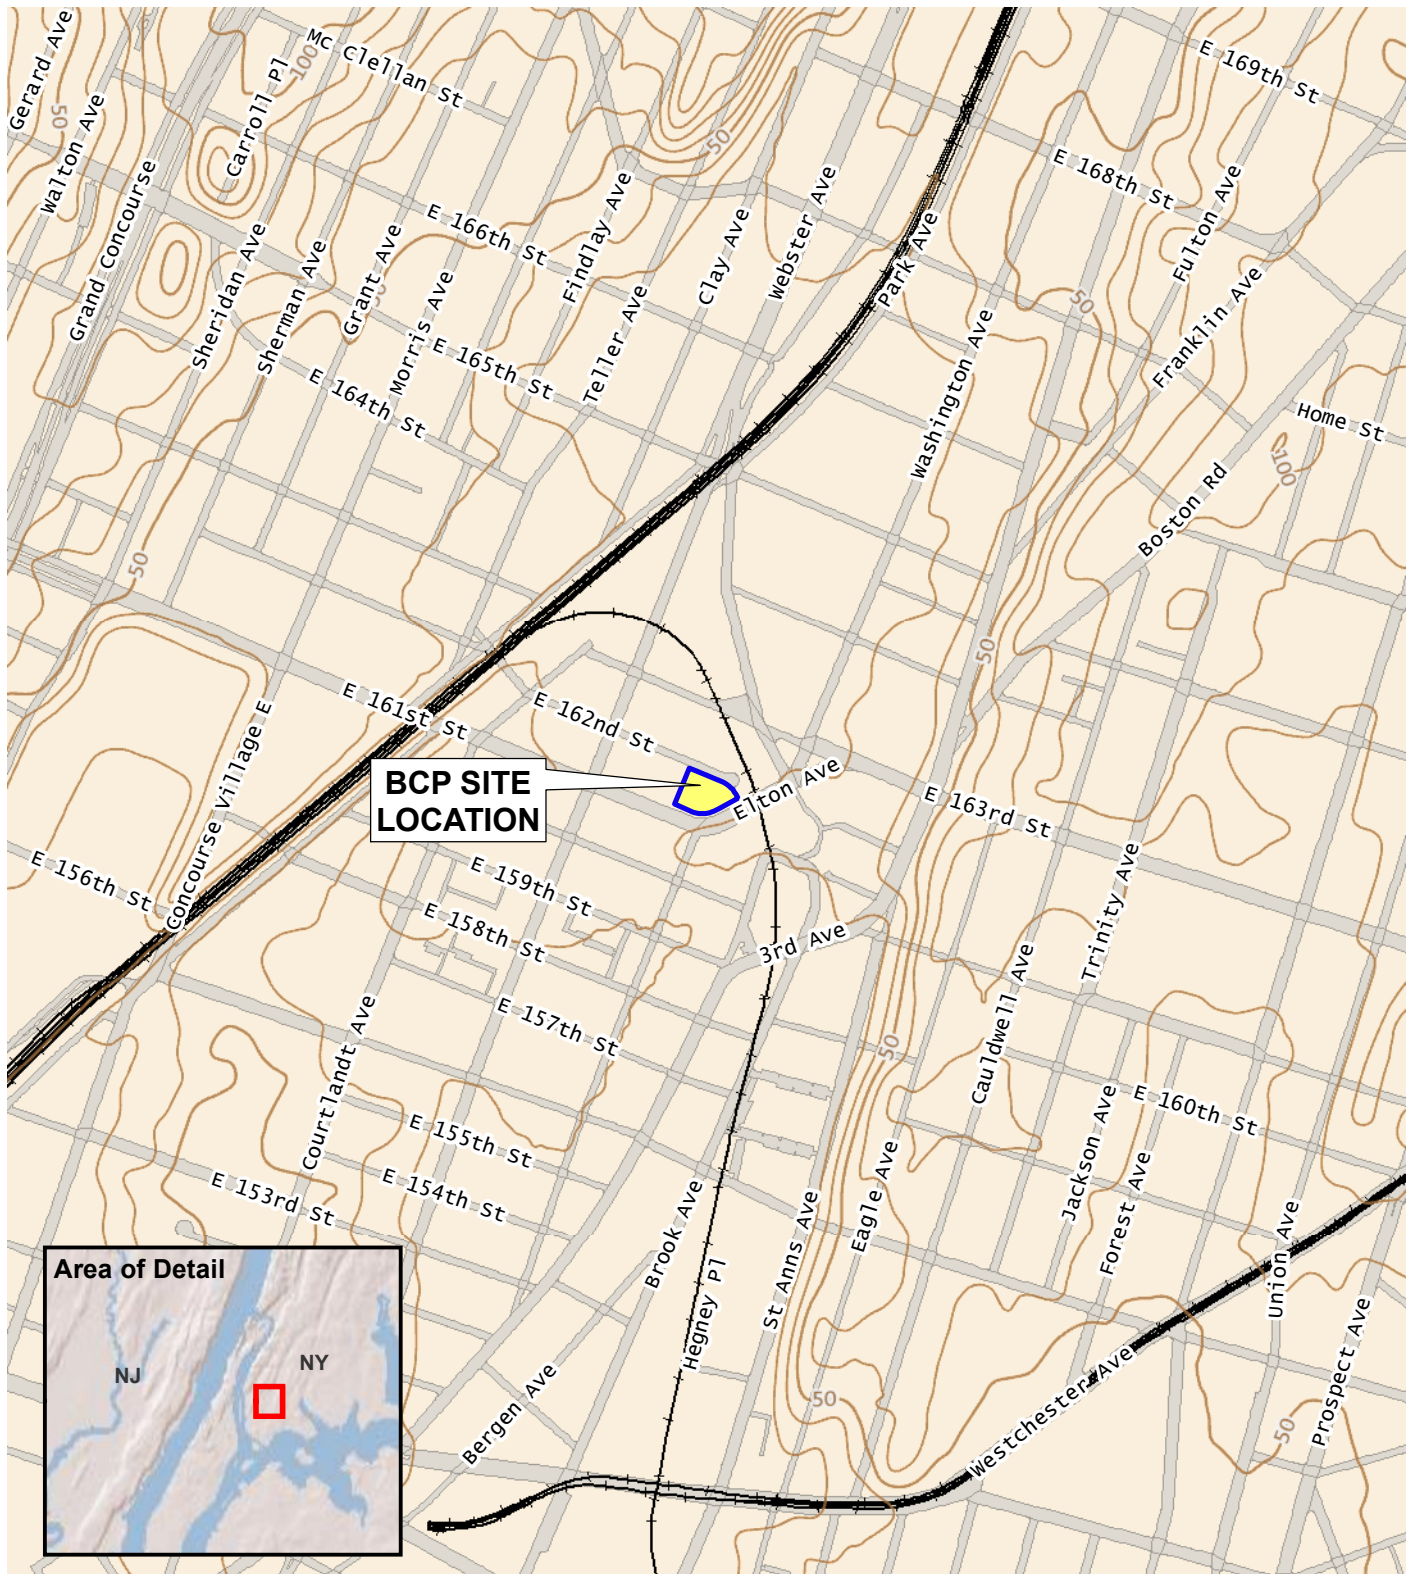

**SOIL VAPOR**

**NYSDOH Soil Vapor Intrusion Matrix Values** : NYSDOH Sub-Slab Vapor Concentration which may require monitoring or mitigation as presented in the Matrix A, Matrix B, and Matrix C tables of the Final Guidance in the State of New York, dated October 2006 ("NYSDOH Vapor Intrusion Guidance Document"), updated May 2017.

$\mu\text{g}/\text{m}^3$  : micrograms per cubic meter

**Exceedances of NYSDOH Soil Vapor Intrusion Matrix Values, if found, are highlighted in bold font.**

Number of Occupants/persons at this location NA Age of Occupants NA

**2. OWNER OR LANDLORD:** (Check if same as occupant )

Interviewed:  Y /  N

Last Name: \_\_\_\_\_ First Name: \_\_\_\_\_

Address: \_\_\_\_\_

County: \_\_\_\_\_

Home Phone: \_\_\_\_\_ Office Phone: \_\_\_\_\_

**3. BUILDING CHARACTERISTICS**

Type of Building: (Circle appropriate response)

Residential  
 Industrial

School  
 Church

Commercial/Multi-use  
Other: \_\_\_\_\_

If the property is residential, type? (Circle appropriate response)

- |              |                        |                   |
|--------------|------------------------|-------------------|
| Ranch        | 2-Family               | 3-Family          |
| Raised Ranch | Split Level            | Colonial          |
| Cape Cod     | Contemporary           | Mobile Home       |
| Duplex       | <u>Apartment House</u> | Townhouses/Condos |
| Modular      | Log Home               | Other: _____      |

If multiple units, how many? 199

If the property is commercial, type?

Business Type(s) Apartment Complex with Commercial on Ground Level - To be determined

Does it include residences (i.e., multi-use)? Y / N      If yes, how many? 199

Other characteristics:

Number of floors 12

Building age Superstructure was built in 2016

Is the building insulated? Y / N

How air tight? Tight / Average / Not Tight  
Except Open Garage (no heat) and Courtyard

**4. AIRFLOW**

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

\_\_\_\_\_  
NA - HVAC was not running at the time of reconnaissance.  
\_\_\_\_\_

Airflow near source

\_\_\_\_\_  
NA - HVAC was not running at the time of reconnaissance.  
\_\_\_\_\_  
\_\_\_\_\_

Outdoor air infiltration

\_\_\_\_\_  
NA - HVAC was not running at the time of reconnaissance.  
\_\_\_\_\_  
\_\_\_\_\_

Infiltration into air ducts

\_\_\_\_\_  
NA - HVAC was not running at the time of reconnaissance.  
\_\_\_\_\_  
\_\_\_\_\_

**5. BASEMENT AND CONSTRUCTION CHARACTERISTICS** (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other Concrete walls
- c. Basement floor: concrete dirt stone other \_\_\_\_\_
- d. Basement floor: uncovered covered covered with \_\_\_\_\_
- e. Concrete floor: unsealed sealed sealed with \_\_\_\_\_
- f. Foundation walls: poured block stone other Sheet rock frame
- g. Foundation walls: unsealed sealed sealed with \_\_\_\_\_
- h. The basement is: wet damp dry moldy Flooded on 11/20 at approx. 08:40 AM due to leak in pump.
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N not applicable

Basement/Lowest level depth below grade: 10 (feet) Partial basement

**Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)**

Newly finished basement and ground level; slab and walls are in good condition; no cracks were observed.

Sump pump was present in partial basement. No penetrations were observed in foundation walls.

**6. HEATING, VENTING and AIR CONDITIONING** (Circle all that apply)

**Type of heating system(s) used in this building: (circle all that apply – note primary)**

Hot air circulation Heat pump Hot water baseboard  
 Space Heaters Stream radiation Radiant floor  
 Electric baseboard Wood stove Outdoor wood boiler Other \_\_\_\_\_

**The primary type of fuel used is:**

Natural Gas Fuel Oil Kerosene  
 Electric Propane Solar  
 Wood Coal

Domestic hot water tank fueled by: Natural Gas

Boiler/furnace located in: Basement Outdoors Main Floor Other \_\_\_\_\_

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present?  Y  N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Ductwork was observed to be in good condition where visible.

## 7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally  Seldom Almost Never

**Level** **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

|                       |  |
|-----------------------|--|
| Basement              | Mechanical, Electrical, and Storage/Locker Rooms |
| 1 <sup>st</sup> Floor | Commerical (Stores/Offices - to be determined)   |
| 2 <sup>nd</sup> Floor | Residential Units                                |
| 3 <sup>rd</sup> Floor | Residential Units                                |
| 4 <sup>th</sup> Floor | Residential Units up until 12th Floor            |

## 8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage?  Y /  N
- b. Does the garage have a separate heating unit? Y /  N / NA Open Garage
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car)  Y /  N / NA  
Please specify Cars, Aerial Lift (temporarily)
- d. Has the building ever had a fire? Y /  N When? \_\_\_\_\_
- e. Is a kerosene or unvented gas space heater present? Y /  N Where? \_\_\_\_\_
- f. Is there a workshop or hobby/craft area? Y /  N Where & Type? \_\_\_\_\_
- g. Is there smoking in the building? Y /  N How frequently? \_\_\_\_\_
- h. Have cleaning products been used recently?  Y /  N When & Type? 1st Floor was cleaned on 11/20/2018
- i. Have cosmetic products been used recently? Y /  N When & Type? \_\_\_\_\_

j. Has painting/staining been done in the last 6 months?  Y /  N Where & When? \_\_\_\_\_

k. Is there new carpet, drapes or other textiles? Y /  N Where & When? \_\_\_\_\_

l. Have air fresheners been used recently? Y /  N When & Type? \_\_\_\_\_

m. Is there a kitchen exhaust fan? Y /  N If yes, where vented? NA

n. Is there a bathroom exhaust fan? Y /  N If yes, where vented? NA

o. Is there a clothes dryer?  Y /  N If yes, is it vented outside?  Y /  N

p. Has there been a pesticide application? Y /  N When & Type? \_\_\_\_\_

Are there odors in the building? Y /  N  
If yes, please describe: \_\_\_\_\_

Do any of the building occupants use solvents at work? Y /  N  
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? \_\_\_\_\_

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) No  
Yes, use dry-cleaning infrequently (monthly or less)  Unknown  
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure?  Y /  N Date of Installation: Completed in June 2018  
Is the system active or passive? Active /  Passive Currently - passive SSDS system that can switch to active (blower)

9. WATER AND SEWAGE

Water Supply:  Public Water Drilled Well Driven Well Dug Well Other: \_\_\_\_\_

Sewage Disposal:  Public Sewer Septic Tank Leach Field Dry Well Other: \_\_\_\_\_

10. RELOCATION INFORMATION (for oil spill residential emergency) NA

a. Provide reasons why relocation is recommended: \_\_\_\_\_

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

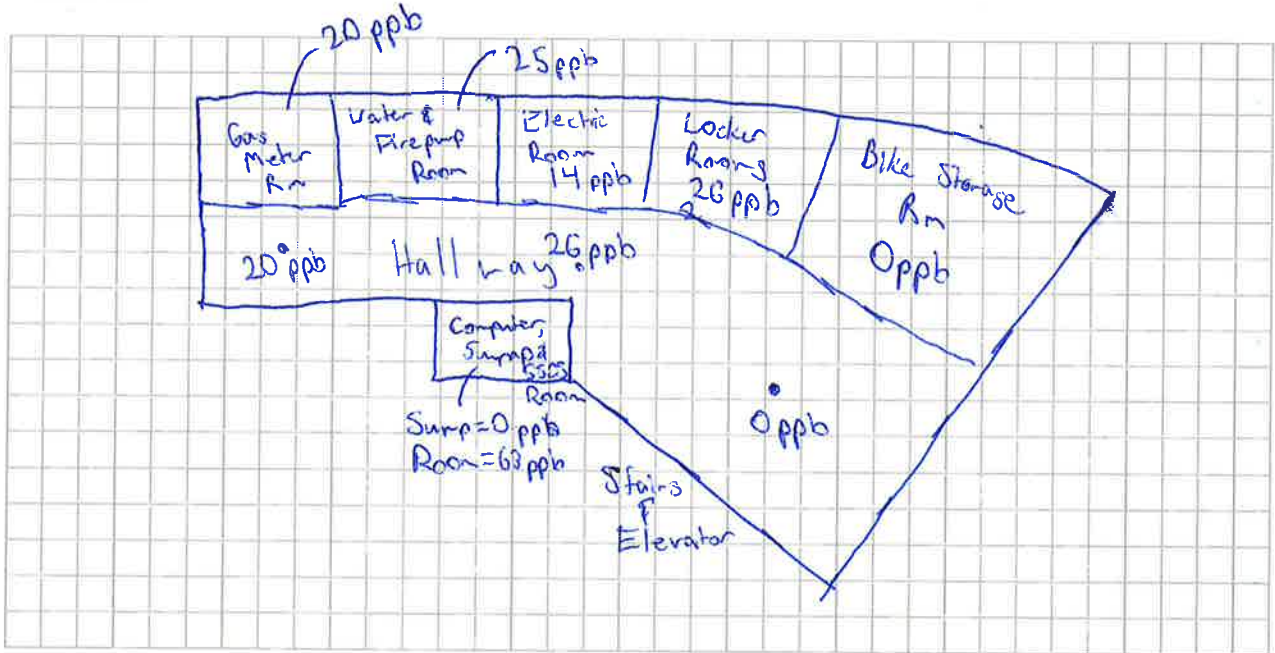

d. Relocation package provided and explained to residents? Y / N

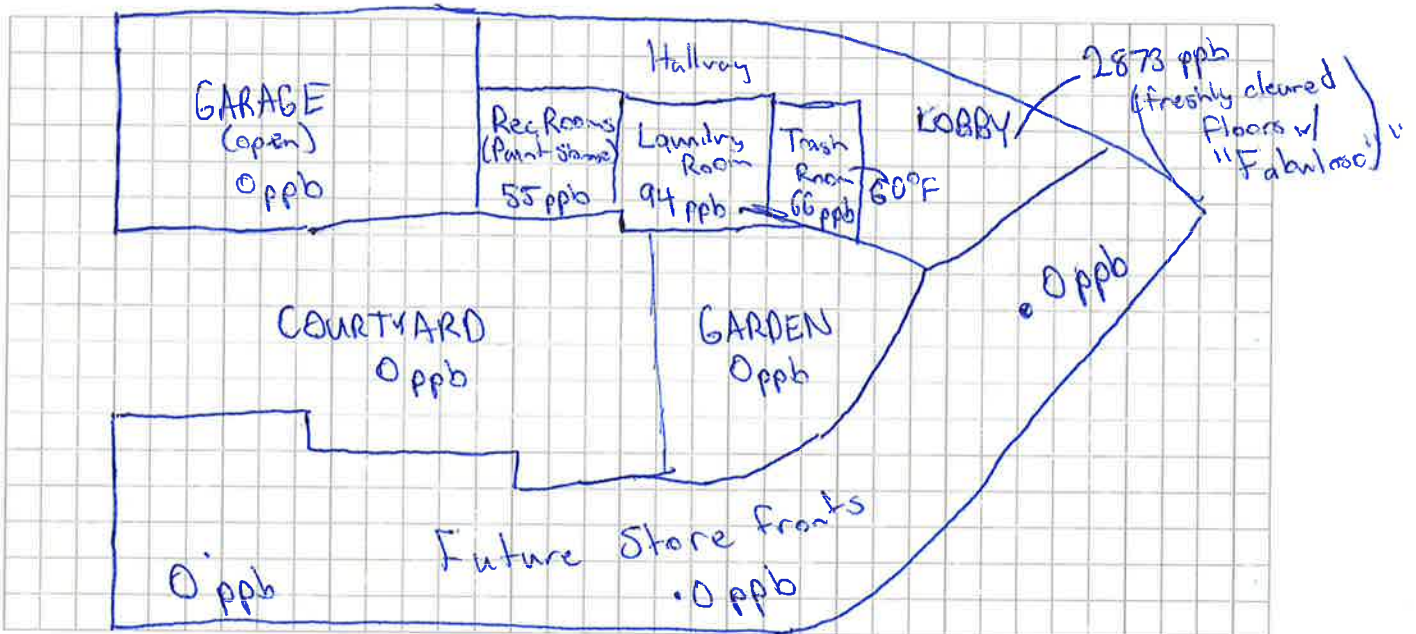

### 11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

#### Basement:

#### First Floor:

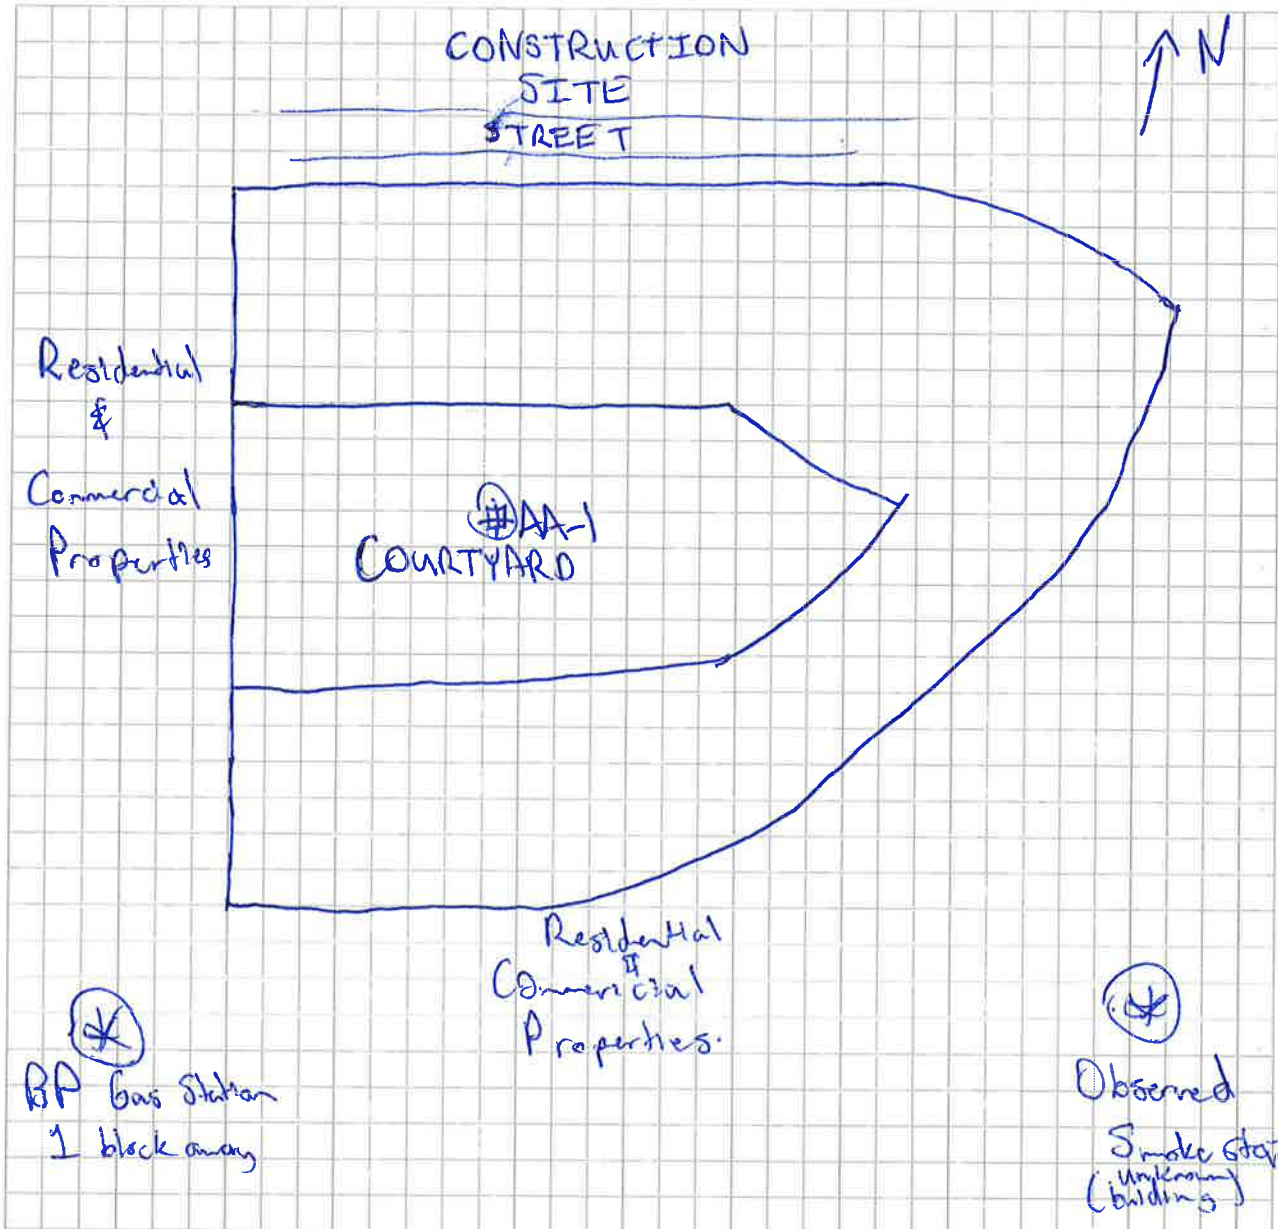

### 12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

**13. PRODUCT INVENTORY FORM**

**Make & Model of field instrument used:** ppbRAE 2000

**List specific products found in the residence that have the potential to affect indoor air quality.**

| Location            | Product Description                   | Size (units)  | Condition *    | Chemical Ingredients            | Field Instrument Reading (units) | Photo **<br>Y/N |
|---------------------|---------------------------------------|---------------|----------------|---------------------------------|----------------------------------|-----------------|

# Definitions/Glossary

Client: AKRF Inc  
Project/Site: Elton Crossing

TestAmerica Job ID: 200-46353-1  
SDG: 200-46353-1

## Qualifiers

### Air - GC/MS VOA

| Qualifier | Qualifier Description   |
|-----------|---|
| U         | Indicates the analyte was analyzed for but not detected.  |
| E         | Result exceeded calibration range.  |
| D         | Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples. |

## Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|---|
| α              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery  |
| CFL            | Contains Free Liquid  |
| CNF            | Contains No Free Liquid   |
| DER            | Duplicate Error Ratio (normalized absolute difference)  |
| Dil Fac        | Dilution Factor   |
| DL             | Detection Limit (DoD/DOE)   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)   |
| EDL            | Estimated Detection Limit (Dioxin)  |
| LOD            | Limit of Detection (DoD/DOE)  |
| LOQ            | Limit of Quantitation (DoD/DOE)   |
| MDA            | Minimum Detectable Activity (Radiochemistry)  |
| MDC            | Minimum Detectable Concentration (Radiochemistry)   |
| MDL            | Method Detection Limit  |
| ML             | Minimum Level (Dioxin)  |
| NC             | Not Calculated  |
| ND             | Not Detected at the reporting limit (or MDL or EDL if shown)  |
| PQL            | Practical Quantitation Limit  |
| QC             | Quality Control   |
| RER            | Relative Error Ratio (Radiochemistry)   |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)   |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)   |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)   |

## CASE NARRATIVE

Client: AKRF Inc

Project: Elton Crossing

Report Number: 200-46353-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

### RECEIPT

The samples were received on 11/23/2018; the samples arrived in good condition.

During the canister pressure check performed upon receipt, it was observed that sample AA-1\_20181120 (200-46353-1) was received at an elevated residual vacuum level, while samples MP-4\_20181120 (200-46353-10) and MP-5\_20181119 (200-46353-11) were found to be received at ambient pressure. The associated flow controllers were evaluated upon receipt and was found to be within the acceptable flow range as compared to the original set flow rate.

During the canister pressure check performed upon receipt, it was observed that sample MP-1\_20181120 (200-46353-7) was received at an elevated residual vacuum level. The associated flow controller was evaluated upon receipt and was found to be outside the set flow and possible clogged.

### VOLATILE ORGANIC COMPOUNDS

Samples AA-1\_20181120 (200-46353-1), IA-1\_20181120 (200-46353-2), IA-2\_20181120 (200-46353-3), IA-3\_20181120 (200-46353-4), IA-4\_20181120 (200-46353-5), IA-5\_20181120 (200-46353-6), MP-1\_20181120 (200-46353-7), MP-2\_20181120 (200-46353-8), MP-3\_20181120 (200-46353-9), MP-4\_20181120 (200-46353-10) and MP-5\_20181119 (200-46353-11) were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 12/06/2018 and 12/07/2018.

Samples IA-1\_20181120 (200-46353-2)[10X], IA-5\_20181120 (200-46353-6)[4X], MP-1\_20181120 (200-46353-7)[50X] and MP-2\_20181120 (200-46353-8)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Samples MP-1\_20181120 (200-46353-7) and MP-2\_20181120 (200-46353-8) were diluted due to the abundance of non-target analytes. A more concentrated analysis was not possible.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# Detection Summary

# Accreditation/Certification Summary

Client: AKRF Inc  
Project/Site: Elton Crossing

TestAmerica Job ID: 200-46353-1  
SDG: 200-46353-1

## Laboratory: TestAmerica Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority  | Program | EPA Region | Identification Number | Expiration Date |
|------------|---------|------------|-----------------------|-----------------|
| New Jersey | NELAP   | 2          | VT972                 | 06-30-19        |

The following analytes are included in this report, but are not accredited/certified under this accreditation/certification:

| Analysis Method | Prep Method | Matrix | Analyte               |
|-----------------|-------------|--------|-----------------------|
| TO-15           |             | Air    | 4-Isopropyltoluene    |
| TO-15           |             | Air    | Chlorodifluoromethane |
| TO-15           |             | Air    | Cumene                |
| TO-15           |             | Air    | n-Butane              |
| TO-15           |             | Air    | n-Butylbenzene        |
| TO-15           |             | Air    | n-Propylbenzene       |
| TO-15           |             | Air    | sec-Butylbenzene      |
| TO-15           |             | Air    | tert-Butylbenzene     |

# Quantitation Limit Exceptions Summary

Client: AKRF Inc  
Project/Site: Elton Crossing

TestAmerica Job ID: 200-46353-1  
SDG: 200-46353-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

| <b>Method</b> | <b>Matrix</b> | <b>Analyte</b>         | <b>Units</b> | <b>Client RL</b> | <b>Lab PQL</b> |
|---------------|---------------|------------------------|--------------|------------------|----------------|
| TO-15         | Air           | 1,1-Dichloroethene     | ppb v/v      | 0.035            | 0.20           |
| TO-15         | Air           | Carbon tetrachloride   | ppb v/v      | 0.035            | 0.20           |
| TO-15         | Air           | cis-1,2-Dichloroethene | ppb v/v      | 0.050            | 0.20           |
| TO-15         | Air           | Trichloroethene        | ppb v/v      | 0.035            | 0.20           |
| TO-15         | Air           | Vinyl chloride         | ppb v/v      | 0.078            | 0.20           |

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor of 2 (K=2), providing a level of confidence of approximately 95% and has been carried out in accordance with ANAB (ANSI-ASQ National Accreditation Board) and ISO 17025 requirements.

This certificate is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

Primary Reference Material Intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis - handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor of 2 (K=2), providing a level of confidence of approximately 95% and has been carried out in accordance with ACLASS (ANSI-ASQ National Accreditation Board) and ISO 17025 requirements.

This certificate is issued in accordance with the laboratory accreditation requirements of ACLASS. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).
