Re: Addendum to the Final Remedial Investigation Report, dated February 2023  
2921 Westchester Avenue, Bronx, NY 10461  
Block 4164, Portion of Lot 5  
BCP Site No. C203140  
Offsite Soil Vapor and Indoor Air Investigation for the Properties located at 2929 Westchester Avenue and 2931 Westchester Avenue

Dear Ms. Palumbo,

On behalf of the Participant, Ralford Realty Corp., Tenen Environmental, LLC (Tenen) has conducted an offsite soil vapor and indoor air investigation at the buildings located on Block 4164, Lot 1 (offsite property, hereinafter referenced as “Offsite Property A”) and Block 4164, Lot 3 (offsite property, hereinafter referenced as “Offsite Property B”). The Participant, having a property located at 2921 Westchester Avenue, Bronx, New York (the Site), entered the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) in October 2020.

The following Remedial Investigation Report (RIR) Addendum documents the soil vapor and indoor air investigation conducted at Offsite Properties A and B in February 2024 as requested by NYSDEC and the New York State Department of Health (NYSDOH). Based upon comparison of the detected concentrations of chlorinated solvents in sub-slab soil vapor and indoor air with the NYSDOH Decision Matrices, no further action is required to address soil vapor conditions at Offsite Properties A or B.

## Background

The Site is located at 2921 Westchester Avenue in the Pelham Bay neighborhood of the Bronx, New York. The Site is defined as an approximate 1,415 square foot (SF) vacant tenant space which is a portion of an irregularly-shaped parcel, identified by the New York City Department of Finance as Block 4164, Lot 5. The Site is located on the west side of Westchester Avenue, between Pilgrim Avenue and Buhre Avenue, in Bronx Community Board 10 and was historically occupied by a dry cleaner.

Lot 5 is improved with one two-story commercial building with a partial basement. The building contains multiple commercial tenant spaces, currently occupied by a cell phone store and a home goods store. The Site was historically occupied by a dry cleaner and, most recently, a tutoring and after-school center. Basements extend beneath the entirety of the Site and directly adjacent vacant and cell phone store tenant spaces. The basement spaces share a common slab, but are separated by walls. The northwestern portion of the home goods store footprint contains a small cub-cellars consisting of a boiler room, and the remainder of the home goods store footprint consists of a slab-on-grade foundation. The commercial layout and cellar layout of the Site are depicted on Figure 2. The Site consists of one vacant tenant space within the building and the portion of the basement directly below.

2921 Westchester Avenue – Bronx, NY  
RIR Addendum – Offsite Soil Vapor Intrusion Investigation Report

In accordance with the January 2021 NYSDEC-approved Remedial Investigation Work Plan (RIWP), Tenen conducted RI activities on and off the Site in February, March, and July 2021 and February 2022. The results of these investigations are described in Tenen’s Final NYSDEC-approved RIR, dated February 2023.

Groundwater samples collected during the RI indicated that chlorinated volatile organic compounds (cVOCs) are present in groundwater at concentrations above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (Class GA Standards) across the Site and offsite to the north, with the highest concentrations occurring in the offsite well installed in the basement of the cell phone store tenant space, adjoining the Site to the north. A soil vapor investigation was conducted within each of the tenant spaces of the Site building as part of the RI and elevated concentrations of cVOCs, including tetrachloroethene (PCE), were detected in indoor air onsite and sub-slab soil vapor and indoor air offsite. Sub-slab soil vapor and co-located indoor air samples were compared to the applicable New York State Department of Health (NYSDOH) Matrices as listed in the NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (Soil Vapor Guidance), which resulted in the following:

- A ‘Mitigate’ Matrix Decision for tetrachloroethene (PCE) at both locations in the vacant basement adjoining the Site to the south and an ‘Identify Sources and Resample or Mitigate’ Matrix Decision for PCE at one location in the home goods store;
- A ‘Mitigate’ Matrix Decision for cis-1,2-dichloroethene (cis-1,2-DCE) at one location in the home goods store and an ‘Identify Sources and Resample or Mitigate’ Matrix Decision for cis-1,2-DCE at both locations in the vacant basement adjoining the Site to the south and two locations in the home goods store;
- An ‘Identify Sources and Resample or Mitigate’ Matrix Decision for trichloroethene (TCE) at both locations in the vacant basement adjoining the Site to the south and at one location in the home goods store;
- A ‘Mitigate’ Matrix Decision for methylene chloride at one location within the home goods store and an ‘Identify Sources and Resample or Mitigate’ Matrix Decision for methylene chloride at five locations within the home goods store; and,
- A ‘Monitor’ Matrix Decision for carbon tetrachloride at one location in the vacant basement adjoining the Site to the south.

Additionally, concentrations of PCE and TCE were detected in exceedance of their respective NYSDOH Air Guideline Values (AGVs) in indoor air on- and offsite. Based on these findings, NYSDEC wrote to the Participant on September 12, 2023 requesting offsite soil vapor intrusion sampling be conducted at Offsite Properties A and B. Tenen submitted a figure depicting the proposed offsite sub-slab soil vapor and co-located indoor air sampling locations to NYSDEC and NYSDOH (collectively, “the Departments”) in January 2024. The figure was approved by the Departments on January 23, 2024.

The offsite soil vapor and indoor air investigation at Offsite Properties A and B was conducted on February 7, 2024 in accordance with Section 3.3 of the January 2021 RIWP and the January 2024 proposed offsite sub-slab soil vapor and co-located indoor air sampling figure. This RIR Addendum provides a summary of Tenen’s findings, including the results of the laboratory analysis, conclusions and recommendations.

### **Offsite Property Information**

Offsite Properties A and B both contain full cellars. The cellar beneath the pharmacy tenant space on Offsite Property A is separated from the cellar beneath the grocery store tenant space on Offsite Property A by a wall and is utilized as storage space by the pharmacy. The cellar slab beneath the pharmacy tenant space is broken in places and contains areas of exposed soil. There are no walls separating the cellar space beneath the grocery store, Bourbon Revival, and Madison Security Group tenant spaces and this cellar space is utilized for storage by the grocery store. The entirety of the cellar on Offsite Property B is utilized for storage by the liquor store. Indoor air quality questionnaires and building inventories were prepared for each offsite property and are included in Attachment 1.

2921 Westchester Avenue – Bronx, NY  
RIR Addendum – Offsite Soil Vapor Intrusion Investigation Report

## Sample Collection

### Soil Vapor

On February 7, 2024, Tenen installed four sub-slab soil vapor points at Offsite Property A and one sub-slab soil vapor point at Offsite Property B. One sub-slab soil vapor point was installed in the cellar below each tenant space at each property (pharmacy, grocery store, Bourbon Revival, and Madison Security Group tenant spaces at Offsite Property A, and the liquor store tenant space at Offsite Property B) [see Figure 2]. Four samples (2931W\_SS-1, 2931W\_SS-2, 2931W\_SS-3, and 2931W\_SS-4) were collected within the existing building on Offsite Property A and one sample (2929W\_SS-1) was collected within the existing building on Offsite Property B. All sub-slab soil vapor samples were collected on February 7, 2024.

### Sub-Slab Soil Vapor Sample Designations – February 2024

Sample Name	Sample Type	Sample Length	Sample Location
2931W_SS-1	Sub-Slab Soil Vapor	8 hours	Basement beneath the pharmacy tenant space on Offsite Property A
2931W_SS-2	Sub-Slab Soil Vapor	8 hours	Basement beneath the grocery store tenant space on Offsite Property A
2931W_SS-3	Sub-Slab Soil Vapor	8 hours	Basement beneath the Bourbon Revival tenant space on Offsite Property A
2931W_SS-4	Sub-Slab Soil Vapor	8 hours	Basement beneath the Madison Security Group tenant space on Offsite Property A
2929W_SS-1	Sub-Slab Soil Vapor	8 hours	Basement beneath the liquor store tenant space on Offsite Property B

All sub-slab soil vapor points were installed using a hand-held hammer drill with a concrete drill bit. Access to the sub-slab soil was gained by drilling through the top surface material (concrete) using a drill bit. Upon penetration through the surface material, a disposable Vapor Pin® was set no more than two inches below the slab.

The soil vapor sampling probe was connected to dedicated tubing that was extended to grade. In accordance with NYSDOH Soil Vapor Guidance protocols, a tracer gas (helium) was used to verify the integrity of the soil vapor probe. A plastic chamber was sealed above the borehole. The sampling tube was pushed through the top of the sealed chamber. The atmosphere inside the chamber was enriched with the tracer gas (helium). A portable helium monitor was attached to the sampling tube to measure a vapor sample from the probe for the presence of high concentrations (>10%) of the tracer gas.

Soil vapor was purged from the boring hole by attaching the surface end of the tubing to an air valve and then to a vacuum pump. The vacuum pump removed one to three volumes of air (volume of the sample probe and tube) prior to sample collection. The flow rate for both purging and sample collection did not exceed 0.2 liters per minute.

The sub-slab soil vapor samples were first screened for organic vapors using a photoionization detector (PID). Pre-sample PID readings from the sub-slab soil vapor points varied from non-detect in 2931W\_SS-1 through 2931W\_SS-4 to 5.8 parts-per-million (ppm) in 2929W\_SS-1. Sub-slab soil vapor samples were collected in batch-certified clean, 6-liter Summa canisters using eight-hour regulators in accordance with the commercial use of the buildings. All samples were analyzed for VOCs via USEPA Method TO-15 with a Category B deliverable package.

2921 Westchester Avenue – Bronx, NY  
RIR Addendum – Offsite Soil Vapor Intrusion Investigation Report

Field notes were maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples were collected and chain of custody protocols.

*Indoor Air and Ambient Air*

On February 7, 2024, Tenen collected four indoor air samples (2931W\_IA-1 through 2931W\_IA-4) from the cellar below each of four tenant spaces on Offsite Property A and one indoor air sample (2929W\_IA-1) from the cellar below the one tenant space on Offsite Property B. Each indoor air sample was co-located with a sub-slab soil vapor sample. Tenen also collected one ambient air sample (AA-4) during the sub-slab soil vapor and indoor air sampling event. Sample locations are shown on Figure 2.

**Indoor Air and Ambient Air Sample Designations – February 2024**

Sample Name	Sample Type	Sample Length	Sample Location
2931W_IA-1	Indoor Air	8 hours	Basement beneath the pharmacy tenant space on Offsite Property A
2931W_IA-2	Indoor Air	8 hours	Basement beneath the grocery store tenant space on Offsite Property A
2931W_IA-3	Indoor Air	8 hours	Basement beneath the Bourbon Revival tenant space on Offsite Property A
2931W_IA-4	Indoor Air	8 hours	Basement beneath the Madison Security Group tenant space on Offsite Property A
2929W_IA-1	Indoor Air	8 hours	Basement beneath the liquor store tenant space on Offsite Property B
AA-4	Outdoor Ambient Air	8 hours	Western Sidewalk of Westchester Avenue, adjacent to Offsite Property B.

Indoor and ambient air samples were collected within the breathing zone (approximately three to five feet above the floor) in accordance NYSDOH Soil Vapor Guidance protocols. Samples were collected in individually-certified, clean 6-liter Summa canisters using eight-hour regulators in accordance with the commercial use of the buildings. Samples were collected at flow rates no greater than 0.2 liters per minute and analyzed for VOCs via USEPA Method TO-15 and TO-15 SIM with a Category B deliverable package.

Field notes were maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, vacuum of canisters before and after the samples were collected and chain of custody protocols.

Sub-slab soil vapor and indoor air sampling logs are included in Attachment 2.

**Sample Analysis**

The samples were sent under chain-of-custody documentation to Alpha Analytical, Inc. (Alpha) in Westborough, MA. Alpha is certified by the NYSDOH Environmental Laboratory Approval Program (ELAP) as LABIDs 11627 and 11148. Soil vapor, indoor air and ambient air samples were analyzed for VOCs.

**Analytical Results**

Sub-slab soil vapor and co-located indoor air results were compared to the NYSDOH Soil Vapor Guidance Decision Matrices. In addition, indoor air samples were compared to the NYSDOH Air Guideline Values (AGVs).

2921 Westchester Avenue – Bronx, NY  
RIR Addendum – Offsite Soil Vapor Intrusion Investigation Report

Soil vapor and indoor air results are included in Table 1 and Figure 3. Laboratory deliverables are included in Attachment 3. A data usability summary report (DUSR) was prepared and is also included in Attachment 3. The analytical results are summarized below.

VOCs were not detected in exceedance of the NYSDOH AGVs in any indoor air samples. The following cVOCs were detected in one or more sub-slab soil vapor or indoor air samples: PCE was detected in four sub-slab soil vapor samples and four indoor air samples; TCE was detected in four indoor air samples; cis-1,2-DCE was detected in three indoor air samples; carbon tetrachloride was detected in all five indoor air samples and the ambient air sample; and, methylene chloride was detected in one indoor air sample. PCE was detected at a max. concentration of 8.48 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) in 2929W\_SS-1 (Offsite Property B) and at a max. concentration of 2.05  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-4 (Offsite Property A); TCE was detected at a max. concentration of 0.183  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-4 (Offsite Property A); cis-1,2-DCE was detected at a max. concentration of 0.135  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-4 (Offsite Property A); carbon tetrachloride was detected at a max. concentration of 0.673  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-3 (Offsite Property A) and at a concentration of 0.421  $\mu\text{g}/\text{m}^3$  in AA-4; and, methylene chloride was detected at a concentration of 2.01  $\mu\text{g}/\text{m}^3$  in 2929W\_IA-1 (Offsite Property B). TCE, cis-1,2-DCE, carbon tetrachloride, and methylene chloride were not detected in any sub-slab soil vapor samples.

PCE and methylene chloride are part of NYSDOH Matrix B and TCE, cis-1,2-DCE, and carbon tetrachloride are part of NYSDOH Matrix A. The concentrations of PCE, TCE, cis-1,2-DCE, carbon tetrachloride, and methylene chloride in all five offsite co-located sub-slab soil vapor and indoor air samples were compared to their respective NYSDOH Decision Matrix (Matrix B for PCE and methylene chloride and Matrix A for TCE, cis-1,2-DCE, and carbon tetrachloride) and resulted in a ‘No Further Action’ Matrix Decision for all five analytes at all five offsite locations (four locations on Offsite Property A, and one location on Offsite Property B). All other cVOCs included in the NYSDOH Decision Matrices, including 1,1,1-trichloroethane, 1,1-dichloroethene, and vinyl chloride, were not detected in any sub-slab soil vapor or indoor air samples collected from Offsite Properties A or B.

A variety of petroleum-related VOCs were detected at low concentrations in one or more sub-slab soil vapor and indoor air samples. Benzene was detected in two sub-slab soil vapor samples and four indoor air samples; toluene was detected in all five sub-slab soil vapor samples and all five indoor air samples; 1,2,4-trimethylbenzene was detected in three sub-slab soil vapor samples; and, 2,2,4-trimethylpentane was detected in one sub-slab soil vapor sample. Benzene was detected at a max. concentration of 1.26  $\mu\text{g}/\text{m}^3$  in 2931W\_SS-4 (Offsite Property A) and at a max. concentration of 0.757  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-3 (Offsite Property A); toluene was detected at a max. concentration of 5.62  $\mu\text{g}/\text{m}^3$  in 2929W\_SS-1 (Offsite Property B) and at a max. concentration of 17.6  $\mu\text{g}/\text{m}^3$  in 2929W\_IA-1 (Offsite Property B); 1,2,4-trimethylbenzene was detected at a max. concentration of 2.78  $\mu\text{g}/\text{m}^3$  in 2929W\_SS-1 (Offsite Property B); and, 2,2,4-trimethylpentane was detected at a concentration of 6.82  $\mu\text{g}/\text{m}^3$  in 2931W\_SS-4 (Offsite Property A).

Elevated concentrations of acetone and ethanol were detected in one or more sub-slab soil vapor samples and indoor air samples. Acetone was detected at a max. concentration of 986  $\mu\text{g}/\text{m}^3$  in 2929W\_SS-1 (Offsite Property B) and at a max. concentration of 34.2  $\mu\text{g}/\text{m}^3$  in 2931W\_IA-2 (Offsite Property A); and, ethanol was detected at a max. concentration of 133  $\mu\text{g}/\text{m}^3$  in 2929W\_SS-1 (Offsite Property B) and at a max. concentration of 1,870  $\mu\text{g}/\text{m}^3$  in 2929W\_IA-1 (Offsite Property B). Acetone and ethanol are common laboratory artifacts.

## Findings and Conclusions

The offsite sub-slab soil vapor and indoor air investigation indicated the following:

- Comparison of detected concentrations of PCE, TCE, cis-1,2-DCE, carbon tetrachloride, and methylene chloride in offsite sub-slab soil vapor samples and co-located indoor air samples to the applicable

2921 Westchester Avenue – Bronx, NY  
RIR Addendum – Offsite Soil Vapor Intrusion Investigation Report

NYSDOH Decision Matrices resulted in a “No Further Action” matrix decision for all analytes at all sampling locations at Offsite Properties A and B.

- VOCs were not detected in exceedance of NYSDOH AGVs in any indoor air samples collected from Offsite Properties A or B.
- A variety of petroleum-related VOCs, including benzene, toluene, 1,2,4-trimethylbenzene, and 2,2,4-trimethylpentane were detected in sub-slab soil vapor and indoor air at low concentrations.
- Acetone and ethanol were detected at elevated concentrations in one or more sub-slab soil vapor and indoor air samples. Acetone and ethanol are common laboratory artifacts.
- Based upon comparison of the detected concentrations of chlorinated solvents in sub-slab soil vapor and indoor air with the NYSDOH Decision Matrices, no further action is required to address soil vapor conditions at Offsite Properties A or B.
- Based on the results of this Offsite SVI and the results of the RI, Tenen believes the Departments have enough information to approve the Remedial Action Work Plan for the Site.

Please contact us if you need any additional information.

Sincerely,  
Tenen Environmental, LLC

- k. Is there new carpet, drapes or other textiles? Y  Where & When? \_\_\_\_\_
- l. Have air fresheners been used recently? Y  When & Type? \_\_\_\_\_
- m. Is there a kitchen exhaust fan? Y  If yes, where vented? \_\_\_\_\_
- n. Is there a bathroom exhaust fan? Y / N If yes, where vented? \_\_\_\_\_
- o. Is there a clothes dryer? Y  If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y  When & Type? \_\_\_\_\_

Are there odors in the building?  
If yes, please describe: Y

**Do any of the building occupants use solvents at work?** Y   
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? \_\_\_\_\_

If yes, are their clothes washed at work? Y / N

**Do any of the building occupants regularly use or work at a dry-cleaning service?** (Circle appropriate response)

- Yes, use dry-cleaning regularly (weekly)      No  
 Yes, use dry-cleaning infrequently (monthly or less)      Unknown  
 Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y  Date of Installation: \_\_\_\_\_  
 Is the system active or passive? Active/Passive

#### 9. WATER AND SEWAGE

**Water Supply:**  Public Water      Drilled Well      Driven Well      Dug Well      Other: \_\_\_\_\_

**Sewage Disposal:**  Public Sewer      Septic Tank      Leach Field      Dry Well      Other: \_\_\_\_\_

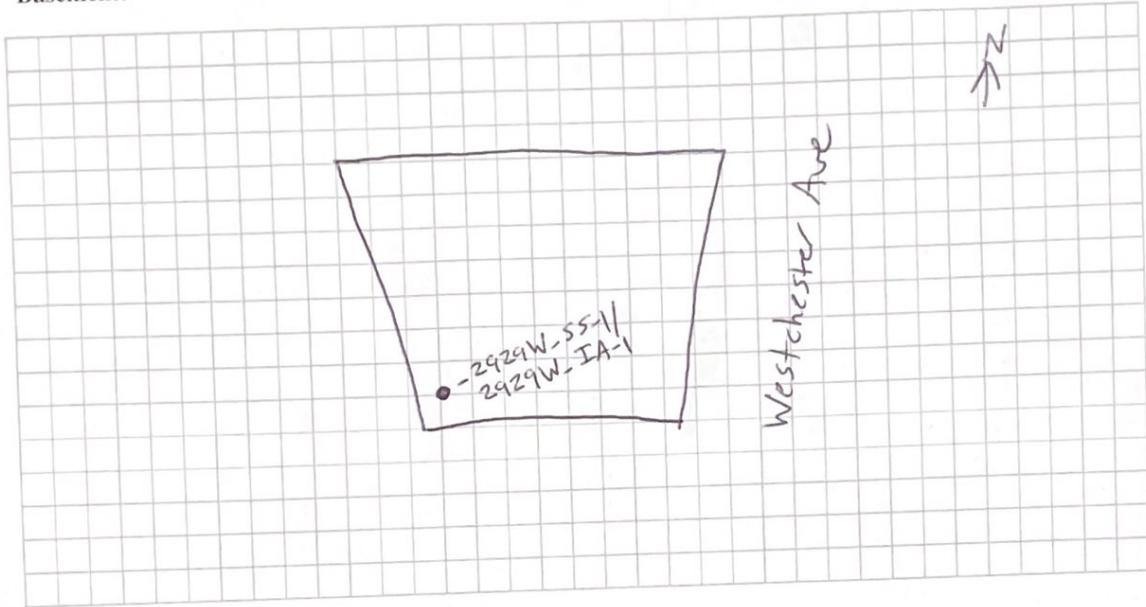

#### 10. RELOCATION INFORMATION (for oil spill residential emergency)

- a. Provide reasons why relocation is recommended: \_\_\_\_\_
- b. Residents choose to: remain in home      relocate to friends/family      relocate to hotel/motel
- c. Responsibility for costs associated with reimbursement explained? Y / N
- d. Relocation package provided and explained to residents? Y / N

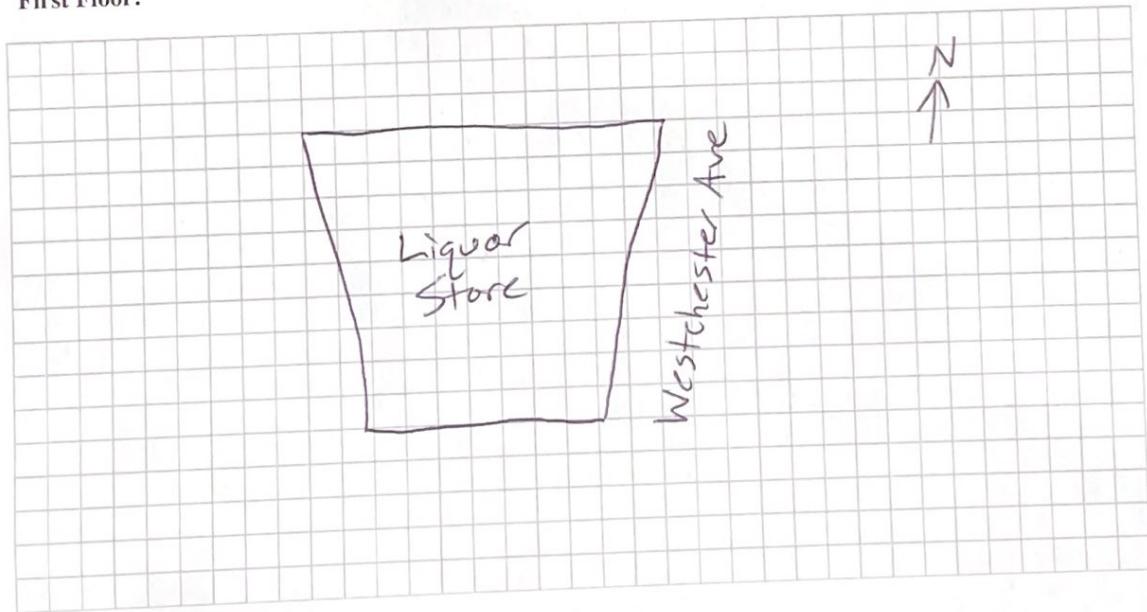

**11. FLOOR PLANS**

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

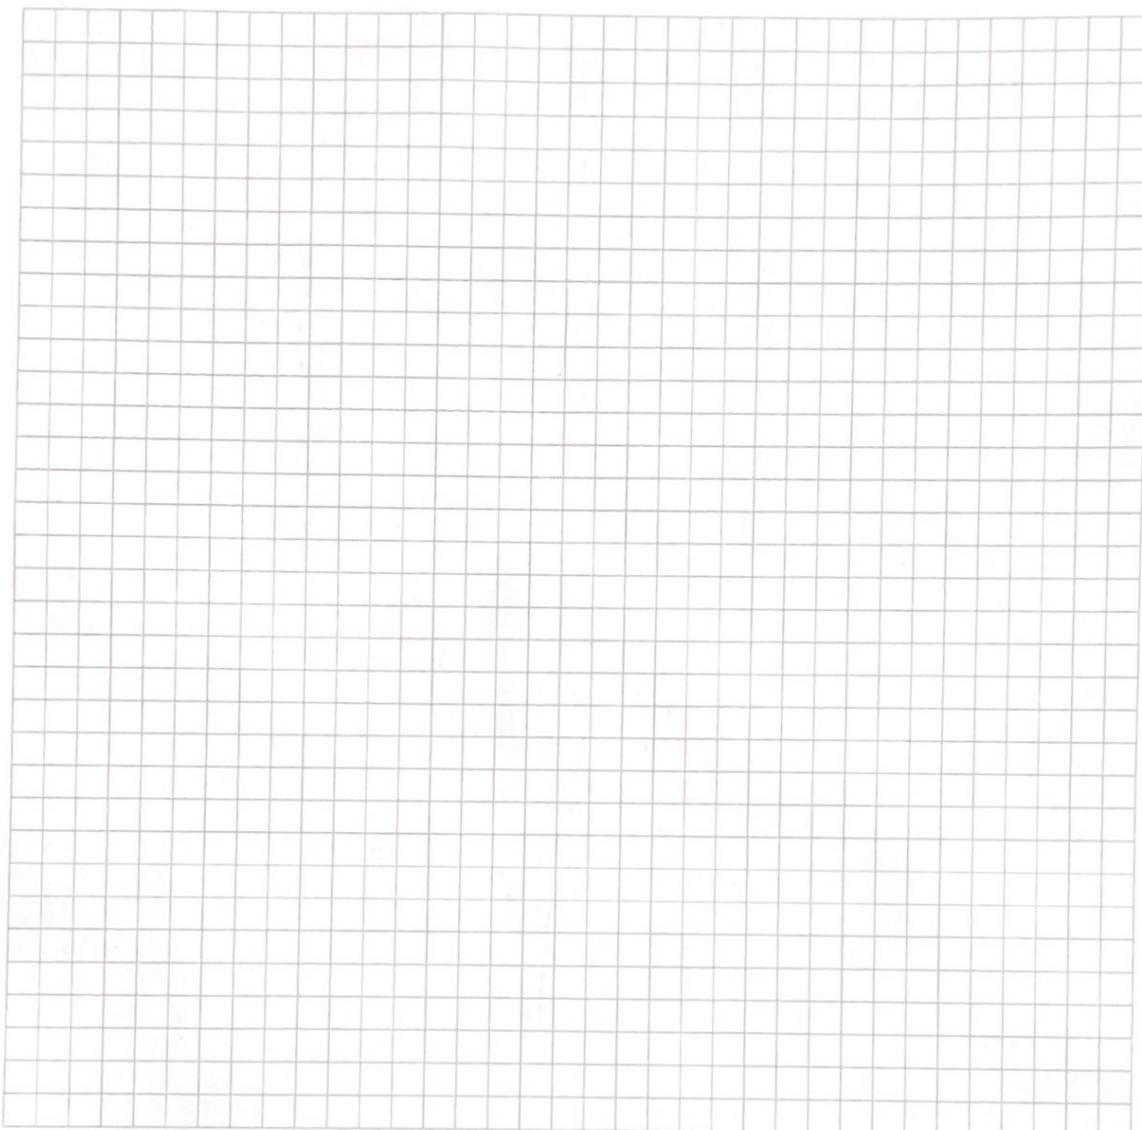

First Floor:

**12. OUTDOOR PLOT**

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

### 13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: MiniRae 3000 PID

List specific products found in the residence that have the potential to affect indoor air quality.

status of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**

\*\* Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

NEW YORK STATE DEPARTMENT OF HEALTH  
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY  
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Ashley Platt Date/Time Prepared 2/7/24  
Preparer's Affiliation Tenen Environmental Phone No. 8646-606-2332

Purpose of Investigation Offsite SVI

**1. OCCUPANT:**

Interviewed: Y N

Last Name: \_\_\_\_\_ First Name: \_\_\_\_\_

Address: \_\_\_\_\_

County: \_\_\_\_\_

Home Phone: \_\_\_\_\_ Office Phone: \_\_\_\_\_

Number of Occupants/persons at this location \_\_\_\_\_ Age of Occupants \_\_\_\_\_

**2. OWNER OR LANDLORD:** (Check if same as occupant \_\_\_\_)

Interviewed: Y N

Last Name: Fridman First Name: Russell

Address: 2931 Westchester Avenue

County: Bronx

Home Phone: 917-439-1304 Office Phone: \_\_\_\_\_

**3. BUILDING CHARACTERISTICS**

Type of Building: (Circle appropriate response)

Residential  
Industrial

School  
Church

Commercial/Multi-use  
Other: \_\_\_\_\_

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? 4 tenant spaces (3 @ grade, 1 on 2<sup>nd</sup> Floor)

If the property is commercial, type?

Business Type(s) Madison security (2<sup>nd</sup> Fl), liquor store (grade), grocery store (grade), pharmacy (grade)

Does it include residences (i.e., multi-use)? Y/N

If yes, how many? \_\_\_\_\_

Other characteristics:

Number of floors 2 and full cellar Building age \_\_\_\_\_

Is the building insulated? Y/N

How air tight? Tight / Average / Not Tight

#### 4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

---

---

---

Airflow near source

---

---

---

Outdoor air infiltration

---

---

---

Infiltration into air ducts

---

---

---

## 5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame  concrete  stone  brick
- b. Basement type:  full  crawlspace  slab  other \_\_\_\_\_
- c. Basement floor:  concrete  dirt  stone  other \_\_\_\_\_
- d. Basement floor:  uncovered  covered *parts of pharmacy cellar have exposed soil*
- e. Concrete floor:  unsealed  sealed  sealed with \_\_\_\_\_
- f. Foundation walls:  poured  block  stone  other \_\_\_\_\_
- g. Foundation walls:  unsealed  sealed  sealed with \_\_\_\_\_
- h. The basement is:  wet  damp  dry  moldy
- i. The basement is:  finished  unfinished  partially finished
- j. Sump present?  Y  N *skb*  
*\*basement^ below staircase to Madison Security is new (Southern portion of basement)*
- k. Water in sump?  Y  N / not applicable

Basement/Lowest level depth below grade: 8-10 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Exposed soil in pharmacy basement (northern portion of lot)

## 6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- |                     |                  |                     |
|---------------------|------------------|---------------------|
| Hot air circulation | Heat pump        | Hot water baseboard |
| Space Heaters       | Stream radiation | Radiant floor       |
| Electric baseboard  | Wood stove       | Outdoor wood boiler |
|                     |                  | Other _____         |

The primary type of fuel used is:

- |             |          |          |
|-------------|----------|----------|
| Natural Gas | Fuel Oil | Kerosene |
| Electric    | Propane  | Solar    |
| Wood        | Coal     |          |

Domestic hot water tank fueled by: \_\_\_\_\_

Boiler/furnace located in:  Basement  Outdoors  Main Floor  Other \_\_\_\_\_Air conditioning:  Central Air  Window units  Open Windows  None

Are there air distribution ducts present?

Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

---

---

---

---

## 7. OCCUPANCY

Level	Is basement/lowest level occupied?	Full-time	Occasionally	Seldom	Almost Never
	<u>General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)</u>				
Basement		Grocery store storage & pharmacy storage			
1 <sup>st</sup> Floor		Liquor store, grocery store, pharmacy			
2 <sup>nd</sup> Floor		Madison Security Group			
3 <sup>rd</sup> Floor					
4 <sup>th</sup> Floor					

## 8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage?  Y /  N
- b. Does the garage have a separate heating unit?  Y /  N /  NA
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car)?  Y /  N /  NA  
Please specify \_\_\_\_\_
- d. Has the building ever had a fire?  Y /  N When? \_\_\_\_\_
- e. Is a kerosene or unvented gas space heater present?  Y /  N Where? \_\_\_\_\_
- f. Is there a workshop or hobby/craft area?  Y /  N Where & Type? \_\_\_\_\_
- g. Is there smoking in the building?  Y /  N How frequently? \_\_\_\_\_
- h. Have cleaning products been used recently?  Y /  N When & Type? \_\_\_\_\_
- i. Have cosmetic products been used recently?  Y /  N When & Type? \_\_\_\_\_

- j. Has painting/staining been done in the last 6 months?  Y /  N Where & When? Southern portion of cellar, in new slab area
- k. Is there new carpet, drapes or other textiles?  Y /  N Where & When? \_\_\_\_\_
- l. Have air fresheners been used recently?  Y /  N When & Type? \_\_\_\_\_
- m. Is there a kitchen exhaust fan?  Y /  N If yes, where vented? \_\_\_\_\_
- n. Is there a bathroom exhaust fan?  Y /  N If yes, where vented? \_\_\_\_\_
- o. Is there a clothes dryer?  Y /  N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application?  Y /  N When & Type? \_\_\_\_\_
- Are there odors in the building?**  Y /  N  
If yes, please describe: \_\_\_\_\_

**Do any of the building occupants use solvents at work?**  Y /  N  
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? \_\_\_\_\_

If yes, are their clothes washed at work?  Y /  N

**Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)**

- Yes, use dry-cleaning regularly (weekly)  
Yes, use dry-cleaning infrequently (monthly or less)  
Yes, work at a dry-cleaning service

No  
 Unknown

**Is there a radon mitigation system for the building/structure?**  Y /  N Date of Installation: \_\_\_\_\_  
Is the system active or passive? Active/Passive

#### 9. WATER AND SEWAGE

**Water Supply:**  Public Water  Drilled Well  Driven Well  Dug Well  Other: \_\_\_\_\_

**Sewage Disposal:**  Public Sewer  Septic Tank  Leach Field  Dry Well  Other: \_\_\_\_\_

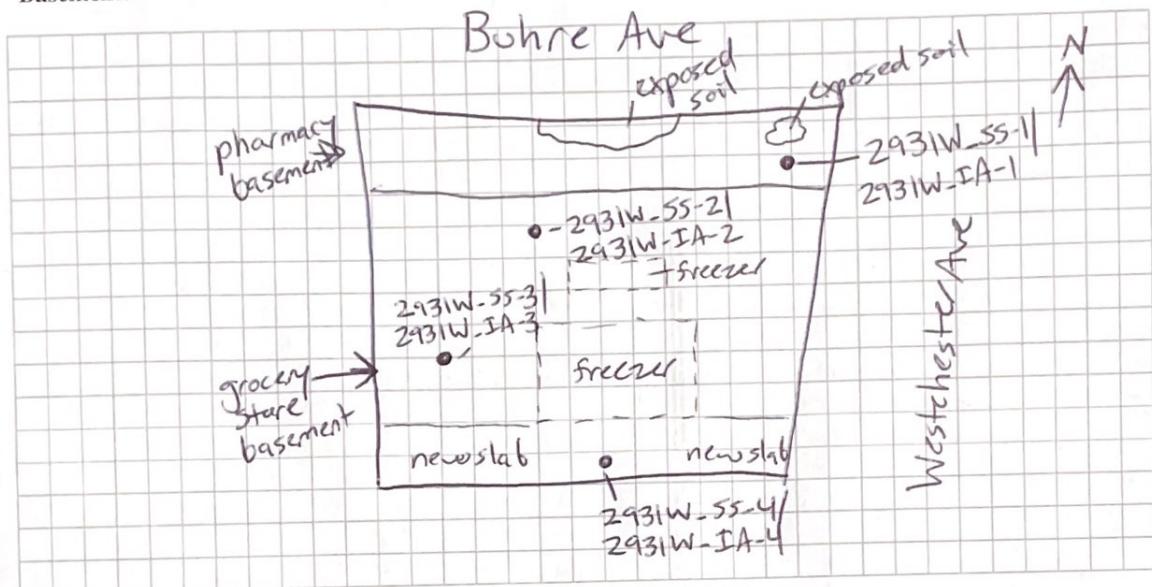

#### 10. RELOCATION INFORMATION (for oil spill residential emergency)

- a. Provide reasons why relocation is recommended: \_\_\_\_\_
- b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel
- c. Responsibility for costs associated with reimbursement explained?  Y /  N
- d. Relocation package provided and explained to residents?  Y /  N

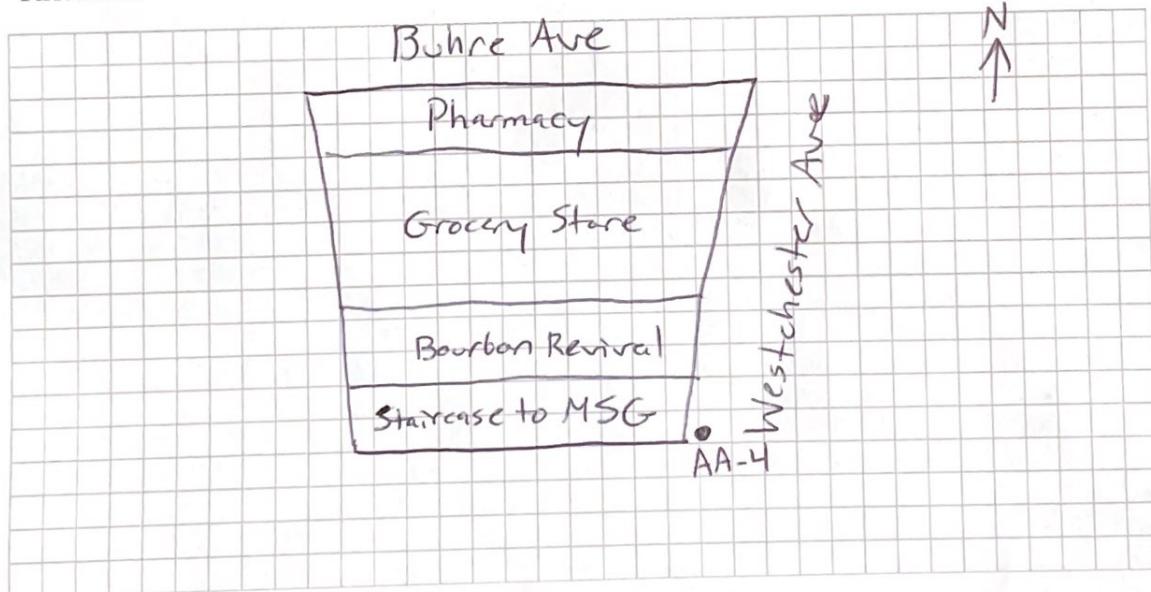

## 11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

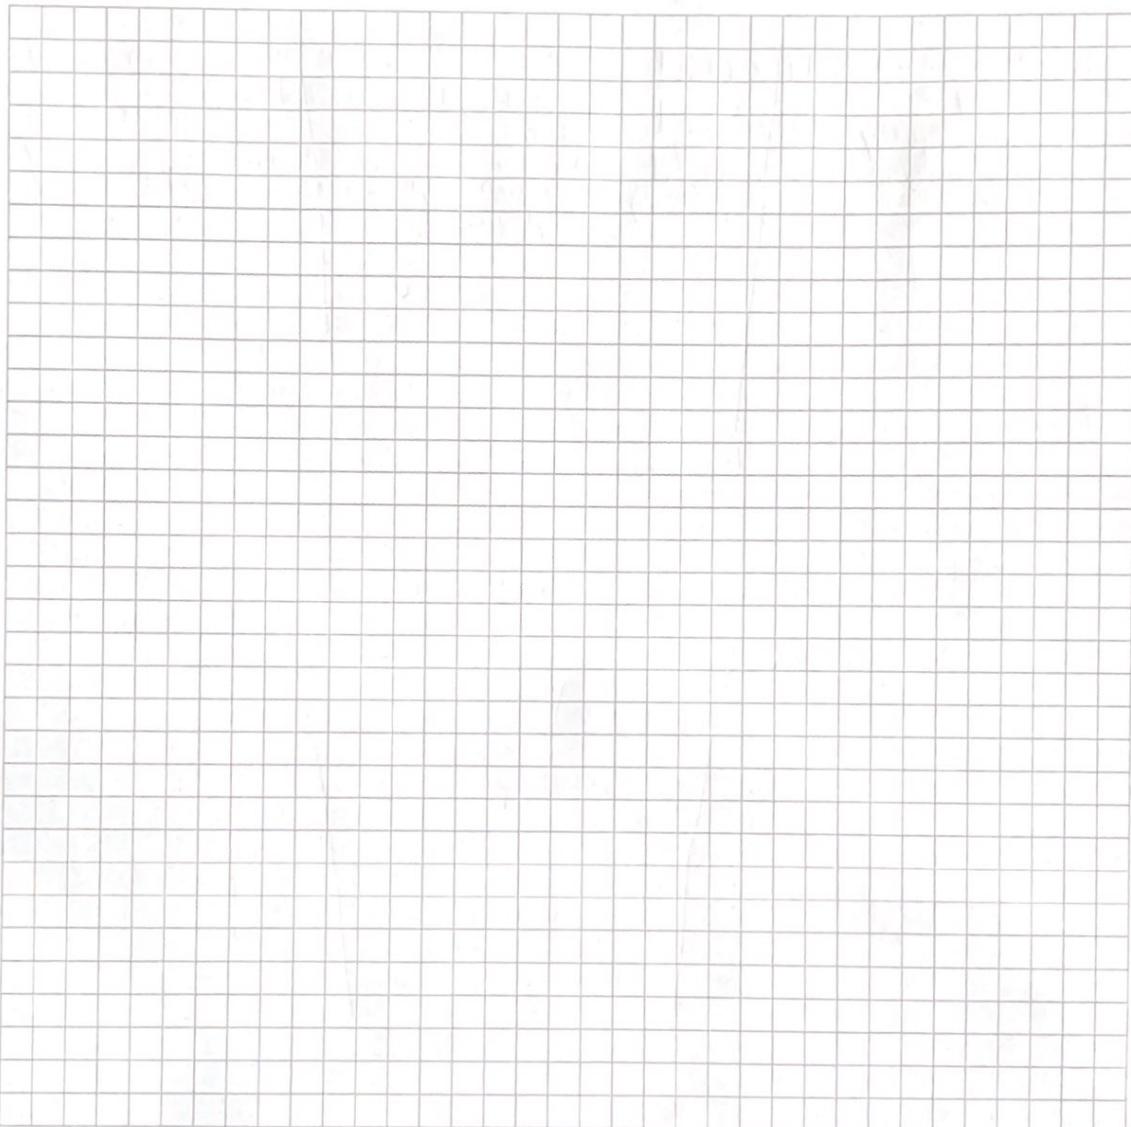

First Floor:

**12. OUTDOOR PLOT**

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

### **13. PRODUCT INVENTORY FORM**

Make & Model of field instrument used: MinRae 3000 PID

**List specific products found in the residence that have the potential to affect indoor air quality.**

Based on the condition of the product containers as Unopened (UO), Used (U), or Deteriorated (D)

\*\* Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

## GLOSSARY

### **Acronyms**

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

**Report Format:** Data Usability Report

**Project Name:** 2931 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406966  
**Report Date:** 02/22/24

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Chlordane:** The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Gasoline Range Organics (GRO):** Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

**Report Format:** Data Usability Report

**Project Name:** 2931 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406966  
**Report Date:** 02/22/24

**Data Qualifiers**

- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Certification Information**

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625.1: alpha-Terpineol

EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**Biological Tissue Matrix:** EPA 3050B

---

**The following analytes are included in our Massachusetts DEP Scope of Accreditation**

**Westborough Facility:**

**Drinking Water**

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO3-F: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Volatile Organics in Air

Canisters were released from the laboratory on February 7, 2024. The canister certification data is provided as an addendum.

L2406976-01: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2406976-02: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

**Report Format:** Data Usability Report

**Project Name:** 2929 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406976  
**Report Date:** 02/22/24

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Chlordane:** The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Gasoline Range Organics (GRO):** Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

**Report Format:** Data Usability Report

**Project Name:** 2929 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406976  
**Report Date:** 02/22/24

**Data Qualifiers**

- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## **Certification Information**

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625.1: alpha-Terpineol

EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

  - 1.12     Overall System Performance

**APPENDICES:**

- A.      Chain of Custody Documents and Sample Receipt Checklists
- B.      Case Narratives
- C.      Data Summary Form Is with Qualifications

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

**Introduction:**

A validation was performed on soil vapor, indoor air and ambient air samples for Volatile Organic analysis collected by Tenen Environmental and submitted to Alpha Analytical for subsequent analysis under chain of custody documentation. This report contains the laboratory and validation results for the field samples itemized below. The samples were collected on February 07, 2024.

The samples were analyzed by Alpha Analytical utilizing EPA Method TO-15 and in accordance with NYSDEC Analytical Services Protocol (2005) and submitted under NYSDEC ASP Category B equivalent deliverable requirements for the associated analytical methodology employed. The analytical testing consisted of the TO-15 Compound List. Ambient Air samples were also analyzed by Selective Ion Monitoring (SIM) techniques for selected chlorinated compounds to achieve NYSDOH Guidance Value reporting levels.

The data was evaluated in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (Publication 9240.1-05), EPA SOP #HW31 (Revision 6-Updated September 2016) and in conjunction with the analytical methodology for which the samples were analyzed, where applicable and relevant.

The data validation report pertains to the following field air samples:

Sample Identification	Laboratory Identification	Sample Matrix (Air Type)	Collection Date
2929W IA-1	L2406976-01	Ambient Air	02/07/2024
2929W SS-1	L2406976-02	Soil Vapor	02/07/2024
AA-4	L2406966-01	Ambient Air	02/07/2024
2931W IA-1	L2406966-02	Indoor Air	02/07/2024
2931W SS-1	L2406966-03	Soil Vapor	02/07/2024
2931W IA-2	L2406966-04	Indoor Air	02/07/2024
2931W SS-2	L2406966-05	Soil Vapor	02/07/2024
2931W IA-3	L2406966-06	Indoor Air	02/07/2024
2931W SS-3	L2406966-07	Soil Vapor	02/07/2024
2931W IA-4	L2406966-08	Indoor Air	02/07/2024
2931W SS-4	L2406966-09	Soil Vapor	02/07/2024

**Data Qualifier Definitions:**

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

**U -** The analyte was analyzed for but was not detected above the reported sample quantitation limit.

**J -** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

**J+ -** The result is an estimated quantity, but the result may be biased high.

**J- -** The result is an estimated quantity, but the result may be biased low.

**NJ -** The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

**UJ -** The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

**R -** The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

**D -** Analyte concentration was obtained from diluted analysis.

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

**Sample Receipt:**

The Chain of Custody documents indicates that the air samples were received on the same day following completion of the sampling event via laboratory courier. Sample login notes and the chain of custody indicate that at the Validated Time of Sample Receipt (VTSR) at the laboratory no discrepancies were noted and therefore the integrity of the summa canister samples is assumed to be good.

Summa Canisters were leak tested prior to collection of each sample. The initial pressure gauge is recorded on the chain of custody and is required to be approximately 30 psi with zero air. Acceptable canister pressure was observed for these samples. All canisters pass the leak check requirements.

The data summary Form I's included in Appendix C includes all usable (qualified) and unusable (rejected) results for the samples identified above and summarize the detailed narrative section of the report. Data validation qualifications have been reported on Form I's for ease of review and verification.

**NOTE:**

L.A.B. Validation Corp. believes it is appropriate to note that the data validation criteria utilized for data evaluation is different than the method requirements utilized by the laboratory. Qualified data does not necessarily mean that the laboratory was non-compliant in the analysis that was performed.

**1.0 Volatile Organics by EPA Compendium Method TO-15**

The following method criteria were reviewed: holding times, surrogate standards, LCS, Blanks, Laboratory Duplicate, Tunes, Calibrations, Internal Standards, Target Component Identification and Quantitation, Reported Quantitation Limits and Overall System Performance. The volatile results are valid and useable as noted on the data summary Forms in Appendix C and within the following text:

**1.1 Holding Time**

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the technical holding time is exceeded, the data may not be considered valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimates, "J." The non-detects (sample quantitation limits) are required to be flagged as estimated, "J," or unusable, "R," if the holding times are grossly exceeded.

Air samples were analyzed within the method and technical required holding times of thirty (30) days from sample collection for analysis. No qualifications were required based upon holding time criteria.

**1.2 Surrogate Standards**

All samples are spiked with surrogate compounds prior to sample analysis to evaluate overall laboratory performance and efficiency of the analytical technique. If the measure of surrogate concentrations is outside contract specifications, qualifications are required to be applied to associated samples and analytes.

Samples were not spiked with surrogate standards. Method TO15 does not mandate the addition of surrogate standards.

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

**1.3 Matrix Spikes (MS)/ Matrix Spike Duplicates (MSD)/Laboratory Duplicate /Field Duplicate Analysis**

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices.

Matrix Spike/Matrix Spike Duplicate analysis was not performed on samples pertaining to these SDGs. Laboratory duplicate was performed on 2931W\_IA-4. RPd for detections was <25%. No qualifiers are required. Precision is acceptable.

Field Duplicates were not required. When performed, acceptable precision for air samples is 25%. The following criteria are utilized for Field/Lab Duplicate analysis:

Criteria	Detected Compounds	Non-Detected Compounds
The RPD is within the limits of 0 and 25%	No qualification	No qualification
The RPD >25%	J in the parent and duplicate samples	Not applicable
The RPD could not be calculated since the compound was only detected in either the parent or duplicate sample. However, the detected concentration was </=2x the reporting limit	No qualification	No qualification
The RPD could not be calculated since the compound was only detected in either the parent or duplicate sample. However, the detected concentration was >2x the reporting limit.	J in the parent and duplicate sample	UJ in the parent of duplicate sample

No qualifications to the data were applied based on MS/MSD/Laboratory Duplicate or Field Duplicate analysis.

**1.4 Laboratory Control Sample**

The LCS data for laboratory control samples (LCS) are generated to provide information on the accuracy of the analytical method and on the laboratory performance.

The following table summarizes the LCS criteria and the data qualification guidelines for all associated field samples.

LCS	NOT QUALIFIED	J	R
% Recovery:			
Detects	70-130%	<70%, >130%	
Non-Detects	>/=130%	50-69%	<50%
Absolute RT of LCS Compounds:			
LCS Compounds in samples RT: (min)	+/-0 .33		>/=0.33

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

Acceptable LCS was analyzed with each analytical batch. Recovery values for all spiked compounds was determined to be >70% - <130%. No qualifiers are required.

**1.5 Blank Contamination**

Quality assurance (QA) blanks, i.e., method, trip and field blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field blanks measure cross-contamination of samples during field operations. Storage blanks measure cross-contamination during sample storage of the field samples and are not required for TO15 analysis. Canister blanks measure cross-contamination from the sampling media.

The following table was utilized to qualify target analyte results due to method blank contamination. The largest value from all the associated blanks is required to be utilized. The largest value from all the associated blanks is required to be utilized:

Blank Type	Blank Result	Sample Result	Action for Samples
Method, Storage, field, Trip, Instrument	Detects	Not Detected	No qualification required
	<CRQL*	<CRQL*	Report CRQL value with a U
		>/= CRQL* and <2x the CRQL**	No qualification required
		>/= CRQL*	</= CRQL*
			>/= CRQL* and </= blank concentration
			>/= CRQL* and > blank concentration
	=CRQL*	</= CRQL*	Report CRQL value with a U
	Gross Contamination**		>CRQL*
		Detects	Report blank value for sample concentration with a U

\*2x the CRQL for methylene chloride, 2-butanone, and acetone.

\*\*4x the CRQL for methylene chloride, 2-butanone, and acetone

\*\*\*Qualifications based on instrument blank results affect only the sample analyzed immediately after the sample that has target compounds that exceed the calibration range or non-target compounds that exceed 100 ug/L.

Below is a summary of the compounds in the sample and the associated qualifications that have been applied:

The table below is utilized to qualify samples with target compound results also present in certification blanks:

Certification Contamination	Sample Result	Action for Sample
>/=detect limit	>5x certification contamination	No qualification required
>/=detect limit	<detect limit	Detection limit "U"
>/=detect limit	>/=detect limit and </= 5x certification contamination level	5x certification contamination "U"
<detect limit	</=detection limit and >/= detection limit	No qualification

Below is a summary of the compounds in the sample and the associated qualifications that have been applied:

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

**A) Method Blank Contamination:**

Canister blanks were determined to be free of any contamination. No target compounds were detected in the method blanks.

*\*Acetone and Methylene Chloride are common laboratory contaminants. The end user should proceed with caution when making decisions based on the reported concentrations for these compounds. The laboratory detected concentrations could not be negated due to lack of presence in the corresponding blanks.*

**B) Field Blank Contamination:**

Field Blank analysis was not required.

**C) Trip Blank Contamination:**

Trip Blank analysis was not required.

**1.6 GC/MS Instrument Performance Check**

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The Tuning standard for volatile organics is Bromofluorobenzene (BFB).

Instrument performance was generated within acceptable limits and frequency (24 hours) for Bromofluorobenzene (BFB) for all analyses.

**1.7 Initial and Continuing Calibrations**

Satisfactory instrument calibration is established to ensure that the instrument can produce acceptable quantitative data. An initial calibration demonstrates that the instrument can give acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

**A) Response Factor GC/MS:**

The response factor measures the instrument's response to specific chemical compounds. The response factor for all compounds must be  $\geq 0.05$  in both initial and continuing calibrations. A value  $<0.05$  indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J." All non-detections for that compound in the corresponding samples will be rejected, "R."

The following compounds can be  $>0.01$  without qualification:

2-Butanone  
Carbon Disulfide  
Chloroethane  
Chloromethane  
1,2-Dibromoethane  
1,2-Dichloropropane  
1,4-Dioxane  
1,2-Dibromo-3-chloropropane  
Methylene Chloride

Response factors for the target analytes reported were found to be within acceptable limits ( $\geq 0.05$ ) [or  $\geq 0.01$  for the 9 compounds above] and remaining analytes, for the initial and continuing calibrations.

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

**B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):**

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentrations. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be <30% and %D must be <30%. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ." If %RSD and %D grossly exceed QC criteria (>90%), non-detect data may be qualified, "R", unusable. Additionally, in cases where the %RSD is >30% and eliminating either the high or the low point of the curve does not restore the %RSD to less than or equal to 30% then positive results are qualified, "J". In cases where removal of either the low or high point restores the linearity, then only low or high-level results will be qualified, "J" in the portion of the curve where non-linearity exists. Acceptable ICV was analyzed.

**Initial Calibrations:** The initial calibrations provided and the %RSD was within acceptable limits (30%) and (40%) for poor responders for all requested target compounds. Initial calibration verification standard (second source) met QC requirements except for Bromoform (34.9%). Non-detects in all samples have been qualified, "UJ."

**Continuing Calibrations:** The continuing calibrations provided and the %D was within acceptable limits (30%) and (40%) for poor responders for all reported compounds.

**1.8 Internal Standards**

Internal Standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-40% to +40%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than +/-20 seconds from the associated continuing calibration standard. If the area count is outside the (-40% to +40%) range of the associated standard, all positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 20 seconds, professional judgment will be used to determine either partial or total rejection of the data for that sample fraction.

**Internal Standard area responses met QC requirements for all analysis pertaining to this data set as compared to the continuing calibration.**

**1.9 Target Compound List Identification**

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within =/- 0.06RRT units of the standard compound and have an ion spectrum which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound.

**GC/MS spectra met the qualitative criteria for identification. Retention times were within required specifications.**

**1.10 Tentatively Identified Compounds (TICs)**

TICs were not required for this project. When submitted, the identification must be considered tentative (both quantitative and qualitative) due to the lack of required compound specific response factors. Consequently, all concentrations should be considered estimated, "J" and because of the qualitative uncertainty should be qualified, "N" where an identification has been made.

**L.A.B. Validation Corp. 14 West Point Drive, East Northport, N.Y. 11731**

TICs were not required with this data set.

**1.11 Compound Quantification and Reported Detection Limits**

GC/MS quantitative analysis are acceptable. Correct internal standards and response factors and air volumes were used to calculate final concentrations.

Sample results have been presented in ug/m<sup>3</sup> as well as ppbv on the laboratory reporting forms. Samples were initially analyzed undiluted at 250mls.

2929W\_IA-1 yielded Ethanol over the instruments' linear calibration range. Results, qualified, "E" by the laboratory have been rejected, "R." Diluted reanalysis (1:10) was performed as required. Ethanol concentration should be obtained from this diluted reanalysis and has been qualified, "D."

2929W\_SS-1 yielded 2-Butanone and Tetrahydrofuran over the instruments' linear calibration range. Results, qualified, "E" by the laboratory have been rejected, "R." Diluted reanalysis (1:5) was performed as required. 2-Butanone and Tetrahydrofuran concentrations should be obtained from this diluted reanalysis and have been qualified, "D."

Indoor air and ambient air samples were also analyzed by SIM (Selective Ion Monitoring) for selected chlorinated compounds to achieve required NYSDOH action levels.

**1.12 Overall System Performance**

GC/MS analytical methodology was acceptable for this analysis. The data reported agrees with the raw data provided in the final reports. The laboratory provided complete data packages and reported all data using acceptable protocols and laboratory qualifiers as defined in the report packages.

Case Narratives**

Phone (516) 523-7891 email LABValidation@aol.com

**Project Name:** 2929 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406976  
**Report Date:** 02/22/24

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Case Narrative (continued)**

Volatile Organics in Air

Canisters were released from the laboratory on February 7, 2024. The canister certification data is provided as an addendum.

L2406976-01: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2406976-02: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEX data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Project Name:** 2931 WESTCHESTER AVE  
**Project Number:** Not Specified

**Lab Number:** L2406966  
**Report Date:** 02/22/24

**Case Narrative (continued)**

Volatile Organics in Air

Canisters were released from the laboratory on February 7, 2024. The canister certification data is provided as an addendum.

Sample Receipt

L2406966-02 through -09: the flow controller and canister IDs are transposed on the COC.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
