## **EXECUTIVE SUMMARY**

Whitlock Point LLC and Whitlock Point Services LLC (the “Volunteers”) plan to enter into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) to investigate and remediate the property located at 1125 Whitlock Avenue (portion of Block 2756, Lot 85), Bronx, New York (herein referred to as the “Site”). The Site is approximately 0.788 acres in size and is located in an area characterized by a mix of residential, commercial, industrial, and manufacturing developments. The Site is bounded by an industrial building to the north, Aldus Street to the south, Whitlock Avenue to the east, and Longfellow Avenue to the west.

This Remedial Investigation Report (RIR) summarizes the results of prior investigations and the Remedial Investigation (RI) performed on the Site. The RI consisted of collecting nineteen (19) soil samples from nineteen (19) soil borings, and twelve (12) soil vapor samples from twelve (12) temporary vapor points, and two (2) groundwater samples from two (2) monitoring wells. Samples were collected to characterize subsurface soils for potential impacts to soil, soil vapor, and groundwater at the Site.

Samples were analyzed for a combination of full target compound list (TCL) and target analyte list (TAL) analytes – which include volatile organic compounds (USEPA Method 8260), metals (USEPA Methods 6010/7471), semi-volatile organic compounds (USEPA Method 8270), cyanide (USEPA Method 9010C), and PCBs/pesticides (USEPA Methods 8081/8082). Sampling for perfluoralkyl substances (PFAS) has not been completed to date. This sampling will be implemented once the Brownfield Cleanup Program (BCP) application has been submitted, and the results will be sent to the NYSDEC in a Supplemental RIR.

Results of the RIR are summarized below:

- The overall depth of impacted soils exceeding the unrestricted use soil cleanup objectives (USCO) ranged from 2 to 14 feet below ground surface (ft-bgs). Metals exceeding the USCOs were identified on the Site at depths up to 14 ft-bgs. Semi volatile organic compounds (SVOCs) and metals exceeding the USCOs, protection of groundwater soil cleanup objectives (PGSCO), and restricted residential soil cleanup objectives (RRSCO) were identified in soils at depths ranging from 2 to 8 ft-bgs.
- The groundwater depth is approximately 9 to 18 ft-bgs across Site and flows to the north. The Site’s groundwater has been impacted with the chlorinated volatile organic compound

(CVOC) tetrachloroethene (PCE) and metals above NYSDEC Division of Water Technical and Operational Guidance Series 1.1.1 (TOGS) Class GA Ambient Water Quality Standards (AQWS) near the northern portion of the Site. The CVOC chloroform was detected above the TOGS AQWS near the southern portion of the Site.

- The CVOCs, PCE, trichloroethene (TCE), and methylene chloride were detected in soil vapor points on the western portion of the Site at concentrations exceeding their New York State Department of Health (NYSDOH) Decision Matrices Sub-slab soil vapor Lower Threshold Values.
- The petroleum hydrocarbon VOCs (PHCs) 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3 butadiene, benzene, ethylbenzene, xylenes, heptane, hexane, and toluene were detected in soil vapor Sitewide.

## 1.0 INTRODUCTION

Whitlock Point LLC and Whitlock Point Services LLC, the Volunteers for the property known as the Sonero Metro City Auto Site located at 1125 Whitlock Avenue, Bronx, New York (portion of Block 2756, Lot 85) ("Site") plan to enter into a BCA with the NYSDEC. The Site was recommended by NYC OER and NYSDEC to be removed from the NYC Voluntary Cleanup Program into the State BCP. A Site Location Map (Topographic Map) is presented as **Figure 1** in **Appendix A**. This document consists of a RIR. This RIR is a summary of the investigative work that has previously been performed at the Site by SESI and a summary of prior investigative work that was conducted by others.

The RI was completed in accordance with the NYSDEC Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10), to provide a systematic assessment of environmental conditions on the Site. The RI defines the nature and extent of contamination on-Site, identifying contaminant source areas, and producing data of sufficient quantity and quality to complete an on-site exposure assessment and a qualitative off-site exposure assessment for purposes of designing the remedial action for the Site.

## 2.0 BACKGROUND

### 2.1 Site Description

The Site is an approximate 0.788 acre vacant parcel located at 1125 Whitlock Avenue (portion of Block 2756, Lot 85), Bronx, New York. Historically, the Site was improved with a filling station, auto storage, auto sales, and auto repair facilities. Currently, the Site is an unpaved vacant parcel, and no structures are present.

The Site is located in an area characterized by a mix of residential, commercial, industrial, and manufacturing developments and is bounded by a vacant former industrial building and 165<sup>th</sup> Street to the north, Aldus Street to the south, Whitlock Avenue to the east, and residential properties and Longfellow Avenue to the west. A map depicting the boundaries of the property is provided as **Figure 2**.

### 2.2 Site History

Historically, the Site was improved with “auto sales” or “garages” and a gas filling station located at the southernmost extent of the Site from the 1950s to 1977. The Site was identified as Sonero Auto Repair from 1999 to 2012, and was also operated as Metro City Auto Repair. Four 1,000-gallon gasoline USTs were closed in place at the Site on December 1, 1999.

### 2.3 Previous Environmental Investigations

The following environmental reports provided in **Appendix A** are summarized below:

- Phase I Environmental Site Assessment, 1156 East 165<sup>th</sup> Street, 1125 Whitlock Avenue, Bronx, Bronx County, New York, Block 2756 Lots 85 and 90, Prepared by PVE Sheffler, LLC, dated January 26, 2016;
- Subsurface Investigation (Phase II ESA); 1156 East 165<sup>th</sup> Street (Block 2756 Lot 90), 1125 Whitlock Avenue (Block 2756 Lot 85), Bronx, New York. PVE Sheffler File No. #560999, dated March 8, 2016;
- Phase I Environmental Site Assessment, 1156 East 165<sup>th</sup> Street, 1125 Whitlock Avenue, Bronx County, New York, Block 2756 Lots 85 and 90, PVE Sheffler File No. #560999, dated May 11, 2017;
- Remedial Investigation Report, 1125 Whitlock Avenue & 1156 East 165<sup>th</sup> Street, NYC OER Project Number: 18TMP0057X, 18EHAN025X, Prepared by PVE Sheffler, LLC, dated November 2017;

- Report on Subsurface Soil and Foundation Investigation, Proposed 14 Story Building, 1125 Whitlock Ave, Bronx, NY (CSA Job # 17-147), Prepared by Carlin, Simpson & Associates, dated December 20, 2017;
- Remedial Action Work Plan (RAWP), Prepared for Park Management by PVE, LLC, dated December 2017;
- Phase I ESA, Prepared for the Stagg Group by PVE, LLC, dated October 2019.

### **2.3.1 Phase I Environmental Site Assessment by PVE (January 2016)**

PVE Sheffler, LLC (PVE) performed a Phase I ESA of the Site and the adjacent parcel currently in the BCP as the North America - Pulse Plastics Site No. C203144 in January 2016. The Phase I ESA identified the following Area of Concern (AOCs):

- Historically, this Site was improved with “auto sales” or “garages” and a gas filling station located at the southernmost extent of the Site from the 1950s to 1977.
- Historically, the Site was identified as Sonero Auto Repair. from 1999 to 2012 and was also operated as Metro City Auto Repair. Sites with such uses have the potential to generate wastes, which may contaminate local soil and/or groundwater if not disposed of properly. other properties in the immediate vicinity of the project site also have the potential to generate similar wastes. A potential vapor encroachment condition was also found to exist based on the history of the project site and surrounding properties in the immediate vicinity.
- Whitlock Parking and Storage, at 1125 Whitlock Avenue is listed as PBS #2-603713. Four 1,000-gallon USTs were closed in place on December 1, 1999. The date of installation was not reported.

### **2.3.2 Phase II Environmental Site Assessment by PVE (March 2016)**

PVE performed an investigation of the Site in March 2016. Eight (8) soil borings were completed on this Site, and the soil consisted of sand-silt mixtures and historic fill. Soil sample analysis from the borings indicated SVOCs at depths of 6 to 8 ft-bgs exceeding RRSCOs in one boring, and metals at depths of 2 to 14 ft-bgs exceeding USCOs in five borings. Three (3) soil vapor samples were collected on this Site. One sample resulted in the CVOCs including PCE at concentration of 1,200 ug/m<sup>3</sup> exceeding the Matrix B Lower Threshold Value of 100 ug/m<sup>3</sup>, and TCE at a concentration of 390 ug/m<sup>3</sup> exceeding Matrix A Lower Threshold Value of 6 ug/m<sup>3</sup>.

### **2.3.3 Phase I Environmental Site Assessment by PVE (May 2017)**

PVE, LLC (PVE) performed a Phase I ESA of the Site in May 2017. The Phase I ESA identified the following AOCs:

1125 Whitlock Avenue was identified as Sonero Auto Repair from 1999 to 2012. Recent imagery indicates the property was also operated as Metro City Auto Repair. Other area drycleaners and automotive repair facilities are present in the vicinity of the subject property. Facilities such as these generate wastes which if handled improperly have the potential to contaminate local soil and/or groundwater. Other properties are listed in the immediate vicinity which also have the potential to generate similar wastes. Considering the past operating history of the subject property and immediately surrounding properties, a potential vapor encroachment condition exists.

### **2.3.4 Remedial Investigation Report by PVE (November 2017)**

PVE prepared a Remedial Investigation Report (RIR) of the Site and the north-adjointing North America – Pulse Plastics BCP Site (1156 East 165<sup>th</sup> Street) for the New York City Office of Environmental Remediation (NYCOER) in November 2017. The RIR summarized supplemental soil vapor sampling and groundwater sampling conducted in August and September 2017. Two (2) monitoring wells were installed and sampled, and six (6) temporary soil vapor points were installed and sampled. Results of the groundwater sampling identified the chlorinated CVOCs PCE at a concentration of 11 ug/L, exceeding the TOGS AWQS of 5 ug/L, and chloroform at a concentration of 9.8 ug/L exceeding the TOGS AWQS of 7 ug/L. Results of the soil vapor sampling identified PCE in four (4) vapor points at concentrations ranging 230 ug/m<sup>3</sup> to 590 ug/m<sup>3</sup> exceeding the NYSDOH Matrix B Lower Threshold Value of 100 ug/m<sup>3</sup>. Methylene chloride was detected in one (1) soil vapor sample at a concentration of 200 ug/m<sup>3</sup> exceeding its Matrix A Lower Threshold Value of 100 ug/m<sup>3</sup>. Finally, TCE was detected in one soil vapor point at a concentration of 39 ug/m<sup>3</sup> exceeding its Matrix A Lower Threshold Value of 6 ug/m<sup>3</sup>.

### **2.3.5 Report on Subsurface Soil and Foundation Investigation by Carlin, Simpson & Associates (December 2017)**

Carlin, Simpson & Associates (CSA) conducted a soils and foundation investigation in December 2017 (“geotechnical study”) to determine the nature and engineering properties of the subsurface soil and groundwater conditions to recommend foundation scheme and determine the

allowable bearing capacity of the Site soils. Specifically, CSA directed the advancement of seven (7) soil borings utilizing hollow stem auger drilling equipment to depths ranging from 23 to 43 ft-bgs. The surficial soils were characterized as fill material at depths ranging from 6 to 13 ft-bgs. The fill is underlain by dense brown coarse to fine sands, silt, and gravel to depths of 20 to 29 ft-bgs. The coarse sands are underlain by weathered schist at depths ranging from 20 to 33 ft-bgs. Weathered bedrock was encountered at depths ranging from 22 to 33 ft-bgs. Groundwater was encountered at depths ranging from 9 to 11 ft-bgs.

### **2.3.6 Remedial Action Work Plan (RAWP) prepared by PVE for Park Management (December 2017)**

PVE prepared a Remedial Action Work Plan (RAWP) for Park Management, Inc. in December 2017. PVE evaluated two remedial alternatives for the Site. The remedial alternatives were evaluated to determine which would be a better alternative to prevent direct contact and exposure to contaminants in contaminated soil, groundwater, and soil vapor. The preferred remedial action consisted of the following:

- Establishment of Track 4 Site Specific Soil Cleanup Objectives;
- A Waste Characterization Study;
- Excavation and removal of soil/fill to depths of approximately 12 feet across most of the site;
- Transportation and off-site disposal of soil/fill material;
- Removal of all USTs encountered during soil excavation;
- Collection and analysis of supplemental soil vapor samples;
- Demarcation of residual soil/fill in landscaped areas;
- Installation of a vapor barrier system consisting of a vapor barrier beneath the slab of the proposed structure and outside of sub-grade foundation sidewalls to mitigate soil vapor migration into the building;
- Installation and operation of an active SSDS beneath the unexcavated portion in the structure and potentially the cellar parking area ramp; and
- Construction and operation of a cellar parking garage with high volume air exchange in conformance with NYC Building Code.

PVE noted that Track 4 Site-Specific SCOs of 250 ppm for total SVOCs, 1,000 ppm for lead, 2.5 ppm for mercury, and 650 ppm for barium, would be utilized at the Site. The RAWP was accepted by NYC Office of Environmental Remediation on December 5, 2017.

### **2.3.7 Phase I ESA prepared by PVE for the Stagg Group (October 2019)**

PVE prepared a Phase I ESA for the Stagg Group in October of 2019. At the time of the investigation Lot 85 was void of structures. The Lot was surrounded by a green construction fence.

Construction fence and scaffolding were also present on the Site. Debris and asphalt from the demolition of the one-story storage structures was also present on the Site.

The only new information in this Phase I compared to the May 2017 Phase I ESA, was that the Site was listed as a OER Voluntary Cleanup Program Site and was also listed on the City's E-Designation Site List.

## **3.0 SITE SETTING**

### **3.1 TOPOGRAPHY**

According to the United States Geological Survey (USGS) (Central Park, New York), 2013 topographic map (**Figure 1**), the Site's average topographic elevation is approximately 38-feet above mean sea level (msl). The topographic map indicates that the topography at the Site slopes downward in an easterly direction.

### **3.2 SURFACE WATER AND DRAINAGE**

There are no surface water bodies or streams on or directly adjacent to the Site. SESI did not observe any areas suspected to be wetlands on the Site. Storm water drainage patterns are generally consistent with the surrounding topography and primarily flow to the east toward the Bronx River.

### **3.3 GEOLOGY**

According to subsurface investigations conducted by PVE, CSA, and SESI the subsurface conditions consist of brown to black fine to medium sand, mixed with traces of gravel, bricks and crushed concrete (fill) to depths of 2 to 13 ft-bgs. Results of CSA's geotechnical study has identified the fill is underlain by dense brown coarse to fine sands, silt, and gravel to depths of 20 to 29 ft-bgs. The coarse sands are underlain by weathered schist at depths ranging from 20 to 33 ft-bgs. Weathered bedrock was encountered at depths ranging from 22 to 33 ft-bgs.

### **3.4 HYDROGEOLOGY**

Groundwater was encountered at depths ranging from 9 to 18.6 ft-bgs in September 2017 and December 2017 in soil borings performed by PVE and CSA. The groundwater was determined to flow in a northerly direction across the Site. Regionally groundwater is expected to flow to the east towards the Bronx River.

## 4.0 REMEDIAL INVESTIGATION ACTIVITIES

The RI was conducted in accordance with the NYSDEC DER-10. The objective of the RI was to complete the investigation of soil, soil vapor, and groundwater on the Site and to delineate the nature and extent of the contamination on Site. Sampling for perfluoralkyl substances (PFAS) has not been completed to date. However, this sampling will be implemented for both soil and groundwater once the Brownfield Cleanup Program (BCP) application has been submitted, and the results will be sent to the NYSDEC in a Supplemental RIR.

### 4.1 PHASE II AND RI SAMPLING SUMMARY

Field activities were completed by PVE between February 2016 and September 2017, and by SESI in October 2019.

- PVE installed and sampled seven (7) soil borings, (2) monitoring wells and nine (9) temporary soil vapor sampling points.
- SESI installed and sampled Twelve (12) soil borings, and three (3) soil vapor points were installed and sampled for the AOCs described in Section 2.0.

Additional information regarding the sampling events is included below. **Table 1** includes a summary of the samples collected and their analyses, **Figures 3, 4, and 5** present the sample locations for soil, groundwater, and soil vapor respectively.

The soil and groundwater samples that were collected were analyzed for TCL/TAL +30 including metals, SVOCs, VOCs, cyanide, and PCBs/pesticides. The soil vapor samples were analyzed for VOCs in accordance with EPA Method TO-15.

### 4.2 INVESTIGATION METHODOLOGY

The field work performed by SESI was completed under the on-Site observation of a SESI field engineer and the environmental professional engineer (PE). The field work involved advancing borings, and installing permanent monitoring wells and temporary soil vapor points. Disposable field equipment was utilized to collect soil and groundwater samples. SESI observed the work completed by the following subcontractors:

- Enviro Drilling and Contracting, Inc.(October 2019): Advanced twelve (12) soil borings and installed three (3) temporary soil vapor points utilizing direct push drilling techniques for laboratory analysis; Conducted a geophysical survey to locate underground utilities and anomalies consistent with USTs;

- Alpha Analytical, Inc., Massachusetts Laboratory (October 2019): Analyzed soil and soil vapor samples as per requested analytical methods.
- Eastern Environmental Solutions, Inc. (August and September 2017): Advanced six (6) soil vapor borings and installed two (2) monitoring wells.
- York Analytical Laboratories, inc. (September 2017): Analyzed soil and groundwater samples as per requested analytical methods.
- Eastern Environmental (February 2016): Advanced seven (7) soil borings, and installed three (3) temporary soil vapor points.
- Paradigm Environmental Services, inc., (February 2016): Analyzed soil samples as per requested analytical methods.
- York Analytical Laboratories, inc., (February 2016): Analyzed soil vapor samples as per requested analytical methods.

#### 4.4 SOIL BORINGS AND SAMPLING

Prior to conducting any subsurface drilling SESI's drilling contractor (Enviro Drilling) contacted New York's utility mark-out system. A total of nineteen (19) soil samples were collected from nineteen (19) soil borings. Seven (7) of the soil samples were collected by PVE in September 2017 (SB-01, SB-02, SB-03, SB-04, SB-06, SB-07, SB-08), and twelve (12) of the soil samples were collected by SESI in October 2019 (SESI-1 through SESI-12).

The borings were advanced utilizing direct-push drilling techniques. **Table 1** in **Appendix C** presents the soil sampling summary. Soil boring locations are presented in **Figure 3**. Borings were advanced to depths ranging from 3.5 to 18 ft-bgs. Soil samples collected utilizing a macro-core and split-spoon samplers. Samples for laboratory chemical analyses were collected based on field screening, which includes visual and olfactory observations and screening with photo-ionization detector (PID). SESI's boring logs are provided in **Appendix C**. PVE's boring logs are provided in **Appendix A**.

#### 4.4 MONITORING WELL INSTALLATIONS

Two (2) permanent groundwater monitoring wells, MW-3 and MW-4, were installed by PVE to assess groundwater quality using hollow stem auger drilling equipment. **Table 1** presents the groundwater sampling summary. Groundwater sample locations are presented on **Figure 4**. Groundwater samples were analyzed for TCL/TAL +30. The depth of well MW-3 is 25 ft-bgs,

and the depth of well MW-4 is 18 ft-bgs. The depth of the water table was determined to range from 14.45 ft-bgs (MW-4) to 18.59 ft-bgs (MW-3) in September 2017. The wells are constructed utilizing 2-inch PVC pipe with a 10-foot, 20 (0.020 inches) slot screen. The PVC screen was surrounded by #2 filter sand. The filter sand extends at least about 2 foot above the screen. A layer of bentonite (approximately 2 foot thick) was then placed on top of the filter sand and the remaining annular space around the PVC riser was grouted with cement/bentonite mix. The wells were subsequently completed with protective steel manholes as flush mount. PVE's well construction logs are provided in **Appendix A**.

#### **4.5 GROUNDWATER SAMPLING**

On September 26, 2017, PVE reported that they purged and sampled monitoring wells MW-3 and MW-4 in accordance with USEPA low flow sampling procedures. Approximately three (3) well volumes were purged, and the purge water was piped to a "flow cell," where water quality parameters including pH, dissolved oxygen, turbidity, specific conductance and oxidation/reduction potential (ORP) were measured. Groundwater samples were collected once the water quality parameters stabilized for three consecutive readings, after which a groundwater sample was collected for TCL/TAL analysis. PVE's groundwater sampling logs are provided in **Appendix A**.

#### **4.6 SOIL GAS INVESTIGATION**

##### **4.6.1 Soil Vapor Sampling**

A total of twelve (12) soil vapor samples were collected from twelve (12) temporary vapor points. PVE collected three (3) soil vapor samples in February 2016 (SV-1, SV-4, and SV-5) and six (6) soil vapor samples in August 2017 (SV-9 through SV-13). SESI collected three (3) in October 2019 (SV-14, SV-15, SV-16). The soil vapor points were collected at a depth of 5 ft-bgs. Soil gas samples were collected in accordance with the Guidance for Evaluating Soil Vapor Intrusion in the State of New York, NYSDOH, dated October 2006.

##### **4.6.2 Sampling Procedure**

Semi-permanent soil vapor probes were installed with an adequate surface seal to prevent outdoor air infiltration at each sampling location. SESI's soil gas implants were installed using a direct push Geoprobe®, while PVE has reported that soil vapor implants were installed using hand tools, to attain the depths as noted in **Table 1**. The soil vapor sample locations are presented in **Figure 5**. Porous, inert backfill packer sand was used to create a sampling column of 2 feet in

length. The implants were fitted with inert Teflon® tubing to the surface. Soil vapor probes were sealed above the sampling zone with a bentonite slurry for a minimum distance of 3 feet. The remainder of the borehole was backfilled with clean material.

Prior to sampling, the soil vapor points were purged three times the volume of the sample probe and tube. Flow rates for both purging and collecting were maintained below 0.2 liters per minute to minimize outdoor air infiltration during sampling. Soil vapor samples were collected in certified Summa® canisters provided by the laboratory. The ground surface was unpaved at the time of sampling which would not allow for sealing a helium trap over the vapor points, and therefore the helium tracer test was not conducted. All samples collected by SESI were sent to Alpha Analytical (an ELAP-accredited laboratory) for EPA TO-15 analysis.

## 5.0 REMEDIAL INVESTIGATION RESULTS

For purposes of evaluating the remedial alternatives associated with the proposed Site redevelopment, the analytical results of the soil samples were compared to the NYSDEC soil cleanup objectives (SCOs) as presented in **Table 2**. The constituent concentrations in groundwater were compared to the applicable TOGS AWQS as presented in **Appendix A**. The soil vapor data is presented in **Table 3**. Sampling locations and concentrations maps for soil, groundwater, and soil vapor are identified in **Figures 3, 4, and 5**. The laboratory data packages for soil, soil vapor and groundwater results are included as **Appendix D**.

### 5.1 SOIL INVESTIGATION RESULTS

The VOC acetone was detected in one (1) soil sample (SB-02) at concentrations of 0.396 mg/kg, exceeding the USCO 0.05 mg/kg. However, acetone was not detected in groundwater and this could be a result of laboratory interference. No PCBs or pesticides were detected in the soil samples collected at concentrations exceeding the USCOs.

As shown in the **Table 5.1** below and **Figure 3**, several SVOCs were identified at concentrations exceeding their RRSCOs and/or PGSCOs in samples collected from SB-03 and SESI-3 including benzo[a]anthracene, Benzo[b]fluoranthene, and indeno(1,2,3-cd)pyrene at depths ranging from 4 to 8 ft-bgs. Chrysene was detected in boring SB-03 exceeding its PGSCO at a depth of 6 to 8 ft-bgs.

As shown on **Table 5.1** below and **Figure 3**, several metals including barium, copper, lead, manganese, mercury, nickel, silver, and zinc were identified site-wide at concentrations exceeding the USCOs in borings SB-01, SB-02, SB-03, SB-06, SB-07, SB-08, SESI-1, SESI-3, SESI-6, SESI-7, SESI-8, SESI-9, SESI-10, and SESI-12 at depths ranging from 3 to 14 ft-bgs. Barium was detected in boring SESI-1 at a concentration of 1,040 mg/kg, exceeding its RRSCO of 400 mg/kg and PGSCO of 820 mg/kg at a depth of 2 – 2.5 ft-bgs. Lead was detected in borings SESI-3 (471 mg/kg) and SESI-7 (499 mg/kg) at concentrations exceeding its RRSCO of 400 mg/kg and PGSCO of 450 mg/kg at depths between 4 and 5.5 ft-bgs. Mercury was also detected in boring SESI-7 at 6.54 mg/kg exceeding both the RRSCO and PGSCO. Manganese was detected in boring SESI-6 at 2,830 mg/kg, exceeding both the RRSCO and PGSCO.

Table 5.1: Summary of Exceedances in Soil

Notes:

1. Mg/Kg – milligrams per kilogram
2. Bold cell = compound detected
3. Q – Data Qualifier
4. J = Estimated Concentration
5. U = Undetected
6. Yellow shading = Compound Exceeds the USCO
7. Orange shading = Compound Exceeds the RSCO
8. Red shading = Compound Exceeds the RRSCO

The following conclusions can be made based on the above soil results:

- The overall depth of impacted soils exceeding the USCOs ranged from 2 to 14 ft-bgs.
- Metals exceeding the USCOs were identified on the Site at depths up to 14 ft-bgs.
- SVOC and metals exceeding both USCO, PGSCOs, and RRSCOs were identified in soils at depths ranging from 2 to 8 ft-bgs.

## 5.2 GROUNDWATER

As shown on **Table 5.2** below and **Figure 4**, the CVOC PCE was detected in monitoring well MW-3 at a concentration of 11 ug/L, exceeding the TOGS AWQS of 5 ug/L. In addition, chloroform was detected in MW-4 at a concentration of 9.8 ug/L exceeding the TOGS AWQS of 7 ug/L. Finally, several metals including manganese sodium, and iron were detected in MW-3 at concentrations exceeding the TOGS AWQS. No SVOCs, PCBs, pesticides, or metals were identified at concentrations exceeding the TOGS AWQSs.

**Table 5.2: Summary of Exceedances in Groundwater**

Well ID			MW-3	FD-MW-3	MW-4
Sampling Date			9/26/2017	9/26/2017	9/26/2017

Notes:

1. Ug/L – micrograms per liter
2. Bold cell = compound detected
3. Q = Data Qualifier
4. B = Compound detected in lab blank data qualifier
5. Yellow shading = Compound Exceeds the TOGS AWQS

The following conclusions can be made based on the above groundwater results:

- The depth to groundwater ranged from 9 to 18 ft-bgs and flows in a northerly direction across the Site.
- The Site's groundwater has been impacted with the CVOC PCE and metals above TOGS AQWS near the northern portion of the Site.
- The CVOC chloroform was detected above the TOGS AQWSs near the southern portion of the Site.

### 5.3 SOIL GAS RESULTS

As shown on **Table 5.3** below and **Figure 5**, the CVOCs, PCE, TCE, and methylene chloride were detected in soil vapor points on the western portion of the Site at concentrations exceeding their NYSDOH Decision Matrices Sub-slab Lower Threshold Value. Specifically, PCE was detected in soil vapor points SV-1, SV-8, SV-9, SV-10, and SV-12 at concentrations ranging from 100 ug/m<sup>3</sup> to 1,200 ug/m<sup>3</sup>, exceeding the Matrix B Sub-slab Lower Threshold Value of 100 ug/m<sup>3</sup>. TCE was detected in soil vapor point SV-1 and SV-10 at a concentration of 390 ug/m<sup>3</sup> and 39 ug/m<sup>3</sup>, exceeding its Matrix A Sub-slab Lower Threshold Value of 6 ug/m<sup>3</sup>. Finally, methylene chloride was detected in vapor point SV-11 at a concentration of 200 ug/m<sup>3</sup>, exceeding the Matrix B Sub-slab Lower Threshold Value of 100 ug/m<sup>3</sup>.

The VOCs acetone and methyl ethyl ketone (MEK) were detected site-wide. Specifically, acetone was detected in vapor points SV-1, SV-4, SV-5, and SV-8 through SV-12 at concentrations ranging from 20 to 1,280 ug/m<sup>3</sup>. MEK was detected in SV-4, SV-5, SV-8, SV-9, SV-10, and SV-12 through SV-16 at concentrations ranging from 2.6 to 215 ug/m<sup>3</sup>.

The petroleum hydrocarbon (PHCs) VOCs 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3 butadiene, benzene, ethylbenzene, xylenes, heptane, hexane, and toluene were detected in soil vapor. Specifically, 1,2,4-trimethylbenzene was detected in SV-4, SV-8, SV-9, SV-11, SV-12, SV-13, SV-15, and SV-16 at concentrations ranging from 1.3 ug/m<sup>3</sup> to 63 ug/m<sup>3</sup>. 1,3,5-trimethylbenzene was detected in SV-8, SV-9, SV-12, and SV-13 at concentrations ranging from 21 ug/m<sup>3</sup> to 26 ug/m<sup>3</sup>. 1,3 butadiene was detected in SV-14, SV-15, and SV-16 at concentrations ranging from 0.883 ug/m<sup>3</sup> to 32.5 ug/m<sup>3</sup>. Benzene was detected in SV-8, SV-9, SV-10, SV-12, SV-13, SV-14, SV-15 and SV-16 at concentrations ranging from 3.96 ug/m<sup>3</sup> to 46 ug/m<sup>3</sup>. Ethylbenzene was detected in SV-8, SV-9, SV-10, SV-11, SV-12, SV-13, and SV-15 at concentrations ranging from 1.21 ug/m<sup>3</sup> to 75 ug/m<sup>3</sup>. Xylenes SV-4, and SV-8, through and SV-16 at concentrations ranging from 2.75 ug/m<sup>3</sup> to 311 ug/m<sup>3</sup>. Heptane was detected in SV-4 through SV-16 at concentrations ranging from 2.24 ug/m<sup>3</sup> to 88 ug/m<sup>3</sup>. Hexane was detected in SV-4, and SV-8 through SV-16 at concentrations ranging from 5.53 ug/m<sup>3</sup> to 440 ug/m<sup>3</sup>. Finally, toluene was detected in SV-4 and SV-8 through SV-16 at concentrations ranging from 2.25 ug/m<sup>3</sup> to 280 ug/m<sup>3</sup>.

Notes:

1. Ug/m<sup>3</sup> – micrograms per kilogram
2. Bold cell = compound detected
3. Q – Data Qualifier
4. U = Undetected
5. Yellow shading = Compound Exceeds the NYSDOH Matrices Values

The following conclusions can be made based on the above soil vapor results:

- The chlorinated CVOCs, PCE, TCE, and methylene chloride were detected in soil vapor points on the western portion of the Site at concentrations exceeding their NYSDOH Decision Matrices Sub-Slab Lower Threshold Value.
- The PHCs VOCs 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3 butadiene, benzene, ethylbenzene, xylenes, heptane, hexane, and toluene were detected in soil vapor.

## **6.0 REMEDIAL INVESTIGATION FINDINGS AND SUMMARY**

### **6.1 CONCEPTUAL SITE MODEL**

The overall depth of SVOC and metals impacted soils exceeding the USCOs ranged from 2 to 14 ft-bgs. Metals exceeding the USCOs were also identified on the Site at depths up to 14 ft-bgs. SVOC and metals exceeding both USCO, RSCOs, and RRSCOs were identified in soils at depths ranging from 2 to 8 ft-bgs. The applicable standards criteria and guidance (SCGs) for the Site groundwater are the NYSDEC TOGS 1.1.1 AWQS. The Site's groundwater has been impacted with CVOCs compounds above NYSDEC TOGS AQWS groundwater standards as a result of the historical land uses.

The site groundwater flow direction is to the north. The groundwater table is at 9-18 ft bgs. The range in groundwater depth is a result of the time of the year and the method (e.g. boring or permanent well) with which the groundwater depth was reported.

The pathway of the contaminated groundwater to human receptors is limited to the ingestion of the groundwater or direct exposure through excavation work. However, groundwater in this area of Bronx is not used for drinking. In addition, the impacted Site groundwater is not likely to have an ecological pathway.

Finally, the PHC VOCs and CVOCs detected in soil vapor can result in soil vapor intrusion into the future on-Site buildings. A vapor intrusion evaluation will be needed for the Site's proposed enclosed areas, as the PHC VOCs and CVOCs may result in soil vapor intrusion into the future on-Site buildings.

### **6.2 HUMAN HEALTH EXPOSURE ASSESSMENT**

This exposure assessment discusses potential migration routes by which chemicals in the environment may be able to reach human receptors in accordance with NYSDEC DER-10 sections 3.14(c)17, 3.3(c)4 and Appendix 3B. This discussion is based on current and hypothetical future site conditions at the investigation area.

An exposure assessment must evaluate five (5) elements that comprise an exposure pathway. A complete exposure pathway includes the following:

1. A description of the contaminant source. If the original source is unknown, then a description of the contaminated environmental medium at the point of exposure;

2. An explanation of the transport mechanism;
3. An identification of all potential exposure points;
4. A description of the exposure route at the contact point; and
5. A receptor population.

There are some exposure pathways related to the contamination if left unaddressed:

#### Soil

Potential routes of exposure to subsurface and surface soils include dermal contact, ingestion and inhalation of soil particulates. At present, potential exposure points have been eliminated by restricting public access to the Site through fencing. During future construction activities, specifically disturbance of soils, the potential for exposures to soils would increase for on-site workers, utility workers, visitors and trespassers.

SVOCs and metal exceedances of the USCOs, RSCOs, and RRSCOs in the Site soil that consist of contaminated fill pose a risk to human health. The exposure pathway to humans can be through direct dermal contact with the contaminated soils or incidental ingestion.

#### Groundwater

Potential groundwater exposure points include ingestion, dermal contact and inhalation of vapors. Brooklyn utilizes municipal water (not groundwater) for drinking purposes. Thus, ingestion as a potential exposure point may be eliminated from further evaluation.

Potential exposures through dermal contact and vapor inhalation would arise during future demolitions, redevelopment or utility repairs where workers, visitors, or trespassers may be exposed to groundwater. The groundwater will naturally attenuate with time and is not anticipated to be a pathway for human health exposure since groundwater use is prohibited for drinking water purposes in this area.

#### Surface Water

Surface water is not present on the Site. Thus, this exposure pathway may be eliminated from further evaluation.

#### Soil Vapor

When volatile organics are detected in soil gas, it creates a potential exposure to building occupants through vapors accumulating beneath structures or impacting indoor air quality within

a structure. Currently, potential human receptors are restricted from entering by fencing. Thus, a potential exposure point does not exist. However, after the site is redeveloped, a potential that vapors could accumulate in enclosed areas such as basements, crawl spaces, etc. of the proposed building would arise.

The VOC levels in the Site soil vapors were found to exceed the NYSDOH Matrices Lower Threshold concentrations without the implementation of the proposed remedial action identified in the Remedial Action Work Plan (RAWP), provided under separate cover. The exposure route for soil vapor is through the inhalation of the contaminated soil vapor that may intrude into the enclosed spaces of any planned Site development.

### **6.3 FISH AND WILDLIFE IMPACT ANALYSIS**

The Site does not contain any wildlife or fish ecologically sensitive resources and hence the Site contamination is not expected to have any impacts on any fish or wildlife ecological resources. The closest surface water body to the Site is the Bronx River, which is located approximately 0.10-miles east of the Site. It is unlikely the contaminated groundwater from the Site will reach the surface water of the Lower New York Bay. The detected groundwater contaminant levels is expected to decrease as a result of natural attenuation. Per DER-10 Appendix 3C, no fish and wildlife impact analysis was needed.

### **6.4 RECOMMENDATIONS**

#### **6.4.1 Summary of RI Results**

The RI filled in the missing data gaps building on prior investigations and completed the nature and extent delineation in on-site media of contamination at the Site to the extent required to determine a remedial action for the Site. Track 1 through 4 cleanup remedies will be evaluated in the RAWP.

The RI has also determined that contaminated soil underlaying the entire Site ranges from 2 to 14 ft bgs, which is found to be impacted with barium, copper, lead, manganese, mercury, nickel, silver, zinc, and SVOCs.

In order to render the Site usable for future development, the RAWP will address the remedial alternatives to limit the exposure to the impacted soils and mitigate the impact to groundwater from on-site sources. It will also address alternatives to mitigate exposures to any VOC vapor intrusion into the proposed development.

#### **6.4.2 Data Limitations and Recommendations for Future Work**

The RI results provide sufficient data to develop a feasible, conceptual remedy for the impacted groundwater and soils.

#### **6.4.3 Recommended Remedial Action Objectives**

The RI has determined that remedial action needs to be implemented to remediate the contaminated soil, which is cause an exposure and impact to groundwater risks. In addition, further evaluation of soil vapor is needed for VOCs detected in soil vapor. The specific alternatives proposed will be fully evaluated in the RAWP.

PVE Sheffler, LLC is submitting this report for work performed at the above-referenced site. This report has been prepared in conformance with the scope and limitations ASTM Standard E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. If you have any questions or comments, please contact one of the individuals listed below. We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR § 312. We have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Appendix C	Additional Reviewed Records
Appendix D	Photographs
Appendix E	Qualifications
Appendix F	Scope and Limitations of Report
Appendix G	User Questionnaire

## 1.0 Introduction

### 1.1 Objectives of Report

This Environmental Site Assessment (ESA) is intended to identify *recognized environmental conditions* (RECs) with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products on the subject property (defined in Section 3.0). The term *recognized environmental conditions* (REC) is defined in accordance with **ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process** as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Consideration is given to potential impacts to soil, groundwater, vapor, and other media.

### 1.2 Scope and Limitations of Report

Visual inspection of the subject property, a review of regulatory records and documents, and a review of historical records and documents are performed in accordance with ASTM E1527-13 and the appended Scope and Limitations (Appendix F). Note that, as stated in Practice 1527-13, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost.

### 1.3 Significant Assumptions

PVE Sheffler assumes that all database records, historical information, interviews conducted, and information obtained from others regarding the subject property are from reliable sources. No attempt was made to independently verify the reliability of said sources, as it is not required to verify the information provided according to Section 7.5.2.1 of ASTM E1527-13. Where access to portions of the site or to structures on the site was unavailable or limited, PVE Sheffler renders no opinion as to the presence of regulated or hazardous materials or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure. Conclusions and recommendations are based on information obtained from said sources and a visual inspection of the subject property on the date listed herein. References and sources used for the preparation of this report are documented in this report.

### 1.4 Special Terms and Conditions

An environmental liens and activity and use limitations (AULs) search was not included with the scope of this report, as per the direction of the user. In order to satisfy the ASTM E 1527-13 requirements for a Phase I ESA, a search for environmental liens and AULs must be appended.

## 1.5 User Reliance

The user is the party seeking to use Practice E1527 to complete this environmental site assessment of the subject property. The user has specific obligations for completing a successful application of Practice E1527 outlined in Section 6 of E1527. Completion of the user questionnaire (attached in Appendix G) helps satisfy these obligations.

In addition to the user, additional parties may rely on the contents of this environmental site assessment as listed below.

User:	The Ader Group
Authorized to rely on this report:	The Ader Group 25 Robert Pitt Drive Suite 215 Monsey, New York 10952

The scope of this Phase I ESA may not meet the needs of other users. Any reliance on the contents of this report by any third party is the sole responsibility of that party.

## 1.6 Definitions

Below are some important definitions (as defined in E1527-13) that are not otherwise defined in this report:

*Fill dirt:* Dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of a real property. It does not include material that is used in limited quantities for normal landscaping activities.

*Material threat:* A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

*Migrate/Migration:* For the purposes of a Phase I ESA, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Note that vapor migration in the subsurface is described in Guide E2600; however, for the purposes of a Phase I ESA, there is no requirement to apply the Guide E2600 standard to achieve compliance with all appropriate inquiries.

## 2.0 Site Description

### 2.1 Subject Property Location

Street Address: 1156 East 165<sup>th</sup> Street  
Municipality: New York City  
County: Bronx County  
State: New York  
Tax Parcel ID: Block 2756 Lot 90

Street Address: 1125 Whitlock Avenue  
Municipality: Not Applicable  
County: Bronx County  
State: New York  
Tax Parcel ID: Block 2756 Lot 85

See Appendix A for site maps. The parcel outline was obtained from the NYC Department of Finance Digital Tax Map (<http://gis.nyc.gov/taxmap/map.htm>).

### 2.2 General Site Features, Characteristics, and Current Operations

Site Features: The subject property consists of two lots (Block 2756 Lot 90 and Block 2756 Lot 85). Lot 90 is a one story manufacturing structure and Lot 85 contains multiple rectangular one story structures used for storage purposes.

Current Use: Lot 90 is a plastic parts manufacture; Lot 85 is a storage facility.

Topography: At grade with Whitlock Avenue and rises gradually towards the west.

Potable Water Supply: Municipal Utilities

Sewage Disposal System: Municipal Utilities

Means of heating/cooling: Natural Gas

### 2.3 Current Uses of Adjoining Properties

Adjoining properties are any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them. Adjoining parcels were obtained from the New York City Department of Finance (DOF) Digital Tax Map ( <http://gis.nyc.gov/taxmap/map.htm> ) with additional information obtained from the New York City Office of Environmental Remediation Searchable Property Environmental E-Database (SPEED)( <https://maps.nyc.gov/moer/speed/>).

Below is a table describing the current uses of adjoining properties.

### 3.0 Database Search

A review of state and federal documents and databases was performed to identify recorded hazardous waste or regulated substance activities on or near the subject property. Information from state and federal databases was compiled by Environmental Data Resources (EDR), an independent subcontractor to PVE Sheffler, LLC. The information presented below is a summary of this report. A complete listing of the sources searched and a complete copy of the database report are provided in Appendix B. The search distances as assigned in ASTM E1527-13 were used at a minimum for each of the following environmental record sources. Additional reviewed records are provided in Appendix C.

Not all sites identified in the database records can be accurately located due to incomplete or conflicting information supplied to the regulatory agencies. Asterisked (\*) sites are indicative of sites listed as un-mappable (“orphan”) in the EDR database report. Based on location information provided, the asterisked sites may be located within the appropriate search radius and are included in this Phase I ESA report. Information about these sites can be reviewed in the EDR Radius Map Report in Appendix B.

#### 3.1 Federal and State Hazardous Waste Sites

##### *Federal National Priority List*

National Priority Listing (NPL) sites are those listed with the USEPA as hazardous waste disposal sites, also known as Superfund sites. Proposed and delisted NPL site lists are also maintained by the USEPA. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NPL	No	0 / 0*	None	Not Present
Proposed NPL	No	0 / 0*	None	Not Present
DELISTED NPL	No	0 / 0*	None	Not Present

##### *Federal CERCLIS*

The USEPA CERCLIS (Comprehensive Environmental Response Compensation & Liability Information System) list details proposed and existing federal Superfund sites. The USEPA also maintains a CERCLIS No Further Remedial Action Planned (NFRAP) inventory. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
CERCLIS	No	0 / 0*	None	Not Present
CERC-NFRAP	No	0 / 0*	None	Not Present

##### *State-Equivalent NPL & CERCLIS*

Inactive State Hazardous Waste Disposal Sites are designated by NYSDEC and are state-equivalent CERCLIS sites. NYSDEC also maintains an inventory of delisted SHWS. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY SHWS	No	0 / 0*	None	Not Present
NY DEL SHWS	No	0 / 0*	None	Not Present

### ***Hazardous Substance Waste Disposal Sites***

The Hazardous Substance Waste Disposal Sites (HSWDS) Inventory is maintained by New York State. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY HSWDS	No	0 / 0*	None	Not Present

## **3.2 Hazardous Waste Treatment, Storage, or Disposal**

### ***RCRA Treatment, Storage, and Disposal Facilities***

The database of RCRA facilities for treatment, storage, or disposal of hazardous materials (RCRA TSD) is maintained by the USEPA. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
RCRA-TSDF	No	0 / 0*	None	Not Present

### ***RCRA Corrective Action Sites***

The USEPA maintains a database of sites within the RCRA Corrective Action program, which are facilities permitted by the USEPA for treatment, storage, or disposal of hazardous waste which have conducted or are currently conducting a corrective action as regulated under the Resource Conservation and Recovery Act. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
CORRACTS	No	1 / 0*	Not Anticipated	Proximity

- American Bank Note Company, located at Tiffany Street and Garrison Avenue, 2,654 feet southwest of the subject property. The assessment determined that the area was designated a low corrective action priority and current human exposures are under control and have been verified. The assessment date was not provided.

### 3.3 Hazardous Waste Generation

The USEPA maintains a database of facilities that generate hazardous waste. Large Quantity Generators (LQG) generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. Small Quantity Generators (SQG) generate between 100 kg and 1,000 kg of hazardous waste per month. Conditionally-exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. Non-generators are sites that do not presently generate hazardous waste. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
RCRA-LQG	No	0 / 0*	None	Not Present
RCRA-SQG	No	0 / 0*	None	Not Present
RCRA-CESQG	No	1 / 0*	Not Anticipated	See Below
RCRA NonGen/NLR	No	1 / 0*	Not Anticipated	See Below

#### RCRA-CESQG:

- NYCT-Whitlock Avenue Station, located at Whitlock Avenue and Lowell Street, 306 feet northeast of the subject property. No violations were found in association with this property.

#### RCRA Non-generator:

- NYS DOT Contract D254615, located at Whitlock Avenue and Aldus Street, 30 feet south of the subject property. No violations were found in association with this property.

### 3.4 State Landfill and/or Solid Waste Disposal Sites

NYSDEC maintains a database of solid waste disposal facilities (SWF) and landfills (LF). Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY SWF/LF	No	7 / 0*	Not Anticipated	See Below

- The Sheridan Expressway – Tully Construction Company, located at Sheridan Expressway Edgewater Road, 1,427 feet northwest of the subject property, is listed as an inactive transfer station.
- The Alamar Carting Corporation, located at 1351 Garrison Avenue, 696 feet southeast of the subject property, is listed as an inactive transfer station.

- The Specialty Motor Cars Inc., located at 1125 Bronx River Avenue, 937 feet northeast of the subject property, is listed as an inactive transfer station.
- The Elite Motor Cars Inc., located at 985 Bronx River Avenue, 1,264 feet southeast of the subject property, is listed as an inactive transfer station.
- The Paper Fibers Corp., located at 960 Bronx River Avenue, 1,477 feet southeast of the subject property, is listed as an inactive transfer station.
- The Bronx Iron & Metal Company, located at 850 Edgewater Road, 1,946 feet southeast of the subject property, is listed as an inactive transfer station.
- The LKQ Hunts Point Auto Parts Corporation, located at 1480 Sheridan Expressway, 2,309 feet northeast of the subject property, is an active transfer station.

### 3.5 State Registered Storage Tanks

NYSDEC maintains a database of petroleum bulk storage (PBS) facilities with regulated storage tanks. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
UST	Yes	0 / 0*	Potentially	See Below
AST	No	2 / 0*	None Anticipated	See Below

#### UST Site:

- Whitlock Parking and Storage, 1125 Whitlock Avenue, PBS #2-603713, the subject property. The following tanks are associated with the subject property: Four 1,000-gallon gasoline USTs that were closed in place on December 1, 1999. The installation date was not reported.

#### AST Site:

- 165<sup>th</sup> Street Bronx LLC, located on 1151 East 165<sup>th</sup> Street, PBS #2-611310, 92 feet northwest of the subject property. The following tanks are associated with the property: One 1,080-gallon #4 fuel oil steel tank installed January 1, 1990. The tank is reported closed, however the date is not reported.
- Aldus Green Associates, located on 1032 Aldus Street, PBS #2-213624, 133 feet south of the subject property. The following tanks are associated with the property: One 5,000-gallon #2 fuel oil tank that was installed on February 18, 1977 and is still active.

### 3.6 Petroleum and Hazardous Material Releases

#### *Emergency Response Notification System*

The USEPA Emergency Response Notification System (ERNS) stores information reported to the USEPA on sudden and/or accidental releases of hazardous substances to the environment. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
ERNS	No	None	Not Present

#### *Petroleum Spills*

NYSDEC maintains a database of petroleum spills reported to the department. Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
SPILLS - Open File	No	0 / 0*	None	Not Present
SPILLS - Closed File	No	2 / 0*	Not Anticipated	See Below

Closed:

- NYSDEC Spill #8706894, located at 1151 East 165<sup>th</sup> Street, 108 feet northwest of the subject property occurred on November 13, 1987 when a spill was reported in the basement of the building. The spill file was closed November 13, 1987.
- NYSDEC Spill #9913058, located at Manhole 17576, Aldus Street and Longfellow Avenue, 136 feet southwest of the subject property occurred on November 16, 2004 when a caller reported a dielectric fluid spill from a cable onto a manhole. Oil did not enter sump pit in the manhole and the spill was contained in an area away from the sump pit. The spill file was closed on February 16, 2000.

### ***State Leaking Storage Tank List***

NYSDEC maintains a database of leaking registered storage tank incident reports (LTANKS). Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment. Due to the high frequency of LUSTs in the applicable search radius, only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. All LUSTs files, both closed and open, within the search radius were reviewed.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
LTANKS - Open File	No	0 / 0*	None	Not Present
LTANKS - Closed File	No	39 / 0*	Not Anticipated	All closed

- NYSDEC Spill #9201510, located at 1151 East 165<sup>th</sup> Street, 92 feet northwest of the subject property, was reported on May 5, 1992 when a tank was overfilled. The tank opening was repaired and less than 1 gallon was reported lost. The spill file was closed on October 31, 2006.
- NYSDEC Spill #9211493, located at 1025 Aldus Street, 188 feet southwest of the subject property, was reported on January 7, 1993 when a caller reported a tank overfill. The caller had the spill contained in the tank room and was conducting the cleanup. The spill file was closed on January 7, 1993.

The remaining 37 closed L Tanks have been addressed to the satisfaction of the NYSDEC and are not likely to impact the subject property.

### **3.7 Brownfield Sites**

A Brownfield is any real property where redevelopment or reuse may be complicated by the presence or potential presence of hazardous waste, petroleum, pollutants, or contaminants.

Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
BROWNFIELDS	No	3 / 0*	Not Anticipated	See Below

- This Brownfield is located at 1095 Southern Boulevard, 1,325 feet west of the subject property. The building on this site was destroyed by a fire in 2008. The site historically has been used for several commercial uses, including a dry cleaning facility. Chlorinated solvents that were detected on-site are related to the past dry cleaning use. Tetrachloroethylene (PCE) have been detected in soil, groundwater and soil vapor. Information submitted with the BCP application concerning the conditions at the site are under review and will be revised as additional information becomes available.
- Lockheed Martin Electronic Defense System, located at 825 Bronx River Avenue, 2,172 feet southeast of the subject property. The property was contaminated with arsenic, chromium, lead mercury, VOCs and SVOCs and these contaminants are impacting the soil and groundwater. Information submitted with the BCP application concerning the conditions at the site are under review and will be revised as additional information becomes available.
- The Boathouse, located at 1399 Lafayette Avenue, 2,459 feet southeast of the subject property. The property was a former fur dressing plant. No other information was provided.

### 3.8 State Voluntary Cleanup Program Sites

The VCP was established to address the environmental, legal, and financial barriers that hinder redevelopment and reuse of contaminated sites, and to enhance private sector cleanup of Brownfield sites by enabling parties to remediate using private rather than public funds.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY VCP	No	1 / 1*	Not Anticipated	Proximity

- The Boathouse, located at 1399 Lafayette Avenue, 2,459 feet southeast of the subject property. The property was a former fur dressing plant. No other information was provided.
- \*Dexter Chemical Corporation, located at 819-845 Edgewater Road and 810-842 Whittier Street, 2,186 feet southeast of the subject property. In the 1950s, the site was a paint manufacturing company, metal works and a door and art craft table company. The company manufactured industrial organic chemicals (primarily phosphation and sulfation batches) as well as other solvents and paint thinners. Investigations led to the discovery of the following contaminants in soil and ground water: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. PVES does not consider

this to be an impact to the subject property due to remediation at the site is complete and residual contamination in the soil and groundwater is being controlled by a Site Management Plan.

### 3.9 Federal & State Engineering & Institutional Controls, & Activity & Use Limitations

Activity and use limitations (AULs) are legal or physical restrictions or limitations on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants or to prevent activities that could interfere with the effectiveness of a response action protecting public health or the environment. AULs are often recorded at the land title office (commonly the County Clerk's office). AUL information is not typically contained in a chain of title report. In some cases, an AUL may not have been filed at the land title office but may be found in a separate environmental agency database.

Engineering control (EC) and institutional control (IC) listings are maintained by the USEPA and NYSDEC and are controls designed to prevent exposure to contaminants remaining on a site. Engineering and institutional controls are types of AULs. Engineering controls are physical modifications to a site. Institutional controls are legal or administrative restrictions on the use of, or access to, a site.

Readily available EC and IC listings were reviewed by EDR, but other AUL information may be applicable. If an AUL search was conducted as part of the environmental liens search, the results are indicated below. However, AULs may only exist in project documentation, which may not be readily available to the environmental professional. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
US ENG CONTROLS	No	None	Not Present
NY ENG CONTROLS	No	None	Not Present
US INST CONTROL	No	None	Not Present
NY INST CONTROL	No	None	Not Present
AULs	Not Searched	N/A	Not Searched

### 3.10 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws. An environmental liens report was not acquired for this report.

	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
Environmental Liens	No	N/A	Not Searched

### 3.11 Other Conditions of Concern

No additional conditions of concern were identified in the database records review.

#### *E-Designation Site list*

An (E) designation requires that the fee owner of a property conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP. Details pertaining to these sites can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.125 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY E DESIGNATION	No	1 / 0*	Not Anticipated	See Below

- Block 2755 Lot 52, located at 967 Longfellow Avenue, 619 feet south of the subject property. An underground gasoline storage tank testing protocol is being evaluated at this site. A satisfaction date is not reported.

#### *Manifests*

A manifest is a document that lists and tracks hazardous waste from the generator, through transporters, to a TSD facility indicating that hazardous wastes have been properly transported in accordance with state and federal regulations. Details pertaining to these sites can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY MANIFEST	No	75 / 0*	Not Anticipated	See Below
NJ MANIFEST	No	4 / 0*	Not Anticipated	No Violations
PA MANIFEST	No	0 / 0*	None	Not Present

#### NY MANIFEST:

- 1167 East 165<sup>th</sup> Street, 55 feet northwest of the subject property. No violations were found for this property.
- 1050 Longfellow Avenue, 114 feet northwest of the subject property. No violations were found for this property.

*No violations were found for the remaining NY Manifests, and therefore an impact to the subject property is not anticipated.*

### ***Manufactured Gas Plants***

Manufactured gas plants (MGPs) produced gas for fuel until the 1950s. A significant amount of waste and hazardous byproducts were typically generated and often disposed of at the plant, resulting in contamination of the site.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR MGP	No	1 / 0*	Not Anticipated	See Below

- East 173<sup>rd</sup> Street Works, located at West Farms Road and Bronx River, 3,233 feet northeast of the subject property, is listed as an MGP. No additional information was provided about the site.

*This listing is considered too far from the subject property to represent an impact to the site.*

### ***Drycleaners***

EDR has searched NYSDEC's list of registered drycleaning facilities. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
DRYCLEANERS	No	2 / 0*	Not Anticipated	See Below

- Lucky/Bethel/J&Y Cleaners, located at 1120 (1240) Westchester Avenue, 894 feet northwest of the subject property.
- Aldus Dry Cleaners, located at 945 Aldus Street, 1,042 feet southwest of the subject property.

*These listings are expected to be too far from the subject property to represent a potential impact.*

### ***Historic Service Stations***

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's

opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR US Hist Auto Stat	Yes	9 / 0*	Potentially	See Below

- 1125 Whitlock Avenue, the subject property, is identified as Sonero Auto Repair from 1999 to 2012.

*We consider the past operating condition of the subject property to be a REC.*

- 1361 Bruckner Boulevard, 407 feet southeast of the subject property, is identified as Maritza Service Station from 1999 to 2001, Bronx Auto Tech Inc. in 2002, P & P Auto Clinic Center Inc. in 2003, Naz Auto Repair Corp. from 2004 to 2008, Bruckner Muffler & Tires Repair Shop in 2011.
- 1133 Whitlock Avenue, 438 feet northeast of the subject property is identified as Macorix Repairs from 2011 to 2012.
- 1141 Whitlock Avenue, 460 feet northeast of the subject property is identified as Best Of New York Body Shop in 2009.
- 1360 Bruckner Boulevard, 529 feet southeast of the subject property, is identified as Bruckner Boulevard Amoco from 1999 to 2000.
- 959 Whittier Street, 558 feet southeast of the subject property, is identified as Edward Automotive Center in 2001, Edwards Automotive Repair Service in 2002, Edward Automobiles in 2003, Edward Automotive in 2004 and Edward Automobiles in 2005.
- 1244 Westchester Avenue, 572 feet northwest of the subject property, is identified as Felix Auto Repair in 2007.
- 1203 Whitlock Avenue, 630 feet north of the subject property is identified as Art Auto Body and Repair Shop Company in 2005.
- 1255 Westchester Avenue, 639 feet northwest of the subject property is identified as T & J Auto Body from 1999 to 2000, Patrony Gas Station Inc. from 2001 to 2003, Patrony Gas Station in 2004, Mexico Becerrils Auto Repair Elc. in 2005, Patrony Gas Station Inc.

from 2006 to 2007, Mexico Becerril Auto Repair in 2008, Patrony Gas Station Inc. from 2009 to 2011 and Patrony Auto Group in 2012.

- 1207 Whitlock Avenue, 642 feet north of the subject property is identified as Perez Transmissions from 1999 to 2001, Art Auto Body in 2002, Rosario Art Auto Body Inc. from 2003 to 2004, Art Auto Body in 2005, Art Auto Body and Repair Shop Company in 2006, Jaws 2 Auto Body Center from 2007 to 2008, H & S Auto Shop from 2009 to 2011 and Art Auto Repair in 2012.

*Facilities such as these are likely to generate wastes which if handled improperly have the potential to contaminate local soil and/or groundwater, which can result in a potential vapor intrusion condition. We consider the proximity of these listings to represent a potential impact to the subject property through a vapor encroachment condition.*

### **Historic Cleaners**

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR US Hist Cleaners	No	3 / 0*	Not Anticipated	See Below

- 1255 Westchester Avenue, 639 feet northwest of the subject property, is identified as D & J Laundromat in 2011.
- 1262 Westchester Avenue 642 feet north of the subject property is identified as Class Cleaners from 1999 to 2011.
- 1264 Westchester Avenue, 651 feet north of the subject property, is identified as Class Cleaners from 2007 to 2008 and Kathys Cleaners from 2010 to 2012.

*Facilities such as these are likely to generate wastes which if handled improperly have the potential to contaminate local soil and/or groundwater, which can result in a potential vapor intrusion condition. We consider the proximity of these listings to*

*represent a potential impact to the subject property through a vapor encroachment condition.*

### ***Registered Recycling Facility List***

NYSDEC maintains a database of recycling facilities (SWRCY). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
SWRCY	No	4 / 0*	Not Anticipated	See Below

- Sal's Metal Corp., located at 900 Edgewater Road, 1204 feet southeast of the subject property is listed as an active recycling facility. No additional information is provided.
- Canal Place Recycling Facility, located at 246-266 Canal Place, 1,394 feet southeast of the subject property is listed as an active recycling facility. No additional information is provided.
- Paper Fibers Corp., located at 960 Bronx River Avenue, 1,477 feet southeast of the subject property is listed as an active recycling facility. No additional information is provided.
- Bronx Iron & Metal Company, located at 850 Edgewater Road, 1,946 feet southeast of the subject property is listed as an active recycling facility. No additional information is provided.

*Considering the lack of any violations reported we do not consider it a REC, nor should there be an impact to the subject property.*

### ***Chemical Bulk Storage Database***

NYSDEC maintains a database of facilities store regulated hazardous substances tanks (CBS), including aboveground tanks with capacities of 185 gallons or greater (CBS AST), and/or in underground tanks of any size (CBS UST). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
CBS	No	0 / 0*	None	Not Present
CBS AST	No	1 / 0*	Not Anticipated	See Below
CBS UST	No	0 / 0*	None	Not Present

- LKQ Hunts Point Auto Parts Corp., located at 1480 Sheridan Expressway, 1,204 feet north of the subject property, CBS #2-000383. The tanks facility status is listed as ‘in service’ and no violations have been reported. No additional information is provided.

*Considering the distance from this listing to the subject property, we do not consider it a REC, nor should there be an impact to the subject property.*

***Recovered Government Archive Waste Facilities***

NYSDEC maintains a database of facilities solid waste and hazardous waste facilities. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY RGA HWS	No	0 / 0*	None	Not Present
NY RGA LF	No	0 / 0*	None	Not Present

#### **4.0 Physical Setting Analysis**

The physical setting of the subject property was evaluated by consulting regional maps and other sources. Following is a summary of this review.

##### **4.1 7.5 Minute USGS Topographic Map**

According to the Central Park, New York USGS topographic map, the subject property is approximately 38 feet above mean sea level.

##### **4.2 Regional Hydrogeology**

Based on topography, groundwater is presumed to flow to the southeast, toward the Bronx River.

## 5.0 Site Reconnaissance

PVE Sheffler personnel inspected the subject property on January 6, 2016 and January 18, 2016. The site reconnaissance and interviews were conducted by Conor Tarbell and Anthony Spadavecchia respectively. Photographs are attached in Appendix D.

The reconnaissance included a walk-through of all accessible interior common areas of the subject property and exterior locations. Adjoining properties were visually assessed from the subject property boundary, public right-of-ways, or other vantage points, and are summarized in Section 2.3. The entire subject property was inspected.

### 5.1 General Site Observations Table

Below are items visually and/or physically observed. Items marked with "†" are defined below.

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
Storage Tanks		X		
Drums†	X			Drums of solvent based paints, pigments and PVC.
Hazardous† or Regulated Substances	X			Drums of solvent based paints, pigments and PVC.
Petroleum Products† Containers		X		
Unidentified Substance Containers		X		
Polychlorinated Biphenyls (PCBs)		X		
Evidence of Solid Waste Disposal (including mounds or filled areas)		X		
Strong, Pungent, or Noxious Odors	X			Odors associated with plastic parts production.
Pools of Liquid		X		
Stained Soil or Pavement	X			Staining witnessed near ovens and painting areas.
Corrosion		X		
Stressed Vegetation		X		
Septic Systems		X		
Pits, Ponds, or Lagoons†		X		
Floor Drains or Sumps†	X			Observed centrally near ovens.
Wastewater†		X

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
Liquid discharges into drainage systems, including stormwater		X		
Wells (including dry wells†)		X		
Other Conditions of Concern		X		

### Definitions

**Drum:** A container (typically, but not necessarily, holding 55 gallons) that may be used to store hazardous substances or petroleum products.

**Dry wells:** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and unintentional) and wastewater disposal (often illegal).

**Hazardous substance:** A substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C. §9601(14), as interpreted by EPA regulations and the courts: “(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C. §§6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. §7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

**Petroleum products:** Those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

**Pits, Ponds, or Lagoons:** Man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing hazardous substances or petroleum products. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

**Sump:** A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

**Wastewater:** Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as stormwater flows, that has not been used in industrial or manufacturing processes, has not been combined

with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

## 5.2 Site Visit Observations

The subject property consists of two lots (Block 2756 Lots 85 & 90) containing multiple structures. The subject property is bordered to the east by the NYC MTA 6-line subway station at Whitlock Avenue, Interstate 895 and the Bronx River.

The northern most structure is a one-story plastic parts manufacturing building accessed on the northern side of the structure along 165<sup>th</sup> Street. The north-central portion of the structure, as you enter from the 165<sup>th</sup> Street entrance, contains multiple offices associated with the plastic manufacturing business (Pulse Plastic Products, Inc). The remainder of the large structure is utilized for plastic parts productions. This production includes multiple ovens, cooling tanks, parts storage, painting/finishing areas, and packing for shipment. Drums of liquid PVC, used in the plastic parts production, are stored throughout the property. The current operator claims all of these drums are non-toxic and inflammable. Drums, ranging in size, of solvent based paints and pigments are stored in a room located in the northwestern corner of the structure. No floor drains were observed in this area; no staining was observed in this area. Multiple floor drains were observed in the vicinity of the ovens and parts storage with visible staining leading to drains near PVC drums. Based on information provided by the current tenant and owner of the site, these drains discharge to the local municipal sewer.

According to the current operator, the plastic parts business has been operating out of that location since 1972; prior to their occupation the subject property was utilized as a non-service garage.

The southern portion of the subject property is made up of several individual rectangular shaped storage structures. The outside perimeter is bordered by barbed wire fence and has two entrances located on the Whitlock Avenue side (one located in the middle of the property that is opened only to remove snow and the southern entrance is the main entrance) are locked. The northern entrance is barricaded and locked and connects to a very narrow strip of property to the west of 1156 East 165<sup>th</sup> Street building and connects to a dilapidated door that was locked inside the storage facility along the northwest section. PVES was granted permission and escorted on the property to observe these structures. Every individual unit was shut closed and locked. One pile of wooden debris was observed near the middle area entrance.

## 6.0 Property History

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records, and/or zoning and land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following is a summary of these findings. Specific sources are documented first, followed by a summary at the end of this section, which may include information initially described in other sections of this report.

### 6.1 Property Ownership

Property ownership history was researched through the New York City Department of Finance Office of the City Register. No property ownership information was discovered from this search. This ownership record is based on reasonably attainable information and does not constitute a title search.

### 6.4 Fire Insurance Maps

Fire Insurance maps were provided in the EDR report and are attached in Appendix B. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

#### 1156 East 165<sup>th</sup> Street

1896	In the northwest section of the subject property, five structures are connected. The structure in the most northwest corner is labeled 'G' (presumably for garage) that is
------	--

	attached to a long rectangular one story structure labeled 'G' (presumably for garage) and connects to the northern most adjoining property (1056 Lowell Street). In the northeast section of the subject property is a one story structure. In the northern central section of the subject property, there are four individual structures.
1901	In the northwest section of the subject property, five structures are connected. The structure in the most northwest corner is labeled 'stable' and attached to a long rectangular two story structure labeled 'cow house' and connects to the northern most adjoining property (1056 Lowell Street). In the northeast section of the subject property is a one story structure. In the northern central section of the subject property, there are three individual structures.
1903	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1915	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1950	Almost the entire subject property is made up of one large structure labeled 'garage'. In the central area of the garage is labeled '2-550gal. gasol tanks buried' (presumably two 550-gallon gasoline tanks are buried). Attached to the garage in the northwest and west central areas are one story structure labeled 'auto'.
1977	Almost the entire subject property is made up of one large structure. Attached to the structure in the northwest of the subject property is a one story structure labeled 'auto repair' and '2-550gal. gasol tanks buried' (presumably two 550-gallon gasoline tanks are buried) is no longer labeled in the central area of the structure.
1978	Refer to year 1977.
1979	Refer to year 1977.
1980	Refer to year 1977.
1981	Refer to year 1977.
1983	Refer to year 1977.
1985	Refer to year 1977.
1986	Refer to year 1977.
1989	Refer to year 1977.
1991	Refer to year 1977.
1992	Refer to year 1977.

1993	Refer to year 1977.
1994	Refer to year 1977.
1995	Refer to year 1977.
1996	Refer to year 1977.
1998	Refer to year 1977.
2001	Refer to year 1977.
2002	Refer to year 1977.
2003	Refer to year 1977.
2004	Refer to year 1977.
2005	Refer to year 1977.

2007	Refer to year 1977.

### 1125 Whitlock Avenue

1896	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1901	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1903	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1915	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1950	The northern most section has a long rectangle one story structure (running from east to west) labeled 'auto houses' and appears to be connected to the southern section of the 1165 East 165 <sup>th</sup> Street garage structure. South of this structure is another a long rectangle one story structure (running from east to west) labeled 'auto houses'. Perpendicular to this structure, are two long rectangular one story structures (running north to south) labeled 'auto houses'. In the southeast section of the subject property are 2 one story structures labeled 'A' (presumably for auto or garage). The west section of the subject property is almost made up entirely of one story structure labeled 'auto houses' (running

	north to south), and 3 one story structures are connected at the southern end. The southern section of the subject property has 'filling sta' (presumably meaning filling or gas station) with three small circles (presumably indicating three gasoline tanks).
1977	The northern most section has a long rectangle one story structure (running from east to west) labeled 'auto houses' and appears to be connected to the southern section of the 1165 East 165 <sup>th</sup> Street garage structure. South of this structure is another a long rectangle one story structure (running from east to west) labeled 'auto houses'. Perpendicular to this structure, are two long rectangular one story structures (running north to south) labeled 'auto houses'. In the southeast section of the subject property are 2 one story structures labeled 'A' (presumably for auto or garage). The west section of the subject property is almost made up entirely of one story structure labeled 'auto houses' (running north to south), and 3 one story structures are connected at the southern end. The southern section of the subject property no longer has 'filling sta' (presumably meaning filling or gas station) with three small circles (presumably indicating three gasoline tanks) as it did in 1950.
1978	Refer to year 1977.
1979	Refer to year 1977.

2007	Refer to year 1977.

## 6.5 City Directories

City directories list telephone company records of past occupants and businesses for an address by year, and is reviewed to determine if past occupants and businesses of the subject property and adjacent properties may have led to recognized environmental conditions. The city directory report is attached in Appendix B.

### *Subject Property*

#### 1156 East 165th Street

2005 – North America Plastics  
Pulse Plastic Products Inc.  
2000 – N America Plastics  
Pulse Plas Prods  
1940 – El Ray Garage Inc.  
Joes Rodio Svce

#### 1125 Whitlock Avenue

2005 - All Star Auto Glass  
Auto Glass  
Caceres Pedro  
Olympic Alarm Systems  
1961- Jay-Dee Service Station  
1940- Consumers Refrigeration Service

### *Adjoining Properties*

Adjoining property addresses are based on the Department of Finance Digital Tax Map, and are listed in Section 2.3. Only environmentally pertinent occupants and businesses are listed below.

#### 1036 Whitlock Avenue

1927 – Whitlock Garage

1044 Whitlock Avenue  
1927 – Printz Garage Inc.

## **6.6 Other Records and Interviews**

Listed below are additional records requested and/or reviewed as part of this Phase I ESA. If information relevant to the findings and conclusions of this ESA has been received from these departments, it is summarized below and/or in other sections of this report.

### ***Health Agency Records***

An information request was sent via email to the NYC Department of Health and Mental Hygiene on January 8, 2016 requesting any information the department has regarding on-site septic systems, supply or monitoring wells, chemical spills, health violations, or other environmental contamination issues associated with the site. Any written response from the department is included in Appendix C. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

### ***Fire Department Records***

A fuel tank special report request form was sent via fax on January 8, 2016 to the NYC Fire Department requesting any information the department has regarding tanks associated with the site. Any written response from the department is included in Appendix C. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

### ***NYC Property***

The NYC Property website, <http://webapps.nyc.gov:8084/CICS/fin1/find001I>, was accessed for records relating to the subject property (Appendix C). The most recent assessment indicates there is a one story building on Lot 90 and Lot 85 to be present on the property.

### ***Building Department***

NYC Department of Buildings (DOB) records were accessed via <http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp> (Appendix C). The Department of Finance Building Classification for Lot 90 is F1-FACTORY/INDUSTRIAL and Lot 85 is G9-GARAGE/GAS STATN.

One certificate of occupancy was obtainable for Block 2756 Lot 85 dated April 15, 1958 for the use of auto repair shop and for Block 2756 Lot 90 dated December 3, 1963 for the use of storage. A list of actions for the lot is attached in Appendix C.

### ***Interview - Regulatory Agency***

No interviews were conducted with regulatory agencies.

***Interview - Current Owner***

No interviews were conducted with current owners because none were provided by the user.

***Interview - Current Operator/Occupant***

No interviews were conducted with current operators or occupants because none were provided by the user.

***Interview - Past Owner***

No interviews were conducted with past owners because none were provided by the user.

***Interview - Past Operator/Occupant***

No interviews were conducted with past operators or occupants because none were provided by the user.

***Interview - User***

The user did not possess any specialized knowledge or experience that was material to recognized environmental conditions in the connection with the property.

***Other Interviews***

No other interviews, other than those already mentioned, were conducted.

**6.7 Summary of General Property History and Use**

The oldest reviewable historical record, the 1896 Sanborn Fire Insurance Map, depicts the property as five structures connected and labeled a garage along the northern section of the subject property. One of the structures links to the northern adjoining property, 1056 Lowell Street. These structures remain on the property in 1901, however are labeled cow house and stable, leading to believe this property was used as some type of farm for a limited time. It is unclear what the subject property was from this year until 1950 due to unattainable records. In 1950, Lot 90 was made up of one large structure, a garage and had two 550-gallon gasoline underground tanks and Lot 85 was made up of seven rectangular structures labeled auto sales or garages with a gas filling station located at the southern section. The 1977 Sanborn Map depicts Lot 90 made up of one structure without the two 550-gallon gasoline tanks and depicts Lot 85 made up of several rectangular structures labeled auto sales or houses without the gas filling station in the southern section and remains that way present day.

## 7.0 Findings and Conclusions

PVE Sheffler personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E1527-13 of the property at 1156 East 165<sup>th</sup> Street and 1125 Whitlock Avenue (the subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 and 7.5 of this report.

<u>Environmental Concern</u>	<u>Number of Findings</u>
Recognized Environmental Conditions (RECs)	2
Controlled Recognized Environmental Conditions (CRECs)	None
Historical Recognized Environmental Conditions (HRECs)	1
De minimis Conditions	1
Data Gap/Data Failure	4

### 7.1 Recognized Environmental Conditions

The definition of a *recognized environmental condition* (REC) is the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following: modifying

1. A Sanborn Fire Insurance map from 1950 for the property at 1156 East 165<sup>th</sup> indicates two 550-gallon gasoline tanks are located on the property. These tanks do not appear on the NYSDEC database of petroleum bulk storage facilities, no other information pertaining to these tanks was identified during preparation of this Phase I ESA. Leakage of petroleum products from these tanks cannot be ruled out.
2. The subject property at 1125 Whitlock Avenue was identified as Sonero Auto Repair from 1999 to 2012. Recent imagery indicates the property was also operated as Metro City Auto Repair. Sites such as these generate wastes which if handled improperly have the potential to contaminate local soil and/or groundwater. Other properties are listed in the immediate vicinity which also have the potential to generate similar wastes. Considering the past operating history of the subject property and immediately surrounding properties, a potential vapor encroachment condition exists.

## 7.2 Controlled Recognized Environmental Conditions

The definition of a *controlled environmental condition* (CREC) is a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. Examples of controls include property use restrictions, activity and use limitations, institutional controls, and engineering controls. CRECs are a subset of RECs. This assessment has revealed no evidence of *controlled recognized environmental conditions* in connection with the property.

## 7.3 Historical Recognized Environmental Conditions

The definition of a *historical recognized environmental condition* (HREC) is a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the property, except for the following, which PVE Sheffler do not consider to be RECs:

1. Whitlock Parking and Storage, at 1125 Whitlock Avenue, the subject property, is listed as PBS #2-603713. Four 1,000-gallon USTs were closed in place on December 1, 1999. The date of installation was not reported. This site is listed with NYSDEC as unregulated/closed, and is considered an HREC.

## 7.4 De minimis Conditions

The term *recognized environmental conditions* is not intended to include *de minimis conditions*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are *not* RECs or CRECs. The following are *de minimis* conditions that are being brought to the attention of the user of this environmental site assessment:

1. 1156 East 165<sup>th</sup> Street, the subject property is currently a plastics manufacturing facility. Based on information provided by the current owner, and operator, this drain discharges to the municipal sewer, and the site does not generate hazardous or regulated waste materials. No attempt was made to independently verify that the floor drain is connected to the municipal sanitary sewer.

## 7.5 Data Gaps and Data Failures

*Data gaps* are defined as a lack or inability to obtain information required by ASTM E-1527-13 despite good faith efforts to gather such information. A *data gap* by itself is not inherently significant and is only significant if other information raises reasonable concerns. Examples of *data gaps* are the inability to inspect portions of the subject property during the site inspection, and an inability to identify the historical use of the subject property back to 1940 but the earliest source shows the subject property to be undeveloped.

*Data failures* are a subset of *data gaps* and indicate a failure to achieve historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. *Data failures* can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier.

The following are data failures or data gaps encountered during this assessment:

1. Records of ownership of the subject property may be incomplete. The ownership record obtained during this assessment is based on reasonably attainable information and does not constitute a title search.
2. Data gaps in excess of five years were encountered during the review of the standard historical sources.
3. Interviews were not conducted with past owners, present operators, past operators, present occupants, or past occupants.
4. Even though the subject property and some of the adjoining properties were identified on one or more of the standard environmental record searches, a regulatory file review was not performed because the files were not considered reasonably ascertainable (either not publically available, not obtainable within reasonable cost and time constraints [20 days], or not practically reviewable).

## 7.6 Conclusions and Opinions

Fuel storage tanks are known to have been located on the subject property, including four tanks at the southern-most extent of the parcel on Whitlock Avenue, and two tanks located on the parcel at 1156 E 165<sup>th</sup> Street.

- The four tanks on the Whitlock Avenue lot are known to have been closed in place, and are registered as such with NYSDEC. Although leakage from these tanks cannot be ruled out, these tanks were presumably closed to the satisfaction of NYSDEC.
- No additional information was available regarding the two tanks on the 1156 East 165<sup>th</sup> Street lot.

- Leakages from tanks, past historical operations, or nearby properties, have the potential to create a vapor intrusion condition.

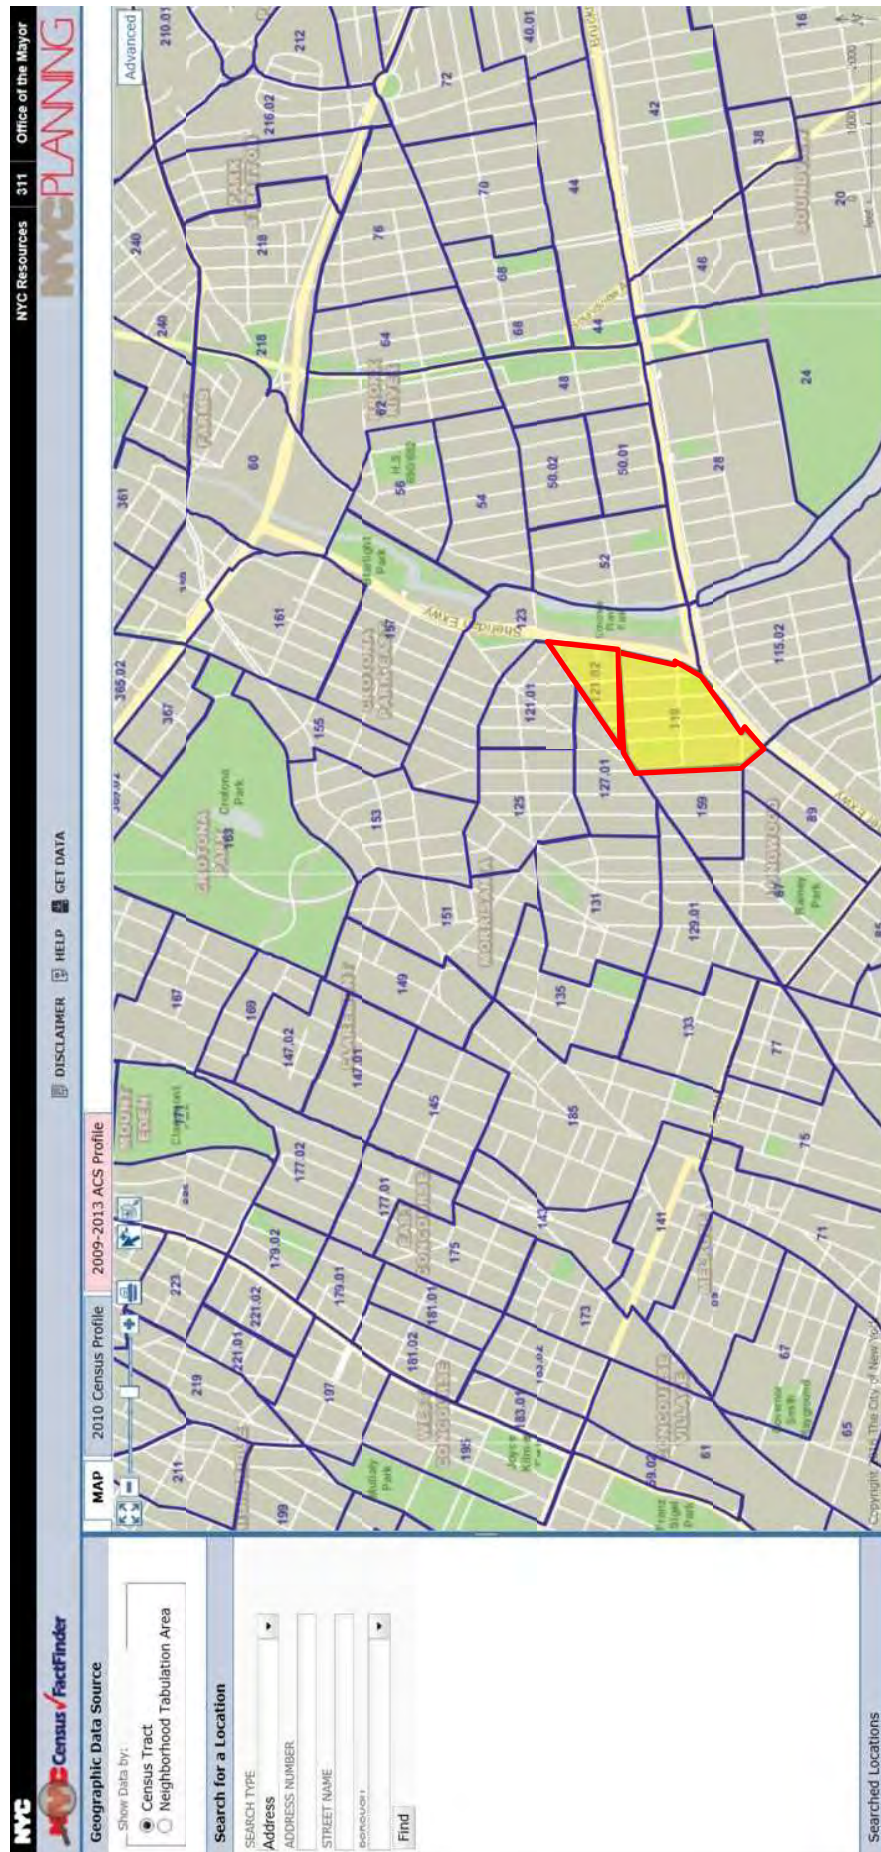

A subsurface investigation would be needed to determine the condition of soil quality and soil vapor in the vicinity of these tanks and on the subject property.

Other sources consulted during this Phase I ESA indicate that the above-referenced data gaps are not significant.

*Standard Notes: As part of this Phase I ESA and in accordance with Section 7.5.2.1 of ASTM E 1527-13, PVE Sheffler has made no attempt to independently verify the reliability of information provided. In addition and in accordance with Section 3.2.18 Note 3 of ASTM E 1527-13, a condition identified as a CREC does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.*

2010-2014 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Census Tract 119, Bronx County, New York		Census Tract 121.02, Bronx County, New York	
	Estimate	Margin of Error	Estimate	Margin of Error
Total:	1,868	+/-283	411	+/-136
Car, truck, or van:	166	+/-85	82	+/-61
Drove alone	76	+/-54	66	+/-50
Carpooled:	90	+/-74	16	+/-25
In 2-person carpool	65	+/-64	2	+/-12
In 3-person carpool	13	+/-20	0	+/-11
In 4-person carpool	0	+/-16	0	+/-11
In 5- or 6-person carpool	12	+/-19	0	+/-11
In 7-or-more-person carpool	0	+/-16	14	+/-18
Public transportation (excluding taxicab):	1,505	+/-276	309	+/-114
Bus or trolley bus	350	+/-109	52	+/-43
Streetcar or trolley car (carro publico in Puerto Rico)	39	+/-41	0	+/-11
Subway or elevated	1,083	+/-247	257	+/-97
Railroad	33	+/-39	0	+/-11
Ferryboat	0	+/-16	0	+/-11
Taxicab	0	+/-16	0	+/-11
Motorcycle	0	+/-16	0	+/-11

Walked	113	+/-83	20	+/-21
Other means	0	+/-16	0	+/-11
Worked at home	74	+/-58	0	+/-11

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

While the 2010-2014 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '\*\*\*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '\*\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

WARNING: These printed materials may be out of date.

	Daily Vehicle Trips				Saturday Daily Vehicle Trips	
<b>Truck</b>						
Local Retail	0.35 per 1,000 sf	8	11	2	0.04 per 1,000 sf	11
Office	0.32 per 1,000 sf	10	11	2	0.01 per 1,000 sf	11
Residential	0.06 per DU	12	9	2	0.02 per DU	9
<b>NOTES:</b> NA = Not Available; DU = Dwelling Unit These trip generation rates are for all boroughs. The truck trip generation rates are based on the use of a 50-50 directional split. *Temporal distributions for Passive and Active Park Uses are based on 18-hour operation. If fewer or different hours, please contact DOT. **The trip generation rates for Destination Retail Land Use account for linked trips, so no linked trip credit can be applied. *** The Fast Food trip generation for a weekday is based on a 12-hour period and Saturday is based on a 3-hour period.						

Trip generation rates should be based on information for generally similar facilities. There may also be a condition specific to the proposed project being analyzed that makes its trip generation expectations significantly different from those listed in Table 16-2. For example, the trip generation rate cited for midtown office space may not be appropriate for back-office space outside Manhattan, or

Re: **Subsurface Investigation (Phase II ESA)**; 1156 East 165<sup>th</sup> Street (Block 2756 Lot 90), 1125 Whitlock Avenue (Block 2756 Lot 85), Bronx, New York.  
PVE Sheffler File #560999

Dear Mr. Srulowitz:

PVE Sheffler, LLC (PVES) has completed our Phase II investigation for the above-referenced property (Figure 1), in accordance with the approved work plan. Below is a summary of field activities, analytical data and recommendations.

## 1.0 INTRODUCTION

PVES completed a Phase I Environmental Site Assessment for the above referenced property dated January 26, 2016. According to this report the following Recognized Environmental Conditions (RECs) were identified.

- A Sanborn Fire Insurance map from 1950 for the property at 1156 East 165<sup>th</sup> indicates two 550-gallon gasoline tanks were located on the property. These tanks do not appear on the NYSDEC database of petroleum bulk storage facilities, no other information pertaining to these tanks was identified during preparation of this Phase I ESA. Leakage of petroleum products from these tanks cannot be ruled out.
- The subject property at 1125 Whitlock Avenue was identified as Sonero Auto Repair from 1999 to 2012. Recent imagery indicates the property was also operated as Metro City Auto Repair. Sites such as these generate wastes which if handled improperly could have the potential to contaminate local soil. Other properties are listed in the immediate vicinity which also could have the potential to generate similar wastes. Considering the past operating history of the subject property and immediately surrounding properties, a potential vapor encroachment condition exists.
- Fuel storage tanks are known to have been located on the subject property at 1125 Whitlock Avenue, including four tanks at the southern-most extent of the parcel. The four tanks are known to have been closed in place, and are registered as such with NYSDEC. Although tank closure documentation was not obtained, based on the regulatory status of these tanks, they were presumably closed to the satisfaction of NYSDEC.

We recommended completing a Phase II Site Assessment, to evaluate soil quality and soil vapor in the vicinity of past site operations and around the perimeter of the aforementioned fuel storage tanks. Summarized below are our findings and conclusions.

## **2.0 FIELD ACTIVITIES**

### **2.1 Geophysical Surveys / Utility Mark Out**

A geophysical services contractor was retained to conduct a mark-out of private utilities and screen the proposed boring locations on February 1, 2016. The mark out was conducted in the following areas:

- Plastics manufacturing facility in the northern portion of the Site (1156 E 165<sup>th</sup> Street).
- A storage facility area and active auto repair shops in the southern portion of the Site (1125 Whitlock Avenue).

The geophysical services contractor was unable to detect any underground storage tanks across the property during their survey.

### **2.2 Soil Sampling**

Following the private utility mark out, 13 (thirteen) soil borings were completed on February 2 and February 3, 2016 for collection of subsurface soil samples (Figure 2). Soil borings on 1125 Whitlock Avenue were completed through the use of a track-mounted Geoprobe<sup>TM</sup> 540M equipped with 4-foot long, 1 ¾ -inch diameter core barrels fitted with acetate liners. Soil borings on 1156 East 165<sup>th</sup> Street were completed through the use of a track-mounted Geoprobe<sup>TM</sup> 6610DT equipped with 5-foot long, 1 ¾ -inch diameter core barrels fitted with acetate liners. Eight borings located within 1125 Whitlock Avenue were sampled continuously from the ground surface to a maximum depth of 16 feet below ground surface (bgs); five borings located within 1156 East 165<sup>th</sup> Street were sampled continuously from the ground surface to a maximum depth of 15 feet below grade. The project geologist recorded detailed logs of each boring which are attached to this report and summarized below. In general, the borings on 1125 Whitlock Avenue consisted of brown sand silt mixtures and the borings on 1156 East 165<sup>th</sup> Street consisted of historic fill. Bedrock was encountered in several borings.

Soil samples were screened in the field for the presence of VOCs using a photoionization detector (PID) and headspace techniques. With exception to SB-11 where two samples were collected, one soil sample from each boring was submitted to a NYSDOH-approved laboratory for analysis of TCL VOCs via USEPA Method 8260, PAH SVOCs via USEPA Method 8270, and TAL Metals via USEPA Methods 6010/7471.

**Boring SB-01** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of light brown fine sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 13-15 feet interval.

**Boring SB-02** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of brown fine sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 6-8 feet interval.

**Boring SB-03** was advanced to approximately 8.5 feet below grade, where refusal was encountered. Groundwater was not encountered. The soil encountered consisted predominately of brown fine sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 6-8 feet interval.

**Boring SB-04** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of brown fine sand-silt mixtures with crushed rock fragments throughout. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 13-15 feet interval.

**Boring SB-05** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of brown sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 13-14 feet interval.

**Boring SB-06** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of historic fill. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 13-14 feet interval.

**Boring SB-07** was advanced to approximately 3.5 feet below grade, where refusal was encountered. Groundwater was not encountered. The soil encountered consisted predominately of sand-silt mixtures. Maximum PID reading was 9.4 ppm. A sample was collected from the 3-3.5 feet interval.

**Boring SB-08** was advanced to approximately 16 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of brown sands. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 9-10 feet interval.

**Boring SB-09** was advanced to approximately 9 feet below grade, where refusal was encountered. Groundwater was not encountered. The soil encountered consisted predominately of historic fill with sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 6-8 feet interval.

**Boring SB-10** was advanced to approximately 15 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of brown sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 12-14 feet interval.

**Boring SB-11** was advanced to approximately 15 feet below grade. Groundwater was not encountered. The soil encountered consisted predominately of sand-silt mixtures with some historic fill. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 3-4 feet and 11-13 feet interval respectively.

**Boring SB-12** was advanced to approximately 8 feet below grade, where refusal was encountered. Groundwater was not encountered. The soil encountered consisted predominately sand-silt mixtures. No elevated PID readings were recorded throughout the boring profile. A sample was collected from the 0-2 feet interval.

**Boring SB-13** was advanced to approximately 3 feet below grade, where refusal was encountered. Groundwater was not encountered. The soil encountered consisted predominately of sand-silt mixtures. No

elevated PID readings were recorded throughout the boring profile. A sample was collected from the 3-3.5 feet interval.

### **2.3 Soil Vapor Sampling**

On February 1, 2016, PVES personnel installed five subsurface vapor sampling points (SV-1 through SV-5) (Figure 3) across the subject property.

Sampling points were installed into the subsurface using a hammer drill and 5/8-inch drill bit. Polyethylene tubing was inserted to the bottom of each borehole and then sealed at the surface using non-volatile organic compound (VOC) emitting clay.

A helium tracer test was conducted to confirm the integrity of the seal at each sample location. The tubing from each sampling point was purged at 0.2 L/min using a RAE Systems MultiRAE Lite (1-3 tubing volumes were purged from each location), and then attached directly to a certified clean Summa canister with a regulator set to collect a sample over a 2-hour period. Samples were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15.

## **3.0 RESULTS**

### **3.1 Soil Samples**

Soil sample results are summarized in Table 1-3. Analytical reports are attached.

#### **VOCs**

VOCs were detected in 5 of the 14 soil samples collected. Three samples contained VOCs detected at concentrations exceeding Unrestricted Use Soil Cleanup Objectives (UUSCOs); no samples contained VOCs at concentrations exceeding Restricted Residential Soil Cleanup Objectives (RRSCOs). The compounds detected are sometimes associated with laboratory cross-contamination of samples during analysis. UUSCO exceedances are summarized below:

- SB-02 (6-8')
  - Acetone (396 ug/kg)
- SB-09 (6-8')
  - Acetone (54.1 ug/kg)
  - Methyl Ethyl Ketone (2-Butanone) (227 ug/kg)
- SB-11 (11-13')
  - Acetone (106 ug/kg)

#### **SVOCs**

SVOCs were detected in 3 of the 14 soil samples collected. Two soil samples, SB-03 and SB-11, contained SVOCs at concentrations exceeding UUSCOs and RRSCOs. These compounds are sometimes associated with historical fill. All exceedances are summarized below:

- SB-03 (6-8')

- **Benzo(A)Anthracene (1,050 ug/kg)\***
- Chrysene (1,080 ug/kg)
- **Indeno(1,2,3-C,D)Pyrene (594 ug/kg)\***
- SB-11 (3-4')
  - **Benzo(A)Anthracene (7,290 ug/kg)\***
  - **Benzo(A)Pyrene (5,740 ug/kg)\***
  - **Benzo(B)Fluoranthene (4,640 ug/kg)\***
  - Benzo(K)Fluoranthene (3,290 ug/kg)
  - **Chrysene (7,890 ug/kg)\***
  - **Indeno(1,2,3-C,D)Pyrene (4,740 ug/kg)\***

\* Compounds detected at concentrations exceeding **Restricted Residential Soil Cleanup Objectives (RRSCOs)**.

## Metals

Metals were detected in all 14 of the 14 soil samples collected. Eight of the sample collected contained metals at concentrations exceeding UUSCOs. One soil sample, SB-11, contained metals detected at concentrations exceeding RRSCOs. These metals are sometimes associated with historical fill. All exceedances are summarized below:

- SB-02 (6-8')
  - Lead (64.5 mg/kg)
- SB-03 (6-8')
  - Lead (103 mg/kg)
- SB-06 (13-14')
  - Lead (134 mg/kg)
- SB-07 (3-3.5')
  - Lead (341 mg/kg)
  - Zinc (699 mg/kg)
- SB-08 (18-20')
  - Lead (139 mg/kg)
  - Zinc (286 mg/kg)
- SB-11 (3-4')
  - **Barium (1,110 mg/kg)\***
  - Copper (70.5 mg/kg)
  - **Lead (1,170 mg/kg)\***
  - Zinc (484 mg/kg)
  - **Mercury (3.21 mg/kg)\***
- SB-12 (0-2')
  - Lead (106 mg/kg)

- SB-13 (3-3.5')
  - Nickel (31.0 mg/kg)

\* Compounds detected at concentrations exceeding **Restricted Residential Soil Cleanup Objectives (RRSCOs)**

### 3.2 Soil Vapor Samples

Soil vapor results are summarized in Table 4. Analytical reports are attached.

#### VOCs

Several VOCs were detected at concentrations exceeding the guidance values per New York State Department of Health (NYSDOH) "Guidance for Evaluating Soil Vapor Intrusion in the State of New York," October 2006, Appendix C.1 NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes, 1997-2003, Indoor Air- Median Results.

Compounds detected in vapor samples at concentrations exceeding Indoor Air- Median parameters are summarized below:

- SV-1
  - **Tetrachloroethylene (PCE) (1,200 µg/m3)\***
  - **Trichloroethylene (TCE) (390 µg/m3)\***
- SV-2
  - Acetone (120 µg/m3)
  - Benzene (6.5 µg/m3)
  - Cyclohexane (17 µg/m3)
  - **Methyl Ethyl Ketone (2-Butanone) (380 µg/m3)\***
  - N-Heptane (35 µg/m3)
  - N-Hexane (11 µg/m3)
  - O-Xylene (1,2-Dimethylbenzene) (7.3 µg/m3)
  - **Tetrachloroethylene (PCE) (250 µg/m3)\***
  - Toluene (41 µg/m3)
- SV-3
  - **1,2,4-Trimethylbenzene (510 µg/m3)\***
  - **1,3,5-Trimethylbenzene (Mesitylene) (530 µg/m3)\***
  - **4-Ethyltoluene (430 µg/m3)\***
  - Acetone (130 µg/m3)
  - Benzene (8.1 µg/m3)
  - **Cyclohexane (110 µg/m3)\***
  - **Ethylbenzene (51 µg/m3)\***
  - **Methyl Ethyl Ketone (2-Butanone) (130 µg/m3)\***
  - **N-Heptane (83 µg/m3)\***
  - N-Hexane (9.5 µg/m3)
  - **O-Xylene (1,2-Dimethylbenzene) (310 µg/m3)\***
  - **Tetrachloroethylene (PCE) (3,600 µg/m3)\***
  - Toluene (66 µg/m3)

- **Trichloroethylene (TCE) (34 µg/m<sup>3</sup>)\***
- SV-4
  - Acetone (24 µg/m<sup>3</sup>)
  - Chloroform (2.5 µg/m<sup>3</sup>)
  - Cyclohexane (1.5 µg/m<sup>3</sup>)
  - Dichlorodifluoromethane (2.8 µg/m<sup>3</sup>)
  - Methyl Tert-Butyl Ether (MTBE) (1.3 µg/m<sup>3</sup>)
  - N-Heptane (4.9 µg/m<sup>3</sup>)
  - N-Hexane (5.3 µg/m<sup>3</sup>)
  - O-Xylene (1,2-Dimethylbenzene) (1.2 µg/m<sup>3</sup>)
- SV-5
  - Acetone (160 µg/m<sup>3</sup>)
  - Methyl Ethyl Ketone (2-Butanone) (8.5 µg/m<sup>3</sup>)

\* Compounds detected at concentrations exceeding NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York," October 2006, Appendix C.1 NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes, 1997-2003, **Indoor Air-99th Percentile Result.**

Several chlorinated hydrocarbons including tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in the sub-slab samples collected from the subject property at concentrations which would require monitoring and possibly mitigation, depending on the associated indoor air concentrations, according to NYSDOH's Guidance for Evaluating Soil Vapor Intrusion in the State of New York document dated October of 2006 (see tabulated on the following page).

**NYSDEC Soil Vapor/Indoor Air Matrix 1**  
 for Trichloroethene (TCE) and Carbon tetrachloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )			
	< 0.25	0.25 to < 1	1 to < 5.0	5.0 and above
< 5	1. No further action	2. Take reasonable and practical actions to identify source(s) and reduce exposures	3. Take reasonable and practical actions to identify source(s) and reduce exposures	4. Take reasonable and practical actions to identify source(s) and reduce exposures
5 to < 50	5. No further action	6. MONITOR	7. MONITOR	8. MITIGATE
50 to < 250	9. MONITOR	10. MONITOR / MITIGATE	11. MITIGATE	12. MITIGATE
250 and above	13. MITIGATE	14. MITIGATE	15. MITIGATE	16. MITIGATE

**NYSDEC Soil Vapor/Indoor Air Matrix 2**  
 for **Tetrachloroethene (PCE)** and **1,1,1-Trichloroethane (1,1,1-TCA)**

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )			
	< 3	3 to < 30	30 to < 100	100 and above
< 100	1. No further action	2. Take reasonable and practical actions to identify source(s) and reduce exposures	3. Take reasonable and practical actions to identify source(s) and reduce exposures	4. Take reasonable and practical actions to identify source(s) and reduce exposures
100 to < 1,000	5. MONITOR	6. MONITOR / MITIGATE	7. MITIGATE	8. MITIGATE
1,000 and above	9. MITIGATE	10. MITIGATE	11. MITIGATE	12. MITIGATE

Per the NYSDOH's Guidance for Evaluating Soil Vapor Intrusion in the State of New York document dated October of 2006 (see above), the following actions are necessary at the following locations:

- **SV-1 - MITIGATE**
- **SV-2 - MITIGATE**
- **SV-3 - MITIGATE**

Mitigation in accordance with the NYSDOH guidance documents in existing buildings typically includes the ventilation of sub-slab vapors, or the incorporation of a vapor barrier and ventilation system in new construction.

#### **4.0 CONCLUSIONS**

##### **4.1 Subsurface Soil**

1. VOCs were detected in three soil samples at concentrations exceeding UUSCOs. No samples collected contained VOCs at detections exceeding RRSCOs.
2. SVOCs were detected in two soil samples collected at concentrations exceeding RRSCOs.
3. Metals were detected in one soil sample at concentrations exceeding RRSCOs

##### **4.2 Soil Vapor**

1. PCE and TCE were detected at concentrations which would require mitigation.

## 5.0 RECOMMENDATIONS

We recommend the following:

1. SVOCs and metals detected in subsurface soil samples are consistent with historic fill, which is common to urban environments. Locations where contaminants exceed RRSCOs represent areas of contaminated soil which will require further characterization, excavation and off-site disposal. Past site operations may have adversely affected subsurface soils. Excavation and handling of historical fill during future construction activities must be conducted in accordance with applicable rules and regulations; materials may necessitate additional testing and analysis for disposal purposes, and community air monitoring may be necessary. These procedures are typical on urban redevelopment sites.
2. The exact locations of the aforementioned USTs located on both 1156 E 165<sup>th</sup> Street and 1125 Whitlock Avenue were not discovered during field activities. If these tanks are exposed by excavation in the future, and determined to be regulated, these tanks will require closure in accordance with appropriate NYSDEC regulations and procedures.
3. Contaminated vapors have the potential to impact indoor air quality, and a vapor mitigation system should be incorporated into any future development, including a vapor barrier and possibly a sub-slab venting system beneath the foot print of buildings to mitigate the vapor intrusion.

Feel free to contact us if you have any questions.

Sincerely,

PVE SHEFFLER, LLC

Notes:  
Standards are for respective Soil Cleanup Objectives (SCOs) per NYSDEC CP-51 and Part 375 Unrestricted Use SCOs and Restricted Residential SCOs  
All concentrations are in ug/kg unless otherwise indicated;  
Yellow highlighted type designates those compounds detected at concentrations exceeding UUSCOs;  
Red highlighted type designates those compounds detected at concentrations exceeding RRSCOs;  
NE = No standard established.  
MDL = Method Detection Limit  
ND= Not detected at MDL for sample.

Table 4 - Soil Vapor Sample Results  
Samples collected February 1, 2016  
Collected from: 1156 E 165th Street & 1125 Whitlock Avenue, Bronx, New York  
PVES File #560999

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*

*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

*"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.*

*"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### Warranty.

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### Scope and Compensation.

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### Prices.

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### Limitations of Liability.

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### Hazard Disclosure.

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### Sample Handling.

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### Legal Responsibility.

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### Assignment.

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### Force Majeure.

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### Law.

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

*This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.*

## Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

*"<" = Analyzed for but not detected at or above the quantitation limit.*

*"E" = Result has been estimated, calibration limit exceeded.*

*"Z" = See case narrative.*

*"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.*

*"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.*

*"B" = Method blank contained trace levels of analyte. Refer to included method blank report.*

*"J" = Result estimated between the quantitation limit and half the quantitation limit.*

*"L" = Laboratory Control Sample recovery outside accepted QC limits.*

*"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.*

*"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.*

*"\*" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*

*"(1)" = Indicates data from primary column used for QC calculation.*

*"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.*

*"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.*

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

# GENERAL TERMS AND CONDITIONS

## LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, term or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

### Warranty.

Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

### Scope and Compensation.

LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB will use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

### Prices.

Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

### Limitations of Liability.

In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

### Hazard Disclosure.

Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

### Sample Handling.

Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

### Legal Responsibility.

LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

### Assignment.

LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

### Force Majeure.

LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

### Law.

This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 02, 2016 and listed below. The project was identified as your project: **560999**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 16B0057**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

**Approved By:**

Benjamin Gulizia  
Laboratory Director

460-00-4	Surrogate: p-Bromofluorobenzene	96.6 %	72-118								

## Notes and Definitions

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
CCV-A	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf ). This applies to detected analytes only.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

**NOTE:** York's Std. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested. Your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

**NOTE:** York's Std. Terms & Conditions are listed on the back side of this document.

PVE, LLC is submitting this report for work performed at the above-referenced site. This report has been prepared in conformance with the scope and limitations ASTM Standard E-1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. If you have any questions or comments, please contact one of the individuals listed below. We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR § 312. We have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PVE, LLC

Conor B. Tarbell  
Assistant Project Manager

Christopher B. Brown, CPG  
Director of Environmental Services/Environmental Professional

## APPENDICES

Appendix A	Site Maps
Appendix B	EDR Database Review Reports
Appendix C	Additional Reviewed Records
Appendix D	Photographs
Appendix E	Qualifications
Appendix F	Scope and Limitations of Report
Appendix G	User Questionnaire

## 1.0 Introduction

### 1.1 Objectives of Report

This Environmental Site Assessment (ESA) is intended to identify *recognized environmental conditions* (RECs) with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products on the subject property (defined in Section 3.0). The term *recognized environmental conditions* (REC) is defined in accordance with **ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process** as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Consideration is given to potential impacts to soil, groundwater, vapor, and other media.

### 1.2 Scope and Limitations of Report

Visual inspection of the subject property, a review of regulatory records and documents, and a review of historical records and documents are performed in accordance with ASTM E1527-13 and the appended Scope and Limitations (Appendix F) with the exception of any special terms and conditions in Section 1.4. Note that, as stated in Practice 1527-13, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost.

### 1.3 Significant Assumptions

PVE, LLC (PVE) assumes that all database records, historical information, interviews conducted, and information obtained from others regarding the subject property are from reliable sources. No attempt was made to independently verify the reliability of said sources, as it is not required to verify the information provided according to Section 7.5.2.1 of ASTM E1527-13. Where access to portions of the site or to structures on the site was unavailable or limited, PVE renders no opinion as to the presence of regulated or hazardous materials or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure. Conclusions and recommendations are based on information obtained from said sources and a visual inspection of the subject property on the date listed herein. References and sources used for the preparation of this report are documented in this report.

## **1.4 Special Terms and Conditions**

An environmental liens and activity and use limitations (AULs) search was not included with the scope of this report, as per the direction of the user. In order to satisfy the ASTM E 1527-13 requirements for a Phase I ESA, a search for environmental liens and AULs must be appended.

## **1.5 User Reliance**

The user is the party seeking to use Practice E1527 to complete this environmental site assessment of the subject property. The user has specific obligations for completing a successful application of Practice E1527 outlined in Section 6 of E1527. Completion of the user questionnaire (attached in Appendix G) helps satisfy these obligations.

In addition to the user, additional parties may rely on the contents of this environmental site assessment as listed below.

User:	Park Management Inc.
Authorized to rely on this report:	Park Management Inc. 571 East New York Avenue, Suite A Brooklyn, New York

The scope of this Phase I ESA may not meet the needs of other users. Any reliance on the contents of this report by any third party is the sole responsibility of that party.

## **1.6 Definitions**

Below are some important definitions (as defined in E1527-13) that are not otherwise defined in this report:

*Fill dirt:* Dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of a real property. It does not include material that is used in limited quantities for normal landscaping activities.

*Material threat:* A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

*Migrate/Migration:* For the purposes of a Phase I ESA, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Note that vapor migration in the subsurface is described in Guide E2600; however, for the purposes of a Phase I ESA, there is no requirement to apply the Guide E2600 standard to achieve compliance with all appropriate inquiries.

## **2.0 Site Description**

### **2.1 Subject Property Location**

Street Address:	1156 East 165 <sup>th</sup> Street 1125 Whitlock Avenue
Municipality:	Bronx
County:	Bronx County
State:	New York
Tax Parcel ID:	Block 2756 Lot 90 & Lot 85
Size:	Lot 90: 19,778 sq. ft. Lot 85: 39,760 sq. ft.

See Appendix A for site maps. The parcel outline was obtained from the NYC Department of Finance Digital Tax Map (<http://gis.nyc.gov/taxmap/map.htm>).

### **2.2 General Site Features, Characteristics, and Current Operations**

Site Features:	The subject property consists of two lots (Block 2756 Lot 90 and Block 2756 Lot 85). Lot 90 is a one-story manufacturing structure and Lot 85 contains multiple rectangular one story structures used for storage purposes.
Current Use:	Lot 90 is a plastic parts manufacture; Lot 85 is a storage facility and auto service repair area.
Topography:	Generally flat, sloping downward to the north.
Potable Water Supply:	Municipal Utilities
Sewage Disposal System:	Municipal Utilities
Means of heating/cooling:	Natural Gas

### **2.3 Current Uses of Adjoining Properties**

Adjoining properties are any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them. Adjoining parcels were obtained from the NYC Department of Finance Digital Tax Map (<http://gis.nyc.gov/taxmap/map.htm>).

Below is a table describing the current uses of adjoining properties.

### 1156 East 165<sup>th</sup> Street

<u>Direction from Subject Property</u>	<u>Address</u>	<u>Owner</u>	<u>Notes</u>	<u>Impact to Subject Property</u>
West	1125 Whitlock Avenue (Block 2756 Lot 85)	1125 Whitlock Garages	Transportation and utility	Not Anticipated
South	1125 Whitlock Avenue (Block 2756 Lot 85)	1125 Whitlock Garages	Transportation and utility	Not Anticipated
East	1324 Westchester Avenue (Block 2759 Lot 100)	Penn Central Company	Transportation and utility	Not Anticipated
North	1056 Lowell Street (Block 2757 Lot 44)	P.D.J. Simone Realty Co.	Industrial and manufacturing	Not Anticipated

North	1156 East 165 <sup>th</sup> Street (Block 2756 Lot 90)	Alan Backelman	Industrial and manufacturing	Not Anticipated

### 3.0 Database Search

A review of state and federal documents and databases was performed to identify recorded hazardous waste or regulated substance activities on or near the subject property. Information from state and federal databases was compiled by Environmental Data Resources (EDR), an independent subcontractor to PVE. The information presented below is a summary of this report. A complete listing of the sources searched and a complete copy of the database report are provided in Appendix B. The search distances as assigned in ASTM E1527-13 were used at a minimum for each of the following environmental record sources. Additional reviewed records are provided in Appendix C.

Not all sites identified in the database records can be accurately located due to incomplete or conflicting information supplied to the regulatory agencies. Asterisked (\*) sites are indicative of sites listed as un-mappable (“orphan”) in the EDR database report. Based on location information provided, the asterisked sites may be located within the appropriate search radius and are included in this Phase I ESA report. Information about these sites can be reviewed in the EDR Radius Map Report in Appendix B.

#### 3.1 Federal and State Hazardous Waste Sites

##### *Federal National Priority List*

National Priority Listing (NPL) sites are those listed with the USEPA as hazardous waste disposal sites, also known as Superfund sites. Proposed and delisted NPL site lists are also maintained by the USEPA. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NPL	No	0 / 0*	None	Not Present
Proposed NPL	No	0 / 0*	None	Not Present
DELISTED NPL	No	0 / 0*	None	Not Present

##### *Federal SEMS*

The SEMS (Superfund Enterprise Management System) list details proposed and existing federal Superfund sites pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The USEPA also maintains a SEMS-ARCHIVE list, which tracks sites that have no further interest under the Federal Superfund Program based on available information. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
SEMS	No	0 / 0*	None	Not Present
SEMS-ARCHIVE	No	0 / 0*	None	Not Present

### ***State-Equivalent NPL & SEMS***

Inactive State Hazardous Waste Disposal Sites are designated by NYSDEC and are state-equivalent SEMS sites. NYSDEC also maintains an inventory of delisted SHWS. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY SHWS	No	1 / 0*	Not Anticipated	See Below
NY DEL SHWS	No	0 / 0*	None	Not Present

SHWS:

- Bethel Cleaners, located at 1120 Westchester Avenue, 892 feet west northwest (topographically up-gradient) of the subject property. Chlorinated solvents were disposed of from this site.

*Based on the distance of this listing in relation to the subject property, PVE does not consider this listing to be a REC.*

### ***Hazardous Substance Waste Disposal Sites***

The Hazardous Substance Waste Disposal Sites (HSWDS) Inventory is maintained by New York State. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY HSWDS	No	0 / 0*	None	Not Present

## **3.2 Hazardous Waste Treatment, Storage, or Disposal**

### ***RCRA Treatment, Storage, and Disposal Facilities***

The database of RCRA facilities for treatment, storage, or disposal of hazardous materials (RCRA TSD) is maintained by the USEPA. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
RCRA-TSDF	No	0 / 0*	None	Not Present

### ***RCRA Corrective Action Sites***

The USEPA maintains a database of sites within the RCRA Corrective Action program, which are facilities permitted by the USEPA for treatment, storage, or disposal of hazardous waste which have conducted or are currently conducting a corrective action as regulated under the Resource Conservation and Recovery Act. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1.0 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
CORRACTS	No	1 / 0*	Not Anticipated	See Below

- American Bank Note Company, located at Tiffany Street and Garrison Avenue, 2,654 feet southwest (topographically up-gradient) of the subject property. The assessment determined that the area was designated a low corrective action priority and current human exposures are under control and have been verified. The assessment date was not provided.

*Based on the distance of this listing in relation to the subject property, PVE does not consider this listing to be a REC.*

### **3.3 Hazardous Waste Generation**

The USEPA maintains a database of facilities that generate hazardous waste. Large Quantity Generators (LQG) generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. Small Quantity Generators (SQG) generate between 100 kg and 1,000 kg of hazardous waste per month. Conditionally-exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. Non-generators are sites that do not presently generate hazardous waste. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
RCRA-LQG	No	0 / 0*	None	Not Present
RCRA-SQG	No	0 / 0*	None	Not Present
RCRA-CESQG	No	1 / 0*	Not Anticipated	See Below
RCRA NonGen/NLR	No	1 / 0*	Not Anticipated	See Below

RCRA-CESQG:

- NYCT-Whitlock Avenue Station, located at Whitlock Avenue and Lowell Street, 306 feet northeast (topographically down-gradient) of the subject property. No violations were found in association with this property.

RCRA Non-generator:

- NYS DOT Contract D254615, located at Whitlock Avenue and Aldus Street, 30 feet south (topographically up-gradient) of the subject property. No violations were found in association with this property.

*Based on the lack of violations, distance and/or down-gradient nature of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### 3.4 State Landfill and/or Solid Waste Disposal Sites

NYSDEC maintains a database of solid waste disposal facilities (SWF) and landfills (LF). Further information can be reviewed in Appendix B.

EDR Database Acronym:	Subject Property:	Properties within 0.5 mile:	Impact to Subject Property	Rationale
NY SWF/LF	No	7 / 0*	Not Anticipated	See Below

- The Sheridan Expressway – Tully Construction Company, located at Sheridan Expressway Edgewater Road, 1,427 feet northwest (topographically up-gradient) of the subject property, is listed as an inactive transfer station.
- The Alamar Carting Corporation, located at 1351 Garrison Avenue, 696 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.
- The Specialty Motor Cars Inc., located at 1125 Bronx River Avenue, 937 feet northeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.
- The Elite Motor Cars Inc., located at 985 Bronx River Avenue, 1,264 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.
- The Paper Fibers Corp., located at 960 Bronx River Avenue, 1,477 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.
- The Bronx Iron & Metal Company, located at 850 Edgewater Road, 1,946 feet southeast (topographically down-gradient) of the subject property, is listed as an inactive transfer station.
- The LKQ Hunts Point Auto Parts Corporation, located at 1480 Sheridan Expressway, 2,309 feet northeast (topographically down-gradient) of the subject property, is an active transfer station.

*Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### **3.5 State Registered Storage Tanks**

NYSDEC maintains a database of petroleum bulk storage (PBS) facilities with regulated storage tanks. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
UST	Yes	0 / 0*	Potentially	See Below
AST	No	2 / 0*	Not Anticipated	See Below

#### **UST Site:**

- Whitlock Parking and Storage, 1125 Whitlock Avenue, PBS #2-603713, the subject property. The following tanks are associated with the subject property: Four 1,000-gallon gasoline USTs that were closed in place on December 1, 1999. The installation date was not reported.

*Based on the lack of closure documentations or referenced to tightness testing or environmental sampling, PVE considers this listing to be a REC at this time.*

#### **AST Site:**

- 165<sup>th</sup> Street Bronx LLC, located on 1151 East 165<sup>th</sup> Street, PBS #2-611310, 92 feet northwest (topographically up-gradient) of the subject property. The following tanks are associated with the property: One 1,080-gallon #4 fuel oil steel tank installed January 1, 1990. The tank is reported closed; the date is not reported.
- Aldus Green Associates, located on 1032 Aldus Street, PBS #2-213624, 133 feet south (topographically up-gradient) of the subject property. The following tanks are associated with the property: One 5,000-gallon #2 fuel oil tank that was installed on February 18, 1977 and is still active.

*Fuel storage tanks operated in accordance with applicable rules and regulations, would not represent a REC, however, unreported releases can occur and would adversely impact the subject property. Based on the information provided, PVE does not consider these listings to be RECs.*

### **Chemical Bulk Storage Database**

NYSDEC maintains a database of facilities store regulated hazardous substances tanks (CBS), including aboveground tanks with capacities of 185 gallons or greater (CBS AST), and/or in underground tanks of any size (CBS UST). Only those that cannot be precisely located (orphans)

or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
CBS	No	0 / 0*	None	Not Present
CBS AST	No	1 / 0*	Not Anticipated	See Below
CBS UST	No	0 / 0*	None	Not Present

- LKQ Hunts Point Auto Parts Corp., located at 1480 Sheridan Expressway, 1,204 feet north (topographically down-gradient) of the subject property, CBS #2-000383. The tanks facility status is listed as ‘in service’ and no violations have been reported. No additional information is provided.

*Based on the distance of this listing in relation to the subject property, PVE does not consider this listing to be a REC.*

### **3.6 Petroleum and Hazardous Material Releases**

#### ***Emergency Response Notification System***

The USEPA Emergency Response Notification System (ERNS) stores information reported to the USEPA on sudden and/or accidental releases of hazardous substances to the environment. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
ERNS	No	None	Not Present

#### ***Petroleum Spills***

NYSDEC maintains a database of petroleum spills reported to the department. Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
SPILLS - Open File	No	0 / 0*	None	Not Present
SPILLS - Closed File	No	2 / 0*	Not Anticipated	See Below

- NYSDEC Spill #8706894, located at 1151 East 165<sup>th</sup> Street, 108 feet northwest (topographically up-gradient) of the subject property occurred on November 13, 1987 when a spill was reported in the basement of the building. The spill file was closed November 13, 1987.
- NYSDEC Spill #9913058, located at Manhole 17576, Aldus Street and Longfellow Avenue, 136 feet southwest (topographically up-gradient) of the subject property occurred on November 16, 2004 when a caller reported a dielectric fluid spill from a cable onto a manhole. Oil did not enter sump pit in the manhole and the spill was contained in an area away from the sump pit. The spill file was closed on February 16, 2000.

*Based on the files being closed to the satisfaction of the NYSDEC, PVE does not consider these listings to be RECs.*

### ***State Leaking Storage Tank List***

NYSDEC maintains a database of leaking registered storage tank incident reports (LTANKS). Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment. Due to the high frequency of LUSTs in the applicable search radius, only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. All LUSTs files, both closed and open, within the search radius were reviewed.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
LTANKS - Open File	No	0 / 0*	None	Not Present

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
LTANKS - Closed File	No	37 / 0*	Not Anticipated	All closed

*All 37 LTANK files were reviewed by PVE personnel. Based on the distance and/or down-gradient nature of these listings in relation to the subject property and the files being closed to the satisfaction of the NYSDEC, PVE does not consider these listings to be RECs.*

### **3.7 Brownfield Sites**

A Brownfield is any real property where redevelopment or reuse may be complicated by the presence or potential presence of hazardous waste, petroleum, pollutants, or contaminants. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY BROWNFIELDS	No	2 / 0*	Not Anticipated	See Below
US BROWNFIELDS	No	1 / 0*	Not Anticipated	See Below

#### **NY BROWNFIELDS**

- This Brownfield is located at 1095 Southern Boulevard, 1,325 feet west (topographically up-gradient) of the subject property. The building on this site was destroyed by a fire in 2008. The site historically has been used for several commercial uses, including a dry cleaning facility. Chlorinated solvents that were detected on-site are related to the past dry cleaning use. Tetrachloroethylene (PCE) have been detected in soil, groundwater and soil vapor. Information submitted with the BCP application concerning the conditions at the site are under review and will be revised as additional information becomes available.
- Loral Electronic Systems, located at 825 Bronx River Avenue, 2,172 feet southeast (topographically down-gradient) of the subject property. The property was contaminated with arsenic, chromium, lead mercury, VOCs and SVOCs and these contaminants are impacting the soil and groundwater. Information submitted with the BCP application concerning the conditions at the site are under review and will be revised as additional information becomes available.

#### **US BROWNFIELDS**

- The Boathouse, located at 1399 Lafayette Avenue, 2,459 feet southeast (topographically down-gradient) of the subject property. The property was a former fur dressing plant. No other information was provided.

*Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### 3.8 State Voluntary Cleanup Program Sites

The VCP was established to address the environmental, legal, and financial barriers that hinder redevelopment and reuse of contaminated sites, and to enhance private sector cleanup of Brownfield sites by enabling parties to remediate using private rather than public funds.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY VCP	No	2 / 0*	Not Anticipated	See Below

- The Boathouse, located at 1399 Lafayette Avenue, 2,459 feet southeast (topographically down-gradient) of the subject property. The property was a former fur dressing plant. No other information was provided.
- Dexter Chemical Corporation, located at 819-845 Edgewater Road and 810-842 Whittier Street, 2,186 feet southeast (topographically down-gradient) of the subject property. In the 1950s, the site was a paint manufacturing company, metal works and a door and art craft table company. The company manufactured industrial organic chemicals (primarily phosphation and sulfation batches) as well as other solvents and paint thinners. Investigations led to the discovery of the following contaminants in soil and ground water: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals.

*Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE/LENV does not consider these listings to be RECs.*

### 3.9 Federal & State Engineering & Institutional Controls, & Activity & Use Limitations

Activity and use limitations (AULs) are legal or physical restrictions or limitations on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants or to prevent activities that could interfere with the effectiveness of a response action protecting public health or the environment. AULs are often recorded at the land title office (commonly the County Clerk's office). AUL information is not typically contained in a chain of title report. In some cases, an AUL may not have been filed at the land title office but may be found in a separate environmental agency database.

Engineering control (EC) and institutional control (IC) listings are maintained by the USEPA and NYSDEC and are controls designed to prevent exposure to contaminants remaining on a site. Engineering and institutional controls are types of AULs. Engineering controls are physical modifications to a site. Institutional controls are legal or administrative restrictions on the use of, or access to, a site.

Readily available EC and IC listings were reviewed by EDR, but other AUL information may be applicable. If an AUL search was conducted as part of the environmental liens search, the results are indicated below. However, AULs may only exist in project documentation, which may not be readily available to the environmental professional. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
US ENG CONTROLS	No	None	Not Present
NY ENG CONTROLS	No	None	Not Present
US INST CONTROL	No	None	Not Present
NY INST CONTROL	No	None	Not Present
AULs	Not Searched	N/A	Not Searched

### 3.10 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws. An environmental liens report was not acquired for this report.

	<i>Subject Property:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
Environmental Liens	Not Searched	N/A	Not Searched

### 3.11 Other Conditions of Concern

#### *Manifests*

A manifest is a document that lists and tracks hazardous waste from the generator, through transporters, to a TSD facility indicating that hazardous wastes have been properly transported in accordance with state and federal regulations. Details pertaining to these sites can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Adjoining Properties:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
NY MANIFEST	No	1 / 0*	Not Anticipated	See Below

*Based on the lack of violations for the property described in the manifests, PVE does not consider this listing to be a REC.*

### ***Manufactured Gas Plants***

Manufactured gas plants (MGPs) produced gas for fuel until the 1950s. A significant amount of waste and hazardous byproducts were typically generated and often disposed of at the plant, resulting in contamination of the site.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 1 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR MGP	No	1 / 0*	Not Anticipated	See Below

- East 173<sup>rd</sup> Street Works, located at West Farms Road and Bronx River, 3,233 feet northeast (topographically down-gradient) of the subject property, is listed as an MGP. No additional information was provided about the site.

*Based on the distance and down-gradient nature of this listing in relation to the subject property, PVE does not consider this listing to be a REC.*

### ***Drycleaners***

EDR has searched NYSDEC's list of registered drycleaning facilities. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
DRYCLEANERS	No	2 / 0*	Not Anticipated	See Below

- Lucky/Bethel/J&Y Cleaners, located at 1120 (1240) Westchester Avenue, 894 feet northwest (topographically up-gradient) of the subject property.
- Aldus Dry Cleaners, located at 945 Aldus Street, 1,042 feet southwest (topographically up-gradient) of the subject property.

*Based on the distance of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### ***Historic Service Stations***

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental

concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR US Hist Auto Stat	Yes	9 / 0*	Potentially	See Below

- 1125 Whitlock Avenue, the subject property, is identified as Sonero Auto Repair from 1999 to 2012.

*Based on this listing being located on the subject property and the types of chemicals used in facilities such as these, PVE considers this listing to be a REC.*

- 1361 Bruckner Boulevard, 407 feet southeast (topographically up-gradient) of the subject property, is identified as Maritza Service Station from 1999 to 2001, Bronx Auto Tech Inc. in 2002, P & P Auto Clinic Center Inc. in 2003, Naz Auto Repair Corp. from 2004 to 2008, Bruckner Muffler & Tires Repair Shop in 2011.
- 1244 Westchester Avenue, 572 feet northwest (topographically up-gradient) of the subject property, is identified as Felix Auto Repair in 2007.
- 1133 Whitlock Avenue, 438 feet northeast (topographically down-gradient) of the subject property is identified as Macorix Repairs from 2011 to 2012.
- 1141 Whitlock Avenue, 460 feet northeast (topographically down-gradient) of the subject property is identified as Best Of New York Body Shop in 2009.
- 1360 Bruckner Boulevard, 529 feet southeast (topographically down-gradient) of the subject property, is identified as Bruckner Boulevard Amoco from 1999 to 2000.
- 959 Whittier Street, 558 feet southeast (topographically down-gradient) of the subject property, is identified as Edward Automotive Center in 2001, Edwards Automotive Repair Service in 2002, Edward Automobiles in 2003, Edward Automotive in 2004 and Edward Automobiles in 2005.
- 1203 Whitlock Avenue, 630 feet north (topographically down-gradient) of the subject property is identified as Art Auto Body and Repair Shop Company in 2005.
- 1255 Westchester Avenue, 639 feet northwest (topographically down-gradient) of the subject property is identified as T & J Auto Body from 1999 to 2000, Patrony Gas Station Inc. from 2001 to 2003, Patrony Gas Station in 2004, Mexico Becerrils Auto Repair Elc. in 2005, Patrony Gas Station Inc. from 2006 to 2007, Mexico Becerril Auto Repair in 2008, Patrony Gas Station Inc. from 2009 to 2011 and Patrony Auto Group in 2012.

- 1207 Whitlock Avenue, 642 feet north (topographically down-gradient) of the subject property is identified as Perez Transmissions from 1999 to 2001, Art Auto Body in 2002, Rosario Art Auto Body Inc. from 2003 to 2004, Art Auto Body in 2005, Art Auto Body and Repair Shop Company in 2006, Jaws 2 Auto Body Center from 2007 to 2008, H & S Auto Shop from 2009 to 2011 and Art Auto Repair in 2012.

*Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### ***Historic Cleaners***

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.25 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
EDR US Hist Cleaners	No	2 / 0*	Not Anticipated	See Below

- 1262 Westchester Avenue 642 feet north (topographically up-gradient) of the subject property is identified as Class Cleaners from 1999 to 2011.
- 1264 Westchester Avenue, 651 feet north (topographically up-gradient) of the subject property, is identified as Class Cleaners from 2007 to 2008 and Kathys Cleaners from 2010 to 2012.

*Based on the distance of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

### ***Registered Recycling Facility List***

NYSDEC maintains a database of recycling facilities (SWRCY). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

<i>EDR Database Acronym:</i>	<i>Subject Property:</i>	<i>Properties within 0.5 mile:</i>	<i>Impact to Subject Property</i>	<i>Rationale</i>
SWRCY	No	4 / 0*	Not Anticipated	See Below

- Sal's Metal Corp., located at 900 Edgewater Road, 1,204 feet southeast (topographically down-gradient) of the subject property is listed as an active recycling facility. No additional information is provided.
- Canal Place Recycling Facility, located at 246-266 Canal Place, 1,394 feet southeast (topographically down-gradient) of the subject property is listed as an active recycling facility. No additional information is provided.
- Paper Fibers Corp., located at 960 Bronx River Avenue, 1,477 feet southeast (topographically down-gradient) of the subject property is listed as an active recycling facility. No additional information is provided.
- Bronx Iron & Metal Company, located at 850 Edgewater Road, 1,946 feet southeast (topographically down-gradient) of the subject property is listed as an active recycling facility. No additional information is provided.

*Based on the distance and down-gradient nature of these listings in relation to the subject property, PVE does not consider these listings to be RECs.*

## **4.0 Physical Setting Analysis**

The physical setting of the subject property was evaluated by consulting regional maps and other sources. Following is a summary of this review.

### **4.1 7.5 Minute USGS Topographic Map**

According to the Central Park, New York USGS topographic map, the subject property is approximately 38 feet above mean sea level.

### **4.2 Regional Hydrogeology**

Based on topography, groundwater is presumed to flow to the southeast, toward the Bronx River.

## 5.0 Site Reconnaissance

PVE personnel inspected the subject property on May 4, 2017. The site reconnaissance and interviews were conducted by Conor Tarbell. Photographs are attached in Appendix D.

The reconnaissance included a walk-through of all accessible interior common areas of the subject property and exterior locations. Adjoining properties were visually assessed from the subject property boundary, public right-of-ways, or other vantage points, and are summarized in Section 2.3.

### 5.1 General Site Observations Table

Below are items visually and/or physically observed. Items marked with "†" are defined below.

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
Storage Tanks		X		
Drums†	X			Drums of solvent based paints, pigments and PVC.
Hazardous† or Regulated Substances	X			Drums of solvent based paints, pigments and PVC.
Petroleum Products† Containers		X		
Unidentified Substance Containers		X		
Polychlorinated Biphenyls (PCBs)		X		
Evidence of Solid Waste Disposal (including mounds or filled areas)		X		
Strong, Pungent, or Noxious Odors	X			Odors associated with plastic parts production.
Pools of Liquid		X		
Stained Soil or Pavement	X			Staining witnessed near ovens and painting areas.
Corrosion		X		
Stressed Vegetation		X		
Septic Systems		X		
Pits, Ponds, or Lagoons†		X		
Floor Drains or Sumps†	X			Observed centrally near ovens.
Wastewater†		X		
Liquid discharges into		X		

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
drainage systems, including stormwater				
Wells (including dry wells†)		X		
Other Conditions of Concern		X		

## Definitions

**Drum:** A container (typically, but not necessarily, holding 55 gallons) that may be used to store hazardous substances or petroleum products.

**Dry wells:** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and unintentional) and wastewater disposal (often illegal).

**Hazardous substance:** A substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C. §9601(14), as interpreted by EPA regulations and the courts: “(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C. §§6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. §7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

**Petroleum products:** Those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

**Pits, Ponds, or Lagoons:** Man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing hazardous substances or petroleum products. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

**Sump:** A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

**Wastewater:** Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as stormwater flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

## **5.2 Site Visit Observations**

The subject property consists of two lots (Block 2756 Lots 85 & 90) containing multiple structures. The subject property is bordered to the east by the NYC MTA 6-line subway station at Whitlock Avenue, Interstate 895 and the Bronx River.

The northern most structure is a one-story plastic parts manufacturing building accessed on the northern side of the structure along 165<sup>th</sup> Street. The north-central portion of the structure, as you enter from the 165<sup>th</sup> Street entrance, contains multiple offices associated with the plastic manufacturing business (Pulse Plastic Products, Inc). The remainder of the structure is utilized for plastic parts productions. This production includes multiple ovens, cooling tanks, parts storage, painting/finishing areas, and packing for shipment. Drums of liquid PVC, used in the plastic parts production, are stored throughout the property. The current operator claims all of these drums are non-toxic and inflammable. Drums, ranging in size, of solvent based paints and pigments are stored in a room located in the northwestern corner of the structure. Multiple floor drains were observed in the vicinity of the ovens and parts storage with visible staining leading to drains near PVC drums. Based on information provided by the current tenant and owner of the site, these drains discharge to the local municipal sewer.

According to the current operator, the plastic parts business has been operating in this location since 1972; prior to their occupation the subject property was utilized as a garage which did not perform automobile maintenance.

The southern portion of the subject property is made up of several individual rectangular shaped storage structures. The perimeter is bordered by barbed wire fence and has two entrances located on Whitlock Avenue (one located in the middle of the property that is opened only to remove snow and the southern entrance is the main entrance) are locked. The northern entrance is barricaded and locked and connects to a narrow alley west of 1156 East 165<sup>th</sup> Street building; an entrance to the storage facility along the northwest section of the property is accessed by this alley. Multiple active auto service structures are located on the southernmost portion of the site.

## **5.3 Non-ASTM ESA Requirements**

### **5.3.1 Asbestos**

Because the structures were constructed prior to 1981 a visual inspection for asbestos containing materials was performed. Suspect material must be considered Presumed Asbestos Containing Materials (PACM) until sampling and analysis can confirm the presence of ACM. No obvious friable or damaged-friable PACM was observed during the site inspection.

### **5.3.2 Lead-Based Paint (LBP)**

Because the subject property is not residential, lead-based paint testing is not required in accordance with the user's requirements for this Phase I ESA.

### **5.3.3 Radon**

PVE reviewed published radon maps/data sources to evaluate potential radon concerns. According to <https://www.epa.gov/radon/find-information-about-local-radon-zones-and-state-contact-information#radonmap>, the subject property is classified as USEPA Zone 3, and radon testing is not necessary.

### **5.3.4 Mold**

PVE visually inspects for hazards associated with mold including water intrusion and other conditions that could lead to mold growth. No evidence of active mold growth was observed during the site inspection; however, previous inspections have noted standing water in portions of the concrete slab floor.

### **5.3.5 Vapor Intrusion**

Potential on-site and off-site vapor intrusion concerns were assessed. The general guidelines of ASTM standard E2600-15-Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions were used, but not strictly followed.

Based on the review of database records outlined in Section 3.0, a vapor encroachment condition exists for the subject property.

### **5.3.6 Lead in Drinking Water**

Municipal water is provided to the subject property through the NYC DEP. This supply is known to meet drinking water requirements and no additional testing is recommended.

## 6.0 Property History

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records, and/or zoning and land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following is a summary of these findings. Specific sources are documented first, followed by a summary at the end of this section, which may include information initially described in other sections of this report.

### 6.1 Property Ownership

Property ownership history was researched through the New York City Department of Finance Office of the City Register. No property ownership information was discovered from this search. This ownership record is based on reasonably attainable information and does not constitute a title search.

## **6.4 Fire Insurance Maps**

Fire Insurance maps were provided in the EDR report and are attached in Appendix B. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

## 1156 East 165<sup>th</sup> Street

1896	In the northwest section of the subject property, five structures are connected. The structure in the most northwest corner is labeled 'G' (presumably for garage) that is attached to a long rectangular one story structure labeled 'G' (presumably for garage) and connects to the northern most adjoining property (1056 Lowell Street). In the northeast section of the subject property is a one-story structure. In the northern central section of the subject property, there are four individual structures.
1901	In the northwest section of the subject property, five structures are connected. The structure in the most northwest corner is labeled 'stable' and attached to a long rectangular two story structure labeled 'cow house' and connects to the northern most adjoining property (1056 Lowell Street). In the northeast section of the subject property is a one-story structure. In the northern central section of the subject property, there are three individual structures.
1903	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1915	See 1903 description.
1950	Almost the entire subject property is made up of one large structure labeled 'garage'. In the central area of the garage is labeled '2-550gal. gasol tanks buried' (presumably two 550-gallon gasoline tanks are buried). Attached to the garage in the northwest and west central areas are one story structure labeled 'auto'.
1977	Almost the entire subject property is made up of one large structure. Attached to the structure in the northwest of the subject property is a one-story structure labeled 'auto repair' and '2-550gal. gasol tanks buried' (presumably two 550-gallon gasoline tanks are buried) is no longer labeled in the central area of the structure.
1978	See 1977 description.
1979	See 1977 description.
1980	See 1977 description.
1981	See 1977 description.
1983	See 1977 description.
1985	See 1977 description.
1986	See 1977 description.
1989	See 1977 description.

1991	See 1977 description.
1992	See 1977 description.
1993	See 1977 description.
1994	See 1977 description.
1995	See 1977 description.
1996	See 1977 description.
1998	See 1977 description.
2001	See 1977 description.
2002	See 1977 description.
2003	See 1977 description.
2004	See 1977 description.
2005	See 1977 description.
2006	See 1977 description.
2007	See 1977 description.

### **1125 Whitlock Avenue**

1896	The existing subject property is not defined by the Sanborn map for this year. It is part of one large parcel.
1901	See 1896 description.
1903	See 1896 description.
1915	See 1896 description.
1950	The northern most section has a long rectangle one story structure (running from east to west) labeled 'auto houses' and appears to be connected to the southern section of the 1165 East 165 <sup>th</sup> Street garage structure. South of this structure is another a long rectangle one story structure (running from east to west) labeled 'auto houses'. Perpendicular to this structure, are two long rectangular one story structures (running north to south) labeled 'auto houses'. In the southeast section of the subject property are 2 one story structures labeled 'A' (presumably for auto or garage). The west section of the subject property is almost made up entirely of one story structure labeled 'auto houses' (running

	north to south), and 3 one story structures are connected at the southern end. The southern section of the subject property has 'filling sta' (presumably meaning filling or gas station) with three small circles (presumably indicating three gasoline tanks).
1977	The northern most section has a long rectangle one story structure (running from east to west) labeled 'auto houses' and appears to be connected to the southern section of the 1165 East 165 <sup>th</sup> Street garage structure. South of this structure is another a long rectangle one story structure (running from east to west) labeled 'auto houses'. Perpendicular to this structure, are two long rectangular one story structures (running north to south) labeled 'auto houses'. In the southeast section of the subject property are 2 one story structures labeled 'A' (presumably for auto or garage). The west section of the subject property is almost made up entirely of one story structure labeled 'auto houses' (running north to south), and 3 one story structures are connected at the southern end. The southern section of the subject property no longer has 'filling sta' (presumably meaning filling or gas station) with three small circles (presumably indicating three gasoline tanks) as it did in 1950.
1978	See 1977 description.
1979	See 1977 description.
1980	See 1977 description.
1981	See 1977 description.
1983	See 1977 description.
1985	See 1977 description.

2006	See 1977 description.
2007	See 1977 description.

## 6.5 City Directories

City directories list telephone company records of past occupants and businesses for an address by year, and is reviewed to determine if past occupants and businesses of the subject property and adjacent properties may have led to recognized environmental conditions. The city directory report is attached in Appendix B.

### *Subject Property*

#### 1156 East 165th Street

2005 – North America Plastics  
Pulse Plastic Products Inc.

2000 – N America Plastics  
Pulse Plas Prods

1940 – El Ray Garage Inc.  
Joes Rodio Svce

#### 1125 Whitlock Avenue

2005 - All Star Auto Glass  
Auto Glass

Caceres Pedro

Olympic Alarm Systems

1961- Jay-Dee Service Station

1940- Consumers Refrigeration Service

### *Adjoining Properties*

Adjoining property addresses are based on the Department of Finance Digital Tax Map, and are listed in Section 2.3. Only environmentally pertinent occupants and businesses are listed below.

#### 1036 Whitlock Avenue

1927 – Whitlock Garage

1044 Whitlock Avenue  
1927 – Printz Garage Inc.

## **6.6 Other Records and Interviews**

Listed below are additional records requested and/or reviewed as part of this Phase I ESA. If information relevant to the findings and conclusions of this ESA has been received from these departments, it is summarized below and/or in other sections of this report.

### ***Health Agency Records***

An information request was sent via email to the NYC Department of Health and Mental Hygiene on January 8, 2016 requesting any information the department has regarding on-site septic systems, supply or monitoring wells, chemical spills, health violations, or other environmental contamination issues associated with the site. Any written response from the department is included in Appendix C. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

### ***Fire Department Records***

A fuel tank special report request form was sent via fax on January 8, 2016 to the NYC Fire Department requesting any information the department has regarding tanks associated with the site. Any written response from the department is included in Appendix C. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

### ***NYC Property***

The NYC Property website, <http://webapps.nyc.gov:8084/CICS/fin1/find001I>, was accessed for records relating to the subject property (Appendix C). The most recent assessment indicates there is a one-story building on Lot 90 and Lot 85 to be present on the property.

### ***Building Department***

NYC Department of Buildings (DOB) records were accessed via <http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp> (Appendix C). The Department of Finance Building Classification for Lot 90 is F1-FACTORY/INDUSTRIAL and Lot 85 is G9-GARAGE/GAS STAT'N.

One certificate of occupancy was obtainable for Block 2756 Lot 85 dated April 15, 1958 for the use of auto repair shop and for Block 2756 Lot 90 dated December 3, 1963 for the use of storage. A list of actions for the lot is attached in Appendix C.

### ***Other Environmental Reports***

PVE Sheffler, LLC prepared a Phase I ESA dated January 26, 2016 and a Subsurface Investigation Report (Phase II ESA) dated March 8, 2016. These documents were reviewed during preparation of this Phase I ESA, the findings of which are incorporated in Section 7.0 of this report.

***Interview - Regulatory Agency***

No interviews were conducted with regulatory agencies.

***Interview - Current Owner***

No interviews were conducted with current owners because none were provided by the user.

***Interview - Current Operator/Occupant***

No interviews were conducted with current operators or occupants because none were provided by the user.

***Interview - Past Owner***

No interviews were conducted with past owners because none were provided by the user.

***Interview - Past Operator/Occupant***

No interviews were conducted with past operators or occupants because none were provided by the user.

***Interview - User***

The user did not possess any specialized knowledge or experience that was material to recognized environmental conditions in the connection with the property.

**6.7 Summary of General Property History and Use**

The earliest available historical record, the 1896 Sanborn Fire Insurance Map, depicts the property as five structures connected and labeled a garage along the northern section of the subject property. One of the structures links to the northern adjoining property, 1056 Lowell Street. These structures remain on the property in 1901, however are labeled cow house and stable, leading to believe this property was used as some type of farm for a limited time. Operating history from 1901 this year until 1950 is not entirely known, due to a lack of historical records, and constitutes a data gap. In 1950, Lot 90 was made up of one large structure, a garage and had two 550-gallon gasoline underground tanks and Lot 85 was made up of seven rectangular structures labeled auto sales or garages with a gas filling station located at the southern section. The 1977 Sanborn Map depicts Lot 90 made up of one structure without the two 550-gallon gasoline tanks and depicts Lot 85 made up of several rectangular structures

labeled auto sales or houses without the gas filling station in the southern section and remains that way present day.

## 7.0 Findings and Conclusions

PVE personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E1527-13 of the property at 1156 East 165<sup>th</sup> Street and 1125 Whitlock Avenue, Bronx, Bronx County, New York (the subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 and 7.5 of this report.

<u>Environmental Concern</u>	<u>Number of Findings</u>
Recognized Environmental Conditions (RECs)	3
Controlled Recognized Environmental Conditions (CRECs)	None
Historical Recognized Environmental Conditions (HRECs)	1
De minimis Conditions	1
Data Gap/Data Failure	4

### 7.1 Recognized Environmental Conditions

The definition of a *recognized environmental condition* (REC) is the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

1. As indicated in Section 5.0 of this report, the subject property has historically been operated as a plastics manufacturing facility which uses solvents and other chemicals. Wastes generated from the site if handled improperly have the potential to adversely impact soil, groundwater and ultimately soil vapor on the subject property.
2. As indicated in Section 6.4 of this report, the 1950 Sanborn Fire Insurance map depicts the subject property located at 1156 East 165<sup>th</sup> as containing two 550-gallon gasoline tanks. These tanks do not appear on the NYSDEC database of petroleum bulk storage facilities, no other information pertaining to these tanks was identified during preparation of this Phase I ESA. Leakage of petroleum products from these tanks cannot be ruled out.
3. As indicated in Section 3.11 of this report, the subject property at 1125 Whitlock Avenue was identified as Sonero Auto Repair from 1999 to 2012. Recent imagery indicates the property was also operated as Metro City Auto Repair. Other area drycleaners and automotive repair facilities are present in the vicinity of the subject property. Facilities

such as these generate wastes which if handled improperly have the potential to contaminate local soil and/or groundwater. Other properties are listed in the immediate vicinity which also have the potential to generate similar wastes. Considering the past operating history of the subject property and immediately surrounding properties, a potential vapor encroachment condition exists.

## **7.2 Controlled Recognized Environmental Conditions**

The definition of a *controlled environmental condition* (CREC) is a *recognized environmental condition* resulting from a past *release of hazardous substances or petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority with *hazardous substances or petroleum products* allowed to remain in place subject to the implementation of required controls. Examples of controls include property use restrictions, activity and use limitations, institutional controls, and engineering controls. CRECs are a subset of RECs. This assessment has revealed no evidence of *controlled recognized environmental conditions* in connection with the property.

## **7.3 Historical Recognized Environmental Conditions**

The definition of a *historical recognized environmental condition* (HREC) is a past *release of any hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the property, except for the following, which PVE do not consider to be RECs:

1. As indicated in Section 3.5 of this report, Whitlock Parking and Storage, at 1125 Whitlock Avenue, the subject property, is listed as PBS #2-603713. Four 1,000-gallon USTs were closed in place on December 1, 1999. The date of installation was not reported. This site is listed with NYSDEC as unregulated/closed.

## **7.4 De minimis Conditions**

The term *recognized environmental conditions* is not intended to include *de minimis conditions*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are *not* RECs or CRECs. The following are *de minimis* conditions that are being brought to the attention of the user of this environmental site assessment:

1. As indicated in Section 5.2 of this report, 1156 East 165<sup>th</sup> Street, the subject property is currently a plastics manufacturing facility containing floor drains with observable liquid

discharge. Based on information provided by the current owner, and operator, this drain discharges to the municipal sewer, and the site does not generate hazardous or regulated waste materials. No attempt was made to independently verify that the floor drain is connected to the municipal sanitary sewer.

## **7.5 Data Gaps and Data Failures**

*Data gaps* are defined as a lack or inability to obtain information required by ASTM E-1527-13 despite good faith efforts to gather such information. A *data gap* by itself is not inherently significant and is only significant if other information raises reasonable concerns. Examples of *data gaps* are the inability to inspect portions of the subject property during the site inspection, and an inability to identify the historical use of the subject property back to 1940 but the earliest source shows the subject property to be undeveloped.

*Data failures* are a subset of *data gaps* and indicate a failure to achieve historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. *Data failures* can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier.

The following are data failures or data gaps encountered during this assessment:

1. Records of ownership of the subject property may be incomplete. The ownership record obtained during this assessment is based on reasonably attainable information and does not constitute a title search.
2. Data gaps in excess of five years were encountered during the review of the standard historical sources. Operating history from 1901 this year until 1950 is not entirely known, due to a lack of historical records, and constitutes a data gap
3. Interviews were not conducted with past owners, present operators, past operators, present occupants, or past occupants.
4. Even though the subject property and some of the adjoining properties were identified on one or more of the standard environmental record searches, a regulatory file review was not performed because the files were not considered reasonably ascertainable (either not publicly available, not obtainable within reasonable cost and time constraints [20 days], or not practically reviewable).

## **7.6 Conclusions and Opinions**

RECs #1, #2 and #3 listed in Section 7.1 are located on the subject property. PVE has reviewed the Phase I ESA dated January 26, 2016 and the Phase II ESA dated March 8, 2016 completed by PVE Sheffler, LLC in preparation of this report. Based on information presented in the Subsurface Investigation Report, past operations at the subject property may have affected on-

site soil, soil vapor, and/or groundwater. For additional information see the attached Subsurface Investigation Report in Appendix C.

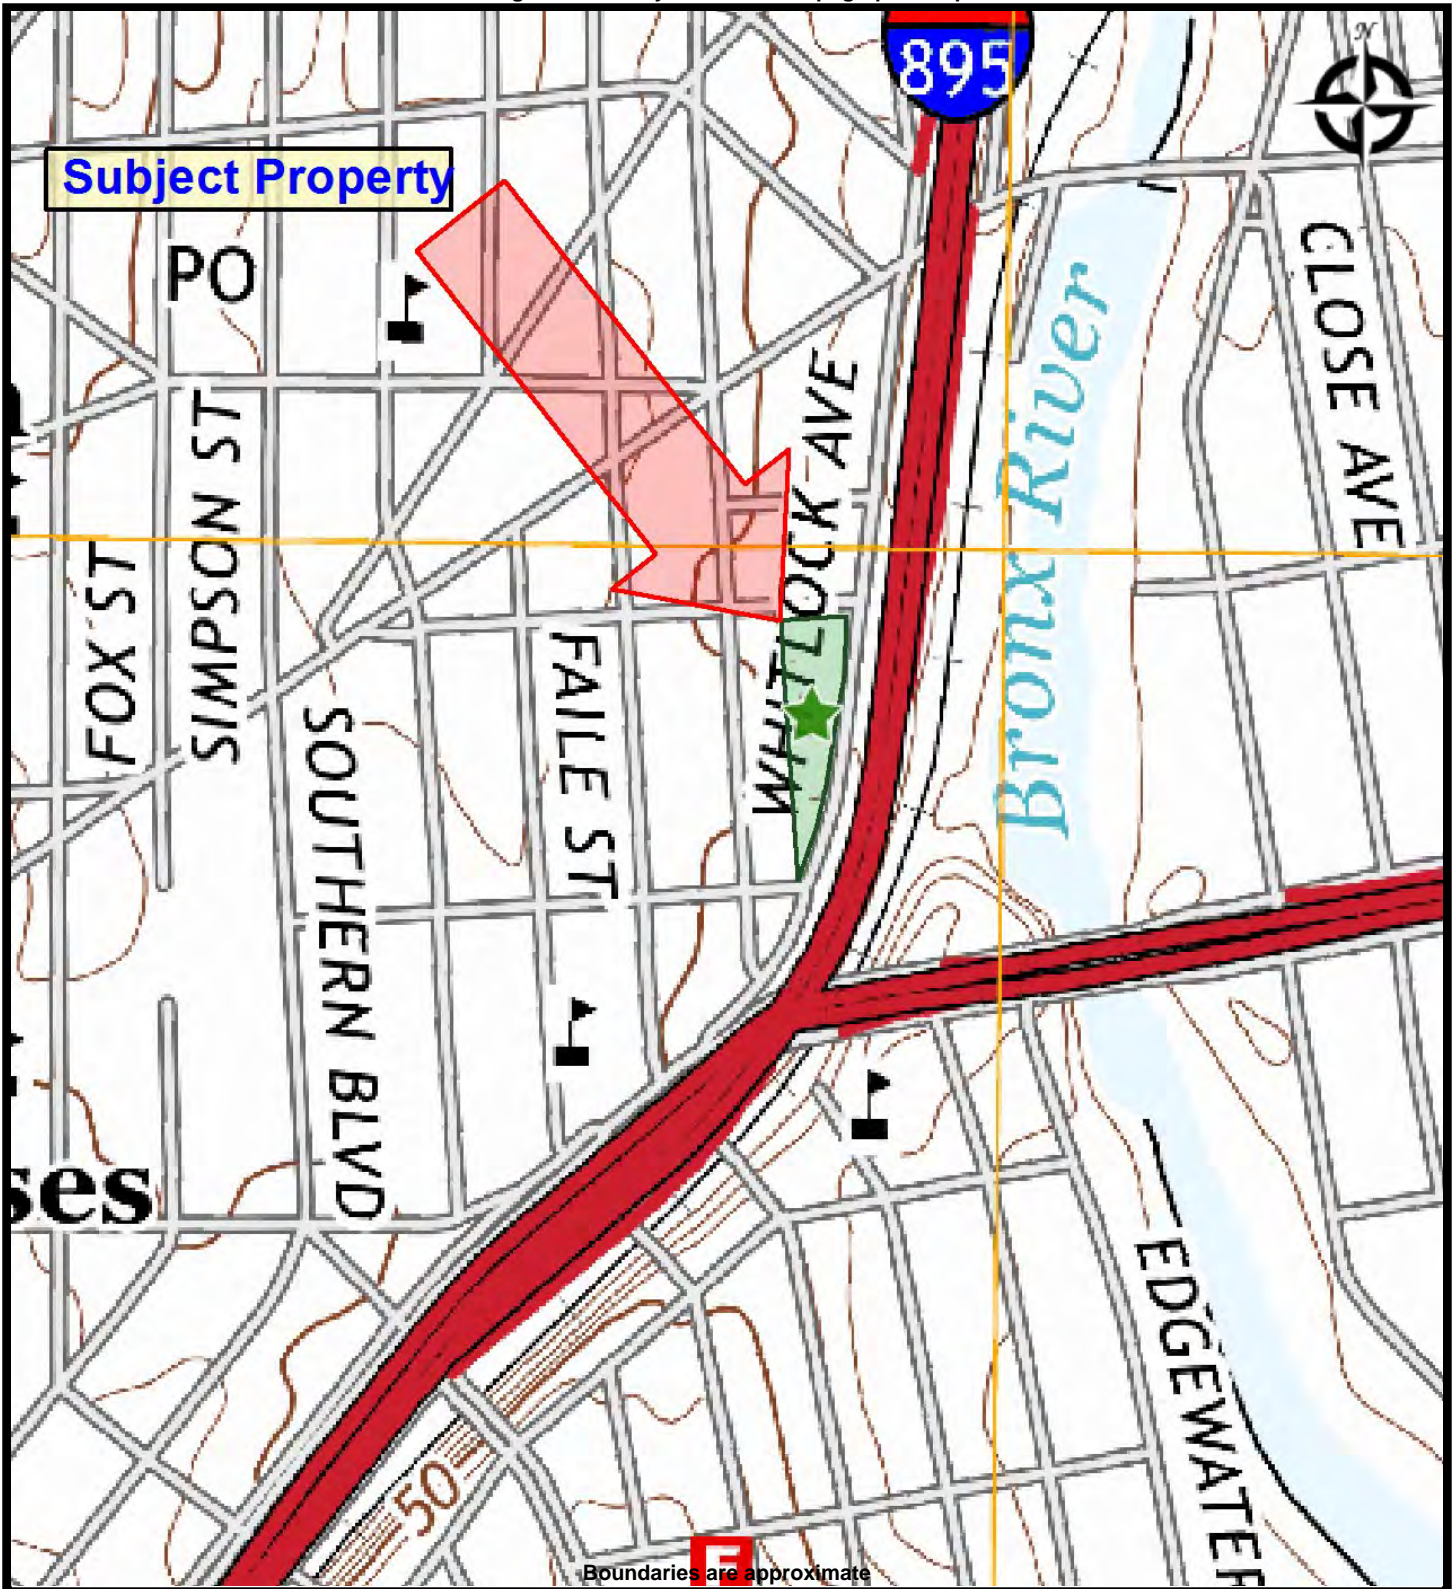

Other sources consulted during this Phase I ESA indicate that the above-referenced data gaps are not significant.

*Standard Notes: As part of this Phase I ESA and in accordance with Section 7.5.2.1 of ASTM E 1527-13, PVE has made no attempt to independently verify the reliability of information provided. In addition, and in accordance with Section 3.2.18 Note 3 of ASTM E 1527-13, a condition identified as a CREC does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.*

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Poughkeepsie, NY 12603

EDR Inquiry # 4509097.3

Contact: Tara Alvarado

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PVE Sheffler were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

1156 E 165TH AND WHITLOCK AVENUE  
BRONX, NY 10459

#### COORDINATES

Latitude (North):	40.8244740 - 40° 49' 28.10"
Longitude (West):	73.8869810 - 73° 53' 13.13"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	593857.9
UTM Y (Meters):	4519656.5
Elevation:	38 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/04/2017 has revealed that there are 7 NY SWF/LF sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2017 has revealed that there are 37 NY LTANKS sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 18 NY UST sites within approximately 0.25 miles of the target property.

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

A review of the NY AST list, as provided by EDR, has revealed that there are 76 NY AST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

#### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2017 has revealed that there are 18 NY Spills sites within approximately 0.125 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 46 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NJ MANIFEST: Hazardous waste manifest information.

A review of the NJ MANIFEST list, as provided by EDR, and dated 12/31/2015 has revealed that there are 3 NJ MANIFEST sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - EAST 17	WEST FARMS RD. AND B	NNE 1/2 - 1 (0.612 mi.)	295	777

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

DEC Region: 2  
DER Facility ID: 89168  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was M TIBBE Transferred for closure review to M Johnson 7/29/05. 6/15/06 Transferred for closure review to T Knizek. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 10/31/06 - Raphael Ketani. The last contact was LT. Broderick of the NYC Fire Department. The spill was an overflow and the tank opening was repaired. Less than 1 gallon was reported lost. Based upon the nature of the loss, the small size of the spill and the fact that 14 years have passed since the incident, I am closing the case administratively. "  
Remarks: "WILL REPAIR OPENING ON TOP TO PREVENT FUTURE OVERFLOW."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL e2mis no. 130012: Feb 16, 2000 @ 13:20 Bill Flynn, senior field operator, reports 1 pint dielectric fluid spill from cable onto floor of manhole. Manhole floor is dry. Oil didn't enter sump pit in hole. Spill is contained in area away from sump pit. Conduit plate 11-L indicates sewer connection in manhole. Cleanup in progress and will be cleanup as 50-499 ppm. Cleanup completed on 2-16-00 at 14:40. 1-pint of oil removed no water. Simple green used to double wash oil contaminated area of manhole. 1-5 gallon drum of waste generated. No sewer connection found in structure. A 9/25/3 field inspection performed by EHS Specialist J. Siesfeld 84253, found all feeders and mains in the structure to be in good repair, and there was no oil, or soucre of oil present in the structure at this time."

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT 4/12/04-Vought-Spill transferred from Miller to Vought as per Rommel. 3/10/05-Vought-Spoke to Mike Morris (ATC 212-353-8280x345) who is requesting site status. Vought told him to call back in two weeks if DEC has not contacted him with review results. 3/17/2004- File review by Vought: Underground Storage Tank Closure Plan (Tone Tank and Pump) Dec 1993. The facility is bounded on the south by Bruckner Blvd, on the north, east and west by commercial properties . The site contains twelve (550-gallon) gasoline USTs and one (550-gallon) fuel oil UST. Report covers procedures for tank contents removal, purging of vapors, cleaning of tanks, tank removal, laboratory analysis, waste disposal, reports and recommendations. Final Site Assessment Work Plan-5/27/94. Revised Final Site Assessment Workplan-7/8/94. Fax from American Hi-Tech-10/13/94. Fuel oil excavation endpoints. Six sidewall endpoints and two bottom endpoints collected. Sample analyticals show only minor SVOC exceedences attributable to fill material. Fax from American Hi-Tech-10/13/94. Gasoline UST excavation endpoints. Eight endpoint soil samples taken from sidewall of excavation and no bottom endpoint samples were collected. Soil analyticals show 2300ppb xylene(TB1 at 8'bg), 9800ppb xylene(TB3 at 10'bg), 1100ppb MTBE(TB3 at 10'bg), 620ppb benzene(TB4 at 8'bg), 18000ppb toluene(TB4 at 8'bg), 33000ppb ethylbenzene(TB4 at 8'bg), 120000ppb xylene(TB4 at 8'bg). Site Assessment Report (American Hi-Tech)-10/31/94. The gasoline tanks had on dispenser island located approximately ten feet away from the tanks . One soil sample was collected as dispenser island and showed no TAGM 4046 Soil Cleanup Objective exceedences. Report recommends that additional remedial activity may be warranted for both the heating oil and gasoline tank excavations . 3/17/05-Vought-DEC requires: 1)groundwater sample at former UST tankfield in particular at former sidewall sample location TB4 and TB3. Vought sent letter with above requirement on 3/17/05. 4/5/05-Vought-Received message from Michael Morris. Vought returned call and left message to return call to DEC. Vought received message from Morris. 4/6/05-Vought-Called Morris (212-353-8280x345) and left message to return call to DEC. Vought spoke to Morris and he will perform groundwater sampling at required locations. If contamination is found additional Geoprobe locations will be performed as opposed to installation of monitoring wells. 6/8/05-Vought-Reviewed Remedial Action Report (ATC Associates) dated 5/5/05 and received on 5/13/05. Six soil borings were performed at site. Based on these findings, petroleum impacted soils remain at the Site. The extent of soil contamination appears to be delineated to the west; however, additional delineation is required to the north, south and east . Additionally ATC recommends that a groundwater monitoring well be installed by a hollow stem auger drill rig to evaluate if groundwater beneath the Site has been impacted . 121.69 tons of soil were removed with UST removal. Four soil samples were collected for analysis. Soil analyticals show: 11000ppb ethylbenzene(B3 8-10'bg), 50200ppb xylenes(B3 8-10'bg), 5290ppb toluene(B4B 8-9'bg), 84800ppb ethylbenzene(B4B 8-9'bg), 301ppb xylene(B4B 8-9'bg). Vought sent letter approving of installation of proposed monitoring wells and delineation to the north, south and east. 8/5/05-Vought-Received call from Michael Moore (ATC) and bedrock encountered at 19-21' below grade. Vought agreed that no groundwater sample is required if clean soil encountered before bedrock. Delineation investigation will be performed via hollow stem auger. 9/26/05 - Obligado- FILE TRANSFERRED

FROM VOUGHT TO OBLIGADO 1/10/06 - Obligado - Received phone call from Charlie Talinger -ATC - (212)353-8280. Said they did a soil investigation with 6 borings. Will send the report. 2/23/06 - Obligado - phone call from Charlie Tallinger, asked if DEC has reviewed subsurface investigation report yet. Told him it has not been reviewed. 2/24/06 - Obligado - Review subsurface investigation report. Impacts at only 1 additional boring location, B9, located south of the former USTs at the 5-6 ft depth interval. Bedrock in this well was located at 15 ft bgs. Soil results in ppb showed 6850 n-propylbenzene, 15,200 1,2,4 trimethylbenzene, 8,300 xylenes. Requests closure based on, UST source removed, no grossly impacted soils remain beneath the Site, and no impacted soils were observed near the soil/bedrock interface. 4/11/06 - Obligado - Sent letter denying no further action due to soil contamination. Required submission of RAP to remediate soil contamination due 6/11/06 6/9/06 - Obligado - Email request for deadline extension from Michael Morris. Granted 1 month extension, new due date is July 11, 2006. 9/18/06 - Obligado - Spoke to Cecil Flekton of Environmental Resource Management (315-445-2554 ext 27 and 315-506-9537), she is new consultant for this site. Because of the change in consultant I gave a new RAP deadline of October 13, 2006. 10/9/06 - Obligado - Received Email from Cecil Flekton. They received all the files transferred from ATC. 10/20/06 - Obligado - Spoke to Cecil Flekton, she said the RAP will be ready 11/27/06 11/17/06 - Obligado - Reviewed RAP for soil vapor extraction to treat vadose soil contamination. Install extraction well and vacuum monitoring points in December 2006. Conduct SVE pilot test in January 2007. Submit SVE Pilot Test Report by February 2007. Approved RAP, sent Robert Fraley approval letter via certified mail. 1/3/07 - Obligado - Emailed Cecile Flekton to inquire in SVE well and vapor monitoring points have been installed. Reply: The extraction well and vapor monitoring points are scheduled for installation next week, January 8 -9th. And the pilot is tentatively schedule for January 15 -18th. 1/23/07- Obligado - Email from Flekton - completed the installation of the vapor monitoring points and extraction well during the week of January 8th and completed the SVE pilot test last week (week of the 15th). The SVE pilot went well and we are currently compiling the data 3/1/07 - Obligado - Spoke with Flekton. She said the SVE pilot was not successful. The radiu of influence was only 6' and there was high flow with low vacuum suggesting short circuiting possibly through utility conduit. She will submit a report and she recommends doing limited excavation instead since soils are only 9' deep. 4/13/07 - Obligado - Review Rrevised RAP. SVE pilot test was not successful. Poor vacuum influence might have been due to short circuiting. Proposes source removal via excavation of contaminated soil instead of SVE. Plans to excavate up to 300 cubic yards of soil. Plan includes a CAMP with site monitoring for VOCs with a PID. I called Cecile Fleckton to discuss. I asked if they would be stockpiling any contaminated soil on site. She said no and that the contaminated soil would be transported off-site the same day. I told her that if they do need to stockpile then piles should be staged on and covered with tarps to prevent storm water runoff and control odors. I told her I would approve the RAP. 4/17/07 - Obligado - Sent RAP approval letter via mail and emailed cc to Cecile. 5/1/07 - Obligado - Cecile Fleckton called to update on status of excavation work, she said contamination was deeper then the 9 ft interval documented in the reports. I told her to excavate as deep as health and safety

constraints would allow to remove as much contaminated soil as possible. 5/2/07 - Obligado - Met Bill Marris on site to see excavation. At time of visit there were two open excavations. A large stockpile (~200 cubic yards) of soil on northern portion of the site resting on tarps. Area around b4 and b4b had already been excavated and soil endpoints had been collected and the holes backfilled. In central portion of tank area a test pit was dug down to 12 ft where PID readings were ~400 ppm at bottom, but could not go any further down due to large boulders. According to onsite staff additional excavation needed to be performed north of B3, west of test pit area, and in B1 area. 5/10/07 - Obligado - Email from Cecile Fleckton. 4 unknown USTs were found at the site. They are in the process of being removed. Excavation expected to proceed until next Thursday. 6/21/07 - Obligado - UST Closure report received by DEpartment. 575.99 tons of contaminated soil removed from the site and transported to Soil Safe Inc. of Bridgeport NJ. 4 previously unknown abandoned USTs were removed as well. Endpoint sampling below SCOs for VOCs for 16 of 19 soil samples. Most samples had minor SVOC PAH exceedences. Of 3 soil samples with VOC exceedences, 1 sample EX5E had 3770 ppb 1,3,5 trimethylbenzene, 470 ppb over limit. Sample EX 5SW was 360 ppb over the same limit and 100 ppb over the xylene limit. EX5SE was the only sample with significant impacts over SCO limits. 1,3,5 trimethyl benzene was 24,000 ppb, while the limit is 3,300 and total xylenes was 12,300 ppb, while the limit is 1200. 4 other compounds exceeded SCOS of this sample as well. Waste manifests were included. I discussed this site with Joe Sun. We agreed to close the site based on the following: 1) only 1 sample had significant exceedences of SCOs. 2) There was an 87% reduction in total VOC concentrations from the hottest sample collected before and the hottest sample collected after excavation. 3) 600 tons of contaminated soil removed and properly disposed of 4) Bedrock at 20 ft and no ground water encountered above the bedrock 5) 4 additional USTs were found and removed so no known source of contamination is remaining. 6) Remaining soil contamination is of limited extent. Send NFA to Cecile and Uhaul. "

DEC Memo: "10/05/05-Vought-The Hotline was notified of a flipped over vehicle on fire on 10/4/05 at approximately 3pm. DEP Hazmat (Catanzaro) was called and stated that the vehicle was a tanker truck. DEC Vought responded to the scene and DEC Austin responded soon after. Tentative identification of the truck was Model Transportation (the identification was made by the supervisor of Model calling the NYPD stating that he had not heard from his driver who made a pickup in the area). Since no definitive identification was made, a state funded contractor (Milro) was hired to recover the remaining fuel from the tanker truck. On-scene was OEM, FDNY, FDNY Hazmat, DEP, DEP Hazmat, DEP Industrial waste, NYCDOT, NYSDOT, NYPD, NYPD Hwy, DOS, CSX, DEC ECO's, ConEd, Conrail, Clean Harbors, Miller Environmental, Northeast Environmental, Clean Ventures, Amtrak and media. The truck had turned on it's side, simultaneously catching fire and beginning to leak fuel (it was later learned that it was carrying approximately 7000-gallons of diesel fuel) which also caught on fire. The final resting place of the truck was over the Amtrack and CSX train tracks on Bruckner Blvd right after the intersection of Bruckner Expressway and the Sheridan Expressway. The burning diesel fuel leaked through the bridge causing damage to the concrete and the electrical systems of the train tracks below. Amtrak and CSX had stopped service in both directions on the tracks. The burning diesel also ran down Whittier Street and Seneca Avenue and ignited approximately ten cars parked on the street and entered a catch basin on the corner of Edgewater Rd and Seneca Avenue. An impact to ConEd feeders at the location as also discovered. Injuries included the deceased truck driver, one civilian injury and one firefighter injury (extent of the civilian and firefighter injury is not known). Reconnaissance of the site showed minimal free product (all was extinguished during fire or had entered catch basin). A small amount of free product(appox 1 gallon) was found on the CSX railroad tracks but was cleaned using adsorbent material. DEP indicated that product was also found in the Hunts Point Water Pollution Control Plant but was however not going to be discharged into the East River (note that USCG was also notified). At this point in time confirmation of the identity of the truck was Model Transportation was made and the company's insurance company had a representative on scene (Northeast Environmental) who took responsibility for the spill and hired Miller Environmental to assist. The impacted catch basins were cleaned out by Northeast Environmental. Northeast Environmental also agreed to clean out the impacted DEP Hunts Point Water Pollution Control Plant. The tanker truck was emptied by both Milro and Northeast and was removed from the bridge at approximately 2am on 10/5/05. The structural damage to

the bridge is currently being investigated by NYSDOT and NYCDOT. Currently the bridge is closed to Eastbound traffic but is open to westbound traffic and some remaining impacted sand remains to be picked up by Northeast and Miller Environmental.  
10/5/04-Vought-Called Dwayne Monaco (Northeast 914-403-5525 fax 914-777-1928) for update and AIG contact. Vought left message to return call. 10/6/05-Vought-Called Monaco for update and AIG contact and all remaining sand was picked up by Miller and Northeast (a total of four containers). Catch basins were all cleaned and approved by DEP Hazmat. No requirements of northeast was made in regards to Hunts Point Pollution Control Plant. Vought also gave Monaco the number of Milro (Basso) to make payment arrangements. 10/11/05-Vought-Received call from Dwayne Monaco that spill number was not in database. Vought returned call and will fax him copy of spill report. All impacted soil was removed and no further issues with DEP. Vought called Milro and Paul will bill AIG directly. Vought called DEC Corcoran and had both spill #'s (03708, 03709) cancelled. 10/14/05-Vought-Received call from Monaco that disposal facility accepted soil and as a result spill number can be closed. Spill closed by Vought. "  
Remarks: "FLIPPED OVER, THE VEHICLE IS ON FIRE, PRODUCT IS ALL OVER THE ROADWAY, POLICE AND FIRE DEPARTMENT ON SCENE."

DEC Memo: "161382. 04-Oct-2005 23:30hrs. Env. Spec. I. Mullan 83980 reports finding 10 gal of an unk. fuel oil as a result of an accident involving a tanker truck carrying unknown fuel product and a resulting fire; approximately 1000 gal. of fire fighting foam/water mixture in MH 3407 (N.B. Bruckner exp. Srvc Rdwy 200' w/o Whitter St.). Tanker operated by Model Transport spilled approximately 6000 gal of product into several con ed facility and adjacent catch basins which are being investigated by on site personnel from the DEP, DEC, OEM, FDNY, MTA, AMTRAK, and other responding agencies at this time. As access is granted the structures are being opened and evaluated for infiltration of spilled product. Smoke & fire was involved with the third party tanker explosion. Sewers, waterways and private property was affected by the third party tanker. Samples are to be taken for analysis once site access is granted to begin cleanup operations. Env. tag #15353. C. Blaich 87348 Also see ConEd e2mis reports 161378, 79, 80, 83 and 84, all are related to this accident. Closed. 12-1-05. see eDocs. GB 161379: 04-Oct-2005 19:20hrs. As a result of an accident involving a tanker truck carrying unknown fuel product and a resulting fire; Snr Specialist K. Trager 17063 reported approximately 3 gals of a fuel product and 1000 gal. of fire fighting foam/water mixture in VS 1783 (w/s Whitter St. 75' s/o N.B. Bruckner exp. Srvc Rdwy). Tanker operated by Model Transport spilled approximately 6000 gal of product into several con ed facility and adjacent catch basins which are being investigated by on site personnel from the DEP, DEC, OEM, FDNY, MTA, AMTRAK, and other responding agencies at this time. As access is granted the structures are being opened and evaluated for infiltration of spilled product. Smoke & fire was involved with the third party tanker explosion. Sewers, waterways and private property was affected by the third party tanker. Samples are to be taken for analysis once site access is granted to begin cleanup operations. Env. tag #31148 was placed. C. Blaich 87348 Lab Sequence Number: 05-10416-001 < 1.0 ppm 05-Oct-2005 21:10hrs. ENV. EH&S Sr. Spec. K. Trager 17063 reports cleanup completed. Structure was double washed and rinsed using bio-gen 760 soap. Clean Venture tanker took on 295 gal of liquid consisting of a fuel/water/foam mixture for transport and disposal at

Classification: Not a generator, verified

Violation Status: No violations found

**FINDS:**

Registry ID: 110063829335

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(Delta, 8/29/02). 12/9/03 Reassigned from Vought to Foley. Adjacent Getty station approx 45' west of site (upgradient) across Whittier Ave. See spill #9901256.(Not currently impacting BPAmoco site) Reviewed SHAR. Land use is commercial. Railroads on both east and west sides. Bronx River is nearest downgradient surface water body approx 170' east of site, approx 50' below site elevation. There are two schools within one-quarter mile radius of the site. PS 75 is located 530' west of the site. Soil analyticals indicate xylenes(6150ppb > TAGM 1200ppb) and 1,2,4-tri-methylbenzene(14500ppb > TAGM 10000ppb) in SB-4 (11-12') above soil cleanup guidance values. No MTBE. Only BTEX compounds detected were in the 11-12' interval of SB-4. Total VOCs in SB-4(14-15') was 182ppb. Groundwater was not encountered. It is suspected that groundwater is located at a depth approx 40'bgs and flows southeasterly towards the Bronx River. During advancement of soil borings, refusal on bedrock was encountered between 10.5' and 25' bgs. Refusal at 15' in SB-4. (KMF) 2/17/04 Investigation Report(IE, 1/3/03) and Remediation Report (IE, 1/26/04) received. 2/18/04 NFA faxed and mailed to Mr. Henry Alpert, David Oil Corp. Copied R. Parrish, Impact Environmental."

Remarks: "GEOPROBE SOIL SAMPLES REVEAL IMPACT. FURTHER ASSESSMENT TO BE PERFORMED."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/9/03 Adjacent Amoco station. Approx 45' across Whittier Ave. See spill #0202858. (KMF) 5/10/2007 - Feng - Spoke to D. Madigan (Tyree). Investigation was performed. Soil and groundwater samples were collected and shows ok. SIR will be submitted to DEC this month. (RJF) 7/13/2007 - Feng - Subsurface Investigation Report, 5/16/2007, submitted by Tyree. Tyree installed 5 soil borings on 2/28/2007 to 3/12/2007. Three borings located in the former tank farm area, one boring located in the former waste oil tank area and one boring located in the former heating oil area. Groundwater was encountered at 30 feet during this investigation. Groundwater is anticipated to flow in a southeastern direction. Soil and groundwater samples were collected. Soil collected from BP-2/W-2 at depth of 10' to 12' bg located in the former tank farm area show some slight exceedance, 3,190 ppb Xylene. There are some minor exceedances in some SVOCs compounds. For groundwater, 5.2 ppb Toluene in W-5. Tyree requested spill closure. Discussed with J. Sun and V. Brevdo, spill closed. 1) All the USTs, pump islands and piping were removed during the 1999 tank removal process. 2) Only slight exceedance in soil and groundwater detected during the subsurface investigation. Spill closed. (RJF) 7/16/2007 - Feng - NFA issued to Getty Properties. (RJF)"

Remarks: "SOIL CONTAMINATION "

**TANK PROBLEM (Continued)**

**S108955607**

gal AST. Spill was trivial and cleaned up with wiping the tank down and minor amount of speedie dry on the floor. Property manager called Atlas Boiler (Bryan Ennest 718-293-3300). They will drain the tank, clean it & determine if it can be repaired or replaced. After work is complete they will test the tank and put it back in service. 10/17/07 bf: Sent ttf letter to: Frank Didio PRC Management Co. LLC 955 East 163rd St. Bronx, NY 10459 11/16/07 Received fax from Bryan Ennist, Vice President of Operations, Atlas Welding and Boiler Repair. Tank had a wet seam near the bottom of the tank. Tank is AST in a fully contained vault. Tank had a stain on the side but no release of oil occurred. Tank was immediately pumped and evaluated. Tank is being repaired and work is expected to be completed by 11/20/07. Called B. Ennist at 718-293-3300. Tank is in a vault that can be inspected (i.e. walked around). I told Mr. Ennist that the tank is registered as vaulted without access. i faxed an info change application to him. fax: (718)367-5658. Since there was no release and tank is AST in vault, no further action is required. bf"

Remarks:

"TANK IS WEEPING AND LOOKS LIKE IT CAN BE REPAIRED:"

DEC Memo: "05/15/06 - See e-docs for Con Ed report detailing cleanup and closure. e2mis no. 163881 20-APR-2006 17:17. Con Edison Veh # 41089 on fire and leaking motor oil and anti-freeze at Westchester Ave and Bryant Ave in the Bronx, NY. FDNY on scene and extinguished fire washing motor oil and anti-freeze into nearby sewer. CFS transportation called to tow vehicle. Hydraulic fluid leaking from boom. CFS mechanic on location to control boom leak. Speedy-dry and absorbent pads being used to contain spill on asphalt; contractor Allstate Power Vac called to clean street and catch basin. "  
Remarks: "Traffic accident caused release of antifreeze and motor oil. Fire Dept was on scene and washed the material down the sewer. Unknown clean up at this time. Sewers were affected but no waterways."

RSE via DEC Zhune. Vought called super (David Ph:718-594-5013) and he noted that AL Eastmond was contacted for cleanup and that mechanical company was enroute (Ph:718-963-4700) sweeping up speedy dry and that original source of vapor complaints (an upstairs apartment) had no further impacts;. Vought performed site visit and source of spill was leaking supply line by oil filter which caused loss of approximately 50 gallons on painted and sealed floor. No drains affected as per David but NYCDEP contacted previously during day by FDNY Hazmat as they were initial responders to site. FNDY overpacked recovered oil into one 55-gallon drum. Vought inspected apartment that was original source of odor complaint (Yodira Apt 2D Cell:917-968-3138) and spoke to Yodira and she had no further complaints and Vought noted no olfactory impact as well but did leave contact info in case further issues should arise. 3000-gallon tank in vault with no weepholes present in basement. No signs of leakage from UST. Contact info for management company as per David is: Kraus Management Julie Peralta Ph: (718)274-5000 8/10/11-Vought-As per PBS #2-282030 tank is a 3000-gallon aboveground tank in contact with soil. As Vought noted no weepholes during inspection then tank is actually a UST. Vought called Peralta and left message that registration to be changed to UST. Vought sent and faxed letter requiring re-registration of tank as UST as well as tightness testing to address as per PBS registration: Kraus Management, Inc. 33-01 Vernon Blvd Long Island City, NY 11106 Ph: (718) 274-5000 Fax:(718) 274-0400 Attn: Julie Peralta"

Remarks: "Caller advised 50 gallons spilled onto basement floor and unknown amount did go down drain. Clean up is in progress."

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "5-3-16 - Obligado - Desk Duty - According to Michelle Luebke, the sheen was first reported yesterday afternoon by a NYC Parks education staff. It was observed again early in the AM by Parks maintenance staff. Michelle Luebke just went out there and observed the sheen in the video about at hour ago. She said it was definitely a rainbow sheen. She said it is not flowing now as much as it was prior, and is more of a patchy sheen now. Please advise if Tim should respond. The

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 111634  
DEC Memo: "7/27/05 - Transferred for closure review to M Johnson. 6/15/06 - Transferred for closure review to T Knizek. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 11/1/06 - Raphael Ketani. Site is an apartment building. There was a tank failure. Tanks-A-Lot was pumping out a mix of asbestos and oil from a pit. The site is block/lot 02758/0036. The site is owned by the Human Resources Administration, 250 Church Street, New York, 10013-3429. The agency involved was DPM/HPD, 100 Gold Street, #6Z1, New York, 10038. Assistant Commissioner of DPM was at (212) 863-7087. I called up the 7087 number, but the person answering the phone said that the building was not in the HPD database. I called up Tanks A Lot from the Bronx (718) 387-8300/927-0350. I spoke to a woman who answered the phone and explained that I needed information on this old spill. She said she wasn't sure there were any records, but she will take a look. I called up Mr. Edwin Lugo of DPM at Gold Street (212) 863-7312. I could only leave a voice mail. 11/2/06 - Raphael Ketani. I made an unannounced site visit. I went to the entrance to 1275 Westchester Avenue and was met by heavy security. I was told that the building is an HRA building and to wait outside. Women, some with babies and young children, were coming and going from the building. I was directed to a side entrance at 1138 Longfellow Avenue. Heavy security met me there. I met the super of HRA Adult Institutions, Mr. Hollis. He showed me the boiler room, the first electrical room, and the second electrical room. Each room was absolutely dry and clean with a solid concrete floor that did not have cracks and was painted. No vapors were detected with the PID in the boiler room and the first electrical room. However, the second electrical room had about 70 ppb of vapors. What these vapors were I could not tell as there were no odors. Also, this room had a side room or large niche where an oil tank might have once been kept. Mr. Hollis told me the building was converted to gas a long time ago. I brought this spill case to the attention of Randall Austin, Chief Spills Engineer Region 2. He told me that I can close this case. Based upon the lack of empirical or incidental evidence of a spill, the lack of direct evidence that a spill event took place, the lack of any personnel who were present at the time of the spill from the apartment building or the cleanup company, the lack of any papers documenting the spill, I am closing the case. 1/8/07 - Raphael Ketani. I received a call from Naim (na-eem) Brown of the CPC (Community Preservation Corporation). He asked whether the spill had been closed. I told him it had. He asked that I send him an NFA letter. I told him I would. The letter went out today to Mr. Brown at the CPC, 31-54 Albany Crescent, Bronx, 10463. "

Remarks: "TANKS-A-LOT IS PUMPING OUT OIL MIXED WITH ASBESTOS FROM 1275 WESTCHESTER AVENUE, PUMPING OIL FROM PIT."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"Need a site visit and/or detailed tank test, photos and siteplan of tank to confirm it is NOT leaking. On 6/14/05, Mr. Fiore of Con Ed sent information which documented clean up of soil contaminated by spill and replacement with clean soil. Contaminated soil was removed from site. Gas leak was repaired and returned to service (see 6/14/05 email message from Con Ed)."

Remarks: "UNKNOWN heating oil. Con ED was investigating a gas leak and while excavating found material in the soil. ConEd is doing clean up. No to the five questions."

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:

Location: The 900 square foot site is located at 1120 Westchester Avenue in Bronx County, NY in an urban area. Site Features: The site is located at 1120 Westchester Avenue, Bronx, New York. According to the New York City Department of Buildings the site is listed as block 2750 and lot 11. Records indicated that the subject building was built in approximately 1922. The building is a two story brick structure with a retail wine and liquor store currently occupying the first floor and one residential apartment on the second floor. The building occupies the entire lot, which is served by public water supply. Current Zoning and Land Use: The site is bordered by mixed use residential and retail properties on all three sides and Westchester Ave in front (to the north). Past Use of the Site: According to Sanborn History Maps, the subject property was vacant from the 1890s to the 1910s. There is no information regarding property use from the 1910s until the 1950s. The property was then used for both a retail store (including a drycleaner) and residential from 1950 to the present day. The Phase II Report did not note for how long the drycleaner operated on the property. Site Geology and Hydrogeology: The subsurface lithology encountered during the investigation consisted of brown fine silt-sand with some gravel. The site topography is generally flat and is situated approximately fifty (50) feet above mean sea level. Refusal due to competent bedrock was encountered at approximately three (3) feet below grade in the basement and twenty-two (22) feet below grade in the sidewalk area.

Env Problem: Based upon a review of a groundwater contour map for the area it is anticipated the regional groundwater flow is from the west to the east towards the Bronx River.

Nature and Extent of Contamination: Preliminary investigation results indicate the site is contaminated with volatile organic compounds (VOCs). Soil The analytical results for the soil samples were compared to the unrestricted use soil cleanup objectives (SCOs) listed in the NYSDEC CP-51 and NYCRR Part 375-6.8(a). The maximum tetrachloroethene (PCE) concentration in soil was 100 parts per million (ppm), at a depth of 0-3 below grade (SB-1B). A maximum observed xylene concentration of 2.7 ppm, and 1,2,4-trimethylbenzene concentration of 7 ppm were detected at depth range of 0-3 in SB-3. All other analytes are below unrestricted use SCOs. Groundwater Not sampled due to drilling refusal. Soil Vapor Analytical results of soil vapor samples were compared to NYSDOH sub-slab guidelines. The maximum tetrachloroethene (PCE) sample concentration was 125,000 ug/m3 at a SSV-1. The maximum trichloroethene (TCE) concentration of 179 ug/m3 was observed at SSV-1. The corresponding indoor air concentration of PCE was 196 g/m3 at IA-1, located in the basement of the building; and IA-2 at 45.8 g/m3, located on the first floor in the liquor store.

Health Problem: Not reported

People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Since the site is covered by pavement and the building basement has a concrete floor, people should not come into direct contact with site-related soil contamination unless the pavement, building, or basement floor is disturbed. Volatile organic compounds in the soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has identified impacts associated with soil vapor intrusion at the on-site building and actions are recommended to address exposure. In addition, environmental sampling is recommended to determine if soil vapor intrusion is a concern for off-site buildings.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

Area of violation: Generators - General  
Date achieved compliance: 09/02/1988  
Evaluation lead agency: State

**FINDS:**

Registry ID: 110004401923

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Sangesland spoke to Celeste Okoli (DEP inspector). He was at the site and spoke to building manager Phillip Gonzalaz (718-991-1325). Appears that oil is coming through the side wall into #875 Longfellow Ave. Site visit needed to determine where the flow comes from. (Probably change the spill address above once a source is identified) 4/13/11- DEC Piper performed site visit at 875 Longfellow Ave. #4 oil is seeping through wall and into sump. Builing is on #2 oil and is not source. Oil is coming from 876- 882 Bryant as they had #4 oil spill. Spill 1100411 is closed and referred to spill 1011300. I spoke with property manger Mike Gallager of Bryant Ave. He asked to discuss tomorrow morning though will have PTC avail to pump out sump and continue monitoring."  
Remarks: "Caller advised above ground tank leaking into basement of the property listed. Clean up is pending."

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility Has Received Notices of Violations:

Regulation violated: Not reported  
Area of violation: Listing - General  
Date violation determined: 04/21/2010  
Date achieved compliance: 04/26/2010  
Violation lead agency: State  
Enforcement action: WRITTEN INFORMAL  
Enforcement action date: 05/04/2010  
Enf. disposition status: Action Satisfied (Case Closed)  
Enf. disp. status date: 05/04/2010  
Enforcement lead agency: State  
Proposed penalty amount: Not reported  
Final penalty amount: Not reported  
Paid penalty amount: Not reported

Evaluation Action Summary:

Evaluation date: 04/21/2010  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Listing - General  
Date achieved compliance: 04/26/2010  
Evaluation lead agency: State

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Line test failure - Contractor will repair and retest line. TTF letter sent 2/9/2004 02/10/04 - Spoke to Bill Simmons of ECS, hired by Cumberland Farms. ABS Carpet Warehouse located adjacent to gas station has complained of gasoline odors. ECS performed indoor air survey and detected some volatiles coming from cracks in floor. A 3/4-HP blower and duct work has been rigged to abate vapors. USTs are approx 40 feet from wall. DTW is approx 18-19 ft below grade, basement floor approx 6 feet above water table. Bill will send fax summarizing indoor vapor sampling, sealing of floor and wall with hydraulic cement, line failure info, proposed SVE and monitoring well locations. They hope to install SVE wells on Friday, 02/13/04. -Rommel 02/18/04 - STIP emailed to Bill Simmons and mailed certified to Angela Pimental at Cumberland Farms. Deadline for signing and returning, 3/3/04. Rommel 03/08/04 - Effective date of Stip. Rommel 6/7/04 - Email to Bill Simmons, Investigation Summary Report was due 6/6/04. Rommel 06/10/04 - Mailed certified letter to Angela Pimento, Cumberland Farms, conditionally approving Investigation Summary Report dated 6/2/04 therefore requiring the submittal of a RAP within 20 days (as per CAP) on June 29, 2004. Rommel 06/21/04 - Received call from Kevin and Bill Simmons from ECS Marin. They will schedule drilling NE, SE and E of SVE-4, sample existing MW, delineate GW to west and notify DEC. Still gas in indoor air samples. This spill report associated with Super Manhole. Add'l testing, performed within last month? and inner walls of both Regular & Plus tanks (adjacent) failed. USTs have been emptied and Cumberland Farms is determining whether to close in place or remove. Rommel Indoor air and SVE sampling scheduled 6/22. Wells scheduled 6/23 and 6/24. RAP deadline extended to 7/15/04 Rommel. >>> Bill Simmons <WSIMMONS@ecsconsult.com> 01/13/05 01:17PM >>> Hello Jennifer, I

wanted to let you know that beginning next week (January 18, 2005) Cumberland Farms Inc. shall be removing and replacing five (5) 4,000 gal USTs. Work shall include tank accessories, all meeting NYC requirements; DWFG piping, as required; new dispensers and their accessories; new monitoring system; new fire suppression system; shoring for new tank installation; new island curbs; and repair vent lines, as required. Tyree is contractor. ECS will oversee UST removals and oversight for contaminated soil excavation and post-ex sampling. If you have any questions, please contact myself or Angela Pimental at 800-225-9702. Thank you. -Rommel 06/10/05: Spill transferred from Rommel to J. Kolleeny. - JK 6/23/05: Reviewed UST Closure Report, dated March 2005. End-pt. samples showed residual contamination, especially at north and northwest edges of tank pit. ECS and Tyree put in a 6th SVE well, between USTs 3 & 4, on 6/22/05. Spoke with Bill Simmons of ECS on 6/23/05, telling him DEC must be given 5 days advance notice of fieldwork, and that location of SVE well should be reviewed and approved by DEC. He explained that site conditions limited choice of where to put SVE well, and that it was a field decision made after tanks were removed and new replacement tanks put it, putting in the casing before backfilling tank pit with pea gravel. JK agreed this was better than nothing, but in future efforts should be made to contact and confer with DEC regarding any system modifications. - J. Kolleeny 6/23/05: Reviewed Site Status Update Report for Jan.-Mar. 2005., dated May 2005. JK contacted Bill Simmons of ECS by phone and requested that SVE system effluent data be included in data table in future reports, rather than Appendix, and that results for benzene effluent be converted into lb/hr and compared to benzene discharge limit from Stip agreement (SVE data sheets). Faxed Bill 2 examples of such conversion calculations and monitoring reports presenting benzene data to show compliance with discharge standard. - J. Kolleeny 6/27/05: Received NYSDOH letter approving ECS recommendation to suspend indoor air sampling at adjacent carpet warehouse, but noting that SVE system operation should continue, and that DOH should be consulted at point when system is shut down, to discuss whether any additional indoor air testing is needed. - J. Kolleeny 06/14/06: Reviewed quarterly site status update rpts from 2nd Quarter '05 through 1st Quarter '06, and sent email to Bill Simmons of ECS: I've reviewed several Site Status Update Rpts (April-June '05, July-Sept. '05, Oct.-Dec. '05 and Jan.-March '06), and it seems that monitoring wells and SVE wells are showing virtually no remaining GW contamination, and SVE system is recovering minimal quantities of hydrocarbon vapors. I suggest ECS advance some soil borings in locations where soil contamination was identified in past investigations, to evaluate extent to which SVE system has cleaned up soil. (Do you have site plan showing historic soil data?) If you agree with idea of doing confirmation soil sampling to evaluate remedial progress, please put together work plan for soil investigation. - J. Kolleeny 03/05/07: Reviewed ECS Site Status Update Rpt for April-Sept.'06, dated Nov.'06 and received 12/13/06. GW results from Sept.'06 show minimal GW contamination remaining, and SVE system performance data show little or no hydrocarbon vapor recovery, suggesting system has reached limit of effectiveness. Report states that ECS will put together soil investigation work plan to evaluate soil remediation progress. Also, spoke with Bill Simmons of ECS on 3/5/07 and agreed that ECS will prepare confirmation soil sampling plan, which will include most recent GW data from Jan. '07. Sent an email confirming this (cc to

Chris Johnson of Cumberland Farms), and asked for electronic copy of Site Status report (now in eDocs). - J. Kolleeny 05/11/07: Reviewed ECS's Site Status Update Report for Oct. '06 - March '07 and Confirmation Soil Boring Work Plan dated 4/30/07 and 5/3/07, respectively. Site Status Update Report presents monitoring data for on-site SVE system (currently not operational) and results of recent and historic groundwater sampling. SVE system data suggest that system may have reached limit of effectiveness, and recent GW data show low levels of petroleum contaminants remaining in a few on- and off-site wells. Based on GW data, ECS asked that NYSDEC consider discontinuing GW monitoring program. Confirmation Soil Boring Work Plan proposes advancing three (3) soil borings to 25 feet below grade at locations where soil contamination was previously identified, to evaluate whether SVE system has effectively addressed contam. I sent letter (in eDocs) to Christopher Johnson of Cumberland Farms (cc'd Bill Simmons of ECS) approving work plan but asking for additional soil boring near well ECS-4, full round of GW sampling, and analysis of soil & GW samples full range of VOCs, and noting that future reports should include site location figure. - J. Kolleeny 06/14/07: Received email from Bill Simmons of ECS on 6/12/07, saying he'd met with adjacent property owner (ABC Carpet Warehouse), and owner is adamantly refusing to allow any drilling on his property (i.e., in alleyway), or in sidewalk in front of his property. I called Bill Simmons on 6/14/07 and agreed that in light of this circumstance, ECS could eliminate boring I requested in sidewalk, and relocate boring in alleyway further to south, onto Cumberland Farms' property, so total no. of borings will be 3. Drilling planned for late June. - JK 02/28/08: Reviewed Confirmatory Soil Boring & GW Investigation Closure Report by ECS, dated 2/14/08, received on 2/19/08. Report summarizes confirmation soil sampling done on 11/27/07 and GW sampling done on 1/29/08. Three soil borings were advanced near north edge of gas station property, near wells SVE-4 and SVE-5, where soil contam was identified in past. Boring CSB-1B (near SVE-5) and boring CSB-2B (near SVE-4) had PID readings of 39 and 35.4 ppm, resp., in 19-21 ft. interval, but no compounds above TAGM 4046 RCO's. Boring CSB-2B in 23-25 ft. interval had benzene exceedance, 106 ug/kg. GW results showed 2 exceedances: 1.3 ug/L of benzene in SVE-2 (in alley between gas station and warehouse), and 5.9 ug/L of total xylenes in SVE-4. Results suggest SVE system has been effective in addressing soil contam. Review of DEC Remarks showed that Mike Hughes of NYS Dept. of Health wanted chance to decide if add'l indoor air monitoring at ABC Carpet is warranted prior to spill closure, so I contacted him on 2/26/08. He wanted to talk to owner of warehouse, so I contacted Bill Simmons of ECS for contact info. Bill gave me name Paul Chapman, 718-842-8775; Bill noted that ECS field personnel have asked Mr. Chapman over years if he still has any odors in basement, and he has replied not since mid-2004; in response to my question does carpet bldg have complete or partial basement, Bill said it has complete basement, sent pdf of bldg plan plus photos of Bronx River at rear of bldg (in eDocs). I gave contact info to Mike Hughes (DOH), who contacted Mr. Chapman; Chapman told him he still occasionally smells gasoline odors in basement and store, and also mentioned seeing sheen on nearby Bronx River (behind warehouse and gas station) that he thinks could be related to this spill. I contacted Bill Simmons and relayed this, and he said Chapman had told him he'd been seeing sheen there since 1970s, long before this spill, and repeated that Chapman had not had any odor complaints for long time. I

**S102149618**

arranged a conference call on 2/28/08 with Simmons and Hughes to discuss these discrepancies, with outcome that I agreed to contact Mr. Chapman to discuss odor problems and access to alleyway for addt'l soil sampling (which Bill Simmons said Chapman had refused to grant for confirm soil invest). I called Mr. Chapman on 2/28/08, and he said he occasionally smells gasoline in basement and store (esp. when humidity is high), and also said he observed sheen in river only after this spill occurred, suggesting soil west of gas station along river had never been adequately investigated. He agreed to allow access to alley for addt'l soil sampling (denying that he had refused access to ECS) and for indoor air sampling; I promised to provide him copy of work plan for addt'l investigation and cc him on my approval letter. His mailing address is: ABC Carpet & Home Attn: Paul Chapman, Vice Chairman & President 1055 Bronx River Ave. Bronx, NY 10472 I then contacted Bill Simmons of ECS and requested work plan for addt'l invest involving soil borings in alley near SVE-1 and SVE-2, plus boring in parking lot area west-northwest of gas station, and indoor air sampling at location in basement where monthly sampling had been done. To follow up on this conversation and keep RP in loop, I sent email to Chris Johnson of Cumberland Farms, with cc's to Mike Hughes of DOH and Bill Simmons of ECS: I want to fill you in on recent developments regarding this site. I reviewed Confirmatory Soil Boring & GW Investigation Closure Report dated 2/14/08, prepared by ECS. Although data available in report suggest that impacts from spill at this site have largely been addressed, in going through spill file I realized that Mr. Michael Hughes of NYSDOH had requested opportunity to comment on whether or not addt'l indoor air sampling might be appropriate at Carpet Warehouse adjacent to site, prior to closing spill case. I contacted Mr. Hughes, and he contacted owner of adjacent property, Mr. Paul Chapman. Reportedly, Mr. Chapman told Hughes that he still occasionally notices gasoline odors in basement and store. I should also mention that confirmatory soil sampling work done recently by ECS did not include any soil borings in alley between Exxon station and carpet warehouse, where soil contam was detected in past and vapor extraction wells were installed. (Reportedly, borings could not be done in alley because Mr. Chapman would not grant access.) Today, I spoke with Mr. Chapman, who again said he occasionally notices gasoline odors in basement and store. I explained that it would be desirable to sample soil in alley to evaluate whether or not soil impacts observed there in past have been addressed, and he agreed to allow access to alley for drilling and soil sampling. He also stated he has repeatedly observed sheen on Bronx River that he believes may be related to spill at Exxon station, and he expressed concern that soil west of Exxon station (between station and river) has never been adequately investigated. As a result, I have asked Bill Simmons of ECS to prepare work plan to advance addt'l soil borings in alley and in parking lot west-northwest of Exxon station, collect and analyze soil samples from these borings, and perform indoor air sampling in basement of warehouse, at location where monthly indoor air sampling was done in past. Data from this addt'l investigation should make possible more definitive evaluation of spill cleanup. I promised to provide Mr. Chapman with copy of ECS's work plan, and to copy him on my work plan approval letter. If you have any questions or comments about this, please do not hesitate to contact me. - J. Kolleeny 04/08/08: On 4/1/08 received pdf of Confirmation Soil Boring Work Plan Addendum, dated 4/1/08 by ECS (in eDocs), by email from Bill Simmons of ECS

**S102149618**

(received hard copy 4/2/08). Plan proposes drilling two soil borings in alleyway between site and ABC Carpet warehouse, adjacent to vapor extraction wells SVE-1 and SVE-2, and a third boring in parking area near west edge of site (towards Bronx River), plus performing indoor air sampling in basement of ABC Carpet, as discussed (see above entry). Email from Bill Simmons stated they'd like to drill borings on 4/22/08 and requested I contact ABC Carpet owner, Paul Chapman, for his permission. I mailed copy of report to Mr. Chapman, and after several attempts to reach him by phone, I spoke with Mr. Chapman on 4/7/08 and he agreed to allow drilling and air monitoring on his property. I sent letter approving work plan, but requesting that if soil impacts are observed in boring near west edge of property, a GW grab sample be taken, to Chris Johnson of Cumberland Farms (cc's to Bill Simmons of ECS and Paul Chapman of ABC Carpet) on 4/7/08 (letter in eDocs). - J. Kolleeny 04/23/08: Visited site on 4/22/08 to observe fieldwork. Boring drilled near NW corner of ABC Carpet Warehouse parking lot, soil in 5'-7' interval had PID reading = 300 ppm, GW at about 20' bgs, GW grab sample taken with bailer after purging well of several bailers' worth of very turbid, silty water (poured some of this into glass jar and let sit, eventually silt settled to fill bottom 1/3 of jar, water above had slight sheen on surface, could be petrol or organic, and very slight petroleum odor, I thought) and letting well recover for several hours. Borings in alley between gas station and warehouse had very little contam.: boring near SVE-2 had 17 ppm on PID for 18'-20' interval, 1 ppm for 20'-22', and boring near SVE-1 had 2 ppm in 18'-20' interval; all else were BDL. Indoor air sample collected with Summa canister from lower level of warehouse; I noticed no petroleum odors, only smells related to carpeting and furniture. Lab results pending. See photos in eDocs image folder. - J. Kolleeny 06/24/08: Received pdf of Confirmatory Soil Boring & GW & Indoor Air Investigation Closure Request Addendum report (in eDocs) via email on 6/6/08 from Bill Simmons of ECS; got hard copy on 6/9/08. Forwarded pdf to Mike Hughes of NYSDOH on 6/11/08 for his review of indoor air data. Reviewing report I noted that GW data table missing compound naphthalene; checked lab data sheets and found that GW grab sample from boring CSB-6, near west edge of ABC Carpet's parking lot, near Bronx River, had exceedance for naphthalene, 119 ug/L. Contacted Bill Simmons and requested that they revise GW data table to include naphthalene, and add mention of exceedance in CSB-6 to text. Received revised text and Table 2 on 6/17/08 (in eDocs). On 6/13/08, received email from Mike Hughes of DOH stating: Levels of petroleum-related compounds in April 08 indoor air sample results for ABC Carpet are similar to background and consistent with sample results from 2005. There does not appear to be any discernable impact from gasoline vapors. Unless your evaluation of soil and GW sample results suggest any potential petroleum vapor concerns, we do not recommend any further air testing at this time. Owner should be advised to contact your office in event gasoline odors should be detected in ABC Carpet building. Report still under review. - J. Kolleeny 08/20/08: In early August, I contacted Bill Simmons of ECS and requested they prepare short discussion of most recent investigation results, focussing on minor exceedances found in soil & GW samples. On 8/4/08 received pdf of Data Evaluation Summary Addendum dated 8/11/08 by ECS (in eDocs), received hard copy on 8/15/08. Document concludes that overwhelming majority of contam originally identified in spill investigation has been addressed, and that residual contam is minor, poses no threat to environment or

public, and will naturally attenuate. Also concludes that contam detected in boring at west end of small parking lot is extremely unlikely to have been caused by this spill, considering distance from source, lack of contam detected in intervening borings, and shallow soil interval affected (ruling out GW transport mechanism). Instead, ECS states contam there could be from fill materials, since site is constructed atop former landfill materials. I asked Vadim Brevdo and Amar Nagi of Region 2 DER and Bob Cozzy of DEC Central Office DER to evaluate spill cleanup history and residual soil & groundwater impacts, plus DOH statement regarding indoor air sample. All concluded that spill cleanup has been adequate and that residual impacts pose no significant threat to environment or public health. I closed spill and issued NFA letter (in eDocs) by email and regular mail to Chris Johnson of Cumberland Farms, with cc by email to Bill Simmons of ECS and by regular mail to Mr. Paul Chapman, owner of adjacent Carpet Warehouse. - J. **Tank Info:**

Tank Number: 001  
Tank ID: 6011  
Tank Status: Closed - Removed  
Material Name: Closed - Removed  
Capacity Gallons: 4000  
Install Date: 01/01/1989  
Date Tank Closed: 01/21/2005  
Registered: True  
Tank Location: Underground  
Tank Type: Steel/carbon steel  
Material Code: 0009  
Common Name of Substance: Gasoline

Tightness Test Method: 20  
Date Test: 01/07/2000  
Next Test Date: Not reported  
Pipe Model: Not reported  
Modified By: NRLOMBAR  
Last Modified: 01/13/2005

**Equipment Records:**

I01 - Overfill - Float Vent Valve  
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring  
A00 - Tank Internal Protection - None  
C02 - Pipe Location - Underground/On-ground  
F04 - Pipe External Protection - Fiberglass  
K01 - Spill Prevention - Catch Basin  
B09 - Tank External Protection - Urethane  
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)  
G04 - Tank Secondary Containment - Double-Walled (Underground)  
E04 - Piping Secondary Containment - Double walled UG  
J01 - Dispenser - Pressurized Dispenser  
H05 - Tank Leak Detection - In-Tank System (ATG)

Tank Number: 002  
Tank ID: 6012  
Tank Status: Closed - Removed  
Material Name: Closed - Removed  
Capacity Gallons: 4000

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 1/31/02 MR. SINGS FROM FABCO STATED THAT THE SPILL CONSISTED OF A FEW GALLONS OF FUEL OIL ON THE SIDEWALK, DIRT WAS SPREAD ON THE OIL DURING A RAINSTORM CREATING A MUDDY OILY WATER MIX. MR.SINGS ALSO INDICATED THE SPILL CAME FROM THE VENT LINE ON BANCO POPULAR, AND THE TRUCK THAT MADE THE DELIVERY SAID ENTERPRISE TRANSPORTATION ON IT. TIPPLE THEN CALLED BANCO POPULAR (718-589-6668) AND WAS INFORMED THAT THE BANK HAD RETAINED WEXLER BOILER COMPANY TO CLEAN THE SPILL. A REPRESENTATIVE FROM THE 1046 SOUTHERN BLVD. BRANCH OF BANCO POPULAR ASSURED TIPPLE AT 5PM THAT SHE HAD INSPECTED THE SPILL SITE AND THE CLEANUP WAS COMPLETE. "

Remarks: "citizen noticed oil company overfill tank - spill to ground and they put dirt down to cover spill area - spill is being washed away today due to rain "

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110004315269

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/19/2005 - Feng - File reviewed by Feng: Tank Closure Report, by Tyree, 11/1993. During 8/1993, ten (10) 550-gallon gasoline USTs were excavated and removed by Main Elmsford Company. Soil samples were collected. Environmental Site Investigation Report, by Tyree, 12/1993. During 10/1993, Tyree installed four (4) monitoring wells. no groundwater encountered. Levels of aromatic hydrocarbons detected in split spoon soil samples collected during drilling, exceeded NYSDEC Soil Guidance Values. Vapor Extraction Influence Pilot Test Report, by Tyree, 1/1995. During 1/1995, Tyree performed a Vapor Extraction Influence Pilot Test. Based upon findings of the vapor extraction influence pilot test a ROI of 15' can be achieved if a flow rate of 122 CFM at 20 of water is supplied to vapor extraction wells VW-1, VW-4, VW-5 and VW-7. Remedial Action Plan, by Tyree, 2/1995. Outlines design and construction details of the SVES to remediate soil contamination detected during removal of the former gasoline UST. SVES installed by Tyree, 4/1995. the SVES consists of six (6) 4-inch diameter vapor extraction wells which are individually manifolded to 2 diameter

Schedule 40 PVC headers. The PVC headers are extended to a 12' squared concrete pad. The PV headers were then manifolded to a skid mounted SVE skid. The SVE skid consists of a Roots 5 hp positive displacement blower and is equipped with pressure and temperature switches, a vapor drop tank (coalescer) with high water level switch, and an integrated control panel. The SVE skid was started during 3/1996. Monitoring and gauging monthly on Vapor extraction wells VW-1 through VW-5, and VW-7 from the top of the well casings using a product/water interface probe. The SVES was inspected, monthly, during the 12/1998 through 2/1999 monitoring quarter. Semi Annual Monitoring Report, by Tyree, 7/2003-12/2003. 6 monitoring wells on site, only 2 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 255.7ppb BTEX and MTBE below MDL in VW-1 (20.21' bg), 6409.9ppb BTEX and MTBE below MDL in VW-4 (19.05' bg). Semi Annual Monitoring Report, by Tyree, 1/2004-6/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 4676.6ppb BTEX and MTBE below MDL in VW-4 (18.5' bg). Semi Annual Monitoring Report, by Tyree, 7/2004-12/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 1408.5ppb BTEX and MTBE below MDL in VW-4 (18.64' bg). 05/04/07-Sun:Based on the Subsurface Investigation Report, dated November 2006 ,all of the groundwater samples collected from the sampling event were non detect, indicating that the groundwater has not been impacted from this spill.No free product was detected in any monitoring wells. Based on 1/2/07 data, BTEX ranged from non-detect to 2.53 ppb, and MTBE ranged from non-detect to 42 ppb.Based on these low concentrations of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Update By:

JHOCONNE

Site Description:

Location:The site C203055A is the area considered off-site from BCP site C203055, which is located at 1095 Southern Boulevard in the Bronx. The off-site area was defined to reflect the potential migration of contaminants from the BCP site, and includes the eastern sidewalk of Southern Boulevard across from the BCP site; and the buildings adjacent to the BCP site on the north, south, and west. Site Features:The off-site area consists of the residential buildings immediately adjacent to the north and west of 1095 Southern Blvd, a commercial building immediately adjacent to the south, and Southern Blvd to the east followed by a parking lot further east across Southern Blvd. To the northeast and southeast across Southern Blvd are mixed commercial/residential buildings. The BCP site at 1095 Southern Boulevard is vacant. Current Zoning/Uses:The off-site area consists of residential and commercial buildings. The BCP site at 1095 Southern Boulevard is currently vacant and undeveloped and is zoned R7-1 (residential district), with a C2-4 commercial overlay meaning that the property can be used for residential, commercial, or mixed (residential plus commercial) use. The proposed on-site development is for an office building, with below-grade parking. Historical Use:The BCP site C203055 has historically been used for several commercial uses including, most recently, a dry cleaning facility. Site Geology and Hydrogeology:The elevation at the BCP site is approximately 59 feet above mean sea level. Bedrock has been identified at depths ranging from 12 to 24 feet below surface grade. The depth to groundwater beneath the site is approximately 9 feet to 12 feet below ground surface. The groundwater flow direction beneath the site is east.

Env Problem:

This site represents an off-site project to investigate the area surrounding, and downgradient of, BCP Site C203055 (1095 Southern Blvd). The investigation determined that no further action is required. Nature and extent of contamination:The contaminants of concern at BCP site C203055 are chlorinated solvents, consistent with the previous use of the site as a dry cleaner. Chlorinated solvents including tetrachloroethylene (PCE) and its breakdown products have been detected in soil, groundwater, and soil vapor in the subsurface of site C203055. Chlorinated solvents were therefore the focus of the investigation for the off-site project. Soil:The off-site investigation did not include soil analysis since there was no reason to believe that contaminants were disposed off-site. Groundwater:During the remedial investigation for the BCP site, elevated concentrations of chlorinated solvents were detected in groundwater in one off-site monitoring well located on the sidewalk just outside the property boundary. At this location, PCE was detected at 51,000 parts per billion (ppb); trichloroethylene (TCE) was detected at 52,000 ppb; and cis-1,2-dichloroethylene was detected at 12,000 ppb. The applicable groundwater quality standard for these contaminants is 5 ppb. Vinyl chloride was also detected at 13,000 ppb compared to the standard of 2 ppb. An off-site investigation was performed to determine if these contaminants were migrating further off-site. Groundwater samples were collected from both permanent monitoring wells and grab samples across Southern Boulevard, in the downgradient direction of groundwater flow. No contaminants of concern were detected in these samples. The extent of off-site contamination appears to be limited to the area just outside the property boundary from the highest area of on-site contamination. Soil vapor and indoor air:Soil vapor intrusion evaluations were

Health Problem:

performed in the two buildings immediately adjacent to the north and south of the site, and two buildings to the west of the site. In the sub-slab soil vapor samples, PCE was detected at a maximum of 52 micrograms per cubic meter (mcg/m3) in one building; however, it was not detected in the indoor air samples collected from that building. In the indoor air samples from other buildings, PCE was detected at a maximum of 8.7 mcg/m3. Based on the sampling that was conducted actions were not needed to address exposures related to soil vapor intrusion. To the east of the site, two soil vapor samples were collected from beneath the sidewalk across Southern Boulevard. PCE was detected at concentrations of 45 mcg/m3 and 6.2 mcg/m3. Trichloroethene (TCE) was also detected at concentrations of 5.4 mcg/m3 and 0.37 mcg/m3. Based on these sampling results and other site-related information no additional actions were recommended. People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is not a concern for buildings adjacent to the 1095 Southern Boulevard site.

Update By: JHOCONNE  
Site Description:

Location: The site is located at 1095 Southern Boulevard in the Bronx. It is bordered by Southern Boulevard to the east, residential buildings immediately adjacent to the north and west, and a commercial building immediately adjacent to the south. Further east across Southern Boulevard are commercial properties. Site Features: The site is approximately 0.23 acres and is currently vacant and unused. The previous on-site building was destroyed in a fire in 2008. Current Zoning and Land Use: The site is currently vacant and undeveloped, following a fire in 2008 which destroyed the on-site building. The site is zoned R7-1 (residential district), with a C2-4 commercial overlay meaning that it can be used for residential, commercial, or mixed (residential plus commercial) use. Past Use of the Site: The site has historically been used for several commercial uses including, most recently, as a dry cleaning facility. It appears that chlorinated solvents detected on-site are related to the historical dry cleaning use. Site Geology and Hydrogeology: The elevation of the site is approximately 59 feet above mean sea level. Bedrock has been identified at a depth of approximately 24 feet below surface grade. The depth to groundwater beneath the site is approximately 9 feet to 11 feet below ground surface. The groundwater flow direction beneath the site is east.

Env Problem:

Nature and extent of contamination: The contaminants of concern are chlorinated solvents, consistent with the previous use of the site for dry cleaning. Tetrachloroethylene (PCE) and its breakdown products have been detected in soil, groundwater, and soil vapor. Soil: Chlorinated volatile organic compounds (cVOCs) are present in soil predominantly near the eastern border of the site, in the depth range of 14 feet to 20 feet below surface grade. Concentrations of chlorinated VOCs exceed the Unrestricted Use Soil Cleanup Objectives (UUSCOs) in 4 of 14 on-site soil borings, all on the east side of the site. In these borings, PCE was detected as high as 1,200 parts per million (ppm); trichloroethylene (TCE) as high as 120 ppm; and cis-1,2-dichloroethene (DCE) as high as 40 ppm. In comparison, the UUSCOs for these contaminants, respectively, are: 1.3 ppm, 0.47 ppm, and 0.25 ppm. Low concentrations of petroleum-related VOCs and semi-volatile organic compounds (SVOCs) were detected on site, at concentrations below the UUSCOs. Metals detected in soil at concentrations exceeding the UUSCO include: trivalent chromium at 33.8 ppm (UUSCO is 30 ppm); copper at 122 ppm (UUSCO is 50 ppm); lead at 357 ppm (UUSCO is 63 ppm); and zinc at 618 ppm (UUSCO is 109 ppm). Groundwater: The contaminants of concern in groundwater are cVOCs. Similar to soil, concentrations are highest in monitoring wells installed in the eastern portion of the site. PCE and its breakdown products were detected at levels exceeding NYSDEC Ambient Ground Water Quality Standards (AGWQS) in 9 of 11 on-site overburden groundwater monitoring wells, in addition to one monitoring well installed in the sidewalk to the east of the site. Contaminants include: PCE as high as 66,000 parts per billion (ppb) compared to the AGWQS of 5 ppb; TCE as high as 17,000 ppb on-site and 52,000 ppb in an off-site well, compared to AGWQS of 5 ppb; DCE as high as 63,000 ppb compared to AGWQS of 5 ppb; and vinyl chloride detected as

**S110748432**

high as 7,920 ppb on-site and 13,000 ppb in an off-site well, compared to AGWQS of 2 ppb. These contaminants were also detected in a bedrock monitoring well, at lesser concentrations (the maximum concentration detected in bedrock groundwater was TCE at 410 ppb). Soil vapor: The contaminants of concern are present in on-site soil vapor. PCE was detected as high as 2,800 micrograms per cubic meter (ug/m3) and TCE as high as 280 ug/m3. Significant threat: The site presents a significant threat to public health and the environment due to the high concentrations of chlorinated volatile organic compounds (VOCs) in on-site soil, groundwater, and soil vapor; and due to the potential off-site migration of contaminants via groundwater. An off-site investigation is underway (see site no. C203055A).

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Access to the site is restricted and contact with contaminated soil is unlikely unless persons dig below the ground surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Off-site soil vapor intrusion sampling has not identified any exposures to date. However, additional sampling is recommended as part of the off-site portion of this project.

DEC Memo: "12/08/05: This spill transferred from J.Kolleeny to S.Kraszewski.  
03/23/06: This spill transferred to K.Tang - SK 07/22/10: J.Kann - spill transferred to J.Kann. Investigation Work Plan received on 7/15/10. 1/3/2012: J.Kann - provided comments investigative work plan in an email (edoced). 4/12/12: J.kann - Work plan approved in an email from 3/19/2012. 9/5/12: J.Kann - should observe field work to confirm that there is no room to sample between tank and building. 4/1/13: J.Kann - sent Stip and Cover letter to NYCHA today. 9/9/13: J.Kann - SIR received 8/12/13. Email sent to NYCHA today stating the report is incomplete - tables are not in the report and the figures are illegible. Will review report once all information is received. 10/8/13: J.Kann - revised SIR received on 9/24/13 and under review. 10/8/13: J.Kann - Report reviewed. 10,000 gallon UST removed in 1998 and replaced with a 4,000 gallon UST. 2013 Investigation included the advancement of thirteen soil borings and the installation of 3 monitoring wells. The spill has been closed based on the following: -source was removed in 1998 -Of the 13 soils samples collected, only one sample contained one SVOC minimally above CP-51, no VOC exceedences. -No free product in the wells -No SVOCs exceedences in groundwater. Minor VOCs detected (6-10 ppb)in groundwater and expected to naturally attenuate. -NFA. NYCHA emailed"  
Remarks: "CALLER STATING THEY ENCOUNTERED CONTAMINATED SOIL WHILE REMOVING AN OLD TANK. SOIL WILL BE REMOVED."

DEC Memo: \*\*\*\*NOTE\*\*\*\* Tank at 1148 Colgate failed AND tank at 1150 Colgate failed\*\*\*\* 8/10/2009 TTF Letter sent to: Ms. Maria McCullough Zevrone Realty Corp 1601 Bronxdale Ave Suite 201 Bronx, NY 10462 8/12/2009 Rep from Langsan Properties called Sangesland and said ABC Tank has been hired to deal with the repairs/retest. They will forward the documentation to the DEC as soon as the work is done. 9/2/09. J.Krimgold reviewed the letter submitted by ABC Tank dated 08/31/09. Based on this letter two USTs 2000 gal each failed the t/test due to a leaky mainway gasket. The gasket was replaced along with a part on the vent pipe. After that both tanks passed the test. Case closed."

SWIS: 0301  
Town: New York City  
Record Added Date: 04/04/2006  
Record Updated Date: 07/24/2012  
Update By: RSLEE  
Site Description:

This is a new BCP application and pertains to the property located at 825 Bronx River Avenue, Bronx County. This site is approximately 10.5 acres in size. Current uses are commercial, industrial and vacant property. Future uses are intended to be residential and commercial. Suspected and known contaminants at this site include arsenic, chromium, lead mercury, VOCs, and SVOCs. These contaminants are suspected to be impacting the soil and groundwater. Soil gas is also a concern and were detected off-site. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health. June 2006: The Applicant withdrew their Application.

Env Problem: Information submitted with the BCP application regarding the environmental conditions at the site are currently under review and will be revised as additional information becomes available.

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(Section 10, Block 2762, Lot 300), 842 Whittier Street (Section 10, Block 2762, Lot 272), 845 Edgewater Road (Section 10, Block 2762, Lot 294), 810-820 Whittier Street (Section 10, Block 2762, Lot 257) and 835 Edgewater Road (Section 10, Block 2762, Lot 299) on the New York City Tax Map. The Site is a 1.642-acre parcel bounded by an industrial/ commercial lot to the north, a commercial lot to the south Edgewater Road to the east, and Whittier Street to the west. Site Features: The Site is currently occupied by 6 buildings and is operated as an industrial facility. Current Zoning/Use(s): The current zoning is industrial/manufacturing. Historical Use(s): The site was previously occupied by a paint manufacturing company, metal works, a door company and art craft table company in the 1950s. The types of raw materials/chemicals associated with these types of operations include solvents and paint thinners. For approximately 40 years, Dexter manufactured specialty industrial organic chemicals, predominately phosphation and sulfation batches, and various blending operations. The Site is currently owned by Edgewater Realty. Site Geology and Hydrogeology: The site is located on a flat coastal peninsula. The estimated elevation is approximately 20 feet above mean sea level. The Bronx River is located less than 1,000 feet to the east of the Site. The depth to shallow groundwater at the site varies from 2 to 12 feet below grade across the site. Groundwater typically flows to the east-northeast towards the Bronx River.

Env Problem:

Nature and Extent of Contamination: Prior to Remediation - Investigations revealed the presence of the following contaminants in soil and groundwater: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals at concentrations above the NYSDEC Recommended Soil Cleanup Objectives and Ambient Groundwater Standards. Two major areas of concern (AOCs), known as Area A and Area I, have been identified. Area A is located beneath the Edgewater Road Plant, and is approximately 40 feet by 40 feet wide and 15 feet deep. Area I is located in an interior section of the facility in the alleyway adjacent to and beneath portions of the Whittier Street Plant, and is approximately 50 feet by 75 feet wide and about 15 feet deep. The primary contaminants of concern in soil at both AOCs are xylene (at concentrations of up to 450 ppm), toluene (28 ppm), ethylbenzene (58 ppm), naphthalene (160 ppm), and several chlorobenzene compounds (260 ppm). Groundwater is similarly contaminated with VOCs including benzene (at concentrations up to 35 ppb), toluene (73 ppb), ethylbenzene (230 ppb), xylene (1,500 ppb), naphthalene (88 ppb) and chlorobenzene (35 ppb). The Remedial Action Work Plan (RAWP) was approved in October 2005. The remedy consisted of an Air Sparge/Soil Vapor Extraction system as well as pumping and treatment of groundwater. The Site Management Plan (SMP) was approved in March 2015. The Final Engineering Report was approved in December 2015. Post-Remediation - Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were xylene, toluene, ethyl benzene, naphthalene and several chlorobenzene compounds in soil and benzene, toluene, ethyl benzene, xylene, naphthalene and chlorobenzene in addition to others in groundwater. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this

The Bronx River is located less than 1,000 feet to the east of the Site. The depth to shallow groundwater at the site varies from 2 to 12 feet below grade across the site. Groundwater typically flows to the east-northeast towards the Bronx River.

Health Problem: Nature and Extent of Contamination: Prior to Remediation - Investigations revealed the presence of the following contaminants in soil and groundwater: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals at concentrations above the NYSDEC Recommended Soil Cleanup Objectives and Ambient Groundwater Standards. Two major areas of concern (AOCs), known as Area A and Area I, have been identified. Area A is located beneath the Edgewater Road Plant, and is approximately 40 feet by 40 feet wide and 15 feet deep. Area I is located in an interior section of the facility in the alleyway adjacent to and beneath portions of the Whittier Street Plant, and is approximately 50 feet by 75 feet wide and about 15 feet deep. The primary contaminants of concern in soil at both AOCs are xylene (at concentrations of up to 450 ppm), toluene (28 ppm), ethylbenzene (58 ppm), naphthalene (160 ppm), and several chlorobenzene compounds (260 ppm). Groundwater is similarly contaminated with VOCs including benzene (at concentrations up to 35 ppb), toluene (73 ppb), ethylbenzene (230 ppb), xylene (1,500 ppb), naphthalene (88 ppb) and chlorobenzene (35 ppb). The Remedial Action Work Plan (RAWP) was approved in October 2005. The remedy consisted of an Air Sparge/Soil Vapor Extraction system as well as pumping and treatment of groundwater. The Site Management Plan (SMP) was approved in March 2015. The Final Engineering Report was approved in December 2015. Post-Remediation - Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were xylene, toluene, ethyl benzene, naphthalene and several chlorobenzene compounds in soil and benzene, toluene, ethyl benzene, xylene, naphthalene and chlorobenzene in addition to others in groundwater. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Site Description: Site Location: The Site is located in an urban area in the Hunts Point section of Bronx County and is identified as 819 Edgewater Road (Section 10, Block 2762, Lot 300), 842 Whittier Street (Section 10, Block 2762, Lot 272), 845 Edgewater Road (Section 10, Block 2762, Lot 294), 810-820 Whittier Street (Section 10, Block 2762, Lot 257) and 835 Edgewater Road (Section 10, Block 2762, Lot 299) on the New York City Tax Map. The Site is a 1.642-acre parcel bounded by an industrial/ commercial lot to the north, a commercial lot to the south Edgewater Road to the east, and Whittier Street to the west. Site Features: The Site is currently occupied by 6 buildings and is operated as an industrial facility. Current Zoning/Use(s): The current zoning is industrial/manufacturing. Historical Use(s): The site was previously occupied by a paint manufacturing company, metal works, a door company and art craft table company in the 1950s. The types of raw materials/chemicals associated with these types of operations include solvents and paint thinners. For approximately 40 years, Dexter manufactured specialty industrial organic chemicals, predominately phosphation and sulfation batches, and various blending operations. The Site is currently owned by Edgewater Realty. Site Geology and Hydrogeology: The site is located on a flat coastal peninsula. The estimated elevation is approximately 20 feet above mean sea level. The Bronx River is located less than 1,000 feet to the east of the Site. The depth to shallow groundwater at the site varies from 2 to 12 feet below grade across the site. Groundwater typically flows to the east-northeast towards the Bronx River.

Env Problem: Nature and Extent of Contamination: Prior to Remediation - Investigations revealed the presence of the following contaminants in soil and groundwater: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals at concentrations

above the NYSDEC Recommended Soil Cleanup Objectives and Ambient Groundwater Standards. Two major areas of concern (AOCs), known as Area A and Area I, have been identified. Area A is located beneath the Edgewater Road Plant, and is approximately 40 feet by 40 feet wide and 15 feet deep. Area I is located in an interior section of the facility in the alleyway adjacent to and beneath portions of the Whittier Street Plant, and is approximately 50 feet by 75 feet wide and about 15 feet deep. The primary contaminants of concern in soil at both AOCs are xylene (at concentrations of up to 450 ppm), toluene (28 ppm), ethylbenzene (58 ppm), naphthalene (160 ppm), and several chlorobenzene compounds (260 ppm). Groundwater is similarly contaminated with VOCs including benzene (at concentrations up to 35 ppb), toluene (73 ppb), ethylbenzene (230 ppb), xylene (1,500 ppb), naphthalene (88 ppb) and chlorobenzene (35 ppb). The Remedial Action Work Plan (RAWP) was approved in October 2005. The remedy consisted of an Air Sparge/Soil Vapor Extraction system as well as pumping and treatment of groundwater. The Site Management Plan (SMP) was approved in March 2015. The Final Engineering Report was approved in December 2015. Post-Remediation - Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were xylene, toluene, ethyl benzene, naphthalene and several chlorobenzene compounds in soil and benzene, toluene, ethyl benzene, xylene, naphthalene and chlorobenzene in addition to others in groundwater. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Code: 56870

Site Description: Site Location: The Site is located in an urban area in the Hunts Point section of Bronx County and is identified as 819 Edgewater Road (Section 10, Block 2762, Lot 300), 842 Whittier Street (Section 10, Block 2762, Lot 272), 845 Edgewater Road (Section 10, Block 2762, Lot 294), 810-820 Whittier Street (Section 10, Block 2762, Lot 257) and 835 Edgewater Road (Section 10, Block 2762, Lot 299) on the New York City Tax Map. The Site is a 1.642-acre parcel bounded by an industrial/ commercial lot to the north, a commercial lot to the south Edgewater Road to the east, and Whittier Street to the west. Site Features: The Site is currently occupied by 6 buildings and is operated as an industrial facility. Current Zoning/Use(s): The current zoning is industrial/manufacturing. Historical Use(s): The site was previously occupied by a paint manufacturing company, metal works, a door company and art craft table company in the 1950s. The types of raw materials/chemicals associated with these types of operations include solvents and paint thinners. For approximately 40 years, Dexter manufactured specialty industrial organic chemicals, predominately phosphation and sulfation batches, and various blending operations. The Site is currently owned by Edgewater Realty. Site Geology and Hydrogeology: The site is located on a flat coastal peninsula. The estimated elevation is approximately 20 feet above mean sea level. The Bronx River is located less than 1,000 feet to the east of the Site. The depth to shallow groundwater at the site varies from 2 to 12 feet below grade across the site. Groundwater typically flows to the east-northeast towards the Bronx River.

Env Problem: Nature and Extent of Contamination: Prior to Remediation - Investigations revealed the presence of the following contaminants in soil and groundwater: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals at concentrations above the NYSDEC Recommended Soil Cleanup Objectives and Ambient Groundwater Standards. Two major areas of concern (AOCs), known as Area A and Area I, have been identified. Area A is located beneath the Edgewater Road Plant, and is approximately 40 feet by 40 feet wide and 15 feet deep. Area I is located in an interior section of the facility in the alleyway adjacent to and beneath portions of the

Whittier Street Plant, and is approximately 50 feet by 75 feet wide and about 15 feet deep. The primary contaminants of concern in soil at both AOCs are xylene (at concentrations of up to 450 ppm), toluene (28 ppm), ethylbenzene (58 ppm), naphthalene (160 ppm), and several chlorobenzene compounds (260 ppm). Groundwater is similarly contaminated with VOCs including benzene (at concentrations up to 35 ppb), toluene (73 ppb), ethylbenzene (230 ppb), xylene (1,500 ppb), naphthalene (88 ppb) and chlorobenzene (35 ppb). The Remedial Action Work Plan (RAWP) was approved in October 2005. The remedy consisted of an Air Sparge/Soil Vapor Extraction system as well as pumping and treatment of groundwater. The Site Management Plan (SMP) was approved in March 2015. The Final Engineering Report was approved in December 2015. Post-Remediation - Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were xylene, toluene, ethyl benzene, naphthalene and several chlorobenzene compounds in soil and benzene, toluene, ethyl benzene, xylene, naphthalene and chlorobenzene in addition to others in groundwater. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.
