

## (Fact Sheet Begins Next)

# Act Now to Continue Receiving Information About This Site!

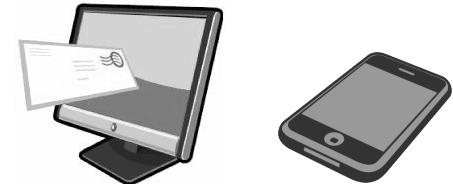

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites electronically by email.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

**You must sign up for the DER email listserv:**

<https://dec.ny.gov/environmental-protection/site-cleanup/regional-remediation-project-information/environmental-cleanup-email-newsletters>

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

**Why You Should Go “Paperless”:**

- Get site information faster and share it easily;
- Receive information about all sites in a chosen county - read what you want, delete the rest;
- It helps the environment and stretches your tax dollars.

If “paperless” is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

# Copyrite Plastic Sheets

Brownfield Cleanup Program  
Site No. C203151  
Bronx County

Department of  
Environmental  
Conservation

January 2026

## NYSDEC Certifies Cleanup Requirements Achieved at Brownfield Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to the Copyrite Plastic Sheets site ("site") located at 261 Grand Concourse & 315 Grand Concourse in Bronx County, under New York State's Brownfield Cleanup Program, have been met. Please see the map for the site location.

The cleanup activities were performed by Walton Street GC Developments LLC and 261 Grand Concourse LLC ("applicants") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). NYSDEC has approved a Final Engineering Report (FER) and issued a Certificate of Completion (COC) for the site.

- Access the approved FER, Notice of COC and other project documents online through the DECinfo Locator: <https://extapps.dec.ny.gov/data/DecDocs/C203151/>.
- Documents also are available at the location(s) identified under "Where to Find Information."

## Completion of the Project

The following activities have been completed to achieve the cleanup action objectives:

- Excavation - Excavation and off-site disposal of about 5,250 tons of contaminated soil and fill material. Clean fill was brought in to replace the excavated soil and to establish the design grades at the site.
- In-Situ Groundwater Treatment Injections – In-situ (i.e. in place) chemical injections were performed to treat groundwater and this removal will continue until residual groundwater concentrations stabilize. Groundwater will continue to be monitored.
- Sub slab depressurization system (SSDS) – An SSDS is an engineering control to mitigate the risk of contaminant vapor intrusion into the indoor air of the building on-site.
- Development of a Site Management Plan (SMP) for long-term management of remaining contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting.
- Recording of an Environmental Easement to control land use and prevent future exposure to any contamination remaining at the site.

## Final Engineering Report Approved

NYSDEC has approved the FER, which:

- 1) Describes the cleanup activities completed.
- 2) Certifies that cleanup requirements have been achieved for the site.
- 3) Describes any institutional/engineering controls to be used. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.
- 4) Certifies that a site management plan for any engineering controls used at the site has been approved by NYSDEC.

The following institutional controls have been put in place on the site:

- Site Management Plan
- Groundwater Use Restriction
- Land Use Restriction
- Environmental Easement

The following engineering controls have been put in place on the site:

- Sub Slab Depressurization System (SSDS)
- Groundwater monitoring wells

## Next Steps

With its receipt of a COC, the applicants are eligible to redevelop the site. In addition, the applicants are eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site. A COC may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

## Site Description

The 0.865-acre site is made up of two tax lots, Block 2344, Lots 1 and 27, and is located at 261-315 Grand Concourse and 270 Walton Avenue in the Mott Haven section of the Bronx. The site is bounded to the north by East 140th Street; to the south by East 138th Street; to the east by Grand Concourse; and to the west by Walton Avenue and a 2-story warehouse.

The site is currently under final stages of construction for two new residential buildings. The Site will consist of two 14-story residential buildings. The Site includes housing for residential use and areas for commercial use.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C203151) at:

<https://appfactory.dec.ny.gov/DERExternalSearch/ERDSearch>

## Brownfield Cleanup Program

New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:

<https://dec.ny.gov/environmental-protection/site-cleanup/brownfield-and-state-superfund-programs/brownfield>

## Stay Informed with DEC Delivers

**We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.**
