New York, NY 10014

Re: Phase I Environmental Site Assessment
350-370 Grand Concourse, Bronx, New York
AKRF Project Number: 210258

Dear Mr. Fine:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment (ESA) Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, and an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13, unless noted otherwise in Section 8.0: "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,

Deborah Shapiro, QEP
Senior Vice President

Gregory Baird
Senior Professional

October 2021

EXECUTIVE SUMMARY

AKRF was retained by 350 Rising LLC (the Client) to prepare a Phase I ESA of the property located at 350-370 Grand Concourse, the Bronx, New York (Tax Block 2341, Lot 42), hereinafter referred to as the "Property." Historically, Lot 42 was divided into Lots 42 and 47. At the time of reconnaissance, the Property comprised an approximately 31,045-square foot (sf) vacant gasoline service station with a 1-story convenience store, a sales kiosk, and canopy covered gasoline pump dispenser area. The surrounding area included automotive, commercial, transit and residential uses, with a wooded vacant lot to the east.

The objective of this assessment was to identify any potential environmental concerns associated with the Property resulting from past or current site usage or the usage of neighboring properties. Historical Sanborn maps indicated that as early as 1935, the Property was utilized for automate repair services, with ongoing storage of petroleum present in the form of underground storage tanks (USTs) at the Property.

This Phase I ESA was performed in conformance with the American Society for Testing and Materials (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice,* which satisfies the United States Environmental Protection Agency's (EPA's) "all appropriate inquiries" (AAI) requirement for landowner liability defenses under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A summary of the assessment findings is presented below.

No Historic RECs or Controlled RECs were identified.

Recognized Environmental Conditions

- At the time of the reconnaissance, the Property was observed to be a former gasoline service station. Petroleum bulk storage (PBS) was observed at the Property, including three 12,000-gallon gasoline USTs within a tank field in the southeast corner of the Property, two minimally filled 55-gallon drums of a gasoline/water mixture in the rear yard of the convenience store, and nine gasoline pump dispenser islands in the center of the Property. Petroleum-like staining was observed on and around each of the gasoline pump dispenser islands and within the tank field area. Multiple monitoring wells and potential soil vapor extraction (SVE) wells were observed throughout the Property, most of which were in damaged or decommissioned condition. Two out-of-service SVE vaults with associated gauges and hoses were observed near the eastern Property line. An unidentified drywell with an unknown discharge point was observed in the northwest corner of the Property behind the convenience store.
- The Property was identified on historic Sanborn maps, city directories, and local records, and in the following databases for current and former operations including various automotive services/repair as well as petroleum storage/filling: New York State Department of Environmental Conservation (NYSDEC) Petroleum Spills, Resource Conservation and Recovery Act (RCRA) Generator/Transporter, NYSDEC Petroleum Bulk Storage (PBS), and the EDR Historic Auto Station. NYSDEC Spill Nos. 98-14075 and 01-11974 remain open.
- A review of the historical city directories and Sanborn maps and regulatory databases identified numerous automotive, commercial, and dry cleaning/laundry uses on adjacent and surrounding blocks as early as 1891.

Business Environmental Risks [items outside the scope of E1527-13 like asbestos containing materials (ACM), lead-based paint (LBP) and/or Polychlorinated Biphenyls (PCBs) in building materials or fill/debris]

- Suspect ACM were observed at the Property. Suspect ACM were noted to be in generally good to damaged condition. ACM may also be present in demolition debris in the subsurface at the Property.
- Based on the existing building's age, PCBs may be contained in fluorescent lighting fixtures, electrical equipment, and caulking. No evidence of leaks or stains from these fixtures and equipment was observed.
- Based on the age of the building, LBP may be present on outdoor surfaces on the Property. Painted surfaces were observed to be in generally fair to good condition. LBP may also be present in demolition debris in the subsurface at the Property.
- The Property has been assigned an E-Designation for Hazardous Materials, Air Quality and Noise (E-442).

Recommendations

- Based on the RECs identified, a Phase II (Subsurface Investigation) is recommended. Based on the results of the Phase II, additional assessment and/or remediation may be necessary to close NYSDEC Petroleum Spill Nos. 98-14075 and 01-11974, which may include, as applicable, participation in the NYSDEC Brownfield Cleanup Program (BCP) or New York City Mayor's Office of Environmental Remediation (OER)'s Voluntary Cleanup Program (VCP).
- If the Property is to be renovated or redeveloped, any subsurface investigation, remediation, and/or redevelopment should be done in consultation with the OER to satisfy the requirements of the E-Designation.
- All known and unknown USTs located at the Property should be closed and removed in accordance with city, state, and federal rules and regulations. If additional USTs are discovered during redevelopment activities, the tanks should be registered with NYSDEC, and closed and removed from the Property in accordance with city, state, and federal rules and regulations. Any additional petroleum spills should be reported to the NYSDEC Spills Hotline.
- Soil and groundwater encountered during any redevelopment activities should be properly handled and disposed of off-site in accordance with local, state, and federal laws and regulations.
- Prior to any demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state, and federal regulations prior to any renovation or demolition that would disturb those materials.
- Any demolition activities with the potential to disturb LBP must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (Occupational Safety and Health Administration [OSHA 29] Code of Federal Regulations [CFR] 1926.62—*Lead Exposure in Construction*). If the Property is visited regularly by children under 6 years of age, the building may be considered a Child Occupied Facility by the Environmental Protection Agency (EPA).

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by 350 Rising LLC (the Client) to prepare a Phase I Environmental Site Assessment (ESA) of the property located at 350 and 370 Grand Concourse, Bronx, New York (Tax Block 2341, Lots 42), hereinafter referred to as the "Property." At the time of reconnaissance, the Property comprised an approximately 31,045-square foot (sf) vacant gasoline service station with a 1-story convenience store, a sales kiosk, and canopy covered gasoline pump dispenser area located at 350-370 Grand Concourse. The Property's lots had been previously merged (from Lots 42 and 47) into a single lot, designated as Lot 42. The surrounding area included automotive, commercial, transit and residential uses, with a wooded vacant lot to the east. A Property location map and Property detail plan are provided as Figures 1 and 2, respectively.

The scope of services for this assessment was in conformance with the American Society for Testing and Materials (ASTM) Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) were conducted to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs); drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; and/or stressed vegetation, leaks, and odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (EPA) guidelines.
- Historical fire insurance maps for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and properties within the ASTM-specified radii: the National Priority List (NPL); Superfund Enterprise Management System (SEMS); CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included Toxic Chemical Release Inventory System (TRIS); Delisted NPL (National priority List Deletions); United States Brownfields; and EDR US Historic Auto Station Listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

- Local agency reviews, including online Buildings and Finance Department records and Environmental Quality Review (CEQR) E-Designation Sites, were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the Property was performed on August 10, 2021, by Mr. Gregory Baird of AKRF. Mr. Tom Reichmann of Atlantis Management Group II LLC was present for the reconnaissance and answered pertinent questions. At the time of the inspection, the weather was partly cloudy and approximately 85 ºF with good visibility. The Property was inspected for the presence of stained surfaces and soil, evidence of storage tanks, drums, leaking pipes, transformers, and any other evidence of hazardous material usage and storage on-site. Neighboring properties were also viewed, but only from public rights-of-way. Photographs documenting the inspection are included in Appendix A.

2.1 General Site Conditions

The Property was approximately 31,045-sf and included a former gasoline service station with a vacant 1-story convenience store, a trash enclosure area, a sales kiosk, and a canopy covered gasoline pump dispenser area with nine dispenser islands located at 350-370 Grand Concourse. According to Mr. Reichmann, the Property has been vacant since August 6, 2021, the three 12,000-gallon gasoline USTs at the Property were recently pumped out, and the associated fill lines had been cut and capped. The fill lines were blown back into the USTs from each dispenser prior to pump out. The former occupant, BP gas company, was notified and has stopped all fuel delivery to the Property.

The gasoline pump dispenser islands and sales kiosk were covered with a metal canopy. The gasoline dispenser fill lines appeared to have been cut and capped at each of the islands and the fuel dispensers appeared to have been removed from the Property. Each of the islands was serviced by an independent fire suppression system consisting of fire extinguishers and piping. Some petroleum-like staining was observed on each island at the connection to the former fuel dispensers.

The sales kiosk consisted of an office, bathroom, and rooftop heating, ventilation, and air conditioning (HVAC) system and was constructed with sheet metal and plywood walls on a concrete slab. Interior construction materials consisted of sheet metal walls and ceilings with ceramic floor tiles. The Veeder-Root UST monitoring system within the kiosk displayed “invalid fuel level”.

A tank field serving the dispensers islands was located in the southeast corner of the Property. It consisted of three 12,000-gallon gasoline USTs (2 regular and 1 premium gasoline tanks), three tank sumps, three fill ports, and three vent lines. Four monitoring wells were observed on the corners of the tank field concrete pad. Minimal petroleum-like staining and some cracks were observed in the tank field area.

The trash enclosure area was observed along the eastern Property line and was surrounded on three sides with concrete block walls. One roll-off dumpster was noted with general refuse and the floor of the trash area was mostly filled with similar general refuse. According to Mr. Reichmann, a private third-party hauler removes the waste regularly.

Multiple monitoring wells and potential soil vapor extraction wells were observed throughout the Property, most of which were in damaged and/or decommissioned condition. Two out-of-service soil vapor extraction vaults with associated gauges and hoses were noted near the eastern Property line; Mr. Reichmann was unaware of when the system was active. Six large manholes, which apparently are connected to the NYC sewer system were observed in the center of the lot between the store and the dispenser island area. A sewer grate was also noted in the southwestern corner of the Property, which was reported to be connected to the New York City (NYC) sewer system.

The 1-story convenience store, located along the northern Property line, consisted of a retail area, offices, a former Dunkin Donuts with a kitchen and walk-in freezer, bathrooms, a utility room and a walk-in refrigerator room. The store was constructed with sheet metal and stucco walls over

concrete block walls on a concrete slab. Interior construction materials consisted of drywall, ceramic and sheet metal walls, drop ceiling tiles, and ceramic floor tiles. Numerous small containers of general cleaning supplies were noted in the former Dunking Donuts and bathroom areas. Floor drains were noted in the kitchen and bathrooms with unknown terminus locations. The area was heated and cooled by rooftop gas powered HVAC units. The utility room for the incoming electrical service was located in the western portion of the store with exterior access only. The store's floor was observed to be in good condition, with minimal cracks and staining. The staining observed appeared to most likely be associated with water.

An eastern side and northern rear yard were noted adjacent to the store. The rear yards contained scattered refuse and two minimally filled 55-gallon drums of a gasoline/water mixture, which was produced from fuel trucks during gasoline filling activities on-site according to Mr. Reichmann. Mr. Reichmann also stated that the drums were contracted to be disposed of by a private third-party contractor when full. No staining was noted in the areas of the drums. A drywell was also noted in the northeast corner of the yard.

2.2 Topography and Hydrogeology

Topography of the Property was flat. Based on the U.S. Geological Survey (USGS), Central Park NY-NJ Quadrangle (2013) map, the Property lies at an elevation of approximately 40 feet above mean sea level. According to the USGS Sheet 3 Bedrock and Engineering Geology Map of New York County, bedrock is expected to be generally encountered at approximately 12 to 17 feet below ground surface; however, historical environmental reports indicated that the depth to bedrock increases along the western boundary of the Property, likely due to excavation activities associated with installation of the west-adjacent subway line.

Based on the topography of the Property, regional groundwater is anticipated to be approximately 15 to 18 feet below ground surface, and to flow southwest towards the Harlem River, which is located approximately 1,000 feet from the Property. Actual groundwater flow may be affected by many factors, including underground utilities, subway tunnels, subsurface features, seasonal fluctuations in groundwater levels, precipitation, geology, and other factors beyond the scope of this study. Historical reports indicate that groundwater at the Property is likely perched and may flow in a southeasterly direction.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

Three 12,000-gallon gasoline USTs (2 regular and 1 premium gasoline tanks) were identified during the site reconnaissance. The USTs were located in the southeast corner of the Property.

The regulatory database search reported the following USTs at the Property: five 4,000-gallon gasoline tanks listed as closed-removed in 2001(historical lot 42); three 12,000-gallon gasoline tanks listed as in-service (historical lot 42); five 4,000-gallon gasoline tanks listed as closed-removed in 1998 (historical lot 47); and one 550-gallon tank of unknown contents listed as closed-removed in 1998 (historical lot 47). Although the regulatory database search indicated the three 12,000-gallon gasoline tanks were in-service, the current Property owner provided AKRF with a copy of a recently submitted Petroleum Bulk Storage (PBS) application indicating that the tanks were temporarily placed out-of-service as of August 9, 2021.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

A review of regulatory databases did not reveal records of current aboveground petroleum storage at the Property.

No evidence of suspect or former ASTs were observed at the Property.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, PCBs, which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the building (constructed in 2003), electrical equipment, lighting fixtures, switches, thermostats, and caulking are not likely to include PCB- and/or mercury-containing components. No obvious leaks or odors were observed in connection with observed equipment or the lighting fixtures.

2.5 Lead-Based Paint (LBP)

LBP was generally not used inside residential buildings after 1977 nationwide. After 1977, its use inside commercial structures was also restricted and its use elsewhere became less common, but LBP may still sometimes be used outdoors. LBP can present a hazard, particularly to children, especially when it is in poor condition.

Based on the presumed age of the building (constructed in 2003), LBP is likely present on exterior surfaces. Painted surfaces were observed to be in fair to good condition throughout the structures and exterior surfaces. During the reconnaissance, there was no observation of residential occupancy, childcare facilities, or other facilities where the extended presence of children would be expected at the Property.

Activities (such as renovation or demolition) with the potential to disturb LBP are subject to a variety of requirements, including United States Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison (Con Ed) provided electricity and natural gas to the Property and surrounding area. The Property was reportedly connected to the NYC municipal water and sewer systems.

2.7 Waste Management and Chemical Handling

Bulk chemical handling activities were observed throughout the Property, including:

- Two minimally filled 55-gallon, closed-top metal drums in the northern portion of the Property, along the east rear yard of the convenience store. The drums reportedly contained a gasoline/water mixture, which was produced from fuel trucks during gasoline filling activities on-site. The drums reportedly are disposed of by a private third-party contractor when full.
- Numerous small containers (generally 1-gallon or less) of general cleaning supplies throughout the convenience store.
- One roll-off dumpster, used for general refuse, was located along the eastern Property line in the trash enclosure area. Private haulers reportedly remove the dumpster from the Property as necessary.

- General refuse was scattered throughout the convenience store and trash enclosure area.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health (NYSDOH) database, the average level of radon in the Bronx was reported as 1.74 picocuries/liter in basements and 1.14 picocuries/liter on 1st floors, both below the United States Environmental Protection Agency (USEPA) recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, drywall, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered ACM. ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Mr. Reichmann was unaware of any asbestos abatement conducted during previous renovation activities. Suspect ACM were observed during the reconnaissance and included: roofing materials, exterior coatings, floor tiles, ceiling tiles, drywall, thermal system insulation, mortar, caulk and putty. Suspect ACM were noted to be in good to damaged condition. Suspect ACM may also be present in other locations not readily accessible during the reconnaissance. This reconnaissance does not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by an NYC-certified asbestos investigator to determine if the project will disturb ACM. Any such ACM must be removed prior to renovation or demolition.

4.0 ADJACENT LAND USE

The Property was bounded to the north by a three-story residential building and a five-story apartment building, followed by East 144th Street; to the east by a wooded vacant lot, followed by Metro North Railroad tracks; to the south by a multi-story residential building, followed by various automotive repair shops; and to the west by Grand Concourse, followed by a U-Haul Storage and Moving facility. The surrounding area consisted primarily of automotive, commercial, transit, and residential uses.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use Maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1891, 1903, 1908, 1935, 1944, 1946, 1947, 1951, 1977, 1978, 1980, 1981, 1984, 1986, 1989, 1991 through 1996, 1998, and 2001 through 2007 were reviewed and are provided in Appendix B.

1891

The Property was developed with several two- to four-story dwellings. A street labeled Ridge Place ran east to west through the center of the Property. Grand Concourse was labeled as (Mott) Avenue.

The Property block was developed with several one- to four-story structures. The New York Central Railroad tracks, located on the east-adjacent block, were depicted as the Hudson River, New Haven, and Hartford Railroads. Several one- to three-story residential buildings were located on the blocks west and north of the Property and a two-story building depicted as Scenic Studios was located on the west-adjacent block. East 140th street to the south of the Property was labeled as Cheever Place.

1903

The Property and adjacent blocks were vacant, with the exception of a public school on the block to the northwest of the Property. This map appeared to only show the street and block locations.

1908

The northern portion of the Property was similar to the 1891 Sanborn Map, and the southern portion side depicted as the NYC and HR Railroad Co. with multiple two- to four-story structures, with one labeled as the Engineers Office. Ridge Place was no longer noted.

The south-adjacent lot buildings were labeled as construction offices, as part of the NYC and HR Railroad Co. The remainder of the Property block was sparsely developed with one- to -four story residential buildings and a wagon builder further south. The northern portion of the west-adjacent lot was depicted with multiple structures labeled as dry color works and a drug store. The public school on northwest block was labeled as Public School No. 31. A building labeled as a bakery was depicted north of the Property and a surgical dressing factory were labeled northeast of the Property across the railroad tracks. A cabinet maker was located southeast of the Property across the railroad tracks. A machine shop and woodworking company were depicted further west of the Property.

1935

The central portion of the Property was occupied by an auto sales yard with an office, and a one-story auto painting and repair building with an office and a paint shop. The northern and southern portions of the Property remained unchanged with the exception of the NYC and HR Railroad Co., which was no longer labeled on the buildings.

The south- and east-adjacent lots on the Property block were developed with several auto repair, service, and painting shops. Two gasoline filling stations were noted further south,

one with four 550-gallon gasoline USTs and the other with three 550-gallon gasoline USTs. The north-adjacent lot was developed with two 5-story apartment buildings and Mott Avenue was renamed as the current Grand Concourse.

The area surrounding the Property was primarily developed with automotive uses. The west-adjacent block contained: two separate two-story garages with two 550-gallon gasoline USTs each; a private garage and repair shop with three 550-gallon gasoline USTs; a Chevrolet service and show room with one 550-gallon USTs; a one-story warehouse for storage of bottles and autos; and one building remained from the dry color works structures. Further west, a fur dressing and dyeing company, a large baking company, wagon repair shop, machine shop, a printer, construction equipment sales and repair, and a carpet cleaning business were noted. A contractor yard was depicted north across East 144th Street, and the surgical dressing factory was now a vacant lot. The eastern block across the railroad tracks was developed with a machine shop, assembling room, a blacksmith, a private garage, auto house, and ice cream manufacturer with a 550-gallon gasoline UST. Further southeast, an auto repair shop with a 550-gallon gasoline UST, contractors' yards, a door and sash factory and casket shop were depicted. Southwest across Grand Concourse and East 140th street, multiple auto garages with gasoline USTs, and auto repair shops were depicted.

1944-1947

The Property was depicted with two separate gasoline filling stations. The northern filling station was noted with four gasoline USTs and the southern filling station was noted with five gasoline USTs. The central portion of the Property was occupied by a two-story residential building and an auto repair shop. All other structures on the Property were removed from the Sanborn map.

The structures on the south- and east-adjacent lots on the Property block were mostly no longer depicted, with the exception of the two auto repair shops to the south. The lots further to the south and the north-adjacent lots were similar to the 1935 Sanborn map.

The west-adjacent block remained mostly unchanged, the garage on the corner of Grand Course and East 140th Street was now depicted as a gasoline filling station with five gasoline USTs. Further west, the wagon repair shop was replaced with a garage and a large laundry corporation with multiple structures depicted. The contractor yard to the north was now developed with a coal yard and office. The auto repair shops on the southeastern block across the railroad tracks were replaced with a garment factory, the casket shop was redeveloped with a plating company, and the door and sash factory was replaced with a welding business. Southwest across Grand Concourse and East 140th street, the auto garages were replaced with a single filling station with seven gasoline USTs.

1951

The central portion of the Property was depicted as auto sales, auto body repair, and upholster. The remaining buildings were labeled similarly to previous Sanborn maps.

The east-adjacent lot on the Property block was depicted with a paint spraying structure. The reminder of the Property block appeared similar to the 1947 Sanborn map.

The west-adjacent block remained mostly unchanged, other than the demolition of the northern most structures and replacement with a parking lot. Further west, one of the vacant lots was developed with a laundry plant. The eastern and southeastern blocks across the railroad tracks remained mostly unchanged. Southwest across Grand Concourse and East

140th street, a private garage was developed on a vacant lot and noted with two gasoline USTs.

1977-1989

The northern gasoline filling station was redeveloped and enlarged, replacing the previous filling station, residential building and auto sales and repair shops. The southern portion of the Property remained unchanged.

The paint spraying structure was demolished on the east-adjacent lot, and the auto body repair shops and filling station to the south were reconfigured and expanded. An auto body shop was also observed east-adjacent to the Property between 1977-1978. By 1981 both gasoline stations to the south on the Property block were replaced with an auto repair shop and parking lots with no gasoline USTs noted.

The west-adjacent block was developed with automotive uses and unnamed warehouses. In 1980, the central warehouse was depicted in the current configuration as the U-Haul Rental and Storage building. Further west and north, the blocks remained mostly unchanged; however, the carpet cleaner and coal yard were no longer depicted. The eastern block across the railroad tracks was now developed with a metal products warehouse, replacing the blacksmith and machine shops. Further southeast, the plating company was no longer depicted and until 1986 a filling station with parking was noted on Park Avenue. By 1989, the lot was noted as parking only. Southwest across Grand Concourse and East 140th an auto service with no USTs was noted.

1991-2001

The southern gasoline filling station was redeveloped to the west and a one-story store was depicted in the southeastern portion of the Property. The northern portion of the Property remained unchanged.

The Property block and the surrounding area appeared mostly unchanged from previous Sanborn maps with some additional automotive related buildings in the southern portion of the Property block.

2002

The Property buildings were demolished, and the lots were vacant.

The Property block and the surrounding area appeared similar to previous Sanborn maps.

2003-2007

The Property appeared in its current configuration with a large central gasoline filling station and a one-story commercial store in the northern portion.

The Property block and the surrounding area appeared similar to previous Sanborn maps.

Summary

Historical Sanborn maps indicated that as early as 1891, the Property was developed with several two- to four-story dwellings and from 1908-1935, the southern portion of the site was depicted as the NYC and HR Railroad Co. with multiple two- to four-story structures. By 1935, the Property was occupied by automotive related businesses/facilities and uses that included various gasoline filling stations, auto sales, and auto body repair with associated gasoline USTs between 1944 and the present.

Properties located to the south of the Property (on the same block) and west-adjacent of the Property (across Grand Concourse) had automotive uses (most with gasoline USTs) from 1935 until the most recent map available.

Gasoline stations, auto repair and sales facilities with gasoline USTs, manufacturing, cleaners, garages, a coal yard, plating, a fur dressing and dyeing company, painting facilities, and railroad tracks were noted in the surrounding area as early as 1891.

5.1.2 Historical Topographic Maps and Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs and topographic maps would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs and topographic maps were not reviewed.

5.1.3 Property Tax Files and Zoning Records

Based on information provided by New York City's Zoning and Land Use database, the Property is zoned as C6-2A (commercial).

5.1.4 Recorded Land Title Records

A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens or use restrictions for the Property. ACRIS records identified the following ownership information:

350 Grand Concourse (Lot 42)

Year	Grantor/Grantee Listed on Deed
2016	350 Concourse Realty Corp/ 350 Concourse Realty LLC
2016	131 Realty Corp./370 Concourse Realty LLC
2008	BP Products North America Inc/Atlantis Management Group II, LLC
1990	350 Concourse Realty Corp/Amoco Oil Company
1980	350 Concourse Realty Corp/Lowell Harwood
1979	Mobile Oil Corp/350 Concourse Realty Corp

370 Grand Concourse (Lot 47)

Year	Grantor/Grantee Listed on Deed
2001	131 Realty Corp./Amoco Oil Company
2001	Amerada Hess Corporation/131 Realty Corp
1976	Klein Frank/Webster 168th Realty Corp
1976	FK Owners Inc/Frank Klein
1976	Klein Frank/FK Owners Inc
1967	FK Owners Inc/Frank Klein
1967	FK Owners Inc/Summit Holding Co Inc
1967	Klein Frank/FK Owners Inc
1967	Twin Properties Inc/Ford Leasing Development Company
1966	Klein Frank/Twin Properties Inc

The identification of BP Products North America Inc, Amerada Hess Corporation, Amoco Oil Company, and Mobil Oil Corp. as landowners of the Property are RECs.

5.1.5 Local Street Directories

A City Directory prepared by Environmental Data Resource, Inc. was reviewed as part of this Phase I ESA and is provided in Appendix C. The City Directory consisted of the names of businesses located on-site and in adjacent properties, compiled from city and reverse telephone directories, as listed in Table 1.

Table 1
Historical City Directories

Year	Comments
1940	**Site:** Automotive (Katz Service Station, Rumohr Motors, Mott Haven Auto Radiator Works, Mott Haven Auto Wreckers and Parts Yard, Friedlander Monroe H Carburetors); Commercial **Surrounding Properties:** Automotive (automobile repair - 342 Grand Concourse, 332 Grand Concourse, 338 Grand Concourse, 324 Grand Concourse); Hospital (321 Grand Concourse); Commercial (Farber and Son Furs – 345 Grand Concourse, Colonial Sand and Stone Co Inc – 361 Grand Concourse; Residential.
1961	**Site:** Automotive (Concourse Service Station, Trio Motors) **Surrounding Properties:** Automotive (automobile repair - 344 Grand Concourse, 332 Grand Concourse, 338 Grand Concourse; service station – 341 Grand Concourse, 315 Grand Concourse); Commercial
1965	**Site:** Automotive (Fran-Ray Service Center, Trio Motors, Concourse Service Station) **Surrounding Properties:** Automotive (automobile repair – 346 Grand Concourse, 344 Grand Concourse, 338 Grand Concourse, 332 Grand Concourse, 315 Grand Concourse; service station – 341 Grand Concourse); Commercial (Lighting Corp - 332 Grand Concourse)
1971	**Site:** Automotive (Fran-Ray Service Center, Trio Used Motors, Concourse Service Station, Foreign Car Repair and Service) **Surrounding Properties:** Automotive (automobile repair - 353 Grand Concourse, 351 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 338 Grand Concourse, 332 Grand Concourse; service station – 341 Grand Concourse, 315 Grand Concourse); Commercial
1976	**Site:** Not Listed **Surrounding Properties:** Automotive (automobile repair - 353 Grand Concourse, 351 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 338 Grand Concourse, 334 Grand Concourse, 332 Grand Concourse, 315 Grand Concourse; service station – 341 Grand Concourse); Commercial
1983	**Site:** Not Listed **Surrounding Properties:** Automotive (automobile repair - 346 Grand Concourse, 344 Grand Concourse, 341 Grand Concourse; 340 Grand Concourse, 334 Grand Concourse, 315 Grand Concourse); Commercial
1993	**Site:** Commercial (ACA Management) **Surrounding Properties:** Automotive (automobile repair – 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 342 Grand Concourse, 341 Grand Concourse, 315 Grand Concourse); Commercial (Sadoc Welding Work - 340 Grand Concourse)
1994	**Site:** Commercial (ACA Management) **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 342 Grand Concourse, 341 Grand Concourse, 340 Grand Concourse, 315 Grand Concourse); Commercial (D&S Fire Protection Corp - 353 Grand Concourse, Sadoc Welding Work - 340 Grand Concourse)
1999	**Site:** Occupant Unknown **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 341 Grand Concourse; car wash - 315 Grand Concourse); Commercial
2000	**Site:** Automotive (Klintel Service Station) **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 341 Grand Concourse; car wash - 315 Grand Concourse); Commercial

Year	Comments
2004	**Site:** Automotive (BP Amoco) **Surrounding Properties:** Automotive (automobile repair - 344 Grand Concourse, 341 Grand Concourse, 340 Grand Concourse, 338 Grand Concourse; car wash - 315 Grand Concourse); Commercial
2005	**Site:** Automotive (BP) **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 341 Grand Concourse, 338 Grand Concourse; car wash - 315 Grand Concourse); Commercial
2009	**Site:** Automotive (BP Amoco) **Surrounding Properties:** Automotive (automobile repair - 346 Grand Concourse, 341 Grand Concourse, 338 Grand Concourse; car wash - 315 Grand Concourse); Commercial
2014	**Site:** Automotive (Grand Concourse Petroleum LLC); Commercial (Dunkin Donuts) **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 340 Grand Concourse; car wash - 315 Grand Concourse); Commercial
2017	**Site:** Automotive (Grand Concourse Petroleum LLC); Commercial (Dunkin Donuts, locksmith) **Surrounding Properties:** Automotive (automobile repair - 349 Grand Concourse, 346 Grand Concourse, 344 Grand Concourse, 341 Grand Concourse, 340 Grand Concourse; Car Wash - 315 Grand Concourse); Commercial

Historical City Directories indicated that the Property was utilized for automobile repair and parking uses between 1940 and 1971, and a petroleum service station from 2000 to 2017. City directories identified various automotive and commercial facilities on adjacent blocks between 1940 and 2017, including: a welding company, lighting company, a fur store, automobile repair shops, service stations, and a car wash. Such uses may have affected subsurface conditions at the Property and are considered RECs.

5.2 Regulatory Review

The regulatory database report, provided in Appendix D, was obtained from Environmental Data Resources, Inc. of Shelton, Connecticut. It includes summaries of the databases searched, their radii around the Property, and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

Federal ASTM standard records reviewed included: the National Priority List (NPL); Superfund Enterprise Management System (SEMS); SEMS-ARCHIVE; CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS).

Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Delisted NPL (National priority List Deletions); United States Brownfields; and EDR US Historic Utility Listings.

National Priority List (NPL)

The NPL is the EPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially affecting property values.

The Property was not listed in the NPL database and no NPL sites were identified within a one-mile radius of the Property.

Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE)

The SEMS (formerly known as CERCLIS) list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by EPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as Superfund Enterprise Management System Archive (SEMS-ARCHIVE) sites, are also included in this database.

The Property was not listed in the SEMS or SEMS-Archive databases and no SEMS or SEMS-Archive sites were identified within a ½-mile radius of the Property.

CORRACTS (Corrective Actions Report)

The CORRACTS database identifies hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity.

The Property was not listed in the CORRACTS database and no CORRACTS sites were identified within a one-mile radius of the Property.

RCRIS (Resource Conservation and Recovery Information System)

This database lists sites that have filed notification forms regarding hazardous waste activity, including treatment, storage and disposal facilities (TSDs); very small-quantity generators (VSQG), small-quantity generators (SQG), and large-quantity generators (LQG); non-generators (Non-Gen); and transporters regulated under RCRA.

No TSD facilities were identified on the Property or within a ½-mile radius of the Property. The Property was identified on the SQG database for the following:

- Merit Oil Corp. (370 Grand Concourse) was listed as an SQG of undefined waste since 2007 and a historic conditionally exempt SQG of undefined waste in 2006, historic SQG of undefined waste in 2007, and a historic LQG of undefined waste in 1987.

Two LQG facilities were identified within a ⅛-mile radius of the Property. Based on its proximity, assumed hydraulic relationships, and/or listing details, the following listing had some limited potential to affect subsurface conditions at the Property:

- 310 Grand Concourse LLC (310 Grand Concourse), located approximately 306 feet to the south of the Property, was listed as an LQG of lead since 2018 and a historic conditionally exempt SQG of undefined waste in 2006, and a historic LQG of undefined waste in 2020.

Based on its location, assumed hydraulic relationships, and/or listing details, the remaining facility is not likely to have significantly affected subsurface conditions at the Property. Details for all listed RCRA sites are included in Appendix D.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not listed in the ERNS database and no ERNS listings were identified on the Property.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

The Property was not listed in the TRIS database and no TRIS sites were identified within a ⅛-mile radius of the Property.

Delisted NPL (National Priority List Deletions)

This database describes former NPL sites that are removed from the NPL list by the EPA. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) established the criteria used by the EPA to delist sites where no further federal response is needed.

The Property was not listed in the delisted NPL database and no delisted NPL sites were identified within a one-mile radius of the Property.

US Brownfields

The US Brownfields program is for properties that clean up and report to the EPA and are served by Brownfields grant programs.

Four US Brownfields sites were identified within a ½-mile radius of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, the US Brownfields sites are not likely to have significantly affected subsurface conditions at the Property. Details for the US Brownfields listings are included in Appendix D.

EDR US Historic Utility Listings

The EDR US Historic Auto Station and Historic Cleaner databases were researched to identify listings for the Property and within a ⅛-mile radius of the Property. These databases list properties that might include gas/filling station establishments and/or drycleaners based on EDR's search of select national business directories.

The Property was listed in the Historic Auto Station database:

- Klintel Service Station (350 Grand Concourse) is listed as a gasoline service station under various names between 1991 and 2014.
- Franray Service Station (370 Grand Concourse) is listed as a gasoline service station between 1969 and 1975.

Three historic automobile stations and two historic dry cleaners were identified within 500 feet of the Property:

- Max Auto Repair (310 Grand Concourse), located approximately 306 feet south of the Property, is listed as a gasoline service station under various names between 1971 and 1973 and as an automotive repair shop under various names between 1980 and 2014.
- Prestige Cleaners (223 East 141st Street), located approximately 313 feet east of the Property, is listed as a laundry and dry cleaner agent between 2008 and 2012.
- 315 Grand Concourse Inc. (315 Grand Concourse), located approximately 315 feet southwest of the Property, is listed as a gasoline service station under various names between 1973 and 2008.
- Josel Parkers Inc. (2644 Park Ave), located approximately 336 feet southeast of the Property, was listed as a gasoline service station in 1970.

- Miron and Sons Laundry Service (310 Walton Ave), located approximately 345 feet southwest of the Property, was listed as a dry cleaning plant in 2000.

Details for all listed EDR US Historic Utility listings are included in Appendix D.

5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Site Registry (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)

This database includes releases reported to the New York State Department of Environmental Conservation (NYSDEC), including tank test failures (for USTs only) and tank failures.

The Property was listed on the NY Spills database:

- NYSDEC Spill No. 98-14075 was reported at Merit Grand Concourse (370 Grand Concourse), the northern portion of the Property, in February 1999. According to the listing, petroleum contaminated soil was discovered during the removal of five 4,000-gallon and one 550-gallon USTs associated with the former gasoline filling station. Approximately 410 tons of petroleum contaminated soil was removed during the tank closure activities. Multiple monitoring wells have been installed and sampled across the Property and remedial actions have taken place as discussed in further detail in Section 5.2.4 and 7.0 of this report. Spill No. 98-14075 remains open.
- NYSDEC Spill No. 01-11974 was reported at BP Amoco Station #17782 (350 Grand Concourse), the southern portion of the Property, in February 2002. According to the listing, gasoline contaminated soil was encountered during the removal of five 4,000-gallon gasoline USTs. Methyl tert-butyl ether (MTBE) was detected above soil cleanup standards in four of the ten post excavation samples. Approximately 1,360 tons of contaminated soil was removed during the tank closure activities (noted that other documentation states 1,129 tons). The USTs were replaced with three 12,000-gallon gasoline USTs, which were installed in a different location on the Property. Multiple monitoring wells have been installed and sampled across the Property and remedial actions have taken place as discussed in further detail in Section 5.2.4 and 7.0 of this report. Spill No. 01-11974 remains open.

Seventy-three spills, which included 47 leaking tanks, were reported within a ½-mile radius of the Property. Based on their proximity (within 400 feet), assumed hydraulic relationships, and/or listing details, the following listings had some limited potential to affect subsurface conditions at the Property:

- NYSDEC Spill No. 15-09044 was reported at Gerardo Woodworking at 168 East 144th Street, located approximately 80 feet northeast of the Property in December 2015. According to the listing, a 550-gallon No. 2 fuel oil UST failed a tank tightness test. The cause of the failure could not be determined and no contamination was

encountered during the fill line replacement. The UST was abandoned in place and did not require endpoint soil per DEC. The spill was closed in September 2016.

- NYSDEC Spill Nos. 93-07897 and 00-12172 were reported at 368 Walton Avenue, located approximately 256 feet west of the Property. According to the listing, benzene, toluene, ethylbenzene, and xylene (BTEX) and MTBE contaminated soil and groundwater were encountered during site redevelopment activities due to disabled/junk vehicles on-site. Multiple rounds of groundwater sampling in 2001 and 2002 showed concentrations of BTEX and MTBE were decreasing. The NYSDEC issued a No Further Action Letter for Spill No. 93-07897 and 00-12172 in 2002 and 2003, respectively.
- NYSDEC Spill No. 11-08611 was reported at 201 East 144th Street, the construction site for the Kipps School, located approximately 316 northeast of the Property in October 2011. According to the listing, contaminated soil was encountered during the removal of two USTs at the site. The area was excavated and endpoint samples were taken. The site has a E-Designation and is being remediated under an approved RAP. The spill was closed in November 2011.

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for all listed NY Spills and LTANKS sites are included in Appendix D.

Chemical Bulk Storage (CBS) Database

The New York CBS database is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

The Property was not listed in the CBS database.

One CBS facility was identified within a ¼-mile radius of the Property. Based on the location, assumed hydraulic relationships, and listing details, the listing is not likely to have significantly affected subsurface conditions at the Property. Details for the CBS database listing is included in Appendix D.

Solid Waste Facilities/Landfill Sites (SWF/LF)

The SWF/LF database is a comprehensive listing of state permitted/recorded solid waste management facilities including certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

The Property was not listed in the SWF/LF database. Three SWF/LF sites were identified within a ½-mile radius of the Property. Based on the location, assumed hydraulic relationships, and/or listing details, the listings are not likely to have significantly affected subsurface conditions at the Property. Details for the SWF/LF listings are included in Appendix D.

Petroleum Bulk Storage (PBS) Database

The PBS database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Nineteen AST and eight UST facilities were identified within a ⅛-mile radius of the Property, including two UST listings associated with the Property. Details of the facilities

with the potential to have affected the Property based on distance (less than 200 feet) in addition to the Property itself are shown in Table 2.

Table 2
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Install Date	Status	Approximate Distance/Direction from Property
Grand Concourse Petroleum 350 Grand Concourse	5 x 4,000 (UST) 3 x 12,000 UST	Gasoline Gasoline	12/01/1990 12/01/2000	Closed-Removed In Service	The Property
Merit Grand Concourse 370 Grand Concourse	5 x 4,000 (UST) 550 (UST)	Gasoline Unknown	11/01/1977	Closed-Removed	The Property
388-390 Grand Concourse 388-390 Grand Concourse	2,000 (AST)	Fuel Oil	01/01/1905	Closed-Removed	North-Adjacent
Peguero Brothers Repair Shop 338 Grand Concourse	150 AST	Waste Oil	08/01/1999	In Service	123 Feet South
Eagle Auto Repair Corp 341 Grand Concourse	275 AST	Waste Oil	11/30/1999	Closed-Removed	136 Feet Southwest

Note: AST = Aboveground storage tank
UST = Underground storage tank

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for the PBS facilities are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

The Property was not listed in the SHWS database. Seven SHWS sites were identified within a one-mile radius of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, these sites are not likely to have significantly affected subsurface conditions at the Property. Details for the SHWS listings are included in Appendix D.

Hazardous Substance Waste Disposal Site Inventory (HSWDS)

This list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites for which EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites.

The Property was not listed in the HSWDS database. No HSWDS sites were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

The Property was not listed in the MOSF database. No MOSF facilities were reported within a ⅛-mile radius of the Property.

Environmental Restoration Program (ERP)

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed in the ERP database. No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program (VCP)

The VCP is a NYSDEC program for investigation and remediation of (generally) privately owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed in the VCP database. Sixteen VCP sites were identified within a ½-mile radius of the Property. Based on their proximity, assumed hydraulic relationships, and/or listing details, the following listings had some limited potential to affect subsurface conditions at the Property:

- 346 Grand Concourse, located south-adjacent to the Property, was listed as VCP Project ID 18TMP0835X, 18EHAN319X, 18CVCP066X. No further information was provided.
- 355 Grand Concourse (355 Grand Concourse), located across Grand Concourse, approximately 165 feet southwest from the Property, was listed as VCP Project ID 14TMP0453X, 14EHAN453X, 15CVCP020X. No further information was provided.

Based on their proximity, assumed hydraulic relationships, and/or listing details the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for all of the VCP facilities are included in Appendix D.

Brownfield Cleanup Program (BCP)

This NYSDEC program is the successor to the VCP. Some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed in the BCP database. Eighteen BCP sites were identified within a ½-mile radius of the Property. Based on their proximity, assumed hydraulic relationships, and/or listing details, the following listings had some limited potential to affect subsurface conditions at the Property:

- 310 Grand Concourse (310-336 Grand Concourse), located approximately 300 feet south of the Property, was listed into the BCP database in 2019. Past site uses included gasoline service stations and automobile repair shops from 1944 to 2000 and a medical imaging facility after 2000. Based on investigations conducted at the site, soil was contaminated with petroleum VOCs, SVOCs and metals, groundwater was contaminated with VOCs, and PFOA and PFOS, and soil vapor had elevated levels of

VOCs. Sampling data did not indicate any off-site impacts to soil, groundwater, or soil vapor.

Based on their proximity, assumed hydraulic relationships, and/or listing details the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for the BCP database listings are included in Appendix D.

5.2.3 Local Agency File Review

Records available online from the New York City Buildings and Finance Departments were viewed for the Property. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials (e.g., petroleum tank installation applications and permits, and records indicating prior uses). Copies of pertinent information are included in Appendix E.

New York City Buildings Department (NYCDOB)

Electronic NYCDOB records for the Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage, or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes, or petroleum products within the Property. The NYCDOB electronic database included:

Lot 42

- A 1966 Certificate of Occupancy (CO) for a 1-story commercial building with storage in the cellar, accessory office and bathroom on the first floor, and an auto sales yard;
- A 1992 CO for a 1-story commercial building with an automotive service station, sales of auto accessories, utility booth, and parking;
- A temporary 2011 CO for a 1-story commercial building with parking for 20 motor vehicles and a gas station with accessory convenience store;
- Multiple temporary 2012 COs for a 1-story commercial building with parking for 20 motor vehicles and a gas station with accessory convenience store;
- A final 2012 CO for a 1-story commercial building with parking for 20 motor vehicles and a gas station with accessory convenience store; and
- Violations for a new building occupied without a valid CO in 2010 and 2011.

Lot 47

- A 1951 CO for a 1-story gas service station and motor vehicle repair shop. The CO noted a gasoline tank installation approved by the Fire Department;
- A 1978 CO for a 1-story gas service station with an accessory storage building and attendant booth;
- A 1979 CO for a 1-story gas service station with an accessory storage building and attendant booth;
- A 1991 CO for a 1-story gas service station with an accessory storage building and attendant booth; and
- A 1989 Violation for altering a building without a valid CO.

The Property's NYCDOB listings also indicated the Property was assigned an E-Designation (E-442) for Hazardous Materials, Air Quality, and Noise. Copies of the COs are included in Appendix E.

Department of City Planning

A search of NYC Environmental Quality Review Requirements (CEQR) data by EDR indicated that the Property was assigned E-Designation E-442 in 2009 as part of the Lower Concourse Rezoning (CEQR No. 08DCP071X) with Hazardous Materials Phase I and Phase II Testing Protocols, air quality, and noise requirements.

Thirty-four sites within a ⅛-mile radius of the Property were also assigned E-Designations, including the south-adjacent site at 346 Grand Concourse and five west-adjacent sites along Grand Concourse (most of which have historical and/or current automobile uses), which could have affected the subsurface at the Property. Details for E-Designated sites are included in Appendix D.

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a Freedom of Information Law (FOIL) request to NYCDEP on September 1, 2021 pertaining to environmental records. As of the date of this report, NYCDEP has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

AKRF sent a FOIL request to NYCDOHMH on September 1, 2021, pertaining to environmental records. As of the date of this report, NYCDOHMH has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in the judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable and useful, accurate, and complete in light of the objective of the records review. These records include:

- Local brownfields lists;
- Local lists of landfill/solid waste disposal sites;
- Local lists of hazardous waste/contaminated sites;
- Local lists of registered tanks;
- Local land records (for activity use limitations);
- Records of emergency release reports; and
- Records of contaminated public wells.

Sources for these records include:

- Local/Regional Water Quality Agency; and
- Local Electric Utility (for PCB records).

In addition to the Local Agency File Review, AKRF sent a FOIL request to NYSDEC Region 2 on August 4, 2021, for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. The NYSDEC identified records pertaining to the Property. The pertinent documents are summarized below:

350 Grand Concourse – Lot 42

Spill Closure Letter, Spill Case #: 0111947, 350 Grand Concourse, Bronx, New York, NYSDEC, September 16, 2016

The NYSDEC closed Spill No. 01-11947 based on the documentation provided up until September 16, 2016. The closure letter indicated the Department reserves all of its rights concerning any further investigation or remedial action the Department deems necessary due to: off-site migrations of petroleum contaminants that were unknown at the time of closure; environmental conditions related to the spill which were unknown; additional information received by the Department which indicated the corrective actions were not sufficient; and fraud in obtaining the spill case closure determination. Also, the letter noted that if subsurface contamination is encountered during future use of the site, appropriate remedial and vapor mitigation efforts may need to be taken to prevent vapor instruction into any site development.

Spill Re-Opening Letter, Spill Case #: 01-11947, BP 17782, 350 Grand Concourse, Bronx, New York, NYSDEC, December 7, 2016

The NYSDEC re-opened Spill No. 01-11947 based on additional contamination that was reported at the Property on October 6, 2016. During well decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was encountered in injection well (IW)-01. The Department required continued quarterly groundwater sampling, including groundwater gauging, sampling of dissolved groundwater contamination, and product recovery. Reporting submitted to the Department for review summarizing the findings and conclusions/recommendations was also required.

Well Decommissioning Summary, Remedial Activities, and Groundwater Analytical Summary for First and Second Quarters 2017, BP #17782 - 350 Grand Concourse, Bronx, New York, NYSDEC Spill No. 01-11974, Arcadis, May 1, 2017

Arcadis decommissioned five of the ten on-site wells in October 2016, vacuum extracted 45-gallons of water contaminated with petroleum in November 2016 at injection well IW-01, and conducted quarterly groundwater sampling of monitoring well IW-01 associated with Spill No. 01-11974 in January and April 2017. Arcadis summarized and concluded the following:

- Spill No. 01-11974 was closed in September 2016. Wells MW-1, MW-3, MW-5, IW-04 and IW-05 were decommissioned in accordance with NYSDEC CP-43: Groundwater Monitoring Well Decommissioning Policy in October 2016. However, 0.62 feet of LNAPL was observed while gauging IW-01 during well decommissioning activities. The remaining wells slated for decommissioning (IW-01, IW-02, MW-2, MW-4 and MW-6A) were left intact. NYSDEC was notified of the LNAPL in well IW-01 and re-opened Spill No. 01-11974 on December 7, 2016.
- Arcadis requested closure of Spill No. 01-11974 based on the results from IW-01 indicating dissolved constituents were mostly comprised of total xylenes with non-detect or low-level benzene and due to the nature of the impacts, absence of nearby downgradient receptors and no absence of LNAPL in January and April 2017.

Remedial Action Plan, BP #17782 - 350 Grand Concourse, Bronx, New York, NYSDEC Spill No. 01-11974, Arcadis, July 19, 2018

Based on elevated concentrations of dissolved BTEX in IW-01 in 2017, the NYSDEC denied the request for closure of Spill No. 01-11974 and issued a letter dated May 24, 2018, requesting resumption of groundwater monitoring and a Remedial Action Plan (RAP) for the Property.

Arcadis submitted the RAP for vacuum truck extraction (VTE) events to address the continued petroleum contaminated encountered in IW-01. Arcadis proposed periodic VTE events at the Property which would recover LNAPL, groundwater and soil vapor from IW-01. Three 8-hour VTE events were proposed, approximately one every month for three months. Post-remedial sampling would be conducted two weeks after the third event and based on the results, future VTE events would be evaluated, based on NYSDEC approval.

Groundwater Analytical Summary for Second, Third, and Fourth Quarters 2018, BP #17782 - 350 Grand Concourse, Bronx, New York, NYSDEC Spill No. 01-11974, Arcadis, July 31, 2018, October 26, 2018, and February 22, 2019

Arcadis conducted quarterly groundwater sampling in associated with Spill No. 01-11974 on the Property in the second, third, and fourth quarters 2018. The reports contained the following:

- Three groundwater sampling events were conducted in 2018 from wells IW-01, IW-02, MW-4 and MW-6A, and one sampling event for MW-2 (inaccessible during second and fourth quarters) which were located between Grand Concourse and the former dispenser islands. LNAPL was not observed in any of the four wells, however most of the samples contained BTEX concentrations above the NYSDEC TOGS Ambient Water Quality Standards.

Groundwater Monitoring Report Third Quarter 2020 and Fourth Quarter 2020, NYSDEC Spill No. 01-11974, BP #17782, 350 Grand Concourse, Bronx, New York, Parsons, October 1, 2020 and January 11, 2021

Parsons prepared Groundwater Monitoring Reports for Remediation Management Services Company, a BP-affiliated company, associated with Spill No. 01-11974 in the third and fourth Quarters of 2020. The following is a summary of the reports:

- Groundwater samples were collected from four wells (IW-01, IW-02, MW-4 and MW-6A) during each quarter. All samples were analyzed for BTEX and MTBE.
- LNAPL was not observed in any of the wells during sampling.
- Results indicated a decreasing trend of total BTEX in all four wells; however, groundwater samples in each of the wells were still above the NYSDEC TOGS Ambient Water Quality Standards.

370 Grand Concourse – Lot 47

Request for Well Abandonments, Speedway #1349, 370 Grand Concourse, Bronx, New York, NYSDEC Spill No. 98-14075, EnviroTrac Ltd., April 20, 2017

EnviroTrac Ltd. (EnviroTrac) requested the abandonment of three of the eight on-site wells, MW-12, MW-13 and MW-14, on behalf of Speedway LLC (Speedway) at 370 Grand Concourse. LNAPL had not been observed at the Property since August 2014, with 0.09 feet documented in MW-15. Groundwater sampling data indicated a decrease in BTEX (98.9% reduction since historical high) and MTBE (99.9% reduction since historical

high) concentrations as a result of the on-site Soil Vapor Extraction (SVE) and Well Stripper (WS) system operations, Oxygen Releasing Material (ORM) socks and Enhanced Fluid Recovery (EFR) events.

Response Letter to Request for Well Abandonments, Spill No. 98-14075, Speedway #1349, 370 Grand Concourse, Bronx, New York, NYSDEC, May 2, 2017

In a response letter to EnviroTrac's request to abandon monitoring wells MW-12, MW-13 and MW-14, the NYSDEC determined wells MW-13 and MW-14 could be abandoned. However, there was insufficient data to allow for the abandonment of MW-12. NYSDEC stated that MW-12 must be monitored for an additional three quarters to determine a definite decreasing trend with very low analyte concentrations.

Speedway LLC Update Report, NYSDEC Spill No. 98-14075, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., January 2017

EnviroTrac prepared an updated groundwater sampling report associated with Spill No. 98-14075 for the Property in the fourth quarter of 2016. The report included the following:

- On November 3, 2016, monitoring wells MW-10, MW-11, and MW-15 through MW-16 were sampled for BTEX and MTBE. The analytical results indicated a maximum benzene concentration of 70.3 micrograms per liter (ug/L) in MW-15 and a maximum MTBE concentration of 1.8 ug/L in MW-16.
- Three EFR events were performed on MW-15, although no LNAPL was measured before or after the event.
- EnviroTrac recommended continued quarterly groundwater sampling and Speedway to continue monthly EFR events.

Speedway LLC Update Report, NYSDEC Spill No. 98-14075, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., April 2017, July 2017, October 2017, and January 2018

EnviroTrac prepared groundwater sampling reports associated with Spill No. 98-14075 for the Property in 2017. The following is a summary of the reports:

- Monitoring wells MW-9 through MW-11, and MW-15 through MW-16 were sampled during the year for BTEX and MTBE. The analytical results indicated a maximum benzene concentration of 61.3 ug/L in MW-15 (August 24, 2017) and a maximum MTBE concentration of 10.4 ug/L in MW-11 (February 27, 2017).
- Twelve EFR events were performed on MW-15 in 2017. LNAPL was measured during five of the events with a thickness ranging from 0.01 to 0.04 feet.
- EnviroTrac abandoned MW-14.
- EnviroTrac recommended continued quarterly groundwater sampling and Speedway to continue monthly EFR events.

Speedway LLC Update Report, NYSDEC Spill No. 98-14075, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., April 2018, July 2018, October 2018, and January 2019

EnviroTrac prepared groundwater sampling reports associated with Spill No. 98-14075 for the Property in 2018. The following is a summary of the reports:

- Monitoring wells MW-9 through MW-12, and MW-15 through MW-16 were sampled during the year for BTEX and MTBE. The analytical results indicated a maximum

benzene concentration of 28.2 ug/L in MW-15 (November 20, 2018) and a maximum MTBE concentration of 99.4 ug/L in MW-12 (March 23, 2017).

- Twelve EFR events were performed on MW-15 in 2018. LNAPL was only measured during one event with a thickness of 0.01 feet.
- Six well casing cleaning events on MW-15 were performed during 2018 in accordance with the site approved RAP (discussed in Section 7.0 of this Phase I report). Each event injected approximately 100-gallons of a 5% solution of the surfactant Biosolve™ Pinkwater®.
- EnvrioTrac requested the abandonment of wells MW-9, MW-10 and MW-11 due to low to non-detect BTEX/MTBE concentrations for several years. NYSDEC granted approved to abandon wells MW-10 and MW-11 and EnviroTrac subsequently closed the wells in January 2019. Due to elevated MTBE concentrations, the well MW-09 abandonment request was denied by NYSDEC and groundwater sampling continued.
- EnviroTrac recommended continued quarterly groundwater sampling and Speedway to continue monthly EFR events.

Speedway LLC Update Report, NYSDEC Spill No. 98-14075, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., April 2019, July 2019, October 2019, and January 2020

EnviroTrac prepared groundwater sampling reports associated with Spill No. 98-14075 for the Property in 2019. The following is a summary of the reports:

- Monitoring wells MW-9 and MW-15 through MW-16 were sampled during the year for BTEX and MTBE. MW-13 was sampled for BTEX only. The analytical results indicated a maximum benzene concentration of 39.6 ug/L in MW-15 (May 22, 2019) and a maximum MTBE concentration of 6.6 ug/L in MW-13 (Jan 29, 2019).
- Seven EFR events were performed on MW-15 in 2018. LNAPL was only measured during one event with a thickness 0.12 feet.
- One well casing cleaning event on MW-15 was performed during 2019 in accordance with the site approved RAP (discussed in Section 7.0 of this Phase I report). A 5% solution of the surfactant Biosolve™ Pinkwater® was utilized during the event.
- EnviroTrac proposed the abandonment of MW-13 in 2018. The well was sampled in January 2019 and showed low to non-detected levels of BTEX and MTBE. EnviroTrac requested abandonment of MW-13 to minimize a trip hazard at the Property.
- EnviroTrac recommended continued quarterly groundwater sampling and Speedway to continue monthly EFR events.

Speedway LLC Update Report, NYSDEC Spill No. 98-14075, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., April 2020, July 2020, October 2020, and January 2021

EnviroTrac prepared groundwater sampling reports associated with Spill No. 98-14075 for the Property in 2020. The following is a summary of the reports:

- Monitoring wells MW-15 through MW-17 were sampled during the year for BTEX and MTBE. The analytical results indicated a maximum benzene concentration of 81.4 ug/L in MW-17 (September 11, 2020) and a maximum MTBE concentration of 6.6 ug/L in MW-17 (November 30, 2020).

- EnviroTrac installed three additional wells at the Property: MW-17; remedial well (REM)-1; and REM-2.
- EnviroTrac recommended continued quarterly groundwater sampling.

The remaining records provided by the NYSDEC were duplicates summarized in Section 7.0 of this Phase I report.

AKRF submitted a FOIL request to NYSDOH on August 3, 2021, pertaining to environmental records. In an email dated August 27, 2021, the NYSDOH indicated that no records were identified for 370 Grand Concourse. As of the date of this report, NYSDOH has not responded to the records request for 350 Grand Concourse. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

On September 1, 2021, AKRF reviewed EPA's computerized database for any environmental records for the Property. The Property was identified in the EPA's computerized databases:

- 350 and 370 Grand Concourse were listed under the ICIS-Air (AIR), which contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. The Property's status was listed as in compliance.
- 370 Grand Concourse was also listed under RCRA, as previously discussed in Section 5.2.1 of this Phase I report.

In AKRF's judgment, no other local records meeting the ASTM criteria are pertinent for the Property. FOIL requests are included in Appendix E.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historical activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or have been filed or recorded against the Property, or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property, including current/past uses of the Property and adjacent properties.

The Phase I ESA was conducted as part of due-diligence associated with the purchase of the Property by the Client. According to the responses included in the questionnaire, Ms. Eileen Glass, the representative for the User, was not aware of any environmental liens or activity use limitations on the Property or any property value reduction due to environmental issues. Ms. Glass indicated that there is no pending, threatened, ongoing or past litigation related to hazardous substances or petroleum products. Ms. Glass indicated that the Property will be purchased at fair market value.

To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. A copy of the Phase I ESA user questionnaire is included in Appendix E.

7.0 PREVIOUS STUDIES

350 Grand Concourse

Site Closure Presentation, BP #17782, 350 Grand Concourse, Bronx, New York, NYSDEC Spill No. 01-11974, Arcadis, October 2015

Arcadis prepared a Spill Closure Presentation for Spill No. 01-11974 on the Property in 2015. The presentation included the following:

- General background including a summary of previous environmental reports;
- A summary of the redevelopment and remediation history of the Property, which included:
  - In 1999, 411 tons of soil was excavated and removed from the northern portion of the Property associated with Spill 98-14075.
  - In 2002, approximately 1,129 tons of soil was excavated and removed during tank closure activities from the southern portion of the Property associated with Spill 01-11974.
  - The Property was redeveloped into a single BP filling station in 2002, which was labeled as Lot 42.
  - Four injection wells were installed and hi-vacuum extraction was performed at IW-04 in 2011.
  - A total of 23,858 gallons of calcium nitrate solution was injection in IW-04 in 2012.
- The presentation concluded that there were decreasing VOC concentration trends in all of the monitoring wells; LNAPL was last detected in December 2013 in IW-01; dissolved VOC concentrations have fallen by an order of magnitude (14ppm to 1ppm) in the most impacted wells (MW-4 and MW-6A) since 2012; soil data showed limited exceedances of soil cleanup objectives; and the most recent groundwater data showed benzene exceeding in only one monitoring well (MW-01).

Groundwater Monitoring Report Fourth Quarter 2019 and First Quarter 2020, NYSDEC Spill No. 01-11974, BP #17782, 350 Grand Concourse, Bronx, New York, Parsons, April 2020

Parsons prepared a Groundwater Monitoring Report for Remediation Management Services Company, a BP-affiliated company, associated with Spill No. 01-11974 for the Property in 2020. The results indicated the following:

- December 2019, groundwater samples were collected from three wells (IW-01, IW-02 and MW-6A) and in February 2020, samples were collected from four wells (IW-01, IW-02, MW-4 and MW-6A). All samples were analyzed for BTEX and MTBE.
- LNAPL was not observed in any of the wells during sampling.
- Results indicated a decreasing trend of total BTEX in wells IW-02 and MW-6A; however, groundwater samples in each of the wells were still above the NYSDEC TOGS Ambient Water Quality Standards.

Groundwater Analytical Summary for First, Second, and Third Quarters 2019, BP #17782, 350 Grand Concourse, Bronx, New York, NYSDEC Spill No. 01-11974, Arcadis, January 2020

Arcadis conducted quarterly groundwater sampling for BP Products North America, Inc. in associated with Spill No. 01-11974 on the Property in 2019. The results indicated the following:

- Spill No. 01-11974 was closed in September 2016; however, NYSDEC re-opened the spill after LNAPL was discovered while decommissioning IW-01 in October 2016.

- In accordance with the RAP, three VTE events were conducted at IW-01 in 2018 and 2019. The recovered LNAPL quantity could not be determined during each event due to the minimal amount collected.
- Three groundwater sampling events were conducted in 2019 from wells IW-01, IW-02, MW-4 and MW-6A, located between Grand Concourse and the former dispenser islands. LNAPL was not observed in any of the four wells; however, all samples contained BTEX concentration above the NYSDEC TOGS Ambient Water Quality Standards. Depth to groundwater ranged between approximately 12 to 15 feet below grade.

370 Grand Concourse

Subsurface Hydrocarbon Assessment Report – Former Hess Service Station, 370 Grand Concourse, Bronx, New York, Delta Environmental Consultants, Inc., July 12, 2001

Delta Environmental Consultants, Inc. (Delta) conducted a subsurface hydrocarbon assessment at the Property in 2001. The assessment indicated the following:

- NYSDEC Spill 98-14075 was reported in 1999 when petroleum contaminated soil was discovered during the removal of the six USTs associated with the former gasoline filling station. Approximately 410 tons of petroleum contaminated soil was removed during the tank closure activities.
- In 1999, eight monitoring wells (MW-1 through MW-8) were installed at the Property. Soil samples collected and analyzed during the installation of the monitoring wells identified VOC concentrations above NYSDEC Guidance Values in two of the eight soil samples.
- Between 1999 and 2001, groundwater samples were collected from the monitoring wells. Laboratory results identified VOC concentrations above the NYSDEC Ground Water Quality Standards in several of the wells.
- Delta installed and sampled five soil borings (SB-1 through SB-5) to 12-17 feet below ground surface, where bedrock was encountered. Soil sample results indicated MTBE above the NYSDEC Soil Cleanup Objectives.
- Delta sampled five of the eight existing monitoring wells. One of the monitoring wells (MW-8), located between Grand Concourse and the former island dispensers, contained 0.03 feet of LNAPL. Groundwater sample results indicated BTEX and MTBE above the NYSDEC Ground Water Quality Standards.
- Delta recommended that continued remedial actions be conducted in support of closure of the NYSDEC Spill Number 98-14075.

Remedial Work Plan (RWP), Speedway #1349, 370 Grand Concourse, Bronx, New York, EnviroTrac Ltd., January 2018

EnviroTrac developed a RWP for the Property in 2018 based on the results of historical and groundwater sampling data. The RWP stated that NYSDEC Spill No. 98-14075 was reported in 1999 when petroleum contaminated soil was discovered during the removal of the six USTs associated with the former gasoline filling station. Approximately 410 tons of petroleum contaminated soil was removed during the tank closure activities.

- Past remedial activities included:
  - ORM socks were installed in MW-12 and MW-13 in 2006.
  - Two additional monitoring wells (MW-15 and MW-16) were installed between Grand Concourse and the former island dispensers in 2008.

  - An approved NYSDEC SVE system in conjunction with a WS system was installed and activated in 2008. MW-15 was not connected to the system due to on-site utilities. Monthly mobile WS events were conducted at MW-15 between 2008 and 2011.
  - In 2010, the SVE system was shut down due to asymptotic conditions, indicating the system effectively remediated the Property except for MW-15.
  - EFR events began in 2011 for MW-15.
  - In 2017, ORM socks were installed in MW-15 to address BTEX and MTBE concentrations.
- Based on residual LNAPL and dissolved BTEX concentrations within MW-15 and drilling/excavation around MW-15 not being feasible due to the presence of nearby utilities and the subway along Grand Concourse, EnviroTrac proposed localized remediation including the injection of the surfactant Biosolve™ Pinkwater® into MW-15, followed by recovery utilizing a vacuum truck. The surfactant injection was designed to desorb, emulsify, and recover residual product from the soil.

350 and 370 Grand Concourse

Evaluation of Site Investigations and Remedial Activities pertaining to Spill No's. 98-14075 & 01-11974 Letter Report, 350 & 370 Grand Concourse, Bronx, New York, 10451, Advanced Cleanup Technologies, Inc. (ACT), August 2020

ACT prepared an evaluation of the status and projected duration of the remedial activities associated with both Spills at the Property. The evaluation included the following:

- ACT reviewed and summarized the previous reports for the Property, all of which have been summarized in Section 7.0 of this Phase I report.
- A June 15, 2020, and August 19, 2020, correspondence between the Property Manager and EnviroTrac regarding 370 Grand Concourse indicated there was a scheduled installation of two sparge wells and one monitoring well in the vicinity of MW-15. EnviroTrac indicated the installation of additional sparge wells would speed up the remedial efforts at the Property, as will the excavation associated with site redevelopment.

ACT concluded that the main area of concern at the Property was between Grand Concourse and the dispenser islands associated with the former gasoline filling station. Separate contractors for each portion of the Property were implementing additional remedial activities to address significant groundwater contamination at the Property, these include periodic vacuum extraction events at 350 Grand Concourse, and the installation and activation of an air sparge groundwater remediation system at 370 Grand Concourse. As both Spills remained open, ACT estimated remedial activities would continue for at least an additional 5 years.

Addendum to Evaluation of Remedial Activities, 350 & 370 Grand Concourse, Bronx, New York, 10451, ACT, December 2020

ACT prepared an addendum to the August 2020 letter report since receiving additional status reports for both Spills at the Property. The addendum included:

- An October 1, 2020, Parson's report "Groundwater Monitoring Report Third Quarter 2020" from the southern portion of the Property. Samples were collected from groundwater monitoring wells IW-1, IW-2, MW-4 and MW-6A.
- An October 2020, EnviroTrac "Update Report", which summarized soil and groundwater conditions beneath the northern portion of the Property. Samples were collected from newly installed monitoring well (MW-17) and two "Remedial Wells" (REM-1 and REM-2).

ACT concluded that the results from both reports indicated significant soil and groundwater contamination beneath the entire Property and the remedial activities that have taken place since the first reported Spill in 1999 have made no appreciable improvements to subsurface site conditions. To date, there has not been a comprehensive investigation of subsurface conditions at the combined Property (southern and northern portions) to identify the actual source or sources of contamination.

ACT concluded that per the NYSDEC, remedial activities in both portions of the Property were limited to groundwater monitoring on a regular basis. ACT believed the spills were from one large soil and groundwater plume which was emanating from the dispenser islands and former tank bed at 370 Grand Concourse and migrating south towards 350 Grand Concourse and west across the entire Property. To close both Spills, ACT recommended excavation of all impacted soil to the extent feasible and closure of the active gasoline station.

Timeline Summary Letter Report, 350 & 370 Grand Concourse, Bronx, New York, 10451, ACT, February 19, 2021

ACT prepared a letter report and timeline summary to decommission the PBS facilities at the Property. Since the Property has been assigned an E-Designated by the New York City Mayor's Office of Environmental Remediation (OER), ACT also provided a timeline and task summary to obtain a "Notice to Proceed" from OER, and enter the NYSDEC BCP.

ACT also indicated that reporting during both the OER VCP and NYSDEC BCP will satisfy NYSDEC's requirements to close the existing NYSDEC Spill Nos. 01-11974 and 98- 104075.

Previous studies are included as Appendix F.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed RECs or conclusions.
- The Property and area history was not conducted in five-year intervals. However, sufficient information about the history of the Property and surrounding area could be obtained from the available historical Sanborn maps, city directories, and available local records, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.
- To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

9.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF was retained by 350 Rising LLC (the Client) to prepare a Phase I ESA of the property located at 350-370 Grand Concourse, the Bronx, New York (Tax Block 2341, Lot 42), hereinafter referred to as the "Property." Historically, Lot 42 was divided into Lots 42 and 47. At the time of reconnaissance, the Property comprised an approximately 31,045-sf vacant gasoline service station with a 1-story convenience store, a sales kiosk, and canopy covered gasoline pump dispenser area.

The Property was bounded to the north by a three-story residential building and a five-story apartment building, followed by East 144th Street; to the east by a wooded vacant lot, followed by Metro North Railroad tracks; to the south by a multi-story residential building, followed by various automotive repair shops; and to the west by Grand Concourse, followed by a U-Haul Storage and Moving facility. The surrounding area consisted primarily of automotive, commercial, transit, and residential uses.

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A summary of the assessment findings is presented below.

No Historic RECs or Controlled RECs were identified.

Recognized Environmental Conditions

- At the time of the reconnaissance, the Property was observed to be a former gasoline service station. Petroleum bulk storage (PBS) was observed at the Property, including three 12,000-gallon gasoline USTs within a tank field in the southeast corner of the Property, two minimally filled 55-gallon drums of a gasoline/water mixture in the rear yard of the convenience store, and nine gasoline pump dispenser islands in the center of the Property. Petroleum-like staining was observed on and around each of the gasoline pump dispenser islands and within the tank field area. Multiple monitoring wells and potential soil vapor extraction wells were observed throughout the Property, most of which were in damaged or decommissioned condition. Two out-of-service SVE vaults with associated gauges and hoses were observed near the eastern Property line. An unidentified drywell with an unknown discharge point was observed in the northwest corner of the Property behind the convenience store.
- The Property was identified on historic Sanborn maps, city directories, and local records, and in the following databases for current and former operations including various automotive services/repair as well as petroleum storage/filling: NYSDEC Petroleum Spills, RCRA Generator/Transporter, NYSDEC PBS, and the EDR Historic Auto Station. NYSDEC Spill Nos. 98-14075 and 01-11974 remain open.
- A review of the historical city directories and Sanborn maps and regulatory databases identified numerous automotive, commercial, and dry cleaning/laundry uses on adjacent and surrounding blocks as early as 1891.

Business Environmental Risks [items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris]

- Suspect ACM were observed at the Property. Suspect ACM were noted to be in generally good to damaged condition. ACM may also be present in demolition debris in the subsurface at the Property.

- Based on the existing building's age, PCBs may be contained in fluorescent lighting fixtures, electrical equipment, and caulking. No evidence of leaks or stains from these fixtures and equipment was observed.
- Based on the age of the building, LBP may be present on outdoor surfaces on the Property. Painted surfaces were observed to be in generally fair to good condition. LBP may also be present in demolition debris in the subsurface at the Property.
- The Property has been assigned an E-Designation for Hazardous Materials, Air Quality and Noise (E-442).

Recommendations

- Based on the RECs identified, a Phase II (Subsurface Investigation) is recommended. Based on the results of the Phase II, additional assessment and/or remediation may be necessary to close NYSDEC Petroleum Spill Nos. 98-14075 and 01-11974, which may include, as applicable, participation in the NYSDEC BCP or OER's VCP.
- If the Property is to be renovated or redeveloped, any subsurface investigation, remediation, and/or redevelopment should be done in consultation with the OER to satisfy the requirements of the E-Designation.
- All known and unknown USTs located at the Property should be closed and removed in accordance with city, state, and federal rules and regulations. If additional USTs are discovered during redevelopment activities, the tanks should be registered with NYSDEC, and closed and removed from the Property in accordance with city, state, and federal rules and regulations. Any additional petroleum spills should be reported to the NYSDEC Spills Hotline.
- Soil and groundwater encountered during any redevelopment activities should be properly handled and disposed of off-site in accordance with local, state, and federal laws and regulations.
- Prior to any demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state, and federal regulations prior to any renovation or demolition that would disturb those materials.
- Any demolition activities with the potential to disturb LBP must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*). If the Property is visited regularly by children under 6 years of age, the building may be considered a Child Occupied Facility by the EPA.

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Deborah Shapiro, QEP
Senior Vice President

Gregory Baird
Senior Professional

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Bolivar Development, LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

EXECUTIVE SUMMARY

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/31/2021 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 47 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 29 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 61 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 02/25/2021 has revealed that there are 34 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - WEST 13	12TH AVE. BETWEEN W.	W 1/2 - 1 (0.775 mi.)	352	1310

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"11/28/03 Reassigned from DeMeo to Foley. See spill #9814075 for info on former Merit station on nothern half of property. File review: Underground Storage Tank Excavation Assessment Report (Delta, 11/4/02) Five 4000gal(double-walled steel) gas USTs and an abandoned 550-gal(single-walled steel) UST excavated during raze and rebuild activities. Replaced with three 12000gal gas USTs in a separate tank cavity. Lab analysis of the gasoline tank field post-ex soil samples identified MTBE in excess of TAGM in the four bottom samples (tank-2, tank-3, tank-4 and tank-5). MTBE concentrations ranged from

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

1500ppb(tank-5) to 7740ppb(tank-3). Total BTEX was non-detect in all soil samples. No soil was excavated during tank pulls. Delta proposes conducting a Geoprobe assessment in the vicinity of the former tank field to delineate soil concentrations. 12/31/03 Received SHAR (Delta, 12/22/03) Report only covers the southern half of the existing BP service station. The nothern half is managed by Amerada Hess, formerly occupied by a Merit station. Site plan shows 6 monitoring wells on the northern portion of the property.(see spill #9814075) 1360 tons of petroleum-impacted soils were removed during raze and rebuild. Six soil borings were advanced around the former tank field and pump islands to depths between 11.5 and 20ft bgs. Lab analysis of soil samples did not identify VOCs in excess of TAGM. Three soil borings were converted to temporary 1 wells. Groundwater samples collected identified between nine and fourteen VOCs in excess of GWQS in all three samples. MTBE concentrations ranged from 2820ppb(SB-1/water) to 11500ppb(SB-2/water). Delta installed three 2 permanent monitoring wells in June/July 2003 to depths between 19.9 and 21.4'bgs. Underlying bedrock was encountered in one of the three borings at 21.5'. Additional groundwater samples were collected. Lab analysis identified VOCs in excess of GWQS in all three samples. 1/5/04 Discussed site with J. Sun, PM for Hess(#9814075). He will look for signed STIP from Hess for northern section of property. May have existing remediation system on property. 1/29/04 Received 4Q2003 monitoring report(Delta, 1/21/04). Max BTEX 29936ppb(MW-5) and max MTBE 2860ppb(MW-4). MW-2 is clean. 1/29/04 Joe Sun sent out stip to Hess. 3/24/04 Hess stip executed. 4/22/04 Received 1Q2004 monitoring report. DTW 12.5-19'bgs. Total BTEX from 10ppb(MW-2) to 15962ppb(MW-1). MTBE from 6.9ppb(MW-2) to 1720ppb(MW-3). 10/14/04 2Q04 monitoring report received. DTW 13-18'bgs. BTEX from 12ppb(MW-2) to 16174ppb(MW-1). MTBE from 3ppb(MW-2) to 1160ppb(MW-1). 4/7/05 Received 3Q04 and 4Q04 monitoring reports. 3Q04- BTEX ranged from ND(MW-2) to 18124ppb(MW-1). MTBE ranged from ND(MW-2) to 424ppb(MW-3). 4Q04- BTEX ranged from 1ppb(MW-2) to 16084ppb(MW-1). MTBE ranged from 9ppb(MW-2) to 507ppb(MW-3). 11/9/05: Reviewed quarterly report dated 9/29/05. Three wells sampled on 6/10/05. No LNAPL present. Max BTEX is 22437ppb (MW1) and max MTBE is 328ppb(MW3). 11/25/05 3Q05 - DTW 11.82-19.30'bgs. No LNAPL present. BTEX from 0.5ppb(MW-2) to 9858ppb(MW-1). MTBE from 2ppb(MW-2) to 559ppb(MW-3). 3/28/06 4Q05 sampling conducted 12/28/05 on three MWs. DTW 11.74-17.91'bgs. BTEX from 34ppb(MW-2) to 31268ppb(MW-1). MTBE from ND(MW-1) to 131ppb(MW-3). MW-1 is problem well. Concentrations in downgradient well(MW-3) are fluctuating. Hess has system operating on northside of property. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 9/29/2006 - Feng - Portfolio meeting with BP and Delta. The site has limited access to trucks due to the canopy. Delta will keep quarterly monitoring. (RJF) 1/4/2007 - Feng - 1Q2006, 10/18/2006, by Delta. Groundwater sampled and gauged 3/3/2006. 3 monitoring wells. DTW 12.23' to 18.31' bg. Flows southeast. No LNAPL. MW-1, 13,489 ppb BTEX, 23.8 ppb MTBE. MW-2, 1.4 ppb BTEX, 2.1 ppb MTBE. MW-3, 60.4 ppb BTEX, 81.4 ppb MTBE. (RJF) 2/6/2007 - Feng - 2Q2006, 12/11/2006, by Delta. Groundwater sampled and gauged 6/30/2006. 3 monitoring wells. DTW 10.82' to 17.93' bg. Flows east-southeast. No LNAPL. MW-1, 14,887 ppb BTEX, 8.6 ppb MTBE. MW-2, 133.62 ppb BTEX, 0.4 ppb MTBE. 16.69 ppb BTEX, 30.4 ppb MTBE. Checked with Hess PM, RAP for SVE and ORC socks approved, but not implemented yet. (RJF) 5/29/2007 - Feng - 3Q2006, 1/22/2007, by Delta. Groundwater sampled and gauged 9/26/2006. 3 monitoring wells. DTW

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

11.98' to 18.02' bg. Flows to southeast. LNAPL in MW-1 (0.02'). MW-1, 9,882 ppb BTEX, 7.7 ppb MTBE. MW-2, 0.45 ppb BTEX, 2 ppb MTBE. MW-3, 9.8 ppb BTEX, 20.6 ppb MTBE. (RJF) 8/15/2007 - Feng - 4Q2006, 7/2/2007. Groundwater sampled 12/13/2006. All 3 monitoring wells were sampled. DTW 12.09' to 18.14' bg. Flows to southeast. No LNAPL. MW-1, 17,027 ppb BTEX, less than 50 ppb MTBE. MW-2, BTEX ND, 1.7 ppb MTBE. MW-3, 21.7 ppb BTEX, 31.5 ppb MTBE. (RJF) 11/21/2007 - Feng - 1Q2007, 8/30/2007. Groundwater sampled 3/28/2007. All 3 monitoring wells were sampled. DTW 11.76' to 17.77' bg. Flows to southeast. No LNAPL. BTEX range ND to 10,616 ppb (MW-1). MTBE range 1.1 ppb to 13.6 ppb (MW-3). (RJF) 3/20/2008 - Feng - eDoc Quarterly Monitoring Report 3Q2007, 4Q2007 and 1Q2008. (RJF) 6/26/2008 - 3Q2007, 2/25/2008. Active service station. The monitoring well network was gauged and sampled on 8/22/007. The site was not sampled in 2Q2007. 3 monitoring wells were gauged and sampled. DTW 11.30' to 17.66' bg. Flows to southeast. No LNAPL. BTEX range ND to 9,528 ppb (MW-1). MTBE range ND to 14.2 ppb (MW-3). 4Q2007, 2/25/2008. Active service station. The monitoring well network was gauged and sampled 11/14/2007. 3 monitoring wells. DTW 12.27' to 18.54' bg. Flows to southeast. NO LNAPL. BTEX range ND to 10,323 ppb (MW-1). MTBE range N Dto 26.2 ppb (MW-3). 1Q2008, 3/10/2008. Active service station. The monitoring well network was gauged and sampled 2/7/2008. 3 monitoring wells. DTW 12.45' to 18.49' bg. Flows to southeast. NO LNAPL. BTEX range 1 ppb to 10,600 ppb (MW-1). MTBE range 1 ppb to 25 ppb (MW-3). (RJF) 10/29/2008 - 2Q2008, 9/20/2008, by Delta. Active station. The monitoring well network was gauged and sampled 6/27/2008. 3 wells were gauged. NO LNAPL. DTW 11.66' to 18.62' bg. Flows to southeast. 3 wells were sampled. BTEX range 0.67 ug/L to 9,770 ug/L (MW-1). MTBE range ND to 14.0 ug/L (MW-3). (RJF) 3/4/2009 - 3Q2008, 12/11/2008, by Delta. Active station. The monitoring well nework was gauged and sampled 9/4/2008. 3 wells were gauged. LNAPL in MW-1 (0.02'). DTW 11.95' to 18.09' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 10,540 ug/L (MW-1). MTBE range 1.1 ug/L to 7.2 ug/L (MW-3). 4Q2008, 1/30/2009, by Delta. Active station. The monitoring well network was gauged and sampled on 12/17/2008. 3 wells were gauged. LNAPL in MW-1 (0.03'). DTW 11.57' to 17.57' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 9,980 ug/L (MW-1). MTBE range ND to 8.3 ug/L (MW-3). (RJF) 8/14/2009 - Reviewed Drilling Work Plan, dated 6/29/2009, by Delta, pdf copy via email. Delta proposes to install 2 monitoring wells northwest and southwest of MW-1. Email comments to Delta requiring one more downgradient well at the east side of the canopy. Revision due 9/2009. (RJF) 9/1/2009 - 2Q2009, 8/5/2009, by Delta. Active station. The monitoring well network was gauged and sampled on 6/29/2009. 3 wells were gauged. NO LNAPL. DTW 10.87' to 17.20' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 10,407 ug/L (MW-1). MTBE range ND to 7.1 ug/L (MW-3). (RJF) 9/11/2009 - email from Delta. attached with the SHAR of 12/29/2003. Delta installed SB-6 at the east side of the canopy/tanks. The boring was advanced to 11.5 feet bgs. Weathered bedrock was encountered at approximately 8 feet bgs and there was no overburden saturation. soil sample taken from 9-11.5 feet, no VOCs/SVOCs detected. Delta requested not to install the well over there as required by DEC 8/14/2009. (RJF) 3Q2009, 12/7/2009, by ARCADIS. 3 wells were gauged and sampled on 9/25/2009. LNAPL in MW-1 (0.01'). Max benzene 81 ug/L (MW-1). Max BTEX 6,200 ug/L (MW-1). Max MTBE 6.3 ug/L (MW-3). ARCADIS requests to reduce the monthly gauging to quarterly based on the intermittent nature of LNAPL occurrence in MW-1. 4Q2009, 2/5/2010, by

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

ARCADIS. 3 wells were gauged and sampled on 12/30/2009. DTW 11.34-17.20' bg. Flows to east-southeast. NO LNAPL. max benzene 34 ug/L (MW-1). Max BTEX 7,900 ug/L (MW-1). Max MTBE 5.2 ug/L (MW-1). Due to project transition, the monthly guaging did not occur in October, November or January 2010, but has now resumed. Installation of 3 additional wells was proposed to DEC 12/2009 and will schedule field upon approval. 3/16/2010 - Reviewed Investigation Work Plan revision, dated 3/8/2010, by ARCADIS. ARCADIS proposes to install 3 monitoring wells, MW-4 west of the canopy, MW-5 south of the canopy in between MW-1 and MW-2, MW-6 east of the canopy. Work plan is approved. Report due 6/2010. (RJF) 5/21/2010 - 1Q2010, 4/28/2010, by ARCADIS. 3 wells were gauged and sampled on 3/12/2010. DTW 19.73-21.33' bg. Flows to east-southeast. NO LNAPL. Max benzene 52 ug/L (MW-1). Max BTEX 7,500J ug/L (MW-1). Max MTBE 4.5J (MW-1). The 3 new wells are scheduled to be installed in 5/2010. ARCADIS requests reduce monthly gauging to quarterly. 08/26/10: This spill case is transferred from R. Feng to J. Kolleeny. Reviewed Results of 2nd Quarter 2010 GW Monitoring and Subsurface Hydrocarbon Assessment Rpt by ARCADIS, both dated 8/16/10 (in eDocs). 2nd Quarter 2010 sampling shows high dissolved contam in well MW-1. Subsurface Invest Rpt. summarizes install'n & sampling of 3 new soil borings, two of which were converted into mon wells (3rd boring hit refusal on presumed bedrock w/o hitting GW). Borings found saturated zone soil contam at MW-4, and significant GW impacts at MW-4 and MW-5. ARCADIS proposed adding new wells to mon program, continued quarterly mon, and evaluation of remedial technologies, feasibility study and remedial action plan. I sent letter (in eDocs) to Jon Armstrong of BP, cc's to Ray Wagner and Andrew Korik of ARCADIS, asking for addt'l delin wells to north & west of most contaminated wells (MW-1, MW-4 & MW-5), with work plan for wells due by 9/17/10 and RAP due by 12/3/10. - J. Kolleeny 08/30/10: Spill no. at adjacent former Merit Station to north of site (cleanup being managed by Hess) is 9814075; see rpts in eDocs for GW data. - J. Kolleeny 09/01/10: On 8/27/10 received email from Ray Wagner of ARCADIS: I believe we can accommodate you on request to add Former UST areas to site plans, where applicable, and we have this info. We will begin this process; please keep in mind there may be a little lag in updating some sites as we will be pulling figures from archive site files sent from Delta. I would like to have a call with you to discuss recently submitted investig rpt for BP station 17782 and your request for addt'l delin wells to west & north of MW-4. Merit site to north has wells just north of MW-4, and stepping out to west of MW-4 is limited due to subway and street. Please let me know if you would be available to discuss this later today or early next week. Spoke with Ray later that day, asked if he could send site plan showing northern half of site (former Merit Station), where cleanup is being managed by Hess. On 8/30/10, he sent figure and 2009 rpt by EnviroTrac showing wells on north portion of site and GW data. I sent email: Thanks for fig. and rpt. Have you been able to find out anything about location of former USTs at former Amoco station? He replied he would have that info by 9/1/10. On 9/1/10, received email from Andrew Korik of ARCADIS showing former UST locations on former Amoco & Merit portions of site (in eDocs). I sent email to Andrew & Ray of ARCADIS, cc to Jon Armstrong of BP: Thanks for sending site plans with former UST locations. I looked over fig. and 2009 EnviroTrac rpt sent few days ago by Ray, and I also looked at more recent EnviroTrac rpt (July 2010) for northern (former Merit sta.) portion of site, and I see that monitoring well

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

MW-4 on southwestern part of that site has either been destroyed or is not being sampled. Therefore, I believe that an addt'l well to north of ARCADIS well MW-4 on former Amoco site, near former property line, is warranted. In light of constraints posed by nearby subway & Grand Concourse, I will not at this time ask for addt'l delin wells west of contam area represented by wells MW-1, MW-4 & MW-5. Please contact me if you have questions. - JK 09/07/10: On 9/2/10, received email from Andrew Korik of ARCADIS with attached site plan showing proposed addt'l well location as requested (in eDocs). Email stated: Per your rqst, see attached fig which shows location of one addt'l mon well proposed to be installed near former property boundary north of our existing MW-4. With your approval, we will schedule install'n & sampling of this well in accordance with procedures outlined in 3/8/10 Work Plan, approved by NYSDEC. Please contact me if you have any questions. Due to proximity of subway tunnel under street and portion of sidewalk, well may need to be moved 5 or 10 ft to east pending comments from NY MTA. Thank you. On 9/7/10, I sent email reply, with cc's to Ray Wagner of ARCADIS & Jon Armstrong of BP: I would prefer if you could install new well about 5 ft to south of proposed location shown on attached drawing. However, I understand that final location of well may be largely determined by presence of subsurface utilities. Please consider this email as authorization to proceed with install'n of addt'l mon well. Well should be installed in accordance with procedures outlined in 03/08/10 Work Plan approved by NYSDEC. Feel free to contact me if you have any questions. Andrew wrote back: Will try to install per your preference, assuming field conditions allow. - JK 11/22/10: Received email from Andrew Korik of ARCADIS: Just wanted to update you on work at BP site 17782 at 350 Grand Concourse. We installed and sampled addt'l well along sidewalk as requested. I am just wrapping up combined 3rd quarter rpt/well install'n rpt and expect to have something to you next week. We are also reviewing remedial alternatives and will be developing a RAP shortly. - J. Kolleeny 03/01/11: Reviewed Results of 3rd Quarter 2010 GW Monitoring and Intall'n of Addt'l GW Mon Well rpt by ARCADIS dated 12/3/10 (in eDocs). Results of Sept. 2010 GW sampling show MW-1 had 4,050 ug/L total BTEX (down from 7,890 ug/L in June 2010), MW-4 had 6,390 ug/L tBTEX (down from 13,600 ug/L in July 2010). New well MW-6A was intalled as requested by DEC; soil samples showed VOC detections but no TAGM 4046 exceedances in sample at GW interface (12.5-13 ft bgs), but significant exceedances in soil sample from below water table (18-18.5 ft bgs), including 15 mg/kg ethylbenzene, 73 mg/kg m,p-xylene, 19 ug/L o-xylene, 42 mg/kg 1,2,4-trimethylbenzene, and 14 mg/kg 1,3,5-trimethylbenzene. GW sample from new well MW-6A, taken in Oct. 2010, was very contaminated, with 12,500 ug/L tBTEX and over 15,000 ug/L total VOCs. Rpt recommendations state quarterly GW monitoring will continue, with MW-6A added to mon program, and that RAP will be prepared and submitted to DEC in Jan. 2011. - J. Kolleeny 04/08/11: Reviewed 4th Quarter 2010 GW Monitoring and Analysis Rpt by ARCADIS, dated 3/7/11 (in eDocs). Results of Nov. and Dec. 2010 GW sampling show MW-1 had 6,150 ug/L total BTEX in Nov. 2010 (up from 4,050 ug/L in Sept. 2010) and increased to 10,700 ug/L tBTEX in Dec. 2010; MW-4 had 9,520 ug/L tBTEX in Nov. 2010 (up from 6390 ug/L in Sept. 2010) and increased to 10,600 ug/L tBTEX in Dec. 2010; MW-6A, not sampled in Nov. 2010, had 12,800 ug/L tBTEX in Dec. 2010 (up a little from 12,500 ug/L in Oct. 2010). Rpt recommendations state quarterly sampling & monthly gauging will continue, and RAP will be submitted in March 2011. - JK 04/11/11: Reviewed Remedial Action Work

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

Plan for Anaerobic Biological Oxidation by ARCADIS, dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate via 5 new injection wells, to enhance bioremediation and address persistent GW contam along west side of site. After 1st injection, one or two rounds of performance monitoring will be performed to determine frequency of addt'l injections. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik & Gene Choquette of ARCADIS. - J. Kolleeny 4/11/2011 - Spill transferred back to JFeng. 5/4/2011 - email from Andy Korik June we are scheduled to install the injection wells per the approved RAWP starting Monday May 9 at the 350 Grand Concourse site. Please call me if you have any questions. Can we change the monthly gauging to quarterly at these sites where we have not seen product in over 1 year? 5/5/2011 - email to Andy Korik Andy, Yes, you can switch from monthly gauging to quarterly gauging for this site. In yesterday's email you said the field work will start on Monday 5/9/2011, how many days are you expected to be in the field? June email from Andy Korik The first day will be coring and hand clearing of the borings. I expect the well installations will start on Tuesday and be finished on Thursday so 4 days on site (3 if things go very quickly). JF 5/17/2011 - received email attached with 1Q2011 quarterly report. eDoc. JF 5/25/2011 - email from Andy Korik of ARCADIS June here is notification that the injection wells were installed at 350 Grand Concourse. Injection well IW-03 could not be installed due to shallow refusal with 4 attempts. We can compensate by increasing injection volumes at the other 4 wells. Still waiting for USEPA approval to inject. Sulfate Injection Well Installation Notification was attached. eDoc. JF 7/11/2011 - 1Q2011, 5/17/2011, by ARCADIS. The groundwater samples were collected on 3/31/2011. 6 wells were sampled. MW-6A located in the north of MW-4 and west of the canopy was installed in 10/2010. NO LNAPL. The site is changed to quarterly gauging. Max BTEX 11,000 ug/L (MW-6A). Max MTBE 12 ug/L (MW-5). Sulfate Injection Well Installation Notification, 5/25/211, by ARCADIS. The installation of four sulfate injection wells took place during the week of May 9 through May 13, 2011. The approved RAWP specified that 5 injection wells to be installed; however, due to refusal at 1.5 to 5 feet depth during 4 attempts to install well IW-03, an injection well was not installed at the proposed IW-03 location. Injection volumes at IW-2 and IW-04 can be adjusted to compensated for the absense of IW-03. They submitted an Inventory of Injection Wells package to USEPA on 5/5/2011. Will notify DEC one week prior to the injection. No soil and groudwater samples taken. JF 5/8/12 - Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC. In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate. Mr. Hussein approved the letter and it was sent out today. 5/24/12 - Raphael Ketani. Today I received the ARCADIS 5/24/12 First Quarter 2012 Groundwater Monitoring and Analysis Report. I reviewed the report. NAPL was not present in any of the wells during this quarter. Groundwater flow was to the east. MW-2 was not accessible in March 2012. MW-1 had 1900 ppb ethylbenzene

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

and 3600 ppb total xylenes. MW-4 had 1700 ppb ethylbenzene and 4100 ppb total xylenes. MW-5 had 380 ppb total xylenes. MW-6A had 1100 ethylbenzene and 6600 total xylenes. The first round of sodium nitrate injections is scheduled to take place at the end of the third monitoring quarter, pending DEC approval. 5/30/12 - Raphael Ketani. Earlier, Mr. Korik had sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter regarding the use of sodium nitrate in place of sodium persulfate. I reviewed the response letter which addressed the 7 comments the Department had made. Their responses were as follows: 1) ARCADIS sent a letter daated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of the sodium persulfate. However, they haven't had a response from the EPA. 2) The amounts of sodium nitrate that will be on site will be less than the 400 pound limit. For this site, 120 lbs. of the material will be stored on site at any given time. 3) Dosing information was presented and was deemed appropriate. 4) Quantitative polymerase chain reaction was used to evaluate the presence of Dichloromonas species bacteria. 5) By using appropriate amounts of the sodium nitrate chemical, the nitrate concentrations will be maintained in order to keep the groundwater environment anoxic. 6) The push pull method will be used to extract any groundwater. This method doesn't cause the reorientation of the soil grains which would result in a loss of the efficiency of the injections. They state that there will be minimal groundwater displacement. 7) The nitrate concentrations will decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater under the site will have to travel 60 feet in order to reach CP-51 levels. Later today, a conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself. The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate proposal, the Department's comments in our 5/7/12 response letter and the information in the ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby BP, had adequately responded to the Department's comments with the exception of item #7, monitoring nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #17782, there were on site monitoring wells 80 feet downgradient of the injection locations. I stated that this was sufficient for monitoring the groundwater. The ARCADIS 5/23/12 response letter was found to be acceptable with the only comment being that they will have to frequently sample the groundwater in order to be sure that it does not exceed the CP-51 standards. If they find that the standards are exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit. 5/31/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/19/2012 - meeting with ARCADIS. Pilot in the IW-4, and monitor MW-1, MW-4 and MW-5. Pay attension to the benzene during the pilot. If not working, will plan for aerobic, i.e. oxygen release, which is fine with MTA. 6/26/2012 - Reviewed Supplemental Letter Work Plan for

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

Nitrate Injections, dated 6/19/2012, by ARCADIS. The Work Plan is intended to fulfill the Department s requirement of specific information (i.e. monitoring, reporting and injection details) regarding the injections as part of the Department s approval of the proposal to use sodium nitrate to treat the contamination on May 30, 2012. ARCADIS proposes to inject 5,300 gallons, 8,000 gallons, and 5,300 gallons of sodium nitrate solution at a concentration of 0.3% by weight into the injection wells for Site 654, Site 5082, and Site 17782, respectively. A groundwater monitoring program will be implemented subsequent to the application. Approves the Work Plan after discussed with Raphael Ketani. Report by 12/2012. 8/28/2012 - 1Q2012, 5/24/2012, by ARCADIS. Groundwater was sampled on 3/6/2012. DTW 12.86 (MW-5) to 18.07' blow the top of casing. NO LNAPL. On 10/27/2011, high vacuum extraction (HiVac) event on IW-1 was conducted for 6-hour duration due to the historical appearance of LNAPL. Next sampling will be in 6/2012. MW-6A, 7,700 BTEX. MW-4, 6,000 BTEX. MW-1, 5,600 BTEX. MW-5, 490 BTEX, 29 MTBE. 10/18/2012 - 2Q2012, 8/30/2012, by ARCADIS. Groundwater was samppled on 6/12/2012. DTW 12.23 (MW-5) to 17.96 (MW-3). Flows to east at a hydraulic gradient of 0.16 feet per foot. MW-6A, 7,100 BTEX. MW-4, 5,200 BTEX, 6 MTBE. MW-1, 5,500 BTEX, 3 MTBE. MW-5, 350 BTEX, 140 MTBE. The first round of calcium nitration injection was conducted in August 2012. Dose-response monitoring, analytical data and remedial efficacy will be evaluated and presented in the 3rd quarter monitoring report along with dosing recommendations for future injections. 12/20/2012 - 3Q2012, 11/12/2012, by ARCADIS. Groundwater was sampled on September 21, 2012. DTW 11.36 (MW-2) and 18.45 (MW-3). Flows to east at a hydraulic gradient of 0.18 feet per foot. Over the period of August 14 to August 24, 2012, approx 23,858 gallons of calcium nitrate solution were injected into IW-04. Post injection response monitoring is on-going and will continue through early November. MW-6A, 5,600 BTEX. MW-4, 5,400 BTEX. MW-1, 4,600 BTEX. MW-5, 380 BTEX. 8/21/2013 - met with ARCADIS. The calcium nitrate injection was done in 8/2012. 2,400 gallon has been injected. MW-1 got some LNAPL 0.02'. Need to monitor. 8/26/2014 - 2Q2014, 8/21/2014, by ARCADIS. Groundwater sampled on 6/24/2014. MW-6A, 2,300 BTEX. MW-4, 2,200 BTEX. MW-1, 5,400 BTEX. in DecDocs. 8/26/2014 - Reviewed letter dated 8/21/2014 from ARCADIS, Review of Metro-North Property East of. ARCADIS conducted a preliminary site reconnaissance to observe condition on Metro North property adjacent to the east side of the BP site. The picture shows that the area between the gas station and the Metro North track was heavily vegetated. The track do not appear to be more than 8-10 feet below the level of the gas station. Direct observation of the ground surface was not possible. ARCADIS proposed to return the site when the vegetation has died to ascertain the difference in grade. in DecDocs. 2/24/2015 - 3Q2014, 1/15/2015. Monitoring on 9/5/2014. DTW 12.13 (MW-2) to 15.10 (IW-1). MW-1, 6,800 BTEX. MW-4, 4,600 BTEX. MW-6A, 3,600J BTEX. 4Q2014, 2/24/2015. Monitoring on 12/1/2014. DTW 11.54 (MW-2) to 18.80 (MW-3). Flows to northwest. MW-1, 8,200 BTEX. MW-4, 3,200 BTEX. MW-6A, 2,800 BTEX. 10/6/2015 - 1Q2015, 6/11/2015. Groundwater was sampled 3/16/2015. DTW 7.02 (MW-4) to 12.33 (MW-6A) feet below TOC. MW-1, 6,300 BTEX. MW-4, 120 BTEX. MW-6A, 980 BTEX. 2Q2015, 8/10/2015. Groundwater monitoring on 6/22/2015. DTW 12.2 (MW-4) to 19.02 (MW-3). Flows to east. MW-1, 4,500 BTEX. MW-4, 1,100 BTEX. MW-6A, 1,100J BTEX. 3/30/2016 Feng - This spill is transferred from J. Feng to J. Vought as per J. Vought. 9/15/16-Vought-File review to date: Email from Arcadis

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

(Buchanan)-5/26/16. Email that Good afternoon Jeff, Please let me know if you any availability to discuss a few BP sites. I have two sites (00147 and 10466) at a critical cross roads that I would like to discuss, also the two pending NFA requests. I am attaching some supporting documentation and listing my thoughts below: Request for no further action submitted October 2015. We have insurance premium due with MTA to maintain our monitoring wells, I would like to get your feeling on this request so we can decide whether to renew the insurance or not. Email from Arcadis (Buchanan)-6/17/16. Email that Good afternoon Jeff, I know you are extremely busy, but have you had a chance to review any of these items? I am pressured weekly by BP, especially regarding 07-01266. Please let me know when you have a few minutes to talk. Thanks Email from Vought to Buchanan-6/20/16. Email that Ira, Apologies for my delay in response. I reviewed your below email and attachments and thought I would respond on each site, in lieu of scheduling a call. With regards to 350 Grand Concourse, I will put this review in my recent queue to hopefully review before I leave for vacation next week. To make things a bit more expedient, I would be much obliged if you could resent the closure request. Attached was Site Closure Summary Package. Vought added Site Closure Summary Package to D2 and reviewed: Site Closure Summary Package (Arcadis)-10/9/15. Contains Spill Closure Presentation that notes Was originally 2 adjoining gas stations: Merit to the north and Amoco to the south, Both stations and property redeveloped into a single BP station in 2002 , and Spill number 0111974 issued when impacts encountered during tank removal in 2002 . Five 4,000-gallon underground gasoline storage tanks and one 550- gallon waste oil tank (reportedly installed in 1977), and associated piping and pump islands were removed from the former Merit station. Five 4,000-gallon steel gasoline USTs and associated piping and pump islands were removed as part of closure of the Amoco station. MTBE detected above TAGM soil cleanup standards if four of ten post excavation samples. Remediation history includes 1999: 411 tons of soil excavated and removed from the former Merit station. 2002: Site is redeveloped into a single BP station. 1,360 tons of soil excavated and removed... Four injection wells installed. Hi-vacuum extraction event at IW-04. Presentation concludes that: Mann-Kendall analyses show decreasing VOC concentration trends in all monitoring wells (Attachment 5). ; LNAPL last detected in December 2013 (0.01-feet thickness) at IW-01. ; Dissolved VOC concentrations have fallen by an order of magnitude(13-14 ppm to 1 ppm) at the two most impacted wells (MW-4 and MW-6A) since 2010 (Attachment 6). ; Available soil data shows limited exceedances of soil cleanup criteria. ; Most recent groundwater data shows benzene exceeding groundwater standards at only one well (MW-1 at 10 ug/L). 9/16/16-Vought-Examined other files in D2 for same site and one monitoring report shows groundwater flow to the east and also shows U-Haul facility across Grand Concourse from site. Other document from Arcadis in 2014 shows no observed impact to MTA tracks downgradient from site which is also not a sensitive receptor. Spill closed due to: 1)reducing petroleum VOCs in groundwater due to attenuation 2)delineation of the residual groundwater contamination 3)no possible impact to receptors to the west due to depth of groundwater and likely depth of basements 4)no further feasibility (including cost effectiveness) to perform further remediation as per CP51 Commissioner's Policy 5)no threat to the wider community as per discussions with DEC Central Office 6)site use will not change and will remain a commercial gas station 7)inclusion

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

of soil contamination clause in spill closure letter. Spill closure letter sent to Randy Coil with cc to Arcadis Buchanan via email and original sent to BP via US mail and added to D2. 11/30/2016 - email from Ira Buchanan to J. Vought Arcadis received spill closure (attached) on September 16th. We mobilized to the site on October 6, 2016 to decommission wells. Wells abandoned include MW-1, MW-3, MW-5, IW-4 and IW-5. When the field crew gauged IW-1, approximately 0.62 feet of LNAPL was encountered. The field crew stopped work at this time leaving IW-1, IW-2, MW-2, MW-4 and MW-6A intact. On November 16, Arcadis subcontractors mobilized to the site with a vacuum extraction truck and set up on IW-1. Prior to beginning the vac event, IW-1 was gauged and had 0.41 feet of LNAPL. IW-2, MW-4 and MW-6A were gauged and did not have LNAPL. MW-2 was not gauged due to a large puddle over the well pad. MW-2 has been historically non-detect for VOCs or detections less than 10 ppb. The November 16 vac event lasted for 8 hours and recovered approximately 45 gallons of petroleum-impacted water from IW-1. The wells were gauged again on November 29, 2016 at which time no LNAPL was observed in IW-1 or the other wells. Based on the information and actions described above, we request permission to continue with abandonment of the remaining 5 wells. email from J. Vought to Ira Buchanan Ira, Thanks for keeping me posted. Question for you: What is the site address for this site? When the Department closed the spill we attempted to ensure that there was a decreasing trend in the groundwater contamination in the remaining dissolved contaminants. With the appearance of free product we have to re-examine the trend to make sure that the remaining contamination is indeed attenuating. As such I am thinking that at least a few quarters of monitoring to re-establish that trend is warranted. However, I must admit I write the above with no site specific knowledge in hand (eg impending development). I will discuss the above with June and also we will consider reopening the spill if warranted. If this appears to be the best course of action we can have a teleconference to discuss further. We will keep you posted and feel free to forward this email onto the consultant as well, -Jeff 12/2/2016 - email from J. Feng to Ira Buchanan Ira, I agree with Jeff that at least a few more quarters of monitoring is necessary to re-establish the trend for the observed product thickness, e.g. 0.62 and 0.41 feet. The history of this injection well has never shown this much product before, e.g. with max of 0.11 feet on 8/11/2011 and last seen 0.01 feet on 12/20/2013. We will need to re-open the spill to do that. Let s do the call next Monday 12/5/2016, at 11:00am? Let us know. 12/5/2016 - Feng - conference call among ARCADIS Andy Korik and Ira Buchanan, and NYSDEC J. Vought and J. Feng. Agreed to continue quarterly groundwater monitoring for IW-1, i.e. gauging, sampling of dissolved, product recovery if there is any for two more quarters. Spill to be re-opened. 12/7/2016 - spill is re-opened. re-opening letter to BP Randy Coil and ARCADIS. Changed lead from Jeff Vought to June Feng. 5/2/17-Vought-Received Well Decommissioning Summary, Remedial Activities and Groundwater Analytical Summary for First and Second Quarter 2017 from Arcadis (Korik). Vought sent an email to Korik with cc to Buchanan and Feng that Andy, The report notes that Based on Arcadis December 2016 phone conversation with Mr. Jeffrey Vought, if LNAPL was not observed in IW-01 during the January and April 2017 gauging and sampling, NYSDEC would consider closure of the spill number. However, our spill notes of the email correspondence from December 2016 noted that: email from J. Vought to Ira Buchanan Ira, Thanks for keeping me posted. Question for you:

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

What is the site address for this site? When the Department closed the spill we attempted to ensure that there was a decreasing trend in the groundwater contamination in the remaining dissolved contaminants. With the appearance of free product we have to re-examine the trend to make sure that the remaining contamination is indeed attenuating. As such I am thinking that at least a few quarters of monitoring to re-establish that trend is warranted. However, I must admit I write the above with no site specific knowledge in hand (eg impending development). I will discuss the above with June and also we will consider reopening the spill if warranted. If this appears to be the best course of action we can have a teleconference to discuss further. We will keep you posted and feel free to forward this email onto the consultant as well, -Jeff 12/2/2016 - email from J. Feng to Ira Buchanan Ira, I agree with Jeff that at least a few more quarters of monitoring is necessary to re-establish the trend for the observed product thickness, e.g. 0.62 and 0.41 feet. The history of this injection well has never shown this much product before, e.g. with max of 0.11 feet on 8/11/2011 and last seen 0.01 feet on 12/20/2013. We will need to re-open the spill to do that. Let s do the call next Monday 12/5/2016, at 11:00am? Let us know. 12/5/2016 - Feng - conference call among ARCADIS Andy Korik and Ira Buchanan, and NYSDEC J. Vought and J. Feng. Agreed to continue quarterly groundwater monitoring for IW-1, i.e. gauging, sampling of dissolved, product recovery if there is any for two more quarters. Spill to be re-opened. Furthermore, the Department letter dated 12/7/16, also in Appendix D of the report, noted that we required collection of dissolved samples as well. Please collect at least two quarters of dissolved quarterly samples in hopes of demonstrating an attenuating trend of dissolved samples, which the Department requires on all of its petroleum contaminated sites. Please let us know if you would like this formalized in a letter which would be a reissuance of the December 7, 2016 letter. Thanks, Korik replied We do have two quarters (January and April 2017) of dissolved analyses for IW-01 in the report. You would like two additional quarters? Vought replied Andrew, I stand corrected and thanks for the clarification. So much for those quick early morning reports scans. Two quarters will be enough for us to consider closure. Thanks and apologies for the confusion . 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 12/12/17 - Austin - Assigned from Vought to Feng - end 5/24/2018 - Feng - Reviewed the Well Decommissioning Summary, Remedial Activities and Groundwater Analytical Summary for First and Second Quarter 2017 (the Report), dated May 1, 2017, prepared by Arcadis U.S., Inc (Arcadis). The Report summarizes the groundwater monitoring activities subsequent to the re-opening of the above referenced spill and requests spill closure. Please note that the spill was closed on September 16, 2016. The spill was then re-opened on December 7, 2016 due to the discovery of 0.62 feet of LNAPL in IW-01 on October 6, 2016. Groundwater monitoring shows that BTEX concentration is 33,650 ug/L in the January 2017 sampling event. Another groundwater monitoring in April 2017 shows BTEX concentration of 31,541 ug/L. The well IW-01 was installed and used as an injection well. No groundwater sampling has been performed until these two monitoring events and thus no groundwater concentration trend has been established for this well. Adequate remediation is required to reduce the BTEX concentration before spill closure can be granted. letter denying spill closure to BP/ARCADIS. RAWP is required within

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

90 days, by end of August 2018. 11/19/2018 - Feng - Reviewed Remedial Action Work Plan, 7/18/2018. And the 3Q2018 Report, 10/26/2018. Arcadis proposed to do VTE events on IW-01 monthly for 3 months and then evaluate further. 3Q2018 show still elevated BTEX concentration in IW-01. Approved the work plan. Arcadis will report back after 3 months. 4/7/2020 - Feng - email from Andrew Shrock of Parsons. Effective 4/1/2020, BP has retained Parsons to replace Arcadis as the consultant for this site. 5/4/2020 - Feng - 4Q2019 and 1Q2020. Monitoring on 12/23/2019 and 2/14/2020. as of 2/14/2020: IW-1, 16,605J BTEX, less than 5 MTBE. IW-2, 2,732J BTEX, less than 5 MTBE. MW-2, not accessible. MW-4, 856 BTEX, 0.5J MTBE. MW-6A, 21.0 BTEX, less than 1 MTBE. 11/24/2020 - Feng - 3Q2020, by Parsons. Monitoring on 7/17/2020. IW-1, 14,394.3 BTEX, <1.0 MTBE. IW-2, 4,600.4 BTEX, <1.- MTBE. IW-4, well is abandoned 4/12/2018. IW-5, well is abandoned 4/12/2018. MW-1, well is abandoned 4/12/2018. MW-2, not accessible. MW-3, well is abandoned 4/12/2018. MW-4, 644.9 BTEX, <1.0 MTBE. MW-5, well is abandoned 4/12/2018. MW-6A, 42.9 BTEX, <1.0 MTBE."

Remarks: "impacted soil discovered tank removal - will be excvated during rebuild"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/5/04 BPAmoco in operation and taking responsibility for southern half of property. Reference spill #0111974.(KMF). 11/26/2003 Reassigned from O'Dowd to Sun. 01/29/2004-Sun-File Update by Sun: Sun sent a Stipulation Agreement to Hess requiring the complete delineation of the contamination, including the restoration of MW-1 and MW-8, and submittal of the Operation, Maintenance and Monitoring Plan. The Department approves the remedial action plan prepared by EnviroTrac, dated July, 2001. The Department set a deadline of 2/20/04 for the Respondent to return the signed Stipulation Agreement. (WJS) 03/26/04- The Stipulation Agreement was signed by Hess on 03/10/04 and executed by the Department on 03/24/04. (WJS) 08/11/04-File Update by Sun: On 08/11/04 Sun approves the Investigation Plan submiited July 8, 2004 by Michael Matri, Project Manager for Hess Corp.The two soil borings/monitoring wells proposed in the Investigation Plan will be used to replace well MW-8 and will be located east and west of the former MW-8 location. The approved letter was mailed to Hess on 08/11/04. (WJS) 05/09/05-File Update by Sun: On 05/05/05, thr Department held a project review meeting with Hess' Project Manager (Mike Matri) and his consultant (EnviroTrac). Per Mike Matri, EnviroTrac has contacted Metropolitan Transportation Authority (MTA) in order to obtain access to delineate along the eastern (up-gradient) portion of the site adjacent to the MTA New York City Transit subway. Currently, Hess drilling contractor, Submmit Drilling Co., Inc., is obtaing the necessary Railroad Protective Liability Policy to satisfy MTA's insurance requirements. The delineation will be conducted once the work is approved by the MTA.(WJS) 10/27/05: Site reassigned from Sun to Andersen. 10/27/05: Reviewed the second quarterly 2005 update report dated 8/19/05. Additional delineation is still in progress. 12/6/05: Reviewed quarterly report dated 11/22/05. Six monitoring wells sampled on October 6, 2005. Max BTEX 3,309.4 ppb (MW13) and max MTBE 1,250ppb (MW13). Additional delineation delayed while waiting for MTA permit. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. Additional

MERIT GRAND CONCOURSE (Continued) **U001839205**

delineation is currently awaiting an MTA permit. 3/29/06: Received email from Thomas Bosshard of EnviroTrac : The two (2) up-gradient monitoring wells at the referenced site have been successfully installed. The new monitoring wells will be incorporated into the site's quarterly groundwater monitoring schedule with the second quarter 2006 sampling event scheduled for April 2006. The monitoring well installations and April 2006 groundwater monitoring event will be summarized in the site's next quarterly Update Report. 6/12/06: Reviewed the first quarterly 2006 update report. Groundwater samples collected on January 19, 2006. Max BTEX 6,032 ppb (MW12), max MTBE 2,830 ppb (MW12). Upgradient on-site wells installed in March. Installation of a well downgradient of MW12 and a RAP required by September 12, 2006. 6/30/06: Meeting on 6/28/06 with Hess, NYSDEC, Quantum, EnviroTrac and GSC. Hess will ask for access to the adjacent RR yard to delineate. ORC may be utilized as a remedial method. 7/12/06: Reviewed second quarterly 2006 report. ORM socks in MW12 and 13. ORC socks will be installed in MW15 and MW16. Groundwater samples collected on 4/4/06. Max BTEX 13,571 ppb (MW15). Max MTBE 964 ppb (MW12). 8/23/06: Received email from Erin Goelz of ET. Delineation not possible in the metronorth area east of the site. Delineation possible on Park Avenue, but this is far from the site. Three wells on Park Avenue were proposed. Wells not required by the Department because they are far from the site. RAP due 9/12/06. 8/29/06: Spoke with Ed Russo. A request for an extension for RAP submission will be required because pilot testing will be conducted on site. Local treatment is not feasible due to subsurface piping on site and the subway nearby. An email request for an extension will be submitted. Power supply at the site may be problematic, ConEdison will be contacted. This site is currently a BP gasoline station. 9/8/06: Received email from Ed Russo. Requested extension until November 30 to submit RAP in order to complete SVE pilot testing on MW's 12 and 13. SVE test tentatively scheduled for October 15. ORC socks will be installed in MW 15 and 16 ASAP. Extension approved. 10/5/06: Received update report dated 9/27/06. Wells sampled on 7/13/06. Fluctuating concentrations. Max BTEX 81,251ppb (MW15), max MTBE 1,650 ppb (MW12). ORM socks installed in MW 15 and 16. Contamination may be in the bedrock. RAP due 11/30/06. 12/7/06: RAP conditionally approved. SVE will be used in six wells, STRE in MW 15 and 16 because could not trench in this area, ORC socks in six wells. Conditions of approval: 1) more agressive groundwater remedial strategy for MW MW 12, 15, 16, and 2)treatment method air effluent. 12/28/06: Reviewed update report dated 12/20/06. Fluctuating gw concentrations. Max BTEX 39,412 ppb (MW15), max MTBE 718 ppb (MW12). 1/17/07: Meeting on 1/16/07. This is the only Hess site not being transferred to Delta. A RAP addedum will be submitted addressing gw contamination. 3/13/07: Reviewed update report. Wells sampled on 1/11/07. Max BTEX 31,608 ppb (MW15), max MTBE 1,140 ppb (MW12). Fluctuating groundwater concentrations. ORM socks installed in MW9, and MW12-MW16. SVE system not installed yet. Emailed Hess, EnviroTrac regarding the SVE implementation schedule, and for details on the existing Well Stripper system on site. 3/15/07: Received email from Ed Russo: I sent you an email on 2/23 summarizing the well stripper, how it works, etc. Please confirm that you received that email. If not, I will resend it. If you did receive it and have further questions or comments, let me know and I will provide you with any additional information you may need. As for the schedule, we are currently working with BP (who currently operates the site) in an effort to connect our system to the BP station's

MERIT GRAND CONCOURSE (Continued) **U001839205**

existing electrical system. This would obviously save a great deal of time since CONED has been very slow to provide us new power drops for some of our other recent systems. We are also working with BP on an access agreement to install the system. Once these issues have been resolved, the system will be installed. Due to the fact that most of the subsurface work is already done, the system install will be very quick once the access and electrical issues are finalized. 3/16/07: Received email from Ed Russo: attached are a picture of the well stripper and a pdf document summarizing how the well stripper works. As you discussed with Dawn Coughlin of Hess at your recent meeting, we are proposing to install permanent well strippers in MW-12 and MW-13 and bring a portable well stripper to the site for periodic full day remediation events (permanent well strippers cannot be installed in MW-15 or MW-16 since these wells are not connected to the remediation system). The permanent well strippers within MW-12 and MW-13 will be sampled (influent and effluent) on a monthly basis during system O&M events and the portable well stripper will be sampled for influent and effluent during the periodic remediation events. Note that we are in the process of working with BP to get access to the site to install the system. In order to expedite the install once access is obtained, we will be ordering the equipment so that we can prepare the shed to be delivered to the site once access is granted. 7/31/07: Received email from Ed Russo: GW sampling was conducted on the site about 2 weeks ago. We should get data from the lab this week and will prepare an update report for submittal to you right away. As far as the system goes, we have received approval from BP (the current owner/operator of the site) to install the system. Our electrician is working on getting power from CONED. We have ordered all equipment and are working on building the shed in house so that once electrical power is available, we can deliver the system to the site and connect it/start it up. Once we get closer to a start date, I will be in contact with you to schedule start-up so you can be onsite if you'd like. 9/5/07: Reviewed quarterly report. Flucating groundwater concentrations. Wells sampled on 7/20/07. Max BTEX 47,580 ppb (MW15). Max MTBE 681 ppb (MW12). ORM socks replaced in MW9 and MW12 - MW16. SVE system and well strippers not installed yet. Short term remediation events planned for MW15 and MW16. Emailed Ed Russo to followup on system startup date and initiation of short term remediation events. 10/9/07: Received email from Ed Russo: we have scheduled an on-site meeting with representatives of BP, Delta Consultants (BP's consultant), and EnviroTrac for Monday October 15th. BP and Delta wanted to be fully aware of our proposed work before agreeing to let us proceed. We expect to get the approval to proceed with the sitework at that meeting. The shed for the remediation system and the control panel have been completed in our shop and can be mobilized to the site once we obtain the access. Our electrician is ready to go and can get to the site within about a week once we obtain access and CONED involvement will be minimal since we will be connecting to BP's station electric for our system electrical requirements. In addition, since the majority of the subsurface work was done a few years ago during the construction of the BP station, only minimal site work is required, so we expect to be able to start the system and short-term remediation events within 4-6 weeks of access approval. I will send you an update of our progress following the October 15th meeting. Edward E. Russo Senior Project Manager EnviroTrac Ltd. 5 Old Dock Road Yaphank, NY 11980 P: 631.924.3001 F: 631.924.5001 http://www.envirotrac.com 2/14/08:

MERIT GRAND CONCOURSE (Continued) **U001839205**

Received email from Ed Russo: We wanted to let you know that the SVE/Well Stripper system was activated at the referenced site on January 29, 2008. Preliminary data indicates that the system is effectively removing BTEX and MTBE from onsite wells. The initial start-up period will last another week or so and then system O&M will continue on a monthly basis thereafter. A full round of groundwater sampling will be conducted this month and a report summarizing that data and all system data collected to date will be submitted to you before April 30, 2008. If you would like to visit the site to see the system or if you have any questions or comments, please give me a call at (631) 924-3001 3/12/08: Reviewed Fourth Quarterly 2007 update report dated November 27,2007. Wells sampled on 10/16/07. Max BTEX 16,839 ppb (MW15), max MTBE 727 ppb (MW12). System startup data will be submitted in next report. 4/15/08: Reviewed update report dated April 8th, 2008. SVE and well strippers (WS) in operation, and short term remediation events and WS being conducted in MW-15 and MW-16. Maximum BTEX concentration 3,779 ppb (MW16), maximum MTBE concentration 325 ppb (MW12). General downward trend in contamination. 8/7/08 - Carlson: Reviewed July 2008 Hydrogeologic Status Report. Wells sampled on 6/30/08. Maximum BTEX concentration 54,315 ppb (MW15). SVE/WS system in operation. Fluctuating concentrations. 10/22/08 - Carlson: Meeting with Hess, Envirotrac, and NYSDEC. 11/17/08 - Carlson: Reviewed October 2008 Update Report. Wells sampled on 8/26/08. Fluctuating concentrations in some wells. Maximum BTEC concentration 1,068 ppb (MW12). System in operation. 2/20/09 - Carlson: Reviewed January 2009 Update Report. SVE and WS in operation. High effluent concentrations in MW15. Effluent concentraions were not measured from MW12,13. Wells sampled on 11/24/08. Hot well MW12 was not sampled (why?). 3/18/09 - Carlson: Meeting with Hess and Envirotrac. Not enough water to sample WS effluent in some cases. 5/7/09 - Carlson: Reviewed April 2009 Update Report. SVE/WS in operation, and monthly STRE from MW15. Wells sampled on 2/27/09. Maximum BTEX concentration 390 ppb (MW15). Strong decreasing trends. 5/28/09 - Carlson: Received email from Ed Russo: while out at the site this week conducting routine GW sampling, our technician noted product (0.18') in MW-15. This well, and the entire site, has cleaned up dramatically since the system was activated and short term remediation events commenced a couple of years ago. As you can see from the attached photo, the product appears to be fresh gasoline. Our technician has taken a sample of the product and the GW within the well. We will analyze the GW for BTEX/MTBE as well as ethanol and conduct a fingerprint analysis on the product to try to confirm that it is a new release since this site is an active BP station. The technician did not note any indication of a surface spill and the well seal and manhole have been reported to be in good condition. Once we get results of the ethanol analysis and fingerprint analysis, we will let you know. If it appears that this may be a new release, we would need to notify BP. 8/7/09 - Carlson: Reviewed July 2009 update report. SVE/WS in operation. STRE on MW15 but high concentrations - effluent should be monitored. MW15 fingerprinting results not included. 8/17/09 - Carlson: Reviewed fingerprinting results of product identified in MW15. Product was found to be weathered gasoline from the old release. 8/19/09 - Carlson: Meeting with Hess. System in operation. 11/17/09 - Carlson: Reviewed October 2009 Update Report. Large decrease in concentration in MW15. System in operation. 1/27/2010 - Carlson: Meeting with Hess. Well stripper wells are often dry. 2/5/2010 - Carlson: Reviewed

MERIT GRAND CONCOURSE (Continued) **U001839205**

update report. Low dissolved concentrations. 5/20/2010 - Carlson: Meeting with Hess. 5/27/2010 - Carlson: Reviewed update report. SVE to be shut down due to low recovery. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. Spike in concentration in MW15. SVE shut down due to low recovery. STRE/well stripper on MW15 monthly. 8/30/2011 - Obligado - Hess is still duing well stripper STRE on wells MW-12 and MW-15 monthly. 10/21/11 - Obligado - This spill is reassigned to Carlson as directed by Brevdo. 11/14/11 - Carlson: Reviewed October 2011 update report. STRE/well stripper on MW15 and MW12 in June and July. Monthly EFR planned instead of well stripper events from now on. 8/24/2012 - 1Q2012, 4/30/2012, by EnviroTrac. The groundwater was sampled on 2/24/2012. DTW 15.95 to 22.32'. Flows to southeast. EFR on MW-12 and MW-15 on 12/14/2011, 1/5/2012 and 2/6/2012. MW-13, 1.5 BTEX, 13 MTBE. MW-9, BTEX ND, 26.2 MTBE. MW-10, 5.5J BTEX, 2.1 MTBE. MW-15, 2,885.8 BTEX, 2.8J MTBE. MW-16, 42.84J BTEX, 7.3 MTBE. 10/12/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on May 16, 2012. DTW 15.00 to 21.62'. Flows to southeast. SVE/well stripper system was shutdown due to lack of hydrocarbon recovery. EFR conducted on selected wells. MW-12, 1,136J BTEX, 164 MTBE. MW-13, 13.6J BTEX, 41.9 MTBE. MW-15, 15,713 BTEX, 9.1J MTBE. MW-16, 42.49J BTEX, 7.1 MTBE. EFR on MW-12 and MW-15. 1/18/2013 - 3Q2012, 10/31/2012, by EnviroTrac. MW-15, 639.9 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 2341 and 42. The latest deed is dated 12/21/79. The property owner is 350

MERIT GRAND CONCOURSE (Continued) **U001839205**

Concourse Realty Corp. The PBS record is #2-297437. The owner is MERIT Oil of New York, Inc., 551 West Lancaster Avenue, Haverford, PA, 19041. The operator is MERIT Grand Concourse. All six USTs were closed and removed on 11/1/98. The contacts are as follows: Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Yesterday I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/10/15, 1/20/16 and 2/3/16 VEFRed MW-15. On 2/9/16 MW-9 to 11 and 14 to 16 were gauged. MW- 9 to 11, 15 and 16 were sampled on 2/9/16. Product was not measured in any of the wells. Groundwater was measured at 15.54' and 22.47' below grade and was determined to be flowing southeast. Total BTEX was non-detect at MW-9 to 11, 703.5 ppb at MW-15 and 14.5 ppb at MW-16. 7/26/16 - Raphael Ketani. Yesterday I received the EnviroTrac 7/25/16 Quarterly Update Report for the period March to May 2016. On 3/7/16, 4/5/16 and 5/5/16 VEFRed MW-15. On 5/13/16 MW-9 to 11 and 14 to 16 were gauged. MW- 9 to 11, 15 and 16 were sampled on 5/13/16. Product was not measured in any of the wells. Groundwater was measured at 14.90' and 21.59' below grade and was determined to be flowing southeast. Total BTEX was 11.3 ppb at MW-9 and non-detect at MW-10 to 11, 3785 ppb (64 ppb benzene) at MW-15 and 20 ppb at MW-16. 10/24/16 - Raphael Ketani. Today I received the EnviroTrac 10/24/16 Quarterly Update Report for the period June to August 2016. On 6/7/16, 7/12/16 and 8/8/16 MW-15 was VEFRed. On 8/22/16 MW-9 to 11 and 14 to 16 were gauged. MW- 9 to 11, 15 and 16 were sampled on 8/22/16. Product was not measured in any of the wells. Groundwater was measured at 14.94' and 21.90' below grade and was determined to be flowing southeast. Total BTEX was non-detect at MW-9 to 11. MW-15 had 11,964.7 ppb BTEX (74.7 ppb benzene). MW-16 had 9.6 ppb BTEX. While I approved the report, I sent an email to Mr. Russo (631) 924-3001, EDR@EnviroTrac.com asking for an explanation as to why the BTEX concentrations should increase so much and so quickly at MW-15. I also asked him to have EnviroTrac come up with a means of reducing the contaminant concentrations at this location. Mr. Russo responded today to my above email with the following statement: in response to your email, please note that the increase in BTEX in MW-15 appears to be related to water table fluctuation. When the water table was lower (in November 2015 and February 2016) BTEX concentrations decreased. The water table has been higher in May 2016 and August 2016 and the BTEX concentrations have increased. Please note factors that indicate that our current course of action is the best to continue to address this impact: 1)The overall trend in remediation of this well, despite the past 2 sampling events, has been good. In 2014 product was present in the well and as a result EFR was initiated. Since 2014, product has no longer been detected within the well. Dissolved concentrations of BTEX were as high as 102,391 ug/l in 2014 prior to initiation of EFR. 2)A majority of the BTEX consists of degraded gasoline (xylenes) and through continuing groundwater monitoring of the site this impact has not shown up in downgradient monitoring wells, indicating that it is an isolated area of impact. 3)A remediation system operated to remediate the eastern portion of the site (area of MWs-9 through 14). As depicted on the attached figure, this remediation system could not be connected to the area of MW-15 due to site constraints/underground utilities. Please also note that we are scheduled to continue to sample the site quarterly and will continue to evaluate our plan moving forward based

MERIT GRAND CONCOURSE (Continued) **U001839205**

on quarterly sampling results. EFR events will continue on a monthly basis. 10/25/16 - Raphael Ketani. I sent a response email to Mr. Russo's 10/24/16 response email. I stated that while EnviroTrac has interpreted the data to indicate a decreasing trend for the BTEX concentrations in the groundwater at MW-15, staff at the Department have noted that the BTEX concentration in the 8/22/16 groundwater sample is at least 3 times greater than that of the past six samples. Also, despite the drop in the water table and the associated release of some product from the micro channels and pores in the soil, we are still concerned that this location will remain a source of groundwater contamination. We will monitor the quarterly analytical results with the expectation that EnviroTrac will take the necessary action to lessen the contamination in the event that it is consistently very high. 2/1/17 - Raphael Ketani. Today I received the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/6/16, 10/26/16 and 11/9/16 MW-15 was VEFRed. On 11/3/16 MW-10, 11 and 14 to 16 were gauged and MW-10, 11, 15 and 16 were sampled. Product was not measured in any of the wells. Groundwater was measured at 15.23' and 18.96' below grade and was determined to be flowing southeast. Total BTEX was non-detect at MW-10 and 11. MW-16 had 3 very low hits and 2 non-detects. MW-15 had 4889.3 ppb BTEX (70.3 ppb benzene). 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/8/16, 1/18/17 and 2/15/17 MW-15 was VEFRed. On 2/27/16, MW-9 to 11 and 14 to 16 were gauged and MW-9 to 11, 15 and 16 were sampled. Product was not measured in any of the wells. Groundwater was measured at 15.63' and 22.37' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 879.4 ppb. MW-16 had 9.3 ppb. I approved the report without comment. Next, I reviewed the EnviroTrac 4/20/17 Request for Well Abandonments letter. EnviroTrac requests permission to abandon wells MW-12 to 14. The reason for requesting the abandonments is that EnviroTrac claims the groundwater data has shown very significant decreases in the concentrations for BTEX (98.9%) and for MTBE (99.9%). I looked at the historical data for wells MW-12 to MW-14. I found that MW-12 hadn't been sampled from 11/21/13 to 8/19/14 because it was not accessible. After this, the well was not sampled up to the 2/27/17 round. Very high to extremely high BTEX results were indicated in Table 1 for the past results. MW-13 was sampled sporadically from 2/24/12 to 5/16/14. It was not sampled from 8/19/14 to 2/27/17, except for the 5/13/15 round when the results were non-detect. Past BTEX results for this well as far back as 11/24/08 were generally low. MW-14 had consistently low BTEX results since shortly after it was installed. Also, with the exception of some rounds when it was not sampled, the results were non-detect from 2/28/08 to 8/24/12. After this, the results have D designations for dry, though there are the letters NS for Not Sampled for the rounds from 5/13/15 to 2/27/17. From reviewing the data in Table 1 for MW-12 to MW-14, I determined that wells MW-13 and MW-14 could be abandoned without compromising the monitoring. However, there was insufficient data for making a determination as to whether MW-12 could be abandoned. In light of this, I stated that MW-12 will need to be sampled for at least 3 more rounds before the Department can make a decision regarding abandonment. I sent an official letter today to Mr. Russo, with a C-C to John Engdahl of Speedway, stating the above. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to

MERIT GRAND CONCOURSE (Continued) **U001839205**

May 2017. On 6/8/17, 7/19/17 and 8/8/17 MW-15 was VEFRed. On 5/18/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 14.66' and 21.13' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 5154.5 ppb. MW-16 had 8.7 ppb BTEX. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/8/17, 7/19/17 and 8/8/17 MW-15 was VEFRed and the sock was replaced. On 8/24/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 15.23' and 22.45' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 8541.3 ppb. MW-16 had 3.2 ppb BTEX. 1/24/18 - Raphael Ketani. Today I received the EnviroTrac Remedial Work Plan dated 1/24/18. The objective of the proposed plan was to collect the product in the vicinity of MW-15. The well was installed in the weathered schist bedrock. Multi-family residences with basements are located to the north. A subway tunnel is located adjacent to the site beneath the Grand Concourse. Utilities are below the Grand Concourse. Product was detected in the well on 6/8/17, 7/19/17, 9/6/17, 10/18/17 and on 11/3/17. The thickness varied from 0.01 feet to 0.04 feet. Due to the proximity of the subway and utilities, EnviroTrac proposes to treat the product by injecting surfactant and recovering surfactant and product as a combined liquid using the EFR method. BioSolve Pinkwater will be the surfactant of choice. One hundred gallons of Pinkwater as a 5% solution will be injected. The inside of the well will be scrubbed with a brush and surge blocking will take place. The EFR event will take place the day after the injection and will last 8 hours. Three additional injection and extraction events will take place after this initial event. On site parameters consisting of depth to product, depth to water and product thickess will be monitored. Wells MW-15 and MW-16 will be utilized for the monitoring. Groundwater sampling will continue to take place quarterly. Each sample will be analyzed for BTEX and MTBE. A work schedule was included in the work plan. I reviewed the schedule and did not have any comments. I approved the work plan. 1/25/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/25/18 for the period September to November 2017. On 9/6/17, 10/18/17 and 11/3/17 MW-15 was VEFRed and the sock was replaced. On 11/17/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 15.31' and 22.59' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 7012.9 ppb. MW-16 had 11.6 ppb BTEX. Later, Mr. Rennie and Mr. Russo called to discuss the site and the proposed usage of Pinkwater. They said that they had good results with the treatment solution as it loosens up the product being held by the soil. I stated that, from my experience, I had mixed feelings about Pinkwater because the results had been mixed. Mr. Russo stated that they'd like to try the treatment solution and that they will send me the results. Mr. Russo added that the reason they want to use the Pinkwater is because the BTEX concentrations are very high in the samples from MW-15. I stated that the groundwater sample results for MW-15 had remained high mostly because xylenes are resistant to breakdown. Mr. Rennie and Mr. Russo agreed. I responded that I had wanted to close the spill case and send a Spill Closure Letter because the product thickness had remained very low. Mr. Russo said that the oil wasn't the issue, just the BTEX concentrations. I

MERIT GRAND CONCOURSE (Continued) **U001839205**

finished the conversation by telling them to try the Pinkwater and to send me the results as soon as possible so that I can evaluate whether closure is appropriate. They said they will. With that, the conversation ended. =case manager's note= Speedway leases the property. The owner is 350 Concourse Realty, LLC at 11 Park Place, Ste. 615, NY, NY, 10007. Mr. Russo said that letters can be sent to both the property owner and Speedway or just to Speedway, who will forward the letters to 350 Concourse Realty. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/23/2018: Reviewed the report. Site history: Petroleum impacted soils encountered during an underground storage tank (UST) upgrade project in February 1999. Removed five (5) 4,000-gallon single wall (SW) steel gasoline underground storage tanks (USTs), one (1) 550-gallon SW steel waste water UST and all associated dispensers, piping and remote fills. During this project a total of 410.76 tons of soil were removed off site for disposal. This report covers period from December 2017 March 2018. On December 13, 2017, January 18, and February 15, 2018 Enhanced Fluid Recovery (EFR) was performed on MW-15. February 13, 2018 Performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. On February 21, 2018 the consultant did a post surge blocking/surfactant injection well gauging event. On March 23, 2018 six (6) monitoring wells were gauged and sampled. Wells Gauged: MW-9 through MW-12, MW-15, and MW-16. Wells Containing LPH: None Groundwater Depth: 14.98 feet to 21.74 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9 through MW-12, MW-15, and MW-16 Maximum Benzene Concentration: 21.6 micrograms per liter (ug/L) in MW-15 BTEX: around 24,000ug/L in MW-15 Maximum MTBE Concentration: 99.4 ug/L in MW-12 The consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC in July 2018. Speedway will continue monthly EFR events. According to the consultant, it appears that surge blocking/surfactant injection has liberated dissolved phase hydrocarbons in the area of MW-15. EnviroTrac will continue to perform surge blocking/surfactant injection events/EFR in MW-15. Results from these events will be used to determine if further action should be taken. AD 07/20/2018: Received the following e-mail from EnviroTrac: Dear Ms. Doronova, Please find attached the latest update report for the above referenced location. Also, please note that monitoring wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE concentrations for several years and show low to ND VOC STARs compounds concentrations in the most recent groundwater sampling event. As a result, Speedway/EnviroTrac respectfully requests the abandonment of these wells in order to minimize trip hazards. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/30/2018: Reviewed the report. This report covers monitoring period from March 2018 May 2018. On March 12, March 19, & May 4, 2018 EnviroTrac

MERIT GRAND CONCOURSE (Continued) **U001839205**

performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. On March 16, March 20, & May 10, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. On May 31, 2018 Gauged and sampled four (4) monitoring wells. Wells Gauged: MW-9 through MW-11, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 14.21 feet to 21.66 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9 through MW-11, MW-15, and MW-16 Maximum Benzene Concentration: ND (non-detect) all wells Maximum MTBE Concentration: 5.0 micrograms per liter (ug/L) in MW-9 BTEX ranges in the site wells from ND in MW-9, MW-10 and MW-11 to 14,600ppb in MW-15. Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Speedway to continue monthly EFR events. According to the consultant, surge blocking/surfactant injection has liberated dissolved phase hydrocarbons in the area of MW-15. EnviroTrac will continue to perform surge blocking/surfactant injection events/EFR in MW-15. Results from these events will be used to determine if further action should be taken. AD 10/29/2018: Received the following e-mail from J. Rennie: Dear Ms. Doronova, Please find attached the latest update report for the above referenced location. Also, please note in our recommendation section that monitoring wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE concentrations for several years and show low to ND VOC STARs compounds concentrations in the most recent groundwater sampling event. As a result, Speedway/EnviroTrac respectfully requests the abandonment of these wells in order to minimize trip hazards. Please let us know if NYSDEC approves of these well abandonments. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/21/2018: Reviewed the 3rd quarter 2018 report for the monitoring period: June 2018 August 2018. Work Performed: - June 4 & August 7, 2018 Performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. - June 5, July 2, & August 10, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. - August 17, 2018 Gauged and sampled six (6) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9 through MW-12, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 13.47 feet to 21.41 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9 through MW-12, MW-15, and MW-16 Maximum Benzene Concentration: 14.1 ug/L)(MW-12) Maximum MTBE Concentration: 88.8 ug/L in MW-12 Total VOCs Range: ND 8,788 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in January 2019. Speedway to continue monthly EFR events. According to the consultant, monitoring wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE concentrations for several years and show low to ND VOC STARs compounds concentrations in the most recent groundwater sampling event. As a result, Speedway/EnviroTrac respectfully requests the abandonment of these wells in order to minimize trip hazards. AD 12/06/2018: Called and left a message to Mr. Rennie. Later received a

MERIT GRAND CONCOURSE (Continued) **U001839205**

call from him. Discussed their recommendations regarding wells MW-9, MW-10 and MW-11. Asked to leave well MW-9 in the annual sampling program since it is most down-gradient well, and approved abandonment of MW-10 and MW-11. Also requested historical data for MW-13 which was not sampled consistently. Mr. Rennie said that the location of the MW-13 was rented by the owner and is occupied by vehicles. Requested to sample that well. Asked to look into historic data regarding well MW-15, if there were any possible sources of contamination as remote fill ports, since it is most up-gradient well at the site according to the GW flow direction. Sent the following e-mail to Mr. Rennie as per his request: Dear Mr. Rennie, The Department had reviewed the submitted report with the proposed recommendations and has the following comments: - DEC approves abandonment of monitoring wells MW-10 and MW-11; - Monitoring well MW-9 should be kept in the program and sampled on annual basis; - Monitoring well MW-13 should be sampled on next sampling event and historic data for this well should be provided to DEC; - Vicinity of an up-gradient well MW-15 should be checked on historic documents for possible sources of contamination such as former remove fill ports, etc. Feel free to contact me if you have any questions regarding this matter. Sincerely, Ainura Doronova - Environmental Engineer AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/13/2019: Reviewed the report. It states that for the monitoring period: September 2018 November 2018, the following work was performed at the site: - September 26, October 12, & November 13, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. - November 20, 2018 Gauged and sampled five (5) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9 through MW-11, MW-15, and MW-16. Wells Containing LPH: None Groundwater Depth: 12.93 feet to 20.28 feet. Groundwater Flow: Southeasterly. Wells Sampled: MW-9 through MW-11, MW-15, and MW-16. Maximum Benzene Concentration: 28.2 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 2.9 ug/L in MW-9. Total VOCs Range: ND 28,680.7 ug/L. Recommendations: The consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to the NYSDEC in April 2019. Speedway will continue monthly EFR events. As approved by the NYSDEC, the abandonment of monitoring wells MW-10 and MW-11 were completed on January 29, 2019. MW-13 was able to be accessed on January 29, 2019 and was sampled. If results are favorable, abandonment of this well will be proposed. Going forward, MW-9 will be sampled on an annual basis per NYSDEC request. AD 04/30/2019: Received a 1st quarter 2019 monitoring report. Will review. AD 05/16/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019, the following work was performed at the site: - December 27, 2018, January 29 & February 20, 2019 Performed Enhanced Fluid Recovery (EFR) on MW-15. - January 29, 2019 Gauged and sampled one (1) monitoring well. Also, two (2) monitoring wells (MW-10 and MW-11) were abandoned as approved by the NYSDEC. - February 19, 2019 - Performed a surge blocking/well cleaning event on MW-15 utilizing a solution of BioSolve Pinkwater (surfactant) and water. - February 25, 2019 Gauged and sampled two (2) monitoring wells. Groundwater

MERIT GRAND CONCOURSE (Continued) **U001839205**

Monitoring: Wells Gauged: MW-13, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 14.25 feet to 16.76 feet. Groundwater Flow: Southeasterly Wells Sampled: MW-13, MW-15, and MW-16 Maximum Benzene Concentration: 39.1 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 6.6 ug/L in MW-13 Total VOCs Range: ND (non-detect) 25,293 ug/L The only site well which exhibits elevated levels - is MW-15 with 25,293ppb of TVOCs. Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2019. An Update Report summarizing these activities will be submitted to the NYSDEC in July 2019. Speedway to continue monthly EFR events. AD 07/30/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager phone: 631.924.3001 - email: joer@envirotrac.com EnviroTrac Ltd., 5 Old Dock Road Yaphank, NY 11980 Will review. AD 07/31/2019: Reviewed the report. It states that for the monitoring period: March May 2019, the following work was performed at the site: - April 22 & May 16, 2019 Performed EFR on MW-15. - May 22, 2019 Gauged and sampled two (2) monitoring wells. GW sampling: Wells Gauged: MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 13.98 feet to 14.10 feet Groundwater Flow: Southeasterly Wells Sampled: MW-15, and MW-16 Maximum Benzene Concentration: 39.6 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 1.8 ug/L in MW-16 Total VOCs Range: 573.7 38,224.2 ug/L Site Historic Remediation Activities: " February 2006 Oxygen Releasing Compound (ORC) socks installed in select wells. " January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. " March 2010 SVE system shut down due to asymptotic conditions. " October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. " July 2017 ORC socks installed in select wells. " February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2019. An Update Report summarizing these activities will be submitted to the NYSDEC in October 2019. Speedway/EnviroTrac are evaluating the possibility of re-drilling MW-15. EnviroTrac will approach the New York City Transit Authority to determine feasibility of re-drilling the well. AD 10/29/2019: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 11/22/2019: Reviewed the report. It states that for the monitoring Ppriod: June August 2019, the following work was performed at the site: - June 17 & July 29, 2019 Performed EFR on MW-15. - August 15, 2019 Gauged and sampled two (2) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 14.98 feet to 15.08 feet Groundwater Flow: Southeasterly Wells Sampled: MW-15, and MW-16 Maximum Benzene Concentration: 39.5 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 1.2 ug/L in MW-16 Total VOCs Range: 865.8 28,614.5 ug/L GW data: Well 02/2019 05/2019 08/2019 (TVOCs ppb) MW-15 25,293 38,224 28,618 MW-16 11 574 866 Well MW-15 indicated high levels of contamination and fluctuating trend. Well MW-16 showed increasing trend in contaminant levels. Recommendations: The consultant recommends to continue quarterly groundwater sampling, with the next sampling event scheduled for November 2019. An Update

MERIT GRAND CONCOURSE (Continued) **U001839205**

Report summarizing these activities will be submitted to the NYSDEC in January 2020. Speedway/EnviroTrac are evaluating the possibility of re-drilling MW-15. EnviroTrac working with the New York City Transit Authority to determine feasibility of re-drilling the well. 01/31/2020: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 02/05/2020: Reviewed the report. It states that for the monitoring period: September November 2019, the following work was performed at the site: - December 3, 2019 Gauged and sampled three (3) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 15.37 feet to 22.57 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9, MW-15, and MW-16 Maximum Benzene Concentration: 25.8 ug/L in (MW-15) Maximum MTBE Concentration: 3.4 ug/L in MW-9 Total VOCs Range: 10.8 10,861.4 ug/L Recommendations: The consultant recommends to continue quarterly groundwater sampling, with the next sampling event scheduled for February 2020. An Update Report summarizing these activities will be submitted to the NYSDEC in April 2020. Speedway/EnviroTrac are evaluating the possibility of re-drilling MW-15. EnviroTrac is working with the New York City Transit Authority to determine the feasibility of re-drilling the well. If re-drilling of the well will not result in the lower TVOCs, other remedial actions should be proposed. AD 04/27/2020: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 05/22/2020: Reviewed the report. It states that the following activities were historically performed at the site: " February 2006 Oxygen Releasing Compound (ORC) socks installed in select wells. " January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. " March 2010 SVE system shut down due to asymptotic conditions. " October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. " July 2017 ORC socks installed in select wells. " February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. Current Site Status: Active BP station. For the reported monitoring period December 2019 February 2020, the following work was performed at the site: - Work Performed: February 11, 2020 Gauged and sampled two (2) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-15 and MW-16 Wells Containing LPH: None Groundwater Depth: 15.37 feet to 15.42 feet Groundwater Flow: Southeasterly Wells Sampled: MW-15 and MW-16 Maximum Benzene Concentration: 25.1 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: ND (non-detect) all wells Total VOCs Range: 987.1 12,268.6 ug/L GW data: Well 02/2019 05/2019 08/2019 12/2019 02/2020(TVOCs ppb) MW-15 25,293 38,224 28,618 10,861 12,268 MW-16 11 574 866 688 987 Both samples wells indicated increases in TVOCs from previous sampling round in December 2019. Consultant's recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2020. An Update Report summarizing these activities will be submitted to the NYSDEC in July 2020. Access to re-drill MW-15 was granted by the New York City Transit Authority. Drilling will tentatively be completed in May 2020. A summary of drilling activities will be included within the

MERIT GRAND CONCOURSE (Continued) **U001839205**

next update report. AD 07/30/2020: Received the following email from Mr. Rennie: Ainura, Please find attached the most recent Update Report for the above referenced location. In addition, Speedway/EnviroTrac proposed the abandonment of monitoring well MW-13 on 10/29/2018. As requested by NYSDEC, MW-13 was sampled on January 29, 2019 and has not been accessible since. Results from this groundwater sampling event show low to non-detect (ND) BTEX/MTBE concentrations and VOC STARs compounds concentrations. As a result, Speedway/EnviroTrac respectfully requests the abandonment of MW-13 in order to minimize trip hazards. Please let us know if NYSDEC approves of this well abandonment. Sincerely, Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 09/18/2020: Reviewed the report. it states that the current site status is - Active BP station For the monitoring period: March May 2020, the following work was performed at the site: - May 1, 2020 Gauged and sampled two (2) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-15 and MW-16 Wells Containing LPH: None Groundwater Depth: 14.60 feet to 14.65 feet Groundwater Flow: Southeasterly Wells Sampled: MW-15 and MW-16 Maximum Benzene Concentration: 23.0 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 1.0 ug/L (MW-16) all wells Total VOCs Range: 427.8 13,914.7 ug/L GW data: Well 02/2019 05/2019 08/2019 12/2019 02/2020 05/2020(TVOCs ppb) MW-15 25,293 38,224 28,618 10,861 12,268 13,915 MW-16 11 574 866 688 987 428 Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2020. An Update Report summarizing these activities will be submitted to the NYSDEC in October 2020. Access to re-drill MW-15 was granted by the New York City Transit Authority. Drilling will tentatively be completed in August 2020. A summary of drilling activities will be included within the next update report. Recommendations (con t): Speedway/EnviroTrac proposed the abandonment of monitoring well MW- 13 on 10/29/2018. As requested by NYSDEC, MW-13 was sampled on January 29, 2019 and has not been accessible since. Results from this groundwater sampling event show low to non-detect (ND) BTEX/MTBE concentrations and VOC STARs compounds concentrations. As a result, Speedway/EnviroTrac respectfully requests the abandonment of MW-13 in order to minimize trip hazards. There is no data for well MW-13 in this report. Looked into report for 1st quarter 2019. Issued a correspondence to Mark Stella of Speedway approving well MW-13 abandonment. AD 10/29/2020: 10/28/2020: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 12/01/2020: Reviewed the report. It states that the current site status is an active BP station. A Stipulation Agreement for this site was signed on March 24, 2004. The following remediation activities were historically performed at the site: - February 2006 Oxygen Releasing Compound (ORC) socks installed in select wells. - January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. - March 2010 SVE system shut down due to asymptotic conditions. - October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. - July 2017 ORC socks installed in select wells. - February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. For the reported monitoring period: June August 2020, the following work was

MERIT GRAND CONCOURSE (Continued) **U001839205**

performed at the site: - August 25, 2020 Pre-cleared three (3) locations: monitoring well (MW)-17, remedial well (REM)-1, and REM-2. - August 31, 2020 Installed three (3) wells (MW-17, REM-1, and REM-2) utilizing a drill rig. - September 11, 2020 Gauged and sampled two (2) monitoring wells. The new wells were developed prior to the sampling event. Groundwater Monitoring: Wells Gauged: MW-16 and MW-17 Wells Containing LPH: None Groundwater Depth: 14.92 feet Groundwater Flow: Southeasterly Wells Sampled: MW-16 and MW-17 Maximum Benzene Concentration: 81.4 micrograms per liter (ug/L) (MW-17) Maximum MTBE Concentration: 6.3 ug/L (MW-17) all wells Total VOCs Range: 1,444.7 37,674.2 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2020. An Update Report summarizing these activities will be submitted to the NYSDEC in January 2021. AD 01/28/2021: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 02/24/2021: Reviewed the report. It states that the current site status is an active BP station. A Stipulation Agreement for this site was signed on March 24, 2004. The following remediation activities were historically performed at the site: - February 2006 Oxygen Releasing Compound (ORC) socks installed in select wells. - January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. - March 2010 SVE system shut down due to asymptotic conditions. - October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. - July 2017 ORC socks installed in select wells. - February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. For the reported monitoring period: September November 2020, the following work was performed at the site: - November 30, 2020 Gauged and sampled three (3) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9, MW-16, and MW-17 Wells Containing LPH: None Groundwater Depth: 14.19 21.29 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9, MW-16, and MW-17 Maximum Benzene Concentration: 12.7 micrograms per liter (ug/L) (MW-17) Maximum MTBE Concentration: 6.6 ug/L (MW-17) Total VOCs Range: 5.1 1,267.8 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for February 2021. An Update Report summarizing these activities will be submitted to the NYSDEC in April 2021. AD"

DEC Region:	2
DER Facility ID:	471971
DEC Memo:	"12-4-15 - Obligado - DEsk Duty - Called TJ at Heinrech. Left a message to call back the DEC. 550 tank #2 fuel oil UST. Dry leak. The tank is about half full, 240 gallons. It is a simple system, with a remote fill, and a vent pipe. He was unable to determine the casue of the leak. Heinrech was hired by a potential buyer. TTF mail merge list updated. I called Mr. Gerardo Bohorquez. I left a message to call back the spills duty desk. Spill assigned to Santosh Mahat. 1/14/16 - Austin - I received a call from Ed Townsend (845-249-0958), a consultant representing the owner of this tank. He indicated that this test was done by a prospective buyer of this property. Mr. Townsend wanted to know how to proceed in getting this matter resolved. He had already had a tank-only test done (passed, according to him) and found a problem with the fill line. However, he said that when the fill was dug out for replacement, no soil contamination was encountered. I asked about the tank-to-boiler line (above ground, no leaks) and the vent line (he indicated that that might have had a failurie, as well, but it was replaced, too). I told him to write this all up, include any documentation and photos, and send it to DEC Mahat via e-mail. He indicated he would do so. - end 6/7/16: Mahat T/c : DEC Mahat contacted Ed and request him to send the closure report on the spill case. 8/11/16: Mahat t/c: DEC Mahat talked to Ed and he mentioned that the report will be sent to the Department as soon as he can. 9/1/16: Mahat Spill case is admistratively closed based on the phone conversation RSE had with the contractor on 1/14/16. No paperwork has been submitted to the office as discussed over the phone. Spill case does not warrant any investigation/work on the case. Case closed. 12/20/2016: McPartland Received call to Duty Desk phone from Ed Townsend (845-249-0958). He explained the tank would be abandoned in place and asked if soil samples would need to be taken since it passed a tightness test. I consulted with DEC Piper and told Ed he would not need to take soil samples since the tank was unregulated and it passed a tightness test. "
Remarks:	"failed tank test"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/10/2002 - Mr. Levent Eskicakit at ATC (212-353-8280)submitted a Site Closure Letter (with backup data) in October 2000. Sangesland requested additional rounds of groundwater sampling which was done in Feb 2001, Sept 2001 and January 2002. Samples were taken from 3 wells (MW1, MW2, MW3) The results showed continued declines in BTEX and MTBE levels over time. Samples from the three wells from Feb 2001, Sept 2001 and Jan 2002 all show non-detect for BTEX. In only the Feb 2001 sample there were trace levels of a couple of VOC's, but these were all non-detect by the Sept 2001 sampling. MTBE levels in MW1 have dropped over these last three sampling cycles from 458 (ug/l) to 199 and finally to 138 (Jan

U HAUL #803-68 (Continued) **S104952744**

2002) MTBE levels in MW2 have been trace (<5 ug/l) for this period. MTBE levels in MW3 were trace and are now non-detect. Based on this information, the NYSDEC is closing this site out with a No Further Action letter. The only exceedance of state standards at this time is for MTBE in MW1. Based on the historical data, the NYSDEC believes this value will attenuate over time."

Remarks: "SITE DISABLED / JUNK VEHICLES."

Program:	BCP
Site Code:	583943
Acres:	0.670
HW Code:	C203121
SWIS:	0301
Town:	New York City
Record Added Date:	03/05/2019
Record Updated Date:	09/16/2020
Update By:	JCGRATHW
Site Description:	"Location: The site is located in the Mott Haven neighborhood of Bronx County and is comprised of two full tax parcels (Lots 28 and 31) and a portion of a third parcel (Lot 10). The total area of the site is 0.68 acres. The west side of the site is bordered by Grand Concourse and commercial properties. The east side is bordered by the Metro North rail line. Site Features: The site was improved with three 1-story masonry buildings constructed approximately in 1931. The buildings and the property are currently vacant. Current Zoning and Land Use: The property is currently zoned C6-2A. C6 districts permit a wide range of high-bulk commercial uses requiring a central location. Surrounding land use primarily consists of commercial (warehouses, auto repair, etc.) and industrial (manufacturing). There are several multi-family apartment buildings to the north and to the east on the opposite side of the Metro-North railway. The area surrounding the property is highly urbanized and predominantly consists of industrial/commercial buildings interspersed with open air parking/display lots and equipment yards. Past Use of the Site: Lot 28 and a portion of Lot 10 have been occupied by several gas stations and auto repair shops beginning in 1944. Lot 31 has been occupied by auto repair shops (glass, radiator) from 1944 through 2000 at which time it was occupied by a medical imaging facility. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 feet below grade followed by native silty-sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 34 feet above mean sea level. The topography within the immediate area slopes gradually to the west and south. Groundwater occurs beneath the site at a depth of approximately 13 feet below grade. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally west to southwest toward the Harlem River. The site is not located within a

310 GRAND CONCOURSE (Continued) **S123658110**

designated flood zone. "

Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and PFAS. Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum VOCs, SVOCs and metals. Soil - Twenty-four soil samples were collected during the Remedial Investigation (RI). Several SVOCs slightly exceed the unrestricted use soil cleanup objectives (UUSCOs) in the southeast corner of the site, including benzo(a)anthracene at 1.5 parts per million (ppm); benzo(b)fluoranthene at 1.3 ppm; benzo(a)pyrene at 1.3 ppm all compared to the UUSCO of 1 ppm; and indeno(1,2,3-CD)pyrene at 0.92 ppm versus the UUSCO of 0.5 ppm. Exceedances of VOCs were found in the southeast corner of the site including 1,2,4-trimethylbenzene at 35 ppm, above the protection of groundwater soil cleanup objective (PGSCO) of 3.6 ppm; ethylbenzene at 11 ppm, above the PGSCO of 1 ppm; n-propylbenzene at 11 ppm, above the PGSCO of 3.9 ppm; and xylenes at 19 ppm, above the UUSCO of 0.26 ppm. The PGSCOs for ethylbenzene, n-propylbenzene, and 1,2,4-trimethylbenzene are also the UUSCOs. Exceedances of metals occurred across the site at a shallow depth of 0-2 feet below ground surface. These metals include lead at 4,210 ppm, compared to the UUSCO of 63 ppm; mercury at 3.4 ppm versus the UUSCO of 0.18 ppm; copper at 873 ppm versus the UUSCO of 50 ppm; and barium at 2,370 ppm versus the UUSCO of 350 ppm. There were three exceedances of the PCB-1260 at a maximum of 0.340 ppm compared to the UUSCO of 1ppm. Exceedances of the pesticides 4,4-DDD at a maximum of 0.023 ppm, 4,4-DDT at a maximum of 0.018 ppm, and 4,4-DDD at a maximum of 0.051 ppm compared to the UUSCO of 0.0033 ppm. These are not considered contaminants of concern (COCs) at this site, as these detections are only slightly above UUSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Two groundwater samples were collected during the RI. Attempts were made to install a third well, however bedrock was too shallow. In one of the groundwater samples, several VOCs were shown to exceed NYS groundwater quality standards. These include trimethylbenzene at 41 parts per billion (ppb) compared to the standard of 5 ppb; ethylbenzene at 130 ppb versus the standard of 5 ppb; total xylenes at 138 ppb versus standard of 5 ppb; and toluene at 19 ppb versus standard of 5 ppb. Several dissolved metals were observed at concentrations above standards, however, these compounds are not considered COCs at this site, as these levels are consistent with general groundwater quality throughout the area and are representative of brackish conditions. PFOA and PFOS were detected in groundwater at maximum of concentrations of 43.5 parts per trillion (ppt) and 19.8 ppt, respectively, vs the screening level of 10 ppt. The maximum total PFAS concentration was detected at a range from 59.12 to 200.22 ppt compared to the screening level of 500 ppt. No SVOCs, PCBs or pesticides were detected at concentrations exceeding standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Sub-Slab Soil Vapor: Four soil vapor and six sub-slab soil vapor points were collected during the RI. Petroleum related VOCs (generally benzene, toluene, ethylbenzene, and xylenes; BTEX) were generally low across with site, with the exception of one location, SG1, where BTEX was found at 3,600 micrograms per cubic meter (ug/m3). Other VOC detections included carbon tetrachloride (maximum detection of 0.44 ug/m3),

310 GRAND CONCOURSE (Continued) **S123658110**

	trichloroethene (maximum detection of 1.77 ug/m3), and tetrachloroethene (maximum detection of 143 ug/m3). Data does not indicate any off-site impacts in soil vapor related to this site. "
Health Problem:	"People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The inhalation of site related contaminants due to soil vapor intrusion does not represent a current concern because the site is vacant. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Environmental sampling indicates that soil vapor intrusion is not a concern offsite."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GRAND OPERATING CORP (Continued) **1001489342**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Name: MR LAGE
DEC Memo: "PBS 2-402877 On December 8, 1999, DEC Sigona called S & W and spoke to Ms. Antoinette Day, who would leave a message for Scott Grahm. DEC Requested a copy of site assessment provided mailing address to S & W. 1/7/04 Reassigned from Sigona to K Foley. Formerly Citygas station. (KMF) 3/22/06 Reassigned from Foley to Tang.(KMF) 12/20/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Mr. Lage (914)793-5201 and left message to call me back regarding information of the spill. -QA 03/05/07: Called at (914)793-5201, They don't know about S & W Company and they don't have any clue for this spill. -QA 04/03/07: Called Mr. lage at (914)793-5201 he was not available left message to call me back. -QA 07/11/07: Called Mr. John Lage (owner) at (915)637-3895 to discuss regarding present status of the spill. He was not there talked to Mr. Tony Ribeiro, Office Manager (Lage Management Corporation) he said he has already done Phase 1 and Phase 2 and he said he will send me the reports. -QA 08/30/07: Called Mr. John Lage (owner) at (914)637-3895 for Phase 1 and Phase 2 report. He was not there left message to call me back. -QA 09/06/07: Called Mr. John Lage at (914)637-3895 he was not there, left message to called me back to discuss regarding Phase 1 and Phase 2 report that i did not received. -QA 09/13/07: Called Mr. John Lage (LMC) at (914)637-3895 he was not there. Left message to call me back. -QA 09/17/07: Called Mr. John Lage (LMC) at (914)637-3895 He was not there. Left message to call me back. -QA 09/21/07: Called Mr. John Lage (LMC) to discuss regarding spill. He was not there left message to call me back. -QA 10/05/07: Called Mr. John Lage (LMC) to remind him to send Phase 1 and Phase 2 report. He was not there left message to call me back. -QA 06/26/2008: This spill case was transferred to A. Doronova. - AD 11/2008: To find a current owner. To send an INL. AD 12/22/2008: Called and left a message to Mr. Lage's secretary. Found on ACRIS information that Citicorp North America Inc. (Invine, CA)owns the property now. Was given phone number: (212)816-0885 of Particia Brigantic (Office of General Counsel for this company). Called and left a message. AD 12/29/2008: Did not receive any response yet. Called and left messages to Mr. Lage and Ms. Brigantic. AD 04/06/2009: Did not receive any response yet. Called few times. Later spoke with P. Brigantic regarding the spill. She asked me to email her this request, in order to forward it to a person in charge of environmental issues in this company. Sent an email to P. Brigantic. AD 04/08/2009: Received an email from P. Brigantic saying: Ms. Doronova- I have checked internally here at Citi and this does not relate to any of my clients. I have forwarded this information to the 2 co-heads of Citi's litigation dept. and they will assign it to someone. Thanks and regards, Patricia AD 04/20/2009: Received a phone call from Preston Turner - Associate General Counsel of Citi Litigation Service Center. He was reffered this case from P. Brigantic. Informed him about site's situation. Mr. Turner will check his files for this property and get back to us. He also asked for time extention to respond on my e-mail, which was granted. AD 04/22/2009: Received an email from P. Tutner of Citi saying: Dear Ms. Doronova: This e-mail will confirm our telephone conversation wherein I responded to your e-mail originally sent to Patricia Brigantic of Citigroup, Inc. Citigroup North America, Inc. is a separate legal entity, and will respond to your inquiry. This e-mail will confirm that you have extended the date by which Citigroup North America, Inc. must respond to your inquiry to May 20,

LOT 27,TAXBLOCK 2344 (Continued) **S109942387**

2009. Thank you for the accommodation. Preston Turner Associate General Counsel Citi Litigation Service Center 300 St. Paul Place, BSP17D Baltimore, MD 21202 (410) 332-3687 (443) 450-4314 (Facsimile) AD 05/18/2009: Received an e-mail from P. Turner saying: Dear Ms. Doronova: This e-mail will respond to the Division of Environmental Remediation's inquiry below related to NYSDEC Spill No. 9909720, and 315 Grand Concourse, Bronx, NY - Block #02344, Lot #0027 (the Property). By e-mail dated April 22, 2009, I confirmed with you the extension you granted to Citigroup North America, Inc. to respond to the inquiry by May 20, 2009. I write to advise you that after inquiry, I have determined that Citigroup North America, Inc. (CNAI) is not an owner of the Property. CNAI is an assignee of a security interest in the Property, but not an owner. According to the records on file with the New York City Department of Finance, the current owner of the Property is: 315 R.E. CORP., a New York Corporation. 315 R.E. CORP. is the owner by virtue of a Deed from the New York City Economic Development Corporation recorded on August 15, 2000. See enclosed ACRIS Search Results for the Property as of April 20, 2009. CNAI is the assignee of a Mortgage as reflected in the enclosed January 26, 2004 Assignment of Mortgage, which was recorded in the land records on or about July 27, 2004. For your information, the New York Division of Corporations identifies the following information about 315 R.E. CORP.: Principal Executive Office: 4291 Boston Post Road, Pelham Manor, NY 10803. Chairman/CEO: John Lage. I believe 315 R.E. CORP. is represented by Robert Bernstein, Esquire of Scarsdale, NY (914) 472-8455. As Citigroup North America, Inc. is merely an assignee of a security interest in the Property, and not the owner of the Property, CNAI is not in control of the Property, including any current remediation efforts. If you disagree and contend that CNAI is responsible as a person with merely a security interest in the Property, please let me know. Otherwise, I will respectfully consider this inquiry satisfied. Thank you again for the accommodation in extending the response date to your inquiry. I hope the information I have provided you as to the Property's ownership is useful in your future inquiries related tot he Property. Sincerely, Preston Turner Associate General Counsel Citi Litigation Service Center 300 St. Paul Place, BSP17D Baltimore, MD 21202 (410) 332-3687 (443) 450-4314 (Facsimile) To send an Outstanding Violation letter to the owner: John Lage 315 R.E. CORP.: 4291 Boston Post Road, Pelham Manor, NY 10803 Also, 315 R.E. CORP. is represented by Robert Bernstein, Esquire of Scarsdale, NY (914) 472-8455. Issued and sent an Outstanding Violation letter to Mr. Lage. Response is due June 18, 2009. AD 06/01/2009: Received some documentation from Mr. Lage. Will review. AD 08/19/2009: Reviewed the submited data. It includes: - Tank Removal proposal dated November 9, 1999 from Papitto Construction Co., Inc. addressed to Mr. Lage; - Subsurface investigation report (SIR) dated November 4, 1999 prepared by S&W Services, Inc. addressed to Mr. Vincent Papitto of Papitto Construction Co., Inc. The SIR states that S&W Services completed the investigation at the site on October 21, 1999. The site has one 4,000-gallon UST, one 6,000-gallon UST and forteen 550-gallon USTs. SI included advancement of 14 soil borings around USTs and collection of 14 soil samples for VOCs and SVOCs analysis. Soil boring logs data indicate that the depth to bedrock across the site ranges from approximately 1 foot to 6 feet. VOCs analytical data indicates very highly contaminated areas in the vicinity of soil borings: SB-4, SB-5, SB-7, SB-9, SB-10 and SB-11. High concentrations of SVOCs were

LOT 27,TAXBLOCK 2344 (Continued) **S109942387**

found in borings: SB-1, SB-3, SB-4, SB-5, SB-10 and SB-12. The consultant recommended removal of USTs and contaminated fill material. No documentation was submitted on USTs removal. AD 10/29/2009: Searched in PBS base for USTs removal info. This site has PBS# 2-402877. According to PBS Facility Information Report, eight USTs were removed from the site on December 17, 2001. USTs description matches description of the tanks in Tank Removal Proposal from Papitto Construction Co., Inc. To contact Mr. Lage and request submission of the USTs Closure report. AD 01/08/2009: Called and spoke with Mr. Toni Riverra of Boulevard Car Wash and requested to submit USTs closure and removal report. AD 09/07/2010: Called and spoke with Mr. Riverra of Boulevard Car Wash regarding the reports submission. He told me that another Phase I investigation was performed by Hydroteck in 2005. requested to submit Phase I report from 2005 and UST closure report from 2001 till November 7, 2010. AD 12/2010: Did not receive any response from Mr. Riverra. Called and left a message. AD 05/2011: Called and left a message to Mr. Riverra of Boulevard Car Wash. AD 01/04/2012: Issued and sent a Notice of Violation Letter addressed to Mr. Lage of 315 R.E. Corp. by certified mail (#7006 0100 0006 2620 3467). Response is due February 4, 2012. AD 02/07/2012: Did not receive any response. To send Final Notice Letter. AD 02/21/2012: Issued and sent Final Notice letter to Mr. Lage by certified letter (# 7006 0100 0006 2620 3405). Response is due March 6, 2012. DL the letter to eDocs. AD 02/23/2012: Received a phone call from Mr. Riverra. he said that he will submit Phase I report from 2005 next week, and that he will try to locate UST closure report from 2001 done by Papitto Construction Co., Inc. AD 02/24/2012: Received Phase 1 Report on a CD from Mr. Riverra. DL all submitted documents to eDocs. UST closure report submission is due. AD 01/2013: called and left a message to Mr. Rivera. AD 03/2014: called and left a message for Mr. Rivera. AD 02/10/2017: called and left a message for Mr. Rivera with the secretary. AD 09/2018: called and left a message to Mr. Rivera. AD"

Remarks: "CAR WASH A WHILE AGO WAS A GAS STATION-SITE ASSESSMENT PERFORMED WHICH SHOWED SOIL TO BE CONTAMINATED. "

DEC Memo:	"Sangesland spoke to Kevin from ELM. He said this is a construction site. They found 1 UST and knew about a 2nd UST. They're working on the PBS issues with Nick Lombardo. Both tanks have now been pulled and they have contaminated soil. The area will be excavated, end points taken and a report submitted. ELM is working with NYC Dan Walsh group to fast track this development. 10/11/11-Vought-Received call from and spoke to Keith Brodock (ELM Ph:212-962-4301x302 Fax:212-962-4302). Brodock noted that perched water in bottom of excavation due to thick clay layer. Vought required collection of one bottom groundwater and soil sidewall samples. One excavation for both tanks. One tank was fuel oil and other tank was unknown. Site is E-designation and former high metal. Approved RAP from OER Walsh's group for metals. Source of metals are historic fill and site was old dye manufacturing facility. Thirty soil borings performed. Dan Cole is contact at OER. Plans include vapor barrier and installation of

KIPPS SCHOOL (Continued) **S111317593**

SSDS which was approved by OER Cole and SCA. Site is proposed to be developed with school. School will take most of lot lines and maintenance area will be covered with gravel and two feet of clean fill. Vought spoke with RHWRE and she noted that as site was under purview of NYCOER that they are under an agreement to report all on-site discharge cases to NYSDEC and no followup required as per Section A. Vought spoke with RSE who noted that Phase I should be submitted along with petroleum endpoint analyticals. Vought called NYCOER Dan Cole (Ph:212-341-0964) and left message to return call to see if DOH had reviewed vapor barrier and SSDS Plans. Vought examined Spills, PBS, CBS, and E-Smart databases and found no other spills or records at Site. Letter requiring endpoint samples and Phase I to be sent to: RH Bronx-Rider, LLC 826 Broadway 9th Floor New York, NY 10003 Attn: Susan Sack Vought prepared CSL and to be sent out to RH Bronx Rider LLC. Vought called ELM Brodock and left message to return call before sending CSL. 10/12/11-Vought-Received call from and spoke to NYCOER Dan Cole who confirmed that DEP has been reviewing project. NYCOER Cole noted that NYCOER Chawla and Walsh discussed site with DEC Cozzy. Cole noted that new school is funded by Robin Hood (a non-for profit agency whom ELM is working for) and also partially funded by SCA. Cole also noted that AKRF reviewed RAP and plans for vapor barrier and SSDS on behalf of SCA. NYCOER also noted that NYCDOH and NYSDOH had not reviewed plans for vapor barrier or SSDS. NYCOER cole also noted that further sampling had noted that all metal contamination had been removed from the site and depth to groundwater was approximately 4'bg. Vought noted that he would have to discuss Site with RSE and Spills may require DOH review of plans for vapor barrier and SSDS due to potential for vapor intrusion and shallow depth to groundwater. NYCOER Cole noted that no dewatering taking place. Vought sent email inquiry to DEC Cozzy with cc to RSE as to whether DEC should require DOH review of vapor barrier and SSDS Plans and submission of Phase I for metals contamination.
10/17/11-Vought-Left message for ELM Brodock with email address of Intern Fu so that he may copy her on data sumbission of historical investigation data for metals and petroleum so that she may begin review while Vought out of office from 10/18 through 10/24. Received message from ELM Brodock and he will messenger over reports today.
10/17/11-Fu-Intern Fu completed meeting notes with approval of Vought: 10/14/11-Vought-DEC Austin & Vought meeting with consultant Keith P. Brodock (646-859-3325). Site was dye manufacturer back in the 1950~1960 . Contaminants include solvents & metals. Large excavation is planned including basement area. Southwest portion of new development will be at grade level. Basement located in the north of the site which is filled by debris. There are: one 6000-gal heating oil PBS registered UST; one 1000-gal unknown UST which will be registered for PBS. Amending PBS registration will be done via DEC Lombordo. Both USTs were partially concrete encased. Last week, two USTs were empted and removed from site. Water samples were collected from USTs. Fill-lines and supply lines were noted. Full Phase II was performed on the site which found high metals and purple staining from dye in the eastern part. Found high soil vapor along Canal Place which might include BTEX. There is 2-5 clay layer in parking lot. Proposed excavation will reach to clay layer to remove metals. New foundation will be constructed above C and D class fill material, vapor barrier, and sub-slab depressurization system. Full list Target Compound List which will include petroleum and metals analysis is required; TCLP for RCRA & metals have no failure as per Brodock.

KIPPS SCHOOL (Continued) **S111317593**

Contractor is currently performing pile testing due to rapid development: excavation planned to begin a week from 10/17/2011. Cn, As be part of the dye process, no dewatering plan for development, and site will be excavated to gw level. No DOH review of vapor barrier and SSDS plan to date. DEC Vought will send out CSL letter w/ review and receive and review analytical data from consultants. 10/17/11-Vought-Received call from and spoke to ELM Brodock and he noted that excavated material had been stockpiled onsite and that USTs and petroleum contaminated soil had been excavated and soil endpoint samples were collected. He noted that additional excavation was performed and the analyticals of the second round of samples should be received from lab on 10/19. ELM Brodock noted that proposal for excavation does include resampling for metals contamination as metals contamination was formerly delineated via soil borings (except for two locations upon which endpoint samples will be collected as vertical depths of contamination concentrations have not been received). Brodock noted that excavation scheduled to begin on 10/24 and may take three days to one week. 10/17/11-Fu-Completed the PBS, CBS, and Spill research near site: Spills around: 1) 02/25/2004-Manhole #9489, WALTON AVE EAST 144TH ST, #0312991: closed case with 1 pint cable oil release. 2) 11/27/2004-Hostos Community College, Walton Ave & East 144th st, #0409591: closed in March 2006 with #2 fuel oil release of UST. 3) 07/11/2007-Con Edison, W/S of Morris Ave & East 144th st, #0890133: closed in with 0.03 gal dielectric fluid release. PBS around: 1) 2085596-E.M.T.C. REALTY CORP, 226 East 144th St: 1500-gal # fuel oil AST/UST? in service. CBS around: 1) 2-000026-Power Chem, 375 Rider Ave: 1500-gal contains PCE which converted to Non-regulated use; expired 03/24/1999. Intern Fu prepared surrounding area site plan with potential receptors and sources. 10/17/11-Fu-Vought and Intern Fu drafted contaminated soil letter which has a one month deadline to Brodock. Vought sent letter via email and original in mail with cc to DEC Austin and OER Cole. 10/17/11-Fu-Received investigation results from ELM including: Phase I ESA dated 10/18/2010, Phase II ESI dated 06/29/2011, Supplemental Metals/Inorganics Delineation and Sediment Trap Evaluation Report dated 08/03/2011, Remedial Action Plan dated 08/05/2011. The letter also claimed that Based upon Phase II and Additional Metals Delineation, NYC Dept of Environmental Remediation approved remedy plan proposed by consultant, which consists three main activities: 1.Excavation of soils containing concentrations of metals exceeding the Site-Specific Cleanup Objective and removal of the underground storage tanks; 2. Prevention of exposure to residual soil by a composite system; 3. Installation of a vapor barrier and a sub-slab depressurization system. Daniel Cole Assistant Director, NYC Office of Environmental Remediation DanielCo@dep.nyc.gov Tel 212.341.0964-Fax 212.788.2941 10/18/11-Fu-Vought left a message to ELM Brodock regarding on the high exceeded TCE & PCB number accorded on site discovered in their Phase II report. Vought stated that DEC alarms them DOH review should be done and due to the high number of metals and petroleum contaminants, the site’s development shouldn’t proceed at current speed. 10/27/11-Vought-Received messages from Dan Cole and ELM Brodock as well as received endpoint sampling data for excavation. Also received email from ELM Greg Wycka on 10/19 that In reference to Spill Case No. 1108611 for the property located at 201 East 144th Street, Bronx, NY, please find attached the analytical soil end-point results (Table 1) and end-point sample location map (Figure 1). As shown in Figure 1, SD-2, SD-3 and SD-4 were collected

KIPPS SCHOOL (Continued) **S111317593**

from the sidewalls of the excavation; SD-1 was collected from the excavation bottom. No soil/fill material was present on the western sidewall of the excavation area because of the presence of a foundation wall; therefore, no end-point sample was collected from the western sidewall. ELM compared the analytical soil data to CP-51 Soil Cleanup Levels for Fuel Oil Contaminated Soil. In summary, no volatile organic compounds (VOCs) were detected above CP-51 Fuel Oil criteria. Seven semi-volatile organic compounds (SVOCs) were detected above CP-51 Fuel Oil criteria, but at concentrations statistically consistent with background concentrations reported in the Phase II ESI Report, which were attributed to the presence of historic fill at the property. In addition, a sample of the groundwater present at the bottom of the excavation was collected and delivered to the laboratory earlier today. The analytical groundwater results should be available Friday afternoon, which we will forwarded to you for review. Vought receceived second email from Wycka that As an addendum to my earlier e-mail, I just want to add that no evidence of petroleum (visual, olfactory or PID screens) was observed in the post-excavation samples. I forgot to include this statement in my earlier e-mail. Vought called ELM Brodock (Ph:212-962-4301x302) and left message that DEC had no objections to backfilling excavation based on the soil samples submitted to date however may still have additional requirements on VB/SSDS design after determination if DOH review is warranted. 10/27/11-Fu-Intern Fu complete summarize Phase I and approved by Vought: PHASE I (ELM)-10/18/2010. Site has 0.85 acre of partially paved parking area, a 5000 sq ft fully paved parking/storage area, and a 4-story commercial building for furniture manufacturing (12000 sq ft per floor) with basement used for storage of materials and boiler room for fuel-oil heating purpose. From 1908-1951, the site was used by an ink manufacturer. Due to no enforceable regulations at that time, hazardous materials release is an environmental concern, including linseed oil, rosins, resins, minerals, metals, varnishes and acids. Production process involved volatilization, combustion, cooling, drying. These left historical materials did not identify any COCs that would lead to a VEC, the Tier 1 investigation was only performed under the existing building footprint. Site was used as a furniture manufacturing warehouse of Chairmasters. Basement is primarily used for storage of materials and contains boiler room; Canal Place Parking lot is used both for parking and for garbage, storage; other floors of building is occupied for the various production aspects. Chairmasters generate waste of debris and removed them off-site monthly. Electrical transformer equipment (may used PCBs because of assumed old age of equipment) located throughout the building primarily in the basement. Site had a Closed Spill Case #0801696 , a 6000-gal UST tightness test failure. The presence of the inactive, unregistered 1000-gal UST does not constitute a REC. ELM recommends Phase II ESA. ELM further recommends that any ACM, LBP, and/or PCB-containing building components affected by demolition at the Site be identified and properly managed during such activities, as required by applicable law . Elevation: 40 above mean sea level. Slope to the north-east. Soils at the site are considered Urban Land, which consist of mixed silt loam, loamy sand, and fine sandy loam. GW is assumed to flow north-northeast and approximately 45 bgs. No drywells, detention or retention ponds. Harlem River located 1800 to the west of the site. Radon not likely exists. North: medical facility; South: Church and Commercial Usages; East: Medical; West: railway. Four schools locate

KIPPS SCHOOL (Continued) **S111317593**

within a two block radius of the site: 1. Public School 018 502 Morris Avenue, Bronx, 2. Public School 203 339 Morris Avenue, Bronx, 3. Community School for Social Justice 350 Gerard Avenue, Bronx, 4. Lincoln Academy/Hostos 475 Grand Concourse, Bronx. Subsurface Analysis (Tyree Brothers) dated 06/08/1989 reported: 3 soil borings drilled to the depth of 30 on the parking lot, no indication of staining or olfactory evidence and no petroleum contaminants exceed standard. Site listed in Resource Conservation and Recovery Information System Generators/Transporters, New York State Spills Information (NY Spills)/Leaking Underground Storage Tanks, E Designation Sites (E-138 Adopted 5/11/2005, CEQR#04DCP003K Underground Gasoline Storage Tanks Testing Protocol; E-227 Adopted 6/30/2009, CEQR#08DCP071X Hazardous Materials; E-227 Adopted 6/30/2009, CEQR#08DCP071X Air Quality). ELM performed site reconnaissance and reported more info besides those findings in the front part of this EIS: third-floor contains storage of the hazardous materials (spent lacquers, sealants, and wood stains) associated with the RCRA-CESQG, 55-gal drum of waste is generated per month which were classified as hazardous waste but with no reveal of the potential to direct contact with sub-surface since these were stored in accordance with Spill Prevention and RCRA protocols. 10/19/11-Fu-Vought received email from Greg (ELM) reporting endpoint sample results dated 10/12/11. 1600ppb Benzo(a)anth(SD-2),1600ppb Chrysene(SD-2),1600ppb Benzo(b)fluo(SD-2),1200ppb Benzo(k)fluo(SD-2),1700ppb Benzo(a)pyrene(SD-2),820ppb Indeno(1,2,3,-cd)pyrene(SD-2); 2500ppb Benzo(a)anth(SD-3), 2200ppb Chrysene(SD-3), 2400ppb Benzo(b)fluo(SD-3), : 1800ppb Benzo(k)fluo(SD-3), 2600ppb Benzo(a)pyrene(SD-3), 1200ppb Indeno(1,2,3,-cd)pyrene; 2200ppb Benzo(a)anth (SD-4), 2000ppb Chrysene (SD-4), 2400ppb Benzo(b)fluo (SD-4), 1700ppb Benzo(k)fluo(SD-4), 2500ppb Benzo(a)pyrene (SD-4), 1300ppb Indeno(1,2,3,-cd)pyrene (SD-4). PHASE II (ELM)-06/29/2011. Preliminary plans for school indicate a 120,000-SF six-story building. Basement slab will be 2-3 above grade of existing basement. In addition to the construction excavation, remedial excavation would be required to accommodate the following: removal of soils containing elevated concentrations of metals from Canal Place Parking Lot, removal of USTs and associated contaminated soils, removal of grossly contaminated soils containing residual contamination. Dewatering may occur as part of site redevelopment and excavation below water table may be necessary. Imported backfill will be used between the top of building slab and the bottom of SSDS. A minimum of two feet of certified clean fill (imported backfill) will be used for any areas of the setback or entrance that are not covered with asphalt or impervious pavement. Fill layer existed 15 bgs at 144th St parking area; 5 bgs in Canal Place parking area. Bedrock was encountered 70-80 bgs. GW table is at 26 bgs at 144th st parking area and 3-4 bgs at Canal Place parking area in Oct 2010 and Feb 2011. A total of six (6) soil vapor samples (SV1-SV6, performed outside existing building), six (6) sub?slab soil vapor samples (SV7-SV12, performed inside existing building), and two outdoor ambient air samples (AMB1-AMB2) were collected for laboratory analysis. Soil vapor survey (10/20/2010): 16ug/m3 TCE (SV-2), 1700ug/m3 TCE (SV-4), 59ug/m3 TCE (SV-5), 660ug/m3 TCE (SV-6), 1600ug/m3 Tetrachloroethylene (SV-6). Ambient air sampling (10/20/2010): only exceed other standard besides NYSDOH AGV. Twenty-five soil borings to a maximum depth of 31 bgs (17 of them were for general site conditions, 4 of them were to evaluate

KIPPS SCHOOL (Continued) **S111317593**

USTs, 4 of them were to evaluate potential presence of PCE & TCE). Soil sampling analysis (10/25/10): VOCs/SVOCs: 0.06ppm Acetone (ELMSB3), 0.13ppm acetone (ELMSB8 2-3), 0.081ppm acetone (ELMSB14 0-2), 0.077ppm acetone (ELMSB14 8-10), 0.12 ppm acetone (ELMSB19 2.5 -3.5), 0.19ppm acetone (ELMSB20 4-5), 0.2 ppm acetone (ELMSB22 2-3), 0.18 ppm acetone (ELMSB22 4 -5), 0.18 ppm acetone (ELMSB23 0-2), 0.093 ppm acetone (ELMSB23 3 -4), METALS: 276ppm Pb (ELMSB1 0-2), 0.65ppm Hg (ELMSB1 0-2), 271 Zn (ELMSB1 0-2), 65.5ppm Cu (ELMSB1 29-31), 180ppm Pb (ELMSB1 29-31), 0.24ppm Hg (ELMSB1 29-31), 125 Zn (ELMSB1 29-31), 117ppm Pb (ELMSB2 0-2), 0.86ppm Hg (ELMSB2 0-2), 627 Zn (ELMSB2 0-2), 134ppm Pb (ELMSB2 19-21), 0.2ppm Hg (ELMSB2 19-21), 69.7ppm Cu (ELMSB2 23-25), 0.34ppm Hg (ELMSB2 23-25), 27.6ppm As (ELMSB3 0-2), 145ppm Cr (ELMSB3 0-2), 1940ppm Pb (ELMSB3 0-2), 12.1ppm Hg (ELMSB3 0-2), 436ppm Zn (ELMSB3 0-2), 63.2ppm Pb (ELMSB3 9-11), 0.7ppm Hg (ELMSB3 9-11), 126 Zn (ELMSB3 9-11), 58.6ppm Cr (ELMSB4 0-2), 426ppm Pb (ELMSB4 0-2), 2.5ppm Hg (ELMSB4 0-2), 140ppm Zn (ELMSB4 0-2), 47.6ppm Cr (ELMSB5 0-2), 525ppm Pb (ELMSB5 0-2), 5.4ppm Hg (ELMSB5 0-2), 87.7ppm Pb (ELMSB5 3-4), 0.86ppm Hg (ELMSB5 3-4), 84.7ppm Cr (ELMSB5 0-2), 757ppm Pb (ELMSB5 0-2), 5.4ppm Hg (ELMSB5 0-2), 142ppm Zn (ELMSB5 0-2), 147ppm Pb (ELMSB6 0-2), 0.73ppm Hg (ELMSB6 0-2), 160ppm (ELMSB7 0-2), 0.47ppm Hg (ELMSB7 0-2), 94.8ppm Cr (ELMSB9 0-2), 559ppm Cu (ELMSB9 0-2), 1470ppm Pb (ELMSB9 0-2), 0.52ppm Hg (ELMSB9 0-2), 3640ppm Zn (ELMSB9 0-2), 33.8ppm Cr (ELMSB9 18-20), 149ppm Pb (ELMSB9 18-20), 0.29ppm Hg (ELMSB9 18-20), 30.2ppm Ni (ELMSB9 18-20), 243ppm Zn (ELMSB9 18-20), 115ppm Cr (ELMSB10 0-2), 976ppm Cu (ELMSB10 0-2), 323ppm Pb (ELMSB10 0-2), 61.7ppm Cu (ELMSB10 18-20), 483ppm Pb (ELMSB10 18-20), 0.19ppm Hg (ELMSB10 18-20), 258ppm Zn (ELMSB10 18-20), 93.9ppm Pb (ELMSB10), 0.33ppm Hg (ELMSB10), 209ppm Pb (ELMSB11 0-2), 317ppm Pb (ELMSB11 18-20), 0.14ppm Hg (ELMSB11 18-20), 97.5ppm Ni (ELMSB11 18-20), 561ppm Pb (ELMSB11), 0.28ppm Hg (ELMSB11), 169ppm Pb (ELMSB12 0-2), 0.51ppm Hg (ELMSB12 0-2), 499ppm Zn (ELMSB12 0-2), 283ppm Pb (ELMSB13 0-4), 0.24ppm Hg (ELMSB13 8-10), 90.3ppm Cr (ELMSB14 0-2), 655ppm Pb (ELMSB14 0-2), 1.4ppm Hg (ELMSB14 0-2), 299ppm Zn (ELMSB14 0-2), 34.4ppm Cr (ELMSB15 0-2), 500ppm Pb (ELMSB15 0-2), 15.2ppm Hg (ELMSB15 0-2), 901ppm Zn (ELMSB15 0-2), 56.7ppm As (ELMSB16 0-2), 314ppm Cr (ELMSB16 0-2), 159,000ppm Pb (ELMSB16 0-2), 1.7ppm Hg (ELMSB16 0-2), 2700ppm Zn (ELMSB16 0-2), 32.4ppm Cr (ELMSB18), 0.19ppm Hg (ELMSB18), 0.24ppm Hg (ELMSB19 2.5-3.5), 136ppm Pb (ELMSB20 1-2), 0.84ppm Hg (ELMSB20 1-2), 171ppm Pb (ELMSB20 4-5), 87.2ppm Pb (ELMSB20 1-2), 0.63ppm Hg (ELMSB20 1-2); PCBs/PESTICIDES: 0.106ppm PCBs (ELMSB1 0-2), 0.0042ppm DDT (ELMSB2 19-21), 0.0054ppm DDT (ELMSB2 23-25), 0.0061ppm DDD (ELMSB3 0-2), 0.018ppm DDD (ELMSB8 2-3), 0.0063ppm DDT (ELMSB9 0-2), 0.0044ppm DDD (ELMSB9 18-20), 0.0087ppm DDE (ELMSB9 18-20), 0.042ppm DDT (ELMSB9 18-20), 0.27ppm PCBs (ELMSB10 0-2), 0.0074ppm DDT (ELMSB10 0-2), 0.0091ppm DDD (ELMSB11), 0.031ppm DDT (ELMSB11), 0.048ppm DDD (ELMSB13 0-4), 0.12ppm DDT (ELMSB13 0-4), 0.176ppm PCBs (ELMSB16 13-15), 0.0052ppm DDT (ELMSB16 13-15), 0.0064ppm DDT (ELMSB18 0-3), 0.0043ppm DDD (ELMSB19 3.5-4.5). A total of seven (7) permanent groundwater monitoring wells were advanced, completed and sampled. Wells were purged at least three well volumes and sampled for DO, pH, temperature, ORP, specific conductance, and turbidity. GW sampling analysis (10/29/10): METALS: 23200ppb Al (MW1), 128ppb Cr (MW1), 59000ppb Fe (MW1), 3000ppb Pb(MW1), 6570ppb Al (MW2), 8880ppb Fe (MW2), 160ppb Pb (MW2), 67500ppb Al (MW3), 144,000ppb Fe (MW3),

KIPPS SCHOOL (Continued) **S111317593**

3730ppb Pb (MW3), 2440ppb Zn (MW3), 18,600ppb Al (MW4), 53,800ppb Fe (MW4), 456ppb Pb (MW4), 64,400 Al (MW5), 112,000ppb Fe (MW5), 81.1ppb Pb (MW5). Additional metals delineation in the Canal Place Parking Lot was requested by NYCOER which will be provided in Supplement Metals Report by ELM. SUPPLEMENTAL METALS REPORT (ELM)-08/03/2011. At the request of NYCOER, ELM conducted this additional subsurface soil investigation delineating the extent of metals and cyanide within the Canal Place Parking Lot, to further investigate the competency of two sediment traps located in the basement slab along the northern wall of existing building. Canal Place Parking Lot was used as a waste storage area by Sigmund Ullman Company back from 1908-1951 which would cause release of metals contained in ink. The metal analytical results indicated elevated concentrations of metals in depth (top 5 feet) intervals corresponding to the historic urban fill unit. Contributing source to these metals would be both the historic urban fill material and release of waste material. Soil analysis show: 100ppb Cyanide (ELMSB3A_0-2), 2100ppb Lead, 27ppb Mercury, 52ppb Cyanide, 1300ppb Lead (ELMSB3A_2-4), 110ppb Cyanide, 3600ppb Lead, 16ppb Mercury (ELMSB4A_0-2), 32ppb Arsenic, 28ppb Cyanide, 2900ppb Lead, 4.3ppb Mercury (ELMSB4A_2-4), 3.5ppb Mercury (ELMSB12A_0-2), 45ppb Cyanide, 1400ppb Lead, 49ppb Mercury (ELMSB13A_0-2), 44ppb Cyanide, 4.3ppb Mercury (ELMSB14A_0-2), 7100ppb Lead, 89ppb Mercury (ELMSB15A_0-2), 27,000ppb Lead, 9.2ppb Mercury (ELMDUP-2), 6400ppb Lead, 8.1ppb Mercury (ELMSB16A_0-2), 3.6ppb Mercury (ELMSB26_5-7), 950ppb Lead, 2.6ppb Mercury (ELMSB27_0-2), 2300ppb Lead, 4.4 ppb Mercury (ELMSB28_5-6), 4.8ppb Mercury (ELMSB29_2-4), 6.4ppb Mercury (ELMSB30_5-6), 840ppb lead (ELMSB31_2-4), 2000ppb Lead (ELMSB32_0-2), 24ppb Mercury (ELMSB33_2-4), 1700ppb lead (ELMSB34_0-2), 5.4ppb mercury (ELMSB34_0-2), 5900ppb lead (ELMSB35_6-8), 9.7ppb mercury (ELMSB35_6-8), 790ppb lead (ELMSED2A_0-2), 940ppb lead (ELMSED2A_2-4). Note: The project?specific TAL Metals list was aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, mercury, nickel, potassium, selenium, silver, sodium, thallium, vanadium, zinc, and cyanide. REMEDIAL ACTION PLAN (ELM)-08/05/2011. RH Bronx intends to demolish the Site and construct a public charter high school. Current plans include: minor setback at main entrance and a rear grade-level stone covered mechanical area (staff access only); basement across the northern portion of the block with small portion extending to the existing parking lot area and final basement slab is 2-3 feet above existing slab; first floor will be slightly below existing grade; excavation for northern basement involves the removal of Canal Place Parking Lot access ramp from 146th st; no excavation in the existing building basement; southern basement requires partial excavation of Sourthwest Parking Lot; 2868 cy will be excavated for basement foundation; 1095 cy will be excavated in Southwest Parking Lot for the first-fl construction; no reuse of the excavated soil; dewatering may occur and excavation below water table may be necessary; Canal Place Parking Lot excavation will have 3 locations below water table; 739 cy of imported backfill will be used between the top of the existing building slab and the bottom of SSDS; additional backfill may required because of additional excavation. Construction design has not been finalized but hopefully no significant change. Proposed remedial actions for the site: 1. Establishment of site SCOs (grossly contaminated soils, Canal Place Parking Lot, USTs areas); 2. Remediation of sediment traps (clean up first, piping disconnected, traps filled with concrete, traps and

KIPPS SCHOOL (Continued) **S111317593**

piping system will be buried beneath certified clean fill); 3. Removal of two known USTs; 4. Management of soil excavated for construction purposes; 5. Excavation of additional soils in the Canal Place Parking Lot above the Site-specific Action Levels (best practicable efforts will be made to remove soils, in locations where limitations exist, horizontal and vertical endpoint samples will be collected from sidewalls and bottom); 6. Characterization of any excavated materials for potential re-use; 7. Sampling and analysis of excavated media; 8. Import of off-site soils or recycled concrete aggregate (RCA); 9. CAMP; 10. Vapor barrier system; 11. SSDS; 12. A final composite cover across the site; 13. Remedial Closure Report. 10/27/11-Fu-Vought & Intern Fu reviewed the site plans and reports. RHWRE noted that she spoke to DEC Cozzy who will create a p-site memo for plume track down due to chlorinated solvents in soil vapor. 10/28/11-Vought-Sent email to DEC Cozzy noting that We have completed the review of the above site and with the assistance of my intern (Denise Fu) have produced the summary maps attached below. You noted in your email below on 10/14 that if we noted some metals of concern, that you would be happy to discuss them with us. I have also attached the Site Plans below to provide you some initial data as Jane has noted that you may be starting a Plume Trackdown due to the presence of PCE and TCE in soil vapor. I would be much obliged if you could take a moment to review the below information and Site Plans in case you may have additional requirements. Some important things to note from the Site Plans. 1)No On-Site Sources of PCE/TCE Have Been Documented to Date via Lab Analysis but Have Been Noted in Field: The former use of the site included an ink manufacturer from 1908-1951 and also as a furniture manufacturer afterwards. Keith Brodock from ELM had noted that they found purple dye in the soil previously possibly indicating an on-site discharge. Note that no documentation has been submitted to date that the soil sampling locations were focused on areas of potential discharge (drains, machines, printing presses, etc). No operational history of former ink manufacturer has been submitted to date. Note that as per Supplemental Metals Report it is possible that a historic release of metals contained in ink manufacturing waste to surficial soils occurred in the vicinity of Canal Place Parking Lot. This is the probable source of colored soils observed during this metals investigation and also during the supplemental Phase II ESI . 2)PCE and TCE Contamination in Soil Vapor: From 1908-1951, the site was used by an ink manufacturer and a furniture manufacturer warehouse afterwards. Note as per Site plan dated 2/11/11, PCE concentrations in soil vapor have been observed up to 1600ug/m3 PCE and 1700ug/m3 TCE. Dan Cole from NYCOER noted to me that there has been no DOH review to date of vapor barrier/ssds plans but as per your email below since the Site is in the E -designation program, no DOH review is needed (albeit future use of site as a school). 3)Metals Contamination: Metals contamination show concentrations in soil up to 7100ppb Pb and 89ppb Hg but all metals contamination has been vertically delineated except for two locations. Note filtered groundwater samples show no Pb or Hg. No RAP has been reviewed or received to date with respect to metals remediation. (eg excavation not a function of remediation or lab analysis but of development plans). (eg excavation not a function of remediation or lab analysis but of development plans). 4)Petroleum Contamination: All petroleum contamination has been removed via collection and analysis of soil sidewall and bottom groundwater samples. 11/1/11-Vought-Sent following email to DEC Cozzy, I just got

KIPPS SCHOOL (Continued) **S111317593**

a call from Dan Cole and he wanted me to let you know documents that we reviewed to date are in E-docs. I also just got off phone with Keith Brodock (consultant for ELM) who ntoed that excavation of Canal Place has been completed to the water table and excavation of the southwest corner of the site is scheduled for this week. Feel free to call me on my cell 917-577-1728 as well if you wish to discuss my earlier email. Please keep me posted on your findings so that I may incorporate the information into the Spill Notes and closed the Spill (if applicable) . Vought later received inquiry from DEC Cozzy for copy of RAP and RAP too large for E-docs and Vought sent inquiry to NYCDEP Cole to faciliate reception of copy and DEC Cozzy noted on email requesting if FTP site available on web for RAP review. DEC Cozzy also discussed site with NYCOER Chawla. 11/07/11-Fu-Vought received an email on 11/4 from DEC Cozzy saying that DEC can close the spill once the R2 is satisfied with the remediation of petroleum; Bureau B is reviewing the chlorinated solvent and metals data to determine possible future investigation for CVOCs; metals are not concerns as the OER-approved RAP implementation; Cozzy recommended that NYS DOH doesn't have to get involved with this case since NYCDOH is working with OER on the case but he will called NYSDOH Bates to discuss it. Vought replied Cozzy that Vought will close the spill early next week. DEC Paul John noted that Spill Closure Letter to include language that Spill will be closed however all further requirements by NYSDOH and NYCOER must be met. 11/7/11-Vought-Spill closed by Vought due to minor Part 375 Unrestricted SCO exceedences for petroleum associated with historic fill. Bureau B (DEC Cozzy) will follow-up of review of chlorinated solvent and metals data and contact NYSDOH Bates with respect to possible review of VB/SSDS Plans. Intern Fu to draft closure letter with cc to DEC Cozzy, DEC Austin, OER Cole and ELM Brodock. Vought received edits on Spill Closure Letter from RSE and DEC John and sent letter to Susan Sack with cc to NYCOER Walsh and Cole, NYSCA Guterman and Castagnoloa, DEC John and Austin and ELM Brodock. 11/8/11-Vought-Copied on email from DEC Cozzy to OER Walsh and Chawla and Cozzy spoke with NYSDOH Bates and Bates noted OER should work with NYCDOH if there are any health related issues as you do for the NYC BF Program. 11/8/11-Cozzy-Spoke to Keith Brodock (ELM) and informed him that the Superfund side of DEC reviewed the chlorinated solvent and metals data along with the OER-approved remedial action plan (RAP). I told him that we are satisfied that the approved RAP has addressed any potential sources at the property and all exposure pathways which have the potential to cause a significant threat. Therefore, there is no need for additional investigation/remedial work due to the chlorinated solvents or metals."

Remarks: "discovery on excavation - old spill next to tank - cleanup pending - removal of tank pending -"

DEC Memo:	"Sangesland spoke to Mike at STV Inc. (consultant to NYC School Construction Authority). Old abanonded school. Vandels have taken copper wires and pipes out of the building. Some oil contamination in a 2 ft x 2 ft pit in the basement floor. Tank was still intact with oil in the tank. Consultant hired by School Construction Fund will drain the tank, clean the basement floor (power wash) and will dig out the pit location, do end point samples. Unknown if the city will renovate the building or knock it down and rebuild. 10/2/07- DEC piper left message for mike req callback and info. 1/28/07- Piper reviewed closure report. As per report, spill was due to vandalism. Contractor cleaned floor and excavated area of concern. Endpoints revealed low level svoc's in one location. All others below TAGM or clean. This spill is closed. see e-docs if warranted."

DEC Memo:	"e2mis 152227 25-Feb-2004 12:08 Oper Superv G.Meiers 14850 reports while on location to inspect MH-9489 associated with Fdrs X0/ Fdr2X12 discovered 1 pint of cable oil on 75 gallons of water. No smoke or fire is/was involved. No sewers, waterways, or private property affected. There is D-fault at that location and the associated feeder(s) need to be deenergized before the cleanup can commence. Env tag 31941 was placed and a pcb sample on DD08222 was placed. Lab Sequence Number: 04-01403-001 PCBs < 1 ppm Flush Mech O.Negron 18400 reports MH-9489 was double washed and rinsed and CFS tanker removed 950 gallons of non-hazardous liquid and will remain on location due

MANHOLE # 9489 (Continued) **S106383100**

to oil and water still coming through the ducts. The flush truck removed 8lbs. of solids to be brought to Hellgate pit for temporary disposal and the tag is still in place until the cable is repaired. The repair in that location is on poly cable and is not the source of the oil. Operating Supervisor Joe McMahon, 14620, reports no oil is coming through ducts, clean water is coming from the ducts, the cable has been repaired, the tanker has been dismissed. There is no sign of source of oil remaining in the strucutre."

Remarks: "One Pint of cable oil was spilled in a manhole. Not sure of the source or cause. Cleanup has not been done at this time."

DER Facility ID:	269575
DEC Memo:	"1/27/05 TJD Tarek Khouri contacted Demeo on 1/24/05 to obtain status of report review for this site. Report is dated 1/13/05. Although a complete review of the submission had not been completed, a quick phone conference regarding this site took place. Contamination above TAGM has been identified through sampling. Langan proposes to close the tanks in place with no remedial action other than the removal of contaminated soils excavated by hand during the tank closure activities. This approach is proposed due to access constraints at this site. Demeo told Mr. Khouri that a new remedial plan would need to be developed to address the contaminated soil exceeding TAGM. An effort would need to be made to remediate impacted soils in situ prior to considering this site for closure. Mr. Khouri has stated he will discuss this with his client and resubmit a work plan to NYSDEC. 6/8/05 - Project transferrd to TLGibbons in Central Office, Albany 9/14/05 - Spoke with Craig Puerta, Langan Engineering (212-479-5400), contractor to Hostos Comm. College. Said site is a former gas station with two 2,000 gal diesel fuel USTs located on campus, surrounded by four trailers which makes access very difficult. They are looking for funding from DASNY before work begins. Preliminary data shows soils surrounding tank impacted above TAGM. Closing in place not an option so remedial work will require significant work to be done by hand to to limited access. Spoke with Art Fasilino, CUNY, 212-541-0440, who said that funding has been secured from DASNY (Samir Rimawi, 917-295-5291) and they are waiting on funding from CUNY. He indicated that this project was a low priority. 1/3/06 - Received call from Tarek Khouri, Langan (212-479-5450). Remediation work had begun with tanks being uncovered today. Tanks both filled with water/fuel mixture which was pumped out. Removed concrete above tanks, cut open and cleaned tanks. Cut through bottom of tanks which are resting on concrete. Bore through tank bottom and concrete and encountered bedrock. Bedrock @ 7' bgs. Tanks solid (not leaking) but piping to tanks leaking with stained soil and petroleum odor. Asked Tarek to send pictures of excavation. Pictures showed minor soil impacts, but very little soil on bedrock. Asked Langan to clean up contamination above bedrock and collect end point samples. 2/7/06 - Spoke with Mr. Khouri. Five endpoint samples, and one runoff water sample, were collected. 3/14/06 - Received closure report on 3/13/06. Only one sample showed elevated levels of VOCs, HT03A, primarily 1,2,4 and 1,3,5 trimethylbenzene. Toal VOCs from this sample were 54,348 ug/kg. This sample was collected from the minor soil remaining on top of competent, crystalline bedrock. The tanks were completely removed, all contaminated media was disposed at a permitted facility, and the excavation was backfilled with clean soil. Close spill."
Remarks:	"while drilling test holes at the site they found an abandoned tank with soil contamination around the tank."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ Con Ed e2mis #147408: 05-Mar.-2003 18:00 hrs. Environmental Flush mechanic T. Murphy # 21162 reports finding ~ 1 pint of unknown oil in sludge and 10 gallons of water from a 3rd party spill up the street while preparing to flush a vault for a transformer replacement. According to Mr. Murphy the oil smells like fuel oil and the affected area is ~ 200 feet in length. The crew will clean the affected area of street around the Vault to prevent further leakage and the cleanup will be conducted as a 50-499ppm PCB. Spill Tag # 36291 installed at vault. 06-Mar.-2003 04:00 Environmental Flush mechanic T. Murphy # 21162 reports that the affected area of of the street adjacent to the vault was double washed and Clean Ventures removed any oil. Double washed the floor and walls of vault2380. Clean Ventures removed all liquids and debris as 50 - 499ppm PCB. Crew removed environmental tag number 36291. Cleanup complete, crew on location T. Murphy 21162. R. Browne # 21646 06-March-2003 10:33 hrs Temp EPA # NYP004108320 assigned by ERT. 50-499 PCB check list pending from T.Murphy (21162) L.Fischer (55784) 06-Mar-2003 22:00hrs. 50 - 499ppm. PCB. Check list submitted to the EH&S Desk by T. Murphy # 21162."
Remarks:	"THERE IS AN UNKNOWN PETROLEUM SPILLED ONTO THE STREET AND RUNNING INTO THE ABOVE MANHOLE - IT WILL BE CLEANED UP AS 50-499 PPM / CON ED SPILL #147408"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region: 2
DER Facility ID: 372139
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 9/08/03 1541 Hrs Sawyer forwarded pbs report to Sigona for inspection. The pbs registation is overdue. 9/17/03 Rossan performed PBS inspection and found them removing tank for closure which opened another spill because of the contamination. 9/23/03 - Sawyer - Sent contaminated soil letter to 381 Canal Place Management. 2/11/04 1030 Hrs - Sawyer - Sent contaminated soil letter to Pride Funiture, Attention: Joseph Muller. 6/24/05 - Spill Lead_DEC Field changed to Grathwol . After repeated efforts by M. Haggerty to contact owner (received no cooperation) and 30-day Department letter requesting information was ignored, J. Grathwol visited the site on 2/16/06. Talked with employees of Pride Furniture. They stated they had no knowledge of the spill. Asked me to call back and discuss with owner. Called several times with no success, Pride Furniture staff stated the owner would call me directly, but it did not happen. Pride Furniture is heated by salamanders , torpedo-shaped heaters - no oil heat. Spill #8709462 is 3 tank failures with gross leaks and was closed because of the multiple spills at the same address. Pride Furniture phone number: 718-585-1400. Recommend this project as potential PIN project. {Grathwol} 9/11/06 assigned to bf 9/11/06 sent ttf old spill letter. bf Undated notes from telephone conference with Schretzmayer in the hard file, entered here 4/22/10: J. Urda case 4/30/09 report - no delineation done yet, wants site visit Phase II investigation Sept. '03 not in file (e-docs). Proposal is to delineate soil and groundwater determination. Will plan be approved by DEC? J. Schretzmayer wants site visit for boring locations. Last page - will send investigation report.
---------- 9/23/03 cont. soil letter sent ttf 001 & 002 closed removed 10/18/03 (not processed) 003 closed in placed 9/17/03 send cont soil letter? ++++++++++++++++++++++ NOTE: Report referred to above is not in the file. bf 8/7/12 bf: On 8/2/12 received call from Stephanie Davis of FPM Group (631)737-6200 ext.228. She is preparing a proposal for either investigation or remediation. She called back on8/6/12. She wanted to know where this case is as far as investigation and remediation. I told her that I needed to review the file and called her back on 8/7/12. Very little documentation found in e-docs. Found reports dated 10/1/03 (soil sampling), 12/3/03 (tank closure), and 4/30/09 (work plan) in OGC file. Ms. Davis requested copies of any reports regarding the ivestigation. Documents were e-mailed to her today . She sent the following e-mail: Brian As per our discussion, please provide a copy of the available technical reports for the above-referenced spill such that we may develop an appropriate scope of work for further investigation and/or remediation, as needed. If you have any questions, please contact me via email or the phone number below. Thanks again for your help in this matter. Stephanie O. Davis, CPG Hydrogeology Department Manager FPM Group 909 Marconi Avenue Ronkonkoma, NY 11779 (631) 737-6200, ext. 228 Fax (631) 737-2410 ----------end---------- 1/24/13 On 11/26/12, received sub-surface investigation work plan. bf 1/28/13 OGC sent letter to James Rigano, attorney, requesting an approvable work plan and notification for the continuing violation of a Commissioner's Order. Work plan is due in 45 days. bf 2/1/13 Yesterday, received updated work plan dated January 30, 2013. Sent

381 CANAL PLACE (Continued) **S103941473**

approval of the plan to Stephanie Davis, consultant. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 11/12/2013 - V. Brevdo Called Stephanie Davis of FPM Group, left voice mail inquring about the status of the project. V.B. 11/12/2013 - V. Brevdo Received call from Stephanie Davis of FPM Group. FPM implemented investigation work plan dated January 30, 2013 and previously approved by the Department (PBS Unit - Brian Falvey). FPM also submitted May 23, 2013 Subsurface Investigation Report, Tank Compliance, and Remedial Action Work Plan. Stephanie Davis e-mailed May 23, 2013 report via e-mail (previosuly was submitted to PBS Unit), which needs Department's review and approval. VB 11/13/2013 - V. Brevdo Current Status of the Project: Industrial / Commercial Building at 381 Canal Place, Bronx (Spill No. 9903367) (a.k.a. Gladiator Realty Corp. and Canal Management Corp.) This property is investigated and remediated under the January 14, 2010 Commissioner s Order in Matter of Gladiator Realty Corp. and Canal Management Corp. The Order requires, among other things, that Gladiator Realty Corp. investigate and remediate petroleum contamination at the site, and correct violations of State s PBS regulations. Historically the building on the site was used as a factory and warehouse. At present the building has several tenants, including a woodworking operation, a market and a warehouse. FPM Group has performed a subsurface investigation at the property in accordance with the Department-approved Subsurface Investigation Work Plan dated January 30, 2013. The investigation was conducted on March 19 to March 21, 2013. Although the investigation results indicated the presence of visibly impacted soil in proximity to the closed in-place USTs from between approximately 5 and 15 feet below the building floor, the soil sampling data demonstrated no exceedances of the Department-recommended soil cleanup objectives. The groundwater sampling indicated presence of VOCs and SVOCs at concentrations lower than NY State drinking water standards. FPM Group has proposed removal of free product on a monthly basis using bailers and/or absorbent materials until no product is detectable or until the thickness of product is reduced to a feasible minimum. A compliance issue associated with the closed tanks was also assessed during the course of this work. Subsurface Investigation Report, Tank Compliance, and Remedial Action Plan document dated May 23, 2013 was submitted to the Department for review and approval. On November 13, 2013 the Department has provided FPM group with comments on the May 23, 2013 document, requested submission of the detailed RAWP, including schedule of proposed remedial activities and Health and Safety Plan. FPM advised the Department they will submit a detailed RAWP that addresses Department s comments. VB 11/26/2013 - V. Brevdo e-mail from the Department to FPM, consultant for RP. November 26, 2013 Dear Ms. Davis: Could you please give me and estimated date when you think FPM will submit the detailed RAWP and address my November 13, 2013 comments on May 23, 2013 Investigation Report? Happy Thanksgiving to you. Vadim Brevdo 12/11/2013 - V. Brevdo Called Stephanie Davis of FPM group - left voice mail inquiring on the status of submission of the detailed RAWP for the project. V.B. 01/23/2014 - FPM submitted RAWP. VB 01/23/2014 - Completed reviw of January 23, 2014 RAWP. Sent e-mail to FPM containing questions and/or comments on RAWP. Current project status: Industrial / Commercial Building at 381 Canal Place, Bronx (Spill No. 9903367) (a.k.a. Gladiator Realty Corp. and Canal Management Corp.) This property is

381 CANAL PLACE (Continued) **S103941473**

investigated and remediated under the January 14, 2010 Commissioner s Order in Matter of Gladiator Realty Corp. and Canal Management Corp. The Order requires, among other things, that Gladiator Realty Corp. investigate and remediate petroleum contamination at the site, and correct violations of State s PBS regulations. Historically, the building on the site was used as a factory and warehouse. At present the building has several tenants, including a woodworking operation, a market and a warehouse. FPM Group has performed a subsurface investigation at the property in accordance with the Department-approved Subsurface Investigation Work Plan dated January 30, 2013. The investigation was conducted on March 19 to March 21, 2013. Although the investigation results indicated the presence of visibly impacted soil in proximity to the closed in-place USTs from between approximately 5 and 15 feet below the building floor, the soil sampling data demonstrated no exceedances of the Department-recommended soil cleanup objectives. The groundwater sampling indicated presence of VOCs and SVOCs at concentrations lower than NY State drinking water standards. FPM Group has proposed removal of free product on a monthly basis using bailers and/or absorbent materials until no product is detectable or until the thickness of product is reduced to a feasible minimum. A compliance issue associated with the closed tanks was also assessed during the course of this work. Subsurface Investigation Report, Tank Compliance, and Remedial Action Plan document dated May 23, 2013 was submitted to the Department for review and approval. On November 13, 2013 the Department has provided FPM group with comments on the May 23, 2013 document, requested submission of the detailed RAWP, including schedule of proposed remedial activities and Health and Safety Plan. FPM submitted a detailed RAWP on January 23, 2014. The proposed remedial action includes removal and proper disposal of free-phase petroleum product identified in three monitoring wells in proximity to the closed in-place USTs and associated fill port. Product monitoring, removal and disposal activities will be conducted under a site-specific Health and Safety Plan, which includes procedures to ensure the safety of remedial personnel, on-site workers, and the nearby community. Two months pilot test is proposed to ascertain the effectiveness of the proposed remediation. The Department reviewed RAWP on January 23, 2014 and requested several clarifications/revisions to the document. Clarifications/revisions are pertinent to verification of no residual free product remaining in closed-in-place tanks and description of the remedial goal. VB 02/05/2014 - V. Brevdo Recevied Revised RAWP from FPM dated February 5, 2014. All the Department’s January 23, 2014 comments (sent via e-mail) are addressed satisfactorily to the Department in the revised RAWP. Revised RAWP can be approved, but approval will be contingent on the successful completion of the pilot test and demonstration that the proposed remediation has reasonalbe expectation to be effective as a full-scale long term remedial approach. V.B. 02/05/2014 - V. Brevdo Reviewed Revised RAWP and issued approval letter. VB 04/15/2014 - V. Brevdo e-mail from FPM: Vadim, Please find attached the results for the product monitoring pilot test we conducted for the above-referenced site in March 2014. In general, we found that product levels decreased over the testing period and recommend that monthly monitoring be continued. Please feel free to contact me with any questions. Ben Ben T. Cancemi, CPG Senior Hydrogeologist Department Manager FPM group 909 Marconi Avenue Ronkonkoma, NY 11779 (631) 737-6200, ext. 209 04/16/2014 - V. Brevdo e-mail to FPM April

381 CANAL PLACE (Continued) **S103941473**

16, 2014 Dear Mr. Cancemi: I reviewed Product Monitoring Pilot Test Report prepared by FPM, dated April 15, 2014. I have the following questions pertinent to the report: 1) According to the approved Remedial Action Work Plan (dated February 5, 2014), the expected duration of the pilot test is two months. Given the pilot test commencement appears to be March 6, 2014, the pilot test should be completed by around May 6, 2014. Do you expect to complete pilot test by May 6, 2014? If not, when is the expected remedial pilot test completion date? 2) According to the schedule in the RAWP, A Pilot Test Report is supposed to be submitted to the Department upon completion of the pilot test. It is my understanding that the pilot test has not yet been completed and April 15, 2014 report is not submitted as a final pilot test report or in leau of final pilot test report. Final pilot test report is yet to be submitted. If my understanding is incorrect, please let me know. 3) The Department's February 5, 2014 RAWP approval letter states the following: Please note that this approval of the Remedial Action Work Plan is contingent on the successful completion of the pilot test and demonstration that the proposed remediation has reasonable expectation to be effective as a full scale / long term remedial approach. Review of the Table 1 Product monitoring data reveals that the amount of product recovered from well MW-1 during the March 2014 is 480 milliliters which is equal to 0.13 gallons. Total volume of product removed from all wells is 770 milliliters or 0.2 gallons. To me this appears as a very small volume. Have FPM evaluated a total volume of free product present in the subsurface at the site? Have FPM concluded whether this product removal rate is effective and whether this removal rate will ensure product removal completion within a reasonable time frame? Thank you, Vadim Brevdo 07/28/2014 - V. Brevdo FPM Group submitted product monitoring report dated July 28, 2014. VB 11/03/2014 - V. Brevdo FPM submitted Product Monitoring Third Quarter Report dated November 3, 2014. VB 03/03/2015 - V. Brevdo FPM submitted Product Monitoring Third Quarter Report dated March 2, 2015. FPM continues monitoring and product removal activities, and submitted Product Monitoring and Removal Report for the fourth quarter of 2014 on March 3, 2015. Over the course of monthly monitoring/removal events from July 2014 throughout December 2014, the thickness of product and removed product volumes in wells situated in the proximity to the closed in-place USTs continued to decrease. One of three recovery wells no longer contains free product. FPM will continue to perform the product monitoring and removal activities on a monthly basis. VB 03-24-2015 - V. Brevdo Ms. Mishelle Gambetta called and represented herself as doing research on the property at 388 Canal Place which they want to buy. Ms. Gandetta inquired about the contamiantion at 381 Canal Place. I (Vadim Brevdo) explained that 381 Canal Place has open petroleum spill case with NYSDEC, and the Department is overseeing the investigation and cleanup of 381 Canal Place. Remediation is currently in progress. With regard to detailed questions about the contamination I suggested that Ms. Gandetta can apply for the project files review under the Freedom of Information Law. I provided for the phone number and fax number to apply for FOIL. V. Brevdo 05-15-2015 - V. Brevdo Spill Case Closure Decision Industrial / Commercial Building at 381 Canal Place, Bronx (Spill No. 9903367) (a.k.a. Gladiator Realty Corp. and Canal Management Corp.) This property is investigated and remediated under the January 14, 2010 Commissioner s Order in Matter of Gladiator Realty Corp. and Canal Management Corp. The Order requires that

381 CANAL PLACE (Continued) **S103941473**

Gladiator Realty Corp. investigate and remediate petroleum contamination at the site, and correct violations of State s PBS regulations. Historically, the building on the site was used as a factory and warehouse. At present the building has several tenants, including a woodworking operation, a market and a warehouse. FPM Group has performed a subsurface investigation at the property in accordance with the Department-approved Subsurface Investigation Work Plan dated January 30, 2013. The investigation was conducted from March 19 to March 21, 2013. The soil sampling data demonstrated no exceedances of the Department-recommended soil cleanup objectives. The groundwater sampling indicated presence of VOCs and SVOCs at concentrations lower than NY State drinking water standards. FPM Group has proposed removal of free product on a monthly basis using bailers and/or absorbent materials until no product is detectable or until the thickness of product is reduced to a feasible minimum. A compliance issue associated with the closed tanks was also assessed during the course of this work. FPM submitted a detailed RAWP on January 23, 2014 which the Department approved on February 5, 2014. The proposed remedial action included removal and proper disposal of free-phase petroleum product identified in three monitoring wells in proximity to the closed in-place USTs and associated fill port. Two months pilot test was proposed to ascertain the effectiveness of the proposed remediation. On April 16, 2014, FPM submitted the Remedial Pilot Test Report following a series of pilot test product monitoring and removal events implemented throughout March 2014. FPM determined that the product thickness decreased over the testing period and recommended that monthly product monitoring and removal activities continue. The Department approved FPM s recommendation. FPM continued monitoring and product removal activities throughout 2014 and winter/spring 2015. On May 14, 2015, FPM submitted Product Monitoring and Removal Report for the first quarter of 2015, including Spill Case Closure Petition. Based on review of the free product monitoring and removal data, FPM has reached the following conclusions: Free-phase product is contained onsite to the proximity of the closed-in-place USTs and associated fill port. The product is confined to the property and is not migrating. Groundwater and soil have been sampled in the product area and downgradient and no exceedances of recommended cleanup values have been detected. Free product has been observed in two wells but has not been observed in four other wells, two of which are downgradient of the product area. Product thickness and removed product volumes declined early in the monitoring and removal process and have remained low 0.1 foot or less since that time. FPM concluded that product has been removed to the extent feasible. The completed remediation is protective of human health and the environment for the contemplated use of the site as a commercial warehouse, woodworking operations and market. The Department agreed with FPM that the spill case can be closed at this time. Spill Case is closed effective May 18, 2015. VB"

Remarks: "tank contained #2 oil - gross fail"

DEC Memo:	"1/16/20 - Sekhon 1, Approximately 5 to 10 gallons of UCON HTF 500 spilled on the ground from a 55-gallon drum. Product SDS identifies the chemical as propylene glycol monobutyl ether (95%) and n-phenyl-alpha-napthylamine (less than 2.4%). The spill was on asphalt which had a 1inch layer of soil/debris on top. A spill of white paint was also mixed in. 2)The drums have been placed on/under plastic, and are scheduled to be picked up for disposal by Eastern Environmental Solutions, Inc. tomorrow. 3)The asphalt/soil is being excavated and stockpiled and placed on separate plastic. EBC will collect a waste characterization soil sample from the stockpile to arrange for off-Site disposal. 4)EBC will be collecting 6 endpoint soil samples from the spill area after excavation is complete for laboratory analysis of VOCs 8260 and SVOCs 8270. 5)Notifier will prepare a Spill Closure Report with the lab results and a summary of the endpoint samples, figure showing spill location, manifests/disposal documentation for the drums and soil. 5/12/20-Lin-Non-hazardous material spill on asphalt with soil/debris on top that was cleaned up. Case closed. Spill transferred to DEC Lin for follow up (daytime runner). "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"03/03/11-Hiralkumar Patel. 3:22 PM:- spoke with Diane. she mentioned that elevator company was making repair. a repair person noticed a spill when came back from brake. one of the pipe broke and spilled oil onto elevator room. as per Diane's staff member, elevator room floor is covered with oil. oil got into a drain located outside of the elevator room. oil sheen found coming up from sewer manhole in parking lot closer to this elevator room. Diane mentioned that elevator has 280 gal hydraulic oil tank. Diane has contacted Clean Harbor to help in cleanup. Diane Macfarlane Hostos Community College Ph. (718) 518-4349 (O) (646) 235-2155 (C) PBS #: 2-452319. DEC Veronica responded. 03/03/11-Zhune visited the site. spill on the elevator's floor is all cleaned. Dunwell Elevator Industries, Inc. cleaned the spill. They will repair the elevator's pump that caused the spill. DEP was notified of oil into the drain. Dunwell Elevator Electrical Industries, INC. 718-388-7575- Victor Deolo Supervisor. Spill closed. "
Remarks:	"Caller advised 50 gallons of hydraulice fluid spilled into the elevator room and down a drain and now can see oil spilling out of a manhole cover in parking lot. Clean up is pending."

Town:	New York City
Record Added Date:	11/29/2017
Record Updated Date:	02/10/2021
Update By:	HMDUDEK
Site Description:	"Location: The site is located in an urban area at 414 Gerard Avenue in the Mott Haven neighborhood of the Bronx. The 12,600-square-foot (0.29 acre) lot is situated on the southwestern corner of the block bounded by East 146th Street to the north, Walton Avenue to the east, East 144th Street to the south, and Gerard Avenue to the west. Site Features: The site is developed with a vacant, one-story manufacturing building with a partial cellar. A 3,000-gallon No. 2 fuel oil aboveground storage tank (AST) was installed in the partial cellar in 1953 (New York State Department of Environmental Conservation [NYSDEC] Petroleum Bulk Storage [PBS] Site No. 2-207209). Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 6a, the site is located within the Lower Concourse Special Mixed Use Paired District (M1-4/R8A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R8 districts promote residential development. Zoning is consistent with the proposed mixed-use development. The surrounding area is primarily commercial and industrial, but also includes residential buildings, public parks, day care centers, and schools. As part of the June 2009 Lower Concourse Rezoning, the site was E-Designated for hazardous materials and noise (E-227 and City Environmental Quality Review [CEQR] No. 08DCP071X). Past Use of the Site: The site was an undeveloped vacant lot until at least 1928. A diner was located in the southern portion from 1935 to 1944; however, the site again appears vacant from 1946 to 1951. The existing on-site building was constructed in the early 1950s, and the site historically operated as a jewelry box manufacturer (Rocket Jewelry) from at least 1954 to 2016. From the 1950s through the 1970s, Rocket Jewelry manufactured jewelry packaging (including decorative boxes and textile covered metal boxes) and displays. During this time period, metal jewelry boxes were typically constructed using a mixture of metals including cadmium, copper, lead, nickel, and zinc. Lead-based paint may also have been used to decorate the outside of the jewelry boxes. Evidence of heavy machinery and nearby drains was observed throughout the first floor and partial cellar. In the 1980s, Rocket Jewelry moved the manufacturing processes overseas and maintained the Bronx-based warehouse for packaging and distribution until 2016. Site Geology and

FORMER ROCKET JEWELRY BOX SITE (Continued) **S121933785**

Hydrogeology: Based on findings from the Remedial Investigation, the site is underlain by fill material predominantly consisting of brown, fine- to coarse-grained sand with varying amounts of silt, gravel, concrete, brick, glass, ash, coal, slag, and debris. The fill was observed to depths varying between about 11 and 27 feet below grade surface (bgs) beneath the partial center in the western part of the site, and between about 9 and 16 feet bgs beneath the first floor in the eastern part of the site. Glacial till that predominantly consisted of fine- to coarse-grained sand with varying amounts of gravel and silt was observed below the fill. Bedrock has been encountered at depths ranging from about 20 to 50 feet bgs. Depth-to-bedrock increased from east to west across the site footprint. Groundwater was observed at a depth of about 20 feet bgs across the site footprint. The groundwater flow direction for the area surrounding the site is to the west towards the Harlem River."

Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), herbicides and pesticides. Soil vapor samples were analyzed for VOCs. Soil: The primary contaminants found in subsurface site soils are SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), and metals typically found in historic fill, which is generally present in the top 27 feet of the site. Seven PAHs were detected in soils down to 27 feet bgs during the RI, included but not limited to, benzo(a)anthracene at a maximum concentration of 5 part per million (ppm) (unrestricted use soil cleanup objective [UUSCO] is 1 ppm), benzo(a)pyrene maximum concentration at 3.9 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene at maximum concentration 4.5 ppm (UUSCO is 1 ppm), benzo(k)fluoranthene at maximum 1.4 ppm (UUSCO is 0.8 ppm), chrysene at maximum 4.9 ppm (UUSCO is 1 ppm), dibenzo(a,h)anthracene at maximum 0.55 ppm (UUSCO is 0.33 ppm) and indeno(1,2,3-cd)pyrene at maximum 0.52 ppm (UUSCO is 0.5 ppm). Metals, including barium, cadmium, copper, lead, mercury, nickel, trivalent chromium and zinc were found in site soils down to 24 feet bgs. Barium at maximum 716 ppm (UUSCO is 350 ppm), cadmium at maximum 2.76 ppm (UUSCO is 2.5 ppm), copper at maximum 55.5 ppm (UUSCO is 50 ppm), lead at maximum 64.9 ppm (UUSCO is 63 ppm), mercury at maximum 0.21 ppm (UUSCO is 0.18 ppm), nickel at maximum 32.4 ppm (UUSCO is 30ppm), trivalent chromium at maximum 31 ppm (UUSCO is 30 ppm) and zinc at maximum 113 ppm (UUSCO is 109 ppm). Total PCBs were detected in two samples at concentrations above the UUSCO of maximum 0.1 ppm. Three pesticides were detected slightly above the UUSCO. There were no herbicides detected at concentrations exceeding the UUSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: One VOCs was detected in groundwater, chloroform at 26 parts per billion (ppb) which is above the ambient water quality standard (AWQS) of 7 ppb. Two SVOCs were detected above standards as follows: benzo(a)anthracene at 0.03 ppb (AWQS is 0.002) and benzo(b)fluoranthene at 0.02 ppb (AWQS is 0.002 ppb). No PCBs, pesticides or metals of concern were detected in groundwater over standards. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Five soil vapor samples and one ambient air sample were collected and submitted for laboratory analysis of USEPA TO-15 VOCs. Tetrachloroethene (PCE) was detected in soil vapor at concentrations ranging from 9.9 micrograms per cubic meter (ug/m3) to 93.6 ug/m3. PCE was not detected in the ambient air sample. PCE s daughter product, trichloroethene (TCE), was detected at a concentration of 1.12 ug/m3.

FORMER ROCKET JEWELRY BOX SITE (Continued) **S121933785**

	Petroleum-related compounds including benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected at concentrations ranging from about 77 ug/m3 to 256 ug/m3 compared to an ambient air concentration of 8 ug/m3. Total VOC concentrations ranged from approximately 461 ug/m3 to 695 ug/m3, compared to an ambient air concentration of 18 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "
Health Problem:	"People are not expected to come in contact with contaminated soils unless they trespass on the site and dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into nearby buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion if the site is re-occupied or redeveloped. Sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	"6/18/08 bf: Sent ttf letter to: Ross Sposato Chairmasters, Inc. 200 East 146th St. Bronx, NY 10451 6/30/08 Received letter from Ross Sposato of Chairmasters. Tank tested on 5/9/08 and failed. Tank was excavated and they are in the process of isolating lines. Also received message from him on 6/26/08 stating the same. (718)292-0600 x-205. bf 7/29/08 On 7/14/08, received letter from Ross Sposato of Chairmasters. Advanced Tank retested tank and tank passed. Piping will be replaced. After he receives test results, he will send test results and PBS Application. Called Ross S. (718)292-0600 x-205. Returning his call. Left message that there is no fee for tank test processing. Also, noted that a reply to my letter for tank test failure is required to be prepared by third party and needs to explain contamination and repairs made. bf 8/25/08 Received passing tank test report. on 7/31/08. Reviewed and found it not acceptable because technician did not sign the report. Sent tt return letter to Ross Sposato at address above and included request for tank test failure letter response. bf 9/5/08 Yesterday, received message from

CHAIRMASTERS INC-200 E 146TH ST (Continued) **1000261378**

Ross of Chairmasters. Info was mailed yesterday. bf 9/13/10 Received call from Ross of Chairmasters. He wanted the status of his tightness test report. I told him I have not received the report nor did I receive a response to the ttf letter. He said that he will fax letter and report to me. bf 9/13/10 This afternoon received fax from ATS that the piping was replaced and there was no spill. Tank tightness test report is still needed to close this case. bf 9/13/10 later this afternoon, received passing tank test report by fax. NFA. bf 9/20/10 Received call from Ross Sposato requesting letter for closure. Faxed amnd mailed it to him. Fax:(718)292-0613. bf"

Remarks: "PBS No: 2-085464 lines in the petromiter failed"

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 04/16/2002 -site visit by Tipple -RAPID FUEL OIL DID DELIVERY AND SPILLED ONTO STREET/SIDEWALK. ONE OF THE CREW SAID THAT THE SPILL WAS CONTAINED BEFORE THE RAIN STARTED. WHEN I ARRIVED ON THE SITE THE SPILL EXTENDED ALONG EAST 140TH STREET FROM THE CORNER OF CANAL AVE TO THE CORNER OF RYDER. TWO MEN WITH SHOVELS A VAN, SPEEDY DRY AND OILY WATER FLOWING INTO THE SEWER DRAIN AT THE CORNER OF 104 AND RYDER. THE VAN WAS NEARLY FULL OF OIL SOAKED DEBRIS. I TOLD THE CREW THAT THEY MUST STOP THE OIL FROM REACHING THE SEWER IMMEDIATELY, CALLED THE OIL COMPANY AND TOLD THEM THAT THEIR CLEANUP CREW WAS NOT SUFFICIENT TO EFFECTIVELY CLEAN THE SPILL. I WAS ASSURED THAT ABC WAS CALLED TO COMPLETE THE CLEANUP. THE SPILL HAD NOT BEEN CALLED IN BY EITHER THE BUILDING MAINTENANCE OR THE OIL COMPANY. I ALSO CALLED DEP TO INFORM THEM OF THE OIL IN THEIR DRAIN. CALLED ABC ON TEUSDAY 4/16 CLEANUP COMPLETED.- 1/8/04-Vought-Spill closed as per Tipple. Spill on concrete and in drain with no pathways to subsurface or groundwater. Spill closed by Vought."
Remarks:	"CALLER IS A TRUCK DRIVER (HE SAYS HE IS ALWAYS ON THE ROAD & HAS NO CALL BACK #) - HE WAS TRYING TO MAKE A DELIVERY ON THAT STREET AND

SPILL NUMBER 0200438 (Continued) **S106002607**

COULD NOT GET DOWN THE STREET BECAUSE THERE WAS OIL ALL OVER THE ROAD"

DEC Memo:	"156726: 29-Dec-2004 10:45 hrs. Bx/West Sr. Engineering Tech. G. Graci # 42890 reported finding oil saturated arc-proofing and oil on the support rack arm of a cable joint on feeder 2X23 while conducting an inspection in manhole 3861 at E/S of Exterior St. 250 ' S/O E. 140 St. Bx. There was/is no sewers, waterways or private property affected. The crew hung an Environmental tag # 38348 and a D-Fault tag # 03421 but were unable to take an oil sample at this time. Cleanup pending feeder outage. This manhole is situated in a traffic lane and will require a back-up vehicle. 30-Dec-2004 11:00 hrs. Bx/West UG. Operating Supervisor D. Scarimbolo # 87659 reported that he took an oil sample from above the manhole and is sending it to the Astoria chemlab for analysis on COC# DD 21141. Cleanup pending feeder outage. 30-DEC-04 PCBs < 1.0 ppm 11-Feb-2005 15:00hrs. Bx/West Environmental Flush Mechanic R. Budhoo # 82277 reported that the hole was double washed and rinsed. The CFS tanker removed 150 gallons of liquid and the Flush Truck removed ~ 500 Lbs. of solids. The underground department are on location to remove the defective cable joint. Environmental tag # 38348 has been removed. CLEANUP COMPLETE. 08-Mar-2005 11:22hrs. (update) All work completed on 2-11-2005 3c600 cut out and removed new 1c750 epr pulled in and new raychem straight made and 'D fault tag removed. Location taken off C&D Fault list."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #144758: Senior Field Operator D. Mullan #20275 reports that while trouble shooting 2X12 he found that fault at the transformer with 50 gallons of dielectric oil on 400 gallons of water in TM 1676. There is no smoke or fire, no sewers or waterways, and no private property affected. Clean up pending crews. Liquid sample has been taken for pcb's, Clean up will be treated as 50-499. Environmental tag number is 37692, which fell into the oil, and was replaced with environmental tag number 37542. 20:41 tanker ordered. 20:50 flush crew dispatched. 27-AUG-2002 21:04 CIG McGuire # 61959 27-AUG-2002 21:45 DEP Rep on R. Diaz on location. 21:50 Flush Mech E. Henn on location. 22:00 ERT D. DUKE on location. Historic results are as follows: Distribution Area: Bronx Vault: 1676 - TRANSFORMER MANHOLE Location: 385 GERARD AV SWK NLY (L LEG) Sample Date, Analysis Date, Received Date, PCB(PPM), Lab Seq No 1/19/1987, 1/26/1987, 1/26/1987, 10ppm, 700908 Tanker scheduled for 23:30 tonight. 27-AUG-2002 23:00 Update: EPA ID # obtained at 21:00 from ERT D. Duke. 27-AUG-2002 23:30 Spring Scafolding company was contacted due to scafolding over part of the grating. The company was called and paged, but did not respond. Spring Scafold Companies phone number is 718-392-4921, and pager # is 917-241-9443. 23:45 EH&S Rep S. Marotta is on location. 28-AUG-2002 02:00 Flush Mech E. Henn Reports that the Astoria tanker removed 400 gallons on non-haz oil, and the flush truck remove 300 pounds of debris. The transformer will be drained when the unit has been CFR. There is no oil leaking at this time. The sump pit was found sealed with concrete. Clean up pending transformer removal. 29-August-2002 @ 06:36 hrs. Lab. results posted as follows: Page 1 of 1 8/27/2002 Consolidated Edison Environment, Health and Safety ChemLab NELAP NY Lab ID No: 10380 Lab Sequence Number: 02-08018-001 Date Approved: 8/27/2002 E2 Incident Number: 144758 Date Received: 8/27/2002 Chain of Custody ID: CC05654 Date Sampled: 8/27/2002 PCB analysis by EPA 608/8082 Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 < 1.0 ppm EPA 608/8082 21-OCT-2002 15:38 Environmental Flush Mech A O. Negron 18400 reports cleanup complete. 775 Gallons of NON-PCB oil and water was removed from the vault by tanker and 1200 pounds of non-hazardous solids were removed by the flush truck. The liquid waste will be transported to Astoria WWTP and the solids will be transported to Hellgate Flush pit. The tanker removed 90 gallons of oil from the unit. The capacity of the unit is 205 gallons, making the spill 115 gallons. The addition spill volume was report to ERT W. Capune 85485 at 15:39. Vault was double washed and rinsed. Cleanup complete. As noted above the sump was sealed with concrete, the discrepancy was 65 gallons and was mis-estimated during the initial report recovered from the vault. 21-OCT-2002 15:53 CIG T. Marcinek 87549 notified of update 15:49 Update 1/14/04 Transformer removal confirmed as per 10/23/03 entry in e2mis report."
Remarks: "PROBLEM WITH FEEDER. CONTAINED IN MANHOLE. 50 GALS ON 400 GALS OF WATER. CON ED 144758. CLEAN UP PENDING. UNK PCB 50-499 PPM."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US EPA TRIS (Toxics Release Inventory System) contains information

SPORT SCREEN INC (Continued) **1000446217**

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Update By:	JHOCONNE
Site Description:	"Location: The site is located at 261 Walton Avenue, Bronx, New York within an urban area. The site is about 27,454 square feet (0.63 acres) in area and is identified on the Bronx Borough Tax Map as Block 2344, Lot 60. The site is bound by industrial/manufacturing building to the north, Walton Avenue followed by industrial buildings to the east, a gas station to the south, and Gerard Avenue followed by the Major Deegan Expressway to the west. Site Features: The site contains a vacant six-story self-storage building, with associated garages and an asphalt-paved lot. Current Zoning and Land Use: The site is located in a M1-4/R6A light manufacturing and high density residential district. The site is also located in the MX-13 Special Mixed-Use District that was established in 1997.. The Special Mixed-Use District was designated to encourage investment in, and enhance the vitality of, existing neighborhoods with mixed residential and industrial uses for new mixed use communities. Past Use of the Site: Past site use included an electrical specialties and lumber storage facility (1908); an automotive wrecking yard (1909-1965); a card and paper warehouse (1927-1956); a brick, lime and cement manufacturing company with a 550-gallon gasoline underground storage tank (1935); an automotive repair facility (1936-1976); and a furniture warehouse and showroom (1977-2007). The site is currently vacant and developed with a six-story self-storage

LOT 60,TAXBLOCK 2344 (Continued) **S109942719**

	building, and associated garages and a parking area. Site Geology and Hydrogeology: Based on findings from the Limited Phase II Environmental Site Assessment performed in February 2012, the site is underlain by historic fill material consisting of predominantly fine- to medium-grained sand, with varying amounts of silt, clay, gravel, cinders, and brick fragments. The historic fill was observed to depths varying between about 10 inches and 5 feet below grade surface (bgs). Historic fill was generally underlain by silty sands, clay, and weathered rock. Refusal was encountered from about 10 inches to 9 feet bgs, and presumed as bedrock. Groundwater was not observed in the borings "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110004447796

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110004505991

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	1
Tank Id:	49928
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/01/1990
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NTFREEMA

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	272896

Equipment Records:

F00 - Pipe External Protection - None
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
B00 - Tank External Protection - None
C03 - Pipe Location - Aboveground/Underground Combination
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
I00 - Overfill - None
J03 - Dispenser - Gravity
L00 - Piping Leak Detection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel Tank in Concrete
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	09/06/2007
Capacity Gallons:	4000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Name:	DIAHANN MCFARLAND
Spiller Company:	HOSTOS COMMUNITY COLLEGE
Spiller Address:	500 GRAND CONCOURSE
Spiller Company:	999
Contact Name:	MICHAEL VANDERHEIJDEN
DEC Memo:	"CSL prepared and sent to Consultant: Woodard and Curran Attn: MICHAEL VANDERHEIJDEN 709 Westchester Ave White Plains, NY 10604 04/24/08-Vought-Called Michael VanDerheijden (Ph:914-448-2266 Fax:914-448-0147) and left message to return call to DEC. Owners contact as per PBS (Frank Virone 718-518-4476). Vought sent and faxed CSL with one month due date to mail address as per PBS #2-452319: Mr. Frank Virone Hostos Community College 500 Grand Concourse Bronx, NY 10451 DEC requires: 1)delineation of soil and groundwater contamination 2)collection of endpoint soil samples if excavation is performed 3)possible PBS update. 04/25/08-Vought-Received call from and spoke to Vanderheijden and data has not been received and product was present. Groundwater very shallow and some free product on groundwater. Depth to groundwater is one foot below grade. Sump five feet away and water in sump has been clean. Further action pending receipt of analyticals. Spill located in basement of building and spatial constraints may restrict excavation. Tank has been cleaned and filled with cement. Spill may be associated with an prior overfill. Tank that was abandoned was techinically as UST in a vault

HOSTOS COMMUNITY COLLEGE - TRAILER #5 (Continued) **1009312355**

in a two teir basement and only access to tank is via manholes. PBS will be changed from temporarily out of service to permanently closed and PBS registration was submitted as per Vanderheijden. Possible action may include additional borings once analyticals are received. Report will be received within two months and deadline extended till June 27, 2008. 05/02/08-Vought-Received call from and spoke to Vanderheijden and he received letter with one month due date and requested letter extending till 6/27/08. Vought sent email to Vanderheijden with above notes from 4/25/08 extending deadline. 05/29/08-Vought-Received fax from Woodward and Curran (Van Der Heijden) dated 5/29/08. 10,000-gallon #6 fuel oil UST located in a very confined area surrounded by electrical and boiler equipment that services the entire building . UST was closed including removal of product and filling with concrete slurry to close in place on 3/25/08. Soil and groundwater samples collected adjacent to the tank and droplets of oil were observed floating on top of the water . Groundwater analyticals showed no detections of VOCs or SVOCs. Proposal to install three additional borings and redrilling of original sample locations in floor and performance of a bail down test to examine product recharge into borings. Once all reasonably recoverable petroleum product has been removed, CUNY will cease recovery backfill holes and notify the DEC . DEC requires: 1)site plan 2)backfill holes only upon approval from DEC and absence of free product as opposed to reasbnably recovered. Vought called Van der Heijden and explained above requirements and requested site plan before approval can be provided. 10/03/08-Vought-Received emailed site plan from Van Der Heijden on 6/11/08. Vought called Van Der Hiejden to clarify pumps adjacent to UST location on site plan. Site plan also has two proposed sampling locations instead of three location as per 5/29/08 proposal. Vought left message to return call. Vought received callback from and spoke to Van der Heijden and pumps adjacent to UST on site plan are sump pumps that have had no history of product detection however two sampling locations farther away from two sumps had prior history of free product in borings. Van Der Heijden will install three to four additional borings to confirm the presence/absence of product and collect groundwater samples in locations of prior borings and assumed downgradient locations. Vought sent letter approving of 5/29/08 proposal with cc to Van Der Heijden. 07/27/09-Vought-Received call from John Virgie (Obrien and Gere-732-225-7380) and they will be replacing Woodward and Curran (former consultant) and they will be implementing scope dated 5/29/08 but only difference will be wells be installed instead of borings. DEC will receive report by 11/15/09. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 6/14/10 - Raphael Ketani. On 8/6/09, a letter was received from O'Brien & Gere confirming discussions between Mr. Vought and Mr. Virgie regarding the proposed subsurface investigation. On 8/10/09, a letter was received from O'Brien & Gere which had the same content as the 8/4/09 letter, but with the addition of an LSIR submission date and a remediation report submission date. Mr. Vought had received the 11/6/2009 Limited Subsurface Investigtion Report (LSIR) on 11/9/09. I reviewed the report today. The three groundwater samples were all non-detect for SVOCs and VOCs. The seven soil samples were non-detect for VOCs and almost entirely non-detect for SVOCs. The soil sample from MW-3 at 4 to 6 feet had a series of very low SVOC hits (some of which were exceedences for the benzo group of analytes), but the concentrations

HOSTOS COMMUNITY COLLEGE - TRAILER #5 (Continued) **1009312355**

are not typical of oil contamination. I tried to contact John Virgie of O'Brien & Gere (732) 225-7380 regarding the report and the need to do a boring at each end of the tank, but I could only leave a phone message. 6/15/10 - Raphael Ketani. I tried to contact Mr. Virgie on his cell (609) 306-0509 regarding the site investigation, but could only leave a message. 6/17/10 - Raphael Ketani. I tried to contact Mr. Virgie regarding the site investigation, but could only leave a message. Mark Randazzo of O'Brien & Gere (781) 883-6432 called in response to my attempt to contact Mr. Virgie. He said that he started the project and usually works on the CUNY site. He said that he is familiar with the project. I asked him why borings were not done at the ends of the tank as there seemed to be enough room to get some equipment to these locations. Mr. Randazzo said that he wasn't sure why. However, he said, the borings and wells that were installed were in an area that was lower than the tank and downgradient. Mr. Randazzo said that he will look at the project again and get back to me. 6/18/10 - Raphael Ketani. Mr. Randazzo called me back. We discussed the site and the presence of droplets of oil in the 2008 groundwater samples. He stated that O'Brien & Gere will bring the matter to the attention of staff at Hostos Community College regarding attempting to install two temporary wells (one at each end of the tank). The most contaminated soil sample would be taken from each boring and a groundwater sample. 6/23/10 - Raphael Ketani. Mr. Randazzo sent me the following e-mail today: O'Brien & Gere respectfully requests that you reconsider your request for additional soil borings and temporary wells in the area of the UST, based on the following: - wells were installed hydraulically downgradient from the UST and no oil was found; - No. 6 oil is characteristically not very mobile; - when the building is taken down, any limited LNAPL present in the area of the tank will be removed; - the sub-basement sump near the UST was found to be free of No. 6 oil; and - according to Hostos personnel, utility drawings in direct vicinity of the tank, electrical equipment, and pump area are not available. Based on this information we ask that you reconsider this request and close the spill number. 6/24/10 - Raphael Ketani. As the product lost is #6 oil which has a low concentration of volatile components, if any, and as no oil has been seen in the groundwater during 2009, and as there are no plans to show where the electrical lines are next to the tank - which poses a safety concern for drilling through the floor in the tank room, I am closing the spill case."

Remarks: "DOING SOIL BORINGS CAME UPON CONTAMINATED SOIL"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT DEC Sigona sent a notice regarding the tank test failure on 10/24/2002. BP PRODUCTS NORTH AMERICA, INC. SUITE 410, 1 WEST PENNSYLVANIA AVENUE TOWSON, MD 21204 ATTN: PAULA SKRYJA see also spill 9408104 10/24/02 Tightness test on tanks/lines and leak detectors - Two regular USTs and two super USTs failed on ullage bubbles. Stage II was not tested because of ullage problems on the tanks. Dispenser #8 taken out of service because it pumps gas into vapor line when pump handle is off. Reviewed 11/20/02 tank re-test results (received 1/8/03). Retested two regular unleaded and two premium unleaded USTs. All passed. Stage II was not tested because piping system needs to be reconfigured. 12/15/03 Left Paula Skryja voicemail message inquiring about status of site. PBS information shows five unleaded gas USTs were removed. 12/15/03 Spoke with Paula Skryja. Site was taken over from Gaseteria in August 2002. Some repairs were made to risers, no tank problems. Station was temporarily shut down until raze and rebuild. Gaseteria removed tanks 1.5 weeks ago. BP was on-site to oversee tank removal. Station to be back in service March 2004. Paula to forward information regarding initial TTF. (KMF) 12/26/03 Received information from Paula Skryja, BP regulatory assurance specialist. Tanks retested and passed on 11/20/02. Details of UST removal should be obtained from Gaseteria. (KMF) 9/19/05 - Spill transferred from Vought to Obligado 12/5/05 - Obligado - File Review: Baseline Assessment Report, submitted by Delta, 12/2/05. At time of assessment, site was an active GAseteria service station with 4 4000 gallon gasoline USTs and 1 4000 gallon

GASETERIA (Continued) **S105997104**

diesel USTs, 3 pump islands. Surrounding landuse is commercial. Sensitive receptor show Harlem River 500 ft soughwest of site. Closest school is 1400 ft northeast of site. Bedrock located at 8 to 12 ft below ground surface. Water is located in bedrock fractures between 8 and 15 ft bgs. Gw flows to southwest. Five soil borings conducted on Dec. 20, 2001. Only soil exceedences in one soil boring SB-3 (9-10.2) with 5880 ppb xylenes and 16,100 ppb napthalene. Total VOCs 81,402 ppb. Three temporary wells installed. Notable ground water results in ppb: (2/6 and 4/19/02) MW1 - benzene 233, ethylbenzene 539, MTBE 3070 MW2 - benzene 52.3, toluene 48, ethylbenzene 575, xylenes 1810, MTBE 122 MW3 - MTBE 50.2 (8/15/02) MW1 - benzene 205, ethlybenzene 435, MTBE 11000 MW2 - benzene 168, ethlybenzene 203, xylene 84.8 MW3 - MTBE 294 UST Closure Report, submitted by AGS, 12/03. On 11/20/03, 5 4000 gallon tanks excavated, Pump islands, piping, vent lines removed. 5 endpoint soil samples collected. IMpacts in only one soil sample, UST - SW Bottom, showing 5200 ppb xylenes. SVOC exceedences as well. One gw sample collected from pit water, showing 6.8 ppb benzene, 27 ppb ethylbenzene, 181 ppb xyelens, 89 ppb toluene. Excavated soil was reused as backfill. Recommends peparation of a Subsurface Investigation Work Plan to investigate and delineate the detected contaminates. UST Closure Report Addendum, submitted by AGS, 12/03. Letter report documents collection of seven samples below former seven despensers and collection of 5 samples at various pipin glocations. VOCs impacts were not detected. SVOCs were detected mostly PAHs. UST Closure Report Addendum No. 2, submitted by AGS, 9/04. Details discovery and abandonment of 3 unregistered and abandoned 550 gallon USTS. PBS registration number 2-191361 assigned on 9/3/04. 425 gallons of non DOT regulated waste liquid was removed from the two tanks. 3 soil samples were collected around the UST. USTs abandoned by filling with concrete slurry. No VOC exceedences detected from soil samples, minor PAH exceedences. Upon completion of the rebuiling activities AGS will prepare a Subsurface Investigation Work Plan to investigate and delineate athe detected contaminants. 12/7/05 - Meeting with ASR, Gaseteria, DEC. This site is scheduled for investigation in summmer 2006. 9/12/06 - Obligado - Emailed multi-site stipulation agreement to Gaseteria on 9/8/06. Sent original on 9/12/06. Due date for workplan is 4/1/06. 6/1/07 - Obligado - Phone conversation with Steve Muller to discuss schedule. New due date for workplan is 8/1/07. 9/25/07 - Obligado - Spoke to Steve Muller about this site. He requested proposing a workplan to collect samples from tank mat wells to determine if there is ground water contamination. I told him I would not accept this work plan and he must submit a workplan for well installation. He said he would submit the workplan today. 9/26/07 - Obligado - Received the Investigation Work Plan. 10/26/07 - Obligado - Reviewed the Subsurface Investigation Workplan. It proposes installation of 4 monitoring wells, collection of soil and ground water samples for 8260/8270 , well survey, and submission of summary report within 60 days. Sent approval email to Steve Muller. 1/30/08 - Obigado - Reviewed Subsurface Investigation Report. 3 monitoring wells were installed. Tank mat wells MWNW and MWSE were also sampled. Soil borings performed above bedrock and samples collected. MWs were installed into bedrock. No VOC impacts in soil above bedrock was above standards, minor SVOC impacts which may be attibutable to fill. Ground water impacts in 2 of 5 wells. Tank mat wells MWNW and MWSE were also sampled. Max BTEX is 579 at MW3, 247 at MWSE. The report recommneds monitoring for 2 more quarters. I

GASETERIA (Continued) **S105997104**

approved the report but required monitoring for 4 quarters at minimum. 5/20/08 - Obligado - Review 1Q08 monitoirng report. BTEX from ND to 272 ug/L. MTBE from ND to 9 ug/L. Will continue monitoring. 12/15/08 - Obligado - Meeting with Gaseteria/ASR/DEC. Gaseteria will submit Closure Petition. 2/2/09 - Obligado - Closure petition submitted. 9/14/09 - Obligado - Sent letter rejecting closure petition. Required soil borings in the vicinity of the tanks to document complete removal of contaminated soil, continued sampling of ground water for at least 2 more quarters. 3/12/10 - Obligado - JCB submitted a work plan to install 2 borings and collect soil and ground water samples in the vicinity of ht eUSTs to document contaminated soil removal. I sent an approval letter to JCB via email. I report will be submitted within 90 days. 4/7/11 - Obligado - I reviewed the RIR report. Soil contamination found in soil boring SB4 adjacent to MWSE. GW samples were collected and BTEX in SB4 was 287 ug/l. During the most recent monitoring event, elevated ground water concentrations detected in MWSE. BTEX was detected at 1591 ug/L in MWSE, including 560 ug/L Benzene. Concentrations in this well have been steadily increasing throughout 2010. I emailed Steve Muller to request the most recent data. 8/7/13 - Obligado - I reviewed the 1st Quarter 2013 report. Maximum BTEX concentrations are 51 ug/L. The report requests closures due to minimal exceeences. Concentrations have been consistently decreasing. This spill no longer appears to be a threat to human health and the environment. This spill is closed. Spill Closure Letter sent to Porcelli."

Town:	New York City
Record Added Date:	04/07/2014
Record Updated Date:	05/16/2019
Update By:	GWBURKE
Site Description:	"Location: The site is located at 477 Gerard Avenue, Bronx, NY on the northwest corner of the intersection of East 146th Street and Gerard Avenue. The site is bounded by the streets above to the east and south, a newly constructed hotel to the west, and a residential building to the north. The site is approximately 0.20 acres in size. Site Features: The site is currently vacant, cleared, and surrounded by a fence. Current Zoning and Land Use: The site is currently vacant and zoned M1-4/R8A as a special mixed-use district meant to enhance the vitality of existing neighborhoods with mixed residential and industrial uses. Past Use of the Site: The site was developed with commercial and industrial uses since at least 1908. Specific past uses include a lumberyard, a sign frame company, auto junkyard, and auto repair facility. Underground storage tanks (USTs) have been reported at the site on historical Sanborn maps, but none were found during the most recent investigation. Geology and Hydrogeology: The subsurface consists of a 15 to 16-foot deep historic fill layer. Beneath the fill layer, the site consists of unconsolidated sand and gravel layers to the depth of bedrock, which is approximately 300 feet below ground surface (bgs). Regional groundwater flows to the southwest towards the Harlem River. Depth to groundwater ranges from 14.5 to 19.5 feet below ground surface (bgs)."
Env Problem:	"Soil and groundwater has been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, poly-chlorinated biphenyls (PCBs), and metals. Soil vapor has been analyzed for VOCs. Soil: The primary contaminants found in site soils are polycyclic aromatic hydrocarbons (PAHs) and metals typically found in historic fill, which is generally present in the top 15-16 feet of the site, and PCBs. PAHs were detected in soils up to 16 feet below ground surface (bgs) during the RI, including but not limited to, benzo(a)anthracene at 1.8 parts per million (ppm) (UUSCO is 1 ppm) and benzo(b)fluoranthene at 2.2 ppm (UUSCO is 1.0 ppm). Metals were found at depths up to 20 feet bgs, with the highest concentrations residing within the upper 10 feet, including arsenic at concentrations up to 90 ppm (UUSCO is 13 ppm), barium up to 560 ppm (UUSCO is 350 ppm), cadmium up to 22 ppm (UUSCO is 2.5 ppm), copper up to 800 ppm (UUSCO is 50 ppm), lead up to 17,000 ppm (UUSCO is 63 ppm), mercury up to 1.4 ppm (UUSCO is 0.18 ppm), nickel up to 82 ppm (UUSCO is 30 ppm), and zinc up to 970 ppm (UUSCO is 109 ppm). During the Phase II investigation PCBs were found in a few locations up to 15.35 ppm. During the RI, PCBs were detected at two locations up to 0.523 ppm (UUSCO is 0.1 ppm). Like the PAHs and metals, PCBs appear to be coincident with the historic fill. Limited petroleum-related VOCs were detected marginally above UUSCOs during the Phase II investigation, but were not detected during the RI. Site-related soil contamination is not expected to be present off-site, but historic fill may be present off-site. Groundwater: The only VOCs detected in groundwater were p-isopropyltoluene at 25 parts per billion (ppb) (standard is 5 ppb), and 1,2,4-trimethylbenzene at 18 ppb (standard is 5 ppb). The contaminants found in groundwater may be from site-related activities or an off-site source, but are

477 GERARD AVENUE (Continued) **S120706172**

typical of background conditions in NYC. Two SVOCs were detected above standards, criteria or guidance values (SCGs) as follows: benzo(a)anthracene at concentrations up to 0.04 ppb (guidance value is 0.002 ppb) and one detection of benzo(a)pyrene at 0.07 ppb (standard is non-detect). No PCBs, pesticides or metals of concern were detected in groundwater over SCGs. It s unclear whether contaminated groundwater extends off-site; however, since the concentrations are low and typical of NYC background concentrations, no off-site investigation is warranted. Soil Vapor: Several VOCs were detected in soil vapor. However, the only chlorinated VOCs detected were tetrachloroethene (PCE) at 162 micrograms per cubic meter (ug/m^3), 1,1,1-trichloroethane at 12.6 ug/m^3, and trichloroethene (TCE) at 1.28 ug/m^3. Data do not indicate off-site soil vapor intrusion is a concern for off-site buildings."

Health Problem: "People may contact contaminants in soil or groundwater if they dig below the surface or contact contaminated groundwater. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Tank Info:

Tank Number: 001
Tank Id: 34190
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 02/28/1974
Capacity Gallons: 10000

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: "Location: The 355 Exterior Street Site is located in an urban area in the Mott Haven neighborhood of the Bronx. The property is bounded by commercial properties to the north and south, Exterior Street to the east, and the Harlem River to the west. Site Features: The site contains an asphalt paved parking lot and an approximately 31,850-square foot warehouse building. The property is currently unoccupied. Current Zoning and Land Use: The property is zoned R7-2 residential and is surrounded by similarly zoned properties. Proposed redevelopment includes a mixed-use building, open landscaped areas, access roads, and sidewalks. Past Use of the Site: The subject property was first developed in the early 1900s and was used as a freight train support facility and lumber supply building until circa 1966. All infrastructure supporting the freight train operation was removed from the site at which time the use of the property transitioned to commercial use and parking. After 1966, the site use consisted of mixed commercial use including lumber distribution, a roofing company and Borax Paper Products. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists of sand and gravel with fill material (brick, asphalt, and wood) underlain by silty sand and clay. Evidence of historic urban fill material was observed at depths up to ten feet below ground surface (bgs) at several locations across the site. Groundwater was encountered between eight and ten feet below the surface at the site and flows to the west. "
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern for the site include SVOCs and metals. Soil: Thirty-two soil samples were collected during the Remedial Investigation (RI). There were no exceedances of VOCs. Several SVOCs exceed the restricted residential use soil cleanup objectives (RRSCOs) across the site, including benzo(a)pyrene at 110 parts per

355 EXTERIOR STREET SITE (Continued) **1009243206**

million (ppm) and benzo(b)fluoranthene at 120 ppm, both compared to the RRSCO of 1 ppm; and indeno(1,2,3-CD)pyrene at 61 ppm versus the RRSCO of 0.5 ppm. These exceedances appear to be related to petroleum contaminated soils that exhibited odor and staining. There were exceedances of metals, including, but not limited to, maximum levels of arsenic at 80.2 ppm compared to the RRSCO of 16 ppm; copper at 16,300 ppm compared to the RRSCO of 270 ppm; and lead at 3,160 ppm compared to the RRSCO of 400 ppm. There were no exceedances of PFAS, PCBs or pesticides. The highest detection of PFAS was 0. 619 parts per billion (ppb), compared to the screening value of 1.1 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Eight groundwater samples were obtained as part of the RI. Six samples detected SVOCs including, but not limited to, maximum concentrations of benzo(a)pyrene at 0.15 parts per billion (ppb) and indeno(1,2,3)cd-pyrene at 0.09 ppb, compared to their ambient water quality standard (AWQS) of 0.002 ppb. Metals detected include, but are not limited to, maximum concentrations of copper at 398 ppb compared to its AWQS of 200 ppb, and lead at 203 ppb compared to its AWQS of 25 ppb. There was one sample with minor exceedances of VOCs. There were no exceedances of pesticides or PCBs. The highest detection of PFOA was 43.2 parts per trillion (ppt), and the highest detection of PFOS was 32.3 ppt, which both exceed the maximum contaminant limit (MCL) of 10 ppt for each compound. These maximum concentrations were found at the upgradient site boundary. There were two detections of 1,4-dioxane, but these results did not exceed the AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Four soil vapor points were sampled during the RI. Multiple VOCs were detected in each soil vapor sample collected from the subject property. Petroleum related compounds, such as benzene and toluene were detected in each soil vapor sample at relatively low concentrations. Chlorinated VOCs such as carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene (TCE), methylene chloride, tetrachloroethene (PCE), 1,1,1-trichloroethane and vinyl chloride were not detected, with the exception of PCE in each soil vapor sample with a maximum concentration of 31.3 micrograms per cubic meter (ug/m3). Data does not indicate any off-site impacts in soil vapor related to this site.
"

Health Problem: "The site is completely fenced which restricts public access. People who dig below the ground surface may come in contact with contaminants in soil. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by site-related contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion is not a current concern on-site, however the potential exists for inhalation exposure from soil vapor intrusion in any future on-site building construction and occupancy. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo: "5/23/19 - Sekhon The property owner-- 355 Exterior Street Associates, LLC c/o The Lightstone Group LLC 1985 Cedar Bridge Ave., Suite 1 Lakewood, NJ 08701 Attn.: Bryan Ramm bramm@lightstonegroup.com PW Grosser in the process of completing our Phase II ESA for the property. While reviewing the preliminary analytical data, they identified VOCs in excess of Restricted-Residential Use Soil Cleanup Objectives and Ambient Water Quality Standards at an isolated area. There is no documented history of tanks at the site and not aware of an onsite source at this time. 1,2,4-Trimethylbenzene --------160 mg/kg 1,3,5-Trimethylbenzene----------63 mg/lg Ethylbenzene ----------1.1 mg/kg n-Butylbenzene ----------17 mg/kg n-Propylbenzene ----------33 mg/kg and sec-Butylbenzene ----------24 mg/kg in the soil at SB009_E (soil sample is from the smear zone) and Isopropylbenzene ----------10.6 ug/L n-Propylbenzene ----------16.4 ug/L and sec-Butylbenzene ----------5.96 ug/L in the groundwater at MW004. Once the report will be ready, PW Grosser will forward to DEC for our review. Case discussed/transferred to DEC Kumar for follow up. 05/23/19-Hiralkumar Patel. 1:17 PM:- received Phase I report from Derek. site is occupied by one commercial-use building and an asphalt parking area. site appears to have been historically used commercial and industrial proposes, including a lumber yard from 1908 to 1924, and a freight train support facility from approx. 1928 to 1966. between 1966 to current day, the site appears to be utilized for mixed commercial use including lumber distribution, a roofing company and Bronx Paper Products. 06/04/19-Hiralkumar Patel. received email from Derek (at 2:22 PM on 06/03/19) including copy of BCP pre-application worksheet. 09/24/19-Hiralkumar Patel. 1:03 PM:- sent email to Derek inquiring updates. 1:29 PM:- received email from Derek. he mentioned that they had pre-application meeting with the NYSDEC and are currently preparing the BCP application and the Remedial Investigation Work Plan (for additional delineation of petroleum). documents will be submitted next week. 12/04/19-Hiralkumar Patel. 1:59 PM:- spoke with Derek. he mentioned that a supplemental investigation was conducted at the site and a remedial investigation work plan has been drafted. investigation report and RIWP will be submitted with BCP application by end of this week. asked Derek to send documents for review. informed him that the case will be managed by Spills unit until the site is accepted in BCP. 04/22/20-Hiralkumar Patel. while searching remediation database, noted BCP case # C203129 for the subject site. reviewed BCP files on DECDocs. as per letter dated 04/17/20, the Department has accepted the BCP application and sent an agreement for signature. the signed agreement is due within 60 days (06/16/20). 05/22/20-Hiralkumar Patel. reviewed DECDocs for BCP # C203129. the BCP agreement was accepted/signed on 04/30/2020. case assigned to DEC Walsh, BCP project manager. 12:10 PM:- sent email to DEC Walsh and informed him about case transfer. email copied to DEC Austin."
Remarks: "in parking lot - in soil and groundwater - cleanup pending"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

AMOCO-PEREZ 13305 (Continued) **1001171440**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Program:	BCP
Site Code:	606217
Acres:	1.340
HW Code:	C203139
SWIS:	0301
Town:	New York City
Record Added Date:	06/03/2020
Record Updated Date:	03/16/2021
Update By:	JCGRATHW
Site Description:	"Location The 399 Exterior Street Site is located in an urban area in the Mott Haven neighborhood of the Bronx. The property is bounded by commercial properties to the north and south, Exterior Street to the east, and New York State Department of Transportation (NYSDOT) owned land to the west. Beyond the NYSDOT owned land is the Harlem River. Site Features: The site contains an asphalt paved parking lot. The property is currently unoccupied. Current Zoning and Land Use: The property is zoned C4-4 (Commercial and residential) and is surrounded by similarly zoned properties. Past Use of the Site: The subject property indicates that it was first developed in the early 1920s and was used as a freight train support facility until circa 1975. Infrastructure supporting the freight train operation was removed from the site at which time the use of the property transitioned to a parking lot. Between 1975 and the early 1990s the site was inactive. From the early 1990s to 2019 the site was operated as a parking area for school buses. Site Geology and Hydrogeology The stratigraphy of the site, from the surface down, consists of sand and gravel with fill material (brick, asphalt, and wood) underlain by silty sand and clay. Evidence of historic urban fill material was observed at depths up to ten feet below grade at several locations across the site. Groundwater was encountered between eight and ten feet below the surface at the site. Regional groundwater flow is estimated to be toward the west."
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/31/2002 - Sangesland spoke with Isaac at Petroleum Tank Cleaners (718-624-4842). PTC was doing some excavations around the stick valves of several buried tanks at Lincoln Hospital. PTC has started excavations in the area and will continue with hopes of getting clean end point samples. Tanks were probably tank tested recently. Sangesland will check PBS for the site. 8/2/2002 - Sangesland spoke with Isaac at PTC. He said they dug out quite a bit of contaminated soil, but didn't get it all. Because of the location of the excavation, PTC had to back fill the site with sand. PTC says they found an old gasoline tank which was empty, but had not been closed out. This tank was located adjacent to the fuel oil tanks they knew about. PTC was given direction to: 1) Delineate the site in 3-D. 2) Determine GW level and direction 3) Prepare & submit a remediation

HOSPITAL (Continued) **S106006138**

work plan 4) Process the documentation to properly close out the tank(PBS) 8/2/2002 - Mark Robbins contacted the DEC to say his firm (HydroTech 631-462-5866) was going to bid on doing a delineation/remediation at the site. 8/13/2002 Sangesland spoke with Mark Robbins. Mr. Robbins requested a letter from the DEC outlining the list of work required on this site. This is needed by the Hospital to process a purchase order. 4/29/2005 Sangesland spoke to Mark Robbins at HydroTech. They have 4 wells which have been under long term monitoring. Mark believes the site may be close to close out. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. 06/03/14-Hiralkumar Patel. visited site. met John Healy at the hospital. informed him about an open spill case. he has no knowledge of this case as he was not working at the facility in 2002. as per PBS record, the site has total of eight (8) active tanks. he mentioned that one 1(1) 10,000 gal diesel UST is located along E 149th Street. two days tanks (one 100 gal and one 275 gal) for diesel product are on building's roof. the remaining five (5) tanks (one 10,000 gal diesel and four 50,000 gal #2 fuel oil) are located underground, in front of the EMS entrance along Park Ave. found total of six (6) monitoring wells around the tank field along Park Ave. Mr. Healy mentioned that there was an old gasoline UST in area of fuel oil tank field. he will look for any environmental reports. asked him to check and sample existing monitoring wells at the site. John Healy Sr. Stationary Engineer Engineering Department Lincoln Hospital 234 E 149th Street Bronx, NY 10451 Ph. (718) 579-5680 (O) (347) 865-3201 (C) Fax (718) 579-4758 email: john.healy@nychhc.org reviewed available documents:

HOSPITAL (Continued) **S106006138**

reported on 03/02/2004 as 50,000 gal #2 oil tank (tank # 4) failed a tightness test. tank was repaired and tested tight. case closed. spill #: 0912680 was reported on 03/05/2010 as 25 gal diesel spilled onto parking lot and storm drain due to overfill. case closed and referred to spill #: 0912687. spill #: 0912687 was reported on 03/05/2010 due to diesel spill onto parking lot and storm drain. case closed. spill #: 1206812 was reported on 10/10/2012 as 10,000 gal diesel tank (tank # 6) failed a tightness test due to loose gasket. case closed. spill #: 1502628 was reported on 06/09/2015 as 50,000 gal #2 fuel oil tank failed a tightness test. case still open. a TTF letter was sent on 06/16/2015. 1:02 PM:- spoke with Angelo (718-579-4645) in facility department. he mentioned that John Healy is no longer working at the site. he asked to contact Patrick Hallahan. Patrick Hallahan Chief Engineer Ph. (718) 579-5680 email: patrick.hallahan@nychhc.org 1:05 PM:- left message for Mr. Hallahan. 1:11 PM:- spoke with Dave Krochko (914-448-2266) at Woodard & Curran regarding gw sampling activities. he mentioned that they never received signed proposal from the property owner and still waiting for reply. 2:53 PM:- called office of NYC Health and Hospitals Corp. for point-of-contact regarding the site. site representative asked to send letter to Mr. Raju's attention. NYC Health & Hospitals Corp. 125 Worth Street New York, NY 10013 Attn.: Ramanathan Raju Ph. (212) 788-3321 3:20 PM:- sent letter to Mr. Hallahan and Mr. Raju including copy of letter dated 08/14/2002 and email dated 06/16/2014. asked them to submit report by the end of 10/16/15 including groundwater sample results and flow direction. also asked them to immediately renew PBS registration. letter emailed to Mr. Hallahan. 09/18/15-Hiralkumar Patel. 11:53 AM:- received message from Evan Trumpatori. he inspected site yesterday to verify location of each monitoring well. during inspection, he noted that five of the wells are actually stick lines for USTs. he only found two (2) 1-inch wells. Evan Trumpatori Woodard & Curran Ph. (914) 294-2414 (O) (631) 662-9991 (C) email: etrumpatori@woodardcurran.com 1:25 PM:- spoke with Evan. asked him to sample the two existing wells. 10/20/15-Hiralkumar Patel. received email from Evan (at 4:32 PM on 10/15/15) including sampling report. abstract: - the nearest surface body is the Harlem River, located approx. 1,800 ft west of the site - five of the seven reported monitoring wells were product level gauging ports for USTs - the remaining were 1-inch wells - no free product was present in either well - marginally elevated PID readings (6.5 ppm in MW-1 and 0.3 ppm in MW-2) were noted in both wells and petroleum odor was observed in well MW-2 - both wells were installed to a depth of approx. 20 ft bg - depth to groundwater was approx. 15 ft bg ---------- - few VOC compounds noted above limit (max. 46 ppb of n-Propylbenzene) - recommended installation of an additional monitoring wells to determine site specific groundwater flow direction report includes google view of the site with two well locations, but does not include site sketch with tank systems and its gauging ports. 10:07 AM:- sent email to Evan and asked to submit a site sketch including tank systems, its gauge ports and existing wells. email copied to Leonard Balgobin (Leonard.Balgobin@nychhc.org), Dave Krochko (dkrochko@woodardcurran.com) and Michael Heijden (mvanderheijden@woodardcurran.com). PBS registration has not been renewed yet. 10/23/15-Hiralkumar Patel. 9:22 AM:- received email from Evan including a google view. as per the submitted map, the north end of the four 50,000 gal tanks are under the existing building.

HOSPITAL (Continued) **S106006138**

10/26/15-Hiralkumar Patel. 10:17 AM:- spoke with Evan and inquired him about position of north end of the four 50,000 gal tanks (under the building?). he mentioned that the google pic is old and currently there is a paved concrete area. so north end of the tanks are not under the building. asked Evan to submit a line drawing (with scale). 11/06/15-Hiralkumar Patel. 1:58 PM:- received email from Evan including a scaled site map. 12/02/15-Hiralkumar Patel. after discussing with DEC DeMeo, case closed based on available information (source removal, minimal impact to groundwater and no planned change of property use). PBS registration has not been renewed yet. 2:01 PM:- sent spill closure letter to Mr. Hallahan. letter emailed to Mr. Hallahan and Evan. **also refer spill #: 1502628.**"

Remarks: "cleanup in progress"

HOSPITAL (Continued) **S106006138**

DEC Memo: "4/1/21-Lin-The contract was putting in test pits and found staining and petroleum odor at 17' to 20'. Groundwater was encountered at that depth and sheen was observed on the groundwater. They will take soil and groundwater samples. Plan to install three (3) USTs, two (2) 30,000 #2 fuel oil and one (1) 25,000 gallon diesel to replace current USTs on-site. Previous spills on this property #1502628, and 0204573. PBS#2-327727 Construction Manager: Tpipkin@guthdeconzo.com 410-924-2790 4/7/21 - Sekhon Site map DECDOCs. Awaiting lab results. 4/9/21 - Sekhon Email from Tyler Pipkin - Good Morning Harmandeep and Lin, Please see below from TRC, NYPA s third party testing company, we should have the official report sometime next week. A corroded metal container filled with PCM was removed from approximately 14 feet below grade near the northeastern area of the Site. Following removal, it was noted that the container contained approximately 5 corrosion holes, ranging in size from - inch to 1-inch diameter. The container was open on one end. Approximately 5 cubic yards of PCM were also removed from the excavation near the former container location. TRC screened removed soil using a photoionization detector (PID) in order to confirm all impacted soil was removed and segregated appropriately. Unimpacted soils, exhibiting no PID readings or visual of olfactory evidence of petroleum contamination, were observed at the excavation sidewalls and base following PCM removal. The impacted soil was segregated from clean soil and stockpiled on poly sheeting onsite. The Contractor indicated the container and PCM will be covered with poly-sheeting until offsite disposal at a later date. The contaminated soil does not appear to be associated with the existing, in-service underground storage tanks (USTs) onsite as petroleum impacts were noted only in the area of the container excavation, which is approximately 50 feet from the location of the existing USTs. Groundwater was not encountered in the excavation. Following removal of the container and petroleum-impacted soils, TRC collected endpoint samples from the excavation. Four (4) sidewall samples and one (1) excavation base sample were collected from the excavation. The samples were collected for volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs) listed in Tables 2 and 3 of the NYSDEC Commissioners Policy-51 guidance document. The samples will be analyzed on a 7-day turnaround time. Please note the excavation was backfilled following endpoint sample collection. I can confirm that the container and PCM has been covered and properly isolated with poly-sheeting. Thank you. Tyler Pipkin Construction Manager"

Remarks: "doing excavation at the hospital - installing new tank - came across contaminated soil - would like callback to discuss the issue"

DEC Region:	2
DER Facility ID:	100552
DEC Memo:	"This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 07/12/04 BTEX at 14,200 ppb in MW10 4/2004 gw sample. MW10 on downgradient edge of 17-K7E (southbound side) Rommel 3/20/07 - Haggerty - Assumed management of site. Site includes both the northbound and southbound stations (70 and 71 Major Deegan Expressway). 3/27/07 - Haggerty - Approved Subsurface Investigation Work Plan 11/20/07 - Haggerty - approved SSIWP. Bedrock MWs and soil borings around current dispenser islands and tank fields proposed. 6/16/08 - Haggerty: approved Preliminary Feasibility Investigaion

EXXONMOBIL (Continued) **S121988503**

Report/Site Statue Update Report dated 6/12/08. Proposed installation of 8 additional injection points as well as a proposed Chemical Oxidation Pilot test. Reviewed expanded groundwater parameters to determine whether this site is suitable for this technology. 3/30/09 - Haggerty: review Feasibility Investigation Report for the RegenOx injection Pilot test. Pilot test shows favorable results however ExxonMobil proposed an Exposure Assessment in an attempt to close out the spill. 5/20/09 - Haggerty: spoke with ExxonMobil at our bi-annual program meeting. ExxonMobil will prepare RAP for further injections. PM explained that an Exposure Assessment can only be submitted when remediation is complete and residual contamination exists, not in place of remediation. Full Scale injection will be implemented. Referred site to OGC for Consent Order. Mobil proposed submitting the RAP by 12/31/09. 11/4/09 - Haggerty: met with Exxon at our bi-annual program meeting. At our last program meeting, the Dept. required them to perform full-scale injection under a RAP/ Consent Order. ExxonMobil legal states that they will not sign a Consent Order without an approved RAP and CAP. Therefore, the Dept. will issue a PIN to complete the remediation. 11/3/09 - Haggerty: PIN 05118 issued. January 2010 - Dept. excecuted access agreement with the NYC Dept. of Parks which owns the land (Major Deegan Expressway runs through Van Cortlandt Park). The gas stations are leased from the NYC Parks. PM sent Underground Injection Control (UIC) EPA 30 day notification on 12/28/09 and received EPA response on 1/19/10. February 2010 - RegenOx injection took place on 2/17/10 after receiving access from Parks Dept. March 2010 - First post-injection sampling took place on 3/17/10. All wells below 1,000ppb of BTEX May 2010 - BTEX concentrations rebounded which is not uncommon. Additional monitoring required. Unfortunately, due to the lack of funds in the Spill Fund, all future work has been postponed until further notice. August 2012 - received permission to conduct one round of GW sampling December 2012 - reviewed groundwater sampling report and VOC concentrations have decreased. 1/4/18 - Haggerty: Monitoring and injection wells decommissioned and restored by DEC callout. Spill closed does not meet standards."

Remarks: "3K TANK (NOT INVOLVED), LINE TEST ONLY FAILED PETRO TITE WITH A LEAK RATE OF -.028GPH, DISCHARGE LINE TEST FAILED , TANK SYSTEM TAKEN OUT OF SERVICE."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/04/2003 - Closed Due To The Nature / Extent Of The Spill Report1/2/03 Reassigned From Sigona To Foley. Investigation Being Performed By Spartan Amoco Under Spill #9909670. Open Mobil #9208906.3/3/04 As Per The Closure Request Report Submitted For Mobil By Gsc, Spill #8905353 Initiated A Subsurface Investigation Conducted From 12/11/89-1/10/90 Which Included Installation Of 5 Mws (Mw-1A Thru Mw-5A). Vocs Were Above Groundwater Standards. This Was Summarized In The February 1990 Roux Subsurface Evaluation Report. Mw-1A Through Mw-5A Were Destroyed (4/90-11/91) Due To Construction Activities Conducted By Amoco. Five 4000Gal Gas Usts, One 550Gal Waste Oil Ust, And One 550Gal Fuel Oil Ust And Piping Were Removed From Site.A Subsurface Investigation Conducted In April 1991 Included Installation Of Two Soil Borings And One Monitoring Well(Mw-6). Results Were Summarized In 6/91 Roux Supplemental Subsurface Investigation Report.A Subsurface Investigation Conducted In November 1991 Included Installation Of 11 Monitoring Wells (Mw-1 Through Mw-5 And Mw-7 Through Mw-12) And One Air Sparge Well (Sp-1). Results Were Summarized In A Gti Report.Spill #9208906 Was Issued To The Site On 11/2/92 As A Result Of Contaminated Soil Observed During Amoco Site Construction Activities."
Remarks:	"4K TANK FAILED PETRO-TITE. L R = 1 GAL / 30 MIN. CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS. "

DEC Region: 2
DER Facility ID: 218930
DEC Memo: "PBS 2-156590 1/20/04 File review (Foley): Prior to divesting this site in March 1990, a site assessment was performed by Roux (hired by Mobil) which indicated elevated BTEX existed in both groundwater and soil, but no free product was found. Upon transfer of property(8/90), the new owner began to install new USTs. During tank replacement, 875 tons of contaminated soil was removed and disposed of. During construction, two upgradient wells were destroyed. Three downgradient wells remained intact. The two wells which were destroyed showed ND for BTEX during sampling. In May 1991, there was an apparent vapor problem in the kiosk at the now active Amoco station. Amoco installed a venting system to alleviate the problem. Based on this, Mobil installed two borings and one well in the vicinity of the kiosk. The report indicated that the soils surrounding the kiosk did not contain very high levels of BTEX in soil. The monitoring well installed contained 0.01' of product. This well is upgradient of all former Mobil tank areas. Additional constuction at the site for a car wash has destroyed three downgradient wells. Thus, only one well remains on the property. However, upon completion of the construction, up to ten additional wells shall be installed at the site. Wells will be installed after construction is completed. 11/91 Eleven monitoring wells and a sparge point were installed. 12/9/91 MW-11 had 0.84' of product. 1/22/92 MW-11 had 0.21' of product. 2/20/92 MW-11 had 7.16' of product. A vac truck has been scheduled on a biweekly basis to extract LNAPL from MW-11. 3/92 LNAPL was detected in MW-11 (0.07-3.02'). Approx 70gal was extracted from MW-11 on 3/4, 3/13, 3/16 using vac truck. Trace amounts of LNAPL were hand-bailed from MW-11 on 3/18 & 3/27. Water sample from car wash well was collected by Tyree, analyzed by Method 602, and returned ND. 4/92 MW-11 had 0.08-0.18' of LNAPL and approx 2.5gal LNAPL bailed. 6/8/92 An EZY Skimmer was installed in MW-11. 7/92-6/93 No LNAPL was detected in any wells. 1/94-3/94 MW-10 had 0.28' product. MW-11 had 0.01' product. 5/94 MW-11 had trace amount of product. 7/11/94 SVE started. DTW 16' bgs. 6 combination SVE/AS points. Will sample all MWs before sparge system started. 2/8/95 0.01' product in BD-1. BTEX from ND(MW-1) to 30,000ppb(MW-5). 10/27/99 Cross Deegan Realty notified by station operator of possible inventory loss. Alvin Petroleum exposed portions of system over next two weeks. No system leaks were detected. 11/9/99 Alvin Petro. requests a tightness test be performed. Crompco detected a leak in one of the four tanks and reported the failure. 11/10/99 Alvin Petro. exposed and removed remote fill box on the tank that failed test. A coupling that connects the piping to the overflow box was found cracked. The coupling was replaced and system retested tight. 11/16/99 Crompco retested system with FDNY and passed. 11/22/99 Impact Environmental performed a limited subsurface investigation of soil adjacent to coupling and concluded that gasoline had impacted soil/GW. Report states that current owner only intends on addressing contamination from 10/99 spill and not the 1992 spill. 10/31/00 Three wells sampled and gauged. SVE system removed from service. ORC socks in wells MW-1 and MW-5. BTEX from 15ppb(MW-12) to 868ppb(MW-1). MTBE from 31ppb(MW-11) to 49,000ppb(MW-1). 2/5/01 Seven wells sampled. BTEX

MOBIL (Continued) **S104278682**

from ND(MW-12) to 240ppb(MW-1). MTBE from <1ppb(MW-12) to 64,000ppb(MW-7). 4/26/01 Seven wells sampled. MTBE has increased in monitoring wells hydraulically downgradient from the current dispenser island and USTs. MTBE ranged from 14ppb(MW-11) to 920,000ppb(MW-10). BTEX ranged from 12.8ppb(MW-11) to 6,080ppb(MW-10). 10/23/01 Eight wells sampled. BTEX from 14ppb(MW-6) to 4,750ppb(MW-10). MTBE from 18ppb(MW-11) to 270,000ppb(MW-10). 1/17/02 Eight wells sampled. BTEX from ND(MW-5) to 1,794ppb(MW-10). MTBE from 29(MW-5) to 65,000ppb(MW-7). 4/30/02 Six wells sampled. BTEX from ND(MW-5 & MW-6) to 1173ppb (MW-10). MTBE from 7.6ppb(MW-1) to 24,000ppb(MW-5). 5/15/02 Sensitive Receptor survey identified PS 31 approx 850' to the southeast. There are residential and commercial buildings with basements immediately adjacent to the site to the north. A subway tunnel is located beneath E 149th St.

03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 11/18/03 Received CAP/Remediation Plan, 3rd Quarter 2003 monitoring report, and tank test results(pass). 12/10/03 Reassigned from Vought to Foley. See closed spills #0307681, 9208906. Review of Remediation Plan: A SVE/AS system was installed by Handex and operated on the property to address spill #9208906. The system is comprised of four soil vapor extraction wells and six air sparge points. At this time, the system is not operational. A monitoring program is being performed. 11/9/99 Tank system tightness test performed by Crompco indicated a leak near the remote fill box. The leak was repaired. Soil staining and petroleum odor was noted below the fill box. Spill 9909670 was reported. 11/22/99 Impact Environmental started subsurface investigation. Groundwater results exceeded standards. 7/7, 7/25, 10/23/00 Enhanced fluid recovery performed on MW-2 as an IRM. Impact Environmental proposes 1) monthly EFR on hottest wells for 6 months, 2) replacement/upgrade of air sparge equipment installed to address #9208906, 3) SVES to be modified to include MW-2. 9/3/03 Impact Environmental sampling data (for Amoco): BTEX levels range from ND(MW-5, 11, 12) to 1606ppb(MW-6). MTBE ranges from ND(MW-12) to 650,070ppb(MW-6). 10/6/03 GSC sampling data (for Mobil): BTEX ranged from ND(MW-2) to 3800ppb(MW-6). MTBE ranges from 9.8ppb(MW-11) to 1,240,000ppb(MW-6). 11/26/03 Impact Environmental data from 4Q2003 report shows MW-6 and MW-2 to be hot spots. BTEX ranges from ND(MW-12) to 6923ppb(MW-6). MTBE ranges from ND(MW-12) to 869,600ppb(MW-6). 2/2/04 Faxed stip to Mr. Hank Alpert, Cross Deegan Realty. Due back 2/23/04. (FAX 516-365-1606) 2/11/04 STIP returned. Cover letter states that a previous CAP for spill #9909670 was already approved by DEC and was authorized to develop CAP for spill #0307681 (dated 11/13/03). 2/13/04 STIP fully executed. 3/4/04 Letter received from DDC(Bruce Rottner) to J. Semelmacher. Requests Amoco's participation in DOT reconstruction project instead of reimbursement of cleanup costs. 3/15/04 Called B. Rottner. He explained that he recieved a phonecall from the owners attorney who stated that contamination was from a Dept of Sanitation garage. However, monitoring well on that property was installed and was clean. Spartan will be sending another letter to DDC at which time B. Rottner will forward a copy to me. 3/10/04 Received 1Q04 monitoring report. Need to delineate around MW-6 and MW-2. 6/18/04 Received 2Q2004 monitoring report. 6/30/04 Met with Spartan Petroleum (H. Alpert) and Impact Env. Received hand-delivered letter dated 6/28/04. Site is located on 149th St between Gerard and River Avenues. The site was impacted by a release detected in 1992 while under lease to Mobil Oil. Mobil

MOBIL (Continued) **S104278682**

installed an SVE/AS system. A new release was confirmed and Spartan released Mobil from contractual obligations. As an IRM, EFR was performed on MW-2. Approx 1075gal GW was extracted. An enhanced SVE/AS was run from July 12, 2001 to the present. During the period from 11/9/99 to 3/3/03, there was a steady decline in contaminant concentrations. In May 2003, BTEX concentrations began to increase unexpectedly. A system test was performed and all lines and tanks tested tight. An off-site source was suspected. Identified a NYCDOS truck terminal upgradient. Also found many monitoring wells on the NYSDOS site. Thru a FOIL request, review of the NYSDEC files incidate that the NYCDOS site is impacting 99 E 149th St. Request closure. 10/4/04 Received 3Q04 monitoring report. 11/19/04 Met with K. Kleaka and K. Scroope, Impact Env. NYCDOS property on eastside of Gerard Avenue (DOS Manhattan West 9). See spill #s 9513870, 9910856. 11/23/04 Email from J. Kolleeny- City's consultant, LiRo, had been performing EFR on wells with free product for several years until last year when a multi-phase extraction system went on line. A MW along E 149th St has had product in it which LiRo identified as weathered #2FO. Although they have been willing to vac out this well, and the remedial system now has extraction wells near it, LiRo has argued that the product in the well was likely coming from off-site because they claimed there was no DOS tanks at that end of their site. However, the PBS list an old 2000gal heating oil tank and a new (4/03) tank at the site. Asked LiRo to locate these tanks. Will keep me updated. 4/13/05 Spoke to K. Kleaka, Impact Env. Will be proposing to shutdown system soon as recovery is decreasing. Still concerned about DOS site having impacts on property. Proposal will include confirmatory soil sampling. 5/6/05 1Q05- GW sample collected on 3/14/05 from MW-8 did not detect any VOCs. Samples from MW-1 and MW-5 detected concentrations of VOCs but not above GWQS. MW-12 was paved over. Several detected concentrations from MW-2,6,7,9,10 & 11 exceeded GWQS. These concentrations are within ROI of system. Told H. Benjamin that it was not necessary to reinstall MW-12. 5/23/05 Sent email to K. Kleaka, Impact Env. After reviewing the July 2004-Sept 2004 and Jan 2005-March 2005 quarterly reports for Manhattan West 9 (operated by NYCDOS at 125 East 149th St, Bronx), it is not clear that the contamination detected at MW-2 is due to impacts from the NYCDOS facility. Historical data for 99 E 149th St shows a significant spike of MTBE at MW-6(869.6ppm) and at MW-2(191.2ppm). The historical data for the NYCDOS facility, dating back to 2000(with some data gaps), does not indicate that the facility is acting as a source of off-site contamination. The only MTBE detection in the NYCDOS wells was in the NW corner of the property(170ppb in 1/00). NYSDOS has been operating a MPE system since 11/12/03. 11/8/05 3Q05 report - Total of 537.84lbs of hydrocarbons removed. Approx 9lbs recovered in last 22 day period. Groundwater concentrations highest in MW-2 at 1420ppb total BTEX and 1500ppb MTBE. MW-6 at 100ppb BTEX and 53ppb MTBE. MW-7 at 10ppb BTEX and 56ppb MTBE. 1/11/06 Met with K. Kleaka and H. Benjamin, Impact. To submit 4Q05 report. Redeveloped sparge points to try and increase efficiency of system which continues to operate. 2/17/06 4Q05 report submitted. SVE continues to operate. Lab analysis from 11/28/05 did not detect VOCs in MW-8. Wells MW-5 and MW-11 had concentrations which did not exceed GWQS. Samples from MW-1,2,6,9,and 10 did exceed GWQS. 3/30/06 1Q06 report submitted. BTEX from ND(MW-1,5,6,8,9,11) to 970ppb(MW-2). MTBE from ND(MW-5,6,8) to 980ppb(MW-2). SVE continues to operate. Total estimated hydrocarbons recovered is 538lbs. 6/30/06 DEC lead

MOBIL (Continued) **S104278682**

transferred from K. Foley to J.A. Maisonave. - JAM 11/27/06 Reviewed 2nd and 3rd Qtr 2006 Monitoring Reports. Groundwater contamination persists in the area of monitoring well MW-2 (~4000ppb). H. Benjamin of Impact Env. proposed performing a pulse test on the system to see if rebound will occur since the system appears to have reached asymptotic conditions. I sent an email to Mr. Benjamin requesting a map showing the radius of influence for each air sparge and SVE point and that GW contamination at MW-2 must be addressed. I also asked if there was soil contamination at the site. If so, has the SVE system effectively treated it? Must prove by confirmatory soil sampling. Email is in the file. - JAM 02/13/07 Reviewed a letter submitted by Impact Env. and dated January 17, 2007. The letter proposes: 1. All monitoring wells will be redeveloped utilizing a surge block and vacuum truck. 2. Monthly Enhanced Fluid Recovery (EFR) events will be performed on MW-2 to reduce the contaminant concentrations in the surrounding area. Said events will be performed utilizing a 2X4 inch diameter K-Packer on a 2-inch diameter drop pipe to maximize liquid and vapor capture. 3. Groundwater sampling will continue on a quarterly schedule. 4. SVE & Sparge operations will continue with the existing system. I sent an email approving these proposals. Groundwater sampling data and recommendations will be submitted in the next quarterly report. A hard copy of the email will be in the file. - JAM 3/29/07 Reviewed 4th Qtr 2006 Monitoring Report submitted by Impact Env. and dated March 6, 2007. All wells were sampled on November 29, 2006. Results were non-detect for total VOCs except for MW-2, which shows persistent levels of VOCs (2,675ppb Total VOCs). The SVE/AS system continues to operate at the site. According to the report, monthly EFR events on MW-2 should have begun in February 2007 and results will be included in the next Monitoring Report. - JAM 6/21/07 Reviewed 1st Qtr 2007 Monitoring Report submitted by Impact Env and dated May 30, 2007. On February 28, 2007, all wells were redeveloped and EFR events commenced on MW-2 All wells were then sampled on March 1, 2007. Wells MW-1, MW-6, and MW-9 showed non-detect results for total VOCs. Wells MW-5, MW-7, MW-8, MW-10 and MW-11 had slight exceedences for Napthalene (ranging from 68ppb to 100ppb). MW-2 showed a decrease of total VOCs from last monitoring round to 1,936ppb. The SVE/AS system continues to operate. - JAM 12/04/07 Reviewed 2nd Qtr 2007 Monitoring Report submitted by Impact Env and dated Sept 18, 2007. All wells were sampled on June 14, 2007 and monthly EFR events continue on MW-2. Wells MW-1, MW-2, MW-9, MW-10 and MW-11 showed exceedences for total VOCs. Wells MW-5, MW-6 were not sampled because they were dry. MW-2 still has the highest level of VOCs, however, it showed a decrease from the last monitoring round to 857ppb from 1,936ppb. The SVE/AS system continues to operate. - JAM Reviewed 3rd Qtr 2007 Monitoring Report submitted by Impact Env and dated Oct 30, 2007. All wells were sampled on Sept 6, 2007 and monthly EFR events continue on MW-2. Results from wells MW-1, MW-2, MW-5, MW-6, MW-7, MW-8 and MW-9 showed non-detect levels for total VOCs. Wells MW-10, MW-11 showed minor exceedences for MTBE (44ppb and 50ppb respectively). Based on the latest result, monthly EFR events appear to have effectively reduced contaminants in MW-2. The SVE/AS system continues to operate. - JAM 4/14/08 Received a call from Hal Benjamin about the Exposure Assessment submitted in March 2008 by Impact Env. They are requesting spill closure and I will get back to him after I review the report. - JAM 5/1/08 Reviewed Exposure Assessment Report. Based on the Exposure Assessment, Impact Env. concludes that the source of contamination has been effectively

MOBIL (Continued) **S104278682**

mitigated and small levels of residual groundwater contamination pose no threat to human health. Impact requests spill closure. I requested a summary of historic soil data associated with this spill. -JAM 6/11/08 Spoke to Hal Benjamin, Impact. An on-site well provides the operating car wash with water. I requested that this well be sampled and results reported in a letter. Spill closure will be reevaluated when results are available. - JAM 8/8/08 Reviewed letter from Spartan dated July 16, 2008. The on-site well that services the carwash was sampled and all analytes were found non-detect. I called Hal and asked the depth at which the car wash well pulls water from and if there are any sampling requirements for that well. He will get back to me. - JAM 11/13/08 Since the on-site car wash supply well did not detect and VOCs and only minor levels of MTBE were detected in two on-site wells, this site poses no threat to human health or the environment. This spill case was closed and an NFA letter was issued to: Henry Alpert Cross Deegan Realty, Corp. 3333 New Hyde Park Rd, Suite 201 New Hyde Park, NY 11042 NFA letter uploaded to eDocs. - JAM"

MOBIL (Continued) **S104278682**

Melancon of GSC (845-561-9890), Mobil's consultant. Mobil wants to close out spills. They divested property in March 1990 but have been active in remediating their spill. Cross Deegan Realty only plans on addressing their spill #9909670 (by restoring to pre-spill conditions). I requested that GSC send in a formal closure request with data justifying closure of Mobil spills. 3/1/04 GSC submitted closure request report. 7/94-10/00 ExxonMobil operated an SVE/AS system removing approx 8861 lbs of VOCs. Four air sparge/vapor extraction wells and one air sparge well were installed. In October 2000, the system was shut down due to asymptotic recovery rates. DEC was notified of system deactivation in March 2001 Handex Site Status Report. Spill #9708729 was issued to the site on 10/25/97 in response to dumping of oil into sewer system. Spill #9909670 was issued to the site on 11/9/99 for petrotite failure on 4000gal gas UST. 4/6/04 NFA letter to be hand delivered at Albany meeting 4/7. Reviewed GSC's closure request report(3/1/04). Concentrations were decreasing to ND prior to Spartan's tank test failure. See Spartan files (spill #9909670)"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY LiRo installed and is currently operating a multi-phase extraction system to address soil and groundwater contamination and recover free product. Product in some wells may be from off-site source (?), there's a nearby gas station and it's possible that some product in wells at the gas station may be coming from Manhattan 9. See Kerry Foley for details. Kolleeny approved boring locations for LiRo's semi-annual soil monitoring on October 26, 2004. This site transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK 4/20/2005 AZ reviewed a Monitoring Report for the remedial system dated January 28, 2005. The site was formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance monitoring data. The report states that based on the site monitoring data, the MPE system is effectively treating contamination. Induced vacuum measurements from monitoring wells MW-3, MW-4 and MW-14 were observed to be below desirable levels. Vacuum should be increased in these wells. LiRo has proposed to shut down extraction wells EW-1, EW-3 and EW-5 since analytical data indicate that no apparent VOC contamination persists in that portion of the site. The Department concured with this proposal.AZ 6-7-2005 AZ reviewed a Monitoring Report received on May 3, 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo proposed to shut down extraction wells EW-1 through EW-6, EW-13 and EW-14, since soil and groundwater data indicate that no apparent VOC contamination persists away from the Gerard Avenue sidewalk portion of the site. The Department concured with shutting down EW-1, EW-2, EW-3, and EW-13. The other extraction wells should continue to operate to address the remaining soil and groundwater contamination. However, the induced vacuum measurements from monitoring wells along Gerard Avenue were observed to be below desirable levels. The vacuum in nearby extraction wells should be increased to improve the induced vacuum in these monitoring wells. AZ 8-22-2005 Reviewed a Monitoring Report dated July 29, 2005. The report presented remedial system performance and groundwater monitoring data. In the report LiRo proposed to modify the current groundwater sampling schedule. Also, LiRo recommended completing proposed soil borings LBR-9 and LBR-10 with shallow screens to allow them to serve as pressure monitoring points in order to better evaluate system performance. The Department concured with these proposals.AZ 1-3-2006 Reviewed a Monitoring Report dated November 30, 2005. The report presents remedial system performance and groundwater monitoring data. The report states that elevated VOC concentrations persist in the area of PM-1. Naphthalene was also observed to exceed NYSDEC guidance value at PM-1. Results of recent groundwater sampling indicate that MW-10 continue to exceed 100 ppb total VOCs. In the report LiRo proposes to shut down several extraction wells. The Department concurred with shutting down wells EW-4, EW-6 and EW-14. The remainder of extraction wells should

MOBIL (Continued) **S104278682**

continue to operate to address the remaining soil and groundwater contamination. AZ 4-10-2006 Reviewed a Monitoring Report dated February 27, 2006. LiRo recommended continued operation of extraction wells EW-8,9 and 10 to continue rmediation of the soil contamination recently observed at LBR-9/PM-1. AZ 7/5/2006 Reviewed a Monitoring Report for the remedial system dated April 21, 2006. The site was formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance monitoring data. Groundwater samples were collected from monitoring wells MW-2, MW-6 and MW-10 on March 1, 2006. TVOCs in MW-6 is 139 ppb which is the highest number observed in this well. The numbers are on the clear upward trend in this well. MW-10 - TVOCs - 91 ppb, MW- 2 - TVOCs - 91 ppb - upward trend. AZ 11-20-2006 Reviewed a Monitoring Report for the remedial system dated August 9, 2006. URS proposed to advance a confirmation soil boring SB-5 near MW-04, LBR-02 and PM-01. I called J. Staten (URS)and concurred with this proposal. E-mail with the approval for the soil sampling plan was sent to Jane Staten (URS). AZ 12-18-2006 Reviewed a Monitoring Report for the remedial system dated August 10, 2006. MPE is operated at the site. The vacuum measurements ranged from 0 (MW-07) to 3.1 The closest extraction well to MW-07 has been shut off. Total VOCs and naphthalene ranged from 1 ppb to 56 ppb in MW-02. Low volumes of gw were extracted and treated during this monitoring period. URS has instructed Franklin to adjust the drop tubes in an effort to extract more groundwater. AZ 1-9-2007 Reviewed a Monitoring Report July through October 2006 for the remedial system dated November 14, 2006. MPE is operated at the site. Flowmeter broke at the end of September. It was not fixed; therefore, the total amount of gallons treated is unknown. Vacuum readings in MW-14 is 0 on 3 occasions. GW results - 65 ppb of total VOC in MW-02. AZ 1/23/2007 At the meeting with DDC/URS on January 10, 2007, the site was discussed. The firm, ATC Associates, will be taking over operation of Manhattan West 9. DEC requested that URS will analyze and improve performance of MW-14. AZ 7-6-2007 Reviewed a Monitoring Report for the remedial system for the period of November 2006 through January 2007 and dated February 15, 2007. MPE is operated at the site. The MPE flowmeter continues to malfunction and requires replacement, but ATC will replace the flowmeter at this time. According to the report, only monitring well MW-02 is exhibiting contaminant concentrations above DEC GW Quality Criteria. The minor exceedances in MW-02 are too low for remedial treatment. On December 2006 URS advanced two soil borings. The analytical results showed VOC exceedances of TAGM #4046 in each soil sample. Total VOCs ranged from 403,400 to 446,260 ppb. Based on the latest sampling resultsURS will operate MPE system using only extraction well EW-09. Also, drop tubes will be raised to 5' above GWT to focus on vadose zone contamination. If MPE modifications are not effective, URS will excavate any remaining vadose zone soil contamination. AZ 11/30/2007 I have reviewed System Performance Monitoring Report for the period April through August 2007. An e-mail was sent to DDC/URS/V. Brevdo: ...URS will sample all monitoring wells during the next quarterly groundwater event. Also, URS will advance a soil boring near the location of boring SB-05. URS requested NYSDEC permission to shut down the MPE system while samples are collected. This recommendation is rejected. Neither soil sampling results of the previous sampling round nor a figure with estimated extent of soil contamination were included in the report. Soil sampling data should be included in proposals for future borings and/or proposals for the system shutdown. Soil sampling performed in

MOBIL (Continued) **S104278682**

December 2006 showed total VOC contamination in a range of 400, 000 ppb. These high levels of soil contamination justify continuing operation of the MPE system. AZ 6-5-2008 An e-mail sent to Jane Staten: I have reviewed the System Performance Monitoring Report and Confirmation Soil Sampling results for the above site. I have a few questions/comments: 1. It seems that the contaminated interval is soil is between 5' and 7' in the area of MW-04. However, you proposing excavation to the depth of five feet. I suggest performing the excavation to the depth of seven feet underground structures and utilities allowing. Also, the area near soil borings B-3.5, LBR-4 and well MW-10 is not covered by your excavation plan. What are your suggestions for this area? Could you submit to DEC soil plume map so we can decide on the extent of the excavation or other soil remediation strategy? AZ 7-18-2008 An e-mail was sento to URS: DEC concurs to the removal of the MPE system under the condition that the remaining contaminated soil be removed via excavation and end-point samples will be taken to confirm complete removal of the contamination. Also, a soil plume map showing historical contaminant concentrations throughout the site should be included in the post excavation remedial report. AZ 9-12-2008 I contacted Jane Staten. She advised me that URS is preparing documentation for soil excavation. They received DEC approval for excavation. AZ 1-5-2009 Reviewed a Monitoring Report through the 3rd Quarter 2008 and dated October 2, 2008. MPE system was operating since April 2004. Currently MPE system is being removed. On July 28 and 29, 2008, URS sampled groundwater monitoring wells. Total VOCs concentrations ranged from non detect to 80 ppb. DEC approved hot spot excavation on September 12, 2008. According to the report, URS is currently preparing the bid documents for the excavation work. Due to the low contaminant concentrations in groundwater, DEC suggests decreasing frequency of groundwater sampling from quarterly to semi-annual. An e-mail was sent to DDC/URS/V.Brevdo. AZ 3-3-2009 An e-mail was sent to J. Staten (URS): It seems that monitoring well MW-16 should be decommissioned. If the floor of the garage is covered in oily sludge then a new spill should be called in by the City or URS. Hot spot excavation should be performed as planned. Full round of groundwater sampling should be performed before petitioning for the spill closure. A temporary well (groundwater sampling point) might be installed at the location of MW-16 (which exhibited 83 ppb of the total VOC). AZ 4-23-2009 An e-mail was sent to J. Staten (URS): I have reviewed a Monitoring Report for this site for the 4th Quarter of 2008. The report stated that monitoring well MW-10 will be removed from the monitoring list because no components exceeded the quality criteria. However, downgradient wells should be monitored regardless of the contaminants presence. Since this site has groundwater flowing in northern and western directions, at least one downgradient well should be monitored in each direction. MW-10 should be monitored. Also, one downgradient well should be monitored at the western edge of the plume. AZ 9-10-2009 An e-mail was sent to J. Staten (URS): I have reviewed report for the above site. The report stated that well MW-16 was decommissioned because URS observed that it was filled to the top of the riser with dirt and water. This well consistently showed elevated reading for VOCs. This well should be re-installed. Also, a well downgradient from the contaminated wells should monitored. URS should add a downgradient well to their monitoring schedule. AZ 9-14-09 Based on the latest URS's submissions (report for the 2nd quarter 2009 dated June 10-2009) and on a correspondence from J.

MOBIL (Continued) **S104278682**

Staten, downgradient wells were sampled. MW-16 was sampled over 8-year period. Over this time, well MW-16 did not exhibit compounds above Groundwater Quality Criteria until a minor exceedance occurred in December 2007. Subsequent samples collected in 2008 also showed a couple of compounds above Groundwater Quality Criteria, but the concentrations were not significant (total VOC concentration under 100 ppb). AZ 12-1-09 An e-mail was sent to Jane Staten/Afsar Samani/Marcy Abzagh/Vadim Brevdo: Dear Jane, I have reviewed Summary of the Excavation Activities and Request for Spill Closure for the above site dated August 19, 2009. Also, I'm in receipt of your e-mail dated Nov. 20, 2009. The e-mail stated that the City, through DCAS, is involved with the owner of the Manhattan West 9 Garage (a private party) in an extensive renovation of that building. DDC stated that the planned renovation work is imminent and includes partial replacement of the Garage floor slab which will destroy the monitoring wells inside the garage. The hot spot excavation found that no VOCs or SVOCs were detected in any soil samples. The results of the excavation are approved. Please make sure that grab samples are taken when performing any soil sampling. Composite samples could be taken only in addition to grab samples. Groundwater samples were collected from 19 wells. No groundwater samples were taken from wells MW-15 and MW-16 because they were destroyed. The latest site-wide groundwater sampling results showed that MW-06 had exceedances of VOCs. Also, the latest available results from MW-16, which is destroyed, showed that it had VOCs exceedances. Groundwater natural attenuation is being used at this site as a remedial strategy for groundwater. Since the groundwater wells will be destroyed at this facility during floor slab replacement and the City would like to close this spill, I request that soil sampling should be performed while doing garage floor replacement. Special attention should be given to the area where MW- 06 and MW-16 are located. These activities should be coordinated between DCAS and NYCDDC. Environmental consultant should be present at the time of the excavation and perform soil sampling. If signs of contaminated soil/groundwater are observed during the excavation, A NEW SPILL SHOULD BE CALLED IN TO NYSDEC HOTLINE. If contaminated soil is discovered it should be removed to the extent possible, end point samples taken and activities immediately reported to NYSDEC. AZ 3-5-2010 Discussed with Jane Staten sampling plan for MW-9 site. She asked for directions for locations of soil sampling points. If utilities, underground structures and the scope of future work allow, samples should be taken in the area of MW-06, MW-16, diesel dispenser, 550 gal gasoline UST (removed), 4,000 gal diesel UST (removed), 4,000 gal diesel UST, 550 hoist oil, 550 kerosene, 550 motor oil and 550 gasoline USTs (abandoned in place). About 23 samples will be taken. AZ 8-3-2010 An e-mail was sent to H. Roberts: Harvey,Request regarding closure of spill 9513870 was denied as per my letter dated 12/01/2009. Soil sampling should be performed at the site as per my letter. If you have any questions regarding this matter please contact me at 718-482-6387. Thank you, AZ 8-3-2010 An e-mail from H. Roberts: Alex, We've been in touch with DOS regarding the renovation work at the Manhattan West 9 Garage. There is no schedule yet for floor slab replacement (see emails below). We'll let you know when the floor replacement gets scheduled. AZ 10-11-2011 I was contacted by K. Shenahan. The current site owner is postponing work on breaking the existing floor and sampling the soil due to the lack of funds. 10/13/2011 an e-mail was received from K. Shenahan:

MOBIL (Continued) **S104278682**

Alex, NYCDDC s environmental consultants have been successfully implementing site remediation at this site since 2004. Remediation technologies included a multi-phase extraction system, natural attenuation and excavation. Recently, the owner of the property informed NYCDDC that the financing of a proposed facility rehabilitation project would not be approved until the spill number was closed. Therefore, URS has prepared this e-mail to summarize the current situation at this site and formally request closure of spill #9513870. Background There has been no activity on this site since late 2009. The MPE system began operating in April 2004 and consisted of a network of 14 extraction wells. By February 2005, site monitoring data showed that free product was no longer present at the site and groundwater contaminant levels were significantly reduced. In addition, soil borings showed significant decreases in soil contamination. Based on these results, three of the extraction wells were shut off. In October and November 2005, LiRo advanced an additional five soil borings to evaluate system performance. Two of the five borings showed the presence of minor residual contamination. In December 2006, URS completed another round of confirmation soil sampling and the data was clean except for one boring near well EW-09. As a result, operation of the MPE system was focused on the area around EW-09. In October 2007, URS advanced another confirmation soil boring and collected two soil samples from the area that was previously found to be contaminated. This data also indicated the presence of residual soil contamination. On January 24, 2008, URS issued an investigation summary report with recommendations for a hot spot excavation for soil and natural attenuation for groundwater. In an e-mail dated June 5, 2008, the NYSDEC responded to the report with several comments to which URS responded in a letter dated June 12, 2008. In an e-mail dated July 18, 2008, the NYSDEC approved removal of the MPE system, hot spot excavation, and natural attenuation for groundwater. In addition, the NYSDEC approved closure of spill #9910856 in an e-mail dated September 12, 2008. The hot spot excavation work was performed by Franklin on June 23, 2009. On August 19, 2009, URS issued a report to the NYSDEC documenting the results of soil excavation work conducted to remediate petroleum contaminated soil (soil confirmation sampling results are attached). The As-Built drawing illustrated the limits of soil excavation. The report also included a formal request to close spill #9513870 assigned to the site. The request to close the spill number was based on the fact that the remedial excavation was successful and there was only trace concentrations of volatile organic compounds (VOCs) detected in groundwater samples collected from the site (groundwater data for the past 5 years is attached). On November 20, 2009, URS also sent the NYSDEC an e-mail notifying them that owner of the facility was planning an extensive renovation of the site including replacement of the concrete floor slab which would destroy the monitoring wells located inside the garage. On December 1, 2009, the NYSDEC sent an e-mail to URS indicating the favorable results of soil excavation were acceptable. In addition, the NYSDEC deferred approving the request for spill number closure until after floor slab replacement project. The NYSDEC requested that field screening and soil sampling be conducted during the concrete floor slab replacement project especially in the area of monitoring wells MW-06 and MW-16. The most recent groundwater data collected at the site indicates very low concentrations of VOC in the following wells: MW-02 (14 ppb, no exceedances) MW-06 (42 ppb, 4 exceedances) MW-14 (2 ppb, no

MOBIL (Continued) **S104278682**

exceedances) MW-15 (4 ppb, no exceedances) MW-16 (65 ppb, 2 exceedances) MW-20 (13 ppb, no exceedances) MW-21 (9 ppb, no exceedances) Summary URS is formally requesting spill #9513870 be closed since it appears that the groundwater and soil have been remediated to the limits of the effectiveness of the approved remedial technologies. We hope this summary and attached data provides you with sufficient information to evaluate this request. URS will reiterate to the property owner that if and when he performs the facility rehabilitation project, he is required by law to notify the NYSDEC if petroleum contaminated soils are encountered. AZ The following e-mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin, I have reviewed the Technical Memo dated October 12, 2011. The Memo stated that NYCDDC's Environmental Consultants have been successfully implementing site remediation since 2004. Remediation technologies included a multi-phase extraction (MPE) system and excavation. MPE system was operating at the site in 2004-2008. As a result, free phase product was no longer present at the site and groundwater contaminant levels were significantly reduced. The hot spot excavation work was performed in 2009. Post excavation end point sampling detected that no VOCs or SVOCs were detected in any soil samples. The remedial excavation was successful and there was only trace concentrations of volatile organic compounds (VOC) detected in groundwater. Based on the most recent groundwater sampling results, only six minor exceedances of groundwater standards were detected. A current owner of the facility is planning an extensive renovation of the site including replacement of the concrete floor slab which would destroy the monitoring wells located inside the garage. If contamination is encountered during the slab replacement, a spill should be called in. Based on the documentation provided to date, spill case 9513870 has been closed. All monitoring wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures . The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky "

Remarks: "under ground tanks with unk petroleum or waste oil have caused soil to be contaminated-still under investigation"
