Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By:	LSZINOMA
Site Description:	"Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not

FORMER G & C SERVICES (Continued) **S110768286**

been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to

FORMER G & C SERVICES (Continued) **S110768286**

	remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."
Health Problem:	"The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Code: 444720
Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and

FORMER G & C SERVICES (Continued) **S110768286**

associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil

FORMER G & C SERVICES (Continued) **S110768286**

vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Code: 444720
Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26

FORMER G & C SERVICES (Continued) **S110768286**

ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a

FORMER G & C SERVICES (Continued) **S110768286**

maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE)

FORMER G & C SERVICES (Continued) **S110768286**

	was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."
Health Problem:	"The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Actual:
22 ft.

NYC DEPT OF SANITATION TTF (Continued) **S112148841**

7/17/12 - reported as a dry leak. Tank alone was retested on 7/23/12 and passed. Failure determined to be associated with a failed vent pipe which was replaced 9/11/12 by Windmill Tank Service. Additionally threads on interstial space access bung on tank top were also determined to be contributing to an air leak and were repaired by maufacturer (Highland Tank) on 9/11/12. Following repairs entire tank system was retested by AARCO on 9/13/12 and passed. No further action is required. Spill closed."

BROWNFIELDS:

Name:	580 GERARD FORMER POST OFFICE VEHICLE REPAIR SHOP
Address:	580 GERARD AVENUE
City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	610854
Acres:	0.716
HW Code:	C203142
SWIS:	0301
Town:	New York City
Record Added Date:	09/02/2020
Record Updated Date:	10/06/2020
Update By:	AMSERVIS
Site Description:	"Site Location: See Response to Section IV.1 and IV.2 above. The Site is located at 580 Gerard Avenue, Bronx, New York 10451. The Site is

US POSTAL SERVICE - VMF (Continued) **1000349040**

located in a mixed industrial, commercial and residential neighborhood. There have been several BCP sites that have entered the program on Gerard Avenue in close proximity to this Site. The surrounding land uses are described in Section 10.C below. Site Features: The Site is occupied by a single-story approximately 31,000 sq. ft, 1951 constructed former U.S. Postal Service vehicle maintenance garage building, which primarily covers the entire Site, with the exception of a 3-foot path on the eastside of the building. There is only a small basement along the Gerard Avenue side of the building. Within the building are three concrete block structures/offices. The smallest of the three is located within the northeastern quadrant of the building. As of March 2011, this area was completely vacant and had an exhaust/ventilation pipe leading up through the roof. EEA concluded that this could have been utilized for the storage of flammables. The concrete block office area on the eastern side of the building was also completely vacant during the EEA Phase I investigation, and may have been utilized for parts and equipment storage. The concrete block office area on the west side of the building appeared to contain office space, bathrooms/locker rooms, etc. according to EEA. The building was vacant as of the March 2011 Phase I and is still currently vacant and was most recently utilized as a furniture warehouse. The Site is not located in a flood zone. The closest waterbody is the Harlem River, which is located about 0.21 miles away (about 1,120 feet). Current Zoning and Land Use: The Site is currently located in an R7A District with a C2-4 Commercial Overlay District and is vacant. The surrounding properties include, to the North, a single-story warehouse/garage building; to the West (across Gerard Avenue), a two-story mixed-use building used as a storage facility and its associated parking lot; to the South (across 150th Street), a single-story warehouse/garage building; and to the East, a small garage and residential buildings. The Site is .2 miles from the 149 St Grand Concourse Subway Station and the Metro North Mott Haven Junction station. Past Use of the Site: The first Phase I Environmental Site Assessment Report was prepared by EEA, Inc. (EEA) for an engineering firm in March 2011. EEA s analysis of historical information regarding the Site indicated that from 1908 until on or about 1950 the Site was vacant until the current on-Site building was constructed circa 1950 for use as a vehicle maintenance and storage facility for the U.S. Post Office. The Post Office was the tenant from 1950 until circa 2000. From circa 2001 through 2007, the building was utilized for automotive service, vehicle repair and parking. After 2007, the project site was occupied by a construction company for general office use and storage, but as of 2011, the building was vacant when inspected during the first Phase I. Based on the specific nature of the identified operations, EEA concluded these types of businesses involved the storage and use of hazardous substances and/or petroleum products, and/or generated hazardous and petroleum wastes. Interior floor drains were observed in the floor throughout the building, and EEA concluded that given the age of the building constructed in the 1950s, it is likely that these drains discharge to the municipal sewer system, but no investigation to confirm this fact was noted in the Report. No exterior storm drains were noted. This initial Phase I report also noted that the Site was listed in the New York State Department of Environmental Conservation Petroleum Bulk Storage (PBS) database under Facility Identification Numbers 2-333212 and 2-476021 and the Spills database under Spill Incident Numbers 9213223 and 9007668. In addition, the Post Office

US POSTAL SERVICE - VMF (Continued) **1000349040**

was a listed RCRA facility at this Site under RCRA Facility ID NY5180010451 large quantity generator. The Phase I states that no hazardous waste activity was listed by New York State for this RCRA Facility, but this conclusion was not confirmed by the documentation provided. In addition, the report states that the Post Office, was listed as a small quantity generator under RCRA Facility ID NYD982727885 at this Site from 1992 until 2009, even though the Post Office vacated in about 2000-2001. Therefore, this ID # was likely related to the spill closures below, when varying amounts and types of wastes were generated and disposed of from the Site under this Facility ID Number. Again, the documentation attached to the Phase I suggests that the Post Office was a large quantity and small generator of waste and the type of waste was not specified. Finally, a tenant named Autorama Enterprises of Bronx, using the 610 Gerard Avenue address, was also listed as a RCRA Facility at the Site under ID NYR000100255, but according to EEA, no hazardous waste activity was listed by New York State for this RCRA Facility. However, the type of waste generated was not specified. EEA identified the following Recognized Environmental Conditions (RECs) at the Site - gasoline tanks, fuel oil tanks, hydraulic lifts and floor drains.
There was no mention in this report that the hydraulic lifts had been removed. However, based on EEA s review of the Toxics Targeting Database Report, EEA concluded that nine gasoline tanks, which had been installed in 1950, were removed in 1993, and subsequent soil sampling showed no evidence of significant contamination. Nevertheless, the Phase I also states: At least nine gasoline tank vent lines were observed running up the length of the wall on the eastern side of the building. According to information obtained during the site inspection, an underground 2,500-gallon fuel oil tank is currently located inside the subject building, where a man-way cover and other associated access ports were evident during EEA s site inspection. Allegedly, a 5,000-gallon fuel oil tank was also removed and replaced in 1993 with this present 2,500-gallon fuel oil tank. Therefore, some remnants of the tank systems still remain on site and the DEC database regarding the tank removals specifically states that Underground including vaulted with no access for inspection . Therefore, it is unclear from the records if the bottom of the excavation pit under the tanks was inspected before or after removal. EEA also noted that there were two spill numbers associated with this Site: Closed Spill Incident Number 9007668 This spill pertains to a tank test failure of a 3,000-gallon fuel oil tank that occurred on October 13, 1990. There is a note in the spill file that groundwater was impacted. See Exhibit M including spill file record. EEA notes that according to the NYSDEC spill file comments, a 5,000-gallon fuel oil underground storage tanks was removed and replaced with a 2,500-gallon underground storage tank (UST) in 1993 and that a subsurface investigation that was performed in 2000, which showed no visual, olfactory, or PID Evidence of contamination/release. Soil analysis was non-detect for Volatile Organic Compounds (VOCs) and Poly Aromatic Hydrocarbon (PAHs) were consistent with obvious fill material (i.e., coal/asphalt).
Groundwater was not encountered before bedrock which was at a depth of approximately 12-feet below ground surface. This spill incident was closed on May 11, 2001. [NOTE: However, the spill file noted that groundwater was impacted and there was no evidence in this Phase I that groundwater was remediated.] Closed Spill Incident Number 9213223 This spill incident is related to gasoline found during the

US POSTAL SERVICE - VMF (Continued) **1000349040**

excavation of gasoline tanks that occurred on February 27, 1993. This spill incident indicates that nine 550-gallon gasoline USTs were removed in 1993. Concurrently, 22 tons of contaminated soil had also been reportedly excavated and removed. Allegedly, the subsurface investigation showed no visual or olfactory evidence of contamination. Soil analysis showed non-detect for VOCs and PAH levels were consistent with obvious fill material. However, groundwater analysis showed non-detect/trace PAHs and VOCs. This spill incident was closed on May 11, 2001. Additionally, EEA added that suspected asbestos containing materials, including but not limited to suspect floor tiles, and possible lead-based painted surfaces were also noted within the building. A more recent Phase I report was prepared for a law firm in September 2018 by GEI. GEI indicated that there had been no significant changes to the building between the 2011 and September 2018 other than there was a temporary furniture warehouse tenant, which was no longer present as of the date of this Phase I investigation.1 GEI identified the same RECs as EEA (underground gasoline tanks, underground fuel oil tanks, hydraulic lifts, and floor drains) and added an addition REC in relation to the more recent City of New York E-designation stating that on May 22, 2013, this Site had been assigned E-Number, E-292 under the Hazardous Materials Phase I and Phase II Testing Protocols. In addition, this Phase I included a Historic REC in connection with not only the two spill incidents described in the 2011 EEA Phase I but a third closed Spill Incident associated with the Site: Closed Spill Incident Number 1205845 This spill occurred when it was reported that approximately two gallons of heating oil residual/staining was noted next to the fill port area on the east side of the building. GEI also performed a Tier 1 Vapor Encroachment Screening for the Site and concluded that a Vapor Intrusion Concern (VIC) cannot be ruled out due to the past historical use, and past history of oil and gasoline tank. A Phase II subsurface investigation was performed by GEI in August 2018, which was summarized in a September 2018 Phase II Report. A total of eight (8) test borings were performed in the building on the Site. Soil borings were advanced and analytical samples were collected to determine if there are impacts to soils underlying the Site. Two (2) soil borings were advanced into the groundwater table and two (2) groundwater grab samples were collected. However, it is important to note that these borings were not located in the vicinity of the former tank farm portion of the Site or where the current tank is still located. Additionally, four (4) soil vapor samples were collected from temporary implants installed beneath the building floor slab. The soil, groundwater and soil vapor exceedances that directly result from historic operations and contaminated historic fill are summarized below in the Environmental Assessment Section. In addition, a more recent soil waste characterization investigation was performed by DPV in February 2020. DPV took 25 soil sample sets (TAL/TCL + 30 and VOC grab samples) from 13 test pit locations throughout the Site. The findings are summarized in the Environmental Assessment Section below. GEI updated its Phase I Report in May 2020 without any new significant findings. A May 2020 Remedial Investigation Work Plan has been submitted with this application to further investigation the contamination found to date. The scope will include 14 soil borings throughout the Site, the conversion of 6 soil borings into six permanent groundwater monitoring wells (MW 1 through MW-6), and ten soil vapor samples. Site Geology and Hydrogeology:

US POSTAL SERVICE - VMF (Continued) **1000349040**

According to the EEA 2011 Phase I, the Bronx is underlain by three principal bedrock formations: Inwood Marble, Fordham Gneiss, and Manhattan Schist. The strata of these rock types have been folded by forces produced by movements in the earth's crust, and the resulting pattern of folding a subsequent erosion has produced a series of ridges and valleys. The rock of Inwood Marble is soluble in even slightly acidic water, and has been eroded through time to form lowlands and valleys, including the channel of the Harlem River. Further erosion of the marble as well as the schist and gneiss occurred later in time, as the surface of rock in New York City was covered by massive glaciers. Besides the erosion that they produce, the glaciers transported broken-up rock fragments from areas to the north and deposited them in many areas of the Bronx. Meltwater streams produced by the glaciers occupied the valleys of Inwood Marble, and they in turn produced outwash sand deposits. These permeable deposits, in combination with solutional fractures present in the limestone, account for the ability of the areas underlain by Inwood Marble to yield significant quantities of groundwater. Recharge of groundwater in the Bronx is chiefly from precipitation. Possible secondary sources include lateral underground flow from Westchester County, as well as leakage from water mains and sewer lines. Areas of the Bronx, in which clay deposits from former glacial lake beds formed marshes, may contain minor quantities of groundwater, which do not readily percolate downward due to the impermeability of these materials. The schist and gneiss are also relatively impermeable, and have historically yielded relatively minor quantities of water to wells. Today, public water supply for the Bronx comes from the upstate reservoirs which supply the City of New York. The general elevation for the area where the Site is located is between approximately 20-30 feet above mean sea-level. GEI in its September 2018 Phase I reiterated the EEA geology and hydrogeology findings above. According to the Phase II, although no permanent groundwater wells were installed, the groundwater flow direction was presumed to be the southerly direction toward the Harlem River. The soil composition in the eight (8) subsurface soil borings was similar in nature, with predominantly fine to medium-grained sand and fill material along with some silt found to exist from the surface to terminus of the borings. Groundwater was encountered in two (2) borings at approximately 23 feet below land surface (bls). Elevated PID readings and a petroleum odor was noted in boring SB-2 at the intersection of the water table, approximately 21-23 feet bls. "

Record Added Date:	10/05/2018
Record Updated Date:	01/22/2019
Update By:	JHOCONNE
Site Description:	"Location: The site, referred to as Bronx Point, is located at 65 East 149th Street in the West Concourse neighborhood of the Bronx, New York. The site is bound by Mill Pond Park to the north; Major Deegan Expressway/Exterior Street followed by the Bronx Terminal Market to the east; East 149th Street/145th Street Bridge followed by a New York Recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. According to the United States Geology Survey (USGS) 7.5-Minute Quadrangle Map, the site elevation is about 3 feet above mean sea level (msl). Site Features: The site is currently comprised of vacant, asphalt-paved lots with one remnant steel loading structure on the western portion of the site. Current Zoning and Land Use: The site is currently located in a R7-2/C2-5 mixed-use district. The site is located within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Site Geology and Hydrogeology: The general stratigraphy of the site, from the surface down, consisted of about 19 feet of historic fill, followed by alternating layers of clay, silt, sand and bedrock. The historic fill layer consisted of black/brown/gray sand with varying amounts of gravel, silt, concrete, brick, and shell fragments. Bedrock was encountered at about 67 feet bgs in the central and southeastern portion of the site and at about 78 feet bgs in the southwestern portion of the site. Groundwater, presumably flows west towards the Harlem River, was encountered at about 3 feet bgs in the southwest portion of the site and at about 6 feet bgs in the eastern portion of the site during previous investigations."
Env Problem:	"Known or suspected sources of contamination include: (1) petroleum impacted soil in the western portion of the site; (2) at least 8-19 feet of historic fill exceeding the Title 6 NYCRR part 375-6.8(a,b) UUSCOs and RRUSCOs for PAHs and metals lead, barium and mercury; and (3) groundwater exceeding the 6NYCRR part 703.5 Water Quality Standards for Class GA water for PAHs and metals lead, manganese, and those associated with salt water intrusion."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

BORINQUEN COURT (Continued) **S116041494**

Site Description: "Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. Additional structures are being constructed on both sides of the exiting building. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

BORINQUEN COURT (Continued) **S116041494**

Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

SHWS:

Name:	2350 FIFTH AVE., NEW YORK (AKA, PS 141)
Address:	2340 & 2350 FIFTH AVENUE
City,State,Zip:	NEW YORK, NY 10037
Program:	HW
Site Code:	57691
Classification:	Site is properly closed - requires continued management.
Region:	2
Acres:	1.543
HW Code:	231004
Record Add:	11/18/1999
Record Upd:	03/11/2021
Updated By:	JHOCONNE
Site Description:	"Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials

2350 FIFTH AVENUE CORP (Continued) **1000108749**

for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was

2350 FIFTH AVENUE CORP (Continued) **1000108749**

installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Date Rec Updated: 12/06/2019
Updated By: YYWONG
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along

2350 FIFTH AVENUE CORP (Continued) **1000108749**

	142nd Street towards the Harlem River. "
Env Problem:	"Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "
Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

2350 FIFTH AVENUE CORP (Continued) **1000108749**

Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a

2350 FIFTH AVENUE CORP (Continued) **1000108749**

period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and

2350 FIFTH AVENUE CORP (Continued) **1000108749**

Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials

The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and

2350 FIFTH AVENUE CORP (Continued) **1000108749**

dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By:	MXYAU
Site Code:	443691
Site Description:	"Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. Additional structures are being constructed on both sides of the exiting building. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "

BORINQUEN COURT (Continued) **S116041516**

Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."
Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Control Type: INST
Dt record added: 10/25/2013
Dt rec updated: 06/23/2015
Updated By: MXYAU
Site Code: 443691
Site Description: "Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. Additional structures are being constructed on both sides of the exiting building. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase

BORINQUEN COURT (Continued) **S116041516**

I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Control Type: INST
Dt record added: 10/25/2013
Dt rec updated: 06/23/2015
Updated By: MXYAU
Site Code: 443691
Site Description: "Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, home for low-income senior citizens. Additional structures are being constructed on both sides of the exiting building. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot

BORINQUEN COURT (Continued) **S116041516**

interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Date Record Added:	09/24/2019
Date Rec Updated:	12/19/2019
Updated By:	KMFORSTE
Site Description:	"Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is a flat and undergoing development. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: The site is undergoing development of two 25-story mixed residential and commercial use towers. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Code: 520537
Site Description: "Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is a flat and undergoing development. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: The site is undergoing development of two 25-story mixed residential and commercial use towers. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

BROWNFIELDS:

Name:	198 EAST 135TH STREET
Address:	198 EAST 135TH STREET
City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	520537
Acres:	1.112
HW Code:	C203084
SWIS:	0301
Town:	New York City
Record Added Date:	01/05/2016
Record Updated Date:	12/27/2020
Update By:	SMQUANDT
Site Description:	"Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is a flat and undergoing development. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: The site is undergoing development of two 25-story mixed residential and commercial use towers. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Date Rec Updated: 03/30/2021
Updated By: SJWALSH
Site Description: "LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Section 9, Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: Prior to remediation, the site was vacant with remnants of paved areas remaining from a former gasoline station. Currently the site is under construction for commercial use as a new, four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a new hotel is under construction. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the

Control Type: INST
Dt record added: 06/25/2012
Dt rec updated: 03/30/2021
Updated By: SJWALSH
Site Code: 410705
Site Description: "LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Section 9, Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: Prior to remediation, the site was vacant with remnants of paved areas remaining from a former gasoline station. Currently the site is under construction for commercial use as a new, four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a new hotel is under construction. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the monitoring events [dissolved oxygen (DO), oxidation reduction potential (ORP), and pH] are indicative of sustained desorption and oxidation, suggesting that additional ISCO and/or EFR events would be effective in further reducing residual groundwater contaminant levels. Based on these conditions, ISCO and EFR treatments will be continued as necessary during post- remedial site management. Residual contamination in the soil and groundwater is being managed

2477 THIRD AVENUE PROPERTY (Continued) **S109580082**

	under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Name: 2477 THIRD AVENUE PROPERTY
Address: 2477 THIRD AVENUE
City,State,Zip: BRONX, NY 10454
Site Code: 410705
Control Name: Landuse Restriction
HW Code: C203047
Control Code: 25
Control Type: INST
Dt record added: 06/25/2012
Dt rec updated: 03/30/2021
Updated By: SJWALSH
Site Code: 410705
Site Description: "LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Section 9, Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: Prior to remediation, the site was vacant with remnants of paved areas remaining from a former

2477 THIRD AVENUE PROPERTY (Continued) **S109580082**

gasoline station. Currently the site is under construction for commercial use as a new, four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a new hotel is under construction. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the monitoring events [dissolved oxygen (DO), oxidation reduction potential (ORP), and pH] are indicative of sustained desorption and oxidation, suggesting that additional ISCO and/or EFR events would be effective in further reducing residual groundwater contaminant levels. Based on these conditions, ISCO and EFR treatments will be continued as necessary during post- remedial site management. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	"12/4/14- Spoke to Ray Lara from PTC. He said they cleaned and emptied he tank. They tested the tank and failed. They are going to perform the isolation test. 2/20/15-Mark Salamack from PTC sent an email dated 2/9/15 with the following information. The one on Lenox Avenue and the one on 5th Avenue are both in the same complex called

CON EDISON (Continued) **S117395116**

the Savoy...whose main address is 45 West 139th Street in Manhattan...these are both above ground tanks that were tested when they went from #6 oil to #2 oil...both had a problem with the way an electronic gauge was connected on top of each tank...there was no contamination or spilled oil in either case...they have both been retested and passed the tightness tests...as we have not been paid yet for the job we have not sent anything to you to get the spill #s closed. Based on the information that the gauge was repaired, there was no contamination or spill in this site and the tank system was retested and past the test this spill is closed"

Remarks: "tank failure, unk pbs #"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/19/03 - ROSSAN, DDO - Called Mr. Kieth Bartley, who confirmed that contaminated soil letter should be sent to: ATT: Mr. Kieth Bartley c/o USA Tanks Plant Maintenance 206 Grandview Avenue Staten Island, NY 10303 5/22/03 TIPPLE UPDATING/ SITE VISIT ON THE 16TH REVEALED OIL FROM RUPTURED TANK ON TANK ROOM FLOOR, SEAPING THROUGH THE SUBSURFACE INTO THE BOILER ROOM, SUMP IN BOILER ROOM FLOOR, DRAIN IN WALKWAY OUTSIDE BASEMENT DOOR, BELOW VENT/FILL LINE SATURATING BRICK STEPS AND WALKWAY DOWN TO BASEMENT DOOR, AND HAD BEEN TRACKED THROUGHOUT THE AREA. A SUBSEQUENT VISIT 5/19 REVEALS THAT OIL WAS STILL DRAINING OUT OF THE SATURATED SOILS INTO THE

HOUSING - THE COMMUNITY PRESERVATION CORP. (Continued) **S105998994**

BOILER ROOM, AND ONLY THE BEGINNINGS OF A SURFACE CLEANUP HAD OCCURED TO DATE. 7/16/2003Tipple updating// spills # 02-00169 and 03-03928 at this address closed and referred to this spill # contaminated soil letter sent to both property owner: Estate of Michael McSherry 3616 Route 94 Chester, NY 10918-1149 and Management Company Classic Realty- John Gubias 3600 Feildston Rd Bronx, NY 10463----718-601-5858 7/15 site visit revealed oil still seeping into sump and along the wall in the boiler room. The walkway sump with soil walls was full of fresh oil, stairs in the walkway and laid up stone foundation wall between the tank room and the walkway were still contaminated with a coating of oil. The new surface spill appeared to be impacting the walkway outside the basement door and the soil walled sump in the walkway. 5/5/04: Tipple sent a letter requesting cleanup details and documentation. certified mail # 7001 0360 0000 8150 4272 11/30/04: Sent letter requesting documentation of work 05/19/06: This spill is transferred from Mr.Koon to Q.Abidi. Called Keith Bartley at (917)669-1093. Left message to call me back. 06/23/06: Contacted to Kristen at (718)981-5710 she told temporary tank set there. Mr.Keith Bartley didn't do the complete job for this spill. She will find out the information about the spill and she will call me back. -QA 08/30/06: Called Keith Bartley and left message to call me back. -QA 09/11/06: Contacted Mr. Keith Bartley(917)669-1093 he said that he will send closing confirmation letter very soon. -QA 10/10/06: Mr. John Herbig (Intech Environmental)called me and said he is going to take soil samples from the basement after chemical analysis he will send me the report for closing the spill. -QA 10/19/06: Talked to John Herbig he said he has collected soil samples from the basement and sent to chemical lab for analysis as soon as he will get the report he will send it to me. -QA 10/26/06: Contacted Mr. John Herbig he said that he received lab results of soil samples he will fax it to me. -QA 11/13/06: Mr. John Herbig (impact Environmental) called me and said soil sample report has come from the lab. He will mail me the report in a week. -QA 11/16/06: Mr. John Herbig called me and said that he has mailed me the soil sample report in couple of days I will receive that. The soil sample data which he faxed me is not readable. i am waiting to receive his mail. -QA 11/27/06: Reviewed the Investigation Summary Report dated November 16, 2006 [in eDocs]. The report presents soil sample results which indicate that a release of petroleum has occurred and soil contamination present at the site. The Department requires additional investigation to determine if there has been an impact to groundwater and to fully delineate soil and groundwater contamination. Sent a letter to Mr. Morris Arlos (owner) to prepare a Work Plan for additional investigation and submit it to Department within 30 days. -QA 12/14/06: Received letter from Mr. Kevin Kleaka, Project Manager (Impact Environmental) that additional investigation activities are not possible in the basement of the building due to limited place. He is going to break the concrete of the basement to excavate the contaminated soil. Additional soil samples will be taken at the site after excavation and removal of the contaminated soil to demonstrate the effectiveness of the remedial activities. -QA 12/20/06: Called Mr. Kevin Kleaka (Consultant and Project Manager) at (631)269-8800 and said to make two temporary well at the side walk of 262 Alexander Avenue to check the potential impact of groundwater. Before that we will not review any remedial plan. -QA 01/08/077: Received phone call from John Herbig of Impact Envt'l, regarding DEC's request for two groundwater samples in sidewalk outside site building; he noted there is already

HOUSING - THE COMMUNITY PRESERVATION CORP. (Continued) **S105998994**

a well in sidewalk related to investigations at 40th Police Precinct, across Alexander Ave. from site. He asked if it would be acceptable to just sample that well, rather than installing two new wells in sidewalk. After reviewing location of existing well (MW-5 from 40th Precinct investigations) which is west-northwest of ASTs in basement of site bldg, and location of soil sample with TAGM exceedance for VOCs, SP-2, and considering that URS has established local groundwater flow direction at 40th Pct. is to west-northwest, J. Kolleeny told Mr. Herbig that sampling of well MW-5 would be acceptable to evaluate impacts to groundwater from this spill. After sampling well, Impact Envt'l can prepare a remedial action plan. - J. Kolleeny 01/11/07: Talked to Mr. John Herbig at (631)774-5597, received his fax regarding groundwater sample results. MTBE is high. [Only compound greatly exceeding its GW std. was MTBE, suggesting main impact to GW is from 40th Police Precinct across street to west.] Now Impact environmental can submit remedial action plan to DEC regarding this spill. -QA 02/05/07: Called Mr. John Herbig (631)774-5597 and reminded him to send electronic version single Pdf file for both the reports, Investigation Summary report and Corrected Action Plan. After receiving that we will approve your plan. -QA 02/07/07: Reviewed the corrective Action Plan dated January 29, 2007 for this site, submitted by impact environmental. The report proposes excavation of an area of residual soil contamination beneath the basement floor at the site, followed by collection of end-point soil samples. The corrective Action plan is approved. Letter mailed out to responsible party. -QA 05/09/07: Called Mr. John Herbig (631)774-5597 and discussed regarding spill. He said that at this site owner is waiting when all tenants will be relocated then work will be started at this site. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD 12/06/2007: Called and spoke to Mr. John Herbig of Impact Env. regarding remedial action plan implementation. He told me that First Alexander LLC was potential buyer and that this company is no longer involved with this property, and due that RAP was not implemented at the site. Called to Building Management (718) 601-5858 of this property. Spoke with a manager. He told that First Alexander LLC is the current owner of this site. This company bought the property approximately one year ago. Now this property under new contract for sale. Received a call from Mr. Morris Arlos - the owner of First Alexander LLC. He confirmed that this property is now under contract. The closing is scheduled on the beginning of January 2008. The new owner - Galaxy was informed about the spill case and agreed to do site remediation, according to Mr.Morris Arlos. Contact person for the Galaxy - Richard Sica, phone: (718) 601-7000. Will contact Galaxy after January 10, 2008. AD 12/07/2007: Spoke to Mr. Sica. His company is aware of the spill and remedial action plan. He will contact us after site purchase to discuss further actions. AD 02/14/2008: Spoke with Mr. Sica regarding the site. He told me that the closing was moved on early March. AD 04/21/2008: Called and left a message to Building Management. AD 08/07/2008: Called and left a message to R. Sica of Gallaxy. AD 11/04/2008: Called and left a message to R. Sica. and to Building Management. AD 12/08/2008: Looked in the ACRIS database, the property now belongs to The Community Preservation Corp. (CPC). Called and spoke with Kristy Seyfert of CPC, phone: 212-869-5300, fax: (212)659-0102. She confirmed that CPC owns the property. She asked me to sent them an official letter and NYSDEC Spill report. AD 12/18/2008: Sent a letter to CPC with a request to prepare and submit a RAP to DEC till January 29, 2009.

HOUSING - THE COMMUNITY PRESERVATION CORP. (Continued) **S105998994**

Faxed a copies of the letter and NYSDEC Spill report to Ms. Seyfert. DL PDF copy to eDocs. AD 02/19/2009: Called and left a message to Ms. Seyfert of CPC regarding past due of RAP submission. Later receved a phone call from K. Seyfert. She said that she did not received the letters. Sent these letters again via fax and e-mail: From: Ainura Doronova [mailto:axdorono@gw.dec.state.ny.us] Sent: Thursday, February 19, 2009 3:26 PM To: Kristy Seyfert <kseyfert@communityp.com Subject: 2515 Seventh Ave., New York NYSDEC Spill No. 0401623 and 262Alexander Ave., Bronx NYSDEC Spill No. 0301707 Dear Ms. Seyfert: Attached please find copies of the letters, regarding above-referenced sites, which were sent to you previously, but were not received by your company according to your statement. Please be advised that response is time sensitive. To receive a deadline postponement you should submit an official request. Sincerely, Ainura Doronova Environmental Engineer later received an e-mail from her saying: Thank you I am in receipt of the attachment and will address the situation ASAP. Kristy Seyfert Loan Analyst The Community Preservation Corporation 28 E. 28th Street, 9th Fl. New York, NY 10016 T: (212) 869-5300 x560 F: (212) 659-0102 kseyfert@communityp.com 05/18/2009: Did not receive any response yet. Called and left a message to Ms. Seyfert. AD 07/27/2009: Called and spoke with Ms. Seyfert - (212)869-5300, ext 560. She said that this case was referred to someone else. This person is on vacation till July 30, 2009. Left my contact info for her. AD 10/02/2009: Called and spoke with K. Seyfert of CPC regarding the submission of the report. She referred me to Ms. Jill Belli - contact person for this case (ext. 626). Called her and left a message. AD 12/08/2009: Did not receive any response from Ms. Belli of CPC. Called and left a message to Ms. Belli again. AD 12/09/2009: Called and again could not reach Ms. Belli or Ms. Seyfert. Will send Remediation Needed Letter to Mr. John McCarthy - vice president of CPC. AD 12/14/2009: Issued and sent Remediation needed Letter to Mr. McCarthy of CPC. Response is due January 25, 2010. DL pdf copy to eDocs. AD 02/2010: Did not receive any response. AD 09/12/2011: Was forwarded an e-mail from Nick Recchia regarding implementation of the 2007 RAP.: Dear Mr. Paul John. Our client is ready to implement the approved corrective action plan which was approved in 2007 and is attached. The contractor will have the area of excavation open for DEC inspection this Wed. 9/14/2011. We would like to move forward in closing this spill case file upon your inspection and reviews ASAP. If you could have someone available to inspect the excavation this Wednesday it would be appreciated I will be on site to collect endpoint soil samples. If you can give me a specific time to meet and co-ordinate for the inspection that would be great. My contact information is below. My cell phone # is 516-395-8763. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. 55 Hilton Avenue, Garden City, NY 11530 Phone: (516) 746-4400 x Fax (516) 746-4432 nrecchia@eeaconsultants.com Called and spoke with Mr. Recchia of EEA. EEA will overlook the remedial excavation in the basement of the building and will collect a post-excavation endpoint soil samples. Discussed this site with J. Kolleeny of DEC. It was decided that EEA can proceed with RAP implementation. Decision on a closure of the spill will be made based on the results of end-point soil samples. AD 09/13/2011: Received an e-mail from Mr. Recchia saying: Ainura. The client contact is Telly Zervoudis. Please advise us ASAP we would like to move forward with closing out this spill. Thanks. Galaxy General Contracting 3152 Albany Cresent Bronx, NY

HOUSING - THE COMMUNITY PRESERVATION CORP. (Continued) **S105998994**

10463 Tzervoudis@galaxygc.com Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called and left a message to Mr. Recchia of EEA. Later spoke with him regarding RAP implementation. He said that removal of contaminated soil will start tomorrow, and he expects that collection of endpoint samples will be in a few days. Requested him to notify DEC about date of sampling. AD 09/14/2011: Received an e-mail from Mr. Recchia saying: Ainura, EEA is performing the remedial action to excavate and remove soils as per the approved RAP. We anticipate collecting endpoint soil samples tomorrow. EEA will prepare a full report of remedial action activities, endpoint sample data, site photos, etc. signed and sealed by our engineer. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called and informed Mr. Recchia that I cannot visit the site on Thursday, September 15, 2011, due to the previously scheduled meeting. Requested to take a pictures of the excavation, document all activities and to take PID readings. AD 09/27/2011: Received an e-mail from N. Recchia saying: Ainura, Hope all is well. I was hoping you could help us out here by taking a quick look at the endpoint results from the excavation. Our client wants to backfill ASAP because it is in the building and they had to shore up the walls. All endpoint samples were collected from the sidewalls of the excavation. The bottom of the excavation was bedrock at a depth of 2 to 2 feet below floor grade. I reviewed the results and it appears that all samples are below the new CP-51 Soil Cleanup Policy which replaces TAGM. I included a photo of the excavation. I apologize for not having a table or drawing ready for you at this time but we want to backfill this ASAP. I will prepare a full report and send it to you next week. Thanks for your help. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Looked at the submitted data. No exeedances of VOCs or SVOCs levels were detected in all six endpoint soil samples. Asked Mr. Recchia to submit a sketch of the excavation with locations of the soil samples. Later received the requested sketch. Approved the backfill of the excavation. AD 10/17/2011: received an e-mail from Mr. Recchia saying: Ainura, Attached please find our final remedial action report for this property. Please review and let me know the spill status. Thanks you. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. DL the report to eDocs. Will review. AD 10/26/2011: Reviewed the report. It states that EEA performed remedial excavation of contaminated soils in the vicinity of the former AST s area. A total of 14.4 tons of contaminates soil was removed off-site. Post-excavation end-point soil samples were collected on September 15, 2011 from 6 sidewalls locations. No bottom soil samples were collected due to presence of a shallow bedrock, which was found at a depth of 1.5' to 2.8' below the basement floor level. According to the analytical data, no VOCs or SVOCs were detected above NYSDEC standards. Based on the result, EEA concludes that contamination was removed and recommends spill case closure. The submitted site map is different from site maps presented by previous consultant. To clarify this difference with Mr. Recchia. Will discuss spill closure request with J. Kolleeny of DEC. AD 10/27/2011: Discussed the site with J. Kolleeny. To ask MR. Recchia if there are any sumps in the basement to be checked for presence of LNAPL or product sheen. AD 10/28/2011: Called and spoke with Mr. Recchia. Requested to clarify excavation location on the site map, and info on sumps. Sent him an e-mail with an attached site plan saying: Mr. Recchia: Could you please verify location of the excavation completed by EEA on this site plan? Also, if there are any

HOUSING - THE COMMUNITY PRESERVATION CORP. (Continued) **S105998994**

sumps in the basement they should be checked for presence of LNAPL or product sheen. AD 01/03/2011: Received an e-mail from Mr. Recchia saying: Ainura, Sorry for the confusion. Our drawing is somewhat misleading I can see your concern and confusion. I have revised our drawing and it is in the area of the former AST's and SP-2 area. We didn't focus on the whole basement location in our drawing only the former tank area and area around SP-2. Sorry for the confusion. I have revised the drawing. I hope this helps. EEA did not observe any basement sumps in the building. Sincerely, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Reviewed the submitted site map. Soil was excavated in the area of the former AST's and soil boring SP-2 area. DL the revised site map to eDocs. Will issue a closure approval letter. AD 11/04/2011: Sent a Spill Closure approval letter to Telly Zervoudis of Galaxy General Contracting Corp. at 3152 Albany Crescent, Bronx, NY 10463 via e-mail: Tzervoudis@galaxygc.com. DL pdf copy of the letter to eDocs. Case closed. AD "

DEC Memo:	"4/29/08 Received letter from Stuart Schwartz, of SNS Energy Distribution Corp., on 4/28/08. Tank was excavated and isolated and retested. Isolation revealed leak was at vent line. No contaminated soil associated with this spill. Tank retested on 4/25/08 and passed. They are waiting for authorization from owner to replace all piping and will retest. bf 5/1/08 bf: sent ttf letter to: Urbanization Maria Lopez Housing 580 White Plains Road, 6th Floor Tarrytown, NY 10591 Sent copy to: Stuart N. Schwartz, Chief Executive officer SNS Energy Corporation 221 Broadway, Suite 205 Amityville, NY 11701 6/4/08 On 6/3/08, received fax of letter dated 5/23/08 from Stuart Schwartz of SNS Energy. All oil distribution piping at the site was replaced even though only the vent line failed. Tightness test was done 5/22/08 and passed. I called Mr. Schwartz (631)691-1700 and left message with secretary to call me back. When he calls back I will request another letter regarding contamination, if any, and the tank test is deficient because of gw determination. bf 6/10/08 On 6/9/08, received revised tank test report. Report is satisfactory. Need letter regarding contamination. Called him at (631)926-2196 and left message requesting letter. bf 6/11/08 Yesterday, received fax from S. Schwartz stating no oil contamination found and piping was replaced due to its age. NFA. bf"

Update By:	AMSERVIS
Site Description:	"Location The site is within an urban area and located at 2455 Third Avenue, Bronx, New York. The approximately 19,900 square-foot (0.46 acres) site is identified on the Bronx County Tax Map as Block 2319, part of Lot 37. The site is bound by East 135th Street/The Major Deegan Expressway followed by a hotel to the northeast, Third Avenue/Third Avenue Bridge ramp followed by commercial buildings to the southeast, a mixed-use commercial/office building to the southwest, and a parking lot and an active construction site to the northwest. Site Features The site contains a one-story warehouse

2455 THIRD AVENUE (Continued) **S125465258**

building and concrete-paved parking on the eastern part of the site. Current Zoning and Land Use According to the New York City Planning Commission Zoning Map 6a, the site is located in a M1-3/R8 light manufacturing and high density residential commercial district, which typically allows for light industrial uses like woodworking and repair shops as well as high density 8-story and taller residential buildings. The site is also located in the Harlem River Waterfront (HRW) Special Purpose District. Special purpose districts are applied to areas to achieve specific planning and urban design objectives. The HRW special purpose district was designated to support the revitalization of this underutilized area in the South Bronx into a vibrant, mixed use, mixed-income neighborhood while retaining viable light industry. The proposed development is consistent with the current zoning. The adjoining parcels and surrounding area are used for industrial/manufacturing, and commercial purposes. Historical Site Use Historical site use includes multiple two- and three-story residential and commercial buildings on the site (1891), a carpet storage facility on the southern part of the site (1908), and a rail yard (1935 1951). The site was an asphalt-paved lot in 1995. In 1998, a one-story building of unknown use was present on the southeastern part of the site, with parking located on the northeastern portion of the site. From 2006 to 2017, the site contained a building on the southwestern part of the site occupied by Bridge Building Supply. The site is currently developed with a one-story warehouse and concrete-paved lot on part of Lot 37. Site Geology and Hydrogeology Based on findings from the subsurface investigation performed in April 2019, the site is underlain by fill material predominantly consisting of brown, fine-grained sand with varying amounts of silt, gravel, tile, metal, concrete, brick, glass, wood, and slag. The fill was observed to depths varying between about 6 and 9.5 feet bgs. Historic fill was generally underlain by fine-grained sands with varying amounts of silt, clay, organic material, and gravel. Historic fill was underlain by a 1- to 5- feet thick clay/peat layer with organic material (between 8 and 16 feet bgs) in borings on the western part of the site followed by sand. Groundwater was observed at depths ranging from about 5.25 feet bgs in the western part of the site to 8.25 feet bgs in the center of the site. Inferred regional groundwater flow direction for the area surrounding the site is to the southwest toward the Harlem River. "

Tang to J.Kann. 5/29/12: J.kann - since little is known about this facility, a P0 priority was assigned. 10/23/13: J.Kann - a work plan was submitted and edoced under 9005760. 01/07/14: J.Kann - revised IWP approved on 12/23/13. There was some confusion between the two Mitchell Houses. The revised IWP only covers Alexander Avenue. SIR due 6/23/14. Site included in the multi site stip sent to NYCHA today. 12/12/14: J.Kann - SIR submitted to DEC on 10/15/14 after an approved extension. The report was reviewed and it required revisions due to the confusion of the two Mitchell houses. The revised report was email to the Department on 12/11/14. Six soil borings were advanced and three wells were installed. Results of the twelve soil samples collected for analysis of VOCs and SVOCs yielded no exceedences of CP-51. All groundwater concentrations were below TOGS 1.1.1. NFA. Spill closed."

Date Record Added:	08/10/2010
Date Rec Updated:	01/19/2021
Updated By:	SMMARTIN
Site Description:	"Site Location: The Site (BCP Area) encompasses approx. 0.9 acre of the approx. 7-acre Mott Haven School Campus (MHSC). The Site is located at 730 Concourse Village West, Block 2443, part of Lot 78 in Bronx, New York. The portion of the MHSC adjoining the BCP Area which is located on Block 2443, part of Lot 78 is referred to as the Non-BCP Area A . The adjacent approx. 7.7-acre property which houses Primary School No. 156 and Intermediate School No. 151 is located on Block 2443, Lots 79 and 190. The area beneath the platforms that support PS 156 and IS 151 is referred to as the Non-BCP Area B . Site

FORMER METRO NORTH PROPERTY (Continued) **S110487604**

Features: The Site is located in a topographic depression. The properties to the north and west are approximately 30 feet higher than the Site. To the north, Primary School No. 156, Intermediate School No. 151, and two apartment buildings are constructed on 30-foot-high concrete columns. The properties to the west are separated from the Site by a 30-foot-high retaining wall. The properties to the south are at approximately the same elevation as the Site. To the east of the Site, the ground again rises to approximately 20 feet above the Site. Current Zoning and Land Use: The current use of the site in the BCP area is a high school. The adjacent properties, besides Primary School No. 156 and Intermediate School No. 151 to the north, include the New York and Harlem Railroad to the east, the New York and Harlem Railroad and Cardinal Hayes High School to the south, and apartment buildings, Herk Elevators, parking lots, Live Poultry and Nationwide Warehouse to the west. Past Uses of the Site: The Site had been a railyard since 1891, with a machine shop, paint area, carpenter shop, and electrical warehouse located to the west of the property. All of these buildings were demolished between 1951 and 1977. The Site remained undeveloped until 2007 when construction of the Mott Haven School Campus was initiated. Site Geology and Hydrogeology: Groundwater flow direction is generally to the west."

Env Problem:	"Nature and Extent of Contamination: Remedy on the site is now completed, and the project is in Site Management phase. The contaminants of concern in soil were benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, 2-methylnaphthalene, and the polynuclear aromatic hydrocarbon (PAHs) benzo(a)anthracene. The most significant contamination identified in soil and groundwater was confined to the northwestern portion of the Site (BCP area). The contaminants of concern in groundwater were dissolved phase VOC and naphthalene contamination. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. The site is managed under a Site Management Plan."
Health Problem:	"It is unlikely that people will come in contact with residual soil contamination remaining at depth as the site is covered by buildings, asphalt, concrete and other covered surfaces, i.e., synthetic turf or rubber surfaces. Inhalation of contaminants via soil vapor intrusion has been prevented through the installation of a vapor barrier and continuous operation of an active mitigation system in the new on-site school buildings. Exposure to contaminants in drinking water is not expected since the area is served by public drinking water. "

Site Description:	"Site Location: The Site (BCP Area) encompasses approx. 0.9 acre of the approx. 7-acre Mott Haven School Campus (MHSC). The Site is located at 730 Concourse Village West, Block 2443, part of Lot 78 in Bronx, New York. The portion of the MHSC adjoining the BCP Area which is located on Block 2443, part of Lot 78 is referred to as the Non-BCP Area A . The adjacent approx. 7.7-acre property which houses Primary School No. 156 and Intermediate School No. 151 is located on Block 2443, Lots 79 and 190. The area beneath the platforms that support PS 156 and IS 151 is referred to as the Non-BCP Area B . Site Features: The Site is located in a topographic depression. The properties to the north and west are approximately 30 feet higher than the Site. To the north, Primary School No. 156, Intermediate School No. 151, and two apartment buildings are constructed on 30-foot-high concrete columns. The properties to the west are separated from the Site by a 30-foot-high retaining wall. The properties to the south are at approximately the same elevation as the Site. To the east of the Site, the ground again rises to approximately 20 feet above the Site. Current Zoning and Land Use: The current use of the site in the BCP area is a high school. The adjacent properties, besides Primary School No. 156 and Intermediate School No. 151 to the north, include the New York and Harlem Railroad to the east, the New York and Harlem Railroad and Cardinal Hayes High School to the south, and apartment buildings, Herk Elevators, parking lots, Live Poultry and Nationwide Warehouse to the west. Past Uses of the Site: The Site had been a railyard since 1891, with a machine shop, paint area, carpenter shop, and electrical warehouse located to the west of the property. All of these buildings were demolished between 1951 and 1977. The Site remained undeveloped until 2007 when construction of the Mott Haven School Campus was initiated. Site Geology and Hydrogeology: Groundwater flow direction is generally to the west."
Env Problem:	"Nature and Extent of Contamination: Remedy on the site is now completed, and the project is in Site Management phase. The contaminants of concern in soil were benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, 2-methylnaphthalene, and the polynuclear aromatic hydrocarbon (PAHs) benzo(a)anthracene. The most significant contamination identified in soil and groundwater was confined to the northwestern portion of the Site (BCP area). The contaminants of concern in groundwater were dissolved phase VOC and naphthalene contamination. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. The

FORMER METRO NORTH PROPERTY (Continued) **S110487604**

	site is managed under a Site Management Plan."
Health Problem:	"It is unlikely that people will come in contact with residual soil contamination remaining at depth as the site is covered by buildings, asphalt, concrete and other covered surfaces, i.e., synthetic turf or rubber surfaces. Inhalation of contaminants via soil vapor intrusion has been prevented through the installation of a vapor barrier and continuous operation of an active mitigation system in the new on-site school buildings. Exposure to contaminants in drinking water is not expected since the area is served by public drinking water. "

Site Code: 335960
Site Description: "Site Location: The Site (BCP Area) encompasses approx. 0.9 acre of the approx. 7-acre Mott Haven School Campus (MHSC). The Site is located at 730 Concourse Village West, Block 2443, part of Lot 78 in Bronx, New York. The portion of the MHSC adjoining the BCP Area which is located on Block 2443, part of Lot 78 is referred to as the Non-BCP Area A . The adjacent approx. 7.7-acre property which houses Primary School No. 156 and Intermediate School No. 151 is located on Block 2443, Lots 79 and 190. The area beneath the platforms that support PS 156 and IS 151 is referred to as the Non-BCP Area B . Site Features: The Site is located in a topographic depression. The properties to the north and west are approximately 30 feet higher than the Site. To the north, Primary School No. 156, Intermediate School No. 151, and two apartment buildings are constructed on 30-foot-high concrete columns. The properties to the west are separated from the Site by a 30-foot-high retaining wall. The properties to the south are at approximately the same elevation as the Site. To the east of the Site, the ground again rises to approximately 20 feet above the Site. Current Zoning and Land Use: The current use of the site in the BCP area is a high school. The adjacent properties, besides Primary School No. 156 and Intermediate School No. 151 to the north, include the New York and Harlem Railroad to the east, the New York and Harlem Railroad and Cardinal Hayes High School to the south, and apartment buildings, Herk Elevators, parking lots, Live Poultry and Nationwide Warehouse to the west. Past Uses of the Site: The Site had been a railyard since 1891, with a machine shop, paint area, carpenter shop, and electrical warehouse located to the west of the property. All of these buildings were demolished between 1951 and 1977. The Site remained undeveloped until 2007 when construction of the Mott Haven School Campus was initiated. Site Geology and Hydrogeology: Groundwater flow direction is generally to the west."
Env Problem: "Nature and Extent of Contamination: Remedy on the site is now completed, and the project is in Site Management phase. The contaminants of concern in soil were benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, 2-methylnaphthalene, and the polynuclear aromatic hydrocarbon (PAHs) benzo(a)anthracene. The most significant contamination identified in soil and groundwater was confined to the northwestern portion of the Site (BCP area). The contaminants of concern in groundwater were dissolved phase VOC and naphthalene contamination. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. The site is managed under a Site Management Plan."
Health Problem: "It is unlikely that people will come in contact with residual soil contamination remaining at depth as the site is covered by buildings, asphalt, concrete and other covered surfaces, i.e., synthetic turf or rubber surfaces. Inhalation of contaminants via soil vapor intrusion has been prevented through the installation of a vapor barrier and continuous operation of an active mitigation system in the new on-site school buildings. Exposure to contaminants in drinking water is not expected since the area is served by public drinking water. "

The Site is located at 730 Concourse Village West, Block 2443, part of Lot 78 in Bronx, New York. The portion of the MHSC adjoining the BCP Area which is located on Block 2443, part of Lot 78 is referred to as the Non-BCP Area A . The adjacent approx. 7.7-acre property which houses Primary School No. 156 and Intermediate School No. 151 is located on Block 2443, Lots 79 and 190. The area beneath the platforms that support PS 156 and IS 151 is referred to as the Non-BCP Area B . Site Features: The Site is located in a topographic depression. The properties to the north and west are approximately 30 feet higher than the Site. To the north, Primary School No. 156, Intermediate School No. 151, and two apartment buildings are constructed on 30-foot-high concrete columns. The properties to the west are separated from the Site by a 30-foot-high retaining wall. The properties to the south are at approximately the same elevation as the Site. To the east of the Site, the ground again rises to approximately 20 feet above the Site. Current Zoning and Land Use: The current use of the site in the BCP area is a high school. The adjacent properties, besides Primary School No. 156 and Intermediate School No. 151 to the north, include the New York and Harlem Railroad to the east, the New York and Harlem Railroad and Cardinal Hayes High School to the south, and apartment buildings, Herk Elevators, parking lots, Live Poultry and Nationwide Warehouse to the west. Past Uses of the Site: The Site had been a railyard since 1891, with a machine shop, paint area, carpenter shop, and electrical warehouse located to the west of the property. All of these buildings were demolished between 1951 and 1977. The Site remained undeveloped until 2007 when construction of the Mott Haven School Campus was initiated. Site Geology and Hydrogeology: Groundwater flow direction is generally to the west."
Env Problem: "Nature and Extent of Contamination: Remedy on the site is now completed, and the project is in Site Management phase. The contaminants of concern in soil were benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, 2-methylnaphthalene, and the polynuclear aromatic hydrocarbon (PAHs) benzo(a)anthracene. The most significant contamination identified in soil and groundwater was confined to the northwestern portion of the Site (BCP area). The contaminants of concern in groundwater were dissolved phase VOC and naphthalene contamination. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. The site is managed under a Site Management Plan."
Health Problem: "It is unlikely that people will come in contact with residual soil contamination remaining at depth as the site is covered by buildings, asphalt, concrete and other covered surfaces, i.e., synthetic turf or rubber surfaces. Inhalation of contaminants via soil vapor intrusion has been prevented through the installation of a vapor barrier and continuous operation of an active mitigation system in the new on-site school buildings. Exposure to contaminants in drinking water is not expected since the area is served by public drinking water. "

The adjacent properties, besides Primary School No. 156 and Intermediate School No. 151 to the north, include the New York and Harlem Railroad to the east, the New York and Harlem Railroad and Cardinal Hayes High School to the south, and apartment buildings, Herk Elevators, parking lots, Live Poultry and Nationwide Warehouse to the west. Past Uses of the Site: The Site had been a railyard since 1891, with a machine shop, paint area, carpenter shop, and electrical warehouse located to the west of the property. All of these buildings were demolished between 1951 and 1977. The Site remained undeveloped until 2007 when construction of the Mott Haven School Campus was initiated. Site Geology and Hydrogeology: Groundwater flow direction is generally to the west."

Env Problem:	"Nature and Extent of Contamination: Remedy on the site is now completed, and the project is in Site Management phase. The contaminants of concern in soil were benzene, toluene, ethylbenzene, and xylenes (BTEX), naphthalene, 2-methylnaphthalene, and the polynuclear aromatic hydrocarbon (PAHs) benzo(a)anthracene. The most significant contamination identified in soil and groundwater was confined to the northwestern portion of the Site (BCP area). The contaminants of concern in groundwater were dissolved phase VOC and naphthalene contamination. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. The site is managed under a Site Management Plan."
Health Problem:	"It is unlikely that people will come in contact with residual soil contamination remaining at depth as the site is covered by buildings, asphalt, concrete and other covered surfaces, i.e., synthetic turf or rubber surfaces. Inhalation of contaminants via soil vapor intrusion has been prevented through the installation of a vapor barrier and continuous operation of an active mitigation system in the new on-site school buildings. Exposure to contaminants in drinking water is not expected since the area is served by public drinking water. "

There is no visible spill at this site, only a TTF. 8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/13/2015: Rashad Per NYC building records 308 Willis Ave has no alternate address. No PBS records or additional spill reports found. No

UNKNOWN - TTF (Continued) **S110541017**

documents found in D2. According to building records the owner is: Willis Bricks LLC C/O Express Fine Jewlery 55 West 47th Street - Suite 340 New York, NY 10036 8/18/2015: Rashad Email sent to Abraham from NYC tank testing: After reviewing the spill report for 308 Willis Ave, Bronx NY, spill#1006590 dated 9/17/2010, I would like to request the following information: Tank test failure report. Test results for supply/return and vent/fill lines. Property owners information. 8/24/2015: Rashad Received email from Goldie with tank test failure report. Report indicates ullage (dry) portion of leak. Letter attached also states This letter is to certify that on September 3, 2010 New York City Tank Testing isolated, tested and reconnected the vent line at the above mentioned premises. The results are as follows: The vent line had a gross failure. Recommendations: At the current time NYC Tank Testing recommends uncovering the top of tank and isolating all necessary lines. Documents uploaded to D2. 12/7/2016: Rashad Spill will be administratively closed as per tank test failure guidance document for TTF greater then 5 years old. Leak was a dry leak and according to tank test documents, failure was in vent line, not tank. Spill administratively closed. "

Remarks: "tank test failure, no other info known"

Record Added Date:	05/15/2015
Record Updated Date:	08/14/2015
Update By:	BXANDERS
Site Description:	"Location: The Site is located in an urban area in the Mott Haven section of the Bronx and is comprised of approximately 47.411 square foot (sf) irregularly (rectanuglar?) shaped lot. The site includes all of Block 2309 Lot 12 and a portion of Lot 1 and has 75 feet of frontage along Bruckner Boulevard and approximately 300 (360?) feet of frontage along E. 134th Street. Site Features: The site is currently vacant. Current Zoning/Use: The site is zoned M1-2/R6A residential/commercial and is currently vacant, though part is used as a parking lot by the adjacnet building. Historical Use: The subject property was historically used as a piano factory, woodworking factory and marble factory (1890s through 1920s), and a revolving door factory and window and door factory (1940s through 2007). Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 to 10 feet below grade. Silty sand is present immediately below this layer to a depth of 15 feet. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface. Groundwater at the Site is present under water table conditions at a depth of approximately 10 feet below grade. Based on regional water table elevation maps, groundwater flow is expected to be southwest toward the Harlem River."

2413 THIRD AVENUE (Continued) **S126369660**

Record Added Date: 03/24/2020
Record Updated Date: 08/04/2020
Update By: HMDUDEK
Site Description: "Location: The 2413 Third Avenue site is about 24,700 square feet (.57 acres) and occupies Block 2319, Lot 109 on the Bronx Borough Tax Map. The site is located west of the intersection of Third Avenue and Bruckner Boulevard and is bound by a self-storage facility to the north; two multiple- story light industrial and a commercial buildings and a dog park, and an access roadway to the northeast; Third Avenue and the Third Avenue Bridge overpass to the southeast; and a residential construction project to the west. Surrounding properties generally consist of light industrial, manufacturing, commercial, and retail buildings. The Harlem River is located about 150 feet west of the site. The site is located in a New York State Environmental Zone (En-Zone) and within the Port Morris Harlem Riverfront Brownfield Opportunity Area, which was granted by the New York State Department of State in 2015. Site Features: The site consists of a 24,700- square-foot lot containing a five-story commercial building that was constructed in 1897 and a tenant parking lot. The western portion of the site contains a gravel-graded rectangular extension that is overgrown with vegetation. The building has a partial cellar that contains mechanical equipment and a sump. The ground floorof the building is occupied by a restaurant (Empanology), a boxing gym (SouthBox Gym), and a furniture storage area; the upper floors of the building are vacant. Current Zoning and Land Use: According to the New York City Planning Commission (NYCPC) Zoning Map 6a, dated June 26, 2019, the site is located in an M1-3/R8 manufacturing district. The site is also located in the Special Harlem River Waterfront Zoning District, which supports the area s revitalization into a vibrant, mixed use, mixed- income neighborhood while retaining viable light industry. Past Use of the Site: By 1891, the central portion of the site was occupied by four 2-story buildings, one 1-story building and one 6-story building used for cleaning shops operated by an iron works facility. The present 6-story commercial building was constructed in 1897 and was used for unspecified manufacturing in 1928. The building contained a wood flooring storage facility from 1935 to 1947 and an unspecified storage facility from 1951 to 2007. The northern portion of the site was occupied by a 1-story building containing a motor truck company in 1922, a manufacturing facility (unspecified) in 1928, and a lubrication oil storage facility between 1935 and 2007. The area formerly occupied by the 1-story building is now a vacant lot covered with concrete and gravel. The southeastern portion of the site was occupied by a 2-story building used as a manufacturing facility (unspecified) in 1928 and a chemical laboratory between 1935 and 1947. The 2-story building was demolished by 1984. A freight railway easement transected the site between 1935 and 1951. The site has been under theownership of RXR 2413 Third Owner LLC since March 2020. Site Geology and Hydrogeology: Based on the findings of Langan s Supplemental Subsurface Environmental Investigation (SESI), dated July 25, 2019, the general stratigraphy of the site consists of historic fill material extending to depths between 5 and 11 feet below grade surface (bgs). The fill material consists of brown fine sand with varying amounts of gravel, brick, coal, concrete, slag, and wood. Native soil observed beneath the fill layer consists of silty and clayey sand and clay with varying amounts of peat and shells. Bedrock was not encountered at depths of up to 20 feet bgs. Based on

2413 THIRD AVENUE (Continued) **S126369660**

	United States Geologic Survey engineering bedrock maps, bedrock beneath the site is estimated to be about 50 feet bgs. Groundwater was encountered between about 7.0 and 8.5 feet bgs. Inferred groundwater flow is to the southwest towards the Harlem River. Based on proximity to the Harlem River estuary, groundwater elevations across the site may be subject to tidal fluctuations. "

DEC Memo:	"12/12/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/28/06: Two 25K USTs installed in 1948 that stored #4/#6 oil were closed-removed in 1996. One 30K UST that stores #2 oil was installed in 1997 and is currently in service. Soil contamination was encountered during tank replacement. 4 MWs were installed in 1996 and is currently bailing oil/water. NYCHA recommends that a site assessment be performed. - SK 9/26/06: This spill was transferred from S.Kraszewski to J. Kann. -JK 12/12/12: J.Kann - the IWP was received in May 2009. The plan and historic files were reviewed. Based on the review, comments were sent to NYCHA on 12/12/12 (edoced). 3/5/13: J.Kann - revised IWP (Addendum letter and Figure 3) recvd on 2/11/13. Information reviewed and found acceptable. Pointed out in an email to NYCHA that the locations identified in the

LINCOLN HOUSES -NYCHA (Continued) **S100167943**

Addendum letter and revised Figure 3 are correct (however, the text of Section 3.2 of the IWP was not revised to reflect the change). SIR due 9/5/13. 12/2/13: J.Kann - stip sent to nycha on 10/30. Signed stip rcvd 12/2 and forwarded to legal. 1/28/14: J.kann - approved modifications to IWP after discussion/email with/from consultant (edoced) 2/06/14: J.Kann- visited site today. Borings were advanced in the sidewalk. Stained soils noted at the groundwater interface and collected for analysis. Historical data shows not product or contamination downgradient of the site (across Madison Avenue). Additional drilling will be performed on Monday 2/10/14. 3/5/14: J.Kann- rcvd RIR on 3/5/14. Reviewed the RIR. Concurred with recommendations. Sent and email to NYCHA. Quarterly monitoring should commence and a 2014 2nd quarter monitoring report is due on July 31, 2014. A RAP is due on 9/5/2014 7/23/14: J.Kann - reviewed RAP. VEFR is proposed in two wells containing product. Monitoring over 6 months. NYCHA needs to install 4 or 6 inch well in sidewalk after scaffolding over sidewalk is removed. email sent to NYCHA on 7/24/14. 5/12/17: J.kann - visited site today. Wells did not contain product. Boiler room walls clean. Given the minimal impacts previously noted and limited to weathered 6 oil, tanks removed over 15 years ago and no dissolved phase in gw, spill closed. Possible weathered 6 oil contaminated soils at groundwater interface, so contaminated spill clause included in closure letter. Spill closed."

DEC Memo:	"7/26/05 - Sangesland spoke to Doug Harm of Brinkerhoff Envir. He said they are developing a vacant site and they found a buried 550 gal UST. Tank was pulled and approx. 300 cubic yards of contamianted soil was stockpiled waiting for disposal. They will take end point samples and compare them to TAGM limits and send it in. ***Consultant knew what to do - No Contaminated Soil Letter was sent*** 10/26/05 - Austin - Project reassigned from Krimgold to Rahman - end 02/27/06 Sharif Rahman- I spoke with Doug Harm,(732)223-2225 and he would send DEC the final closure report in 5/6 weeks. 05/08/06 Sharif Rahman- I spoke with Doug again, he would send me the summary of investigation for review first, then the final report. 10/04/06 Rahman- Nine UST were discovered ranging from 275 gallons to 2,000 gallons in size.Tanks showed evidence of discharge.Brinkerhoff excavated and properly disposed approx. 465 tons of petroleum-impacted soil.Analyticals reuslts showed elevated levels of PAH cmpounds that had historicaly been over the NYS DEC TAGM's soil clean up objectives as a result of historic fill material.Five end point samples were collected.VOCs were non detectable in all samples. Several SVOC PAHs were reported over DEC SCO, but these PAHs are the same PAHs that were identified in the historic fill found throughout the site.Placement of a impermeable cap comprised of concrete is projected to be completed in October 2006."

Town:	New York City
Record Added Date:	03/07/2019
Record Updated Date:	06/05/2019
Update By:	SXWU
Site Description:	"Location: The project site is part of Borough of Bronx Block 2291, Lot 1 & 101 (Zoning Lot) bounded by Willis Avenue to the west and between 146th Street and 147th Street, where a partially vacant one-story commercial building (Development Site). To facilitate the Proposed Development, NYCHA will reapportion the tax lots within the Zoning Lot prior to commencing construction. Currently, NYCHA has filed the RP602 form with DOB and has received temporary approval of the apportionment assigning lot 101 to the Proposed Development site. Site Features: The Site has 100 feet of frontage on the north side of East 146th Street and 100 feet of frontage on the east side of Willis Avenue and is currently occupied by a one-story building containing three commercial spaces fronting Willis Avenue, and a vacant New York City Housing Authority (NYCHA) maintenance garage fronting East 146th Street. The NYCHA maintenance garage section of the building is L-shaped , sloping downwards from sidewalk grade to the north (to a final depth of approximately 9 below sidewalk grade [bsg]) and then extending to the west. Current Zoning and Land Use: Current Zoning: R6, with C1-4 overlay. Current Land Use: The site is currently occupied by a one-story building containing three commercial spaces fronting Willis Avenue, and a vacant New York City Housing Authority (NYCHA) maintenance garage fronting East 146th Street. (see Site Property Map and Land Use Map, Attachment B). City Directory listings identified automotive repair facilities at 474 Willis Avenue and 472 Willis Avenue, and manufacturing and/or equipment servicing facilities at 402 East 147th Street, a historical address associated with the Site. A 1958 Certificate of Occupancy indicated on-site use of fuel-oil. Site Geology and Hydrogeology: The Geologic Map of New York and the Surficial Geologic Map of New York (lower Hudson sheets) indicate that Urban Land soil series is likely to be located on the property. Subsurface soils encountered at the Site during the extension of the soil borings generally consisted of variable texture fill materials (unsorted sands with brick, rock, gravel and other debris) overlying brown, sorted sands. Groundwater encountered during the extension of soil borings throughout the property ranged between 12 to 15 feet bsg. Based on information gathered during the Phase II investigation, shallow groundwater flow in the vicinity of the property flows to the south. There are no surface water bodies, wet areas, or regulated wetlands on the property. Wetlands and Floodplain maps are provided in Attachment B."
Env Problem:	"C203122 Environmental Assessment Nature and Extent of Contamination

BETANCES VI (Continued) **S123658111**

Based upon investigations conducted to date, the primary contaminants of concern for the site include semivolatile organic compounds (SVOCs) and metals. Soil Benzo(a)anthracene (SVOC) was found in soil 0-2 feet (shallow) below grade surface level (bgs) at the south-eastern corner of the site. The maximum concentration of Benzo(a)anthracene 3.8 parts per million (ppm) exceeds restricted residential soil cleanup objective (RRSCO) of 1 ppm. Benzo(a)pyrene (SVOC) was found in shallow soil at the south-eastern edge of the site. The maximum concentration of Benzo(a)pyrene 6.68 ppm exceeds RRSCO of 1ppm. Benzo(b)fluoranthene (SVOC) was found in shallow soil at the south-eastern corner of the site. The maximum concentration of Benzo(b)fluoranthene 3.49 ppm exceeds RRSCO of 1 ppm. Barium (metal) was found in soil 4-6 feet bgs at the northern edge of the site. The maximum concentration of barium 909 ppm exceeds RRSCO of 400 ppm. Lead (metal) was found in shallow soil at the north-eastern area of the site. The maximum concentration of lead 501 ppm exceeds RRSCO of 400 ppm. Groundwater Manganese (metal) was found at a maximum concentration at the south-west corner of the site. The maximum concentration of dissolved manganese 1,160 ppb exceeds AWQs of 300 ppb. Soil Vapor Soil vapor sampling did not document the presence of any likely source areas of petroleum contamination. Samples contained low-level concentrations of petroleum compounds, as well as numerous other VOCs typically encountered in urban settings. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off site buildings."

DEC Memo:	"Merritt Environmental Consulting 77 Arkay Dr. Suite D Hauppauge NY 11788 is engineering consultant for building. Tank is a wrapped 1080. It will need to be uncovered, inspected and repaired. Once done, they will retest and submit passing results to DEC Lin. TTF sent to: Amarjit Chopra 3 Rose Hill Rd. Suffern, NY 10901 E-mail Address-asc509@gmail.com Business Address-509 Willis Ave., Bronx, NY 10455 Phone #:6464798102 10/1/18-Lin-Spoke to Amarjit Chopra. According to Amarjit, the hole is on top of the tank. He will send me pictures. The tank will be replaced. 11/2/18-Lin-Recieved message from Steve regarding that the concrete underneath the tank is in bad condition. Steve recommend that they break open the concrete and remove as much contaminated soil as possible as to not undermine the foundation wall and nearby utility lines. Once they remove the soil, they will backfill, restore the concrete, and epoxy. 11/8/18-Lin-Recieved call from Amarjit Chopra that the spill has been cleaned up. However he indicated that he wants to hire another contractor to do the backfill and the rest of the work. 2/8/19-Lin-Contractor broke through the concrete and removed the contaminated soil down to bedrock. New concrete floor was put in and two (2) 330 ASTs were installed. Case closed. "

FORMER MUGLER SHORING INC. (Continued) **S117936658**

Site Description: "Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing remediation and redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per

FORMER MUGLER SHORING INC. (Continued) **S117936658**

billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code:	507623
Site Description:	"Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing remediation and redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist

FORMER MUGLER SHORING INC. (Continued) **S117936658**

of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in

FORMER MUGLER SHORING INC. (Continued) **S117936658**

groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code: 507623
Site Description: "Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing remediation and redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related

The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill

FORMER MUGLER SHORING INC. (Continued) **S117936658**

Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife

FORMER MUGLER SHORING INC. (Continued) **S117936658**

	Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Update By:	AMSERVIS
Site Description:	"Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing remediation and redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Updated By:	MOBARRIE
Site Description:	"The site location is currently described as the inersection of Concourse Village West and East 156th Street, Bronx because no source area has yet been identified. According to historic information and Sanborn maps, the MGP had been had been a small facility located on a former rail yard, the Former Metro North Property BCP# C203030 that served the rail yard. Groundwater data show elevated concentrations of MGP related contaminates such as naphthalene migrating from off-site toward the Former Metro North Site. It appears that there is an MGP waste disposal area contributing to the groundwater contamination. The objective of the preliminary site assessment (PSA) is to locate the source of the groundwater contamination determine if a remedy is necessary and feasible, if so, is a remedial investigation necessary. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Sites."

Updated By: JCGRATHW
Site Description: "Location: The site is located in the Melrose section of Bronx County (Borough of The Bronx, New York City). The site is located on the west side of Melrose Avenue between East 156th and East 157th Streets. Site Features: The site is a vacant lot covered with vegetation, and is surrounded with a chain-link fence. The site is bordered to the north by a community garden, to the east by Melrose Avenue, to the south by a 6-story apartment building, and to the west by a school (PS 29). Current Zoning and Land Use: The site is zoned for residential. There are no buildings on the site, and the property is not currently in use. Past Use of the Site: The Department began a Site Characterization in this area during the Fall of 2003 based on results obtained from a petroleum spill investigation at the FDNY Engine 71/Ladder 55 property located at 720 Melrose Avenue, which indicated elevated levels of tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (DCE) in groundwater. Based on the field sampling program (which was conducted in several phases, and was completed in the Spring of 2007), and a review of available historical information, the site was identified as a primary source of the area-wide chlorinated solvent contamination. According to Sanborn fire insurance maps and an interview with a long-time resident, this site was occupied by a dry cleaner during the 1950's. The maps show that the solvent tanks were located in the rear of the building. Since the time of that former facility's operation, the site has been abandoned. Site Geology and Hydrogeology: The site is underlain by a fill unit (5-7' thick), a fine-medium sand unit with some silt (5-25' thick), and bedrock (11-28' below grade). Groundwater is approximately 16-19' below ground surface in the vicinity of the site. In some areas, the groundwater is below the surface of bedrock). Groundwater on-site flows SE towards Melrose Avenue, and then to the south towards the East River (~7,000' south of the site) along a former stream bed."

FORMER MELROSE AVENUE DRY CLEANER (Continued) **S113916992**

Env Problem:	"Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 6,200 ppb, well above the Part 703.5 class GA standard of 5 ppb. Trichloroethene (up to 500 ppb), and cis-1,2-dichloroethene (up to 3,500 ppb) have also been found in shallow groundwater above their respective Part 703.5 class GA standards (5 ppb each). The plume of PCE-contaminated groundwater has migrated south at least 2 blocks under a residential area. - Soil PCE has been found in on-site soils up to 2.2 ppm, slightly above the soil cleanup objective for unrestricted use (1.3 ppm). - Soil Vapor Concentrations of PCE in soil vapor have been found up to 5,810 ug/m^3. Significant Threat: The site poses a significant environmental threat based on the property's past use as a dry cleaner, which contaminated groundwater beneath the site with PCE at levels several orders of magnitude above standards and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures."
Health Problem:	"The site is fenced, however, site access is still possible and persons who enter the site could potentially contact contaminants in the soil by walking on soil, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition because there are no on-site buildings. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development and occupancy. In addition, vapor sampling indicates soil vapor intrusion is a concern for off-site buildings."

Updated By:	DMMOLOUG
Site Description:	"The former Film Storage Warehouse is approximately 0.25 acres and is located at 203-209 West 146th St. in Manhattan. The property is located on the north site of West 146th St. between Adam Clayton Powell Jr. Boulevard and Fredrick Douglass Boulevard. The site is bounded on the north and west by residential buildings, and on the east by commercial buildings with residences on the upper floors. The former warehouse site has been unoccupied for over 50 years and is currently vacant. A site investigation was funded by EPA as a targeted site assessment. A Site Investigation Report was approved in November 2004. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal sites."
Env Problem:	"Several contaminants were detected in soils including semivolatile compounds, (primarily polyaromatic hydrocarbons)and several metals. Most of the soil contamination appears to be related to historic fill material. The building interior also has debris piles containing asbestos and lead (from insulation and lead paint, respectively). Soil vapor beneath the building contains volatile organic compounds above expected background concentrations."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Elevation:	32 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

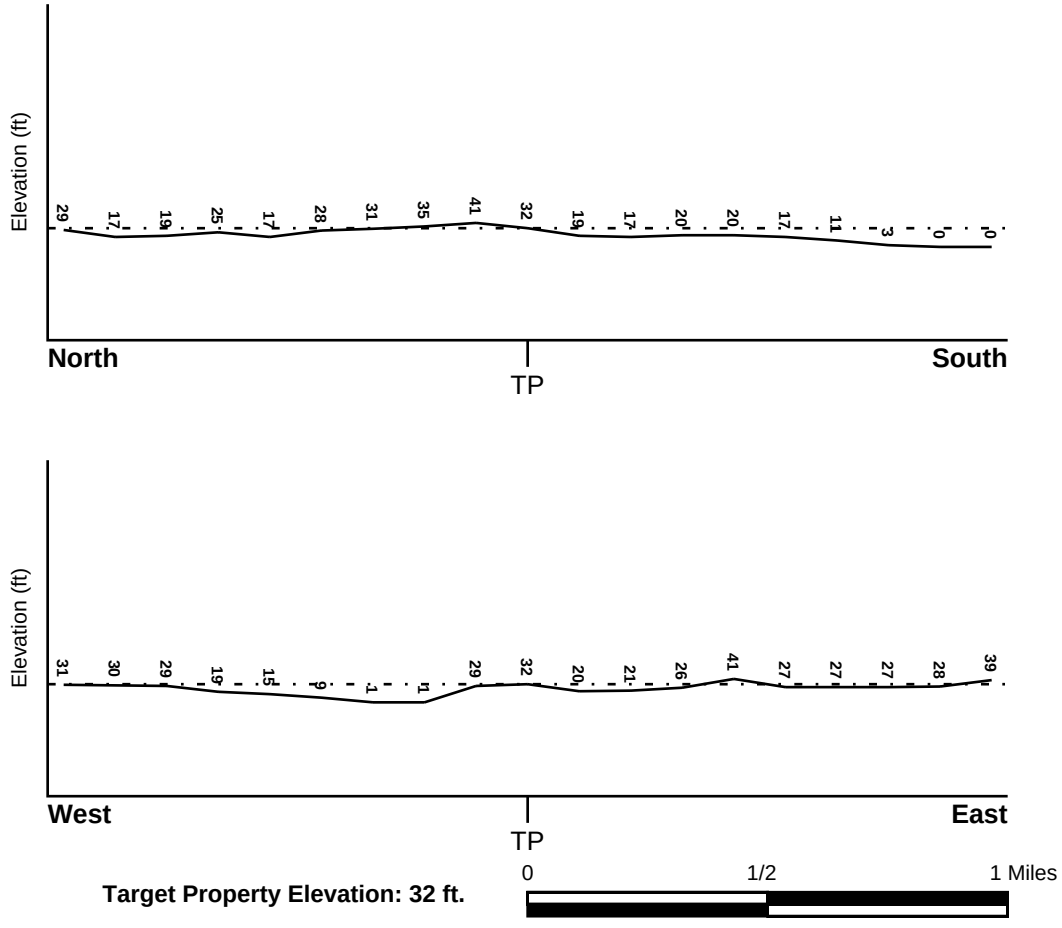
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970083F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970091F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OCT 5-1951

Borough Superintendent.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the occupancy of premises, upon payment of a fee of fifty cents per copy.

RE: 350 Grand Concourse, Bronx, NY

Dear Gregory Baird:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on August 4, 2021.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.

FOIL #: 21-08-062

Dear Gregory Baird:

This letter responds to your Freedom of Information Law (FOIL) request of August 4, 2021, in which you requested environmental records pertaining to "370 Grand Concourse, Bronx, NY."

Please be advised that after conducting a diligent search, no records responsive to your request have been located.

The address is served by the New York City public water system (NY7003493). Any violation reports for the public water system can be found at the following website:

www.health.ny.gov/environmental/water/drinking/violations/previous_compliance_reports.htm

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

Re.: 350 Grand Concourse Blvd., Bronx
Spill Case #: 0111974

Dear Mr. Coil,

Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case referenced above. All wells associated with this project should be closed according to the Department's CP-43 *Groundwater Monitoring Well Decommissioning Policy.*

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

I. The off-site migration of petroleum contaminants that was unknown at the time of this closure.

II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure.

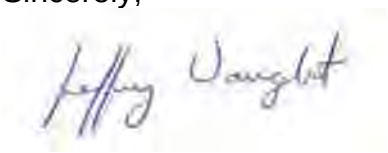
III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment.

IV. Fraud in obtaining this spill case closure determination.

Please note the following concerns for the possible future use of this site. If subsurface contamination is encountered during excavation, construction, or any other on-site activity, appropriate remedial and vapor mitigation efforts may be needed to be taken to prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the site owner, developer or any responsible party from compliance with any applicable laws and regulations.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.

Sincerely,



Jeffrey Vought
Engineering Geologist 2

RE: NYSDEC Spill No. 01-11974
BP 17782, 350 Grand Concourse, Bronx NY

Dear Mr. Coil:

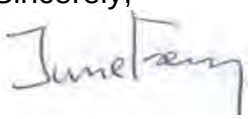
The New York State Department of Environmental Conservation (the Department) issued a letter of Spill Closure dated September 16, 2016 for the above referenced site. On November 30, 2016, the Department was notified that additional contamination was noted on the Site, i.e. 0.62 feet of product was observed in IW-1 on October 6, 2016. The Department has reopened the spill due to environmental conditions related to the Site which were unknown to the Department at the time of the spill closure approval and also due to information received, in whole or part, after the Department's approval for inactivation, which indicates that inactivation decision and/or corrective action is not sufficiently protective of human health for the reasonably anticipated use of the Site.

The Department requires the following immediately:

Quarterly Groundwater Sampling: Quarterly groundwater monitoring to be continued including groundwater gauging, sampling of dissolved groundwater contamination and product recovery, if product is observed, for at least two more quarters as agreed between the Department and ARCADIS on December 5, 2016. A report summarizing the findings including sample analyses, site plan, groundwater monitoring data, conclusions and recommendations must be submitted to the Department. Additional investigation/remediation may be required upon the Department's review of the quarterly monitoring reports.

If you have any questions, please contact me at 718-482-4998.

Sincerely,



June Feng
Environmental Engineer

Spill Closure Presentation

BP 17782

350 Grand Concourse

Bronx, NY

NYSDEC Spill # 01-11974

Site Use and History

- Was originally 2 adjoining gas stations: Merit to the north and Amoco to the south

- Both stations and property redeveloped into a single BP station in 2002

- Spill number 0111974 issued when impacts encountered during tank removal in 2002

Tank Removal – 1999

- Five 4,000-gallon underground gasoline storage tanks and one 550-gallon waste oil tank (reportedly installed in 1977), and associated piping and pump islands were removed from the former Merit station.

Tank Removal – 2002

- Five 4,000-gallon steel gasoline USTs and associated piping and pump islands were removed as part of closure of the Amoco station. MTBE detected above TAGM soil cleanup standards if four of ten post excavation samples (*Underground Storage Tank Excavation Assessment Report, Delta Environmental, 2002* - data not available).

Site Investigations (at former Amoco Station)

- 2002: Geoprobe assessment including advancement of six soil borings (results presented in **Attachment 1**).

- 2003: Monitoring well installation (MW-1, MW-2 and MW-3) and soil sampling (results presented in **Attachment 1**).

- **2010: ARCADIS assumes role of project consultant.**

- 2010: Advancement/installation of MW-4 and MW-5. MW-6 was attempted but the boring was dry at refusal. Several NYSDEC STARS VOC compounds exceeded soil cleanup criteria at MW-4 (results presented in **Attachment 2**).

- 2010: Advancement/installation of MW-6A. Six NYSDEC STARS VOC compounds exceeded soil cleanup criteria (results presented in **Attachment 3**).

Redevelopment and Remediation History

- 1999: 411 tons of soil excavated and removed from the former Merit station.

- 2002: Site is redeveloped into a single BP station. 1,360 tons of soil excavated and removed (manifests provided in **Attachment 4**).

- **2010: ARCADIS assumes role of project consultant.**

- 2011: Four injection wells installed. Hi-vacuum extraction event at IW-04.

- 2012: 23,858 gallons of calcium nitrate solution is injected into IW-04.

Trends/Conclusions

- Mann-Kendall analyses show decreasing VOC concentration trends in all monitoring wells (**Attachment 5**).

- LNAPL last detected in December 2013 (0.01-feet thickness) at IW-01.

- Dissolved VOC concentrations have fallen by an order of magnitude (13-14 ppm to 1 ppm) at the two most impacted wells (MW-4 and MW-6A) since 2010 (**Attachment 6**).

- Available soil data shows limited exceedances of soil cleanup criteria.

- Most recent groundwater data shows benzene exceeding groundwater standards at only one well (MW-1 at 10 ug/L).

	MTBE	10/10 - 03/15	--	0 / 19	--	--	--	--	--	--	--

Abbreviations:

BTEX = benzene, toluene, ethylbenzene, xylenes
DWN = downward trend
FOD = frequency of detection (# detects / # samples)
Mean = arithmetic mean
MTBE = methyl tertiary butyl ether
NST = no significant trend
SD = standard deviation

Notes:

1. All results are in micrograms per liter (µg/L). Values less than 10 are reported to 2 significant figures. Values greater than 10 are reported to 3 significant figures.
2. Trend results are presented when at least four samples and one detected value are available.
3. Nondetects were assigned a common value less than the minimum detected value (95% of the minimum detected value) (USEPA 2009).

Notes:

1. Samples were collected by EnviroTrac through December 2014 and by Clean Globe Environmental beginning in March 2015.
2. Laboratory analysis was conducted by Lancaster Laboratories located in Lancaster, Pennsylvania.
3. Concentrations reported in micrograms per liter (ug/L) or parts per billion (ppb).
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. J = Indicates an estimated concentration.
6. ND = Not detected.
7. Bold values indicate that the constituent was detected at a concentration greater than NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998).
8. NA = Not Analyzed.
9. NM = Not Measured.
10. NP = No Product.
11. LNAPL = Light non-aqueous phase liquid.
12. BTEX = Benzene, Toluene, Ethylbenzene and Xylene.
13. MTBE = Methyl tert-butyl ether.
14. Elevations reference an arbitrary onsite benchmark.
15. NSVD = Not surveyed to vertical datum.

On behalf of BP Products North America (BP), Arcadis of New York, Inc. (Arcadis) is submitting this summary of decommissioning of five monitoring/injection wells, remedial activities at IW-01, and groundwater gauging and sampling at IW-01 during the first and second quarter of 2017 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). The field activities performed included decommissioning of five (out of ten total) wells in October 2016, a vacuum extraction event in November 2016, and groundwater sampling and fluid level gauging at IW-01 in January and April 2017. The site background is briefly described below, followed by a summary of the methodology and findings. Well decommissioning and field sampling was performed by Clean Globe Environmental, LLC (CGE) of Kings Park, New York.

Background

The current BP station was formerly two separate gasoline stations located on adjoining properties; a Merit station to the north and an Amoco station to the south. The current BP station was constructed in 2002. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that New York State Department of Environmental Conservation (NYSDEC) Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during station upgrade in 2002. Two subsurface investigations were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of 3 permanent groundwater monitoring wells. In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess. In October 2010, a sixth monitoring well (MW-6A) was installed at the site near the sidewalk along

Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site. In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), as shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between IW-02 and IW-04, however the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four attempts to install IW-03.

During the third quarter 2012 (from August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into IW-04.

Well Abandonment and Closure

On September 16, 2016, NYSDEC issued a letter (**Appendix A**) closing spill 01-11974. During well decommissioning activities on October 6, 2016, wells MW-1, MW-3, MW-5, IW-04 and IW-05 were decommissioned in accordance with NYSDEC CP-43: *Groundwater Monitoring Well Decommissioning Policy*. Decommissioning forms and well construction logs are provided in **Appendix B**.

Re-opening of Spill 01-11974

Upon gauging injection well IW-01 on October 6, 2016, 0.62 feet of LNAPL was observed. The most recent prior appearance of LNAPL at this well was in December 2013 at which time 0.01 feet of LNAPL was observed. Work was immediately stopped and the remaining wells (IW-01, IW-02, MW-2, MW-4 and MW-6A) were left intact. In response to the observance of LNAPL, a vacuum truck extraction event was conducted at IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Waste disposal documentation is provided in **Appendix C**. Remaining wells were gauged on November 29, 2016 and no LNAPL was observed. The injection wells (IW-01, IW-02, IW-04 and IW-05) had been gauged on a quarterly basis since installation in June 2011, but not sampled with one exception as follows: IW-05 was sampled in August, September and October 2012, with dissolved BTEX concentrations ranging from 520 µg/L to 790 µg/L. NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016 issued a letter re-opening spill 01-11974 (**Appendix D**). In accordance with NYSDEC guidance, IW-01 was gauged and sampled in January and April 2017. Based on Arcadis' December 2016 phone conversation with Mr. Jeffrey Vought, if LNAPL was not observed in IW-01 during the January and April 2017 gauging and sampling, NYSDEC would consider closure of the spill number.

Sampling and Analytical Methodologies

Prior to purging or sample collection, IW-01 was gauged for depth to water or LNAPL. After gauging, the well was purged of at least 3 well volumes of groundwater or until dry using mechanical pump with dedicated polyethylene tubing.

CGE collected groundwater samples using clean, previously unused disposable bailers. Upon collection, the groundwater samples were placed in laboratory-prepared sample containers, labeled and immediately placed in an iced cooler and shipped, along with a trip blank, to Eurofins (Lancaster) Laboratories of Lancaster, Pennsylvania under chain of-custody protocols. The groundwater samples were analyzed for benzene, toluene, ethylbenzene and xylenes (BTEX), and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260.

Well Gauging at IW-01

On January 12, 2017, the measured depth to water was 14.83 feet below top of casing (TOC), while on April 3, 2017, the measured depth to water was 14.90 feet below top of casing (TOC).

Laboratory Analytical Results for IW-01

The laboratory analytical reports and chain of custody are presented in **Appendix E**. Groundwater results for constituents detected above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998) are summarized below

- January 2017: benzene (ND < 20 micrograms per liter [µg/L]), toluene (650 µg/L), ethylbenzene (3,000 µg/L), xylenes (30,000 µg/L), with total dissolved BTEX concentrations of 33,650 µg/L. MTBE was not detected (ND < 20 µg/L).
- April 2017: benzene (11 µg/L), toluene (530 µg/L), ethylbenzene (3,000 µg/L), xylenes (28,000 µg/L), with total dissolved BTEX concentrations of 31,541 µg/L. MTBE was not detected (ND < 20 µg/L).

Conclusions and Recommendations

Dissolved constituents are mostly comprised of total xylenes, with benzene either not detected, or detected at low parts per billion concentrations. Based on the isolated nature of impacts, absence of nearby downgradient receptors, and non-re-appearance of LNAPL, Arcadis respectfully requests closure of spill # 01-11974. If you have any questions or comments about this report, please feel free to contact me at 315.671.9323 (andrew.korik@arcadis.com).

Sincerely,

Arcadis of New York, Inc.

Mr. Randy Coil
Atlantic Richfield Company
201 Helios Way
Helios Plaza 6.370A
Houston, Tx 77079

Re.: 350 Grand Concourse Blvd., Bronx
Spill Case #: 0111974

Dear Mr. Coil,

Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case referenced above. All wells associated with this project should be closed according to the Department's CP-43 *Groundwater Monitoring Well Decommissioning Policy.*

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

I. The off-site migration of petroleum contaminants that was unknown at the time of this closure.

II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure.

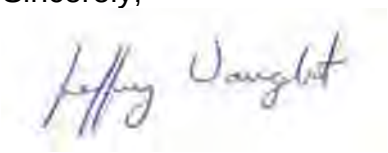
III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment.

IV. Fraud in obtaining this spill case closure determination.

Please note the following concerns for the possible future use of this site. If subsurface contamination is encountered during excavation, construction, or any other on-site activity, appropriate remedial and vapor mitigation efforts may be needed to be taken to prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the site owner, developer or any responsible party from compliance with any applicable laws and regulations.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.

Sincerely,



Jeffrey Vought
Engineering Geologist 2

Houston, TX 77079

RE: NYSDEC Spill No. 01-11974
BP 17782, 350 Grand Concourse, Bronx NY

Dear Mr. Coil:

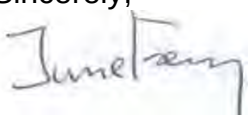
The New York State Department of Environmental Conservation (the Department) issued a letter of Spill Closure dated September 16, 2016 for the above referenced site. On November 30, 2016, the Department was notified that additional contamination was noted on the Site, i.e. 0.62 feet of product was observed in IW-1 on October 6, 2016. The Department has reopened the spill due to environmental conditions related to the Site which were unknown to the Department at the time of the spill closure approval and also due to information received, in whole or part, after the Department's approval for inactivation, which indicates that inactivation decision and/or corrective action is not sufficiently protective of human health for the reasonably anticipated use of the Site.

The Department requires the following immediately:

Quarterly Groundwater Sampling: Quarterly groundwater monitoring to be continued including groundwater gauging, sampling of dissolved groundwater contamination and product recovery, if product is observed, for at least two more quarters as agreed between the Department and ARCADIS on December 5, 2016. A report summarizing the findings including sample analyses, site plan, groundwater monitoring data, conclusions and recommendations must be submitted to the Department. Additional investigation/remediation may be required upon the Department's review of the quarterly monitoring reports.

If you have any questions, please contact me at 718-482-4998.

Sincerely,



June Feng
Environmental Engineer

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below. Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	none detected
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

< less than

> greater than

ppm parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

ppb parts per billion

Dry weight basis Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Laboratory Data Qualifiers:

C - Result confirmed by reanalysis
E - Concentration exceeds the calibration range
J (or G, I, X) - estimated value ≥ the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U - Analyte was not detected at the value indicated
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference…
W - The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Project Name: BP 17782
LL Group #: 1785427

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below. Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Email:
Andrew.Korik@arcadis.com

Our ref:
GP09BPNA.N002

Dear Ms. Feng:

On behalf of BP Products North America (BP), Arcadis of New York, Inc. (Arcadis) is submitting this Groundwater Analytical Summary for the second quarter of 2018 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). The field activities performed included groundwater sampling and fluid level gauging at four monitoring and injection wells in April 2018. The site background is briefly described below, followed by a summary of the methodology and findings. Field sampling was performed by Clean Globe Environmental, LLC (CGE) of Kings Park, New York.

Background

The current BP station, constructed in 2002, was formerly two separate gasoline stations located on adjoining properties: a Merit station to the north and an Amoco station to the south. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that New York State Department of Environmental Conservation (NYSDEC) Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during a station upgrade in 2002. Two subsurface investigations (conducted by others) were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of three permanent groundwater monitoring wells.

Arcadis began work on this site for BP in 2009. In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental

monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess (under Spill Number 98-14074). In October 2010, a sixth monitoring well (MW-6A) was installed at the site near the sidewalk along Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site. In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), as shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between injection wells IW-02 and IW-04; however, the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four installation attempts.

During the third quarter of 2012 (August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into injection well IW-04.

Spill Closure and Re-Opening

On September 16, 2016, the NYSDEC issued a letter closing Spill Number 01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy (CP)-43: *Groundwater Monitoring Well Decommissioning Policy.* A tremie pipe was used to inject cement-bentonite grout into the wells from the bottom up. The top 2 to 3 feet of the riser pipe was then broken off below grade, and the well curb-box was removed and patched with concrete. Well decommissioning logs and boring logs are presented in **Appendix A**. Photographs of typical pre- and post-decommissioning surface completions are shown in **Appendix B**. During decommissioning activities, 0.62 feet of LNAPL was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, a vacuum truck extraction event was conducted at injection well IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Remaining wells, including injection well IW-01, were gauged on November 29, 2016, and no LNAPL was observed.

The NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016, issued a letter re-opening Spill Number 01-11974. The NYSDEC required that injection well IW-01 be gauged and sampled for two consecutive quarters. Accordingly, injection well IW-01 was gauged and sampled on January 12, 2017, and April 3, 2017. Measurable LNAPL was not observed during either gauging event. Gauging and analytical results are presented in **Table 1**. According to Arcadis' December 2016 telephone conversation with Mr. Jeffrey Vought of the NYSDEC, if LNAPL was not observed in injection well IW-01 during the January and April 2017 gauging and sampling, the NYSDEC would consider closure of the spill number. Based on elevated concentrations of dissolved benzene, toluene, ethylbenzene, and xylenes (BTEX) in injection well IW-01, the NYSDEC issued a letter dated May 24, 2018, requesting resumption of groundwater monitoring and a Remedial Action Plan (RAP).

Well Gauging and Sampling

On April 12, 2018, four wells (IW-01, IW-02, MW-4, and MW-6A) were gauged for depth to water or LNAPL. Monitoring well MW-2 was not accessible and, therefore, it was not gauged. **Table 1** presents current and historical data, depth to water measurements, groundwater elevations, light non-aqueous phase liquid (LNAPL) observations, and an analytical summary. Measured depth to water ranged from 11.64 feet below top of casing (TOC) at monitoring well MW-4 and 14.08 feet below TOC at injection well IW-01. LNAPL was not observed during the second quarter of 2018. Prior to purging or sample collection,

the monitoring wells were gauged for depth to water or LNAPL. After gauging, each monitoring well was purged of at least three well volumes of groundwater or until dry using a disposable bailer and/or a mechanical pump with dedicated polyethylene tubing.

CGE collected groundwater samples from the monitoring wells using clean, previously unused disposable bailers. Upon collection, the groundwater samples were placed in laboratory-prepared sample containers, labeled, immediately placed in an iced cooler, and shipped, along with a trip blank, to Eurofins Laboratories of Lancaster, Pennsylvania (Eurofins [Lancaster]), under chain-of-custody protocols. The groundwater samples were analyzed for BTEX and methyl tertiary-butyl ether in accordance with United States Environmental Protection Agency (USEPA) Method 8260.

Laboratory Analytical Results

Historical groundwater analytical results and the most recent results are summarized in **Table 1**. **Figure 3** summarizes analytical results for the second quarter of 2018. The laboratory analytical report and chain-of-custody are presented in **Appendix C**. Groundwater analytical results for constituents detected above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998) for the second quarter 2018 sampling event are also summarized below, along with total BTEX concentrations.

- Injection well IW-01: toluene (530 micrograms per liter [µg/L]), ethylbenzene (1,800 µg/L), and xylenes (20,000 µg/L), with total dissolved BTEX concentrations of 22,330 µg/L.
- Injection well IW-02: toluene (6.00 µg/L), ethylbenzene (1,100 µg/L), and xylenes (5,300 µg/L), with total dissolved BTEX concentrations of 6,406 µg/L.
- Monitoring well MW-2: inaccessible (car parked over well) and not gauged or sampled.
- Monitoring well MW-4: benzene (20.0 µg/L), ethylbenzene (46.0 µg/L), and xylenes (170 µg/L), with total dissolved BTEX concentrations of 238 µg/L.
- Monitoring well MW-6A: ethylbenzene (71.0 µg/L) and xylenes (440 µg/L), with total dissolved BTEX concentrations of 514 µg/L.

The April 12, 2018 results show a reduction in total dissolved BTEX at injection well IW-01, from 33,650 µg/L and 31,541 µg/L in January 2017 and April 2017, respectively, to 22,330 µg/L.

Remedial Activities

As directed by the NYSDEC in a letter dated May 24, 2018, a RAP (for multiple vacuum extraction events) to address residual petroleum impacts was submitted to the NYSDEC on July 19, 2018.

Conclusions and Recommendations

The next quarterly groundwater gauging and sampling event is scheduled for late July 2018. Three vacuum extraction events are proposed to be conducted in September and October pending NYSDEC review and approval of the RAP submitted on July 19, 2018.

If you have any questions or comments about this report, please feel free to contact me at 315.671.9323 (andrew.korik@arcadis.com).

Notes:
1. Samples were collected by EnviroTrac.
2. Laboratory analysis was conducted by Lancaster Laboratories located in Lancaster, Pennsylvania.
3. Concentrations reported in micrograms per liter (ug/L) or parts per billion (ppb).
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. J = Indicates an estimated concentration.
6. ND = Not detected.
7. Bold values indicate that the constituent was detected at a concentration greater than NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998).
8. NA = Not Analyzed.
9. NM = Not Measured.
10. NP = No Product.
11. LNAPL = Light non-aqueous phase liquid.
12. BTEX = Benzene, Toluene, Ethylbenzene and Xylene.
13. MTBE = Methyl tert-butyl ether.
14. Elevations reference an arbitrary onsite benchmark.
15. NSVD = Not surveyed to vertical datum.

Project Name: BP 17782
ELLE Group #: 1933226

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.
Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

SW-846 8260C, GC/MS Volatiles

Batch #: D181091AA (Sample number(s): 9564532, 9564534-9564536 UNSPK: P564044)

The recovery(ies) for the following analyte(s) in the MS and/or MSD were below the acceptance window: Ethylbenzene, Xylene (Total)

The relative percent difference(s) for the following analyte(s) in the MS/MSD were outside acceptance windows: Ethylbenzene, Xylene (Total)

Batch #: D181141AA (Sample number(s): 9564533 UNSPK: P566472)

The recovery(ies) for one or more surrogates were below the acceptance window for sample(s) MS

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 1933226
Reported: 04/25/2018 16:24

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Sample Acceptance Policy

Samples must be submitted in a manner that meets the criteria listed below. If these criteria are not met, the laboratory will contact the client to discuss how to proceed with testing. If the client decides to proceed with testing, a comment describing the variation will appear on the analytical report.

- Documentation must be complete and include: sample identification, the location, date and time of collection, collector's name or initials, preservation type, sample type, required analyses, and any special remarks concerning the sample.
- Proper sample labeling must include unique identification on a durable (water resistant) label using indelible ink.
- Samples must be collected in appropriate containers with sufficient volume to perform tests. The laboratory will provide appropriate bottleware.
- Samples must be shipped promptly to meet specified holding times with adequate packing materials to prevent damage during shipment and adequate wet ice to meet method temperature requirements (0-6°C, not frozen).
- Please follow all IATA and/or DOT regulations when returning shipment.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mg**	milligram(s)
C	degrees Celsius	**mL**	milliliter(s)
cfu	colony forming units	**MPN**	Most Probable Number
CP Units	cobalt-chloroplatinate units	**N.D.**	non-detect
F	degrees Fahrenheit	**ng**	nanogram(s)
g	gram(s)	**NTU**	nephelometric turbidity units
IU	International Units	**pg/L**	picogram/liter
kg	kilogram(s)	**RL**	Reporting Limit
L	liter(s)	**TNTC**	Too Numerous To Count
lb.	pound(s)	**µg**	microgram(s)
m3	cubic meter(s)	**µL**	microliter(s)
meq	milliequivalents	**umhos/cm**	micromhos/cm

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Dear Ms. Feng:

On behalf of BP Products North America (BP), Arcadis of New York, Inc. (Arcadis) is submitting this Groundwater Analytical Summary for the third quarter of 2018 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). The field activities performed included groundwater sampling and fluid level gauging at five monitoring and injection wells on July 26, 2018. The site background is briefly described below, followed by a summary of the methodology and findings. Field sampling was performed by Clean Globe Environmental, LLC (CGE) of Kings Park, New York.

Background

The current BP station, constructed in 2002, was formerly two separate gasoline stations located on adjoining properties: a Merit station to the north and an Amoco station to the south. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that New York State Department of Environmental Conservation (NYSDEC) Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during a station upgrade in 2002. Two subsurface investigations (conducted by others) were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of three permanent groundwater monitoring wells.

Arcadis began work on this site for BP in 2009. In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess (under Spill Number 98-14074). In October 2010, a sixth monitoring well (MW-6A) was

installed at the site near the sidewalk along Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site. In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), as shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between injection wells IW-02 and IW-04; however, the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four installation attempts.

During the third quarter of 2012 (August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into injection well IW-04.

Spill Closure and Re-Opening

On September 16, 2016, the NYSDEC issued a letter closing Spill Number 01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy (CP)-43: *Groundwater Monitoring Well Decommissioning Policy.* A tremie pipe was used to inject cement-bentonite grout into the wells from the bottom up. The top 2 to 3 feet of the riser pipe was then broken off below grade, and the well curb-box was removed and patched with concrete. During decommissioning activities, 0.62 feet of LNAPL was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, a vacuum truck extraction event was conducted at injection well IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Remaining wells, including injection well IW-01, were gauged on November 29, 2016, and no LNAPL was observed.

The NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016, issued a letter re-opening Spill Number 01-11974. The NYSDEC required that injection well IW-01 be gauged and sampled for two consecutive quarters. Accordingly, injection well IW-01 was gauged and sampled on January 12, 2017, and April 3, 2017. Measurable LNAPL was not observed during either gauging event. Gauging and analytical results are presented in **Table 1**. According to Arcadis' December 2016 telephone conversation with Mr. Jeffrey Vought of the NYSDEC, if LNAPL was not observed in injection well IW-01 during the January and April 2017 gauging and sampling, the NYSDEC would consider closure of the spill number. Based on elevated concentrations of dissolved benzene, toluene, ethylbenzene, and xylenes (BTEX) in injection well IW-01, and as directed by the NYSDEC in a letter dated May 24, 2018, a Remedial Action Plan (RAP) for multiple vacuum extraction events to address residual petroleum impacts was prepared and subsequently submitted to the NYSDEC on July 19, 2018.

Well Gauging and Sampling

On July 26, 2018, five wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were gauged for depth to water or LNAPL. **Table 1** presents current and historical data, depth to water measurements, groundwater elevations, light non-aqueous phase liquid (LNAPL) observations, and an analytical summary. Measured depth to water ranged between 10.42 feet below top of casing (TOC) at monitoring well MW-2 and 13.79 feet below TOC at injection well IW-01. LNAPL was not observed during the third quarter of 2018. Prior to purging or sample collection, the monitoring wells were gauged for depth to water or LNAPL. After gauging, each monitoring well was purged of at least three well volumes of groundwater or until dry using a disposable bailer and/or a mechanical pump with dedicated polyethylene tubing.

CGE collected groundwater samples from the monitoring wells using clean, previously unused disposable bailers. Upon collection, the groundwater samples were placed in laboratory-prepared sample containers,

labeled, immediately placed in an iced cooler, and shipped, along with a trip blank, to Eurofins Laboratories of Lancaster, Pennsylvania (Eurofins [Lancaster]), under chain-of-custody protocols. The groundwater samples were analyzed for BTEX and methyl tertiary-butyl ether in accordance with United States Environmental Protection Agency (USEPA) Method 8260.

Laboratory Analytical Results

Historical groundwater analytical results and the most recent results are summarized in **Table 1**. **Figure 2** summarizes analytical results for the third quarter of 2018. The laboratory analytical report and chain-of-custody are presented in **Appendix A**. Groundwater analytical results for constituents detected above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998) for the third quarter 2018 sampling event are also summarized below, along with total BTEX concentrations.

- Injection well IW-01: benzene (5 micrograms per liter [µg/L]), toluene (620 µg/L), ethylbenzene (2,300 µg/L), and xylenes (25,000 µg/L), with total dissolved BTEX concentrations of 27,925 µg/L.
- Injection well IW-02: ethylbenzene (540 µg/L), and xylenes (2,100 µg/L), with total dissolved BTEX concentrations of 2,640 µg/L.
- Monitoring well MW-2: BTEX and MTBE were not detected above NYSDEC TOGS.
- Monitoring well MW-4: BTEX and MTBE were not detected above NYSDEC TOGS.
- Monitoring well MW-6A: ethylbenzene (52 µg/L) and xylenes (19 µg/L), with total dissolved BTEX concentrations of 71 µg/L.

Total dissolved BTEX concentrations at injection well IW-01 have decreased since January 2017 from 33,650 µg/L to 27,925 µg/L. However, concentrations have increased from the July 2018 results of 22,330 µg/L.

Conclusions and Recommendations

The next quarterly groundwater gauging and sampling event is scheduled for October 2018.

If you have any questions or comments about this report, please feel free to contact me at 315.671.9323 (andrew.korik@arcadis.com).

Sincerely,

Arcadis of New York, Inc.

Notes:
1. Samples were collected by EnviroTrac.
2. Laboratory analysis was conducted by Lancaster Laboratories located in Lancaster, Pennsylvania.
3. Concentrations reported in micrograms per liter (ug/L) or parts per billion (ppb).
4. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
5. J = Indicates an estimated concentration.
6. ND = Not detected.
7. Bold values indicate that the constituent was detected at a concentration greater than NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998).
8. NA = Not Analyzed.
9. NM = Not Measured.
10. NP = No Product.
11. LNAPL = Light non-aqueous phase liquid.
12. BTEX = Benzene, Toluene, Ethylbenzene and Xylene.
13. MTBE = Methyl tert-butyl ether.
14. Elevations reference an arbitrary onsite benchmark.
15. NSVD = Not surveyed to vertical datum.

Project Name: BP 17782
ELLE Group #: 1970811

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

SW-846 8260C, GC/MS Volatiles

Batch #: D182142AA (Sample number(s): 9727115-9727120 UNSPK: 9727118)

The recovery(ies) for the following analyte(s) in the MS and/or MSD exceeded the acceptance window indicating a positive bias: Xylene (Total), Toluene, Ethylbenzene

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Our ref:
GP18BPNA.N002

Dear Ms. Feng:

On behalf of BP Products North America, Inc. (BP), Arcadis of New York, Inc. (Arcadis) is submitting this Groundwater Analytical Summary for the fourth quarter of 2018 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). Field activities were performed on October 25, 2018 and included groundwater gauging and sampling. The site background is described below, followed by a summary of the methodology and findings. Field sampling was performed by Clean Globe Environmental, LLC of Kings Park, New York.

SITE BACKGROUND

The current BP station, constructed in 2002, was formerly two separate gasoline stations located on adjoining properties: A Merit station to the north and an Amoco station to the south. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that New York State Department of Environmental Conservation (NYSDEC) Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during a station upgrade in 2002. Two subsurface investigations (performed by others) were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of three permanent groundwater monitoring wells.

Arcadis began work on this site for BP in 2009. In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess (under Spill Number 98-14074). In October 2010, a sixth monitoring well (MW-6A) was installed at the site near the sidewalk along Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site.

In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between injection wells IW-02 and IW-04; however, the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four installation attempts.

During the third quarter of 2012 (August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into injection well IW-04.

SPILL CLOSURE AND RE-OPENING

On September 16, 2016, the NYSDEC issued a letter closing Spill Number 01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy (CP)-43: *Groundwater Monitoring Well Decommissioning Policy*. A tremie pipe was used to inject cement-bentonite grout into the wells from the bottom up. The top 2 to 3 feet of the riser pipe was then broken off below grade, and the well curb-box was removed and patched with concrete. During decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, a vacuum truck extraction event was conducted at injection well IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Remaining wells, including injection well IW-01, were gauged on November 29, 2016, and no LNAPL was observed.

The NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016, issued a letter re-opening Spill Number 01-11974. The NYSDEC required that injection well IW-01 be gauged and sampled for two consecutive quarters. Accordingly, injection well IW-01 was gauged and sampled on January 12, 2017, and April 3, 2017. Measurable LNAPL was not observed during either gauging event. Gauging and analytical results are presented in **Table 1**. According to Arcadis' December 2016 telephone conversation with Mr. Jeffrey Vought of the NYSDEC, if LNAPL was not observed in injection well IW-01 during the January and April 2017 gauging and sampling, the NYSDEC would consider closure of the spill number. Based on elevated concentrations of dissolved benzene, toluene, ethylbenzene, and xylenes (BTEX) in injection well IW-01, and as directed by the NYSDEC in a letter dated May 24, 2018, a Remedial Action Plan (RAP) for multiple vacuum truck extraction (VTE) events to address residual petroleum impacts was prepared and subsequently submitted to the NYSDEC on July 19, 2018.

FOURTH QUARTER 2018 WELL GAUGING AND SAMPLING

On October 25, 2018, depth to water measurements and groundwater samples were collected from four wells (IW-01, IW-02, MW-4, and MW-6A). Monitoring well MW-2 was not accessible and, therefore, was not gauged or sampled. **Table 1** presents current and historical data including depth to water measurements, groundwater elevations, LNAPL observations, and analytical results. Depth to water measurements ranged from 12.31 feet below top of casing (TOC) at monitoring well MW-4 to 14.23 feet below TOC at monitoring well MW-6A. LNAPL was not observed during the event.

After gauging, each monitoring well was purged of at least three well volumes of groundwater or until dry using a disposable bailer and/or a mechanical pump with dedicated polyethylene tubing. Groundwater samples were collected using clean, previously unused disposable bailers. Upon collection, the

groundwater samples were placed in laboratory-prepared sample containers, labeled, immediately placed in an iced cooler, and shipped, along with a trip blank, to Eurofins Laboratories of Lancaster, Pennsylvania, under chain-of-custody protocols. The groundwater samples were analyzed for BTEX and methyl tertiary-butyl ether in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

LABORATORY ANALYTICAL RESULTS

Groundwater analytical results for the fourth quarter 2018 event are provided in **Table 1** and illustrated on **Figure 2**. The laboratory report, with chain of custody documentation, is provided in **Appendix A**. Groundwater results for constituents detected above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998) for the fourth quarter 2018 sampling event are also summarized below, along with total BTEX concentrations.

- Injection well IW-1: benzene (7 micrograms per liter [µg/L]), toluene (650 µg/L), ethylbenzene (2,500 µg/L), xylenes (23,000 µg/L), with total dissolved BTEX concentrations of 26,157 µg/L.
- Injection well IW-2: ethylbenzene (680 µg/L), xylenes (3,800 µg/L), with total dissolved BTEX concentrations of 4,480 µg/L.
- Monitoring well MW-4: benzene (56 µg/L), ethylbenzene (150 µg/L), and xylenes (100 µg/L), with total dissolved BTEX concentrations of 310 µg/L.
- Monitoring well MW-6A: ethylbenzene (30 µg/L), and xylenes (14 µg/L), with total dissolved BTEX concentrations of 44.6 µg/L.

Analytical results from the October 25, 2018 sampling event are generally consistent with recent results; however, since 2010, BTEX concentrations have decreased significantly at wells MW-4 (from 14,000 µg/L in July 2010 to 310 µg/L in October 2018) and MW-6A (from 13,000 µg/L in October 2010 to 44.6 µg/L in October 2018).

CONCLUSIONS AND RECOMMENDATIONS

The next groundwater gauging and sampling event will be conducted during the first quarter of 2019.

Please contact me at 860-533-9948 or sahithi.rondla@arcadis.com with any questions or comments.

Sincerely,

Arcadis of New York, Inc.

Sahithi Rondla
Project Manager

Notes:
1. Laboratory analysis was conducted by Lancaster Laboratories located in Lancaster, Pennsylvania.
2. Concentrations reported in micrograms per liter (ug/L) or parts per billion (ppb).
3. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
4. J = Indicates an estimated concentration.
5. ND = Not detected.
6. Bold values indicate that the constituent was detected at a concentration greater than NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998).
7. NA = Not Analyzed.
8. NM = Not Measured.
9. NP = No Product.
10. LNAPL = Light non-aqueous phase liquid.
11. BTEX = Benzene, Toluene, Ethylbenzene and Xylene.
12. MTBE = Methyl tert-butyl ether.
13. Elevations reference an arbitrary onsite benchmark.
14. NSVD = Not surveyed to vertical datum.

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

SW-846 8260C, GC/MS Volatiles

Sample #s: 9872083

The reporting limits for the GC/MS volatile compounds were raised due to the level of non-target compounds.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2003105
Reported: 11/15/2018 15:30

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Dear Ms. Feng:

On behalf of BP Products North America, Inc. (BP), Arcadis of New York, Inc. (Arcadis) is submitting this Groundwater Analytical Summary for the first, second, and third quarters of 2019 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). Field activities were performed on March 01, June 13, and September 30, 2019 and included groundwater gauging and sampling. The site background is described below, followed by a summary of the methodology and findings.

SITE BACKGROUND

The current BP station, constructed in 2002, was formerly two separate gasoline stations located on adjoining properties: A Merit station to the north and an Amoco station to the south. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that New York State Department of Environmental Conservation (NYSDEC) Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during a station upgrade in 2002. Two subsurface investigations (performed by others) were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of three permanent groundwater monitoring wells.

Arcadis began work on this site for BP in 2009. In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess (under Spill Number 98-14074). In October 2010, a sixth monitoring well (MW-6A) was installed at the site near the sidewalk along Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site.

In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between injection wells IW-02 and IW-04; however, the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four installation attempts.

During the third quarter of 2012 (August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into injection well IW-04.

SPILL CLOSURE AND RE-OPENING

On September 16, 2016, the NYSDEC issued a letter closing Spill Number 01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy (CP)-43: *Groundwater Monitoring Well Decommissioning Policy*. A tremie pipe was used to inject cement-bentonite grout into the wells from the bottom up. The top 2 to 3 feet of the riser pipe was then broken off below grade, and the well curb-box was removed and patched with concrete. During decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, a vacuum truck extraction (VTE) event was conducted at injection well IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Remaining wells, including injection well IW-01, were gauged on November 29, 2016, and no LNAPL was observed.

The NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016, issued a letter re-opening Spill Number 01-11974. The NYSDEC required that injection well IW-01 be gauged and sampled for two consecutive quarters. Accordingly, injection well IW-01 was gauged and sampled on January 12, 2017, and April 3, 2017. Measurable LNAPL was not observed during either gauging event. Gauging and analytical results are presented in **Table 1**. According to Arcadis' December 2016 telephone conversation with Mr. Jeffrey Vought of the NYSDEC, if LNAPL was not observed in injection well IW-01 during the January and April 2017 gauging and sampling, the NYSDEC would consider closure of the spill number. Based on elevated concentrations of dissolved benzene, toluene, ethylbenzene, and xylenes (BTEX) in injection well IW-01, and as directed by the NYSDEC in a letter dated May 24, 2018, a Remedial Action Plan (RAP) for multiple VTE events to address residual petroleum impacts was prepared and subsequently submitted to the NYSDEC on July 19, 2018.

VACUUM TRUCK EXTRACTION EVENTS

In accordance with the RAP, three VTE events were conducted just prior to and during the reporting period on December 28, 2018, January 15, 2019, and February 13, 2019. Arcadis provided oversight during vacuum truck operation. Each event was conducted for approximately 8 hours with total fluids (LNAPL, groundwater, and soil vapor) being extracted from IW-01. All liquid extracted during the event was containerized within the vacuum truck and transported off site, under manifest, for disposal. Extracted soil vapor was treated through two vapor-phase carbon vessels in series prior to discharge to the atmosphere.

Prior to and after each event, groundwater and LNAPL were gauged in IW-01. In addition, surrounding monitoring wells were observed during the event to evaluate influence from the applied vacuum and liquid

extraction at IW-01. Due to the minimal volume of liquid recovered and the large area of the vacuum truck, it was not possible to accurately quantify the amount of LNAPL recovered during each event.

Data collected from the three events, as well as data from an historical event conducted in 2011, are included in **Table 2** and **Table 3**.

FIRST, SECOND, AND THIRD QUARTER 2019 WELL GAUGING AND SAMPLING

On March 01, 2019, June 13, 2019, and September 30, 2019, depth to water measurements and groundwater samples were collected from four wells (IW-01, IW-02, MW-4, and MW-6A). Monitoring well MW-2 was not accessible during the three events; therefore, it was not gauged or sampled. **Table 1** presents current and historical data including depth to water measurements, groundwater elevations, LNAPL observations, and analytical results. The following depth to water measurements were observed during the first, second, and third quarter events:

- First Quarter: Depth to water measurements ranged from 12.38 feet below top of casing (TOC) at monitoring well MW-4 to 14.40 feet below TOC at monitoring well IW-01.
- Second Quarter: Depth to water measurements ranged from 11.85 feet below TOC at monitoring well MW-4 to 14.65 feet below TOC at monitoring well IW-02.
- Third Quarter: Depth to water measurements ranged from 13.60 feet below TOC at monitoring well MW-4 to 15.35 feet below TOC at monitoring well IW-01.

LNAPL was not observed during any of the events.

After gauging, each monitoring well was purged of at least three well volumes of groundwater or until dry using a disposable bailer and/or a mechanical pump with dedicated polyethylene tubing. Groundwater samples were collected using clean, previously unused disposable bailers. Upon collection, the groundwater samples were placed in laboratory-prepared sample containers, labeled, immediately placed in an iced cooler, and shipped, along with a trip blank, to Eurofins Laboratories of Lancaster, Pennsylvania, under chain-of-custody protocols. The groundwater samples were analyzed for BTEX and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

LABORATORY ANALYTICAL RESULTS

Analytical results for groundwater samples collected during the first, second, and third quarters of 2019 are provided in **Table 1**, and illustrated on **Figure 2**. The laboratory reports, with chain of custody documentation, are provided in **Appendix A**. The laboratory report provided for the September 2019 sampling event initially contained the following typographical errors: the sample collected from well MW-6A was incorrectly identified as sample MW-64; and, the E qualifier comment given to the total xylene result for the sample from well IW-01 was unclear. To correct the two errors, Eurofins Laboratories issued a revised report correcting the sample description for well MW-6A and clarifying the E qualifier comment for the sample from well IW-01.

Groundwater results for constituents detected above the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998) from the

first, second, and third quarter 2019 sampling events are also summarized below, along with total BTEX concentrations.

First Quarter:

- Injection well IW-01: benzene (6 micrograms per liter [µg/L], estimated), toluene (110 µg/L), ethylbenzene (1,200 µg/L), xylenes (7,400 µg/L), with total dissolved BTEX concentrations of 8,716 µg/L.
- Injection well IW-02: toluene (7 µg/L, estimated), ethylbenzene (820 µg/L), xylenes (2,800 µg/L), with total dissolved BTEX concentrations of 3,627 µg/L.
- Monitoring well MW-4: benzene (61 µg/L), toluene (12 µg/L), ethylbenzene (600 µg/L), and xylenes (840 µg/L), with total dissolved BTEX concentrations of 1,513 µg/L.
- Monitoring well MW-6A: ethylbenzene (55 µg/L) and xylenes (54 µg/L), with total dissolved BTEX concentrations of 109.8 µg/L.

Second Quarter:

- Injection well IW-01: benzene (7 µg/L), toluene (230 µg/L), ethylbenzene (1,400 µg/L), xylenes (11,000 µg/L), with total dissolved BTEX concentrations of 12,637 µg/L.
- Injection well IW-02: ethylbenzene (850 µg/L), xylenes (4,200 µg/L), with total dissolved BTEX concentrations of 5,053 µg/L.
- Monitoring well MW-4: benzene (8 µg/L), ethylbenzene (32 µg/L), and xylenes (56 µg/L), with total dissolved BTEX concentrations of 97 µg/L.
- Monitoring well MW-6A: ethylbenzene (68 µg/L) and xylenes (130 µg/L), with total dissolved BTEX concentrations of 198.5 µg/L.

Third Quarter:

- Injection well IW-01: benzene (7 µg/L), toluene (59 µg/L), ethylbenzene (2,400 µg/L), xylenes (9,200 µg/L), with total dissolved BTEX concentrations of 11,666 µg/L.
- Injection well IW-02: ethylbenzene (1,200 µg/L), xylenes (4,600 µg/L), with total dissolved BTEX concentrations of 5,805.6 µg/L.
- Monitoring well MW-4: benzene (61 µg/L), toluene (8 µg/L), ethylbenzene (220 µg/L), and xylenes (310 µg/L), with total dissolved BTEX concentrations of 599 µg/L.
- Monitoring well MW-6A: ethylbenzene (15 µg/L) and xylenes (65 µg/L), with total dissolved BTEX concentrations of 81.2 µg/L.

CONCLUSIONS AND RECOMMENDATIONS

The 4th quarter groundwater gauging and sampling event was conducted in December 2019. The Laboratory analytical data was not available at the time of this submittal, hence it will be reported with the next report submittal.

Please note that a data tabulation error was reported on Table 1 of the Q3 and Q4 2018 groundwater monitoring reports submitted to NYSDEC on October 26, 2018 and February 22, 2019, respectively. Monitoring wells MW-2R, MW-7, MW-8, and MW-10 do not exist at the site; therefore, references to these wells should be disregarded.

Please contact me at 860-533-9948 or sahithi.rondla@arcadis.com with any questions or comments.

Sincerely,

Arcadis of New York, Inc.

Notes:
1. Laboratory analysis was conducted by Lancaster Laboratories located in Lancaster, Pennsylvania.
2. Concentrations reported in micrograms per liter (ug/L) or parts per billion (ppb).
3. U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
4. J = Indicates an estimated concentration.
5. ND = Not detected.
6. Bold values indicate that the constituent was detected at a concentration greater than NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998).
7. NA = Not Analyzed.
8. NM = Not Measured.
9. NP = No Product.
10. LNAPL = Light non-aqueous phase liquid.
11. BTEX = Benzene, Toluene, Ethylbenzene and Xylene.
12. MTBE = Methyl tert-butyl ether.
13. Elevations reference an arbitrary onsite benchmark.
14. NSVD = Not surveyed to vertical datum.
15. E = Concentration exceeds the calibration range. The reported concentration is an estimated value.

Notes:
acfm - actual cubic feet per minute
ft TOC - feet from top of casing.
in. Hg - inches mercury.
lbs/ ft^3 - pounds - pounds per cubic foot
lbs/ hr - pounds per hour
lbs/ day - pounds per day
ppm = parts per million
Temp. - temperature in degress F°
*Field PID readings, all other concentrations are estimates

SAMPLE INFORMATION

Client Sample Description	Sample Collection Date/Time	ELLE#
MW-4 Groundwater	03/01/2019 08:55	9996743
MW-6A Groundwater	03/01/2019 09:35	9996744
IW-02 Groundwater	03/01/2019 10:10	9996745
IW-01 Groundwater	03/01/2019 10:40	9996746
TB_(20190301) Water	03/01/2019 07:00	9996747

The specific methodologies used in obtaining the enclosed analytical results are indicated on the Laboratory Sample Analysis Record.

2425 New Holland Pike, Lancaster, PA 17601 • 717-656-2300 • Fax: 717-656-6766 • www.EurofinsUS.com/LancLabsEnv

Project Name: BP 17782
ELLE Group #: 2031679

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2031679
Reported: 03/12/2019 08:42

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result	LOQ**	MDL
	ug/l	ug/l	ug/l
Batch number: F190702AA	Sample number(s): 9996743-9996747		
Benzene	< 1	1	0.2
Ethylbenzene	< 1	1	0.4
Methyl Tertiary Butyl Ether	< 1	1	0.2
Toluene	< 1	1	0.2
Xylene (Total)	< 5	5	1

LCS/LCSD

Analysis Name	LCS Spike Added ug/l	LCS Conc ug/l	LCSD Spike Added ug/l	LCSD Conc ug/l	LCS %REC	LCSD %REC	LCS/LCSD Limits	RPD	RPD Max
Batch number: F190702AA	Sample number(s): 9996743-9996747								
Benzene	20	19.43	20	18.51	97	93	80-120	5	30
Ethylbenzene	20	18.92	20	18.44	95	92	80-120	3	30
Methyl Tertiary Butyl Ether	20	18.63	20	17.5	93	87	69-122	6	30
Toluene	20	19.13	20	18.59	96	93	80-120	3	30
Xylene (Total)	60	56.86	60	55.79	95	93	80-120	2	30

Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: BTEX/MTBE
Batch number: F190702AA

	Dibromofluoromethane	1,2-Dichloroethane-d4	Toluene-d8	4-Bromofluorobenzene
9996743	93	94	98	98
9996744	94	97	98	99
9996745	94	95	98	97
9996746	96	96	97	97
9996747	94	96	99	97
Blank	95	97	99	95
LCS	93	98	98	98

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Sample Description: **MW-4 Grab Groundwater**

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2049451
Reported: 06/27/2019 23:43

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result ug/l	LOQ** ug/l	MDL ug/l
Batch number: F191772AA	Sample number(s): 1083270-1083274		
Benzene	< 1	1	0.2
Ethylbenzene	< 1	1	0.4
Methyl Tertiary Butyl Ether	< 1	1	0.2
Toluene	< 1	1	0.2
Xylene (Total)	< 5	5	1
Batch number: F191781AA	Sample number(s): 1083272		
Ethylbenzene	< 1	1	0.4
Xylene (Total)	< 5	5	1

LCS/LCSD

Analysis Name	LCS Spike Added ug/l	LCS Conc ug/l	LCSD Spike Added ug/l	LCSD Conc ug/l	LCS %REC	LCSD %REC	LCS/LCSD Limits	RPD	RPD Max
Batch number: F191772AA	Sample number(s): 1083270-1083274								
Benzene	20	20.12			101		80-120		
Ethylbenzene	20	19.53			98		80-120		
Methyl Tertiary Butyl Ether	20	19.33			97		69-122		
Toluene	20	20.46			102		80-120		
Xylene (Total)	60	61.14			102		80-120		
Batch number: F191781AA	Sample number(s): 1083272								
Ethylbenzene	20	21	20	19.22	105	96	80-120	9	30
Xylene (Total)	60	64.36	60	59.88	107	100	80-120	7	30

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2049451
Reported: 06/27/2019 23:43

Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: BTEX/MTBE
Batch number: F191772AA

	Dibromofluoromethane	1,2-Dichloroethane-d4	Toluene-d8	4-Bromofluorobenzene

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Project Name: BP 17782
ELLE Group #: 2066974

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

SW-846 8260C, GC/MS Volatiles

Sample #s: 1164800

The concentration reported for Xylene (Total) is estimated since it exceeds the calibration range of the instrument. A further diluted analysis was performed from a previously opened container with headspace and/or outside of the method holding time. The result for Xylene (Total) is 4800 ug/l in this trial.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

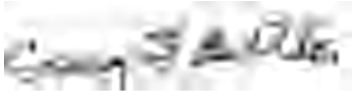
Subject: **Groundwater Monitoring Report Fourth Quarter 2019 and First Quarter 2020**
NYSDEC Spill #01-11974
BP Station #17782
350 Grand Concourse, Bronx, New York

Dear Ms. Feng:

Parsons has prepared the enclosed Groundwater Monitoring Report on behalf of Remediation Management Services Company (RMSC), a BP-affiliated company. The report details groundwater monitoring results from the above-referenced work site. Groundwater samples were collected on December 23, 2019 and on February 14, 2020. The site is on a quarterly monitoring schedule and the next sampling event is tentatively scheduled for June 2020.

If you have any questions or require additional information, please contact the BP project manager (John Frankenthal) at (312) 809-4117 or myself at (315) 552-9680.

Sincerely,



Craig F. Butler, P.E.
Project Manager

BP STATION #17782
GROUNDWATER MONITORING REPORT
(Fourth Quarter 2019 and First Quarter 2020)

Prepared For:	**Remediation Management Services Company**
Prepared By:	**Parsons**
Report Date:	**4/29/2020**

GROUNDWATER GAUGING AND SAMPLING METHODS

On December 23, 2019 and February 14, 2020, depth to water measurements and groundwater samples were collected by Arcadis personnel from four wells (IW-1, IW-2, MW-4, and MW-6A). Monitoring well MW-4 was not accessible during the December event; therefore, it was not gauged or sampled. Monitoring well MW-2 was not accessible during both events; therefore, it was not gauged or sampled. The monitoring wells were gauged for depth to groundwater and for the presence/absence of light non-aqueous phase liquid (LNAPL). The depth to groundwater and presence/absence of LNAPL (if any) were gauged using an oil/water interface probe capable of measuring to the nearest 0.01 foot. The groundwater level measurements were converted to groundwater elevations using top of monitoring well casing elevations. Top of casing elevations were referenced to an arbitrary, on-site datum. No LNAPL was observed in any well during the two monitoring events.

Prior to sampling, the volume of water contained within each monitoring well was calculated using the well diameter and water column height. Whenever possible, a volume of groundwater equivalent to at least three well volumes was purged from each monitoring well using a disposable bailer and/or a mechanical pump with dedicated polyethylene tubing. Groundwater samples were collected using clean, previously unused disposable bailers. The samples were poured from the bailers into laboratory-supplied bottles. The samples were then placed into a cooler, on ice, and transported under chain-of-custody procedures to Eurofins Lancaster Laboratories Environmental of Lancaster, Pennsylvania. Eurofins is a New York State Department of Health-certified laboratory (Certification #10670). The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

GROUNDWATER GAUGING AND SAMPLING RESULTS

Data collected during well gauging activities are summarized in Table 1 and sampling locations are illustrated on Figure 2. Groundwater sampling analytical results for the last four sampling events are depicted on Figure 3. Hydrographs depicting historical groundwater elevation trends for representative monitoring wells are included in Figure 4. The laboratory analytical reports are provided as Appendix A. Historical groundwater analytical data are also provided in Table 1 for reference.

CONCLUSIONS AND RECOMMENDATIONS

Concentrations of BTEX in excess of applicable TOGS WQS (Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values) were detected in each of the four groundwater samples collected during the December 2019 and February 2020 sampling events. BP plans to continue groundwater monitoring at the subject site.

BP SERVICE STATION #17782
350 GRAND CONCOURSE
BRONX, NEW YORK

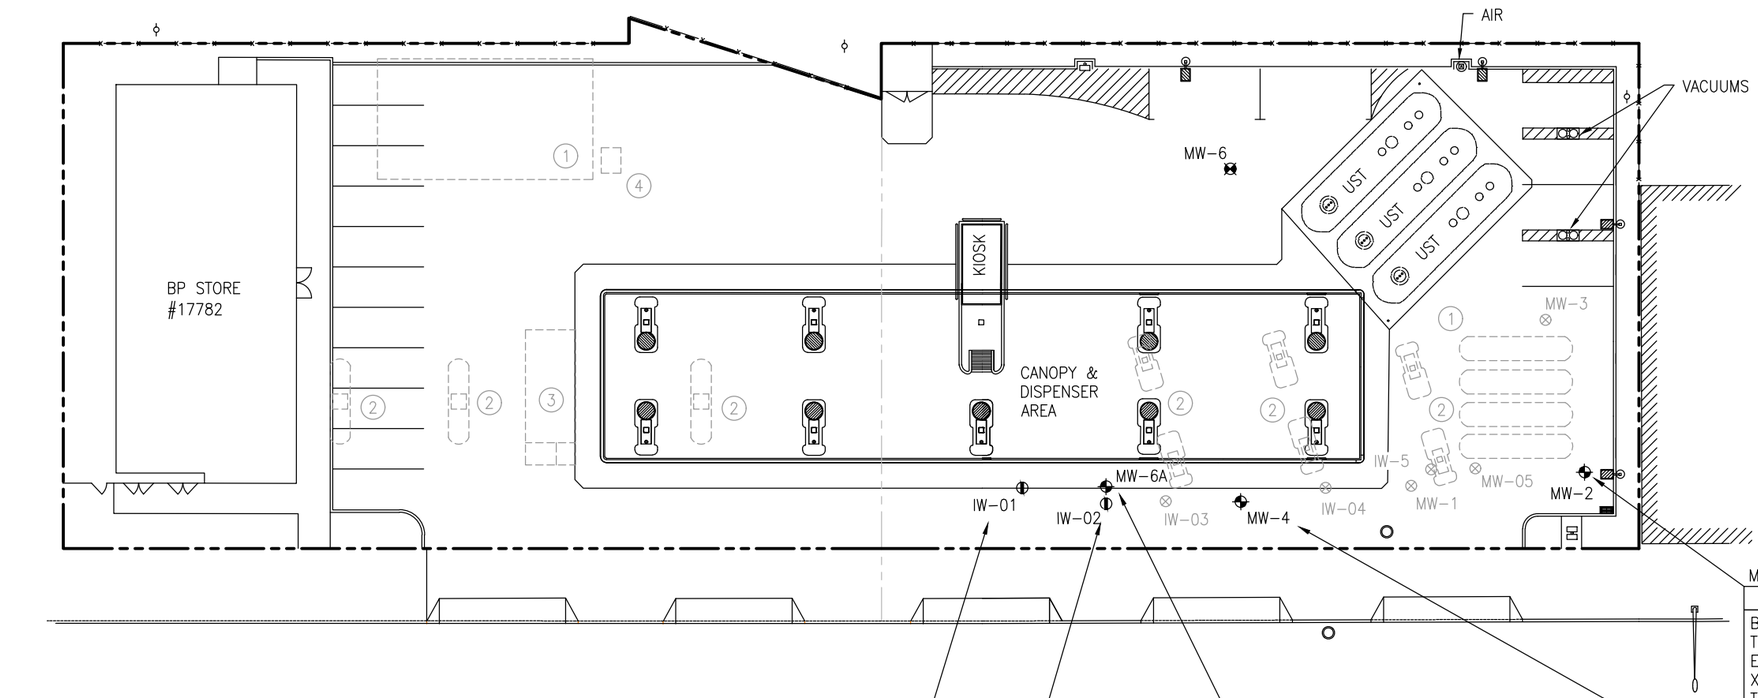
PARSONS	200 COTTONTAIL LANE SOMERSET, NJ 08873
DRAWN BY: SBM	DATE: 4/27/20
	BP17782-01.dwg



0 10 20 30 60

SCALE IN FEET

LEGEND:

- PROPERTY LINE
- FENCE
- MONITORING WELL
- INJECTION WELL
- ATTEMPTED BORING
- DECOMMISSIONED MONITORING/INJECTION WELL
- MH — MANHOLE
- CB — CATCH BASIN
- UTILITY POLE

FORMER SITE FEATURES:

1. FORMER TANK FIELD LOCATION
2. FORMER DISPENSER ISLAND LOCATION
3. FORMER KIOSK LOCATION
4. FORMER WASTE WATER UST LOCATION

CONCENTRATIONS REPORTED IN MICROGRAMS PER LITER (ug/L)

SAMPLE DATE		ACTION LEVEL
B	BENZENE	1
T	TOLUENE	5
E	ETHYLBENZENE	5
X	XYLENES	5
MTBE	METHYL-TERTIARY-BUTYL-ETHER	10

BOLD -VALUE IN EXCESS OF NYSDEC TOGS WQS

J -ESTIMATED CONCENTRATION ABOVE THE ADJUSTED METHOD DETECTION LIMIT AND BELOW THE ADJUSTED REPORTING LIMIT.

U -THE COMPOUND WAS ANALYZED FOR BUT NOT DETECTED. THE ASSOCIATED VALUE IS THE COMPOUND QUANTITATION LIMIT.

Gauging Notes:
TOC - Top of Casing
LNAPL - Light non-aqueous phase liquid
NP - LNAPL not present
NM - Not measured
* - Corrected for LNAPL if present (assumes LNAPL specific gravity - 0.75)

Analytical Notes:
NYSDEC - New York State Department of Environmental Conservation
TOGS WQS - Technical & Operational Guidance Series 1.1.1, Ambient W
Quality Standards and Guidance Values
Results in bold exceed applicable NYSDEC TOGS WQS
TOTAL BTEX - Sum of benzene, toluene, ethylbenzene and xylenes concentrations
MTBE - Methyl tertiary-butyl ether
ug/L - Micrograms per liter
ND - Not detected
< - Not detected at or above indicated laboratory reporting limit
J - Estimated concentration below the instrument reporting limit

Project Name: BP 17782
ELLE Group #: 2081049

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2081049
Reported: 01/06/2020 11:56

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result	LOQ**	MDL
	ug/l	ug/l	ug/l

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2081049
Reported: 01/06/2020 11:56

Surrogate Quality Control

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: BTEX/MTBE
Batch number: F200021AA

	Dibromofluoromethane	1,2-Dichloroethane-d4	Toluene-d8	4-Bromofluorobenzene
1231451	94	96	103	96
Blank	96	97	104	95
LCS	93	102	104	98
Limits:	80-120	80-120	80-120	80-120

Analysis Name: BTEX/MTBE
Batch number: F200052AA

	Dibromofluoromethane	1,2-Dichloroethane-d4	Toluene-d8	4-Bromofluorobenzene
1231448	94	97	101	100
1231449	92	94	101	100
1231450	93	96	102	101
1231452	94	99	101	94
Blank	94	98	101	94
LCS	95	99	102	96
LCSD	94	103	102	96
Limits:	80-120	80-120	80-120	80-120

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Quality Control Summary

Client Name: ARCADIS (NY) Group Number: 2088213
Reported: 02/24/2020 16:52

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result	LOQ**	MDL
	ug/l	ug/l	ug/l
Batch number: F200542AA	Sample number(s): 1261427-1261432		
Benzene	< 1	1	0.2
Ethylbenzene	< 1	1	0.4
Methyl Tertiary Butyl Ether	< 1	1	0.2
Toluene	< 1	1	0.2
Xylene (Total)	< 6	6	1

LCS/LCSD

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

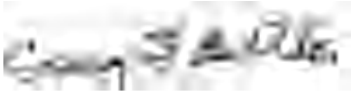
Subject: **Groundwater Monitoring Report Third Quarter 2020**
NYSDEC Spill #01-11974
BP Station #17782
350 Grand Concourse, Bronx, New York

Dear Ms. Feng:

Parsons has prepared the enclosed Groundwater Monitoring Report on behalf of Remediation Management Services Company (RMSC), a BP-affiliated company. The report details groundwater monitoring results from the above-referenced work site. Groundwater samples were collected on July 17, 2020. The site is on a quarterly monitoring schedule and the next sampling event is tentatively scheduled for October 2020.

If you have any questions or require additional information, please contact the BP project manager (John Frankenthal) at (312) 809-4117 or myself at (315) 552-9680.

Sincerely,



Craig F. Butler, P.E.
Project Manager

BP STATION #17782
GROUNDWATER MONITORING REPORT
(Third Quarter 2020)

Prepared For:	**Remediation Management Services Company**
Prepared By:	**Parsons**
Report Date:	**10/1/2020**

SITE BACKGROUND AND HISTORY OF TWO SEPARATE RELEASES

The current BP station was constructed in 2002 but was formerly two separate gasoline stations located on immediately adjoining properties (a Merit station to the north and an Amoco station to the south). Both the former Merit station and the former Amoco station have open spill numbers. In 2002, both the former Merit station and the former Amoco station were razed, the two properties combined, and one single BP gasoline sales facility was constructed. Subsurface petroleum impacts were encountered during tank removal at the Amoco station in 2002 and NYSDEC Spill Number #01-11974 was issued. During February 1999 NYSDEC Spill Number #98-14075 was issued for the Merit station (while the former Merit station was still in operation) and Speedway (successor to Merit) is currently completing environmental monitoring and remediation activities on the northern portion of the site.

On September 16, 2016, the NYSDEC issued a letter closing Spill #01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy CP-43: *Groundwater Monitoring Well Decommissioning Policy*. During decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, four vacuum truck extraction events were completed at well IW-01 during 2016, 2018, and 2019 to remove LNAPL, groundwater, and soil vapor from this area of the site. All liquid extracted during each event was containerized within the vacuum truck and transported off site for proper disposal. Since 2019, groundwater monitoring activities have been completed to verify that concentrations of dissolved-phase BTEX/MTBE associated with Spill #01-11974 continue to decrease.

All work summarized in this report is associated with the former Amoco (now BP) release under Spill #01-11974.

GROUNDWATER GAUGING AND SAMPLING METHODS

On July 17, 2020, depth to water measurements and groundwater samples were collected by Parsons personnel from four wells (IW-1, IW-2, MW-4, and MW-6A). Monitoring well MW-2 was not accessible during the event due to construction on the adjacent property. Therefore, MW-2 was not gauged or sampled. The monitoring wells were gauged for depth to groundwater and for the presence/absence of LNAPL. The depth to groundwater and presence/absence of LNAPL (if any) were gauged using an oil/water interface probe capable of measuring to the nearest 0.01 foot. The groundwater level measurements were converted to groundwater elevations using top of monitoring well casing elevations.

Top of casing elevations were referenced to an arbitrary, on-site datum. No LNAPL was observed in any of the wells during the monitoring event.

Prior to sampling, the volume of water contained within each monitoring well was calculated using the well diameter and water column height. Whenever possible, a volume of groundwater equivalent to at least three well volumes was purged from each monitoring well using disposable bailers. Groundwater samples were collected using clean, previously unused disposable bailers. The samples were poured from the bailers into laboratory-supplied bottles. The samples were then placed into a cooler, on ice, and transported under chain-of-custody procedures to Pace Analytical Services (Pace) of Melville, NY. Pace is a New York State Department of Health-certified laboratory (Certification #10478). The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

GROUNDWATER GAUGING AND SAMPLING RESULTS

Data collected during well gauging activities are summarized in Table 1 and sampling locations are illustrated on Figure 2. Groundwater sampling analytical results for the last five sampling events are depicted on Figure 3. Hydrographs depicting historical groundwater elevation trends for representative monitoring wells are included in Figure 4. The laboratory analytical reports are provided as Appendix A. Historical groundwater analytical data are also provided in Table 1 for reference.

CONCLUSIONS AND RECOMMENDATIONS

Concentrations of BTEX in excess of applicable TOGS WQS (Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values) were detected in each of the four groundwater samples collected during the July 2020 sampling event. BP plans to continue groundwater monitoring at the subject site.

Gauging Notes:
TOC - Top of Casing
LNAPL - Light non-aqueous phase liquid
NP - LNAPL not present
NM - Not measured
* - Corrected for LNAPL if present (assumes LNAPL specific gravity - 0.75)

Analytical Notes:
NYSDEC - New York State Department of Environmental Conservation
TOGS WQS - Technical & Operational Guidance Series 1.1.1, Ambient W
Quality Standards and Guidance Values
Results in bold exceed applicable NYSDEC TOGS WQS
TOTAL BTEX - Sum of benzene, toluene, ethylbenzene and xylenes concentrations
MTBE - Methyl tertiary-butyl ether
ug/L - Micrograms per liter
ND - Not detected
< - Not detected at or above indicated laboratory reporting limit
J - Estimated concentration below the instrument reporting limit

RE: Project: 17782 7/17
Pace Project No.: 70138828

Dear Caryn James:

Enclosed are the analytical results for sample(s) received by the laboratory on July 18, 2020. The results relate only to the samples included in this report. Results contained within this report conform to the most current version of the TNI standards, BP LaMP Technical Requirements Revision 12.1, and any applicable Quality Assurance Project Plan (QAPP), or Work Plan unless otherwise narrated in the body of this report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Rebeka K. Smith
rebeka.smith@pacelabs.com

PROJECT NARRATIVE

Project: 17782 7/17
Pace Project No.: 70138828

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: Parsons PLUS
Date: July 31, 2020

General Information:
6 samples were analyzed for EPA 8260C/5030C by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 170901

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70138608001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 827249)
  - Ethylbenzene
  - Toluene
  - m&p-Xylene
  - o-Xylene

MS: Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.

- MS (Lab ID: 827249)
  - Xylene (Total)

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: 17782 7/17
Pace Project No.: 70138828

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.

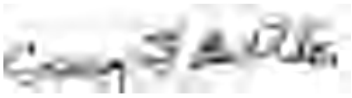
Subject: **Groundwater Monitoring Report Fourth Quarter 2020**
NYSDEC Spill #01-11974
BP Station #17782
350 Grand Concourse, Bronx, New York

Dear Ms. Feng:

Parsons has prepared the enclosed Groundwater Monitoring Report on behalf of Remediation Management Services Company (RMSC), a BP-affiliated company. The report details groundwater monitoring results from the above-referenced work site. Groundwater samples were collected on October 14, 2020. The site is on a quarterly monitoring schedule and the next sampling event is tentatively scheduled for January 2021.

If you have any questions or require additional information, please contact the BP liability manager (John Frankenthal) at (331) 236-1391 or myself at (315) 552-9680.

Sincerely,



Craig F. Butler, P.E.
Project Manager

BP STATION #17782
GROUNDWATER MONITORING REPORT
(Fourth Quarter 2020)

Prepared For: **Remediation Management Services Company**

Prepared By: **Parsons**

Report Date: **1/11/2021**

SITE BACKGROUND AND HISTORY OF TWO SEPARATE RELEASES

The current BP station was constructed in 2002 but was formerly two separate gasoline stations located on immediately adjoining properties (a Merit station to the north and an Amoco station to the south). Both the former Merit station and the former Amoco station have open spill numbers. In 2002, both the former Merit station and the former Amoco station were razed, the two properties combined, and one single BP gasoline sales facility was constructed. Subsurface petroleum impacts were encountered during tank removal at the Amoco station in 2002 and NYSDEC Spill Number #01-11974 was issued. During February 1999 NYSDEC Spill Number #98-14075 was issued for the Merit station (while the former Merit station was still in operation) and Speedway (successor to Merit) is currently completing environmental monitoring and remediation activities on the northern portion of the site.

On September 16, 2016, the NYSDEC issued a letter closing Spill #01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC Commissioners Policy CP-43: *Groundwater Monitoring Well Decommissioning Policy*. During decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, four vacuum truck extraction events were completed at well IW-01 during 2016, 2018, and 2019 to remove LNAPL, groundwater, and soil vapor from this area of the site. All liquid extracted during each event was containerized within the vacuum truck and transported off site for proper disposal. Since 2019, groundwater monitoring activities have been completed to verify that concentrations of dissolved-phase BTEX/MTBE associated with Spill #01-11974 continue to decrease. BTEX concentrations at wells IW-01 and IW-02 have decreased significantly since the first samples were collected in 2017.

All work summarized in this report is associated with the former Amoco (now BP) release under Spill #01-11974.

GROUNDWATER GAUGING AND SAMPLING METHODS

On October 14, 2020, depth to water measurements and groundwater samples were collected from four wells (IW-1, IW-2, MW-4, and MW-6A). Monitoring well MW-2 was not accessible during the event due to construction on the adjacent property. Therefore, MW-2 was not gauged or sampled. The monitoring wells were gauged for depth to groundwater and for the presence/absence of LNAPL. The depth to groundwater and presence/absence of LNAPL (if any) were gauged using an oil/water interface probe capable of measuring to the nearest 0.01 foot. The groundwater level measurements were converted to groundwater elevations using top of monitoring well casing elevations. Top of casing elevations were referenced to an arbitrary, on-site datum. No LNAPL was observed in any of the wells during the monitoring event.

Prior to sampling, the volume of water contained within each monitoring well was calculated using the well diameter and water column height. Whenever possible, a volume of groundwater equivalent to at least three well volumes was purged from each monitoring well using disposable bailers. Groundwater samples were collected using clean, previously unused disposable bailers. The samples were poured from the bailers into laboratory-

supplied bottles. The samples were then placed into a cooler, on ice, and transported under chain-of-custody procedures to Pace Analytical Services (Pace) of Melville, NY. Pace is a New York State Department of Health-certified laboratory (Certification #10478). The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

GROUNDWATER GAUGING AND SAMPLING RESULTS

Data collected during well gauging activities are summarized in Table 1 and sampling locations are illustrated on Figure 2. Groundwater sampling analytical results are depicted on Figure 3. Hydrographs depicting historical groundwater elevation trends for representative monitoring wells are included in Figure 4. The laboratory analytical report is provided as Appendix A. Historical groundwater analytical data are also provided in Table 1 for reference.

CONCLUSIONS AND RECOMMENDATIONS

Concentrations of BTEX in excess of applicable TOGS WQS (Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values) were detected in each of the four groundwater samples collected during the October 2020 sampling event. BTEX concentrations in the four monitoring wells associated with Spill #01-11974 have decreased over the last year. BP plans to continue groundwater monitoring at the subject site.

Gauging Notes:
TOC - Top of Casing
LNAPL - Light non-aqueous phase liquid
NP - LNAPL not present
NM - Not measured
* - Corrected for LNAPL if present (assumes LNAPL specific gravity - 0.75)

Analytical Notes:
NYSDEC - New York State Department of Environmental Conservation
TOGS WQS - Technical & Operational Guidance Series 1.1.1, Ambient W
Quality Standards and Guidance Values
Results in bold exceed applicable NYSDEC TOGS WQS
TOTAL BTEX - Sum of benzene, toluene, ethylbenzene and xylenes concentrations
MTBE - Methyl tertiary-butyl ether
ug/L - Micrograms per liter
ND - Not detected
< - Not detected at or above indicated laboratory reporting limit
J - Estimated concentration below the instrument reporting limit

RE: Project: 17782 10/14
Pace Project No.: 70149664

Dear Caryn James:

Enclosed are the analytical results for sample(s) received by the laboratory on October 15, 2020. The results relate only to the samples included in this report. Results contained within this report conform to the most current version of the TNI standards, BP LaMP Technical Requirements Revision 12.1, and any applicable Quality Assurance Project Plan (QAPP), or Work Plan unless otherwise narrated in the body of this report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Julie Litvin
julie.litvin@pacelabs.com

PROJECT NARRATIVE

Project: 17782 10/14
Pace Project No.: 70149664

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: Parsons PLUS
Date: November 04, 2020

General Information:
6 samples were analyzed for EPA 8260C/5030C by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

QC Batch: 182532

S2: Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

- MW-4-20201014 (Lab ID: 70149664001)
  - 4-Bromofluorobenzene (S)
  - Toluene-d8 (S)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 182684

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70149670007

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 894549)
  - Benzene
- MSD (Lab ID: 894550)
  - Benzene

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: 17782 10/14
Pace Project No.: 70149664

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: Parsons PLUS
Date: November 04, 2020

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

Analyte Comments:

QC Batch: 182684

E: Analyte concentration exceeded the calibration range. The reported result is estimated.

- MS (Lab ID: 894549)
  - Benzene
- MSD (Lab ID: 894550)
  - Benzene

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 17782 10/14
Pace Project No.: 70149664

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E	Analyte concentration exceeded the calibration range. The reported result is estimated.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
S2	Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

RE: Groundwater Monitoring Report First Quarter 2021
NYSDEC Spill #01-11974
BP Station #17782
350 Grand Concourse, Bronx, New York

Dear Ms. Feng:

Remediation Management Services Company (RMSC), a BP Products North America, Inc.-affiliated company, is submitting the enclosed Groundwater Monitoring Report for the above referenced Site.

Should you have any questions regarding this submittal, please feel free to contact me at (331) 236-1391 or John.Frankenthal@bp.com.

Sincerely,

John Frankenthal
Liability Manager
Remediation Management Services Company

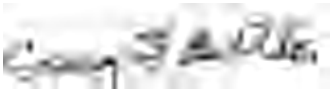
Subject: **Groundwater Monitoring Report First Quarter 2021**
NYSDEC Spill #01-11974
BP Station #17782
350 Grand Concourse, Bronx, New York

Dear Mr. Frankenthal,

Parsons has prepared the enclosed Groundwater Monitoring Report on behalf of Remediation Management Services Company (RMSC). The report details groundwater monitoring results collected from the above-referenced site on January 18, 2021. The site is on a quarterly monitoring schedule and the next sampling event is tentatively scheduled for April 2021.

If you have any questions or require additional information, please contact me at (315) 552-9680.

Sincerely,



Craig F. Butler, P.E.
Project Manager

BP STATION #17782
GROUNDWATER MONITORING REPORT
(First Quarter 2021)

Prepared For: **Remediation Management Services Company**

Prepared By: **Parsons**

Report Date: **4/21/2021**

Site Background and History of Two Separate Releases

The current BP station was constructed in 2002 but was formerly two separate gasoline stations located on immediately adjoining properties (a Merit station to the north and an Amoco station to the south). Both the former Merit station and the former Amoco station have open spill numbers. In 2002, both the former Merit station and the former Amoco station were razed, the two properties combined, and one single BP gasoline sales facility was constructed. Subsurface petroleum impacts were encountered during tank removal at the Amoco station in 2002 and NYSDEC Spill Number #01-11974 was issued. During February 1999 NYSDEC Spill Number #98-14075 was issued for the Merit station (while the former Merit station was still in operation) and Speedway (successor to Merit) is currently completing environmental monitoring and remediation activities on the northern portion of the site. See Figures 1 and 2 for site details.

On September 16, 2016, the NYSDEC issued a letter closing Spill #01-11974. On October 6, 2016, wells MW-1, MW-3, MW-5, IW-4, and IW-5 were decommissioned in accordance with NYSDEC Commissioners Policy CP-43: *Groundwater Monitoring Well Decommissioning Policy*. During decommissioning activities, 0.62 feet of light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01, and the remaining wells (IW-1, IW-2, MW-2, MW-4, and MW-6A) were left intact. In response to the observance of LNAPL, four vacuum truck extraction events were completed at well IW-1 during 2016, 2018, and 2019 to remove LNAPL, groundwater, and soil vapor from this area of the site. All liquid extracted during each event was containerized within the vacuum truck and transported off site for proper disposal. Since 2019, groundwater monitoring activities have been completed to verify that concentrations of dissolved-phase BTEX/MTBE associated with Spill #01-11974 continue to decrease. BTEX concentrations at wells IW-1 and IW-2 have decreased significantly since the first samples were collected in 2017.

All work summarized in this report is associated with the former Amoco (now BP) release under Spill #01-11974.

Groundwater Gauging and Sampling Methods

On January 18, 2021, depth to water measurements and groundwater samples were collected from four wells (IW-1, IW-2, MW-4, and MW-6A). Monitoring well MW-2 was not accessible during the event due to construction on the adjacent property. Therefore, MW-2 was not gauged or sampled. The monitoring wells were gauged for depth to groundwater and for the presence/absence of LNAPL using an oil/water interface probe capable of measuring to the nearest 0.01 foot. The groundwater level measurements were converted to groundwater elevations using top of monitoring well casing elevations. Top of casing elevations were referenced to an arbitrary, on-site datum. No LNAPL was observed in any of the wells during the monitoring event.

Prior to sampling, the volume of water contained within each monitoring well was calculated using the well diameter and water column height. Whenever possible, a volume of groundwater equivalent to at least three well volumes was purged from each monitoring well using disposable bailers. Groundwater samples were collected using clean, previously unused disposable bailers. The samples were poured from the bailers into laboratory-supplied bottles. The samples were then placed into a cooler, on ice, and transported under chain-of-custody procedures to Pace Analytical Services (Pace) in Melville, NY. Pace is a New York State Department of Health-certified laboratory (Certification #10478). The groundwater samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260C.

Groundwater Gauging and Sampling Results

Data collected during well gauging activities are summarized in Table 1 and sampling locations are illustrated on Figure 2. Groundwater sampling analytical results are depicted on Figure 3. Hydrographs depicting historical groundwater elevation trends for representative monitoring wells are included in Figure 4. The laboratory analytical report is provided as Appendix A. Historical groundwater analytical data are also provided in Table 1 for reference.

Conclusions and Recommendations

Concentrations of BTEX in excess of applicable TOGS WQS (Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values) were detected in each of the four groundwater samples collected during the January 2021 sampling event. Total BTEX concentrations in the four monitoring wells associated with Spill #01-11974 have remained similar to concentrations detected a year ago or have decreased over the last year. BP plans to continue groundwater monitoring at the subject site.

Gauging Notes:
TOC - Top of Casing
LNAPL - Light non-aqueous phase liquid
NP - LNAPL not present
NM - Not measured
* - Corrected for LNAPL if present (assumes LNAPL specific gravity - 0.75)

Analytical Notes:
NYSDEC - New York State Department of Environmental Conservation
TOGS WQS - Technical & Operational Guidance Series 1.1.1, Ambient V
Quality Standards and Guidance Values
Results in bold exceed applicable NYSDEC TOGS WQS
TOTAL BTEX - Sum of benzene, toluene, ethylbenzene and xylenes concentrations
MTBE - Methyl tertiary-butyl ether
ug/L - Micrograms per liter
ND - Not detected
< - Not detected at or above indicated laboratory reporting limit
J - Estimated concentration below the instrument reporting limit

RE: Project: 17782 1/18
Pace Project No.: 70159809

Dear Caryn James:

Enclosed are the analytical results for sample(s) received by the laboratory on January 19, 2021. The results relate only to the samples included in this report. Results contained within this report conform to the most current version of the TNI standards, BP LaMP Technical Requirements Revision 12.1, and any applicable Quality Assurance Project Plan (QAPP), or Work Plan unless otherwise narrated in the body of this report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Julie Litvin

PROJECT NARRATIVE

Project: 17782 1/18
Pace Project No.: 70159809

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: Parsons PLUS
Date: January 29, 2021

General Information:
6 samples were analyzed for EPA 8260C/5030C by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

QC Batch: 194223

S0: Surrogate recovery outside laboratory control limits.

- MW-4-20210118 (Lab ID: 70159809003)
  - Toluene-d8 (S)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 17782 1/18
Pace Project No.: 70159809

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

S0 Surrogate recovery outside laboratory control limits.

Dear Ms. Feng:

On behalf of BP Products North America (BP), Arcadis of New York, Inc. (Arcadis) is submitting this Remedial Action Plan for vacuum truck extraction (VTE) events to address isolated petroleum impacts observed at injection well IW-01 at the BP service station located at 350 Grand Concourse in Bronx, New York (**Figure 1**). Spill Number 01-11974 was closed by the New York State Department of Environmental Conservation (NYSDEC) in September 2016. During well decommissioning activities in October 2016, light non-aqueous phase liquid (LNAPL) was observed in injection well IW-01. In November 2016, the NYSDEC issued a letter re-opening the spill number and requiring LNAPL recovery and monitoring. The site background is briefly described below, including the previously issued and rescinded site closure, the decommissioning activities, and the subsequent gauging, sampling, and extraction events at injection well IW-01.

Background

The current BP station, constructed in 2002, was formerly two separate gasoline stations located on adjoining properties: A Merit station to the north and an Amoco station to the south. Available records indicate that subsurface petroleum impacts were encountered during tank removal in 2002 and that NYSDEC Spill Number 01-11974 was issued. The records further indicate that 1,360 tons of petroleum-impacted soils were removed from the site during a station upgrade in 2002. Two subsurface investigations were subsequently conducted in 2002 and 2003. The investigations consisted of the advancement of temporary borings and the installation of three permanent groundwater monitoring wells.

In July 2010, two additional monitoring wells (MW-4 and MW-5) were installed along the western side of the site. A third monitoring well (MW-6) was to be installed along the eastern side of the site; however, a field decision was made not to install a well when groundwater was not encountered in the boring. Currently, environmental monitoring and remediation activities taking place on the northern portion of the site are managed by another consultant hired by Amerada Hess. In October 2010, a sixth monitoring well (MW-6A) was installed at the site near the sidewalk along Grand Concourse to further delineate the extent of petroleum impacts along the west side of the site. In May 2011, four remedial injection wells (IW-01, IW-02, IW-04, and IW-05), as shown on **Figure 2**, were installed to distribute an oxidation enhancing solution throughout the areas of suspected impacts. A fifth injection well (IW-03) was to be installed between IW-02 and IW-04; however, the borehole could not be advanced to an appropriate depth due to shallow refusal encountered during four installation attempts.

During the third quarter of 2012 (August 14 through August 24), approximately 23,858 gallons of calcium nitrate solution were injected into injection well IW-04.

Well Abandonment and Closure

After post-injection monitoring was completed, the NYSDEC issued a letter on September 16, 2016, closing Spill Number 01-11974. During well decommissioning activities on October 6, 2016, wells MW-1, MW-3, MW-5, IW-04, and IW-05 were decommissioned in accordance with NYSDEC CP-43: *Groundwater Monitoring Well Decommissioning Policy*.

Re-Opening of Spill Number 01-11974

Upon gauging injection well IW-01 during the decommissioning activities on October 6, 2016, 0.62 feet of LNAPL was observed. The most recent prior appearance of LNAPL at this well was in December 2013, at which time 0.01 feet of LNAPL was observed. Decommissioning work was immediately stopped, and the remaining wells (IW-01, IW-02, MW-2, MW-4, and MW-6A) were left intact. The injection wells (IW-01, IW-02, IW-04, and IW-05) had been gauged on a quarterly basis since their installation in June 2011, but not sampled, with one exception as follows: IW-05 was sampled in August, September, and October 2012, with dissolved benzene, toluene, ethylbenzene, and xylenes (BTEX) concentrations ranging from 520 micrograms per liter (µg/L) to 790 µg/L.

In response to the observance of LNAPL, a VTE event was conducted at injection well IW-01 on November 16, 2016, during which 45 gallons of petroleum-impacted water was removed and properly disposed. Remaining wells, including IW-01, were gauged on November 29, 2016, and no LNAPL was observed. The NYSDEC was subsequently notified of the LNAPL observation, and on December 7, 2016, issued a letter re-opening Spill Number 01-11974.

Initial Post Re-Opening Monitoring

In accordance with NYSDEC requirements, injection well IW-01 was gauged and sampled in January and April 2017. According to Arcadis' December 2016 telephone conversation with Mr. Jeffrey Vought of the NYSDEC, if LNAPL was not observed in IW-01 during the January and April 2017 gauging and sampling, the NYSDEC would consider closure of the spill number.

Prior to purging or sample collection, injection well IW-01 was gauged for depth to water or LNAPL. LNAPL was not detected in the well. On January 12, 2017, the measured depth to water was 14.83 feet below top of casing (TOC), while on April 3, 2017, the measured depth to water was 14.90 feet below TOC. After gauging, the well was purged of at least three well volumes of groundwater or until dry using a mechanical pump with dedicated polyethylene tubing.

A groundwater sample was collected using a clean, previously unused disposable bailer. Upon collection, the groundwater sample was placed in laboratory-prepared sample containers, labeled, immediately placed in an iced cooler, and shipped, along with a trip blank, to Eurofins Laboratories of Lancaster, Pennsylvania (Eurofins [Lancaster]), under chain of-custody protocols. The samples were analyzed for BTEX and methyl tertiary-butyl ether (MTBE) in accordance with United States Environmental Protection Agency (USEPA) Method 8260.

Groundwater results for constituents detected above the NYSDEC Technical and Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values (NYSDEC 1998[1]) are summarized below:

- January 2017: benzene (ND < 20 µg/L), toluene (650 µg/L), ethylbenzene (3,000 µg/L), and xylenes (30,000 µg/L), with total dissolved BTEX concentrations of 33,650 µg/L. MTBE was not detected (ND < 20 µg/L).
- April 2017: benzene (11 µg/L), toluene (530 µg/L), ethylbenzene (3,000 µg/L), and xylenes (28,000 µg/L), with total dissolved BTEX concentrations of 31,541 µg/L. MTBE was not detected (ND < 20 µg/L).

Closure Request and Subsequent Denial
