Green and Sustainable Remediation Evaluation
101 East 150th Street
Bronx, NY 11101
NYSDEC BCP Site Number – C203154

Sites remediated under the oversight of the New York State Department of Environmental Conservation (NYSDEC) are required to incorporate the concepts of green remediation into all phases of the cleanup process in accordance with DER-31. Green remediation is defined as "*the practice of considering all environmental effects of remedy implementation and incorporating options to minimize the environmental footprint of cleanup actions*." GZA GeoEnvironmental of New York (GZA) has completed the following evaluation of the site management activities associated with the *Site Management Plan* (SMP) for the site located at 1101 East 150th Street in the Bronx, New York utilizing the SiteWise™ tool for green and sustainable remediation tracking and information provided by the site owner, 586 River Ave., LLC, and its subcontractors.

BACKGROUND

The site is located at Block 2354, Lot 1 in Bronx County New York and identified as 101 East 150th Street in Bronx, New York. 586 River Ave., LLC entered into the Brownfield Cleanup Program (BCP) with the NYSDEC to investigate and remediate the site for the development of a six-story school building with approximately 304,711 gross square feet. The site is approximately 2.27 acres and is situated in the Lower Concourse neighborhood of Bronx and surrounded by residential, commercial, and industrial properties. The site has undergone a remedial investigation submitted to NYSDEC in November 2022 for the BCP. Due to the contamination observed during the 2022 remedial investigation, GZA has prepared the RAWP to begin remediation of the Site and limit potential exposure to hazardous materials during the initial construction phase. Prior to the development of the RAWP several remedial components were already implemented at the Site under Interim Remedial Measures (IRMs). The IRMs included the excavation and disposal of VOC impacted soils beneath the northern parking lot area and within the building footprint to between 2 and 10 ft below grade and the dewatering from excavation areas below the water table. A portion of the VOC impacted area that was excavated was backfilled with an in-situ chemical oxidation (ISCO) material mixed with clean soils to improve the breakdown of residual VOCs in the groundwater.

The remedy implemented during the remedial action was a Track 4 alternative including the excavation of impacted soils to the depth of the foundation, the installation of an active SSDS, long-term monitoring (LTM) of groundwater, and In-situ soil stabilization below the building foundation. As a part of the Track 4 remedy, a Site Management Plan has been developed for the Site for ongoing monitoring, sampling, and maintenance activities. The site management activities evaluated in this GSR evaluation include the site side inspection, monitoring, maintenance, and sampling of the SSDS and SVE System, and quarterly groundwater sampling.

Descriptions of the general activities performed under these actions as well as the parameters used for the SiteWise™ evaluation are presented in the following sections.

FOOTPRINT ANALYSIS

SITE-WIDE INSPECTION

An annual Site-wide inspection will be performed to assess the condition of the engineering controls (ECs) in place from the remedy. The annual inspection will focus on evaluating the condition of the site cap, monitoring wells, SSDS, and SVE System and ongoing record keeping required under the SMP.

The assumptions utilized in the analysis of the demolition process include the following:

- 1 GZA qualified environmental professional (QEP) will perform the inspection annually for 5-years.
- All travel will be from the GZA Manhattan office, approximately 9 miles one way, via public transit.

SSDS AND SVE SYSTEM MONITORING, SAMPLING, AND MAINTENANCE

The SSDS is an active system and consists of 16 extraction pits with piping to 7 vertical risers in the building which manifold into two fans venting above the roof line. Each fan is operated continuously with alarms to notify building maintenance staff of shutdowns. The SVE system is an active system that consists of two horizontal extraction pipes at different elevations within the same trench along the northwest side of the building to prevent offsite soil vapor migration. The SVE system has a single radial blower in continuous operation with a similar alarm system. Ongoing monitoring and sampling for both systems will be performed by a QEP on a monthly basis for measuring vacuum in both systems and visual inspections, and annually for measuring vacuum at the SSDS monitoring points and sampling for both systems.

The assumptions utilized in the analysis of the demolition process include the following:

- 1 GZA qualified environmental professional (QEP) will perform the monthly and annually monitoring and sampling for a period of 2 years
- All travel will be from the GZA Manhattan office, approximately 9 miles one way, via public transit.
- Sampling will be conducted once per year and include TO-15 samples collected from the pre-, mid-, and post-carbon drums on the treatment system, 15 monitoring points, 7 indoor air locations, and 1 outdoor air location.
- Vacuum monitoring will be performed utilizing a micromanometer.
- Samples will be transported to and from the laboratory facility via SUV, approximately 200 miles.

QUARTERLY GROUNDWATER SAMPLING

The remedy included the use of in-situ treatment through the direct application of RegenOx® in hot spot areas prior to backfilling the excavation. On going monitoring of the remedy's monitored attenuation will be completed by conducting quarterly groundwater sampling from 3 downgradient and 1 upgradient monitoring wells at the

Site. Samples will be analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and total and dissolved metals (including mercury and cyanide).

The assumptions utilized in the analysis of the demolition process include the following:

- 1 GZA sampling technicians will perform the quarterly sampling for a period of 2 years.
- All travel will be from the GZA Manhattan office, approximately 9 miles one way, via SUV.
- Sampling will be conducted once per quarter utilizing a peristaltic pump and dedicated tubing with a flow-through cell water quality meter.
- Samples will be transported to and from the laboratory facility via SUV, approximately 200 miles.
- 3 well volumes will be purged during each sampling event, approximately 20 gallons.

EVALUATION RESULTS SUMMARY

SiteWise™ breaks down the impacts of project into the following categories:

- Greenhouse gas emissions (metric tons)
- Total energy used (million british thermal units)
- Water consumption (gallons)
- Electricity Usage (megawatt hours)
- Onsite nitrous oxide emissions (metric tons)
- Onsite sulfur oxide emissions (metric tons)
- Onsite particulate matter less than 10 microns (PM10) emissions (metric tons)
- Total nitrous oxide emissions (metric tons)
- Total sulfur oxide emissions (metric tons)
- Total PM10 emissions (metric tons)
- Accident fatality risk
- Accident injury risk

The project impacts for these categories are provided for project wide evaluation as well as individual components of the project. The detailed summary of the evaluation, including the comparison of impacts from each alternative and each alternatives' environmental footprint, is provided in **Attachment 1**. A climate screening checklist of the remedy is also provided as **Attachment 2**.

Overall, the project related impacts from the site management activities include 77.61 metric tons of greenhouse gas emissions, 1,644.88 million British thermal units of energy consumed, 98,052 gallons of water consumed, and 191.95 megawatt hours of electricity used. The largest impacts across these four metrics is related to the continually operation of the blowers for the SSDS and SVE system for electricity generation at upstream sources.

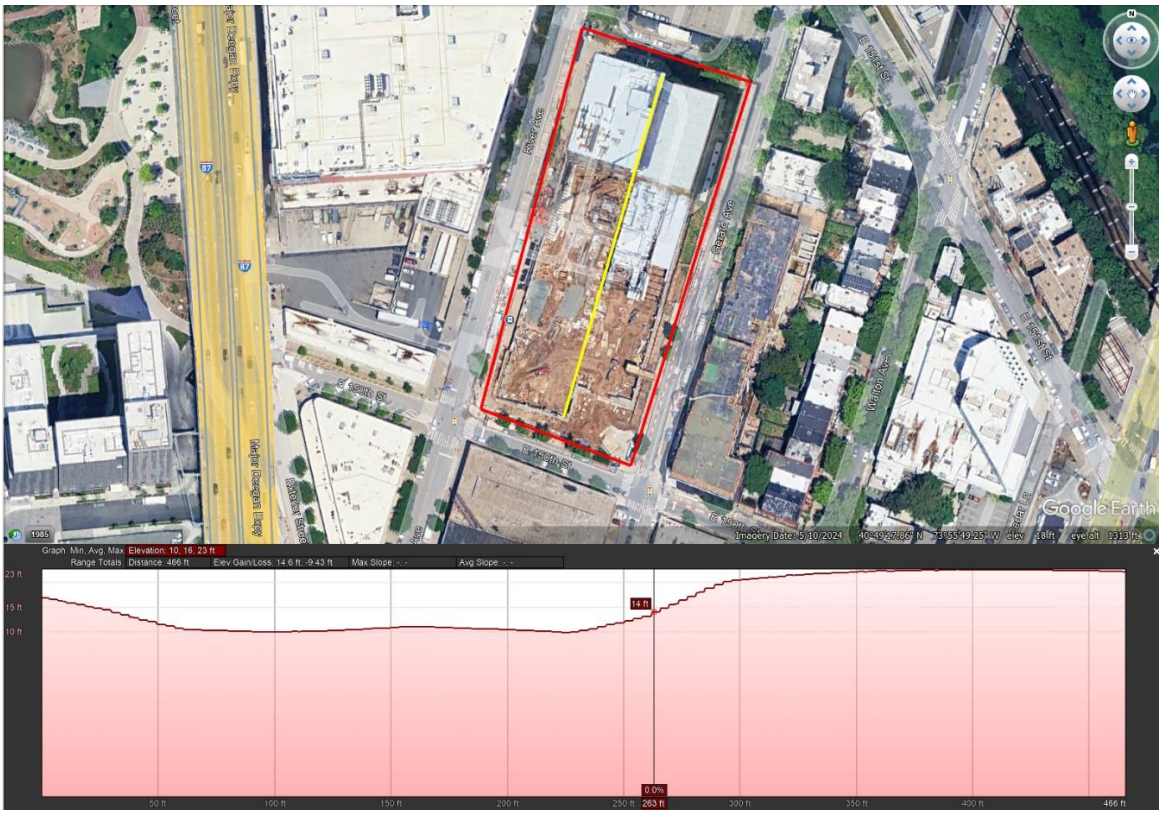
Attachment 2 – Climate Screening Checklist

Climate Screening Checklist -- Example

Background

- Project Manager: Reinbill Maniquez
- Site Name: 101 East 150th Street
- Site Number: C203154
- Site Location: 101 East 150th Street Bronx, New York 10451



- Site Elevation (average above sea level): Approximately 16 feet above sea level (from google earth).

- ClimAID region: Region 4—New York City and Long Island

- Remedial Stage/Site Classification: Site Classification A

- Contamination -- Media Impacted/Contaminants of Concern:
    - Soil – VOCs (1,2,4-trimethylbenzene, Tetrachloroethene [PCE], and Trichloroethene [TCE]); SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo (a, h) anthracene and indeno(1,2,3-cd) pyrene); and Metals (lead and mercury)
    - Groundwater – VOCs (1,2,4,5-tetramethylbenzene, 1,2,4-trimethylbenzne, 1,3,5, trimethylbenzene, acrylonitrile, ethylbenzene, isopropylbenzene, naphthalene, n-butylbenzene, n-propylbenzene, o-xylene, p/m-xylene, p-isopropyltoluene, sec-butylbenzene, 1,1,1- TCA, 1,1-DCA, cis-1,2-DCE, and TCE); SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd) pyrene), and phenol); Metals (iron, magnesium, manganese, and sodium); Pesticides (Dieldrin), Per- and Polyfluoroalkyl substances (PFAS) (PFBS, PFOA, and PFOS).
    - Soil Vapor – VOCs (PCE, TCE, 1,1,1-TCA, cis-1,1-DCE, carbon tetrachloride, and cis 1,2-DCE)

- Proposed/Current Remedy: The includes site management activities related to Site-wide inspections, SSDS and SVE System monitoring and maintenance, and quarterly groundwater sampling as outlined in the Site Management Plan (SMP).

- What is the predicted timeframe of the remedy? Will components of the remedy still be in place in 10+ years?
  The remedy includes engineering controls with varying timeframes. The Site CAP is intended to be in place and maintained for the life cycle of the building. The SSDS, SVE System, and quarterly groundwater monitoring are anticipated to be in place less than 10 years as the remedy naturally attenuates from the implemented remedy.

Is the site in a disadvantaged community (DAC) or potential environmental justice area (PEJA) (Use DECinfolocator: DECinfo Locator (ny.gov))?

☒Yes ☐ No

If the site is in a DAC or PEJA, will climate impacts be magnified? If yes, list how and why.

☐Yes ☒ No

Should thresholds of concern be lowered to account for magnification of impacts? If yes, indicate how lower thresholds will be used in the screening.

☐**Yes** ☒ **No**

Climate Screening Table*

Potential Climate Hazards	**Relevant to the Site Location (Y/N/NA)** [1]	**Projected Change (**Put the reference document/model used here) [3]	**Potential to Impact Remedy (Y/N)**	**Is remedy/site already resilient? (Y/N)** [4]
Precipitation	Potentially	Based upon FEMA's Resiliency Analysis Planning Tool the annual rain fall is projected to increase between 6.97 and 11.20 inches by the end of the century	N	N/A
Temperature (Extreme Heat or Cold Weather Impacts) [2]	Y	Based upon FEMA's Resiliency Analysis Planning Tool, by the end of the century there will be an estimated increase of 525.15 cooling degree days.	N	N/A
Sea Level Rise	Y	Y - Based upon the NOAA's Sea Level Rise Viewer the site is not impacted at 10 feet of SLR.	N	N/A

Flooding[5]	Y	Based upon FEMA's Resiliency Analysis Planning Tool, a the site does not fall within the 0.2% or 1% annual chance flood hazard areas.	N	N/A
Storm Surge	Y	Y – NOAA's Storm Surge Risk Maps tool indicates that the site could be impacted by less than 3 ft of water during category 3 hurricanes and over 9 ft of water for category 4 and higher hurricanes	Y	Y The remedy is already resilient as the SSDS and SVE system are the only portions of the remedy that could be impacted from storm surge and the system will be equipped with a pipe cleanout port to remove excess water if it cannot drain naturally.
Wildfire	N	N/A	N/A	N/A
Drought	N	N/A	N/A	N/A
Storm Severity (could include high winds, lightening, etc.)	Y	N - Based upon FEMA's Resiliency Analysis Planning Tool, there is no increase in storm severity outlook.	Y	Y The remedy is already resilient as the SSDS is the only portion of the remedy that could be impacted from severe weather and the system will be equipped with a telemetry system to remotely notify loss of power.

Landslides	N	N/A	N/A	N/A
Other Hazards:	Seismic Activity – N/A	N/A	N/A	N/A

*Links to potential data sources can be found on the following page

[1] If the first column is N --> The rest of the columns will be N/A, the hazard is not applicable to the site.

[2] Extreme Heat: periods of three or more days above 90°F- Extreme Cold: Individual days with minimum temperatures at or below 30 degrees F (NYSERDA ClimAID report), Note: this is important for sites with active remedial systems/sites where the remedy relies on the electrical grid

[3] List the projected change in specific terms or units e.g. inches of rain fall, feet of sea level rise, etc.

[4] If final column is Y, provide reasoning, if the final column is N --> Climate Vulnerability Assessment (CVA) required.

[5] For system sites- components (e.g. electrical wiring and panels) should be evaluated to determine if they would need to be raised to avoid flooding.

Required Next Steps (If no further action, provide justification):

The vulnerability that was assessed were primarily related to the SSDS and SVE system as other portions of the remedy are not vulnerable to wet or flooding conditions and not reliant on electricity to function. The SSDS and SVE system will be the only component requiring continual operation for an ongoing duration and remaining in place at the Site. The SSDS and SVE system is equipped with a telemetry system to notify times of lost operation and a pipe cleanout port to remove any excess water that cannot drain naturally that may occur from climate related impacts. No further actions are anticipated at this time.

RE: Petroleum Bulk Storage Closure
586 River Avenue/595 Gerard Avenue
Bronx, New York 10451
Block 2354 Lot 1
NYSDEC PBS No. 2609485

Dear Mr. Zielinski:

On behalf of 586 River Ave., LLC (Owner), Goldberg Zoino & Associates, P.C. d/b/a GZA GeoEnvironmental of New York (GZA) is pleased to provide this letter summarizing the information available for the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) Tank Closures associated with the PBS Facility No. 2609485 associated with Tank 0001 (10,000-gallon fuel oil aboveground storage tank [AST]) previously operated by American Self Storage.

BACKGROUND

The Site is located at 101 East 150th Street (a.k.a. 586 River Avenue) in the Lower Concourse neighborhood of Bronx, New York and is bound to the north by a commercial parking lot, to the east by Gerard Avenue, to the south by East 150th Street, and to the west by River Avenue. Tank 001 was located in a basement tank room of the former Site building as shown on **Figure 1.**

The Site is managed under the NYSDEC Brownfield Cleanup Program (BCP) as Site No. C203154. The Site is comprised of a rectangular-shaped parcel identified as Block 2354, Lot 1 on the New York City (NYC) Department of Finance (DOF) Tax Map. The Site is 98,973 square feet (SQ FT) in size and is currently awaiting a NYSDEC BCP Certificate of Completion (COC) for the successful remediation of the site.

The Site previously contained a 2-story commercial building with a cellar on the southern portion of the property, which was demolished in November and December 2023. The northern portion of the property formerly contained a parking lot for the building, which has also been removed.

GZA understands that during the building demolition the fuel tanks associated with the former building were removed and disposed of off-site. GZA received four New York City Fire Department (FDNY Tank Affidavits of Closure:

An Equal Opportunity Employer M/F/V/H

1. Tank A – 100-gallon AST
2. Tank B – 100-gallon AST
3. Tank C – 100-gallon AST
4. Tank 001 – 10,000-gallon AST

Action Remediation, Inc. completed the AST removals in 2023 during the building demolition as part of their contract with Xolle Demo under NYC DOB permit DM-220745022. GZA has been provided with the disposal manifests, photographs, and tank affidavits. The documentation provided is appended to this report, in **Attachments C through E**.

GZA has been on-site during the remediation of the NYSDEC BCP Site. GZA can confirm that the Site building and associated ASTs are no longer on the site. As part of the BCP remedial activities, GZA collected 69 endpoint samples as part of the confirmation sampling during the excavation portion of the remediation and can confirm that the ASTs did not have a negative impact on the subsurface below the former Site building (see **Figure 2**).

1.0 INTRODUCTION

586 River Ave., LLC, (Owner) retained GZA GeoEnvironmental of New York (GZA) to perform a waste characterization study prior to the planned redevelopment at the 101 East 150th Street (a.k.a., 580-586 River Avenue) Bronx, New York (Site).

The Owner intends to enter into an agreement with the New York State Department of Environmental Conservation (NYSDEC) under the New York State Brownfield Cleanup Program (BCP) as a "volunteer" to investigate and remediate the Site. A Remedial Investigation (RI) has been performed by GZA to evaluate Site conditions and information necessary to develop an Interim Remedial Measure Work Plan (IRMWP) and a Remedial Action Workplan (RAWP). This Waste Characterization Report incorporates some of the results of the RI and was prepared to address the requirements of the BCP IRMWP/RAWP.

1.1 PROJECT OBJECTIVES

Our objective was to collect and analyze soil samples for waste characterization parameters in accordance with the IRMWP/RAWP and to support the excavation, management, and disposal of excavated materials during the planned redevelopment at the Site.

1.2 SCOPE OF SERVICES

GZA's Waste Characterization Scope of Services consisted of the following activities:

- Performed a geophysical survey around (i.e., 10 feet [ft] radius) the boring locations with a ground penetrating radar (GPR);
- Installation of a total of 31 soil borings at each location to a maximum depth of 13 feet below ground surface[1] (ft bgs);
- Description and classification of soil samples;
- Field screening of soil samples using a photoionization detector (PID); and
- Collection and laboratory analysis of discrete and composite soil samples at each waste characterization grid to account for the proposed redevelopment excavation;

This report presents GZA's field observations and results. This report is subject to modification if GZA or any other party develops or obtains additional information in connection with the Site and has been prepared in accordance with the limitations presented in **Appendix A.**

[1] Note that 'ground surface' elevation (EL) varies based on the North American Vertical Datum of 1988 [NAVD88]. For example, the building cellar level is at approximate elevation (EL) +7.79 to +9, while the parking area surface is approximate EL +11 to +13.28.

2.0 PROJECT BACKGROUND

This section provides information on the Site, project background, and the proposed redevelopment.

2.1 SITE DESCRIPTION

The Site is identified 586 River Avenue is located in the Lower Concourse neighborhood of Bronx, New York in an area zoned for light manufacturing (M1-2) and commercial (C2-4 and C4-4) use. The Site is bound to the north by East 151st Street, to the east by Gerard Avenue, to the south by East 150th Street, and to the west by River Avenue. The 2.27 acres lot is bounded by a commercial parking lot to the north, to the east by Gerard Avenue, to the south by East 150th Street, and to the west by River Avenue. A topographic map showing the location of the Site is provided on **Figure 1**.

The Site is comprised of a rectangular-shaped parcel identified as Bronx Block 2354, Lot 1 on the New York City (NYC) Department of Finance (DOF) Tax Map. The Site is 98,973 square ft in size and is currently occupied by a two-story commercial building with a basement at the southern portion of the property and a parking lot at the northern portion of the property. A Site Plan is provided on **Figure 2**. Photographs of the Site are included in **Appendix B**.

2.2 PROPOSED DEVELOPMENT

The Owner intends to redevelop the Site into a six-story school building. The Proposed development would not alter the Project Site's existing M1-2 zoning designation. The redevelopment would not create a land use nor a structure that would be incompatible with the existing zoning designations within the surrounding secondary study area. The Requestor intends to redevelop the Site by removing the existing building and constructing a new 304,711 gross square foot, six-story school building with a cellar. The proposed development plan will incorporate engineering controls in the form of a vapor barrier and a sub-slab depressurization system (SSDS).

The Site redevelopment will require excavation that will extend down to approximately 2 ft bgs in the area where the existing building is located, and down to approximately 5 ft bgs at the parking area (north of the existing building) to accommodate the proposed new cellar. In addition, local deep excavations will be performed to account for building elements. For example, the area of proposed grease interceptor pit will be excavated down to 9 feet bgs and the proposed elevator pit will be excavated down to approximately 13 feet bgs. The proposed excavation plan and the redevelopment plan are provided on **Figures 3** and **4**, respectively.

3.0 ENVIRONMENTAL SETTING

This section provides information regarding the anticipated physiographic, hydrogeologic, hydrologic, and soil conditions in the area of the Site.

3.1 REGIONAL PHYSIOGRAPHY

Based on the August 2020 topographic survey, the Site elevation (EL) ranges from 7.8 ft to 27.4 ft based on the North American Vertical Datum of 1988 (NAVD 88). The existing Site building is at the lowest elevation, at approximately EL 7.8 ft. The highest elevation in the parking lot area is at the northern most portion of the Site at EL 13.3 ft. The Site elevation rises steeply to the east (towards Gerard Avenue) and west (towards River Avenue)

of the parking lot area, to a maximum of EL 27.4 ft. The topographic gradient near the Site slopes from northeast to southwest. The nearest water body is the Harlem River, which is located approximately 750 ft west of the Site.

3.2 GEOLOGIC, HYDROGEOLOGIC, AND HYDROLOGIC CONDITIONS

According to the 1992 USGS publication Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties (Baskerville 1992), Bronx County is underlain by high grade metamorphic bedrock consisting of a sequence of Cambrian and Ordovician gneiss, schistose-gneiss, and marble. The bedrock beneath the Site is expected to be the Inwood Marble, (white calcite-dolomite) interlayered with units of Walloomsac and Manhattan Schists. Based on the Geotechnical Engineering study conducted by GZA and finalized in April 2022, bedrock is anticipated to be at between EL -29.4 and EL -76.4 ft. The bedrock elevations appear to vary significantly and erratically across the Site.

Soils observed in boring logs advanced on Site indicate that subsurface soil at the Site consisted of a surface layer of concrete or asphalt ranging from 0.5 ft to 1.0 ft bgs and a fill layer, which primarily consisted of well-graded sand with varying amounts of gravel, rock, brick, ash, and organic material. The layer of historic fill ranged from approximately 1.5 to 7.0 ft bgs during the Remedial Investigation. Native soil consisting of pre-dominantly well-graded brown sand is present below the historic fill. A dry layer of sand, rock, and boulders was encountered at a few boring locations below the observed water table.

GZA performed a groundwater well gauging event at all on-Site wells on September 15, 2022. During this groundwater gauging event, depth to groundwater ranges from approximately 8.3 to 10.3 ft bgs in the parking lot area and 13.4 to 21.1 ft bgs on the adjacent sidewalks. The temporary monitoring wells were gauged in August 2022 and ranged from 5 to 5.25 ft bgs. The groundwater elevation data shows that groundwater flows generally from east to west across the Site, towards the Harlem River. A groundwater contour map showing the inferred direction of groundwater flow, monitoring well locations, and groundwater elevations is provided as **Figure 5**.

4.0 WASTE CHARACTERIZATION SAMPLING ACTIVITIES

The following section discusses the waste characterization activities performed by GZA. Representative photographs of the field investigation activities are included in **Appendix B**.

4.1 SOIL BORING INSTALLATION

From August 15, 2022, through August 17, 2022, eight soil borings were installed in the interior of the existing building to account for two waste characterization grids (WC-01 and WC-02). The soil borings were installed by EPhase2 of Huntington Station, NY, using a Geoprobe 420M Geoprobe® direct-push technology limited access rig equipped with 3-foot interval steel macro-cores with acetate liners.

From August 18 through August 25, 19 soil borings were installed at the parking area (i.e., north exterior of the existing building) to account for 13 waste characterization grids (WC-03 through WC-15). The soil borings were installed by Cascade/Aquifer Drilling and Testing, Inc. (ADT) of Mineola, NY, using a Geoprobe® 7720DT Geoprobe® DPT drill rig equipped with a 5-foot interval steel macro-cores with acetate liners and a Geoprobe® 8140LC mid-size sonic drill rig equipped with a 4-inch steel sampler lined with SDT-45 plastic core bags.

On September 13, 2022, four soil borings were installed were installed at the parking area (i.e., north exterior of the existing building) to account for two waste characterization grids (WC-16 and WC-17) that are located at the proposed elevator pits where the deepest excavation will occur. The soil borings were installed by Clean Globe Environmental, Inc. (CGE) of Hauppauge, NY using a Geoprobe® 7720DT DPT drill rig equipped with a 5-foot interval steel macro-cores with acetate liners.

Soil samples were visually classified in the field and described in accordance with the Modified Burmister Classification System. The soil samples were screened in the field for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID) equipped with a 10.6 eV lamp calibrated to a 100- parts per million (ppm) isobutylene in air standard. PID readings are documented on the soil boring logs in ppm.

Samples were collected based on waste characterization grids that represent approximately 800 cubic yards (CY) of proposed excavated material, a typical requirement of disposal facilities in New Jersey. The 17 waste characterization grids, and soil boring locations are shown on **Figure 2**. Soil borings logs are included in **Appendix C.** This sampling program characterized approximately 13,600 CY of excavated materials for offsite disposal in the areas of the proposed redevelopment.

4.2 SAMPLE COLLECTION AND CHEMICAL ANALYSIS

GZA collected discrete and composite soil samples from the borings up to the proposed extent of the excavation for redevelopment (i.e., between 0 to 13 ft bgs). Discrete/grab soil samples were analyzed for volatile organic compounds (VOCs) and extractable petroleum hydrocarbons (EPH). The grab samples were collected based on visual, olfactory, and PID screening results. Soil samples were then combined into composite samples to account for their respective waste characterization grids listed in the sample summary provided in **Table 1** and as shown in **Figure 2**.

Immediately after sample collection, the soil sample containers were placed in insulated coolers with ice and transported under proper chain-of-custody protocols to Alpha Analytical of Westborough, Massachusetts (Alpha), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory. The soil samples were submitted to Alpha for the following analyses and by the methods listed below:

5.1 SUBSURFACE CONDITIONS

Based on the results Remedial Investigation/Waste Characterization sampling event, the generalized subsurface stratigraphy at the site consists of the following strata, in order of increasing depth:

- SURFACE COVER: 0.5-ft to 1-ft of asphalt or concrete depending on soil boring location.
- FILL: Brown fine to medium grained sand, with some silt, trace gravel. Miscellaneous debris such as brick fragments and ash were encountered within the fill stratum at varying depths from 1.5 to 7 ft bgs.
- SAND: A layer of sand was observed underlaying the fill stratum. It is a brown to dark brown, fine to medium grained sand with trace to some silt. This stratum extended to at the maximum depth of the soil borings at 15 ft bgs.
- GROUNDWATER. Groundwater was encountered at depths between 8.3 and 10.3 ft bgs across the parking area during a groundwater gauging event on September 15, 2022. The temporary monitoring wells drilled in the interior of the building during the Remedial Investigation contained groundwater depths of 5 to 5.3 ft bgs.

6.0 FINDINGS AND CONCLUSIONS

GZA performed a waste characterization study prior to the planned excavation for redevelopment at 101 East 150th Street (a.k.a., 580-586 River Avenue) Bronx, New York. The waste characterization study included a subsurface investigation that involved the collection and analysis of soil samples from the proposed excavation areas.

The findings of the waste characterization study are summarized below.

- During the waste characterization sampling, historic urban fill material of off-site origin was encountered at depths between 1.5 and 7 feet bgs.

- The VOCs 1,1-Dichloroethane, cis-1,2-dichloroethene, trans-1,2-dichloroethene, TCE, and PCE exceeded the UUSCOs, RUSCOs, and/or PGWSCOs in one or more waste characterization soil samples. Two areas of elevated VOCs (around SB-05 and SB-20) are recommended to be excavated prior to the mass excavation during the IRM. Additional end point samples will be collected around these two areas to confirm that soils above appropriate SCOs have been removed.

- The SVOCs Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, and Indeno(1,2,3-cd)pyrene exceeded the UUSCOs, RUSCOs, and/or PGWSCOs in one or more waste characterization soil samples.

- The metals copper, lead, mercury, and zinc exceeded the UUSCOs in multiple waste characterization soil samples. Lead and mercury exceeded the RUSCO in one soil sample.

- The pesticides 4,4-DDE and 4,4-DDT exceeded the UUSCOs in one or more waste characterization soil samples.

- The samples were detected at concentrations below the New Jersey Department of Environmental Protection Residential Soil Remediation Criterion for EPH and GRO.

- TCLP VOCs and TCLP Metals were either below detection limits or below the TCLP Maximum Contaminant Concentrations for Toxicity.

- The analytical results from the Waste Characterization parameters indicate that the samples tested do not exhibit hazardous waste characteristics.

Based on these findings, the following conclusions can be drawn from the waste characterization study in GZA's opinion.

- These analytical results can be used to facilitate the acceptance of the soils for off-site disposal at suitable soil disposal facilities. Excavated material may require additional waste characterization depending on the acceptance requirements of the selected soil disposal facility permit. Excavated material must be transported by a 6 NYCRR Part 364 registered or permitted transporter.

- The analytical results indicate that the toxicity and waste characterization parameters were within the maximum allowed concentrations of contaminants, and the soils can be managed as non-hazardous materials.

- Soils in waste characterization grids 2, 3, 4, 6, 7, 8, 9, 10, 11 and 13 exhibited concentrations that exceeded Residential or Protection of Groundwater SCOs. Therefore, the fill material observed in these grids do not meet the definition of "General Fill" in New York State (refer to 6 NYCRR Part 360), and disposal at a permitted facility is required.

- Transportation and off-Site disposal of all soil/fill material at licensed or permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and the approved IRMWP/RAWP. Appropriate segregation of excavated media on-Site.

- For each disposal facility to be during the BCP Site redevelopment, a letter from the Owner/GZA to the receiving facility requesting approval for disposal and a letter back to the Owner/GZA providing approval for disposal will be submitted to NYSDEC prior to any transport and disposal of soil at a facility. Disposal facilities will be reported to NYSDEC when they are identified and prior to the start of the IRM and/or remedial action.

Appendix A - Limitations

USE OF REPORT

1. GZA GeoEnvironmental, Inc. (GZA) prepared this report on behalf of, and for the exclusive use of our Client for the stated purpose(s) and location(s) identified in the Proposal for Services and/or Report. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not expressly identified in the agreement, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to GZA.

STANDARD OF CARE

2. GZA's findings and conclusions are based on the work conducted as part of the Scope of Services set forth in the Proposal for Services and/or Report and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. Conditions other than described in this report may be found at the subject location(s).

3. GZA's services were performed using the degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or a similar property. No warranty, expressed or implied, is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during its study. Additionally, GZA makes no warranty that any response action or recommended action will achieve all of its objectives or that the findings of this study will be upheld by a local, state or federal agency.

4. In conducting our work, GZA relied upon certain information made available by public agencies, Client and/or others. GZA did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information which we have noted, if any, are discussed in the Report.

SUBSURFACE CONDITIONS

5. The generalized soil profile(s) provided in our Report are based on widely-spaced subsurface explorations and are intended only to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were based on our assessment of subsurface conditions. The composition of strata, and the transitions between strata, may be more variable and more complex than indicated. For more specific information on soil conditions at a specific location refer to the exploration logs. The nature and extent of variations between these explorations may not become evident until further exploration or construction. If variations or other latent conditions then become evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

6. Water level readings have been made, as described in this Report, in and monitoring wells at the specified times and under the stated conditions. These data have been reviewed and interpretations have been made in this report. Fluctuations in the level of the groundwater however occur due to temporal or spatial variations in areal recharge rates, soil heterogeneities, the presence of subsurface utilities, and/or natural or artificially induced perturbations. The observed water table may be other than indicated in the Report.

COMPLIANCE WITH CODES AND REGULATIONS

7. We used reasonable care in identifying and interpreting applicable codes and regulations necessary to execute our scope of work. These codes and regulations are subject to various, and possibly contradictory, interpretations. Interpretations and compliance with codes and regulations by other parties is beyond our control.

SCREENING AND ANALYTICAL TESTING

8. GZA collected environmental samples at the locations identified in the Report. These samples were analyzed for the specific parameters identified in the report. Additional constituents, for which analyses were not conducted, may be present in soil, groundwater, surface water, sediment and/or air. Future Site activities and uses may result in a requirement for additional testing.

9. Our interpretation of field screening and laboratory data is presented in the Report. Unless otherwise noted, we relied upon the laboratory's QA/QC program to validate these data.

10. Variations in the types and concentrations of contaminants observed at a given location or time may occur due to release mechanisms, disposal practices, changes in flow paths, and/or the influence of various physical, chemical, biological or radiological processes. Subsequently observed concentrations may be other than indicated in the Report.

INTERPRETATION OF DATA

11. Our opinions are based on available information as described in the Report, and on our professional judgment. Additional observations made over time, and/or space, may not support the opinions provided in the Report.

ADDITIONAL INFORMATION

12. In the event that the Client or others authorized to use this report obtain additional information on environmental or hazardous waste issues at the Site not contained in this report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.

ADDITIONAL SERVICES

13. GZA recommends that we be retained to provide services during any future investigations, design, implementation activities, construction, and/or property development/ redevelopment at the Site. This will allow us the opportunity to: i) observe conditions and compliance with our design concepts and opinions; ii) allow for changes in the event that conditions are other than anticipated; iii) provide modifications to our design; and iv) assess the consequences of changes in technologies and/or regulations.

REMARKS

1 - Rock layer prevented large recovery from sample No. 3.
2 - Groundwater observed at approximately 20 ft bgs.

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

REMARKS

5.25 - Groundwater depth measured at 5.24 ft bgs in temporary monitoring well.

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

REMARKS

1 - Groundwater observed at approximately 9 ft bgs.

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Total Metals

L2244887-02, -04, -06, -08, -10, -12, -14, -16, -18, -20, -22, -24, -25, -37, -39, -41, -43, -45, -47, and -55: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1677178-3 MS recoveries for aluminum (806%), iron (3060%), and manganese (242%), performed on L2244887-02, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1677178-3 MS recoveries, performed on L2244887-02, are outside the acceptance criteria for antimony (62%), potassium (172%), and selenium (73%). A post digestion spike was performed and was within acceptance criteria.

The WG1677178-3 MS recoveries, performed on L2244887-02, are outside the acceptance criteria for calcium

(128%), copper (152%), and lead (149%). A post digestion spike was performed and yielded unacceptable recoveries for calcium (70%), copper (70%), and lead (60%). The serial dilution recoveries were not acceptable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.

The WG1677178-3 MS recoveries, performed on L2244887-02, are outside the acceptance criteria for cobalt (73%), nickel (73%), and thallium (57%). A post digestion spike was performed and yielded unacceptable recoveries for cobalt (69%), nickel (69%), and thallium (64%). The serial dilution recoveries were not applicable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.

The WG1678102-3/-4 MS/MSD recoveries for aluminum (0%/0%), iron (0%/0%), and manganese (0%/0%), performed on L2244887-41, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1678102-3/-4 MS/MSD recoveries, performed on L2244887-41, are outside the acceptance criteria for antimony (62%/62%) and selenium (MSD 71%). A post digestion spike was performed and was within acceptance criteria.

The WG1677174-4 Laboratory Duplicate RPD for mercury (44%), performed on L2244887-02, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1677178-4 Laboratory Duplicate RPD for calcium (26%), performed on L2244887-02, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1677178-6 serial dilution analysis, associated with L2244887-02, had a %D above the acceptance criteria for aluminum (36%), barium (36%), calcium (40%), copper (32%), iron (43%), lead (38%), magnesium (40%), manganese (41%), and vanadium (35%).
