CERTIFICATION

I, Michael D. Burke, certify that I am currently a Qualified Environmental Professional as defined in Title 6 of the official compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10).

Michael D. Burke, PG, CHMM

1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of St. Joseph Apartments LLC (the Participant) for the property located at 484 East 178th Street in the Tremont neighborhood of the Bronx, New York (the site). The Participant entered into the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP – Site No. C203182) to investigate and remediate the site, and will implement this RIWP pursuant to the forthcoming Brownfield Cleanup Agreement.

The objectives of the Remedial Investigation (RI) are to investigate and characterize the nature and extent of environmental conditions at the site, evaluate whether any contamination is emanating from the site, provide sufficient information to evaluate remedial alternatives, and inform the Qualitative Human Health Exposure Assessment (QHHEA). The RI will generate a data set sufficient to perform a qualitative on- and off-site human health exposure assessment and to evaluate remedial alternatives. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation (May 2010); NYSDEC Sampling, Analysis and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) (April 2023) (NYSDEC PFAS Guidance); and the New York State Department of Health (NYSDOH) "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates) (NYSDOH Guidance for SVI).

2.0 SITE BACKGROUND

2.1 Site Description

The approximately 40,102-square-foot (0.92-acre) site is located in the Tremont neighborhood of the Bronx, New York and is identified as Block 3043, Lot 10 (formerly Lots 10, 16, 22, and 23). Lots 10, 16, 22, and 23 were combined to form Lot 10 in January 2024. The site is bound by East 178th Street to the north, Bathgate Avenue to the east, a daycare facility (Block 3043 Lot 30) and a mixed-use commercial/residential building (Block 3043 Lot 8) to the south, and Washington Avenue to the west.

Former site buildings were demolished in 2019, and the site is currently improved with a vacant lot containing remnant structures including a ramp, staircase, and retaining walls. A site location map is provided as Figure 1 and a site plan is provided as Figure 2.

According to the New York City Planning Commission Zoning Map 3d, dated August 15, 2024, the site is located in an R7D manufacturing area. An R7 district is characterized by medium-density apartments that consist of lower buildings on smaller lots and taller buildings with less lot coverage on larger lots.

The purpose of the project is to develop an underutilized, contaminated parcel of land into a 100% affordable multi-family residential development, while implementing remedial measures that are protective of human health and the environment. The proposed redevelopment project is still in advanced planning stages and is expected to include a 100% affordable eight-story residential building with a 33,300-square-foot footprint. The building is anticipated to have a U-shaped design with landscaped inner courtyard and a partial basement used for building superintendent housing, community facility space, storage, and utilities. The redevelopment plan is included in Appendix A.

2.2 Surrounding Property Land Use

The site is located in an urban setting occupied by single- and multi-story buildings with residential, commercial and industrial occupants in addition to public facilities, schools, and recreational space. The following is a summary of surrounding property use:

Direction	Adjoining Properties	Surrounding Properties
North	East 178th Street followed by multi-story residential buildings	Multi-story residential and commercial buildings
East	Bathgate Avenue followed by a garden, two multi-story residential buildings, and an elementary school	Multi-story residential and commercial buildings and an outdoor parking lot
South	Church/preschool and multi-story commercial building	Multi-story residential and commercial buildings, and a church

Direction	Adjoining Properties	Surrounding Properties
West	Washington Avenue followed by a church and three multi-story residential buildings	Vacant land, an auto repair shop and multiple industrial buildings

Public infrastructure (storm drains, sewers, and underground utility lines) exists within the streets surrounding the site. A land use map showing the adjacent and surrounding properties is provided as Figure 3.

Land use within a half-mile radius includes residential, commercial, public spaces, public facilities, and light industrial buildings. Residential areas, consisting of single- and multi-family houses/buildings are located along East 178th Street to the north of site, along Washington Avenue to the west of site, and along Bathgate Avenue to the east of the site. The nearest ecological receptor is Bronx River, located about 1.1 miles east of the site. Sensitive receptors, as defined in DER-10, located within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	Bronx Charter School for Excellence 5 (approx. 350 feet southwest of the site)	1946 Bathgate Avenue Bronx, NY 10457
2	Sharon Baptist Head Start Campus 4 (approx. 500 feet southeast of the site)	1925 Bathgate Avenue Bronx, NY 10457
3	Loyalty Daycare LLC (approx. 0.1 miles east of the site)	4226 Third Avenue Bronx, NY 10457
4	Six to Six Group Family Daycare (approx. 0.1 miles northwest of the site)	4375 Park Avenue Bronx, NY 10457
5	Chiquitines Daycare II Corp. (approx. 0.1 miles north of the site)	454 E 179th Street Bronx, NY 10457
6	Treasured Learning Child Care Services (approx. 0.1 miles west of the site)	4275 Park Avenue Bronx, NY 10457
7	Trabajamos Community Head Start (approx. 0.1 mile north of the site)	997 Bathgate Avenue Bronx, NY 10457
8	Josies Daycare (approx. 0.2 miles east of the site)	2080 Grand Concourse, Apt A22 Bronx, NY 10457
9	Bronx Daycare Center Inc. (approx. 0.2 miles southeast of the site)	559 East Tremont Avenue Bronx, NY 10457
10	Fun Place Daycare LLC (approx. 0.2 miles north of the site)	2039 Washington Avenue Bronx, NY 10457
11	Bright Dreamers Daycare (approx. 0.2 mile north of the site)	2047 Bathgate Avenue Bronx, NY 10457

Number	Name (Approximate distance from site)	Address
12	Tiny Hearts Bathgate LLC (approx. 0.2 miles north of site)	2071 Bathgate Avenue Bronx, NY 10457
13	First Steps Urban Outreach, Inc. (approx. 0.2 miles southwest of the site)	4197 Park Avenue Bronx 10457
14	Providing Urban Learners Success In Education High School (approx. 0.2 miles northeast of site)	560 East 179th Street Bronx, NY 10457
15	P.S 058-X058 (approx. 0.3 miles southwest of the site)	459 176th Street Bronx, NY 10457
16	The Eagle Academy for Young Men (approx. 0.3 miles south of the site)	4143 Third Avenue Bronx, NY 10457
17	Around the Clock Academy Daycare (approx. 0.3 miles northeast of site)	2052 Arthur Ave Bronx, NY 10457
18	Sunflower Daycare (approx. 0.3 miles north of site)	455 E 181st St 1 floor Bronx, NY 10457
19	Mallelyn Group Family Day Care (approx. 0.4 west of the from site)	1960 Anthony Avenue 1 floor Bronx, NY 10457
20	Rainbow Clouds Group Family Daycare (approx. 0.4 miles east of the site)	1997 Huges Avenue, Apartment 2B Bronx, NY 10457
21	Maritza Day Care (approx. 0.4 miles west of the site)	1835 Anthony Ave #5906 Bronx, NY 10457
22	P.S. 352 (approx. 0.4 miles east of site)	700 E 179th St Suite 417 Bronx, NY 10457
23	Zeta Bronx Tremont Park Elementary School (approx. 0.4 miles southeast of the site)	1910 Arthur Avenue Bronx, NY 10457
24	P.S. 059 The Community School of Technology (approx. 0.4 miles north of the site)	21845 Bathgate Avenue Bronx, NY 10457
25	JHS 118 William W. Niles School (approx. 0.4 miles northeast of the site)	577 East 179th Street Bronx, NY 10457
26	P.S. 163 Arthur A. Schomburg (approx. 0.4 miles northwest of the site)	2075 Webster Avenue Bronx, NY 10457
27	P.S. 3 Raul Julia Micro Society (approx. 0.5 miles northeast of the site)	2100 Lafontaine Avenue Bronx, NY 10457
28	Noah's Ark Daycare (approx. 0.5 miles southwest of the site)	1775 Clay Avenue Bronx, NY 10457
29	My Happy Place Family Daycare (approx. 0.5 miles west of the site	1900 Grand Concourse Apt A Bronx, NY 10457

Number	Name (Approximate distance from site)	Address
30	Nadia Daycare Center (approx. 0.5 miles northwest of the site)	20254 Anthony Avenue Bronx, NY 10457

2.3 Site Physical Conditions

2.3.1 Topography

According to a site survey last revised on February 28, 2024, the site is at el. 85.56 relative to the North American Vertical Datum 1988 (NAVD88) in the northeastern part and el. 57.83 NAVD88 in the southwestern part of site. The surrounding area slopes down to the west toward the Harlem River, which is located about 1.3 miles from the site.

2.3.2 Geology

The site is located in a developed area of the Bronx, New York that is generally covered with paved roads, public walkways, and buildings. The built environment is generally underlain by uncontrolled fill used for construction and development since the late 1800's. According to the USGS Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties, New York, dated 1992, the site is underlain by Fordham Gneiss interlayered with units of the Inwood Marble Formation, which generally consists of white calcite-dolomite marble.

The stratigraphy of the site, from the surface down, consists of urban fill, sand, and gravel underlain by bedrock. The fill was observed from below surface cover to approximately 2 to 14 feet below grade surface (bgs) during previous investigations. Based on drilling refusal and a rock probe investigation, bedrock is expected to range from 2 to 19.1 feet bgs and follows the same general slope of the surface grade from the northeast down to the west and south.

2.3.3 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, coverage by impervious surfaces, and subsurface structures. Other factors influencing groundwater include depth to bedrock, the presence of anthropogenic fill, and variability in local geology and groundwater sources or sinks.

Groundwater was encountered in one soil boring/monitoring well (B-6W) during the previous geotechnical investigation at around 11.5 feet bgs. A permanent monitoring well(B-6W) was installed and developed during the geotechnical investigation and currently remains in the

northern part of the site. Groundwater flow direction was not evaluated in the previous geotechnical investigation, however, regional groundwater flow is estimated to the west. Groundwater elevations and flow direction will be evaluated during the RI.

Groundwater in the Bronx is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

2.3.4 Wetlands

Wetlands were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands map. There are no designated wetlands on the site.

2.4 Summary of Previous Site Use

A review of historical data revealed that the site was located in a densely developed urban area, characterized by commercial and industrial uses, as early as 1896. Historical records indicate that the site was improved with an early iteration of "St. Joseph's Academy" on the southern part of the site, a mixed-use building on the northwestern part of the site, and two dwellings on the northeastern part of the site. By 1901, a church structure with a basement for an auditorium, meeting hall, cafeteria, gym, and school counseling was constructed along with another rendition of the academy/convent. A rectory was added as well in 1950. By 1981, the mixed-use commercial and residential buildings were demolished. The dwellings were demolished by 2012, and the church and remaining buildings were demolished in 2019 for redevelopment of the site.

There is one 3,000-gallon fuel oil aboveground storage tank (AST) registered to Lot 10. This AST was removed during demolition of the former church in 2019. There are municipal records that refer to several underground storage tanks (UST), including two 275-gallon USTs on former Lot 23 and one 1,000-gallon UST on former Lot 22. Although a job filing to remove the USTs was filed in 2012, it is unknown if these remain on-site or have been removed.

Potential sources of contamination at the site include the unknown fill used to develop the site, demolition of former structures, previous USTs and AST registered to the site, and migration from an off-site source.

2.5 Summary of Previous Environmental Investigations

The following previous environmental reports were prepared for the site and are summarized below. (copies are provided in Appendix B):

- Phase I Environmental Site Assessment (ESA), prepared by VHB Consultants, dated September 19, 2019
- Phase II Environmental Site Investigation (ESI), prepared by VHB Consultants, dated February 11, 2024

Phase I ESA, prepared by VHB Consultants, dated September 19, 2019

The findings of the Phase I ESA include the following:

- At the time of the Phase I ESA, one steel 3,000-gallon fuel oil AST was registered to the property on former Lot 10. The AST was reportedly installed around 1911, rested directly on soil, and was listed as in-service as of date of submission of the Phase I ESA. The AST was not observed during the site reconnaissance. It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment. Municipal records associated with the site reference three USTs (two 275-gallon USTs on former Lot 23 and one 1,000-gallon UST on former Lot 22). No documentation of UST conditions were provided, however, a job listing to remove one 1,000-gallon UST was filed in 2012. It is unknown if these USTs remain on site or if they were removed.

- Given the development history and recent demolition of the mixed-use building with an elevator on former Lot 16 and the two-story dwelling on former Lot 22, there is a potential for remnant historic structures (i.e., remnant foundations) and urban fill materials to be present on the subject property. Former Lot 22 is elevated with respect to surrounding grade.

Phase II ESI, prepared by VHB Consultants, dated February 11, 2024

The Phase II ESI was conducted in March 2023. The investigation within the site consisted of:

- Installation of 11 soil borings to between 2 and 14 feet bgs and collection of 17 soil samples

- Installation of 10 soil vapor sampling points to between 2 and 11 feet bgs and collection of 10 soil vapor samples

Groundwater was not encountered above the refusal depths at presumed bedrock, and no groundwater samples were collected. The following is a summary of the findings:

Soil

- *Subsurface Observations*: Urban fill, sand and gravel were observed from surface grade to approximately 2 to 14 feet bgs. Bedrock was observed underlying fill at each of the boring locations. A petroleum odor was apparent and a maximum photoionization detector (PID) reading of 31.4 parts per million (ppm) was detected from 5 to 9 feet bgs at soil boring SB-11 (former Lot 23). Municipal records identifying two 275-gallon USTs on Lot 23 were noted in the previous Phase I ESA, possibly connecting these impacts to historical tank leaks or releases.

- Two of the eleven soil borings (SB-4 and SB-5) contained semivolatile organic compounds (SVOC) including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene at concentrations above the NYSDEC 6 New York Code of Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCOs).

- Two of the eleven soil borings (SB-4 and SB-5) contained SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene at concentrations above NYSDEC 6 NYCRR Part 375 Restricted Use Restricted-Residential (RURR) SCOs.

- All eleven soil borings (SB-1 through SB-11) contained metals including mercury, zinc, copper, barium, lead, chromium, and arsenic at concentrations above the NYSDEC 6 NYCRR Part 375 UU SCOs.

- Two of the eleven soil borings (SB-5 and SB-11) contained metals including barium, lead, and arsenic at concentrations above the NYSDEC 6 NYCRR Part 375 RURR SCOs.

- Four of the eleven soil borings (SB-1, SB-4, SB-5, and SB-11) contained pesticides including 4,4'-DDT, 4,4'-DDD, 4,4'-DDE, alpha chlordane, dieldrin, and heptachlor that were detected at concentrations above the NYSDEC 6 NYCRR Part 375 UU SCOs.

Soil Vapor

Twenty (20) volatile organic compounds (VOCs) were detected in soil vapor samples across the site. One chlorinated volatile organic compound (CVOC), tetrachloroethene (PCE), was detected in soil vapor at concentrations ranging from 59.7 micrograms per cubic meter (µg/m^3) to 658 µg/m^3. Per the NYSDOH Guidance for SVI Decision Matrices, eight soil vapor samples exceed the minimum soil vapor/sub-slab vapor concentration warranting recommendations ranging from no further action to mitigation.

A summary of soil and soil vapor sampling results are provided on Figures 4 and 5.

2.6 Preliminary Areas of Concern

Based on site history and the findings of the previous studies, the preliminary areas of concern (PAOC) to be further investigated during the RI are described below and shown on Figure 6:

PAOC 1: SVOC and Metal Contamination in Fill

Previous investigations identified elevated SVOC and metal contamination in multiple soil samples. Based on the location of soil borings with SVOC and metal concentrations above RURR SCOs, this PAOC is in the northern part of site.

PAOC 2: Chlorinated Solvent Contamination

Previous investigations identified CVOC contamination in soil vapor. PCE was detected at maximum concentration of 658 µg/m^3 in soil vapor yielding recommendations ranging from "mitigate" to "no further action" when evaluated using the NYSDOH Guidance for SVI Decision Matrices. Based on the widespread presence of CVOCs in soil vapor and the current lack of an identified source, this PAOC is sitewide.

PAOC 3: Petroleum Bulk Storage

Historical records indicate one former AST was present on former Lot 22 from 1911 to approximately 2019 when the buildings were undergoing demolition. No documentation of the AST condition was provided in the Phase I ESA and Phase II ESI, and it is unknown if the condition was assessed prior to the commencement of demolition activities. No documentation of the condition of the former USTs on former Lot 23 prior to their removal was available for review. Petroleum-like odors and maximum PID readings of 31.4 ppm were observed around 5 to 9 feet bgs in soil boring SB-11 near the western site boundary (previous investigation by VHB), suggesting historical releases of petroleum. These petroleum-like impacts and locations of the former PBS tanks require further investigation and represent a PAOC in the northeastern part of site.

3.0 SCOPE OF WORK

The objective of this RIWP is to investigate and characterize "the nature and extent of the contamination at and/or emanating from the brownfield site," per Environmental Conservation Law (ECL) Article 27, Title 14 (Brownfield Cleanup Program, or BCP). The rationale for each sampling location in relation to the PAOCs and analytical parameters for each proposed sample are provided in Table 1. The field tasks are discussed in more detail in the following sections.

Geophysical Survey

- Perform a geophysical survey over the entire site and adjoining sidewalks to clear sample locations and identify underground structures and utilities. Sample locations may be relocated based on the findings of the geophysical survey.

Soil Investigation and Sampling

- Advance at least nine soil borings (RIB01 through RIB09) to 14 feet bgs or refusal due to presumed bedrock, whichever is encountered first. Six of the soil borings to be converted to groundwater monitoring wells will be advanced to at least 5 feet below the observed groundwater interface or bedrock refusal, whichever is encountered first.

- Collect 5 surficial soil samples (RISS01 through RISS05) to about 6 inches bgs within the vegetated/soil-covered parts of the site.

- Collect a minimum of two soil samples from nine boring locations (RIB01 through RIB09) (plus quality assurance/quality control [QA/QC] samples) and one soil sample from five surficial soil sampling locations (RISS01 through RISS05) for laboratory analysis. Sampling frequency and analysis is further described in Section 3.2.

Monitoring Well Installation and Sampling

- Install and develop six permanent groundwater monitoring wells (RIMW01 through RIMW05 and RIMW09); bedrock wells will be installed where groundwater is not encountered above bedrock.

- Develop previously installed permanent monitoring well, B-6W, due to inactivity between investigations.

- Collect one groundwater sample from each monitoring well, including previously installed monitoring, B-6W, (plus QA/QC samples) for laboratory analysis.

    - Install and develop additional permanent groundwater monitoring wells on a case-by-case basis north, east, and west of the site. If groundwater sample results collected from on-site monitoring wells indicate the presence of contamination, to investigate potential off-site migration of contamination.

- Survey and gauge monitoring wells to establish groundwater elevations and evaluate flow direction.

Soil Vapor and Ambient Air Sampling

- Install three soil vapor points (RISV01 and RISV03) to at least 2 feet above the groundwater table to supplement existing on-site soil vapor data.

- Collect one sample from each point, one ambient air sample (AA-01), and one duplicate sample for laboratory analysis for VOCs by United States Environmental Protection Agency (USEPA) Method TO-15.

Off-site Soil Vapor Sampling

- Install five soil vapor point to at least 2 feet above the groundwater table to the north, east, and west of the site (RIOSV01 through RIOSV05).

- Collect one sample from each point for VOCs by USEPA Method TO-15.

Modifications to this scope of work may be required: 1) due to site operations, equipment or other access restrictions; 2) in the event that unexpected contamination is detected and additional analytical data is needed; and 3) to adequately characterize and delineate subsurface impacts in compliance with the BCP, regulations and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be notified in advance of implementing any modifications.

The field investigation will be completed in accordance with NYSDEC DER-10 Guidance and the procedures specified in the Health and Safety Plan (HASP) and the Quality Assurance Project Plan (QAPP) included as Appendices C and D, respectively. A Community Air Monitoring Plan (CAMP) will be implemented during this investigation (see Section 3.7.2 and Appendix E).

The names, contact information and roles of the principal personnel who will participate in the investigation are listed below. The HASP contains emergency contact information (HASP Table 5) and a map with a route to the nearest hospital (HASP Figure 2). Résumés for Langan employees involved in the project are included in the QAPP (Appendix D).

3.1 Geophysical Survey

Langan will coordinate with a geophysical contractor to clear subsurface testing locations of potential subsurface utilities or other suspect anomalies and to locate potential USTs. The site-wide and adjoining sidewalks geophysical survey will be completed using a collection of geophysical instruments, including electromagnetic and utility line locator instruments and ground-penetrating radar (GPR). Sample locations will be relocated as necessary to avoid subsurface utilities, infrastructure, or other impediments identified during the survey.

3.2 Soil Investigation

3.2.1 Drilling and Logging

An environmental drilling subcontractor will advance nine on-site soil borings to a minimum of 14 feet bgs or bedrock refusal, whichever is encountered first. The groundwater table is anticipated to be encountered around 11.5 feet bgs. A plan showing the proposed boring locations is included as Figure 6. A Langan engineer, geologist, or scientist will document the work, screen the soil samples for environmental impacts, and collect environmental samples for laboratory analyses under the direct supervision of a Qualified Environmental Professional. Soil will be screened continuously to the boring termination depth with a PID equipped with a 10.6 electron volt (eV) bulb, for visual and olfactory evidence of environmental impacts (e.g., staining and odor), and for non-aqueous phase liquid (NAPL) saturation and distribution (if encountered). Soil descriptions will be recorded in a field log. Boring logs will be presented in the Remedial Investigation Report (RIR).

Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox® and water.

3.2.2 Surficial Soil Investigation

A Langan field scientist, engineer, or geologist will use a shovel to collect five surficial soil samples (RISS01 through RISS05) throughout the vegetated/soil-covered parts of the site. The samples will be collected from 0 to 6 inches bgs. Excavated soil will be screened for total organic vapor (TOV) concentrations using a PID equipped with a 10.6 eV bulb, and for visual and olfactory indications of environmental impacts (e.g., staining and odor). The shovel will be decontaminated between test pits using Alconox® and water.

3.2.3 Soil Sampling and Analysis

A minimum of two soil samples will be collected from each soil boring and one soil sample will be collected from each surficial soil sampling location for laboratory analysis, for a total of 21 soil samples plus QA/QC samples. The following sampling methodology will be applied:

Soil Borings:

- If impacts are not observed, a sample will be taken from shallow fill and above bedrock (boring termination).
- If impacts are observed, an additional sample will be collected from the most impacted interval, and an additional sample will be collected from below the impacted interval if encountered above the boring termination depth.

Surficial Soil Samples:

- A sample will be taken from the top 6 inches, targeting the 0- to 2-inch interval. If vegetation or coarse aggregate is observed at grade, then a soil sample will be collected from 0 to 2 inches beneath the base of the vegetation and/or aggregate layer.

The proposed soil samples are summarized in Table 1. The samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to attempt to maintain a temperature of approximately 4°C) for delivery to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Soil samples collected from soil borings in areas that have not been investigated yet (RIB01, RIB04, RIB05, RIB07, and RIB09) and surficial soil sample locations (RISS01 through RISS05) will be analyzed using the latest USEPA methods as follows:

- Part 375 List and Target Compound List (TCL) VOCs by USEPA methods 8260C/5035
- Part 375 List and TCL SVOCs by USEPA method 8270D
- Part 375 List Polychlorinated biphenyls (PCBs) by USEPA method 8082A
- Target Analyte List (TAL)/Part 375 List metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010C/7471B/9010C/7196A.
- Part 375 List pesticides by USEPA methods 8081B and 8151A, respectively

- NYSDEC List PFAS by EPA Method 1633. A list of the PFAS compounds is provided in Table 2.
- 1,4-dioxane by EPA Method 8270D

Soil samples collected from soil borings co-located with soil borings from previous investigations (RIB02, RIB03, RIB06, and RIB08) will be analyzed using the latest USEPA methods as follows:

- NYSDEC List PFAS by EPA Method 1633.
- 1,4-dioxane by EPA Method 8270D
- If impacts are observed, samples will be additionally analyzed for VOCs and SVOCs

QA/QC procedures to be followed are described in the QAPP in Appendix D.

3.3 Groundwater Investigation

3.3.1 Monitoring Well Installation

Six of the nine on-site soil borings will be converted to permanent groundwater monitoring wells. Proposed monitoring well locations are shown on Figure 6.

Additional permanent groundwater monitoring wells may be installed on a case-by-case basis on the north, east, and west of the site if groundwater sample results collected from on-site monitoring wells indicate the presence of contamination, to investigate potential off-site migration of contamination.

If groundwater is observed in overburden material, monitoring wells will be constructed using 2-inch-diameter, threaded, flush-joint, polyvinyl chloride (PVC) casing, and 10-foot-long, pre-packed well screens that will terminate about 7 feet below the observed groundwater table. Clean sand (e.g., Morie No. 2) will be used to fill the minimum 2-inch-thick annulus around the screen up to about 2 feet above the top of the screened interval. A 2-foot-thick bentonite seal will be installed above the sand, and the remaining borehole annulus will be backfilled with drill cuttings with no evidence of chemical or petroleum impacts (i.e., staining, odors, or PID readings above background conditions) to within 12 inches of the surface and/or grouted to the surface with a bentonite and cement slurry. Monitoring wells will be finished at the surface with flush-mounted access covers.

If groundwater is not encountered above bedrock, bedrock monitoring wells will be installed. After soil sampling has been completed, a 4-inch-diameter stainless steel casing will be advanced a minimum of 2 feet into competent bedrock, and the borehole will be grouted to seal the well from potential overburden impacts. The grout will be allowed at least 24 hours to cure. After curing, the bedrock will be cored using a 2.875-inch or 3.875-inch HQ core bit to about 5 to 15 feet into competent rock, depending on water level. Management of investigation-derived waste (IDW) is discussed in Section 3.7.

Following installation, the wells will be developed using a surge block across the well screen to agitate and remove fines. The surge block will be moved within the installed well in 2-to-3-foot increments for approximately 2 minutes per increment. After surging, the well will be purged via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). The well will then be allowed to equilibrate for a minimum of one week before collecting groundwater samples.

3.3.2 Monitoring Well Survey

The location and elevation of the groundwater monitoring wells (top of casing elevations) will be surveyed. This data will be used with synoptic groundwater well gauging data to prepare a groundwater contour map to evaluate the direction of groundwater flow. Vertical control will be established by surveying points relative to NAVD88 by a NYS-licensed land surveyor. Elevations of the top of monitoring well casings and protective well casings will be surveyed to the nearest 0.01 foot.

3.3.3 Groundwater Sampling and Analysis

One groundwater sample will be collected from each of the seven on-site monitoring wells as summarized in Table 1. Prior to sampling, one round of synoptic gauging for static water levels will be performed and the monitoring wells will be purged. Purging will consist of pumping, at a minimum, the stabilized drawdown volume plus the pump's tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells (dated July 30, 1996, and 4th revision September 19, 2017). If physical and chemical parameters do not stabilize within one hour of purging, sample collection will proceed. Samples will be collected with a submersible pump and dedicated polyethylene tubing (or similar pump apparatus). Non-disposal components of the pump will be decontaminated with Alconox and water between each sample location. Development and purge water will be containerized for off-site disposal.

The groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of approximately 4°C) for delivery to the laboratory. Groundwater samples from both newly installed and existing well locations will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA method 8260C
- TCL SVOCs by USEPA method 8270D
- PCBs by USEPA method 8082A
- Metals (filtered and unfiltered) by USEPA method 6010C/7470
- NYSDEC List PFAS by EPA Method 1633

- 1,4-dioxane by EPA Method 8270D with selected ion monitoring (SIM)

QA/QC procedures to be followed are described in the QAPP in Appendix D.

3.4 Soil Vapor Investigation

3.4.1 Soil Vapor Point Installation

Three on-site soil vapor points and five off-site soil vapor points will be installed in accordance with the NYSDOH Guidance for SVI.

Soil vapor points will be installed using direct-push technology by advancing a vapor probe to about 2 feet above the bedrock or groundwater table, whichever is shallower. The soil vapor collection points will consist of inert sample tubing (i.e., polyethylene) and the annulus (i.e., the sampling zone) around the installed tubing will be filled with a clean, coarse sand pack to about 0.5 feet bgs, followed by a hydrated bentonite seal to surface grade.

3.4.2 Soil Vapor Sampling and Analysis

Samples will be collected in general accordance with NYSDOH Guidance for SVI. The proposed vapor samples are summarized in Table 1. A plan showing the proposed soil vapor locations is included as Figure 6. Before collecting soil vapor samples, a minimum of three vapor probe volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample point at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE® meter. Purged soil vapor will be monitored for VOCs with the MultiRAE® during this process. Samples will be collected within one day of installing temporary vapor points.

A helium tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC technique to document the seal integrity of each soil vapor sampling point seal before and after sampling. The tracer gas will be introduced into a container surrounding the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal is considered compromised and should be enhanced or reconstructed to reduce outside air infiltration.

After integrity of each seal is confirmed, soil vapor will be collected over a 2-hour sampling period into laboratory-supplied, batch-certified clean 6.0-liter Summa® canisters with calibrated flow controllers. One sample will be collected from each of the eight soil vapor points. One duplicate sample of one soil vapor point will be collected. One ambient air sample will be collected from the breathing zone (about 3 to 5 feet above grade) concurrently with soil vapor sample collection to provide information regarding background air conditions, for a total of ten samples. The samples will be analyzed for VOCs by USEPA Method TO-15.

A log sheet for each soil vapor sample will be completed to record sample identification, date and time of sample collection, sampling depth, name of the field staff responsible for sampling,

sampling methods and equipment, vapor purge volumes, volume of vapor extracted, flow rate, and vacuum of canisters before and after sample collection.

QA/QC procedures to be followed are described in the QAPP in Appendix D.

3.5 Contingencies for Additional Investigation

Based on field observations and receipt of preliminary sample results, additional investigation may be warranted to complete vertical and horizontal delineation of on-site impacts. If preliminary sample results indicate the presence of a hotspot, additional soil borings and/or groundwater monitoring wells may be installed to investigate potential off-site migration of contamination. Additional investigation would be completed in accordance with Sections 3.1, 3.2, and 3.3. The NYSDEC Project Manager will be notified in advance of beginning any additional investigation.

3.6 Data Management and Validation

Laboratory analyses of soil, groundwater, vapor, and air samples will be conducted by a NYSDOH ELAP-approved laboratory in accordance with USEPA SW-846 methods and delivered in NYSDEC Category B format. Environmental data will be reported electronically using the database software application EQuIS as part of NYSDEC's Environmental Information Management System (EIMS).

Table 1 summarizes the proposed samples and laboratory analyses. QA/QC procedures required by SW-846 methods, including initial and continuing instrument calibrations, standard compound spikes, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates), will be followed. The laboratory will provide sample bottles, which will be pre-cleaned and preserved in accordance with the SW-846 methods.

Data validation will be performed in accordance with the USEPA Region 2 Standard Operating Procedures (SOPs) for data validation and USEPA's National Functional Guidelines for Organic and Inorganic Data Review, Technical and Administrative Guidance Memorandum (TAGM) Solid Waste Guidance (SW-96-09) Development and Review of Site Analytical Plans, and DER-10 Appendix 2B Section 2.0. Tier 1 data validation (the equivalent of USEPA's Stage 2A validation) will be performed to evaluate data quality. Tier 1 data validation is based on completeness and compliance checks of sample-related quality control results including:

- Holding times;
- Sample preservation;
- Blank results (method, trip, and field blanks);
- Surrogate recovery compounds and extracted internal standards (as applicable);

- Laboratory control samples and laboratory control sample duplicates recoveries and relative percent difference (RPDs);
- Matrix spike and matrix spike duplicate recoveries and RPDs;
- Laboratory duplicate RPDs; and
- Field duplicate RPDs.

A Data Usability Summary Report (DUSR) will be prepared by the data validator and reviewed by the quality assurance manager before issuance. The DUSR will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain-of-custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. Additional details on the DUSRs are provided in the QAPP in Appendix D.

3.7 Management of Investigation-Derived Waste

Excess Investigation-Derived Waste (IDW), including soil cuttings, purged groundwater, and decontamination fluids, will be containerized in properly-labeled and sealed United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums and staged for future waste characterization and off-site disposal at a facility permitted to accept the waste. The drums will be staged in an area on-site, pending receipt of laboratory data and off-site disposal to an appropriate facility. IDW will be removed from the site within one month of completing the investigation. The site will be secured during and after investigation to prevent public access to the site.

3.8 Air Monitoring

A site-specific HASP will be followed during implementation of this RIWP and air monitoring will be conducted for site workers in addition to the Community Air Monitoring Program (CAMP) for the community. Air monitoring results will be recorded in the field book during the investigation activities, downloaded from field instruments and summarized in the RIR/daily reports.

3.8.1 Worker Air Monitoring

Air monitoring of the breathing zone will be performed periodically during drilling and sampling activities to document health and safety protection for the work team. VOCs will be monitored with a PID in accordance with the HASP (Appendix C). If air monitoring during intrusive operations identifies the presence of VOCs, the field engineer will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal protective equipment. If the VOC action level is exceeded, work will cease, and the work location will be evacuated. Monitoring will continue until the levels drops to permissible limits, at which point, work will resume with continued monitoring. If high levels persist, field activities will be

halted, and the work relocated to another area. If dust emissions are observed, work will stop and dust suppression measures (i.e., water spray) will be implemented.

3.8.2 Community Air Monitoring Plan

In addition to air monitoring in the worker breathing zone, community air monitoring will be performed in compliance with the NYSDOH Generic CAMP during any outdoor intrusive work. The CAMP is included in Attachment E.

CAMP will consist of continuous monitoring for VOCs and dust emissions during ground-intrusive activities (i.e., soil boring and monitoring well installation). Upwind concentrations will be measured at the start of each workday to establish background concentrations. VOCs and dust emissions will be monitored at the downwind perimeter of the work zone, which will be established at a point on the site where the general public or site workers may be present. VOC monitoring will be conducted with a PID equipped with a 10.6 eV lamp. VOC community air monitoring requirements will be conducted until it is determined that the site is not a source of organic vapors. Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM10) and capable of averaging a period of 15 minutes (or less) for comparison to the airborne particulate action level (e.g., DustTrak). If dust emissions are observed, work will stop, and dust suppression measures will be implemented.

3.9 Green Remediation Standards

Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per the NYSDEC DER-31 Green Remediation Policy (DER-31). DER-31 requires the following green remediation/sustainability concepts be considered and/or implemented, to the extent feasible, during investigations:

- Increase energy efficiency/minimize total energy use and direct and indirect CO2/greenhouse gas (GHG) emissions to the atmosphere
- Reduce emissions of air pollutants
- Minimize habitat disturbance and create or enhance habitat or usable land
- Conserve natural resources such as soil and water; promote the sequestration of carbon through reforestation or afforestation
- Minimize freshwater consumption and maximize water reuse during daily operations and treatment processes
- Prevent long-term erosion, surface runoff, and off-site water quality impacts; prevent unintended soil compaction
- Minimize waste or implement beneficial use of materials that would otherwise be considered a waste

- Minimize equipment and truck idling and use sustainably produced biofuels to reduce discharges of pollutants and GHGs to the atmosphere
- Utilize clean diesel (new or retrofitted) equipment to reduce emissions to the atmosphere
- Minimize truck travel for disposal to save energy, reduce emissions, reduce localized noise, vibration, and wear and tear on roads
- Minimize use of heavy equipment to save energy and reduce emissions

During implementation of this RIWP, the following elements will be incorporated, to the extent feasible, to reduce GHGs and other emissions:

- Use of Ultra Low Sulfur Diesel in vehicles and machinery by drilling contractor
- Use of diesel exhaust purifier scrubbers on machinery (drill rigs) by drilling contractor
- Minimization of idling of all vehicles (including construction equipment) in accordance with 6 NYCRR Part 217 Motor Vehicle Emissions, Subpart 217-3 Idling Prohibition for Heavy Duty Vehicles
- Reduction of materials consumption and off-site transport by reuse of non-impacted drilling spoils as backfill within the boring of origin and containerization of drilling spoils exhibiting visual, olfactory, and instrumental signs of contamination.
- Site workers in New York City will use public transportation to the extent feasible for commuting in lieu of personal vehicles.

3.10 Qualitative Human Health Exposure Assessment

A Qualitative Human Health Exposure Assessment will be conducted in accordance with Appendix 3B of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The assessment will be submitted in the RIR.

4.0 REPORTING

4.1 Remedial Investigation Report

Following completion of the RI and receipt of analytical data, an RIR will be prepared in accordance with the applicable requirements of DER-10 Section 3.14. The report will:

- Describe site history and previous investigations
- Describe site environmental conditions
- Describe sampling methodology and field observations
- Evaluate analytical results and describe findings
- Provide conclusions and recommendations for any further assessment (if warranted)

The RIR will summarize the nature and extent of contamination at each area of concern and identify unacceptable exposure pathways (as determined through a QHHEA. DUSRs will be included in the RIR, and electronic data deliverables will be submitted to the NYSDEC EQuIS database prior to submission of the draft RIR.

The RIR will include soil boring and well construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The tabulated analytical results will be organized in table format and include sample location, media sampled, sample depth, field/laboratory identification numbers, analytical results and the applicable Standards, Criteria, and Guidance (SCGs) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, soil vapor points, sub-slab vapor points, indoor air samples, and ambient air samples and corresponding concentrations above SCGs for each media, groundwater elevation contours and flow direction, and, if appropriate, groundwater contaminant concentration contours.

Soil sample results will be compared to UU and RURR SCOs. Soil sample results will also be compared to Protection of Groundwater (PGW) SCOs for analytes detected above NYSDEC Standard Guidance Values (SGVs) in groundwater.

Groundwater sample results will be compared to the NYSDEC SGVs.

Soil vapor sample results will be compared to NYSDOH Guidance for SVI Decision Matrices.

The RIR will be provided in an electronic format to the NYSDEC.

4.2 Daily Reports

Daily reports will be prepared and submitted to the NYSDEC and NYSDOH project managers by the end of each day following the reporting period and will include:

- Progress updates

- Photographic documentation
- Identification of samples collected
- Locations and references to a site map for completed activities
- A summary of any and all community complaints with relevant details, including contact information
- A summary of CAMP findings, including elevated concentrations and response actions, if any
- An explanation of notable site conditions
- A list of anticipated work for the following reporting day

Daily reports are not intended to notify the NYSDEC of emergencies (e.g., accident, spill), request changes to the RIWP, or communicate other sensitive or time-critical information. However, such conditions will also be included in the daily reports. Emergency conditions and changes to the RIWP will be communicated directly to the NYSDEC Project Manager.

The NYSDEC-assigned project number will appear on all reports.

5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP. If the schedules changes, it will be updated and submitted to the NYSDEC.

Milestone	Weeks from NYSDEC Approval of RIWP	Estimated Duration (weeks)
RI Mobilization	2	2
RI Field Investigation	5	3
Laboratory Analysis	7	2
Remedial Investigation Report Preparation and Submission to the NYSDEC	13	6

- CATCH BASIN
- PLANT BED DRAIN
- ZONE X — IRRIGATION ZONES
- IRRIGATION VALVE BOX; TO BE LOCATED BY IRRIGATION CONSULTANT AND L.A. (COORDINATE LOW VOLTAGE CONDUIT FROM CONTROLLER TO IRRIGATION VALVE BOX)
- CONTROL BOX 1 — IRRIGATION CONTROL BOX, COORDINATE LOCATION WITHIN NEAREST UTILITY ROOM w/ M.E.P. ENGINEER & ARCHITECT
- HB — HOSE BIBS; SEE MEP DWG; GENERAL BUILDING CONTRACTOR TO PROVIDE CONNECTION TO EXTERIOR
- GFCI — GFCI; SEE MEP DWG; GENERAL BUILDING CONTRACTOR TO PROVIDE CONNECTION TO EXTERIOR
- PROPERTY LINE

NOTES:

1. SEE PLANTING SCHEDULE ON L-300. ALL PLANTS MUST BE NATIVE OR NON-INVASIVE SPECIES ADAPTED TO THE LOCAL CLIMATE.
2. REFER TO CIVIL ENGINEER & M.E.P. ENGINEER DRAWINGS FOR ALL PIPE & DRAINAGE CONNECTIONS
3. FINAL DRAIN LOCATIONS TO BE DETERMINED BY CIVIL ENGINEER
4. FINAL LOCATION OF IRRIGATION VALVE BOXES AND CONTROLLERS TO BE DETERMINED BY LANDSCAPE ARCHITECT AND ARCHITECT. SEE LANDSCAPE IRRIGATION DRAWINGS & SPECIFICATIONS FOR DETAILS.
5. FINAL LOCATION OF EXTERIOR GFCI OUTLETS TO BE DETERMINED BY M.E.P. ENGINEER & L.A.
6. LANDSCAPE CONTRACTOR TO DELIVER ALL NURSERY STOCK TO SITE PRIOR TO PLANTING. IF NOT POSSIBLE, LANDSCAPE CONTRACTOR TO SUBMIT NURSERY STOCK DELIVERY SCHEDULE TO LANDSCAPE ARCHITECT FOR APPROVAL PRIOR TO DELIVERY.
7. LANDSCAPE ARCHITECT TO LAY OUT PERENNIALS AND GROUND COVER AND APPROVE LOCATIONS OF ALL PLANT MATERIAL IN FIELD PRIOR TO PLANTING.
8. PROVIDE DRIP IRRIGATION AT ALL PLANTING AREAS. SEE SPECS.

10. THE FOLLOWING SCOPE IS SUBJECT TO DELEGATED DESIGN:
    - A. SOLAR ARRAY GALVANIZED STEEL POSTS AND BEAMS, ANCHORS TO SUPERSTRUCTURE AND ROOF.
    - B. CONDENSERS SUPPORT DUNNAGE AND CATWALKS.
    - C. PARAPET GUARDRAILS AND WINDSCREENS.
11. REFER TO DRAWING A-004 FOR ACCESSIBILITY STANDARD REQUIREMENTS, CLEARANCES AND DETAILS.
12. REFER TO DRAWINGS A-020 AND A-021 FOR LIFE AND SAFETY PLANS AND CODE COMPLIANCE.
13. PROVIDE 6" CONCRETE PADS AT EQUIPMENT AS REQUIRED. REFER TO MEP DRAWINGS FOR ADDITIONAL INFORMATION.
14. PROVIDE CONCRETE CURBS AT ALL ROOFTOP DUCT PENETRATIONS. REFER TO MECHANICAL DRAWINGS.

SCALE: As indicated	62 of 175

LEGEND

- GWB HUNG/FRAMED CEILING / SOFFIT — WATER RESISTANT AT WET LOCATIONS
- UNDERSIDE OF SLAB/PLANK ABOVE. TREATED W/ COVER COAT COMPOUND IN RESIDENTIAL AREAS. REFER TO SECTIONS & ELEVATIONS
- 2' X 2' ACOUSTICAL CEILING TILE
- DECORATIVE WOOD SLAT CEILING
- UHPC / FIBER CEMENT SOFFIT
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR WITH STROBE
- DAYLIGHT SENSOR
- OCCUPANCY SENSOR
- VACANCY SENSOR
- WIRELESS ACCESS POINT
- DIRECTIONAL ILLUMINATED EXIT SIGN
- CAPPED, RECESSED CEILING SPRINKLER HEAD
- CEILING HVAC RETURN / EXHAUST DIFFUSER
- CEILING HVAC SUPPLY DIFFUSER
- STROBE DEVICE
- DOORBELL STROBE DEVICE
- CEILING ELEVATION

RCP NOTES

1) COORDINATE WITH MEP DRAWINGS.
2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS. SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES

1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE

1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

RCP NOTES

1) COORDINATE WITH MEP DRAWINGS.
2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS, SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

LEGEND

- GWB HUNG/FRAMED CEILING / SOFFIT — WATER RESISTANT AT WET LOCATIONS
- UNDERSIDE OF SLAB/PLANK ABOVE. TREATED W/ COVER COAT COMPOUND IN RESIDENTIAL AREAS. REFER TO SECTIONS & ELEVATIONS
- 2' X 2' ACOUSTICAL CEILING TILE
- DECORATIVE WOOD SLAT CEILING
- UHPC / FIBER CEMENT SOFFIT
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR WITH STROBE
- DAYLIGHT SENSOR
- OCCUPANCY SENSOR
- VACANCY SENSOR
- WIRELESS ACCESS POINT
- DIRECTIONAL ILLUMINATED EXIT SIGN
- CAPPED, RECESSED CEILING SPRINKLER HEAD
- CEILING HVAC RETURN / EXHAUST DIFFUSER
- CEILING HVAC SUPPLY DIFFUSER
- STROBE DEVICE
- DOORBELL STROBE DEVICE
- CEILING ELEVATION

RCP NOTES

1) COORDINATE WITH MEP DRAWINGS.
2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS. SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

SCALE: As indicated	74 of 175

LEGEND

- GWB HUNG/FRAMED CEILING / SOFFIT — WATER RESISTANT AT WET LOCATIONS
- UNDERSIDE OF SLAB/PLANK ABOVE. TREATED W/ COVER COAT COMPOUND IN RESIDENTIAL AREAS. REFER TO SECTIONS & ELEVATIONS
- 2' X 2' ACOUSTICAL CEILING TILE
- DECORATIVE WOOD SLAT CEILING
- UHPC / FIBER CEMENT SOFFIT
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR
- HARDWIRED CARBON MONOXIDE AND SMOKE DETECTOR WITH STROBE
- DAYLIGHT SENSOR
- OCCUPANCY SENSOR
- VACANCY SENSOR
- WIRELESS ACCESS POINT
- DIRECTIONAL ILLUMINATED EXIT SIGN
- CAPPED, RECESSED CEILING SPRINKLER HEAD
- CEILING HVAC RETURN / EXHAUST DIFFUSER
- CEILING HVAC SUPPLY DIFFUSER
- STROBE DEVICE
- DOORBELL STROBE DEVICE
- CEILING ELEVATION

RCP NOTES

1) COORDINATE WITH MEP DRAWINGS.
2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS, SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS, SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL LIGHTING CONTROL NARRATIVE
1. COORDINATE WITH LIGHTING CONTROLS NOTED IN ELECTRICAL PLANS.
2. LIGHTING IN COMMON AREA ROOMS, EXCEPT STAIRWELLS AND CORRIDORS, SHALL BE PROVIDED WITH OCCUPANCY SENSORS WITH MANUAL CONTROL.

DAYLIGHT SENSORS SHALL BE PROVIDED IN COMMON AREAS WITH WINDOWS AND CONTROL LIGHTING WITHIN 12 FEET OF THE WINDOW. STAIRWELL LIGHTS SHALL BE PROVIDED WITH INTEGRAL OCCUPANCY SENSORS. LOBBY LIGHTS ARE CONTINUOUSLY ON. CORRIDOR AND STAIR LIGHTS ARE CONTINUOUSLY ON AT 50%, OCCUPANCY SENSORS SHALL DIM THEM TO 50% AFTER 20 MINUTES OF VACANCY.

RCP NOTES

1) COORDINATE WITH MEP DRAWINGS.
2) LIGHTING CONTROLS TO COMPLY WITH NYC ENERGY CODE.
3) ALL PUBLIC LIGHTING SHALL BE METERED SEPARATELY FROM RESIDENTIAL UNITS.
4) ALL DWELLING UNITS SHALL BE INDIVIDUALLY METERED.
5) 100% OF PERMANENTLY INSTALLED FIXTURES WITHIN DWELLING UNITS SHALL BE PROVIDED WITH HIGH EFFICIENCY LAMPS, MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
6) REFER TO LIGHTING FIXTURE SCHEDULE ON A-650 AND SPECIFICATIONS.
7) ALL NON-APARTMENT AREAS SHALL BE PROVIDED WITH OCCUPANCY SENSOR CONTROLS, OR AUTOMATIC BI-LEVEL LIGHTING CONTROLS; AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS.
8) ALL EXTERIOR FIXTURES TO BE FULL CUT OFF, AND SHALL HAVE COMBINED BALLAST AND LAMP EFFICACIES MEETING OR EXCEEDING ENERGY STAR SPECIFICATIONS. SWITCHING TO BE AUTOMATIC ON TIMERS OR PHOTOCELL CONTROLS, WITH MANUAL SWITCH OVERRIDE.
9) WHERE INVERTERS ARE REQUIRED FOR EMERGENCY LIGHT FIXTURES, PLACE ONE PER FLOOR MIN. IN THE ELECTRICAL CLOSET. COORD WITH ELECTRICAL DWGS.
10) DOTTED LINES IN RCP INDICATE WHERE DUCTS TRANSFER ABOVE CEILING. NOT ALL LOCATIONS MAY BE SHOWN.
11) PROVIDE ACCESS PANELS WHERE REQUIRED FOR PROPER MAINTENANCE, SIZED AS RECOMMENDED BY MANUFACTURER, WHETHER OR NOT THEY APPEAR ON ARCHITECTURAL DRAWINGS. FINAL LOCATIONS TO BE APPROVED BY ARCHITECT.
12) PROVIDE 2HR FIRE RATED ENCLOSURES WHERE REQUIRED FOR REFRIGERANT PIPING.
13) REFER TO MECHANICAL DRAWINGS FOR MECHANICAL EQUIPMENT LOCATION.
14) DUCTS IN STRUCTURE ABOVE (DASHED BOXES) ARE SHOWN FOR REFERENCE ONLY; REFER TO MEP DRAWINGS.
15) ALL DUCTWORK, PIPES, AND CONDUIT TO BE CONCEALED IN GYPSUM BOARD CONSTRUCTION, WHETHER OR NOT INDICATED ON DRAWINGS. 16) MIN. LUMENS AT EGRESS PATHS TO BE PER NYC CODE CHAPTER 10.
17) CEILING HEIGHTS NOTED ARE ABOVE FINISHED FLOOR. ADDITIONAL SOFFITS NOT ANTICIPATED - PROVIDE SOFFITS AS REQUIRED TO ACHIEVE CEILING HEIGHT - REVIEW WITH ARCHITECT. FOYERS IN APARTMENTS AND CORRIDORS MUST BE MIN. 7'-6" AFF.
18) PROVIDE METAL GROUNDS AT ALL WINDOW HEADERS FOR FUTURE SHADE/WINDOW TREATMENT INSTALLATION.
19) ALL WATER CURTAIN SPRINKLERS TO BE CONCEALED WITH GYPSUM WALL ASSEMBLIES.
20) RECESSED LIGHTING ADJACENT TO UNCONDITIONED SPACES IS TO BE ICAT LABELED AND AIR SEALED.

GENERAL CEILING NOTES
1. ALL DROP SOFFITS AT KITCHENETTES TO BE MIN. 1'-0" AT KITCHENETTE SIDE, TYPICAL.
2. ALL BEAMS TO RECEIVE SOFFIT ENCLOSURE, TYP.
3. MINIMUM CEILING HEIGHT AT BEDROOMS AND LIVING AREAS IS 8'-0" AFF.
4. ACU'S & OTHER MECHANICAL EQUIPMENT SHOWN FOR REFERENCE ONLY - SEE MEP DRAWINGS.

GENERAL NOTES:

1. THE STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH THE ARCHITECTURAL AND MECHANICAL DRAWINGS AND SPECIFICATIONS.

2. THE 2022 EDITION OF THE NEW YORK CITY BUILDING CODE, AND APPLICABLE EDITIONS OF THE FOLLOWING CODES AND STANDARDS SHALL APPLY:

   A. CODE OF STANDARD PRACTICE FOR STEEL BUILDINGS AND BRIDGES - AISC.
   B. ANSI/AISC 360-05 SPECIFICATION FOR STRUCTURAL STEEL BUILDINGS.
   C. BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE - ACI 318.
   D. SPECIFICATIONS FOR MASONRY STRUCTURES – ACI 530.1

   IN CASE OF CONFLICT, THE MOST STRINGENT REQUIREMENTS SHALL APPLY.

3. FIELD MEASUREMENTS SHALL BE TAKEN AT THE SITE BY THE CONTRACTOR TO VERIFY AND SUPPLEMENT ALL DIMENSIONS AND ADDITIONS AFFECTED BY EXISTING WORK OR NEW WORK THAT HAS ALREADY BEEN INSTALLED. ANY DISCREPANCIES FROM THE INFORMATION SHOWN ON PLANS SHALL BE REPORTED TO AND COORDINATED WITH THE ARCHITECT.

4. BEFORE COMMENCEMENT OF ANY WORK AND/OR FABRICATION, THE CONTRACTOR SHALL SUBMIT TO THE ARCHITECT FOR HIS APPROVAL CONCRETE MIX DESIGNS FOR EACH TYPE OF CONCRETE TO BE USED, MILL REPORTS FOR STEEL, STRUCTURAL PENETRATIONS AND SHOP DRAWINGS FOR ALL STRUCTURAL TRADES AND OTHER DOCUMENTS AS REQUIRED PER PROJECT SPECIFICATIONS.

5. MEMBERS WITH SIZES INDICATED ON THE DRAWINGS ARE NEW UNLESS OTHERWISE NOTED (UON).

6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ALL ROOF, FLOOR AND WALL PENETRATIONS, PATCHING, REPAIRING AND FLASHING AS REQUIRED.

7. ITEMS INDICATED AS "BY OTHERS" DENOTES DELEGATED DESIGN ITEMS TO BE PROVIDED BY THE CONTRACTOR (DESIGNED BY MANUFACTURER'S ENGINEER FOR PREFABRICATED ITEMS OR BY CONTRACTOR'S ENGINEER FOR CUSTOM ITEMS).

8. THE NOTES OF EACH FOLLOWING SECTION SHALL APPLY, EXCEPT AS SPECIFICALLY NOTED OR SHOWN OTHERWISE ON THE BALANCE OF THESE STRUCTURAL DRAWINGS.

CAST-IN-PLACE CONCRETE NOTES:

1. CONCRETE TYPES

   A. SLABS ON GRADE (OTHER THAN SIDEWALKS) – 4,000 PSI STONE CONCRETE.
   B. NON-STRUCTURAL FILL – 3,000 PSI LIGHTWEIGHT CONCRETE (115 PCF MAX.).
   C. MAT FOUNDATION - 8,000 PSI STONE CONCRETE.
   D. ALL OTHER CONCRETE – 6,000 PSI STONE CONCRETE.

2. BAR REINFORCEMENT SHALL CONFORM TO ASTM A615, GRADE 60 UNLESS HIGHER GRADE IS INDICATED ON DRAWINGS.

3. WELDED WIRE FABRIC SHALL CONFORM TO ASTM A1064 WITH A MINIMUM ULTIMATE TENSILE STRENGTH OF 70,000 PSI.

4. CONCRETE SHALL BE CAST MONOLITHICALLY BETWEEN JOINTS SHOWN ON THE STRUCTURAL DRAWINGS. REQUESTS FOR ADDITIONAL CONSTRUCTION JOINTS SHALL BE SUBMITTED TO THE ENGINEER OF RECORD FOR REVIEW AND APPROVAL PRIOR TO CONSTRUCTION. ADDITIONAL CONSTRUCTION JOINTS NOT SHOWN ON DRAWINGS MAY REQUIRE ADDITIONAL REINFORCING AT THE DIRECTION OF THE ENGINEER OF RECORD.

5. REINFORCEMENT MARKED "CONT." (CONTINUOUS) SHALL BE LAPPED A PROPER DISTANCE AT SPLICES AND CORNERS AND SHALL BE HOOKED OR EXTENDED A PROPER DISTANCE AT NON-CONTINUOUS ENDS AS PER SPLICE AND DEVELOPMENT LENGTH REQUIREMENTS SHOWN ON THE DRAWINGS. ALL HORIZONTAL WALL REINFORCING SHALL BE CONTINUOUS.

6. REINFORCEMENT SHALL BE CONTINUOUS THROUGH ALL CONSTRUCTION JOINTS. THE CONTRACTOR SHALL LOCATE CONSTRUCTION JOINTS AT POINTS OF MINIMUM SHEAR.

7. SPLICES FOR ALL REINFORCEMENT IN SHEAR WALLS SHALL BE TENSION SPLICES.

8. REINFORCING BARS SHALL HAVE THE FOLLOWING CONCRETE PROTECTION:

CONCRETE CAST AGAINST EARTH	- 3"
EXPOSED TO EARTH OR WEATHER	- 2"
SLABS AND WALLS NOT EXPOSED	- 3/4" OR BAR DIAMETER
BEAMS AND GIRDERS NOT EXPOSED	- 1-1/2" TO STIRRUPS
COLUMNS NOT EXPOSED	- 1-1/2" TO TIES

9. MAXIMUM LENGTH OF CONCRETE POUR (DISTANCE BETWEEN CONSTRUCTION JOINTS) SHALL BE 50 FEET DURING JUNE, JULY, AUGUST AND SEPTEMBER AND 75 FEET DURING THE REST OF THE YEAR. LOCATION OF CONSTRUCTION JOINTS, IF REQUIRED, SHALL BE SUBJECT TO THE APPROVAL OF THE ARCHITECT.

10. THE CONTRACTOR SHALL VERIFY DIMENSIONS AND LOCATIONS OF ALL OPENINGS, PIPE SLEEVES, ANCHOR BOLTS, ETC. AS REQUIRED BY TRADES BEFORE CONCRETE IS POURED.

11. THE CONTRACTOR SHALL PROVIDE SLAB BOLSTERS, HIGH CHAIRS AND ALL ACCESSORIES REQUIRED FOR PROPER PLACEMENT OF REINFORCING BARS AND WIRE MESH AS PER A.C.I. & C.R.S.I. STANDARDS.

12. CONCRETE MAY BE CONVEYED BY PUMPING. PUMPING METHODS SHALL COMPLY WITH REQUIREMENTS ESTABLISHED BY A.C.I. COMMITTEE 304, PLACING CONCRETE PUMPING METHODS.

13. PRIOR TO PLACING CONCRETE, ALL REINFORCEMENT SHALL BE FREE OF LOOSE FLAKY RUST, MUD, OIL OR OTHER COATING THAT WILL DESTROY, REDUCE OR HAMPER FULL BOND CAPACITY.

14. THE PLACEMENT OF DOWELS, ANCHOR RODS, OR ANY OTHER EMBEDMENTS INTO WET CONCRETE "WET STICKING", SHALL NOT BE PERMITTED.

15. THE FOLLOWING CRITERIA SHALL BE MET WITH REGARDS TO PLACEMENT OF CONDUITS, PIPES, ETC. IN CONCRETE SLABS.

   A. ALL CONDUITS SHALL BE CENTERED AT MID-DEPTH OF SLAB. CONDUIT DIAMETER SHALL NOT EXCEED 1/3 OF SLAB THICKNESS. CLEAR DISTANCE BETWEEN TWO ADJACENT CONDUITS SHALL BE A MINIMUM OF 3 DIAMETERS OF LARGER OF THE TWO CONDUITS.
   B. VERTICAL SLEEVES, PIPES, ETC. THROUGH SLAB EITHER CLUSTERED OR INDIVIDUAL, SHALL NOT INTERRUPT MORE THAN 1/3 OF THE WIDTH OF COLUMN STRIP.
   C. NO REINFORCEMENT BARS SHALL BE CUT, BENT, SHIFTED OR OTHERWISE ALTERED AS CONDUITS, PIPES, ETC. AS COMPARED TO WHAT IS SHOWN ON THESE DRAWINGS.
   D. ANY DEVIATIONS FROM ABOVE REQUIREMENTS SHALL BE SHOWN ON THE SHOP DRAWINGS AND SUBMITTED FOR APPROVAL BY THIS OFFICE.

STRUCTURAL STEEL NOTES:

1. STRUCTURAL STEEL SHALL CONFORM TO THE FOLLOWING:

   A. WIDE FLANGE AND TEE SHAPES - ASTM A992 GRADE 50
   B. CHANNELS, S SHAPES, ANGLES, PLATES AND BARS - ASTM A36
   C. ROUND, SQUARE & RECTANGULAR HSS SHAPES - ASTM A500 GRADE B

2. SHOP CONNECTIONS SHALL BE WELDED OR BOLTED. FIELD CONNECTIONS SHALL BE BOLTED UNLESS SPECIFICALLY SHOWN OTHERWISE ON STRUCTURAL DRAWINGS.

3. ALL BOLTING SHALL CONFORM TO THE RESEARCH COUNCIL ON STRUCTURAL CONNECTIONS "SPECIFICATION FOR STRUCTURAL JOINTS USING ASTM A325 OR A490 BOLTS", LATEST EDITION.

4. BOLTED CONNECTIONS SHALL UTILIZE ASTM A325 OR A490 BOLTS. ALL BOLTS SHALL BE 3/4 INCH DIAMETER MINIMUM. BOLTED SIMPLE SHEAR CONNECTIONS SHALL UTILIZE HIGH STRENGTH BOLTS IN BEARING TYPE CONNECTIONS AND SHALL BE INSTALLED "SNUG TIGHT". BOLTED MOMENT CONNECTIONS, SPLICE CONNECTIONS AND BRACING CONNECTIONS SHALL BE PRETENSIONED JOINTS WITH FULLY PRETENSIONED HIGH-STRENGTH BOLTS IN BEARING. CONNECTIONS WITH OVERSIZE HOLES OR SLOTTED HOLES IN WHICH THE LOAD IS NOT APPLIED NORMAL TO THE LONG DIMENSION OF THE SLOT REQUIRE SLIP CRITICAL BOLTS.

5. ALL WELDING ELECTRODES SHALL BE LOW HYDROGEN, AS REQUIRED BY AWS "STRUCTURAL WELDING CODE" AND "CODE FOR ARC AND GAS WELDING IN BUILDING CONSTRUCTION" TO SATISFY BASE-TO-FILLER METAL COMBINATION CRITERIA. ALL FILLER METAL SHALL HAVE A MINIMUM CVN TOUGHNESS OF 20 FT. LBS. AT MINUS 20 DEGREES F.

6. ALL WELDING SHALL BE DONE BY QUALIFIED WELDERS AND SHALL CONFORM TO THE AWS "CODE FOR ARC AND GAS WELDING IN BUILDING CONSTRUCTION", LATEST EDITION. WELDER CERTIFICATES SHALL BE SUBMITTED TO GACE BEFORE COMMENCEMENT OF WORK.

7. MINIMUM SIZE OF FILLET WELDS SHALL BE 1/4" MIN. FOR FIELD WELDS AND AS REQUIRED PER AISC SPECIFICATION RELATIVE TO BASE METAL THICKNESS FOR SHOP WELDS.

8. ALL DETAILING, FABRICATION AND ERECTION SHALL CONFORM TO AISC "LOAD AND RESISTANCE FACTOR DESIGN SPECIFICATION FOR STRUCTURAL STEEL BUILDINGS" AND AISC "CODE OF STANDARD PRACTICE", LATEST EDITIONS.

9. CONNECTIONS OF ALL BEAMS AND GIRDERS SHALL BE DESIGNED FOR REACTIONS INDICATED ON STRUCTURAL DRAWINGS. ALL OTHER CONNECTIONS SHALL BE DESIGNED FOR THE FULL CAPACITY OF THE MEMBERS.

10. KNIFE CONNECTIONS SHALL NOT BE PERMITTED UNLESS SPECIFICALLY REQUESTED BY A CONTRACTOR AND APPROVED BY STRUCTURAL ENGINEER PRIOR TO SHOP DRAWING APPROVAL. CONTRACTOR'S BIDS SHALL BE SUBMITTED BASED ON THE KNIFE CONNECTIONS NOT ALLOWED. SPECIFIC KNIFE CONNECTION DETAILS SHALL BE SUBMITTED FOR APPROVAL AT THE TIME WHEN TYPICAL DETAILS AND ERECTION PLANS ARE SUBMITTED. THE DETAILS SHALL BE ACCOMPANIED BY CALCULATIONS SIGNED AND SEALED BY PROFESSIONAL ENGINEER LICENSED IN THE STATE WHERE PROJECT IS TO BE BUILT. CALCULATIONS SHALL DEMONSTRATE THAT THE HELDS ARE NOT OVERSTRESSED DUE TO SECONDARY STRESSES DUE TO BOLT TIGHTENING, PRYING ACTION, ETC.

11. INSPECTION AND TESTING OF WELDS AND BOLTS SHALL BE AS FOLLOWS:

   A. A TESTING AGENCY ACCEPTABLE TO THE ENGINEER OF RECORD SHALL BE EMPLOYED BY THE OWNER TO PERFORM ALL SHOP AND FIELD INSPECTIONS AND TESTING OUTLINED BELOW.
   B. ALL WORK SHALL BE SCHEDULED BY THE CONTRACTOR TO ALLOW THE BELOW SHOP AND FIELD TESTING TO BE COMPLETED.
   C. ALL WELDS SHALL BE VISUALLY INSPECTED. FIFTEEN (15) PERCENT OF RANDOMLY SELECTED FILLET, PLUG AND SLOT WELDS SHALL BE MEASURED.
   D. FIFTEEN (15) PERCENT OF RANDOMLY SELECTED FILLET WELDS IN BEAM AND GIRDER SHEAR CONNECTION PLATES, ANGLES, ETC. SHALL BE CHECKED BY MAGNETIC PARTICLE METHOD, ONLY THE FINAL PASS SHALL BE CHECKED.
   E. ULTRASONICALLY TEST 100 PERCENT OF ALL FULL AND PARTIAL PENETRATION WELDS. WELD PREPARATION OF 100 PERCENT OF WELDS SHALL BE INSPECTED.
   F. ALL BOLTS SHALL BE VISUALLY INSPECTED.
   G. ALL SLIP CRITICAL BOLTS SHALL BE CHECKED FOR PROPER TENSIONING USING THE "DIRECT TENSION INDICATOR" METHOD. MEASURE WITH FEELER GAGES AT LEAST 15% OF BOLTS IN EACH CONNECTION, BUT NOT LESS THAN TWO BOLTS PER CONNECTION.
   H. A MINIMUM OF 15 PERCENT OF BOLTS, BUT NOT LESS THAN TWO BOLTS IN EACH BEARING TYPE CONNECTION SHALL BE CHECKED FOR PROPER TENSIONING USING THE CALIBRATED TORQUE WRENCH METHOD.
   I. IN CASE MULTIPLE DEFECTS HAVE BEEN DETECTED, THE ABOVE EXTENT OF INSPECTION SHALL BE INCREASED AT DISCRETION OF STRUCTURAL ENGINEER OF RECORD.

12. SUBMITTALS

   A. SEE "SUBMITTAL NOTES" FOR GENERAL REQUIREMENTS.
   B. THE CONTRACTOR SHALL SUBMIT TO THE ARCHITECT, FOR REVIEW, ENGINEERED SHOP AND ERECTION DRAWINGS SHOWING SHOP FABRICATION DETAILS FOR EACH PIECE OF STEEL, FIELD ASSEMBLY DETAILS AND ERECTION PLANS FOR ALL STEEL.
   C. SHOP DRAWINGS SHOWING PIECE DETAILS SHALL NOT BE SUBMITTED PRIOR TO APPROVAL OF ERECTION DRAWINGS AND RELATED CONNECTION DETAILS, DIAGRAMS, SCHEDULES, ETC.

13. ALL CONNECTIONS SHALL BE DESIGNED AND DETAILED BY A PROFESSIONAL ENGINEER, REGISTERED IN THE STATE OF NEW YORK, HIRED BY THE CONTRACTOR. IF REQUESTED BY THE ENGINEER OF RECORD, CALCULATIONS SHALL BE SUBMITTED FOR THE ENGINEER OF RECORD'S REFERENCE. ALL REFERENCE CALCULATIONS SHALL BE SIGNED AND SEALED BY THE CONTRACTOR'S ENGINEER.

14. DETAILING SHALL BE PERFORMED USING APPROPRIATE ENGINEERING DESIGN PRINCIPLES AND ACCEPTED INDUSTRY STANDARDS. IN ACCORDANCE WITH THE CONTRACT DOCUMENTS, DETAILER SHALL BE AWARE THAT THE DETAILS AND SECTIONS SHOWN ON THE STRUCTURAL DRAWINGS ARE CONCEPTUAL ONLY AND DO NOT INDICATE THE NUMBER OF BOLTS, WELD SIZES, AND OTHER INFORMATION REQUIRED TO BE SHOWN ON THE SHOP DRAWINGS, UNLESS SPECIFICALLY NOTED.

15. ALL STAIR AND OTHER MISCELLANEOUS STEEL STRUCTURES SHALL BE DESIGNED AND DETAILED BY AN ENGINEER EMPLOYED BY THE CONTRACTOR. DRAWINGS SHALL BEAR THE SEAL AND SIGNATURE OF A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF NEW YORK AND SHALL BE SUBMITTED FOR REVIEW BY STRUCTURAL ENGINEER OF RECORD. CALCULATIONS SHALL BE SUBMITTED FOR REFERENCE.

16. NO STRUCTURAL STEEL TO RECEIVE FIREPROOFING SHALL BE PAINTED. ALL STEEL SHALL BE CLEANED IN THE FIELD OF ALL RUST, LOOSE MILL SCALE AND OTHER FOREIGN MATERIALS PRIOR TO THE APPLICATION OF FIREPROOFING.

17. ALL STEEL EXPOSED TO WEATHER SHALL BE HOT-DIPPED GALVANIZED. THIS INCLUDES ALL STEEL LINTELS, RELIEVING ANGLES, HANGERS, ETC. DAMAGED / CUT / WELDED GALVANIZATION SHALL BE TOUCHED UP / REPAIRED IN ACCORDANCE WITH ASTM A780 "STANDARD PRACTICE FOR REPAIR OF DAMAGED AND UNCOATED AREAS OF HOT-DIP GALVANIZED COATINGS".

18. ALL BEAMS SHALL BE FABRICATED AND ERECTED WITH NATURAL CAMBER UP.

19. SHEAR STUDS SHALL BE HEADED SHEAR CONNECTORS AS MANUFACTURED AND INSTALLED BY NELSON STUD WELDING. SHEAR STUD INSTALLATION SHALL BE INSPECTED BY AN APPROVED TESTING AGENCY IN OWNER'S DIRECT EMPLOY. THREE (3) BEND TESTS SHALL BE PERFORMED AT THE BEGINNING OF CONSTRUCTION, AFTERWARDS, 20 PERCENT (MINIMUM) OF SHEAR STUDS SHALL BE INSPECTED BY "RING TEST" AND MEASURED. ALL STUD WELDING SHALL BE INSPECTED VISUALLY.

POST INSTALLED ANCHORS

1. ANCHOR CAPACITY SHALL BE BASED ON THE TECHNICAL DATA PUBLISHED BY THE ANCHOR MANUFACTURER OR OTHER METHOD AS APPROVED BY THE STRUCTURAL ENGINEER OF RECORD ("ENGINEER").

2. SUBSTITUTION REQUESTS FOR ALTERNATE PRODUCTS SHALL BE APPROVED IN WRITING BY THE ENGINEER PRIOR TO USE. CONTRACTOR SHALL PROVIDE CALCULATIONS DEMONSTRATING THAT THE SUBSTITUTED PRODUCT IS CAPABLE OF ACHIEVING THE PERFORMANCE VALUES OF THE SPECIFIED PRODUCT. SUBSTITUTIONS SHALL BE EVALUATED BY THEIR HAVING AN INTERNATIONAL CODE COUNCIL EVALUATION SERVICE REPORT (ICC ESR) SHOWING COMPLIANCE WITH THE RELEVANT BUILDING CODE FOR SEISMIC USES, LOAD RESISTANCE, INSTALLATION CATEGORY, AND AVAILABILITY OF COMPREHENSIVE INSTALLATION INSTRUCTIONS. ADHESIVE ANCHOR EVALUATION SHALL CONSIDER EFFECTS OF CREEP, IN-SERVICE TEMPERATURE AND INSTALLATION TEMPERATURE.

3. ANCHORS SHALL BE INSTALLED PER THE MANUFACTURER INSTRUCTIONS INCLUDED IN THE ANCHOR PACKAGING.

4. OVERHEAD ADHESIVE ANCHORS MUST BE INSTALLED USING THE HILTI PROFI SYSTEM OR OTHER MANUFACTURER'S EQUAL OR BETTER SYSTEM, IF APPROVED BY THE ENGINEER IN ADVANCE.

5. ALL POST INSTALLED ANCHORS SHALL BE INSTALLED BY PERSONNEL TRAINED AND CERTIFIED IN THE INSTALLATION OF THE SPECIFIED PRODUCTS AND ACCESSORIES. INSTALLERS SHALL BE CERTIFIED THROUGH THE ACI/CRSI ADHESIVE ANCHOR INSTALLER CERTIFICATION PROGRAM OR EQUIVALENT. INSTALLERS SHALL HAVE PROOF OF CERTIFICATION WITH THEM ON SITE AT THE TIME OF INSTALLATION AND SHALL PRESENT SAID CERTIFICATION TO THE SPECIAL INSPECTOR.

6. ANCHOR CAPACITY IS DEPENDENT UPON SPACING BETWEEN ADJACENT ANCHORS AND PROXIMITY OF ANCHORS TO THE EDGE OF CONCRETE. ANCHORS SHALL BE INSTALLED IN ACCORDANCE WITH SPACING AND EDGE DISTANCES INDICATED ON THE STRUCTURAL DRAWINGS.

7. REINFORCING BARS OR OTHER ELEMENTS EMBEDDED IN THE EXISTING CONCRETE STRUCTURE MAY CONFLICT WITH SPECIFIC ANCHOR LOCATIONS. UNLESS NOTED ON THE DRAWINGS THAT THE BARS, ETC. CAN BE CUT, THE CONTRACTOR SHALL REVIEW THE EXISTING STRUCTURAL DRAWINGS AND SHALL UNDERTAKE TO LOCATE THE POSITION OF THE EMBEDDED BARS, ETC. BY GROUND PENETRATING RADAR (GPR), X-RAY, CHIPPING OR OTHER MEANS.

8. CONTINUOUS SPECIAL INSPECTIONS FOR POST INSTALLED ANCHORS SHALL BE PERFORMED IN ACCORDANCE WITH SECTION 4.4 OF THE INDIVIDUAL INTERNATIONAL CODE COUNCIL- EVALUATION SERVICE (ICC- ES) REPORT FOR THE INDIVIDUAL ANCHOR. THE CONTRACTOR SHALL GIVE THE SPECIAL INSPECTOR SUFFICIENT ADVANCE NOTICE TO ALLOW ENOUGH TIME FOR PROPER INSPECTION OF HOLE PREPARATION, ANCHOR INSTALLATION, TIGHTENING, ETC. ANCHORS INSTALLED WITHOUT INSPECTION AT ALL THESE PHASES SHALL BE REJECTED AND WILL HAVE TO BE REPLACED AT CONTRACTOR'S EXPENSE.

STEEL PAINTING NOTES - EXPOSED STEEL:

1. CLEAN STEEL IN ACCORDANCE WITH SSPC-SP6 COMMERCIAL BLAST CLEANING AND COAT WITH TNEMEC OMNITHANE 530 PRIME TO 2 - 3 MILS DRY FILM THICKNESS (DFT), OR APPROVED EQUAL, WITHIN 4 HOURS OF CLEANING. AFTER ERECTION AND TOUCH UP APPLY A FULL COAT OF TNEMEC N69F HI-BUILD EPOXOLINE II TO 3 - 5 MILS DFT FOR TEMPERATURES DURING APPLICATION / CURING BELOW 50 DEG. F DOWN TO 35 DEG. F., AND TNEMEC SERIES 135 CHEMBUILD TO 5 - 8 MILS DFT FOR TEMPERATURES DURING APPLICATION / CURING ABOVE 50 DEGREE F.

ALLOWANCES:

1. BIDDERS SHALL PROVIDE A SEPARATE PRICE FOR 5 TONS OF ADDITIONAL REINFORCING STEEL (ASTM A615) & 10 CUBIC YARDS OF CONCRETE (F'C = 6000 PSI) TO BE USED ON THE PROJECT AS PER THE DIRECTION OF THE ARCHITECT. THE VALUE OF THE UNEXPENDED BALANCE OF THESE MATERIALS SHALL BE REFUNDED TO THE OWNER.

2. BIDDERS SHALL PROVIDE A SEPARATE PRICE FOR 2 TONS OF ADDITIONAL STRUCTURAL STEEL (ASTM A992-50) TO BE USED ON THE PROJECT AS PER THE DIRECTION OF THE ARCHITECT. THIS STEEL WILL BE ADDED AS NEEDED PRIOR TO OR DURING THE SHOP DRAWING REVIEW PHASE. THE VALUE OF THE UNEXPENDED BALANCE OF THIS STEEL SHALL BE REFUNDED TO THE OWNER.

SPECIAL INSPECTION NOTES:

1. SPECIAL INSPECTION ITEMS REQUIRED BY NYC BUILDING CODE RELATED TO STRUCTURAL WORK SHOWN ON GACE DRAWINGS.

A. STRUCTURAL STEEL – WELDING
B. STRUCTURAL STEEL – DETAILS
C. STRUCTURAL STEEL – HIGH STRENGTH BOLTING
D. CONCRETE – CAST-IN-PLACE
E. CONCRETE SAMPLING AND TESTING
F. CONCRETE DESIGN MIX
G. POST-INSTALLED ANCHORS (BB# 2014-018, 2014-019, 2015-027, 2016-005)
H. FINAL (PROGRESS INSPECTION)

THE CONTRACTOR IS OBLIGATED TO NOTIFY THE INSPECTOR AT LEAST 72 HOURS BEFORE INSTALLATION OF SUCH ITEMS SO THAT PROPER INSPECTION CAN BE MADE. IN NO CASE SHALL SUCH ITEMS BE INSTALLED OR CONSTRUCTED WITHOUT COMPLETE APPROVAL OF THE INSPECTOR. UNAPPROVED INSTALLATION IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S SOLE EXPENSE.

ALL SPECIAL INSPECTIONS SHALL BE PERFORMED BASED ON APPROVED SHOP DRAWINGS. INSPECTIONS PERFORMED BASED ON UNAPPROVED DRAWINGS SHALL BE CONSIDERED INVALID AND SHALL BE REJECTED.

BIDDER'S WARRANTY:

BY THE ACT OF SUBMITTING A BID FOR THE PROPOSED CONTRACT, THE BIDDER WARRANTS THAT:

1. THE BIDDER AND ALL SUBCONTRACTORS HE INTENDS TO USE HAVE CAREFULLY AND THOROUGHLY REVIEWED THE DRAWINGS, SPECIFICATIONS AND OTHER CONSTRUCTION CONTRACT DOCUMENTS AND HAVE FOUND THEM COMPLETE AND FREE FROM AMBIGUITIES AND SUFFICIENT FOR THE CONTRACTOR TO BID, FABRICATE, AND INSTALL THE WORK ON TIME, FURTHER THAT,

2. THE BIDDER AND ALL WORKMEN, EMPLOYEES AND SUBCONTRACTORS HE INTENDS TO USE ARE SKILLED AND EXPERIENCED IN THE TYPE OF CONSTRUCTION REPRESENTED BY THE CONSTRUCTION CONTRACT DOCUMENTS BID UPON; FURTHER THAT,

3. NEITHER THE BIDDER NOR ANY OF HIS EMPLOYEES, AGENTS INTENDED SUPPLIERS OR SUBCONTRACTORS HAVE RELIED UPON ANY VERBAL REPRESENTATIONS, ALLEGEDLY AUTHORIZED OR UNAUTHORIZED FROM THE OWNER, HIS EMPLOYEES OR AGENTS INCLUDING ARCHITECTS, ENGINEERS OR CONSULTANTS, IN ASSEMBLING THE BID FIGURE; AND FURTHER THAT,THE BID FIGURE IS BASED SOLELY UPON THE CONSTRUCTION CONTRACT DOCUMENTS AND PROPERLY ISSUED WRITTEN ADDENDA AND NOT UPON ANY OTHER WRITTEN REPRESENTATION.

4. THE BIDDER ALSO WARRANTS THAT HE HAS CAREFULLY EXAMINED THE SITE OF THE WORK AND THAT FROM HIS OWN INVESTIGATIONS HE HAS SATISFIED HIMSELF AS TO THE NATURE AND LOCATION OF THE WORK AND THE CHARACTER, QUALITY, QUANTITIES OF MATERIALS AND DIFFICULTIES TO BE ENCOUNTERED, THE KIND AND EXTENT OF EQUIPMENT AND OTHER FACILITIES NEEDED FOR THE PERFORMANCE OF THE WORK, THE GENERAL AND LOCAL CONDITIONS, AND OTHER ITEMS WHICH MAY, IN ANY WAY, AFFECT THE WORK OR ITS PERFORMANCE.

SHORING NOTES:

1. THE CONTRACTOR SHALL BE RESPONSIBLE TO PROVIDE TEMPORARY SUPPORT AND ADEQUATE PROTECTION FOR THE STABILITY AND INTEGRITY OF THE STRUCTURE (OR PORTIONS THEREOF) DURING THE ENTIRE CONSTRUCTION PERIOD AND TO MAINTAIN IT AT LEVELS ACCEPTABLE WITHIN THE CONSTRUCTION INDUSTRY BY THE USE OF ALL MEANS AVAILABLE, INCLUDING BUT NOT LIMITED TO TEMPORARY BRACING AND SHORING (SHORING SYSTEM). IN NO CASE SHALL THE STRUCTURE BE ALLOWED TO BECOME UNSTABLE AND/OR UNSAFE, AS DEFINED BY LOCAL GOVERNMENTAL AGENCIES.

2. THE SHORING SYSTEM SHALL BE DESIGNED TO SUPPORT ALL APPLICABLE LOADS THAT MAY BE IMPOSED ON THE STRUCTURE DURING CONSTRUCTION IN ACCORDANCE WITH INDUSTRY STANDARDS AND GENERALLY ACCEPTED ENGINEERING PRINCIPLES.

3. THE SHORING SYSTEM, INCLUDING ALL DETAILS AND SEQUENCING, SHALL BE DESIGNED AND DETAILED BY A SPECIALTY STRUCTURAL ENGINEER (SSE) LICENSED AND REGISTERED IN THE STATE OF NEW YORK. THE SSE SHALL SIGN AND SEAL ITS DRAWINGS ILLUSTRATING THE SHORING SYSTEM AND SEQUENCING, WHICH MAY NEED TO BE FILED AND APPROVED BY ALL APPLICABLE GOVERNMENTAL AUTHORITIES, INCLUDING THE NYC DOB.

4. REFERENCES TO SHORING IN THE STRUCTURAL DRAWINGS BY GACE ARE SOLELY FOR THE PURPOSE OF COORDINATION WITH GACE'S DESIGN. THE SHORING ENGINEER SHALL SUBMIT SHORING AND BRACING DRAWINGS TO THE ARCHITECT FOR REVIEW OF EFFECT ON THE PERMANENT STRUCTURAL ELEMENTS THAT ARE DESIGNED BY THIS OFFICE. GACE IS NOT RESPONSIBLE FOR THE DESIGN, DETAILING, REVIEW, INSPECTION, OR APPROVAL OF THE SHORING DESIGN OR PROPOSED SEQUENCING.

5. THE SHORING SYSTEM SHALL BE INSPECTED BY THE SSE WHO PREPARED THE DRAWINGS/SPECIFICATIONS AND SEQUENCING OR A THIRD-PARTY SPECIAL INSPECTOR. THE SSE OR SPECIAL INSPECTOR SHALL CERTIFY IN A WRITTEN STATEMENT THAT THE WORK WAS PERFORMED IN ACCORDANCE WITH THE SIGNED AND SEALED DRAWINGS/SPECIFICATIONS.

SUBMITTAL NOTES:

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR IDENTIFYING, PREPARING AND DELIVERING ALL SHOP DRAWINGS AND OTHER SUBMITTALS ("SUBMITTALS") REQUIRED BY THE CONTRACT DOCUMENTS IN A TIMELY MANNER. ALL MATERIAL SHALL BE DELIVERED GRADUALLY SO AS TO AVOID SUBMISSION OF LARGE NUMBER OF SUBMITTALS NOT ALLOWING THE ENGINEER TIMELY REVIEW.

2. THE STRUCTURAL ENGINEER OF RECORD ("EOR") SHALL REVIEW SUBMITTALS PERTINENT TO STRUCTURAL DESIGN (SHOP DRAWINGS AND OTHER PERTINENT DOCUMENTS SUCH AS MATERIAL, PRODUCT, ASSEMBLY INFORMATION, ETC.) SUBMITTED BY THE CONTRACTOR. THE ENGINEER SHALL COMMENT ON THE SUBMITTALS AND APPROVE OR DISAPPROVE WITH COMMENTS, AS APPROPRIATE, FOR GENERAL CONFORMANCE WITH THE INFORMATION GIVEN AND THE DESIGN CONCEPT EXPRESSED IN THE CONTRACT DOCUMENTS. REVIEW OF SUCH SUBMITTALS SHALL NOT BE FOR THE PURPOSE OF DETERMINING THE ACCURACY AND COMPLETENESS OF OTHER INFORMATION SUCH AS DIMENSIONS, QUANTITIES, INSTALLATION OR PERFORMANCE OF EQUIPMENT OR SYSTEMS, ETC. WHICH SHALL BE THE CONTRACTOR'S RESPONSIBILITY. ENGINEER'S REVIEW SHALL NOT IN ANY WAY RELIEVE THE CONTRACTOR OF HIS/HER RESPONSIBILITY TO ACCURATELY AND COMPLETELY INTERPRET THE CONTRACT DOCUMENTS.

3. IF REQUIRED BY SPECIFICATIONS, SHOP DRAWINGS AND OTHER DOCUMENTS SHALL BEAR THE SEAL AND SIGNATURE OF A PROFESSIONAL ENGINEER LICENSED IN THE STATE WHERE THE PROJECT IS TO BE CONSTRUCTED.

4. BEFORE SUBMITTING A SHOP DRAWING OR ANY OTHER DOCUMENT TO THE ENGINEER, THE CONTRACTOR SHALL REVIEW AND APPROVE EACH SUCH SUBMITTAL FOR CONFORMANCE WITH THE CONTRACT DOCUMENTS. EVERY COPY OF EACH SUBMITTAL SHALL BEAR THE CONTRACTOR'S REVIEW STAMP SHOWING THAT THEY HAVE BEEN REVIEWED AND APPROVED. THE ENGINEER SHALL RETURN WITHOUT REVIEW MATERIAL WHICH HAS NOT BEEN APPROVED BY THE CONTRACTOR.

5. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR THE MEANS, METHODS, TECHNIQUES, SEQUENCES AND OPERATIONS OF CONSTRUCTION, SAFETY PRECAUTIONS AND PROGRAMS INCIDENTAL THERETO, INCLUDING REFLECTION OF EXISTING FIELD CONDITIONS. APPROVAL OF ANY SUBMITTAL BY THE ENGINEER SHALL NOT BE CONSTRUED AS ACCEPTANCE OF ANY OF THE FOREMENTIONED ASPECTS OF CONTRACTOR'S WORK.

6. THE ENGINEER SHALL ASSUME THAT NO SUBMITTED SHOP DRAWING OR OTHER DOCUMENT COMPRISES A VARIATION FROM THE CONTRACT UNLESS THE CONTRACTOR ADVISES THE ENGINEER OTHERWISE IN WRITING. THE CONTRACTOR SHALL NOT PROCEED WITH ANY WORK RELATED TO SUCH VARIATION BEFORE RECEIPT OF ENGINEER'S WRITTEN ACCEPTANCE.

7. IN CASE RESUBMISSION OF

NOTES:

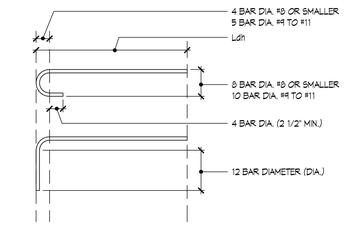
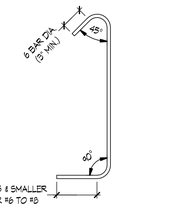
1. THESE DEVELOPMENT AND SPLICE LENGTHS ARE COMPUTED FOR UNCOATED BARS IN ELEMENTS OF NORMAL WEIGHT CONCRETE.
2. THESE DEVELOPMENT AND SPLICE LENGTHS SHALL BE MULTIPLIED BY ALL OF THE APPLICABLE FACTORS THAT FOLLOW:

EPOXY-COATED REINFORCING (FOR TYP. REINF.) x1.50
EPOXY-COATED REINFORCING (FOR TOP REINF.) x1.31
REINFORCING PLACED IN LIGHTWEIGHT CONCRETE x1.34

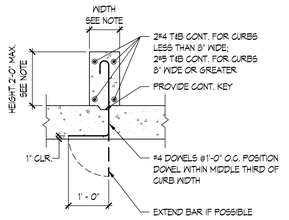
3. 'Ld' CAN BE USED AS ACI CLASS A SPLICE. 'Ls' CAN BE USED AS ACI CLASS B SPLICE.
4. USE TOP CONDITION FOR ANY HORIZONTAL BARS WITH MORE THAN 12 INCHES OF FRESH CONCRETE BELOW.
5. WHEN BARS OF DIFFERENT SIZE ARE SPLICED, SPLICE LENGTH SHALL BE THE LARGER OF THE DEVELOPMENT LENGTH OF LARGER BAR AND LAP SPLICE LENGTH OF SMALLER BAR.



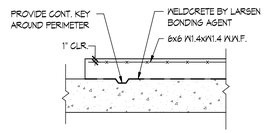
1 TYPICAL STANDARD HOOK
3/4" = 1'-0"
NOTE: FOR DEVELOPMENT LENGTH Ldh SEE SCHEDULE.



2 TYPICAL TIE HOOK (HAIR PIN)
3/4" = 1'-0"



3 TYPICAL CONCRETE CURB
3/4" = 1'-0"
NOTE: FOR CURB HEIGHT & WIDTH SEE ARCHITECTURAL DRAWINGS.



4 TYPICAL CONCRETE PAD
3/4" = 1'-0"

DESIGN CRITERIA

STRUCTURAL JOB # X08026211-I1

SEAL & SIGNATURE:

PROJECT No:	B9142.00
DRAWING BY:	CA
CHK BY:	AM
DWG No:	S-002.00
SCALE: As indicated	2 OF 10

FOUNDATION NOTES:

1. FOUNDATION DESIGN HAS BEEN BASED ON GEOTECHNICAL REPORT PREPARED BY PILLORI ASSOCIATES, P.A. DATED MAY 2021. A COPY OF THIS REPORT SHALL BE AVAILABLE AT THE PROJECT SITE AT ALL TIMES.

2. ALL EARTHWORK, SUBGRADE PREPARATION AND FOUNDATION WORK SHALL BE DONE ACCORDING TO THE GEOTECHNICAL REPORT AND UNDER SUPERVISION OF LICENSED GEOTECHNICAL ENGINEER IN OWNER'S DIRECT EMPLOY.

3. SPREAD FOOTINGS SHALL BEAR ON ROCK WITH A MINIMUM BEARING CAPACITY OF 6 TONS PER SQUARE FOOT. IF MATERIAL OF THIS CAPACITY IS NOT FOUND AT THE ELEVATIONS INDICATED THE FOOTINGS SHALL BE LOWERED AT THE DIRECTION OF THE LICENSED GEOTECHNICAL ENGINEER IN OWNER'S DIRECT EMPLOY.

4. MAKE NO EXCAVATION TO THE FULL DEPTH INDICATED WHEN FREEZING TEMPERATURES MAY BE EXPECTED UNLESS THE FOOTINGS OR SLABS CAN BE PLACED IMMEDIATELY AFTER THE EXCAVATION HAS BEEN COMPLETED. PROTECT THE BOTTOM OF EXCAVATION FROM FROST IF PLACING OF CONCRETE IS DELAYED. SHOULD PROTECTION FAIL, REMOVE FROZEN MATERIALS AND REPLACE WITH CONCRETE OR GRAVEL FILL.

5. WALLS SHALL BE TEMPORARILY BRACED AGAINST EARTH PRESSURE AND OTHER FORCES UNTIL SLABS, BEAMS AND OTHER MEMBERS DESIGNED TO BRACE THE FINISHED STRUCTURE HAVE BEEN IN PLACE AND HAVE ATTAINED REQUIRED CONCRETE ULTIMATE STRENGTH.

6. UNLESS OTHERWISE RECOMMENDED BY THE GEOTECHNICAL ENGINEER'S REPORT, SLABS ON GRADE SHALL BE SUPPORTED BY A COMPACTED POROUS FILL AT LEAST 8 INCHES THICK. AT INTERIOR SLABS A VAPOR BARRIER AT LEAST 15 MILS THICK SHALL BE PLACED BETWEEN THE SLAB AND THE POROUS FILL. THE POROUS FILL SHALL, IN TURN, BE SUPPORTED BY EITHER CLEAN, INORGANIC ORIGINAL SOIL OR A COMPACTED FILL WITH A MODIFIED PROCTOR DENSITY OF 90.

SUPPORT OF EXCAVATION:

1. SUPPORT OF EXCAVATION, (SHEETING, SHORING, BRACING ETC.)SHALL BE DESIGNED BY A QUALIFIED PROFESSIONAL ENGINEER EXPERIENCED IN THIS TYPE OF WORK, EMPLOYED BY THE OWNER. THIS ENGINEER, FURTHER REFERRED TO AS THE SUPPORT OF EXCAVATION (SOE) ENGINEER SHALL BE RESPONSIBLE FOR INSPECTION OF THIS WORK AS REQUIRED BY THE PERTINENT BUILDING CODE.

2. THE SOE ENGINEER SHALL SUBMIT SHEETING, SHORING AND BRACING DRAWINGS TO THE ARCHITECT FOR COORDINATION WITH DESIGN DRAWINGS. SUCH DRAWINGS SHALL BE SUBMITTED PRIOR TO FILING OF THE STRUCTURAL DRAWINGS BY THE OFFICE FOR APPROVAL BY DOB.

3. THE SOE ENGINEER SHALL CARRY PROPER PROFESSIONAL AND GENERAL LIABILITY INSURANCE. GACE SHALL BE NAMED AS AN "ADDITIONAL INSURED" ON AND UNDER SOE ENGINEER'S INSURANCE POLICIES FOR GACE'S BENEFIT.

4. SHEETING, SHORING AND BRACING, AS WELL AS OTHER ELEMENTS OF SUPPORT OF EXCAVATION (SOE) SHALL BE SHOWN ON PLANS AND DETAILED BY THE SOE ENGINEER. THE SOE ENGINEER SHALL FILE SUCH PLANS AND OBTAIN APPROVAL FROM THE DEPARTMENT OF BUILDINGS AS PART OF THE FILING FOR THE FOUNDATION PERMIT.

SPECIAL INSPECTION NOTES:

1. SPECIAL INSPECTION ITEMS REQUIRED BY NYC BUILDING CODE RELATED TO STRUCTURAL WORK SHOWN ON GACE DRAWINGS.

A. CONCRETE - CAST-IN-PLACE
B. CONCRETE SAMPLING AND TESTING
C. CONCRETE DESIGN MIX
D. POST-INSTALLED ANCHORS (BB# 2014-018, 2014-019, 2015-027, 2016-005)
F. FOOTING AND FOUNDATION (PROGRESS INSPECTION)
G. FINAL (PROGRESS INSPECTION)

THE CONTRACTOR IS OBLIGATED TO NOTIFY THE INSPECTOR AT LEAST 72 HOURS BEFORE INSTALLATION OF SUCH ITEMS SO THAT PROPER INSPECTION CAN BE MADE. IN NO CASE SHALL SUCH ITEMS BE INSTALLED OR CONSTRUCTED WITHOUT COMPLETE APPROVAL OF THE INSPECTOR. UNAPPROVED INSTALLATION IS SUBJECT TO REMOVAL AND REPLACEMENT AT THE CONTRACTOR'S SOLE EXPENSE.

ALL SPECIAL INSPECTIONS SHALL BE PERFORMED BASED ON APPROVED SHOP DRAWINGS. INSPECTIONS PERFORMED BASED ON UNAPPROVED DRAWINGS SHALL BE CONSIDERED INVALID AND SHALL BE REJECTED.

NEW YORK CITY CODE NOTES

SCOPE OF WORK:
FOUNDATION WORK PROPOSED FOR NEW BUILDING AS SHOWN ON PLANS HEREIN.

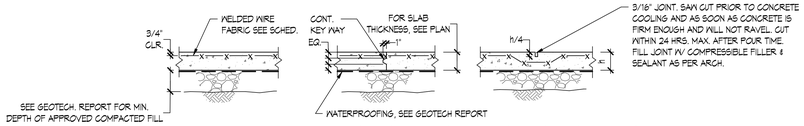
FOUNDATION DRAWINGS ARE IN COMPLIANCE WITH BC107.1.1, AND BC CHAPTERS 16, 18, AND 19

RELATED JOB APPLICATION NUMBERS:

MECHANICAL:	X08026188-I1
PLUMBING:	X08026146-I1
SPRINKLER / STANDPIPE:	X08026201-I1
CIVIL:	X08026209-I1
FOUNDATION / EARTHWORK:	X08026216-I1
STRUCTURAL:	X08026211-I1

REINFORCEMENT SCHEDULE

SLAB THICKNESS	REINFORCEMENT	MAX. JOINT SPACING (@ INTERIOR SLABS)	MAX. JOINT SPACING (@ EXTERIOR SLABS)
5"	6x6-W2.1xW2.1	12'-0" E.W.	10'-0" E.W.



TYPICAL SLAB-ON-GRADE

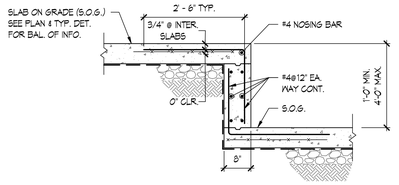
CONSTRUCTION JOINT

NOTE: PROVIDE CONTINUOUS WATERSTOP IN ALL JOINTS AS REQ'D. BY ARCHITECT.

SAW CUT CONTRACTION JOINT

NOTES:

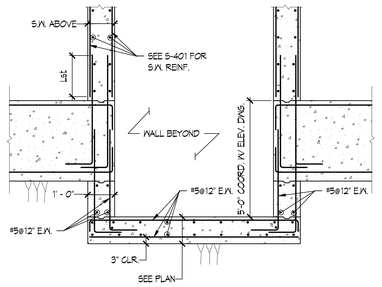
1. FOR MAXIMUM SPACING SEE TABLE ABOVE. PROVIDE JOINTS AT HALF THE INDICATED SPACING WHEN ADJACENT TO SLAB STEPS.
2. CONTRACTOR TO PROVIDE PROPOSED JOINT LAYOUT PLAN FOR REVIEW AND APPROVAL.



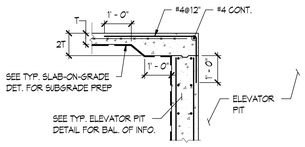
2 TYPICAL STEP IN SLAB-ON-GRADE
3/4" = 1'-0"

NOTE: PROVIDE CONTINUOUS WATERSTOPS IN ALL JOINTS ARE REQUIRED BY ARCHITECT.

1 TYPICAL SLAB-ON-GRADE
3/4" = 1'-0"

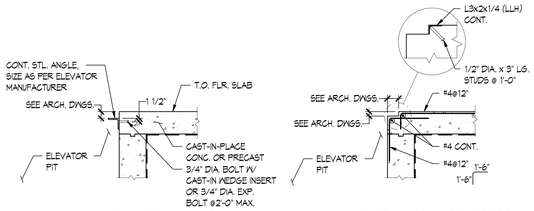


TYPICAL ELEVATOR PIT DETAIL



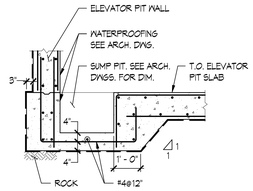
AT NEW UNREINFORCED SLAB

ELEVATOR PIT TO SLAB-ON-GRADE CONNECTION



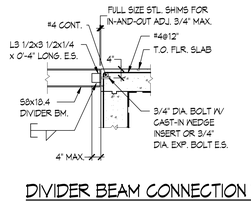
ON STEEL ANGLE

ON RECESS IN CONCRETE

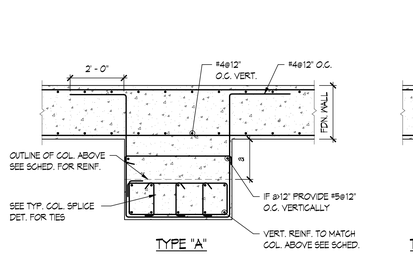


ELEVATOR SILL

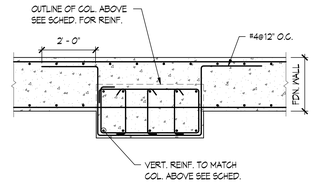
ELEVATOR SUMP-PIT



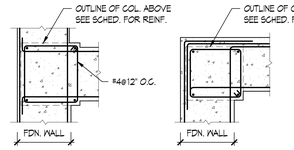
DIVIDER BEAM CONNECTION TO ELEVATOR PIT



TYPE "A"



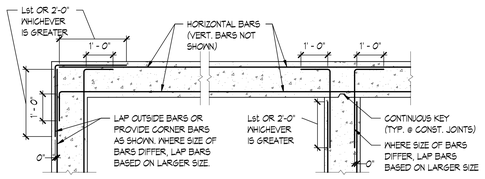
TYPE "B" COLUMN BUTTRESS WITHIN FOUNDATION WALL



TYPE "C" TYPE "D"

3 TYPICAL COLUMN BUTTRESS PLAN
1/2" = 1'-0"

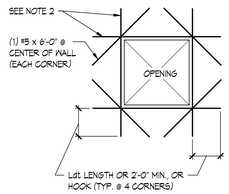
NOTE: FOR BALANCE OF WALL REINFORCEMENT & OTHER INFORMATION SEE TYPICAL WALL SECTIONS / PIER-BUTTRESS DETAIL.



AT CORNERS AT INTERSECTIONS

TYPICAL HORIZONTAL REINFORCING FOR CONCRETE WALLS (PLAN)
5 1/2" = 1'-0"

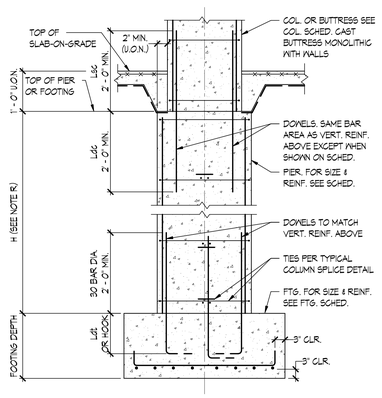
NOTE: PROVIDE CONTINUOUS WATERSTOPS IN ALL JOINTS AS REQUIRED BY ARCHITECT.



TYPICAL OPENING IN CONCRETE WALL
6 1/2" = 1'-0"

NOTES:

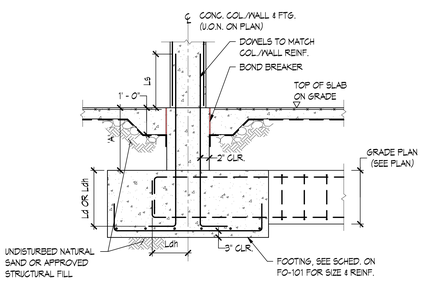
1. HOOK ALL INTERRUPTED CONTINUOUS BARS.
2. PLACE ONE-HALF OF REINFORCING BAR AREA INTERRUPTED BY OPENING IN THE SAME FACE AT BOTH SIDES OF OPENING. TWO #5 EACH SIDE MIN.



TYPICAL CONCRETE COLUMN, PIER OR BUTTRESS AND FOOTING (NON-SEISMIC)
7 3/4" = 1'-0"

NOTE R:
WHERE H IS LESS THAN 1'-0" EXTEND COLUMN DOWELS THROUGH PIER AND Ld: INTO FOOTING AND OMIT PIER DOWELS. CAST COLUMN MONOLITHIC WITH FOOTING AND OMIT PIER.

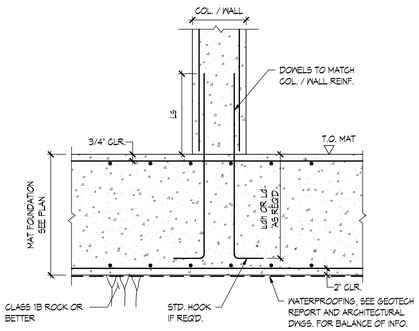
4 TYPICAL ELEVATOR PIT
1/2" = 1'-0"



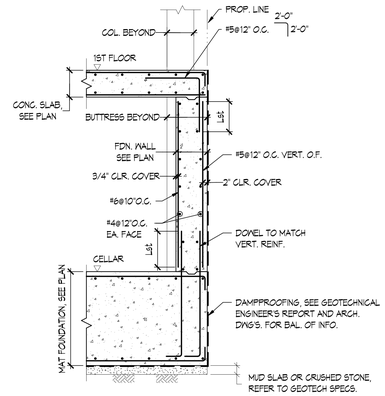
TYPICAL FOOTING (SLAB ON GRADE)
8 1/2" = 1'-0"

NOTES:

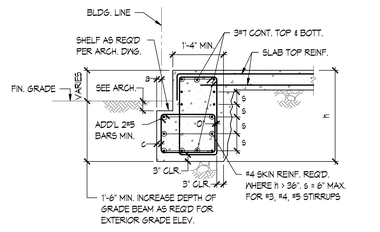
1. HAUNCH SLAB ON GRADE TO TOP OF FOOTING WHERE 'A' IS LESS THAN 12" AND PROVIDE BOND BREAKER BETWEEN TOP OF FOOTING AND SLAB.
2. GRADE BEAM(S) TO BE POURED MONOLITHICALLY WITH PILE CAP. ALTERNATIVELY, CONTRACTOR TO SUBMIT PROPOSED CONSTRUCTION JOINT LOCATION(S) FOR APPROVAL.



TYPICAL MAT FOUNDATION
9 3/4" = 1'-0"



TYPICAL FOUNDATION WALL
10 1/2" = 1'-0"



TYPICAL EXTERIOR GRADE BEAM WITH FRAMED SLAB (UNFORMED)
11 1/2" = 1'-0"

NOTES:
1. BEAM SIZES ON PLANS AND IN BEAM SCHEDULES ARE DESCRIBED THUS: bXh WHERE b AND h ARE GIVEN IN INCHES.
2. INCREASE h BY 1 1/2" FROM SCHEDULE FOR GRADE BEAM WITH EARTH FORM.
3. 3#07 & c/-2" CLEAR WITH FORM WORK.
   8#11 & c/-3" CLEAR WITH EARTH FORM.

FOUNDATION PART PLANS

STRUCTURAL JOB # X08026211-I1

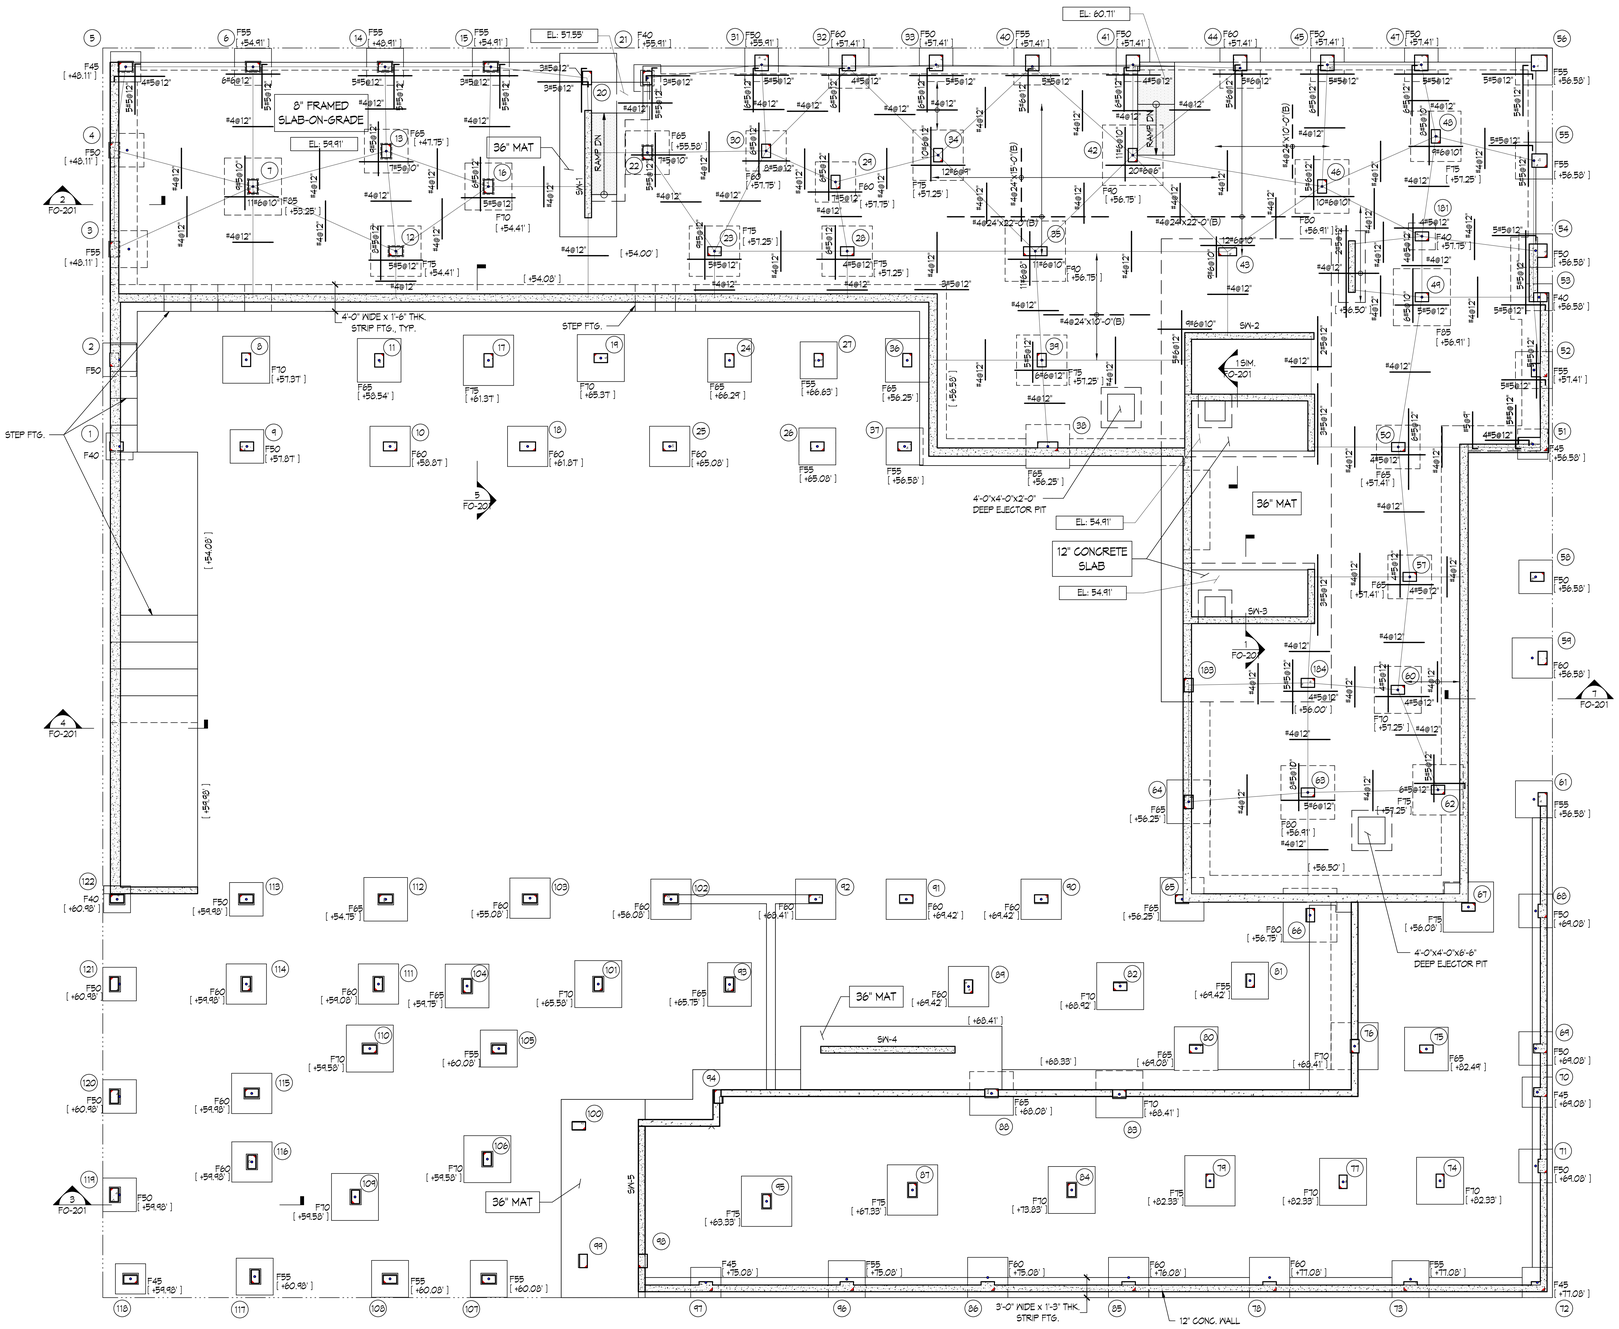
SEAL & SIGNATURE:

PROJECT No:	B9142.00
DRAWING BY:	CA
CHK BY:	AM

DWG No:

FO-002.00

SCALE: As indicated



CELLAR FRAMING PLAN

1/8" = 1'-0"

NOTES:

1. EL. XX'-XX' — DENOTES TOP OF SLAB ELEVATION WITH RESPECT TO NAVD88 DATUM ELEVATION.
2. X" SLAB ON GRADE — DENOTES CONCRETE SLAB ON GRADE OF THICKNESS 'X'. SEE TYPICAL SLAB ON GRADE DETAIL ON DRAWING FO-001 FOR BALANCE OF INFORMATION. SLOPE TOP OF TO DRAINS AS REQUIRED. REFER TO ARCH. & MEP. DRAWINGS FOR SLAB PITCH AND DRAIN LOCATIONS.
3. X" MAT — DENOTES CONCRETE MAT OF THICKNESS 'X'. MAT TO BEAR ON 6 TSF SOIL, OR BETTER. SEE CONCRETE NOTES ON DRAWING S-001 FOR BALANCE OF INFORMATION.
4. FXX — DENOTES SPREAD FOOTING. FOR SIZE & REINFORCEMENT, SEE SCHEDULE ON THIS SHEET.
5. [XX'] — DENOTES BOTTOM OF FOOTING ELEVATION WITH RESPECT TO NAVD88 DATUM ELEVATION. IF PROPER BEARING MATERIAL IS NOT FOUND AT THE ELEVATION INDICATED, LOWER THE BOTTOM OF FOOTING AS NECESSARY. A [1H:1V] INFLUENCE LINE SHALL BE MAINTANED BETWEEN BOTTOM OF ADJACENT FOOTINGS.
6. FOOTINGS TO BE CENTERED ON COLUMNS ABOVE, UNLESS OTHERWISE NOTED.
7. FOR GRADE BEAM REINFORCEMENT, SEE SCHEDULE ON FO-001.
8. BOTTOM OF GRADE BEAM ELEVATION DENOTED THUS (X'-X").
9. CENTERLINE OF GRADE BEAMS TO ALIGN WITH CENTROID OF FOOTING & COLUMN, UNLESS OTHERWISE NOTED.
10. FOR COLUMN DIMENSIONS & REINFORCEMENT, SEE COLUMN SCHEDULE ON DRAWING S-301 THRU S-303.
11. SW-XX — DENOTES CONCRETE SHEAR WALL. SEE DRAWING S-401 FOR BALANCE OF INFORMATION.
12. DENOTED RAISED SLAB/ RAMP. SEE DETAIL 1 ON S-004

SEAL & SIGNATURE:

PROJECT No:	B9142.00
DRAWING BY:	CA
CHK BY:	AM
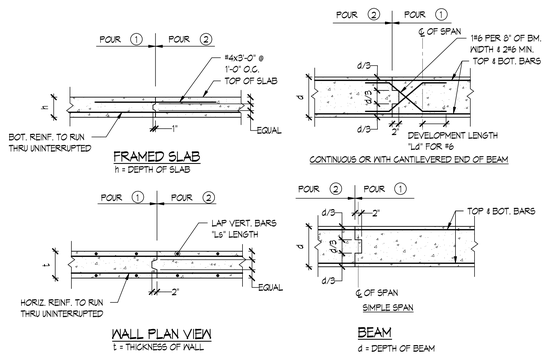
DWG No:	FO-201.00
SCALE: 1/2" = 1'-0"	6 OF 10

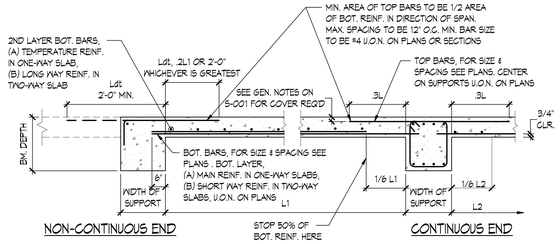


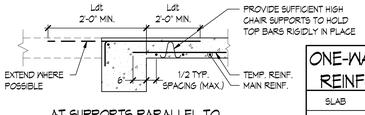
1 TYPICAL CONSTRUCTION JOINT

3/4" = 1'-0"

NOTES:

1. CONSTRUCTION JOINTS SHALL NOT BE PERMITTED FOR BEAMS WITH CONCENTRATED LOADS. CONSULT WITH ENGINEER FOR SPECIAL CASES.
2. CONTRACTOR SHALL SUBMIT ALL PROPOSED CONSTRUCTION JOINTS FOR APPROVAL.
3. PROVIDE CONTINUOUS WATERSTOPS IN ALL JOINTS AS REQUIRED BY ARCHITECT.





AT SUPPORTS PARALLEL TO MAIN REINFORCEMENT IN ONE-WAY SLABS

ONE-WAY SLAB TEMPERATURE REINFORCEMENT SCHEDULE

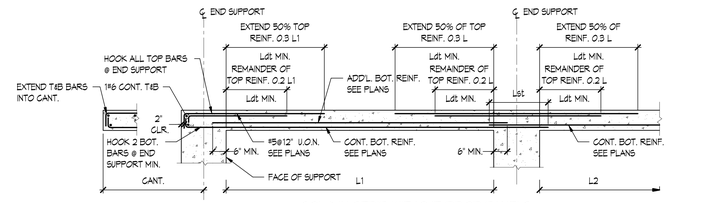
SLAB	REINF.	SLAB	REINF.
5"	#4@18"	9"	#4@12"
6"	#4@18"	10"	#5@17"
7"	#4@15"	11"	#5@15"
8"	#4@13"	12"	#5@14"

2 TYPICAL ONE-WAY AND TWO-WAY SLABS

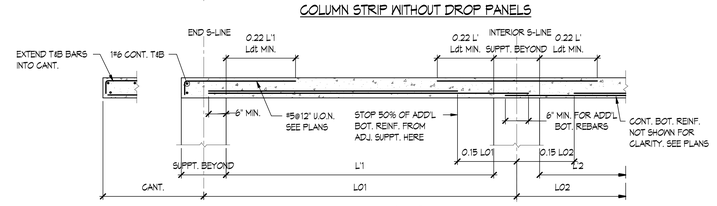
1/2" = 1'-0"

NOTE:

1. L = LONGER ADJACENT SPAN L1 OR L2.



COLUMN STRIP WITHOUT DROP PANELS



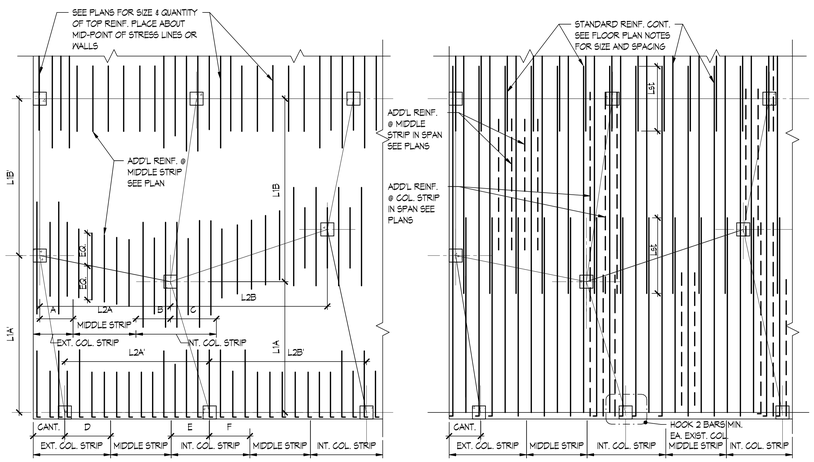
MIDDLE STRIP

3 TYPICAL FLAT PLATE REINFORCING PLACEMENT

1/2" = 1'-0"

NOTES:

1. L'1 = THE GREATER OF L1 FOR EITHER OF TWO ADJACENT COLUMN STRIPS.
2. L'2 = THE GREATER OF L2 FOR EITHER OF TWO ADJACENT COLUMN STRIPS.
3. L = THE GREATER OF L1 OR L2.
4. L' = THE GREATER OF L'1 OR L'2.



TOP BAR PLACEMENT

NOTES:
1. REINFORCEMENT SHOWN IS TYPICAL FOR BOTH DIRECTIONS.
2. COLUMN STRIP WIDTH GREATER THAN OR EQUAL TO COLUMN, WALL, OR PILE CAP DIMENSION PERPENDICULAR TO COLUMN STRIP SPAN.
3. 'A' = THE LESSER OF: L1A/4, L1B/4 OR L2A/4
   'B' = THE LESSER OF: L1A/4, L1B/4, OR L2A/4
   'C' = THE LESSER OF: L1A/4, L1B/4, OR L2B/4
   'D' = THE LESSER OF: L1A'/4 OR L2A'/4
   'E' = THE LESSER OF: L1A/4 OR L2A/4
   'F' = THE LESSER OF: L1A/4 OR L2B/4
4. ——— DENOTES STRESS LINE.

BOTTOM BAR PLACEMENT

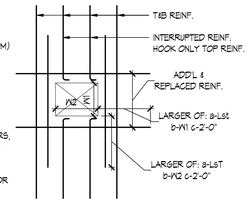
NOTES:
1. REINFORCEMENT SHOWN IS TYPICAL FOR BOTH DIRECTIONS.
2. FOR COLUMN STRIP AND MIDDLE STRIP MEASUREMENTS SEE 'TYPICAL TOP BAR PLACEMENT FOR FLAT SLAB CONSTRUCTION' DETAIL.
3. COLUMN STRIP WIDTH GREATER THAN OR EQUAL TO COLUMN, WALL, OR PILE CAP DIMENSION PERPENDICULAR TO COLUMN STRIP SPAN.

4 TYPICAL BAR PLACEMENT FOR FLAT PLATE CONSTRUCTION

12" = 1'-0"

NOTES:

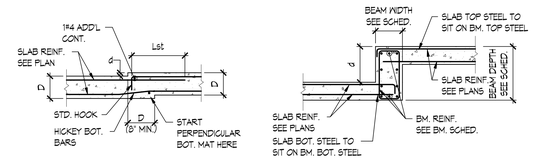
1. IF REINFORCEMENT IS INTERRUPTED (TOP OR BOTTOM) 1/2 THE EQUIVALENT AREA SHALL BE REPLACED ON EACH SIDE OF OPENING. 1#4 MIN. EACH SIDE.
2. IF OPENING IS LOCATED IN AREA OF NO TOP REINFORCEMENT & OPENING IS LARGER THAN 16"X16" PROVIDE 1#4 TOP SIDE OF OPENING.
3. IF OPENING IS SMALLER THAN SPACING OF SLAB BARS, NO ADDITIONAL REINFORCEMENT IS REQUIRED. SLAB BARS TO BE PLACED AT EDGES OF OPENING.
4. IF OPENING IS NEAR OR AGAINST EXTERIOR BEAMS OR COLUMNS & REINFORCEMENT CANNOT BE EXTENDED, HOOK ADDITIONAL BARS.

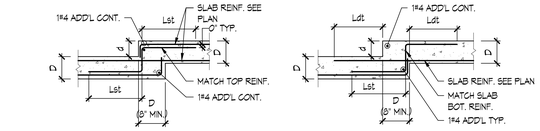


5 TYPICAL ADDED REINFORCING AT OPENINGS IN CONCRETE SLAB

1/4" = 1'-0"

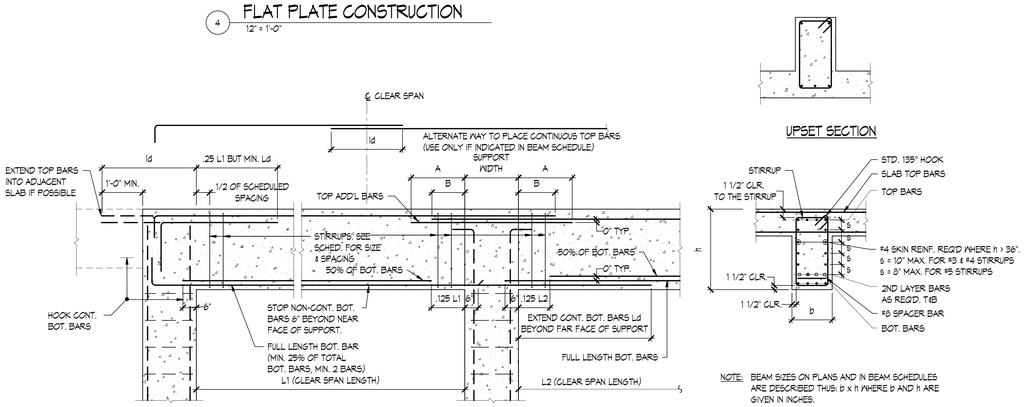
NOTE: MINIMUM REQUIREMENTS ARE SHOWN IN THESE DETAILS. SEE PLAN FOR ADDITIONAL REQUIREMENTS.





6 TYPICAL STEPS IN SLAB

1/2" = 1'-0"



ABBREVIATIONS:

A = .33 L1 OR L2 WHICHEVER IS GREATER BUT MIN. Id

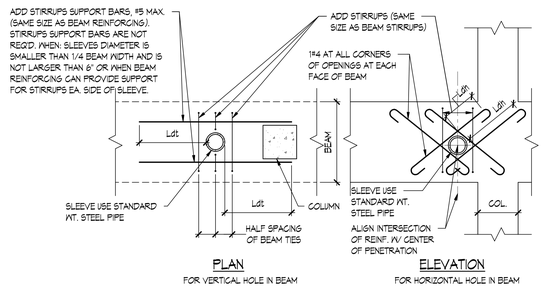
B = .2 L1 OR L2 WHICHEVER IS GREATER BUT MIN. Id

7 TYPICAL CONCRETE BEAM

1/2" = 1'-0"

NOTES:

1. THIS DETAIL REPRESENTS TYPICAL CONDITION ONLY. SEE PLANS AND BEAM SCHEDULE FOR NON-TYPICAL REINFORCING DETAILS.
2. ALL BOTTOM BARS TO BE NON-CONTINUOUS UNLESS SPECIFICALLY DESCRIBED AS CONT. ON PLANS OR IN SCHEDULE.

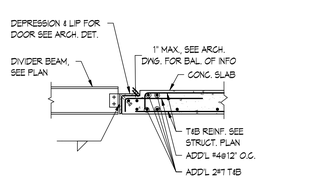


8 TYPICAL OPENINGS IN CONCRETE BEAMS

3/4" = 1'-0"

NOTES:

1. ALL OPENINGS REGARDLESS OF SIZE ARE SUBJECT TO APPROVAL OF STRUCTURAL ENGINEER. ALL PROPOSED OPENING SIZES, LOCATION & ELEVATIONS TO BE SUBMITTED FOR REVIEW. OPENINGS THAT REQUIRE SPECIFIED LONGITUDINAL REINFORCEMENT BE PLACED IN ADDITIONAL LAYERS WILL NOT BE PERMITTED.
2. NO OPENINGS ARE PERMITTED IN CONCRETE BEAMS LARGER THAN 2" DIA. UNLESS SPECIFICALLY INDICATED ON STRUCTURAL PLANS. ALL BEAM REINFORGMENT TO RUN THROUGH.



9 ELEVATOR DIVIDER BEAM TO CONCRETE SLAB CONNECTION

3/4" = 1'-0"

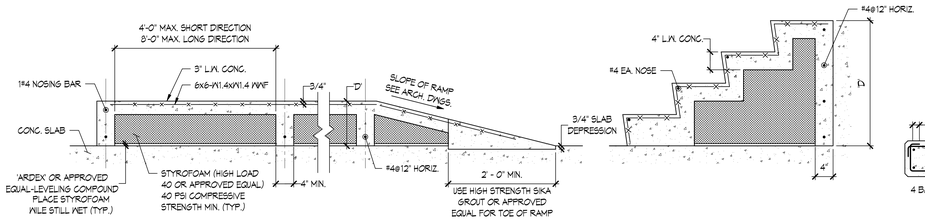
TYPICAL DETAILS 1

STRUCTURAL JOB # X0802621I-I1

SEAL & SIGNATURE:

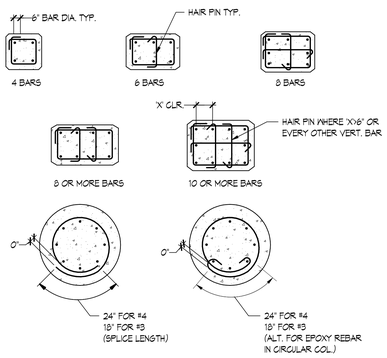
PROJECT No:	B9142.00
DRAWING BY:	CA
CHK BY:	AM
DWG No:	S-003.00
SCALE: As indicated	7 OF 10



1 TYPICAL INFILL OF DEPRESSED SLAB
1" = 1'-0"

NOTES:

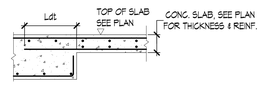
1. WHERE DEPTH 'D' IS 4" OR LESS, OMIT STYROFOAM.
2. MAX. TOTAL DEPTH 'D' IS 4'-0".



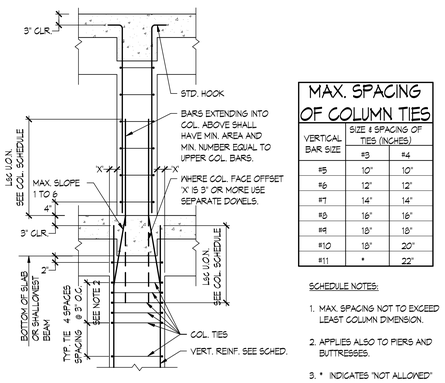
2 TYPICAL TIED COLUMNS
1/2" = 1'-0"

NOTES:

1. TOTAL NUMBER OF BARS SHOULD BE SPACED AROUND PERIMETER IN SUCH A WAY AS TO ACHIEVE APPROXIMATELY EQUAL SPACING.
2. USE THESE DETAILS AT PIERS AND BUTTRESSES.



6 TYPICAL SECTION THRU CHANGE IN SLAB THICKNESS - BOTTOM STEP
1/2" = 1'-0"



MAX. SPACING OF COLUMN TIES		
VERTICAL BAR SIZE	SIZE & SPACING OF TIES (INCHES)	
	#3	#4
#5	10"	10"
#6	12"	12"
#7	14"	14"
#8	16"	16"
#9	18"	18"
#10	18"	20"
#11	*	22"

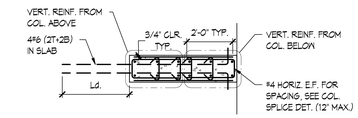
SCHEDULE NOTES:

1. MAX. SPACING NOT TO EXCEED LEAST COLUMN DIMENSION.
2. APPLIES ALSO TO PIERS AND BUTTRESSES.
3. * INDICATES 'NOT ALLOWED'

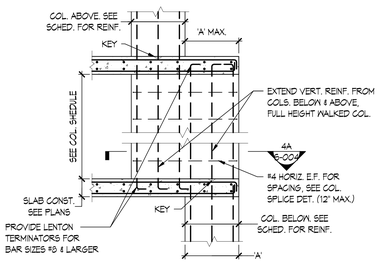
3 TYPICAL COLUMN SPLICE (NON-SEISMIC)
3/4" = 1'-0"

NOTES:

1. TIES SHALL START 4" FROM TOP OF FOOTING OR FLOOR SLAB AND SHALL EXTEND TO WITHIN 2" OF THE BOTTOM OF THE SHALLOWEST BEAM OR TO WITHIN 2" OF THE BOTTOM OF THE SLAB WHEN BEAMS DO NOT FRAME INTO ALL FOUR FACES OR THE COLUMN.
2. WHEN COLUMN BARS ARE OFFSET THE TIES SHALL BE SPACED NOT OVER 3" O.C. FOR A DISTANCE OF 1'-0" BELOW THE POINT OF OFFSET.



4A SECTION
1/2" = 1'-0"

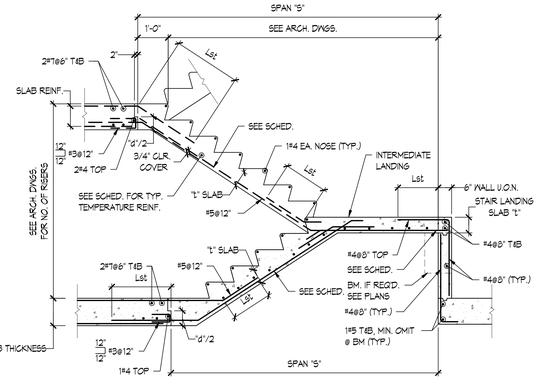


4 TYPICAL WALKED COLUMN (ELEVATION)
1/2" = 1'-0"

STAIR SCHEDULE				
SPAN 'S'	SLAB THICK 't'	REINFORCING **		TEMPERATURE REINFORCEMENT
		SIZE	SPACING	
9'-0" OR LESS	5 1/2"	#4	12"	#4 @ 18"
10'-0"	6"	#4	12"	#4 @ 18"
11'-6"	7"	#4	10"	#4 @ 16"
13'-0"	8"	#5	12"	#4 @ 12"
15'-0"	9"	#5	10"	#4 @ 12"

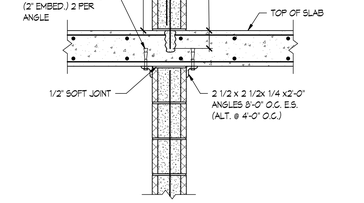
STAIR NOTES:

1. FOR ORIENTATION, DIMENSIONS, NUMBER OF TREADS AND RISERS IN EACH RUN, SEE STAIR SECTION AND / OR ARCHITECTURAL DRAWINGS.
2. EXTEND STAIR WIDTH FOR MASONRY SUPPORT WHERE CALLED FOR ON ARCHITECTURAL DRAWINGS.
3. FOR PORTIONS OF STAIRS POURED WITH FLOOR SLAB SEE PLANS FOR SECTIONS AND DETAILS.
4. ALL NON-CONTACT SPLICES MUST BE LESS THAN 6" APART.

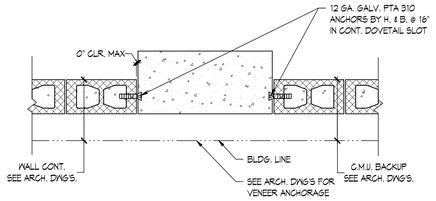


5 TYPICAL CONCRETE STAIRS
1/2" = 1'-0"

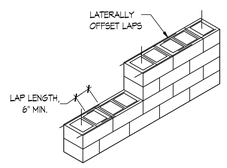
7 TYPICAL EXTERIOR CMU
1" = 1'-0"



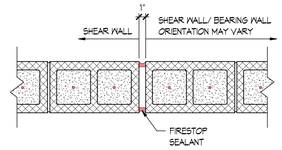
8 TYPICAL NON-LOAD BEARING INTERIOR MASONRY PARTITIONS
1" = 1'-0"



9 TYPICAL C.M.U WALL ANCHORAGE DETAIL INTERIOR MASONRY PARTITIONS
1" = 1'-0"



10 TYPICAL VERTICAL AND HORIZONTAL WALL REINFORCEMENT
3/4" = 1'-0"
NOTE: SEE SCHEDULES AND GENERAL NOTES FOR HORIZONTAL AND VERTICAL WALL REINFORCEMENT.



11 TYPICAL CMU WALL JOINT
1 1/2" = 1'-0"

1/8" = 1'-0"

MASONRY DEVELOPMENT AND SPLICE LENGTH							
BAR/ WIRE SIZE	DIAMETER	f'm = 1,500 PSI		f'm = 2,000 PSI		f'm = 3,000 PSI	
		DEVELOPMENT LENGTH (Em) IN.	TENSION SPLICE LENGTH (Sm) IN.	DEVELOPMENT LENGTH (Em) IN.	TENSION SPLICE LENGTH (Sm) IN.	DEVELOPMENT LENGTH (Em) IN.	TENSION SPLICE LENGTH (Sm) IN.
W1.7	0.148	9	14	9	14	9	14
W2.1	0.162	10	15	10	15	10	15
W2.8	0.189	12	18	12	18	12	18

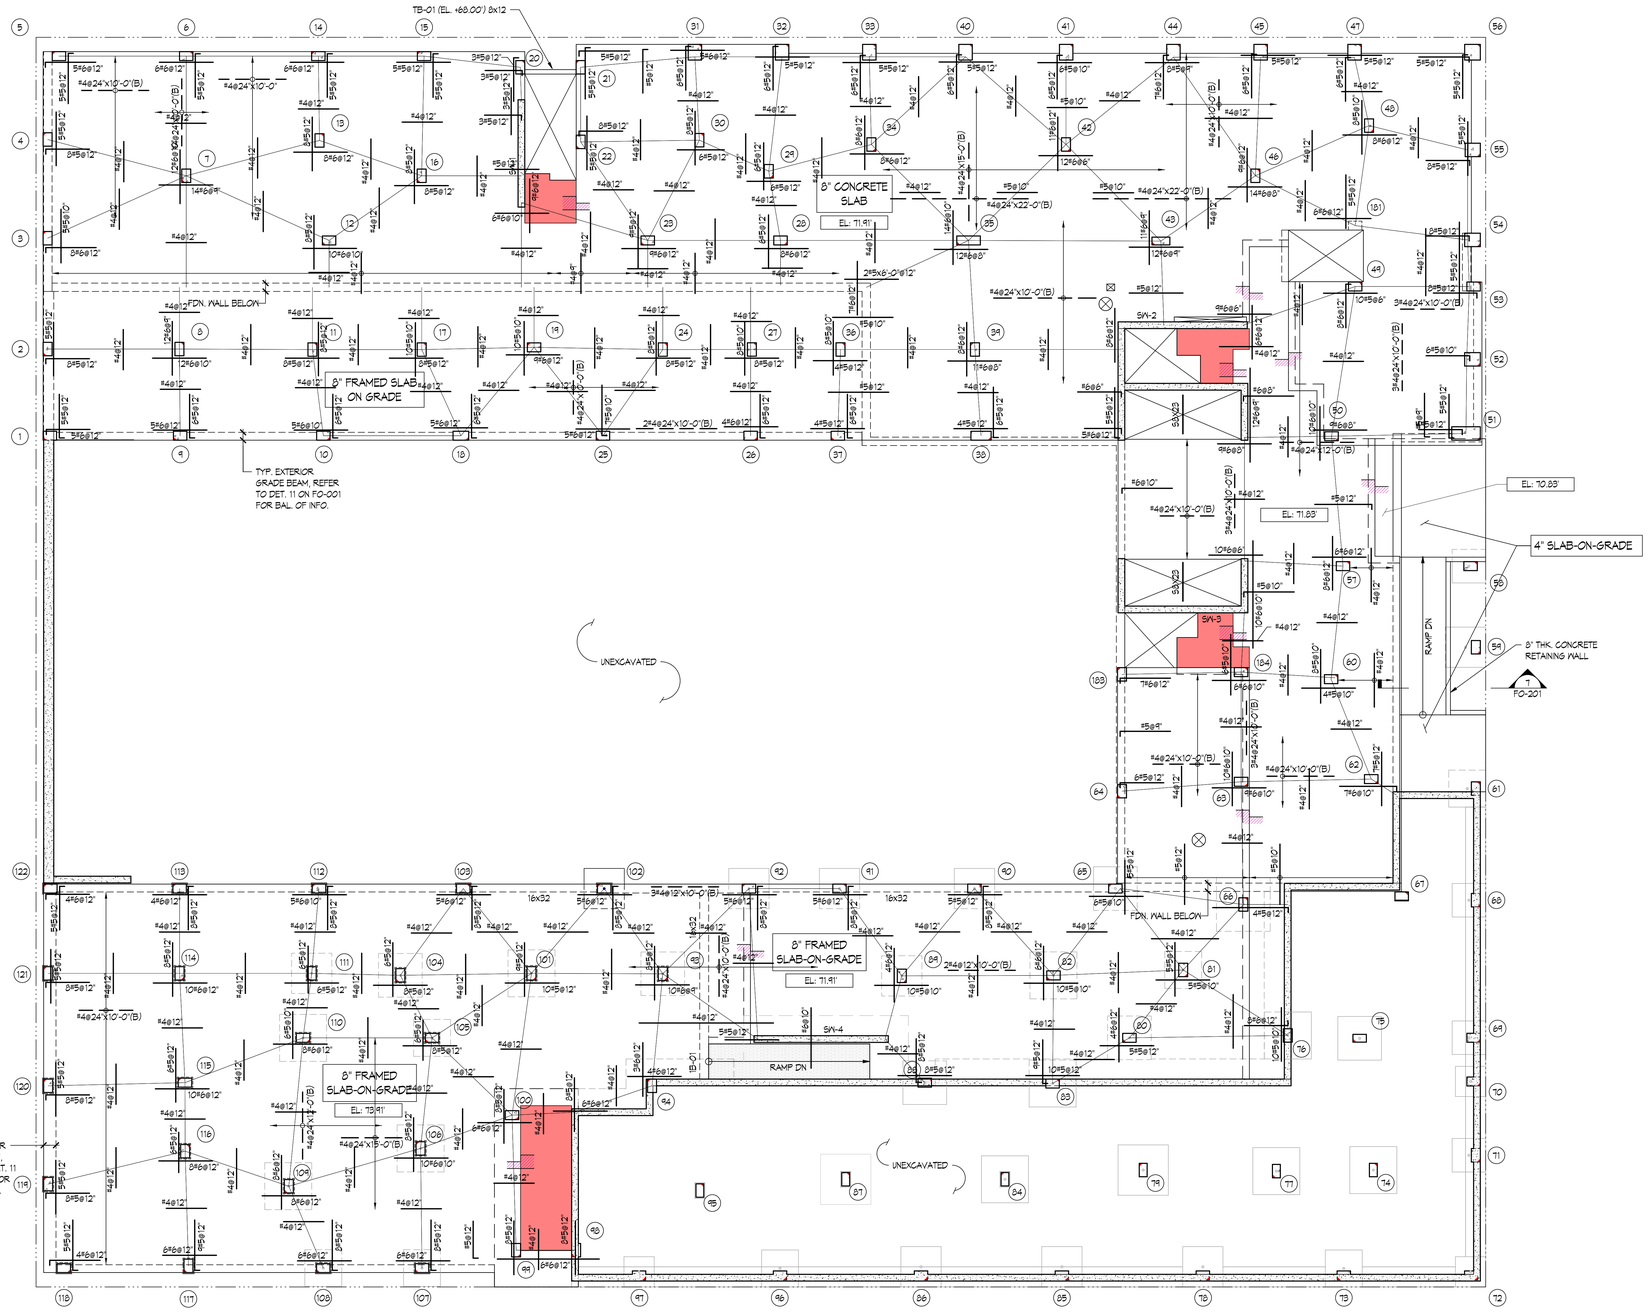
SCALE: As indicated	8 OF 10



GROUND FLOOR FRAMING PLAN

1/8" = 1'-0"

NOTES:

1. EL. XX'-XX" — DENOTES TOP OF SLAB ELEVATION WITH RESPECT TO NAVD88 DATUM ELEVATION.
2. X" SLAB ON GRADE — DENOTES CONCRETE SLAB ON GRADE OF THICKNESS 'X', SEE TYPICAL SLAB ON GRADE DETAIL ON DRAWING FO-001 FOR BALANCE OF INFORMATION. SLOPE TOP OF TO DRAINS AS REQUIRED. REFER TO ARCH. & MEP. DRAWINGS FOR SLAB PITCH AND DRAIN LOCATIONS.
3. X" CONCRETE SLAB — DENOTES CONCRETE SLAB OF THICKNESS 'X'. SEE CONCRETE NOTES ON DRAWINGS S-001 FOR BALANCE OF INFORMATION.
4. REINFORCING BARS SHOWN ON PLAN TO BE PLACED IN ACCORDANCE WITH TYPICAL FLAT PLATE DETAILS ON DRAWING S-003 AND IN ADDITION TO ANY STANDARD REINFORCEMENT CALLED FOR IN THOSE DETAILS. ALL REINFORCING SHOWN ON PLAN IS TO BE PLACED IN ADDITION TO TYPICAL BOTTOM REINFORCEMENT OF #4@12" EACH WAY CONTINUOUS.
5. ——— DENOTES TOP REINFORCEMENT.
6. ___ (B) ___ DENOTES ADDITIONAL BOTTOM REINFORCEMENT.
7. PLACE EAST-WEST REINFORCEMENT IN THE OUTERMOST LAYER.
8. SLAB OPENINGS AND PENETRATIONS SHOWN SHALL BE COORDINATED WITH ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING & SPRINKLER DRAWINGS.
9. FOR BEAM REINFORCEMENT, SEE BEAM SCHEDULES ON DRAWING S-304. TOP OF BEAMS TO BE EVEN WITH TOP OF SLAB, UNLESS OTHERWISE NOTED THUS (X-X')
10. FOR COLUMN DIMENSIONS & REINFORCEMENT, SEE COLUMN SCHEDULE ON DRAWING S-301 THRU S-303.
11. SW-XX — DENOTES CONCRETE SHEAR WALL. SEE DRAWING S-401 FOR BALANCE OF INFORMATION.
12. S-x-- — DENOTES STEEL FRAMING.
13. ▭ — DENOTED RAISED SLAB/ RAMP. SEE DETAIL 1 ON S-004.

5. ___ (B) ___ DENOTES ADDITIONAL BOTTOM REINFORCEMENT.
6. PLACE EAST-WEST REINFORCEMENT IN THE OUTERMOST LAYER.
7. SLAB OPENINGS AND PENETRATIONS SHOWN SHALL BE COORDINATED WITH ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING & SPRINKLER DRAWINGS.
8. FOR BEAM REINFORCEMENT, SEE BEAM SCHEDULES ON DRAWING S-304. TOP OF BEAMS TO BE EVEN WITH TOP OF SLAB, UNLESS OTHERWISE NOTED THUS (X-X')
9. FOR COLUMN DIMENSIONS & REINFORCEMENT, SEE COLUMN SCHEDULE ON DRAWING S-301 THRU S-303.
10. SW-XX — DENOTES CONCRETE SHEAR WALL. SEE DRAWING S-401 FOR BALANCE OF INFORMATION.
11. S-x-- — DENOTES STEEL FRAMING.
12. DENOTES EXTENT OF TRANSFER SLAB
13. CA — DENOTES CONCRETE COLUMN ABOVE.
14. * — DENOTES REINFORCEMENT IN LIEU OF TYPICAL #5@12" O.C. EDGE REINFORCEMENT CALLED FOR IN FLAT PLATE DETAILS ON DRAWING S-003.

CERTIFICATION

I, George Lester, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Site Investigation for the 484 East 178th Street/ St. Joseph's Site (NYC OER Site No. 23TMP0776X/23EH-A129X). I am responsible for the content of this Phase II Environmental Site Investigation (ESI), have reviewed its contents and certify that this Phase II ESI is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

George Lester, PE	2/11/24	Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

The Phase II Environmental Site Investigation (ESI) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The site investigation described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 484 East 178th Street in the Tremont section of the Bronx, New York and is identified as Block 3043 and Lots 10, 16, 22, and 23 on the New York City Tax Map; these lots have been merged into a single lot (Lot 10) to facilitate the Site development. Figure 1 shows the Site location. The Site is 40,102-square feet and is bounded by East 178th Street to the north, a four-story commercial and office building as well as a three-story preschool to the south, Bathgate Avenue to the east, and Washington Avenue to the west. A map of the site boundary is shown in Figure 1. Currently, the Site is vacant and contains a ramp, staircase, and retaining walls around its elevated northeastern section. The Site slopes from the elevated northeastern section downward to the west and south, the elevation ranges from approximately 79 feet (NAVD 88) in the northeast to approximately 58 feet (NAVD 88) in the southwest.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 100% affordable, approximately 230,875 gsf, eight-story (82-foot tall; 95-foot tall measured from Washington Avenue) multi-family residential building with a total of 251 dwelling units (inclusive of one building superintendent unit). The building will have a U-shape design with landscaped inner courtyard and a partial basement used for building superintendent housing, bicycle storage, community facility space, storage, and utilities. At grade, the building will have residential, residential amenity, and community facility spaces, as well as offices and lobbies.

The open courtyard will be at grade level and consist of concrete pavers, planting soil, timber decking, and artificial turf. It will be used for outdoor recreation. The entryway on East 178th Street will also feature a small open space area with pavers on slab and planting soil. The proposed building footprint spans about 33,300 square feet, while the cellar spans about 15,600 square feet. The proposed development will achieve a full build-out to the property boundaries with an interior courtyard. Excavation depth ranges from 6.5-19.5 feet below surface grade for

drainage features in the courtyard and structural footings beneath the building. If suitable for drainage and geotechnical purposes, existing site soils may remain in portions of the courtyard. Based on drilling refusal, bedrock is expected to be 2.0-14.0 feet below surface grade and follows the same general slope from the northeast down to the west and south as the surface grade. Excavation is not anticipated below the groundwater table. Demolition of existing the existing stair, ramp, and retaining walls will occur prior to construction. Layout of the proposed site development is presented in Figure 2. The current zoning designation is R7D, which promotes new medium-density contextual development along transit corridors. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

VHB was able to establish a history for the Site dating back to 1896 when the Site was improved with an early iteration of "St. Joseph's Academy" on southern portions, a mixed-use building on northwestern portions and two dwellings on northeastern portions. The most recent church structure with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling was constructed by 1901 along with another rendition of the academy/convent building. The neo-Gothic church was built of white stone quarried from the lot and faced with polished granite on the front and rear ends.[1] When built, the church provided seating for about 1,500 persons. A six-story horseshoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The former rectory appeared by 1950. The mixed-use commercial and residential buildings were demolished by 1981, and the dwelling on northeastern portions was demolished circa 2012. The church was closed as of 2015 and remaining buildings on the Site were demolished in 2019 for redevelopment of the Site.

According to information maintained by the NYCDOF, the current owners of record are identified as Church of St. Joseph to Tremont for Lot 16 and St Joseph R C Church for Lots 10, 22 and 23. Previous owners of Lot 16 include St. Barnabas Hospital and the City of New York, according to the Automated City Register Information System (ACRIS).

The AOCs identified for this site include:

[1] A supplemental description of the subject property history was obtained from the New York City American Guild of Organists.

1. One 3,000-gal fuel oil aboveground storage tank is registered to Lot 10 and municipal records reference several underground storage tanks (USTs; two 275-gallon on Lot 23 and one 1,000-gallon on Lot 22). It is unknown if these USTs remain on-site or have been removed. The AST was removed during demolition of the former church on site.

2. Demolition of former structures (particularly on Lots 16 [formerly occupied by a mixed-use elevator building] and Lot 22 [formerly occupied by a two-story dwelling]) indicating the potential presence of historic fill.

These AOCs are related to Recognized Environmental Conditions identified in the Phase I Report.

Summary of the Work Performed under the Environmental Site Investigation

VHB, at the direction of Catholic Homes, performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);

2. Installed eleven (11) soil borings across the entire project Site, and collected seventeen (17) soil samples for chemical analysis from the soil borings to evaluate soil quality;

3. Installed ten (10) soil vapor probes around Site perimeter and collected ten (10) samples for chemical analysis.

Installation of groundwater monitoring wells was attempted at six of the boring locations, however refusal was encountered (assumed bedrock) above the groundwater surface at each location. As a result, groundwater samples could not be collected to evaluate groundwater quality.[2]

Summary of Environmental Findings

1. Elevation of the property ranges from approximately 65 to 80 feet above mean sea level.

[2] VHB corresponded with OER regarding the sampling issues on site and OER accepted forgoing collection of groundwater in an email dated March 29, 2023.

2. Depth to groundwater assumed to be within 80 feet below ground surface (bgs) at the Site.

3. Groundwater flow is expected to be generally from north to south beneath the Site.

4. Depth to bedrock is approximately two to 14 feet bgs at the Site.

5. The stratigraphy of the site, from the surface down, consists of two to 14 feet of urban fill, sand, and gravel underlain by bedrock.

6. Soil/fill samples collected during the Phase II ESI showed:

    - VOCs were not detected above UUSCOs.
    - PFAS compounds were measured in a single sample. No PFAS compounds were detected above NYSDEC Guidance Values. Perfluorooctanesulfonic acid (PFOS) was detected at a concentration of 0.212 ng/g, perfluorodecanesulfonic acid (PFDS) was detected at a concentration of 0.055 ng/g, and total perfluorooctanoic acid (PFOA)/PFOS was detected at a concentration of 0.212 ng/g in SB-6.
    - Several SVOCs were detected above RUSCOs and RRSCOS in SB-4 and SB-5, including benzo(a)anthracene (max. 3.4 mg/kg), benzo(a)pyrene (max. 3.1 mg/kg), benzo(b)fluoranthene (max. 3.7 mg/kg), benzo(k)fluoranthene (1.4 mg/kg), chrysene (max. 3 mg/kg), dibenzo(a,h)anthracene (0.62 mg/kg), and indeno(1,2,3-cd)pyrene (max. 1.8 mg/kg).
    - Several pesticides were detected above UUSCOS but below RUSCOS and RRSCOs, including 4,4'-DDE (max. 0.181 mg/kg), 4,4'-DDD (max. 0.0268 mg/kg), and 4,4'-DDT (max. 0.806 mg/kg). Heptachlor (0.849 mg/kg), dieldrin (max. 0.069 mg/kg), and cis-chlordane (max. 3.47 mg/kg) were detected above RUSCOS but below RRSCOs in SB-4, SB-5, and SB-11. Pesticides were not detected above RRSCOs.
    - PCBs were not detected above UUSCOs.
    - Several metals were detected above UUSCOs but below RUSCOs and RRSCOs, including mercury (0.214 mg/kg), zinc (max. 1,500 mg/kg), and copper (max. 55.3 mg/kg). Barium (max. 522 mg/kg), lead (max. 1,370 mg/kg), and arsenic (max. 93.8 mg/kg) were detected above RRSCOs in SB-5 and SB-11.

7. Soil vapor samples collected during the Phase II ESI showed 1,1,1-Trichloroethane was detected in one soil vapor sample at a concentration of 2.74 $\mu g/m^3$ in SV-4. Based on the

NYSDOH Soil Vapor/Indoor Air Matrices, concentrations of 1,1,1-Trichloroethane were detected within the "No Further Action" range. Tetrachloroethene (PCE) was detected in all soil vapor samples at concentrations ranging from 59.7 $\mu g/m^3$ in SV-1 to 658 $\mu g/m^3$ in SV-5. Based on the NYSDOH Soil Vapor/Indoor Air Matrices, concentrations of PCE reported in soil vapor samples SV-2, SV-3, and SV-5 through SV-10 were detected above the "No Further Action" range and require mitigation.

PHASE II ENVIRONMENTAL SITE INVESTIGATION

1.0 SITE BACKGROUND

Association of New York Catholic Homes (Catholic Homes) is considering enrollment in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.9-acre site located at 484 East 178th Street in the Tremont section of the Bronx, New York. Residential use is proposed for the property. The proposed building will have a U-shape design with landscaped inner courtyard and a partial basement used for building superintendent housing, bicycle storage, community facility space, storage, and utilities. At grade, the building will have residential, residential amenity, and community facility spaces, as well as offices and lobbies. The Phase II ESI work was performed between March 29 and 30, 2023. This Phase II ESI summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 484 East 178th Street in the Tremont section of the Bronx, New York and is identified as Block 3043 and Lots 10, 16, 22, and 23 on the New York City Tax Map; these lots have been merged into a single lot (Lot 10) to facilitate the Site development. Figure 1 shows the Site location. The Site is 40,102-square feet and is bounded by East 178th Street to the north, a four-story commercial and office building as well as a three-story preschool to the south, Bathgate Avenue to the east, and Washington Avenue to the west. A map of the site boundary is shown in Figure 1. Currently, the Site is vacant and contains a ramp, staircase, and retaining walls around its elevated northeastern section. The Site slopes from the elevated northeastern section downward to the west and south, the elevation ranges from approximately 79 feet (NAVD 88) in the northeast to approximately 58 feet (NAVD 88) in the southwest.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a 100% affordable, approximately 230,875 gross square feet (gsf), eight-story (82-foot tall; 95-foot tall measured from Washington Avenue) multi-family residential building with a total of 251 dwelling units (inclusive of one

building superintendent unit). The building will have a U-shape design with landscaped inner courtyard and a partial basement used for building superintendent housing, bicycle storage, community facility space, storage, and utilities. At grade, the building will have residential, residential amenity, and community facility spaces, as well as offices and lobbies.

The open courtyard will be at grade level and consist of concrete pavers, planting soil, timber decking, and artificial turf. It will be used for outdoor recreation. The entryway on East 178th Street will also feature a small open space area with pavers on slab and planting soil. The proposed building footprint spans about 33,300 square feet, while the cellar spans about 15,600 square feet. The proposed development will achieve a full build-out to the property boundaries with an interior courtyard. Excavation depth ranges from 6.5-19.5 feet below surface grade for drainage features in the courtyard and structural footings beneath the building. If suitable for drainage and geotechnical purposes, existing site soils may remain in portions of the courtyard. Based on drilling refusal, bedrock is expected to be 2.0-14.0 feet below surface grade and follows the same general slope from the northeast down to the west and south as the surface grade. Excavation is not anticipated below the groundwater table. Demolition of existing the existing stair, ramp, and retaining walls will occur prior to construction. Layout of the proposed site development is presented in Figure 2. The current zoning designation is R7D, which promotes new medium-density contextual development along transit corridors. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

Adjoining properties include a three-story preschool (Sharon Baptist Head Start; 1925 Bathgate Avenue) and a four-story commercial and office building (1932 Washington Avenue). The neighborhood is primarily zoned for residential use, with a commercial district along East Tremont Avenue. Nearby sensitive receptors such as schools, hospitals, and day care facilities within a 250 to 500-foot radius identified by OER's *SPEED* application include the following:

- 1925 Bathgate Avenue, Sharon Baptist Head Start
- 1946 Bathgate Avenue, Bronx Charter School for Excellence 5
- 1956 Bathgate Avenue, El Batey de Dona Provi Garden
- 514 East 178th Street, Project Renewal Inc. Mobile Medical Van

- 4215 Third Avenue, Community Healthcare Network – Tremont
- 4226 3rd Avenue, Loyalty Daycare LLC

Figure 3 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

VHB was able to establish a history for the Site dating back to 1896 when the Site was improved with an early iteration of "St. Joseph's Academy" on southern portions, a mixed-use building on northwestern portions and two dwellings on northeastern portions. The most recent church structure with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling was constructed by 1901 along with another rendition of the academy/convent building. The neo-Gothic church was built of white stone quarried from the lot and faced with polished granite on the front and rear ends.[3] When built, the church provided seating for about 1,500 persons. A six-story horseshoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The former rectory appeared by 1950. The mixed-use commercial and residential buildings were demolished by 1981, and the dwelling on northeastern portions was demolished circa 2012. The church was closed as of 2015 and remaining buildings on the Site were demolished in 2019 for redevelopment of the Site.

According to information maintained by the NYCDOF, the current owners of record are identified as Church of St. Joseph to Tremont for Lot 16 and St Joseph R C Church for Lots 10, 22 and 23. Previous owners of Lot 16 include St. Barnabas Hospital and the City of New York, according to the Automated City Register Information System (ACRIS).

2.2 Previous Investigations

No previous ESIs or information regarding previous environmental investigations for the Site were provided to VHB for review at the time of preparation of this Phase II ESI .

2.3 Site Inspection

Isabel Mielczarek of VHB performed a site inspection on March 29, 2023. The Site was vacant at the time of inspection. No evidence of petroleum storage or gross contamination was observed at the time. A piezometer well from a previous geotechnical investigation was observed. Depth to water within the well was measured to be approximately 12.25 feet bgs,

[3] A supplemental description of the subject property history was obtained from the New York City American Guild of Organists.

however it is suspected that this was perched water above bedrock, as the well bottom was measured at approximately 12.45 feet bgs.

2.4 Areas of Concern

The AOCs identified for this site include:

3. One 3,000-gal fuel oil aboveground storage tank is registered to Lot 10 and municipal records reference several underground storage tanks (USTs; two 275-gallon on Lot 23 and one 1,000-gallon on Lot 22). It is unknown if these USTs remain on-site or have been removed. The AST was removed during demolition of the former church on site.
4. Demolition of former structures (particularly on Lots 16 [formerly occupied by a mixed-use elevator building] and Lot 22 [formerly occupied by a two-story dwelling]) indicating the potential presence of historic fill.

These AOCs are related to Recognized Environmental Conditions identified in the Phase I Report, which is presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this Phase II ESI is Isabel Mielczarek.

3.2 Health and Safety

All work described in this Phase II ESI was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the Phase II ESI was managed in accordance with applicable laws and regulations.

4.0 PHASE II ESI ACTIVITIES

VHB, at the direction of Catholic Homes, performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed eleven (11) soil borings across the entire project Site, and collected seventeen (17) soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed ten (10) soil vapor probes around Site perimeter and collected ten (10) samples for chemical analysis.

Installation of groundwater monitoring wells was attempted at six of the boring locations, however refusal was encountered above the groundwater interface at each location. As a result, groundwater samples could not be collected to evaluate groundwater quality.[4]

4.1 Geophysical Investigation

VHB and X-Ray Locators conducted a limited geophysical investigation (LGI) on March 29, 2023 within accessible areas of the Site that were within approximately ten feet of proposed boring locations. The purpose of the LGI was to attempt to identify potential utility interference at the soil boring and soil vapor sample locations prior to drilling activities. The LGI was conducted using an electromagnetic survey and ground-penetrating radar (GPR) Survey.

The results of the LGI identified sub-surface anomalies in the vicinity of proposed sample locations; however, sample locations did not need to be relocated as a result. During the investigation, VHB did not detect anomalies indicative of a UST(s).

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On March 29, 2023, eleven (11) soil borings (SB-1 through SB-11) were advanced at the Site. A Geoprobe direct-push drill rig supplied by AARCO Environmental (AARCO) of

[4] VHB corresponded with OER regarding the sampling issues on site and OER accepted forgoing collection of groundwater in an email dated March 29, 2023.

Lindenhurst, New York was used to collect all soil samples using a five-foot long Macro Core sampler fitted with a dedicated acetate liner. Soil samples were collected from the zero to two-foot bgs interval at each boring location. Deeper soil samples were collected where possible, as described in Section 4.3. Soil recovered from the boring locations was screened for evidence of anthropogenic impacts based on visual, olfactory, and photoionization detector (PID) methods. No evidence of gross contamination was identified in the soil borings.

Boring logs were prepared by a geologist and are attached in Appendix B. A map showing the location of soil borings and vapor points is shown in Figure 5.

Survey

Soil borings and soil vapor sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features using a digital measuring wheel.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all AOCs and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Soil and soil vapor have been sampled and evaluated in the Phase II ESI. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this Phase II ESI provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Seventeen (17) soil samples were collected for chemical analysis during this Phase II ESI from eleven (11) soil borings (SB1-SB11). All borings were advanced to refusal, which ranged from two (2) to fourteen (14) feet bgs across the site. One shallow interval (0-2’ bgs) soil sample was collected from each soil boring. Deeper soil samples were collected where possible at SB-1, SB-2, SB-3, SB-4, SB-5, and SB-11 from intervals ranging from 4-6’ bgs to 12-14’ bgs.

During sample collection, field personnel wore dedicated, disposable gloves, and all samples were directly collected from a driller-provided acetate sleeve and were placed in laboratory-

supplied containers. Following sample collection, the samples were placed in a cooler with ice and submitted under standard chain-of-custody protocol to Alpha Analytical Laboratory of Mansfield, Massachusetts (Alpha Analytical), a New York State Department of Health Environmental Laboratory Approval Program (NYSDOH ELAP)-certified laboratory. The samples were transported and analyzed within required holding times. Laboratories and analytical methods are shown below.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Appendix B. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Ten (10) soil vapor probes were installed and ten (10) soil vapor samples were collected for chemical analysis during this Phase II ESI. The vapor implants consisted of a field-decontaminated stainless retract-a-tip soil vapor screen attached to factory new polyethylene tubing. The sample points were sealed to the ground using non-toxic clay bentonite and areas immediately above each sample point were sealed with a canister, thus creating an annular space. The sub-slab soil vapor probes were installed to a depth of approximately 6 to 12" above the depth of refusal.

Prior to sample collection, a helium tracer gas test was performed at each soil vapor point to confirm the integrity of the seals. A grout-sealed helium shroud was constructed and placed over each soil vapor sample point. Helium gas was introduced into the shroud and was monitored with an MGD-2002 Helium Leak Detector. 24-hours following soil vapor probe installation, one to three implant volumes were purged prior to the collection of any soil-gas samples. Sampling occurred for the duration of approximately 2-hours. Flow rates for both purging and sampling did not exceed 0.2 L/min. Following purging, soil vapor samples were collected in 6-liter summa canisters and submitted under standard chain-of-custody protocol to Alpha Analytical. The samples were transported and analyzed within required holding times for volatile organic compounds (VOCs) via United States Environmental Protection Agency (USEPA) Method TO-15.

Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 2. Soil vapor sampling logs are included in Appendix C. Methodologies used

for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.*

Chemical Analysis

Chemical analytical work presented in this Phase II ESI has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Isabel Mielczarek
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the Phase II ESI is NYS ELAP certified and was Alpha Analytical
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil and soil vapor are summarized in Table 1 and 2, respectively. Laboratory data deliverables for all samples evaluated in this Phase II ESI are provided in digital form in Appendix D and E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site consists of approximately two to fourteen feet of historic fill material, sand, and gravel underlain by bedrock. Soils contained traces of gravel, brick, glass, asphalt, and concrete.

Hydrogeology

Groundwater was not encountered during investigation. Groundwater is greater than 14 feet bgs and not present in the unconsolidated material above bedrock.

5.2 Soil Chemistry

Seventeen (17) soil sample results collected during the Phase II ESI were compared to the NYSDEC Unrestricted Use (UU) Soil Cleanup Objectives (SCOs), Residential Use (RU) and Restricted Residential (RR) Use SCOs as presented in 6NYCRR Part 375-6.8. Soil sample results revealed the following:

- VOCs were not detected above UUSCOs.
- PFAS compounds were measured in a single sample, SB-6 (0-2'). No PFAS compounds were detected above NYSDEC Guidance Values. Perfluorooctanesulfonic acid (PFOS) was detected at a concentration of 0.212 ng/g, perfluorodecanesulfonic acid (PFDS) was detected at a concentration of 0.055 ng/g, and total perfluorooctanoic acid (PFOA)/PFOS was detected at a concentration of 0.212 ng/g in SB-6.
- Several SVOCs were detected above RUSCOs and RRSCOS in SB-4 and SB-5, including benzo(a)anthracene (max. 3.4 mg/kg in SB-4 (4’-6’)), benzo(a)pyrene (max. 3.1 mg/kg in SB-4 (4’-6’)), benzo(b)fluoranthene (max. 3.7 mg/kg in SB-4 (4’-6’)), benzo(k)fluoranthene (1.4 mg/kg in SB-4 (4’-6’)), chrysene (max. 3 mg/kg in SB-4 (4’-6’)), dibenzo(a,h)anthracene (0.62 mg/kg in SB-4 (4’-6’)), and indeno(1,2,3-cd)pyrene (max. 1.8 mg/kg in SB-4 (4’-6’)).
- Several pesticides were detected above UUSCOS but below RUSCOS and RRSCOs, including 4,4’-DDE (max. 0.181 mg/kg in SB-4 (4’-6’)), 4,4’-DDD (max. 0.0268 mg/kg in SB-4(4’-6’)), and 4,4’-DDT (max. 0.806 mg/kg in SB-4 (4’-6’)). Heptachlor (0.849 mg/kg in SB-11 (6.5’-8.5')), dieldrin (max. 0.069 mg/kg in SB-5 (12’-14’)), and cis-

chlordane (max. 3.47 mg/kg in SB-11 (6.5'-8.5')) were detected above RUSCOS but below RRSCOs in SB-4, SB-5, and SB-11. Pesticides were not detected above RRSCOs.

- PCBs were not detected above UUSCOs.
- Several metals were detected above UUSCOs but below RUSCOs and RRSCOs, including mercury (0.214 mg/kg in SB-4 (4'-6')), zinc (max. 1,500 mg/kg in SB-5 (12'-14')), and copper (max. 55.3 mg/kg in SB-10 (0-2')). Barium (max. 522 mg/kg in SB-5 (12'-14')), lead (max. 1,370 mg/kg in SB-5 (12'-14')), and arsenic (max. 93.8 mg/kg in SB-11 (6.5'-8.5')) were detected above RRSCOs in SB-5 and SB-11.

Data collected during the Phase II ESI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 1. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives.

5.4 Soil Vapor Chemistry

Ten (10) soil vapor samples (SV-1 through SV-10) were collected during the Phase II ESI and were compared to the New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion October 2006, updated May 2017, Matrix A, B and C. Soil vapor results detected petroleum-related VOCs (BTEX and their associated derivatives) in the ten soil vapor samples. The total concentration of BTEX compounds in soil vapor range from 10.441 micrograms per cubic meter ($\mu g/m^3$) in SV-1 to 65.77 $\mu g/m^3$ in SV-5.

1,1,1-Trichloroethane was detected in one soil vapor sample at a concentration of 2.74 $\mu g/m^3$ in SV-4. Based on the NYSDOH Soil Vapor/Indoor Air Matrices, concentrations of 1,1,1-Trichloroethane were detected within the "No Further Action" range. Tetrachloroethene (PCE) was detected in all soil vapor samples at concentrations ranging from 59.7 $\mu g/m^3$ in SV-1 to 658 $\mu g/m^3$ in SV-5. Based on the NYSDOH Soil Vapor/Indoor Air Matrices, concentrations of PCE reported in soil vapor samples SV-2, SV-3, and SV-5 through SV-10 were detected above the "No Further Action" range and require mitigation.

Data collected during the Phase II ESI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. The source of the soil vapor concentrations is unknown and may be originating off-site.

Figure 7 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the Phase II ESI, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property. Special considerations regarding the shallow bedrock and presumed depth to groundwater should be made for development purposes.

Executive Summary

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine evidence of recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), historic recognized environmental conditions (HRECs) and business environmental risks (BERs) in connection with four (4) contiguous parcels on the northern portions of a block bound by Washington Avenue, East 178th, Bathgate Avenue and East Tremont Avenue in the Borough of The Bronx, Bronx County, City of New York, State of New York (hereinafter referred to as the "subject properties"). The subject properties are collectively known by the street address of 1949 Bathgate Avenue, and are identified on the New York City (NYC) Tax Maps as Borough 2 - Block 3034 – Lots 10, 16, 22 and 23.

The subject properties have a topographic elevation that ranges from approximately 65-feet to 80-feet amsl and slopes downward from an elevated northwestern portion surrounded by retaining walls and staircases. Depth to groundwater beneath the subject properties is estimated to be within 80 feet bgs. The EDR database report indicates that groundwater was encountered at 11.7 to 15.9 feet bgs at the nearest site with available groundwater data. Regional groundwater is expected to flow to the south.

VHB was able to establish a history for the subject properties dating back to 1896 when the subject properties were improved with an early iteration of "St. Joseph's Academy" on southern portions, a mixed-use building on northwestern portions and two dwellings on northeastern portions. The existing church structure with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling was constructed by 1901 along with another rendition of the academy/convent building. The neo-Gothic church was built of white stone quarried from the lot and faced with polished granite on the front and rear ends. When built, the church provided seating for about 1,500 persons. A six-story horse shoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The rectory appeared by 1950. The mixed-use commercial and residential buildings were demolished by 1981, and the dwelling on northeastern portions was demolished circa 2012. The church was closed as of 2015 and remaining buildings on the subject properties are currently undergoing demolition in 2019 for redevelopment.

Lot 10 is developed with a vacant church building currently undergoing demolition and Lot 16 is developed with landscaped areas, paved walkways and stairs that provide access to the church building. Lot 22 is vacant and was temporarily used as a

garden in association with an ancillary church building formerly present on Lot 23 (recently demolished).

Based on the results of the visual inspection, records review and interviews, it was determined there were no RECs identified for the subject properties. However, the following BERs were identified during the course of this Phase I ESA:

- There is one (1) steel 3,000-gallon fuel oil AST registered to the property that reportedly was installed circa 1911, rested directly on soil and is listed as in-service as of submission of this Phase I ESA. No documentation of the AST condition has been provided to VHB for review and the site personnel present during site reconnaissance indicated that they were unaware of its location. It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment. Furthermore, no documentation of the conditions of former USTs at the time of removal has been provided. The potential presence of out-of-service oil tanks at the subject properties represents a BER. It is expected that all tanks, if encountered during demolition, will be removed in accordance with applicable regulations by the designated demolition contractor.

- Given the development history of the subject properties with the previous mixed-use building on of which was complete with an elevator on Lot 16 that has since been demolished as well as a two-story dwelling on Lot 22, there is a potential for remnant historic structures (i.e, remnant foundations) and urban fill materials to be present on the subject properties. Lot 22 is elevated with respect to surrounding grade. Potential presence of historical fill material of unknown origin is considered a BER. Historic fill materials, if encountered during redevelopment, should be removed and transported to a facility capable and permitted to handle such material during any potential redevelopment of the subject property.

1.0 Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was prepared to determine recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), historic recognized environmental conditions (HRECs) and business environmental risk (BERs) in connection with four (4) contiguous parcels on the northern portions of a block bound by Washington Avenue, East 178th, Bathgate Avenue and East Tremont Avenue in the Borough of The Bronx, Bronx County, City of New York, State of New York (hereinafter referred to as the "subject properties"). The subject properties are collectively known by the street address of 1949 Bathgate Avenue, and are identified on the New York City (NYC) Tax Maps as Borough 2 - Block 3043 – Lots 10, 16, 22 and 23. Figures depicting the subject properties location are included in Appendix A and representative site photographs are included in Appendix B of this Phase I ESA.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society for Testing and Materials (ASTM) Practice E1527-13, inclusive of the United States Environmental Protection Agency (USEPA) "All Appropriate Inquiry" requirement amended in the Federal Register on December 30, 2013. The United State Environmental Protections Agency (USEPA) "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-13 is to define good commercial and customary practice in the United States of America for conducting an environmental site

assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute *"all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice," as defined in 42 U.S.C. §9601 (35)(B).*

As stated in ASTM Practice E1527-13, the purpose of the Phase I ESA is to identify, to the extent feasible, pursuant to the process established by ASTM Practice E1527-13, *"recognized environmental conditions in connection with a property."*

The term "*recognized environmental conditions*," as defined by ASTM Practice E1527-13 means *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment under conditions indicative of a release to the environment under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions"*

The term *"de minimis conditions*," as defined by ASTM Practice E1527-13 means "*a condition that generally does not present a threat to human health or the environment that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions*."

The term "*controlled recognized environmental condition*," as defined by ASTM Practice E1527-13 means "*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls. A condition considered by the Environmental Professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment.*

The term "*historic recognized environmental condition*," as defined by ASTM Practice E1527-13 means "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls. Before calling the past release a historical recognized*

environmental condition, the Environmental Professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the Environmental Professional considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

The term "*business environmental risk*," as defined by ASTM Practice E1527-13 means "*a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.*"

This Phase I ESA, as required by ASTM Practice E1527-13, specifically consists of the following four components:

1. Records Review
    a. Physical settings document review
    b. Regulatory database records search
    c. Local municipal agency records search
    d. Historic use records search
2. Site Reconnaissance
3. Interviews with Past and Present Owners and Occupants
4. Evaluation and Reporting

As stated in Practice E1527-13, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-13. The issues are referred to as non-scope considerations. The following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I ESA:

- Radon
- Lead-Based Paint (LBP)
- Asbestos-Containing Materials (ACM)
- Wetlands
- Mold and Water Damage

1.3 Significant Assumptions

In preparation of the Phase I ESA, it is generally assumed that information provided within the Environmental Database Resources, Inc. (EDR) report, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.

2. The data reported, and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-13. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client.

3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by VHB Engineering, Surveying, Landscape Architecture and Geology, P.C. (VHB).

4. VHB's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. VHB does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of

contamination at the site and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation.

6. This report is based, in part, on information supplied to VHB by third-party sources. While efforts have been made to substantiate this third-party information, VHB cannot attest to the completeness or accuracy of information provided by others.

7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in September 2019 by Christopher Rooney and was supervised by Bryan Murty, Senior Project Manager of VHB at the request of Association of New York Catholic Homes. VHB assumes no liability for use of this report by any person or entity other than the Client, for which it was prepared. Any potential future user of this document would be subject to VHB approval and such user's reliance on this document would be in accordance with the terms and conditions of the original contract.

2.0

Site Description

2.1 Property and Address Location

The subject properties consist of four (4) contiguous parcels on the northern portions of a block bound by Washington Avenue, East 178th, Bathgate Avenue and East Tremont Avenue in the West Bronx section and Tremont neighborhood of the Borough of The Bronx, Bronx County, City of New York, State of New York. The subject properties are situated in an urban mixed-use area with residential, manufacturing, parkland and commercial uses nearby. The subject properties are collectively identified as 1949 Bathgate Avenue. However, according to the New York City Departments of Finance and Buildings (NYCDOF and NYCDOB), each individual parcel that comprises the subject properties contains an individual address. The northwestern-most lot is identified by the street address of 484 East 178th Street and the northeastern lots are referred to as 1951 Bathgate Avenue and 1949 Bathgate Avenue while the southern of the three parcels are known by the street addresses of 1940 Washington Avenue, 1948 Washington Avenue and 1947 Bathgate Avenue. Figures depicting the subject properties are included in Appendix A and representative site photographs are included in Appendix B of this Phase I ESA.

2.1.1 Tax Map Number

The subject properties are identified on the NYC Tax Maps as Borough 2 - Block 3034 – Lots 10, 16, 22 and 23. An excerpt of the tax map is provided as Figure 3 in Appendix A.

2.1.2 Acreage and Building Size

The associated acreage and size of habitable structures for each respective parcel that comprise the subject properties according to records maintained by the NYCDOF is provided in the table, below:

Parcel Number	Parcel Square Footage (s.f.)	Parcel Acreage	Building Size
Lot 10	22,381 s.f.	0.51 acres	14,850 s.f.
Lot 16	7,489 s.f.	0.17 acres	0 s.f.
Lot 22	7,581 s.f.	0.17 acres	0 s.f.
Lot 23	2,653 s.f.	0.06 acres	1,286 s.f.

2.1.3 Ownership

According to information maintained by the NYCDOF, the current owners of record are identified as Church of St. Joseph to Tremont for Lot 16 and St Joseph R C Church for Lots 10, 22 and 23.

2.1.4 Title Report

No title report was provided to VHB for review from the Client or the owners previously identified in Section 2.1.3 of this Phase I ESA.

2.1.5 Zoning

According to the City of New York Zoning Maps, the subject properties are currently located in the residential R6A zoning district.

2.2 Current Occupancy and Property Use

Lot 10 is developed with a vacant church building currently undergoing demolition and Lot 16 is developed with landscaped areas, paved walkways and stairs that provide access to the church building. Lot 22 is vacant and was temporarily used as a garden in association with an ancillary church building formerly present on Lot 23 (recently demolished).

3.0

Site Geology and Hydrogeology

3.1 Topography and Site Characteristics

3.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Central Park, NY Quadrangle (see Figure 4 in Appendix A) and online aerial imagery and topographic data available from Google Earth. The subject properties have a topographic elevation that ranges between approximately 65 feet above mean sea level (amsl) to 80 feet amsl. The topography of the subject properties slopes downward to the south and west with the use of retaining walls and staircases.

3.1.2 Surface Water Bodies

No surface water bodies are present on the subject properties. The nearest surface water body is Indian Lake located approximately 0.60 mile to the southeast. An associated wetland analysis is provided in Section 7.4 of this Phase I ESA.

3.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservsation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the primary soil component in the vicinity of the subject properties are identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the subject properties. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand and stratified sandy loam.

Additional information regarding the soil classification is also included on Pages A-4 and A-5 of the EDR report (Appendix F).

3.2 Groundwater Characteristics

3.2.1 Depth to the Water Table

The most extensive aquifers in the Bronx, where the overall property is located, are bedrock aquifers. Bedrock aquifer formations underlie most of the Bronx and northern Westchester County, storing and transmitting groundwater in fractures and joints. In many valleys or low-lying areas, saturated surficial deposits (known as unconsolidated aquifers, sand and gravel aquifers, or overburden aquifers) store and transmit water through pore spaces between sediment grains. However, neither of the aquifer systems located in the Bronx is considered to be a prolific means of water production.

Groundwater at the site is likely perched and recharges through precipitation, stormwater run-off and possibly leaking utilities. Depending on the thickness and permeability of unconsolidated deposits, groundwater may or may not be present above bedrock and where present likely migrates via preferential pathways or remains relatively stagnant. Groundwater migration is also likely influenced by adjacent building foundations and footings. No water table elevation maps are available for Bronx County. For the purposes of this Phase I ESA, depth-to-groundwater is assumed to be within 80 feet below grade surface (bgs).

A review of well data available from the USGS indicates indicated that the nearest USGS monitoring point (Well 40000834384) well is located further than one-quarter mile from subject properties and there is no groundwater data available for this location. Based on a review of the Environmental Data Resources, Inc. (EDR) database report, the nearest site with available groundwater data, is 1888 Bathgate Avenue Redevelopment, located approximately 0.10 mile south of the subject properties. The EDR database report indicates that groundwater was encountered at 11.7 to 15.9 feet bgs at this site.

3.2.2 Groundwater Flow Direction

Groundwater flow direction typically mimics surface topography. Based upon information included in the EDR database report, regional groundwater is expected to flow to the south. Groundwater flow may vary local due influences of underground structures or de-watering operations.

3.2.3 Groundwater Classification

Although not used as a source of drinking water, groundwater underlying the subject properties and the surrounding area is categorized as Class GA. This classification requires quality standards to be the most stringent.

3.2.4 Groundwater Quality

As groundwater is not used as a potable water source in the site vicinity, no ambient current groundwater quality data are known to exist for New York County. However, due to the historic high-density development associated with New York City, groundwater is likely impaired.

3.3 Geology

The consolidated rocks in New York City are of igneous, sedimentary, and metamorphic origin and are Pre-Cambrian to Triassic in age. The igneous rocks consist of granite, pegmatite, granodiorite, diabase, and basic dikes. The sedimentary rocks are composed of shale and sandstone of Triassic age, which occur only on Staten Island, and the metamorphic rocks consist chiefly of gneiss, schist, and marble. The consolidated rocks are exposed or are close to the land surface in much of northern New York and Bronx Counties. In Richmond County, the serpentine bedrock in the central part of the County is exposed in a few places but is generally covered by unstratified glacial drift or other deposits. In Kings and Queens Counties the surface of the bedrock slopes about 80 feet per mile to the southeast and is buried under Cretaceous and Pleistocene deposits aggregating as much as 1,150 feet in thickness. Bedrock is exposed only in a small area near Astoria in northwestern Queens County.

The igneous and metamorphic rocks in New York City are crystalline and contain practically no pore spaces. They do, however, contain joints, openings along cleavage planes, and other fractures through which small amounts of groundwater may move. Larger quantities of water occur in the Inwood limestone, a metamorphic rock, in which the openings have been enlarged by solution. The sedimentary rocks yield water chiefly from joints, and openings along bedding and fault planes. Some water may be held in the pore spaces between the grains of which rocks are

composed. The volume of water held in this manner is generally small but varies depending upon the kind and amount of cementation of the rock, and the size of the pores.

The unconsolidated deposits which overlie the consolidated bedrock of New York City consist of beds of gravel, sand, silt and clay. The deposits range in geologic age from Cretaceous to Recent and are divided into two groups: deposits of Cretaceous age, and deposits of Quaternary (Pleistocene and Recent) age. The unconsolidated deposits are thickest in Kings and Queens Counties (up to 1,150 feet thick) and have a considerable range in thickness in the other counties, reaching a maximum thickness of about 400 feet in Richmond County.

The deposits of Cretaceous age are important or potentially important as sources of groundwater only in Richmond and the Long Island Counties. They are entirely absent in Bronx and New York Counties. The deposits originated mainly as stream deposits of the flood-plain and deltaic varieties and consequently show marked variations in texture and sorting both vertically and horizontally. The sediments range from solid clays to relatively clay-free beds of fine to coarse sand and gravel. Between these extremes are mixed textural types such as clayey sand, sandy clay, and clayey gravel. These materials, in general, occur in discontinuous lenses.

Much of the surface of Richmond, New York, and Kings and Queens Counties is immediately underlain by unconsolidated deposits of Pleistocene and Recent age. In Bronx County, the deposits are thinner, and more outcrops of rocks are evident than in other parts of the City. The deposits consist of four units: unstratified till forming the Harbor Hill terminal moraine; unstratified drift forming ground moraine; stratified sediments, largely outwash sand and gravel deposited by streams from melting glaciers during several stages of ice advances, but locally including beds of clay which may be the equivalent of the Gardiners clay; and alluvium of Recent age.

The outwash sand and gravel deposits contain abundant groundwater supplies in southeastern Richmond and southern New York Counties and most of Kings and Queens Counties. These well-sorted sediments were deposited in flood plains, deltas, and fans in front of the glaciers by melt-water streams. They are porous and highly permeable. Outwash deposits in Kings and Queens Counties comprise two distinct units separated by the interglacial Gardiners clay. The older, lower, unit is called the Jameco gravel; the upper unit is part of the post-Gardiners deposits referred to on Long Island as the upper Pleistocene deposits.

There is some evidence that locally, as in Kings County, the clay was not deposited or was cut through by streams before the deposition of the younger outwash, which therefore in places, may rest directly on the Jameco gravel. Thus, the geologic and hydrologic conditions in the Pleistocene deposits in Kings and Queens Counties are complex. Similar conditions may occur in the other counties where corresponding erosional and depositional events may have taken place.

The Jameco gravel and the Gardiners clay have not been positively identified in Bronx, New York, and Richmond Counties, and most of the glacial deposits in those counties probably are the equivalent of the upper Pleistocene deposits of Long Island. However, some of the deeper valley-fill deposits in Staten Island and Manhattan may be the equivalent of the Jameco gravel.

The alluvium of Recent age is of little importance as a source of groundwater in New York City. The deposits, ranging in thickness from several feet to as much as 100 feet, consist of white to gray sand and gravel, usually containing broken shell fragments, and layers of dark gray organic clay and silt. The clay and silt help to seal the fresh water aquifers against salt water intrusion. Some thin deposits of recent age may occur in the valleys of the streams draining Bronx County, but most of the deposits occur beneath the beaches, offshore bars, tidal channels, and embayment's bordering the City.

4.0

Site History

4.1 Municipal Records Review

Local government record keeping, pertaining to the subject properties being located in the Borough of The Bronx, Bronx County, City of New York, State of New York, is under the jurisdiction of the following agencies:

Agency Name	Type of Records Maintained	Date Freedom of Information Requests Submitted	Date of Agency Response, Records Review or Records Receipt
City of New York, Department of Finance	Tax assessment records, parcel/building size, ownership.	N/A	On-line database review conducted May 31, 2019.
City of New York Department of Buildings	Building permit applications, building permits, site plans, surveys.	N/A	On-line records review conducted May 31, 2019.
City of New York Fire Department	Fire prevention violations, registration of underground and aboveground petroleum and motor vehicle fuel storage tanks.	April 22, 2019	Responses received from Violation Section May 23, 2019. Responses from Tank Section pending.
City of New York Department of Health and Mental Hygiene	Environmental investigations, lead-based paint poisoning, asbestos.	April 22, 2019	Response received June 4, 2019.
City of New York Department of Environmental Protection	Sewer and water records, lead-paint, asbestos, emergency response, air, noise, permitting and enforcement.	April 22, 2019	Response received April 26, 2019.
New York State Department of Environmental Conservation	Spill incident and inactive hazardous waste site records.	N/A	N/A

Available copies of local government correspondence and/or records are provided in Appendix C. Pertinent records, if any, that are received following submission of this Phase I ESA and determined to significantly affect the findings, conclusions and/or recommendations set forth will be forwarded as an addendum to this Phase I ESA.

Summary of Records Reviewed/Obtained as of the Date of Report Issuance

New York City Department of Finance

The following is a summary of pertinent information obtained from the NYCDOF)

Tax Lot:	Borough 2 – Block 3043 – Lot 10
Address:	1940 Washington Avenue
Owner:	St Joseph R C Church
Lot Size:	22,381 s.f. – Irregular
Classification:	M1 - Church, Synagogue, Chapel, Mosque
Building Size:	14,850 s.f.
Year Built:	1911

Tax Lot:	Borough 2 – Block 3043 – Lot 16
Address:	No # Washington Avenue
Owner:	Church of Saint Josephto Tremont
Lot Size:	7,489 s.f. – Rectangular
Classification:	V0 - Vacant Land
Building Size:	N/A
Year Built:	N/A

Tax Lot:	Borough 2 – Block 3043 – Lot 22
Address:	1951 Bathgate Avenue
Owner:	St Joseph R C Church
Lot Size:	7,581 s.f. – Rectangular
Classification:	V0 - Vacant Land
Building Size:	N/A
Year Built:	N/A

Tax Lot:	Borough 2 – Block 3043 – Lot 23
Address:	1949 Bathgate Avenue
Owner:	St Joseph R C Church
Lot Size:	2,653 s.f. – Rectangular
Classification:	M3 - Church, Synagogue, Chapel, Mosque
Building Size:	1,286 s.f.
Year Built:	N/A

New York City
Department of Buildings

The NYCDOB computerized Property Profile Overview (PPO) was reviewed on May 31, 2019 for each individual parcel that comprise the subject properties. The following information was obtained for the subject properties:

Block 3043 - Lot 10

The PPO indicates that there are no Certificates of Occupancy (C/Os) for Lot 10. However, the PPO notes records of alterations dated 1895 and 1912, building notices dated 1921, 1924 and 1929, plumbing repairs in 1947 as well as demolition permits dated 1960 and 2018. Furthermore, a job filling for an electric sign is dated 1920. It should be noted that there is an active violation listed on the PPO for lack of a boiler inspection issued in 1995 as well as job filling to replace two boilers and associated oil burners with new boilers and dual fired oil and gas burners also in 1995. The PPO indicated electric meters were replaced in 1996 and 2013. There are no records or elevators or other unresolved complaints of Environmental Community Board (ECB) violations. Given the presence of oil burners and dual-fired heating systems, there is a potential for fuel oil to have been utilized on-site. An associated analysis of potential sources of fuel oil is included in Sections 5.2 and 6.4.2 of this Phase I ESA.

Block 3043 – Lot 16

The PPO indicates that there are no C/Os for this property. Lot 16 is associated with miscellaneous actions in 1963 and a single job filling for upgrades of various amenities including asphalt, play areas, walkways, steps, fences and gates. No boiler or elevator records were identified on the PPO in association with Lot 16. Furthermore, there are no records of complaints or DOB/ECB violations listed for the parcel.

Block 3043 - Lot 22

The PPO indicates that there are no C/Os for Lot 22. However, the PPO notes records of alterations dated 1891, plumbing repairs in 1942, a building notice dated 1948 and demolition of the three-story building circa 2012. It should be noted that there is an active violation listed on the PPO for lack of a boiler inspection issued in 1994 as well as job filling to remove one 1,000-gallon underground storage tank (UST) also in 2012. An associated analysis of petroleum storage tanks and fuel oil sources is provided in Sections 5.2 and 6.4.2 of this Phase I ESA. There are no records or elevators or other unresolved complaints of Environmental Community Board (ECB) violations.

Block 3043 - Lot 23

The PPO indicates that there are two C/Os for Lot 23. The C/O dated January 11 1991 is for a church with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling. The remaining C/O documents mention buildings with a basement and three car garages in the 1920s unlikely to pertain to the subject properties, based on available address information. The PPO notes a new building in 1919, building notices dated 1926, 1953, 1970 and 1971, plumbing repairs in 1974, records of alterations dated 1988, replacement of a sidewalk vault roof circa 2011 and demolition of the former convent circa 2017. It should be noted that there is an active stop work order for the site listed on the PPO for complaints relating to the safety during demolition and an expired permit. There are also indications of a boiler on the premises and a job filing for the removal of two 275-gallon USTs in 2012. An associated analysis of petroleum storage tanks and fuel oil sources is provided in Sections 5.2 and 6.4.2 of this Phase I ESA. There are no records or elevators or other unresolved complaints or active Environmental Community Board (ECB) violations.

Copies of the NYCDOB information are included in Appendix C.

New York City Fire Department

Freedom of Information Law (FOIL) applications were forwarded to the New York City Fire Department (FDNY) on April 22, 2019. VHB received responses from the Violations Section of this agency dated May 23, 2019, which indicated that no violation as listed for 1948, 1949 or 1950 Washington Avenue. No response has been received to date from the Tank Section of this agency in association with the aforementioned request. Any additional information that may become available that affect the findings, conclusions and/ or recommendations set forth in this Phase I ESA will be forwarded as an addendum.

New York City Department of Health and Mental Hygiene

A FOIL request was submitted to the New York City Department of Health and Mental Hygiene (NYCDOH) on April 22, 2019 with respect to the subject properties and VHB received a response dated June 4, 2019, which indicated that no records were identified for the subject properties.

New York City Department of Environmental Protection

FOIL applications were forwarded to the New York City Department of Environmental Protection (NYCDEP) on April 22, 2019. VHB received responses

from this agency, dated April 26, 2019, that indicated that no records were identified for the subject properties.

New York State Department of Environmental Conservation, Region Two

No spill incidents or environmental remediation database entries were identified on or adjacent to the subject properties with the potential to represent a significant environmental risk. As such, no FOIL requests were submitted to the NYSDEC.

Adjacent Properties

No adjacent properties were identified within the visual inspection or EDR database report with the potential to represent a significant environmental risk to the subject properties. As such, no FOIL requests were submitted with regard to adjacent or surrounding properties.

Copies of local government correspondence and/or records are provided in Appendix C.

4.2 Historical Resources Review

4.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject properties and immediate surrounding area. Fire Insurance Maps were provided for the years 1896, 1901, 1903, 1915, 1903, 1915, 1950, 1977 to 1981, 1984, 1985, 1986, 1989, 1991 to 1996, 1998 and 2001 to 2007. (Appendix D). The following is a summary of information provided within the aforementioned Sanborn Maps:

Date	Comments
1896	**Subject Properties:** The subject properties are divided into four lots developed with four building structures. A three-story structure with one-story extensions on western portions as well as two (2) two-story buildings on eastern portions are unlabeled, while a three-story structure one southern portions is denoted as "St. Joseph's Academy." **Surrounding Properties:** The adjacent properties include a Methodist Church to the west-northwest and a police station adjoining to the south-southeast. The roadway network is consistent with its current configurations. Vacant parcels are depicted to the east and northeast, while remaining adjacent uses are limited to relatively small one- or two-story buildings consistent with dwellings.
1901	**Subject Properties:** The subject properties have been renovated/redeveloped with a larger church building replacing the former academy and occupying the southern portions, consistent with the current church building currently under demolition. A smaller building labelled "Academy" is present immediately northeast of the same. Portions of an earlier building on northwestern portions remain and a two story-building on northeastern portions has been extended and is complemented by a one-story accessory structure. **Surrounding Properties:** The surrounding areas are more densely developed, with residential, institutional and commercial properties. The adjacent church and police station remain. A livery stable and duplex are present to the east and southeast, respectively. The remaining adjacent properties are unlabeled. A railroad is present one block to the west.
1903	**Subject and Surrounding Properties:** The subject and a majority of the surrounding properties are not depicted and, therefore, no representation can be made as to the precise site configuration at this time based on this resource.
1915	**Subject Properties:** The academy on central-east portions has been relabeled as a convent. The two-story building on northeastern portions is labelled as a dwelling. A six-story horse shoe-shaped building with a centrally located elevator has been constructed on northwestern portions and is indicated for use as storefronts with dwellings above along with the earlier structure still present on central-west portions. **Surrounding Properties:** The adjacent and surrounding properties are also shown in greater detail than in previous Sanborn map depictions. The adjacent uses are generally residential with some commercial uses and several intuitions uses including a temple, another church and the police precinct. A garage has now been constructed adjacent the subject properties to the southwest, likely in association with the police precinct.
1950	**Subject Properties:** The subject properties configuration is similar to the 1950 Sanborn map depiction. However, the former convent appears to have been redeveloped or renovated as the existing rectory that is now present on Lot 23. **Surrounding Properties:** The surrounding areas are more densely developed with commercial, mixed-use and multi-family residential apartment buildings. In addition, a post office was constructed across the roadway to the west and an associated parochial school is now present to the east. A funeral home replaced the livery.
1977	**Subject Properties:** The older and smaller of mixed-use building on northeastern portions has been presumably demolished. **Surrounding Properties:** The post office has been demolished and an iron works in now present beyond.
1979-1980	**Subject and Surrounding Properties:** The subject and surrounding properties appear similar to their 1977 Sanborn map depictions.

1981	**Subject Properties:** The six-story building formerly present on northwestern portions is no longer present. The remaining portion of the subject properties are similar to the 1969 through 1980 Sanborn map depictions. **Surrounding Properties:** The adjacent and surrounding properties appear similar to their 1977 through 1980 Sanborn map depictions. The surrounding density has decreased, with several parcels appearing vacant.
1984	**Subject Properties:** The subject properties appear similar to the 1981 Sanborn map depictions. **Surrounding Properties:** The parcel adjacent to the north-northwest has been redeveloped with a six-story residential building. In addition, a five-story apartment building was cleared from land adjacent to the northeast.
1985-1996	**Subject and Surrounding Properties:** The subject and surrounding properties appear generally similar to their 1984 Sanborn map depiction.
1998	**Subject Properties:** The subject properties appear similar to the 1981 through 1996 Sanborn map depictions. **Surrounding Properties:** There were several adjoining two-story residences constructed to the southwest.
2004-2007	**Subject and Surrounding Properties:** The subject and surrounding properties appear generally similar to their 1998 Sanborn map depiction.

Based on a review of historical Sanborn map depictions, the subject properties were improved with an early iteration of "St. Josephs Academy" on southern portions as well as a mixed-use building and two dwellings on northern portions all before 1896. The existing church structure was constructed by 1901 along with another rendition of the academy building, which was labeled as a convent by 1915. A six-story horse shoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The existing rectory appeared in its current configurations by 1950. The six-story mixed use commercial and residential building was demolished by 1981 and the subject properties remained in similar configuration through 2007.

Given the development history of the subject properties with the previous six-story mixed-use building complete with an elevator on Lot 16 that has since been demolished as well as a two-story dwelling on Lot 22 present through 2007, there is a potential for remnant historic structures (i.e, remnant foundations) and urban fill materials to be present on the subject properties. Same are considered BERs for the respective parcels.

4.2.2 Historical Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Historical aerial photographs were provided for the years 1924, 1951, 1954, 1966, 1974, 1976, 1984, 1991, 1995, 2006, 2009, 2013 and 2017 (Appendix E). VHB preformed a review to identify information regarding past uses of the subject and surrounding

properties, in order to help determine if historical usage represented an environmental risk. The following is a summary of information provided within the aforementioned aerial imagery:

Date	Comments
1924 - 1951	**Subject properties:** Consistent with historical Sanborn maps, the subject properties were improved with the existing church building on southern portions, a horse shoe-shaped building on northwestern portions and smaller structures on northeastern portions. A building on central-west portions appears until 1966. **Surrounding Properties:** The surrounding area is densely developed with buildings of various configuration and size. The neighborhood is transected by a railway and parkland is present to the southeast. No intense industrial uses are visible.
1966	**Subject and Surrounding Properties:** The subject and surrounding properties are generally consistent with the previous aerial photographs; however, the smaller building on western portions is no longer visible, either demolished or obscured by shadows.
1984	**Subject properties:** The former horse shoe-shaped building no longer is present. The remaining portions of subject properties appear similar to their current configuration, with the church building present. **Surrounding Properties:** Consistent with historical Sanborn maps, the density of the surrounding area has decreased, with several parcels appearing vacant.
1991 - 2009	**Subject and Surrounding Properties:** The subject and surrounding properties are generally consistent with the 1984 aerial photograph. It should be noted that the resolution of certain aerial photographs is insufficient to determine precise building conditions and site uses.
2013 - 2017	**Subject and Surrounding Properties:** The subject and surrounding properties are generally consistent with the previous aerial photographs; however, the former dwelling on northeastern portions is no longer visible, either demolished or obstructed by tree cover.

The historical aerial photographs are generally consistent with the historical Sanborn maps, confirming that the subject properties were improved with several structures including the existing church building prior to 1924, shadowing the location of the former convent. The building structures on western, northwestern and northeastern parcels were demolished by 1966, 1984 and 2013, respectively. The subject properties have remained in similar configuration since approximately 2013.

As previously indicated, given the development history of the subject properties with the previous mixed-use buildings on Lots 10 and 16 that have since been demolished as well as a two-story dwelling on Lot 22, there is a potential for remnant historic structures (i.e, remnant foundations) and urban fill materials to be present on the subject properties. Same are considered BERs for the respective parcels.

4.2.3 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject properties were provided to VHB for review at the time of preparation of this Phase I ESA.

4.2.4 Activity and Use Limitation

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the properties as a result of environmental issue identified at the subject properties. The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, NYCDOB, and the EDR report. No environmental liens or AULs were identified for the subject properties as a result of the search. However, it should be noted that there is an unresolved violation by DOB listed on the PPO for Lot 23 and an active stop work order was in effect at the time of preparation of this report. However, this does not appear to be environmental in nature and does not represent a significant environmental risk to the subject properties.

4.2.5 Summary of Site History

VHB was able to establish a history for the subject properties dating back to 1896 when the subject properties were improved with an early iteration of "St. Joseph's Academy" on southern portions, a mixed-use building on northwestern portions and two dwellings on northeastern portions. The existing church structure with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling was constructed by 1901 along with another rendition of the academy/convent building. The neo-Gothic church was built of white stone quarried from the lot and faced with polished granite on the front and rear ends.[1] When built, the church provided seating for about 1,500 persons. A six-story horse shoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The rectory appeared by 1950. The mixed-use commercial and residential buildings were demolished by 1981, and the dwelling on northeastern portions was demolished circa 2012. The church was closed as of 2015 and remaining buildings on the subject properties are currently undergoing demolition in 2019 for redevelopment.

▼

[1] A supplemental description of the subject property history was obtained from the New York City American Guild of Organists.

5.0

Regulatory Agency Database Search

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject properties (Appendix E). List of the databases searched, and the search radius is shown on the summary table below. VHB reviewed the database output to determine if the subject properties appear on any of the regulatory agency lists.

5.1 Federal Databases

Agency	Listing Name or Database Searched	Abbreviation	Search Distance	Subject Properties Listed?	No. of Sites within the Search Radius
USEPA	National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	0
USEPA	Superfund Enterprise Management System (former CERCLA Information System	SEMS and SEMS-ARCHIVE	0.5 mile	No	0
USEPA	Corrective Action Reports	CORRACTS	1.0 mile	No	0
USEPA	Federal Facility Site Information	FFSI	1.0 mile	No	0
USEPA	Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	0
USEPA	Resource Conservation and Recovery Act - Small/Large Quantity, Conditionally Exempt Small Quantity and Former Hazardous Waste Generators	RCRA SQG/LQG/CESQG/ NonGen	0.25 mile	**Yes**	5 LQG 3 SQG 0 CESQG 71 NonGen
USEPA	Engineering Control Sites	USEC	0.5 mile	No	0
USEPA	Institutional Control Sites	USIC	0.5 mile	No	0
USGS	Department of Defense Sites	DOD	1.0 mile	No	0
USACE	Formerly Used Defense Sites	FUDS	1.0 mile	No	0
USEPA	Brownfields Sites	US Brownfields	0.5 mile	No	0
USDOJ	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile	No	0

Agency	Listing Name or Database Searched	Abbreviation	Search Distance	Subject Properties Listed?	No. of Sites within the Search Radius
USEPA	Superfund (CERCLA) Records of Decision	ROD	1.0 mile	No	0
USDOE	Mines Master Index File	UMTRA	0.5 mile	No	0
USEPA	Open Dump Inventory	ODI	0.5 mile	No	0
US NAVY	Land Use Control Information System	LUCIS	0.5 mile	No	0
USEPA	Mines Master Index File	MINES	0.25 mile	No	0
FEMA	FEMA Underground Tank Database	FEMA-UST	0.25 mile	No	0

The subject properties were identified on one of the above listed databases: RCRA-NonGen. The RCRAInfo database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Although they may have in the past, RCRA-NonGen sites do not presently generate hazardous waste. A review of the EDR report revealed that the one RCRA-NonGen listings associated with a subject property address represents a utility feature, a service boxes, maintained by the local electrical company. The listings are the result of shipments circa 2014 of lead-impacted waste typical during routine maintenance. These features do not typically cause significant subsurface impacts. Furthermore, no record of RCRA violations or spill files were identified in connection to these features. As such, the RCRA-NonGen listings do not represent a significant environmental risk to the subject properties.

The subject properties are not included on any of the other above-listed federal databases.

In addition to the 18 federal databases with search radii of one-eighth of a mile to one mile, over 22 additional federal databases were searched to determine if the subject properties are listed. These databases include Federal Superfund Liens (NPL Liens), Emergency Response Notification System (ERNS), Hazardous Material Information Reporting System (HMIRS), Toxic Chemical Release Inventory System (TRIS), Toxic Substances Control Act (TSCA), TSCA Tracking System (FFTS), Section 7 Tracking System (SSTS), Integrated Compliance Information System (ICIS), Radiation Information Database (RADINFO), Federal Insecticide, Fungicide & Rodenticide Act / Toxic Substance Control Act Tracking System (FTTS), Historic FTTS sites (HISTFTTS), US Department of Transportation Incident and Accident Date (DOT OPS), Clandestine Drug Labs (CDL), Historical Clandestine Drug Labs (HCDL), CERCLA Lien information (LEINS2), PCB Activity Database System (PADS), Material License Tracking System (MLTS), Facility Index List (FINDS), RCRA Administrative Action Tracking System (RAATS), PCB Transformer Registration Database (PCBTRD), Coal Ash – Department of Energy (CADOE) and Financial Assurance Information Listing (FAIL). The subject properties are not listed any of the 22 additional federal databases.

A review of the EDR report has revealed that there are five RCRA-LQG and three RCRA-SQG facilities as well as 70 additional RCRA-NonGen facilities listed as within one-quarter mile of the subject properties.

Resource Conservation and Recovery Act – Large Quantity, Small Quantity, Conditionally Exempt Small Quantity and No Longer Regulated Hazardous Waste Generators (RCRA-LQG, RCRA-SQG, RCRA-CESQG and RCRA-NonGen)

As previously mentioned, the RCRAInfo database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. RCRA-LQGs generate over 1,000 kilograms (kg) of hazardous waste or over one kg of acutely hazardous waste per month. RCRA-SQGs generate between 100 kg and 1,000 kg of hazardous waste per month. RCRA-NonGen sites do not presently generate hazardous waste. There was a total of 79 RCRA facilities located within one-quarter mile of the subject properties. There are no unresolved violations are associated with the RCRA-LQG and RCRA-SQG facilities identified within one-quarter mile of the subject properties. Furthermore, none of the aforementioned RCRA-LQG and RCRA-SQG facilities are located adjacent to the subject properties. As previously indicated, RCRA-NonGen sites do not presently generate hazardous waste and, therefore, their listings are unlikely to represent a significant environmental risk to the subject properties. In addition to the utility feature associated with the subject properties, there are two RCRA-NonGen facilities potentially located adjacent to the subject properties. The same are as follows:

- ConEdison, 495 East 178th Street, refers to a utility feature located adjacent to the north and hydraulically upgradient of the subject properties. There is no record of violations or other listings in connection with this facility. As previously discussed, these utility service features are not typically anticipated to cause significant subsurface impacts on adjacent or surrounding properties. As such, this listing does not represent a significant environmental risk to the subject properties.

- Bronx Shepherds Restoration Corporation, 1932 Washington Avenue, refers to a contractor office that is present adjacent to the south and hydraulically downgradient of the subject properties. The listings are the result of shipments of ignitable, corrosive, non-halogenated solvent and lead wastes circa 2015. No additional information is included in the EDR database report. There is no evidence to suggest that this listing represents a significant environmental risk to the subject properties.

There were no additional federal database listings in the EDR database report.

5.2 New York State Databases

Agency	Listing Name or Database Searched	Abbreviation	Search Distance	Subject Properties Listed?	No. of Sites within the Search Radius
NYSDEC NJDEP	Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	1 SHWS Delisted SHWS
NYSDEC	Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0
NYSDEC	Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	0
NYSDEC	Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	2 SWF/LF
NYSDEC	Registered Recycling Facility List	SWRCY	0.5 mile	No	1 SWRCY
NYSDEC	Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
NYSDEC	Leaking Underground Storage Tanks, including Historical LTANKS	LTANKS / HLTANKS	0.5 mile	No	38 LTANKS
NYSDEC	Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	0.25 mile	**Yes**	16 UST 69 AST
NYSDEC	Chemical Bulk Storage - Underground and Aboveground Storage Tank Databases	CBS UST/AST	0.25 mile	No	0
NYSDEC	Major Oil Storage Facility - Underground and Aboveground Storage Tank Databases	MOSF UST/AST	0.5 mile	No	0
NYSDEC	Registry of Engineering Controls	NYEC	0.5 mile	No	1 NYEC
NYSDEC	Registry of Institutional Controls	NYIC	0.5 mile	No	1 NYIC
NYCDCP	Restrictive Declarations List	RES-DECL	0.125 mile	No	1 RES-DECL
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile	No	3 VCP
NYSDEC	Environmental Restoration Program	ERP	0.5 mile	No	0
NYSDEC	State Brownfields Site List	Brownfields	0.5 mile	No	2 Brownfields
NYCDEP	E-Designation Site List	E-DES	0.125 mile	No	19 E-DES
NYSDEC	Spills Information Database, including Historic Spills Database	NYSPILLS / NYHSPILLS	0.125 mile	No	29 NYSPILLS
NYSDEC NJDEP	Facility and Manifest Data	MANIFEST	0.25 mile	**Yes**	107 MANIFEST
NYSDEC	Registered Dry-cleaning Facilities	DRYCLEANERS	0.25 mile	No	1 DRYCLEANERS
NYSDEC	Coal Ash Disposal Sites List	CADS	0.5 mile	No	0

The subject properties are listed on two of the above-referenced state databases: MANIFEST and PBS-AST.

The MANIFEST databases provide information on hazardous waste shipments and the generators of such shipments, as well as tracking the waste transported and listing the waste disposal facility. A review of the EDR report revealed that the one MANIFEST listings associated with a subject property address represents a utility service box maintained by the local electrical company. The listings are the result of shipments circa 2014 of lead-impacted waste typical during routine maintenance. As stated above, there are no violations associated with the RCRA listings and it is unlikely these listings represent a significant risk to the subject properties.

The inclusion of a site on the PBS-UST/AST lists means that the subject properties are registered with one or more storage tanks exceeding certain capacities. These databases do not indicate leaks, spills, or other violations. Lot 10 is listed on the PBS-AST database, under the name "St. Joseph's Church." The EDR report indicates this parcel included in the subject properties is registered with the following storage tank:

- One (1) steel 3,000-gallon fuel oil AST resting directly on soil, reportedly installed circa 1911 and reportedly in-service as of April 14, 2017.

No documentation of the AST condition has been provided to VHB for review as part of this Phase I ESA and the site personnel indicated during site reconnaissance and interview that they were unaware of its location (see Sections 6.3 and 6.4.2 of this Phase I ESA). It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment.

Furthermore, a review of municipal records indicate that USTs were formerly present at the subject properties and no documentation of the conditions of the UST at the time of removal has been provided to VHB for review as part of this Phase I ESA. It should also be noted that the USTs formerly at the subject properties may not have been registered based on their relatively low capacity (under 1,100-gallons). The potential presence of an AST and former USTs represents a BER.

The subject properties are not listed on any of the other above-referenced state databases.

In addition to the 21 New York State (NYS) databases with search radii of one-eighth of a mile to one mile, four additional NYS databases, the State Pollutant Discharge Elimination System (SPDES), Air Emissions Data (AIRS), Historic Aboveground Storage Tanks (Hist-AST) and Underground Injection Control Wells (UIC) were searched to determine if the subject properties were listed. The subject properties were not listed on the four additional NYS databases included in the EDR search report.

A review of the EDR report has revealed that there is one SHWS site within one mile; two SWF/LF facilities, one SWRCY facilities, 38 LTANKS sites, one NYEC/ NYIC sites, three VCP sites and two NY Brownfields sites within one-half mile; 16 PBS-UST and 71 PBS-AST facilities as well as one 108 MANIFEST sites and one DRYCLEANERS site within one-quarter mile; and one RES-DECL site, 19 E-DES sites and 29 NYSPILLS sites within one-eighth mile of the subject properties.

New York State Hazardous Waste Sites (SHWS)

The SHWS database is the State's equivalent to the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). These sites may or may not already be listed on the federal National Priority List (NPL). Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The one SHWS facility listed in the EDR report is summarized as follows:

- Kleener King, 1610 Bathgate Avenue, refers to a former drycleaner location approximately 0.54 mile south-southwest of the subject properties and hydraulically downgradient. Following closure of the dry-cleaning business and abandonment of the facility by the owner/operator, hazardous waste was found consisting of chlorinated solvents in groundwater and soil vapor. However, given the distance from the subject properties and downgradient location with respect to groundwater flow, it is unlikely this site represents a significant environmental risk to the subject properties.

Leaking Underground Storage Tanks (LTANKS)

These records contain an inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks (USTs) or leaking aboveground storage tanks (ASTs). The causes of the incidents are tank test failures, tank failures or tank overfills. Each of the 38 LTANKS sites listed in the EDR database report were issued letters of no further action by the NYSDEC, and there is no evidence to suggest that these sites represent a significant environmental risk to the subject properties. Furthermore, none of the aforementioned LTANKS sites are located adjacent to the subject properties.

New York Engineering Controls and Institutional Controls (NYEC/ (NYIC)

The NYEC database contains a listing of environmental remediation sites that have engineering controls in place while the NYIC database contains a listing of environmental remediation sites that have institutional controls in place. There was one site listed on the NYIC and NYEC databases identified in the EDR database report. The same is summarized as follows:

- Webster Avenue Residences, 411 East 178th Street/ 1973 Webster Avenue, refers to a development site located approximately 700 feet northwest and hydraulically

crossgradient with respect to groundwater flow. According to the EDR database report, historical fill materials were identified at this site which was also formerly occupied by automotive shops and former gasoline station. Remediation at the site was completed and residual contaminants are being managed under a Site Management Plan (SMP). Groundwater contamination was not reported in connection with this site. As such, this site is unlikely to represent a significant environmental risk to the subject properties.

Solid Waste Facilities/Landfill Sites (SWF/LF)

The SWF/LF records typically contain an inventory of transfer stations, car dismantling facilities, other solid waste disposal facilities or landfills in a particular state. Neither of the two SWF/LF sites identified in the EDR database report are located adjacent to the subject properties and are situated hydraulically crossgradient or downgradient with respect to groundwater flow. Given the distances and locations, it is unlikely these sites would represent a significant environmental risk to the subject properties.

Solid Waste Disposal Sites and Registered Recycling Facility List (SWRCY)

The SWRCY database provides a listing of registered recycling facilities. The one SWRCY site identified in the EDR database report is located over one-quarter mile from the subject properties and crossgradient with respect to groundwater flow. Given the distance and location, it is unlikely this site represents a significant environmental risk to the subject properties based on the available information.

Voluntary Cleanup Program (VCP)

The VCP was developed by New York to enhance private sector cleanup of brownfield sites by enabling parties to remediate sites using private rather than public funds and to reduce development pressures. None of the three VCP sites identified are located adjacent of the subject properties. Two (2) of the three (3) VCP listings are associated with, Webster Avenue Residences, which was previously summarized under its NYEC/ NYIC database listings and was determined not to represent a significant environmental risk to the subject properties. The remaining VCP site is located southwest and hydraulically downgradient of the subject properties of the subject properties. As such, none of the identified VCP sites represent a significant environmental risk to the subject properties.

Brownfields

A Brownfields site is a property where the presence or potential presence of hazardous waste, petroleum, pollutants or contaminants may complicate redevelopment or re-use of the site. There are two Brownfields sites listed in the EDR database report. One of the Brownfields listings are associated with, Webster Avenue Residences, which was previously discussed with respect to its NYEC/ NYIC and VCP database listings and was determined not to represent a significant environmental

risk to the subject properties. The remaining Brownfield site is located south and hydraulically downgradient of the subject properties. As such, none of the identified Brownfield sites represent a significant environmental risk to the subject properties.

Petroleum Bulk Storage – Underground and Aboveground Storage Tank Databases (PBS-UST/AST)

A previously discussed, the inclusion of a site on the PBS-UST/AST lists means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under the NYSDEC Petroleum Bulk Storage and/ or the FDNY. This database does not indicate leaks, spills or other violations. There are 16 identified PBS-UST sites and an additional 70 PBS-AST facilities surrounding the subject properties. As the number of these sites in surrounding areas increase, the greater potential for subsurface conditions to have been affected and impair groundwater quality. Nonetheless, there is no evidence in the listings that suggests the presence of USTs and ASTs at surrounding sites currently represents a significant environmental risk to the subject properties. The four adjacent PBS-UST/AST facilities are summarized, as follows:

- 463 East 178th St HDFC, 463 East 178th Street, refers to a co-op housing building adjacent to the north-northwest and hydraulically upgradient or crossgradient from the subject properties. According to the EDR database, this property is registered with one (1) 5,000-gallon steel #2 fuel oil AST resting directly on soil, reportedly installed February 17, 1981 and currently in-service with no recent tightness testing information available. Given the location of the facility across an intersection, there is no evidence to suggest that the presence of the AST at this adjacent site currently represents a significant environmental risk to the subject properties.

- 495 East 178th St HDFC, 495 East 178th Street, refers to a co-op housing building adjacent to the north-northeast and potentially hydraulically upgradient from the subject properties. According to the EDR database, this property is registered with one (1) 4,000-gallon steel #4 fuel oil AST reportedly installed October 26, 1941, in-service and last tested January 18, 2018. Given the location of the facility across a roadway, there is no evidence to suggest that the presence of the AST at this adjacent site currently represents a significant environmental risk to the subject properties.

- Quest Property MGMT II Corp., 505 East 178th Street, refers to an apartment building with ground floor convenience store located adjacent to the northeast and potentially hydraulically upgradient from the subject properties. According to the EDR database, this property is registered with one (1) 3,500-gallon steel #6 fuel oil AST resting directly on soil, reportedly installed circa 1928 and currently in-service with no recent tightness testing information available. Considering the location of the facility across an intersection, there is no evidence to suggest that

the presence of the AST at this adjacent site currently represents a significant environmental risk to the subject properties.

- St Joseph's School, 1946 Bathgate Avenue, refers to the associated parochial school building across a roadway adjacent to the east and hydraulically crossgradient of the subject properties. According to the EDR database report, this property is registered with one (1) 3,000-gallon steel #2 fuel oil AST resting directly on soil, reportedly installed circa 1960 and currently in-service with no recent tightness testing information available. Given the location of the facility across a roadway, there is no evidence to suggest that the presence of the AST at this adjacent site currently represents a significant environmental risk to the subject properties.

Facility and Manifest Database (MANIFEST)

As previously stated, the MANIFEST databases provide information on hazardous waste shipments and the generators of such shipments, as well as tracking the waste transported and listing the waste disposal facility. There were 105 additional MANIFEST sites identified within one-quarter miles of the subject properties. The majority represent utility service features, not typically anticipated to cause significant subsurface impacts on adjacent or surrounding properties. There is no reported evidence that suggests these listings represent a significant environmental risk to the subject properties. The two potentially adjacent MANIFEST listings were previously discussed with respect to their RCRA listings, which were determined not to represent any significant environmental risk to the subject properties.

Registered Drycleaning Facilities (DRYCLEANERS)

The DRYCLEANERS database contains a listing of all registered dry-cleaning facilities. These facilities consider high risk for potential sources for chlorinated solvent waste contamination of groundwater and/or soil vapor. There was one registered DRYCLEANERS sites listed in the EDR report, which is located one-quarter mile to the northwest and hydraulically crossgradient of the subject properties. Based on the distance and hydraulic location, it is unlikely that this site would represent a significant environmental risk to the subject properties.

Restrictive Declarations List (RES-DECL)

This database contains a listing of sites with restrictive declarations. A restrictive declaration is a covenant that binds present and future owners of a property to specific conditions regarding the future use and development of the site. The one RES-DECL site listed in the EDR database report is summarized as follows:

- "Lot 42, Tax Block 2924", 507 East 176th Street, refers to a development site located approximately 600 feet south of the subject properties and hydraulically downgradient with respect to groundwater flow. According to the EDR database

report, this property is registered with a UST and one "closed" NYSPILLS listing. The RES-DECL pertains to hazardous materials conditions and was recorded on November 1, 2006. No additional information was included in the EDR database report. However, based on the distance and hydraulic location, it is unlikely that this site would represent a significant environmental risk to the subject properties.

E-Designation

Sites listed on the E-Designation (E-DES) database are lots designated with an "E" on the Zoning Maps of the City of New York for potential hazardous materials contamination, air and/or noise quality impacts. None of the 19 E-DES sites identified in the EDR database report are located adjacent to the subject properties, and there is no reported evidence that suggests these sites represent a significant environmental risk to the subject properties. Furthermore, these sites are all located either downgradient or crossgradient of the subject properties and listings for the nearest E-DES sites pertain only to exhaust stack location limitations.

New York Spills Information Database (NYSPILLS)

The NYSPILLS database contains information regarding spills reported to the NYSDEC, including chemical and petroleum spills incidents. This database includes spills active as of April 1, 1986, as well as spills occurring since this date. Each of the 29 NYSPILLS sites listed in the EDR database report were issued determinations of no-further-action required by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject properties. Furthermore, none of the identified NYSPILLS sites listed in the EDR database report are located adjacent to the subject properties.

There were no additional state database listings in the EDR database report.

5.3 Tribal Records and EDR Proprietary Databases

Agency	Listing Name or Database Searched	Abbreviation	Search Distance	Subject properties Listed?	No. of Sites within the Search Radius
USGS	Indian Reservations	IRESERVE	1.0 mile	No	0
USGS	Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0
USGS	Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
USGS	Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
USGS	Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0. 5 mile	No	0
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	1 MGP
EDR	Historical Auto Stations	HAS	0.5 mile	No	3 HAS
EDR	Historical Cleaners	HCL	0.5 mile	No	2 HCL

The subject properties do not appear on any tribal records of EDR proprietary databases.

A review of the EDR report has revealed that there is one MGP site, three HAS and two HCL sites within one-half mile of the subject properties.

Manufactured Gas Plant (MGP)

The EDR Proprietary MGP database includes records of coal gas plants compiled by EDR's researchers. MGPs were used in the United States from the 1900s to 1950s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludge, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as continuous source of soil and groundwater contamination. The one identified MGP site is Con Edison – East 175th Street Station MGP, 1815 to 1845 Webster Avenue, located approximately one-quarter mile southwest and hydraulically crossgradient or downgradient from the subject properties. Based upon the distance and hydraulically location, this site does not represent an environmental risk to the subject properties.

Historical Auto Stations (HAS)

The HAS database contains a listing of potential filling/ gasoline stations and automotive repair shops. The three HAS listings identified are each located approximately one block northwest, west or southwest of the subject properties and crossgradient with respect to groundwater flow. None of the identified HAS sites are situated adjacent to the subject properties, and there is no reported evidence that suggests these sites are a significant environmental risk to the subject properties.

US Historical Cleaners (HCL)

The HCL database contains a listing of potential drycleaner sites. This database falls within EDR's category of information classified as "High Risk Historical Records." The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. Two HCL sites were identified within one-eight mile or one city block of the subject properties. Neither are situated adjacent of the subject properties. The same are each located to the southwest and southeast and hydraulically crossgradient of the subject properties. Based on the available information, there is no evidence to suggest these sites represent a significant environmental risk to the subject properties.

5.4 Orphan Site Summary

Orphan sites are those sites where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject properties. The Orphan Summary identified three sites with inadequate address information. Based on a review of the available information, it was determined that none of the listed sites are located adjacent to the subject properties and each are unlikely to present a significant environmental concern.

6.0

Site Reconnaissance

6.1 Site Inspection

VHB representative Christopher Rooney visually inspected the subject properties on June 20, 2019. VHB visually inspected the grounds as well as representative portions of the interior of the partially demolished building. The aforementioned building occupies southern portions of the subject properties and was vacant and gutted at the time of the site visit. The basement was utilized to staged temporary stockpiles of wood and other debris. The remaining portions of the subject properties consisted of a paved courtyard on northwestern portions utilized as temporary contractor yard with a stone staircase leading to a out-of-service fountain and the former location of a leveled rectory building on central portions. A single wall of the rectory remains and is braced to support an unpaved elevated area on northeastern portions surrounding by a retaining wall along 178th Street and Bathgate Avenue. Although generally visible from adjacent scaffolding, it should be noted that access to the elevated northwestern portions of the subject properties was restricted.

6.2 Surrounding Land Use

North: 178th Street followed by multifamily co-operative apartment buildings.

South: A daycare facility with basketball court adjoining a vacant contractor office.

East: Bathgate Avenue with an associated Parochial School directly across and flanked by a funeral home and duplex residential structure.

West: A religious/institutional property with church building advertising day-care and adjoining two-story residences with gated driveways/ yards in front.

6.3 Interviews

VHB was accompanied by Elliton, a demolition crew foreman and equipment operator in association with Kingsland Demolition/ Blue Rock Contracting Inc. (Kingsland), provided general access during the visual inspection conducted on June 20, 2019. The Kingsland representative indicated that they had recently demolished a stage inside the basement of the former church building as well as nearly the entirety of the former rectory building on central portions and were utilizing northwestern portions of the subject properties for staging an excavator and other heavy equipment. VHB was informed that no access was available to the isolated and elevated northwestern portions, which were supported by a remaining wall of the rectory. He also indicated that the demolition contractor was instructed to leave the central stair case intact.

VHB inquired with Elliton if he was aware of any oil tanks on the property or removed as part of the on-going demolition activities. Although no one present at the site was able to indicate the status of any oil tank, the demolition contractor indicated that diesel recovered from another site was stored on-site in three plastic 55-gallon drums. Elliton noted he was only present at the site for a few months and presumed oil tanks were dealt with prior to his mobilization, but that they were capable of removing any that if discovered. VHB was also informed that the demolition is generally accomplished by driving debris starting with upper floor into the interior portions and collecting and segregating debris utilizing a skidsteer and excavator to load the same for off-site disposal.

No additional personnel or occupants were available for interview during the site reconnaissance.

6.4 Summary of Environmental Site Features

6.4.1 Hazardous Materials Handling, Storage and Disposal

No substantial hazardous material disposal and/or industrial operations were observed at the subject properties during the time of the visual inspection. VHB noted the presence of small quantities of gasoline as well as flammable gas canisters present in association with the demolition activities. The presence of these items does not represent a significant environmental risk. However, same should be properly handled/removed in accordance with applicable regulations.

6.4.2 Underground and Aboveground Storage Tanks

VHB noted the presence of a fill port at grade on central-east portions of the subject properties (between the former church building and former location of the rectory) approximately 20 feet from the construction entrance. In addition, VHB observed an exhaust stack that has been added to southwestern portions of the former church building and two remnant pipes surfacing above accumulated rubble in nearby interior portions of the building footprint.

The remnant of the former church building structure was not heated during the time of the visual inspection. However, the property has a history of utilizing a fuel oil-fired heating system, based on municipal records and site observations. Lot 10 is registered with one (1) steel 3,000-gallon fuel oil AST resting directly on soil, reportedly installed circa 1911 and reportedly in-service as of April 14, 2017. No documentation of the AST condition has been provided to VHB for review as part of this Phase I ESA and the site personnel indicated during site reconnaissance and interview that they were unaware of its location (see Section 6.3). It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment.

Furthermore, local municipal records indicate that other storage tanks including two (2) steel 275-gallon USTs and one (1) steel 1,000-gallon UST were formerly present at the subject properties and no documentation of the conditions of the USTs at the time of removal on has been provided to VHB for review as part of this Phase I ESA. Although VHB observed the presence of a fill port, exhaust stack and potential additional remnant piping at the subject properties, the former location of the USTs nor location and condition of the AST is unconfirmed. It should be noted that the USTs formerly at the subject properties may not have been registered based on their relative low capacities (under 1,100-gallons). The potential presence of an AST and remnant USTs represents a BER for the subject properties.

In addition to the above, several plastic 55-gallon drums containing diesel/ fuel oil are situated on central portions of the subject properties. However, the same were observed to be in good condition, are being utilized in association with the demolition activities and the presence of these items does not represent a significant environmental risk. No additional visual evidence of petroleum storage tanks (i.e., tank graves, boilers or fuel lines) was identified.

6.4.3 Utilities and Sanitary and Stormwater Disposal Facilities

<u>Utilities Provided to the Site</u>

- Electricity is provided via underground distribution lines based on site observations including utility manholes present in the adjacent roadways.

- Telephone is available via overhead distribution lines. A utility pole was present on the north-central portions of the subject properties during site reconnaissance.
- Natural gas was provided via underground distribution lines. Natural gas shut-off valve boxes are present to the west of the former church building.

Sanitary and Stormwater Disposal Systems

- Sanitary wastes historically generated at the former buildings were presumably discharged into the municipal sewer system. Sanitary wastes are currently generated via mobile out-house associated with demolition activities.
- Stormwater runoff infiltrates into the ground in unpaved areas or flows overland to discharge into curbside storm drains located on neighboring roadways. Although stormwater may have historically discharged to area and floor drains on-site, same presumably discharged to the municipal sewer system.

Water Supply

- Potable water is supplied by the municipal provider (NYCDEP).

6.4.4 Underground Injection Control Program-Regulated Site Features

Underground injection wells are regulated by the UIC program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h *et seq.*). The SDWA is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority that specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains.

The USEPA *may*, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water.

No sanitary wastes are currently generated at the subject properties. Although stormwater may have historically discharged to area and floor drains on-site, same presumably discharged to the municipal sewer system. Furthermore, no storm drains or drywells were identified during site reconnaissance. Stormwater currently infiltrates into the ground at the subject properties or flows overland to discharge into curbside storm drains located on neighboring roadways. No pits, ponds or cisterns were observed during the site reconnaissance.

6.4.5 Potable Water Supply and On-Site Wells

Potable water is provided to the surrounding properties by a municipal water source. No on-site potable water wells, active or inactive, or groundwater monitoring wells were observed on the subject properties during the visual inspection. Furthermore, there are no public water supply wells within one mile of the subject properties.

6.4.6 Polychlorinated Biphenyls

PCBs were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems. PCBs were also added as a plasticizer in caulking used to seal joints between masonry units and around windows, in addition to other building materials such as paints, mastics, sealants, adhesives and specialty coatings. According to the USEPA, PCBs were used in buildings primarily between 1950 and 1980. Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the TSCA.

No transformers were observed on the subject properties or mounted on nearby utility poles. Same may be in vaults beneath the adjacent roadways. Sanborn map depictions indicated that the six-story mixed-use building formerly on northwestern Lot 16 was equipped with a passenger elevator. However, given the height of the former building (as six stories), it is likely the elevator was cable-operated and unlikely to have been equipped with PCB-containing hydraulic fluid.

No additional features with the potential to contain PCBs were identified. It is assumed that and ballasts as well as building materials (i.e. caulk, mastics, etc.) potentially containing PCBs were managed in according to federal disposal restrictions as part of standards demolition/ renovation practices. As such, PCBs are not considered a significant environmental risk for the subject properties based on available information.

6.4.7 Debris, Dumping and Surficial Staining

As part of demolition, debris removal was on-going at the time of the site reconnaissance. The building debris were stockpiled within the building frame and were being loaded into containers for off-site disposal. These activities do not

represent a significant environmental concern. Limited quantities of refuse and litter observed during site reconnaissance. Although not considered a significant environmental risk, the same should be removed. No substantial quantities evidence of illicit dumping or surficial staining was observed at the subject properties during the visual inspection.

6.4.8 Fill Materials

Historic Sanborn maps reviewed as part of this Phase I ESA revealed the former presence of mixed-use building on the northeastern portions of Lot 10 and Lot 16 and a former residential building on northwestern Lot 22 having been located on the subject properties, which have since been demolished. Lot 22 is elevated with respect to the surrounding grade such that retaining walls are present surrounding the same. As such, it is likely that fill material from unknown sources was utilized to grade the property. Given this information as well as previous development and demolition at the subject properties, urban fill may be present at the site. The potential presence of urban fill materials from previous site development represents a BER.

6.4.9 Stressed Vegetation

No stressed vegetation was identified during the site reconnaissance which included a walkthrough of the exterior grounds.

6.4.10 Soil Vapor Migration and Encroachment

VHB conducted a Tier 1 vapor encroachment screen in accordance with ASTM E2600-10 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The ASTM E2600-10 guidance provides, "*…practical guidance and a useful process for conducting a vapor encroachment screen (VES) on a property parcel involved in a real estate transaction in the United States of America with respect to chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the property.*"

The goal of the VES, as established by the ASTM E2600-10 is to, "*...identify a vapor encroachment condition (VEC) which is the presence of likely presence of COC vapors in the sub-surface of the target property caused by the release of vapors from contaminated soil or groundwater either on or near the target property…*"

The Tier 1 screening included a review of the following:

- Available regulatory data (i.e. historical aerial photographs, historical Sanborn maps and the EDR database report [see Section 5.0]).

- A review of municipal records, including NYSDEC spill records.
- Current and historical usage of the subject properties and surrounding areas.
- Depth to groundwater and groundwater flow direction in the vicinity of the subject properties.
- Soil characteristics in the vicinity of the subject properties.
- Preferential pathways.
- Current remedial status of any contaminated properties.

Based upon a review of the aforementioned resources, a VEC is unlikely to exist at the subject properties.

7.0

Non-Scope Considerations

7.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that Bronx, where the subject properties is located, is in Zone 3. Properties within Zone 3 are least likely to experience radon intrusion above the recommended action level of 4 picocuries per liter (pCi/L). The EDR report provides information from the NYSDOH radon survey which indicates that 138 radon tests have been conducted in Bronx County. Test results indicate average radon concentrations of 1.74 pCi/L in basements and 1.14 pCi/L in living areas. Based on these data, radon does not likely represent an environmental concern.

7.2 Lead-Based Paint

In 1978, the United States Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. LBP is defined by the USEPA and Housing and Urban Development (HUD) guidelines as paint or other surfaces coating that contains lead equal to or greater than 0.5 percent, 5,000 parts per million (ppm) or 1.0 milligram per square centimeter (mg/cm^2) as measured by laboratory analysis or X-ray fluorescence (XRF). No painted surfaces were identified within the interiors of remaining building portions. No documentation of previous lead-paint testing or abatements was provided for review. Although there was a potential for LBP to have been present at the subject properties in association with former buildings, same is anticipated to be mitigated by disposal of debris during observed demolition activities. Therefore, the presence of LBP is not considered an environmental concern.

7.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996. Given the age of the existing structures, there is potential for ACM to the present amongst building materials and sub-grade piping. Same is not considered a potential environmental hazard unless friable or otherwise disturbed.

Roofing materials including tar paper were observed on remaining portions of the former church building roof at the time of the site reconnaissance. However, it is presumed that this and any other remaining buildings materials have been determined to not contain asbestos as VHB was provided with documentation confirming that the all ACM has been abated from the entire building. An Asbestos Assessment Report dated January 7, 2019 and signed by a NYCDEP Certified Asbestos Investigator is included in Appendix G of this Phase I ESA. Based on the provided information, asbestos does not represent an environmental concern for the subject properties.

7.4 Wetlands

Pursuant to 6 NYCRR Part 661, the NYSDEC restricts various uses and activities within state regulated tidal wetlands and the surrounding 300-foot adjacent area. The NYSDEC Tidal Wetlands Maps (available online at opdgig.dos.ny.gov) depict the approximate boundaries of tidal wetlands under NYSDEC jurisdiction. According to NYSDEC Tidal Wetlands Maps, there are no NYSDEC tidal wetlands located at or within 300-feet of the subject properties. Furthermore, the nearest tidal wetlands are located greater than one mile from the subject properties.

Pursuant to 6 NYCRR Parts 663 and 664, the NYSDEC regulates various uses and activities within NYS-regulated freshwater wetlands and the surrounding 100-foot adjacent area. The NYSDEC Environmental Resource Mapper (ERM) website (available online at dec.ny.gov/gis/erm/) and NYSDEC Tidal Wetland Maps depict the approximate boundaries of freshwater wetlands under NYSDEC jurisdiction. According to the ERM website, there are no NYSDEC-regulated freshwater wetlands located at or within one mile of the subject properties.

The United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) Wetlands Mapper website (available online at fws.gov/wetlands/wetlands-mapper) depicts the approximate boundaries of wetlands that may be regulated by the federal government. In general, any proposed direct impact to federally-regulated

wetlands (e.g., draining, filling, dredging, discharges, outfalls, construction of structures, etc.) requires a permit from the USACE. According to the NWI website, the nearest potential federal wetlands are those located approximately 0.60 mile to the southeast of the subject properties. These wetlands are associated with Indian Lake and are classified as PUBHx, which are classified as a Palustrine System with an unconsolidated bottom that is excavated and permanently flooded.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject properties are located within the 100-year or 500-year flood zones. The FIRM showing the properties (No. 3604970213F) that the subject properties is located outside of the 100-year and 500-year flood zone. As such, there is a minimal risk of flooding at the subject properties.

7.5 Mold and Water Damage

As there are no habitable structures present, the presence of mold is not an environmental risk for the subject properties. Any potential mold/mildew-infested surfaces would be addressed as part of demolition and debris removal of the on-site buildings.

8.0
Findings

This document is a Phase I ESA prepared to determine evidence of RECs, CRECs, HRECs and BERs in connection with four (4) contiguous parcels on the northern portions of a block bound by Washington Avenue, East 178th, Bathgate Avenue and East Tremont Avenue in the Borough of The Bronx, Bronx County, City of New York, State of New York. The subject properties are collectively known by the street address of 1949 Bathgate Avenue, and are identified on the New York City (NYC) Tax Maps as Borough 2 - Block 3034 – Lots 10, 16, 22 and 23.

The subject properties have a topographic elevation that ranges from approximately 65-feet to 80-feet amsl and slopes downward from an elevated northwestern portion surrounded by retaining walls and staircases. Depth to groundwater beneath the subject properties is estimated to be within 80 feet bgs. The EDR database report indicates that groundwater was encountered at 11.7 to 15.9 feet bgs at the nearest site with available groundwater data. Regional groundwater is expected to flow to the south.

VHB was able to establish a history for the subject properties dating back to 1896 when the subject properties were improved with an early iteration of "St. Joseph's Academy" on southern portions, a mixed-use building on northwestern portions and two dwellings on northeastern portions. The existing church structure with basement for auditorium, meeting hall, cafeteria, dances, gym and school counseling was constructed by 1901 along with another rendition of the academy/convent building. The neo-Gothic church was built of white stone quarried from the lot and faced with polished granite on the front and rear ends. When built, the church provided seating for about 1,500 persons. A six-story horse shoe-shaped building with a centrally located elevator was constructed on northwestern portions by 1915. The rectory appeared by 1950. The mixed-use commercial and residential buildings were demolished by 1981, and the dwelling on northeastern portions was demolished circa 2012. The church was closed as of 2015 and remaining buildings on the subject properties are currently undergoing demolition in 2019 for redevelopment.

The Lot 10 is developed with a vacant church building currently undergoing demolition and Lot 16 is developed with landscaped areas, paved walkways and stairs that provide access to the church building. Lot 22 is vacant and was temporarily used as a garden in association with an ancillary church building formerly present on Lot 23 (recently demolished).

Given the development history of the subject properties with the previous mixed-use buildings including a six-story structure complete with an elevator on Lot 16 that has since been demolished as well as a two-story dwelling on Lot 22 present through 2007, there is a potential for remnant historic structures (i.e, remnant foundations) and urban fill materials to be present on the subject properties. Same are considered BERs for the respective parcels.

A review of the EDR report revealed that the RCRA-NonGen and MANIFEST listings associated with a subject property address represents utility features, such as service boxes, utility poles, transformer vaults or manholes maintained by the local electrical company. A utility pole was present on the north-central portions of the subject properties during site reconnaissance. These features do not typically cause significant subsurface impacts on adjacent or surrounding properties. The listings are the result of shipments of lead-impacted waste typical during maintenance or replacement circa 2014. There are no unresolved violations associated with the RCRA listings and it is unlikely these listings represent a significant risk to the subject properties.

The subject properties do not appear in any listings, databases or registries of Superfund sites, CERCLA sites, hazardous waste treatment facilities, known or suspected hazardous waste disposal sites or landfills maintained by the USEPA or NYSDEC.

VHB noted the presence of a fill port at grade on central-east portions of the subject properties (between the former church building and former location of the rectory) approximately 20 feet from the construction entrance. In addition, VHB observed an exhaust stack that has been added to southwestern portions of the former church building and two remnant pipes surfacing above accumulated rubble in nearby interior portions of the building footprint.

The remnant of the former church building structure was not heated during the time of the visual inspection. However, the property has a history of utilizing a fuel oil-fired heating system, based on municipal records and site observations. Lot 10 is registered with one (1) steel 3,000-gallon fuel oil AST resting directly on soil, reportedly installed circa 1911 and reportedly in-service as of April 14, 2017. No documentation of the AST condition has been provided to VHB for review as part of this Phase I ESA and the site personnel indicated during site reconnaissance and interview that they were unaware of its location (see Section 6.3). It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment.

Furthermore, local municipal records indicate that other storage tanks including two (2) steel 275-gallon USTs and one (1) steel 1,000-gallon UST were formerly present at the subject properties and no documentation of the conditions of the USTs at the time of removal on has been provided to VHB for review as part of this Phase I ESA. Although VHB observed the presence of a fill port, exhaust stack and potential additional remnant piping at the subject properties, the former location of the USTs nor location and condition of the AST is unconfirmed. It should be noted that the USTs formerly at the subject properties may not have been registered based on their relative low capacities (under 1,100-gallons). The potential presence of an AST and remnant USTs represents a BER for the subject properties.

In addition to the above, several plastic 55-gallon drums containing diesel/ fuel oil are situated on central portions of the subject properties. However, the same were observed to be in good condition, are being utilized in association with the demolition activities and the presence of these items does not represent a significant environmental risk. No additional visual evidence of petroleum storage tanks (i.e., tank graves, boilers or fuel lines) was identified.

As part of demolition, debris removal was on-going at the time of the site reconnaissance. The building debris were stockpiled within the building frame and were being loaded into containers for off-site disposal. These activities do not represent a significant environmental concern. Limited quantities of refuse and litter observed during site reconnaissance. Although not considered a significant environmental risk, the same should be removed. No substantial quantities evidence of illicit dumping or surficial staining was observed at the subject properties during the visual inspection.

No substantial hazardous material disposal and/or industrial operations were observed at the subject properties during the time of the visual inspection. Sanitary wastes are generated at the subject properties historically discharged to the municipal sanitary system and currently are generated via mobile out-house associated with demolition activities. Furthermore, no storm drains were identified during site reconnaissance. Based upon a review of available resources, a VEC is unlikely to exist at the subject properties. Given the observed demolition and supplemental documentation provided, it is presumed that any PCBs, ACM and/or LBP were abated in accordance with application regulations as part of standards demolition/ renovation practices. Furthermore, radon and mold are not significant environmental concerns for the subject properties.

9.0
Conclusions

Based on the results of the visual inspection, records review and interviews, it was determined there were no RECs identified for the subject properties. However, the following BERs were identified during the course of this Phase I ESA:

- There is one (1) steel 3,000-gallon fuel oil AST registered to the property that reportedly was installed circa 1911, rested directly on soil and is listed as in-service as of submission of this Phase I ESA. No documentation of the AST condition has been provided to VHB for review and the site personnel present during site reconnaissance indicated that they were unaware of its location. It is unknown if the AST condition was assessed prior to the commencement of demolition activities, or whether the AST historically leaked and impacted the subsurface environment. Furthermore, no documentation of the conditions of former USTs at the time of removal has been provided. The potential presence of out-of-service oil tanks at the subject properties represents a BER. It is expected that all tanks, if encountered during demolition, will be removed in accordance with applicable regulations by the designated demolition contractor.

- Given the development history of the subject properties with the previous mixed-use building on of which was complete with an elevator on Lot 16 that has since been demolished as well as a two-story dwelling on Lot 22, there is a potential for remnant historic structures (i.e, remnant foundations) and urban fill materials to be present on the subject properties. Lot 22 is elevated with respect to surrounding grade. Potential presence of historical fill material of unknown origin is considered a BER. Historic fill materials, if encountered during redevelopment, should be removed and transported to a facility capable and permitted to handle such material during any potential redevelopment of the subject property.

10.0

Environmental Professional Statement

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-13, inclusive of the USEPA "All Appropriate Inquiry" requirement published in the Federal Register on December 30, 2013. The USEPA "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

VHB, declares that, to the best of its professional knowledge and belief, it meets the definition of "Environmental Professional" as set forth in 312.10 of 40 CFR 312 and it has the specific qualifications based on education, training and experience to assess a property with respect to the nature, history and setting of the subject properties. VHB has developed and performed the "All Appropriate Inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312. Section 11.0 contains the data gaps and deficiencies of the research data encountered during VHB's preparation of this report.

11.0

Data Gaps/Data Failure

As stated within this document, the Phase I ESA was conducted in accordance with requirements set forth in the ASTM Practice E1527-13 and USEPA All Appropriate Inquiry Rule. Based upon VHB's research in an attempt to satisfy all the requirements set forth in the above-referenced standards, the following data gaps were encountered:

- Responses to select municipal agency records requests were still pending at of the issuance of this report. To date, no responses were received to the municipal agency records requests submitted to the Tank Section of the FDNY. Pertinent records, should they become available and affect the findings and conclusions, will be forwarded as an addendum to this Phase I ESA.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 4/25/2019 at 1:34:43 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

New York, New York 10013

Re: Freedom of Information Request
1940 Washington Avenue, Bronx 10457
Block: 3043 Lots: 10, 16, 22, and 23

Dear Ms. Bryant:

Our firm has been retained to prepare a Phase I Environmental Site Assessment (ESA) for the above-referenced property.

We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g. asbestos, lead paint), etc. for the facility.

We agree with the department's decision to omit any health or personal identification in records provided.

If you require additional information to respond to this request or if there are costs associated with same, please do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

VHB Engineering, Surveying, Landscape Architecture and Geology, P.C.

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class

Class 1 - Immediately Hazardous
Class 2 - Major
Class 3 - Lesser

HAZ - Hazardous - 1968 Building Code
NON-HAZ - Non-hazardous - 1968 Building Code

Violation Status Descriptions

OPEN - No Compliance Recorded
OPEN - Certificate Pending (Certificate of Correction submitted and under review)
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)

ECB Hearing Status

CURED/IN-VIO - In Violation/no hearing required
STIPULATION/IN-VIO - No hearing required/in violation
IN VIOLATION - Hearing decision completed
DISMISSED - Hearing decision completed

RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required) RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance) RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing) RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)	DEFAULT - Respondent failed to appear at hearing PUBLICLY-OWNED - No hearing required PENDING - Awaiting ECB hearing or decision ADMIT/IN-VIO - In Violation/no hearing required WRITTEN OFF - Imposed penalty legally uncollectable

Borough Superintendent.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there by any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended, nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy

25 Applicant's Statements and Signatures *Required for **all** applications.*

Falsification of any statement is a misdemeanor and is punishable by a fine or imprisonment, or both. It is unlawful to give to a city employee, or for a city employee to accept, any benefit, monetary or otherwise, either as a gratuity for properly performing the job or in exchange for special consideration. Violation is punishable by imprisonment or fine or both. I understand that if I am found after hearing to have knowingly or negligently made a false statement or to have knowingly or negligently falsified or allowed to be falsified any certificate, form, signed statement, application, report or certification of the correction of a violation required under the provisions of this code or of a rule of any agency, I may be barred from filing further applications or documents with the Department. I prepared or supervised the preparation of the construction documents and specifications herewith submitted and to the best of my knowledge and belief, the construction documents and work shown thereon comply with the provisions of the NYC Administrative Code and other applicable laws and rules, ☐ *(←check here if)* except as set forth in the accompanying documents. I acknowledge that I have read and complied with all instructions pertaining to this application and supplementary schedules submitted.
Cluster Development Statement (if applicable): I hereby state that all specifications relating to this job are identical to those previously filed under the group lead job number, except as specified herein.

Yes	No	
☐	☐	**For initial New Building and Alteration 1 applications filed under the 2008 NYC Building Code only:** does this building qualify for high-rise designation?
☒	☐	**Directive 14 initial applications only**: I certify that the construction documents submitted and all construction documents related to this application do not require a new or amended Certificate of Occupancy as there is no change in use, exits, or occupancy.

26 Property Owner's Statements and Signatures

Falsification of any statement is a misdemeanor and is punishable by a fine or imprisonment, or both. It is unlawful to give to a city employee, or for a city employee to accept, any benefit, monetary or otherwise, either as a gratuity for properly performing the job or in exchange for special consideration. Violation is punishable by imprisonment or fine or both. I understand that if I am found after hearing to have knowingly or negligently made a false statement or to have knowingly or negligently falsified or allowed to be falsified any certificate, form, signed statement, application, report or certification of the correction of a violation required under the provisions of this code or of a rule of any agency, I may be barred from filing further applications or documents with the Department. Furthermore, I understand that I am responsible for insuring that a final inspection be performed when the permitted work is complete, and that a satisfactory report of final inspection be submitted, along with all required submittal documents, so that the NYC Department of Buildings may issue a letter of completion or certificate of occupancy within the time prescribed by law.

I have authorized the applicant to file this application for the work specified herein and all future amendments. I will not knowingly authorize any work that is not in compliance with the New York City Energy Conservation Code (NYCECC).

Yes No

☐ ☒ **Fee Deferred Request Statement**
I hereby request a fee deferral for the work proposed on this application and understand that **all fees must be paid before issuance of any Certificate of Occupancy or job sign off**.

☐ ☒ **Fee Exemption Request Statement**
In accordance with §28-112.1 of the NYC Administrative Code I hereby state that the proposed work involves a building or property owned or used exclusively for the purposes indicated in such section.

☐ ☒ **Owner's Certifications Regarding Occupied Housing**
The site of the building to be altered or demolished, or the site of the new building to be constructed, contains one or more occupied dwelling units that will remain occupied during construction. These occupied dwelling units have been clearly indentified on the submitted construction documents.

☐ ☒ The site of the building to be altered or demolished, or the site of the new building to be constructed, contains occupied housing accommodations subject to rent control or rent stabilization under Chapters 3 and 4 of Title 26 of the New York City Administrative Code. ***If yes, select one of the following:***

☐ The owner is not required to notify the Division of Housing and Community Renewal (DHCR) of the owner's intention to file because the nature and scope of the work proposed, pursuant to DHCR regulations, does not require notification.

☐ The owner has notified the Division of Housing and Community Renewal (DHCR) of its intention to file such construction documents/apply for such permit and has complied with all requirements imposed by the regulations of such agency as preconditions for such [filing/application].

Provide date DHCR notified:

☐ ☒ **Owner's Certification for Adult Establishments**
I authorize and intend to create, enlarge, or extend an establishment with adult activity and/or adult material as defined in ZR §12-10 "adult establishment" or related sign at the subject premises.

☒ ☐ **Owner's Certification for Directive 14 Applications (if applicable)**
I have read and am fully aware of the applicant's statement that the construction documents submitted and all construction documents related to this application will not require a new or amended Certificate of Occupancy as there is no change in use, exits, or occupancy. Furthermore, I understand that I am responsible for retaining a qualified design professional to perform a final inspection when the permitted work is complete and this professional must submit a satisfactory final inspection report to the NYC Department of Buildings within the time following inspection prescribed by Department rule.

Owner type: ☐ Individual ☐ DCAS ☐ HHC ☐ NYCHA
☐ Partnership ☐ DOE ☐ HPD ☐ NYS
☐ Corporation *26A* ☐ Other Government
☐ Condo Unit Owner or Co-Op Tenant-shareholder *26A*

NYC VCP Cleanup Plan
Remedial Activities to Begin

The New York City Office of Environmental Remediation (OER) is providing this Fact Sheet pursuant to the New York City Voluntary Cleanup Program (VCP). OER has approved the Remedial Action Work Plan (RAWP) submitted by Mastermind Ltd. for 1910-1928 Webster Avenue, 401-429 East Tremont Avenue, and 4215-4219 Park Avenue, Bronx, New York (Block 3027, Lot 1). The remedial work will begin in October 2015. The RAWP can be reviewed electronically or in person at the document repositories identified in the box at left.

Site Description:
The 58,771 square-foot site is currently a vacant four (4)-story building which is connected to a two (2)-story building on the eastern portion of the property, bordering Park Avenue. The proposed use of the site is an eight (8)-story, mixed-use building with a below-grade parking garage, management office, storage, and mechanical rooms. Three (3) separate commercial spaces, recreation rooms, storage rooms, a courtyard, and a residential lobby are proposed for the first floor of the building. Residential apartments are proposed for the 2nd to 8th floors.

Summary of the Remedy:
The remedial action for 1910-1928 Webster Avenue, 401-429 East Tremont Avenue, and 4215-4219 Park Avenue is a Track 4 Site-specific Use cleanup. The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP citizen participation activities according to an approved Citizen Participation Plan;
- Performance of a Community Air Monitoring Program (CAMP) for particulates and volatile organic compounds;
- Establishment of Site-Specific (Track 4) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding SCOs. For development purposes, the average excavation depth across the Site will be approximately 14 feet below grade surface. Excavation depths for foundation components and the elevator pit may exceed 14 feet below grade surface. Approximately 40,000 tons of soil will be excavated and removed from this property;
- Collection and analysis of end point samples to determine the performance of the remedy with respect to attainment of SCOs;
- Transportation and off-Site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities;
- Construction and maintenance of an engineered composite cover consisting of four (4)- to six (6)-inch concrete building slab across the building footprint and the parking area to prevent human exposure to residual soil/fill remaining under the Site;
- Installation of a ventilated below-grade parking structure using high volume air exchange in accordance with the New York City Department of Building (NYCDOB) mechanical code;
- Dewatering will be performed in full compliance with applicable laws, rules and regulations. Dewatering permit will be obtained from NYCDEP prior to construction activities;
- Installation of a vapor barrier below the concrete slab underneath the building and outside foundation sidewalls below grade;
- Submission of a Remedial Action report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP;
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for maintenance and inspection of Engineering and Institutional Controls and reporting at a specified frequency;
- The property will continue to be registered with an E-Designation by the NYCDOB.

Cleanup activities are scheduled to begin in October 2015 and are expected take approximately 6 to 8 months to complete.

Next Steps: After the enrollee completes the remedial work, a RAR will be prepared and submitted to OER. The RAR will describe the cleanup activities and certify that all cleanup requirements were met. Once the RAR is approved, OER will issue a Notice of Completion, a City liability release, and a New York City Green Property Certificate. OER will then issue a fact sheet announcing the completion of the remedial action and identify all engineering and institutional controls to be used at the Site.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building. For information regarding New York City's Voluntary Cleanup Program, please visit our website at: www.nyc.gov/oer.

Contact: Ashley Monti

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	Scale	Details	Source
2017	1"=500'	Flight Year: 2017	USDA/NAIP
2013	1"=500'	Flight Year: 2013	USDA/NAIP
2009	1"=500'	Flight Year: 2009	USDA/NAIP
2006	1"=500'	Flight Year: 2006	USDA/NAIP
1995	1"=500'	Acquisition Date: March 13, 1995	USGS/DOQQ
1991	1"=500'	Flight Date: March 09, 1991	NAPP
1984	1"=500'	Flight Date: March 26, 1984	USDA
1976	1"=500'	Flight Date: October 29, 1976	USGS
1974	1"=500'	Flight Date: September 15, 1974	NOAA
1966	1"=500'	Flight Date: January 12, 1966	USGS
1954	1"=500'	Flight Date: February 18, 1954	USGS
1951	1"=500'	Flight Date: April 21, 1951	EDR Proprietary Aerial Viewpoint
1924	1"=500'	Flight Date: July 01, 1924	FAIR

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/12/2018 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/31/2018 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 38 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 16 NY UST sites within

approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 3 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/12/2018 has revealed that there are 29 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 71 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - EAST 17	1815 - 1845 WEBSTER	WSW 1/4 - 1/2 (0.277 mi.)	AH295	610

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

PERSONAL CAR AUDIO	450 EAST TREMONT AVE	WSW 0 - 1/8 (0.091 mi.)	F71	112

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110069683774

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"8/11/16: Mahat t/c: DEC Mahat left a voice message to notifier to call back with more information on the spill case. Sean Harrison ****** Env. Cosultant sharrison@brinkenv.com 1805 Atlantic Avenue Manasquan, NJ 08736 Phone: 732-223-2225 Fax: 732-223-3666 Web: www.BrinkEnv.com 8/12/16: Mahat t/c: DEC Mahat received a call from Mr. Harrison informing that the UST closure letter and Soil Investigation letter will be submitted to the Department shortly. Spill case has been assigned to DEC PM Omar as day time runner for the spill date. DEC is waiting for a closure report. 8/12/2016: Rashad Received email from Sean: As I discussed with Santosh this morning on the phone, our UST Closure Letter Report and Soil Investigation Report are provided in the dropbox below. Based on our investigation, no compounds were detected above the CP-51 Cleanup Levels. Additionally, two (2) other consultants conducted soil investigations and their sampling reports are also provided in the dropbox below. TRC detected toluene in three (3) samples at concentrations ranging between 13 and 18 mg/kg and Restoration & Conservation, LLC detected 1,2,4-trimethylbenzene at 4 mg/kg. https://www.dropbox.com/sh/rhj4c23mv2nq5y2/ AAB25w1AWlAk53EcDNcXwWUza?dl=0 Please review the reports and let me know if there is anything else required to close out this spill case. Please don t hesitate to give me a ring if you have questions.

PHASE 2 - COMMERCIAL (Continued) **S118707421**

Downloaded 4 documents for site, they have been uploaded to D2. Review of UST Closure letter by Brinckerhoff dated August 4th is as follows: On May 9, 2016 during a site inspection to photo document an UST that was previously encountered by NYCSCA during construction. The UST was encountered during excavation of soil in the basement of the existing building at the site for the construction of a proposed sewer ejector pit. Based on the initial inspection, only a portion of the UST was visible since the remaining portion of the UST was covered by concrete and soil. At the time the size and extent of UST was unknown as well as any contents were unknown, no holes or openings were observed. On May 26th they returned to investigate contents of UST, they removed concrete on top of the UST. The UST was identified to be 550 gallons In size and about half filled with gasoline. An additional 550 gallon UST was found. UST2 was on quarter filled with gasoline. On May 27th AARCO pumped out the tanks and cleaned the interior of the tanks. AARCO cut tanks and removed them. Also the underground piping that connected both USTs and extended parallel along both USTs were cut and removed, no other piping was found. Inspection of interior and exterior portions of both USTs found no evidence of cracks or holes. Concrete was observed beneath the base of both USTs. The concrete was observed to be intact and no evidence of staining was found. No evidence indicative of a leak or discharge from UST-1 or UST-2 were observed based on visual, olfactory, and PID. Since concrete was observed beneath both USTs and no evidence indicative of a leak or discharge was observed in the soil surrounding UST1 and UST2 based on visual, olfactory and PID screening, no post excavation soil samples were collected. AARCO constructed wooden framework adjacent to the eastern half of UST-1 and filled the remaining portion of UST-1 and entire UST-2 with clean sand, AARCO then capped the top of both USTs with concrete, affadivits are attached. Review of Soil Investigation by Brinckerhoff dated June 24, 2016 is as follows: On June 16 an investigation occurred in 2 below grade ejector pits. One soil sample from the depth interval within each of the below grade pits exhibiting the highest contamination were taken for sampling. In ejector pit#2 a hand auger was advanced to approximately 6-9.5 feet below basement floor grade. PID readings were recorded up to 1340ppm between 7-8.5 feet. Groundwater was encountered about 8 feet below grade, no free product or sheen was observed. In the elevator pit a auger was advanced about 5.5 feet - 9 feet bg. Elevated PID readings up to 1479ppm were observed between 8-9 feet below basement grade. The analytical results indicate that the soil samples, collected and analyzed as part of this investigation, do not contain detectable contaminants of concern. Only exceedance is .17ppm Acetone in Sample S-1. Review of Restoration and Conservation sampling report is as follows: Ejector Pit 1 sample results had exceedances in 1,2,4 Trimethylbenzene-4ppm, no other exceedances were recorded in ejector pit 1, 2 or elevator pit. Review of TRC Site Inspection and Sampling Report dated July 11, 2016 is as follows: The inspection was performed on June 27, 2016 responding to reports of heavy petroleum odors and soil staining discovered during excavation for an elevator pit and ejector pit. Two USTs were discovered by the contractor during excavation for ejector pit 1. The USTs were cleaned and partially removed to accommodate installation of the ejector pit. Petroleum staining and odors in each of the pits at approximately the same elevation, about 8.5 feet below basement level and about 18 feet below first floor. Brinkerhoff Environmental Services collected two

PHASE 2 - COMMERCIAL (Continued) **S118707421**

samples (discussed above) neither found contamination. However no samples were collected in ejector pit 1. Restoration and Conservation LLC collected one sample from each pit, one from ejector pit#1, one from ejector pit#2 and one from an elevator pit. TRC also performed sampling on July 1st and collected a total of 3 samples. Sample results collected at 8.5-9.5 feet below basement which is about 15 feet below street level, ground water is expected to be about 18 feet below ground level or 10-12.5 feet below basement level. In ejector pit 1 have exceedances in toluene-13ppm, ejector pit 2 had exceedance in toluene-14ppn, elevator pit toluene-18ppm. Sample results from Brinckerhoff do not indicate petroleum contamination within the excavation areas. Samples collected by R&C were diluted, resulting in (for several compounds) detection limits above CP-51 Criteria, and the R&C results are therefore inconclusive as to whether or not soil within the excavation areas exhibit characterizes of petroleum contamination. Due to incomplete information and inconclusive sampling results from others, TRC collected soil samples within the ejector and elevator pit excavations for analysis. The concentrations for Toluene detected in the ejector and elevator pit excavations exceed CP-51 SCL. Additionally, elevated PID reading were recorded during screening of the pits and petroleum staining odors were consistently observed in the excavations, indicating the presence of petroleum-contaminated soil at approximately 18-20 feet below street grade. However we note the following: There is no known source of petroleum contamination at the Site. Documentation of removal of the USTs from ejector pit 1 has not to date been made available; however it has been reported verbally to TRC that there was no evidence of a release from the USTs. Additionally, there was no evidence of impact observed above the interval of petroleum-contaminated soil in the pits. Additionally, the known petroleum contaminated material at the site appears to be present consistently throughout the part of the site inspected by TRC in a narrow interval near the presumed elevation of the water table. It is possible that the petroleum contamination has migrated from an offsite source. Additional investigation would be necessary to determine the source of the petroleum contamination. 516 East Tremont Ave has alternate address of 508-518 East Tremont Ave and 4199-4205 3rd Avenue. No PBS registrations or additional spills found for site. Consulted with DEC Vought and sent follow up email to Sean: Thank you for the reports. I have a few follow up questions: Do you have any information on the prior use of this site? What will the future use of the site be? Is this site in any NYCOER or NYSDEC program? Sean replied: Do you have any information on the prior use of this site? Yes, the existing building was historically utilized for mixed residential and commercial uses. A Phase I ESA was performed for the site in 2012 and the report is provided in the above dropbox link for your reference. What will the future use of the site be? The two upper floors of the existing building are currently being utilized as offices for the NYPD Parking Enforcement Division and the basement, ground floor and first floor will be utilized as a school. Is this site in any NYCOER or NYSDEC program? No it s not. Also attached was Phase 1, it has been uploaded to D2. Spoke to Mr. Kanaparthi from NYCSCA and let him know what I will be sending summary to DOH to review. 8/15/2016: Rashad Sent email to Mr. Kanaparthi: I am following up on our conversation from last week on 516 Tremont Ave. Will TRC or Brinckerhoff be submitting a proposal/work plan for further investigation at this site? Bob wrote: The spill incident is being

PHASE 2 - COMMERCIAL (Continued) **S118707421**

handled by the landlord and we recommend that all communications should be directed to the landlord. Sent email to Sean: Thank you for the additional information. Will additional work/investigation be done for this site? 8/17/2016: Rashad Received email from Sean: The project is currently on hold since we called in the spill; however, we are looking for your guidance on whether additional investigation is necessary? Please advise. Discussed case with DEC Vought and I will be preparing Report Receipt Review letter. Letter was emailed to Sean with cc to Bob Kanaparthi. Letter was uploaded to D2. 8/22/2016: Rashad Received email from Sean on 8/18: I reviewed your letter and there are some discrepancies that do not accurately represent the documentation that was provided to you and do not accurately represent the actions that have already been completed at the site. On August 12th, 2016, I submitted the following documents to you in a dropbox: " Soil Investigation Summary Report, dated June 24, 2016, prepared by Brinkerhoff; " Site Inspection and Sampling Report, dated July 11, 2016, prepared by TRC Solutions; " Chemical Testing & Soil Characterization Report, dated June 29, 2016, prepared Restoration & Conservation LLC; and " Underground Storage Tank (UST) Closure Letter Report, dated August 4, 2016, prepared by Brinkerhoff. We request the first paragraph of your letter be revised to acknowledge that you received and reviewed all of the aforementioned documentation. Also, a Petroleum Bulk Storage (PBS) Application to register and close the USTs has already been submitted to the DEC PBS Unit and the documentation was provided to you in the UST Closure Letter Report as Appendix V. We request that line item #3 in your letter be removed since this action has already been completed. Please note that the current site owner is not developing this site for a school. One (1) of the current tenants of the building, the NYCSCA, is redeveloping the basement, ground floor and first floor as a school. We request the sentence As you are aware, the current site owner intends to develop this site for a school be revised. Additionally, we will forward you the development plans from the NYCSCA; however, please note that per the NYSDOH Soil Vapor Guidance Document October 2006 Air Matrix Tables 1 and 2, the installation of a vapor barrier or sub-slab depressurization system (SSDS) is only required when the concentrations of chlorinated solvent compounds from a sub-slab soil vapor sample and indoor air sample are compared against each other and indicate a mitigation action. Since, only petroleum-related compounds (toluene and 1,2,4-trimethylenezne) were detected in reported soil investigations and no chlorinated solvents were detected, this does not apply and it is very unlikely that a vapor barrier or SSDS will need to be installed. We request that the letter be revised to accurately represent the documentation that was provided and to accurately represent the actions that have already been completed at the site. Please let me know if you have any questions. 8/23/2016: Rashad Consulted with DEC Vought and sent email to NYCSCA, Sean, and NYSDOH on 8/22: The Department has received your comments and we seek clarification on the below before we can revise the letter. I have copied the NYCSCA above as your email below notes that One (1) of the current tenants of the building, the NYCSCA, is redeveloping the basement, ground floor and first floor as a school . The Department seeks to clarify who is performing the redevelopment so that an updated requirement letter may be addressed to one or both parties. If necessary, we will consult with the Office of General Counsel to confirm who the responsible parties are. Also note that we have copied the NYSDOH above so that they may address the comments on

PHASE 2 - COMMERCIAL (Continued) **S118707421**

the requirement for an SSDS/vapor barrier system. We have also sent the NYSDOH a separate email with a summary and background information on this site. Once the above issues are clarified, the Department will send out a revised letter with copies to all above. Please also note that my supervisor, Jeff Vought is copied on this email. Thanks. 8/24/2016: Rashad Worked with DEC Vought and consulted with NYSDOH, OGC, and spoke with NYCSCA and sent following email to all parties: We consulted with the NYSDOH and we spoke with the NYCSCA and the Department needs the following: 1.Submission of development plans including depths of planned buildings, site plans showing future use of the basement and building locations, and discussion of vapor mitigation techniques used in the development of the site such as sub-slab depressurization systems, vapor barriers and /or moisture barriers. 2.During our discussion with the NYCSCA they indicated that there may be additional excavation. The Department requires collection of additional confirmation samples, if further excavation occurs, as per the letter to you dated August 17, 2016, including collection of sidewall samples. We consulted with our Office of General Counsel as to who the Department s revised requirement letter will be addressed to and they noted that it should be addressed to ARP, LLC. With respect to your request of revising the sentence As you are aware, the current site owner intends to develop this site for a school , the Department suggests the following, As you are aware, the current site is being partially redeveloped into a school . In regards to SSDS only being required at chlorinated solvent impacted sites, we confirmed with the NYSDOH that they may also be required for petroleum contamination and they offered the follow guidance: 1.7.2 Chlorinated and non-chlorinated volatile chemical sites The guidance should be used when evaluating soil vapor intrusion at chlorinated and non-chlorinated volatile chemical sites, including petroleum hydrocarbon sites and manufactured gas plant sites. While the likelihood for exposures related to soil vapor intrusion may differ between sites due to site-specific conditions and chemical-specific properties, the extent of volatile chemical contamination and the nature of the contamination, these factors should be considered when developing the conceptual site model and implementing an investigation plan (as discussed in Sections 1.5 and 1.6). For example, if the conceptual site model suggests that soil vapor intrusion is not a concern at a petroleum hydrocarbon site due to biodegradation, the work plan might include the measurement of select bioparameters (e.g., oxygen, carbon dioxide, methane, etc.), along with the petroleum hydrocarbons, at varying depths to demonstrate bioattenuation in the vadose. The work plan might include sub-slab vapor sampling as well to demonstrate that conditions beneath nearby buildings are also resulting in bioattenuation of the petroleum hydrocarbons. Once the Department and NYSDOH receive and review the above we will possibly hold a teleconference with all parties, and formalize our requirements in writing via letter. Please note the letter may require the installation of sidewalk monitoring wells, determination of groundwater flow direction, and collection of groundwater samples. We would much appreciate if you can keep everyone above posted on your reply so that way we all may be informed. 8/26/2016: Rashad Received email from Lee of NYCSCA: In the interest of time, and in response to your 8/24 email request to Sean Harrison, please find the drawings and specifications for the planned development of the building related to school construction in the referenced drop box link:

PHASE 2 - COMMERCIAL (Continued) **S118707421**

https://www.dropbox.com/sh/xlgawb6ialzvkvm/AACUddU9TMMzf2nHJ-SqJUxwa?dl=0. As discussed on the phone, we would very much appreciate NYSDOH s determination as to whether or not mitigative measures/engineering controls are required based on the data provided to you by the landlord s environmental consultant and a review of the drawings for the school. Please let us know if you require additional information from SCA. 9/6/2016: Rashad Received comments from Nate seeking vapor barrier clarification, sent email to NYCSCA: After discussing the development plans with the NYSDOH, we would like clarification on the proposed vapor barrier found in the Specifications Volume 1. Please submit a scaled site plan with the locations of the vapor barrier installation, please also clarify whether it will be installed under exterior walls only or between the contamination and concrete slab across the entire building. It is also recommended that a 20-mil vapor barrier be installed. Due to the numerous files that were sent it is possible that we may have additional questions and may request a teleconference after we receive and review the above requested information. Thank you. 9/7/2016: Rashad Deborah replied: Rashad, this is a retrofit of an existing building and no work is anticipated on the exterior foundation walls. The vapor barrier specified in Specification 07272 is for damp proofing and is not a gas vapor barrier. Further, it is only being installed above grade. I hope this clarifies for you. Should you have any questions or concerns, please give me a call. 9/14/16-Vought-Conference call with NYSDOH Hughes/Walz and NYCDOH D'Andrea. Teleconference set up by DEC Rashad earlier during week as per suggestion by NYSDOH. Discussion included brief site history including lack of proposal of SSDS to date and possible future reluctance by SCA to install one. Vought noted that he and DEC Omar to confer with OGC Urda on possibly requiring SCA to install SSDS despite them not being a property owner or discharger. NYSDOH also discussed that if SCA does not feel an SSDS is warranted during call on Friday that further investigation will be needed in the basement (eg further soil, soil vapor, possible gw). Vought noted that Department required further delineation whether via wells in the sidewalk post development of further geoprobe soil borings in basement, if feasible. 9/16/2016: Rashad Held conference call with DEC Jeff, NYCSCA, NYSDOH, Brinckerhoff Environmental, TRC, and property owners to discuss next possible steps. We discussed that installation of an SSDS with sidewalk monitoring wells would be needed to delineate and determine if there is an off site source or complete delineation of soil, gw, and soil vapor in the basement would be needed to prove that no ssds is needed. Brinckerhoff will discuss various options with property owner and make choice, then submit work plan. 11/1/2016: Rashad Sent Sean from Brinkerhoff email seeking project update. 11/2/2016: Rashad Sean replied: The SCA s environmental consultant, TRC Solutions, is now handling the remediation of this spill number and all correspondence should be made directly through them. We are no longer involved. Emailed Ms Guterman asking for update and TRC contact info. 11/3/2016: Rashad Ms. Guterman responded yesterday: SCA s involvement was limited to removal and proper disposal of the soil from three ejector/elevator pits so that we could proceed with construction. We also designed and will oversee the installation of the SSDS to address any potential soil vapor issues. We are not involved in remediation of the spill case and would appreciate you discussing with the landlord. Radame Perez (property owner or representing owner) responds: Deborah Lee

PHASE 2 - COMMERCIAL (Continued) **S118707421**

please contact me to discuss. As we see it, TRC s involvement- namely the removing/disposing of the soil and overseeing the installation of the SSDS is in effect, the remediation steps to address the spill number. Accordingly, these steps will need to be incorporated into a closure report to close out the spill with DEC. Therefore, once again, TRC Solutions is handling the remediation of this spill number and all correspondence should be made directly through them. Brinkerhoff Environmental is not retained for this nor are they involved. Please contact Anthony D Angelo or I to discuss and / or for any further required clarification. Sent review letter so all parties. Email: Ms. Guterman, Please supply us with the SSDS design plans so that NYSDEC and NYSDOH can review/comment on the plans. Radame, As discussed during our teleconference on 9/16, offsite monitoring well installation in addition to the installation of an SSDS is required. NYCSCA and TRC will be installing the SSDS, however monitoring well installation and (possible) further remediation is required by the property owner. Please see attached letter for details. Feel free to contact me if you have any questions and keep us posted on the results. Thanks. 11/4/2016: Rashad Received SSDS design from NYCSCA, design was uploaded to D2. 11/7/2016: Rashad Received comments on SSDS from Nate: I have reviewed the sub-slab depressurization system (SSDS) design and specification plans for the PS 909X NYCSCA project. Based on that review I offer the following; it is referenced in the document that the Liquid Boot GeoVent system will be placed within the gas permeable layer rather than perforated/slotted PVC pipe for the lateral portions of the system. The DOH has not overseen a project using the GeoVent product previously, as with all active SSDSs the effectiveness of the system to create an adequate negative pressure will need to be verified. The results of the pressure differential testing will need to be provided to DOH for review. Spoke to Nate, I will be forwarding comments to all parties: See comments below from NYSDOH regarding the SSDS design/specs and please let us know your thoughts. Please keep in mind that the Department cannot certify that the vapor mitigation system will not pose a health risk until the results of the pressure differential testing prove the system is adequate. Thank you. Ms. Guterman responded: Rashad, just so we are on the same page: If the SSDS is installed and pressure testing demonstrates it is effective, will the Department then certify to SCA that the space is environmentally suitable for occupancy? Nate’s response was forwarded to all parties: The short answer is yes. If the system is proven to provide adequate negative pressure throughout the building, then vapor intrusion will not occur making the space suitable for occupancy. The only caveat is that the SSDS will need to be maintained and periodically certified that it is still operating as designed as it was when it was originally commissioned. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 2/1/17-Vought- Assisting DEC Lakhani on spill. Vought received email from Brinkerhoff Environmental (Sean Harrision Email:sharrison@brinkenv.com Ph:732-223-2225) on 1/26/17 that Good Morning Jeffrey, Please see the attached letter. Can you inform us who the new PM for this spill case is? I ve tried reaching out to Rashad multiple times and just got his voicemail indicating he is no longer with DEC. Please let us know. Thank you, . In email string was earlier email to DEC Omar dated 1/26/17 that Rashad, I tried sending you an attachment yesterday but it didn t go through for some reason. Please see the dropbox link below:

PHASE 2 - COMMERCIAL (Continued) **S118707421**

https://www.dropbox.com/sh/fwc0qotx94rlbs5/AAAQ8f_oTFBWQS3Q292nXoEoa?dl=0 Thank you, . Vought uploaded letter to D2 and reviewed: Response Letter to DEC (Brinkerhoff-Gene Santana)-1/25/17. Letter notes that Brinkerhoff retained by ARP, LLC c/o Mastermind Ltd. to address remedial requirements of DEC letter dated 11/3/16. Letter notes Brinkerhoff will perform the investigation activities and submit a report for DEC review. 2/1/17-Vought-Sent email to Brinkerhoff (Harrison) with a cc to all parties that Sean, Rashad is no longer with the DEC and the spill has been transferred to Pratik Lakhani, copied above, here in the Spills Unit. Pratik is new to the unit and I as such I will assist him on the above spill as I did Rashad. I have also reattached your letter and included NYSDOH, NYCDHOH, and the School Construction Authority on this email so that they may be informed. To bring you as well as those copied above up to speed, I have include Rashad s most recent spill notes below which may assist in fulfillment of DEC s requirement letter from 11/3/16. His recent notes are as follows: 11/7/2016: Rashad Received comments on SSDS from Nate: I have reviewed the sub-slab depressurization system (SSDS) design and specification plans for the PS 909X NYCSCA project. Based on that review I offer the following; it is referenced in the document that the Liquid Boot GeoVent system will be placed within the gas permeable layer rather than perforated/slotted PVC pipe for the lateral portions of the system. The DOH has not overseen a project using the GeoVent product previously, as with all active SSDSs the effectiveness of the system to create an adequate negative pressure will need to be verified. The results of the pressure differential testing will need to be provided to DOH for review. Spoke to Nate, I will be forwarding comments to all parties: See comments below from NYSDOH regarding the SSDS design/specs and please let us know your thoughts. Please keep in mind that the Department cannot certify that the vapor mitigation system will not pose a health risk until the results of the pressure differential testing prove the system is adequate. Thank you. Ms. Guterman responded: Rashad, just so we are on the same page: If the SSDS is installed and pressure testing demonstrates it is effective, will the Department then certify to SCA that the space is environmentally suitable for occupancy? Nate’s response was forwarded to all parties: The short answer is yes. If the system is proven to provide adequate negative pressure throughout the building, then vapor intrusion will not occur making the space suitable for occupancy. The only caveat is that the SSDS will need to be maintained and periodically certified that it is still operating as designed as it was when it was originally commissioned. As per Brinkerhoff s attached letter, the NYSDEC and NYSDOH look forward to the results of the investigation and look forward to receiving the resulting report.Please send all further correspondence to Pratik Lakhani above with a cc to me as well as NYSDOH. You can also reach Pratik at (718)482-4038 if needed. Thanks for your patience, 03/01/17 - Lakhani Called Sean Harrison and he informed that three (3) weeks ago, monitoring wells were installed on the sidewalks. Soil borings were also installed and two (2) soil samples were taken from each boring. Sean will send the soil data results to DEC Lakhani. Last week samples, were taken from the wells and Sean is awaiting the analysis results. As for the SSDS, the subgrade has been installed. The SSDS is being installed by SCA. Pressure differential testing has not been done yet. SCA contact is Tanya Amusina. 03/02/17 - Lakhani Soil samples do not show VOC exceedances above CP-51 standards. Tanya

PHASE 2 - COMMERCIAL (Continued) **S118707421**

Amusina's contact information: Tanya Amusina NYCSCA Project Officer Cell: 917-417-8922 TAMUSINA@nycsca.org 03/03/17 - Lakhani Emailed SCA Tanya Amusina the following: I hope this email find you in good health. I am the new project manager for the above spill case. I received your contact from Sean Harrison of Brinkerhoff Environmental Services, Inc. From my understanding, SCA is responsible for the installation of the sub-slab depressurization system (SSDS) at the site. When is the system scheduled to be installed? Please remember that as per the NYSDOH, once the SSDS is installed, pressure testing must be conducted to prove that the SSDS is effective. Please update me on any other activities regarding the site. 03/15/17 - Lakhani Emailed SCA Tanya, and cc'ed SCA Gutterman and SCA Kanaparthi, seeking an update on the installation of the SSDS. SCA Bob Kanaparthi responded and informed that the SSDS is currently being constructed and expected to be completed by August 2017. Once installation and testing is completed, SCA will provide all testing/certifications required. 04/03/17 - Lakhani Spill Closure Report (Brinkerhoff, 3/29/17) - Brinkerhoff directed the installation of three (3) groundwater monitoring wells. AARCO installed the monitoring wells to depths between approx. 23' and 25'bgs. During advancement of the boreholes, Brinkerhoff continuously screened the soil and no evidence of contamination was observed. Since no evidence of soil contamination was observed during the three (3) well installations, two (@) deep soil samples were collected above the groundwater interface from each borehole. In total, Brinkerhoff collected six (6) soil samples and sent them to the lab to be analyzed. The analytical results from the six (6) soil samples detected no compounds at concentrations above CP-51 standards. Following sample collection from each soil boring, the boreholes were converted to permanent wells using two PVC, 0.02 slotted well screens. Free phase product was not detected in any of the three (3) monitoring wells. The depth to groundwater ranged from 14.3'-16.1'bgs. Groundwater flow was anticipated to be towards the north-northwest. One (1) groundwater sample was collected from each well. The analytical results detected no petroleum related compounds at concentrations above standards. However, three (3) chlorinated related compounds were detected above standards: PCE 2.2 ug/L(MW-1), PCE 54 ug/L(MW-2), PCE 2.3 ug/L(MW-3), TCE 16 ug/L(MW-1), TCE 31 ug/L(MW-2), TCE 5.6 ug/L(MW-3). One of the active tenants of the site building, the NYCSCA, is currently redeveloping the basement, ground floor, and first floor of the site building as a school. As part of the redevelopment, the NYCSCA's contractor performed soil excavation and off-site removal of non-haz petroleum contaminated soil - overseen by TRC, the consultant. As part of redevelopment, the NYCSCA installed a vapor barrier membrane and an active SSDS beneath the foundation slab in the basement of the building. TRC designed the vapor barrier membrane and SSDS and oversaw the installation. At the time of preparation of this report, the vapor barrier membrane and all components of the SSDS have been installed. However, the contractor is still reportedly installing the riser piping and roof components of the SSDS. In the Soil Investigation Report dated 06/24/16, two (2) soil samples were taken - one from ejector pit #2 (S-1) and the other from the elevator pit (S-2). Results were as follow: benzene 64 ppb(S-1, 7'-8'bgs), benzene 250 ppb(S-2, 6.5'-7.5'bgs), xylenes 500 ppb(S-2, 6.5'-7.5'bgs), PCE 64 ppb(S-1, 7'-8'bgs), PCE 250 ppb(S-2, 6.5'-7.5'bgs). 04/05/17 - Lakhani DEC Lakhani responded to Sean Harrison informing him that the spill cannot be closed until pressure testing is completed on the

PHASE 2 - COMMERCIAL (Continued) **S118707421**

SSDS. Because as per NYSDOH, the system must be proven to provide adequate negative pressure throughout the building, confirming that vapor intrusion will not occur and make the space suitable for occupancy. After reviewing the report, there were no endpoint samples taken from the elevator pit and ejector pit #2, even though both areas contained contamination prior to excavation. DEC Lakhani sent a report review & receipt letter requiring endpoint samples to be collected from the elevator pit and ejector pit #2 and a submission of a surrounding area site plan. Moreover, Sean was informed that the spill will be closed pending submission of the pressure test on the SSDS, acceptable results from the endpoint samples, and submission of surrounding area site plan. 04/11/17 - Lakhani Sean responded confirming with property owner that the NYCSCA will distribute the results for NYSDEC's and NYSDOH's review once the testing is complete. No post-excavation samples were collected from the base of the elevator pit or ejector pit. Brinkerhoff was not involved during the soil excavation/removal activities of these pits. The NYCSCA's consultant, TRC Companies, Inc., performed the oversight and in the attached email, the NYCSCA confirmed that the petroleum-contaminated material was removed from both pits. 04/14/17 - Lakhani Sent email to NYCSCA Kanaparthi, Guterman, Wagner, and Lempert about necessary endpoint sampling in ejector pit #2 and the elevator pit. 4/18/17-Vought-Received call from and spoke to SCA Guterman and Michael Wagner who had expressed concern that DEC was continuing to require endpoint soil samples from excavations for elevator pit despite knowledge that all the contamination could not be removed as part of development, and hence the installation of an active SSDS and DEC requirement for Brinkerhoff to submit well installation plan to see if remaining contamination was posed a threat for off-site mobility. Vought noted that in general, DEC always required collection of endpoint samples as it was necessary to characterize soil contamination that remained in place. SCA Guterman noted that due to ongoing development, the excavations were already backfilled and it was no longer feasible for endpoint samples to be collected. SCA Guterman also inquired as to if Brinkerhoff (consultant for site owner) had submitted a well installation plan to date and she also noted that SCA was hoping school could be opened in September. SCA Wagner also confirmed the need for pressure testing of the SSDS in the summer before the possible school opening in September. Vought spoke to DEC Lakahani so that he would send an email to SCA that noted the following: 1)DEC, after further consideration, was no longer requiring collection of endpoint samples 2)Information as to whether DEC received the well installation plan from Brinkerhoff (and if it was not received, then Lakahani would send an inquiry to Brinkerhoff at to it's status with a cc to SCA) 3)Scheduled plans for this summer's pressure testing of the SSDS as per NYSDOH requirements before the school possibly opened in September (with a cc to NYSDOH Walz on the email) 4)Clarification of Lakhani email from 4/5/17 that spill will be considered for closure upon receiving confirmation of the effectiveness of the SSDDS AS WELL AS confirming that there was no off-site impact from the remaining contamination as evidenced by Brinkerhoff's monitoring wells that remain to be installed. DEC Lakhani sent the following email to NYCSCA Guterman: I hope you re doing well. After further consideration and discussion with Jeffrey Vought, DEC is no longer requiring collection of endpoint samples in the area of the elevator pit and ejector pit #2. Moreover, Brinkerhoff has sent me the well installation plan in a closure

PHASE 2 - COMMERCIAL (Continued) **S118707421**

report that I ve attached to this email. Brinkerhoff directed the installation of three (3) groundwater monitoring wells. AARCO installed the monitoring wells to depths between 23' and 25'bgs. During advancement of the boreholes, Brinkerhoff continuously screened the soil and no evidence of contamination was observed. Since no evidence of soil contamination was observed during the three (3) well installations, two (2) deep soil samples were collected above the groundwater interface from each borehole. In total, Brinkerhoff collected six (6) soil samples and sent them to the lab to be analyzed. The analytical results from the six (6) soil samples detected no compounds at concentrations above CP-51 standards. Following sample collection from each soil boring, the boreholes were converted to permanent wells. Free phase product was not detected in any of the three (3) monitoring wells. The depth to groundwater ranged from 14.3'-16.1'bgs. Groundwater flow was anticipated to be towards the north-northwest. One (1) groundwater sample was collected from each well. The analytical results detected no petroleum related compounds at concentrations above standards. However, chlorinated related compounds were detected above standards with maximum concentrations of 54 ug/L of PCE in MW-2 and 31 ug/L of TCE in MW-2. Due to the prior review of the vapor mitigation efforts by NYSDOH, and in an effort to keep everyone copied above informed, at the time of preparation of this report, the vapor barrier membrane and all components of the SSDS had been installed. However, the contractor is installing the riser piping and roof components of the SSDS. NYCSCA has scheduled plans for this summer s pressure testing of the SSDS as per NYSDOH requirements before the school could possibly be opened in September. We are hoping that NYSDOH can perform and expeditious review of the pressure testing so we can help NYCSCA meet their deadline. Finally, the spill will be considered for closure upon receiving confirmation of the effectiveness of the SSDS, as well as confirmation via continued quarterly sampling of monitoring wells that there is no off-site impact from the residual contamination as evidenced by Brinkerhoff s monitoring wells. If you have any questions, please contact me at (718) 482-4038. 06/15/17 - Lakhani Sean Harrison emailed the results of a second round of groundwater sampling: Prior to sample collection, an interface probe, capable of detecting a free-phase product thickness of 0.01 feet, was used to gauge each well identified as MW-1 through MW-3. Free-phase product was not detected in any of the three (3) monitoring wells, and the depth to groundwater ranged from 14.14 to 15.89 feet below the existing sidewalk grade. Groundwater flow was determined to be towards the north-northwest direction which is consistent with the data recorded in the February 22, 2017 sampling event. One (1) groundwater sample was collected from each well. The analytical results from the three (3) groundwater samples detected no petroleum-related compounds at concentrations above TOGS. However, three (3) chlorinated-related compounds were detected at concentrations above TOGS. These compounds are unrelated to this spill investigation, and the source of these contaminants is unknown. 06/16/17 - Lakhani Sent the following email to Nathan Walz regarding ejector pits at the site: Nathan, I hope you re doing well. You ve already provided commentary on the active SSDS that was installed at the above site. However, there has been a new concern recently brought to light. In the cellar of the building there are three (3) permanent ejector pits that have already been installed which pump sewage out to the sewer. These ejector pits were excavated and

PHASE 2 - COMMERCIAL (Continued) **S118707421**

installed because NYCSCA is currently redeveloping the cellar, ground floor, and first floor of the site building as a school. TRC oversaw the installation of these ejector pits. Upon excavating these pits, soil contamination was observed, however, not all the contamination was removed as part of the development. My preliminary discussions with TRC indicated that these pits were sealed but I have no further information on the method of sealing and the structure of the pits. As a refresher, the groundwater at the site is impacted by chlorinated solvents, namely PCE and TCE. Wells down-gradient of the ejector pits have been sampled and returned with concentrations of 72 ug/L and 56 ug/L for PCE and TCE respectively. I wanted to bring this to your attention as NYSDOH may have additional requirements regarding indoor air that are influenced by these ejector pits, despite there being an active SSDS installed and to see if they posed a possible vapor intrusion concern. If they do pose a possible vapor intrusion concern, please let us all know and I am hoping that via this email that SCA/TRC can provide more information on the structure and use of the pits especially with respect to any vapor intrusion issues. Please also note that SCA is in discussions with Jane O Connell regarding possible BCP entry and as such I have copied her above as well. 06/20/17 - Lakhani Spoke to NYCSCA Guterman and staff on 06/19/17 and they informed that the ejector pits were installed in concrete and had a crystalline water proofing applied to the inside and outside of the pit (two membranes). The pit was then filled with a gas permeable aggregate. NYCSCA Guterman emailed to clarify the structure of the pits and the engineering controls installed to prevent vapor intrusion. The ejector pits are constructed of concrete walls and bottom and surrounded by gas permeable aggregate to ensure communication with the SSDS and allow evacuation of the vapors. In addition, the exterior of the pits are coated with a waterproofing material and the interior of the pits are coated with a crystalline waterproofing material. The ejector pits were considered during the design of the SSDS and should not represent a new concern regarding soil vapor intrusion. Further, NYCSCA will b conducting vacuum field tests during the commissioning of the system to ensure proper operation of the SSDS. DEC Jane confirmed that the site is not applying to BCP. 08/25/17 - Lakhani Sean emailed to inform that Brinkerhoff performed another round of groundwater sampling on 08/24/17. He also sent the Certificate of Compliance for the SSDS that was installed at the site. The client confirmed that the SCA's consultant is currently preparing the SMP for the system. 09/01/17 - Lakhani Brinkerhoff Sean sent the results from the recent groundwater sampling event conducted at the site. They are still waiting to receive the SMP from SCA's consultant. Sampling Results Summary Letter (Brinkerhoff, 08/30/17) - Prior to sample collection, an interface probe was used to gauge each well identified as MW-1 through MW-3. Free Phase product was not detected in any of the three (3) wells. The depth to groundwater ranged from 14.35' to 16.09'bg. Groundwater flows to the north-northwest. One (1) sample was collected from each well. Results are as follow: TCE 24 ug/L(MW-1), PCE 63 ug/L(MW-2), TCE 42 ug/L(MW-2). Contaminants are within attenuation range. Consulted with DEC Jane O'Connell who informed that the concentrations of the contaminants are low and do not warrant an investigation to take place to locate the source. There are no known sensitive receptors downgradient of the site. The active SSDS has been installed and was tested effective. 09/05/17 - Lakhani Brinkerhoff Sean sent the SMP for the site. The SMP was also sent to

PHASE 2 - COMMERCIAL (Continued) **S118707421**

NYSDOH Nathan Walz for review. 09/06/17 - Lakhani NYSDOH reviewed the SSDS SMP and offered the following comment: Pressure differential testing should be performed at the monitoring points that are associated with the SSDS fan unit(s) if they are functioning at a lower vacuum than previously inspected or original commissioning values. This testing should be done to verify that the SSDS is still creating an adequate negative pressure, results of this testing should be included on the inspection form and corrective actions taken as necessary. Comments were forwarded to SCA and consultants. Spill is closed. DEC Requires: 1)As per NYSDOH Walz the effectiveness of the system to create an adequate negative pressure will need to be verified. The results of the pressure differential testing will need to be provided to DOH for review. - to be performed by SCA as tenant 2)Site Management Plan for SSDS operation as NYSDOH Walz noted that the SSDS will need to be maintained and periodically certified that it is still operating as designed as it was when it was originally commissioned. - to be performed by SCA as tenant 3)Submission of off-site (sidewalk) well installation plan by property owners consultant Brinkerhoff 3)cc to Vought, NYSDOH Hughes/Walz, NYCDOH D'Andrea, SCA Gutterman/Kanaparthi, Brinkerhoff Harrison"

Remarks: "The cleanup is still pending."

DEC Memo:	"12/08/07-Vought-Duty Desk officer. Called and spoke to Tony Monaco (Petro 718-333-8863 800-758-3835 fax: 718-333-8836). Petro onsite and made delivery and spill of ten gallons in basement which was confirmed by driver. Spill contained to basement but when driver came back to clean up spill he was refused access by Washington. One of tenants also witnessed spill. Cause of spill may be broken fill. If Washington allows access Petro will come in and investigate and put down speedy dry (at least). Vought called Wahsington and left message with Ms. Washington to return call immediately and told her that letter would be sent requiring cleanup. DEC requires: 1)tightness testing of tank system and repair if fail 2)cleanup of basement spill 3)cc to Petro. Vought sent letter with above requirements and one month due date to owner as per ACRIS: Ms. Eda Washington Morning Star Baptist Church, Inc. A Religous Corporation 217 East 123rd Street New York, NY 10035 01/02/08 Spoke with Eda Washington, sent her the letter, dated 12/08/07 at new address: Morning Star Full Gospel Assembly 464 E Tremont Avenue Bronx, NY 10457 Attn: Sue Washington (SR) 01/22/08 Rec'd letter from Petro confirming the repair was done, surface spill was cleaned up, there was no soil contamination observed.Spill closed.(SR) "

MAN HOLE 29750 (Continued) **S106007729**

reports while attempting to take an oil sample from feeder 71 in manhole 1894 located in front of 1894 Washington Avenue (109 feet south of East Tremont Avenue), Bronx, finding 9 gallons of dielectric fluid leak from a valve on top of the feeder pipe and is contained with 500 gallons of water in the manhole. No fire or smoke is/was involved. No sewers, waterways, or private property affected. Crew tightened valve and the leak has been stopped. Chem Lab has been contacted and is on route to sample oil for PCBs. Cleanup will be performed by vendor pending test results. Vendor, Clean Harbors has been contacted and they will perform the clean up. Cleanup completed: 22 Sept 02 Cleanup Activities: TIGHTENED VALVE, BLOCKED NEARBY SEWERS/DRAINS WITH SPILL KITS, REMOVED/RECOVERED LIQUID/SOLIDS, REMOVED VISIBLE TRACES OF OIL, WASHED STAINED AREAS."

Remarks: "spill from a bad valve on the feeder pipe - no sewers/wateways/private property/smoke/fire - on 500 gallons of water - is all contained"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 1
Tank Id: 44785
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I05 - Overfill - Vent Whistle
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1995
Capacity Gallons: 1500
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 07/16/2014

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	60420
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

4196 PARK AVENUE (Continued) **A100178033**

Equipment Records:

C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1980
Capacity Gallons:	2000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MSBAPTIS

Record Updated Date:	07/09/2018
Update By:	JHOCONNE
Site Description:	Location- The 1888 Bathgate Avenue Site is an approximately 36,000 square foot (0.826 acres) parcel located in an urban area in the East Tremont neighborhood of the Bronx. Site Features- The site formerly consisted of five vacant, interconnected single-story warehouses and was most recently occupied by a steel door manufacturer. Current Zoning and Land Use- The current zoning designation of the site is M1-4/R7A/R7X (residential and manufacturing). The site is located in special mixed-use Third Avenue/Tremont Avenue MX-14 district, allowing for mixed residential and industrial uses in close proximity. Past Use of the Site- Historic records indicated that the site was developed with private residences and stores as early as 1896, with industrial and manufacturing uses including a lumber yard, various warehouses, Decorative Plastics Co., a glass and glazing facility, a bed spring company, various clothing and accessory manufacturers, a woodworking facility, and a rebar manufacturing facility. ABCO Steel Door (ABCO), a steel door manufacturing facility, occupied the site between approximately 1980 and 1993. Since approximately 1993, no manufacturing operations occurred at the site; however, the site buildings were used for storage of equipment and supplies by ABCO. Site Geology and Hydrogeology- Based on site-specific groundwater measurements, groundwater beneath the site ranges from approximately 11.7 to 15.9 feet below grade in the southwestern and northeastern portions of the Site, respectively. Shallow groundwater flows in a southerly direction beneath the site.
Env Problem:	Nature and Extent of Contamination Prior to Completion of Remediation Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include lead, mercury, tetrachloroethene (PCE) and trichloroethene (TCE). Soil - Lead and mercury were found at the 5 to 8 foot depth

1888 BATHGATE AVENUE REDEVELOPMENT SITE (Continued) **S120706197**

interval. Lead concentrations range from 567 parts per million (ppm) to 1,060 ppm as compared to the restricted residential soil cleanup objective (RRSCO) of 400 ppm. Mercury concentrations range from 2.51 to 6.23 ppm compared to the RRSCO of 0.81 ppm. PCE was detected soil samples at concentrations ranging from 0.0106 ppm to 0.0188 ppm, below its Unrestricted Use Soil Cleanup Objective (UUSCO) of 1.3 ppm and its RRSCO of 19 ppm. TCE was found in site soils at concentrations below both the UUSCO and the RRSCO. Pesticides, total PCBs and SVOCs were all detected above UUSCOs and RRSCOs in soil samples. Data does not indicate any off-site impacts in soil related to this site. Groundwater - PCE and TCE were found in groundwater at concentrations exceeding groundwater standards. The maximum TCE concentration was 5.6 parts per billion (ppb) compared to the groundwater standard of 5 ppb. The PCE concentration ranged from 25.2 to 210 ppb compared to the standard of 5 ppb. Lead was found in groundwater at a concentration of 42 parts per billion (ppb) exceeding the groundwater standard of 25 ppb. Mercury was not found in the groundwater. No pesticides, PCBs or SVOCs were detected above their respective AQWSs. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - TCE was detected in soil vapor at 56 micrograms per cubic meter ug/m3. PCE concentrations range from 37 to 300 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: The site is covered with buildings; however, people may come into contact with contaminated soil or groundwater if they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in the event the site is re-occupied. People are not breathing the contaminated indoor air via soil vapor intrusion since the site is vacant. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings as a result of this site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 01/26/04 TRANSFERRED FROM ROMMEL TO AUSTIN 02/17/04: Reassigned from AUSTIN to KRIMGOLD. On 6/29/05, J Peck tried to contact Paul Ciminello at Eco-Systems. Eco-Systems has different telephone No. 845 452 1658. Paul Ciminello's home telephone No. in Poughkeepsie is 845 452 1190. On 7/1/05, Paul returned call from telephone No. 914 475 4208. On 9/7/05, J Peck called last mentioned telephone No. and left message that the NYSDEC needed the address of the spill location and documentation of clean up status. Paul Ciminello has not responded. On 1/10/06, J Peck while working on another project with ecosystems made the connection that the parties were the same as for this spill. J Peck emailed ecoosystems

EAST 178TH/MONTEREY AV (Continued) **S105140459**

reiterating previous request for spill closeout information. On 1/25/06, ecosystems forwarded a Letter Report with sampling information that indicated BTEX constituent concentrations were within exceptable range of recent BTEX guidelines. (copy enclosed) "
Remarks: "caller doing site work found contamination."

Contact Name:	DEBRA THOMPSON
DEC Memo:	"10/29/13 : Mahat Case is transferred from DEC Demeo to DEC Mahat as per DEC Demeo and DEC Vought. A complete case review is completed under supervision of DEC Vought. Background of the Property: -1.3 Acre property -Former Lamp manufacture site. -A tank (UST) was found on the site. Delineation was performed on vicinity of the tank and results were negative for the potential contamination. -Soil is mainly brown medium sandy loam and historic fill Future Plan for redevelopment: -Current structure is waiting for demolition. -Multi-stories mixed used structure is planned. 7 stories, 34 appt per floor and 240 total including 40,000 square foot retail space. -

SOIL (Continued) **S112809094**

Excavation of the soil for the foundation is not expected to be below ground water level which is 14 feet in average. 1/3/2013: Spill was reported by DT consultant. During the process of sampling the soil for the redevelopment, DT discovered petroleum contamination in Soil Boring 13. 3/5/2013: Proposed and executed the work plan to delineate and remediate the contamination from the site. Gary Frederic LLC (Property owner) hired Taylord Environmental to execute Phase II Environmental Site Assessment. 3/26/2013: Taylord Environmental submitted Site Specification Investigation (SSI) complete report. Report includes following criteria: METHODOLOGY: Soil Analysis: -VOCs were below regulatory standard -Samples were taken from 4 feet intervals -27 soil samples were collected -Detection of Tretrachloroethene- 7ppm on SB 9. (Below standard)(Soil Vapor Analysis: -8 sample locations and they were 2 feet above the ground water level. -Under NYSDOH final guidance on soil vapor intrusion, October 2006. Following items were above regulatory standard: Dimromocloroenthane- 140ppm Butadience- 51ppm Chloroform- 220ppm Ground Water Analysis: -9 GW samples were collected. -Flow of GW is from East to West. -12 dissolved metals were detected in ground water sample (unfiltered GW) -VOCs and SVOCs were below regulatory standard. Conclusion and Recommendation: The detection of compound as encountered during this investigation appears to be concentrated mainly in surface soil sample across the site. However, DTC did documents petroleum based hydrocarbon that required remediation action plan. 8/29/2013: Mahat Mr. Taylord submitted a supplement report to support the original report. He performed few sample analysis down gradient (East-West). The supplement results were very supportive to the original report. Hence, Mr. Taylord requested DEC to close the spill case. This piece of documents argue why the spill should be closed and the reason for no futher remediation plan. This document is uploaded in edocs. 10/31/2013: Mahat A briefing conducted to DEC Vought after the complete review of the case. Vought suggested to have a discussion with Hazardwaste Engineer for a consultation. 11/1/2013: Mahat A consultation session was held with DEC Vought and DEC Jane Oconnell (Hazard Waste Remediation Engineer). As per Jane: Ground water, soil and soil vapor are below standard to be considered as a hazard site. The contamination on site is historic and no further remediation action plan is required. 11/4/2013: Mahat A voice message was left to Mr. Talyor with a call back number stating few queations about the case. A call was received from Mr. Taylord inquiring about the site status. As we discuss about the site he informed DEC that no future redevelopment plan is proposed. Not having any future plan for the site may change the ball game since all the analytical report was performed under restricted soil clean up act. A cross reference with OER (Shaminder Chawla: shaminder@dep.nyc.gov) was attempted. A voice message was left to Mr. Chawla providing all the information about the site. 11/7/2013: Mahat An email was sent to Mr Chawla for more information about the site with DEP perspective. Later in the evening, a phone call was received from Mr. Chawla mentioning that DEP is not involved with the case at this moment. 11/12/2013: Mahat Partner with Mr. Chawala again with NYC VCP Site Number: 13EH-N278X. He mentioned that nothing alerting activity is going on their file. Mr. Chawala has no objection on DEC closing the spill. Further guidance for the property owner would be taking extra precautions and approach for vapor barrier. All the remediation actions and analytical report has been thoroughly reviewed. DEC made a decision to close the spill. Spill

SOIL (Continued) **S112809094**

will be open upon violation of criteria discussed in SCL. As of 11/12/2013 no further investigation is required. Spill closed. DEC Requires: 1).The depth of excavation of the soil for the foundation of the proposed building. 2).Prevention or vapor barrier upeon redevelopment."

Remarks: "Caller advised collected samples of ground at residence that smells like an unknown petroleum product possibly gasoline. Clean up is pending."

DEC Memo:	"7/16/15: J.Kann - spoke with Edyta Korczynska. She informed me that the site is a Brownfield site and the project manager from DEC Albany, John Grathwol was on site today to observe the tank removal and endpoint sampling. Emailed John Grathwol notifying him that the spill was placed in his name. 7/29/15: Two 550-gallon tanks were removed along with the associated petroleum contaminated soil. Post-excavation samples were also taken on July 16, 2015. (J. Grathwol) 12/6/15: Post-excavation samples illustrate that spill is remediated. Final Engineering Report documents spill cleanup and will be approved this month. Spill closed. (J. Grathwol)"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Con Ed detailed report: 10/21/96 While entering the pumphouse to reset crossover 4 after 38X01 tripped auto, I noticed water on the floor of pumphouse. The water had an oil sheen to it. I called S.M. Peate to notify him of situation and prodeeded to place booms at waters outer edges and lay absorbant pads on top of oil water mixture. Water entered pumphouse because of torrential wind driven rains. Water entered from roof and large metal doors on south

EAST 179TH ST SUB STA (Continued) **S107407368**

end of pumphouse. Area at main entrance to building was dry. DEC Inspector Notes: 5/28/02 Foley inspected pumphouse with SSO EH&S Tom Whipple and Joe Susco. Valves all have containment pans and absorbant pads hanging underneath to catch any drips. According to Whipple, this is not a priority to fix, but will be fixed eventually. Pumphouse concrete floor appears to be clean. Tank not leaking."

Remarks: "RESIDUE OIL FOUND IN THE PUMP HOUSE - UNKNOWN WHERE IT CAME FROM - SPILL HAS NOT BEEN CLEANED UP YET - THE OIL IS FLOATING ON 4 GALLONS OF WATER ON A CEMENT FLOOR - THE WATER IS FROM HE ROOF LEAKING IN THE PUMP HOUSE - CLEAN UP WILL BE DONE BY 1600 HOURS"

Contact Name:	HARDIK PAREKH
DEC Memo:	"Sangesland called and left a voice message with Mr. Parekh asking for more details. Is the drum on private property? Is it on the sidewalk? Why were soil & groundwater tests done around the tank? Was the tank ever removed? What is the current status on the site? Lantern Group (non for profit housing development company) Development will be funded by the HPD. Mr. Parekh said they will remove th drum and deal with the contamination on site (some PAH's) once the city approves the costs. Source is a 55 gal drum. Investigation revealed PAHs and no groundwater cont. Based on spill info. this spill closed."
Remarks:	"Found a 55gal. drum above ground with staining around it. Did Phase 2 environmental subsurface investigation around the drum. Groundwater was not affected. (Investiagtion was done on June 16,2006 and the results came back on July 15,2006)"

Tank Info:

PUBLIC SCHOOL 58 - BRONX (X058) (Continued) **A100166655**

Tank Number: 001
Tank Id: 58039
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/01/1999
Capacity Gallons: 7500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

Updated By:	JCGRATHW
Site Code:	499347
Site Description:	Location: The 1.4 acre site is located in an urban area at 4275 Park Avenue and 411 East 178th Street (a/k/a 1973 Webster Avenue) in the Tremont section in Bronx. The site is bounded by a warehouse to the north, commercial and residential properties to the south and to the west, and MTA Metro North railway lines to the east. Site Features: The site is currently improved with two unoccupied steel framed masonry block structures. There are currently two tax lots (lots 3 and 55) that comprise the site. Current Zoning and Land Use: The site is being developed and is zoned C4-5X (Residential/ Commercial). Past Use of the Site: From 1901 through 1915, a number of residences, retail stores, patent office, paint shop, wagon house and stable were located on-site. The site was the location of a service station and parts department, Studebaker Corporation of America, Park Avenue Auto Body Company Inc. and G Auto Bodies from at least 1927 to at least 1940. Lots 6, 7, 8 and 75 were improved with two-story structures until 1981, when they were demolished. Site Geology and Hydrogeology: Subsurface soil at the site consists of historic fill, which is primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The historic fill layer extends to a depth of 5 to 8 feet below grade. Native soil consisting of brown sand is present below the historic fill layer. Bedrock is reportedly 50 - 55 feet below grade. Groundwater exists at a depth of approximately 15 to 19 feet below grade and flows in a southeast direction. Surface topography in the general area of the site possesses moderate relief with general slope to the south-southeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene and lead in soil. Groundwater contamination is not an issue at the site. Remedial actions have successfully achieved soil cleanup objectives specified in the Decision Document and a soil cover system exists throughout the site. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code:	499347
Site Description:	Location: The 1.4 acre site is located in an urban area at 4275 Park Avenue and 411 East 178th Street (a/k/a 1973 Webster Avenue) in the Tremont section in Bronx. The site is bounded by a warehouse to the north, commercial and residential properties to the south and to the west, and MTA Metro North railway lines to the east. Site Features: The site is currently improved with two unoccupied steel framed masonry block structures. There are currently two tax lots (lots 3 and 55) that comprise the site. Current Zoning and Land Use: The site is being developed and is zoned C4-5X (Residential/ Commercial). Past Use of the Site: From 1901 through 1915, a number of residences, retail stores, patent office, paint shop, wagon house and stable were located on-site. The site was the location of a service station and parts department, Studebaker Corporation of America, Park Avenue Auto Body Company Inc. and G Auto Bodies from at least 1927 to at least 1940. Lots 6, 7, 8 and 75 were improved with two-story structures until 1981, when they were demolished. Site Geology and Hydrogeology: Subsurface soil at the site consists of historic fill, which is primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The historic fill layer extends to a depth of 5 to 8 feet below grade. Native soil consisting of brown sand is present below the historic fill layer. Bedrock is reportedly 50 - 55 feet below grade. Groundwater exists at a depth of approximately 15 to 19 feet below grade and flows in a southeast direction. Surface topography in the general area of the site possesses moderate relief with general slope to the south-southeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene and lead in soil. Groundwater contamination is not an issue at the site. Remedial actions have successfully achieved soil cleanup objectives specified in the Decision Document and a soil cover system exists throughout the site. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Geology and Hydrogeology: Subsurface soil at the site consists of historic fill, which is primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The historic fill layer extends to a depth of 5 to 8 feet below grade. Native soil consisting of brown sand is present below the historic fill layer. Bedrock is reportedly 50 - 55 feet below grade. Groundwater exists at a depth of approximately 15 to 19 feet below grade and flows in a southeast direction. Surface topography in the general area of the site possesses moderate relief with general slope to the south-southeast.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene,

WEBSTER AVENUE RESIDENCES (Continued) **S120706253**

benzo(a)pyrene and lead in soil. Groundwater contamination is not an issue at the site. Remedial actions have successfully achieved soil cleanup objectives specified in the Decision Document and a soil cover system exists throughout the site. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Location: The 1.4 acre site is located in an urban area at 4275 Park Avenue and 411 East 178th Street (a/k/a 1973 Webster Avenue) in the Tremont section in Bronx. The site is bounded by a warehouse to the north, commercial and residential properties to the south and to the west, and MTA Metro North railway lines to the east. Site Features: The site is currently improved with two unoccupied steel framed masonry block structures. There are currently two tax lots (lots 3 and 55) that comprise the site. Current Zoning and Land Use: The site is being developed and is zoned C4-5X (Residential/ Commercial). Past Use of the Site: From 1901 through 1915, a number of residences, retail stores, patent office, paint shop, wagon house and stable were located on-site. The site was the location of a service station and parts department, Studebaker Corporation of America, Park Avenue Auto Body Company Inc. and G Auto Bodies from at least 1927 to at least 1940. Lots 6, 7, 8 and 75 were improved with two-story structures

WEBSTER AVENUE RESIDENCES (Continued) **S120706224**

	until 1981, when they were demolished. Site Geology and Hydrogeology: Subsurface soil at the site consists of historic fill, which is primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The historic fill layer extends to a depth of 5 to 8 feet below grade. Native soil consisting of brown sand is present below the historic fill layer. Bedrock is reportedly 50 - 55 feet below grade. Groundwater exists at a depth of approximately 15 to 19 feet below grade and flows in a southeast direction. Surface topography in the general area of the site possesses moderate relief with general slope to the south-southeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene and lead in soil. Groundwater contamination is not an issue at the site. Remedial actions have successfully achieved soil cleanup objectives specified in the Decision Document and a soil cover system exists throughout the site. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Program:	BCP
Site Code:	499347
Acres:	1.4
HW Code:	C203075
SWIS:	0301
Town:	New York City
Record Added Date:	09/02/2014
Record Updated Date:	01/16/2018
Update By:	JXGRECO
Site Description:	Location: The 1.4 acre site is located in an urban area at 4275 Park Avenue and 411 East 178th Street (a/k/a 1973 Webster Avenue) in the Tremont section in Bronx. The site is bounded by a warehouse to the north, commercial and residential properties to the south and to the west, and MTA Metro North railway lines to the east. Site Features: The site is currently improved with two unoccupied steel framed masonry block structures. There are currently two tax lots (lots 3 and 55) that comprise the site. Current Zoning and Land Use: The site is being developed and is zoned C4-5X (Residential/ Commercial). Past Use of the Site: From 1901 through 1915, a number of residences, retail stores, patent office, paint shop, wagon house and stable were located on-site. The site was the location of a service station and parts department, Studebaker Corporation of America, Park Avenue Auto Body Company Inc. and G Auto Bodies from at least 1927 to at least 1940. Lots 6, 7, 8 and 75 were improved with two-story structures until 1981, when they were demolished. Site Geology and Hydrogeology:

WEBSTER AVENUE RESIDENCES (Continued) **S120706174**

	Subsurface soil at the site consists of historic fill, which is primarily comprised of brick, concrete, wood and other debris in a brown silty-sand matrix. The historic fill layer extends to a depth of 5 to 8 feet below grade. Native soil consisting of brown sand is present below the historic fill layer. Bedrock is reportedly 50 - 55 feet below grade. Groundwater exists at a depth of approximately 15 to 19 feet below grade and flows in a southeast direction. Surface topography in the general area of the site possesses moderate relief with general slope to the south-southeast.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzo(a)anthracene, benzo(a)pyrene and lead in soil. Groundwater contamination is not an issue at the site. Remedial actions have successfully achieved soil cleanup objectives specified in the Decision Document and a soil cover system exists throughout the site. Residual contamination in the soil is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Con Ed e2mis #108697: 6/26/97 0855hrs Substation Operator Sheehan reports oil spill from transformer #1 conservator tank. Oil is leaking out of breather down TRF onto bluestone. 8gal to bluestone. Pads and pigs placed. 7/18/97 1235hrs Job completed by CSD Transformer Group. Oil contaminated bluestone removed and replaced. Oil level lowered in caonservator tank. Con Ed e2mis #108699: Approx 150gal spilled over a period of 4weeks from leaking bleeder valve on top of transformer. Transformer removed from service on a class 1 emergency. Repairs were completed on 6/27/97 at 11:00. Cleanup of bluestone and soil completed on 6/30/97 at 3:30pm by Transformer Group-R. Ammermuller. DEC Inspector Notes: 5/28/02 Foley inspected Transformer #1 with SSO EH&S Tom Whipple and Joe Susco. No active leaks at this time. "
Remarks:	"OVERFILL OF TRANSFORMER OIL INTO TANK. CON ED IS IN PROCESS OF CLEANING."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Engelhardt responded. Leaking transformer has been taken out of service. 2 55 gal drums partially full of contaminated bluestone. Mario Brindisi and Bob Ferrens on scene from Con Ed. Leak caused by transformer fault. Transformer overheated and oil leaked through weakest point in system, a breather valve (a device to remove moisture to oil). Chem lab took oil sample to check for combustibles (hydrogen, acetylene, methane). Revisited site on 5/5/98 inspected excavation and gave instructions to the station to go ahead and backfill."
Remarks: "transformer overheat and product leaked thru relief valve cleanup in progress "

CON EDISON TRANSFORMER MANHOLE 26 (Continued) **1010327060**

Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/10/2007
Site name: CON EDISON
Classification: Not a generator, verified

Date form received by agency: 01/09/2007
Site name: CON EDISON
Classification: Unverified

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name:	ROBERTO PORCELLI
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT Sangesland DDO Contaminated Soil Letter sent to: Roberto Porcelli Gaseteria Oil Corp. 364 Maspeth Ave. Brooklyn, NY 11211 9/27/05 - Obligado - Spill transferred from Vought to Obligado 12/7/05 - Obligado - Review UST Closure Report, submitted by ASR, March 2004. Site documents UST excavation activities from May 19 thorugh July 9 2003. Site has elevation of 50 ft above sea level. Site was inactive with 3000 gasoline gallon USTs and 1 4000 gallon diesel UST. There were 5 former pump islands with 8 dispensers. PBS# 2340073. Plan to raze the bulding and leave an empty lot for future development. Adjoining site to north is a parking lot for the Bronx Mental Health facility. Beyond which are multistory apartment buildings with store fromts. Sensitive Receptor survey - no wells in vicinity. Crotona Park 2200 ft southeast. No federal or Public water supply wells. Closes church is 500 ft northwest of the site. BAsed on topography, regional gw flow to southeast. Site underlain by till consisting of fine to coarse sand to depths between 10 and 12 ft bgs. Gw estimated at 18 ft and flows southeast towards Bronx River. Tanks, USTs, dispensers, supply lines and pump islands were removed. Product fill, supply and vent lines were excavated, cut from the tank and

TEXACO/4115 3RD AVENUE (Continued) **S106014998**

capped. All supply lines were excavated. 5/20/03 - Soil results from UST excavation in ppb: North wall - SVOCs South wall - 870 benzene, 1600 toluene, 2700 xylene, 13000 MTBE, East Wall - 3600 MTBE West Wall - 1200 MTBE Bottom North - 800 MTBE, SVOCs Bottom South - 5200 MTBE 7/16/03 - Ground water results from geoprobe borings in ppb: GP-North - 49 MTBE GP-South - 530 MTBE GP-East - 290 MTBE GP - West - 6.2 benzene, 1200 MTBE Soil was reused onsite. Conclusions - operation of this site as a gasoline service station has caused minimal impact to the subsurface soils and groundwater to warrant further environmental site assessment or action 12/9/05 - From meeting with ASR, DEC, Gaseteria - need future well installations - 2006 9/8/06 - Emailed Gaseteria multisite stipulation agreement. Due date for ISR is 11/1/06. 9/12/06 - Sent original Stip to Gaseteria. 10/31/06 - Obligado - Stipulation Agreement executed 10/31/06 by Oliva 12/18/06 - Obligado - Review Investigation Summary Report submitted by ASR, dated December 1, 2006. The site is currently a Dunkin Donuts. Site is 46 ft above msl. Immediate vicinity is commercial. Hotel to the west and a doctors office to hte north, a park to the east. GW flow to northwest. 3 wells installed on July 28, 2006. Gw found from 11.91 to 13.39 ft bgs. 1 soil sample from each well at 13'-15' bgs. Used Air Rotary. GW results: MW1 - BTEX ND, MTBE 740 MW2 - 120 ethylbenzene, 820 xylenes, 2187 VOCs MW3 - 38 MTBE ASR recommends - 2 rounds of quartelry sampling, sensitive receptor survey. Sent email to ASR/Gaseteria requiring 3 additional wells, since no downgradient wells were installed. Due date for investigation workplan is 1/19/07. 1/19/07 - Obligado - Received Supplemental Investigation Workplan. 2/13/07 - Obligado - Reviewed Supplemental Investigation Workplan to install 3 wells. Approved of the plan with modification to move one of proposed wells into the D&D drivethrough area, so that it would be downgradient of MW2. Due date for report is 4/13/07. 3/7/07 - Obligado - Sent sidewalk opening letter to S.Muller. 6/8/07 - Obligado - Email from Steve Muller, finishing up the ISR tonight. 7/6/07 - Obligado - FISR received via email. 11/30/07 - Obligado - Reviewed Final Investigation Summary Report. 3 wells were installed, 2 onsite and 1 offsite. During well installation 3 soil samples collected from the ground water interface at 13' to 15' bgs. Soil impacts detected at MW5 above SCOs. GW impacts above TOGS were detected in MW5 (759 ug/L total BTEX) and MW2 (3040 ug/L BTEX). ASR's conclusions - Soil and ground water have been delineated and no investigation activities are warranted. Although the source has been removed, a BTEX plume exists in the central area of the subject site where USTs once exited. BTEX and MTBE plumes have not migrated off the subject site. ASR recommends - continue to perform quarterly ground water sampling and lab anlaysis by EPA Method 602 plus MTBE for MW1 through MW5 and observe trends. I found some inconsistencies with the report- The approved workplan proposed split spoon soil sampling at 5-7,7-9, and the ground water interface and screening with a PID. The boring logs had no split spoon intervals or PID readings. The sampling method on the boring log was none . I called Steve and asked him to send me revised boring logs. I also asked for boring logs from previously installed wells as they were included in the previous report. 12/17/07 - Obligado - I have not hueard from Steve regarding my request. I sent an email listing report deficiencies and required resubmittal by January 21, 2007. 3/5/08 - Obligado - Reviewed the Final Investigation Summary Report submitted by ASR. Also received and reviewed the 1Q08 monitoring report. Low levels <100 max total BTEX found in most recent sampling

TEXACO/4115 3RD AVENUE (Continued) **S106014998**

event in Jan 08. The revised FISR version addressed my comments. I sent an email to Steve cc to Gaseteria approving the report and continued monitoring. No addtional delienation is required at this time. 6/24/08 - Obligado - Review 2nd quarter 2008 update report. BTEX range from ND to 2300 ug/l in MW3. Max MTBE is 76 ug/L. Will continue monitoring results. 8/20/08 - Obligado - Meeting with ASR/Gasetera/DEC. ASR will abandon MW6 and look into location to install well closer. 12-12-08 - Obligado - Review 3Q08 report. Ground water impacts max 750 ug/L in MW2. MW6 abandoned on 8/26/08. 12/15/08 - Obligado - Meeting with GASeteria/ASR/DEC. Gaseteria will submit a workplan for installation of closer cross gradient well north of 95 and a soil boring investigaiton on-site to determine if there is a residual soil source contributing to fluctuating gw concentrations. 5/19/09 - Obligado - Meeting with GAseteria. GW concentrations low. They will do a boring in the center of the site downgradient of USTs to confirm no contaminated soil source. 6/2/09 - Obligado - Approved a workplan to do an additional boring. They will submit a closure petition within 30 days. 10/7/09 - Obligado completed review of closure petition. Do not approve closure. Report has deficiencies including innacurate statements and missing information. Sent a letter with comments requiring resubmittal within 30 days. Comments in edocs. 2/22/10 - Obligado - I received a Remedial Investigation report, which documents the most recent confirmatory soil boring in the source area just down gradient of the UST, in the location of the 2003 UST south wall endpoint sample. The boring went to 5 ft below the water table. The highest PID reading throughout the boring was 3.7 ppm. The sample from the water interface was collected for laboratory analysis. The sample was ND for VOCs and SVOCs. The ground water results from the most recent ground water sampling report 4rth Quarter 2009 showed maximum BTEX concentration of 50 u/gL in MW2 and 19 ug/L MTBE in MW5. The down-gradient wells are ND for both BTEX and MTBE. Residual soil impacts are minimal and ground water concentrations while fluctuating demonstrate an overall down ward trend, which should continue with removal of source. Ground water plume does not appear to be migrating downgradient or off-site. After discussion with DEC Tibbe, this spill does not appear to be a threat to human health or the environment and this spill has been closed. 6/21/10 - Obligado - Received well abandonment documentation."

Remarks: "while removing tank contaminated soil was located "

FINDS:

Registry ID: 110007994769

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	37231
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	I04 - Overfill - Product Level Gauge (A/G)
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	F00 - Pipe External Protection - None
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	3000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

DEC Memo: "PBS #2-190799 ON 12/2/97 3 x 4k GASOLINE UST'S UPGRADED, 1 x 8k GASOLINE UST INSTALLED AND 1 550 WO & 1 x 2k #2 FUEL OIL UST'S WERE REMOVED. 450 TONS OF SOIL WERE EXCAVATED AND DISPOSED OF. SMALL HOLE OBSERVED IN TOP OF FUEL OIL UST. GW DATA FROM B-2 SHOWS HIGH BTEX & MTBE. NEEDS ADDITIONAL DELINEATION. STIP ISSUED 9/2/98, EFFECTIVE 10/16/98. SEE ALSO SPILL # 94-11243 WHICH WAS CLOSED. 1/00 System to be moved from 175-22 Horace Harding. MW-7 to be connected to the system and operating by 2/00. 2/29/00 SVE system was activated.

SHELL OIL-NELSON'S AC CNT INC (Continued) **1000694372**

System sampled weekly for one month and monthly thereafter. 4/00 LNAPL in MW-7 was sampled and ID'd as premium unleaded gasoline. 6/00 A product baildown test was performed on MW-7. Static measurements showed a product thickness of 1.82' and baildown test results estimated product thickness in the aquifer as 0.07'. Weekly product recovery by hand bailing and a PRB to continue. 8/00 Plan to install two wells across Webster Ave downgradient of MW-2. The AS system will be activated. 12/00 Two off-site borings were advanced and monitoring wells installed as MW-8 and MW-9. No VOCs were detected in soil samples. 4/10/02 Analytical from 2/11/02 showed an MTBE conc of 1,360,000ppb in MW-1 and 433,000ppb in MW-2. Over the past 4 sampling events, MTBE conc have ranged from 4,000 ppm total VOCs) in 3 locations, which does not corresponde with the ground water results from the well which was installed in that location MW11 which was ND. They will propose installing AS/SVE pilot test wells and submit a workplan. At least one AS or SVE well will be installed in tank grave to confirm soil/ground water data. 6/17/09 - Obligado - Sent approval letter for investigation, and required submissino of pilot test workplan within 60 days. 11/2/09- Obligado - Review Pilot Test work plan. Proposes to install an SVE well, an AS well, and a monitoring well in the vicinity of the former USts in order to conduct a AS/SVE pilot test in the vicinity of the impacted soil and ground water around UST area and MW7. A pilot test report will be submitted within 120 days. 11/9/09 - Obligado - Meeting with DEC, Shell, GES. They will proceed with the approved workplan. 4/15/10 - Obligado - I reviewed the Pilot Test Report. According to the report, AS/SVE is an effective strategy. The pilot tested SVE only, AS only, and AS/SVE combined. They calculated an(ROI) for SVE only, AS only and combined SVE/AS is estimated to be 15 feet, 14.5 feet and 17 feet respectively. VOC recovery increased significantly when sparging in combination with SVE as compared to SVE alone. The report recommends submitting a detailed RAWP for AS/SVE within 120 days. I emailed an approval letter for the report. 4/20/10 - Obligado - Meeting with DEC, Shell, GES. RAWP will be submitted by August 13, 2010. Remediation system installation and start up activities will be dependent on the development activities on the property 10-31-10 - Obligado - RAP submitted. 11-3-10 - Obligado - Completed review of the remedial Action Plan. The plan proposes to install a AS/SVE system. 8 SVE wells and 7 AS wells will be installed. The system will be installed in concurrence with the site redevelopment activities. I sent a approval letter for the RAP. 3-15-11 - Obligado - I reviewed the 4Q10 report. Max BTEX is 9423 ug/L (MW7). They plan to prepare bid documents for SVE/AS system installation. System installation will be performed in conjunction with site redevelopment, anticipated to occur early 2011. 5/16/11 - Obligado - I received an email from Jennifer Guilles. The Wolf Petroleum has initiated site redevelopment. They will begin istalling the AS/SVE system shortly. I reviewed the 1Q11 update report. BTEX Range is ND up to 11,091 ?g/L (MW- 15). 8/8/11 - Obligado - I reviewed a work plan dated 7/26/11 to reinstall 3 monitoring wells to replace those that were destroyed during system redevelopment. I sent an email approving of the well installations. 1/14/13 - Obligado - I reviewed the 3rd Quarter 2012 report. According to the report, MW7 in the source area was also destroyed during redevelopment. The workplan I approved on 8/8/11 said mistakenly reported it as intact. I sent an email to Jennifer Gillies requiring a replacement well for MW7. I also requested the report documenting the removal of 600+ tons of contaminated soil and

SHELL OIL-NELSON'S AC CNT INC (Continued) **1000694372**

endpoint sampling. 2/5/13 - Obligado - I received a letter from URS explaining why MW7 was not re-installed and proposing not to reinstall it. The letter also explained that endpoint samples were not collected as 1845 Webster Avenue Gasoline LLC utilized sheeting during the excavation. 2/7/13 - Obligado- I sent a response letter requiring re-installation of MW7 and implementation of the approved AS/SVE RAP. Based on the available site plans, the new tank field soil excavation area described in the letter is not located in the same area as the former Shell UST source area or the MW7 source area, which were the treatment areas for the approved AS/SVE Remedial Action Plan (RAP). Heavily contaminated soil in excess of CP-51 standards remains at the site at locations MW15 (299 ppm Total VOCs), AS1 (698 ppm TVOCs), SVE-1 (304 ppm TVOCs), TB16 (1,542 ppm TVOCS), TB10 (5,622 ppm TVOCs), TB4 (2,707 ppm TVOCs), TB12 (453 ppm TVOCs) TB11 (3,267 ppm TVOCS), TB8 (4,961 ppm TVOCs), and TB5 (1,785 ppm TVOCs). Based on the 4th quarter report, over past 5 quarters GW concentrations have been increasing in MW17, from 4,555 ug/L BTEX in 4Q11 to 9,837 ug/L BTEX in 4Q12. Required submission of a AS/SVE system installation implementation schedule within 30 days. 3/6/13 - Obligado - I received a letter from URS rqeuesting to defer the implementation schedule for the reinstallation of MW7 and the remediation system. According to the letter, Shell attended a meeting with the NYCDEC Central Office on February 19, 2013, and as a result, the Central Office is reviewing historic and future activities for former Shell Service Station #138578 located at 1845 Webster Avenue in Bronx. URS, on behalf of Shell, would like to request that the implementation schedule be deferred at this time until a formal decision regarding future activities at the site is redered by the Central Office . 4/18/13 - Obligado - I received the 1st Quarter 2013 monitoring report. Maximum total BTEX found in MW17 with 10,480 ug/L, including 513 ug/L benzene, 4,560 ug/L toluene, 977 ug/L ethylbenzene, and 4,430 ug/L xylenes. All other wells were below standard. 5/17/13 - Obligado - I called Jennifer to inquire about the extent to which the remedial system has already been installed. According to Jennifer, all the horizontal piping has been installed in accordance with the approved RAP. Behind the station, the piping stubs up to the location of the proposed system enclosure. The pipes lead to the AS and SVE 2 x 2 Manholes which are also currently empty. She provided a map showing the current piping system layout as installed. 6/12/13 - Obligado - I sent a letter to Shell and URS requiring submission of an alternate remedial plan to clean up the site within 60 days. 8/12/13 - Obligado - Shell/URS submits a RAP for a scaled down AS/SVE system focusing on the tank area with 2 air sparge wells and 3 soil vapor extraction wells. 8/16/13 - Obligado - I approved the RAP. RAP approval letter sent to Rob Rule and URS cc to Bill Wolf Petroleum 6/12/15- Obligado - Jennifer Gillies requested to shut down the system based on asymptotic recovery. I approved the request. They will monitor the groundwater for rebound. 8/20/15 - Obligado - I reviewed the Quarterly Monitoring Report. Maximum BTEX concentrations were 1040 ugL in MW17. No benzene reported in sVE effluent collected on 4/7/15. According to the report, 139 lbs of petroleum hydrocarbons have been removed to date. AECOM will collect groundwater samples in 3rd quarter to confirm no rebound. 11/10/16 - Obligado - Meeting with Shell, GES. This site still has a small hot spot of contaminate mass iaround 1 well MW17. We agreed since the plume is not migrating off-site and on-site impacts are limited, they can submit an exposure assessment and closure request. They would

SHELL OIL-NELSON'S AC CNT INC (Continued) **1000694372**

like to take the system from 1845 webster and move it to 3555 Tremont. 10/9/17 - Obligado - I received a Exposure Assessment and Closure Request. Shell requests closure based on: -the old USTS, associated piping, an dispenser system was removed and upgraded -During site redevelopment, 679 tons of petroleum impacted soils were removed -An AS/SVE system operated between 2014 until 2016 until asymptotic recovery was reached -An exposure assessment shows minimal impact to human health or the environment. -Impacted soil and groundwater are between 11 and 15 ft bgs and-not likely to impact receptors except in the case of on-site excavation workers. -The area is served by a public water supply. -vapor intrusions is unlikely to occur I approve spill closure in accordance with spill project closure guidance based on 1 The spill has been properly investigated 2 The plume is completely delineated and is localized to former MW7/current MW17 hotspot. Ground water attenuates to ND before reaching the down-gradient well. 3 Soil impacts have been delineated and are localized to the area of the tank field from below 11 ft bgs. 4 Significant remediation has been performed to reduce the contaminant mass - UST removal, 600 tons of soil removed down to 15 ft in the tank area, two separate AS/SVE systems have been operated at the site till asymptotic recovery. 5 LNAPL has not been observed since 2002 and was recovered using VEFR, bailing, and Passive recovery bailers. 6 Impacts primarily at depth below 11 ft. 7 Site is continuing to operate as a gasoline station 8 There are no threats of vapor impact to existing structures based on depth of impact and slab on grade construction of on-site building 9 Ground water plume has been shrinking in areal extent and contaminant levels have been decreasing over time. This spill no longer appears to be a threat to human health or the environment. Spill closed. "

Remarks: "CALLERS COMPANY DOING A STATION UPGRADE WHEN THEY ENCOUNTERED CONTAMINATED SOIL."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NRLOMBAR
Last Modified:	04/14/2017
Material Name:	#4 fuel oil (on-site consumption)

Tank Number:	003
Tank Id:	236314
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
G00 - Tank Secondary Containment - None

BRONX BERGEN BUILDING (Continued) **U003391853**

A00 - Tank Internal Protection - None
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
D00 - Pipe Type - No Piping
J03 - Dispenser - Gravity
L00 - Piping Leak Detection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	10/02/1986

FINDS:

Registry ID: 110004554786

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	44327
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

D00 - Pipe Type - No Piping
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	05/17/2010
Register:	True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

	I04 - Overfill - Product Level Gauge (A/G) B00 - Tank External Protection - None C00 - Pipe Location - No Piping F00 - Pipe External Protection - None G00 - Tank Secondary Containment - None J02 - Dispenser - Suction Dispenser A00 - Tank Internal Protection - None D01 - Pipe Type - Steel/Carbon Steel/Iron E00 - Piping Secondary Containment - None H00 - Tank Leak Detection - None L09 - Piping Leak Detection - Exempt Suction Piping
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/10/1930
Capacity Gallons:	4000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MFLEONAR
Last Modified:	04/03/2018
Material Name:	#2 fuel oil (on-site consumption)

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
