DEC Memo:	11/22/21 - Obligado - Desk Duty - EMIS 282783 - Mechanic A Patrick Haughton (emp# 20356) reports finding 1 pint of unknown oil believed to be dielectric fluid from a primary cable leaking into MH 4500 through a duct to the structure's floor. confirmed with absorbent pad. Environmental tag 136309 was hung and samples for oil Id and PCB were taken. 8/26/22 - Kim - Con Ed Lab Oil ID and analysis results (Con Ed approval date: 11/23/21) indicated a third party spill based on the

LOT 5,TAXBLOCK 2350 (Continued) **S109942635**

presence of lubricating oil. Con Ed reported on 12/1/21 that Clean Harbors removed all oily debris
and double-washed the impacted structure with Simple Green. On 12/3/21, Con Ed worked in the
structure to install 2 sets of 500 for a new business construction and reported oil on the wall
coming from a duct that has an old 3c cut/cable end that can't be reached from structure. Section
would need to be pulled to remediate the problem. On 6/6/22 Clean Harbors removed all oily
liquid/debris and double-washed and rinsed the structure with Simple Green. Con Ed contained and
cleaned up the spill. See document files for further information Spill closed end

Remarks: 1 pint along wall into structure - cleanup pending test results

DEC Memo:	6/18/08 bf: Sent ttf letter to: Ross Sposato Chairmasters, Inc. 200 East 146th St. Bronx, NY 10451 6/30/08 Received letter from Ross Sposato of Chairmasters. Tank tested on 5/9/08 and failed. Tank was excavated and they are in the process of isolating lines. Also received message from him on 6/26/08 stating the same. (718)292-0600 x-205. bf 7/29/08 On 7/14/08, received letter from Ross Sposato of Chairmasters. Advanced Tank retested tank and tank passed. Piping will be replaced. After he receives test results, he will send test results and PBS Application. Called Ross S. (718)292-0600 x-205. Returning his call. Left message that there is no fee for tank test processing. Also, noted that a reply to my letter for tank test failure is required to be prepared by third party and needs to explain contamination and repairs made. bf 8/25/08 Received passing tank test report. on 7/31/08. Reviewed and found it not acceptable because technician did not sign the report. Sent tt return letter to

CHAIRMASTERS INC-200 E 146TH ST (Continued) **1000261378**

Ross Sposato at address above and included request for tank test failure letter response. bf 9/5/08 Yesterday, received message from Ross of Chairmasters. Info was mailed yesterday. bf 9/13/10 Received call from Ross of Chairmasters. He wanted the status of his tightness test report. I told him I have not received the report nor did I receive a response to the ttf letter. He said that he will fax letter and report to me. bf 9/13/10 This afternoon received fax from ATS that the piping was replaced and there was no spill. Tank tightness test report is still needed to close this case. bf 9/13/10 later this afternoon, received passing tank test report by fax. NFA. bf 9/20/10 Received call from Ross Sposato requesting letter for closure. Faxed amnd mailed it to him. Fax:(718)292-0613. bf

Remarks: PBS No: 2-085464 lines in the petromiter failed

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

CHAIRMASTERS INC-200 E 146TH ST (Continued) **1000261378**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	03/03/11-Hiralkumar Patel. 3:22 PM:- spoke with Diane. she mentioned that elevator company was making repair. a repair person noticed a spill when came back from brake. one of the pipe broke and spilled oil onto elevator room. as per Diane's staff member, elevator room floor is covered with oil. oil got into a drain located outside of the elevator room. oil sheen found coming up from sewer manhole in parking lot closer to this elevator room. Diane mentioned that elevator has 280 gal hydraulic oil tank. Diane has contacted Clean Harbor to help in cleanup. Diane Macfarlane Hostos Community College Ph. (718) 518-4349 (O) (646) 235-2155 (C) PBS #: 2-452319. DEC Veronica responded. 03/03/11-Zhune visited the site. spill on the elevator's floor is all cleaned. Dunwell Elevator Industries, Inc. cleaned the spill. They will repair the

CON EDISON (Continued) **S110768593**

elevator's pump that caused the
spill. DEP was notified of oil into the drain. Dunwell Elevator
Electrical Industries, INC.
718-388-7575- Victor Deolo Supervisor. Spill closed.

Remarks: Caller advised 50 gallons of hydraulice fluid spilled into the elevator room and down a drain and now can see oil spilling out of a manhole cover in parking lot. Clean up is pending.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BROWNFIELDS:
Name: 355 EXTERIOR STREET SITE
Address: 355 EXTERIOR STREET
City,State,Zip: BRONX, NY 10451
Program: BCP
Site Code: 599979
Acres: 1.430
HW Code: C203129
SWIS: 0301
Town: New York City
Record Added Date: 12/30/2019
Record Updated Date: 05/20/2024
Update By: SMQUANDT
Site Description: "Location: The 355 Exterior Street Site is located in an urban area in the Mott Haven neighborhood of the Bronx. The property is bounded by commercial properties to the north and south, Exterior Street to the east, and the Harlem River to the west. Site Features: The site contains an asphalt paved parking lot and an approximately 31,850-square foot warehouse building. The property is currently unoccupied. Current Zoning and Land Use: The property is zoned R7-2 residential and is surrounded by similarly zoned properties. Proposed redevelopment includes a mixed-use building, open landscaped areas, access roads, and sidewalks. Past Use of the Site: The subject property was first developed in the early 1900s and was used as a freight train support facility and lumber supply building until circa 1966. All infrastructure supporting the freight train operation was removed from the site at which time the use of the property transitioned to commercial use and parking. After 1966, the site use consisted of mixed commercial use including lumber distribution, a roofing company and Borax Paper Products. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists of sand and gravel with fill material (brick, asphalt, and wood) underlain by silty sand and clay. Evidence of historic urban fill material was observed at depths up to ten feet below ground surface (bgs) at several locations across the site. Groundwater was encountered between eight and ten feet below the surface at the site and flows to the west. "
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs),

355 EXTERIOR STREET SITE (Continued) **1009243206**

pesticides, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern for the site include SVOCs and metals. Soil: Thirty-two soil samples were collected during the Remedial Investigation (RI). There were no exceedances of VOCs. Several SVOCs exceed the restricted residential use soil cleanup objectives (RRSCOs) across the site, including benzo(a)pyrene at 110 parts per million (ppm) and benzo(b)fluoranthene at 120 ppm, both compared to the RRSCO of 1 ppm; and indeno(1,2,3-CD)pyrene at 61 ppm versus the RRSCO of 0.5 ppm. These exceedances appear to be related to petroleum contaminated soils that exhibited odor and staining. There were exceedances of metals, including, but not limited to, maximum levels of arsenic at 80.2 ppm compared to the RRSCO of 16 ppm; copper at 16,300 ppm compared to the RRSCO of 270 ppm; and lead at 3,160 ppm compared to the RRSCO of 400 ppm. There were no exceedances of PFAS, PCBs or pesticides. The highest detection of PFAS was 0. 619 parts per billion (ppb), compared to the screening value of 1.1 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Eight groundwater samples were obtained as part of the RI. Six samples detected SVOCs including, but not limited to, maximum concentrations of benzo(a)pyrene at 0.15 parts per billion (ppb) and indeno(1,2,3)cd-pyrene at 0.09 ppb, compared to their ambient water quality standard (AWQS) of 0.002 ppb. Metals detected include, but are not limited to, maximum concentrations of copper at 398 ppb compared to its AWQS of 200 ppb, and lead at 203 ppb compared to its AWQS of 25 ppb. There was one sample with minor exceedances of VOCs. There were no exceedances of pesticides or PCBs. The highest detection of PFOA was 43.2 parts per trillion (ppt), and the highest detection of PFOS was 32.3 ppt, which both exceed the maximum contaminant limit (MCL) of 10 ppt for each compound. These maximum concentrations were found at the upgradient site boundary. There were two detections of 1,4-dioxane, but these results did not exceed the AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Four soil vapor points were sampled during the RI. Multiple VOCs were detected in each soil vapor sample collected from the subject property. Petroleum related compounds, such as benzene and toluene were detected in each soil vapor sample at relatively low concentrations. Chlorinated VOCs such as carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene (TCE), methylene chloride, tetrachloroethene (PCE), 1,1,1-trichloroethane and vinyl chloride were not detected, with the exception of PCE in each soil vapor sample with a maximum concentration of 31.3 micrograms per cubic meter (ug/m3). Data does not indicate any off-site impacts in soil vapor related to this site.
"

Health Problem: "The site is completely fenced which restricts public access. People who dig below the ground surface may come in contact with contaminants in soil. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by site-related contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion is not a current concern on-site, however the potential exists for inhalation exposure from soil vapor intrusion in any future on-site building construction and

355 EXTERIOR STREET SITE (Continued) **1009243206**

	occupancy. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	5/23/19 - Sekhon The property owner-- 355 Exterior Street Associates, LLC c/o The Lightstone Group LLC 1985 Cedar Bridge Ave., Suite 1 Lakewood, NJ 08701 Attn.: Bryan Ramm bramm@lightstonegroup.com PW Grosser in the process of completing our Phase II ESA for the property. While reviewing the preliminary analytical data, they identified VOCs in excess of Restricted-Residential Use Soil Cleanup Objectives and Ambient Water Quality Standards at an isolated area. There is no documented history of tanks at the site and not aware of an onsite source at this time. 1,2,4-Trimethylbenzene --------160 mg/kg 1,3,5-Trimethylbenzene----------63 mg/lg Ethylbenzene ----------1.1 mg/kg n-Butylbenzene ----------17 mg/kg n-Propylbenzene ----------33 mg/kg and sec-Butylbenzene ----------24 mg/kg in the soil at SB009_E (soil sample is from the smear zone) and Isopropylbenzene ----------10.6 ug/L n-Propylbenzene ----------16.4 ug/L and sec-Butylbenzene ----------5.96 ug/L in the groundwater at MW004. Once the report will be ready, PW Grosser will forward to DEC for our review. Case discussed/transferred to DEC Kumar for follow up. 05/23/19-Hiralkumar Patel. 1:17 PM:- received Phase I report from Derek. site is occupied by one commercial-use building and an asphalt parking area. site appears to have been historically used commercial and industrial proposes, including a lumber yard from 1908 to 1924, and a freight train support facility from approx. 1928 to 1966. between 1966 to current day, the site appears to be utilized for mixed commercial use including lumber distribution, a roofing company and Bronx Paper Products. 06/04/19-Hiralkumar Patel. received email from Derek (at 2:22 PM on 06/03/19) including copy of BCP pre-application worksheet. 09/24/19-Hiralkumar Patel. 1:03 PM:- sent email to Derek inquiring updates. 1:29 PM:- received email from Derek. he mentioned that they had pre-application meeting with the NYSDEC and are currently preparing the BCP application and the Remedial Investigation Work Plan (for additional delineation of petroleum). documents will be submitted next week. 12/04/19-Hiralkumar Patel. 1:59 PM:- spoke with Derek. he mentioned that a

355 EXTERIOR STREET SITE (Continued) **1009243206**

supplemental investigation was conducted at the site and a remedial investigation work plan has
been drafted. investigation report and RIWP will be submitted with BCP application by end of this
week. asked Derek to send documents for review. informed him that the case will be managed by
Spills unit until the site is accepted in BCP. 04/22/20-Hiralkumar Patel. while searching
remediation database, noted BCP case # C203129 for the subject site. reviewed BCP files on DECDocs.
as per letter dated 04/17/20, the Department has accepted the BCP application and sent an agreement
for signature. the signed agreement is due within 60 days (06/16/20). 05/22/20-Hiralkumar Patel.
reviewed DECDocs for BCP # C203129. the BCP agreement was accepted/signed on 04/30/2020. case
assigned to DEC Walsh, BCP project manager. 12:10 PM:- sent email to DEC Walsh and informed him
about case transfer. email copied to DEC Austin.

Remarks: in parking lot - in soil and groundwater - cleanup pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	383 MORRIS AVENUE
Address:	383 MORRIS AVENUE
City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	659595
Acres:	0.131
HW Code:	C203172
SWIS:	0301
Town:	New York City
Record Added Date:	12/12/2023
Record Updated Date:	02/06/2024
Update By:	SMQUANDT
Site Description:	"Location The site is in an urban area characterized by commercial, industrial, and residential uses within the Bronx, New York and consists of three lots identified as Bronx Tax Block 2334, Lots 62, 63, and 66, all of which are in the process of being merged into a single tax lot. The site is bound to the north by a one-story commercial deli followed by a seven-story mixed use commercial and residential building that wraps around to the western border of the site, then Rider Avenue; to the east by 143rd Street; to south by Morris Avenue followed by a NYC public housing complex; and to west by a seven-story commercial/residential building followed by 142nd Street. Site Features The site is improved with a concrete-paved lot containing a shipping container and two sheds that are used for storage and another temporary structure that is used as an office and workshop for the J&F Used Tire Shop. The local topography is relatively flat and appears to slope to the southwest toward the Harlem River, which is about 2,000 feet west of the site. Current Zoning and Land Use According to the New York City Planning Commission Zoning Map, the site is located in an M1-4/R7A and MX-13 zoning district, which is a special mixed-use light manufacturing and medium-heavy residential zoning district. Land use within a half-mile radius includes commercial, residential, industrial, institutional, and public parks. Past Use of the Site The proposed BCP site is depicted as being in a densely-developed area in the earliest available topographic and Sanborn fire insurance maps dated circa the late 1890s, with three dwellings shown on the Sanborn maps. By 1935, the eastern part of the building at 383 Morris Avenue is shown as a plaster-clad dwelling, while the western part of the building is labeled farrier. The building at 383 Morris Avenue is labeled as a plumber from 1944 through 1977. The site appears unchanged through the most recent Sanborn Map in 2007. According to city directory listings, B & G Welding Service operated at 383 Morris Avenue in 1940. The buildings at 375 Morris Avenue and 268 143rd Street remained residences from the late 1800s until the 2010s. One city directory listing in 1927 lists a stationary business at 375 Morris Avenue. The buildings were demolished in 2012 and the land was repurposed to support the current use by J&F Used Tire Shop, which provides basic auto repair services and oil changes. A 2023 Phase I Environmental Site Assessment (ESA) documented on-one 275-gallon used oil container that was used for on-site oil changes. On-site petroleum storage, historical auto repair and other manufacturing

LOT 63,TAXBLOCK 2334 (Continued) **S122872791**

	operations may have contributed to the presence of unidentified subsurface contaminants including petroleum and/or chlorinated solvents at the proposed BCP site. Site Geology and Hydrogeology The site is relatively flat and in an area of shallow bedrock (within 20 feet of the surface). The nearest surface water body is the Harlem River, which is about 2,000 feet to the west. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. However, based on topographic gradient and proximity to surrounding water bodies, it is expected that groundwater flows to the west towards the Harlem River. According to the Federal Emergency Management Agency (FEMA) Preliminary Flood Insurance Rate Map (FIRM) dated January 30, 2015, the site is located in Zone X, outside the 0.2% annual chance of flood and 100-year flood plain. "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

CARNATION PLASTIC MFG CO INC (Continued) **U003385246**

Tank Number: 001
Tank Id: 5394
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
H04 - Tank Leak Detection - Groundwater Well
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
G00 - Tank Secondary Containment - None
Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 4500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MJGRIFFI
Last Modified: 05/09/2022
Material Name: #2 fuel oil (on-site consumption)

Town:	New York City
Record Added Date:	05/19/2022
Record Updated Date:	04/11/2024
Update By:	SMQUANDT
Site Description:	"Location: The Site is located at 110 East 138th Street in the Mott Haven section of the Bronx, New York in a residential, commercial,

EAST 138TH STREET AFFORDABLE HOUSING (Continued) **S128906257**

and manufacturing-zoned area. The Site is abutted to the north by East 138th Street, followed by the Madison Avenue Bridge; to the south by the Padded Wagon moving company warehouse and associated parking; to the east by Exterior Street, followed by the Major Deegan Expressway; and to the west by a freight train rail line, followed by the Harlem River. Site Features: The Site is currently vacant and is developed with a one-story warehouse with a basement to the east, a one-story steel shed to the north (abutting the one-story warehouse), and an asphalt-paved parking lot to the west. The Site was most recently utilized as a used auto sales facility and auto repair shop until approximately July 2019 when the Site became vacant. The greater surrounding area includes primarily commercial and auto-related uses, as well as some vacant buildings. Self-storage facilities are located on blocks to the north and south. Nearby auto-related uses include a gas station, a towing business, and taxi parking and maintenance facility. Current Zoning and Land Use: The Site is currently zoned as R7-2 (residential) and C2-4 (commercial) and is located within the Special Harlem River Waterfront District and Inclusionary Housing Designated Area. The surrounding area is predominately commercial and automotive-related. Past Use of the Site: Available records indicated that the Site included a lumber yard and a building materials company in the late 19th and early 20th centuries. By 1922, the Site was identified as part of the New York State Canal Terminal and included three small one-story structures (for unspecified use) and undeveloped land. By 1935, the Site was occupied by a building materials business and contained a 550-gallon gasoline underground storage tank (UST) in the eastern portion of the Site. It is unknown if this tank was removed from the Site. The Site was shown as vacant land from 1944 to 1951. The existing warehouse on the eastern side of the Site was used as a coffee roasting and sales business from approximately 1968 through 1993, a warehouse (for unspecified use) in 1994 to 2004, a shoe factory in 2005, and a used auto sales facility with a repair shop in 2005 to 2019. The Site has been vacant since 2019. The Requestor has owned and operated the Site since March 14, 2022. The following known or suspected sources of contamination were identified at the Site during previous investigations: Historic industrial and automotive Site uses, including auto sales and repair, a lumber yard, and shoe manufacturing. A former 550-gallon UST was identified in the eastern portion of the Site on historic Sanborn fire insurance maps. Multiple 55-gallon drums of motor oil, a 550-gallon used oil AST, and abandoned chemicals, primarily for automotive uses, were identified throughout the Site during the March 2020 Phase I ESA. Site Geology and Hydrology: Surface topography slopes steeply down to the southwest, so that the adjacent East 138th Street sidewalk is at the same grade as the ground floor of the Site on its eastern side, but at basement floor grade on its western side. Based on the U.S. Geological Survey (Central Park Quadrangle), the Site lies at an elevation of approximately 10 to 20 feet above the North American Vertical Datum of 1988 (NAVD 1988), an approximation of mean sea level. During AKRF s 2021 Subsurface (Phase II) Investigation, the depth to water ranged from approximately 10.42 feet below grade in the northwestern portion of the Site to 12.31 feet below grade in the northeastern portion of the Site, as measured from temporary well points. Based on topography and groundwater measurements from temporary well points, groundwater likely flows in a westerly direction toward the Harlem River. Actual groundwater table depth and

EAST 138TH STREET AFFORDABLE HOUSING (Continued) **S128906257**

	flow direction may be affected by tidal fluctuations, subsurface openings or obstructions such as basements, or underground utilities. Groundwater in the Bronx is not used as a source of potable water (the municipal water supply uses upstate reservoirs). The stratigraphy of the Site consists of historic fill (brown sand, silt, and gravel with trace amounts of brick, concrete, asphalt, glass, and coal slag) down to approximately 9 to 20 feet below grade, underlain by apparent native grey silty clay to the boring terminus. Apparent bedrock was encountered at 16 feet below grade and 10 feet below grade at soil borings SB-08 and SB-11, respectively. "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Latitude:	40.8120169
Longitude:	-73.9322124
DEC Memo:	This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 07/12/04 BTEX at 14,200 ppb in MW10 4/2004 gw sample. MW10 on downgradient edge of 17-K7E (southbound side) Rommel 3/20/07 - Haggerty - Assumed management of site. Site includes both the northbound and southbound stations (70 and 71 Major Deegan Expressway). 3/27/07 - Haggerty - Approved Subsurface Investigation Work Plan 11/20/07 - Haggerty - approved SSIWP. Bedrock MWs and soil borings around current dispenser islands and tank fields proposed. 6/16/08 - Haggerty: approved Preliminary Feasibility Investigaion Report/Site Statue Update Report dated 6/12/08. Proposed installation of 8 additional injection points as well as a proposed Chemical Oxidation Pilot test. Reviewed expanded groundwater parameters to determine whether this site is suitable for this technology. 3/30/09 - Haggerty: review Feasibility Investigation Report for the RegenOx injection Pilot test. Pilot test shows favorable results however ExxonMobil proposed an Exposure Assessment in an attempt to close out the spill. 5/20/09 - Haggerty: spoke with ExxonMobil at our bi-annual program meeting. ExxonMobil will prepare RAP for further injections. PM explained that an Exposure Assessment can only be submitted when remediation is complete and residual contamination exists, not in place of remediation. Full Scale injection will be implemented. Referred site to OGC for Consent Order. Mobil proposed submitting the RAP by 12/31/09. 11/4/09 - Haggerty: met with Exxon at our bi-annual program meeting. At our last program meeting, the Dept. required them to perform full-scale injection under a RAP/ Consent Order. ExxonMobil legal states that they will not sign a Consent Order without an approved RAP and CAP. Therefore, the Dept. will issue a PIN to complete the remediation. 11/3/09 - Haggerty: PIN 05118 issued. January 2010 - Dept. excecuted access agreement with the NYC Dept. of Parks which owns the land (Major Deegan Expressway runs through Van Cortlandt Park). The gas stations are leased from the NYC Parks. PM sent Underground Injection Control (UIC) EPA 30 day notification on 12/28/09 and received EPA response on 1/19/10. February 2010 - RegenOx injection took place on 2/17/10 after receiving access from Parks Dept. March 2010 - First post-injection sampling took place on 3/17/10. All wells below 1,000ppb of BTEX May 2010 - BTEX concentrations rebounded which is not uncommon. Additional monitoring required. Unfortunately, due to the lack of funds in the Spill Fund, all future work has been postponed until further notice. August 2012 - received permission to conduct one round of GW sampling December 2012 - reviewed groundwater sampling report and VOC concentrations have decreased. 1/4/18 - Haggerty: Monitoring and injection wells decommissioned and restored by DEC callout. Spill closed does not meet standards.
Remarks:	3K TANK (NOT INVOLVED), LINE TEST ONLY FAILED PETRO TITE WITH A LEAK RATE OF -.028GPH, DISCHARGE LINE TEST FAILED , TANK SYSTEM TAKEN OUT OF SERVICE.

Hazardous Waste Summary:
Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	477 GERARD AVENUE
Address:	477 GERARD AVENUE
City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	493435
Acres:	0.200
HW Code:	C203071
SWIS:	0301
Town:	New York City
Record Added Date:	04/07/2014
Record Updated Date:	05/16/2019
Update By:	GWBURKE
Site Description:	"Location: The site is located at 477 Gerard Avenue, Bronx, NY on the northwest corner of the intersection of East 146th Street and Gerard Avenue. The site is bounded by the streets above to the east and south, a newly constructed hotel to the west, and a residential building to the north. The site is approximately 0.20 acres in size. Site Features: The site is currently vacant, cleared, and surrounded by a fence. Current Zoning and Land Use: The site is currently vacant and zoned M1-4/R8A as a special mixed-use district meant to enhance the vitality of existing neighborhoods with mixed residential and industrial uses. Past Use of the Site: The site was developed with commercial and industrial uses since at least 1908. Specific past uses include a lumberyard, a sign frame company, auto junkyard, and auto repair facility. Underground storage tanks (USTs) have been reported at the site on historical Sanborn maps, but none were found during the most recent investigation. Geology and Hydrogeology: The subsurface consists of a 15 to 16-foot deep historic fill layer. Beneath the fill layer, the site consists of unconsolidated sand and gravel layers to the depth of bedrock, which is approximately 300 feet below ground surface (bgs). Regional groundwater flows to the southwest towards the Harlem River. Depth to groundwater ranges from 14.5 to 19.5 feet below ground surface (bgs)."
Env Problem:	"Soil and groundwater has been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs),

477 GERARD AVENUE (Continued) **S120706172**

pesticides, poly-chlorinated biphenyls (PCBs), and metals. Soil vapor has been analyzed for VOCs. Soil: The primary contaminants found in site soils are polycyclic aromatic hydrocarbons (PAHs) and metals typically found in historic fill, which is generally present in the top 15-16 feet of the site, and PCBs. PAHs were detected in soils up to 16 feet below ground surface (bgs) during the RI, including but not limited to, benzo(a)anthracene at 1.8 parts per million (ppm) (UUSCO is 1 ppm) and benzo(b)fluoranthene at 2.2 ppm (UUSCO is 1.0 ppm). Metals were found at depths up to 20 feet bgs, with the highest concentrations residing within the upper 10 feet, including arsenic at concentrations up to 90 ppm (UUSCO is 13 ppm), barium up to 560 ppm (UUSCO is 350 ppm), cadmium up to 22 ppm (UUSCO is 2.5 ppm), copper up to 800 ppm (UUSCO is 50 ppm), lead up to 17,000 ppm (UUSCO is 63 ppm), mercury up to 1.4 ppm (UUSCO is 0.18 ppm), nickel up to 82 ppm (UUSCO is 30 ppm), and zinc up to 970 ppm (UUSCO is 109 ppm). During the Phase II investigation PCBs were found in a few locations up to 15.35 ppm. During the RI, PCBs were detected at two locations up to 0.523 ppm (UUSCO is 0.1 ppm). Like the PAHs and metals, PCBs appear to be coincident with the historic fill. Limited petroleum-related VOCs were detected marginally above UUSCOs during the Phase II investigation, but were not detected during the RI. Site-related soil contamination is not expected to be present off-site, but historic fill may be present off-site. Groundwater: The only VOCs detected in groundwater were p-isopropyltoluene at 25 parts per billion (ppb) (standard is 5 ppb), and 1,2,4-trimethylbenzene at 18 ppb (standard is 5 ppb). The contaminants found in groundwater may be from site-related activities or an off-site source, but are typical of background conditions in NYC. Two SVOCs were detected above standards, criteria or guidance values (SCGs) as follows: benzo(a)anthracene at concentrations up to 0.04 ppb (guidance value is 0.002 ppb) and one detection of benzo(a)pyrene at 0.07 ppb (standard is non-detect). No PCBs, pesticides or metals of concern were detected in groundwater over SCGs. It s unclear whether contaminated groundwater extends off-site; however, since the concentrations are low and typical of NYC background concentrations, no off-site investigation is warranted. Soil Vapor: Several VOCs were detected in soil vapor. However, the only chlorinated VOCs detected were tetrachloroethene (PCE) at 162 micrograms per cubic meter (ug/m^3), 1,1,1-trichloroethane at 12.6 ug/m^3, and trichloroethene (TCE) at 1.28 ug/m^3. Data do not indicate off-site soil vapor intrusion is a concern for off-site buildings."

Health Problem: "People may contact contaminants in soil or groundwater if they dig below the surface or contact contaminated groundwater. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Sampling indicates soil vapor intrusion is not a concern for off-site buildings."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a

DORMITORY AUTHORITY STATE OF NEW YORK - DASNY-HOSTOS COMMUNI (Continued) **1014399831**

database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Spiller Company:	999
Contact Name:	MICHAEL VANDERHEIJDEN
Latitude:	40.8180570
Longitude:	-73.9273660
DEC Memo:	CSL prepared and sent to Consultant: Woodard and Curran Attn: MICHAEL VANDERHEIJDEN 709 Westchester Ave White Plains, NY 10604 04/24/08-Vought-Called Michael VanDerheijden (Ph:914-448-2266 Fax:914-448-0147) and left message to return call to DEC. Owners contact as per PBS (Frank Virone 718-518-4476). Vought sent and faxed CSL with one month due date to mail address as per PBS #2-452319: Mr. Frank Virone Hostos Community College 500 Grand Concourse Bronx, NY 10451 DEC requires: 1)delineation of soil and groundwater contamination 2)collection of endpoint soil samples if excavation is performed 3)possible PBS update. 04/25/08-Vought-Received call from and spoke to Vanderheijden and data has not been received and product was present. Groundwater very shallow and

HOSTOS COMMUNITY COLLEGE - TRAILER #5 (Continued) **1009312355**

some free product on groundwater. Depth to groundwater is one foot below grade. Sump five feet away
and water in sump has been clean. Further action pending receipt of analyticals. Spill located in
basement of building and spatial constraints may restrict excavation. Tank has been cleaned and
filled with cement. Spill may be associated with an prior overfill. Tank that was abandoned was
techinically as UST in a vault in a two teir basement and only access to tank is via manholes. PBS
will be changed from temporarily out of service to permanently closed and PBS registration was
submitted as per Vanderheijden. Possible action may include additional borings once analyticals are
received. Report will be received within two months and deadline extended till June 27, 2008.
05/02/08-Vought-Received call from and spoke to Vanderheijden and he received letter with one month
due date and requested letter extending till 6/27/08. Vought sent email to Vanderheijden with above
notes from 4/25/08 extending deadline. 05/29/08-Vought-Received fax from Woodward and Curran (Van
Der Heijden) dated 5/29/08. 10,000-gallon #6 fuel oil UST located in a very confined area
surrounded by electrical and boiler equipment that services the entire building . UST was closed
including removal of product and filling with concrete slurry to close in place on 3/25/08. Soil
and groundwater samples collected adjacent to the tank and droplets of oil were observed floating
on top of the water . Groundwater analyticals showed no detections of VOCs or SVOCs. Proposal to
install three additional borings and redrilling of original sample locations in floor and
performance of a bail down test to examine product recharge into borings. Once all reasonably
recoverable petroleum product has been removed, CUNY will cease recovery backfill holes and notify
the DEC . DEC requires: 1)site plan 2)backfill holes only upon approval from DEC and absence of
free product as opposed to reasbnably recovered. Vought called Van der Heijden and explained above
requirements and requested site plan before approval can be provided. 10/03/08-Vought-Received
emailed site plan from Van Der Heijden on 6/11/08. Vought called Van Der Hiejden to clarify pumps
adjacent to UST location on site plan. Site plan also has two proposed sampling locations instead
of three location as per 5/29/08 proposal. Vought left message to return call. Vought received
callback from and spoke to Van der Heijden and pumps adjacent to UST on site plan are sump pumps
that have had no history of product detection however two sampling locations farther away from two
sumps had prior history of free product in borings. Van Der Heijden will install three to four
additional borings to confirm the presence/absence of product and

HOSTOS COMMUNITY COLLEGE - TRAILER #5 (Continued) **1009312355**

collect groundwater samples in
locations of prior borings and assumed downgradient locations. Vought
sent letter approving of
5/29/08 proposal with cc to Van Der Heijden. 07/27/09-Vought-Received
call from John Virgie (Obrien
and Gere-732-225-7380) and they will be replacing Woodward and Curran
(former consultant) and they
will be implementing scope dated 5/29/08 but only difference will be
wells be installed instead of
borings. DEC will receive report by 11/15/09. 6/11/10-Vought-Spill
transferred from DEC Vought to
DEC Ketani as per DEC Austin and Vought transfer to Section A. 6/14/10
- Raphael Ketani. On 8/6/09,
a letter was received from O'Brien & Gere confirming discussions
between Mr. Vought and Mr. Virgie
regarding the proposed subsurface investigation. On 8/10/09, a letter
was received from O'Brien &
Gere which had the same content as the 8/4/09 letter, but with the
addition of an LSIR submission
date and a remediation report submission date. Mr. Vought had received
the 11/6/2009 Limited
Subsurface Investigtion Report (LSIR) on 11/9/09. I reviewed the
report today. The three
groundwater samples were all non-detect for SVOCs and VOCs. The seven
soil samples were non-detect
for VOCs and almost entirely non-detect for SVOCs. The soil sample
from MW-3 at 4 to 6 feet had a
series of very low SVOC hits (some of which were exceedences for the
benzo group of analytes), but
the concentrations are not typical of oil contamination. I tried to
contact John Virgie of O'Brien
& Gere (732) 225-7380 regarding the report and the need to do a boring
at each end of the tank, but
I could only leave a phone message. 6/15/10 - Raphael Ketani. I tried
to contact Mr. Virgie on his
cell (609) 306-0509 regarding the site investigation, but could only
leave a message. 6/17/10 -
Raphael Ketani. I tried to contact Mr. Virgie regarding the site
investigation, but could only
leave a message. Mark Randazzo of O'Brien & Gere (781) 883-6432 called
in response to my attempt to
contact Mr. Virgie. He said that he started the project and usually
works on the CUNY site. He said
that he is familiar with the project. I asked him why borings were not
done at the ends of the tank
as there seemed to be enough room to get some equipment to these
locations. Mr. Randazzo said that
he wasn't sure why. However, he said, the borings and wells that were
installed were in an area
that was lower than the tank and downgradient. Mr. Randazzo said that
he will look at the project
again and get back to me. 6/18/10 - Raphael Ketani. Mr. Randazzo
called me back. We discussed the
site and the presence of droplets of oil in the 2008 groundwater
samples. He stated that O'Brien &
Gere will bring the matter to the attention of staff at Hostos
Community College regarding

HOSTOS COMMUNITY COLLEGE - TRAILER #5 (Continued) **1009312355**

attempting to install two temporary wells (one at each end of the tank). The most contaminated soil
sample would be taken from each boring and a groundwater sample. 6/23/10 - Raphael Ketani. Mr.
Randazzo sent me the following e-mail today: O'Brien & Gere respectfully requests that you
reconsider your request for additional soil borings and temporary wells in the area of the UST,
based on the following: - wells were installed hydraulically downgradient from the UST and no oil
was found; - No. 6 oil is characteristically not very mobile; - when the building is taken down,
any limited LNAPL present in the area of the tank will be removed; - the sub-basement sump near the
UST was found to be free of No. 6 oil; and - according to Hostos personnel, utility drawings in
direct vicinity of the tank, electrical equipment, and pump area are not available. Based on this
information we ask that you reconsider this request and close the spill number. 6/24/10 - Raphael
Ketani. As the product lost is #6 oil which has a low concentration of volatile components, if any,
and as no oil has been seen in the groundwater during 2009, and as there are no plans to show where
the electrical lines are next to the tank - which poses a safety concern for drilling through the
floor in the tank room, I am closing the spill case.

Remarks: DOING SOIL BORINGS CAME UPON CONTAMINATED SOIL

Tank Info:

Tank Number:	001
Tank Id:	3035
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	9
Pipe Model:	Not reported
Install Date:	11/01/1993
Capacity Gallons:	7000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

FINDS:
Registry ID: 110004505991

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Program:	BCP
Site Code:	606217
Acres:	1.340
HW Code:	C203139
SWIS:	0301
Town:	New York City
Record Added Date:	06/03/2020
Record Updated Date:	09/06/2023
Update By:	SMQUANDT
Site Description:	"Location: The 399 Exterior Street site is located in an urban area in the Mott Haven neighborhood of the Bronx. The property is bounded by commercial properties to the north and south, Exterior Street to the east, and New York State Department of Transportation (NYSDOT) owned land to the west. Beyond the NYSDOT-owned land is the Harlem River. Site Features: The site 1.34 acres and contains an asphalt paved parking lot. The property is currently unoccupied. Current Zoning and Land Use: The property is zoned C4-4 (commercial and residential) and is surrounded by similarly zoned properties. Past Use of the Site: The subject property was first developed in the early 1920s and used as a freight train support facility until circa 1975. Infrastructure supporting the freight train operation was removed from the site, at which time the use of the property transitioned to a parking lot. Between 1975 and the early 1990s the site was inactive. From the early 1990s to 2019 the site was operated as a parking area for school buses. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists of sand and gravel with fill material (brick, asphalt, and wood) underlain by silty sand and clay. Evidence of historic urban fill material was observed at depths up to ten feet below grade at several locations across the site. Groundwater was encountered between eight and ten feet below the surface at the site. Regional groundwater flow is estimated to be toward the west. "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern for the site include SVOCs and metals. Soil: Eleven soil samples were collected during the Remedial Investigation (RI). There were no exceedances of VOCs. Several SVOCs exceed the restricted residential use soil cleanup objectives (RRSCOs) across the site, including, but not limited to benzo(a)anthracene at 11

ATLANTIC EXPRESS - EXTERIOR STREET (Continued) **S106969386**

parts per million (ppm), benzo(a)pyrene at 12 ppm, benzo(b)fluoranthene at 13 ppm compared to their RRSCO of 1 ppm; and indeno(1,2,3-CD)pyrene at 7.4 ppm versus the RRSCO of 0.5 ppm. There were exceedances of metals, including, but not limited to, maximum levels of lead at 1,960 ppm compared to the RRSCO of 400 ppm and copper at 2,460 ppm compared to the RRSCO of 270 ppm. There were no exceedances of pesticides or PCBs above RRSCOs. There were no exceedances of PFAS above UUSCO. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Six groundwater samples were obtained as part of the RI. Five samples detected SVOCs including, but not limited to, maximum concentrations of benzo(a)anthracene at 0.823 parts per billion (ppb), benzo(a)pyrene at 0.971 ppb, benzo(b)fluoranthene at 0.823 ppb and indeno(1,2,3)cd-pyrene at 0.40 ppb, compared to their ambient water quality standard (AWQS) of 0.002 ppb. Metals detected include, but are not limited to, lead at 79.61 ppb compared to its AWQS of 25 ppb. This exceedance was of an unfiltered groundwater sample, and may be affected by suspended soil particles in the sample. There were no exceedances of VOCs or pesticides. There were two exceedances of the PCB, Arochlor-1260 at a maximum of 0.5740 ppb above the AWQS of 0.09 ppb. The highest detection of PFOA was 32.1 parts per trillion (ppt), and the highest detection of PFOS was 35.3 ppt, which both exceed the maximum contaminant level (MCL) of 10 ppt in drinking water for each compound. There were three detections of 1,4-dioxane, but these results did not exceed the AWQS. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Four soil vapor points were sampled during the RI. Multiple VOCs were detected in each soil vapor sample collected from the subject property. Petroleum related compounds, such as benzene and toluene were detected in each soil vapor sample at relatively low concentrations. Chlorinated VOCs were detected at maximum concentrations of carbon tetrachloride at 0.71 micrograms per cubic meter (ug/m3), cis-1,2-dichloroethene at 0.25 ug/m3, trichloroethene (TCE) at 0.43 ug/m3, methylene chloride at 22 ug/m3, and tetrachloroethene at 25.6 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, soil vapor intrusion is not a current concern, however, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Environmental sampling indicates soil vapor intrusion due to site contaminants is not a concern for off-site properties."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Updated By:	YYWONG
Site Description:	"Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the

FORMER G & C SERVICES (Continued) **S110768286**

site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb);

FORMER G & C SERVICES (Continued) **S110768286**

toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Code: 444720
Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the

FORMER G & C SERVICES (Continued) **S110768286**

presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining

FORMER G & C SERVICES (Continued) **S110768286**

	contamination is being managed under a Site Management Plan."
Health Problem:	"The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Code: 444720
Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic

FORMER G & C SERVICES (Continued) **S110768286**

compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

FORMER G & C SERVICES (Continued) **S110768286**

as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to

FORMER G & C SERVICES (Continued) **S110768286**

3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."

Health Problem: "The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

Site Description: "Location: The site is located at 255 East 138th Street, between Rider Avenue and Third Avenue, in the Bronx. The site is identified as Block 2333, Lot 1. Site Features: The site is approximately 20,000 square feet and has a new mixed-use retail/residential building. Current Zoning and Land Use: The property is in a special mixed-use district, zoned M1-4/R7X (manufacturing/ residential). The site is currently vacant and has not been used since 2006. To the north are large, multi-story former industrial buildings, to the west is a one-story garage building currently used for parking and storage, to

FORMER G & C SERVICES (Continued) **S110768286**

the east (across Third Avenue and Morris Avenue) is a senior citizen residential building and to the south (across East 138th Street) is an abandoned gas station and commercial storefronts with residential apartments above. Past Use of the Site: Most recently, the eastern portion of the site (formerly known as 2551 3rd Avenue) was occupied by a KFC restaurant (approximately 1969 to 2006, demolished in 2012). Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Prior to that, the site was used as a gas station and machine shop from approximately 1935 to 1969 (originally identified as City Gas and later Cities Service Oil Company). The western portion of the site (formerly known as 245 East 138th Street) has been operated as a machine shop, gasoline station, and auto repair facility by various operators for 80 years, most recently as a Getty gas station and auto repair shop. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.75 to 6.32 feet below ground surface and flows to the southwest. The geology generally consists of dark brown sand from 0 to 4 feet below grade, with evidence of urban fill material such as concrete, brick, asphalt, and gravel. Dark brown to gray-black sand is generally present from 4 to 12 feet below grade. Bedrock has not been identified in the top 25 feet below surface grade. "

Env Problem:

"Nature and Extent of Contamination: Prior to Remediation: The primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Two spills have been reported and closed for the site. On June 27, 2007, Spill No. 0703567 was reported for the eastern portion of the site when contamination was discovered during the removal of underground storage tanks from the former gas station. Contaminated soil was excavated and backfilled and end-point samples were analyzed. The spill was closed in May 2008. A spill was also reported for the western portion of the site on June 29, 1998 (NYSDEC Spill No. 9804000), due to contamination identified during the removal of five underground storage tanks, pump islands and associated piping. Contaminated soil was excavated and disposed off-site; subsequent remedial activity and monitoring at the site was performed under the Spill Response Program between 1998 and 2006. The spill was closed on November 3, 2006. Subsequently, the Remedial Investigation indicated that petroleum-related volatile organic compounds (VOCs) from the historical petroleum spills have largely been mitigated, but are still present in soil, groundwater, and soil vapor. Soil - VOCs related to the previous petroleum spills on the site were identified in two soil borings in the southwest corner of the site at a depth of 5.5 to 7.5 feet below grade. In this area, ethylbenzene was detected at a concentration of 45.8 parts per million (ppm) compared to the Unrestricted Use Soil Cleanup Objective (UUSCO) of 8.4 ppm; 1,2,4-trimethylbenzene at 206 ppm compared to the UUSCO of 3.6 ppm; xylene at 71.9 ppm compared to the UUSCO of 0.26 ppm; and naphthalene at 22.6 ppm compared to the UUSCO of 12 ppm. Outside of this limited area, the primary contaminants identified in soil are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. These contaminants are present site-wide primarily from the surface down to 3 to 5 feet below surface grade. Contaminants decrease in presence and concentration in deeper soil. SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), include: benzo(a)anthracene detected at a maximum of 10.8 ppm, benzo(a)pyrene at a maximum of 10.1 ppm, benzo(b) fluoranthene at a maximum of 11.9 ppm, and chyrsene at a maximum of 12.7 ppm. By comparison, the UUSCO for all of these compounds is 1 ppm. Metals include: arsenic at a maximum concentration of 49.3 ppm compared to the UUSCO of 13 ppm; lead at a maximum of 2290 ppm compared to the UUSCO of 63 ppm; copper at a maximum of 718 ppm compared to the UUSCO of 50 ppm; and chromium at a maximum of 35.8 ppm compared to the UUSCO of 30 ppm. Groundwater - Groundwater beneath the site is contaminated with petroleum-related VOCs which are associated with the spills from the former gasoline

FORMER G & C SERVICES (Continued) **S110768286**

	stations. Groundwater contamination is limited to the western portion of the site. Contaminants of concern in groundwater include: benzene detected at a maximum concentration of 388 parts per billion (ppb); toluene at a maximum concentration of 26.2 ppb; ethylbenzene at a maximum concentration of 122 ppb; and n-propylbenzene at a maximum concentration of 451 ppb. The NYSDEC Water Quality Standards for these contaminants are 1 ppb for benzene and 5 ppb for toluene, ethylbenzene, and n-propylbenzene. Soil Vapor - Multiple VOCs were identified in soil vapor across the site. Tetrachloroethylene (PCE) was detected in 5 of 6 soil vapor samples at concentrations ranging from 210 micrograms per cubic meter (ug/m3) to 373 ug/m3. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site are semi-volatile organic compounds (SVOCs) and metals, which appear to be related to the presence of historic fill material. Remedial actions have successfully achieved soil cleanup objectives. Remaining contamination is being managed under a Site Management Plan."
Health Problem:	"The site is completely fenced, which restricts public access. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. On-site contamination is not contributing to off-site vapor intrusion exposures. "

DEC Memo:	10/21/2014 - Feng - Duty Desk Officer. Talked to Steven Frank of LIRO Engineering (718-321-3136 x236, franks@liro.com). This is an E-Designation site and in the planning stage to develop into affordable housing and a hotel. The site owner is currently working

110 EAST 149TH STREET (Continued) **S117363725**

with NYCOER. The NYCOER has approved the RIWP and a Phase 2 has been done. A total of 5 soil borings have been installed onsite, i.e. in 2 corners and soil and groundwater were sampled. Petroleum contamination has been identified at the boarder line near next door property. Mainly BTEX with highest of xylenes were found in the soil samples. According to the Phase 1 conducted by previous consultant, the site has been used for warehouse, lumber yard, and heating oil tank in the other portion of the site, but the soil boring results did not indicate petroleum impacts in this area. The above mentioned Phase 1 did indicate that the next door property 100 East 149th Street was a filling station and they suspected it is the source of the petroleum impact at 110 East 149th Street. The demolish of the onsite warehouse might occur in Spring 2015. There is no schedule for the development. Next, they will submit the investigation report to OER and DEC. 3/30/2016 Feng - This spill is transferred from J. Feng to J. Vought as per J. Vought. 12/19/2017 - Austin - Project transferred from Vought to Lakhani - end 07/23/18 - Lakhani OER Colin Sullivan emailed a summary of the spill. The spill was opened in October 2014 during the remedial investigation when petroleum compounds were detected at elevated concentrations in MW-2 and MW-3. Results are as follow: benzene 140 ug/L(MW-2), xylene 79.6 ug/L(MW-2), toluene 9.5 ug/L(MW-2), benzene 52 ug/L(MW-3), ethylbenzene 5.3 ug/L(MW-3), isopropylbenzene 110 ug/L(MW-3), xylene 29.1 ug/L(MW-3), toluene 7.4 ug/L(MW-3). The site was initially composed of one lot, Lot 25. This lot has since been divided into three lots since the development plan involved constructing three new buildings: Block 2351, Lot 25, Lot 50 and Lot 40. MW-3 is on Lot 25 and MW-2 is on Lot 40. Currently the buildings on lots 25 and 50 have been constructed and TCOs have been issued for both buildings. These buildings are now seeking to obtain certificate of occupancy.\\ RAR (Impact Environmental, 06/20/18) - Depth to groundwater at the site ranged from approx. 9’bg in the southern portion to 18.5’bg in the northern portion of the site. Apparent groundwater flow was generally to the northwest, west, and southwest. For Lot 50, excavated and removed soil/fill for development purposes within the footprint of the site building to 2’bg in the northeast slab-on-grade corner, 1’bg in the southeastern slab-on-grade corner, 10.5’bg in the eastern-central cellar area along Gerard Ave, 5’bg along the slab-on-grade northern side of the building, and 5.5’bg in the cellar areas parallel to the courtyard/parking area. Additionally, installation of the building’s elevator pit required excavation down to 15’bg. No

110 EAST 149TH STREET (Continued) **S117363725**

USTs or new petroleum spills were found. For Lot 25, pile caps and grade beams were excavated to approx. 4.5'bg for the majority of the slab-on-grade construction. The detention tank structure and elevator pit were excavated to 6'bg. For Lot 25, Pile caps and grade beams were excavated to approximately 4.5'bg for the majority of the slab on-grade construction with the exception of the detention tank structure and elevator pit, which were excavated to approximately 6'bg. 07/24/18 - Lakhani The development team's plan is to start construction on Lot 40 in about 6 months and finish remedial activities 6 months after that. 07/26/18 - Lakhani Emailed NYSDOH Walz regarding the soil vapor at the site. 07/27/18 - Lakhani NYSDOH Walz has no concerns with Building B/C because they have sub-grade parking garages. However, soil vapor and indoor air data will have to be collected once the hotel is finished and within the heating season to determine whether full activation of these SSDS systems will be necessary. RAWP, indicates that all the buildings will have an SSDS that is semi-active (wind turbine on top of pipe). However, the RAR indicates that no SSDS was installed. Engineering controls at the site include a vapor barrier and composite cover. 08/10/18 - Lakhani Building plans were changed at the last minute (during pre construction meeting) from sub grade parking to parking at grade. A cellar was never proposed beneath building A. Previously, sub grade parking was proposed beneath court yard between two buildings. Future Hotel Building (orange area) will include SSDS. Plans have changed from hotel to commercial office. 08/24/18 - Lakhani Conference call with Colin Sullivan, Nathan Walz, and Shaminder Chawla. It was decided that an SVI study will be conducted at Building B/C during the heating season. It will be proposed in the next RAWP since the site is being developed under the Affordable Housing Project. The commercial office will be implementing an active SSDS. 10/18/18 - Lakhani DEP Collin Sullivan informed that owner requested to perform indoor air sampling rather than the initially agreed upon full SVI study. The owner believes that an SVI study would be intrusive of the new buildings and would undermine the integrity of the vapor barrier. While this is a legitimate concern because the owner rather not puncture the vapor barrier after it was installed, but without soil vapor data the potential for future issues is unknown unless a long-term air monitoring program is implemented. 08/05/19 - Lakhani - Spill being transferred to Lin. 3/30/21-Lin-The former use of the site was an outdoor advertising company, a coffee warehouse, Twinkie import company, and metro beer and soda. Two USTs were found on-site. The tanks were inspected and removed. No signs of

110 EAST 149TH STREET (Continued) **S117363725**

release were found (absence
of soil staining, no PID detection, and no sign of cracks on the
USTs). Water was found in UST 1
before it was removed. Endpoint samples were taken in the excavation
of UST 2 and came back clean.
The location of UST 1 was near UST 2. Groundwater sample taken in 2019
came back clean with no
elevated readings and no free product was found. A composite cover, a
vapor barrier and an active
SSDS was installed for this site. The site will also continue to be
registered as an E-designated
site by NYCDOB. Case closed.

Remarks: CALLER ADVISED RECEIVED PHASE 2 RESULTS SHOWING UNKNOWN PETROLEUM IN THE SOIL

a school under the Mayor s Office of Environmental Remediation oversight (enroller in the Voluntary Cleanup Program - 23CVCP037X, 14EHAZ301X). The contractor found some old concrete drainage structures when they were removing the old slab yesterday. When they removed the lids/covers of these structures, they were filled with oil-water mixture. We called AARCO and they pumped out the oil from the structures. There is still some sediment left in the structures because they need a high pressure vacuum truck to be able to remove the sediments, which is scheduled for next week. Doesn t look like the structures spilled as they had liquid in them but we ve decided to scrape the surrounding soils once the concrete structures are removed next week following the sediment removal and test the stockpile separately for disposal purposes to be on the safe side. We will also collect endpoint samples upon removal of the stockpiled material. Please let me know if you have any questions, and the plan is acceptable to you. I m attaching a few photos for your review and records. Regards, Ezgi Karayel Principal vEKtor consultants 37 W. 37th Street, 6th Floor New York, NY 10018 m:716.868.8873 o: 347.871.0750 Case discussed with DEc Rick Lin and transferred to him for follow up. 11/14/23-Lin-Old concrete drainage structures were discovered at the site and oil and sediments were found in the structures. The structures were removed and the soil from below the structure were over excavated. Endpoint samples were collected from the bottom of the structures. Endpoint samples came back clean and no further excavation is required. Case closed.

Record Added Date:	09/20/2022
Record Updated Date:	05/06/2024
Update By:	WBBENNET
Site Description:	"Location: The 100 East 149th Street BCP site is located in an urban area. The site is a 0.094 acre irregular-shaped parcel on the southeastern quadrant of the intersection of River Avenue and East 149th Street in the Bronx in New York City. Site Features: The 100 East 149th Street BCP site is currently vacant. Current Zoning and Land Use: The site is currently vacant and is zoned M1-4/R8A, MX-13 for Light Manufacturing and Residential Use. The surrounding parcels are currently used for a combination of commercial and residential uses. The adjacent residential property is located to the south (530 Exterior Street). The property immediately east of the site (501 Gerard Ave) is being used as a school. Past Use of the Site: The site appears to have been developed for residential purposes by 1927 and was developed with a gasoline station in circa 1935 through approximately 1989 with five 550-gallon buried underground storage tanks (USTs) at the site. The lot was improved with a one-story building and the site was utilized as an automotive service station, auto sales, a junk and salvage yard, auto wrecking, public parking, and an automotive and parts dealer. Truck rental companies occupied the Site between 1994 and 2009 and a tire company occupied the Site in 2017. The structure was demolished in about 2019. Site Geology and Hydrogeology: Bronx, New York is located within the Embayed section of the Coastal Plain physiographic province, which is characterized by areas of low relief and consists of Cretaceous Coastal Plain sediments, primarily clay, sand, and gravel, that overlie igneous and metamorphic rocks that crop out in Connecticut. Near-surface geology in heavily developed areas such as the site and vicinity are considered urban land. Soil at the site consists of fill material that contained concrete, brick, and asphalt in a matrix of silty sand from grade to 15-feet below grade and consists of medium grained sand with fill material to approximately 10-feet below grade and medium grained sand and clay to approximately 15-feet below grade. Depth to water at the site is expected to be approximately 10 to 14-feet below ground surface and is expected to flow to the west in the direction of the Harlem River. "
Env Problem:	"Environmental Assessment: Based upon prior investigations conducted

100 EAST 149TH STREET (Continued) **S129283536**

to date at the Site, the primary contaminants of concern for the Site include Volatile Organic Compounds (VOCs) with include gasoline compounds, Semi-Volatile Organic Compounds (SVOCs), which include polyaromatic hydrocarbons (PAHs), and metals. Soil VOCs - The gasoline compound 1,2,4- trimethylbenzene (61 mg/kg) was detected in the western portion of the Site at a depth of 10 to 12.5-feet below grade at a concentration exceeding its Restricted Residential Soil Cleanup Objective (RRSCO) and Protection of Groundwater (PGW) Standards. SVOCs - Multiple polyaromatic hydrocarbons (PAHs) were additionally detected at concentrations exceeding their respective RRSCOs and PGW Standards. PAHs including benzo(a)anthracene (max of 19.70 mg/kg), benzo(a)pyrene (max of 21 mg/kg), benzo(b)fluoranthene (max of 15.90 mg/kg), dibenzo(a,h)anthracene (max of 1.50 mg/kg), and indeno(1,2,3-cd)pyrene (max of 14.70 mg/kg) were detected in the soil throughout the Site at depths ranging from 0 to 15-feet below grade. The compound benzo(k)fluoranthene (max of 14.80 mg/kg) was detected on the western portion of the Site at a depth of 10-feet below grade, on the northeastern portion of the site at a depth of 5 to 7.5-feet below grade, and on the southwestern corner of the Site at a depth of 7.5 to 10-feet below grade. Chrysene (max of 18.20 mg/kg) was detected in the northeastern corner of the Site at a depth of 5 to 7.5-feet below grade and in the southwestern corner of the Site at 7.5 to 10-feet below grade. Metals - Metals including arsenic (35.80 mg/kg), barium (1,110 mg/kg), and cadmium (16.5 mg/kg) were detected in the southeastern corner of the Site at approximately 10-feet below grade at concentrations exceeding their respective RRSCOs and PGW Standards and lead (max of 10,700 mg/kg) was detected in the southeastern corner of the Site at approximately 0 to 2-feet and 10-feet below grade at concentrations exceeding its RRSCO and PGW Standard. Mercury was detected on the southern portion of the Site (max of 2.25 mg/kg) at approximately 0 to 2-feet and 10-feet below grade at concentrations exceeding its RRSCO and PGW Standard. PCBs - Total PCBs was detected at a concentration greater than its RRSCO and PGW Standard at 10-feet below grade in the southern portion of the Site (8.46 mg/kg). Groundwater - Gasoline compounds including 1,2,4-Trimethylbenzene (max of 210 ug/L), 1,3,5- Trimethylbenzene (max of 210 ug/L), benzene (max of 820 ug/L), ethyl benzene (max of 400 ug/L), isopropylbenzene (max of 92 ug/L), n-Butylbenzene (max of 43 ug/L), n-Propylbenzene (max of 290 ug/L), o-Xylene (max of 88 ug/L), p- & m-Xylenes (max of 490 ug/L), p-Isopropyl toluene (max of 8.80 ug/L), sec-Butylbenzene (max of 38 ug/L), toluene (max of 100 ug/L), Xylenes, total (max of 580 ug/L), and naphthalene (max of 203 ug/L) were detected in the groundwater beneath the Site at concentrations exceeding their respective NYSDEC TOGS Standards. PAHs including benzo(a)anthracene (max of 3.25 ug/L), benzo(a)pyrene (max of 4.39 ug/L), benzo(b)fluoranthene (max of 4.23 ug/L), benzo(k)fluoranthene (max of 3.33 ug/L) chrysene (max of max of 3.20 ug/L), and indeno(1,2,3-cd)pyrene (max of 3.44 ug/L) were detected in the groundwater beneath the Site at concentrations exceeding their respective NYSDEC TOGS Standards. Metals including arsenic (64 ug/L), barium (1,260 ug/L), cadmium (18 ug/L), chromium (max of 352 ug/L), copper (860 ug/L), lead (max of 2,190 ug/L), magnesium (59,600 ug/L), manganese (max of 4,440 ug/L), nickel (149 ug/L), sodium (max of 53,300 ug/L), and zinc (max of 4,510 ug/L) were detected in the groundwater beneath the Site at concentrations exceeding their respective NYSDEC TOGS Standards. Soil Vapor The compound cis-1,2-Dichloroethylene (1.40 ug/m3) was detected in the soil vapor

100 EAST 149TH STREET (Continued) **S129283536**

	in the northeastern portion of the Site at a concentration requiring the identification of source(s), resampling, or mitigation according to the New York State Department of Health (NYSDOH) Soil Vapor Intrusion Decision Matrices."
Health Problem:	"The site is vacant and access is restricted by a fence. The site is partially covered with asphalt and concrete; however, people who enter the site may come into contact with contaminants in the soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of structures, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building occupancy and / or redevelopment. Environmental sampling indicates soil vapor intrusion from site contamination is not a concern for off-site buildings."

LEft message for Bruce requesting copy of report fro review. Afterwards a meeting can be held. 05/18/06 - Reviewed Site Investigation Report. NYCDEP is dealing with the contaminated soil under the Hazardous Materials E Designation provision. The highest TVOCs in GW is 1.5 ppm. NYCDEP has required vapor barrier and sub-slab venting system to be installed beneath the proposed new building. The residual GW contaminations do not pose any immediate risk to the environment and should biodegrade over time. This spill is inactivated. - KST

DEC Memo:	4/1/21-Lin-The contract was putting in test pits and found staining and petroleum odor at 17' to 20'. Groundwater was encountered at that depth and sheen was observed on the groundwater. They will take soil and groundwater samples. Plan to install three (3) USTs, two (2) 30,000 #2 fuel oil and one (1) 25,000 gallon diesel to replace current USTs on-site. Previous spills on this property #1502628, and 0204573. PBS#2-327727 Construction Manager: Tpipkin@guthdeconzo.com 410-924-2790 4/7/21 - Sekhon Site map DECDOCs. Awaiting lab results. 4/9/21 - Sekhon Email from Tyler Pipkin - Good Morning Harmandeep and Lin, Please see below from TRC, NYPA s third party testing company, we should have the official report sometime next week. A corroded metal container filled with PCM was removed from approximately 14 feet below grade near the northeastern area of the Site. Following removal, it was noted that the container contained approximately 5 corrosion holes, ranging in size from - inch to 1-inch diameter. The container was open on one end. Approximately 5 cubic yards of PCM were also removed from the excavation near the former container location. TRC screened removed soil using a photoionization detector (PID) in order to confirm all impacted soil was removed and segregated appropriately. Unimpacted soils, exhibiting no PID readings or visual of olfactory evidence of petroleum contamination, were observed at the excavation sidewalls and base following PCM removal. The impacted soil was segregated from clean soil and stockpiled on poly sheeting onsite. The Contractor indicated the container and PCM will be covered with poly-sheeting until offsite disposal at a later date. The contaminated soil does not appear to be associated with the existing, in-service underground storage tanks (USTs) onsite as petroleum impacts were noted only in the area of the container excavation, which is approximately 50 feet from the location of the existing USTs. Groundwater was not encountered in the excavation.

LINCOLN HOSPITAL TTF (Continued) **S106006138**

Following removal of the container and petroleum-impacted soils, TRC collected endpoint samples from the excavation. Four (4) sidewall samples and one (1) excavation base sample were collected from the excavation. The samples were collected for volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs) listed in Tables 2 and 3 of the NYSDEC Commissioners Policy-51 guidance document. The samples will be analyzed on a 7-day turnaround time. Please note the excavation was backfilled following endpoint sample collection. I can confirm that the container and PCM has been covered and properly isolated with poly-sheeting. Thank you. Tyler Pipkin Construction Manager 9/3/21 - Sekhon Closure report submitted for departmental review. DECDOCS 9/7/21 - Sekhon Report reviewed and acceptable. Case closed.

Remarks: doing excavation at the hospital - installing new tank - came across contaminated soil - would like callback to discuss the issue

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/31/2002 - Sangesland spoke with Isaac at Petroleum Tank Cleaners (718-624-4842). PTC was doing some excavations around the stick valves of several buried tanks at Lincoln Hospital. PTC has started excavations in the area and will continue with hopes of getting clean end point samples. Tanks were probably tank tested recently. Sangesland will check PBS for the site. 8/2/2002 - Sangesland spoke with Isaac at PTC. He said they dug out quite a bit of contaminated soil, but didn't get it all. Because of the location of the excavation, PTC had to back fill the site with sand. PTC says they found an old gasoline tank which was empty, but had not been closed out. This tank was located adjacent to the fuel oil tanks they knew about. PTC was given direction to: 1) Delineate the site in 3-D. 2) Determine GW level and direction 3) Prepare & submit a remediation work plan 4) Process the documentation to properly close out the tank(PBS) 8/2/2002 - Mark Robbins contacted the DEC to say his firm (HydroTech 631-462-5866) was going to bid on doing a delineation/remediation at the site. 8/13/2002 Sangesland spoke with Mark Robbins. Mr. Robbins requested a letter from the DEC outlining the list of work required on this site. This is needed by the Hospital to process a purchase order. 4/29/2005 Sangesland spoke to Mark Robbins at HydroTech. They have 4 wells which have been under long term monitoring. Mark believes the site may be close to close out. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. 06/03/14-Hiralkumar Patel. visited site. met John Healy at the hospital. informed him about an open spill case. he has no knowledge of this case as he was not working at the facility in 2002. as per PBS record, the site has total of eight (8) active tanks. he mentioned that one 1(1) 10,000 gal diesel UST is located along E 149th Street. two days tanks (one 100 gal and one 275 gal) for diesel product are on building's roof. the remaining five (5)

LINCOLN HOSPITAL TTF (Continued) **S106006138**

tanks (one 10,000 gal diesel and
four 50,000 gal #2 fuel oil) are located underground, in front of the EMS entrance along Park Ave.
found total of six (6) monitoring wells around the tank field along Park Ave. Mr. Healy mentioned
that there was an old gasoline UST in area of fuel oil tank field. he will look for any
environmental reports. asked him to check and sample existing monitoring wells at the site. John
Healy Sr. Stationary Engineer Engineering Department Lincoln Hospital 234 E 149th Street Bronx, NY

reviewed available documents:
- 1)
08/14/2002: DEC Sangesland sent letter requiring complete delineation and submission of RAP. 2)
09/10/2002: Subsurface Investigation Report: - prepared by HydroTech - five USTs (4 - 50,000 gal
fuel oil, 1 - 10,000 gal diesel) are situated beneath the asphalt parking lot to the west of
emergency room - boiler plant is situated to the south of the parking lot - all five tanks are
situated in north-south direction - a former dispenser is situated on top of a concrete island that
is located to the north of the 10,000 gal diesel tank - PTC was contracted to replace direct fill
pipes associated with each UST - identified petroleum impacted soil during the installation of fill
pipes for diesel UST - impacted soil extended to at least a depth of 8 ft bg - a soil sample was
collected for fingerprint analysis; result indicated that the petroleum most closely resembled fuel
oil 1 with a very slight presence of gasoline - subsurface investigation conducted in Aug. 2002 -
installed four soil borings (SP-1 through SP-4) - boring SP-1 was installed to 16 ft bg, where
refusal was encountered - borings SP-2, SP-3 and SP-4 were installed to 20 ft bg; no refusal
encountered in these borings - found PID readings between 463 and 693 ppm from 0 to 16 ft bg in
SP-1; maximum PID reading found at 16 ft bg where refusal encountered - in SP-2, found PID reading
of 382 ppm at 16-18 ft bg and 189 ppm at 18-20 ft bg - in SP-3, found PID readings between 289 and
628 ppm from 8 to 18 ft bg; 24 ppm recorded at 18-20 ft bg - in SP-4, found PID reading of 486 ppm
at 14-16 ft bg and 102 ppm at 16-18 ft bg - total five soil samples were collected (two from SP-1,
and one each from SP-2, SP-3 and SP-4) - water table was identified at 12 to 16 ft bg ----------

spill #: 9208811 was
reported on 10/30/1992 due to 3 gal #2 oil spill. case closed. spill
#: 9310375 was reported on
11/26/1993 as 30 gal #6 oil spilled into sewer due to tank overfill.
case closed. spill #: 9515003
was reported on 02/22/1996 as 30 gal #6 oil spilled due to truck
malfunction. case closed. spill #:
0313236 was reported on 03/02/2004 as 50,000 gal #2 oil tank (tank #
4) failed a tightness test.
tank was repaired and tested tight. case closed. spill #: 0912680 was
reported on 03/05/2010 as 25
gal diesel spilled onto parking lot and storm drain due to overfill.
case closed and referred to
spill #: 0912687. spill #: 0912687 was reported on 03/05/2010 due to
diesel spill onto parking lot
and storm drain. case closed. spill #: 1206812 was reported on
10/10/2012 as 10,000 gal diesel tank
(tank # 6) failed a tightness test due to loose gasket. case closed.
spill #: 1502628 was reported
on 06/09/2015 as 50,000 gal #2 fuel oil tank failed a tightness test.
case still open. a TTF letter
was sent on 06/16/2015. 1:02 PM:- spoke with Angelo (718-579-4645) in
facility department. he
mentioned that John Healy is no longer working at the site. he asked
to contact Patrick Hallahan.
Patrick Hallahan Chief Engineer Ph. (718) 579-5680 email:
patrick.hallahan@nychhc.org 1:05 PM:-
left message for Mr. Hallahan. 1:11 PM:- spoke with Dave Krochko
(914-448-2266) at Woodard & Curran
regarding gw sampling activities. he mentioned that they never
received signed proposal from the
property owner and still waiting for reply. 2:53 PM:- called office of
NYC Health and Hospitals
Corp. for point-of-contact regarding the site. site representative
asked to send letter to Mr.
Raju's attention. NYC Health & Hospitals Corp. 125 Worth Street New
York, NY 10013 Attn.:
Ramanathan Raju Ph. (212) 788-3321 3:20 PM:- sent letter to Mr.
Hallahan and Mr. Raju including
copy of letter dated 08/14/2002 and email dated 06/16/2014. asked them
to submit report by the end
of 10/16/15 including groundwater sample results and flow direction.
also asked them to immediately
renew PBS registration. letter emailed to Mr. Hallahan.
09/18/15-Hiralkumar Patel. 11:53 AM:-
received message from Evan Trumpatori. he inspected site yesterday to
verify location of each
monitoring well. during inspection, he noted that five of the wells

LINCOLN HOSPITAL TTF (Continued) **S106006138**

are actually stick lines for
USTs. he only found two (2) 1-inch wells. Evan Trumpatori Woodard & Curran Ph. (914) 294-2414 (O)
(631) 662-9991 (C) email: etrumpatori@woodardcurran.com 1:25 PM:- spoke with Evan. asked him to
sample the two existing wells. 10/20/15-Hiralkumar Patel. received email from Evan (at 4:32 PM on
10/15/15) including sampling report. abstract: - the nearest surface body is the Harlem River,
located approx. 1,800 ft west of the site - five of the seven reported monitoring wells were
product level gauging ports for USTs - the remaining were 1-inch wells - no free product was
present in either well - marginally elevated PID readings (6.5 ppm in MW-1 and 0.3 ppm in MW-2)
were noted in both wells and petroleum odor was observed in well MW-2 - both wells were installed
to a depth of approx. 20 ft bg - depth to groundwater was approx. 15 ft bg ---------- -
few VOC compounds noted above limit (max. 46 ppb of n-Propylbenzene) - recommended installation of
an additional monitoring wells to determine site specific groundwater flow direction report
includes google view of the site with two well locations, but does not include site sketch with
tank systems and its gauging ports. 10:07 AM:- sent email to Evan and asked to submit a site sketch
including tank systems, its gauge ports and existing wells. email copied to Leonard Balgobin
(Leonard.Balgobin@nychhc.org), Dave Krochko (dkrochko@woodardcurran.com) and Michael Heijden
(mvanderheijden@woodardcurran.com). PBS registration has not been renewed yet. 10/23/15-Hiralkumar
Patel. 9:22 AM:- received email from Evan including a google view. as per the submitted map, the
north end of the four 50,000 gal tanks are under the existing building. 10/26/15-Hiralkumar Patel.
10:17 AM:- spoke with Evan and inquired him about position of north end of the four 50,000 gal
tanks (under the building?). he mentioned that the google pic is old and currently there is a paved
concrete area. so north end of the tanks are not under the building. asked Evan to submit a line
drawing (with scale). 11/06/15-Hiralkumar Patel. 1:58 PM:- received email from Evan including a
scaled site map. 12/02/15-Hiralkumar Patel. after discussing with DEC DeMeo, case closed based on
available information (source removal, minimal impact to groundwater and no planned change of
property use). PBS registration has not been renewed yet. 2:01 PM:- sent spill closure letter to
Mr. Hallahan. letter emailed to Mr. Hallahan and Evan. **also refer spill #: 1502628.**

DEC Memo:	12/4/20-Lin-Four (4) 4,000 gallon USTs were removed so that can install new tanks. Contaminated soil was found underneath the 4,000 gallon tanks. There are several 550 USTs that were closed in place. Significant contamination was found underneath the 550 tanks and those tanks will be removed during the tank upgrade as well. According to consultant, they are very limited to what they can excavate horizontally. They will excavated as much as they can and take end point sample. Property owner contact info: Manny Chadha 917-939-9667 731 Main St, New rochelle, NY 10801 PBS#2-600832 12/14/20 - Kim - I received photos from Kevin Brussee with Environmental Business Consultants showing the area from where the four (4) 4,000gal USTs were removed; the excavation with installed shoring; and the stockpile of contaminated soil to be transported to Soil Safe Logan facility for disposal. 12/1/2022 - Kim - NYC OER Site Project #20EHAZ122X at 2525 3rd Ave under Project Manager Shirley Chen. On 8/8/22 I received a copy of the Soil/Materials Management Plan Summary Report from DEC Liu. The report noted that the property will continue to be registered with a Hazardous Materials E-Designation by the NYC Department of Buildings. A copy of the Soil/Materials Management Plan Summary Report was uploaded to DecDocs. 12/5/22 - Kim - At this active gas station, four 4,000gal gasoline USTs and nine 550gal gasoline USTs were removed and replaced by three new 12,000gal USTs; the former canopy and dispensers and dispenser islands were also removed and replaced. Contaminated soil was excavated up to the extent deemed practicable by the site owner's contractor: excavation for the renovation, new underground storage tanks, to a depth of approximately 15ft bgs; excavation to a depth of approximately 5ft for the footings for the new canopy and for the new dispensers/dispenser islands. EBC reported some additional remedial excavation was performed as necessary to remove accessible petroleum impacted soil. Brussee with EBC also reported that they excavated down to a clay layer and PID screenings indicated the removal of contaminated soil. The former building slab was removed and replaced with a new 6in thick concrete slab, except the new tank pad area which was capped with a

WATER SEEPAGE INTO ADJACENT BASEMENT (Continued) **S121982313**

	new 10in thick concrete tank pad slab, the entire exterior area around the building was capped with a new 6in thick concrete slab. A total of 1,063.44tons of petroleum impacted soil/fill was removed and transported to the Soil Safe, Inc. Endpoint samples from the area where the four 4,000gal gasoline USTs were located indicated the presence of acetone (not included in CP-51 SCOs), benzene (above unrestricted SCOs, below residential SCOs), and xylene (above unrestricted SCOs, below residential SCOs). The SMMP Summary Report, photos, and lab results for the collected soil samples indicated that the spilled petroleum was degraded, and the level of soil contamination that could not be excavated was below residential SCOs. Spill case closed - end
Remarks:	contamination at tank removal site, investigation and c/u ongoing

DEC Memo:	Sangesland left voice mail with Celeste and Malorie at DEP asking for more information.... Wastewater spill???? What does this mean? 2/6/12-Vought-Onsite meeting arranged by DEC Patel with NYCDEP Industrial Waste (Celeste Oloke Cell:347-672-6059) and Vought. Vought met NYCDEP Oloke and carwash at Shell Station located at 2525 3rd Avenue has wastewater tanks (used for recycling water at wash) and tanks are immediately adjacent to rear of four story residential brick building located at 2535 Third Avenue. NYCDEP Sewers Unit was onsite on Tuesday 1/31 and placed green dye into all four waste water tanks. At time of site visit green dye was still evident in wastewater tank and water level was almost filled to top. Note that overland drainainge from was running into holes in tank manways. On other side of carwash, waste water at times of high output ran out of carwash and into catch basin located on Shell property and then catchbasin would overflow and wastewater would run down street into NYCDEP Combined Sewer. NYCDEP noted that on 1/31 there was sheen and some oily residue on catchbasin water. At time of DEC site visit NO sheen or evidence of product in catch basin or in manways or in basement of 2535 3rd Avenue. Vought also inspected basement of 2535 3rd Avenue with NYCDEP Oloke and building owner (David Aharnwa Ph:718-402-9428 Ph:718-300-0977) and observed approximately five gallons of dye impacted water in rear of basement on concrete and evidence of seepage through adjacent wall to Shell Station (evidenced by wet and eroding mortar between brick). NYCDEP Oloke noted that NYCDOB and NYCDEP Health Unit will be performing site visit as well. As per Aharnwa there was never any fuel oil or petroleum vapors in his basement from seepage. Vought and NYCDEP Oloke called and held teleconference with DEC Water Unit Selvin Southwell who indicated that unless discharge was to surface water body or storm sewer (in this spill that was not the case as discharge to combined sewer) then DEC would have legal authority to get involved. As such DEC Southwell noted that Department could not make any further requirements with respect to wastewater issue. Vought noted PBS #2-600832 for site and reviewed

WATER SEEPAGE INTO ADJACENT BASEMENT (Continued) **S121982313**

registration with DEC Falvey who noted that CDM (Department PBS Contractor) performed tank
inspection in 2010 and noted no violations and that routine inspection would likely be next year.
Vought called NYCDEP Oloke and informed him of Shell inspection status and closed spill as no
impact to soil or groundwater. See also open spill #9109618 assigned to DEC Brevdo. Vought informed
Brevdo of this closed spill and Brevdo to follow up with status of open spill #9109618. Note owner
of site as per PBS is: Chad Springfield Corp. 2525 Third Avenue Bronx, NY 10451 Contact: Manny
Kumar ph:(914)654-8900 Ph:(917)939-9667 Vought provided copy of this report and PBS and Spill
Report 9109618 to Brevdo for followup.

Remarks: spill to catch basin and soil/please call celeste okloi

Town:	New York City
Record Added Date:	12/23/2010
Record Updated Date:	08/01/2022
Update By:	JHOCONNE
Site Description:	"Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, a 12-story building with commercial space on the first floor, and a 8-story residential building. These buildings are home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "
Env Problem:	"Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm,

BORINQUEN COURT (Continued) **S116041494**

	Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/04/2003 - Closed Due To The Nature / Extent Of The Spill Report1/2/03 Reassigned From Sigona To Foley. Investigation Being Performed By Spartan Amoco Under Spill #9909670. Open Mobil #9208906.3/3/04 As Per The Closure Request Report Submitted For Mobil By Gsc, Spill #8905353 Initiated A Subsurface Investigation Conducted From 12/11/89-1/10/90 Which Included Installation Of 5 Mws (Mw-1A Thru Mw-5A). Vocs Were Above Groundwater Standards. This Was Summarized In The February 1990 Roux Subsurface Evaluation Report. Mw-1A Through Mw-5A Were Destroyed (4/90-11/91) Due To Construction Activities Conducted By Amoco. Five 4000Gal Gas Usts, One 550Gal Waste Oil Ust, And One 550Gal Fuel Oil Ust And Piping Were Removed From Site.A Subsurface Investigation Conducted In April 1991 Included Installation Of Two Soil Borings And One Monitoring Well(Mw-6). Results Were Summarized In 6/91 Roux Supplemental Subsurface Investigation Report.A Subsurface Investigation Conducted In November

MOBIL (Continued) **S104278682**

1991 Included Installation Of 11 Monitoring Wells (Mw-1 Through Mw-5 And Mw-7 Through Mw-12) And One Air Sparge Well (Sp-1). Results Were Summarized In A Gti Report.Spill #9208906 Was Issued To The Site On 11/2/92 As A Result Of Contaminated Soil Observed During Amoco Site Construction Activities.

Remarks: 4K TANK FAILED PETRO-TITE. L R = 1 GAL / 30 MIN. CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS.

DEC Memo:	PBS 2-156590 1/20/04 File review (Foley): Prior to divesting this site in March 1990, a site assessment was performed by Roux (hired by Mobil) which indicated elevated BTEX existed in both groundwater and soil, but no free product was found. Upon transfer of property(8/90), the new owner began to install new USTs. During tank replacement, 875 tons of contaminated soil was removed and disposed of. During construction, two upgradient wells were destroyed. Three downgradient wells remained intact. The two wells which were destroyed showed ND for BTEX during sampling. In May 1991, there was an apparent vapor problem in the kiosk at the now active Amoco station. Amoco installed a venting system to alleviate the problem. Based on this, Mobil installed two borings and one well in the vicinity of the kiosk. The report indicated that the soils surrounding the kiosk did not contain very high levels of BTEX in soil. The monitoring well installed contained 0.01' of product. This well is upgradient of all former Mobil tank areas. Additional constuction at the site for a car wash has destroyed three downgradient wells. Thus, only one well remains on the property. However, upon completion of the construction, up to ten additional wells shall be installed at the site. Wells will be installed after construction is completed. 11/91 Eleven monitoring wells and a sparge point were installed. 12/9/91 MW-11 had 0.84' of product. 1/22/92 MW-11 had 0.21' of product. 2/20/92 MW-11 had 7.16' of product. A vac truck has been scheduled on a biweekly basis to extract LNAPL from MW-11. 3/92 LNAPL was detected in MW-11 (0.07-3.02'). Approx 70gal was extracted from MW-11 on 3/4, 3/13, 3/16 using vac truck. Trace amounts of LNAPL were hand-bailed from MW-11 on 3/18 & 3/27. Water sample from car wash well was collected by Tyree, analyzed by Method 602, and returned ND. 4/92 MW-11 had 0.08-0.18' of LNAPL and approx 2.5gal LNAPL bailed. 6/8/92 An EZY Skimmer was installed in MW-11. 7/92-6/93 No LNAPL was detected in any wells. 1/94-3/94 MW-10 had 0.28' product. MW-11 had 0.01' product. 5/94 MW-11 had trace amount of product. 7/11/94 SVE started. DTW 16' bgs. 6 combination SVE/AS points. Will sample all MWs before sparge system started. 2/8/95 0.01' product in BD-1. BTEX from ND(MW-1) to 30,000ppb(MW-5). 10/27/99 Cross Deegan Realty notified by

MOBIL (Continued) **S104278682**

station operator of possible inventory loss. Alvin Petroleum exposed portions of system over next two weeks. No system leaks were detected. 11/9/99 Alvin Petro. requests a tightness test be performed. Crompco detected a leak in one of the four tanks and reported the failure. 11/10/99 Alvin Petro. exposed and removed remote fill box on the tank that failed test. A coupling that connects the piping to the overflow box was found cracked. The coupling was replaced and system retested tight. 11/16/99 Crompco retested system with FDNY and passed. 11/22/99 Impact Environmental performed a limited subsurface investigation of soil adjacent to coupling and concluded that gasoline had impacted soil/GW. Report states that current owner only intends on addressing contamination from 10/99 spill and not the 1992 spill. 10/31/00 Three wells sampled and gauged. SVE system removed from service. ORC socks in wells MW-1 and MW-5. BTEX from 15ppb(MW-12) to 868ppb(MW-1). MTBE from 31ppb(MW-11) to 49,000ppb(MW-1). 2/5/01 Seven wells sampled. BTEX from ND(MW-12) to 240ppb(MW-1). MTBE from <1ppb(MW-12) to 64,000ppb(MW-7). 4/26/01 Seven wells sampled. MTBE has increased in monitoring wells hydraulically downgradient from the current dispenser island and USTs. MTBE ranged from 14ppb(MW-11) to 920,000ppb(MW-10). BTEX ranged from 12.8ppb(MW-11) to 6,080ppb(MW-10). 10/23/01 Eight wells sampled. BTEX from 14ppb(MW-6) to 4,750ppb(MW-10). MTBE from 18ppb(MW-11) to 270,000ppb(MW-10). 1/17/02 Eight wells sampled. BTEX from ND(MW-5) to 1,794ppb(MW-10). MTBE from 29(MW-5) to 65,000ppb(MW-7). 4/30/02 Six wells sampled. BTEX from ND(MW-5 & MW-6) to 1173ppb (MW-10). MTBE from 7.6ppb(MW-1) to 24,000ppb(MW-5). 5/15/02 Sensitive Receptor survey identified PS 31 approx 850' to the southeast. There are residential and commercial buildings with basements immediately adjacent to the site to the north. A subway tunnel is located beneath E 149th St.

03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 11/18/03 Received CAP/Remediation Plan, 3rd Quarter 2003 monitoring report, and tank test results(pass). 12/10/03 Reassigned from Vought to Foley. See closed spills #0307681, 9208906. Review of Remediation Plan: A SVE/AS system was installed by Handex and operated on the property to address spill #9208906. The system is comprised of four soil vapor extraction wells and six air sparge points. At this time, the system is not operational. A monitoring program is being performed. 11/9/99 Tank system tightness test performed by Crompco indicated a leak near the remote fill box. The leak was repaired. Soil staining and petroleum odor was noted below the fill box. Spill 9909670 was reported. 11/22/99 Impact Environmental started subsurface investigation. Groundwater results exceeded standards. 7/7, 7/25, 10/23/00 Enhanced fluid recovery performed on MW-2 as an IRM. Impact Environmental proposes 1) monthly EFR on hottest wells for 6 months, 2) replacement/upgrade of air sparge equipment installed to address #9208906, 3) SVES to be modified to include MW-2. 9/3/03 Impact Environmental sampling data (for Amoco): BTEX levels range from ND(MW-5, 11, 12) to 1606ppb(MW-6). MTBE ranges from ND(MW-12) to 650,070ppb(MW-6). 10/6/03 GSC sampling data (for Mobil): BTEX ranged from ND(MW-2) to 3800ppb(MW-6). MTBE ranges from 9.8ppb(MW-11) to 1,240,000ppb(MW-6). 11/26/03 Impact Environmental data from 4Q2003 report shows MW-6 and MW-2 to be hot spots. BTEX ranges from ND(MW-12) to 6923ppb(MW-6). MTBE ranges from ND(MW-12) to 869,600ppb(MW-6). 2/2/04 Faxed stip to Mr. Hank Alpert, Cross Deegan Realty. Due back 2/23/04. (FAX 516-365-1606) 2/11/04 STIP returned.

MOBIL (Continued) **S104278682**

Cover letter states that a previous CAP for spill #9909670 was already approved by DEC and was authorized to develop CAP for spill #0307681 (dated 11/13/03). 2/13/04 STIP fully executed. 3/4/04 Letter received from DDC(Bruce Rottner) to J. Semelmacher. Requests Amoco's participation in DOT reconstruction project instead of reimbursement of cleanup costs. 3/15/04 Called B. Rottner. He explained that he recieved a phonecall from the owners attorney who stated that contamination was from a Dept of Sanitation garage. However, monitoring well on that property was installed and was clean. Spartan will be sending another letter to DDC at which time B. Rottner will forward a copy to me. 3/10/04 Received 1Q04 monitoring report. Need to delineate around MW-6 and MW-2. 6/18/04 Received 2Q2004 monitoring report. 6/30/04 Met with Spartan Petroleum (H. Alpert) and Impact Env. Received hand-delivered letter dated 6/28/04. Site is located on 149th St between Gerard and River Avenues. The site was impacted by a release detected in 1992 while under lease to Mobil Oil. Mobil installed an SVE/AS system. A new release was confirmed and Spartan released Mobil from contractual obligations. As an IRM, EFR was performed on MW-2. Approx 1075gal GW was extracted. An enhanced SVE/AS was run from July 12, 2001 to the present. During the period from 11/9/99 to 3/3/03, there was a steady decline in contaminant concentrations. In May 2003, BTEX concentrations began to increase unexpectedly. A system test was performed and all lines and tanks tested tight. An off-site source was suspected. Identified a NYCDOS truck terminal upgradient. Also found many monitoring wells on the NYSDOS site. Thru a FOIL request, review of the NYSDEC files incidate that the NYCDOS site is impacting 99 E 149th St. Request closure. 10/4/04 Received 3Q04 monitoring report. 11/19/04 Met with K. Kleaka and K. Scroope, Impact Env. NYCDOS property on eastside of Gerard Avenue (DOS Manhattan West 9). See spill #s 9513870, 9910856. 11/23/04 Email from J. Kolleeny- City's consultant, LiRo, had been performing EFR on wells with free product for several years until last year when a multi-phase extraction system went on line. A MW along E 149th St has had product in it which LiRo identified as weathered #2FO. Although they have been willing to vac out this well, and the remedial system now has extraction wells near it, LiRo has argued that the product in the well was likely coming from off-site because they claimed there was no DOS tanks at that end of their site. However, the PBS list an old 2000gal heating oil tank and a new (4/03) tank at the site. Asked LiRo to locate these tanks. Will keep me updated. 4/13/05 Spoke to K. Kleaka, Impact Env. Will be proposing to shutdown system soon as recovery is decreasing. Still concerned about DOS site having impacts on property. Proposal will include confirmatory soil sampling. 5/6/05 1Q05- GW sample collected on 3/14/05 from MW-8 did not detect any VOCs. Samples from MW-1 and MW-5 detected concentrations of VOCs but not above GWQS. MW-12 was paved over. Several detected concentrations from MW-2,6,7,9,10 & 11 exceeded GWQS. These concentrations are within ROI of system. Told H. Benjamin that it was not necessary to reinstall MW-12. 5/23/05 Sent email to K. Kleaka, Impact Env. After reviewing the July 2004-Sept 2004 and Jan 2005-March 2005 quarterly reports for Manhattan West 9 (operated by NYCDOS at 125 East 149th St, Bronx), it is not clear that the contamination detected at MW-2 is due to impacts from the NYCDOS facility. Historical data for 99 E 149th St shows a significant spike of MTBE at MW-6(869.6ppm) and at MW-2(191.2ppm). The historical data for the NYCDOS facility, dating back to 2000(with some data gaps), does not indicate that the facility is acting as a

MOBIL (Continued) **S104278682**

source of off-site contamination. The only MTBE detection in the NYCDOS wells was in the NW corner of the property(170ppb in 1/00). NYSDOS has been operating a MPE system since 11/12/03. 11/8/05 3Q05 report - Total of 537.84lbs of hydrocarbons removed. Approx 9lbs recovered in last 22 day period. Groundwater concentrations highest in MW-2 at 1420ppb total BTEX and 1500ppb MTBE. MW-6 at 100ppb BTEX and 53ppb MTBE. MW-7 at 10ppb BTEX and 56ppb MTBE. 1/11/06 Met with K. Kleaka and H. Benjamin, Impact. To submit 4Q05 report. Redeveloped sparge points to try and increase efficiency of system which continues to operate. 2/17/06 4Q05 report submitted. SVE continues to operate. Lab analysis from 11/28/05 did not detect VOCs in MW-8. Wells MW-5 and MW-11 had concentrations which did not exceed GWQS. Samples from MW-1,2,6,9,and 10 did exceed GWQS. 3/30/06 1Q06 report submitted. BTEX from ND(MW-1,5,6,8,9,11) to 970ppb(MW-2). MTBE from ND(MW-5,6,8) to 980ppb(MW-2). SVE continues to operate. Total estimated hydrocarbons recovered is 538lbs. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 11/27/06 Reviewed 2nd and 3rd Qtr 2006 Monitoring Reports. Groundwater contamination persists in the area of monitoring well MW-2 (~4000ppb). H. Benjamin of Impact Env. proposed performing a pulse test on the system to see if rebound will occur since the system appears to have reached asymptotic conditions. I sent an email to Mr. Benjamin requesting a map showing the radius of influence for each air sparge and SVE point and that GW contamination at MW-2 must be addressed. I also asked if there was soil contamination at the site. If so, has the SVE system effectively treated it? Must prove by confirmatory soil sampling. Email is in the file. - JAM 02/13/07 Reviewed a letter submitted by Impact Env. and dated January 17, 2007. The letter proposes: 1. All monitoring wells will be redeveloped utilizing a surge block and vacuum truck. 2. Monthly Enhanced Fluid Recovery (EFR) events will be performed on MW-2 to reduce the contaminant concentrations in the surrounding area. Said events will be performed utilizing a 2X4 inch diameter K-Packer on a 2-inch diameter drop pipe to maximize liquid and vapor capture. 3. Groundwater sampling will continue on a quarterly schedule. 4. SVE & Sparge operations will continue with the existing system. I sent an email approving these proposals. Groundwater sampling data and recommendations will be submitted in the next quarterly report. A hard copy of the email will be in the file. - JAM 3/29/07 Reviewed 4th Qtr 2006 Monitoring Report submitted by Impact Env. and dated March 6, 2007. All wells were sampled on November 29, 2006. Results were non-detect for total VOCs except for MW-2, which shows persistent levels of VOCs (2,675ppb Total VOCs). The SVE/AS system continues to operate at the site. According to the report, monthly EFR events on MW-2 should have begun in February 2007 and results will be included in the next Monitoring Report. - JAM 6/21/07 Reviewed 1st Qtr 2007 Monitoring Report submitted by Impact Env and dated May 30, 2007. On February 28, 2007, all wells were redeveloped and EFR events commenced on MW-2 All wells were then sampled on March 1, 2007. Wells MW-1, MW-6, and MW-9 showed non-detect results for total VOCs. Wells MW-5, MW-7, MW-8, MW-10 and MW-11 had slight exceedences for Napthalene (ranging from 68ppb to 100ppb). MW-2 showed a decrease of total VOCs from last monitoring round to 1,936ppb. The SVE/AS system continues to operate. - JAM 12/04/07 Reviewed 2nd Qtr 2007 Monitoring Report submitted by Impact Env and dated Sept 18, 2007. All wells were sampled on June 14, 2007 and monthly EFR events continue on MW-2. Wells MW-1, MW-2, MW-9, MW-10 and MW-11 showed exceedences for total VOCs. Wells MW-5, MW-6

MOBIL (Continued) **S104278682**

were not sampled because they were dry. MW-2 still has the highest level of VOCs, however, it showed a decrease from the last monitoring round to 857ppb from 1,936ppb. The SVE/AS system continues to operate. - JAM Reviewed 3rd Qtr 2007 Monitoring Report submitted by Impact Env and dated Oct 30, 2007. All wells were sampled on Sept 6, 2007 and monthly EFR events continue on MW-2. Results from wells MW-1, MW-2, MW-5, MW-6, MW-7, MW-8 and MW-9 showed non-detect levels for total VOCs. Wells MW-10, MW-11 showed minor exceedences for MTBE (44ppb and 50ppb respectively). Based on the latest result, monthly EFR events appear to have effectively reduced contaminants in MW-2. The SVE/AS system continues to operate. - JAM 4/14/08 Received a call from Hal Benjamin about the Exposure Assessment submitted in March 2008 by Impact Env. They are requesting spill closure and I will get back to him after I review the report. - JAM 5/1/08 Reviewed Exposure Assessment Report. Based on the Exposure Assessment, Impact Env. concludes that the source of contamination has been effectively mitigated and small levels of residual groundwater contamination pose no threat to human health. Impact requests spill closure. I requested a summary of historic soil data associated with this spill. -JAM 6/11/08 Spoke to Hal Benjamin, Impact. An on-site well provides the operating car wash with water. I requested that this well be sampled and results reported in a letter. Spill closure will be reevaluated when results are available. - JAM 8/8/08 Reviewed letter from Spartan dated July 16, 2008. The on-site well that services the carwash was sampled and all analytes were found non-detect. I called Hal and asked the depth at which the car wash well pulls water from and if there are any sampling requirements for that well. He will get back to me. - JAM 11/13/08 Since the on-site car wash supply well did not detect and VOCs and only minor levels of MTBE were detected in two on-site wells, this site poses no threat to human health or the environment. This spill case was closed and an NFA letter was issued to: Henry Alpert Cross Deegan Realty, Corp. 3333 New Hyde Park Rd, Suite 201 New Hyde Park, NY 11042 NFA letter uploaded to eDocs. - JAM

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM. SOIL G/W. 12/10/03 Reassigned from Sigona to Foley. 1/28/04 Spoke to Brian Melancon of GSC (845-561-9890), Mobil's consultant. Mobil wants to close out spills. They divested property in March 1990 but have been active in remediating their spill. Cross Deegan Realty only plans on addressing their spill #9909670 (by restoring to pre-spill conditions). I requested that GSC send in a formal closure request with data justifying closure of Mobil spills. 3/1/04 GSC submitted closure request report. 7/94-10/00 ExxonMobil operated an SVE/AS system removing approx 8861 lbs of VOCs. Four air sparge/vapor extraction wells and one air sparge well were installed. In October 2000, the system was shut down due to asymptotic recovery rates. DEC was notified of system deactivation in March 2001 Handex Site Status Report. Spill #9708729 was issued to the site on 10/25/97 in response to dumping of oil into sewer system. Spill #9909670 was issued to the site on 11/9/99 for petrotite failure on 4000gal gas UST. 4/6/04 NFA letter to be hand delivered at Albany meeting 4/7. Reviewed GSC's closure request report(3/1/04). Concentrations were decreasing to ND prior to Spartan's tank test failure. See Spartan files (spill #9909670)

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY LiRo installed and is currently operating a multi-phase extraction system to address soil and groundwater contamination and recover free product. Product in some wells may be from off-site source (?), there's a nearby

MOBIL (Continued) **S104278682**

gas station and it's possible that some product in wells at the gas station may be coming from Manhattan 9. See Kerry Foley for details. Kolleeny approved boring locations for LiRo's semi-annual soil monitoring on October 26, 2004. This site transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK 4/20/2005 AZ reviewed a Monitoring Report for the remedial system dated January 28, 2005. The site was formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance monitoring data. The report states that based on the site monitoring data, the MPE system is effectively treating contamination. Induced vacuum measurements from monitoring wells MW-3, MW-4 and MW-14 were observed to be below desirable levels. Vacuum should be increased in these wells. LiRo has proposed to shut down extraction wells EW-1, EW-3 and EW-5 since analytical data indicate that no apparent VOC contamination persists in that portion of the site. The Department concured with this proposal.AZ 6-7-2005 AZ reviewed a Monitoring Report received on May 3, 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo proposed to shut down extraction wells EW-1 through EW-6, EW-13 and EW-14, since soil and groundwater data indicate that no apparent VOC contamination persists away from the Gerard Avenue sidewalk portion of the site. The Department concured with shutting down EW-1, EW-2, EW-3, and EW-13. The other extraction wells should continue to operate to address the remaining soil and groundwater contamination. However, the induced vacuum measurements from monitoring wells along Gerard Avenue were observed to be below desirable levels. The vacuum in nearby extraction wells should be increased to improve the induced vacuum in these monitoring wells. AZ 8-22-2005 Reviewed a Monitoring Report dated July 29, 2005. The report presented remedial system performance and groundwater monitoring data. In the report LiRo proposed to modify the current groundwater sampling schedule. Also, LiRo recommended completing proposed soil borings LBR-9 and LBR-10 with shallow screens to allow them to serve as pressure monitoring points in order to better evaluate system performance. The Department concured with these proposals.AZ 1-3-2006 Reviewed a Monitoring Report dated November 30, 2005. The report presents remedial system performance and groundwater monitoring data. The report states that elevated VOC concentrations persist in the area of PM-1. Naphthalene was also observed to exceed NYSDEC guidance value at PM-1. Results of recent groundwater sampling indicate that MW-10 continue to

MOBIL (Continued) **S104278682**

exceed 100 ppb total VOCs.
In the report LiRo proposes to shut down several extraction wells. The Department concurred with
shutting down wells EW-4, EW-6 and EW-14. The remainder of extraction wells should continue to
operate to address the remaining soil and groundwater contamination. AZ 4-10-2006 Reviewed a
Monitoring Report dated February 27, 2006. LiRo recommended continued operation of extraction wells
EW-8,9 and 10 to continue rmediation of the soil contamination recently observed at LBR-9/PM-1. AZ
7/5/2006 Reviewed a Monitoring Report for the remedial system dated April 21, 2006. The site was
formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance
monitoring data. Groundwater samples were collected from monitoring wells MW-2, MW-6 and MW-10 on
March 1, 2006. TVOCs in MW-6 is 139 ppb which is the highest number observed in this well. The
numbers are on the clear upward trend in this well. MW-10 - TVOCs - 91 ppb, MW- 2 - TVOCs - 91 ppb
- upward trend. AZ 11-20-2006 Reviewed a Monitoring Report for the remedial system dated August 9,
2006. URS proposed to advance a confirmation soil boring SB-5 near MW-04, LBR-02 and PM-01. I
called J. Staten (URS)and concurred with this proposal. E-mail with the approval for the soil
sampling plan was sent to Jane Staten (URS). AZ 12-18-2006 Reviewed a Monitoring Report for the
remedial system dated August 10, 2006. MPE is operated at the site. The vacuum measurements ranged
from 0 (MW-07) to 3.1 The closest extraction well to MW-07 has been shut off. Total VOCs and
naphthalene ranged from 1 ppb to 56 ppb in MW-02. Low volumes of gw were extracted and treated
during this monitoring period. URS has instructed Franklin to adjust the drop tubes in an effort to
extract more groundwater. AZ 1-9-2007 Reviewed a Monitoring Report July through October 2006 for
the remedial system dated November 14, 2006. MPE is operated at the site. Flowmeter broke at the
end of September. It was not fixed; therefore, the total amount of gallons treated is unknown.
Vacuum readings in MW-14 is 0 on 3 occasions. GW results - 65 ppb of total VOC in MW-02. AZ
1/23/2007 At the meeting with DDC/URS on January 10, 2007, the site was discussed. The firm, ATC
Associates, will be taking over operation of Manhattan West 9. DEC requested that URS will analyze
and improve performance of MW-14. AZ 7-6-2007 Reviewed a Monitoring Report for the remedial system
for the period of November 2006 through January 2007 and dated February 15, 2007. MPE is operated
at the site. The MPE flowmeter continues to malfunction and requires replacement, but ATC will
replace the flowmeter at this time. According to the report, only monitring well MW-02 is

MOBIL (Continued) **S104278682**

exhibiting contaminant concentrations above DEC GW Quality Criteria. The minor exceedances in MW-02 are too low for remedial treatment. On December 2006 URS advanced two soil borings. The analytical results showed VOC exceedances of TAGM #4046 in each soil sample. Total VOCs ranged from 403,400 to 446,260 ppb. Based on the latest sampling resultsURS will operate MPE system using only extraction well EW-09. Also, drop tubes will be raised to 5' above GWT to focus on vadose zone contamination. If MPE modifications are not effective, URS will excavate any remaining vadose zone soil contamination. AZ 11/30/2007 I have reviewed System Performance Monitoring Report for the period April through August 2007. An e-mail was sent to DDC/URS/V. Brevdo: ...URS will sample all monitoring wells during the next quarterly groundwater event. Also, URS will advance a soil boring near the location of boring SB-05. URS requested NYSDEC permission to shut down the MPE system while samples are collected. This recommendation is rejected. Neither soil sampling results of the previous sampling round nor a figure with estimated extent of soil contamination were included in the report. Soil sampling data should be included in proposals for future borings and/or proposals for the system shutdown. Soil sampling performed in December 2006 showed total VOC contamination in a range of 400, 000 ppb. These high levels of soil contamination justify continuing operation of the MPE system. AZ 6-5-2008 An e-mail sent to Jane Staten: I have reviewed the System Performance Monitoring Report and Confirmation Soil Sampling results for the above site. I have a few questions/comments: 1. It seems that the contaminated interval is soil is between 5' and 7' in the area of MW-04. However, you proposing excavation to the depth of five feet. I suggest performing the excavation to the depth of seven feet underground structures and utilities allowing. Also, the area near soil borings B-3.5, LBR-4 and well MW-10 is not covered by your excavation plan. What are your suggestions for this area? Could you submit to DEC soil plume map so we can decide on the extent of the excavation or other soil remediation strategy? AZ 7-18-2008 An e-mail was sento to URS: DEC concurs to the removal of the MPE system under the condition that the remaining contaminated soil be removed via excavation and end-point samples will be taken to confirm complete removal of the contamination. Also, a soil plume map showing historical contaminant concentrations throughout the site should be included in the post excavation remedial report. AZ 9-12-2008 I contacted Jane Staten. She advised me that URS is preparing documentation for soil excavation. They received DEC approval for excavation. AZ 1-5-2009 Reviewed a

MOBIL (Continued) **S104278682**

Monitoring Report through the 3rd Quarter 2008 and dated October 2, 2008. MPE system was operating since April 2004. Currently MPE system is being removed. On July 28 and 29, 2008, URS sampled groundwater monitoring wells. Total VOCs concentrations ranged from non detect to 80 ppb. DEC approved hot spot excavation on September 12, 2008. According to the report, URS is currently preparing the bid documents for the excavation work. Due to the low contaminant concentrations in groundwater, DEC suggests decreasing frequency of groundwater sampling from quarterly to semi-annual. An e-mail was sent to DDC/URS/V.Brevdo. AZ 3-3-2009 An e-mail was sent to J. Staten (URS): It seems that monitoring well MW-16 should be decommissioned. If the floor of the garage is covered in oily sludge then a new spill should be called in by the City or URS. Hot spot excavation should be performed as planned. Full round of groundwater sampling should be performed before petitioning for the spill closure. A temporary well (groundwater sampling point) might be installed at the location of MW-16 (which exhibited 83 ppb of the total VOC). AZ 4-23-2009 An e-mail was sent to J. Staten (URS): I have reviewed a Monitoring Report for this site for the 4th Quarter of 2008. The report stated that monitoring well MW-10 will be removed from the monitoring list because no components exceeded the quality criteria. However, downgradient wells should be monitored regardless of the contaminants presence. Since this site has groundwater flowing in northern and western directions, at least one downgradient well should be monitored in each direction. MW-10 should be monitored. Also, one downgradient well should be monitored at the western edge of the plume. AZ 9-10-2009 An e-mail was sent to J. Staten (URS): I have reviewed report for the above site. The report stated that well MW-16 was decommissioned because URS observed that it was filled to the top of the riser with dirt and water. This well consistently showed elevated reading for VOCs. This well should be re-installed. Also, a well downgradient from the contaminated wells should monitored. URS should add a downgradient well to their monitoring schedule. AZ 9-14-09 Based on the latest URS's submissions (report for the 2nd quarter 2009 dated June 10-2009) and on a correspondence from J. Staten, downgradient wells were sampled. MW-16 was sampled over 8-year period. Over this time, well MW-16 did not exhibit compounds above Groundwater Quality Criteria until a minor exceedance occurred in December 2007. Subsequent samples collected in 2008 also showed a couple of compounds above Groundwater Quality Criteria, but the concentrations were not significant (total VOC concentration under 100 ppb). AZ 12-1-09 An

MOBIL (Continued) **S104278682**

e-mail was sent to Jane Staten/Afsar Samani/Marcy Abzagh/Vadim Brevdo: Dear Jane, I have reviewed Summary of the Excavation Activities and Request for Spill Closure for the above site dated August 19, 2009. Also, I'm in receipt of your e-mail dated Nov. 20, 2009. The e-mail stated that the City, through DCAS, is involved with the owner of the Manhattan West 9 Garage (a private party) in an extensive renovation of that building. DDC stated that the planned renovation work is imminent and includes partial replacement of the Garage floor slab which will destroy the monitoring wells inside the garage. The hot spot excavation found that no VOCs or SVOCs were detected in any soil samples. The results of the excavation are approved. Please make sure that grab samples are taken when performing any soil sampling. Composite samples could be taken only in addition to grab samples. Groundwater samples were collected from 19 wells. No groundwater samples were taken from wells MW-15 and MW-16 because they were destroyed. The latest site-wide groundwater sampling results showed that MW-06 had exceedances of VOCs. Also, the latest available results from MW-16, which is destroyed, showed that it had VOCs exceedances. Groundwater natural attenuation is being used at this site as a remedial strategy for groundwater. Since the groundwater wells will be destroyed at this facility during floor slab replacement and the City would like to close this spill, I request that soil sampling should be performed while doing garage floor replacement. Special attention should be given to the area where MW- 06 and MW-16 are located. These activities should be coordinated between DCAS and NYCDDC. Environmental consultant should be present at the time of the excavation and perform soil sampling. If signs of contaminated soil/groundwater are observed during the excavation, A NEW SPILL SHOULD BE CALLED IN TO NYSDEC HOTLINE. If contaminated soil is discovered it should be removed to the extent possible, end point samples taken and activities immediately reported to NYSDEC. AZ 3-5-2010 Discussed with Jane Staten sampling plan for MW-9 site. She asked for directions for locations of soil sampling points. If utilities, underground structures and the scope of future work allow, samples should be taken in the area of MW-06, MW-16, diesel dispenser, 550 gal gasoline UST (removed), 4,000 gal diesel UST (removed), 4,000 gal diesel UST, 550 hoist oil, 550 kerosene, 550 motor oil and 550 gasoline USTs (abandoned in place). About 23 samples will be taken. AZ 8-3-2010 An e-mail was sent to H. Roberts: Harvey,Request regarding closure of spill 9513870 was denied as per my letter dated 12/01/2009. Soil sampling should be performed at the site as per my letter. If you

MOBIL (Continued) **S104278682**

have any questions regarding
this matter please contact me at 718-482-6387. Thank you, AZ 8-3-2010
An e-mail from H. Roberts:
Alex, We've been in touch with DOS regarding the renovation work at
the Manhattan West 9 Garage.
There is no schedule yet for floor slab replacement (see emails
below). We'll let you know when the
floor replacement gets scheduled. AZ 10-11-2011 I was contacted by K.
Shenahan. The current site
owner is postponing work on breaking the existing floor and sampling
the soil due to the lack of
funds. 10/13/2011 an e-mail was received from K. Shenahan: Alex,
NYCDDC s environmental consultants
have been successfully implementing site remediation at this site
since 2004. Remediation
technologies included a multi-phase extraction system, natural
attenuation and excavation.
Recently, the owner of the property informed NYCDDC that the financing
of a proposed facility
rehabilitation project would not be approved until the spill number
was closed. Therefore, URS has
prepared this e-mail to summarize the current situation at this site
and formally request closure
of spill #9513870. Background There has been no activity on this site
since late 2009. The MPE
system began operating in April 2004 and consisted of a network of 14
extraction wells. By February
2005, site monitoring data showed that free product was no longer
present at the site and
groundwater contaminant levels were significantly reduced. In
addition, soil borings showed
significant decreases in soil contamination. Based on these results,
three of the extraction wells
were shut off. In October and November 2005, LiRo advanced an
additional five soil borings to
evaluate system performance. Two of the five borings showed the
presence of minor residual
contamination. In December 2006, URS completed another round of
confirmation soil sampling and the
data was clean except for one boring near well EW-09. As a result,
operation of the MPE system was
focused on the area around EW-09. In October 2007, URS advanced
another confirmation soil boring
and collected two soil samples from the area that was previously found
to be contaminated. This
data also indicated the presence of residual soil contamination. On
January 24, 2008, URS issued an
investigation summary report with recommendations for a hot spot
excavation for soil and natural
attenuation for groundwater. In an e-mail dated June 5, 2008, the
NYSDEC responded to the report
with several comments to which URS responded in a letter dated June
12, 2008. In an e-mail dated
July 18, 2008, the NYSDEC approved removal of the MPE system, hot spot
excavation, and natural
attenuation for groundwater. In addition, the NYSDEC approved closure
of spill #9910856 in an

MOBIL (Continued) **S104278682**

e-mail dated September 12, 2008. The hot spot excavation work was performed by Franklin on June 23,
2009. On August 19, 2009, URS issued a report to the NYSDEC documenting the results of soil
excavation work conducted to remediate petroleum contaminated soil (soil confirmation sampling
results are attached). The As-Built drawing illustrated the limits of soil excavation. The report
also included a formal request to close spill #9513870 assigned to the site. The request to close
the spill number was based on the fact that the remedial excavation was successful and there was
only trace concentrations of volatile organic compounds (VOCs) detected in groundwater samples
collected from the site (groundwater data for the past 5 years is attached). On November 20, 2009,
URS also sent the NYSDEC an e-mail notifying them that owner of the facility was planning an
extensive renovation of the site including replacement of the concrete floor slab which would
destroy the monitoring wells located inside the garage. On December 1, 2009, the NYSDEC sent an
e-mail to URS indicating the favorable results of soil excavation were acceptable. In addition, the
NYSDEC deferred approving the request for spill number closure until after floor slab replacement
project. The NYSDEC requested that field screening and soil sampling be conducted during the
concrete floor slab replacement project especially in the area of monitoring wells MW-06 and MW-16.
The most recent groundwater data collected at the site indicates very low concentrations of VOC in
the following wells: MW-02 (14 ppb, no exceedances) MW-06 (42 ppb, 4 exceedances) MW-14 (2 ppb, no
exceedances) MW-15 (4 ppb, no exceedances) MW-16 (65 ppb, 2 exceedances) MW-20 (13 ppb, no
exceedances) MW-21 (9 ppb, no exceedances) Summary URS is formally requesting spill #9513870 be
closed since it appears that the groundwater and soil have been remediated to the limits of the
effectiveness of the approved remedial technologies. We hope this summary and attached data
provides you with sufficient information to evaluate this request. URS will reiterate to the
property owner that if and when he performs the facility rehabilitation project, he is required by
law to notify the NYSDEC if petroleum contaminated soils are encountered. AZ The following e-mail
was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin, I have reviewed the Technical Memo dated
October 12, 2011. The Memo stated that NYCDDC's Environmental Consultants have been successfully
implementing site remediation since 2004. Remediation technologies included a multi-phase
extraction (MPE) system and excavation. MPE system was operating at the site in 2004-2008. As a
result, free phase product was no longer present at the site and

MOBIL (Continued) **S104278682**

groundwater contaminant levels
were significantly reduced. The hot spot excavation work was performed in 2009. Post excavation end
point sampling detected that no VOCs or SVOCs were detected in any soil samples. The remedial
excavation was successful and there was only trace concentrations of volatile organic compounds
(VOC) detected in groundwater. Based on the most recent groundwater sampling results, only six
minor exceedances of groundwater standards were detected. A current owner of the facility is
planning an extensive renovation of the site including replacement of the concrete floor slab which
would destroy the monitoring wells located inside the garage. If contamination is encountered
during the slab replacement, a spill should be called in. Based on the documentation provided to
date, spill case 9513870 has been closed. All monitoring wells associated with this project should
be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures .
The Department hereby reserves all of its rights concerning, and such forbearance shall not extend
to, any further investigation or remedial action the Department deems necessary due to: I. The
off-site migration of petroleum contaminants that was not addressed by this evaluation. II.
Environmental conditions related to the Site which were unknown to the Department at the time of
this approval. III. Information received, in whole or in part, after the Department's spill case
closure, which indicates that the corrective action was not sufficiently protective of human health
for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for
inactivation. Please be advised that you should maintain a permanent file of all documentation and
correspondence regarding this case for future use. The Department's files regarding this release
may not be maintained indefinitely. Sincerely, Alex Zhitomirsky

Remarks: under ground tanks with unk petroleum or waste oil have caused soil to be contaminated-still under investigation

Town:	New York City
Record Added Date:	05/31/2022
Record Updated Date:	02/06/2024
Update By:	SMQUANDT
Site Description:	"Location: The site is located at 188 East 135th Street in the Mott Haven neighborhood of the Bronx and is identified as Block 2323, Lot 13 on the New York City Tax Map. The site is bounded to the north by a lot owned and operated by Metro North Railroad, to the east by East 135th Street followed by Major Deegan Expressway (I-87), to the west by a lot owned by the Department of Citywide Administration Services (DCAS) including a railroad right-of-way that runs north to south, and to the south by a NYC-owned vacant lot and Park Avenue. Site Features: The 0.580-acre site is currently developed with a vacant, 6,500 square foot single-story building located on the east-central portion of the parcel. The remainder of the site consists of asphalt-paved parking lot and a small unpaved yard area. The site is partially overgrown with tall weeds, small trees, and shrubbery along the perimeter of the site and through cracks in the asphalt. A sewer line traverses the site from northeast to southwest through the property, and a subway tunnel is located underneath Park Avenue and a portion of the southern section of the site. Current Zoning and Land Use: The site is currently inactive and has a zoning designation of residential (R7-2) with a commercial (C2-4) overlay. The surrounding properties are generally industrial and commercial usage or are vacant land. Past Use of the Site: Historic uses of the property include a railroad yard, a coal yard, a contractor's storage/supply yard, potential dry cleaner, an auto wrecker, and an iron and steel company. The site was developed with a rail spur associated the adjacent elevated railroad tracks by at least 1891. The rail spur was removed by 1908 and the site remained undeveloped until 1923, when it was developed with the existing one-story commercial building, occupied by a pipe cutter. By the mid-1930s, northern and western portions were developed with several small one-story structures identified as a coal yard. By 1944, a truck scale was installed adjacent to the pipe cutting building. The coal company buildings were demolished between 1951 and 1968 and the pipe cutters building occupied by an auto wrecker. The site was occupied by an iron and steel company in the early 1960s and by the late-1970s it was occupied by a moving and storage company until at least 2010. The city directory listed the site as being occupied by a dry cleaner in 2000. Site Geology and Hydrogeology: The ground level elevation at the site is approximately 8 to 10 feet above mean sea level. The site is underlain by a layer of fill material consisting primarily of brown, dark brown and gray/brown silt-sand mixtures with brick,

188 EAST 135TH STREET REDEVELOPMENT SITE (Continued) **S128906260**

gravel, wood, glass fragments and pockets of crushed rock to variable depths between six and eleven feet below grade. Deeper native soils consist of primarily of brown and dark brown fine to medium sand and lean clay with varying amounts of silt, gravel, and brick to the boring terminus depth of 20 feet. Bedrock was not encountered. Groundwater was encountered at depths ranging from approximately 6.8 to 9.2 feet below ground surface and flow beneath the site is generally from the northeast to the southwest towards the Harlem River, which is located approximately 25 feet from the site."

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. The primary contaminants of concern include SVOCs, PCBs and metals in soil, and SVOCs in groundwater. Soil: Exceedances of the restricted residential use soil cleanup objectives (RRSCOs) and, for some contaminants, protection of groundwater soil cleanup objective (PGWSCOs), were identified sitewide at depths up to 10 ft bgs and in the northeastern portion of the site up to 14 ft bgs. Fill material varied in depth, with the majority of site-wide fill located in the upper 10 ft bgs. SVOCs detected at concentrations exceeding their respective RRSCOs and/or PGWSCOs include benzo(a)anthracene up to 8.9 parts per million (ppm) (RRSCO and PGWSCO of 1 ppm), benzo(a)pyrene up to 12 ppm (RRSCO of 1 ppm), benzo(b)fluoranthene up to 12 ppm (RRSCO of 1 ppm and PGWSCO of 1.7 ppm), benzo(k)fluoranthene up to 4.2 ppm (RRSCO of 3.9 ppm and PGWSCO of 1.7 ppm), chrysene up to 8.8 ppm (RRSCO of 3.9 ppm and PGWSCO of 1 ppm), dibenzo(a,h)anthracene up to 2 ppm (RRSCO of 0.33 ppm), and indeno-(1,2,3-c,d)pyrene up to 6.1 ppm (RRSCO of 0.5 ppm). Metals detected at concentrations exceeding RRSCOs include arsenic up to 112 ppm (RRSCO of 16 ppm), barium up to 509 ppm (RRSCO of 400 ppm) cadmium up to 9.55 ppm (RRSCO of 4.3 ppm), copper up to 2,530 ppm (RRSCO of 270 ppm), lead up to 6,380 ppm (RRSCO of 400 ppm), mercury up to 9.92 ppm (RRSCO of 0.81 ppm). PCBs were detected at concentrations up to 14.7 ppm, exceeding the RRSCO of 1 ppm. No VOCs, pesticides or PFAS were detected above their respective RRSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: SVOCs detected above the Class GA Ambient Water Quality Standard and Guidance Value (AWQSGV) include: benzo(a)anthracene up to 0.16 ppb, benzo(a)pyrene up to 0.19 ppb, benzo(b)fluoranthene up to 0.21 ppb, benzo(k)fluoranthene up to 0.08 ppb, chrysene up to 0.16 ppb, and indeno(1,2,3-cd)pyrene up to 0.12 ppb all with an AWQSGV of 0.002 ppb. The only dissolved metals detected at concentrations exceeding their respective AWQSGVs were naturally occurring minerals such as magnesium, manganese, and sodium and are not considered site related. PFAS detected at concentrations exceeding their respective AWQSGVs include PFOS at 61.3 parts per trillion (ppt) (AWQGV of 2.7 ppt) and PFOA up to 66.9 ppt (AWQSGV of 6.7 ppt). No VOCs, pesticides, or PCBs were detected above their respective AWQSGV. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Various chlorinated VOCs were detected in soil vapor including PCE up to 63.1 micrograms per cubic meter (?g/m) and vinyl chloride up to 8.28 ?g/m . Petroleum-related VOCs were also detected in soil vapor, most notably hexane up to 36,300 ?g/m and n-heptane up to 11,400 ?g/m both of which were detected near the northern site boundary and do not appear to be site related. Acetone was detected throughout the site, up to a maximum concentration of

188 EAST 135TH STREET REDEVELOPMENT SITE (Continued) **S128906260**

	2,490 ?g/m which is also not anticipated to be site related. Data does not indicate any off-site impacts in soil vapor related to this site."
Health Problem:	"People are not drinking contaminated groundwater because the area is served by a public water supply that obtains its water from a different source. Since contaminated groundwater is approximately six feet or greater below the ground surface, it is unlikely that people will come into contact with the groundwater unless they dig below this level. The site is completely fenced, which restricts public access. However, persons who enter the site may come into contact with contaminants found in surface soil by walking on the site, digging or otherwise disturbing the soil at the site. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Furthermore, environmental sampling indicates soil vapor intrusion from site contaminants is not a concern for off-site buildings. "

Cleanup of structures:	Not reported
IC in place date:	9/21/2016
Additional Cleanup/Treatment Tech Info:	Approximately 21,000 tons of nonhazardous petroleum-contaminated soil was removed from the Site. Soil was excavated to approximately 15 feet bgs across the majority of the Site. As part of the soil excavation excavation to 15 feet bgs, extensive dewatering was required. Even though this activity likely removed majority of the contaminated groundwater from the Site, ORC treatment was still applied to the bottom of the excavation to treat any residual soil and groundwater contamination left below 15 feet.

Control Type:	INST
Dt record added:	10/25/2013
Dt rec updated:	08/22/2023
Updated By:	WYZHENG
Site Code:	443691
Site Description:	"Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, a 12-story building with commercial space on the first floor, and a 8-story residential building. These buildings are home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project

BORINQUEN COURT (Continued) **S116041516**

confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Site Description: "Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, a 12-story building with commercial space on the first floor, and a 8-story residential building. These buildings are home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE

BORINQUEN COURT (Continued) **S116041516**

ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Site Features: The Site is currently occupied by a 7-story residential building, a 12-story building with commercial space on the first floor, and a 8-story residential building. These buildings are home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "
Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not

BORINQUEN COURT (Continued) **S116041516**

occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. A metal work shop was located on the southeast portion of the site from 1951 through 1978, and a mattress manufacturing factory was located on the northwest part of the site from 1944 through 1978. Geology and Hydrogeology: The 2011 remedial investigation (RI), revealed soils consisting mainly of clayey sands to silt mixtures in the 20-25 feet bg drilled borings. Refusal was encountered in one of the soil borings (SB-01) at 20 feet below ground surface (bgs). All other borings were completed to 25 feet bgs without encountering bedrock. On-Site groundwater levels measured over the course of the RI project confirm the depth to groundwater to be in the range of approximately 13 to 17 feet bgs with flow toward the southwest. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation - Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, pesticides and other volatile organic compounds (VOCs) were present in the subsurface. These contaminants are impacting soil, groundwater, and soil vapor. Previous investigations included a Phase I Environmental Site Assessment and a Remedial Investigation. Soil - The concentrations of metals (barium, copper, mercury, lead and zinc), 4,4 -DDT, toluene, ethylbenzene and PAHs exceeded the UUSCOs in the samples collected from 0 to 10 feet in four borings installed across the Site (SB-04, SB-08 and SB-09). The concentrations of 4,4 -DDE, 4,4 -DDT, lead and PAHs exceeded UUSCOs in the 10-20 foot interval in only three borings (SB-04, SB-06 and SB-10). Ethylbenzene ranged from 0 to 1.4 ppm (restricted residential SCO of 41 ppm, Groundwater Protection SCO of 1 ppm) and toluene ranged from 0 to 1.1 ppm (restricted residential SCO of 100 ppm). Groundwater - VOCs detected in groundwater samples collected were tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-DCE), ethylbenzene, meta- (m)/para- (p) xylene and isopropylbenzene. PCE ranged from 0 to 19 ppb, TCE ranged from 0 to 25 ppb, cis-1,2-DCE ranged from 22 to 43 ppb, m/p-xylenes ranged from 0 to 19 ppb, and propylbenzene ranged from 0 to 11 ppb. Soil Vapor - PCE was detected in three out of the four soil vapor samples and TCE was detected in only one sample at 2 ug/ m3. PCE ranged from 0 to 75 ug/ m3. Based on this data, soil vapor intrusion into on-site buildings is not occurring and no mitigation was necessary. Post-Remediation - Remediation at the site is complete. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. The Certificate of Completion was issued on December 19, 2013."

BORINQUEN COURT (Continued) **S116041516**

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Site Description: "Location: The site is approximate 1.8 acres, located at 285 East 138th Street in the Bronx. The Site is bordered on the west by the 3rd Avenues, to the north by East 139th St., to the east by residential buildings and the NYC Police Department 40th Precinct, and to the south by East 138th St. Properties surrounding the site are primarily residential, with some commercial and industrial uses. Site Features: The Site is currently occupied by a 7-story residential building, a 12-story building with commercial space on the first floor, and a 8-story residential building. These buildings are home for low-income senior citizens. Historical Uses: Former uses on the Site include a gasoline filling station with five 550-gallon underground storage tanks (USTs), which has operated on the southwest corner of the property for at least 40 years prior to 1968. A parking garage and auto repair facility with 2 USTs occupied the north-central part of the site from at least 1935 through 1978. Updated By:	STROBERT
Site Description:	"LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Section 9, Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: Prior to remediation, the site was vacant with remnants of paved areas remaining from a former gasoline station. Currently the site is a four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a hotel has been constructed. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the monitoring events [dissolved oxygen (DO), oxidation reduction potential (ORP), and pH] are indicative of sustained desorption and oxidation, suggesting that additional ISCO and/or EFR events would be effective in further reducing residual groundwater contaminant levels. Based on these conditions, ISCO and EFR treatments will be continued as necessary during post- remedial site management. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

SITE FEATURES: Prior to remediation, the

2477 THIRD AVENUE PROPERTY (Continued) **S109580082**

site was vacant with remnants of paved areas remaining from a former gasoline station. Currently the site is a four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a hotel has been constructed. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the monitoring events [dissolved oxygen (DO), oxidation reduction potential (ORP), and pH] are indicative of sustained desorption and oxidation, suggesting that additional ISCO and/or EFR events would be effective in further reducing residual groundwater contaminant levels. Based on these conditions, ISCO and EFR treatments will be continued as necessary during post- remedial site management. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Description: "LOCATION: The site is located in an urban industrialized section of the south Bronx at the intersection of 3rd Avenue and the Major

2477 THIRD AVENUE PROPERTY (Continued) **S109580082**

Deegan Expressway (I-87) between 135th Street and 136th Street. It is located approximately 1000 feet east of the Harlem River. The property consists of Section 9, Block 2320, Lot 11 of tax map 20902, and is 0.214 acres in size. SITE FEATURES: Prior to remediation, the site was vacant with remnants of paved areas remaining from a former gasoline station. Currently the site is a four-story hotel. CURRENT ZONING AND LAND USE(S): The site is zoned commercial. As noted above, a hotel has been constructed. PAST USE OF THE SITE: The site was a gasoline filling station from the 1950 s until approximately 1989. Releases of petroleum products to the environment resulted in the site contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 feet above mean sea level. The nearest surface water body is the Harlem River, approximately 1000 west of the site. Groundwater was encountered from 7 to 10 feet below ground surface and was found to flow in a south-southwesterly direction towards the Harlem River. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related compounds in site soils and groundwater. Remedial actions have successfully achieved the protection of groundwater soil cleanup objectives which are more than sufficient for the site s commercial use. Quarterly groundwater monitoring conducted thus far suggests that contaminated soil removal as well as groundwater treatment via in-situ chemical oxidation (ISCO) and enhanced fluid recovery (EFR) have had a positive effect towards achieving the groundwater remedial goals, and if continued, will be effective in achieving the remedial goals over time. Water quality parameters measured in the field during the monitoring events [dissolved oxygen (DO), oxidation reduction potential (ORP), and pH] are indicative of sustained desorption and oxidation, suggesting that additional ISCO and/or EFR events would be effective in further reducing residual groundwater contaminant levels. Based on these conditions, ISCO and EFR treatments will be continued as necessary during post- remedial site management. Residual contamination in the soil and groundwater is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	9/26/12 TJD File review. NYCDOS (Al Mignone) has provided required documentation in support of spill closure relating to reported tank test failure. System failed initial system test (Dry as a Bone)on 7/17/12 - reported as a dry leak. Tank alone was retested on 7/23/12 and passed. Failure determined to be associated with a failed vent pipe which was replaced 9/11/12 by Windmill Tank Service. Additionally threads on interstial space access bung on tank top were also determined to be contributing to an air leak and were repaired by maufacturer (Highland Tank) on 9/11/12. Following repairs entire tank system was retested by AARCO on 9/13/12 and passed. No further action is required. Spill closed.
Remarks:	TTF 0 spilled

DEC Memo:	DEMEO needs to send a TTF letter to Sanitation) 8/9/12-Vought-Notes above by DEC Sangesland. Vought primary off-hours responder. Vought noted PBS #2-455660 for site also listed as 125 East 149th Street. As primary off-hours responder, Vought called TJ O'Connor (Dry As A Bone Ph:516-678-5115) to see if failure was wet or dry leak and left message on voicemail to return call as soon as possible. Vought called Al Mignone (Ph:646-235-3183) for more information and left message to return call. Vought called PBS contact: NYC Dept. of Sanitation 125 Worth Street Room 823B New York, NY 10013 Attn: M. Bonacorsa Ph:(646)885-4874 Fax:(212)442-8624 or (212)442-8625 Bonacorsa retired from NYCDOS as per receptionist and letter should be sent to Mr. Chingas. Vought sent out TTF letter to above address and faxed letter as well. Vought sent out letter to NYCDOS Chingas and added copy to e-docs and left Demeo copy as well. 9/18/12 TJD File review. NYSDOS (Al Mignone) has provided copies of initial failing tank test report performed on 8/8/12 (Dry as a Bone) and a

NYCDOS TANK TEST FAILURE (Continued) **S112148870**

subsequent passing tank test report performed on 8/13/12 (AARCO). Initial failed test was reported as a dry leak. NYCDOS reports no repairs were made to system and was retested by another contractor and passed. Testing reports and e-mail correspondence have been uploaded to E-DOCS. No further action is required.

Site Description:	"Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn

2350 FIFTH AVENUE CORP (Continued) **1000108749**

fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying

2350 FIFTH AVENUE CORP (Continued) **1000108749**

buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light

2350 FIFTH AVENUE CORP (Continued) **1000108749**

manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by

2350 FIFTH AVENUE CORP (Continued) **1000108749**

the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in

2350 FIFTH AVENUE CORP (Continued) **1000108749**

December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Description: "Location: The site is located on the west side of Fifth Avenue

2350 FIFTH AVENUE CORP (Continued) **1000108749**

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation

2350 FIFTH AVENUE CORP (Continued) **1000108749**

machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Control Type: INST
Dt record added: 11/04/2014
Dt rec updated: 01/19/2024
Updated By: MCSALAZA
Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s

2350 FIFTH AVENUE CORP (Continued) **1000108749**

through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH’s air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Code: 520537
Site Description: "Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is occupied by a residential and commercial building. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: Two 25-story mixed residential and commercial use towers were constructed on the site. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. The site formerly consisted of Lot 60 and 160, but the lots were merged into one Lot, 160. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Code: 520537
Site Description: "Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is occupied by a residential and commercial building. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: Two 25-story mixed residential and commercial use towers were constructed on the site. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. The site formerly consisted of Lot 60 and 160, but the lots were merged into one Lot, 160. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Description:	"Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is occupied by a residential and commercial building. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: Two 25-story mixed residential and commercial use towers were constructed on the site. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. The site formerly consisted of Lot 60 and 160, but the lots were merged into one Lot, 160. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of

198 EAST 135TH STREET (Continued) **S127750713**

	gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Description:	"Site Location: The site is located at 580 Gerard Avenue, Bronx, New York 10451. The site is located in a mixed industrial, commercial and residential neighborhood. There are several BCP sites Gerard Avenue in close proximity to this Site. Site Features: The site is currently occupied by a vacant single-story approximately 31,000 sq. ft which served as a U.S. Postal Service vehicle maintenance garage building. The site is not located in a flood zone. The closest waterbody is the Harlem River, which is located about 0.21 miles away (about 1,120 feet). Current Zoning and Land Use: The site is currently located in an R7A District with a C2-4 Commercial Overlay District. The

US POSTAL SERVICE - VMF (Continued) **1000349040**

surrounding properties include, to the north, a single-story warehouse/garage building; to the west (across Gerard Avenue), a two-story mixed-use building used as a storage facility and its associated parking lot; to the south (across 150th Street), a single-story warehouse/garage building; and to the east, a small garage and residential buildings. Past Use of the Site: From 1908 until on or about 1950 the site was vacant until the current on-site building was constructed circa 1950 for use as a vehicle maintenance and storage facility for the U.S. Post Office. The Post Office was the tenant from 1950 until circa 2000. From circa 2001 through 2007, the building was utilized for automotive service, vehicle repair and parking. After 2007, the project site was occupied by a construction company for general office use and storage, but as of 2011, the building was vacant. The Site was listed in the New York State Department of Environmental Conservation Petroleum Bulk Storage (PBS) database under Facility Identification Numbers 2-333212 and 2-476021 and the Spills database under Spill Incident Numbers 9213223 and 9007668. In addition, the Post Office was a listed RCRA facility at this Site under RCRA Facility ID NY5180010451 large quantity generator. The Post Office, was listed as a small quantity generator under RCRA Facility ID NYD982727885 at this Site from 1992 until 2009, even though the Post Office vacated in about 2000-2001. Finally, a tenant named Autorama Enterprises of Bronx, using the 610 Gerard Avenue address, was listed as a RCRA Facility at the Site under ID NYR000100255. There following spill numbers are associated with this Site: Closed Spill Incident Number 9007668 This spill pertains to a tank test failure of a 3,000-gallon fuel oil tank that occurred on October 13, 1990. There is a note in the spill file that groundwater was impacted. See Exhibit M including spill file record. Closed Spill Incident Number 9213223 This spill incident is related to gasoline found during the excavation of gasoline tanks that occurred on February 27, 1993. This spill incident indicates that nine 550-gallon gasoline USTs were removed in 1993. Concurrently, 22 tons of contaminated soil had also been reportedly excavated and removed. Allegedly, the subsurface investigation showed no visual or olfactory evidence of contamination. Soil analysis showed non-detect for VOCs and PAH levels were consistent with obvious fill material. However, groundwater analysis showed non-detect/trace PAHs and VOCs. This spill incident was closed on May 11, 2001. Closed Spill Incident Number 1205845 This spill occurred when it was reported that approximately two gallons of heating oil residual/staining was noted next to the fill port area on the east side of the building. Site Geology and Hydrogeology: The general elevation for the area where the site is located is between approximately 20-30 feet above mean sea-level. The groundwater flow direction was presumed to be the southerly direction toward the Harlem River. The soil composition in the eight (8) subsurface soil borings was similar in nature, with predominantly fine to medium-grained sand and fill material along with some silt found to exist from the surface to terminus of the borings. Groundwater was encountered in two (2) borings at approximately 23 feet below land surface (bls). "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Remarks:	caller states that he was contacted by the homeowner regarding oil that had been dumped out of the temporary tank into a pit on the ground. They had initially indicated that it was inside the premises. When they had pumped out the tank on the 11th they had placed 20 gallons from the temporary tanks into the main tank. caller states that on July 9th abc tank had installed 2 new 275gallon tanks into the oil room and had done all new piping as well and they disonnected and drained oil from temp tank into a pit located at the base of the alley way drain

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/19/03 - ROSSAN, DDO - Called Mr. Kieth Bartley, who confirmed that contaminated soil letter should be sent to: ATT: Mr. Kieth Bartley c/o USA Tanks Plant Maintenance 206 Grandview Avenue Staten Island, NY 10303 5/22/03 TIPPLE UPDATING/ SITE VISIT ON THE 16TH REVEALED OIL FROM RUPTURED TANK ON TANK ROOM FLOOR, SEAPING THROUGH THE SUBSURFACE INTO THE BOILER ROOM, SUMP IN BOILER ROOM FLOOR, DRAIN IN WALKWAY OUTSIDE BASEMENT DOOR, BELOW VENT/FILL LINE SATURATING BRICK STEPS AND WALKWAY DOWN TO BASEMENT DOOR, AND HAD BEEN TRACKED THROUGHOUT THE AREA. A SUBSEQUENT VISIT 5/19 REVEALS THAT OIL WAS STILL DRAINING OUT OF THE SATURATED SOILS INTO THE BOILER ROOM, AND ONLY THE BEGINNINGS OF A SURFACE CLEANUP HAD OCCURED TO DATE. 7/16/2003Tipple updating// spills # 02-00169 and 03-03928 at this address closed and referred to this spill # contaminated soil letter sent to both property owner: Estate of Michael McSherry 3616 Route 94 Chester, NY 10918-1149 and Management Company Classic Realty- John Gubias 3600 Feildston Rd Bronx, NY 10463----718-601-5858 7/15 site visit revealed oil still seeping into sump and along the wall in the boiler room. The walkway sump with soil walls was full of fresh oil, stairs in the walkway and laid up stone foundation wall between the tank room and the walkway were still contaminated with a coating of oil. The new surface spill appeared to be impacting the walkway outside the basement door and the soil walled sump in the walkway. 5/5/04: Tipple sent a letter requesting cleanup details and documentation. certified mail # 7001 0360 0000 8150 4272 11/30/04: Sent letter requesting documentation of work 05/19/06: This spill is transferred from Mr.Koon to Q.Abidi. Called Keith Bartley at (917)669-1093. Left message to call me back. 06/23/06: Contacted to Kristen at (718)981-5710 she told temporary tank set

(Continued) **S105998994**

there. Mr.Keith Bartley didn't do
the complete job for this spill. She will find out the information
about the spill and she will
call me back. -QA 08/30/06: Called Keith Bartley and left message to
call me back. -QA 09/11/06:
Contacted Mr. Keith Bartley(917)669-1093 he said that he will send
closing confirmation letter very
soon. -QA 10/10/06: Mr. John Herbig (Intech Environmental)called me
and said he is going to take
soil samples from the basement after chemical analysis he will send me
the report for closing the
spill. -QA 10/19/06: Talked to John Herbig he said he has collected
soil samples from the basement
and sent to chemical lab for analysis as soon as he will get the
report he will send it to me. -QA
10/26/06: Contacted Mr. John Herbig he said that he received lab
results of soil samples he will
fax it to me. -QA 11/13/06: Mr. John Herbig (impact Environmental)
called me and said soil sample
report has come from the lab. He will mail me the report in a week.
-QA 11/16/06: Mr. John Herbig
called me and said that he has mailed me the soil sample report in
couple of days I will receive
that. The soil sample data which he faxed me is not readable. i am
waiting to receive his mail. -QA
11/27/06: Reviewed the Investigation Summary Report dated November 16,
2006 [in eDocs]. The report
presents soil sample results which indicate that a release of
petroleum has occurred and soil
contamination present at the site. The Department requires additional
investigation to determine if
there has been an impact to groundwater and to fully delineate soil
and groundwater contamination.
Sent a letter to Mr. Morris Arlos (owner) to prepare a Work Plan for
additional investigation and
submit it to Department within 30 days. -QA 12/14/06: Received letter
from Mr. Kevin Kleaka,
Project Manager (Impact Environmental) that additional investigation
activities are not possible in
the basement of the building due to limited place. He is going to
break the concrete of the
basement to excavate the contaminated soil. Additional soil samples
will be taken at the site after
excavation and removal of the contaminated soil to demonstrate the
effectiveness of the remedial
activities. -QA 12/20/06: Called Mr. Kevin Kleaka (Consultant and
Project Manager) at (631)269-8800
and said to make two temporary well at the side walk of 262 Alexander
Avenue to check the potential
impact of groundwater. Before that we will not review any remedial
plan. -QA 01/08/077: Received
phone call from John Herbig of Impact Envt'l, regarding DEC's request
for two groundwater samples
in sidewalk outside site building; he noted there is already a well in
sidewalk related to
investigations at 40th Police Precinct, across Alexander Ave. from
site. He asked if it would be

(Continued) **S105998994**

acceptable to just sample that well, rather than installing two new wells in sidewalk. After
reviewing location of existing well (MW-5 from 40th Precinct investigations) which is
west-northwest of ASTs in basement of site bldg, and location of soil sample with TAGM exceedance
for VOCs, SP-2, and considering that URS has established local groundwater flow direction at 40th
Pct. is to west-northwest, J. Kolleeny told Mr. Herbig that sampling of well MW-5 would be
acceptable to evaluate impacts to groundwater from this spill. After sampling well, Impact Envt'l
can prepare a remedial action plan. - J. Kolleeny 01/11/07: Talked to Mr. John Herbig at
(631)774-5597, received his fax regarding groundwater sample results. MTBE is high. [Only compound
greatly exceeding its GW std. was MTBE, suggesting main impact to GW is from 40th Police Precinct
across street to west.] Now Impact environmental can submit remedial action plan to DEC regarding
this spill. -QA 02/05/07: Called Mr. John Herbig (631)774-5597 and reminded him to send electronic
version single Pdf file for both the reports, Investigation Summary report and Corrected Action
Plan. After receiving that we will approve your plan. -QA 02/07/07: Reviewed the corrective Action
Plan dated January 29, 2007 for this site, submitted by impact environmental. The report proposes
excavation of an area of residual soil contamination beneath the basement floor at the site,
followed by collection of end-point soil samples. The corrective Action plan is approved. Letter
mailed out to responsible party. -QA 05/09/07: Called Mr. John Herbig (631)774-5597 and discussed
regarding spill. He said that at this site owner is waiting when all tenants will be relocated then
work will be started at this site. -QA 12/04/2007: This spill case was transferred to A. Doronova.
AD 12/06/2007: Called and spoke to Mr. John Herbig of Impact Env. regarding remedial action plan
implementation. He told me that First Alexander LLC was potential buyer and that this company is no
longer involved with this property, and due that RAP was not implemented at the site. Called to
Building Management (718) 601-5858 of this property. Spoke with a manager. He told that First
Alexander LLC is the current owner of this site. This company bought the property approximately one
year ago. Now this property under new contract for sale. Received a call from Mr. Morris Arlos -
the owner of First Alexander LLC. He confirmed that this property is now under contract. The
closing is scheduled on the beginning of January 2008. The new owner - Galaxy was informed about
the spill case and agreed to do site remediation, according to Mr.Morris Arlos. Contact person for
the Galaxy - Richard Sica, phone: (718) 601-7000. Will contact Galaxy

(Continued) **S105998994**

after January 10, 2008. AD
12/07/2007: Spoke to Mr. Sica. His company is aware of the spill and remedial action plan. He will
contact us after site purchase to discuss further actions. AD
02/14/2008: Spoke with Mr. Sica
regarding the site. He told me that the closing was moved on early March. AD 04/21/2008: Called and
left a message to Building Management. AD 08/07/2008: Called and left a message to R. Sica of
Gallaxy. AD 11/04/2008: Called and left a message to R. Sica. and to Building Management. AD
12/08/2008: Looked in the ACRIS database, the property now belongs to The Community Preservation
Corp. (CPC). Called and spoke with Kristy Seyfert of CPC, phone: 212-869-5300, fax: (212)659-0102.
She confirmed that CPC owns the property. She asked me to sent them an official letter and NYSDEC
Spill report. AD 12/18/2008: Sent a letter to CPC with a request to prepare and submit a RAP to DEC
till January 29, 2009. Faxed a copies of the letter and NYSDEC Spill report to Ms. Seyfert. DL PDF
copy to eDocs. AD 02/19/2009: Called and left a message to Ms. Seyfert of CPC regarding past due of
RAP submission. Later receved a phone call from K. Seyfert. She said that she did not received the
letters. Sent these letters again via fax and e-mail: From: Ainura Doronova

receive any response. AD 09/12/2011: Was forwarded an e-mail from Nick Recchia regarding
implementation of the 2007 RAP.: Dear Mr. Paul John. Our client is ready to implement the approved
corrective action plan which was approved in 2007 and is attached. The contractor will have the
area of excavation open for DEC inspection this Wed. 9/14/2011. We would like to move forward in
closing this spill case file upon your inspection and reviews ASAP. If you could have someone
available to inspect the excavation this Wednesday it would be appreciated I will be on site to
collect endpoint soil samples. If you can give me a specific time to meet and co-ordinate for the
inspection that would be great. My contact information is below. My cell phone # is 516-395-8763.
Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. 55
Hilton Avenue, Garden City, NY 11530 Phone: (516) 746-4400 Fax (516) 746-4432
nrecchia@eeaconsultants.com Called and spoke with Mr. Recchia of EEA. EEA will overlook the
remedial excavation in the basement of the building and will collect a post-excavation endpoint
soil samples. Discussed this site with J. Kolleeny of DEC. It was decided that EEA can proceed with
RAP implementation. Decision on a closure of the spill will be made based on the results of
end-point soil samples. AD 09/13/2011: Received an e-mail from Mr. Recchia saying: Ainura. The
client contact is Telly Zervoudis. Please advise us ASAP we would like to move forward with closing
out this spill. Thanks. Galaxy General Contracting 3152 Albany Cresent Bronx, NY 10463
Tzervoudis@galaxygc.com Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called
and left a message to Mr. Recchia of EEA. Later spoke with him regarding RAP implementation. He
said that removal of contaminated soil will start tomorrow, and he expects that collection of
endpoint samples will be in a few days. Requested him to notify DEC about date of sampling. AD
09/14/2011: Received an e-mail from Mr. Recchia saying: Ainura, EEA is performing the remedial
action to excavate and remove soils as per the approved RAP. We anticipate collecting endpoint soil
samples tomorrow. EEA will prepare a full report of remedial action activities, endpoint sample
data, site photos, etc. signed and sealed by our engineer. Sincerely

(Continued) **S105998994**

Yours, Nicholas J. Recchia,
C.P.G. Vice President, Senior Hydrogeologist Called and informed Mr. Recchia that I cannot visit
the site on Thursday, September 15, 2011, due to the previously scheduled meeting. Requested to
take a pictures of the excavation, document all activities and to take PID readings. AD 09/27/2011:
Received an e-mail from N. Recchia saying: Ainura, Hope all is well. I was hoping you could help us
out here by taking a quick look at the endpoint results from the excavation. Our client wants to
backfill ASAP because it is in the building and they had to shore up the walls. All endpoint
samples were collected from the sidewalls of the excavation. The bottom of the excavation was
bedrock at a depth of 2 to 2 feet below floor grade. I reviewed the results and it appears that all
samples are below the new CP-51 Soil Cleanup Policy which replaces TAGM. I included a photo of the
excavation. I apologize for not having a table or drawing ready for you at this time but we want to
backfill this ASAP. I will prepare a full report and send it to you next week. Thanks for your
help. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Looked at the submitted
data. No exeedances of VOCs or SVOCs levels were detected in all six endpoint soil samples. Asked
Mr. Recchia to submit a sketch of the excavation with locations of the soil samples. Later received
the requested sketch. Approved the backfill of the excavation. AD 10/17/2011: received an e-mail
from Mr. Recchia saying: Ainura, Attached please find our final remedial action report for this
property. Please review and let me know the spill status. Thanks you. Nicholas J. Recchia, C.P.G.
Vice President, Senior Hydrogeologist EEA Inc. DL the report to eDocs. Will review. AD 10/26/2011:
Reviewed the report. It states that EEA performed remedial excavation of contaminated soils in the
vicinity of the former AST s area. A total of 14.4 tons of contaminates soil was removed off-site.
Post-excavation end-point soil samples were collected on September 15, 2011 from 6 sidewalls
locations. No bottom soil samples were collected due to presence of a shallow bedrock, which was
found at a depth of 1.5’ to 2.8’ below the basement floor level. According to the analytical data,
no VOCs or SVOCs were detected above NYSDEC standards. Based on the result, EEA concludes that
contamination was removed and recommends spill case closure. The submitted site map is different
from site maps presented by previous consultant. To clarify this difference with Mr. Recchia. Will
discuss spill closure request with J. Kolleeny of DEC. AD 10/27/2011: Discussed the site with J.
Kolleeny. To ask MR. Recchia if there are any sumps in the basement to be checked for presence of

(Continued) **S105998994**

LNAPL or product sheen. AD 10/28/2011: Called and spoke with Mr. Recchia. Requested to clarify
excavation location on the site map, and info on sumps. Sent him an e-mail with an attached site
plan saying: Mr. Recchia: Could you please verify location of the excavation completed by EEA on
this site plan? Also, if there are any sumps in the basement they should be checked for presence of
LNAPL or product sheen. AD 01/03/2011: Received an e-mail from Mr. Recchia saying: Ainura, Sorry
for the confusion. Our drawing is somewhat misleading I can see your concern and confusion. I have
revised our drawing and it is in the area of the former AST's and SP-2 area. We didn't focus on the
whole basement location in our drawing only the former tank area and area around SP-2. Sorry for
the confusion. I have revised the drawing. I hope this helps. EEA did not observe any basement
sumps in the building. Sincerely, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist
Reviewed the submitted site map. Soil was excavated in the area of the former AST's and soil boring
SP-2 area. DL the revised site map to eDocs. Will issue a closure approval letter. AD 11/04/2011:
Sent a Spill Closure approval letter to Telly Zervoudis of Galaxy General Contracting Corp. at 3152
Albany Crescent, Bronx, NY 10463 via e-mail: Tzervoudis@galaxygc.com. DL pdf copy of the letter to
eDocs. Case closed. AD

Remarks: clean up is underway

DEC Memo:	12/4/14- Spoke to Ray Lara from PTC. He said they cleaned and emptied he tank. They tested the tank and failed. They are going to perform the isolation test. 2/20/15-Mark Salamack from PTC sent an email dated 2/9/15 with the following information. The one on Lenox Avenue and the one on 5th Avenue are both in the same complex called the Savoy...whose main address is 45 West 139th Street in Manhattan...these are both above ground tanks that were tested when they went from #6 oil to #2 oil...both had a problem with the way an electronic gauge was connected on top of each tank...there was no contamination or spilled oil in either case...they have both been retested and passed the tightness tests...as we have not been paid yet for the job we have not sent anything to you to get the spill #s closed. Based on the information that the gauge was repaired, there was no contamination or spill in this site and the tank system was retested and past the test this spill is closed
Remarks:	tank failure, unk pbs #

Record Updated Date:	01/03/2023
Update By:	AMSERVIS
Site Description:	"Location: The site is located within an urban area at 2455 and 2457 Third Avenue, Bronx, NY. The approximately 19,900 square-foot (0.45 acres) site is identified on the Bronx County Tax Map as Block 2319, Lots 38 and 39. The site is bounded by East 135th Street/the Major Deegan Expressway followed by a hotel to the northeast, Third Avenue/Third Avenue Bridge ramp followed by commercial buildings to the southeast, a mixed-use commercial/residential building to the southwest, and a parking lot and an active construction site to the

2455 THIRD AVENUE (Continued) **S125465258**

northwest. Site Features: The site is undergoing redevelopment. Current Zoning and Land Use: This site is currently vacant and is zoned M1-3/R8, which allows for light manufacturing and high density residential commercial district. The adjoining parcels and surrounding area are used for industrial/manufacturing, and commercial purposes. Past Use of the Site: Historical site use includes multiple two- and three-story residential and commercial buildings on the site (1891), a carpet storage facility on the southern part of the site (1908), and a rail yard (1935 - 1951). The site was an asphalt-paved lot in 1995. In 1998, a one-story building of unknown use was present on the southeastern part of the site, with parking located on the northeastern portion of the site. From 2006 to 2017, the site contained a building on the southwestern part of the site occupied by Bridge Building Supply. The site is currently vacant and is covered by the concrete slab of the recently demolished warehouse as well as a concrete-paved lot. Site Geology and Hydrogeology: The site is underlain by fill material predominantly consisting of brown, fine-grained sand with varying amounts of silt, gravel, tile, metal, concrete, brick, glass, wood, and slag. The fill was observed to depths varying between about 6 and 9.5 feet below ground surface (bgs). Historic fill is generally underlain by fine-grained sands with varying amounts of silt, clay, organic material, and gravel. In the western portion of the site, historic fill is underlain by a 1- to 5- foot thick clay/peat layer with organic material (between 8 and 16 feet bgs) followed by sand. Bedrock was not encountered during the previous site investigations. Groundwater is present at depths of approximately 8 feet below grade surface at the site. Groundwater flows to the west. "

Env Problem:	"Remediation at the site is completed. Prior to remediation, the primary contaminants of concern include SVOCs and metals in soil. Remaining contamination will be managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

101 EAST 150TH STREET (Continued) **S129283531**

Update By: AAOBLIGA
Site Description: "Site Location and Site Features: The current owner, 586 River Ave., LLC (the Requestor), proposes to redevelop the property located at 101 East 150th Street in the Borough of the Bronx (the Site) with a new building for a 2,400-student charter school. Alternate addresses for the Site include 586 River Avenue, 580 River Avenue and 595 Gerard Avenue. The Site has coordinates of Latitude - 40 49 15 , Longitude - 73 55 45 based on the World Geodetic System of 1984 (WGS84) standard. The Site is comprised of one New York City (NYC) tax lot (Bronx Block 2354, Lot 1) and is 99,109 square feet (approximately 2.27 acres) in area and is bound to the north by a NYC-owned surface parking lot (151 Street Lot South), to the east by Gerard Avenue, to the south by East 150th Street, and to the west by River Avenue. The Site is currently occupied by a 2-story warehouse with cellar that has a building footprint of 30,345-square feet on the southern portion of the property. The cellar and first floors are used as a self-storage facility, operated by Treasure Island Storage. The second floor is occupied by a school (the New York City Children s Center, also known as P.723XatBronx Children s School). The northern portion of the property is a parking lot for the building and parking area for buses and delivery trucks. The parking lot is approximately 68,628 square feet, 69% of the lot area. Current Zoning and Land Use: The Site is located in the Lower Concourse neighborhood of Bronx, New York in an area zoned for light manufacturing (M1-2) use and is comprised of a rectangular-shaped parcel identified as Block 2354, Lot 1 on the NYC Department of Finance (DOF) Tax Map. The Site is located in a mixed industrial, commercial, and residential neighborhood. The nearest residential properties are located approximately 50 feet to the south (across East 150th Street) and 150 feet to the east (along Walton Avenue). The boundaries of the Site correspond to the current tax map boundaries. The Site is currently being occupied by a commercial self-storage facility and a school as tenants of the former owner (580 Gerard LLC). The school is operating pursuant to a special permit issued by the BSA in 2004 (BSA Cal. No 05-04-BZ). The new use for the site, which will require the removal of the existing building and the construction of a new building, will be as a 2,400-student K-12 charter school, a use that would require a new special permit from the BSA. A school is a permitted use in the zoning district but requires the issuance of a special permit by the New York City Board of Standards and Appeals (BSA). Past Use of the Site: Records from 1891 through the early-1900s, show the Site as athletic fields. By the late-1900s, the Site was used as a lumber storage yard. By early 1930s until 1950, the Site was used as an athletic field / recreational facility with a club house. In 1952, the building occupying the southern portion of the Site was constructed. The rest of the property was used as athletic fields and then later converted into a parking area for the building. The 2-story building with a cellar first used by a shoe factory (National Shoes) as office and warehouse (from ca 1952 to 1981) and an electronic parts manufacturer (Welbilt Electronic Die Corp/Wedtech) (from ca 1984 to ca 1990s). By 2001, the property was foreclosed, and ownership was transferred to Marty and Dorothy Silverman Foundation, and eventually donated to the St. Luke s Roosevelt Hospital Center. The property was then sold to Gerard Avenue LLC, which began converting it to a self-storage facility (American Storage). In 2003, the NYC DOB granted a change of use of the building s cellar and ground floor from electronic part manufacturing to commercial

101 EAST 150TH STREET (Continued) **S129283531**

self-storage use; and the change of use of second floor of the property from office spaces to classrooms and instructional spaces. In 2019, the Site was sold to 580 Gerard LLC (Treasure Island Storage), which continued the self-storage and school operations at the property. The northern portion of the Site is used for parking. The Requestor purchased the Site from 580 Gerard LLC on December 29, 2021 (ACRIS document ID 2022011200728001). Neither the Requestor, nor Success Academy Charter Schools is owned by or in any way affiliated with any of the prior owners or operators of the Site. No previous remedial activities have been implemented at the Site. Site Geology and Hydrogeology: According to the 1992 USGS publication Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties (Baskerville 1992), Bronx County is underlain by high grade metamorphic bedrock consisting of a sequence of Cambrian and Ordovician gneiss, schistose-gneiss, and marble. The bedrock beneath the Site is expected to be the Inwood Marble, (white calcite-dolomite) interlayered with units of Walloomsac and Manhattan Schists. The Geotechnical Engineering Report by GZA, dated April 15, 2022 observed bedrock between 50 feet and almost 100 feet below ground surface with an average depth of approximately 70 feet. The eastern portion of the Site along the Gerard Avenue is at an elevation (EL) corresponding to EL +23 to EL +27 feet North American Vertical Datum of 1988 (NAVD88). The topography along River Avenue is lower and ranges between EL +15 and EL +21 feet. The Parking area is cut down from the adjacent street elevations and ranges between EL +8 and EL +12 feet. Regionally, the topography slopes westward down to approximately EL +8 feet. The nearest water body is the Harlem River located 750 feet west of the Site. The GZA Geotechnical Engineering Report identified fill material, consisting of fine to coarse sand containing up to 35 percent gravel, up to 35 percent silt or clayey silt, and varying amounts of brick, glass, or concrete fragments (Fill) was encountered below the surface cover at each boring across the entire Site. The bottom of the Fill layer ranged between EL +0.5 and EL +9 feet across the Site. During the geotechnical study, groundwater levels in an observation well were measured between 8.9 and 9.1 feet below the parking area grade, which corresponds to approximately EL +2.8 and EL +3.0 feet. The anticipated groundwater flow direction is west towards the Harlem River. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, poly-chlorinated biphenyls (PCBs), metals and per- and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. Soil Several VOCs were detected in soil 3-12 feet below grade surface (bgs) above the Protection of Groundwater soil cleanup objectives (PGSCO) and Residential SCO (RRSCO). 1,2,4-trimethylebenzene was detected at a maximum concentration of 150 parts per million, or ppm (PGSCO value of 3.6 ppm and RSCO value of 47 ppm), 1,3,5-trimethylebenzene was detected at a maximum concentration of 59 ppm (PGSCO value of 52 ppm and RSCO value of 47 ppm), trichloroethene (TCE) was detected at a maximum concentration of 150 ppm (PGSCO value of 0.47 ppm and RSCO value of 10 ppm), tetrachloroethene (PCE) was detected at a maximum concentration of 12 ppm (PGSCO value of 1.3 ppm and RSCO value of 5.5 ppm), and cis-1,2-dichloroethene was detected at a maximum concentration of 11 ppm (PGSCO value of 0.25 ppm and RSCO value of 29 ppm). Several SVOCs such as benzo(a)anthracene was detected at a maximum concentration of 17 ppm (PGSCO value of 1.7 ppm and RSCO value of 1 ppm),

101 EAST 150TH STREET (Continued) **S129283531**

benzo(a)pyrene maximum concentration of 17 ppm (RSCO value of 1 ppm and PGSCO value of 1.7 ppm), and benzo(b)fluoranthene maximum concentration of 14 ppm (RSCO value of 1 ppm and PGSCO value of 1.7 ppm). Metals such as lead was detected at a maximum concentration of 1,030 ppm (PGSCO value of 450 ppm and RSCO value of 400 ppm). No Polychlorinated biphenyls (PCBs) were detected at concentrations exceeding the RSCOs. No pesticides were detected at concentrations exceeding the RSCOs. Regarding PFAS, perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.00159 ppm exceeding the protection of groundwater value of 0.00037 ppm, but below the residential value of 0.0088 ppm. Groundwater - Several petroleum VOCs were detected in groundwater monitoring wells. 1,2,4-trimethylebenzene was detected at a maximum concentration of 1,900 parts per billion (ppb) exceeding Ambient Water Quality Standards (AWQS) of 5 ppb. 1,3,5-trimethylebenzene was detected at a maximum concentration of 820 ppb (AWQS of 5 ppb). Ethylbenzene was detected at a maximum concentration of 290 ppb (AWQS of 5 ppb). 1,1,1-Trichloroethane was detected at a maximum concentration of 10 ppb (AWQS of 5 ppb). Cis-1,2-Dichloroethene was detected at a maximum concentration of 9.4 ppb (AWQS of 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 31 ppb (AWQS of 5 ppb). Two SVOCs, benzo(a)anthracene was detected at a maximum concentration of 0.05 ppb (AWQS value of 0.002 ppb) and naphthalene was detected at a maximum concentration of 290 ppb (AWQS of 10 ppb). Dissolved metals are consistent with urban background concentrations. No Polychlorinated biphenyls (PCBs) were detected exceeding their respective AWQS. Regarding pesticides, dieldrin was detected at a maximum concentration of 0.008 ppb exceeding their respective AWQS of 0.004 ppb. Regarding PFAS, PFOS was detected at a maximum concentration of 30.9 parts per trillion (ppt) and perfluorooctanoic acid (PFOA) at a maximum concentration of 48.1 ppt, which exceed the NYSDOH maximum contaminant level (MCL), or drinking water standard of 10 ppt each. Soil Vapor - Several chlorinated VOCs were detected in soil vapor and indoor air samples. 1,1,1-Trichloroethane was detected in soil vapor samples at a maximum concentration of 52,200 micrograms per cubic meter (ug/m3). 1,1-Dichloroethane was detected in soil vapor samples at a maximum concentration of 68,400 ug/m3. Cis-1,2-dicholorethene was detected in soil vapor samples at a maximum concentration of 218,000 ug/m3. Trichloroethene (TCE) was detected in soil vapor samples at a maximum concentration of 59,700 ug/m3 and in indoor air samples at a maximum concentration of 0.81 ug/m3. Tetrachloroethene (PCE) was detected in soil vapor samples at a maximum concentration of 23,300 ug/m3 and in indoor air samples at a maximum concentration of 62.5 ug/m3. "

Health Problem: "Since the site is covered with pavement and a building, people will not come into direct contact with contaminated soil or contaminated groundwater unless they dig below the surface. The area is served by a public water supply that is not affected by the groundwater contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The building on the site is currently occupied and actions are needed to address indoor air impacts due to soil vapor intrusion. Also, the potential exists for the inhalation of site contaminants due to soil vapor intrusion both off-site and for any future on-site redevelopment. "

Site Description:	"Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling

BRONX POINT (Continued) **S127480939**

facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm

BRONX POINT (Continued) **S127480939**

(RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Updated By: YXPALUMB
Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations

BRONX POINT (Continued) **S127480939**

include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved

BRONX POINT (Continued) **S127480939**

soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in

BRONX POINT (Continued) **S127480939**

groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site

BRONX POINT (Continued) **S127480939**

soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002

BRONX POINT (Continued) **S127480939**

ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 577942
Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site:

BRONX POINT (Continued) **S127480939**

Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or

BRONX POINT (Continued) **S127480939**

herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West

BRONX POINT (Continued) **S127480939**

Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and

BRONX POINT (Continued) **S127480939**

naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

These PAHs were associated with visually

BRONX POINT (Continued) **S127480939**

petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

DEC Memo:	4/1/21-Zhune- Woo Kim sent the following email- I am looping in the NYSDEC BCP team. We called in a spill because petroleum-impacted water and petroleum sludge was released onto soil and groundwater during the removal of underground storage tanks. These tanks were identified during the excavation of a petroleum hotspot and will be decommissioned by an FDNY-certified contractor. The spill will be remediated under the NYSDEC Brownfield Cleanup Program. The NYSDEC project manager is Shaun Bollers, who has been cc d in this response.
Remarks:	2 USTs discovered during excavation of site. Contained and cleanup is pending.

DEC Memo: 12/07/05: This spill transferred from J.Kolleeny to S.Kraszewski.

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

09/23/10: J.Kann - spill
transferred from K. Tang to J.Kann. 5/29/12: J.kann - since little is known about this facility, a
P0 priority was assigned. 10/23/13: J.Kann - a work plan was submitted and edoced under 9005760.
01/07/14: J.Kann - revised IWP approved on 12/23/13. There was some confusion between the two
Mitchell Houses. The revised IWP only covers Alexander Avenue. SIR due 6/23/14. Site included in
the multi site stip sent to NYCHA today. 12/12/14: J.Kann - SIR submitted to DEC on 10/15/14 after
an approved extension. The report was reviewed and it required revisions due to the confusion of
the two Mitchell houses. The revised report was email to the Department on 12/11/14. Six soil
borings were advanced and three wells were installed. Results of the twelve soil samples collected
for analysis of VOCs and SVOCs yielded no exceedences of CP-51. All groundwater concentrations were
below TOGS 1.1.1. NFA. Spill closed.

Remarks: CALLER WAS REMOVING TOPSOIL TO REMOVE TANKS AND REALIZED SOIL WAS CONTAMINATED. CONTRACT WORK WAS STOPPED UNTIL DEC NOTIFIED.

DEC Memo:	12/23/22 - Kim - I received a follow-up call from Ryan McPherson with NYCHA. NYCHA crew responded to the site to clean up the heating oil that seeped up from the leaking fill line. Remediation work will be scheduled for next week. 12/27/22 - Kim - I received a follow up email from NYCHA McPherson that the initial remediation at the Mitchel spill # 2207895 was done on 12/23/22. Remediation pressure washed and vacuumed all affected areas. Areas where soil was impacted was covered in a plastic tarp and staked to prevent additional infiltration. The area to be soft dug was approximately 10ft by 50ft by 1ft. Photos after work done on 12/23/22 were received via email. 4/4/23 - Kim - NYCHA McPherson submitted soil sampling data on 3/31/23. Soil data shows one exceedance of Unrestricted Use Soil Cleanup Objectives in sample M3 with Total Xylenes at 730ug/kg (Unrestricted Use SCO at 260ug/kg) but below Residential Restricted Use SCO at 100,000ug/kg. Gross contamination from the spilled oil was removed. No further remediation is required. Spill case closed. 11/14/23 - Kim - Spill case reopened based on oil found in basement sump at Mitchel Houses that was reported in Spill 2300847. Further information required regarding remediation work done in response to the spill and the condition of the fill line.
Remarks:	underground fill line leaking cleanup pending soil only

DEC Memo:	5/1/23 - Kim - Desk Duty - I called McPherson with NYCHA. An unknown oil was found in the ejector pit in the afternoon and the ejector pit sump was shut off to prevent discharge. NYCHA described the oil as being golden-brown in color and the oil did not have a fuel odor. It is possibly hydraulic oil from an unknown source. NYCHA checked the elevator shafts and did not find any spilled oil or liquids. NYCHA collected a sample of the oil for ID. NYCHA is using a vacuum truck to remove the unknown oil from the ejector pit. NYCHA was not sure how much oil was in the ejector pit as over 1,000gal was pumped out and there was more liquid that needed to be pumped out. The unknown oil was found following a significant rain event over the weekend. NYCHA is investigating the spill and the source of the unknown oil. 5/2/23 - Kim - Scheduled site visit with NYCHA McPherson. Oil was still coming into the basement at 205 Alexander Ave. The oil appeared to be mostly clear on top of water and there was not a noticeable sheen. Location of oil impacted sump

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

and monitoring well are on the southern side of 205 Alexander Ave. The oil did not give off the odor of No. 2 Fuel Oil. I discussed my observations with DEC Austin and this unknown oil could be hydraulic oil or dielectric feeder oil. Based on Spills Database, a Con Ed Feeder appears to have been located on E 138th St in the Bronx north of this spill site. In the Spills Database, I found older Con Ed spills in the area, but I did not find a recent feeder leak. 5/4/23 - Kim - I received a follow up email from NYCHA McPherson that the sample went in 5/3/23 with a 5-day TAT. On 5/3/23, 205 Alexander was still getting the same flow of oil in the basement as on 5/2/23. 5/17/23 - Kim - I received a copy of the lab report from NYCHA McPherson which found the sample contained 120,000mg/L of Gasoline Range Hydrocarbons and 910,000mg/kg of Unidentified TPH. The TPH sample results included the comment that Petroleum hydrocarbon chromatogram most closely resembles diesel fuel / fuel #2. I called NYCHA McPherson and he stated that there was still oil coming into the basement. NYCHA is currently using engineering controls (absorbent pads to prevent oil from discharging with water from the basement ejector pit but it was ineffective as most of the oil is floating on top of the flowing water) and is planning to schedule the final cleanup using a vac truck when the flow of oil subsides. I contacted Con Ed and this does not appear to be from a recent feeder leak. I asked Con Ed to check into this possibly being a dielectric fluid spill. Con Ed responded that Con Ed STO only has solid dielectric feeder 12 blocks away and there are no oil filled feeders near the spill location; Con Ed Electric Operations has not reported any distribution issues in the area. 6/6/23 - Kim - See spills on E 138th St in the Bronx in the vicinity of the Mitchel Houses and reported within the last 10 years listed below: Spill 2207895: Reported 12/23/22 as a spill from the NYCHA UST fill line. NYCHA crew responded to the site, cleaned up the heating oil that seeped up from the leaking fill line, and covered the area with poly. Remediation work to hand dig the fill line was completed and endpoint soil samples were completed 2/24/23 indicating that the contaminated soil was removed. Spill 1809262: EMIS 270019. Excavation on 3rd Ave and E 138th St located around the corner 0.2mi from 205 Alexander. Con Ed reportedly found lube oil; Sample 18-08700-001 contained less than 2.00ppm PCB but Sample 18-08700-003 contained 12.00ppm PCB. Spill 1707595: 255 E 138th St located around the corner 0.2mi from 205 Alexander. Con Ed reported finding cable oil contaminated soils while excavating in the street, 44 tons of soil and liquids was removed. Closed 3/15/19.

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

Previous spills in the vicinity
and reported within the last 15 years include: Spill 1101731: Con Ed Vault at 206 E 138th St
located 0.25mi from 205 Alexander. Con Ed reportedly found lube oil in a vault at 206 E 138th St.
Spill 0890203: Con Ed Manhole in front of 285 E 138th St located around the corner 0.2mi from 205
Alexander. Con Ed found 2pt of oil from uncapped cable ends. Spill 0814310: Park Ave & E 138th
located 0.3mi from 205 Alexander. Limited information in Spill Report. Con Ed Equipment failure,
Utility Conduit, Dielectric fluid... Prior, 15.3 years ago, Spill 0710643 at 220 E 138th St.
Vacant/commercial lot removed four 550gal USTs Based on the history of reported spills on E 138th
St, it appears that there have been prior excavations and underground structures where prior spills
of Con Ed dielectric cable oil and spills from unknown sources of lubricating oil were found.
6/12/23 - Kim - On 6/8/23, I met NYCHA McPherson on site and we grabbed a sample of the unknown oil
from the monitoring well located next to the UST at 205 Alexander Ave. From a visual inspection of
the sample, the liquid was black to dark brown in color and appears amber when held up to the
light. The liquid also appeared to have low viscosity in comparison to known petroleum product
samples, less viscous than dielectric oil, and most similar in viscosity to diesel or no. 2 fuel
oil. Based on this visual inspection and the odor of the collected sample, this unknown oil appears
to be weathered No. 2 fuel oil. 6/22/23 - Kim - I contacted Ryan with NYCHA who reported that
recently NYCHA has intermittently observed oil in the basement sump of 205 Alexander Ave. Ryan will
have the active, in-use UST system tightness tested as requested by DEC. 7/13/23 - Kim - Site
history: Spill 2207895 - On 12/23/22, NYCHA reported an overfill of the tank system that spilled
onto the grass surface and was cleaned up. The majority of impacted soil was removed and disposed
of by NYCHA. Residual contamination based on endpoint soil samples collected 2/24/23 only had minor
exceedances of SCOs. The spill site is registered under PBS 2-473243. The Mitchel Houses have 3 in
service USTs, 3 closed and removed tanks (closed 7/1/98), and 1 tank closed in place (5/1/98). The
3 in service USTs were installed 7/1/98, contain no. 2 fuel oil in double-walled fiberglass coated
steel tanks with leak detection (interstitial electronic monitoring, auto tank gauge), overfill
protection (high level alarm, automatic shut-off), suction dispenser, underground/on-ground piping,
flexible piping, etc. Nearby sites searched by using UIS (E 138TH ST, E 137TH ST, 3RD AVE- LINCOLN
AVE/ALEXANDER AVE/ WILLIS AVE, E 136TH ST, E 135TH ST) and DECinfo Locator. Groundwater in the area

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

generally flows to the west-southwest, i.e. potential off-site source of oil is to the east-northeast (based on information from BCP C203056 and C203057 files). PBS 2-197637 St. Jerome Church at 230 Alexander Ave 0.1mi NE from 205 Alexander. PBS Registration Expired 7/20/2007. Tank in service 3,000gal containing no. 2 fuel oil. PBS 2-218421 270 Alexander Ave HDFC 0.1mi N from 205 Alexander. PBS Registration current and expires 6/26/2027. 1 Tank in service, 1,800gal steel AST-contact w/soil containing no. 2 fuel oil. PBS 2-342807 40 PCT at 257 Alexander Ave 0.1mi N from 205 Alexander. PBS Registration current and expires 12/14/27. 2 Tanks in service, 550gal and 2,400gal containing no. 2 fuel oil. PBS 2-482595 Westbury Ct. East 138th St. Corp. at 361 E 138th St 0.14mi NE from 205 Alexander. PBS Registration Unregulated/closed. PBS 2-473332 416 E 137th St NYCHA Mitchel Houses Management Office 0.2mi E from 205 Alexander. In other directions: PBS 2-351679 P.S. 154 - Bronx X154 at 333 E 135th St 0.1mi SE from 205 Alexander. PBS Registration current and expires 6/28/2023. 2 Tanks in service, 7,500gal each, containing no. 4 fuel oil. PBS 2-607817 Los Peguero Repair Shop at 209 E 138th St 0.3mi NW from 205 Alexander. Four tanks no. 001, 200, 300, 400 were closed in place. Tank 1 remains in service and contains 250gal of waste oil/used oil. PBS 2-318825 220 E 138th St 0.3mi W from 205 Alexander. Four 550gal tanks that contained gasoline were removed. Tank 001 that contained 3,000gal of no. 2 fuel oil was closed in place. BCP sites BCP C203056 Borinquen Court 271 - 285 E. 138th St located to the north of the site. Groundwater is approximately 15 feet below surface grade at the Site and flows to the west-southwest. Track 4: Restricted use with site specific soil cleanup objectives. From Work Plan.BCP.C203056.2020-11-02.Revised SMP, Based on the surveyed well elevations and the depth to water measurements recorded during prior investigations, groundwater is approximately 15 feet below surface grade at the Site and flows to the west-southwest. Hydrogeological evaluations completed during prior monitoring at the Site indicated a groundwater flow direction to the southwest in the overburden aquifer. Groundwater elevation data and groundwater monitoring well construction logs are available in prior reports including the RIR, FER, and subsequent investigations completed by AKRF in 2015 and 2016. BCP C203057 Former G & C Services 255 East 138th St located 0.19mi to the northwest of the site. From DecDocs file Work_plan.BCP.C203057.2018-02-13.SMP_revised_February_2018.pdf Section 2.2.3 Hydrogeology, Depth to groundwater varies across the Site between approximately 4.75 and 6.5 feet below grade surface,

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

according to the RIR prepared by Brinkerhoff in May 2013. The inferred groundwater direction is
towards the west to southwest. SSF N 203051 Rider Ave Gas Station 0.2mi northwest. BCP C203047 2477
3rd Avenue Property 0.19mi west. 7/11/23 - Kim - Follow up with PBS 2-197637 St. Jerome Church at
230 Alexander Ave 0.1mi NE from 205 Alexander. PBS Registration Expired 7/20/2007. PBS record
indicates tank was in service 3,000gal steel UST containing no. 2 fuel oil. Based on proximity and
the expired registration, this tank may have spilled oil. Further, groundwater flow direction to
the southwest in the overburden aquifer would suggest that the source of oil is likely to the
northeast. 8/17/23 - Kim - Joint inspection with DEC Zielinski performed on 8/10. 3 PBS facilities
- there were violations of PBS regulations but no clear source of the spill impacting 205 Alexander
Ave. PBS 2-218421 270 Alexander Ave HDFC had 1 tank in service. This facility did not appear to be
the source of oil but there appeared to be some oil present floating on water in a floor drain in
the basement. PBS 2-342807 40 PCT at 257 Alexander Ave had 2 Tanks in service, 550gal and 2,400gal
containing no. 2 fuel oil and did not appear to be the source of oil. PBS 2-197637 St. Jerome
Church at 230 Alexander Ave had 2 tanks; one of these tanks was not registered with PBS. There was
also some oil present in the basement boiler room sump pit. PBS is requiring the facility to
perform a tank tightness test; records must be submitted to DEC by 9/14/23 - NOV letter dated
8/15/23 sent by PBS. An additional inspection was performed at 269 Alexander Ave, a residential
building that appeared to be unoccupied currently and under construction. The building had an
unregistered tank with a capacity greater than 1,100gal. PBS will be requiring the respondent to
perform a tank tightness test - correspondence pending additional information requested by PBS.
10/31/23 - Kim - Ryan McPherson reported that 205 Alexander Ave reported finding some oil in the
basement sump. Absorbent pads will be used to remove as much oil as possible. The monitoring well
located next to the UST at 205 Alexander Ave that had product previously had one inch of oil on
water today. The source of the spill remains unknown. 11/3/23 - Ye - Received an update from Ryan
that oil was found again in the sump (second time this week, becoming a nuisance). They say it's
been tested and not their oil because it's golden brown and not dyed. Said I will update the notes
and DEC Kim, who can follow up next week. 11/7/23 - Kim - I searched for spills in the Bronx in the
vicinity of the Mitchel Houses and reported from 11/6/23 to 10/18/22 and found 5 spills: 2207895 -
see above... Reported 12/23/22 as a spill from the NYCHA UST fill

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

line. NYCHA crew responded to the
site, cleaned up the heating oil that seeped up from the leaking fill
line, and covered the area
with poly. Remediation work to hand dig the fill line was completed
and endpoint soil samples were
completed 2/24/23 indicating that the contaminated soil was removed.
2303264 - Reported 7/19/23 at
NYCDOE school, PBS#2-351679, TTF 7,500gal AST due to dry leak in vent
line. 2302112 - 2300733
2208631 11/9/23 - Kim - Note 269 Alexander Ave registered the
abandoned tank under PBS 2-613487. I
performed a site visit on 11/8/23 and met with NYCHA McPherson and his
crew. Using an interface
probe NYCHA confirmed that there was oil in the monitoring well by
their UST. We inspected the
basement and saw that there was a sheen on the water in the basement
floor drain and odors of a
degraded petroleum spill but there was no free product. Prior to my
site visit, NYCHA employees
stated that there have been globules of oil on water and petroleum
odors following rain events.
After discussing next steps with NYCHA, we investigated the
surrounding area north-northeast of 205
Alexander and found some monitoring wells on the sidewalks that can be
sampled to track down the
source of the spill. 11/22/23 - Kim - I met onsite with Ryan McPherson
and NYCHA personnel in the
morning after a rain event yesterday. Using an interface probe NYCHA
checked the monitoring well by
their UST and measured 6in of oil present. In the basement floor
drain, there was a nonrecoverable
sheen on the water and barely a detectable petroleum odor. NYCHA used
the interface probe to check
the monitoring wells in the sidewalk on Alexander Ave in front of the
police precinct at 257
Alexander Ave, in front of 261 Alexander Ave, 269 Alexander Ave, and
across the street in the
sidewalk in front of 262 Alexander Ave. Only water was detected. No
other reports of oil have been
received since oil was found in the basement floor drain at 205
Alexander. Based on the information
available, there has not been evidence of an offsite source of the
oil. The source of the oil is
possibly an old spill from the building's own UST system. I
recommended that NYCHA collect oil in
the monitoring well by their UST using absorbent socks and mitigating
indoor air quality concerns
using ventilation fan and/or an air scrubber. 7/18/24 - Kim - Proposed
sample and well locations
submitted by NYCHA McPherson. I called NYCHA McPherson and suggested
that the well locations
include one to the southwest as that is presumably the general
direction to the closest surface
waterbody, the Harlem River. New proposal pending submission.

Remarks: cleanup pending. drain in basement

Update By:	BXANDERS
Site Description:	"Location: The Site is located in an urban area in the Mott Haven section of the Bronx and is comprised of approximately 47.411 square foot (sf) irregularly (rectanuglar?) shaped lot. The site includes all of Block 2309 Lot 12 and a portion of Lot 1 and has 75 feet of frontage along Bruckner Boulevard and approximately 300 (360?) feet of frontage along E. 134th Street. Site Features: The site is currently vacant. Current Zoning/Use: The site is zoned M1-2/R6A

FORMER MANUFACTURING PLANT (Continued) **S117936672**

	residential/commercial and is currently vacant, though part is used as a parking lot by the adjacnet building. Historical Use: The subject property was historically used as a piano factory, woodworking factory and marble factory (1890s through 1920s), and a revolving door factory and window and door factory (1940s through 2007). Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 to 10 feet below grade. Silty sand is present immediately below this layer to a depth of 15 feet. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface. Groundwater at the Site is present under water table conditions at a depth of approximately 10 feet below grade. Based on regional water table elevation maps, groundwater flow is expected to be southwest toward the Harlem River."
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Town:	New York City
Record Added Date:	03/24/2020
Record Updated Date:	01/19/2024
Update By:	HMDUDEK
Site Description:	"Location: The 0.57-acre site is located at 2413 Third Avenue, in the Port Morris Harlem Riverfront section of the Bronx. The site occupies a portion of Block 2319, Lot 109. The site is located west of the intersection of Third Avenue and Bruckner Boulevard and is bounded by a self-storage facility to the north; light industrial and commercial buildings, a dog park, and an access roadway to the northeast; Third Avenue and the Third Avenue Bridge overpass to the southeast; and a residential construction project to the west. Site Features: The site contains a multi-story residential building with parking below the building. Current Zoning and Land Use: The site is located in the Special Harlem River Waterfront Zoning District. The site is zoned M1-3/R8. A multi-story residential building is being built on the site. Past Use of the Site: By the late 1897, a 6-story building was constructed and used for unspecified manufacturing through the 1920s. Starting in the 1930s the building was used for storage; it was used for storage through the early 2000s. A 1-story building occupied the northern portion of the lot by at least the 1920s. This building was used for automobile repair, unspecified manufacturing, and lubrication oil storage through the early 2000s when the building was demolished. The southeastern portion of the site was occupied by a 2-story building used as a manufacturing facility by at least the

2413 THIRD AVENUE (Continued) **S126369660**

1920s and used for manufacturing and a chemical laboratory. The 2-story building was demolished by 1984. A freight railway easement transected the site between 1935 and 1951. Site Geology and Hydrogeology: The site was excavated to between 10-26 feet below ground surface. The building is underlain by native silty and clayey sands and clay with varying amounts of peat and shells. Bedrock was not encountered during site investigation and minimum expected depth to bedrock is 50 feet. Groundwater was encountered between about 7 and 8.5 feet bgs. Inferred groundwater flow is to the southwest towards the Harlem River. Based on proximity to the Harlem River estuary, groundwater elevations across the site may be subject to tidal fluctuations. "

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals in soils; PAHs in groundwater; Chlorinated volatile organic compounds (CVOCs) and petroleum products in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. "
Health Problem:	"The site has been remediated and the potential for people to come in contact with site contamination was addressed by the remedy."

DEC Memo:	4/29/08 Received letter from Stuart Schwartz, of SNS Energy Distribution Corp., on 4/28/08. Tank was excavated and isolated and retested. Isolation revealed leak was at vent line. No contaminated soil associated with this spill. Tank retested on 4/25/08 and passed. They are waiting for authorization from owner to replace all piping and will retest. bf 5/1/08 bf: sent ttf letter to: Urbanization Maria Lopez Housing 580 White Plains Road, 6th Floor Tarrytown, NY 10591 Sent copy to: Stuart N. Schwartz, Chief Executive officer SNS Energy Corporation 221 Broadway, Suite 205 Amityville, NY 11701 6/4/08 On 6/3/08, received fax of letter dated 5/23/08 from Stuart Schwartz of SNS Energy. All oil distribution piping at the site was replaced even though only the vent line failed. Tightness test was done 5/22/08 and passed. I called Mr. Schwartz (631)691-1700 and left message with secretary to call me back. When he calls back I will request another letter regarding contamination, if any, and the tank test is deficient because of gw determination. bf 6/10/08 On 6/9/08, received

(Continued) **S109064253**

revised tank test report. Report is satisfactory. Need letter regarding contamination. Called him at (631)926-2196 and left message requesting letter. bf 6/11/08 Yesterday, received fax from S. Schwartz stating no oil contamination found and piping was replaced due to its age. NFA. bf

Shop is closed - no access. FDNY HazMat pumped out 2 x 55 gal drums from basement. 1/27/04. J. Krimgold @ site. 275 gal AST in basement was overfilled. Due to an excessive pressure. A cap on a service opening blow out and

COMM/RES BUILDING (Continued) **S106124045**

about 150 gal of oil was released onto the basement floor. Alba Fuel Corp. (contact Esad Cocoh) made a delivery of 270 gal (according to the delivery slip) of #2 oil to the tank with ~ 150 gal of oil in it. However, refusing to take responsibility. Strong petrol. odor in the dry cleaning shop and second floor apartment. Frank Jamenes - house owner @ cell. (347) 806-1999. 1/29/04. AL Eastmond was hired by Alba Fuel to clean up. 2/11/04. J.Krimgold visit the site. Spill has been cleaned up. NFA.

Remarks: All but 5 gallons in basement (concrete floor). Five gallons pumped out through sump pump. Fire company on scene.

DEC Memo:	Tank is UNDER 1080 gal - non PBS. They did not have an exact size. There is no visible spill at this site, only a TTF. 8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/13/2015: Rashad Per NYC building records 308 Willis Ave has no alternate address. No PBS records or additional spill reports found. No documents found in D2. According to building records the owner is: Willis Bricks LLC C/O Express Fine Jewlery 55 West 47th Street - Suite 340 New York, NY 10036 8/18/2015: Rashad Email sent to Abraham from NYC tank testing: After reviewing the spill report for 308 Willis Ave, Bronx NY, spill#1006590 dated 9/17/2010, I would like to request the following information: Tank test failure report. Test results for supply/return and vent/fill lines. Property owners information. 8/24/2015: Rashad Received email from Goldie with tank test failure report. Report indicates ullage (dry) portion of leak. Letter attached also states This letter is to certify that on September 3, 2010 New York City Tank Testing isolated, tested and

UNKNOWN - TTF (Continued) **S110541017**

reconnected the vent line at the above mentioned premises. The results are as follows: The vent line had a gross failure. Recommendations: At the current time NYC Tank Testing recommends uncovering the top of tank and isolating all necessary lines. Documents uploaded to D2. 12/7/2016: Rashad Spill will be administratively closed as per tank test failure guidance document for TTF greater then 5 years old. Leak was a dry leak and according to tank test documents, failure was in vent line, not tank. Spill administratively closed.

Remarks: tank test failure, no other info known

DEC Memo:	12/12/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/28/06: Two 25K USTs installed in 1948 that stored #4/#6 oil were closed-removed in 1996. One 30K UST that stores #2 oil was installed in 1997 and is currently in service. Soil contamination was encountered during tank replacement. 4 MWs were installed in 1996 and is currently bailing oil/water. NYCHA recommends that a site assessment be performed. - SK 9/26/06: This spill was transferred from S.Kraszewski to J. Kann. -JK 12/12/12: J.Kann - the IWP was received in May 2009. The plan and historic files were reviewed. Based on the review, comments were sent to NYCHA on 12/12/12 (edoced). 3/5/13: J.Kann - revised IWP (Addendum letter and Figure 3) recvd on 2/11/13. Information reviewed and found acceptable. Pointed out in an email to NYCHA that the locations identified in the Addendum letter and revised Figure 3 are correct (however, the text of Section 3.2 of the IWP was not revised to reflect the change). SIR due 9/5/13. 12/2/13: J.Kann - stip sent to nycha on 10/30. Signed stip rcvd 12/2 and forwarded to legal. 1/28/14: J.kann - approved modifications to IWP after discussion/email with/from consultant (edoced) 2/06/14: J.Kann- visited site today. Borings were advanced in the sidewalk. Stained soils noted at the groundwater interface and collected for analysis. Historical data shows not product or contamination downgradient of the site (across Madison Avenue). Additional drilling will be performed on Monday 2/10/14. 3/5/14: J.Kann- rcvd RIR on 3/5/14. Reviewed the RIR. Concurred with recommendations. Sent and email to NYCHA. Quarterly monitoring should commence and a 2014 2nd quarter monitoring report is due on July 31, 2014. A RAP is due on 9/5/2014 7/23/14: J.Kann - reviewed RAP. VEFR is proposed in two wells containing product. Monitoring over 6 months. NYCHA needs to install 4 or 6 inch well in sidewalk after scaffolding over sidewalk is removed. email sent to NYCHA on 7/24/14. 5/12/17: J.kann - visited site today. Wells did not contain product. Boiler room walls clean. Given the minimal impacts previously noted and limited to weathered 6 oil, tanks removed over 15 years ago and no dissolved phase in gw, spill closed. Possible weathered 6 oil contaminated soils

LINCOLN HOUSES -NYCHA (Continued) **S100167943**

	at groundwater interface, so contaminated spill clause included in closure letter. Spill closed.

DEC Memo:	8/13/14- Ahmed - Spoke to Ryan (203-784-3069). As per him, the site used to be a gas station, they

2401 THIRD AVENUE (Continued) **S117269407**

did some Phase II investigation ans result showed elevated concenteation at groundwater sample
taken from a downgradient well from a former gasolene tank. they will do some supplemental
investigation. Ask him to contact DEC Demeo as he will manage the spill. Assigned to Tim Demeo.
8/15/14 - Obligado - I received a call from Ryan who requested to update some information. The site
was never a gas station. It was a commercial facility with a gasoline tank for site operations.
10/26/18 - Austin - Spill transferred from Tim DeMeo to Prat Lakhani - end 12/23/20 - A COC was
executed by DER on 12/23/20 under BCP site no. C203052. A Track 4 Residential Residential cleanup
was achieved.

Remarks: Samples showing traces of gas in soil. Tank may be still in the ground. Further investigation to take place.

Control Type:	ENG
Date Record Added:	09/04/2020
Date Rec Updated:	10/25/2022
Updated By:	WYZHENG
Site Description:	"Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "
Env Problem:	"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded

FORMER MUGLER SHORING INC. (Continued) **S117936658**

their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Updated By: WYZHENG
Site Code: 507623
Site Description: "Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to

FORMER MUGLER SHORING INC. (Continued) **S117936658**

the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."
