DEC Memo:	9/26/12 TJD File review. NYCDOS (Al Mignone) has provided required documentation in support of spill closure relating to reported tank test failure. System failed initial system test (Dry as a Bone)on 7/17/12 - reported as a dry leak. Tank alone was retested on 7/23/12 and passed. Failure determined to be associated with a failed vent pipe which was replaced 9/11/12 by Windmill Tank Service. Additionally threads on interstial space access bung on tank top were also determined to be contributing to an air leak and were repaired by maufacturer (Highland Tank) on 9/11/12. Following repairs entire tank system was retested by AARCO on 9/13/12 and passed. No further action is required. Spill closed.

DEC Memo:	DEMEO needs to send a TTF letter to Sanitation) 8/9/12-Vought-Notes above by DEC Sangesland. Vought primary off-hours responder. Vought noted PBS #2-455660 for site also listed as 125 East 149th Street. As primary off-hours responder, Vought called TJ O'Connor (Dry As A Bone Ph:516-678-5115) to see if failure was wet or dry leak and left message on voicemail to return call as soon as possible. Vought called Al Mignone (Ph:646-235-3183) for more information and left message to return call. Vought called PBS contact: NYC Dept. of Sanitation 125 Worth Street Room 823B New York, NY 10013 Attn: M. Bonacorsa Ph:(646)885-4874 Fax:(212)442-8624 or (212)442-8625 Bonacorsa retired from NYCDOS as per receptionist and letter should be sent to Mr. Chingas. Vought sent out TTF letter to above address and faxed letter as well. Vought sent out letter to NYCDOS Chingas and added copy to e-docs and left Demeo copy as well. 9/18/12 TJD File review. NYSDOS (Al Mignone) has provided copies of initial failing tank test report performed on 8/8/12 (Dry as a Bone) and a

NYCDOS TANK TEST FAILURE (Continued) **S112148870**

subsequent passing tank test report performed on 8/13/12 (AARCO). Initial failed test was reported as a dry leak. NYCDOS reports no repairs were made to system and was retested by another contractor and passed. Testing reports and e-mail correspondence have been uploaded to E-DOCS. No further action is required.

SHWS:

Name:	2350 FIFTH AVE., NEW YORK (AKA, PS 141)
Address:	2340 & 2350 FIFTH AVENUE
City,State,Zip:	NEW YORK, NY 10037
Program:	HW
Site Code:	57691
Classification:	Site is properly closed - requires continued management.
Region:	2
Acres:	1.543
HW Code:	231004
Record Add:	11/18/1999
Record Upd:	02/14/2023
Updated By:	AAOBLIGA
Site Description:	"Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn

2350 FIFTH AVENUE CORP (Continued) **1000108749**

fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying

2350 FIFTH AVENUE CORP (Continued) **1000108749**

buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines.

2350 FIFTH AVENUE CORP (Continued) **1000108749**

The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light

2350 FIFTH AVENUE CORP (Continued) **1000108749**

manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by

2350 FIFTH AVENUE CORP (Continued) **1000108749**

the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue

2350 FIFTH AVENUE CORP (Continued) **1000108749**

between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were

2350 FIFTH AVENUE CORP (Continued) **1000108749**

tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH's air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer

Site Code: 57691
Site Description: "Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is zoned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s

2350 FIFTH AVENUE CORP (Continued) **1000108749**

through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utilized both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered hazardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying horizontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River. "

Env Problem: "Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH’s air guidelines. To minimize the potential for the inhalation of site-related contaminants, a sub-slab depressurization system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Code: 520537
Site Description: "Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is occupied by a residential and commercial building. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: Two 25-story mixed residential and commercial use towers were constructed on the site. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. The site formerly consisted of Lot 60 and 160, but the lots were merged into one Lot, 160. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Site Code: 520537
Site Description: "Location: The 1.112-acre site is located in an urban area of the Bronx, NY. The property is located approximately 250 feet northwest of the intersection of East 135th Street and 3rd Avenue. Site Features: The property is occupied by a residential and commercial building. The Harlem River is located approximately 500 feet to the southwest. Current Zoning and Land Use: Two 25-story mixed residential and commercial use towers were constructed on the site. The site is zoned as a M1-3/R8 district for mixed-use high-density residential, commercial, and light manufacturing uses. The surrounding land use is primarily commercial, including warehouses to the northwest, and commercial office space to the southeast. The site formerly consisted of Lot 60 and 160, but the lots were merged into one Lot, 160. Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Past Use of the Site: Prior site uses include a railroad freight yard, coal yard, warehousing, and various industrial uses (some of which included oil storage). Most recently it was used for vehicle storage (parking). Historic fill is also present at the site. Some soil remediation of volatile organic compounds (VOCs), semi-VOCs (SVOCs) and metals occurred in 1999 under the Petroleum Spills Program (Spill #0001384) and resulted in removal of an abandoned underground storage tank. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface to approximately 16 feet below grade, is classified as fill consisting of a mixture of

198 EAST 135TH STREET (Continued) **S127750713**

	gravel, sand, rocks and apparent construction debris. The water table at the site ranges from approximately 9 feet to 12 feet below grade. Groundwater flow is towards the north northwest, in the direction of the Harlem River."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and poly-cyclic aromatic hydrocarbons related to the presence of historic fill. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining contamination at the site. "

Town:	New York City
Record Added Date:	09/02/2020
Record Updated Date:	05/29/2021
Update By:	JHOCONNE
Site Description:	"Site Location: The site is located at 580 Gerard Avenue, Bronx, New York 10451. The site is located in a mixed industrial, commercial and residential neighborhood. There are several BCP sites Gerard Avenue in close proximity to this Site. Site Features: The site is currently occupied by a vacant single-story approximately 31,000 sq. ft which served as a U.S. Postal Service vehicle maintenance garage building. The site is not located in a flood zone. The closest waterbody is the Harlem River, which is located about 0.21 miles away (about 1,120 feet). Current Zoning and Land Use: The site is currently located in an R7A District with a C2-4 Commercial Overlay District. The

US POSTAL SERVICE - VMF (Continued) **1000349040**

surrounding properties include, to the north, a single-story warehouse/garage building; to the west (across Gerard Avenue), a two-story mixed-use building used as a storage facility and its associated parking lot; to the south (across 150th Street), a single-story warehouse/garage building; and to the east, a small garage and residential buildings. Past Use of the Site: From 1908 until on or about 1950 the site was vacant until the current on-site building was constructed circa 1950 for use as a vehicle maintenance and storage facility for the U.S. Post Office. The Post Office was the tenant from 1950 until circa 2000. From circa 2001 through 2007, the building was utilized for automotive service, vehicle repair and parking. After 2007, the project site was occupied by a construction company for general office use and storage, but as of 2011, the building was vacant. The Site was listed in the New York State Department of Environmental Conservation Petroleum Bulk Storage (PBS) database under Facility Identification Numbers 2-333212 and 2-476021 and the Spills database under Spill Incident Numbers 9213223 and 9007668. In addition, the Post Office was a listed RCRA facility at this Site under RCRA Facility ID NY5180010451 large quantity generator. The Post Office, was listed as a small quantity generator under RCRA Facility ID NYD982727885 at this Site from 1992 until 2009, even though the Post Office vacated in about 2000-2001. Finally, a tenant named Autorama Enterprises of Bronx, using the 610 Gerard Avenue address, was listed as a RCRA Facility at the Site under ID NYR000100255. There following spill numbers are associated with this Site: Closed Spill Incident Number 9007668 This spill pertains to a tank test failure of a 3,000-gallon fuel oil tank that occurred on October 13, 1990. There is a note in the spill file that groundwater was impacted. See Exhibit M including spill file record. Closed Spill Incident Number 9213223 This spill incident is related to gasoline found during the excavation of gasoline tanks that occurred on February 27, 1993. This spill incident indicates that nine 550-gallon gasoline USTs were removed in 1993. Concurrently, 22 tons of contaminated soil had also been reportedly excavated and removed. Allegedly, the subsurface investigation showed no visual or olfactory evidence of contamination. Soil analysis showed non-detect for VOCs and PAH levels were consistent with obvious fill material. However, groundwater analysis showed non-detect/trace PAHs and VOCs. This spill incident was closed on May 11, 2001. Closed Spill Incident Number 1205845 This spill occurred when it was reported that approximately two gallons of heating oil residual/staining was noted next to the fill port area on the east side of the building. Site Geology and Hydrogeology: The general elevation for the area where the site is located is between approximately 20-30 feet above mean sea-level. The groundwater flow direction was presumed to be the southerly direction toward the Harlem River. The soil composition in the eight (8) subsurface soil borings was similar in nature, with predominantly fine to medium-grained sand and fill material along with some silt found to exist from the surface to terminus of the borings. Groundwater was encountered in two (2) borings at approximately 23 feet below land surface (bls). "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Remarks:	caller states that he was contacted by the homeowner regarding oil that had been dumped out of the temporary tank into a pit on the ground. They had initially indicated that it was inside the premises. When they had pumped out the tank on the 11th they had placed 20 gallons from the temporary tanks into the main tank. caller states that on July 9th abc tank had installed 2 new 275gallon tanks into the oil room and had done all new piping as well and they disonnected and drained oil from temp tank into a pit located at the base of the alley way drain

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/19/03 - ROSSAN, DDO - Called Mr. Kieth Bartley, who confirmed that contaminated soil letter should be sent to: ATT: Mr. Kieth Bartley c/o USA Tanks Plant Maintenance 206 Grandview Avenue Staten Island, NY 10303 5/22/03 TIPPLE UPDATING/ SITE VISIT ON THE 16TH REVEALED OIL FROM RUPTURED TANK ON TANK ROOM FLOOR, SEAPING THROUGH THE SUBSURFACE INTO THE BOILER ROOM, SUMP IN BOILER ROOM FLOOR, DRAIN IN WALKWAY OUTSIDE BASEMENT DOOR, BELOW VENT/FILL LINE SATURATING BRICK STEPS AND WALKWAY DOWN TO BASEMENT DOOR, AND HAD BEEN TRACKED THROUGHOUT THE AREA. A SUBSEQUENT VISIT 5/19 REVEALS THAT OIL WAS STILL DRAINING OUT OF THE SATURATED SOILS INTO THE BOILER ROOM, AND ONLY THE BEGINNINGS OF A SURFACE CLEANUP HAD OCCURED TO DATE. 7/16/2003Tipple updating// spills # 02-00169 and 03-03928 at this address closed and referred to this spill # contaminated soil letter sent to both property owner: Estate of Michael McSherry 3616 Route 94 Chester, NY 10918-1149 and Management Company Classic Realty- John Gubias 3600 Feildston Rd Bronx, NY 10463----718-601-5858 7/15 site visit revealed oil still seeping into sump and along the wall in the boiler room. The walkway sump with soil walls was full of fresh oil, stairs in the walkway and laid up stone foundation wall between the tank room and the walkway were still contaminated with a coating of oil. The new surface spill appeared to be impacting the walkway outside the basement door and the soil walled sump in the walkway. 5/5/04: Tipple sent a letter requesting cleanup details and documentation. certified mail # 7001 0360 0000 8150 4272 11/30/04: Sent letter requesting documentation of work 05/19/06: This spill is transferred from Mr.Koon to Q.Abidi. Called Keith Bartley at (917)669-1093. Left message to call me back. 06/23/06: Contacted to Kristen at (718)981-5710 she told temporary tank set

(Continued) **S105998994**

there. Mr.Keith Bartley didn't do
the complete job for this spill. She will find out the information
about the spill and she will
call me back. -QA 08/30/06: Called Keith Bartley and left message to
call me back. -QA 09/11/06:
Contacted Mr. Keith Bartley(917)669-1093 he said that he will send
closing confirmation letter very
soon. -QA 10/10/06: Mr. John Herbig (Intech Environmental)called me
and said he is going to take
soil samples from the basement after chemical analysis he will send me
the report for closing the
spill. -QA 10/19/06: Talked to John Herbig he said he has collected
soil samples from the basement
and sent to chemical lab for analysis as soon as he will get the
report he will send it to me. -QA
10/26/06: Contacted Mr. John Herbig he said that he received lab
results of soil samples he will
fax it to me. -QA 11/13/06: Mr. John Herbig (impact Environmental)
called me and said soil sample
report has come from the lab. He will mail me the report in a week.
-QA 11/16/06: Mr. John Herbig
called me and said that he has mailed me the soil sample report in
couple of days I will receive
that. The soil sample data which he faxed me is not readable. i am
waiting to receive his mail. -QA
11/27/06: Reviewed the Investigation Summary Report dated November 16,
2006 [in eDocs]. The report
presents soil sample results which indicate that a release of
petroleum has occurred and soil
contamination present at the site. The Department requires additional
investigation to determine if
there has been an impact to groundwater and to fully delineate soil
and groundwater contamination.
Sent a letter to Mr. Morris Arlos (owner) to prepare a Work Plan for
additional investigation and
submit it to Department within 30 days. -QA 12/14/06: Received letter
from Mr. Kevin Kleaka,
Project Manager (Impact Environmental) that additional investigation
activities are not possible in
the basement of the building due to limited place. He is going to
break the concrete of the
basement to excavate the contaminated soil. Additional soil samples
will be taken at the site after
excavation and removal of the contaminated soil to demonstrate the
effectiveness of the remedial
activities. -QA 12/20/06: Called Mr. Kevin Kleaka (Consultant and
Project Manager) at (631)269-8800
and said to make two temporary well at the side walk of 262 Alexander
Avenue to check the potential
impact of groundwater. Before that we will not review any remedial
plan. -QA 01/08/077: Received
phone call from John Herbig of Impact Envt'l, regarding DEC's request
for two groundwater samples
in sidewalk outside site building; he noted there is already a well in
sidewalk related to
investigations at 40th Police Precinct, across Alexander Ave. from
site. He asked if it would be

(Continued) **S105998994**

acceptable to just sample that well, rather than installing two new wells in sidewalk. After
reviewing location of existing well (MW-5 from 40th Precinct investigations) which is
west-northwest of ASTs in basement of site bldg, and location of soil sample with TAGM exceedance
for VOCs, SP-2, and considering that URS has established local groundwater flow direction at 40th
Pct. is to west-northwest, J. Kolleeny told Mr. Herbig that sampling of well MW-5 would be
acceptable to evaluate impacts to groundwater from this spill. After sampling well, Impact Envt'l
can prepare a remedial action plan. - J. Kolleeny 01/11/07: Talked to Mr. John Herbig at
(631)774-5597, received his fax regarding groundwater sample results. MTBE is high. [Only compound
greatly exceeding its GW std. was MTBE, suggesting main impact to GW is from 40th Police Precinct
across street to west.] Now Impact environmental can submit remedial action plan to DEC regarding
this spill. -QA 02/05/07: Called Mr. John Herbig (631)774-5597 and reminded him to send electronic
version single Pdf file for both the reports, Investigation Summary report and Corrected Action
Plan. After receiving that we will approve your plan. -QA 02/07/07: Reviewed the corrective Action
Plan dated January 29, 2007 for this site, submitted by impact environmental. The report proposes
excavation of an area of residual soil contamination beneath the basement floor at the site,
followed by collection of end-point soil samples. The corrective Action plan is approved. Letter
mailed out to responsible party. -QA 05/09/07: Called Mr. John Herbig (631)774-5597 and discussed
regarding spill. He said that at this site owner is waiting when all tenants will be relocated then
work will be started at this site. -QA 12/04/2007: This spill case was transferred to A. Doronova.
AD 12/06/2007: Called and spoke to Mr. John Herbig of Impact Env. regarding remedial action plan
implementation. He told me that First Alexander LLC was potential buyer and that this company is no
longer involved with this property, and due that RAP was not implemented at the site. Called to
Building Management (718) 601-5858 of this property. Spoke with a manager. He told that First
Alexander LLC is the current owner of this site. This company bought the property approximately one
year ago. Now this property under new contract for sale. Received a call from Mr. Morris Arlos -
the owner of First Alexander LLC. He confirmed that this property is now under contract. The
closing is scheduled on the beginning of January 2008. The new owner - Galaxy was informed about
the spill case and agreed to do site remediation, according to Mr.Morris Arlos. Contact person for
the Galaxy - Richard Sica, phone: (718) 601-7000. Will contact Galaxy

response from Ms. Belli of CPC. Called and left a message to Ms. Belli again. AD 12/09/2009: Called
and again could not reach Ms. Belli or Ms. Seyfert. Will send Remediation Needed Letter to Mr. John
McCarthy - vice president of CPC. AD 12/14/2009: Issued and sent Remediation needed Letter to Mr.
McCarthy of CPC. Response is due January 25, 2010. DL pdf copy to eDocs. AD 02/2010: Did not
receive any response. AD 09/12/2011: Was forwarded an e-mail from Nick Recchia regarding
implementation of the 2007 RAP.: Dear Mr. Paul John. Our client is ready to implement the approved
corrective action plan which was approved in 2007 and is attached. The contractor will have the
area of excavation open for DEC inspection this Wed. 9/14/2011. We would like to move forward in
closing this spill case file upon your inspection and reviews ASAP. If you could have someone
available to inspect the excavation this Wednesday it would be appreciated I will be on site to
collect endpoint soil samples. If you can give me a specific time to meet and co-ordinate for the
inspection that would be great. My contact information is below. My cell phone # is 516-395-8763.
Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. 55
Hilton Avenue, Garden City, NY 11530 Phone: (516) 746-4400 Fax (516) 746-4432
nrecchia@eeaconsultants.com Called and spoke with Mr. Recchia of EEA. EEA will overlook the
remedial excavation in the basement of the building and will collect a post-excavation endpoint
soil samples. Discussed this site with J. Kolleeny of DEC. It was decided that EEA can proceed with
RAP implementation. Decision on a closure of the spill will be made based on the results of
end-point soil samples. AD 09/13/2011: Received an e-mail from Mr. Recchia saying: Ainura. The
client contact is Telly Zervoudis. Please advise us ASAP we would like to move forward with closing
out this spill. Thanks. Galaxy General Contracting 3152 Albany Cresent Bronx, NY 10463
Tzervoudis@galaxygc.com Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called
and left a message to Mr. Recchia of EEA. Later spoke with him regarding RAP implementation. He
said that removal of contaminated soil will start tomorrow, and he expects that collection of
endpoint samples will be in a few days. Requested him to notify DEC about date of sampling. AD
09/14/2011: Received an e-mail from Mr. Recchia saying: Ainura, EEA is performing the remedial
action to excavate and remove soils as per the approved RAP. We anticipate collecting endpoint soil
samples tomorrow. EEA will prepare a full report of remedial action activities, endpoint sample
data, site photos, etc. signed and sealed by our engineer. Sincerely

(Continued) **S105998994**

Yours, Nicholas J. Recchia,
C.P.G. Vice President, Senior Hydrogeologist Called and informed Mr. Recchia that I cannot visit
the site on Thursday, September 15, 2011, due to the previously scheduled meeting. Requested to
take a pictures of the excavation, document all activities and to take PID readings. AD 09/27/2011:
Received an e-mail from N. Recchia saying: Ainura, Hope all is well. I was hoping you could help us
out here by taking a quick look at the endpoint results from the excavation. Our client wants to
backfill ASAP because it is in the building and they had to shore up the walls. All endpoint
samples were collected from the sidewalls of the excavation. The bottom of the excavation was
bedrock at a depth of 2 to 2 feet below floor grade. I reviewed the results and it appears that all
samples are below the new CP-51 Soil Cleanup Policy which replaces TAGM. I included a photo of the
excavation. I apologize for not having a table or drawing ready for you at this time but we want to
backfill this ASAP. I will prepare a full report and send it to you next week. Thanks for your
help. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Looked at the submitted
data. No exeedances of VOCs or SVOCs levels were detected in all six endpoint soil samples. Asked
Mr. Recchia to submit a sketch of the excavation with locations of the soil samples. Later received
the requested sketch. Approved the backfill of the excavation. AD 10/17/2011: received an e-mail
from Mr. Recchia saying: Ainura, Attached please find our final remedial action report for this
property. Please review and let me know the spill status. Thanks you. Nicholas J. Recchia, C.P.G.
Vice President, Senior Hydrogeologist EEA Inc. DL the report to eDocs. Will review. AD 10/26/2011:
Reviewed the report. It states that EEA performed remedial excavation of contaminated soils in the
vicinity of the former AST s area. A total of 14.4 tons of contaminates soil was removed off-site.
Post-excavation end-point soil samples were collected on September 15, 2011 from 6 sidewalls
locations. No bottom soil samples were collected due to presence of a shallow bedrock, which was
found at a depth of 1.5’ to 2.8’ below the basement floor level. According to the analytical data,
no VOCs or SVOCs were detected above NYSDEC standards. Based on the result, EEA concludes that
contamination was removed and recommends spill case closure. The submitted site map is different
from site maps presented by previous consultant. To clarify this difference with Mr. Recchia. Will
discuss spill closure request with J. Kolleeny of DEC. AD 10/27/2011: Discussed the site with J.
Kolleeny. To ask MR. Recchia if there are any sumps in the basement to be checked for presence of

(Continued) **S105998994**

LNAPL or product sheen. AD 10/28/2011: Called and spoke with Mr. Recchia. Requested to clarify
excavation location on the site map, and info on sumps. Sent him an e-mail with an attached site
plan saying: Mr. Recchia: Could you please verify location of the excavation completed by EEA on
this site plan? Also, if there are any sumps in the basement they should be checked for presence of
LNAPL or product sheen. AD 01/03/2011: Received an e-mail from Mr. Recchia saying: Ainura, Sorry
for the confusion. Our drawing is somewhat misleading I can see your concern and confusion. I have
revised our drawing and it is in the area of the former AST's and SP-2 area. We didn't focus on the
whole basement location in our drawing only the former tank area and area around SP-2. Sorry for
the confusion. I have revised the drawing. I hope this helps. EEA did not observe any basement
sumps in the building. Sincerely, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist
Reviewed the submitted site map. Soil was excavated in the area of the former AST's and soil boring
SP-2 area. DL the revised site map to eDocs. Will issue a closure approval letter. AD 11/04/2011:
Sent a Spill Closure approval letter to Telly Zervoudis of Galaxy General Contracting Corp. at 3152
Albany Crescent, Bronx, NY 10463 via e-mail: Tzervoudis@galaxygc.com. DL pdf copy of the letter to
eDocs. Case closed. AD

DEC Memo:	12/4/14- Spoke to Ray Lara from PTC. He said they cleaned and emptied he tank. They tested the tank and failed. They are going to perform the isolation test. 2/20/15-Mark Salamack from PTC sent an email dated 2/9/15 with the following information. The one on Lenox Avenue and the one on 5th Avenue are both in the same complex called the Savoy...whose main address is 45 West 139th Street in Manhattan...these are both above ground tanks that were tested when they went from #6 oil to #2 oil...both had a problem with the way an electronic gauge was connected on top of each tank...there was no contamination or spilled oil in either case...they have both been retested and passed the tightness tests...as we have not been paid yet for the job we have not sent anything to you to get the spill #s closed. Based on the information that the gauge was repaired, there was no contamination or spill in this site and the tank system was retested and past the test this spill is closed

Record Added Date:	09/10/2019
Record Updated Date:	01/03/2023
Update By:	AMSERVIS
Site Description:	"Location: The site is located within an urban area at 2455 and 2457 Third Avenue, Bronx, NY. The approximately 19,900 square-foot (0.45 acres) site is identified on the Bronx County Tax Map as Block 2319, Lots 38 and 39. The site is bounded by East 135th Street/the Major Deegan Expressway followed by a hotel to the northeast, Third Avenue/Third Avenue Bridge ramp followed by commercial buildings to the southeast, a mixed-use commercial/residential building to the southwest, and a parking lot and an active construction site to the

2455 THIRD AVENUE (Continued) **S125465258**

northwest. Site Features: The site is undergoing redevelopment. Current Zoning and Land Use: This site is currently vacant and is zoned M1-3/R8, which allows for light manufacturing and high density residential commercial district. The adjoining parcels and surrounding area are used for industrial/manufacturing, and commercial purposes. Past Use of the Site: Historical site use includes multiple two- and three-story residential and commercial buildings on the site (1891), a carpet storage facility on the southern part of the site (1908), and a rail yard (1935 - 1951). The site was an asphalt-paved lot in 1995. In 1998, a one-story building of unknown use was present on the southeastern part of the site, with parking located on the northeastern portion of the site. From 2006 to 2017, the site contained a building on the southwestern part of the site occupied by Bridge Building Supply. The site is currently vacant and is covered by the concrete slab of the recently demolished warehouse as well as a concrete-paved lot. Site Geology and Hydrogeology: The site is underlain by fill material predominantly consisting of brown, fine-grained sand with varying amounts of silt, gravel, tile, metal, concrete, brick, glass, wood, and slag. The fill was observed to depths varying between about 6 and 9.5 feet below ground surface (bgs). Historic fill is generally underlain by fine-grained sands with varying amounts of silt, clay, organic material, and gravel. In the western portion of the site, historic fill is underlain by a 1- to 5- foot thick clay/peat layer with organic material (between 8 and 16 feet bgs) followed by sand. Bedrock was not encountered during the previous site investigations. Groundwater is present at depths of approximately 8 feet below grade surface at the site. Groundwater flows to the west. "

Env Problem:	"Remediation at the site is completed. Prior to remediation, the primary contaminants of concern include SVOCs and metals in soil. Remaining contamination will be managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

101 EAST 150TH STREET (Continued) **S129283531**

Update By: AAOBLIGA
Site Description: "Site Location and Site Features: The current owner, 586 River Ave., LLC (the Requestor), proposes to redevelop the property located at 101 East 150th Street in the Borough of the Bronx (the Site) with a new building for a 2,400-student charter school. Alternate addresses for the Site include 586 River Avenue, 580 River Avenue and 595 Gerard Avenue. The Site has coordinates of Latitude - 40 49 15 , Longitude - 73 55 45 based on the World Geodetic System of 1984 (WGS84) standard. The Site is comprised of one New York City (NYC) tax lot (Bronx Block 2354, Lot 1) and is 99,109 square feet (approximately 2.27 acres) in area and is bound to the north by a NYC-owned surface parking lot (151 Street Lot South), to the east by Gerard Avenue, to the south by East 150th Street, and to the west by River Avenue. The Site is currently occupied by a 2-story warehouse with cellar that has a building footprint of 30,345-square feet on the southern portion of the property. The cellar and first floors are used as a self-storage facility, operated by Treasure Island Storage. The second floor is occupied by a school (the New York City Children s Center, also known as P.723XatBronx Children s School). The northern portion of the property is a parking lot for the building and parking area for buses and delivery trucks. The parking lot is approximately 68,628 square feet, 69% of the lot area. Current Zoning and Land Use: The Site is located in the Lower Concourse neighborhood of Bronx, New York in an area zoned for light manufacturing (M1-2) use and is comprised of a rectangular-shaped parcel identified as Block 2354, Lot 1 on the NYC Department of Finance (DOF) Tax Map. The Site is located in a mixed industrial, commercial, and residential neighborhood. The nearest residential properties are located approximately 50 feet to the south (across East 150th Street) and 150 feet to the east (along Walton Avenue). The boundaries of the Site correspond to the current tax map boundaries. The Site is currently being occupied by a commercial self-storage facility and a school as tenants of the former owner (580 Gerard LLC). The school is operating pursuant to a special permit issued by the BSA in 2004 (BSA Cal. No 05-04-BZ). The new use for the site, which will require the removal of the existing building and the construction of a new building, will be as a 2,400-student K-12 charter school, a use that would require a new special permit from the BSA. A school is a permitted use in the zoning district but requires the issuance of a special permit by the New York City Board of Standards and Appeals (BSA). Past Use of the Site: Records from 1891 through the early-1900s, show the Site as athletic fields. By the late-1900s, the Site was used as a lumber storage yard. By early 1930s until 1950, the Site was used as an athletic field / recreational facility with a club house. In 1952, the building occupying the southern portion of the Site was constructed. The rest of the property was used as athletic fields and then later converted into a parking area for the building. The 2-story building with a cellar first used by a shoe factory (National Shoes) as office and warehouse (from ca 1952 to 1981) and an electronic parts manufacturer (Welbilt Electronic Die Corp/Wedtech) (from ca 1984 to ca 1990s). By 2001, the property was foreclosed, and ownership was transferred to Marty and Dorothy Silverman Foundation, and eventually donated to the St. Luke s Roosevelt Hospital Center. The property was then sold to Gerard Avenue LLC, which began converting it to a self-storage facility (American Storage). In 2003, the NYC DOB granted a change of use of the building s cellar and ground floor from electronic part manufacturing to commercial

101 EAST 150TH STREET (Continued) **S129283531**

self-storage use; and the change of use of second floor of the property from office spaces to classrooms and instructional spaces. In 2019, the Site was sold to 580 Gerard LLC (Treasure Island Storage), which continued the self-storage and school operations at the property. The northern portion of the Site is used for parking. The Requestor purchased the Site from 580 Gerard LLC on December 29, 2021 (ACRIS document ID 2022011200728001). Neither the Requestor, nor Success Academy Charter Schools is owned by or in any way affiliated with any of the prior owners or operators of the Site. No previous remedial activities have been implemented at the Site. Site Geology and Hydrogeology: According to the 1992 USGS publication Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties (Baskerville 1992), Bronx County is underlain by high grade metamorphic bedrock consisting of a sequence of Cambrian and Ordovician gneiss, schistose-gneiss, and marble. The bedrock beneath the Site is expected to be the Inwood Marble, (white calcite-dolomite) interlayered with units of Walloomsac and Manhattan Schists. The Geotechnical Engineering Report by GZA, dated April 15, 2022 observed bedrock between 50 feet and almost 100 feet below ground surface with an average depth of approximately 70 feet. The eastern portion of the Site along the Gerard Avenue is at an elevation (EL) corresponding to EL +23 to EL +27 feet North American Vertical Datum of 1988 (NAVD88). The topography along River Avenue is lower and ranges between EL +15 and EL +21 feet. The Parking area is cut down from the adjacent street elevations and ranges between EL +8 and EL +12 feet. Regionally, the topography slopes westward down to approximately EL +8 feet. The nearest water body is the Harlem River located 750 feet west of the Site. The GZA Geotechnical Engineering Report identified fill material, consisting of fine to coarse sand containing up to 35 percent gravel, up to 35 percent silt or clayey silt, and varying amounts of brick, glass, or concrete fragments (Fill) was encountered below the surface cover at each boring across the entire Site. The bottom of the Fill layer ranged between EL +0.5 and EL +9 feet across the Site. During the geotechnical study, groundwater levels in an observation well were measured between 8.9 and 9.1 feet below the parking area grade, which corresponds to approximately EL +2.8 and EL +3.0 feet. The anticipated groundwater flow direction is west towards the Harlem River. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, poly-chlorinated biphenyls (PCBs), metals and per- and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. Soil Several VOCs were detected in soil 3-12 feet below grade surface (bgs) above the Protection of Groundwater soil cleanup objectives (PGSCO) and Residential SCO (RRSCO). 1,2,4-trimethylebenzene was detected at a maximum concentration of 150 parts per million, or ppm (PGSCO value of 3.6 ppm and RSCO value of 47 ppm), 1,3,5-trimethylebenzene was detected at a maximum concentration of 59 ppm (PGSCO value of 52 ppm and RSCO value of 47 ppm), trichloroethene (TCE) was detected at a maximum concentration of 150 ppm (PGSCO value of 0.47 ppm and RSCO value of 10 ppm), tetrachloroethene (PCE) was detected at a maximum concentration of 12 ppm (PGSCO value of 1.3 ppm and RSCO value of 5.5 ppm), and cis-1,2-dichloroethene was detected at a maximum concentration of 11 ppm (PGSCO value of 0.25 ppm and RSCO value of 29 ppm). Several SVOCs such as benzo(a)anthracene was detected at a maximum concentration of 17 ppm (PGSCO value of 1.7 ppm and RSCO value of 1 ppm),

101 EAST 150TH STREET (Continued) **S129283531**

benzo(a)pyrene maximum concentration of 17 ppm (RSCO value of 1 ppm and PGSCO value of 1.7 ppm), and benzo(b)fluoranthene maximum concentration of 14 ppm (RSCO value of 1 ppm and PGSCO value of 1.7 ppm). Metals such as lead was detected at a maximum concentration of 1,030 ppm (PGSCO value of 450 ppm and RSCO value of 400 ppm). No Polychlorinated biphenyls (PCBs) were detected at concentrations exceeding the RSCOs. No pesticides were detected at concentrations exceeding the RSCOs. Regarding PFAS, perfluorooctanesulfonic acid (PFOS) was detected at a maximum concentration of 0.00159 ppm exceeding the protection of groundwater value of 0.00037 ppm, but below the residential value of 0.0088 ppm. Groundwater - Several petroleum VOCs were detected in groundwater monitoring wells. 1,2,4-trimethylebenzene was detected at a maximum concentration of 1,900 parts per billion (ppb) exceeding Ambient Water Quality Standards (AWQS) of 5 ppb. 1,3,5-trimethylebenzene was detected at a maximum concentration of 820 ppb (AWQS of 5 ppb). Ethylbenzene was detected at a maximum concentration of 290 ppb (AWQS of 5 ppb). 1,1,1-Trichloroethane was detected at a maximum concentration of 10 ppb (AWQS of 5 ppb). Cis-1,2-Dichloroethene was detected at a maximum concentration of 9.4 ppb (AWQS of 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 31 ppb (AWQS of 5 ppb). Two SVOCs, benzo(a)anthracene was detected at a maximum concentration of 0.05 ppb (AWQS value of 0.002 ppb) and naphthalene was detected at a maximum concentration of 290 ppb (AWQS of 10 ppb). Dissolved metals are consistent with urban background concentrations. No Polychlorinated biphenyls (PCBs) were detected exceeding their respective AWQS. Regarding pesticides, dieldrin was detected at a maximum concentration of 0.008 ppb exceeding their respective AWQS of 0.004 ppb. Regarding PFAS, PFOS was detected at a maximum concentration of 30.9 parts per trillion (ppt) and perfluorooctanoic acid (PFOA) at a maximum concentration of 48.1 ppt, which exceed the NYSDOH maximum contaminant level (MCL), or drinking water standard of 10 ppt each. Soil Vapor - Several chlorinated VOCs were detected in soil vapor and indoor air samples. 1,1,1-Trichloroethane was detected in soil vapor samples at a maximum concentration of 52,200 micrograms per cubic meter (ug/m3). 1,1-Dichloroethane was detected in soil vapor samples at a maximum concentration of 68,400 ug/m3. Cis-1,2-dicholorethene was detected in soil vapor samples at a maximum concentration of 218,000 ug/m3. Trichloroethene (TCE) was detected in soil vapor samples at a maximum concentration of 59,700 ug/m3 and in indoor air samples at a maximum concentration of 0.81 ug/m3. Tetrachloroethene (PCE) was detected in soil vapor samples at a maximum concentration of 23,300 ug/m3 and in indoor air samples at a maximum concentration of 62.5 ug/m3. "

Health Problem: "Since the site is covered with pavement and a building, people will not come into direct contact with contaminated soil or contaminated groundwater unless they dig below the surface. The area is served by a public water supply that is not affected by the groundwater contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The building on the site is currently occupied and actions are needed to address indoor air impacts due to soil vapor intrusion. Also, the potential exists for the inhalation of site contaminants due to soil vapor intrusion both off-site and for any future on-site redevelopment. "

Site Description:	"Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling

BRONX POINT (Continued) **S127480939**

facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm

BRONX POINT (Continued) **S127480939**

(RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Description:	"Location: The site is located at 575 Exterior Street and identified

BRONX POINT (Continued) **S127480939**

on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is

BRONX POINT (Continued) **S127480939**

0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

BRONX POINT (Continued) **S127480939**

include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code:	577942
Site Description:	"Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "
Env Problem:	"Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs),

BRONX POINT (Continued) **S127480939**

pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air

Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in

BRONX POINT (Continued) **S127480939**

groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 577942
Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to

BRONX POINT (Continued) **S127480939**

remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but

BRONX POINT (Continued) **S127480939**

these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002

BRONX POINT (Continued) **S127480939**

ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Code: 577942
Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site:

BRONX POINT (Continued) **S127480939**

Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic

BRONX POINT (Continued) **S127480939**

acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

Site Description: "Location: The site is located at 575 Exterior Street and identified on the Tax Map as Block 2356, Lots 2,10 and part of 6 in the West

BRONX POINT (Continued) **S127480939**

Concourse neighborhood of the Bronx, NY. The site is about 194,772 square feet (4.471 acres) and bounded by Mill Pond Park to the north; the elevated Major Deegan Expressway and Exterior Street to the east; East 149th Street/145th Street Bridge followed by a recycling facility to the south; and a railroad right-of-way followed by the Harlem River to the west. Site Features: The site is currently comprised of the proposed 23-story tower development under construction. Current Zoning and Land Use: The site is currently under construction and located in a R7-2 (residential)/C2-5 (commercial) mixed-use district and is within the Special Harlem River Waterfront District. The adjoining parcels are used for commercial and light industrial purposes, with the surrounding area generally consisting of residential, commercial, light industrial, and institutional (schools and churches) use. Past Use of the Site: Historic operations at the site include a lumberyard and sawmill (1891-1908), a machine shop (1908), a coal yard (1908-1935), a New York Edison Company facility (1922), and a railroad freight yard (1908-1980). From 1980 the site was vacant until remedial construction started in 2021. Records indicate that from about 1977 through 2007 three buildings were located on the eastern side of the site, which were then demolished. Site Geology and Hydrogeology: Site soils consist of historic fill in the top 24 feet, underlain by alternating layers of clay, silt, sand and bedrock. Bedrock is present at depths ranging from about 67 feet below ground surface (ft-bgs) to 78 ft-bgs, sloping from east to west. Groundwater is present at depths of about 6 to 13 ft-bgs and flows north/north west towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation of the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) associated with visually petroleum-impacted soil and historic fill and also metals primarily found in historic fill. Two volatile organic compounds (VOCs) were detected at concentrations exceeding ambient water quality standards and soil vapor exhibited elevated levels of contamination from chlorinated VOCs (CVOCs). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use under a track 4 cleanup which included excavation, a site cover, ISCO treatment of the groundwater and sub-slab depressurization to mitigate soil vapor impacts. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan. Prior to Remediation: Soil and groundwater were analyzed for (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and emerging contaminants (ECs). Based upon investigations conducted, the primary contaminants of concern include petroleum-related SVOCs and metals in soil, and petroleum-related SVOCs in groundwater. Soil - No VOCs were detected above the restricted residential use soil cleanup objectives (RRSCOs). Eight SVOCs, mainly PAHs, were detected at concentrations above the RRSCOs in 29 soil borings. These PAHs were associated with visually petroleum-impacted soil and in historic fill collected at depths from 0 to 24 feet below ground surface (bgs). The maximum concentrations include benzo(a)anthracene at 16.6 parts per million (ppm) (RRSCO is 1 ppm), benzo(a)pyrene at 17.5 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 14.1 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 12 ppm (RRSCO is 3.9 ppm), chrysene at 14.2 ppm (RRSCO is 3.9ppm), dibenzo(a,h)anthracene at 3.43 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at 9.98 ppm (RRSCO of 0.5 ppm), and

BRONX POINT (Continued) **S127480939**

naphthalene at 14.40 ppm (RRSCO is 100 ppm). Several metals were detected at concentrations above the RRSCOs in soil, including arsenic at 41.9 ppm (RRSCO is 16 ppm), barium at 2,710 ppm (RRSCO is 400 ppm), cadmium at 6 ppm (RRSCO is 4.3 ppm), cyanide at 1,290 ppm (RRSCO is 27 ppm), lead at 6,600 ppm (RRSCO is 400 ppm), and mercury at 24.6 ppm (RRSCO is 0.81 ppm). They were primarily found in historic fill at depths from 0 to 24 feet bgs. No PCBs, pesticides or herbicides were detected above RRSCOs. No standards currently exist in New York State for 1,4-dioxane or per- and polyfluoroalkyl substances (PFAS) in soil, so soil sample concentrations were compared to NYSDEC screening values of 0.1 ppm for 1,4-dioxane and 1 part per billion (ppb) for PFAS. 1,4-dioxane was not detected in soil samples. One or more of eight individual PFAS compounds were detected in 18 of 22 soil samples analyzed for PFAS. Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were detected above the NYSDEC PFAS screening value of 1 ppb at a maximum concentration of 5.39 ppb. Data does not indicate any off-site impacts in soil related to this site. Groundwater - One VOC, 1,2,4-trimethylbenzene, was detected at a concentration above the ambient water quality standards (AWQS) of 5 parts per billion (ppb) at a concentration of 7.57 ppb. Seven PAHs namely, benzo(a)anthracene at 1.32 ppb (AWQS is 0.002 ppb), benzo(a)pyrene at 1.52 ppb (AWQS is non-detect), benzo(b)fluoranthene at 1.21 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 1.3 ppb (AWQS is 0.002 ppb), chrysene at 1.39 ppb (AWQS is 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.871 ppb (AWQS is 0.002 ppb), and naphthalene at 14.2 ppb (AWQS is 10 ppb) were detected in nine monitoring wells. Iron, magnesium, manganese, selenium and sodium were the only metals detected above AWQS, but these are associated with the site s proximity to saline surface water. Levels of PFOS and/or PFOA was detected above the NYSDEC screening level of 10 ppt in all groundwater wells with PFOS at a maximum concentration of 86.9 parts per trillion (ppt) and PFOA at 45.7 ppt. 1,4-dioxane was detected above the NYSDEC screening level of 1 ppb in one groundwater sample collected from monitoring well MW06 at 2.2 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor - Chlorinated VOCs including tetrachloroethene (PCE) and vinyl chloride were detected in soil-vapor samples. PCE was detected at a maximum concentration of 7.3 micrograms per cubic meter (g/m3). Vinyl chloride was detected at a maximum concentration of 60 g/m3. As no occupied structures exist at the site, no subslab or indoor air samples were taken. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining contamination."

DEC Memo:	4/1/21-Zhune- Woo Kim sent the following email- I am looping in the NYSDEC BCP team. We called in a spill because petroleum-impacted water and petroleum sludge was released onto soil and groundwater during the removal of underground storage tanks. These tanks were identified during the excavation of a petroleum hotspot and will be decommissioned by an FDNY-certified contractor. The spill will be remediated under the NYSDEC Brownfield Cleanup Program. The NYSDEC project manager is Shaun Bollers, who has been cc d in this response.
Remarks:	2 USTs discovered during excavation of site. Contained and cleanup is pending.

DEC Memo: 12/07/05: This spill transferred from J.Kolleeny to S.Kraszewski.

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

09/23/10: J.Kann - spill
transferred from K. Tang to J.Kann. 5/29/12: J.kann - since little is known about this facility, a
P0 priority was assigned. 10/23/13: J.Kann - a work plan was submitted and edoced under 9005760.
01/07/14: J.Kann - revised IWP approved on 12/23/13. There was some confusion between the two
Mitchell Houses. The revised IWP only covers Alexander Avenue. SIR due 6/23/14. Site included in
the multi site stip sent to NYCHA today. 12/12/14: J.Kann - SIR submitted to DEC on 10/15/14 after
an approved extension. The report was reviewed and it required revisions due to the confusion of
the two Mitchell houses. The revised report was email to the Department on 12/11/14. Six soil
borings were advanced and three wells were installed. Results of the twelve soil samples collected
for analysis of VOCs and SVOCs yielded no exceedences of CP-51. All groundwater concentrations were
below TOGS 1.1.1. NFA. Spill closed.

Remarks: CALLER WAS REMOVING TOPSOIL TO REMOVE TANKS AND REALIZED SOIL WAS CONTAMINATED. CONTRACT WORK WAS STOPPED UNTIL DEC NOTIFIED.

DEC Memo:	12/23/22 - Kim - I received a follow-up call from Ryan McPherson with NYCHA. NYCHA crew responded to the site to clean up the heating oil that seeped up from the leaking fill line. Remediation work will be scheduled for next week. 12/27/22 - Kim - I received a follow up email from NYCHA McPherson that the initial remediation at the Mitchel spill # 2207895 was done on 12/23/22. Remediation pressure washed and vacuumed all affected areas. Areas where soil was impacted was covered in a plastic tarp and staked to prevent additional infiltration. The area to be soft dug was approximately 10ft by 50ft by 1ft. Photos after work done on 12/23/22 were received via email. 4/4/23 - Kim - NYCHA McPherson submitted soil sampling data on 3/31/23. Soil data shows one exceedance of Unrestricted Use Soil Cleanup Objectives in sample M3 with Total Xylenes at 730ug/kg (Unrestricted Use SCO at 260ug/kg) but below Residential Restricted Use SCO at 100,000ug/kg. Gross contamination from the spilled oil was removed. No further remediation is required. Spill case closed. 11/14/23 - Kim - Spill case reopened based on oil found in basement sump at Mitchel Houses that was reported in Spill 2300847. Further information required regarding remediation work done in response to the spill and the condition of the fill line.
Remarks:	underground fill line leaking cleanup pending soil only

DEC Memo:	5/1/23 - Kim - Desk Duty - I called McPherson with NYCHA. An unknown oil was found in the ejector pit in the afternoon and the ejector pit sump was shut off to prevent discharge. NYCHA described the oil as being golden-brown in color and the oil did not have a fuel odor. It is possibly hydraulic oil from an unknown source. NYCHA checked the elevator shafts and did not find any spilled oil or liquids. NYCHA collected a sample of the oil for ID. NYCHA is using a vacuum truck to remove the unknown oil from the ejector pit. NYCHA was not sure how much oil was in the ejector pit as over 1,000gal was pumped out and there was more liquid that needed to be pumped out. The unknown oil was found following a significant rain event over the weekend. NYCHA is investigating the spill and the source of the unknown oil. 5/2/23 - Kim - Scheduled site visit with NYCHA McPherson. Oil was still coming into the basement at 205 Alexander Ave. The oil appeared to be mostly clear on top of water and there was not a noticeable sheen. Location of oil impacted sump

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

and monitoring well are on the southern side of 205 Alexander Ave. The oil did not give off the odor of No. 2 Fuel Oil. I discussed my observations with DEC Austin and this unknown oil could be hydraulic oil or dielectric feeder oil. Based on Spills Database, a Con Ed Feeder appears to have been located on E 138th St in the Bronx north of this spill site. In the Spills Database, I found older Con Ed spills in the area, but I did not find a recent feeder leak. 5/4/23 - Kim - I received a follow up email from NYCHA McPherson that the sample went in 5/3/23 with a 5-day TAT. On 5/3/23, 205 Alexander was still getting the same flow of oil in the basement as on 5/2/23. 5/17/23 - Kim - I received a copy of the lab report from NYCHA McPherson which found the sample contained 120,000mg/L of Gasoline Range Hydrocarbons and 910,000mg/kg of Unidentified TPH. The TPH sample results included the comment that Petroleum hydrocarbon chromatogram most closely resembles diesel fuel / fuel #2. I called NYCHA McPherson and he stated that there was still oil coming into the basement. NYCHA is currently using engineering controls (absorbent pads to prevent oil from discharging with water from the basement ejector pit but it was ineffective as most of the oil is floating on top of the flowing water) and is planning to schedule the final cleanup using a vac truck when the flow of oil subsides. I contacted Con Ed and this does not appear to be from a recent feeder leak. I asked Con Ed to check into this possibly being a dielectric fluid spill. Con Ed responded that Con Ed STO only has solid dielectric feeder 12 blocks away and there are no oil filled feeders near the spill location; Con Ed Electric Operations has not reported any distribution issues in the area. 6/6/23 - Kim - See spills on E 138th St in the Bronx in the vicinity of the Mitchel Houses and reported within the last 10 years listed below: Spill 2207895: Reported 12/23/22 as a spill from the NYCHA UST fill line. NYCHA crew responded to the site, cleaned up the heating oil that seeped up from the leaking fill line, and covered the area with poly. Remediation work to hand dig the fill line was completed and endpoint soil samples were completed 2/24/23 indicating that the contaminated soil was removed. Spill 1809262: EMIS 270019. Excavation on 3rd Ave and E 138th St located around the corner 0.2mi from 205 Alexander. Con Ed reportedly found lube oil; Sample 18-08700-001 contained less than 2.00ppm PCB but Sample 18-08700-003 contained 12.00ppm PCB. Spill 1707595: 255 E 138th St located around the corner 0.2mi from 205 Alexander. Con Ed reported finding cable oil contaminated soils while excavating in the street, 44 tons of soil and liquids was removed. Closed 3/15/19.

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

Previous spills in the vicinity
and reported within the last 15 years include: Spill 1101731: Con Ed Vault at 206 E 138th St
located 0.25mi from 205 Alexander. Con Ed reportedly found lube oil in a vault at 206 E 138th St.
Spill 0890203: Con Ed Manhole in front of 285 E 138th St located around the corner 0.2mi from 205
Alexander. Con Ed found 2pt of oil from uncapped cable ends. Spill 0814310: Park Ave & E 138th
located 0.3mi from 205 Alexander. Limited information in Spill Report. Con Ed Equipment failure,
Utility Conduit, Dielectric fluid... Prior, 15.3 years ago, Spill 0710643 at 220 E 138th St.
Vacant/commercial lot removed four 550gal USTs Based on the history of reported spills on E 138th
St, it appears that there have been prior excavations and underground structures where prior spills
of Con Ed dielectric cable oil and spills from unknown sources of lubricating oil were found.
6/12/23 - Kim - On 6/8/23, I met NYCHA McPherson on site and we grabbed a sample of the unknown oil
from the monitoring well located next to the UST at 205 Alexander Ave. From a visual inspection of
the sample, the liquid was black to dark brown in color and appears amber when held up to the
light. The liquid also appeared to have low viscosity in comparison to known petroleum product
samples, less viscous than dielectric oil, and most similar in viscosity to diesel or no. 2 fuel
oil. Based on this visual inspection and the odor of the collected sample, this unknown oil appears
to be weathered No. 2 fuel oil. 6/22/23 - Kim - I contacted Ryan with NYCHA who reported that
recently NYCHA has intermittently observed oil in the basement sump of 205 Alexander Ave. Ryan will
have the active, in-use UST system tightness tested as requested by DEC. 7/13/23 - Kim - Site
history: Spill 2207895 - On 12/23/22, NYCHA reported an overfill of the tank system that spilled
onto the grass surface and was cleaned up. The majority of impacted soil was removed and disposed
of by NYCHA. Residual contamination based on endpoint soil samples collected 2/24/23 only had minor
exceedances of SCOs. The spill site is registered under PBS 2-473243. The Mitchel Houses have 3 in
service USTs, 3 closed and removed tanks (closed 7/1/98), and 1 tank closed in place (5/1/98). The
3 in service USTs were installed 7/1/98, contain no. 2 fuel oil in double-walled fiberglass coated
steel tanks with leak detection (interstitial electronic monitoring, auto tank gauge), overfill
protection (high level alarm, automatic shut-off), suction dispenser, underground/on-ground piping,
flexible piping, etc. Nearby sites searched by using UIS (E 138TH ST, E 137TH ST, 3RD AVE- LINCOLN
AVE/ALEXANDER AVE/ WILLIS AVE, E 136TH ST, E 135TH ST) and DECinfo Locator. Groundwater in the area

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

generally flows to the west-southwest, i.e. potential off-site source of oil is to the east-northeast (based on information from BCP C203056 and C203057 files). PBS 2-197637 St. Jerome Church at 230 Alexander Ave 0.1mi NE from 205 Alexander. PBS Registration Expired 7/20/2007. Tank in service 3,000gal containing no. 2 fuel oil. PBS 2-218421 270 Alexander Ave HDFC 0.1mi N from 205 Alexander. PBS Registration current and expires 6/26/2027. 1 Tank in service, 1,800gal steel AST-contact w/soil containing no. 2 fuel oil. PBS 2-342807 40 PCT at 257 Alexander Ave 0.1mi N from 205 Alexander. PBS Registration current and expires 12/14/27. 2 Tanks in service, 550gal and 2,400gal containing no. 2 fuel oil. PBS 2-482595 Westbury Ct. East 138th St. Corp. at 361 E 138th St 0.14mi NE from 205 Alexander. PBS Registration Unregulated/closed. PBS 2-473332 416 E 137th St NYCHA Mitchel Houses Management Office 0.2mi E from 205 Alexander. In other directions: PBS 2-351679 P.S. 154 - Bronx X154 at 333 E 135th St 0.1mi SE from 205 Alexander. PBS Registration current and expires 6/28/2023. 2 Tanks in service, 7,500gal each, containing no. 4 fuel oil. PBS 2-607817 Los Peguero Repair Shop at 209 E 138th St 0.3mi NW from 205 Alexander. Four tanks no. 001, 200, 300, 400 were closed in place. Tank 1 remains in service and contains 250gal of waste oil/used oil. PBS 2-318825 220 E 138th St 0.3mi W from 205 Alexander. Four 550gal tanks that contained gasoline were removed. Tank 001 that contained 3,000gal of no. 2 fuel oil was closed in place. BCP sites BCP C203056 Borinquen Court 271 - 285 E. 138th St located to the north of the site. Groundwater is approximately 15 feet below surface grade at the Site and flows to the west-southwest. Track 4: Restricted use with site specific soil cleanup objectives. From Work Plan.BCP.C203056.2020-11-02.Revised SMP, Based on the surveyed well elevations and the depth to water measurements recorded during prior investigations, groundwater is approximately 15 feet below surface grade at the Site and flows to the west-southwest. Hydrogeological evaluations completed during prior monitoring at the Site indicated a groundwater flow direction to the southwest in the overburden aquifer. Groundwater elevation data and groundwater monitoring well construction logs are available in prior reports including the RIR, FER, and subsequent investigations completed by AKRF in 2015 and 2016. BCP C203057 Former G & C Services 255 East 138th St located 0.19mi to the northwest of the site. From DecDocs file Work_plan.BCP.C203057.2018-02-13.SMP_revised_February_2018.pdf Section 2.2.3 Hydrogeology, Depth to groundwater varies across the Site between approximately 4.75 and 6.5 feet below grade surface,

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

according to the RIR prepared by Brinkerhoff in May 2013. The inferred groundwater direction is
towards the west to southwest. SSF N 203051 Rider Ave Gas Station 0.2mi northwest. BCP C203047 2477
3rd Avenue Property 0.19mi west. 7/11/23 - Kim - Follow up with PBS 2-197637 St. Jerome Church at
230 Alexander Ave 0.1mi NE from 205 Alexander. PBS Registration Expired 7/20/2007. PBS record
indicates tank was in service 3,000gal steel UST containing no. 2 fuel oil. Based on proximity and
the expired registration, this tank may have spilled oil. Further, groundwater flow direction to
the southwest in the overburden aquifer would suggest that the source of oil is likely to the
northeast. 8/17/23 - Kim - Joint inspection with DEC Zielinski performed on 8/10. 3 PBS facilities
- there were violations of PBS regulations but no clear source of the spill impacting 205 Alexander
Ave. PBS 2-218421 270 Alexander Ave HDFC had 1 tank in service. This facility did not appear to be
the source of oil but there appeared to be some oil present floating on water in a floor drain in
the basement. PBS 2-342807 40 PCT at 257 Alexander Ave had 2 Tanks in service, 550gal and 2,400gal
containing no. 2 fuel oil and did not appear to be the source of oil. PBS 2-197637 St. Jerome
Church at 230 Alexander Ave had 2 tanks; one of these tanks was not registered with PBS. There was
also some oil present in the basement boiler room sump pit. PBS is requiring the facility to
perform a tank tightness test; records must be submitted to DEC by 9/14/23 - NOV letter dated
8/15/23 sent by PBS. An additional inspection was performed at 269 Alexander Ave, a residential
building that appeared to be unoccupied currently and under construction. The building had an
unregistered tank with a capacity greater than 1,100gal. PBS will be requiring the respondent to
perform a tank tightness test - correspondence pending additional information requested by PBS.
10/31/23 - Kim - Ryan McPherson reported that 205 Alexander Ave reported finding some oil in the
basement sump. Absorbent pads will be used to remove as much oil as possible. The monitoring well
located next to the UST at 205 Alexander Ave that had product previously had one inch of oil on
water today. The source of the spill remains unknown. 11/3/23 - Ye - Received an update from Ryan
that oil was found again in the sump (second time this week, becoming a nuisance). They say it's
been tested and not their oil because it's golden brown and not dyed. Said I will update the notes
and DEC Kim, who can follow up next week. 11/7/23 - Kim - I searched for spills in the Bronx in the
vicinity of the Mitchel Houses and reported from 11/6/23 to 10/18/22 and found 5 spills: 2207895 -
see above... Reported 12/23/22 as a spill from the NYCHA UST fill

MITCHELL HOUSES -NYCHA (Continued) **S103036974**

line. NYCHA crew responded to the
site, cleaned up the heating oil that seeped up from the leaking fill
line, and covered the area
with poly. Remediation work to hand dig the fill line was completed
and endpoint soil samples were
completed 2/24/23 indicating that the contaminated soil was removed.
2303264 - Reported 7/19/23 at
NYCDOE school, PBS#2-351679, TTF 7,500gal AST due to dry leak in vent
line. 2302112 - 2300733
2208631 11/9/23 - Kim - Note 269 Alexander Ave registered the
abandoned tank under PBS 2-613487. I
performed a site visit on 11/8/23 and met with NYCHA McPherson and his
crew. Using an interface
probe NYCHA confirmed that there was oil in the monitoring well by
their UST. We inspected the
basement and saw that there was a sheen on the water in the basement
floor drain and odors of a
degraded petroleum spill but there was no free product. Prior to my
site visit, NYCHA employees
stated that there have been globules of oil on water and petroleum
odors following rain events.
After discussing next steps with NYCHA, we investigated the
surrounding area north-northeast of 205
Alexander and found some monitoring wells on the sidewalks that can be
sampled to track down the
source of the spill. 11/22/23 - Kim - I met onsite with Ryan McPherson
and NYCHA personnel in the
morning after a rain event yesterday. Using an interface probe NYCHA
checked the monitoring well by
their UST and measured 6in of oil present. In the basement floor
drain, there was a nonrecoverable
sheen on the water and barely a detectable petroleum odor. NYCHA used
the interface probe to check
the monitoring wells in the sidewalk on Alexander Ave in front of the
police precinct at 257
Alexander Ave, in front of 261 Alexander Ave, 269 Alexander Ave, and
across the street in the
sidewalk in front of 262 Alexander Ave. Only water was detected. No
other reports of oil have been
received since oil was found in the basement floor drain at 205
Alexander. Based on the information
available, there has not been evidence of an offsite source of the
oil. The source of the oil is
possibly an old spill from the building's own UST system. I
recommended that NYCHA collect oil in
the monitoring well by their UST using absorbent socks and mitigating
indoor air quality concerns
using ventilation fan and/or an air scrubber. 7/18/24 - Kim - Proposed
sample and well locations
submitted by NYCHA McPherson. I called NYCHA McPherson and suggested
that the well locations
include one to the southwest as that is presumably the general
direction to the closest surface
waterbody, the Harlem River. New proposal pending submission.

Remarks: cleanup pending. drain in basement

Site Description:	"Location: The Site is located in an urban area in the Mott Haven section of the Bronx and is comprised of approximately 47.411 square foot (sf) irregularly (rectanuglar?) shaped lot. The site includes all of Block 2309 Lot 12 and a portion of Lot 1 and has 75 feet of frontage along Bruckner Boulevard and approximately 300 (360?) feet of frontage along E. 134th Street. Site Features: The site is currently vacant. Current Zoning/Use: The site is zoned M1-2/R6A

FORMER MANUFACTURING PLANT (Continued) **S117936672**

	residential/commercial and is currently vacant, though part is used as a parking lot by the adjacnet building. Historical Use: The subject property was historically used as a piano factory, woodworking factory and marble factory (1890s through 1920s), and a revolving door factory and window and door factory (1940s through 2007). Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 to 10 feet below grade. Silty sand is present immediately below this layer to a depth of 15 feet. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface. Groundwater at the Site is present under water table conditions at a depth of approximately 10 feet below grade. Based on regional water table elevation maps, groundwater flow is expected to be southwest toward the Harlem River."

HW Code:	C203137
SWIS:	0301
Town:	New York City
Record Added Date:	03/24/2020
Record Updated Date:	01/19/2024
Update By:	HMDUDEK
Site Description:	"Location: The 0.57-acre site is located at 2413 Third Avenue, in the Port Morris Harlem Riverfront section of the Bronx. The site occupies a portion of Block 2319, Lot 109. The site is located west of the intersection of Third Avenue and Bruckner Boulevard and is bounded by a self-storage facility to the north; light industrial and commercial buildings, a dog park, and an access roadway to the northeast; Third Avenue and the Third Avenue Bridge overpass to the southeast; and a residential construction project to the west. Site Features: The site contains a multi-story residential building with parking below the building. Current Zoning and Land Use: The site is located in the Special Harlem River Waterfront Zoning District. The site is zoned M1-3/R8. A multi-story residential building is being built on the site. Past Use of the Site: By the late 1897, a 6-story building was constructed and used for unspecified manufacturing through the 1920s. Starting in the 1930s the building was used for storage; it was used for storage through the early 2000s. A 1-story building occupied the northern portion of the lot by at least the 1920s. This building was used for automobile repair, unspecified manufacturing, and lubrication oil storage through the early 2000s when the building was demolished. The southeastern portion of the site was occupied by a 2-story building used as a manufacturing facility by at least the

2413 THIRD AVENUE (Continued) **S126369660**

1920s and used for manufacturing and a chemical laboratory. The 2-story building was demolished by 1984. A freight railway easement transected the site between 1935 and 1951. Site Geology and Hydrogeology: The site was excavated to between 10-26 feet below ground surface. The building is underlain by native silty and clayey sands and clay with varying amounts of peat and shells. Bedrock was not encountered during site investigation and minimum expected depth to bedrock is 50 feet. Groundwater was encountered between about 7 and 8.5 feet bgs. Inferred groundwater flow is to the southwest towards the Harlem River. Based on proximity to the Harlem River estuary, groundwater elevations across the site may be subject to tidal fluctuations. "

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and metals in soils; PAHs in groundwater; Chlorinated volatile organic compounds (CVOCs) and petroleum products in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. "
Health Problem:	"The site has been remediated and the potential for people to come in contact with site contamination was addressed by the remedy."

DEC Memo:	4/29/08 Received letter from Stuart Schwartz, of SNS Energy Distribution Corp., on 4/28/08. Tank was excavated and isolated and retested. Isolation revealed leak was at vent line. No contaminated soil associated with this spill. Tank retested on 4/25/08 and passed. They are waiting for authorization from owner to replace all piping and will retest. bf 5/1/08 bf: sent ttf letter to: Urbanization Maria Lopez Housing 580 White Plains Road, 6th Floor Tarrytown, NY 10591 Sent copy to: Stuart N. Schwartz, Chief Executive officer SNS Energy Corporation 221 Broadway, Suite 205 Amityville, NY 11701 6/4/08 On 6/3/08, received fax of letter dated 5/23/08 from Stuart Schwartz of SNS Energy. All oil distribution piping at the site was replaced even though only the vent line failed. Tightness test was done 5/22/08 and passed. I called Mr. Schwartz (631)691-1700 and left message with secretary to call me back. When he calls back I will request another letter regarding contamination, if any, and the tank test is deficient because of gw determination. bf 6/10/08 On 6/9/08, received

(Continued) **S109064253**

revised tank test report. Report is satisfactory. Need letter regarding contamination. Called him at (631)926-2196 and left message requesting letter. bf 6/11/08 Yesterday, received fax from S. Schwartz stating no oil contamination found and piping was replaced due to its age. NFA. bf

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO send TTF letter. 7/26/04 Tipple spoke with Mr. Hollar, Tim DeMeo working on site with Mr. Hollar///cleanup in progress///Site transferred to DeMeo, spill report faxed to Mr. Hollar, tank and contaminated soil to be removed Durnin: This spill was associated with spill 0312468 (#2 oil seeping from 25,000 gal. UST into basement) which was closed on May 16, 2006. This spill, #0313699, was a tank test failure of the same 25,000 gal. UST. Durnin: August 23, 2005-Airtek Environmental Corp. was hired to oversee the removal and replacement of the 25,000 gallon UST. Durnin: August 25, 2005-Durnin visits site to witness tank excavation pit and affected basement. Durnin: August 31, 2005- Durnin visits site to witness installation of new 25,000 gallon UST. Durnin: February 13, 2006-Airtek Environmental Corp. submits a Remedial Action Report, Exposure Assessment report and a CD of photographs. Durnin: The Remedial Action Report was reviewed and approved on April 17, 2006. Durnin: Spill No. 0313699 was closed based on the Remedial Action Report and a subsequent site investigation findings by the Owner s environmental consultant. Durnin: The site was closed on June 19, 2006.

DEC Memo:	Tank is UNDER 1080 gal - non PBS. They did not have an exact size. There is no visible spill at this site, only a TTF. 8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/13/2015: Rashad Per NYC building records 308 Willis Ave has no alternate address. No PBS records or additional spill reports found. No documents found in D2. According to building records the owner is: Willis Bricks LLC C/O Express Fine Jewlery 55 West 47th Street - Suite 340 New York, NY 10036 8/18/2015: Rashad Email sent to Abraham from NYC tank testing: After reviewing the spill report for 308 Willis Ave, Bronx NY, spill#1006590 dated 9/17/2010, I would like to request the following information: Tank test failure report. Test results for supply/return and vent/fill lines. Property owners information. 8/24/2015: Rashad Received email from Goldie with tank test failure report. Report indicates ullage (dry) portion of leak. Letter attached also states This letter is to certify that on September 3, 2010 New York City Tank Testing isolated, tested and

UNKNOWN - TTF (Continued) **S110541017**

reconnected the vent line at the above mentioned premises. The results are as follows: The vent line had a gross failure. Recommendations: At the current time NYC Tank Testing recommends uncovering the top of tank and isolating all necessary lines. Documents uploaded to D2. 12/7/2016: Rashad Spill will be administratively closed as per tank test failure guidance document for TTF greater then 5 years old. Leak was a dry leak and according to tank test documents, failure was in vent line, not tank. Spill administratively closed.

Remarks: tank test failure, no other info known

DEC Memo:	12/12/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/28/06: Two 25K USTs installed in 1948 that stored #4/#6 oil were closed-removed in 1996. One 30K UST that stores #2 oil was installed in 1997 and is currently in service. Soil contamination was encountered during tank replacement. 4 MWs were installed in 1996 and is currently bailing oil/water. NYCHA recommends that a site assessment be performed. - SK 9/26/06: This spill was transferred from S.Kraszewski to J. Kann. -JK 12/12/12: J.Kann - the IWP was received in May 2009. The plan and historic files were reviewed. Based on the review, comments were sent to NYCHA on 12/12/12 (edoced). 3/5/13: J.Kann - revised IWP (Addendum letter and Figure 3) recvd on 2/11/13. Information reviewed and found acceptable. Pointed out in an email to NYCHA that the locations identified in the Addendum letter and revised Figure 3 are correct (however, the text of Section 3.2 of the IWP was not revised to reflect the change). SIR due 9/5/13. 12/2/13: J.Kann - stip sent to nycha on 10/30. Signed stip rcvd 12/2 and forwarded to legal. 1/28/14: J.kann - approved modifications to IWP after discussion/email with/from consultant (edoced) 2/06/14: J.Kann- visited site today. Borings were advanced in the sidewalk. Stained soils noted at the groundwater interface and collected for analysis. Historical data shows not product or contamination downgradient of the site (across Madison Avenue). Additional drilling will be performed on Monday 2/10/14. 3/5/14: J.Kann- rcvd RIR on 3/5/14. Reviewed the RIR. Concurred with recommendations. Sent and email to NYCHA. Quarterly monitoring should commence and a 2014 2nd quarter monitoring report is due on July 31, 2014. A RAP is due on 9/5/2014 7/23/14: J.Kann - reviewed RAP. VEFR is proposed in two wells containing product. Monitoring over 6 months. NYCHA needs to install 4 or 6 inch well in sidewalk after scaffolding over sidewalk is removed. email sent to NYCHA on 7/24/14. 5/12/17: J.kann - visited site today. Wells did not contain product. Boiler room walls clean. Given the minimal impacts previously noted and limited to weathered 6 oil, tanks removed over 15 years ago and no dissolved phase in gw, spill closed. Possible weathered 6 oil contaminated soils

LINCOLN HOUSES -NYCHA (Continued) **S100167943**

	at groundwater interface, so contaminated spill clause included in closure letter. Spill closed.

DEC Memo:	8/13/14- Ahmed - Spoke to Ryan (203-784-3069). As per him, the site used to be a gas station, they

2401 THIRD AVENUE (Continued) **S117269407**

did some Phase II investigation ans result showed elevated concenteation at groundwater sample
taken from a downgradient well from a former gasolene tank. they will do some supplemental
investigation. Ask him to contact DEC Demeo as he will manage the spill. Assigned to Tim Demeo.
8/15/14 - Obligado - I received a call from Ryan who requested to update some information. The site
was never a gas station. It was a commercial facility with a gasoline tank for site operations.
10/26/18 - Austin - Spill transferred from Tim DeMeo to Prat Lakhani - end 12/23/20 - A COC was
executed by DER on 12/23/20 under BCP site no. C203052. A Track 4 Residential Residential cleanup
was achieved.

Remarks: Samples showing traces of gas in soil. Tank may be still in the ground. Further investigation to take place.

Control Type:	ENG
Date Record Added:	09/04/2020
Date Rec Updated:	10/25/2022
Updated By:	WYZHENG
Site Description:	"Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "
Env Problem:	"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded

FORMER MUGLER SHORING INC. (Continued) **S117936658**

their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Site Code: 507623
Site Description: "Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot

FORMER MUGLER SHORING INC. (Continued) **S117936658**

one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "
Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to

FORMER MUGLER SHORING INC. (Continued) **S117936658**

the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Name: FORMER MUGLER SHORING INC.
Address: 2401 THIRD AVENUE
City,State,Zip: BRONX, NY 10451
Site Code: 507623
Control Name: Ground Water Use Restriction
HW Code: C203052
Control Code: 08
Control Type: INST
Dt record added: 09/04/2020
Dt rec updated: 10/25/2022
Updated By: WYZHENG
Site Code: 507623
Site Description: "Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering

FORMER MUGLER SHORING INC. (Continued) **S117936658**

approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The site formerly housed a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931, which was surrounded by asphalt, concrete and cobblestone-paved exterior driving/storage areas. In January 2017 the building was demolished. The site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned as M1-3/R8 residential/ commercial (a Special Mixed Use District). The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The site was historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil and petroleum-related volatile organic compounds (VOCs) in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for VOCs, SVOCs, metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum-related VOCs, SVOCs and metals. Soil - A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), benzo(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and benzo(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater - A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analyzed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb

FORMER MUGLER SHORING INC. (Continued) **S117936658**

compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: benz(a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and benzo(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor - Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened - Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

DEC Memo:	9/14/ 17- DEC Piper spoke with Sam at Metro. Leak is a dry leak. Tester is in field. They will contact him, get details and update me when done. 2/2 - Spill Transferred to Central Office. 5/8/18 - Spoke with Isaac he stated that he is currently looking for a tank company to replace tank. Pipe broke during the winter and the heating system has not run since. 8/6/18 - Site inspected, no evidence of a release, no odors, tank is currently not in use. Site closed not meeting standards due to no environmental data or removal. RJW
Remarks:	it was a 1000 gallon tank it is in a concrete base.

DEC Memo:	contractor working for TriBoro Bridge & Tunnel Authority was painting a bridge and left a drum of diesel under the bridge leaking. Anthony at Harlem River Yard says that they have been called and say they will remove the drum and dig out the impacted soil. This work needs to be confirmed with a call to Anthony (718-402-6925) 1/19/2007 Sangesland confirmed drum was removed and impacted soil was removed and replaced with clean fill.

Town:	New York City
Record Added Date:	03/07/2019
Record Updated Date:	12/30/2022
Update By:	AMSERVIS
Site Description:	"Location: The 0.23-acre site is located at 472-474 Willis Avenue and is designated as Tax Block 2291, Lot 101. The site is bounded by Willis Avenue to the west, 146th Street to the south, and residential apartment buildings to the east and north. Site Features: Remedial action has been completed and the site is currently undergoing redevelopment. Current Zoning and Land Use: The site is zoned R6 (residential), with C1-4 (commercial) overlay and is currently used for commercial purposes. Past Use of the Site: City Directory listings identified automotive repair facilities at 474 Willis Avenue and 472 Willis Avenue, and manufacturing and/or equipment servicing facilities at 402 East 147th Street, a historical address associated with the Site. A 1958 Certificate of Occupancy indicated on-site use of fuel-oil. Site Geology and Hydrogeology: Subsurface soils encountered at the site during the installation of the soil borings generally consisted of variable texture fill materials (unsorted sands with brick, rock, gravel and other debris) overlying brown, sorted sands. Groundwater was encountered at depths ranging between 12 to 15 feet below surface grade. Based on information gathered during the remedial investigation, shallow groundwater flow in the vicinity of the property is to the south. There are no surface water bodies or regulated wetlands on the property. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern for the site included SVOCs and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for residential use. "
Health Problem:	"Remedial actions are complete and the remedy addressed all identified site contamination so no exposures are expected."

DEC Memo:	Roux Associates called saying they are working this project. They seem to know what to do, so no CSL was sent. 12/14/06 Rahman- William Holubowich is the contact person with Roux Assoc.They are currently preparing the Phase II report, will send to DEC along with Phase I shortly. 01/18/07 Rahman-Phase II report by Roux Associates referenced the presence of a gasoline tank and pump back in 1950's.Currently, there are no active USTs present at the site.Roux Associate collected six soil samples and three ground water samples from the site.Soil and ground water samples from the loading dock area, where the potential gasoline UST was reportedly located,indicated the presence of VOCs associated with gasoline.GW sample one contained Ethylbenzene 23 ug/l, Xylenes 120ug/l, Benzene 4 ug/l.Soil samples SB-2 and SB-3 contained Xylenes @8300 ug/l and 46,000 ug/l rspectively.As per the report, there is no off site migration of the contaminants.Contamination is localized in loading dock area.Roux Associate recommended installation of three groundwater monitoring wells and quarterly groundwater sampling and reporting for one year to evaluate groundwater quality.If a reduction in VOC is not identified, alternative approach will be evaluated to treat groundwater. 07/10/08 Final closure report from Roux Associates. Roux Associate

(Continued) **S108296712**

injected ORC to enhance the
biodegradation of the VOCs in the vicinity of GW-1, as per the previous RAP.The ORC slurry was
injected via 12 temporary injections points.The lab result shows that in situ remediation has
significantly reduced the concentrations of BTEX by an average of 92%.The final concentration of
VOCs are: Benzene 0.69 ug/l ,Toluene 34 ug/l,Ethylbenzene 220 ug/l, Xylenes 1,800 ug/l.Roux
opinioned that ground water at that site does not pose any threat to public health or
environment.Spill can be closed.(sr)

DEC Memo:	03/28/17 - Lakhani The property is an OER E designation/VCP site (15CVCP082X). There is an existing 5-story building on the property. The consultant, Brinckerhoff Environmental, is working on the commercial redevelopment of the site. They were excavating to perform repairs on the sewer line and encountered stained soils. PID readings were recorded up to 600ppm and odors are present. 10 cu. yds. of soil was excavated and stockpiled and waste class sampled. One (1) sample was taken from the east sidewall of the excavation and two (2) were taken from the bottom of the excavation. The north and west walls are brick as the excavation is along the property boundary. The south wall of the excavation does not exist as this excavation extended into an older, neighboring onsite excavation. Excavation was completed to 6’bg. Groundwater is to 10’-12’bg. A former gasoline UST was removed in the 1980-1990s which was located 15’-20’ east of the excavation. PBS #2-610419 CSL sent to Sean Harrison of Brinkerhoff Environmental and property owner at: Bruckner Associates, Inc. 20 Bruckner Blvd Bronx, NY 10454 4/16/17-Sean Harrison from Brinkerhoff sent the following email. The post-excavation sample results table has been uploaded to EPIC. Sample PE-1 detected several petroleum-related semi-volatile organic compounds (SVOCs) and volatile organic compounds (VOCs) exceeding the NYSDEC CP-51 Soil Cleanup Levels. The area surrounding PE-1 will be excavated further and the soil will be added to the existing stockpile of impacted-material. Following the additional excavation, we will collect another sample to confirm removal of soil contamination. Additionally, we have received the waste characterization data for the stockpiled material and we re currently coordinating disposal. We will forward you the facility approval letter once it s been received. On April 28, 2017, GDI Construction, LLC performed additional remedial excavation within the voconity of the PE_1 sqample location. The contractor hand-excavated the area surrounding PE_1 from Six (6) to eight (8)feet bgs and the excavated soil was added to the existing stockpile of petroleum-impacted soils and was properly covered with polyethylene sheeting and anchored. Following the excavation, Brinkerhoff screened the subsurface and no remaining petroleum impacts were identified based on visual, olfactory, and PID screening methods. one (1) post-excavation base

(Continued) **S108296712**

sample, identified as PE-1A, was collected at eight (8) to 8.5 feet bgs and was submitted for analysis of TLC, VOCs, SVOCS. Based on the analytical results, no compounds were detected at concentrations above the NYSDEC CP-51 SCLs in post-excavation sample PE-1. The entire site will be covered with a 20 -mil vapor block plus vapor barrier membrane and a concrete slab. Based on the analytical result this spill is closed.

Remarks: investigation underway

Record Add:	06/05/2007
Record Upd:	10/06/2009
Updated By:	MOBARRIE
Site Description:	"The site location is currently described as the inersection of Concourse Village West and East 156th Street, Bronx because no source area has yet been identified. According to historic information and Sanborn maps, the MGP had been had been a small facility located on a former rail yard, the Former Metro North Property BCP# C203030 that served the rail yard. Groundwater data show elevated concentrations of MGP related contaminates such as naphthalene migrating from off-site toward the Former Metro North Site. It appears that there is an MGP waste disposal area contributing to the groundwater contamination. The objective of the preliminary site assessment (PSA) is to locate the source of the groundwater contamination determine if a remedy is necessary and feasible, if so, is a remedial investigation necessary. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Sites."

FILM STORAGE WAREHOUSE SITE (Continued) **S113917008**

Region:	2
Acres:	Not reported
HW Code:	231009
Record Add:	02/06/2003
Record Upd:	06/14/2006
Updated By:	DMMOLOUG
Site Description:	"The former Film Storage Warehouse is approximately 0.25 acres and is located at 203-209 West 146th St. in Manhattan. The property is located on the north site of West 146th St. between Adam Clayton Powell Jr. Boulevard and Fredrick Douglass Boulevard. The site is bounded on the north and west by residential buildings, and on the east by commercial buildings with residences on the upper floors. The former warehouse site has been unoccupied for over 50 years and is currently vacant. A site investigation was funded by EPA as a targeted site assessment. A Site Investigation Report was approved in November 2004. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal sites."
Env Problem:	"Several contaminants were detected in soils including semivolatile compounds, (primarily polyaromatic hydrocarbons)and several metals. Most of the soil contamination appears to be related to historic fill material. The building interior also has debris piles containing asbestos and lead (from insulation and lead paint, respectively). Soil vapor beneath the building contains volatile organic compounds above expected background concentrations."

FORMER MELROSE AVENUE DRY CLEANER
753 MELROSE AVENUE
BRONX, NY 10451

NY SHWS **S113916992**
N/A

Relative:
Higher

Actual:
34 ft.

SHWS:
Name: FORMER MELROSE AVENUE DRY CLEANER
Address: 753 MELROSE AVENUE
City,State,Zip: BRONX, NY 10451
Program: HW
Site Code: 57014
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.066
HW Code: 203009
Record Add: 02/21/2001
Record Upd: 02/06/2024
Updated By: BWRUNG
Site Description: "Location: The Former Melrose Avenue Dry Cleaner site is located in an urban area at 753 Melrose Avenue in the Melrose section of the Bronx and consists of a 0.066-acre parcel denoted as Block 2403, Lot 31 on the New York City tax map. The site is located on the west side of Melrose Avenue between East 156th and East 157th Streets. Site Features: The site is a vacant lot covered with crushed stone and is surrounded with a chain-link fence. The site is bordered to the north by a community garden, to the east by Melrose Avenue, to the south by a six-story apartment building, and to the west by the Public School (P.S.) 29 Ballfield. Current Zoning and Land Use: The site is zoned R6 for residential use. There are no buildings on the site, and the property is not currently in use. Past Use of the Site: Records show the site was utilized as a store and dwelling as early as 1909. Circa 1946, the site was developed with a single structure. The site was occupied by a dry cleaner during the 1950s, with storage tanks at the rear of the building. The site structure was demolished in 1968 and the site has been vacant/abandoned ever since. Use of the site as a dry cleaner has resulted in contaminated groundwater and soil vapor at the site and down gradient of the site to the south. Site Geology and Hydrogeology: The site is underlain by a fill unit extending 5 to 7 feet below ground surface (bgs), a native fine-medium sand unit with some silt present at depths of 5 to 28 feet bgs, and bedrock (Inwood marble) present at depths 11 to 28 feet below grade. Groundwater is approximately 16 to 19 feet bgs in the vicinity of the site. In some areas, the groundwater is below the surface of bedrock. Groundwater on-site flows southeast towards Melrose Avenue, and then to the south towards the East River (approximately 7,000 feet south of the site) along a former stream bed. "
Env Problem: "Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals. Groundwater samples were also analyzed for emerging contaminants. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs in groundwater and soil vapor. Soil: Soil samples were collected from various depths throughout the site. Soil sampling analytical results did not indicate detection of any contaminants above residential soil cleanup objectives in any of the soil samples. There were no detections of SVOCs and PCBs above unrestricted use soil

FORMER MELROSE AVENUE DRY CLEANER (Continued) **S113916992**

cleanup objectives (UUSCOs). One metal and one pesticide were detected above their respective UUSCOs in site soils. Copper was detected at a maximum concentration of 60 parts per million (ppm), exceeding the UUSCO of 50 ppm. 4-4'-DDT, was detected at a maximum concentration of 0.0088 ppm, exceeding the UUSCO of 0.0033 ppm. The VOC tetrachloroethene (PCE) was detected at a maximum concentration of 0.16 ppm, below the UUSCO of 1.3 ppm. No other VOCs were detected in the soil samples collected from on-site soil borings. Data does not indicate any off-site impacts in soil related to this site. Groundwater: There were no detections of SVOCs, PCBs or pesticides above Technical Operation and Guidance Series Ambient Water Quality Standards (AWQS) in on-site or off-site groundwater. VOCs were detected in on-site groundwater at concentrations below AWQS and off-site groundwater at concentration above AWQS. VOCs detected at concentrations exceeding the AWQS in off-site groundwater include acetone at a maximum concentration of 390 parts per billion, or ppb (AWQS is 50 ppb), chloroform at a maximum concentration of 8.4 ppb (AWQS is 7 ppb), cis-1,2-dichloroethylene at a maximum concentration of 45 ppb (AWQS 5 ppb), tetrachloroethylene (PCE) at a maximum concentration of 660 ppb (AWQS 5 ppb), and trichloroethylene (TCE) at a maximum concentration of 6.4 ppb (AWQS 5 ppb). VOC exceedances of AWQS extend off-site approximately 700 feet to the south of the site. Metals were detected in on-site groundwater at concentrations below AWQS and off-site groundwater at concentration above AWQS. Metals that were detected in off-site groundwater samples at concentrations exceeding AWQS included iron at a maximum concentration of 7.1 ppb (AWQS 0.3 ppb), magnesium at a maximum concentration of 120 ppb (AWQS 35 ppb), manganese at a maximum concentration of 5.6 ppb (AWQS 0.3 ppb), and sodium at a maximum concentration of 240 ppb (AWQS 20 ppb). The metals observed above AWQS in groundwater are commonly associated with naturally occurring phenomenon. PFAS compounds were detected in on-site groundwater at concentrations below their maximum contaminant level, or MCL (water quality standard), and in off-site groundwater at concentration above their maximum contaminant level. The PFAS perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in off-site groundwater samples at concentrations exceeding their MCL of 10 ppt each at maximum concentrations of 23 and 24 ppt, respectively. Data does indicate off-site impacts in groundwater related to this site. Soil Vapor, Sub-Slab Soil Vapor and Indoor Air: Soil vapor samples were collected at off-site locations near properties underlain by PCE contamination in groundwater. 1,1,1-TCA was detected at a maximum concentration of 10 micrograms per cubic meter (ug/m3), PCE was detected at a maximum concentration of 840 ug/m3, TCE was detected at a maximum concentration of 14 ug/m3, and carbon tetrachloride was detected at a maximum concentration of 1.6 ug/m3. PCE detections in soil vapor extend approximately 700 feet to the south and southeast of the site. An off-site soil vapor intrusion investigation was performed in March of 2017. Sub-slab soil vapor and indoor air samples were taken in off-site structures where access was granted to determine if soil vapor intrusion exposures were present. Sub-slab soil vapor and indoor air concentrations for PCE at the NYPD Police Service Area (PSA) 7 to the south of the site indicated soil vapor intrusion mitigation was necessary. A sub-slab depressurization system (SSDS) was installed at the NYPD PSA 7 building in 2019 to mitigate soil vapor intrusion. No actions were needed to address soil vapor intrusion at the other structures sampled. Significant Threat: The

FORMER MELROSE AVENUE DRY CLEANER (Continued) **S113916992**

site was determined to pose a significant environmental threat on November 19, 2013. This determination was based on the property's past use as a dry cleaner, which contaminated groundwater beneath the site and down gradient of the site with PCE. The site was also determined to be a significant threat to public health due to the concentrations of PCE detected in on-site and off-site groundwater and soil vapor, in conjunction with the proximity of these concentrations to occupied structures. "

Health Problem: "People will not come in contact with site contamination in soil because on-site soil is not contaminated. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. A subslab depressurization system has been installed at an off-site building to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other off-site buildings, including those buildings where testing has previously been declined by owners or whose owners did not respond to sampling requests. DEC Memo:	5/30/14-Zhune spoke to Brian Turchetta from ALC Environmental. He said they were doing phase I. They found a mix of oil and water all over the basement. Brian said as per the property owner there was a AST and is no longer in the site. He said that he is working for a potential byer. b.turchetta@alcenvironmental.com 8/5/14-Zhune spoke to Brian Turcetta from ALC Environmental and he said that they perfomed a Phase I during June at this site. Based on the findings, they recommended that the owner perform a subsurface investigation, but they have not heard from the owner. I called Fred Dilmanian (Owner) and he said that he is very concerned about the spill. He called his insurance company to see if the remediation is covered under his insurance. He asked me to call him by the end of August when he will let me know which company he will

407 EAST 158TH STREET (Continued) **S117267188**

hire. Fred Dilmanian
516-637-0901 9/29/14-Zhune spoke to Fred. He said Eastern Environmental is in the process to clean
the basement. Eastern Environmental- Jim 631-727-2700 3/10/15-James Mulvey sent the phase I Report
prepared by ALC Environmental and dated June 25, 2014. 3/30/15-James Mulvey sent the Limited
Subsurface Investigation dated March 16, 2015. The report stated that the NYSDCE was contacted to
report a fuel oil spill. According to the phase I, free floating product was floating in the
flooded basement at the time the inspection was completed. Eastern installed three soil borings in
the basement. Based on the depth of minimal impacted soil extending to less than 2' below grade,
there is no treat to the groundwater. The soil analytical result indicated no detected VOCs and
SVOCs in sample SB-1 and sample SB-2. Sample SB-3 indicated the following VOCs 1,2,4
Trimethylbenzene 2600 ug/kg, 1,3,5 Trimethylbenzene 980 ug/kg, o-xylene 1000 ug/kg and P-&m-xylene
1000 ug/kg. above the NYSDEC CP-51 unrestricted residential soil cleanup guidance. 10/8/15-James
Mulvey sent the Additional Limited Subsurface Investigation dated October 5, 2015. Eastern
conducted a second subsurface investigation at this site. the objective was to determine whether
the subject site's underlying soil in the basement of the property has been adversely impacted by
fuel oil release that was identified during a site visit for Phase I. On August 29,2014 Eastern
removed a total of 150 gallons of oil/water mix from the basement. On September 24, 2015 Eastern
installed five (5) soil borings in the basement of the site to determine the vertical delineation
of the fuel oil release in the underlying soils beneath the basement concrete floor. The Soil
samples submitted for analysis were from 2'-4' depth. The soil analytical results indicated no
detectable VOCs, SVOCs for all five (5) samples. 10/15/15-Zhune sent the following email to James
Mulvey Can you show borings #1, #2, #3 from Subsurface Investigation dated 3/16/15 in the site map
of the additional Limited subsurface Investigation dated 9/25/15. Please explain how you delineated
Boring # 3 from Subsurface Investigation 3/16/15. I need a scale site plan. 10/20/15-James Mulvey
sent the following email The original borings were delineated from 0 -2 below grade And that sample
from boring #3 was from 0 -1 below grade, The new borings were delineated from 0 -4 below grade.
1/14/16-Zhune sent the following email to James Mulvey I reviewed this case with my supervisor,
Jeff (copied above), and the soil analytical results for SB-3 show soils remaining at the site are
above CP-51 Unrestricted Soil Cleanup Objectives (SCOs). Despite the lack of vertical delineation

407 EAST 158TH STREET (Continued) **S117267188**

at SB-3, the Department is willing to close the spill upon submission of a a letter describing how
further contamination delineation is not feasible as per CP-51 Commissioners Policy (please refer
to the definition of feasible in the guidance). You may obtain the guidance at
http://www.dec.ny.gov/regulations/2393.html . The Department is also willing to close this site due
to the dominance of xylenes and trimethylbenzene indicating that is an older spill. 1/3/16 @
4:52pm-James Mulvey sent the following email if the NYSDEC is willing to close the spill file based
on the dominance of xylenes and trimethylbenzene indicating that is an older spill , please close
the spill for the property owner. 1/3/16 @ 5:12pm-James Mulvey sent the following email remember
that SB-3 was impacted at the shallow depths, it was clean at deeper depths, no need to further
delineate vertically . Based on the email sent by James on 1/3/16 @ 5:12pm this spill is closed.

Remarks: Caller advised aprx 5 gal of oil spilled onto concrete beasement floor. CLean up is pending.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

COMMERCIAL PROPERTY
338-344 GRAND CONCOURSE
BRONX, NY 10451

TARGET PROPERTY COORDINATES

Latitude (North):	40.814989 - 40° 48' 53.96''
Longitude (West):	73.928431 - 73° 55' 42.35''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590375.3
UTM Y (Meters):	4518560.5
Elevation:	32 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115942 CENTRAL PARK, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

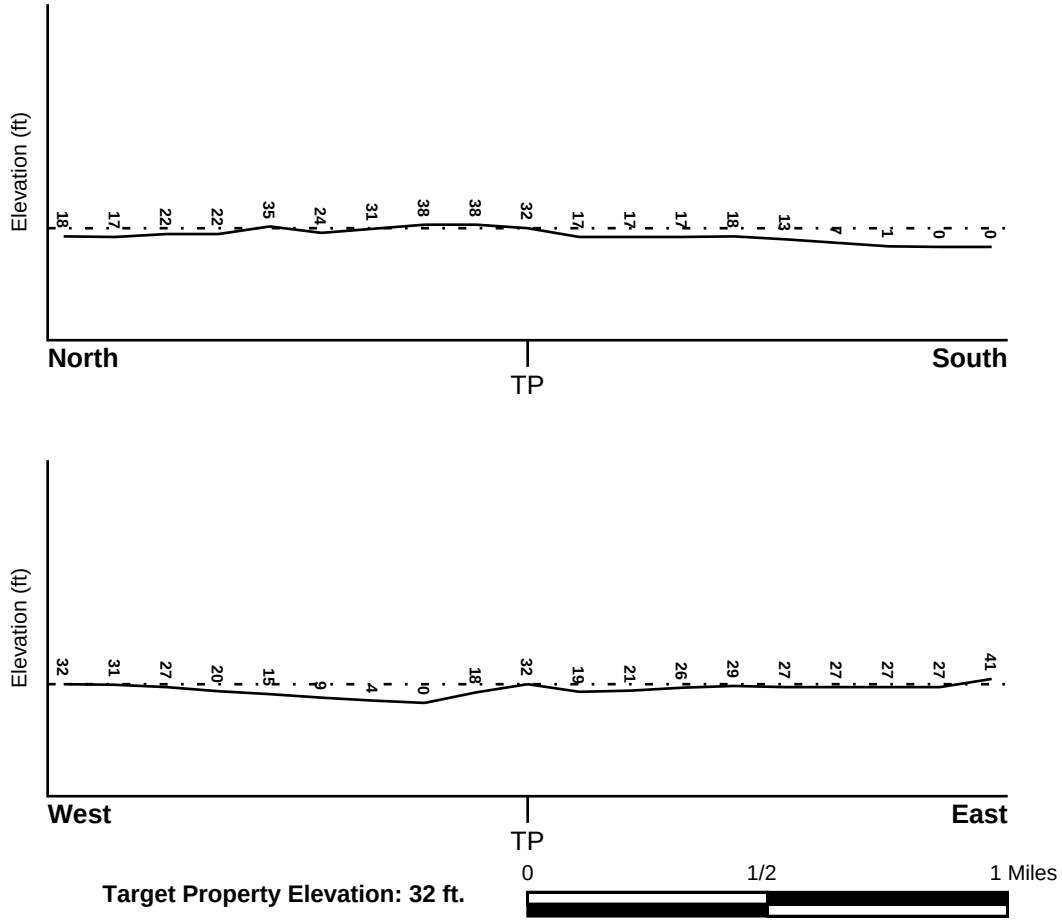
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970083F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970079F	FEMA FIRM Flood data
3604970087F	FEMA FIRM Flood data
3604970091F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Bronx County, New York
Survey Area Data: Version 13, Sep 4, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 12, 2020—Nov 4, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 9/9/2024 at 7:00 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

EXECUTIVE SUMMARY

KB Environmental Assessment Ltd. (KBEA) prepared this Phase I Environmental Site Assessment (ESA) for the commercial property located on the east side of Grand Concourse, between East 144th Street to the north, and East 138th Street to the south, in the Mott Haven section of the Borough of the Bronx, New York City, Kings County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 344 Grand Concourse, and as Borough 2 – Block 2341 – Lot No. 37 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions. Recognized environmental conditions are defied as (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and KBEA's proposal for services.

KBEA was able to establish a history for the property dating back to 1891. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was undeveloped from at least 1891. By 1908, north-central portions are developed with a small 1-structure occupied by the NYC & Hudson Valley Railroad. By 1935, the property is developed with several interconnected 1-story structures, which extended off-site to the south and east. These included a retail store, auto repair, auto service, auto painting and storage buildings. By 1944, only one structure is present. This building occupied the far western portions of the property and were identified as an auto repair shop. The subject property is also depicted as a single lot, combined with the current southern adjacent parcel. Sanborn map depictions remained unchanged through 2007. Aerial photographs show the second (metal building) was constructed between the mid-198s and mid-2000s. City directories identify the building as occupied by auto repair related tenants from the early-1960s through 2020.

kb Environmental Assessment

4 GAIL STREET
BAY SHORE, NEW YORK 11706

The property is currently developed with two interconnected 1-story commercial buildings without basements. The western building is a concrete block and brick structure, and the eastern structure is steel-framed and covered by metal panels. An asphalt-paced yard area is east of the buildings. Portions of the yard areas are covered by a corrugated metal roof structure supposed by wood framing. Sidewalks are west of the property, along Grand Concourse. The buildings are comprised of office space, a customer waiting area, restrooms, garage/repair areas, and storge/utility space. The buildings are currently occupied by Teddy's Place Auto Repair, which has reportedly occupied the site since the mid-1970s.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No controlled recognized environmental conditions (CRECs) or historic recognized environmental conditions (HRECs) were identified for the subject property. The identified REC is summarized as follows:

- Information obtained from multiple historic sources revealed that the site was utilized as multiple auto repair shops and an auto painting facility. In addition, most of the adjacent/surrounding properties were also utilized as service stations, auto repair shops and various industrial uses. As such, there is a potential for historic site operations and/or those at the adjacent/surrounding properties to have impacted the subsurface beneath the subject property, including potential impacts to soil vapor and indoor air quality. Therefore, the historic use of the subject and surrounding properties is considered a REC.

Based upon the above findings and conclusions, KBEA recommends following:

- To evaluate potential impacts related to the historic usage of the subject and surrounding properties, a subsurface investigation should be performed. At a minimum, the investigation should include the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the subject property.

In addition to the aforementioned REC, KBEA identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]). The environmental concerns/BERs and KBEA's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having E-HazMat, Air Quality and Noise restrictions (E-227), which were determined during the Lower Concourse Rezoning action completed by NYC in June 2009 (CEQR 08DCP071X). The E-designations require the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-designations is considered a BER.

- The Sanborn map from 1935 shows the eastern portions of the subject property as developed with a 1-story auto painting shop that extends off-site to the south. The map also notes the presence of a 225-gallon gasoline underground storage tank (UST); however, the exact location of the tank is not depicted. Additionally, this tank (if present on the subject property) was likely removed during building demolition. Finally, given that the UST has been out-of-service since the late-1940s, any spills or releases from the tank have had over 70 years to naturally attenuate. Therefore, KBEA considers the potential presence of this UST to represent a BER.

  To evaluate the potential presence of the UST, a geophysical survey (e.g., magnetometer and/or ground penetrating radar survey) could be conducted in the vicinity of the suspected tank to confirm its presence/location. As an alternative, given that the UST has been out-of-service since the mid-1940s any spills or releases from the tank have had over 70 years to naturally attenuate. As such, it is unlikely that a significant quantity of impacted soil (if any) remains on-site nor is it likely that groundwater remediation and/or long-term groundwater monitoring would be required to remediate any spill to the satisfaction of the New York State Department of Environmental Conservation (NYSDEC). Therefore, this potential tank can be addressed under a contingency plan as part of any proposed redevelopment project.

- Fluorescent light ballasts were observed throughout the buildings, which based on the ages of the buildings, may contain polychlorinated biphenyls (PCBs). KBEA recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by

the United States Environmental Protection Agency (USEPA), KBEA recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.

- Information obtained from multiple historic sources revealed that the subject property was formerly developed with one or more commercial structures from at least 1908 through 1935. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The potential presence of fill materials is considered a BER.

  Experience with similar projects shows that typical urban fill materials (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the E-HazMat designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Suspect asbestos-containing acoustic ceiling tile and sheetrock/plaster were observed within the buildings, specifically office areas at the southwestern portion. The suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. However, due to the ages of the site buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then KBEA recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a New York City (NYC) and New York State (NYS)-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

1.0 INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the commercial property located on the east side of Grand Concourse, between East 144th Street to the north, and East 138th Street to the south, in the Mott Haven section of the Borough of the Bronx, New York City, Kings County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 344 Grand Concourse, and as Borough 2 – Block 2341 – Lot No. 37 on the New York City (NYC) tax maps (Figures 1 through 4). Representative site photographs are included in Appendix A.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-21, inclusive of the United States Environmental Protection Agency (USEPA) "all appropriate inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "all appropriate inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-21 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-21, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-21, *"recognized environmental conditions in connection with the subject commercial parcel."*

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-21 means*"...the (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

"The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment."

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-21, specifically consists of the following four components:

1. Records Review;
    a. Physical settings document review;
    b. Regulatory database records search;
    c. Local municipal agency records search; and
    d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-21, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-21. The issues are referred to as non-scope considerations. The following

is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;

2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-21. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;

3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in

existence at the time of the investigation, and other information obtained and reviewed by KB Environmental Assessment, Ltd. (KBEA);

4. KBEA's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. KBEA does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;

6. This report is based, in part, on information supplied to KBEA by third-party sources. While efforts have been made to substantiate this third-party information, KBEA cannot attest to the completeness or accuracy of information provided by others; and

7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in September 2004 by KBEA at the request of Mr. Anshel Fridman, for his use, use of his and consulting representatives and other agents authorized to act on his behalf, in conjunction with the sale, lease or acquisition of the subject property. KBEA assumes no liability for use of this report by any person or entity other than those, for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of a single tax parcel located on the east side of Grand Concourse, between East 144th Street to the north, and East 138th Street to the south, in the Mott Haven section of the Borough of the Bronx, New York City, Kings County, New York. The subject property is identified by the street address of 344 Grand Concourse (Figures 1 through 4).

2.1.1 Tax Map Number

The subject property is designated as Borough 2 – Block 2341 – Lot No. 37 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to New York City Tax Maps, the subject property consists of a single 0.116 acre (5,050 square foot) tax parcel. The property is currently developed with two interconnected 1-story commercial buildings without basements. The western building is a concrete block and brick structure with a reported area of 1,150 square feet (SF). The eastern structure is steel-framed and covered by metal panels, with an estimated area of 1,250 SF. An asphalt-paced yard area is east of the buildings. Portions of the yard areas are covered by a corrugated metal roof structure supposed by wood framing. Sidewalks are west of the property, along Grand Concourse.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property owner is identified as Heted Realty Corp.

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is zoned for commercial (C6-2A) use (Figure 5).

2.2 Current Occupancy and Property Use

The property is currently developed with the two aforementioned 1-story commercial buildings without basements, and a partially covered rear paved parking lot/storage area. The buildings are comprised of office space, a customer waiting area, restrooms, garage/repair areas, and storge/utility space. The buildings are currently occupied by Teddy's Place Auto Repair. Teddy's Place has reportedly occupied the site since the mid-1970s.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage KBEA to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made KBEA aware of any environmental liens against the subject property and has not requested that KBEA perform an environmental lien search for the subject property.

3.3 Specialized Knowledge

The user has not made KBEA aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made KBEA aware of any commonly known or reasonably ascertainable information regarding the past uses of the Subject property, specific chemicals in use at the Subject property or any spills, chemical releases, or environmental cleanups at the subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made KBEA aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject property as part of the due diligence to support the acquisition of the property by Mr. Anshel Fridman.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Central Park, NY-NJ Quadrangle (Figure 4). The elevation of the subject property is approximately 32 feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient of the surrounding areas sloping downward to the southwest.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property. The nearest surface water body is the Harlem River, located approximately 0.2 mile to the west at its closest point.

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix D).

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated depth to groundwater and groundwater flow direction typically varies due to seasonal fluctuations in precipitation, local usage demands, hydrogeology, underground structures, or de-watering operations (if any). Generally, groundwater flow typically mimics the surface topography and will also tend to flow toward nearby bodies of surface water.

As no water table maps are published for the site vicinity, evaluation of the surface topography and available geologic information indicates that shallow groundwater, if present, is likely perched above bedrock and recharges through precipitation, storm water run-off and possibly leaking utilities. Groundwater, if present in unconsolidated materials, likely flows to the west, towards the Harlem River.

A review of USGS well data included in the EDR database report indicates that no USGS monitoring wells with available (recent) water level data, are located within a one-mile radius of the subject property.

4.3 Geology

According to the USGS Ground Water Atlas of the United States, New York region (1995), the site is within the New England Physiographic Province, which is underlain by metamorphic and sedimentary rocks of the Cambrian and Ordovician period. The bedrock that underlies much of the island of Manhattan is known as the Manhattan schist, which is a formation of mica schist rock that is well suited for the foundations of tall buildings, and in fact, the two large concentrations of skyscrapers on the island occur where the formation is close to the surface.

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of the Bronx, New York City, Bronx County, on-line records searches were conducted or Freedom of Information Act (FOIA) requests were sent to the following agencies: New York City Department of Finance, New York City Registrar, New York City Department of Buildings, the New York City Fire Department, the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Health (NYCDOH), and the New York State Department of Environmental Conservation (NYSDEC) requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight weeks to process FOIA requests. Responses/information received to date are included in Appendix B. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Borough 2 – Block 2341 – Lot No. 37
Address:	344 Grand Concourse
Owner:	Heted Realty Corp.
Lot Size:	50.62 by 100 – rectangular
Building Class:	G2 – Auto Body/Collision or Auto Repair
Zoning:	Commercial (C6-2A)

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

According to the PPO, five Actions are identified for this parcel: one alteration permit, dated in 1952; two plumbing repair slips, both dated in 1952; and one two unknown/unspecified actions, both dated in 1952.

No DOB or Environmental Control Board (ECB) violations are listed for this parcel.

Two Complaints are identified for this parcel, dated in July 2003 and August 2008, and related to an illegal repair shop and occupancy contrary to zoning. However, both of the Complaints are listed as closed/resolved.

No Jobs/Filings or ARA/LAA jobs are listed for this parcel.

New York City Fire Department

Freedom of Information Law (FOIL) application FOIL applications were forwarded to the New York City Fire Department (FDNY) on September 11, 2024. Responses from the FDNY are pending.

New York City Department of Health

A FOIL application was forwarded to the New York City Department of Health (NYCDOH) September 11, 2024. A response from this agency is pending.

New York City Department of Environmental Protection

A FOIL application was forwarded to the New York City Department of Environmental Protection (NYCDEP) on September 11, 2024. A response from this agency is pending.

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1891, 1908, 1922, 1928, 1935, 1944, 1946, 1947, 1951, 1968, 1969, 1977, 1978, 1980, 1981, 1984, 1986, 1989, 1991, 1992, 1993, 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006 and 2007 (Appendix C). KBEA's review of the Sanborn Maps is provided on the following table:

Date	Comments
1891	**Subject Property:** Undeveloped land **Surrounding Properties:** Low-rise (2- to 4-story buildings), likely residences are to the north, with Ridge Place beyond. Mott Avenue (currently Grand Concourse) is to the west, followed by a 2-story structure, with a scenic studio beyond. Undeveloped land is to the northwest and Cheever Place (currently E. 140th Street) is to the southwest. A small 2-story building, likely a residence is to the south, followed by moderate low-rise development. A 2-story building, likely a residence is to the east-southeast, followed by railroad tracks, with East Avenue (currently Park Avenue) beyond.
1908	**Subject Property:** Developed with a small 1-story structure at the central portion of the property. This structure appears associated with the NYC and Hudson River Railroad complex adjacent to the north. **Surrounding Properties:** An engineer's office and several other structures occupied by the NYC and Hudson River Railroad are to the north, followed by two 5-story residential buildings, with additional residential development beyond. Mott Avenue is to the west, followed by a residence, with a scenic studio beyond. Undeveloped land is to the northwest and Cheever Place is to the southwest. Undeveloped land is to the south, followed by three 4-story apartment buildings, with a residence and wagon builder beyond. Undeveloped land is to the east, followed by railroad tracks and Park Avenue.
1922-1928	**Subject and Surrounding Properties:** The 1922 and 1928 maps were obtained from a collection of historic pier maps. The maps only depict areas located along the Harlem River and adjacent areas associated with the freight shipping/storage. As such, map coverage is limited to areas further west (beyond Walton Avenue). Therefore, the subject and adjacent properties are not depicted.
1935	**Subject Property:** Developed with a 1-story structure at the far western portion of the property, identified as an auto repair shop. Portions of several additional 1-story buildings, identified as storage and auto painting shops, are present on the central and eastern portions of the property. These structures continue off-site to the south. The easternmost structure is identified as maintaining a 225-gallon gasoline underground storage tank (UST). **Surrounding Properties:** A retail store, a residence and an auto house are adjacent to the north, followed by residential development, with an auto repair/paint shop beyond. Grand Concourse is to the west, followed by a garage, with a bottle storge facility beyond. An undeveloped lot and a private garage/repair shop are to the northwest. E. 140th Street is to the southwest. Two 1-story retail structures (west) and additional portions of the auto repair/painting buildings are adjacent to the south, followed by an auto trade risk facility, with a retail store, an undeveloped lot, and service station beyond. A 1-story auto repair shop is to the east-southeast, followed by railroad tracks, with Park Avenue beyond.
1944-1951	**Subject Property:** The westernmost structure (auto repair shop) remains present. The remainder of the property is undeveloped. **Surrounding Properties:** Two undeveloped lots are adjacent to the north, followed by a service station, with an auto repair shop beyond. Grand Concourse is to the west, followed by a service station, with a machine shop beyond. An undeveloped lot is to the northwest and E. 140th Street and a service station are to the southwest. A retail store and auto service facility are to the south, followed by two auto repair shops, with an undeveloped lot and service stations beyond. Undeveloped land is to the east, followed by railroad tracks, with Park Avenue and industrial uses beyond. The 1946 map shows the southern adjacent building as an auto glass shop, with a fender repair shop beyond. The two buildings adjacent to the south are shown as a single retail structure, with a small addition to the east on the 1947 map. The southern adjacent building was again expanded to the east by 1951, with the addition identified as a garage. The 1951 map also shows a 1-story office across Grand Concourse to the northwest.

1977-1981	**Subject Property:** Developed with a single, 1-story commercial building identified as an auto repair shop. The building occupies the western portion of the parcel, consistent with the existing structure. **Surrounding Properties:** An auto repair shop and retail store are to the north, followed by a service station, with service station beyond. An auto body repair shop is to the northeast. Grand Concourse is to the west, followed by a service station, with an industrial building beyond. An office building and a private garage are to the northwest. E. 140th Street and a service station are to the southwest. A retail store and autobody repair shop is to the south, followed by an auto glass shop, with a service station and with parking lots beyond. A 1-story autobody repair shop is adjacent to the east, followed by railroad tracks, with Park Avenue and industrial uses beyond. The autobody repair shop to the northeast is not depicted beginning on the 1980 map. In addition, the private garage across Grand Concourse to the northwest is identified as a non-specific manufacturing use beginning on the 1980 map. The service station beyond the glass shop to the south is identified as an auto repair shop beginning on the 1981 map.
1984-1989	**Subject Property:** Shown consistent with the 1981 map depiction. **Surrounding Properties:** Also shown generally consistent with their 1981 map depictions, except that the service stations to the north and across Grand Concourse to the west are now identified as auto repair shop. The repair shop to the south, beyond the glass shop, is shown as expanded to the south beginning on the 1986 map, with the addition identified as a non-specific commercial use.
1991-2005	**Subject Property:** Shown consistent with the 1989 map depiction. **Surrounding Properties:** Also shown generally consistent with their 1989 map depictions, except that the property further to the north, beyond the adjacent retail store/repair shop, has been redeveloped as a service station, with a retail store and a large overhead canopy. The office across Grand Concourse to the northwest is now identified as a non-specific commercial use. The service station to the southwest across Grand Concourse is identified as a service station and car wash beginning on the 1992 map. The service station property further to the north is shown as undeveloped on the 2002 map and re-developed with another service station by 2003. The service station carwash to the southwest is identified only as a car wash beginning on the 2003 map, and the retail store adjacent to the north is identified as a non-specific commercial use.
2006-2007	**Subject Property:** Shown consistent with the 2005 map depiction **Surrounding Properties:** Also shown generally consistent with their 2005 map depictions, except that the retail store portion of the southern adjacent building is identified as a non-specific commercial use beginning on the 2006 map.

The Sanborn maps from 1935 through 2007 revealed that the subject property was utilized as multiple auto repair shops and an auto painting facility. In addition, most of the adjacent/surrounding properties were also utilized as service stations, auto repair shops and various industrial uses. As such, there is a potential for historic site operations and/or those at the adjacent/surrounding properties to have impacted the subsurface beneath the subject property. Therefore, the historic use of the subject and surrounding properties is considered a REC.

The Sanborn map from 1935 shows the eastern portions of the subject property are developed with a 1-story auto painting shop that extends off-site to the north. The map also notes the presence of a 225-gallon gasoline UST; however, the exact location of the tank is not depicted. Additionally, this tank (if present on the subject property) was likely removed during building demolition or during the construction of the existing

commercial building. Finally, given that the UST has been out-of-service since the late-1940s, any spills or releases from the tank have had over 70 years to naturally attenuate. Therefore, KBEA considers the potential presence of this UST to represent a BER.

In addition, the Sanborn maps from 1908 through 1935 revealed that the subject property was developed with one or more commercial and/or residential buildings. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the subject property. The potential presence of fill materials is considered a BER.

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1941, 1951, 1954, 1961, 1966, 1976, 1984, 1991, 1995, 2002, 2006, 2011, 2015, and 2019 (Appendix C). However, given that the historical use of the site was established through a review of a Sanborn Maps, city directories and topographic maps, KBEA determined that the historical use of the site has been properly assessed, and, therefore, the historic aerials were only briefly reviewed for evidence of significant differecnces and to fill in time gaps (if any).

The photographs do not show any evidence of historic water bodies, significant re-grading, mining or historic dumping activities, which would indicate a potential environmental risk to the property. In addition, due to the long term, dense urban use of the subject property and surrounding areas, the aerial photographs did not provide significant details regarding potential environmental concerns at the site or surrounding properties.

5.2.3 Historic Topographic Map Review

KBEA reviewed the 2023 Central Park, NY-NJ USGS topographic quadrangle maps, as well as available historic topographic quadrangle maps provided by EDR. KBEA's review of the topographic maps is provided on the following table:

Date	Comments
1897-1900	**Subject Property:** Shaded black, indicating that it is developed with at least one building or structure, consistent with residences depicted on the 1891 Sanborn map (see Section 5.1.2). **Surrounding Properties:** Undeveloped land is adjacent to the north, followed by dense development along Grand Concourse, with E. 144th Street beyond. Grand Concourse is to the west, followed by undeveloped land, with Walton Avenue beyond. Dense development is to the south, followed by railroad tracks and E. 138th Street. Railroad tracks are to the east, followed by a tributary (canal) of the Harlem River), with sparse to moderate development and Rider Avenue beyond.
1947	**Subject Property:** Appears developed with at least one structure; however, most of the site is obscured by map text and symbols. **Surrounding Properties:** Undeveloped land is adjacent to the north, followed by a larger structure, with dense development (black shading) beyond. Grand Concourse is to the west. Properties further west are obscured by map text but appear generally undeveloped, with dense development beyond. Walton Avenue is further west, with moderate development beyond. Properties to the south are obscured by map text, followed by sparse development, with a railroad station and E. 138th Street beyond. Railroad tracks are to the east, followed by Park Avenue, with dense development beyond.
1956-1997	**Subject Property:** Shaded pink to indicate dense, urban development with no improvements depicted. **Surrounding Properties:** Shaded pink to indicate dense, urban development with no improvements depicted, except for railroad tracks adjacent to the east. Grand Concourse is adjacent to the west, with Interstate 87 (Major Deegan Expressway) further to the west. E. 144th Street is further to the north. A railroad station is further to the south, followed by E. 138th Street. Park Avenue is further to the east, beyond the railroad tracks. PS 31 is further to the northwest, beyond E. 144th Street.
2013-2023	**Subject and Surrounding Properties:** The 2013 and 2019 maps do not depict any buildings or other structures. Surrounding roads are visible, consistent with their current configuration. Railroad tracks are adjacent to the east. A school is further to the west-northwest (north of E. 144th Street), with Interstate 87 and the Harlem River beyond.

KBEA's historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (Appendix D) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property. The listings for the subject property are summarized in the following table:

Date	Comments
1927-1956	**Subject Property: "**Address not Listed in Research Source"
1961	**Subject Property:** C. Gobel Carburetors (344)
1965	**Subject Property:** ABC Speedometer Repairs and Concourse Foreign Auto Repair (344)

1971	**Subject Property:** Tom's Foreign Auto Parts (344)
1976-2010	**Subject Property:** Teddy's Place Auto Repair (344)
2014-2017	**Subject Property: "**Address not Listed in Research Source"
2020	**Subject Property:** Teddy's Place Auto Repair (344)

Note: Addresses shown in ( ) are on Grand Concourse unless noted otherwise.

KBEA's city directory review did not reveal evidence of recognized environmental conditions in connection with the subject property. KBEA notes that the subject and nearby properties were identified as a mixture of residential, commercial/retail, and light industrial uses since the late-1920s, including auto sales and service facilities, auto/auto body repair shops, service stations, metal plating operations, manufacturing operations, carting and waste disposal facilities, warehouses, shipping/trucking facilities, contractor offices/yards, garages, retail stores, and commercial/professional offices. Given the time of operation for these facilities and their potential prior use, the area cannot be confirmed of having no subsurface impacts; however, no specific operation or activity was noted that warrants additional investigation at this time. KBEA notes that several of the adjacent/surrounding properties were listed on various regulatory databases indicating hazardous waste generation, petroleum storage and/or petroleum releases; however, these listings are further discussed in Sections 6.1 and 6.2).

5.2.5 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject property were provided to KBEA for review by the property owner or their representatives.

5.2.6 Environmental Liens or Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property because of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage

associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the New York City Office of Environmental Remediation (NYCOER). The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites.

The City of New York Environmental Quality Review (CEQR) Requirement Declarations and City of New York Zoning maps and website, as well as the EDR database report, indicate that the subject property is identified as having a E-HazMat, Air Quality and Noise restrictions (E-227), which were determined during the Lower Concourse Rezoning and Related Actions completed by the City in June 2009 (CEQR 06DCP071X). The Hazardous Materials designation indicates that there is a potential for soil and groundwater beneath the subject property to be impacted by historic operations at the subject or adjacent properties. As such, the property requires an environmental assessment and review by the NYCOER to determine if the current and/or historic use of the property has impacted the subsurface and if additional investigation/remediation is warranted. The Air E-Designation requires that any new residential and/or commercial development on this property must use natural gas for HVAC systems or, if fuel oil is used, ensure that the boiler stack(s) is located at least 20 feet from the lot line facing E. 144th Street, and at least 15 feet from the lot line facing E. 138th Street, to avoid any potential significant air quality impacts. The Noise E-Designation requires that in order to ensure acceptable interior noise environment, future residential/commercial uses must provide a closed-window condition with a minimum of 35 decibels (dBA) window/wall attenuation in all facades in order to maintain an interior noise environment of 45 dBA. In order to maintain a closed-window condition, an alternative means of ventilation must also be provided. Alternative means of ventilation includes, but is not limited to, central air conditioning or air conditioning sleeves containing air conditioners or HUD-approved fans. The CEQR document combined Lot No,. 37 with Lot No. 40 as a potential development site. As such, air quality and noise requirements may require modification.

The E-designations require the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designations is considered a Business Environmental Risk (BER).

5.3 Summary of Site History

KBEA was able to establish a history for the property dating back to 1891. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was undeveloped from at least 1891. By 1908, north-central portions are developed with a small 1-structure occupied by the NYC & Hudson Valley Railroad. By 1935, the property is developed with several interconnected 1-story structures, which extended off-site to the south and east. These included a retail store, auto repair, auto service, auto painting and storage buildings. By 1944, only one structure is present. This building occupied the far western portions of the property and were identified as an auto repair shop. The subject property is also depicted as a single lot, combined with the current southern adjacent parcel. Sanborn map depictions remained unchanged through 2007. Aerial photographs show the second (metal building) was constructed between the mid-198s and mid-2000s. City directories identify the building as occupied by auto repair related tenants from the early-1960s through 2020.

The property is currently developed with two interconnected 1-story commercial buildings without basements. The western building is a concrete block and brick structure, and the eastern structure is steel-framed and covered by metal panels. An asphalt-paced yard area is east of the buildings. Portions of the yard areas are covered by a corrugated metal roof structure supposed by wood framing. Sidewalks are west of the property, along Grand Concourse. The buildings are comprised of office space, a customer waiting area, restrooms, garage/repair areas, and storge/utility space. The buildings are currently occupied by Teddy's Place Auto Repair, which has reportedly occupied the site since the mid-1970s.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. KBEA reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	0 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	0 SEMS 0 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	0
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	0
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA LQG/SQG/VSQG/ NonGen	Site & Adjoining	No	0 LQG 0 SQG 0 VSQG 6 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	NA
Institutional Control Sites	USIC	Site	No	NA
Emergency Response Notification System	ERNS	Site	No	NA
Federal Brownfields Sites	US Brownfields	0.5 mile	No	4

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Federal Resource Conservation and Recovery Act (RCRA): This database includes selective information on facilities which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). No adjoining properties were listed on the RCRA database. However, one RCRA-NonGen listings (ACA Amoco, 350 Grand Concourse; 315 GC Citgo, 315 Grand Concourse; B&M Linen Corp., 310 Walton Avenue; Con Edison Transformer Manhole 647, E. 140th Street and Walton Avenue; Con Edison, E. 140th Street and Walton Avenue; and Con Edison, 2570 Park Avenue) were identified for adjacent/proximate properties. A NonGen facility is a former registered/regulated generator which does not presently generate hazardous waste. Information provided within the EDR report indicates that there are no listed violations for these facilities. Therefore, they are unlikely to represent a significant environmental concern to the subject property.

Federal Brownfields Sites: A Brownfield site is any real property where redevelopment of re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant or contaminant. The US Brownfields database includes Cooperative Agreement Recipients (CARs) and Targeted Brownfields Assessment (TBA) sites. These sites receive direct and/or indirect funding from the USEPA to conduct site investigation and/or remediation.

Four US Brownfields listings (Rider Avenue Gas Station, 250 East 138th Street; Tres Puentes, 285 East 138th Street; Mill Pond Park/Pier 5, 65 East 149th Street; and 351 East 139th Street) were identified within a one-half mile radius of the subject property. The USEPA provided funding to the City of New York to conduct a Phase I ESAs at two of these properties, to prepare a Remedial Action Work Plan, and perform remediation. however, limited information is provided in the database. Given that these facilities are each located over one-eighth mile and hydraulically crossgradient/downgradient facilities are unlikely a significant environmental concern to the subject property.

6.2 State Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	7 SHWS 0 Delisted SHWS

Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	1
Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	0
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	5
Registered Recycling Facility List	SWRCY	0.5 mile	No	3
Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
Leaking Underground Storage Tanks	LTANKS	0.5 mile	No	41 LTANKS
Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	Site & Adjoining	No	1 UST 2 AST 0 TANKS
Chemical Bulk Storage - Underground and Aboveground Storage Tank Databases	CBS UST/AST	0.25 mile	No	1
Major Oil Storage Facility - Underground and Aboveground Storage Tank Databases	MOSF UST/AST	Site & Adjoining	No	0
Registry of Engineering Controls	NYEC	Site	No	NA
Registry of Institutional Controls	NYEC	Site	No	NA
Voluntary Cleanup Agreements	VCP	0.5 mile	No	12
State Brownfields Site List	Brownfields	0.5 mile	No	24
E-Designation Site List	E-Des	0.125 mile	**Yes**	26
NYC Office of Environmental Remediation Site List	NYCOER	1.0 mile	No	58
PFOA/PFOS Database	NY PFAS	0.25 mile	No	1
Spills Information Database	NYSPILLS	0.125 mile	No	25
Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	0

**KBEA notes that according to ASTM E 1527-21, Section 8.1.2.1, the search distance may be reduced at the discretion of the environmental professional. The potential to impact the site, including KBEA's decision to reduce the search distances, was based on several factors including, but not limited to: regulatory status by applicable agencies, medium impacted, distance from the site, historical use of the site and surrounding properties, estimated direction of groundwater flow, soil/geologic factors, urban setting, and other factors. In this case, there were no databases with reduced search distances.*

The subject property was identified on the E-Des database. This listings ius summarized as follows:

NYC E-Designated Sites(E-DES): The subject property was listed on the E-Designation database as having E-HazMat, Air Quality and Noise restrictions (E-227), which were determined during the Lower Concourse Rezoning action completed by NYC in June 2009 (CEQR 08DCP071X). The E-designations require the issuance of a Notice to Proceed by the NYC Office of Environmental Remediation (OER) before the property can be redeveloped. The presence of the E-designations is considered a BER.

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional State databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Inactive Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. These records come from the New York State Department of Environmental Conservation (NYSDEC).

Two SHWS listings were identified within a one-quarter mile radius of the subject property, and they are summarized as follows:

- 2568 Park (ID No. 437190), 2569 Park Avenue, approximately 670 feet south and hydraulically crossgradient of the subject property. This facility is part of the Port Morris Zone 1 BOA, DEC #BOA00032, DOS #10BOA002; however, it was not funded as the property owner would not permit access. No environmental data is available for this site and the site is classified "N" indicating no further action is warranted at this time. Based on the information in the database, distance from the subject property, presumed hydraulic gradient, and that the subject property and surrounding area utilize water from a municipal source, this facility is unlikely to represent a significant environmental concern to the subject property.

- Rider Avenue Gas Station (ID No. 437424), 250 East 138th Street, approximately 1,230 feet south and hydraulically crossgradient of the subject property. This facility is part of the Port Morris Zone 1 BOA, DEC #BOA00032, DOS #10BOA002; however, it was not funded as the there is an on-going State enforcement action. No environmental data is available for this site and the site is classified "N" indicating no further action is warranted at this time. Based on the information in the database, distance from the subject property, presumed hydraulic gradient, and that the subject property and

surrounding area utilize water from a municipal source, this facility is unlikely to represent a significant environmental concern to the subject property.

Five additional SWHS listings (Mott Haven MGP Plume, Concourse Village West; Former Melrose Avenue Dry Cleaner, 753 Melrose Avenue; 2350 Fifth Avenue Corp., 2350 Fifth Avenue; Vista 1, 2401 Third Avenue; and Film Storage Warehouse Site, 203-209 West 146th Street) were identified between one-quarter mile and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

NY VAPOR REOPENDED (VAPOR) database: This is a database listing of previously dismissed/closed SHWS sites that are being re-evaluated with current knowledge of the potential for soil vapor intrusion.

One VAPOR listing (2350 Fifth Avenue Corp., 2350 5th Avenue) was identified within a one-mile radius of the subject property. Limited information regarding this facility is included in the database report; however, its status' is listed as "Complete". In addition, this facility was detailed previously in the SHWS sites section and is located over one-quarter mile west-northwest and hydraulically separated from the subject property by the Harlem River. AS such, it is unlikely to represent a significant environmental concern to the subject property.

Solid Waste Facilities/ Landfill Sites (SWF/LF): This database is an inventory of solid waste disposal facilities or landfills in New York State. Five SWF/LF listings were identified within a one-half mile radius of the subject property. This listing is summarized as follows:

- Equinox Associates, 475 Exterior Street, approximately 890 feet west-southwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive construction and demolition (C&D) debris processing facility.

- New York Recycling, 475 Exterior Street, approximately 1,460 feet northwest and hydraulically crossgradient of the subject property. This facility is identified as an active C&D debris processing facility that accepts asphalt, brick concrete, road, clean soil, and metals.

- Young Contracting Co., 2501 Third Avenue, approximately 1,650 feet south and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive waste transfer station.

- Bronx County Recycling, 475 Exterior Street, approximately 1,870 feet north-northwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive C&D processing station with no violations.

- Harlem River Yard, 99 Lincoln Avenue, approximately 2,500 feet south and hydraulically crossgradient of the subject property. This facility is identified as an inactive waste transfer station.

Based on the information provided in the database report, their distances in a dense urban area and/or the presumed hydraulic gradient, these facilities are unlikely to represent a significant environmental concern to the subject property.

In addition, three Registered Recycling (SWRCY) facilities were identified within a one-half mile radius of the subject property, and are summarized as follows:

- Ecology Recycling Plant, 321 Canal Place, approximately 430 feet southeast and hydraulically crossgradient of the subject property. This facility is identified as inactive, with no violations.

- Waste Connections of NY, 246-266 Canal Place, approximately 550 feet south-southeast and hydraulically crossgradient of the subject property. This facility is identified as inactive, with no violations.

- Sinigeen LLC/DBA First Crush, 2505 Third Avenue #1, approximately 1,600 feet south and hydraulically cross- to downgradient of the subject property. This facility is identified as inactive, with no violations.

Leaking Underground Storage Tanks (LTANKS): Forty-one LTANKS listings were identified within a one-half mile radius of the subject property. Forty of the 41 LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which

suggests that these sites are a significant environmental concern to the subject property. In addition, none of the listed closed LTANKS sites are located adjacent to the subject property.

A review of the one remaining open LTANKS listing (234 E. 149th Street) including the nature of the release, its distance, and the presumed hydraulic gradient, indicate that this listing is unlikely to represent a significant environmental concern to the subject property.

Petroleum Bulk Storage – Tank Facility Listings (TANKS) and Underground and Aboveground Storage Tank Databases (PBS-UST/AST): Thirty-one PBS-UST, 38 PBS-AST, and two TANKS sites are listed in the database report. The inclusion on the PBS-UST/AST list means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under 6 NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) and/or the New York City Fire Department (FDNY). This database does not indicate leaks, spills, or other violations.

One of the listed PBS-UST and two of the listed PBS-AST sites are located adjacent to the subject property. These listings are summarized as follows:

- 315 Grand Concourse (PBS ID No. 2-249440), 315 Grand Concourse, adjacent to the southwest, across Grand Concourse, and hydraulically cross- to downgradient of the subject property. This site is listed on both the PBS-UST and PBS-AST databases as having nine removed USTs and six removed ASTs. The tanks ranged in size from 550 to 4,000-gallons, contained gasoline, diesel fuel, lube oil, and waste oil, and were removed in 2001 and 2024. This property was cross-referenced on the NYSPILLS database related to one open and one closed spill incident. These spills are detailed in the NYSPILLS sites section where they were determined unlikely to represent a significant environmental concern to the subject property.

- Eagle Auto Repair (PBS ID No. 2-607912), 341 Grand Concourse, adjacent west, across Grand Concourse, and hydraulically downgradient of the subject property. This site is listed on the PBS-AST database as having one 275-gallon steel AST containing waste oil, installed in 1999 and removed in 2014. This site was not cross-referenced on the LTANKS or NYSPILLS databases. As such, this facility is unlikely to represent a significant environmental concern to the subject property.

State Chemical Bulk Storage Sites (CBS): The inclusion of a facility on the CBS list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 595 - 599 (NYSDEC Chemical Bulk Storage) and has a total storage capacity equal to or greater than 185 gallons. This database does not indicate leaks, spills, or other violations. One CBS facility (Power Chem. Co., Inc., 375 Rider Avenue was identified within a one-quarter mile radius of the subject property. This facility is listed as having one 1,500-gallon AST containing tetrachloroethylene that was installed in 1984 and converted to a non-regulated use. This facility was not cross-referenced on the LTANKS or NYSPILLS databases. Therefore, this facility is unlikely to represent a significant environmental concern to the subject property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation are carried out under oversight of the NYSDEC, and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the Department is provided with standard reservations.

Three VCP site was identified within a one-eighth mile radius of the subject property, and it is summarized as follows:

- 346 Grand Concourse Site (ID No. 18CVCP066X), 346 Grand Concourse, adjacent to the north and hydraulically crossgradient of the subject property. Information obtained from the NYCOER website indicates that this site was an auto repair shop that was to be redeveloped with 6- to 8-story hotel building. Soil/fill materials were impacted by semi-volatile organics, metals and pesticides. Groundwater was impacted with semi-volatile organic compounds (SVOCs) and metals. Soil vapor contained low concentrations of petroleum-related and one chlorinated volatile organic compounds (CVOC) below regulatory criteria. Remediation has been completed and a Notice of Completion was issued by NYCOER in June 2022. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

- 335 Grand Concourse Site (ID No. 15CVCP020X), 335 Grand Concourse, adjacent to the west, across Grand Concourse, and hydraulically downgradient of the subject property. Information obtained from the NYCOER website indicates that this site was developed with an auto repair shop and that is proposed to be redeveloped with a 9-story hotel building. Soil/fill materials and groundwater were impacted with several contaminants exceeding regulatory criteria. Soil vapor also contained minor concentrations of petroleum-related and CVOCs. The buildings have been demolished; however, remediation and redevelopment activities have been suspended. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

- 276 Grand Concourse Site (ID No. 19CVCP050X), 276 Grand Concourse, approximately 420 feet south and hydraulically crossgradient of the subject property. Information obtained from the NYCOER website indicates that this site is a vacant lot and parking area that was to be redeveloped with 12-story mixed-use (commercial/residential) building with a basement. Soil/fill materials were impacted by semi-volatile organics, metals and pesticides. Groundwater was impacted with VOCs and SVOCs. Soil vapor contained moderate concentrations of petroleum-related and one chlorinated VOCs below regulatory criteria. Remediation has been completed and a Notice of Completion was issued by NYCOER in June 2022. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

Nine additional VCP listings were identified between a one-eighth and one-half mile radius of the subject property. Based on the information in the database report, as well as that available from the NYCOER website, their distance, the presumed hydraulic gradient, and that the subject property and surrounding area is supplied potable water from a municipal source it is unlikely that these facilities represent a significant environmental concern to the subject property.

New York State Brownfields Sites (BROWNFIELDS): In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a

cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum.

Four NY BROWNFIELDS sites were identified within a one-eighth mile radius of the subject property. These sites are summarized as follows:

- 350 Rising (ID No. C203153), 350 Grand Concourse, approximately 40 feet north-northeast and hydraulically crossgradient the subject property. The site was historically utilized as various auto repair shops, gas stations, and a railroad office, as well as several residential buildings. Fill material and soil underlying the site are primarily impacted by SVOCs and metals. Groundwater is impacted by VOCs and SVOCs and soil vapor is impacted by chlorinated solvents. Investigation and remediation are ongoing. Based upon this information, its distance and the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

- 310 Grand Concourse Site (ID No. C203121), 310-334 Grand Concourse, approximately 180 feet north-northeast south and hydraulically crossgradient. This property is comprised of two lots totaling 0.68 acre that was recently redeveloped with a 14-story mixed-use building. Historically the site was used for various auto repair shops and service stations. Remediation is listed as “Completed”, with a Certificate of Completion issued by NYSDEC in December 2021. Groundwater flows to the west-northwest. Based on the information in the database report, its distance and the presumed hydraulic gradient, this site is unlikely to represent a significant environmental concern to the subject property.

- 261 Walton Avenue Site (ID No. C203135), 261 Walton Avenue, approximately 530 feet west-southwest and hydraulically downgradient the subject property. The site was historically utilized as an electrical specialties and lumber storage yard, an auto wrecking yard, a lime and cement company and various warehouses. Limited investigations completed to date have revealed SVOC and metals impacts to soil/fill material. Investigation and remediation are ongoing. Based upon this information, its distance and the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

- Copyrite Plastic Sheets (ID No. C203151), 261 Grand Concourse, adjacent to the southwest, across Grand Concourse, and hydraulically cross- to downgradient the subject property. The site was historically utilized as a plastic products manufacturer, electrical and air conditioning contractors, service stations, repair shops, used car sales, an oil change center and various warehouses. Investigations conducted to date have identified SVOCs, metals, and PFAs in soil, petroleum VOCs, metals and PFAs in groundwater and a limited area of CVOCs in soil vapor. Data did not reveal off-site impacts. Groundwater flows generally southeast in bedrock. Remediation is ongoing. Based upon this information, its distance and the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

Twenty additional NY BROWNFIELDS listings were identified between a one-eighth and one-half mile radius of the subject property. Based on the information in the database report, as well as that available from the NYCOER website, their distance, the presumed hydraulic gradient, and that the subject property and surrounding area is supplied potable water from a municipal source it is unlikely that these facilities represent a significant environmental concern to the subject property.

NYCDCP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning, and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation and construction are proposed to be conducted.

Three types of E-DES listings (HazMat, Air and Noise) exist, although a property can be assigned multiple designations based on known or potential risks to redevelopment. However, only those with a HazMat designation are considered to present a concern based on their historic use/development (i.e., service station, dry cleaner, manufacturing facility, etc.). The HazMat designation indicates that projected and potential development of these sites requires an environmental assessment and review by the NYC Office of Environmental Remediation (NYCOER) to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

Twenty-six E-DES listings were identified within a one-eighth mile of the subject property, four of which (338 Grand Concourse, 335 Grand Concourse, 346 Grand Concourse, and 349 Grand Concourse) are located

adjacent to the subject property. This designation does not indicate the presence of contamination, nor does it indicate the presence/potential presence of offsite impacts. Therefore, there is no information in the database report that indicates the E-DES listings represent a significant environmental concern to the subject property.

NYC Office of Environmental Remediation Sites (NYCOER): This database is a listing of those properties remediated under the oversight of the NYC Office of Environmental Remediation (OER) as part of either the E-Designation program or NYC VCP. The database includes sites that have been completed or are in-progress. Fifty-eight NYCOER sites were identified within a one-mile radius, with seven sites located within a one-eight mile radius. Based upon a review of the information included in the database report and available from the NYCOER website, remediation has been completed at five of the seven facilities. The remaining two active sites are located hydraulically cross- to downgradient of the subject property. As such, there is no information to indicate that these facilities represent a significant environmental concern to the subject property.

Per- and Polyfuoroalkyl Substances (PFAS) Contamination Site List (NY PFAS): NY PFAS database includes select businesses, fire departments, fire training centers, bulk storage facilities, airports, Department of Defense facilities surveyed by the NYSDEC to help determine if these entities used or stored materials containing perfluorooctanoic acid (PFOA) and/or perfluroroctane sulfonate (PFOS) including aqueous film-forming fire-fighting foams (AFFFs) and dispersants used in Teflon coating operations.

One NY PFAS site (Copyrite Plastic Sheets, 261 Grand Concourse) was listed within a one-quarter mile radius of the subject property. This facility was historically occupied by various commercial and industrial tenants, as well as a service station/auto repair shop. The site was investigated under the NYC BCP and elevated concentrations of PFAS compounds were identified in groundwater. This property I currently being remediated under the BCP. No off-site impacts were identified, and groundwater flows generally to the southwest. Based on the information listed in the database report, its distance, the presumed hydraulic gradient, and/or its remedial status, it is unlikely that site represents a significant environmental concern to the subject property.

New York Spills Information Database (NYSPILLS): Twenty-five NYSPILLS listings were identified within a one-eighth mile radius of the subject property. Twenty-two of the 25 NYSPILLS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. One of

the properties with listed closed NYSPILLS is located adjacent to the subject property, and it is summarized as follows:

- Spill No. 01-09527 – Former City Gas/Lage Car Wash, 315 Grand Concourse, adjacent to the southwest, across Grand Concourse, and hydraulically cross- to downgradient of the subject property. This spill, which occurred on December 29, 2001, is related to the reports of gasoline tank removal and strong gasoline odors. No additional details are provided; however, the spill was closed by the NYSDEC on December 31, 2001. This site is currently being remediated and developed under the NYS BCP with an open Spill No. 99-09720 also being addressed.

A review of the information provided regarding the three active NYSPILLS listing (350 Grand Concourse, 370 Grand Concourse, and 315 Grand Concourse), including the nature of the releases, their distances and the presumed hydraulic gradient location, indicate that these spills are unlikely to represent an environmental concern to the subject property.

6.3 Tribal Records and EDR Proprietary Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Indian Reservations	IRESERVE	1.0 mile	No	0
Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0
Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0.5 mile	No	0
Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
Manufactured Gas Plants	MGP	1.0 mile	No	1
Historic Cleaners	HISTCL	Site & Adjoining	No	0
Historic Auto Stations	HISTAS	Site & Adjoining	No	1

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Manufactured Gas Plants (MGPs): One Manufactured Gas Plant (MGP) site (Con Edison – West 132nd Street Station MGP, 12th Avenue between West 131st Street – West 133rd Street) is listed in the database report. MGPs were industrial facilities at which gas was produced from coal, oil and other feedstocks. The gas was stored, and then piped to the surrounding area, where it was used for lighting, cooking, and heating homes and businesses. The first MGPs were constructed in the early 1800s, prior to the Civil War. Most were closed during the early-to-middle 1900s, and the last one ceased operations in 1972. The production of manufactured gas created wastes including coal tar and purifier waste (lime or wood chips treated with iron oxides and used to remove cyanide and sulfur from the manufactured gas). These materials were often disposed of on the site resulting in soil and groundwater contamination. Given that the listed MGP facility is over one-half mile and hydraulically separated from the subject property by the Harlem River, it is unlikely that this facility represents a significant environmental concern to the subject property.

Historical Auto Stations Database (HISTAS): The HISTAS database provides information compiled by EDR from multiple sources that identify potential sites historically occupied by a filling/gasoline/service station, auto repair shop, auto service station, etc. There are six HISTAS listings in the database report, one of which (315 Grand Concourse, Inc., 315 Grand Concourse) is associated with an adjacent property. The 315 Grand Concourse site reportedly operated as service station from at least 1973 through 2008. This facility was detailed above in the VCP or BCP database sections where it was determined unlikely to represent a significant environmental concern to the subject property.

6.4 Orphan Site Summary

The database report also includes seven "orphan" sites, which are those properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. KBEA reviewed additional information available from EDR regarding this site, as well as available USEPA and NYS data and maps to determine if the orphan site presents a significant environmental risk to the subject property. The listed Orphan sites do not appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

KBEA representative Keith Butler inspected the subject property on September 16, 2024, accompanied by Mr. Greg (last name not provided) of Teddy's Place Auto Repair, the property owner's representative. The property owner's representative provided a brief site history and other general site information.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of the building interior, exterior areas, building systems (HVAC, plumbing, electrical, etc.), the sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. No limiting conditions were encountered during the survey, although the presence of lumber and other building materials staged on the southern portions of the property, limited visibility.

7.3 Site Description

The subject property consists of a single tax parcel located on the east side of Grand Concourse, between East 144th Street to the north, and East 138th Street to the south, in the Mott Haven section of the Borough of the Bronx, New York City, Kings County, New York. The subject property is identified by the street address of 344 Grand Concourse, and as Borough 2 – Block 2341 – Lot No. 37 on the NYC tax maps.

The property is currently developed with two interconnected 1-story commercial buildings without basements. The western building is a concrete block and brick structure with a reported area of 1,150 SF. The eastern structure is steel-framed and covered by metal panels, with an estimated area of 1,250 SF. An asphalt-paced yard area is east of the buildings. Portions of the yard areas are covered by a corrugated metal roof structure supposed by wood framing. Site perimeters are bordered by the site and adjacent buildings, except for rear yard areas which are enclosed with corrugated metal panels topped with barbed wire. The buildings are accessible via two vehicle and one pedestrian entrance leading from Grand Concourse. A gated entrance is also located at the east side of the property, accessible via a shared driveway entrance north of the subject property and the eastern adjacent MTA-owned property. Sidewalks are west of the property, along Grand Concourse.

The buildings are comprised of office space, a customer waiting area, restrooms, garage/repair areas, and storge/utility space. The buildings are currently occupied by Teddy's Place Auto Repair. Teddy's Place has reportedly occupied the site since the mid-1970s.

7.4 Utilities

Based upon information provided to KBEA and/or obtained during the site inspection, the following is a table of utilities supplied to the subject property and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	Brooklyn Union

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of the Bronx, known as Mott Haven. The following surrounding land uses were observed during the Phase I ESA site inspection:

North: A 9-story hotel building, followed by undeveloped parcel (former service station), with a two-family residence and apartment buildings beyond.

South: A vacant (former autobody repair shop) 1-story commercial building (338 Grand Concourse), followed by a 14-story mixed-use (commercial/residential) building (322 Grand Concourse), with a 1-story commercial building and a 12-story mixed-use building beyond.

East: A Metropolitan Transportation Authority (MTA) property, including a paved parking lot, and railroad tracks, followed by Park Avenue, with industrial development beyond.

West: Grand Concourse, followed by an undeveloped parcel (335 Grand Concourse) and a 1-story commercial building (349 Grand Concourse). E. 140st Street is to the southwest and a self-storge facility is to the northwest.

7.6 Interviews

Mr. Greg (last name not provided) of Teddy's Place Auto Repair, the property owner's representative, authorized site access, but was not present during the site inspection. The property owner's representative also provided a brief site history and general site information. Pertinent statements made by the property owner's representative are included throughout this report.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

Small amounts of cleaning and maintenance supplies were identified in the restroom and janitorial storage rooms within the site buildings. Teddy's Place also stores various amounts of motor oil, transmission fluid, lubricating oils and various automotive fluids. The identified materials are stored is various quantities including retail size containers, 5-gallon pails, and 30- and 55-gallon drums, and are consistent with normal business operations. The on-site storage of these substances is not a REC. Evidence of minor and de minimis oil spills/staining was observed within the buildings, primarily on the floor of the garage/shop and within the rear yard areas during the site inspection.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored, or disposed of at the site was observed on the date of the survey. In addition, the regulatory records review and interviews did not reveal evidence of any activities involving the production of hazardous wastes at the subject property.

Teddy's Place performs oil changes and other automotive repair/maintenance, which generates waste oil, waste oil filters, waste antifreeze, and other waste automotive fluids. The wastes are stored in several 55-gallon drums located east of the buildings (within a corrugated shed structure – metal floor and roof)structure). Waste oil and other automotive fluids are picked up on a periodic basis by a licensed waste hauler for offsite disposal.

Solid wastes and recyclables generated by site occupants are stored in a single trash dumpster, situated on pavement within the rear parking lot (east). The wastes are hauled by City Waste Services, a private carter, for offsite disposal. No evidence of staining or liquid wastes was observed around the bins/cans. No RECs

associated with solid waste generation, storage, and disposal were identified on the subject property during the reconnaissance or through personnel interviews.

7.7.3 Underground and Aboveground Storage Tanks

The buildings are heated and supplied hot water by natural gas-fired equipment. Several ceiling-mounted natural gas-fired heaters were observed within the repair shop portions of the buildings, with a gas meter located within the customer waiting area. No evidence of underground storage tanks (i.e., vent or fill pipes) were observed on the property at the time of the site inspection. The EDR database report did not identify any registered petroleum or chemical ASTs or USTs for the subject property, and there are no known spills/releases attributed to the subject property.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to KBEA's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

The subject property is serviced by the NYC municipal sewer system.

Storm drains and floor drains that discharge directly to subsurface soils pose a potential environmental concern because they provide a pathway for impacts to the subsurface and are classified as Class V injection wells under the USEPA's Underground Injection Control (UIC) program. These structures are required to be properly closed or permitted to stay open.

No exterior catch basins or storm drains were observed on the property at the time of the site inspection. Storm water from the subject property drains to curbside drains along Grand Concourse and flows overland to surrounding properties. Curbside drains discharge to the NYC municipal sewer system.

No interior floor drains were identified within the buildings at the time of the site inspection.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being

used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Fluorescent light ballasts were observed in throughout the buildings, which based on the age of the buildings, may contain PCBs. The disposal of leaking PCB ballasts is subject to federal regulations. No evidence of leakage associated with observed light ballasts was apparent as viewed from ground level. Based on the age of the structure and the potential for the fluorescent light ballasts to contain PCBs, the light ballasts are considered an environmental concern for the subject property.

The repair shop area was equipped with three hydraulic electric lifts, which do not include subgrade equipment. However, due to the presence of vehicles and other equipment, the presence of older, out-of-service piston lifts could not be confirmed. No electrical transformers, elevators or other equipment suspected to contain PCBs were identified on the subject property at the time of the site inspection.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills, stains or odors was observed on the subject property at the time of the site inspection. Based on the review of historical and regulatory records, no evidence of landfills, and/or direct burial activities was observed on or proximate to the subject property. However, as the subject property was formerly developed with several commercial buildings, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the subject property. The potential presence of fill materials is considered a BER.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

KBEA also inspected the subject properties for evidence of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	**Not Observed**	**Observed**
Chemical/Petroleum Odors	X	
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells	X	
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Bronx area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 31 radon tests have been conducted in Bronx County. Test results indicate average radon concentrations of 0.67 pCi/L (first floor level) and 1.11 pCi/L (basements). Data indicate that approximately two percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

Additional data (May 2023) obtained from the NYSDOH indicates that 97 basement radon tests have been conducted in Bronx County, with average radon basement concentration of 1.74 pCi/L. Based on these data, radon is not likely to represent an environmental concern for the subject property

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces conducted during the site inspection indicated that interior paint within the building was in fair condition, with some areas of chipping, peeling, and well-worn paint. The building exterior walls were finished with painted metal panels and brick, and unpainted brick. Exterior painted surfaces were also in fair condition. The lead contents of the paints are unknown, but due to the ages of the buildings the presence of lead-based paint (LBP) is possible. Since the improvements are used for commercial purposes, lead-based paint is not considered an environmental concern. In addition, the building is not subject to LBP testing and other requirements specified in NYC Local Law No. 1 for 2004. The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and State regulations.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because

when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). Suspect asbestos-containing acoustic ceiling tile and sheetrock/plaster were observed within the building, specifically office areas at the southwestern portion. The suspect ACMs were in good condition at the time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. However, due to the ages of the site buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos. No sampling of suspect ACM was conducted in coordination with this Phase I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Central Park, NY-NJ Quadrangle, indicates that there are no NYS freshwater wetlands located within a one-mile radius of the subject property.

Tidal wetlands line much of the saltwater shore, bays, inlets, canals, and estuaries of Long Island and New York City, and Westchester County. The tidal wetlands regulations apply anywhere tidal inundation occurs on a daily, monthly, or intermittent basis, including but not exclusively within the salt wedge. Vegetation in intertidal areas beyond the range of the salt wedge is classified as coastal fresh marsh. In accordance with the New York State Tidal Wetlands Land Use Regulations (6 NYCRR Part 661), sixteen wetland categories are defined in the regulations. Coastal and tidal freshwater wetlands categories are identified by the presence of a tide and the types of vegetation present. The categories of wetlands and the restrictions placed on activities in and around them are defined in detail in 6 NYCRR Part 661.

KBEA also reviewed NYSDEC Tidal Wetlands Maps available online. The tidal wetlands map (No. 588-518) showing the subject and surrounding properties indicates that the Harlem River, located approximately 0.7 mile to the west of the subject property, is classified as a Littoral Zone (LZ) tidal wetland. LZ wetlands are

defined as the tidal wetland zone that includes all lands under tidal waters which are not included in any other category. There shall be no LZ under waters deeper than six feet at mean low water.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that the nearest potential federal wetlands are located approximately 0.7 mile to the west of the subject property and associated with the Harlem River. These wetlands are classified as E1UBL wetlands, which are defined as subtidal estuarine water bodies with unconsolidated bottoms, which are permanently flooded. Additional information obtained from the FWS website is included in Appendix B.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject properties are located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970083F) indicates that entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the subject property.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

8.6 Vapor Encroachment

As part of this assessment, KBEA evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-10 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening assessment generally consists of the following: a search distance test to identify if there are any known or

suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for nonpetroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits. Based on an evaluation of this collective criteria, the potential for a VEC from current and surrounding land use activities is considered moderate to high due to the long term use of the subject and surrounding properties, as auto repair shops, autobody repair shops, and/or service stations. The potential soil vapor intrusion risk is considered a REC and should be evaluated as part of a Phase II investigation. KBEA notes that soil vapor sampling is a required part of the NYCOER E-Designation HazMat investigation program.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-21 (inclusive of the USEPA all appropriate inquiry requirements) for the commercial property located on the east side of Grand Concourse, between East 144th Street to the north, and East 138th Street to the south, in the Mott Haven section of the Borough of the Bronx, New York City, Kings County, New York. The subject property is identified by the street address of 344 Grand Concourse, and as Borough 2 – Block 2341 – Lot No. 37 on the NYC tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No controlled recognized environmental conditions (CRECs) or historic recognized environmental conditions (HRECs) were identified for the subject property. The identified REC is summarized as follows:

- Information obtained from multiple historic sources revealed that the site was utilized as multiple auto repair shops and an auto painting facility. In addition, most of the adjacent/surrounding properties were also utilized as service stations, auto repair shops and various industrial uses. As such, there is a potential for historic site operations and/or those at the adjacent/surrounding properties to have impacted the subsurface beneath the subject property, including potential impacts to soil vapor and indoor air quality. Therefore, the historic use of the subject and surrounding properties is considered a REC.

Based upon the above findings and conclusions, KBEA recommends following:

- To evaluate potential impacts related to the historic usage of the subject and surrounding properties, a subsurface investigation should be performed. At a minimum, the investigation should include the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to

conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the subject property.

In addition to the aforementioned REC, KBEA identified several environmental concerns (ASTM Non-Scope issues/BERs). The environmental concerns/BERs and KBEA's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having E-HazMat, Air Quality and Noise restrictions (E-227), which were determined during the Lower Concourse Rezoning action completed by NYC in June 2009 (CEQR 08DCP071X). The E-designations require the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-designations is considered a BER.

- The Sanborn map from 1935 shows the eastern portions of the subject property as developed with a 1-story auto painting shop that extends off-site to the south. The map also notes the presence of a 225-gallon gasoline UST; however, the exact location of the tank is not depicted. Additionally, this tank (if present on the subject property) was likely removed during building demolition. Finally, given that the UST has been out-of-service since the late-1940s, any spills or releases from the tank have had over 70 years to naturally attenuate. Therefore, KBEA considers the potential presence of this UST to represent a BER.

  To evaluate the potential presence of the UST, a geophysical survey (e.g., magnetometer and/or ground penetrating radar survey) could be conducted in the vicinity of the suspected tank to confirm its presence/location. As an alternative, given that the UST has been out-of-service since the mid-1940s any spills or releases from the tank have had over 70 years to naturally attenuate. As such, it is unlikely that a significant quantity of impacted soil (if any) remains on-site nor is it likely that groundwater remediation and/or long-term groundwater monitoring would be required to remediate any spill to the satisfaction of the NYSDEC. Therefore, this potential tank can be addressed under a contingency plan as part of any proposed redevelopment project.

- Fluorescent light ballasts were observed throughout the buildings, which based on the ages of the buildings, may contain PCBs. KBEA recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition,

while the disposal of non-leaking PCB ballasts is not currently regulated by the USEPA, KBEA recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.

- Information obtained from multiple historic sources revealed that the subject property was formerly developed with one or more commercial structures from at least 1908 through 1935. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The potential presence of fill materials is considered a BER.

  Experience with similar projects shows that typical urban fill materials (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the E-HazMat designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Suspect asbestos-containing acoustic ceiling tile and sheetrock/plaster were observed within the buildings, specifically office areas at the southwestern portion. The suspect ACMs were in good condition at the time of the site inspection. Exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. However, due to the ages of the site buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then KBEA recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a NYC and NYS-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-21, inclusive of the USEPA "All Appropriate Inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the site referenced above. KBEA has developed and performed the "All Appropriate Inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during KBEA's preparation of this report.

QUALIFICATIONS OF

ENVIRONMENTAL PROFESSIONAL

kb Environmental Assessment

Keith W. Butler, President

PROFILE

Mr. Butler has extensive project management experience with respect to environmental due diligence and subsurface investigations. He is responsible for the preparation of project proposals, Phase I and II Environmental Site Assessments, Work Plans, Health and Safety Plans, Quality Assurance Project Plans, and investigation reports. Additionally, Mr. Butler has conducted and managed numerous Phase I and II ESAs. In these roles, Mr. Butler is responsible for applying the various state and local regulations, which govern environmental compliance and determine the need for additional investigation and/or remediation.

SELECTED PROJECTS

Madison National Bank, Various Sites, New York
Mr. Butler served as the Project Manager and principal contact for Madison National Bank. He was responsible for the preparation of Transaction Screen and Phase I/II Environmental Site Assessments (ESAs) at various sites throughout the New York metropolitan area, as required by the bank to satisfy client mortgage or construction loan requests.

Jewish Home & Hospital, Manhattan, NY
Most recently, Mr. Butler completed a Phase I ESA at their Bronx campus to obtain US. Housing and Urban Development (HUD) funding for a future construction project. Mr. Butler was also responsible for implementing a Remedial Action Work (RAW) Plan at the Bronx facility as required by the NYSDEC under a Voluntary Cleanup Agreement. The RAW included the preparation of contract documents, excavation of over 2,000 tons petroleum contaminated soils, installation of a Soil Vapor Extraction (SVE) system remedial oversight, and sampling.

Pulte Homes of New York, Patchogue, NY
Mr. Butler served as the Project Manager for the re-development of this six-acre site and was responsible for field oversight and coordination between remediation contractors and various regulatory agencies. Initial phases of the project included the completion of Phase I and II ESAs. Subsequent remediation consisted of UST removal, excavation of petroleum-impacted soils, closure of three NYSDEC spill numbers, removal of contaminated UIC sediment/sludge, the closure of commercial and residential UIC structures and the excavation of arsenic and metals contaminated soil. The project was conducted under approved Remedial Work and Soil Management Plans with oversight from the State, County and Village agencies.

Town of Islip, Blydenburgh Road Landfill, Hauppauge, NY
Mr. Butler served as the Project Manager for the groundwater and leachate monitoring program at the Blydenburgh Road Landfill - Cleanfills 1 and 2 and Leachate Impoundment Area. Mr. Butler was the principal contact for the Town's Resource Recovery Agency. He prepared the quarterly and annual monitoring reports, oversaw sampling efforts, and coordinated with the Town's analytical laboratory and data validation contractors. Mr. Butler was also responsible for preparing quarterly well condition reports and leachate quality reports for compliance with the Town's Suffolk County Discharge Certification Permit.

Ogden Aviation, Various Sites, JFK International Airport, Jamaica, New York
Mr. Butler served as the project manager for the rehabilitation of the satellite fuel farm recovery well system. Recovery wells at the fuel farm had become clogged with iron deposits and bacteria limiting product recovery efforts. Mr. Butler developed and supervised chemical cleaning and redevelopment of recovery wells under the approval of the NYSDEC. The chemical treatment has resulted in significant increases in product recovery volumes.

Brookhaven National Laboratory, Upton, NY
Mr. Butler has worked on a number of remediation system and monitoring well installation projects at BNL. His duties included oversight of installations, system pump tests, performance evaluations, and well development. He also provided oversight of soil borings, temporary well construction, soil and water sampling, and air monitoring for groundwater screening survey of two operable units in hazardous and radioactive waste storage areas. Mr. Butler also provided oversight for groundwater monitoring, well

construction, well abandonment, and methane-monitoring wells for landfill closure.

metroPCS, Various Sites, New York
Mr. Butler served as the Project Manager for metroPCS' Long Island region telecommunications site acquisition and expansion program. Mr. Butler was responsible for the preparation of Phase I ESAs, the conduct of Phase II ESAs, including asbestos, lead paint and soil sampling, and coordination of National Environmental Policy Act (NEPA) reports and planning studies at various locations proposed for construction of new cellular telephone facilities. Reports and associated communications were transmitted electronically through metroPCS' data management system.

Dormitory Authority - State of New York, Harlem Hospital Center Modernization Project - Hazardous and Universal Waste Survey, Harlem Hospital, New York, NY
Mr. Butler served as the field team leader for conducting hazardous and universal waste surveys in multiple buildings affiliated with Harlem Hospital Center. The survey included the identification of hazardous and universal waste materials including chemicals, paints, fluorescent bulbs, high intensity discharge bulbs/fixtures, battery operated equipment, above and underground petroleum storage tank identification, PCB containing light ballasts and electrical equipment. The hospital is comprised of a number of buildings, many that were abandoned and slated for demolition.

SVE Monitoring at Newark International Airport, Elizabeth, NJ
A routine leak detection test indicated that two 10,000-gallon underground storage tanks, which were used to store unleaded gasoline, had failed tightness tests. Follow-up investigation revealed that the product had impacted the subsurface environment. In response to this, a soil vapor extraction system was installed to reduce the residual concentrations of petroleum constituents in soil and groundwater and to minimize vapor migration into subsurface utility vaults. Mr. Butler was responsible for implementing the Remedial Action Work Plan, developed for the site by Ogden and the State of New Jersey. Activities conducted under the RAW include quarterly groundwater monitoring, air sampling, vacuum pressure monitoring, system maintenance and reporting.

Federal Express Site, Newark International Airport, Elizabeth, NJ
Mr. Butler worked with Ogden Aviation and the State of New Jersey to address outstanding environmental issues at the site related to a spill of jet fuel, which occurred during a construction accident. Mr. Butler performed a site assessment, which included groundwater monitoring, product gauging, and groundwater flow modeling. After reviewing these data, Mr. Butler determined that fill material at the site was contributing to soil and groundwater contamination and has petitioned the State for partial site closure. Mr. Butler is continuing to address the remaining area of concern through product recovery and continued monitoring.

Northrop Grumman, Various Sites
Mr. Butler conducted three Phase I ESAs and a Phase II investigation for the presence of PCBs in soil. He also inspected and supervised the removal of underground storage tanks, asbestos abatement projects, and sanitary system closures related to the facility decommissioning. Mr. Butler also conducted groundwater investigations and provided oversight during soil sampling, drilling and soil remediation activities.

New York City Department of Environmental Protection, Various Sites
Mr. Butler served as an Environmental Scientist for hazard investigation at seven sewage pump stations. Mr. Butler addressed a wide range of environmental concerns including asbestos, lead based paints, PCB oil, light ballasts, and other hazardous building materials. He conducted field investigations, sampling, and prepared Hazardous Materials Survey Reports for use during preparation of plans and specifications for proposed pump station construction projects.

Fresh Kills Landfill, Staten Island, New York
Mr. Butler participated in the field operations during pump and yield tests conducted on Cells 1 and 9. The tests were performed to determine the hydraulic properties of the landfill's refuse. He collected groundwater and leachate measurements in recovery wells and in adjacent observation wells under pumping and non-pumping conditions.

Long Island City, New York 10013

Re: Freedom of Information Request
344 Grand Concourse
Block 2341, Lot No. 37
Bronx, New York 10451

Dear Sir or Madam:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties. We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g., asbestos, lead paint), etc. for the facility. We agree with the department's decision to omit any health or personal identification in records provided.

If you require additional information to respond to this request or if there are costs associated with same, please, do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

KB Environmental Assessment Ltd.

Keith W. Butler
President

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	*Scale*	*Details*	*Source*
2019	1"=500'	Flight Year: 2019	USDA/NAIP

EDR Historical Topo Map Report

09/09/24

Site Name:

Commercial Property
338-344 Grand Concourse
Bronx, NY 10451
EDR Inquiry # 7758351.4

Client Name:

KB Environmental Assessment
4 Gail Street
Bay Shore, NY 11706
Contact: Keith Butler

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: YBA2401

Coordinates:

Latitude:	40.814989 40° 48' 54" North
Longitude:	-73.928431 -73° 55' 42" West
UTM Zone:	Zone 18 North
UTM X Meters:	590372.90
UTM Y Meters:	4518771.82
Elevation:	31.95' above sea level

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 528 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/25/2024 has revealed that there are 5 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 41 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Spill Date: 2017-09-14

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 31 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 25 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 65 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 25 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 12 E MANIFEST sites within approximately 0.25 miles of the target property.

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 69 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

CON EDISON - WEST 13	12TH AVE. BETWEEN W.	W 1/2 - 1 (0.763 mi.)	399	1707

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

BROWNFIELDS:

Name:	310 GRAND CONCOURSE
Address:	310 AND 334 GRAND CONCOURSE
City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	583943
Acres:	0.680
HW Code:	C203121
SWIS:	0301
Town:	New York City
Record Added Date:	03/05/2019
Record Updated Date:	12/30/2021
Update By:	AMSERVIS
Site Description:	"Location: The site is located in the Mott Haven neighborhood of Bronx County and is comprised of two full tax parcels (Lots 28 and 31). The total area of the site is 0.68 acres. The west side of the site is bordered by Grand Concourse and commercial properties. The east side is bordered by the Metro North rail line. Site Features: The site was improved with three 1-story masonry buildings constructed approximately in 1931. The buildings and the property are currently undergoing redevelopment to a 14-story residential building. Current Zoning and Land Use: The property is currently zoned C6-2A. C6 districts permit a wide range of high-bulk commercial uses requiring a central location. Surrounding land use primarily consists of commercial (warehouses, auto repair, etc.) and industrial (manufacturing). There are several multi-family apartment buildings to the north and to the east on the opposite side of the Metro-North railway. The area surrounding the property is highly urbanized and

310 GRAND CONCOURSE (Continued) **S127990257**

	predominantly consists of industrial/commercial buildings interspersed with open air parking/display lots and equipment yards. Past Use of the Site: Lot 28 has been occupied by several gas stations and auto repair shops beginning in 1944. Lot 31 has been occupied by auto repair shops (glass, radiator) from 1944 through 2000 at which time it was occupied by a medical imaging facility. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 feet below grade followed by native silty-sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 34 feet above mean sea level. The topography within the immediate area slopes gradually to the west and south. Groundwater occurs beneath the site at a depth of approximately 13 feet below grade. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally west to southwest toward the Harlem River. The site is not located within a designated flood zone. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum VOCs, SVOCs and metals in soils. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. "
Health Problem:	"Remedial actions are complete and no exposures are expected to site contamination since the site has been cleaned up to unrestricted use."

City,State,Zip:	BRONX, NY 10451
Program:	BCP
Site Code:	631009
Acres:	0.710
HW Code:	C203153
SWIS:	0301
Town:	New York City
Record Added Date:	01/13/2022
Record Updated Date:	04/18/2023
Update By:	WBBENNET
Site Description:	"Location: The site is located at 350 Grand Concourse in the Bronx, New York, and is identified on the New York City Tax Map as Block 2341, Lot 42. Historically, Lot 42 was divided into Lots 42 and 47. The approximately 31,045- sf site is bounded to the north by a three-story residential building; to the east by a wooded vacant lot; to the south by an under construction multi-story hotel; and to the west by Grand Concourse. Site Features: The 31,045-sf Site proposed for entrance into the BCP includes Block 2341, Lot 42. Currently, the site is developed with a concrete-paved vacant gasoline service station with a 1-story boarded up convenience store, a former sales kiosk, and canopy covered (disconnected) gasoline pump dispenser area. Current Zoning and Land Use: The site is currently zoned as C6-2A commercial and residential district. The proposed use is consistent with existing zoning for the site. Past Use of the Site: Historical records indicated that as early as 1891, the site was

350 RISING (Continued) **S128660457**

developed with several two- to four-story dwellings and from 1908-1935, the southern portion of the site was depicted as the NYC and HR Railroad Co. with multiple two- to four-story structures. By 1935, the site was occupied by automotive related businesses/facilities and uses that included various gasoline filling stations, auto sales, and auto body repair with associated gasoline USTs between 1944 and the present. The site was also listed on the NYSDEC PBS database with three out-of-service 12,000-gallon gasoline underground storage tanks (USTs). Site Geology and Hydrology: Based on the U.S. Geological Survey Central Park NY-NJ Quadrangle (2013) map, the site is approximately 40 feet above the North American Vertical Datum of 1988 (NAVD88). Groundwater was encountered between approximately 12 to 18 feet below grade across the site during AKRF s 2021 Phase II Subsurface Investigation. Groundwater is expected to flow southwest beneath the site towards the Harlem River, which is located approximately 1,000 feet from the site. Actual groundwater flow may be affected by many factors, including underground utilities, subway tunnels, subsurface features, seasonal fluctuations in groundwater levels, precipitation, geology, and other factors beyond the scope of this study. Stratigraphy beneath the site consisted of up to 7 to 17 feet of historic fill (silt with sand, brick, and gravel) generally underlain by either apparent native soil (silt, sand, and clay with gravel) to the terminus of the borings (between 13 to 25 feet below grade) or apparent weathered bedrock encountered between 7 to 20 feet below grade. Groundwater was encountered approximately 12 to 18 feet below grade. "

I04 - Overfill - Product Level Gauge (A/G)

Tank Number: 005
Tank ID: 41293
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 4000
Install Date: 12/01/1990
Date Tank Closed: 12/01/2001
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0009
Common Name of Substance: Gasoline

Tightness Test Method: 19
Date Test: 02/07/2001
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI
Last Modified: 05/09/2022

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
H04 - Tank Leak Detection - Groundwater Well
J01 - Dispenser - Pressurized Dispenser
B02 - Tank External Protection - Original Sacrificial Anode
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

350 RISING (Continued) **U003107160**

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G04 - Tank Secondary Containment - Double-Walled (Underground)

Tank Number: 1
Tank ID: 62366
Tank Status: Temporarily Out of Service
Material Name: Temporarily Out of Service
Capacity Gallons: 12000
Install Date: 12/01/2001
Date Tank Closed: 08/09/2021
Registered: True
Tank Location: Underground
Tank Type: Equivalent technology
Material Code: 2712
Common Name of Substance: Gasoline/Ethanol

Tightness Test Method: 14
Date Test: 07/08/2005
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI

DEC Memo:	11/28/03 Reassigned from DeMeo to Foley. See spill #9814075 for info on former Merit station on nothern half of property. File review: Underground Storage Tank Excavation Assessment Report (Delta, 11/4/02) Five 4000gal(double-walled steel) gas USTs and an abandoned 550-gal(single-walled steel) UST excavated during raze and rebuild activities. Replaced with three 12000gal gas USTs in a separate tank cavity. Lab analysis of the gasoline tank field post-ex soil samples identified MTBE in excess of TAGM in the four bottom samples (tank-2, tank-3, tank-4 and tank-5). MTBE concentrations ranged from 1500ppb(tank-5) to 7740ppb(tank-3). Total BTEX was non-detect in all

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

soil samples. No soil was excavated during tank pulls. Delta proposes conducting a Geoprobe assessment in the vicinity of the former tank field to delineate soil concentrations. 12/31/03 Received SHAR (Delta, 12/22/03) Report only covers the southern half of the existing BP service station. The nothern half is managed by Amerada Hess, formerly occupied by a Merit station. Site plan shows 6 monitoring wells on the northern portion of the property.(see spill #9814075) 1360 tons of petroleum-impacted soils were removed during raze and rebuild. Six soil borings were advanced around the former tank field and pump islands to depths between 11.5 and 20ft bgs. Lab analysis of soil samples did not identify VOCs in excess of TAGM. Three soil borings were converted to temporary 1 wells. Groundwater samples collected identified between nine and fourteen VOCs in excess of GWQS in all three samples. MTBE concentrations ranged from 2820ppb(SB-1/water) to 11500ppb(SB-2/water). Delta installed three 2 permanent monitoring wells in June/July 2003 to depths between 19.9 and 21.4'bgs. Underlying bedrock was encountered in one of the three borings at 21.5'. Additional groundwater samples were collected. Lab analysis identified VOCs in excess of GWQS in all three samples. 1/5/04 Discussed site with J. Sun, PM for Hess(#9814075). He will look for signed STIP from Hess for northern section of property. May have existing remediation system on property. 1/29/04 Received 4Q2003 monitoring report(Delta, 1/21/04). Max BTEX 29936ppb(MW-5) and max MTBE 2860ppb(MW-4). MW-2 is clean. 1/29/04 Joe Sun sent out stip to Hess. 3/24/04 Hess stip executed. 4/22/04 Received 1Q2004 monitoring report. DTW 12.5-19'bgs. Total BTEX from 10ppb(MW-2) to 15962ppb(MW-1). MTBE from 6.9ppb(MW-2) to 1720ppb(MW-3). 10/14/04 2Q04 monitoring report received. DTW 13-18'bgs. BTEX from 12ppb(MW-2) to 16174ppb(MW-1). MTBE from 3ppb(MW-2) to 1160ppb(MW-1). 4/7/05 Received 3Q04 and 4Q04 monitoring reports. 3Q04- BTEX ranged from ND(MW-2) to 18124ppb(MW-1). MTBE ranged from ND(MW-2) to 424ppb(MW-3). 4Q04- BTEX ranged from 1ppb(MW-2) to 16084ppb(MW-1). MTBE ranged from 9ppb(MW-2) to 507ppb(MW-3). 11/9/05: Reviewed quarterly report dated 9/29/05. Three wells sampled on 6/10/05. No LNAPL present. Max BTEX is 22437ppb (MW1) and max MTBE is 328ppb(MW3). 11/25/05 3Q05 - DTW 11.82-19.30'bgs. No LNAPL present. BTEX from 0.5ppb(MW-2) to 9858ppb(MW-1). MTBE from 2ppb(MW-2) to 559ppb(MW-3). 3/28/06 4Q05 sampling conducted 12/28/05 on three MWs. DTW 11.74-17.91'bgs. BTEX from 34ppb(MW-2) to 31268ppb(MW-1). MTBE from ND(MW-1) to 131ppb(MW-3). MW-1 is problem well. Concentrations in downgradient well(MW-3) are fluctuating. Hess has system operating on northside of property. 6/8/2006 - Feng -

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

project reassigned to RJFeng.
(RJF) 9/29/2006 - Feng - Portfolio meeting with BP and Delta. The site has limited access to trucks
due to the canopy. Delta will keep quarterly monitoring. (RJF)
1/4/2007 - Feng - 1Q2006,
10/18/2006, by Delta. Groundwater sampled and gauged 3/3/2006. 3 monitoring wells. DTW 12.23' to
18.31' bg. Flows southeast. No LNAPL. MW-1, 13,489 ppb BTEX, 23.8 ppb MTBE. MW-2, 1.4 ppb BTEX, 2.1
ppb MTBE. MW-3, 60.4 ppb BTEX, 81.4 ppb MTBE. (RJF) 2/6/2007 - Feng - 2Q2006, 12/11/2006, by Delta.
Groundwater sampled and gauged 6/30/2006. 3 monitoring wells. DTW 10.82' to 17.93' bg. Flows
east-southeast. No LNAPL. MW-1, 14,887 ppb BTEX, 8.6 ppb MTBE. MW-2, 133.62 ppb BTEX, 0.4 ppb MTBE.
16.69 ppb BTEX, 30.4 ppb MTBE. Checked with Hess PM, RAP for SVE and ORC socks approved, but not
implemented yet. (RJF) 5/29/2007 - Feng - 3Q2006, 1/22/2007, by Delta. Groundwater sampled and
gauged 9/26/2006. 3 monitoring wells. DTW 11.98' to 18.02' bg. Flows to southeast. LNAPL in MW-1
(0.02'). MW-1, 9,882 ppb BTEX, 7.7 ppb MTBE. MW-2, 0.45 ppb BTEX, 2 ppb MTBE. MW-3, 9.8 ppb BTEX,
20.6 ppb MTBE. (RJF) 8/15/2007 - Feng - 4Q2006, 7/2/2007. Groundwater sampled 12/13/2006. All 3
monitoring wells were sampled. DTW 12.09' to 18.14' bg. Flows to southeast. No LNAPL. MW-1, 17,027
ppb BTEX, less than 50 ppb MTBE. MW-2, BTEX ND, 1.7 ppb MTBE. MW-3, 21.7 ppb BTEX, 31.5 ppb MTBE.
(RJF) 11/21/2007 - Feng - 1Q2007, 8/30/2007. Groundwater sampled 3/28/2007. All 3 monitoring wells
were sampled. DTW 11.76' to 17.77' bg. Flows to southeast. No LNAPL. BTEX range ND to 10,616 ppb
(MW-1). MTBE range 1.1 ppb to 13.6 ppb (MW-3). (RJF) 3/20/2008 - Feng - eDoc Quarterly Monitoring
Report 3Q2007, 4Q2007 and 1Q2008. (RJF) 6/26/2008 - 3Q2007, 2/25/2008. Active service station. The
monitoring well network was gauged and sampled on 8/22/007. The site was not sampled in 2Q2007. 3
monitoring wells were gauged and sampled. DTW 11.30' to 17.66' bg. Flows to southeast. No LNAPL.
BTEX range ND to 9,528 ppb (MW-1). MTBE range ND to 14.2 ppb (MW-3). 4Q2007, 2/25/2008. Active
service station. The monitoring well network was gauged and sampled 11/14/2007. 3 monitoring wells.
DTW 12.27' to 18.54' bg. Flows to southeast. NO LNAPL. BTEX range ND to 10,323 ppb (MW-1). MTBE
range N Dto 26.2 ppb (MW-3). 1Q2008, 3/10/2008. Active service station. The monitoring well network
was gauged and sampled 2/7/2008. 3 monitoring wells. DTW 12.45' to 18.49' bg. Flows to southeast.
NO LNAPL. BTEX range 1 ppb to 10,600 ppb (MW-1). MTBE range 1 ppb to 25 ppb (MW-3). (RJF)
10/29/2008 - 2Q2008, 9/20/2008, by Delta. Active station. The monitoring well network was gauged
and sampled 6/27/2008. 3 wells were gauged. NO LNAPL. DTW 11.66' to 18.62' bg. Flows to southeast.

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

3 wells were sampled. BTEX range 0.67 ug/L to 9,770 ug/L (MW-1). MTBE range ND to 14.0 ug/L (MW-3).
(RJF) 3/4/2009 - 3Q2008, 12/11/2008, by Delta. Active station. The monitoring well nework was
gauged and sampled 9/4/2008. 3 wells were gauged. LNAPL in MW-1 (0.02'). DTW 11.95' to 18.09' bg.
Flows to southeast. 3 wells were sampled. BTEX range ND to 10,540 ug/L (MW-1). MTBE range 1.1 ug/L
to 7.2 ug/L (MW-3). 4Q2008, 1/30/2009, by Delta. Active station. The monitoring well network was
gauged and sampled on 12/17/2008. 3 wells were gauged. LNAPL in MW-1 (0.03'). DTW 11.57' to 17.57'
bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 9,980 ug/L (MW-1). MTBE range ND to
8.3 ug/L (MW-3). (RJF) 8/14/2009 - Reviewed Drilling Work Plan, dated 6/29/2009, by Delta, pdf copy
via email. Delta proposes to install 2 monitoring wells northwest and southwest of MW-1. Email
comments to Delta requiring one more downgradient well at the east side of the canopy. Revision due
9/2009. (RJF) 9/1/2009 - 2Q2009, 8/5/2009, by Delta. Active station. The monitoring well network
was gauged and sampled on 6/29/2009. 3 wells were gauged. NO LNAPL. DTW 10.87' to 17.20' bg. Flows
to southeast. 3 wells were sampled. BTEX range ND to 10,407 ug/L (MW-1). MTBE range ND to 7.1 ug/L
(MW-3). (RJF) 9/11/2009 - email from Delta. attached with the SHAR of 12/29/2003. Delta installed
SB-6 at the east side of the canopy/tanks. The boring was advanced to 11.5 feet bgs. Weathered
bedrock was encountered at approximately 8 feet bgs and there was no overburden saturation. soil
sample taken from 9-11.5 feet, no VOCs/SVOCs detected. Delta requested not to install the well over
there as required by DEC 8/14/2009. (RJF) 3Q2009, 12/7/2009, by ARCADIS. 3 wells were gauged and
sampled on 9/25/2009. LNAPL in MW-1 (0.01'). Max benzene 81 ug/L (MW-1). Max BTEX 6,200 ug/L
(MW-1). Max MTBE 6.3 ug/L (MW-3). ARCADIS requests to reduce the monthly gauging to quarterly based
on the intermittent nature of LNAPL occurrence in MW-1. 4Q2009, 2/5/2010, by ARCADIS. 3 wells were
gauged and sampled on 12/30/2009. DTW 11.34-17.20' bg. Flows to east-southeast. NO LNAPL. max
benzene 34 ug/L (MW-1). Max BTEX 7,900 ug/L (MW-1). Max MTBE 5.2 ug/L (MW-1). Due to project
transition, the monthly guaging did not occur in October, November or January 2010, but has now
resumed. Installation of 3 additional wells was proposed to DEC 12/2009 and will schedule field
upon approval. 3/16/2010 - Reviewed Investigation Work Plan revision, dated 3/8/2010, by ARCADIS.
ARCADIS proposes to install 3 monitoring wells, MW-4 west of the canopy, MW-5 south of the canopy
in between MW-1 and MW-2, MW-6 east of the canopy. Work plan is approved. Report due 6/2010. (RJF)
5/21/2010 - 1Q2010, 4/28/2010, by ARCADIS. 3 wells were gauged and

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

sampled on 3/12/2010. DTW
19.73-21.33' bg. Flows to east-southeast. NO LNAPL. Max benzene 52
ug/L (MW-1). Max BTEX 7,500J
ug/L (MW-1). Max MTBE 4.5J (MW-1). The 3 new wells are scheduled to be
installed in 5/2010. ARCADIS
requests reduce monthly gauging to quarterly. 08/26/10: This spill
case is transferred from R. Feng
to J. Kolleeny. Reviewed Results of 2nd Quarter 2010 GW Monitoring and
Subsurface Hydrocarbon
Assessment Rpt by ARCADIS, both dated 8/16/10 (in eDocs). 2nd Quarter
2010 sampling shows high
dissolved contam in well MW-1. Subsurface Invest Rpt. summarizes
install'n & sampling of 3 new soil
borings, two of which were converted into mon wells (3rd boring hit
refusal on presumed bedrock w/o
hitting GW). Borings found saturated zone soil contam at MW-4, and
significant GW impacts at MW-4
and MW-5. ARCADIS proposed adding new wells to mon program, continued
quarterly mon, and evaluation
of remedial technologies, feasibility study and remedial action plan.
I sent letter (in eDocs) to
Jon Armstrong of BP, cc's to Ray Wagner and Andrew Korik of ARCADIS,
asking for addt'l delin wells
to north & west of most contaminated wells (MW-1, MW-4 & MW-5), with
work plan for wells due by
9/17/10 and RAP due by 12/3/10. - J. Kolleeny 08/30/10: Spill no. at
adjacent former Merit Station
to north of site (cleanup being managed by Hess) is 9814075; see rpts
in eDocs for GW data. - J.
Kolleeny 09/01/10: On 8/27/10 received email from Ray Wagner of
ARCADIS: I believe we can
accommodate you on request to add Former UST areas to site plans,
where applicable, and we have
this info. We will begin this process; please keep in mind there may
be a little lag in updating
some sites as we will be pulling figures from archive site files sent
from Delta. I would like to
have a call with you to discuss recently submitted investig rpt for BP
station 17782 and your
request for addt'l delin wells to west & north of MW-4. Merit site to
north has wells just north of
MW-4, and stepping out to west of MW-4 is limited due to subway and
street. Please let me know if
you would be available to discuss this later today or early next week.
Spoke with Ray later that
day, asked if he could send site plan showing northern half of site
(former Merit Station), where
cleanup is being managed by Hess. On 8/30/10, he sent figure and 2009
rpt by EnviroTrac showing
wells on north portion of site and GW data. I sent email: Thanks for
fig. and rpt. Have you been
able to find out anything about location of former USTs at former
Amoco station? He replied he
would have that info by 9/1/10. On 9/1/10, received email from Andrew
Korik of ARCADIS showing
former UST locations on former Amoco & Merit portions of site (in
eDocs). I sent email to Andrew &

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

Ray of ARCADIS, cc to Jon Armstrong of BP: Thanks for sending site plans with former UST locations.
I looked over fig. and 2009 EnviroTrac rpt sent few days ago by Ray, and I also looked at more
recent EnviroTrac rpt (July 2010) for northern (former Merit sta.) portion of site, and I see that
monitoring well MW-4 on southwestern part of that site has either been destroyed or is not being
sampled. Therefore, I believe that an addt'l well to north of ARCADIS well MW-4 on former Amoco
site, near former property line, is warranted. In light of constraints posed by nearby subway &
Grand Concourse, I will not at this time ask for addt'l delin wells west of contam area represented
by wells MW-1, MW-4 & MW-5. Please contact me if you have questions. - JK 09/07/10: On 9/2/10,
received email from Andrew Korik of ARCADIS with attached site plan showing proposed addt'l well
location as requested (in eDocs). Email stated: Per your rqst, see attached fig which shows
location of one addt'l mon well proposed to be installed near former property boundary north of our
existing MW-4. With your approval, we will schedule install'n & sampling of this well in accordance
with procedures outlined in 3/8/10 Work Plan, approved by NYSDEC. Please contact me if you have any
questions. Due to proximity of subway tunnel under street and portion of sidewalk, well may need to
be moved 5 or 10 ft to east pending comments from NY MTA. Thank you. On 9/7/10, I sent email reply,
with cc's to Ray Wagner of ARCADIS & Jon Armstrong of BP: I would prefer if you could install new
well about 5 ft to south of proposed location shown on attached drawing. However, I understand that
final location of well may be largely determined by presence of subsurface utilities. Please
consider this email as authorization to proceed with install'n of addt'l mon well. Well should be
installed in accordance with procedures outlined in 03/08/10 Work Plan approved by NYSDEC. Feel
free to contact me if you have any questions. Andrew wrote back: Will try to install per your
preference, assuming field conditions allow. - JK 11/22/10: Received email from Andrew Korik of
ARCADIS: Just wanted to update you on work at BP site 17782 at 350 Grand Concourse. We installed
and sampled addt'l well along sidewalk as requested. I am just wrapping up combined 3rd quarter
rpt/well install'n rpt and expect to have something to you next week. We are also reviewing
remedial alternatives and will be developing a RAP shortly. - J. Kolleeny 03/01/11: Reviewed
Results of 3rd Quarter 2010 GW Monitoring and Intall'n of Addt'l GW Mon Well rpt by ARCADIS dated
12/3/10 (in eDocs). Results of Sept. 2010 GW sampling show MW-1 had 4,050 ug/L total BTEX (down
from 7,890 ug/L in June 2010), MW-4 had 6,390 ug/L tBTEX (down from

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

13,600 ug/L in July 2010). New
well MW-6A was intalled as requested by DEC; soil samples showed VOC detections but no TAGM 4046
exceedances in sample at GW interface (12.5-13 ft bgs), but significant exceedances in soil sample
from below water table (18-18.5 ft bgs), including 15 mg/kg ethylbenzene, 73 mg/kg m,p-xylene, 19
ug/L o-xylene, 42 mg/kg 1,2,4-trimethylbenzene, and 14 mg/kg 1,3,5-trimethylbenzene. GW sample from
new well MW-6A, taken in Oct. 2010, was very contaminated, with 12,500 ug/L tBTEX and over 15,000
ug/L total VOCs. Rpt recommendations state quarterly GW monitoring will continue, with MW-6A added
to mon program, and that RAP will be prepared and submitted to DEC in Jan. 2011. - J. Kolleeny
04/08/11: Reviewed 4th Quarter 2010 GW Monitoring and Analysis Rpt by ARCADIS, dated 3/7/11 (in
eDocs). Results of Nov. and Dec. 2010 GW sampling show MW-1 had 6,150 ug/L total BTEX in Nov. 2010
(up from 4,050 ug/L in Sept. 2010) and increased to 10,700 ug/L tBTEX in Dec. 2010; MW-4 had 9,520
ug/L tBTEX in Nov. 2010 (up from 6390 ug/L in Sept. 2010) and increased to 10,600 ug/L tBTEX in
Dec. 2010; MW-6A, not sampled in Nov. 2010, had 12,800 ug/L tBTEX in Dec. 2010 (up a little from
12,500 ug/L in Oct. 2010). Rpt recommendations state quarterly sampling & monthly gauging will
continue, and RAP will be submitted in March 2011. - JK 04/11/11: Reviewed Remedial Action Work
Plan for Anaerobic Biological Oxidation by ARCADIS, dated 2/28/11 (in eDocs). RAWP proposes
injection of sulfate via 5 new injection wells, to enhance bioremediation and address persistent GW
contam along west side of site. After 1st injection, one or two rounds of performance monitoring
will be performed to determine frequency of addt'l injections. I sent approval letter (in eDocs) to
Jon Armstrong of BP, cc's to Andrew Korik & Gene Choquette of ARCADIS. - J. Kolleeny 4/11/2011 -
Spill transferred back to JFeng. 5/4/2011 - email from Andy Korik June we are scheduled to install
the injection wells per the approved RAWP starting Monday May 9 at the 350 Grand Concourse site.
Please call me if you have any questions. Can we change the monthly gauging to quarterly at these
sites where we have not seen product in over 1 year? 5/5/2011 - email to Andy Korik Andy, Yes, you
can switch from monthly gauging to quarterly gauging for this site. In yesterday's email you said
the field work will start on Monday 5/9/2011, how many days are you expected to be in the field?
June email from Andy Korik The first day will be coring and hand clearing of the borings. I expect
the well installations will start on Tuesday and be finished on Thursday so 4 days on site (3 if
things go very quickly). JF 5/17/2011 - received email attached with 1Q2011 quarterly report. eDoc.

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

JF 5/25/2011 - email from Andy Korik of ARCADIS June here is notification that the injection wells were installed at 350 Grand Concourse. Injection well IW-03 could not be installed due to shallow refusal with 4 attempts. We can compensate by increasing injection volumes at the other 4 wells. Still waiting for USEPA approval to inject. Sulfate Injection Well Installation Notification was attached. eDoc. JF 7/11/2011 - 1Q2011, 5/17/2011, by ARCADIS. The groundwater samples were collected on 3/31/2011. 6 wells were sampled. MW-6A located in the north of MW-4 and west of the canopy was installed in 10/2010. NO LNAPL. The site is changed to quarterly gauging. Max BTEX 11,000 ug/L (MW-6A). Max MTBE 12 ug/L (MW-5). Sulfate Injection Well Installation Notification, 5/25/211, by ARCADIS. The installation of four sulfate injection wells took place during the week of May 9 through May 13, 2011. The approved RAWP specified that 5 injection wells to be installed; however, due to refusal at 1.5 to 5 feet depth during 4 attempts to install well IW-03, an injection well was not installed at the proposed IW-03 location. Injection volumes at IW-2 and IW-04 can be adjusted to compensated for the absense of IW-03. They submitted an Inventory of Injection Wells package to USEPA on 5/5/2011. Will notify DEC one week prior to the injection. No soil and groudwater samples taken. JF 5/8/12 - Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC. In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate. Mr. Hussein approved the letter and it was sent out today. 5/24/12 - Raphael Ketani. Today I received the ARCADIS 5/24/12 First Quarter 2012 Groundwater Monitoring and Analysis Report. I reviewed the report. NAPL was not present in any of the wells during this quarter. Groundwater flow was to the east. MW-2 was not accessible in March 2012. MW-1 had 1900 ppb ethylbenzene and 3600 ppb total xylenes. MW-4 had 1700 ppb ethylbenzene and 4100 ppb total xylenes. MW-5 had 380 ppb total xylenes. MW-6A had 1100 ethylbenzene and 6600 total xylenes. The first round of sodium nitrate injections is scheduled to take place at the end of the third monitoring quarter, pending DEC approval. 5/30/12 - Raphael

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

Ketani. Earlier, Mr. Korik had
sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter
regarding the use of sodium nitrate in place of sodium persulfate. I reviewed the response letter
which addressed the 7 comments the Department had made. Their responses were as follows: 1) ARCADIS
sent a letter daated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of
the sodium persulfate. However, they haven't had a response from the EPA. 2) The amounts of sodium
nitrate that will be on site will be less than the 400 pound limit. For this site, 120 lbs. of the
material will be stored on site at any given time. 3) Dosing information was presented and was
deemed appropriate. 4) Quantitative polymerase chain reaction was used to evaluate the presence of
Dichloromonas species bacteria. 5) By using appropriate amounts of the sodium nitrate chemical, the
nitrate concentrations will be maintained in order to keep the groundwater environment anoxic. 6)
The push pull method will be used to extract any groundwater. This method doesn't cause the
reorientation of the soil grains which would result in a loss of the efficiency of the injections.
They state that there will be minimal groundwater displacement. 7) The nitrate concentrations will
decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate
to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the
downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until
it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater
under the site will have to travel 60 feet in order to reach CP-51 levels. Later today, a
conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself.
The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate
proposal, the Department's comments in our 5/7/12 response letter and the information in the
ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby
BP, had adequately responded to the Department's comments with the exception of item #7, monitoring
nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #17782, there
were on site monitoring wells 80 feet downgradient of the injection locations. I stated that this
was sufficient for monitoring the groundwater. The ARCADIS 5/23/12 response letter was found to be
acceptable with the only comment being that they will have to frequently sample the groundwater in
order to be sure that it does not exceed the CP-51 standards. If they find that the standards are

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit. 5/31/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/19/2012 - meeting with ARCADIS. Pilot in the IW-4, and monitor MW-1, MW-4 and MW-5. Pay attension to the benzene during the pilot. If not working, will plan for aerobic, i.e. oxygen release, which is fine with MTA. 6/26/2012 - Reviewed Supplemental Letter Work Plan for Nitrate Injections, dated 6/19/2012, by ARCADIS. The Work Plan is intended to fulfill the Department s requirement of specific information (i.e. monitoring, reporting and injection details) regarding the injections as part of the Department s approval of the proposal to use sodium nitrate to treat the contamination on May 30, 2012. ARCADIS proposes to inject 5,300 gallons, 8,000 gallons, and 5,300 gallons of sodium nitrate solution at a concentration of 0.3% by weight into the injection wells for Site 654, Site 5082, and Site 17782, respectively. A groundwater monitoring program will be implemented subsequent to the application. Approves the Work Plan after discussed with Raphael Ketani. Report by 12/2012. 8/28/2012 - 1Q2012, 5/24/2012, by ARCADIS. Groundwater was sampled on 3/6/2012. DTW 12.86 (MW-5) to 18.07' blow the top of casing. NO LNAPL. On 10/27/2011, high vacuum extraction (HiVac) event on IW-1 was conducted for 6-hour duration due to the historical appearance of LNAPL. Next sampling will be in 6/2012. MW-6A, 7,700 BTEX. MW-4, 6,000 BTEX. MW-1, 5,600 BTEX. MW-5, 490 BTEX, 29 MTBE. 10/18/2012 - 2Q2012, 8/30/2012, by ARCADIS. Groundwater was samppled on 6/12/2012. DTW 12.23 (MW-5) to 17.96 (MW-3). Flows to east at a hydraulic gradient of 0.16 feet per foot. MW-6A, 7,100 BTEX. MW-4, 5,200 BTEX, 6 MTBE. MW-1, 5,500 BTEX, 3 MTBE. MW-5, 350 BTEX, 140 MTBE. The first round of calcium nitration injection was conducted in August 2012. Dose-response monitoring, analytical data and remedial efficacy will be evaluated and presented in the 3rd quarter monitoring report along with dosing recommendations for future injections. 12/20/2012 - 3Q2012, 11/12/2012, by ARCADIS. Groundwater was sampled on September 21, 2012. DTW 11.36 (MW-2) and 18.45 (MW-3). Flows to east at a hydraulic gradient of 0.18 feet per foot. Over the period of August 14 to August 24, 2012, approx 23,858 gallons of calcium nitrate solution were injected into IW-04. Post injection response monitoring is on-going and will continue through early November. MW-6A, 5,600 BTEX. MW-4,

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

5,400 BTEX. MW-1, 4,600 BTEX.
MW-5, 380 BTEX. 8/21/2013 - met with ARCADIS. The calcium nitrate injection was done in 8/2012.
2,400 gallon has been injected. MW-1 got some LNAPL 0.02'. Need to monitor. 8/26/2014 - 2Q2014,
8/21/2014, by ARCADIS. Groundwater sampled on 6/24/2014. MW-6A, 2,300 BTEX. MW-4, 2,200 BTEX. MW-1,
5,400 BTEX. in DecDocs. 8/26/2014 - Reviewed letter dated 8/21/2014 from ARCADIS, Review of
Metro-North Property East of. ARCADIS conducted a preliminary site reconnaissance to observe
condition on Metro North property adjacent to the east side of the BP site. The picture shows that
the area between the gas station and the Metro North track was heavily vegetated. The track do not
appear to be more than 8-10 feet below the level of the gas station. Direct observation of the
ground surface was not possible. ARCADIS proposed to return the site when the vegetation has died
to ascertain the difference in grade. in DecDocs. 2/24/2015 - 3Q2014, 1/15/2015. Monitoring on
9/5/2014. DTW 12.13 (MW-2) to 15.10 (IW-1). MW-1, 6,800 BTEX. MW-4, 4,600 BTEX. MW-6A, 3,600J BTEX.
4Q2014, 2/24/2015. Monitoring on 12/1/2014. DTW 11.54 (MW-2) to 18.80 (MW-3). Flows to northwest.
MW-1, 8,200 BTEX. MW-4, 3,200 BTEX. MW-6A, 2,800 BTEX. 10/6/2015 - 1Q2015, 6/11/2015. Groundwater
was sampled 3/16/2015. DTW 7.02 (MW-4) to 12.33 (MW-6A) feet below TOC. MW-1, 6,300 BTEX. MW-4, 120
BTEX. MW-6A, 980 BTEX. 2Q2015, 8/10/2015. Groundwater monitoring on 6/22/2015. DTW 12.2 (MW-4) to
19.02 (MW-3). Flows to east. MW-1, 4,500 BTEX. MW-4, 1,100 BTEX. MW-6A, 1,100J BTEX. 3/30/2016 Feng
- This spill is transferred from J. Feng to J. Vought as per J. Vought. 9/15/16-Vought-File review
to date: Email from Arcadis (Buchanan)-5/26/16. Email that Good afternoon Jeff, Please let me know
if you any availability to discuss a few BP sites. I have two sites (00147 and 10466) at a critical
cross roads that I would like to discuss, also the two pending NFA requests. I am attaching some
supporting documentation and listing my thoughts below: Request for no further action submitted
October 2015. We have insurance premium due with MTA to maintain our monitoring wells, I would like
to get your feeling on this request so we can decide whether to renew the insurance or not. Email
from Arcadis (Buchanan)-6/17/16. Email that Good afternoon Jeff, I know you are extremely busy, but
have you had a chance to review any of these items? I am pressured weekly by BP, especially
regarding 07-01266. Please let me know when you have a few minutes to talk. Thanks Email from
Vought to Buchanan-6/20/16. Email that Ira, Apologies for my delay in response. I reviewed your
below email and attachments and thought I would respond on each site, in lieu of scheduling a call.

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

With regards to 350 Grand Concourse, I will put this review in my recent queue to hopefully review before I leave for vacation next week. To make things a bit more expedient, I would be much obliged if you could resent the closure request. Attached was Site Closure Summary Package. Vought added Site Closure Summary Package to D2 and reviewed: Site Closure Summary Package (Arcadis)-10/9/15. Contains Spill Closure Presentation that notes Was originally 2 adjoining gas stations: Merit to the north and Amoco to the south, Both stations and property redeveloped into a single BP station in 2002 , and Spill number 0111974 issued when impacts encountered during tank removal in 2002 . Five 4,000-gallon underground gasoline storage tanks and one 550-gallon waste oil tank (reportedly installed in 1977), and associated piping and pump islands were removed from the former Merit station. Five 4,000-gallon steel gasoline USTs and associated piping and pump islands were removed as part of closure of the Amoco station. MTBE detected above TAGM soil cleanup standards if four of ten post excavation samples. Remediation history includes 1999: 411 tons of soil excavated and removed from the former Merit station. 2002: Site is redeveloped into a single BP station. 1,360 tons of soil excavated and removed... Four injection wells installed. Hi-vacuum extraction event at IW-04. Presentation concludes that: Mann-Kendall analyses show decreasing VOC concentration trends in all monitoring wells (Attachment 5). ; LNAPL last detected in December 2013 (0.01-feet thickness) at IW-01. ; Dissolved VOC concentrations have fallen by an order of magnitude(13-14 ppm to 1 ppm) at the two most impacted wells (MW-4 and MW-6A) since 2010 (Attachment 6). ; Available soil data shows limited exceedances of soil cleanup criteria. ; Most recent groundwater data shows benzene exceeding groundwater standards at only one well (MW-1 at 10 ug/L). 9/16/16-Vought-Examined other files in D2 for same site and one monitoring report shows groundwater flow to the east and also shows U-Haul facility across Grand Concourse from site. Other document from Arcadis in 2014 shows no observed impact to MTA tracks downgradient from site which is also not a sensitive receptor. Spill closed due to: 1)reducing petroleum VOCs in groundwater due to attenuation 2)delineation of the residual groundwater contamination 3)no possible impact to receptors to the west due to depth of groundwater and likely depth of basements 4)no further feasibility (including cost effectiveness) to perform further remediation as per CP51 Commissioner's Policy 5)no threat to the wider community as per discussions with DEC Central Office 6)site use will not change and will remain a commercial gas station 7)inclusion of soil contamination

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

clause in spill closure letter.
Spill closure letter sent to Randy Coil with cc to Arcadis Buchanan
via email and original sent to
BP via US mail and added to D2. 11/30/2016 - email from Ira Buchanan
to J. Vought Arcadis received
spill closure (attached) on September 16th. We mobilized to the site
on October 6, 2016 to
decommission wells. Wells abandoned include MW-1, MW-3, MW-5, IW-4 and
IW-5. When the field crew
gauged IW-1, approximately 0.62 feet of LNAPL was encountered. The
field crew stopped work at this
time leaving IW-1, IW-2, MW-2, MW-4 and MW-6A intact. On November 16,
Arcadis subcontractors
mobilized to the site with a vacuum extraction truck and set up on
IW-1. Prior to beginning the vac
event, IW-1 was gauged and had 0.41 feet of LNAPL. IW-2, MW-4 and
MW-6A were gauged and did not
have LNAPL. MW-2 was not gauged due to a large puddle over the well
pad. MW-2 has been historically
non-detect for VOCs or detections less than 10 ppb. The November 16
vac event lasted for 8 hours
and recovered approximately 45 gallons of petroleum-impacted water
from IW-1. The wells were gauged
again on November 29, 2016 at which time no LNAPL was observed in IW-1
or the other wells. Based on
the information and actions described above, we request permission to
continue with abandonment of
the remaining 5 wells. email from J. Vought to Ira Buchanan Ira,
Thanks for keeping me posted.
Question for you: What is the site address for this site? When the
Department closed the spill we
attempted to ensure that there was a decreasing trend in the
groundwater contamination in the
remaining dissolved contaminants. With the appearance of free product
we have to re-examine the
trend to make sure that the remaining contamination is indeed
attenuating. As such I am thinking
that at least a few quarters of monitoring to re-establish that trend
is warranted. However, I must
admit I write the above with no site specific knowledge in hand (eg
impending development). I will
discuss the above with June and also we will consider reopening the
spill if warranted. If this
appears to be the best course of action we can have a teleconference
to discuss further. We will
keep you posted and feel free to forward this email onto the
consultant as well, -Jeff 12/2/2016 -
email from J. Feng to Ira Buchanan Ira, I agree with Jeff that at
least a few more quarters of
monitoring is necessary to re-establish the trend for the observed
product thickness, e.g. 0.62 and
0.41 feet. The history of this injection well has never shown this
much product before, e.g. with
max of 0.11 feet on 8/11/2011 and last seen 0.01 feet on 12/20/2013.
We will need to re-open the
spill to do that. Let s do the call next Monday 12/5/2016, at 11:00am?
Let us know. 12/5/2016 -

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

Feng - conference call among ARCADIS Andy Korik and Ira Buchanan, and NYSDEC J. Vought and J. Feng.
Agreed to continue quarterly groundwater monitoring for IW-1, i.e. gauging, sampling of dissolved,
product recovery if there is any for two more quarters. Spill to be re-opened. 12/7/2016 - spill is
re-opened. re-opening letter to BP Randy Coil and ARCADIS. Changed lead from Jeff Vought to June
Feng. 5/2/17-Vought-Received Well Decommissioning Summary, Remedial Activities and Groundwater
Analytical Summary for First and Second Quarter 2017 from Arcadis (Korik). Vought sent an email to
Korik with cc to Buchanan and Feng that Andy, The report notes that Based on Arcadis December 2016
phone conversation with Mr. Jeffrey Vought, if LNAPL was not observed in IW-01 during the January
and April 2017 gauging and sampling, NYSDEC would consider closure of the spill number. However,
our spill notes of the email correspondence from December 2016 noted that: email from J. Vought to
Ira Buchanan Ira, Thanks for keeping me posted. Question for you: What is the site address for this
site? When the Department closed the spill we attempted to ensure that there was a decreasing trend
in the groundwater contamination in the remaining dissolved contaminants. With the appearance of
free product we have to re-examine the trend to make sure that the remaining contamination is
indeed attenuating. As such I am thinking that at least a few quarters of monitoring to
re-establish that trend is warranted. However, I must admit I write the above with no site specific
knowledge in hand (eg impending development). I will discuss the above with June and also we will
consider reopening the spill if warranted. If this appears to be the best course of action we can
have a teleconference to discuss further. We will keep you posted and feel free to forward this
email onto the consultant as well, -Jeff 12/2/2016 - email from J. Feng to Ira Buchanan Ira, I
agree with Jeff that at least a few more quarters of monitoring is necessary to re-establish the
trend for the observed product thickness, e.g. 0.62 and 0.41 feet. The history of this injection
well has never shown this much product before, e.g. with max of 0.11 feet on 8/11/2011 and last
seen 0.01 feet on 12/20/2013. We will need to re-open the spill to do that. Let s do the call next
Monday 12/5/2016, at 11:00am? Let us know. 12/5/2016 - Feng - conference call among ARCADIS Andy
Korik and Ira Buchanan, and NYSDEC J. Vought and J. Feng. Agreed to continue quarterly groundwater
monitoring for IW-1, i.e. gauging, sampling of dissolved, product recovery if there is any for two
more quarters. Spill to be re-opened. Furthermore, the Department letter dated 12/7/16, also in
Appendix D of the report, noted that we required collection of

LOT 42,TAXBLOCK 2341 (Continued) **S109942572**

dissolved samples as well. Please
collect at least two quarters of dissolved quarterly samples in hopes of demonstrating an
attenuating trend of dissolved samples, which the Department requires on all of its petroleum
contaminated sites. Please let us know if you would like this formalized in a letter which would be
a reissuance of the December 7, 2016 letter. Thanks, Korik replied We do have two quarters (January
and April 2017) of dissolved analyses for IW-01 in the report. You would like two additional
quarters? Vought replied Andrew, I stand corrected and thanks for the clarification. So much for
those quick early morning reports scans. Two quarters will be enough for us to consider closure.
Thanks and apologies for the confusion . 5/31/2017 - Feng - This spill is transferred from June
Feng to Jeffrey Vought as per Jeffrey Vought. 12/12/17 - Austin - Assigned from Vought to Feng -
end 5/24/2018 - Feng - Reviewed the Well Decommissioning Summary, Remedial Activities and
Groundwater Analytical Summary for First and Second Quarter 2017 (the Report), dated May 1, 2017,
prepared by Arcadis U.S., Inc (Arcadis). The Report summarizes the groundwater monitoring
activities subsequent to the re-opening of the above referenced spill and requests spill closure.
Please note that the spill was closed on September 16, 2016. The spill was then re-opened on
December 7, 2016 due to the discovery of 0.62 feet of LNAPL in IW-01 on October 6, 2016.
Groundwater monitoring shows that BTEX concentration is 33,650 ug/L in the January 2017 sampling
event. Another groundwater monitoring in April 2017 shows BTEX concentration of 31,541 ug/L. The
well IW-01 was installed and used as an injection well. No groundwater sampling has been performed
until these two monitoring events and thus no groundwater concentration trend has been established
for this well. Adequate remediation is required to reduce the BTEX concentration before spill
closure can be granted. letter denying spill closure to BP/ARCADIS. RAWP is required within 90
days, by end of August 2018. 11/19/2018 - Feng - Reviewed Remedial Action Work Plan, 7/18/2018. And
the 3Q2018 Report, 10/26/2018. Arcadis proposed to do VTE events on IW-01 monthly for 3 months and
then evaluate further. 3Q2018 show still elevated BTEX concentration in IW-01. Approved the work
plan. Arcadis will report back after 3 months. 4/7/2020 - Feng - email from Andrew Shrock of
Parsons. Effective 4/1/2020, BP has retained Parsons to replace Arcadis as the consultant for this
site. 5/4/2020 - Feng - 4Q2019 and 1Q2020. Monitoring on 12/23/2019 and 2/14/2020. as of 2/14/2020:
IW-1, 16,605J BTEX, less than 5 MTBE. IW-2, 2,732J BTEX, less than 5 MTBE. MW-2, not accessible.

He was not there left message to call me back. -QA 10/05/07: Called Mr. John Lage (LMC) to remind him to send Phase 1 and Phase 2 report. He was not there left message to call me back. -QA 06/26/2008: This spill case was transferred to A. Doronova. - AD 11/2008: To find a current owner. To send an INL. AD 12/22/2008: Called and left a message to Mr. Lage's secretary. Found on ACRIS information that Citicorp North America Inc. (Invine, CA)owns the property now. Was given phone number: (212)816-0885 of Particia Brigantic (Office of General Counsel for this company). Called and left a message. AD 12/29/2008: Did not receive any response yet. Called and left messages to Mr. Lage and Ms. Brigantic. AD 04/06/2009: Did not receive any

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

response yet. Called few times. Later spoke with P. Brigantic regarding the spill. She asked me to email her this request, in order to forward it to a person in charge of environmental issues in this company. Sent an email to P. Brigantic. AD 04/08/2009: Received an email from P. Brigantic saying: Ms. Doronova- I have checked internally here at Citi and this does not relate to any of my clients. I have forwarded this information to the 2 co-heads of Citi's litigation dept. and they will assign it to someone. Thanks and regards, Patricia AD 04/20/2009: Received a phone call from Preston Turner - Associate General Counsel of Citi Litigation Service Center. He was reffered this case from P. Brigantic. Informed him about site's situation. Mr. Turner will check his files for this property and get back to us. He also asked for time extention to respond on my e-mail, which was granted. AD 04/22/2009: Received an email from P. Tutner of Citi saying: Dear Ms. Doronova: This e-mail will confirm our telephone conversation wherein I responded to your e-mail originally sent to Patricia Brigantic of Citigroup, Inc. Citigroup North America, Inc. is a separate legal entity, and will respond to your inquiry. This e-mail will confirm that you have extended the date by which Citigroup North America, Inc. must respond to your inquiry to May 20, 2009. Thank you for the accommodation. Preston Turner Associate General Counsel Citi Litigation Service Center 300 St. Paul Place, BSP17D Baltimore, MD 21202 (410) 332-3687 (443) 450-4314 (Facsimile) AD 05/18/2009: Received an e-mail from P. Turner saying: Dear Ms. Doronova: This e-mail will respond to the Division of Environmental Remediation's inquiry below related to NYSDEC Spill No. 9909720, and 315 Grand Concourse, Bronx, NY - Block #02344, Lot #0027 (the Property). By e-mail dated April 22, 2009, I confirmed with you the extension you granted to Citigroup North America, Inc. to respond to the inquiry by May 20, 2009. I write to advise you that after inquiry, I have determined that Citigroup North America, Inc. (CNAI) is not an owner of the Property. CNAI is an assignee of a security interest in the Property, but not an owner. According to the records on file with the New York City Department of Finance, the current owner of the Property is: 315 R.E. CORP., a New York Corporation. 315 R.E. CORP. is the owner by virtue of a Deed from the New York City Economic Development Corporation recorded on August 15, 2000. See enclosed ACRIS Search Results for the Property as of April 20, 2009. CNAI is the assignee of a Mortgage as reflected in the enclosed January 26, 2004 Assignment of Mortgage, which was recorded in the land records on or about July 27, 2004. For your information, the New York Division of Corporations

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

identifies the following information about 315 R.E. CORP.: Principal Executive Office: 4291 Boston Post Road, Pelham Manor, NY 10803. Chairman/CEO: John Lage. I believe 315 R.E. CORP. is represented by Robert Bernstein, Esquire of Scarsdale, NY (914) 472-8455. As Citigroup North America, Inc. is merely an assignee of a security interest in the Property, and not the owner of the Property, CNAI is not in control of the Property, including any current remediation efforts. If you disagree and contend that CNAI is responsible as a person with merely a security interest in the Property, please let me know. Otherwise, I will respectfully consider this inquiry satisfied. Thank you again for the accommodation in extending the response date to your inquiry. I hope the information I have provided you as to the Property's ownership is useful in your future inquiries related tot he Property. Sincerely, Preston Turner Associate General Counsel Citi Litigation Service Center 300 St. Paul Place, BSP17D Baltimore, MD 21202 (410) 332-3687 (443) 450-4314 (Facsimile) To send an Outstanding Violation letter to the owner: John Lage 315 R.E. CORP.: 4291 Boston Post Road, Pelham Manor, NY 10803 Also, 315 R.E. CORP. is represented by Robert Bernstein, Esquire of Scarsdale, NY (914) 472-8455. Issued and sent an Outstanding Violation letter to Mr. Lage. Response is due June 18, 2009. AD 06/01/2009: Received some documentation from Mr. Lage. Will review. AD 08/19/2009: Reviewed the submited data. It includes: - Tank Removal proposal dated November 9, 1999 from Papitto Construction Co., Inc. addressed to Mr. Lage; - Subsurface investigation report (SIR) dated November 4, 1999 prepared by S&W Services, Inc. addressed to Mr. Vincent Papitto of Papitto Construction Co., Inc. The SIR states that S&W Services completed the investigation at the site on October 21, 1999. The site has one 4,000-gallon UST, one 6,000-gallon UST and forteen 550-gallon USTs. SI included advancement of 14 soil borings around USTs and collection of 14 soil samples for VOCs and SVOCs analysis. Soil boring logs data indicate that the depth to bedrock across the site ranges from approximately 1 foot to 6 feet. VOCs analytical data indicates very highly contaminated areas in the vicinity of soil borings: SB-4, SB-5, SB-7, SB-9, SB-10 and SB-11. High concentrations of SVOCs were found in borings: SB-1, SB-3, SB-4, SB-5, SB-10 and SB-12. The consultant recommended removal of USTs and contaminated fill material. No documentation was submitted on USTs removal. AD 10/29/2009: Searched in PBS base for USTs removal info. This site has PBS# 2-402877. According to PBS Facility Information Report, eight USTs were removed from the site on December 17, 2001. USTs

description matches description of the tanks in Tank Removal Proposal from Papitto Construction
Co., Inc. To contact Mr. Lage and request submission of the USTs Closure report. AD 01/08/2009:
Called and spoke with Mr. Toni Riverra of Boulevard Car Wash and requested to submit USTs closure
and removal report. AD 09/07/2010: Called and spoke with Mr. Riverra of Boulevard Car Wash
regarding the reports submission. He told me that another Phase I investigation was performed by
Hydroteck in 2005. requested to submit Phase I report from 2005 and UST closure report from 2001
till November 7, 2010. AD 12/2010: Did not receive any response from Mr. Riverra. Called and left a
message. AD 05/2011: Called and left a message to Mr. Riverra of Boulevard Car Wash. AD 01/04/2012:
Issued and sent a Notice of Violation Letter addressed to Mr. Lage of 315 R.E. Corp. by certified
mail (#7006 0100 0006 2620 3467). Response is due February 4, 2012. AD 02/07/2012: Did not receive
any response. To send Final Notice Letter. AD 02/21/2012: Issued and sent Final Notice letter to
Mr. Lage by certified letter (# 7006 0100 0006 2620 3405). Response is due March 6, 2012. DL the
letter to eDocs. AD 02/23/2012: Received a phone call from Mr. Riverra. he said that he will submit
Phase I report from 2005 next week, and that he will try to locate UST closure report from 2001
done by Papitto Construction Co., Inc. AD 02/24/2012: Received Phase 1 Report on a CD from Mr.
Riverra. DL all submitted documents to eDocs. UST closure report submission is due. AD 01/2013:
called and left a message to Mr. Rivera. AD 03/2014: Called and left a message for Mr. Rivera. AD
02/10/2017: called and left a message for Mr. Rivera with the secretary. AD 09/2018: Called and
left a message to Mr. Rivera. AD 10/2020: Called and left a message to Mr. Robert Bernstein. AD
06/2021: Issued and sent a certified Outstanding Violation letter to Mr. Lage (#7016 3560 0000 4627
9734) with a due date by July 1, 2021. AD 06/17/2021: Received a message form Mr. Lage
(914-804-6934). called and spoke with him. Mr. Lage has UST Closure Report and he will submit it
shortly. Explained to Mr. Lage that this report will be reviewed and DEC will inform hem if
additional information is needed. AD 06/21/2021: Received some documents for the site. Will review.
AD 07/20/2021: Reviewed the report. It states that the property now is a car wash called Boulevard
Car Wash of NY Inc. According to PBS database all USTs associated with this property were closed
and removed. There are 5 ASTs in service with total capacity of 7,000 gallons. Submitted documents
include: - Tank Removal proposal dated November 9, 1999 from Papitto Construction Co., Inc.
addressed to Mr. Lage; - Subsurface investigation report (SIR) dated

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

November 4, 1999 prepared by
S&W Services, Inc. addressed to Mr. Vincent Papitto of Papitto Construction Co., Inc. These
documents were already submitted previously in August 2009. No requested UST Closure Report was
submitted. If this report could not be located, site characterization SI is needed to be performed.
AD 09/2021: Called and left a message to Mr. Lage. AD This site was included into List of the sites
with no Stip/Order as per the Department's request. 03/08/2023: Received the following email from
DEC Legals requesting to submit next cases for issuing Stipulations or Orders. AD 03/09/2023: Sent
the following email to Jack Agosta: Jack, Here are the next two spill cases to address: 1. NYSDEC
Spill No. 9909720 315 Grand Concourse, Bronx (Stip?) - Mr. John Lage (914-804-6934) 2. NYSDEC Spill
No. 9410908 49-01 Van Dam Street, Queens (Stip?) - Mr. William Tagert, (631-757-8829) Feel free to
contact me if you need more information. Regards, Ainura 718-482-6453 03/28/2023: I was copied on
the following email from Ms. Ezgi Karayel: Hi Jack, It was nice talking to you just now. Here is
the link for reports submitted to OER previously for this site. https://www.dropbox.com/scl/fo/t9irxh60wi5i4hstl572w/h?dl=0&rlkey=qmphjhhnacn0u131m2kwu8k7r We are
also in the process of preparing a new RIR/RAWP. The plan is to submit a major amendment to the
existing BCP/BCA for 261 Grand Concourse and enroll 315 Grand Concourse and 270 Walton to the BCP
as well. Our client recently purchased this property in November. Regards, Ezgi Karayel Principal
vEKtor consultants 37 W. 37th Street, 6th Floor New York, NY 10018 m:716.868.8873 o: 347.871.0750
f: 347.402.7735 www.vektorconsultants.com Later in the day received the email from Jack Agosta: Hi
Ainura, Here are the documents that I was referring to that Ezgi had sent me via dropbox. Ezgi
called me earlier this afternoon to tell me that this site is part of a multi-parcel site that is
applying to the BCP program. As a result, they recently performed a Remedial Investigation and it
seems like there are little to no petroleum impacts (based upon what Ezgi told me I haven t had a
chance to review these reports for myself). I know that this was a site for potential quick
closure, so let me know once you ve had a chance to review and whether you think closure is
appropriate or whether a Stipulation is required. Thanks Ainura Best, Jack So, the site was sold
and is entering now into BCP. Reviewed the site investigation report. It states that the
stratigraphy of the Site, from the surface down, consists of 1 to 2 ft layer of a dark brown sand
with gravel, followed by a thin layer of weathered bedrock, and then bedrock. Depth to groundwater
is at approximately 4.3 ft below grade based on a measurement

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

collected from the one monitoring well installed at the Site. Regional groundwater flow is expected to be towards the north-northwest. In March 2022, the consultant installed ten soil borings (SB1 through SB10) across the Site, and collected ten soil samples and one duplicate for chemical analysis. They attempted to install groundwater monitoring wells across the Site utilizing a 6610 Geoprobe, but got refusal, due to shallow bedrock, which was encountered across the Site at a depth of approximately 2 ft below the surface of the sampling location. One monitoring well (labeled by BEC as MW2E) previously installed to a depth of approximately 11 ft below grade (cored approximately 7 ft through bedrock) as part of the geotechnical investigation was found in the Grand Concourse sidewalk and one groundwater sample was collected for chemical analysis. Eight soil vapor implants were installed (SV1 through SV8) across the Site and collected eight soil vapor samples for chemical analysis.
Soil data: Soil/fill samples results were compared to NYSDEC SCOs and showed the following: - One VOC, acetone (max. of 71 ug/Kg) was detected above UUSCOs within soil boring sample SB8 (0-2).
Several VOCs were detected at a trace concentrations below UUSCOS including 1,3,5-trimethylbenzene (at 2 ug/Kg), benzene (max. of 1.8 ug/Kg), carbon disulfide (at 6.6 ug/Kg), ethylbenzene (max. of 4.5 ug/Kg), m&p-xylenes (max. of 23 ug/Kg), methyl ethyl ketone (max. of 15 ug/Kg), methyl t-butyl ether (MTBE) (at 2 ug/Kg), naphthalene (at 200 ug/Kg), o-xylene (max. of 8.3 ug/Kg), styrene (at 0.67 ug/Kg), tetrachloroethene (max. of 640 ug/Kg in SB1(0-2), and 400 ug/Kg in SB2(0-2)), and toluene (max. of 200 ?g/Kg). - Two SVOCs including benz(a)anthracene (max. of 1,100 ug/Kg) and indeno(1,2,3-cd)pyrene (max. of 680 ug/Kg) were detected above RRSCOs within three of the ten shallow soil samples. No other SVOCs were detected above UUSCOs. - Two pesticides, including 4,4 -DDE (at 9.5 ug/Kg) and 4,4 -DDT (max. of 9.6 ug/Kg) were detected above UUSCOs within two of the soil samples. No pesticides were detected above RRSCOs; - One PCB, PCB-1260 (at 420 ?g/Kg) was detected above UUSCOs in one soil sample (SB6(0-2)). No PCBs were detected above RRSCOs; - Four metals including copper (max. of 68.3 mg/Kg), lead (max. of 165 mg/Kg), mercury (max. of 0.39 mg/Kg), nickel (max. of 32.3 mg/Kg), and zinc (max. of 198mg/Kg) were detected above UUSCOs within soil samples collected across the Site. No metals were detected above RRSCOs; - No PFAS compounds were detected; and - Overall, the soil results are unremarkable and does not indicate any waste disposal. GW data: Groundwater sample results collected during the March 2022 RI were compared to

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

NYS 6NYCRR Part 703.5 Class GA GQS. Groundwater samples showed the following: - No SVOCs,
Pesticides or PCBs were detected at measurable concentrations above GQS; - No VOCs were detected at
a concentration above GQS within the groundwater samples. Trace concentrations of the VOCs carbon
disulfide (2.5 ug/L within the duplicate), methyl t-butyl either
(MTBE) (max. of 31 ug/L within the
duplicate), and tetrachloroethene (PCE) (at 0.77 ug/L) were present at concentrations below GQS; -
Several metals were identified in groundwater samples but only sodium (157 mg/L) was detected above
GQS within the dissolved groundwater samples. Soil vapor results: - The soil vapor results
indicated low levels of petroleum-related VOCs and low levels of chlorinated VOCs: - Total
concentrations of petroleum-related VOCs (BTEX) within the soil vapor samples ranged from 3.67
ug/m3 to 368 ug/m3; - The chlorinated solvents detected include carbon tetrachloride at a max
concentration of 0.52 ug/m3, methylene chloride at 3.68 ug/m3 in one soil vapor sample,
tetrachloroethene (PCE) in all eight soil vapor samples ranging from 1.85 ug/m3 to 827 ug/m3, and
trichloroethene (TCE) in six of the eight soil vapor samples ranging from 0.27 ug/m3 to 4.32 ug/m3;
- The chlorinated VOCs 1,1,1-trichloroethane (TCA),
1,1-dichloroethene, cis-1,2-dichloroethene, and
vinyl chloride were not detected within any of the soil vaporsamples; and - The chlorinated VOC
tetrachloroethene (PCE) was detected above the monitoring level range established within the NYSDOH
soil vapor guidance matrix in one sample. Note: Most of the ten soil borings installed were located
on the site boundaries. No soil borings were installed at the former USTs area. AD 03/30/2023:
Called and spoke with Ms. Karayel. Discussed the site. AD 04/05/2023: Called and discussed the site
with Jack Agosta. It was decided to wait for the site to be accepted into BCP, and then recall the
Stip. Later in the day, I was copied by Jack on the following email to Mr. Karayel: Good morning
Ezgi, I understand that Ainura spoke to you about this site, and I just wanted to make sure that we
re all on the same page and have something to that effect in writing. We cannot close the spill
case at this time given that the RI did not investigate in the area of the former tank location.
However, given the site s application into the BCP program, I will extend the deadline for the
Stipulation 120 days until August 21, with further extensions possible depending on the status of
admission into the BCP program. If the site is admitted, then the Stipulation will be withdrawn.
Ong the other hand, if the site is denied entry into the BCP program, then we will require that the
Stipulation is signed and the spill is investigated/remediated

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

accordingly. Thank you again for
your attention to this matter. Best, Jack Agosta Jonathan Agosta, Esq. He/Him/His Assistant
Attorney, Office of General Counsel Received the following response from Ms. Karayel: Hi Jack,
Understood, this makes complete sense and thank you for extending the deadline to work with the
developers. I will keep you both posted on the BCP status. Like you ve said, in the event that the
site is denied, then we will conduct any further work related to spill closure under the stip
agreement. I will be in touch once I have more to report on BCP/BCA. Regards, Ezgi Karayel
Principal vEKtor consultants 37 W. 37th Street, 6th Floor New York, NY 10018 m:716.868.8873 o:
347.871.0750 f: 347.402.7735 AD 06/08/2023: Received the following email from Ruth Curley from
Albany: Ainura/Jon This property has applied to come into the BCP. Is there a STIP for this spill?
I saw some correspondence indicating it would be canceled if the site came into BCP, but there is
not one in DecDocs. Ruth Curley, PE 518 402 9480 Sent her the following response: Hi Ruth, This
site does not have signed Stip. It was sent to RP with the following conditions written by Jack
Agosta: We cannot close the spill case at this time given that the RI did not investigate in the
area of the former tank location. However, given the site s application into the BCP program, I
will extend the deadline for the Stipulation 120 days until August 21, with further extensions
possible depending on the status of admission into the BCP program. If the site is admitted, then
the Stipulation will be withdrawn. On the other hand, if the site is denied entry into the BCP
program, then we will require that the Stipulation is signed and the spill is
investigated/remediated accordingly. Feel free to contact me if you need more info. Regards, Ainura
Doronova - Environmental Engineer AD 01/03/2024: I was copied on the following email: Hi Ruth and
Ainura, Happy New Year! Ruth, I hope you re recovered from COC season alright. I saw that the
amendment for this BCP Site was executed late last month to add 315 Grand Concourse as part of the
existing site. Could you please reassign Spill No. 9909720 to your name? Ainura, I will withdraw
the Stipulation and R2 number. Best, Jack Jonathan Agosta, Esq. He/Him/His Assistant Attorney,
Office of General Counsel New York State Department of Environmental Conservation AD Later I was
copied on the following email from Ruth: Hi Jon, That might be pre-mature, as the site is now
considering withdrawing from the BCP program and going back to OER. I had a call with the
consultant about that on 12/29. They are planning to do bldg. demo and remove the tanks. I told

FORMER CITYGAS/LAGE CAR WASH NS (Continued) **S109942387**

Remarks:	them to send me an IRM workplan for the tank pull. I will let you know if I hear anything else. Ruth Curley, PE 518 402 9480 AD 01/10/2024: Received the following email from Ruth: Ainura If a site is going to remove petroleum tanks or address an open spill, does Spills require a written workplan? Ruth Curley 01/11/2024: Sent her the response: We usually do require a work plan for the USTs removal if they were a source of the opened spill. Regards, Ainura 02/08/2024: Called and spoke with Ezgy Karayel - the consultant for the site. She confirmed that the site is in BCP program now. Asked her to send me a BCP project number to refer to. AD CAR WASH A WHILE AGO WAS A GAS STATION-SITE ASSESSMENT PERFORMED WHICH SHOWED SOIL TO BE CONTAMINATED.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	67
Tank Id:	181891
Material Code:	0013
Common Name of Substance:	Lube Oil

Equipment Records:

L02 - Piping Leak Detection - Interstitial - Manual Monitoring
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
A01 - Tank Internal Protection - Epoxy Liner
J03 - Dispenser - Gravity
F02 - Pipe External Protection - Original Sacrificial Anode
G01 - Tank Secondary Containment - Diking (Aboveground)
F06 - Pipe External Protection - Wrapped
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
D01 - Pipe Type - Steel/Carbon Steel/Iron
B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/2003
Capacity Gallons:	1000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/5/04 BPAmoco in operation and taking responsibility for southern half of property. Reference spill #0111974.(KMF). 11/26/2003 Reassigned from O'Dowd to Sun. 01/29/2004-Sun-File Update by Sun: Sun sent a Stipulation Agreement to Hess requiring the complete delineation of the contamination, including the restoration of MW-1 and MW-8, and submittal of the Operation, Maintenance and Monitoring Plan. The Department approves the remedial action plan prepared by EnviroTrac, dated July, 2001. The Department set a deadline of 2/20/04 for the Respondent to return the signed Stipulation Agreement. (WJS) 03/26/04- The Stipulation Agreement was signed by Hess on 03/10/04 and executed by the Department on 03/24/04. (WJS) 08/11/04-File Update by Sun: On 08/11/04 Sun approves the Investigation Plan submiited July 8, 2004 by Michael Matri, Project Manager for Hess Corp.The two soil borings/monitoring wells proposed in the Investigation Plan will be used to replace well MW-8 and will be located east and west of the former MW-8 location. The approved letter was mailed to Hess on 08/11/04. (WJS) 05/09/05-File Update by Sun: On 05/05/05, thr Department held a project review meeting with Hess' Project Manager (Mike Matri) and his consultant (EnviroTrac). Per Mike Matri, EnviroTrac has contacted Metropolitan Transportation Authority (MTA) in order to obtain access to delineate along the eastern (up-gradient) portion of the site adjacent to the MTA New York City Transit subway. Currently, Hess drilling contractor, Submmit Drilling Co., Inc., is obtaing the necessary Railroad Protective Liability Policy to satisfy MTA's insurance requirements. The delineation will be conducted once the work is approved by the MTA.(WJS) 10/27/05: Site reassigned from Sun to Andersen. 10/27/05: Reviewed the second quarterly 2005 update report dated 8/19/05. Additional delineation is still in progress. 12/6/05: Reviewed quarterly report dated 11/22/05. Six monitoring wells sampled on October 6, 2005. Max BTEX 3,309.4 ppb (MW13) and max MTBE 1,250ppb (MW13). Additional delineation delayed while waiting for MTA permit. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. Additional delineation is currently awaiting an MTA permit. 3/29/06: Received email from Thomas Bosshard of EnviroTrac : The two (2) up-gradient monitoring wells at the referenced site have been successfully installed. The new monitoring wells will be incorporated into the site's quarterly groundwater monitoring schedule with the second quarter 2006 sampling event scheduled for April 2006. The monitoring well installations and April

MERIT GRAND CONCOURSE (Continued) **U001839205**

2006 groundwater monitoring
event will be summarized in the site's next quarterly Update Report.
6/12/06: Reviewed the first
quarterly 2006 update report. Groundwater samples collected on January
19, 2006. Max BTEX 6,032 ppb
(MW12), max MTBE 2,830 ppb (MW12). Upgradient on-site wells installed
in March. Installation of a
well downgradient of MW12 and a RAP required by September 12, 2006.
6/30/06: Meeting on 6/28/06
with Hess, NYSDEC, Quantum, EnviroTrac and GSC. Hess will ask for
access to the adjacent RR yard to
delineate. ORC may be utilized as a remedial method. 7/12/06: Reviewed
second quarterly 2006
report. ORM socks in MW12 and 13. ORC socks will be installed in MW15
and MW16. Groundwater samples
collected on 4/4/06. Max BTEX 13,571 ppb (MW15). Max MTBE 964 ppb
(MW12). 8/23/06: Received email
from Erin Goelz of ET. Delineation not possible in the metronorth area
east of the site.
Delineation possible on Park Avenue, but this is far from the site.
Three wells on Park Avenue were
proposed. Wells not required by the Department because they are far
from the site. RAP due 9/12/06.
8/29/06: Spoke with Ed Russo. A request for an extension for RAP
submission will be required
because pilot testing will be conducted on site. Local treatment is
not feasible due to subsurface
piping on site and the subway nearby. An email request for an
extension will be submitted. Power
supply at the site may be problematic, ConEdison will be contacted.
This site is currently a BP
gasoline station. 9/8/06: Received email from Ed Russo. Requested
extension until November 30 to
submit RAP in order to complete SVE pilot testing on MW's 12 and 13.
SVE test tentatively scheduled
for October 15. ORC socks will be installed in MW 15 and 16 ASAP.
Extension approved. 10/5/06:
Received update report dated 9/27/06. Wells sampled on 7/13/06.
Fluctuating concentrations. Max
BTEX 81,251ppb (MW15), max MTBE 1,650 ppb (MW12). ORM socks installed
in MW 15 and 16.
Contamination may be in the bedrock. RAP due 11/30/06. 12/7/06: RAP
conditionally approved. SVE
will be used in six wells, STRE in MW 15 and 16 because could not
trench in this area, ORC socks in
six wells. Conditions of approval: 1) more agressive groundwater
remedial strategy for MW MW 12,
15, 16, and 2)treatment method air effluent. 12/28/06: Reviewed update
report dated 12/20/06.
Fluctuating gw concentrations. Max BTEX 39,412 ppb (MW15), max MTBE
718 ppb (MW12). 1/17/07:
Meeting on 1/16/07. This is the only Hess site not being transferred
to Delta. A RAP addedum will
be submitted addressing gw contamination. 3/13/07: Reviewed update
report. Wells sampled on
1/11/07. Max BTEX 31,608 ppb (MW15), max MTBE 1,140 ppb (MW12).
Fluctuating groundwater

MERIT GRAND CONCOURSE (Continued) **U001839205**

concentrations. ORM socks installed in MW9, and MW12-MW16. SVE system not installed yet. Emailed
Hess, EnviroTrac regarding the SVE implementation schedule, and for details on the existing Well
Stripper system on site. 3/15/07: Received email from Ed Russo: I sent you an email on 2/23
summarizing the well stripper, how it works, etc. Please confirm that you received that email. If
not, I will resend it. If you did receive it and have further questions or comments, let me know
and I will provide you with any additional information you may need. As for the schedule, we are
currently working with BP (who currently operates the site) in an effort to connect our system to
the BP station's existing electrical system. This would obviously save a great deal of time since
CONED has been very slow to provide us new power drops for some of our other recent systems. We are
also working with BP on an access agreement to install the system. Once these issues have been
resolved, the system will be installed. Due to the fact that most of the subsurface work is already
done, the system install will be very quick once the access and electrical issues are finalized.
3/16/07: Received email from Ed Russo: attached are a picture of the well stripper and a pdf
document summarizing how the well stripper works. As you discussed with Dawn Coughlin of Hess at
your recent meeting, we are proposing to install permanent well strippers in MW-12 and MW-13 and
bring a portable well stripper to the site for periodic full day remediation events (permanent well
strippers cannot be installed in MW-15 or MW-16 since these wells are not connected to the
remediation system). The permanent well strippers within MW-12 and MW-13 will be sampled (influent
and effluent) on a monthly basis during system O&M events and the portable well stripper will be
sampled for influent and effluent during the periodic remediation events. Note that we are in the
process of working with BP to get access to the site to install the system. In order to expedite
the install once access is obtained, we will be ordering the equipment so that we can prepare the
shed to be delivered to the site once access is granted. 7/31/07: Received email from Ed Russo: GW
sampling was conducted on the site about 2 weeks ago. We should get data from the lab this week and
will prepare an update report for submittal to you right away. As far as the system goes, we have
received approval from BP (the current owner/operator of the site) to install the system. Our
electrician is working on getting power from CONED. We have ordered all equipment and are working
on building the shed in house so that once electrical power is available, we can deliver the system
to the site and connect it/start it up. Once we get closer to a start

MERIT GRAND CONCOURSE (Continued) **U001839205**

date, I will be in contact
with you to schedule start-up so you can be onsite if you'd like.
9/5/07: Reviewed quarterly
report. Flucating groundwater concentrations. Wells sampled on
7/20/07. Max BTEX 47,580 ppb (MW15).
Max MTBE 681 ppb (MW12). ORM socks replaced in MW9 and MW12 - MW16.
SVE system and well strippers
not installed yet. Short term remediation events planned for MW15 and
MW16. Emailed Ed Russo to
followup on system startup date and initiation of short term
remediation events. 10/9/07: Received
email from Ed Russo: we have scheduled an on-site meeting with
representatives of BP, Delta
Consultants (BP's consultant), and EnviroTrac for Monday October 15th.
BP and Delta wanted to be
fully aware of our proposed work before agreeing to let us proceed. We
expect to get the approval
to proceed with the sitework at that meeting. The shed for the
remediation system and the control
panel have been completed in our shop and can be mobilized to the site
once we obtain the access.
Our electrician is ready to go and can get to the site within about a
week once we obtain access
and CONED involvement will be minimal since we will be connecting to
BP's station electric for our
system electrical requirements. In addition, since the majority of the
subsurface work was done a
few years ago during the construction of the BP station, only minimal
site work is required, so we
expect to be able to start the system and short-term remediation
events within 4-6 weeks of access
approval. I will send you an update of our progress following the
October 15th meeting. Edward E.
Russo Senior Project Manager EnviroTrac Ltd. 5 Old Dock Road Yaphank,
NY 11980 P: 631.924.3001 F:
631.924.5001 http://www.envirotrac.com 2/14/08: Received email from Ed
Russo: We wanted to let you
know that the SVE/Well Stripper system was activated at the referenced
site on January 29, 2008.
Preliminary data indicates that the system is effectively removing
BTEX and MTBE from onsite wells.
The initial start-up period will last another week or so and then
system O&M will continue on a
monthly basis thereafter. A full round of groundwater sampling will be
conducted this month and a
report summarizing that data and all system data collected to date
will be submitted to you before
April 30, 2008. If you would like to visit the site to see the system
or if you have any questions
or comments, please give me a call at (631) 924-3001 3/12/08: Reviewed
Fourth Quarterly 2007 update
report dated November 27,2007. Wells sampled on 10/16/07. Max BTEX
16,839 ppb (MW15), max MTBE 727
ppb (MW12). System startup data will be submitted in next report.
4/15/08: Reviewed update report
dated April 8th, 2008. SVE and well strippers (WS) in operation, and
short term remediation events

and WS being conducted in MW-15 and MW-16. Maximum BTEX concentration 3,779 ppb (MW16), maximum
MTBE concentration 325 ppb (MW12). General downward trend in contamination. 8/7/08 - Carlson:
Reviewed July 2008 Hydrogeologic Status Report. Wells sampled on 6/30/08. Maximum BTEX
concentration 54,315 ppb (MW15). SVE/WS system in operation. Fluctuating concentrations. 10/22/08 -
Carlson: Meeting with Hess, Envirotrac, and NYSDEC. 11/17/08 - Carlson: Reviewed October 2008
Update Report. Wells sampled on 8/26/08. Fluctuating concentrations in some wells. Maximum BTEC
concentration 1,068 ppb (MW12). System in operation. 2/20/09 - Carlson: Reviewed January 2009
Update Report. SVE and WS in operation. High effluent concentrations in MW15. Effluent
concentraions were not measured from MW12,13. Wells sampled on 11/24/08. Hot well MW12 was not
sampled (why?). 3/18/09 - Carlson: Meeting with Hess and Envirotrac. Not enough water to sample WS
effluent in some cases. 5/7/09 - Carlson: Reviewed April 2009 Update Report. SVE/WS in operation,
and monthly STRE from MW15. Wells sampled on 2/27/09. Maximum BTEX concentration 390 ppb (MW15).
Strong decreasing trends. 5/28/09 - Carlson: Received email from Ed Russo: while out at the site
this week conducting routine GW sampling, our technician noted product (0.18') in MW-15. This well,
and the entire site, has cleaned up dramatically since the system was activated and short term
remediation events commenced a couple of years ago. As you can see from the attached photo, the
product appears to be fresh gasoline. Our technician has taken a sample of the product and the GW
within the well. We will analyze the GW for BTEX/MTBE as well as ethanol and conduct a fingerprint
analysis on the product to try to confirm that it is a new release since this site is an active BP
station. The technician did not note any indication of a surface spill and the well seal and
manhole have been reported to be in good condition. Once we get results of the ethanol analysis and
fingerprint analysis, we will let you know. If it appears that this may be a new release, we would
need to notify BP. 8/7/09 - Carlson: Reviewed July 2009 update report. SVE/WS in operation. STRE on
MW15 but high concentrations - effluent should be monitored. MW15 fingerprinting results not
included. 8/17/09 - Carlson: Reviewed fingerprinting results of product identified in MW15. Product
was found to be weathered gasoline from the old release. 8/19/09 - Carlson: Meeting with Hess.
System in operation. 11/17/09 - Carlson: Reviewed October 2009 Update Report. Large decrease in
concentration in MW15. System in operation. 1/27/2010 - Carlson: Meeting with Hess. Well stripper
wells are often dry. 2/5/2010 - Carlson: Reviewed update report. Low

MERIT GRAND CONCOURSE (Continued) **U001839205**

dissolved concentrations.
5/20/2010 - Carlson: Meeting with Hess. 5/27/2010 - Carlson: Reviewed update report. SVE to be shut
down due to low recovery. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. Spike in
concentration in MW15. SVE shut down due to low recovery. STRE/well stripper on MW15 monthly.
8/30/2011 - Obligado - Hess is still duing well stripper STRE on wells MW-12 and MW-15 monthly.
10/21/11 - Obligado - This spill is reassigned to Carlson as directed by Brevdo. 11/14/11 -
Carlson: Reviewed October 2011 update report. STRE/well stripper on MW15 and MW12 in June and July.
Monthly EFR planned instead of well stripper events from now on.

MW-15, 639.9 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J.
Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today.
According to ACRIS, the block and lot are 2341 and 42. The latest deed is dated 12/21/79. The
property owner is 350 Concourse Realty Corp. The PBS record is #2-297437. The owner is MERIT Oil of
New York, Inc., 551 West Lancaster Avenue, Haverford, PA, 19041. The operator is MERIT Grand
Concourse. All six USTs were closed and removed on 11/1/98. The contacts are as follows:
Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward
Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001,
JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Yesterday I received the EnviroTrac 4/25/16 Quarterly
Update Report. On 12/10/15, 1/20/16 and 2/3/16 VEFRed MW-15. On 2/9/16 MW-9 to 11 and 14 to 16 were
gauged. MW- 9 to 11, 15 and 16 were sampled on 2/9/16. Product was not measured in any of the
wells. Groundwater was measured at 15.54’ and 22.47’ below grade and was determined to be flowing
southeast. Total BTEX was non-detect at MW-9 to 11, 703.5 ppb at MW-15 and 14.5 ppb at MW-16.
7/26/16 - Raphael Ketani. Yesterday I received the EnviroTrac 7/25/16 Quarterly Update Report for
the period March to May 2016. On 3/7/16, 4/5/16 and 5/5/16 VEFRed MW-15. On 5/13/16 MW-9 to 11 and
14 to 16 were gauged. MW- 9 to 11, 15 and 16 were sampled on 5/13/16. Product was not measured in
any of the wells. Groundwater was measured at 14.90’ and 21.59’ below grade and was determined to
be flowing southeast. Total BTEX was 11.3 ppb at MW-9 and non-detect at MW-10 to 11, 3785 ppb (64
ppb benzene) at MW-15 and 20 ppb at MW-16. 10/24/16 - Raphael Ketani. Today I received the
EnviroTrac 10/24/16 Quarterly Update Report for the period June to August 2016. On 6/7/16, 7/12/16
and 8/8/16 MW-15 was VEFRed. On 8/22/16 MW-9 to 11 and 14 to 16 were

MERIT GRAND CONCOURSE (Continued) **U001839205**

gauged. MW- 9 to 11, 15 and 16
were sampled on 8/22/16. Product was not measured in any of the wells. Groundwater was measured at
14.94' and 21.90' below grade and was determined to be flowing southeast. Total BTEX was non-detect
at MW-9 to 11. MW-15 had 11,964.7 ppb BTEX (74.7 ppb benzene). MW-16 had 9.6 ppb BTEX. While I
approved the report, I sent an email to Mr. Russo (631) 924-3001, EDR@EnviroTrac.com asking for an
explanation as to why the BTEX concentrations should increase so much and so quickly at MW-15. I
also asked him to have EnviroTrac come up with a means of reducing the contaminant concentrations
at this location. Mr. Russo responded today to my above email with the following statement: in
response to your email, please note that the increase in BTEX in MW-15 appears to be related to
water table fluctuation. When the water table was lower (in November 2015 and February 2016) BTEX
concentrations decreased. The water table has been higher in May 2016 and August 2016 and the BTEX
concentrations have increased. Please note factors that indicate that our current course of action
is the best to continue to address this impact: 1) The overall trend in remediation of this well,
despite the past 2 sampling events, has been good. In 2014 product was present in the well and as a
result EFR was initiated. Since 2014, product has no longer been detected within the well.
Dissolved concentrations of BTEX were as high as 102,391 ug/l in 2014 prior to initiation of EFR.
2) A majority of the BTEX consists of degraded gasoline (xylenes) and through continuing
groundwater monitoring of the site this impact has not shown up in downgradient monitoring wells,
indicating that it is an isolated area of impact. 3) A remediation system operated to remediate the
eastern portion of the site (area of MWs-9 through 14). As depicted on the attached figure, this
remediation system could not be connected to the area of MW-15 due to site constraints/underground
utilities. Please also note that we are scheduled to continue to sample the site quarterly and will
continue to evaluate our plan moving forward based on quarterly sampling results. EFR events will
continue on a monthly basis. 10/25/16 - Raphael Ketani. I sent a response email to Mr. Russo's
10/24/16 response email. I stated that while EnviroTrac has interpreted the data to indicate a
decreasing trend for the BTEX concentrations in the groundwater at MW-15, staff at the Department
have noted that the BTEX concentration in the 8/22/16 groundwater sample is at least 3 times
greater than that of the past six samples. Also, despite the drop in the water table and the
associated release of some product from the micro channels and pores in the soil, we are still

MERIT GRAND CONCOURSE (Continued) **U001839205**

concerned that this location will remain a source of groundwater contamination. We will monitor the quarterly analytical results with the expectation that EnviroTrac will take the necessary action to lessen the contamination in the event that it is consistently very high. 2/1/17 - Raphael Ketani. Today I received the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/6/16, 10/26/16 and 11/9/16 MW-15 was VEFRed. On 11/3/16 MW-10, 11 and 14 to 16 were gauged and MW-10, 11, 15 and 16 were sampled. Product was not measured in any of the wells. Groundwater was measured at 15.23' and 18.96' below grade and was determined to be flowing southeast. Total BTEX was non-detect at MW-10 and 11. MW-16 had 3 very low hits and 2 non-detects. MW-15 had 4889.3 ppb BTEX (70.3 ppb benzene). 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/8/16, 1/18/17 and 2/15/17 MW-15 was VEFRed. On 2/27/16, MW-9 to 11 and 14 to 16 were gauged and MW-9 to 11, 15 and 16 were sampled. Product was not measured in any of the wells. Groundwater was measured at 15.63' and 22.37' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 879.4 ppb. MW-16 had 9.3 ppb. I approved the report without comment. Next, I reviewed the EnviroTrac 4/20/17 Request for Well Abandonments letter. EnviroTrac requests permission to abandon wells MW-12 to 14. The reason for requesting the abandonments is that EnviroTrac claims the groundwater data has shown very significant decreases in the concentrations for BTEX (98.9%) and for MTBE (99.9%). I looked at the historical data for wells MW-12 to MW-14. I found that MW-12 hadn't been sampled from 11/21/13 to 8/19/14 because it was not accessible. After this, the well was not sampled up to the 2/27/17 round. Very high to extremely high BTEX results were indicated in Table 1 for the past results. MW-13 was sampled sporadically from 2/24/12 to 5/16/14. It was not sampled from 8/19/14 to 2/27/17, except for the 5/13/15 round when the results were non-detect. Past BTEX results for this well as far back as 11/24/08 were generally low. MW-14 had consistently low BTEX results since shortly after it was installed. Also, with the exception of some rounds when it was not sampled, the results were non-detect from 2/28/08 to 8/24/12. After this, the results have D designations for dry, though there are the letters NS for Not Sampled for the rounds from 5/13/15 to 2/27/17. From reviewing the data in Table 1 for MW-12 to MW-14, I determined that wells MW-13 and MW-14 could be abandoned without compromising the monitoring. However, there was insufficient data for making a

MERIT GRAND CONCOURSE (Continued) **U001839205**

determination as to whether MW-12 could be abandoned. In light of this, I stated that MW-12 will need to be sampled for at least 3 more rounds before the Department can make a decision regarding abandonment. I sent an official letter today to Mr. Russo, with a C-C to John Engdahl of Speedway, stating the above. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May 2017. On 6/8/17, 7/19/17 and 8/8/17 MW-15 was VEFRed. On 5/18/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 14.66' and 21.13' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 5154.5 ppb. MW-16 had 8.7 ppb BTEX. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/8/17, 7/19/17 and 8/8/17 MW-15 was VEFRed and the sock was replaced. On 8/24/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 15.23' and 22.45' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 8541.3 ppb. MW-16 had 3.2 ppb BTEX. 1/24/18 - Raphael Ketani. Today I received the EnviroTrac Remedial Work Plan dated 1/24/18. The objective of the proposed plan was to collect the product in the vicinity of MW-15. The well was installed in the weathered schist bedrock. Multi-family residences with basements are located to the north. A subway tunnel is located adjacent to the site beneath the Grand Concourse. Utilities are below the Grand Concourse. Product was detected in the well on 6/8/17, 7/19/17, 9/6/17, 10/18/17 and on 11/3/17. The thickness varied from 0.01 feet to 0.04 feet. Due to the proximity of the subway and utilities, EnviroTrac proposes to treat the product by injecting surfactant and recovering surfactant and product as a combined liquid using the EFR method. BioSolve Pinkwater will be the surfactant of choice. One hundred gallons of Pinkwater as a 5% solution will be injected. The inside of the well will be scrubbed with a brush and surge blocking will take place. The EFR event will take place the day after the injection and will last 8 hours. Three additional injection and extraction events will take place after this initial event. On site parameters consisting of depth to product, depth to water and product thickess will be monitored. Wells MW-15 and MW-16 will be utilized for the monitoring. Groundwater sampling will continue to take place quarterly. Each sample will be analyzed for BTEX and MTBE. A work schedule was included in the work plan. I

MERIT GRAND CONCOURSE (Continued) **U001839205**

reviewed the schedule and did not have any comments. I approved the work plan. 1/25/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/25/18 for the period September to November 2017. On 9/6/17, 10/18/17 and 11/3/17 MW-15 was VEFRed and the sock was replaced. On 11/17/17, MW-9 to 11, 15 and 16 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 15.31' and 22.59' below grade and was determined to be flowing southeast. BTEX was non-detect at MW-9 to 11. MW-15 had 7012.9 ppb. MW-16 had 11.6 ppb BTEX. Later, Mr. Rennie and Mr. Russo called to discuss the site and the proposed usage of Pinkwater. They said that they had good results with the treatment solution as it loosens up the product being held by the soil. I stated that, from my experience, I had mixed feelings about Pinkwater because the results had been mixed. Mr. Russo stated that they'd like to try the treatment solution and that they will send me the results. Mr. Russo added that the reason they want to use the Pinkwater is because the BTEX concentrations are very high in the samples from MW-15. I stated that the groundwater sample results for MW-15 had remained high mostly because xylenes are resistant to breakdown. Mr. Rennie and Mr. Russo agreed. I responded that I had wanted to close the spill case and send a Spill Closure Letter because the product thickness had remained very low. Mr. Russo said that the oil wasn't the issue, just the BTEX concentrations. I finished the conversation by telling them to try the Pinkwater and to send me the results as soon as possible so that I can evaluate whether closure is appropriate. They said they will. With that, the conversation ended. =case manager's note= Speedway leases the property. The owner is 350 Concourse Realty, LLC at 11 Park Place, Ste. 615, NY, NY, 10007. Mr. Russo said that letters can be sent to both the property owner and Speedway or just to Speedway, who will forward the letters to 350 Concourse Realty. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/23/2018: Reviewed the report. Site history: Petroleum impacted soils encountered during an underground storage tank (UST) upgrade project in February 1999. Removed five (5) 4,000-gallon single wall (SW) steel gasoline underground storage tanks (USTs), one (1) 550-gallon SW steel waste water UST and all associated

MERIT GRAND CONCOURSE (Continued) **U001839205**

dispensers, piping and
remote fills. During this project a total of 410.76 tons of soil were removed off site for
disposal. This report covers period from December 2017 March 2018. On December 13, 2017, January
18, and February 15, 2018 Enhanced Fluid Recovery (EFR) was performed on MW-15. February 13, 2018
Performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons
of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial
Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. On February 21, 2018 the
consultant did a post surge blocking/surfactant injection well gauging event. On March 23, 2018 six
(6) monitoring wells were gauged and sampled. Wells Gauged: MW-9 through MW-12, MW-15, and MW-16.
Wells Containing LPH: None Groundwater Depth: 14.98 feet to 21.74 feet Groundwater Flow:
Southeasterly Wells Sampled: MW-9 through MW-12, MW-15, and MW-16 Maximum Benzene Concentration:
21.6 micrograms per liter (ug/L) in MW-15 BTEX: around 24,000ug/L in MW-15 Maximum MTBE
Concentration: 99.4 ug/L in MW-12 The consultant will continue quarterly groundwater sampling, with
the next sampling event scheduled for May 2018. An Update Report summarizing these activities will
be submitted to NYSDEC in July 2018. Speedway will continue monthly EFR events. According to the
consultant, it appears that surge blocking/surfactant injection has liberated dissolved phase
hydrocarbons in the area of MW-15. EnviroTrac will continue to perform surge blocking/surfactant
injection events/EFR in MW-15. Results from these events will be used to determine if further
action should be taken. AD 07/20/2018: Received the following e-mail from EnviroTrac: Dear Ms.
Doronova, Please find attached the latest update report for the above referenced location. Also,
please note that monitoring wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE
concentrations for several years and show low to ND VOC STARs compounds concentrations in the most
recent groundwater sampling event. As a result, Speedway/EnviroTrac respectfully requests the
abandonment of these wells in order to minimize trip hazards. Sincerely, Joseph Rennie - Project
Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001
(Fax) - joer@envirotrac.com Will review. AD 07/30/2018: Reviewed the report. This report covers
monitoring period from March 2018 May 2018. On March 12, March 19, & May 4, 2018 EnviroTrac
performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons
of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial

MERIT GRAND CONCOURSE (Continued) **U001839205**

Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. On March 16, March 20, & May 10, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. On May 31, 2018 Gauged and sampled four (4) monitoring wells. Wells Gauged: MW-9 through MW-11, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 14.21 feet to 21.66 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9 through MW-11, MW-15, and MW-16 Maximum Benzene Concentration: ND (non-detect) all wells Maximum MTBE Concentration: 5.0 micrograms per liter (ug/L) in MW-9 BTEX ranges in the site wells from ND in MW-9, MW-10 and MW-11 to 14,600ppb in MW-15. Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Speedway to continue monthly EFR events. According to the consultant, surge blocking/surfactant injection has liberated dissolved phase hydrocarbons in the area of MW-15. EnviroTrac will continue to perform surge blocking/surfactant injection events/EFR in MW-15. Results from these events will be used to determine if further action should be taken. AD 10/29/2018: Received the following e-mail from J. Rennie: Dear Ms. Doronova, Please find attached the latest update report for the above referenced location. Also, please note in our recommendation section that monitoring wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE concentrations for several years and show low to ND VOC STARs compounds concentrations in the most recent groundwater sampling event. As a result, Speedway/EnviroTrac respectfully requests the abandonment of these wells in order to minimize trip hazards. Please let us know if NYSDEC approves of these well abandonments. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/21/2018: Reviewed the 3rd quarter 2018 report for the monitoring period: June 2018 August 2018. Work Performed: - June 4 & August 7, 2018 Performed a surge blocking/well cleaning event on MW-15 while injecting approximately 100 gallons of a 5% solution of BioSolve Pinkwater (surfactant) and water as proposed within the Remedial Action Plan (RAP) submitted to and approved by the NYSDEC in January 2018. - June 5, July 2, & August 10, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. - August 17, 2018 Gauged and sampled six (6) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9 through MW-12, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 13.47 feet to 21.41 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9 through MW-12, MW-15, and MW-16

MERIT GRAND CONCOURSE (Continued) **U001839205**

Maximum Benzene Concentration:
14.1 ug/L)(MW-12) Maximum MTBE Concentration: 88.8 ug/L in MW-12 Total VOCs Range: ND 8,788 ug/L
Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled
for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in
January 2019. Speedway to continue monthly EFR events. According to the consultant, monitoring
wells MW-9, MW-10, and MW-11 have shown low to ND BTEX/MTBE concentrations for several years and
show low to ND VOC STARs compounds concentrations in the most recent groundwater sampling event. As
a result, Speedway/EnviroTrac respectfully requests the abandonment of these wells in order to
minimize trip hazards. AD 12/06/2018: Called and left a message to Mr. Rennie. Later received a
call from him. Discussed their recommendations regarding wells MW-9, MW-10 and MW-11. Asked to
leave well MW-9 in the annual sampling program since it is most down-gradient well, and approved
abandonment of MW-10 and MW-11. Also requested historical data for MW-13 which was not sampled
consistently. Mr. Rennie said that the location of the MW-13 was rented by the owner and is
occupied by vehicles. Requested to sample that well. Asked to look into historic data regarding
well MW-15, if there were any possible sources of contamination as remote fill ports, since it is
most up-gradient well at the site according to the GW flow direction. Sent the following e-mail to
Mr. Rennie as per his request: Dear Mr. Rennie, The Department had reviewed the submitted report
with the proposed recommendations and has the following comments: - DEC approves abandonment of
monitoring wells MW-10 and MW-11; - Monitoring well MW-9 should be kept in the program and sampled
on annual basis; - Monitoring well MW-13 should be sampled on next sampling event and historic data
for this well should be provided to DEC; - Vicinity of an up-gradient well MW-15 should be checked
on historic documents for possible sources of contamination such as former remove fill ports, etc.
Feel free to contact me if you have any questions regarding this matter. Sincerely, Ainura Doronova
- Environmental Engineer AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura
attached is the most recent update report for your review/files. Let us know if you have any
questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock
Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) -
edr@envirotrac.com Will review. AD 02/13/2019: Reviewed the report. It states that for the
monitoring period: September 2018 November 2018, the following work was performed at the site: -

MERIT GRAND CONCOURSE (Continued) **U001839205**

September 26, October 12, & November 13, 2018 Performed Enhanced Fluid Recovery (EFR) on MW-15. - November 20, 2018 Gauged and sampled five (5) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9 through MW-11, MW-15, and MW-16. Wells Containing LPH: None Groundwater Depth: 12.93 feet to 20.28 feet. Groundwater Flow: Southeasterly. Wells Sampled: MW-9 through MW-11, MW-15, and MW-16. Maximum Benzene Concentration: 28.2 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 2.9 ug/L in MW-9. Total VOCs Range: ND 28,680.7 ug/L. Recommendations: The consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to the NYSDEC in April 2019. Speedway will continue monthly EFR events. As approved by the NYSDEC, the abandonment of monitoring wells MW-10 and MW-11 were completed on January 29, 2019. MW-13 was able to be accessed on January 29, 2019 and was sampled. If results are favorable, abandonment of this well will be proposed. Going forward, MW-9 will be sampled on an annual basis per NYSDEC request. AD 04/30/2019: Received a 1st quarter 2019 monitoring report. Will review. AD 05/16/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019, the following work was performed at the site: - December 27, 2018, January 29 & February 20, 2019 Performed Enhanced Fluid Recovery (EFR) on MW-15. - January 29, 2019 Gauged and sampled one (1) monitoring well. Also, two (2) monitoring wells (MW-10 and MW-11) were abandoned as approved by the NYSDEC. - February 19, 2019 - Performed a surge blocking/well cleaning event on MW-15 utilizing a solution of BioSolve Pinkwater (surfactant) and water. - February 25, 2019 Gauged and sampled two (2) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-13, MW-15, and MW-16 Wells Containing LPH: None Groundwater Depth: 14.25 feet to 16.76 feet. Groundwater Flow: Southeasterly Wells Sampled: MW-13, MW-15, and MW-16 Maximum Benzene Concentration: 39.1 micrograms per liter (ug/L) (MW-15) Maximum MTBE Concentration: 6.6 ug/L in MW-13 Total VOCs Range: ND (non-detect) 25,293 ug/L The only site well which exhibits elevated levels - is MW-15 with 25,293ppb of TVOCs. Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2019. An Update Report summarizing these activities will be submitted to the NYSDEC in July 2019. Speedway to continue monthly EFR events. The following remediation activities were historically performed at the site: - February 2006 Oxygen Releasing Compound (ORC) socks installed in select wells. - January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. - March 2010 SVE system shut down due to asymptotic conditions. - October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. - July 2017 ORC socks installed in select wells. - February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. For the reported monitoring period: June August 2021, the following work was performed at the site: - August 16, 2021 Gauged and sampled three (3) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-12, MW-16, and MW-17 Wells Containing LPH: None Groundwater Depth: 13.16 21.88 feet Groundwater Flow: Southeasterly Wells Sampled: MW-12, MW-16, and MW-17 Maximum Benzene Concentration: 12.3 micrograms per liter (ug/L) (MW-17) Maximum MTBE Concentration: 25.5 ug/L (MW-12) Total VOCs Range: 49.1 ug/L 273.6 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2021. An Update Report summarizing these activities will be submitted to the NYSDEC in January 2022. AD 01/26/2022: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 03/16/2022: Reviewed the 4th quarter 2021 monitoring report. It states that the current site status is an active BP station. A Stipulation Agreement for this site was signed on March 24, 2004. The following remediation activities were historically performed at the site: - February 2006

MERIT GRAND CONCOURSE (Continued) **U001839205**

Oxygen Releasing Compound (ORC) socks installed in select wells. - January 2008 A Soil Vapor Extraction (SVE) system in conjunction with a Well Stripper (WS) system was activated. - March 2010 SVE system shut down due to asymptotic conditions. - October 2011 Enhanced Fluid Recovery (EFR) events commenced on monitoring well MW-15. - July 2017 ORC socks installed in select wells. - February 2018 Injections of Biosolve Pinkwater commenced on monitoring well MW-15. For the reported monitoring period: September November 2021, the following work was performed at the site: - November 5, 2021 Gauged and sampled four (4) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-9, MW-12, MW-16, and MW-17 Wells Containing LPH: None Groundwater Depth: 13.49 21.38 feet Groundwater Flow: Southeasterly Wells Sampled: MW-9, MW-12, MW-16, and MW-17 Maximum Benzene Concentration: 4.5 micrograms per liter (ug/L) (MW-12) Maximum MTBE Concentration: 19.6 ug/L (MW-12) Total VOCs Range: 2.9 ug/L 412.7 ug/L Recommendation: Continue quarterly groundwater sampling, with the next sampling event scheduled for February 2022. An Update Report summarizing these activities will be submitted to the NYSDEC in April 2022. This site was recently sold to a developer that plans to enter it into the Brownfields Cleanup Program. AD 03/29/2022: Received the following email from Mr. Rennie: Ainura, Please be advised that the above referenced property has been sold and the new owner has entered an application for it to be accepted into the Brownfields Cleanup Program (BCP). The owner s consultant, AKRF, has conducted a Phase II investigation which was submitted with the BCP application, and has made a recommendation to have Spill #98-14075 closed pending BCP application approval. As a result, we are notifying you that Speedway has not been granted access to the site to conduct quarterly groundwater sampling for the planned 1st quarter event of 2022. If you have any questions, please do not hesitate to contact me or Ed Russo. We will keep you posted if we learn new information on this. Sincerely, Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com AD

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the

MERIT GRAND CONCOURSE (Continued) **1000263797**

state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/10/2002 - Mr. Levent Eskicakit at ATC (212-353-8280)submitted a Site Closure Letter (with backup data) in October 2000. Sangesland requested additional rounds of groundwater sampling which was done in Feb 2001, Sept 2001 and January 2002. Samples were taken from 3 wells (MW1, MW2, MW3) The results showed continued declines in BTEX and MTBE levels over time. Samples from the three wells from Feb 2001, Sept 2001 and Jan 2002 all show non-detect for BTEX. In only the Feb 2001 sample there were trace levels of a couple of VOC's, but these were all non-detect by the Sept 2001 sampling. MTBE levels in MW1 have dropped over these last three sampling cycles from 458 (ug/l) to 199 and finally to 138 (Jan 2002) MTBE levels in MW2 have been trace (<5 ug/l) for this period. MTBE levels in MW3 were trace and are now non-detect. Based on this information, the NYSDEC is closing this site out with a No Further Action letter. The only exceedance of state standards at this time is for MTBE in MW1. Based on the historical data, the NYSDEC believes this value will attenuate over time.
Remarks:	SITE DISABLED / JUNK VEHICLES.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	55512
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

BEN-GOMO REALTY, INC. (Continued) **A100129096**

D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1975
Capacity Gallons:	3500
Tightness Test Method:	03
Date Test:	11/01/1998
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	JSMACRI
Last Modified:	10/30/2023
Material Name:	#2 fuel oil (on-site consumption)

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	1/16/20 - Sekhon 1, Approximately 5 to 10 gallons of UCON HTF 500 spilled on the ground from a 55-gallon drum. Product SDS identifies the chemical as propylene glycol monobutyl ether (95%) and n-phenyl-alpha-napthylamine (less than 2.4%). The spill was on asphalt which had a 1inch layer of soil/debris on top. A spill of white paint was also mixed in. 2)The drums have been placed on/under plastic, and are scheduled to be picked up for disposal by Eastern Environmental Solutions, Inc. tomorrow. 3)The asphalt/soil is being excavated and stockpiled and placed on separate plastic. EBC will collect a waste characterization soil sample from the stockpile to arrange for off-Site disposal. 4)EBC will be collecting 6 endpoint soil samples from the spill area after excavation is complete for laboratory analysis of VOCs 8260 and SVOCs 8270. 5)Notifier will prepare a Spill Closure Report with the lab results and a summary of the endpoint samples, figure showing spill location, manifests/disposal documentation for the drums and soil. 5/12/20-Lin-Non-hazardous material spill on asphalt with soil/debris on top that was cleaned up. Case closed. Spill transferred to DEC Lin for follow up (daytime runner).
Remarks:	5-10 gallons lost- unknown sewers. C/u in progress

DEC Memo:	12-4-15 - Obligado - DEsk Duty - Called TJ at Heinrech. Left a message to call back the DEC. 550 tank #2 fuel oil UST. Dry leak. The tank is about half full, 240 gallons. It is a simple system, with a remote fill, and a vent pipe. He was unable to determine the casue of the leak. Heinrech was hired by a potential buyer. TTF mail merge list updated. I called Mr. Gerardo Bohorquez. I left a message to call back the spills duty desk. Spill assigned to Santosh Mahat. 1/14/16 - Austin - I received a call from Ed Townsend (845-249-0958), a consultant representing the owner of this tank. He indicated that this test was done by a prospective buyer of this property. Mr. Townsend wanted to know how to proceed in getting this matter resolved. He had already had a tank-only test done (passed, according to him) and found a problem with the fill line. However, he said that when the fill was dug out for replacement, no soil contamination was encountered. I asked about the tank-to-boiler line (above ground, no leaks) and the vent line (he indicated that that might have had a failurie, as well, but it was replaced, too). I told him to write this all up, include any documentation and photos, and send it to DEC Mahat via e-mail. He indicated he would do so. - end 6/7/16: Mahat T/c : DEC Mahat contacted Ed and request him to send the closure report on the spill case. 8/11/16: Mahat t/c: DEC Mahat talked to Ed and he mentioned that the report will be sent to the Department as soon as he can. 9/1/16: Mahat Spill case is admistratively closed based on the phone conversation RSE had with the contractor on 1/14/16. No paperwork has been submitted to the office as discussed over the phone. Spill case does not warrant any investigation/work on the case. Case closed. 12/20/2016: McPartland Received call to Duty Desk phone from Ed Townsend (845-249-0958). He explained the tank would be abandoned in place and asked if soil samples would need to be taken since it passed a tightness test. I consulted with DEC Piper and told Ed he would not need to take soil samples since the tank was unregulated and it passed a tightness test.

GERARDO WOODWORKING (Continued) **S118462493**

Remarks: failed tank test
