1.0 INTRODUCTION

SESI prepared this Remedial Investigation Workplan (RIWP) for 1140 River Avenue, (Block 2487, Lot 38), Bronx, New York ("Site"). The Site is in the Brownfield Cleanup Program (BCP) and is known as the 1140 River Avenue Auto Repair Site (C203195) (hereinafter the "Site" or "BCP Site") with the Volunteer River Avenue BC LLC ("Volunteer"). A Site Location Map is presented as **Figure 1.1**.

This document comprises an RIWP that describes the investigation activities to be conducted at the Site, as part of the Site's planned remedial investigation to plan for the Site's remediation. This RIWP includes a description of the Site, summary of the Site history and previous environmental investigations, a description of the Site's physical, geologic, hydrogeologic setting and subsurface features and a plan of action for further investigation of the areas of concern identified previously.

This RIWP has been prepared to achieve the following objectives:

- To complete the horizontal and vertical delineation of the nature and extent of contamination on the Site;
- To identify any potential source areas of contamination;
- To determine the remedial action needed to protect human health and the environment; and
- To collect sufficient data to evaluate remedial alternatives for the Site.

This RIWP is developed in general accordance with the Department's Remediation Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

2.0 PROJECT BACKGROUND

2.1 SITE DESCRIPTION

The Site consists of an approximately 0.39-acre lot that has been developed with a paved parking lot and courtyard located at 1140 River Avenue, Bronx, New York. The Site is identified on local tax map records as Block 2487, Lot 38.

The Site is currently developed with an at-grade parking lot and courtyard associated with the adjacent residential building to the east. The Site is bound by McClellan Street to the north and River Avenue to the west. The Site historically contained auto repair garages (circa 1954-1984).

Topographically, the project area generally slopes downward to the south/southeast with an approximate elevation of 38.74 feet above msl. The street grade along River Avenue slopes from 34 to 39 feet above msl (from south to north) and from 39 to 43 feet above msl (from west to east). The at-grade parking lot surface grades vary from 34 to 41 feet above msl (west to east).

The Site most recently has been paved/vacant since approximately 1991. A Site Location Map is provided as **Figure 1.1**. A Site Plan is included as **Figure 2.1**. The proposed Site redevelopment is anticipated to consist of a 100% affordable apartment building comprising approximately 300 units, as well as one (1) small commercial space and 50 parking spaces to accommodate the commercial business.

The Site is bound to the north by apartments and parking, to the west by parks and recreation, and to the south and east by more apartments. Adjacent properties are summarized on **Table 2.1** below:

Table 2.1 – Summary of Surrounding Properties

Direction	Adjacent Property Use
North	Apartments and Parking
South	Apartments
East	Apartments
West	Parks and Recreation

2.2 SITE HISTORY

The Site was vacant from at least 1924 through 1954, after which it was developed as an auto repair garage that remained in operation until approximately 1991. The buildings were demolished in 1991, and the Site was subsequently paved. Since then, it has remained free of structures and has been used as a parking lot. Based on this history, various former auto repair operations at the Site have likely involved the use of hazardous materials and petroleum products, which could include, but are not limited, to fuel storage and dispensing, vehicle maintenance and repair, and solvent use for cleaning.

2.3 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

The following environmental reports are attached in **Appendix A** and are summarized below:

- "Phase I Environmental Site Assessment, 1140 River Avenue, Block 2487, Lot 38, Bronx, Bronx County, NY," prepared by SESI, dated July 2025.
- "Phase II Environmental Site Assessment, 1140 River Avenue, Block 2487, Lot 38, Bronx, Bronx County, NY," prepared by SESI, dated July 2025.

2.3.1 PHASE I ENVIRONMENTAL SITE ASSESSMENT (JULY 2025)

- SESI performed a Phase I ESA which identified three (3) Recognized Environmental Conditions (RECs) in connection with the Site:
- **REC 1 – Known Site Contamination:** An environmental Phase II investigation was completed by SESI in 2024 and documented in a Phase II Reported in July 2025. Pesticides, metals and semi-volatile organic compounds (SVOCs) were found above New York State Department of Environmental Conservation (NYSDEC) soil cleanup objectives in soil. Additionally, volatile organic compounds (VOC), SVOCs, pesticides, polycyclic aromatic hydrocarbons (PAHs), metals and per- and polyfluoroalkyl substances (PFAS) were found above NYSDEC groundwater quality standards in groundwater. Finally, elevated benzene was detected in soil vapor. **Therefore, the Phase I concluded this known contamination was a REC and that further investigation/remediation is warranted.**
- **REC 2 – Site Historic Fill:** SESI identified historic fill throughout the Site up to 10 feet below grade surface (ft bgs) during the 2024 Phase II investigation (reported in 2025). Furthermore, the 1947 and 1956 topographic maps indicate historic fill was used to

regrade the Site due to the changes in contour lines. **Therefore, this historic fill regarding was considered a REC that warrants further investigation/remediation.**

- **REC 3 – Historic Site Operations:** The Sanborn fire insurance maps indicated auto repair garages (circa 1969-1981) at the west on the Site. Additionally, the aerial photographs indicated car garages (1954-1984). **Therefore, this historic use of auto repair garages was considered a REC that warrants further investigation/remediation.**

Based on the operational auto repair history of the Site, various operations at the Site have likely involved the use of hazardous materials and petroleum products, which could include, but are not limited, to fuel storage and dispensing, vehicle maintenance and repair, and solvent use for cleaning. Therefore, further investigation of the Site was warranted.

A copy of the Phase I ESA report prepared by SESI is included in **Appendix A.**

2.3.2 PHASE II ENVIRONMENTAL SITE ASSESSMENT (JULY 2025)

In August through September 2024, SESI performed Target Compound List plus 30 tentatively identified compounds / Target Analyte List (TCL+30/TAL) sampling of soil and groundwater, and VOC sampling of soil vapor at the Site to partially satisfy the requirements of potentially entering the Site into the BCP. The Phase II ESA consisted of geophysical surveys and the advancement of 41 soil borings, two (2) temporary wellpoints and three (3) soil vapor samples at the Site. Elevated photoionization detector (PID) readings were not encountered in the soil borings. The Phase II ESA confirmed the presence of SVOC, metal and pesticide contamination in soil/historic fill, as well as pesticides, Perfluorinated Compounds (perfluorooctanoic acid [PFOA] and perfluorooctanesulfonic acid [PFOS]), SVOCs, metals, chloroform in groundwater at the Site. Additionally, elevated benzene was detected in one (1) sample that requires further sampling and potential mitigation.

Based on the results and due to the future planned 100% affordable mixed-use commercial and residential future use of the Site, the Site was entered into the BCP and further investigation is required to fully delineate the nature and extent of soil, groundwater and soil vapor exceedances pursuant to this RIWP.

A copy of the Phase II ESA report prepared by SESI is included in **Appendix A**.

2.4 GEOLOGIC SETTING

A Geotechnical Engineering report prepared by Bilow Engineering, LLC, dated December 2, 2024, provided supplemental information regarding the lithology of the Site. A total of nine (9) geotechnical borings were installed between September 30 and October 4, 2024. The investigation indicated the subsurface conditions at the Site generally consist of surficial materials, underlain by uncontrolled fill, underlain by sand, underlain by decomposed rock, and underlain by competent bedrock.

The report states surface materials consisted of asphalt, concrete and subbase granular materials measured up to six (6) inches.

The report indicates the uncontrolled fill was encountered directly under the surface materials layer and extended to up to +-8 feet below existing grades. The uncontrolled fill generally consisted of sand with varying amounts of silt, gravel, brick, and asphalt. The fill is considered loose to dense.

The report indicates the sand layer was encountered directly below the fill layer and ranged between 5 to 15 feet in thickness. The sand was generally brown, medium-to-fine-grained, with varying amounts of silt. The sand is considered loose, medium-dense, and dense.

The report states weathered/decomposed rock material was encountered in all boring locations directly below the sand layer and continued to the top of the competent bedrock layer. The decomposed rock layer ranged between 5 to 15 feet in thickness and was generally gray and brown mica schist with varying amounts of sand and silt.

According to the report, bedrock was encountered in all boring locations directly below the decomposed rock layer and generally consisted of moderately to slightly weathered gray mica schist. The top of the bedrock varied from 3 to 30 feet below the Site slab. Lenses of decomposed rock were observed within the bedrock layer. Rock core recovery ranged from approximately 55 to 100 percent, with a Rock Quality Designation (RQD) ranging from approximately 35 to 67 percent. The upper portions of the bedrock are generally more weathered and RQD generally increases with depth.

2.5 HYDROGEOLOGIC SETTING

The geotechnical report indicates that groundwater was not encountered during overburden drilling and was only observed at depth within bedrock.

As part of SESI's groundwater investigation on August 13, 2024, two (2) temporary monitoring wells were installed to depths of approximately 28 and 33 feet below ground surface (bgs). Bedrock was encountered at depths of approximately 10 to 15 feet bgs. Groundwater was observed in both borings at depths ranging from approximately 23 to 26 feet bgs. Each temporary well was constructed with up to 10 feet of screen at the bottom of the borings.

A copy of the Geotechnical Engineering report prepared by Bilow Engineering, LLC is included in **Appendix A**.

2.6 SUBSURFACE FEATURES

There are no known underground storage tanks or drywells at the Site.

2.7 SUMMARY OF PHASE II ENVIRONMENTAL RESULTS

Based on the investigation conducted to date, the primary contaminants of concern (COCs) are anticipated to be pesticides, VOCs, SVOCs, metals and PFAS with concentrations exceeding USCOs, RSCOs, and/or RRSCOs. COCs will be refined based on the Remedial Investigation Report (RIR) results.

Soil (maximum concentrations):

- **Pesticides:** 4,4'-DDD (0.0114 mg/kg), 4,4'-DDE (0.00354 mg/kg)
- **Metals:** Arsenic (13.2 mg/kg), copper (374 mg/kg), lead (962 mg/kg), mercury (0.662 mg/kg), nickel (30.8 mg/kg), and zinc (1,000 mg/kg)
- **SVOCs:** Benzo(a)anthracene (11 mg/kg), Benzo(a)pyrene (10 mg/kg), Benzo(b)fluoranthene (13 mg/kg), Benzo(ghi)perylene (6.1 mg/kg), Benzo(k)fluoranthene (2.6 mg/kg), Chrysene (6.9 mg/kg), Dibenzo(a,h)anthracene (1.4 mg/kg), Indeno(1,2,3-cd)pyrene (5.9 mg/kg), Phenanthrene (15 mg/kg) and Phenol (0.36 mg/kg)
- **VOCs:** Acetone (0.04 mg/kg)

Groundwater (maximum concentrations):

- **Pesticides:** Dieldrin (0.019 ug/L)
- **SVOCs:** Benzo(a)anthracene (0.03 ug/L), benzo(b)fluoranthene (0.03 ug/L), and phenol (1.5 ug/L)
- **PFAS:** PFOA (0.0295 ug/L) and PFOS (0.00894 ug/L)
- **Metals:** Iron (2,310 ug/L), magnesium (62,500 ug/L), and sodium (36,000 ug/L)
- **VOCs:** Chloroform (27 ug/L)

Soil Vapor (maximum concentrations):

- **VOCs:** Benzene (495 ug/m^3)

3.0 REMEDIAL INVESTIGATION

Soil borings, soil vapor borings, and groundwater monitoring wells are proposed below based on the following rationale to complete the nature and extent delineation of contaminated soil, groundwater and soil vapor on the Site. The applicable standards, criteria, and guidance values (SCGVs) for the Site soil based on a preferred Track 1 remedy are the 6 NYCRR PART 375-6.3 unrestricted use soil cleanup objectives (USCOs). The applicable SCGVs for the Site groundwater are the applicable 6 NYCRR Part 703 AWQS and Technical and Operational Guidance Series (TOGS) 1.1.1. The applicable screening level criteria for soil vapor are in the NYSDOH Decision Matrices (October 2006, amended February 2024) lower threshold values, which will be used for comparison purposes only and not for remedial decisions. New York State does not have applicable remediation criteria for constituents found in soil vapor gases.

This RIWP assumes a Site-wide land survey will be completed prior to the start of RI activities to locate the proposed sample locations in the field. Prior to the start of intrusive activities, a geophysical survey including ground penetrating radar (GPR) and electromagnetic (EM) detection will be conducted to clear boring locations and to confirm no underground storage tanks are present. Additionally, utilities entering and leaving the Site will be located/identified and a minimum of 5 feet of clearance will be exercised for all drilling locations.

Following the RI activities, all soil boring, monitoring well and soil vapor point locations will be surveyed for location and elevation. The survey data will be provided pursuant to the DER-10 requirements in an acceptable format (e.g., North America Datum 83 [NAD83]).

3.1 SOIL REMEDIAL INVESTIGATIONS

Surface soil samples will be collected at each of the seven (7) proposed RI soil borings. Surface soil samples will be collected from 0 to 2 inches bgs to assess potential for current and/or future exposures.

In order to further evaluate the soils, seven (7) soil borings will be advanced on the Site in an approximately sixty (60)-foot grid pattern to evaluate and delineate soil contamination from historical operations, and other potential sources. In addition, waste characterization samples will be collected from the borings for disposal approval. The proposed soil boring locations are shown on **Figure 3.1**.

The borings will be advanced using direct-push or other drilling methods as needed. The borings will extend to a depth of 20 fbgs or until native material or bedrock is encountered. Up to 35 soil samples will be collected, assuming a maximum of five (5) samples per boring at a minimum of one sample per 5-foot depth interval based on field screening that includes visual observations, photoionization detector (PID) readings and olfactory observations. Boring logs documenting soil classifications, PID readings, and visual observations will be provided in the final report. All investigative derived waste (IDW) of soil cuttings and purged groundwater will be containerized, sampled, and properly disposed of pursuant to DER-10 3.3.e requirements, further discussed in **Section 4.0**.

Upon retrieval of the sampling core, the collected sample shall be placed in glass jars and labeled, stored on site (on ice in a cooler if necessary) and transmitted to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified testing laboratory. Chain-of-custody procedures will be practiced following Section 15, EPA-600/4-82-029, Handbook for Sampling and Sample Preservation of Water and Waste Waters. Soil for VOC analysis will be collected in Encore ® samplers.

The drilling contractor will be responsible for obtaining accurate and representative samples, informing the geologist of changes in drilling pressure, keeping a separate general log of soils encountered and installing monitoring wells to levels directed by the supervising engineer, scientist, or geologist following specifications further outlined in this protocol.

Soil samples will be analyzed by a NYSDOH ELAP-certified laboratory for TCL+30/TAL including VOCs by EPA Method 8260C or D, SVOCs by EPA Method 8270D or E, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, and TAL metals by EPA Methods 6010D, 7471B, and 9012B in additional to the 41 PFASs compounds by EPA Method 1633A. Category B deliverables will be requested on each sample chain of custody.

The proposed soil sample locations and the rationale for their locations are presented in **Table 3.1** below.

Table 3.1: Summary of Proposed Soil Borings and Sampling

Soil Boring ID	Boring Depth (ft)	Proposed Sampling Interval (ft)	Target Analyses	Sampling Rationale
RI-SB-1 through RI-SB-7	Up to 20	0-0.2	TCL VOCs (USEPA 8260C or D), SVOCs and 1,4-Dioxane (USEPA 8270D or E), Pesticides (USEPA 8081B), PCBs (USEPA 8082A), Metals (Method 6010D, 7471B for mercury, and 9012B for cyanide), and PFAS (USEPA 1633A)	Nature of Surface Soil (In areas with exposed surface)
		1-5		Nature and Extent of Fill Layer
		5-10		Characterize Bottom Fill Layer
		10-15		Characterize Soil Vertically
		15-20		
DUP1-2026MMDD through DUP2-2026MMDD	TBD	TBD	TCL VOCs (USEPA 8260C or D), SVOCs and 1,4-Dioxane (USEPA 8270D or E), Pesticides (USEPA 8081B), PCBs (USEPA 8082A), Metals (Method 6010D, 7471B for mercury, and 9012B for cyanide), and PFAS (USEPA 1633A)	QA/QC
MS1-2026MMDD through MS2-2026MMDD	TBD	TBD		
MSD1-2026MMDD through MSD2-2026MMDD	TBD	TBD		
FB1-2026MMDD through FB2-2026MMDD	N/A	N/A		
TB1-2026MMDD through TB2-2026MMDD	N/A	N/A	TCL VOCs (USEPA 8260C or D)	QA/QC

Notes:

ft bgs - feet below ground surface

A geologist, scientist or engineer will be on site during the drilling operations to fully characterize each soil core to 20 feet or refusal at bedrock. The classification method will follow the New York State Soil Description Procedure.

A summary of the parameters to be tested, the analytical methods and the holding times for the samples is shown on **Table 3.2**.

Table 3.2 – Soil Analyses Summary

Parameter and Analytical Method	Holding Time
Volatile Organic Compounds (VOCs) – USEPA 8260C or D	14 days
SVOCs (BNAs) and 1,4-Dioxane – USEPA 8270D or E	14 days (until extraction, 40 days extracted)
Pesticides – USEPA 8081B	14 days (until extraction) 40 days (extracted)
PCBs – USEPA 8082A	None
Metals - Method 6010D, 7471B for mercury, and 9012B for cyanide	180 days Cyanide: 14 days
PFAS – USEPA 1633A	28 days

Quality assurance/quality control (QA/QC) samples will be collected and analyzed as specified in the Quality Assurance Project Plan (QAPP). The number of duplicate, spiked and blank samples analyzed will be collected at a frequency of one (1) duplicate for every 20 samples. The inclusion and frequency of analysis of field blanks will be one (1) per every 20 soil samples but not more than one (1) per day. Samples to be analyzed for volatile organic compounds will be accompanied by a field blank for all matrix types and trip blank for water matrices. An equipment blank for Per- and polyfluoroalkyl substances (PFAS) will be collected once per day, regardless of whether equipment being used is disposable, at a frequency of one (1) per 20 samples taken for soil. SESI's field sampling procedures are described in the QAPP presented in **Appendix B.** The Emerging Contaminant Sampling Plan is included as **Appendix C.**

3.2 GROUNDWATER REMEDIAL INVESTIGATION

To investigate the Site groundwater, a total of three (3) permanent groundwater monitoring wells will be installed as shown on **Figure 3.2**. The wells will be installed to 20 feet in the bedrock in addition to the overburden. The total depth of each well will be field-adjusted based on the detected bedrock surface in each location. The well screen depth interval will be based on the results of the downhole geophysical logging. The well screen length (5 or 10 feet) and depth will be determined based on the identified water bearing zone depth and thickness. The groundwater table is anticipated to be approximately 23 to 26 feet below ground surface based

on the Phase II investigation. The previously observed weathered bedrock was encountered at 10 to 15 feet bgs; therefore, it is expected that all three (3) wells will be sealed in bedrock and the screened intervals will be determined based on the proposed geophysical logging.

Bedrock wells will be installed in accordance with Section 2.4.2.1 of USEPA's Design and Installation of Monitoring Wells (January 2018). A 5-inch pilot borehole will be drilled through the soil overburden into the bedrock. An outer casing is then installed into the borehole by setting it into the bedrock and grouting it into place. After the grout has set, the borehole will then be advanced through the grout seal up to 20-feet in the bedrock via 4-inch rock coring.

After all three (3) boreholes are installed, geophysical logging will be conducted at each of the boreholes. Downhole logging will include fluid temperature, fluid conductivity and resistivity, optical televiewer, acoustic televiewer and clipper, heat pulse flow meter (under ambient and pumping conditions), natural gamma, and spontaneous potential probes for data collection. Geophysical logging will aid in gathering and interpreting hydrogeological data for development of the conceptual site model.

Each monitoring well will then be constructed with two (2)-inch diameter wells and risers. Based on the observations from geophysical logging, 5 or 10 ft-screens will be set to straddle the major water-bearing fracture, as identified through downhole geophysical logging. The annular space of each well will be filled with #2 sand to at least one (1) foot above the screen to protect the screen from intrusion of bentonite or grout. At least two (2) feet of bentonite seal will be placed in the annular space around the well from above the sand pack. After bentonite cures for at least eight (8) hours, the annulus around the borehole will be sealed with grout mixture. The seal will be either within the bedrock or right at the bedrock surface to avoid the communication between any overburden infiltrating water and groundwater located in the shallow bedrock aquifer. Finally, each monitoring well will be completed with a flush-mount road-box or stickup as necessary. A typical boring and well construction log is provided in **Appendix D**.

Once the grout cures for at least 24 hours, the wells will be developed in accordance with ASTM D5521. All monitoring wells will be developed or cleared of all fine-grained materials and sediments that have settled in or around the well during installation so that the screen is transmitting representative portions of the groundwater. A decontaminated pump or bailer will be

used and subsequently decontaminated after each use following procedures outlined in the Decontamination Protocol. Pumping or bailing will cease when the turbidity falls below 50 NTUs or until specific conductivity, pH, and temperature are stable (i.e., consecutive readings are within 10 percent with no overall upward or downward trends in measurements). Water generated during well development will be containerized, staged securely, and disposed of at appropriate permitted facilities as discussed in **Section 4.0**.

The Groundwater RI will be conducted to achieve the following:

- delineate the nature and extent of area of concern-specific contaminants in the Site groundwater;
- identify actual or potential impacts to sensitive receptors, e.g. surface water;
- determine whether a contaminant plume exists;
- gather sufficient data to determine groundwater flow direction and contour map and evaluate groundwater Remedial alternatives, including, as appropriate, monitored natural attenuation, and
- provide information on the background quality of the groundwater flowing into the Site.

All the wells will be surveyed for location and elevation. The survey data will be provided pursuant to the DER-10 requirements in an acceptable format (e.g., North America Datum 83 [NAD83]). The wells will be gauged for groundwater depth to determine the groundwater elevation. The Site-specific groundwater flow direction and gradient will be determined based on the latest elevation data and summarized in the RIR. The proposed well locations are shown on **Figure 3.2**.

One (1) round of sampling will be conducted from the newly installed wells at least seven (7) days after monitoring well development. The data will be analyzed to determine whether groundwater contamination exists, the magnitude and the extent of the potential contaminant plume. In addition to the analytical data, field measurements and chemical analyses will be conducted to characterize the impacted groundwater.

The wells will be sampled using the low flow technique, when possible. A flow rate of 100 milliliters (ml) to 250 ml per minute is used to purge the wells. Drawdown will not exceed 0.3 feet. At the initiation of low flow purging a water level is recorded as well as field parameters. Field parameters are then monitored every five minutes during low flow purging using a flow through

cell. When three (3) consecutive measurements of pH differ by 0.1 units or less, with oxygen reduction potential within 10 mv or less, turbidity varies 10 percent or less, conductivity differs by 3 percent or less and dissolved oxygen by 10 percent or less, sampling may begin. Flow through cells are used so continuous real time readings are made. When the parameters stabilize the flow through cell is disconnected and sample bottles are filled directly from the tubing. If the parameters of a well do not stabilize in a timely manner, the groundwater sample will be collected after emptying three (3) well volumes from the well being sampled.

All groundwater samples will be analyzed by a NYSDOH ELAP-certified laboratory and Category B deliverables will be requested on each sample chain of custody. All the samples will be analyzed for TCL+30/TAL, 1-4 dioxane and PFAS pursuant to the April 2023 PFAS Guidance document. The VOCs will be analyzed by EPA Method 8260C, SVOCs by EPA Method 8270D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Methods 6010C, 7471B, and 9012, 1-4 dioxane by EPA Method 8270 SIM and PFAS compounds by EPA Method 1633A. The QAPP, which describes all field sampling procedures, is included as **Appendix B**, and the Emerging Contaminant Sampling Plan is included as **Appendix C**. The proposed groundwater monitoring wells and the rationale for their locations are presented in **Table 3.3** below.

In addition, QA/QC samples will be collected and analyzed as specified in the QAPP. Specifically, the number of duplicate, spiked and blank samples analyzed will be a minimum of one (1) duplicate for every 20 samples. For the aqueous matrix, field blanks will be collected at a frequency of one (1) per day. A trip blank will be included with each shipment of samples where sampling and analysis for TCL volatiles is planned (water matrix only). A trip blank will consist of 40 ml VOA vials prepared before the sample bottles are sent by the laboratory. It consists of a sample of distilled, deionized water that accompanies the other sample bottles into the field and back to the laboratory. The trip blank will be analyzed for TCL VOCs as a measure of potential contamination from background sources and their effect on the results. To check for contaminant carryover when non-dedicated sampling equipment is used, a rinsate blank will be submitted to the laboratory. This blank will also be analyzed for TCL VOCs. An equipment blank for Per- and polyfluoroalkyl substances (PFAS) will be collected once per day, regardless of whether equipment being used is disposable, at a frequency of one (1) per 20 samples taken for groundwater.

Table 3.3 – Summary of Proposed Groundwater Monitoring Wells

Well Name	Estimated Screen Interval (ft bgs)	Proposed Sample Depths	Well Location Rationale	Analysis
RI-MW-01	To be determined based on geophysical logging	Center of Water Column feet below groundwater table	Characterization of Site groundwater and Horizontal Delineation of Phase II Exceedances	TCL VOCs (USEPA 8260C or D), SVOCs and 1,4-Dioxane (USEPA 8270D or E), Pesticides (USEPA 8081B), PCBs (USEPA 8082A), Metals (Method 6010D, 7470A for mercury, and 9012B for cyanide), and PFAS (USEPA 1633A)
RI-MW-02				
RI-MW-03				

3.3 SOIL VAPOR INVESTIGATION

SESI will collect five (5) soil vapor samples from soil vapor points collocated by groundwater wells. The proposed soil vapor point locations are shown on **Figure 3.3**. The purpose of the soil vapor investigation is to assess the potential for vapor intrusion into future buildings. All soil vapor points will be installed at depths indicated on **Table 3.4**.

The soil vapor samples under the existing parking lot asphalt will be collected in accordance with the procedures of the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York as amended in May 2017 and February 2024. Specifically, the soil vapor probes will be advanced using direct push sampling equipment and samples will be collected by installing vapor implants. There is no on-Site building; therefore, indoor air samples cannot be taken. The soil vapor depth will be based on the final construction and development plan. A disposable one-time-use vapor point connected to flexible tubing will be inserted into the borehole. The annular space of the borehole will be filled with sand, and the surface will be sealed with bentonite to seal the surface. Prior to sampling the tubing system will be purged of ambient air with a low-flow pump.

The soil vapor samples will be collected into laboratory-supplied approximately six (6)-liter, stainless-steel, summa canisters with sampling period set to be two (2) hours. The summa canisters will be equipped with a manometer to verify the canister is under vacuum, and a flow controller set to a flow rate of 50 mL/min (<200 mL/min). A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of

samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols. The vapor samples will be sent to a certified laboratory for analysis of VOCs in accordance with EPA Method TO-15. In addition to the soil vapor, one (1) outdoor air sample will be collected with an 6-liter summa canister set to a flow rate of 50 mL/min (<200 mL/min) outside the building. The field sampling procedures are described in the QAPP, which is included as **Appendix B**.

As part of the vapor sampling, a tracer gas will be used to serve as QA/QC by verifying the integrity of each soil vapor probe seal. Helium will be used as the tracer gas and a shroud will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

Table 3.4 Summary of Proposed Soil Vapor Sampling

Soil Vapor/Ambient Air Point Name	Sample Type	Proposed Sample Depths	Collection Period	Analysis
RI-SV-01	Soil Vapor	5 feet below grade	2 hours	VOCs (TO-15)
RI-SV-02	Soil Vapor	5 feet below grade	2 hours	VOCs (TO-15)
RI-SV-03	Soil Vapor	5 feet below grade	2 hours	VOCs (TO-15)
RI-SV-04	Soil Vapor	5 feet below grade	2 hours	VOCs (TO-15)
RI-SV-05	Soil Vapor	5 feet below grade	2 hours	VOCs (TO-15)
RI-AA-01	Ambient Air	3 feet above grade	2 hours	VOCs (TO-15)

Co-located indoor samples will not be collected as the property is currently devoid of any building structures.

4.0 DECONTAMINATION AND IDW

Equipment utilized for ground intrusive activities (i.e. borings and wells) will be decontaminated between each boring. Equipment utilized for sample collection (i.e. spoons, trowels) will be decontaminated between each sample unless disposable equipment is utilized. Appropriate decontamination areas will be established to support work being conducted in each area of the Site. PFAS free certified deionized water, supplied from the laboratory, will be used for the decontamination of the sampling tools if needed. Otherwise locally supplied water, if available, or water supplied by the driller in a tank, will be used to decontaminate the equipment.

All investigative derived waste (IDW) of soil cuttings and purged groundwater will be containerized, sampled, and properly disposed of pursuant to DER-10 3.3.e requirements. Drill cuttings produced on-site are presumed contaminated and must be placed on protective sheeting, covered when left overnight, and will be used to backfill their originating borehole unless conditions such as free product, gross contamination, penetration of confining layers, or installation of monitoring wells prohibit reuse; in such cases, cuttings will be containerized and managed as waste to be disposed of at appropriate permitted facilities. Water generated during well development or purging will be containerized, staged securely, and disposed of at appropriate permitted facilities.

Disposable sampling equipment, including macro core liners, spoons, gloves, bags, paper towels, and PPE that contacts environmental media, will be double bagged and disposed of as municipal trash in a facility trash dumpster as non-hazardous refuse.

5.0 WASTE CHARACTERIZATION

Waste characterization will be completed in conjunction with the remedial investigation to obtain data for facility waste disposal approvals. Waste characterization samples will be collected as five-point composites, and analyzed for TCL+30/TAL; however, the exact quantity and parameters will be determined based on disposal facility requirements.

6.0 SURVEY

After the RI sampling scope is completed, a survey will be completed, which includes the locations and elevations of all the monitoring wells, soil borings and soil vapor points. Survey datum will be provided relative to NAD83. Elevation datum will be provided relative to NAVD88.

7.0 HUMAN HEALTH EXPOSURE ASSESSMENT

A qualitative human health exposure assessment will be performed for the Site in accordance with the NYSDOH's Qualitative Human Health Exposure Assessment guidance document. Sampling data will be reviewed along with the physical conditions of the contaminant sources or physical hazards near the Site. Potential on-Site and off-Site exposures will be evaluated. The Exposure Assessment will describe the nature and size of the population exposed, or potentially exposed, to the contaminants that are present at, or that could be potentially migrating from the Site, and will characterize the exposure setting, identify exposure pathways and evaluate contaminant fate and transport.

Several objectives will be met by the exposure assessment. First, applicable Site information and characterization data for environmental media of concern will be evaluated. Applicable SCGVs including Part 375 SCOs and CP-51 SCOs for soil, and AWQSGV for groundwater will be analyzed.

An assessment of current and future Site activities and Site use will be conducted in relation to potential human exposure. Next, potential exposure pathways will be identified, and each aspect of the potential exposure pathway will be evaluated. Once soil and groundwater remediation has been implemented, the impact of the remediation on future exposure scenarios will be analyzed.

8.0 FISH AND WILDLIFE IMPACT ANALYSIS

A Fish and Wildlife Impact Analysis (FWIA) Decision Key will be completed in the Remedial Investigation Report to determine if an FWIA is needed. Contaminant migration pathways and any fish and wildlife exposure pathways will be identified. As stated in the FWIA, "if no resources are associated with the site or if there is no potential for contaminant migration to the resources, then only the necessary information to support that conclusion should be provided."

If resources are identified, or migration pathways exist, an FWIA will be completed and submitted as part of the RI Report. The FWIA would include qualitative estimates of the following: 1) the routes, intensity, frequency, and duration of actual or potential exposures to chemicals; 2) the nature and size of the population exposed to the contaminants that are present at or migrating from the Site; 3) the exposure setting and possible exposure pathways; and 4) contaminant fate and transport.

A Fish & Wildlife assessment is not anticipated for this Site due to its urban location and distance from surface water bodies and wildlife areas. The DEC Environmental Resource Mapper, located at the link below, does not identity any significant natural communities or rare plants or animals in the vicinity of the Site.

https://gisservices.dec.ny.gov/gis/erm/?_gl=1*faquhx*_ga*MTA0MDU5ODAxMi4xNjk2NTEwOTc0*_ga_QEDRGF4PYB*MTc0MTExNDEwMy4xNTkuMS4xNzQxMTE1MzUxLjAuMC4w

9.0 ENVIRONMENTAL FOOTPRINT ANALYSIS

An Environmental Footprint Analysis (EFA) will be completed prior to the remedial work as part of the feasibility study, remedial design and updated throughout remedial construction to ensure contributions to the remedial footprint are being identified, monitored and addressed. SESI will utilize the EPA's Spreadsheets for Environmental Footprint Analysis (SEFA) and SiteWise™ to analyze the environmental footprint of the Site cleanup project, determine which cleanup activities drive the footprint, and adjust project parameters to reduce the footprint.

10.0 CLIMATE CHANGE SCREENING OR VULNERABILITY ASSESSMENT

The Site is entering the program at the investigation stage; therefore, a Climate Change Screening or Vulnerability Assessment is not required at this time. Further, this Site is not in a floodplain and is not located in the vicinity of a wetland; therefore, the requirements for a vulnerability assessment are not anticipated.

11.0 DUSR

Following the completion of the laboratory analysis program, a Data Usability Summary Report (DUSR) will be completed for the lab data and included as part of the RI Report. The DUSR will include available datasets from previous investigations, as well as data from this phase of Site characterization. The DUSR is carried out as specified in DER-10 to evaluate the quality control measures that were implemented during the field and laboratory analytical programs, with the objective of determining whether the reported analytical data are representative and usable for decision making. The DUSR will evaluate whether the data are technically defensible (i.e. were all analytical data requirements met and documented?). Data usability analysis reviews the Site data to determine whether they are adequate to draw conclusions regarding the nature and extent of contamination.

The items that will be reviewed as part of the DUSR will include the following:

- Completeness (number of samples collected and analyzed compared to plans)
- Chains of custody are complete and accurate
- Holding times
- Instrument calibration
- Relative percent difference between field duplicates
- Reasonableness of data (e.g. relationships between total and soluble analytes)
- Blank contamination

The DUSR will be conducted in accordance with guidelines provided under Appendix 2B of DER-10. The Site-specific QAPP is included in **Appendix B**.

12.0 REMEDIAL INVESTIGATION REPORT

Following the completion of the RI activities and the receipt of sample results, an RIR will be prepared. The RIR will summarize the activities completed during the RIR including analytical results, well construction and sampling logs, waste characterization information for disposal purposes, conclusions from the FWIA if necessary, a DUSR and laboratory data packages. Scaled figures showing the sample locations and areas of contamination exceeding applicable standards will be prepared for soil, soil vapor, and groundwater. Sampling results will be summarized and discussed and the need for additional investigation and remediation will be evaluated. In addition, analytical summary tables will be prepared for soil, soil vapor, and groundwater compared to applicable standards.

The RIR will also include: 1) a summary of the Site history and previous investigations, 2) a description of current Site conditions, 3) the identification of exposure pathways via a Qualitative Human Health Exposure Assessment; an analysis of the results, 4) a description of the nature and extent of the contamination; and 5) a detailed conclusion with recommendations.

Analytical data collected during the Remedial Investigation and previous data used for the selection of the remedy will be submitted in the NYSDEC approved Electronic Data Deliverable (EDD) format. EDDs will be prepared using the DEC's Environmental Information Management System (EIMS) database software application EQuIS™ for submission.

13.0 QUALITY ASSURANCE/QUALITY CONTROL

QA/QC is addressed in the QAPP included as **Appendix B**. The QAPP outlines procedures to be followed for sampling and analysis to ensure quality of the results. A DUSR will be prepared with the final reports to document the reliability of the sample results.

14.0 HEALTH AND SAFETY PLAN

A Site-specific Health and Safety Plan (HASP) has been prepared and is included as **Appendix E**. All on-Site personnel and visitors involved in the RI will be required to read and sign the HASP prior to entry of the Site.

15.0 COMMUNITY AIR MONITORING

A Community Air Monitoring Plan (CAMP) is provided as **Appendix F**, in accordance with DER-10 requirements for remedial investigation. The CAMP sets forth air monitoring procedures that will be utilized to measure airborne emissions during the RI, in order to minimize the release of contaminants to off-Site areas.

16.0 CITIZEN PARTICIPATION PLAN

Citizen participation activities will be performed throughout the RI process to involve and inform the public. The specific citizen participation activities to be performed are outlined in the Citizen Participation Plan (CPP), included as **Appendix G**.

17.0 REMEDIAL INVESTIGATION SCHEDULE

The proposed remedial investigation schedule is presented on **Table 17.1** below.

Table 17.1: Proposed Remedial Investigation Schedule

Activity	Scheduled Date
RIWP Submission	Middle February, 2026
DEC Comments on RIWP	Middle April 2026
Revised RIWP Submission	Early May 2026
RIWP 30-day Comment Period	Middle April to Middle May, 2026
RI Implementation	June to July 2026
RIR and RAWP Submission	August 2026
DEC Comments on RIR and RAWP	September 2026
Revised RIR and RAWP	Late September 2026
RAWP 45-day Comment Period	October through Middle November, 2026
Decision Document	End of November, 2026

18.0 PROJECT CONTACTS

The RIWP activities will be conducted by SESI and their qualified subcontractors, on behalf of the volunteer. The organization of SESI's key project management and field staff, and respective areas of responsibility, is presented in **Table 18.1** below along with the names of subcontractors.

Table 18.1: Project Contacts

Role	Name	Telephone No.
Project Principal	Fuad Dahan, P.E., PhD	973-808-9050 x249
Project Manager (PM)	Sheng Long	973-808-9050 x278
Engineer of Record	Fuad Dahan, P.E., PhD	973-808-9050 x249
Assistant Project Manager	Danielle Quinn	973-808-9050 x247
Field Team Leader	TBD	
Quality Assurance Officer	Joe Scardino	973-808-9050
Field Personnel	TBD	
Analytical Laboratory	SGS North America Inc.	732-329-0200

Appendix C	Laboratory-Test Results

INTRODUCTION

This report presents the results of our geotechnical engineering evaluation for the proposed construction of a New 20-story Building on Lot 38 of Block 2487 in Bronx, NY. This corner property is bound by McClellan Street on the north and River Avenue on the west. We have summarized and evaluated the subsurface exploration and soil laboratory test results and provided geotechnical engineering recommendations for the foundation design and construction of the proposed development.

This report has been prepared per the Site Plan by Newman Design dated August 19, 2024, and per our conversations with the project team. The ground-surface elevations provided in this report are interpreted from the Survey Drawing by Statewide Land Surveying PC dated August 31, 2024. Elevations from the survey are with respect to the North American Vertical Datum (NAVD88), and those reported herein should be considered approximate rather than precise.

SITE DESCRIPTION

The "Site" (Block 2487, Lot 38) is an existing at-grade parking lot bordered by Mc. Clellan Street is on the north, and River Avenue is on the west. The site has an approximate area of about 17,275 square feet with about 189 feet of frontage along River Avenue and about 60 feet along Mc. Clellan Street. The street grade along River Avenue slopes El 34 to 39 (from south to north) and El 39 to El 43 (from west to east). The at-grade parking lot surface grades vary from 34 to 41 (west to east).

To the west of the site above River Avenue is a New York City Transit (NYCT) elevated subway line that serves the "4" line. The tunnel column is about 15 feet from the western property line.

A site location map is presented in Figure No. 1, and a site survey is included in Appendix A.

Adjacent Properties

Two properties border the site on the east and the south. Limited information regarding the foundations and the lowest-level slab elevation of the adjacent buildings is available at the time of this study. We recommend that the presence of any below-grade levels should be verified in the field with test pits. The adjacent buildings are summarized as follows:

- 1111 Gerard Avenue (Block: 2487 Lot: 42) is occupied by a six-story building with an at-grade parking lot constructed circa 1991 and borders the site on the east. The building abuts the northern part of the east property line and is offset by 30 to 40 feet on the southern part of the east property line. A below-grade basement exists at this property and the actual extents and depths are to be confirmed with test pits.

- 1083 Gerard Avenue (Block: 2487 Lot: 32) is occupied by multiple three-story buildings with at-grade parking lots and borders the site on the south. The building abuts the eastern part of the

south property line, and the parking lot borders the western part of the south property line. Below-grade basement extents and depths are to be confirmed with test pits.

The number of stories in the adjacent buildings was obtained from Building Department records and the survey provided.

Flood Insurance Rate Map

We have reviewed the Preliminary Flood Insurance Rate Map (PFIRM) for New York City by the Federal Emergency Management Agency (FEMA), Community Panel No. 3604970083G, dated December 5, 2013. According to this map, the site falls outside Flood Zone X (a 500-year flood zone or areas subject to inundation by 0.2% annual chance of flood). The FEMA PFIRM map is shown in Figure No. 2.

PROPOSED DEVELOPMENT

According to the drawings provided by the project team, the proposed development consists of constructing a 20-story building with one below-grade level. At the time of this report, structural loads are unavailable.

SUBSURFACE EXPLORATION

Our subsurface investigation consisted of drilling nine borings and measuring groundwater readings in the existing monitoring well. The approximate boring locations are shown in Figure No. 3.

Test Boring Exploration

Borings, B-1 through B-9, were completed by Axciss Geotechnical Drilling using a track-mounted rig between September 30 and October 4, 2024, under the full-time inspection of Bilow Engineering.

Borings were drilled to depths of 20 to 37 feet below the site grade and were advanced using mud-rotary drilling techniques, a tri-cone roller bit with drilling fluid, and a steel casing to provide soil stabilization. Standard Penetration Tests (SPT)[1] were performed in the soil layers using an automatic hammer and standard split spoon sampler (ASTM D1586). Recovered soil samples were visually examined and classified in the field in accordance with the United Soil Classification System (USCS) and assigned classification numbers in accordance with ASTM D2487 and the Building Code. Rock exploration was performed when encountered and rock samples were visually examined.

[1] The Standard Penetration Test is a measure of soil density and consistency. The SPT N-value is defined as the number of blows required to drive a 2-inch-outer-diameter split-barrel sampler 12 inches using a 140-pound hammer falling freely for 30 inches.

Soil and rock classification, SPT N-values, and other field observations were recorded on the boring logs, and a copy of the boring log is included in Appendix B.

Laboratory Testing

Geotechnical laboratory tests were conducted on representative soil samples to define the index (physical and mechanical) properties. The laboratory test program consisted of:

- Six mechanical grain-size determinations (sieve analysis; ASTM D6913)
- Six natural-water content determinations (ASTM D2216)

The laboratory test results are included in Appendix C.

SUBSURFACE CONDITIONS

The general subsurface profile consists of a layer of uncontrolled fill, underlain by a sand layer (with varying amounts of silt and gravel), underlain by decomposed rock, and finally competent bedrock until boring termination depths. The subsurface profiles are included in Figures Nos. 4 through 7. Detailed descriptions of each subsurface stratum are given below in order of increasing depth.

Uncontrolled Fill [Class 7][2]

The uncontrolled fill layer was encountered at the site, extending to about 4 to 8 feet below the site grade. The fill consists of sand with varying amounts of silt, gravel, brick, and asphalt. SPT N-values in the fill layer ranged from 5 to 31 bpf, with an average of about 14 bpf. The fill is considered loose to dense and is classified as Building Code Class 7 material, Controlled and Uncontrolled Fills.

Sand [Class 3a, 3b, and 6]

In borings B-1 to B-5, about a 5-to 10-foot-thick sand layer was encountered directly below the fill layer to the top of the decomposed rock layer. The sand layer in boring B-8 is observed to be 15 feet thick. The sand generally was brown, medium-to fine-grained, with varying amounts of silt. SPT N-values in the sand ranged from 2 to 52 bpf, averaging about 21 bpf.

Laboratory tests of the seven samples in this soil stratum indicated that the moisture content ranged from 8% to 19%, with an average of 13%.

The sand is considered loose, medium-dense, and dense. It is classified as SP, SM, and SP-SM and designated as Building Code Class 3a, 3b, and 6 materials.

[2] Numbers in brackets indicate a classification of soil materials in accordance with the 2022 New York City Building Code.

Decomposed Rock [Class 1d]

A 5- to 15-foot-thick decomposed rock layer was encountered directly below the sand layer and continued to the top of the competent bedrock layer. The decomposed rock was generally gray and brown mica schist with varying amounts of sand and silt. SPT N-values were collected in this layer, and the N-values were above 100 bpf. Rock cores were collected where possible, and the REC values ranged from 27% to 97%, averaging 66%, and the RQD values ranged from 0% to 28%, averaging 19%.

The decomposed bedrock is designated as Building Code Class 1d material, “Decomposed Rock.”

Bedrock [Class 1b and 1c]

Bedrock was found below the decomposed rock and generally consisted of moderately to slightly weathered, gray mica schist. The top of the bedrock varied from el 7 to 36, which is about 3 to 30 feet below the site slab. Lenses of decomposed rock were observed within the bedrock layer. Rock-core recovery (REC) values were between 55 and 100 percent, averaging 84 percent. Rock-quality designations (RQD) were between 35 and 67 percent, averaging 50 percent.

The bedrock is designated as Building Code Class 1b and 1c, “Medium Hard Rock and Intermediate Rock.”

Groundwater

The groundwater was not encountered until the boring drilling depths in bedrock. Based on the experience in similar geological conditions, we interpret that groundwater would be perched on top of the bedrock during rainfall events – the borings were performed during drought season.

SEISMIC EVALUATION

This section provides the results of our seismic evaluation of the site in accordance with the general procedures outlined in the Building Code.

Based on the soil conditions encountered at the site with the proposed footings bearing on native soils (deeper than 10 feet), we recommend the site be designated Site Class C – Very Dense Soil and Soft Rock Profile, assuming that the proposed structure will be Structural Occupancy/Risk Category II (Building Code Table 1604.5).

The table below provides our recommended parameters for the proposed structure's seismic design. The architect and structural engineer must confirm the structural occupancy/risk and seismic design categories. We note that if the proposed building's depth is altered, the seismic design parameters could change and will need to be evaluated.

Table No. 1 - Building Code Seismic Design Parameters

Seismic Design Parameter	Recommended Value	2022 NYCBC Reference
Mapped Spectral Acceleration for short periods (S_s)	0.296 g	Section 1613.3.1
Mapped Spectral Acceleration for the 1-second period (S_1)	0.061 g	
Site Class	C	Table 1613.3.4.1
Site Coefficient for short periods (F_a)	1.30	Table 1613.3.3(1)
Site Coefficient for the 1-second period (F_v)	1.50	Table 1613.3.3 (1)
Design spectral response acceleration at short periods (S_{DS})	0.257 g	Section 1613.5.4
Design spectral response acceleration at 1-sec period (S_{D1})	0.061 g	
Seismic Design Category	B	Table 1613.3.5

Liquefaction Potential

The seismic provision of the Building Code requires an evaluation of the liquefaction potential of sand, silt, and non-cohesive materials below the groundwater table and up to 50 feet below the ground surface or to the top of the bedrock. As the groundwater is not observed within the borings, liquefaction need not be considered for the proposed foundation design.

FOUNDATION RECOMMENDATIONS

We understand that the proposed building will have a cellar level below the site grade, and the bearing stratum is assumed to be at el 28, which is about 10 feet below the site grade. For the proposed cellar excavation to el 28, the building will be bearing on the Building Code Class 3a and 3b or better material. We have not been provided with the structural foundation loads; however, considering the building height, we recommend that consideration be initially given to supporting the new building on a shallow foundation bearing on Class 3a or 3b or stratum. For Building Code Class 3a, the recommended allowable bearing capacity is 6 tons per square foot (tsf), and for Class 3b material, the bearing capacity is 3 tsf. Class 3b soils were encountered around borings B-5 and B-8, as shown in the bearing capacity map in Figure 8. We estimated an initial (during construction) total settlement of about 0.375 to 0.5 inches for this load.

The bottom of the proposed footings on the northeast should match the bottom of the adjacent building's footings.

The foundation stress and deformations are estimated by performing structural analyses, which require a modulus of subgrade reaction value. For a shallow footing bearing on the 3a soils, we recommend a modulus of subgrade reaction value between 50 and 100 PCI, and for 3b soils, the subgrade modulus is between 35 and 75 PCI. The structural engineer's plots of estimated footing stresses and settlements

should be provided to us for review. If the foundation stresses or settlements are greater than the recommended values, especially close to the adjacent buildings, settlement-reducing elements (e.g., piles) may be required at specific locations.

All the foundations should be below the frost line at a minimum of 4 feet below the site grade and be placed on the native soil stratum. If appropriate bearing material is not encountered at the foundation elevation, the unsuitable material should be removed until the appropriate bearing material is encountered.

Design Groundwater Level

The groundwater was not observed within the borings, but groundwater is typically observed on top of the bedrock, and the ongoing drought might have influenced the groundwater conditions on-site. For design purposes, we recommend a design groundwater level of about el 32 to account for periods of prolonged precipitation events, utility breaks, etc.

Floor Slab

We recommend placing a 6-inch-thick layer of clean crushed stone below the proposed slab-on-grade to allow for uniform bearing.

The contractor should take appropriate measures to protect the subgrade against the effects of adverse weather conditions. Any deleterious material or silt and clay encountered at the slab elevation shall be removed and replaced with structural fill or crushed stone before the placement of the slab.

Rock Anchors

Uplift forces can be resisted by tie-down anchors socketed into bedrock. Rock Anchors should be double-corrosion-protected, consisting of a PVC sheathing and grout encapsulation around the anchor bar to the top of the rock. An allowable tensile capacity of 100 tons can be achieved by using a 1-3/4-inch threaded bar (Grade 150) with 6,000 psi grout and a minimum bond length of 20 feet with a 6-inch socket diameter. A minimum free length of 10 feet should be provided. The contractor should be cautious with their drilling means and methods as lenses of decomposed rock were observed within the bedrock layer.

The free-stressing length of the anchor should be proportionated such that the dead weight of the engaged rock mass is greater than the individual anchor load or the sum of the group anchor loads. The engaged rock mass should be defined as the wedge formed by extending a plane 45 degrees vertically from the midpoint of the bond length. The rock-mass wedge should extend upwards from the outermost anchor, and the bottom of the wedge should be a level plane through the midpoint of the anchors.

The anchor bond length should be proportioned using an allowable peripheral shear resistance in the uplift of 100 psi multiplied by the nominal socket peripheral area. At least 10 percent of the anchors should

be performance-tested in accordance with the Post-Tensioning Institute (PTI), and the remaining anchors should all be proof-tested.

Permanent Below-Grade Walls

Permanent below-grade foundation walls should be designed to resist static lateral earth pressures and surcharge loads. In accordance with Section 1802.2 of the Building Code, dynamic earth pressures need not be considered in the design for structures assigned to Seismic Design Category B. Our recommended earth pressures acting against the wall vary in soil and with respect to the groundwater level. All perimeter walls should be designed for surcharge pressures as described below. The lateral earth pressure diagram is included in Figure No. 6.

For the areas where the wall is backfilled, or soil is present behind the wall, we recommend the wall be designed for static loading conditions that will consist of a triangular earth pressure distribution having an equivalent fluid weight of 60 pounds per square foot per foot of depth (at rest condition).

Lateral pressures from the sidewalk and any other surcharge loads should be added as a uniform soil pressure equal to 50 percent of the vertical pressure, applied over the height of the wall where the soil is present. We recommend that a vertical surcharge load of 600 pounds per square foot (psf) be considered for the north and west perimeter below-grade walls (fire-truck loading). A surcharge of 300 psf is to be considered for the east and south perimeter below-grade walls.

Waterproofing

We recommend that the below-grade slabs and walls be fully waterproofed with membrane-type waterproofing such as Preprufe (300R for horizontal applications and 160R for vertical applications) and Bituthene products by GCP Applied Technologies (GCP).

For all waterproofing applications, a diligent inspection of waterproofing materials is critical, especially during the placement of reinforcement for the slabs and foundation walls. The vertical waterproofing should be protected with a rigid barrier to prevent damage during backfilling. The substrate to receive horizontal waterproofing should be a 3-inch-thick lean concrete working surface (mud mat). Holes or rips in the waterproofing membranes should be repaired in accordance with the manufacturer's recommendations.

In addition to waterproofing, the foundation walls should have a drainage panel such as Hydroduct by GCP, or an approved equivalent. The drainage panel will provide protection for the waterproofing membrane and minimize water from accumulating against the foundation walls. The use of bentonite waterproofing or negative-side crystalline waterproofing is not recommended.

We recommend that a warranty be obtained from the manufacturer and installer to cover materials and workmanship. Only certified installers should be used to perform the waterproofing work. Diligent

protection and quality control are critical in producing a final product that limits the potential for seepage. Detailed daily inspections should be performed to document any damage resulting from the contractor's activities. Repairs should be made as soon as possible. Repairs should be made as soon as possible and should be made per the manufacturer's recommendations. A representative of the manufacturer should perform a final inspection and approve all work prior to concrete pours.

Under-Slab Drainage System

We recommend an under-slab drainage system below the slab-on-grade to mitigate hydrostatic loads and reduce the potential for water infiltration from seepage and intermittent rises in groundwater. The underslab drainage system should consist of a minimum 12-inch-thick layer of free-drainage gravel or crushed stone that conforms to the requirements of New York State Department of Transportation Item 605.0901, Underdrain Filter Type I or AASHTO No 57 stone. The use of recycled concrete aggregate (RAC) or blasted rock, locally known as "mole-rock," shall not be permitted in place of the recommended free-drainage gravel or crushed stone, as the fines can clog the drainage system.

We recommend installing drainage pipes consisting of a minimum 4-inch diameter, Schedule 40, perforated PVC conforming to ASTM D1785. The pipes should be integrally connected and should outlet into a suitable sump pit for discharge via a pump. The pipe network should be installed with a maximum spacing of 20 feet on the center. Clean-outs should be provided at the ends and at appropriate intermediate locations of pipe runs to allow maintenance of the system.

A mechanical engineer must design the sump and pumping system. The system should include a de-sander and sump to be used in conjunction with a duplex pumping arrangement. A duplex pump scheme is recommended to account for maintenance and emergency situations. An automatic float valve to actuate the pumps and a high-water alarm are common safety precautions and should be designed as part of the building's mechanical system. For the design of the sump and pumping system, the rate of seepage should be observed during excavation, and the actual daily inflow can be measured by the pumping required to keep the site dry. An under-slab drainage option requires permanent maintenance; power loss should be taken into account, and consideration should be given to installing emergency power generators. Cleanouts are recommended within the system to allow flushing of the drainage pipes.

The rules of the City of New York (Title 15, Chapter 19, Section 19-02) prohibit pumping groundwater into sewers under long-term conditions. As stated above, the system is intended to collect seepage, and intermittent rises in groundwater level and is not intended as a dewatering system. Groundwater discharge permits are required for discharge volumes greater than 10,000 gallons per day (7 gpm) and are effective for a term of only one year. Therefore, this portion of the DEP rules does not allow the long-term pumping of groundwater into the sewer system. We believe that the groundwater flow into the underslab drainage will be relatively small. If seepage measured during the excavation is greater than an average of 10,000 gallons per day, the under-slab drainage system will not be in accordance with the DEP regulations.

CONSTRUCTION RECOMMENDATIONS

Our recommendations for various construction-related activities are provided below.

Excavation and Rock Removal

Construction of the foundation elements will require excavation in soil, weathered rock, and bedrock. Soil strata can be excavated using conventional earth-moving equipment. Abandoned concrete and brick foundations are to be expected below grade. A pneumatic hammer may be required to break up existing foundations. Removal of existing structures adjacent to abutting buildings may require excavation using hand methods.

Local temporary soil excavations above the natural groundwater level can have soil slopes as steep as 1.5H:1V. The slopes of any excavation adjacent to the existing structures should be no steeper than 2H:1V. All excavations steeper than 2H:1V adjacent to the structures will require temporary support.

Cellar construction will also require rock removal. Common rock excavation methods include ripping, mechanical impactors (hoe rams), chemical splitting, and/or blasting. Hoe rams may be sufficient to remove the rock where joints are inclined. Blasting or chemical splitting is likely required to break harder rock, and pre-drilling will be necessary for individual footings. Blasting is not recommended, given the proximity of adjacent buildings and NYCT elevated structures. During rock excavation, special care should be taken to minimize foundation rock damage (overbreak) vibrations and damage to any existing neighboring structures and utilities. Excessive damage to rock in the rock-cut perimeter walls may result in excavation instability. All rock excavations adjacent to the existing buildings and along the excavation at River Avenue should be line drilling with holes spaced at close centers prior to peeling, chipping, or blasting to reduce overbreak beneath adjacent structures and provide a better surface for cellar wall construction.

A New York State licensed Professional Engineer should design the support of excavation drawings. Excavations must not undermine neighboring buildings and the right of way.

Subgrade Preparation and Protection

Foundation-bearing surfaces should be level and clear of debris, standing or frozen water, and other deleterious materials. Soils should be excavated with care to avoid disturbances below the bearing elevation. We recommend that the final 3 inches of excavation be performed with flat-bladed buckets in open areas and by hand in confined areas. The subgrade should be protected from the effects of frost, precipitation, groundwater, and surface water run-off and construction until the concrete is cast. As such, we recommend that the contractor limit the area of the exposed subgrade to prevent deterioration of bearing conditions; however, excavations should be made large enough to allow passage of the compactor.

Areas disturbed by excavation and other areas found to be unacceptable should be excavated and replaced with free-draining gravel or crushed stone. Structural fill, Controlled Low Strength Material (CLSM), or lean concrete may be used in lieu of gravel or crushed stone, subject to the approval of the Geotechnical Engineer based on a review of in-situ conditions at the time of excavation. The resulting subgrade following placement of fill and compaction should be firm and unyielding under the weight of heavy equipment without evidence of rutting, pumping, or heaving. Vibratory compaction should not be performed on soils within 2 feet of the groundwater table or that are not within 2 percent of optimum moisture content. Compaction should be discontinued in the event that soils are observed to "pump or heave" due to wet conditions.

Following compaction, slab and foundation subgrades should be capped with 3 inches of crushed stone fill. This material will help protect the subgrades from degradation and can be used to assist in the conveyance of water during dewatering activities. A mud slab should be cast to provide protection and may be required to provide a suitable substrate for waterproofing.

A New York state-licensed engineer must verify bearing material in accordance with the Building Code requirements prior to placement of fill or concrete.

Temporary Groundwater Control

Based on the measured groundwater levels, the general site excavation is not planned to encounter groundwater. The contractor should take appropriate measures to protect the site and open excavations from weather elements such as rain and snow. Controlling the surface water runoff (rainfall) during excavation and foundation construction will be critical for proper subgrade preparation. If any water is encountered, it can be removed with conventional sump wells.

All groundwater discharged from the site into city sewers will require temporary dewatering permits from the NYC Department of Environmental Protection. The temporary dewatering system should consider limiting the influence of the drawdown and the potential detrimental effects on the neighboring buildings.

Fill Material, Placement, and Compaction Criteria

Any material used for backfilling around foundations and walls should consist of structural fill as defined by the Building Code. Controlled fill should consist of sand, gravel, crushed stone, crushed gravel, or a mixture of these and must be free of organic, frozen, and other deleterious materials. The fill materials should have a maximum particle size not greater than 3 inches and have less than 10% by dry weight passing a No. 200 sieve. The fill should be compacted to at least 95% of the material's maximum dry density as determined by the Modified Proctor Compaction Test (ASTM D1557). The existing fill may be used as long as it meets the gradation requirements discussed above. The use of recycled concrete aggregate, or the byproduct of blasting/tunneling (commercially known as mole rock), is not recommended for backfill. The top layer of landscaping material should be in accordance with the City of

New York Parks & Recreation requirements.

Fill should be placed in uniform 3-inch-thick loose lifts. Lightweight compaction equipment should be used adjacent to subgrade walls. The appropriate water content at the time of compaction should be plus or minus two percentage points of optimum water content as determined by the laboratory compaction tests of the proposed fill. No fill should be placed on areas where standing water is observed or on frozen subsoil areas.

PRECONSTRUCTION CONDITIONS DOCUMENTATION AND MONITORING

Preconstruction Conditions Documentation

The preconstruction documentation of all structures and the elevated NYCT structure within 50 feet of the proposed work to provide the owner and foundation contractor, etc., with documentation of existing conditions in the event of a future damage claim. The purpose of these observations is to provide a photographic or video documentation representation of the existing general conditions and to identify obvious visual deficiencies. This documentation should also identify areas requiring specific monitoring during construction, including optical surveying and vibration monitoring. The structural integrity of the structure is not commonly addressed in such documentation.

Monitoring Program

During excavation, a precise optical survey and instrumentation program should be implemented by the foundation contractor to monitor for vertical and horizontal movements of all adjacent structures to evaluate construction procedures. A monitoring plan submission to NYCT should be made to determine the monitoring program within the adjacent elevated structure.

The survey should be performed weekly, with measurements taken to the nearest 0.005 of a foot. A licensed surveyor should perform the survey. Criteria for allowable movements of structures should be finalized after a building pre-construction survey is completed.

Ground vibrations may develop during construction and excavation. Ground vibrations in nearby structures should be monitored during construction using seismographs. The ground vibrations should be monitored using a threshold-type seismograph capable of measuring 0.02 of an inch.

In addition to survey points and seismographs, telltale crack reference gauges should be monitored within the adjacent structures. The crack gauges should be sensitive to 0.001 of an inch and should be read at least once daily.

We recommend completing a monitoring plan and project specifications before construction and excavation. The plan and specifications would detail the methods and equipment required for monitoring vibration and movement and would provide movement criteria and requirements for the frequency of

readings and reporting.

CONSTRUCTION DOCUMENTS AND QUALITY ASSURANCE

Technical specifications and design drawings should incorporate Bilow Engineering's recommendations. Bilow Engineering will assist the design team in preparing specification sections related to geotechnical issues such as earthwork, backfill, and excavation support when authorized. Bilow Engineering should also, when authorized, review foundation drawings prepared by the structural engineer and contractor submittals relating to materials and construction procedures for geotechnical work.

Bilow Engineering has investigated and interpreted the site subsurface conditions and developed general foundation design recommendations contained here and is, therefore, best suited to perform quality-assurance observation and testing of geotechnical-related work during construction. This work requiring quality-assurance confirmation includes but is not limited to, earthwork, backfill, deep foundations, and excavation support. Recognizing that construction is essentially the completion of design, Bilow Engineering's quality-assurance observation and testing during construction is necessary to maintain our continuity of responsibility on this project.

QUALITY CONTROL DURING CONSTRUCTION

The contractor is responsible for construction quality control, which includes satisfactorily constructing the foundation system and any associated temporary works to achieve the design intent while not adversely impacting or causing loss of support to the neighboring structures. Construction activities that can alter the existing ground conditions, such as excavation, fill placement, foundation construction, ground improvement, pile driving/drilling, dewatering, etc., can also potentially induce stresses, vibrations, and movements in nearby structures and utilities and disturb occupants of nearby structures. Contractors working at the site must ensure that their activities will not adversely affect the performance of the structures and utilities and will not disturb occupants of nearby structures. Contractors must also take all necessary measures to protect the existing structures during construction. By using this report, the owner agrees that Bilow Engineering will not be held responsible for any damage to adjacent structures.

The preparation and use of this report are based on the condition that the project construction contract between the owner and their contractors will include (1) Bilow Engineering being added to the project wrap and the contractor's general liability insurance as an additional insured, and (2) language specifically stating the foundation contractor will defend, indemnify, and hold harmless the owner and Bilow Engineering against all claims related to disturbance or damage to adjacent structures or properties.

DISCLAIMER AND LIMITATIONS

The conclusions and recommendations provided in this report result from our interpretation of the geotechnical conditions at the site inferred from a limited number of borings performed by others and information provided by the Ownership and Structural Engineer. Actual subsurface conditions may vary. Recommendations provided are dependent upon one another, and no recommendation should be followed independently of the others. This study has been conducted in accordance with the standard of care commonly used as state-of-the-practice in the profession. No warranties, expressed or implied, are made.

Any proposed changes in structures or their locations should be brought to Bilow Engineering's attention as soon as possible so that we can determine whether such changes affect our recommendations. Information on subsurface strata and groundwater levels interpreted from the boring logs represent conditions encountered only at the locations indicated and at the time of the investigation. Different conditions encountered during construction should immediately be brought to Bilow Engineering's attention for evaluation, as they may affect our recommendations.

This report has been prepared to assist the owner and structural engineer in the design process and is only applicable to the design of the specific project identified. The information in this report cannot be used or depended on by engineers or contractors involved in evaluations or designs of facilities (including underpinning, grouting, stabilization, etc.) on adjacent properties, which are beyond the limits of that which is the specific subject of this report.

Environmental issues (such as permitting or potentially contaminated soil and groundwater) are outside the scope of this study and should be addressed in a separate evaluation.

1 FLOOD INSURANCE RATE MAP
SCALE: 1"=500'

0 250 500 1000 Feet

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- Limit of Moderate Wave Action
- 513 — Base Flood Elevation line and value; elevation in feet*

1.0 PROJECT SUMMARY

SESI Consulting Engineers (SESI), at the request of River Avenue BC LLC (User) has conducted a Phase I Environmental Site Assessment (ESA) for the subject property located at 1140 River Avenue, Bronx, Bronx County, New York (herein referred to as the "subject property"). The subject property is identified on local tax maps with Tax ID 2024870038. A Subject Property Location Map is included on **Figure 1.1**. A tax map is included on **Figure 1.2**. The Subject Property is composed of an approximately 0.39-acre lot that has been developed with a paved parking lot. A Subject Property Plan is included on **Figure 1.3**.

The subject property is currently developed with a parking lot and courtyard associated with the adjacent residential building to the east. The subject property historically contained auto repair garages (circa 1954-1984). SESI completed limited Phase II soil, groundwater and soil vapor sampling at this property in August and September 2024. These data indicated pesticides, metals and semi-volatile organic compounds (SVOCs) in soil exceeding the New York State Department of Environmental Conservation (NYSDEC) unrestricted use and restricted residential use soil cleanup objectives, volatile organic compounds (VOCs), SVOCs, pesticide, polycyclic aromatic hydrocarbons (PAHs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater exceeding the NYSDEC ambient water quality standards (AWQS), and elevated benzene in soil vapor.

The objective of this ESA is to identify the presence or likely presence, use or release on the subject property of hazardous substances or petroleum products as defined in the American Standard of Testing and Materials (ASTM) E1527-21 as a Recognized Environmental Condition (REC). In addition, Business Environmental Risks (BERs), Controlled Recognized Environmental Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) were identified, if present.

The following RECs were identified:

- **REC 1 – Known Subject Property Contamination:** An environmental Phase II investigation was completed by SESI in 2024. Pesticides, metals and SVOCs were found above NYSDEC soil cleanup objectives in soil. Additionally, VOC, SVOC, pesticides, PAHs, metals and PFAS were found above NYSDEC groundwater quality standards in

groundwater. Finally, elevated benzene was detected in soil vapor. **Therefore, further investigation/remediation is warranted.**

- **REC 2 – Subject Property Historic Fill:** SESI identified historic fill throughout the subject property up to 10 feet during the 2024 Phase II investigation. Furthermore, the 1947 and 1956 topographic maps indicate historic fill due to the changes in contour lines. This historic fill is likely associated with rail line fill and may be impacted by the rail activities. **Therefore, further investigation/remediation is warranted.**
- **REC 3 – Historic Subject Property Operations:** The Sanborn fire insurance maps indicated auto repair garages (circa 1969-1981) at the west on the subject property. Additionally, the aerial photographs indicated auto repair garages (1954-1984). **Therefore, further investigation/remediation is warranted.**

The following BERs were identified:

- **BER 1 – Off-Site Operations:** Four (4) facilities (Cromwell Cleaners, Nancy Lewis Cleaners, Junior Dry Cleaners, Miguel Crespo Custod) were identified in the NY DRYCLEANERS and/or EDR Hist Cleaner databases within 445 feet hydraulically upgradient from the subject property. Additionally, one (1) facility (Mayer Garage Service Inc.) was listed in the EDR Hist Auto database. **As no releases were reported, no additional investigation is required.**
- **BER 2 – Off-Site Railroad Operations:** During the 2024 site walkthrough, SESI observed a railroad to the west of the subject property. No releases were observed associated with the railroad. **No further investigation is warranted.**
- **BER 3 – Dumpsters:** During the 2024 site walkthrough, SESI observed several dumpsters associated with the apartment building to the east of the subject property. **No further investigation is warranted.**
- **BER 4 – Groundwater Monitoring Wells:** During the 2024 site walkthrough, SESI observed one (1) monitoring well at the center of the subject property. **No further investigation is warranted.**

The RECs are discussed further in **Section 10.0 CONCLUSIONS AND RECOMMENDATIONS** of this Report.

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of this study is to determine the RECs at the subject property for due diligence purposes related to the potential acquisition of the subject property.

SESI has developed this Phase I ESA Report on behalf of the User. It has been developed in substantial conformance with the ASTM's International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. According to ASTM E1527-21, the following conditions were identified during this assessment:

REC – "(1) the presence of hazardous substances or petroleum products in, on, or at the property due to release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the property due to a release or likely to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition."

CREC – "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority."

HREC – "A past release that has been remediated to below residential standards and given regulatory closure with no use restrictions."

BER – "A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate and is not an issue required to be investigated under this practice."

2.2 SCOPE OF SERVICES

The scope of this assessment consisted of the following general tasks: a records review; a Subject Property visit; interviews with present and past owners, operators, and occupants to the extent possible; and preparation of this ESA report. Specific tasks that were conducted included the following:

- A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA) and state and local agencies within the minimum search

distance. Environmental Data Resources, Inc. (EDR) prepares environmental databases used in these assessments.

- A Subject Property reconnaissance to observe conditions and to assess the subject property location with respect to adjoining and surrounding property uses, types of development, topography, natural surface features, roadways, railroad lines and rights-of-way to identify obvious potential environmental conditions on neighboring properties.
- Per ASTM E1527-21, questionnaires were provided to the User (Client), and Owner to obtain information related to the subject property.

2.3 SIGNIFICANT ASSUMPTIONS

Information obtained by SESI and by third parties is assumed to be accurate and/or true. SESI makes no warranty, either implied or expressed, regarding the accuracy or validity of information supplied by others.

2.4 LIMITATIONS/METHODOLOGY/RELIANCE

This ESA was prepared for the exclusive use of River Avenue BC LLC, including its affiliates and lenders. During the assessment, methodologies were used that conform to generally accepted practices for this type of work. The scope and character of the environmental assessment were, in professional judgment, sufficient to justify the stated conclusions after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the subject property as found in historical records, and visual observation of the subject property. No other investigation was performed other than that which is expressly noted in this Report.

This ESA was performed in accordance with ASTM E1527-21 and is subject to reasonable limits of time and cost and is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with a property. Sampling and laboratory analysis are required to determine if soil, surface water, groundwater, air, and construction materials have been impacted by a contaminant.

The information presented in this ESA was obtained during the Subject Property reconnaissance and from the Client, representatives of the Client, current/former property owner(s) or tenants, Federal, State, County and Local Officials, and available mapped information obtained by SESI. SESI does not certify the accuracy of the information received from outside sources.

This ESA should be used in its entirety. Use of portions of this ESA may nullify the information and/or conclusions of this ESA. Subject property observations discussed herein apply to subject property conditions as observed during Subject Property reconnaissance only. The conclusions of this ESA do not apply to conditions that were unavailable for inspection and could not be evaluated.

SESI does not certify that the subject property is contaminant free and this ESA does not serve as a warranty. SESI's investigation was performed within the time frame requested by the client.

The activities to conduct this ESA did not include sampling and analyses of soil, surface water, groundwater, air, or construction materials unless expressed otherwise and requested by the client. Formal wetland, asbestos, mold, and/or radon evaluations were not performed and are not within the scope of work for an ESA. If additional services including underground storage tank (UST) testing, construction materials testing, or environmental sampling (soil, surface water, groundwater, air) are recommended, the results and conclusions for these tests will be provided under separate cover.

2.5 DISCLAIMER

This ESA was prepared by SESI for the sole and exclusive use of River Avenue BC LLC. Nothing under the Agreement between SESI and the User shall be construed to give any rights or benefits to anyone other than the User and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of the User and SESI and not for the benefit of any other party. SESI does not intend, without its written consent, for this ESA to be disseminated to anyone other than the User, or to be used or relied upon by anyone other than the User. Use of the ESA by any other person is unauthorized and such use is at their sole risk.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 LOCATION/STRUCTURES/LEGAL DESCRIPTION

The subject property consists of one (1) parcel with an area of approximately 0.39-acres located at 1140 River Avenue, Bronx, Bronx County, New York. The subject property is identified on tax map records as Tax ID 20-2487-0038. The Subject Property is improved by a parking lot. **Figure 1.1** provides a Subject Property Location Map. A Subject Property Plan is shown on **Figure 1.3**.

The subject property is bound to the north by McLellan Street, to the west by River Avenue, to the south by parking and apartments, and to the east by apartments. A summary of the uses of the adjacent properties is shown on **Table 3.1** below.

Table 3.1—Adjacent Property Uses

Direction	Adjacent Property Use
North	Apartments and Parking
South	Apartments
East	Apartments
West	Parks and Recreation

3.2 SUBJECT PROPERTY AND VICINITY CHARACTERISTICS

The subject property is located in a primarily commercial and residential area. The closest notable surface water body is the Harlem River located approximately 0.56 miles west of the Subject Property.

3.3 CURRENT USE OF THE PROPERTY

The subject property is currently utilized as a parking lot, courtyard and dumpsters for the adjacent apartments to the east.

4.0 USER PROVIDED INFORMATION

4.1 TITLE INFORMATION

A chain of title and deed search was not prepared as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date. SESI identified the following information from the NYC Department of Finance Property Information Portal:

Deed 1

Date: December 9, 2011

Grantee: MP River LLC

Grantor: Shree Ganesh Bronx LLC

Property Type: Non-Residential Vacant Land

Recorded: January 17, 2012

Deed 2

Date: April 14, 2010

Grantee: Shree Ganesh Bronx LLC

Grantor: Republic Gerard LLC

Property Type: Commercial Real Estate

Recorded: April 22, 2010

Deed 3

Date: January 26, 2007

Grantee: Republic Gerard LLC

Grantor: CV Bronx Associates LP

Property Type: Apartment Building

Recorded: February 8, 2007

These records are found in **Appendix A**.

4.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.3 SPECIALIZED KNOWLEDGE/OTHER USER PROVIDED INFORMATION

SESI conducted a Phase II ESA investigation that concluded the following:

- Soil: Pesticides, metals and SVOCs above NYSDEC soil cleanup objectives;
- Groundwater: VOCs, SVOCs, pesticides, PAHs, metals and PFAS above NYSDEC groundwater quality standards; and
- Soil Vapor: Benzene above NYSDEC soil vapor cleanup objectives.

This known contamination is considered **REC 1**. The exceedance figures are included in **Appendix B**. Furthermore, historic fill was identified between 2 and 10 feet below ground surface (ft-bgs). This known historic fill is considered **REC 2**.

4.3.1 INTERVIEWS

A completed User Questionnaire is not provided as the date of this report. However, information of the subject property is well understood from other resources. Therefore, it is not considered as a significant data gap.

4.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE RECORDS

SESI completed a review of publicly available NYSDEC mapping and database systems and the United States Environmental Protection Agency (USEPA) database system as part of this Report to determine the environmental conditions at the subject property and adjacent properties. This review did not identify any areas of concern. The database information is attached to this Report as **Appendix A.**

4.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Report User indicated no knowledge of any valuation reduction related to environmental concerns.

4.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The subject property parcel is currently owned by MP River LLC and is utilized as parking and a courtyard for the adjacent residence.

5.0 RECORDS REVIEW

5.1 STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, CITY, STATE

5.1.1 EDR SEARCH

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR) and reported in the EDR Radius Map Report with GeoCheck (**Appendix D**). The Report meets the government records search requirements of ASTM E1527-21 *Standard Practice for Environmental Site Assessments*. Search distances are per ASTM standards. The properties identified in the search area with environmental records are listed below:

Table 5.1—Property Listings

Based on a review of the EDR Radius Map Report, the subject property is not identified on the EDR databases.

The EDR Radius Map Report identified operations at nearby facilities in the following listings. A discussion of these nearby properties is provided below:

RCRA Large Quantity Generator (RCRA-LQG)

The RCRA-LQG includes a list of facilities that generate over 1,000 kilograms of hazardous waste, or over one (1) kilogram of acutely hazardous waste per month. According to the RCRA-LQG list provided by EDR, there is one (1) RCRA-LQG facility (MTA NYCT-Jerome 162nd Street Substation) within approximately 0.25 miles of the subject property. The facility is located 0.237 miles hydraulically downgradient from the subject property; therefore, this facility is not expected to have adversely impacted the subject property.

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulate less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there are four (4) RCRA-SQG facilities (NYC Dept of Education PS 114X, MTA NYCT-167 St Station 4 Line, BP West Coast Products-BP 30178, and NYC Dept of Education -PS 73X) within approximately 0.25 miles of the subject property. These facilities are greater than 445 feet from the subject property and do not have associated documented releases. Therefore, these facilities are not expected to have adversely impacted the subject property.

RCRA Very Small Quantity Generator (RCRA-VSQG)

The RCRA-VSQG includes a list of facilities that generate less than 100 kilograms of hazardous waste, or less than one (1) kilogram of acutely hazardous waste per month. According to the RCRA-VSQG list provided by EDR, there are five (5) RCRA-VSQG facilities within approximately 0.25 miles of the subject property. These facilities are greater than 501 feet from the subject property and do not have associated documented releases. Therefore, these facilities are not expected to have adversely impacted the subject property.

NY State Hazardous Waste Sites (NY SHWS)

NY SHWS is a list of known contaminated facilities in New York. A review of the database as provided by EDR identified three (3) facilities (1296 Sheridan Avenue, Mott Haven MGP Plume Trackdown, and Former Melrose Avenue Dry Cleaner) within one (1) mile of the subject property. These facilities are greater than 0.420 miles from the subject property and do not have associated documented releases. Therefore, these facilities are not expected to have adversely impacted the subject property.

Solid Waste Facility/Landfill (SWF/LF)

The SWF/LF provides a list of facilities that operate solid waste disposal facilities. These facilities may be active or inactive, or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal facilities. A review of the SWF/LF list provided by EDR identified one (1) facility identified by the address (1231 Sheridan Avenue) within approximately 0.5 miles of the subject property. This facility reported a spill of 10 gallons of fuel oil due to human error. This spill has been closed by the NYSDEC. Based on the facility being located 0.32 miles from the subject property and no associated open releases, the facility is not expected to have adversely impacted the subject property.

NY Leaking Storage Tanks (NY LTANKS)

The NY LTANKS database contains an inventory of reported leaking underground and aboveground storage tanks. According to the NY LTANKS list provided by the EDR, there are 67 leaking tanks located within 0.5 miles of the subject property. Of these facilities, one (1) facility reported a spill of one (1) gallon of gasoline 0.179 miles from the subject property. Based on the quantity of the spill and distance from the subject property, the facility is not expected to have adversely impacted the subject property. Other facilities with reported releases were noted as closed in the NYSDEC database.

NY Underground Storage Tanks Sites (NY UST)

The NY UST database contains registered USTs maintained by the associated facilities. USTs are regulated under Subtitle I of the RCRA. A total of 17 NY UST facilities are located within approximately 0.25 miles of the subject property. None of these USTs were noted on adjoining properties and no associated open releases were reported. Therefore, these facilities are not expected to have adversely impacted the subject property.

NY Aboveground Storage Tank Sites (NY AST)

The NY AST database contains registered ASTs maintained by the associated facilities. A total of 117 facilities were identified within approximately 0.25 miles of the subject property. Although these facilities operate an AST(s), no releases associated with these facilities are active; therefore, these facilities are not expected to have adversely impacted the subject property.

Tanks: Storage Tank Facility Listing

This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency. A review of the database as provided by EDR identified one (1) facility (Verizon New York Inc [NY90105]) within 0.25 miles of the subject property. This facility is located 234 feet from the subject property and contains closed spills; therefore, this facility is not expected to have adversely impacted the subject property.

NY Voluntary Clean Up Program (NY VCP)

The NY VCP is a list of responsible parties, developers, local officials, or individuals working with the department to remediate non-priority contaminated sites that pose no immediate threat to human health or the environment. A review of the NY VCP list provided by EDR has identified five (5) VCP facilities located within approximately 0.5 miles of the subject property. Of these facilities, two (2) are located within 241 feet of the subject property. For these two (2) facilities, the statuses are noted as either closed or completed. Therefore, thee facilities are not expected to have adversely impacted the subject property.

DEL SHWS: Delisted Registry Sites

A database listing of sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites. A review of the database as provided by EDR identified one (1) facility (Radium Chemical) located within 0.25 miles of the subject property. This facility is located 0.211 miles from the subject property and does not have reported releases. Therefore, this facility is not expected to have adversely impacted the subject property.

NY SPILLS

NY SPILLS are facilities that have documented releases/spills associated with either petroleum bulk storage or chemical bulk storage at their facilities. According to the NY SPILLS list provided

by EDR, there are 20 NY SPILLS sites within 0.125 miles of the subject property. All spill cases are noted as closed by the NYSDEC; therefore, these facilities are not expected to have adversely impacted the subject property.

RCRA Non-Generators/No Longer Regulated (RCRA NonGen/NLR)

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-Generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR has revealed that there are 75 facilities within 0.25 miles of the subject property. Since none of these facilities currently generate hazardous waste nor have open releases, they are not expected to adversely impact the subject property.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about the proximity of UST facilities and LUST sites to surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires. A review of the database as provided by EDR identified 15 facilities within 0.25 miles of the subject property. Since none of these facilities currently have associated releases, they are not expected to adversely impact the subject property.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials. A review of the database as provided by EDR identified six (6) facilities within 0.5 miles of the subject property. All facilities are noted as closed

with “No Further Action” documented as the status; therefore, these facilities are not expected to have adversely impacted the subject property.

E MANIFEST: Hazardous Waste Electronic Manifest System

EPA established a national system for tracking hazardous waste shipments electronically. This system, known as e-Manifest, will modernize the nation’s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states. A review of the database as provided by EDR identified six (6) listings within 0.25 miles of the subject property. These facilities do not have any reported releases. Therefore, these facilities are not expected to have adversely impacted the subject property.

NY DRYCLEANERS Sites

NY DRYCLEANERS database provides a listing of active dry cleaner facilities. Six (6) NY DRYCLEANERS site are within approximately 0.25 miles of the subject property. A review of the EDR data noted three (3) drycleaner facilities (Cromwell Cleaners, Nancy Lewis Cleaners, Junior Dry Cleaners) facilities within 700 feet hydraulically upgradient from the subject property. No releases were reported; however, due to the distance and former use of the property, these facilities are considered **BER 1.**

E DESIGNATION : E DESIGNATION SITE LISTING

The (E [Environmental]) designation would ensure that sampling and remediation take place on the subject properties and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP. A review of the database as provided by EDR identified 11 facilities within 0.125 miles of the subject property. These facilities do not have any reported releases. Therefore, these facilities are not expected to have adversely impacted the subject property.

MANIFEST Facilities

MANIFEST Facilities include facilities that have generated hazardous waste or contaminants. A review of the NY, PA, and NJ MANIFEST lists, as provided by EDR, identified 97 NY Manifest listings, two (2) PA Manifest listings (Con Edison-Anderson Ave and NYCT-Jerome 162 Substation) and 25 NJ Manifest listings within 0.25 miles of the subject property. Of these listings, reported releases were documented as closed; therefore, these facilities are not expected to have adversely impacted the subject property.

Vapor Reopened: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. A review of the database as provided by EDR identified one (1) facility (1296 Sheridan Avenue) within 0.5 miles of the subject property. This facility is not reported to have any releases and has a status of No Further Action.

EDR Hist Cleaner Sites

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, has revealed that there are two (2) Hist Cleaner facilities (Migel Crespo Custod and Cromwell Cleaners) within approximately 0.125 miles of the subject property. Of these facilities, one (1) facility (Cromwell Drycleaners) was previously listed while the other facility (Migel Crespo Custod) is located 445 feet hydraulically upgradient from the subject property. This facility did not report any violations or releases. However, due to the historical operations this is considered **BER 1**.

5.1.2 PREVIOUS ENVIRONMENTAL REPORTS

Previous environmental reports were provided by the User and reviewed as part of this assessment. These reports are discussed in **Section 4.3** of this Report.

5.1.3 LOCAL, COUNTY, AND STATE FOIA REQUESTS

As described below, regulatory agencies were contacted by SESI to request access to files regarding the subject property under the Freedom of Information Act (FOIA).

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

On October 25, 2024, SESI accessed the USEPA MyProperty and Envirofacts environmental databases. No records pertaining to the subject property were identified. The USEPA documentation and requests for information are presented in **Appendix A**.

NEW YORK STATE DEPARTMENT OF CONSERVATION

A FOIA request was submitted to NYSDEC for the subject property on October 22, 2024. The NYSDEC returned no responsive records.

OPEN NYC

On October 22, 2024, SESI filed information requests with agencies in New York City: the Fire Department for the City of New York, the New York City Department of Environmental Protection, and the Mayor's Office of Environmental Remediation. The New York City Department of Environmental Protection returned no responsive records. At the time of this report, the other agencies had not returned responses to the requests submitted; however, should the responses contain information that alter the opinions and conclusions of this Report, SESI reserves the right to revise this Report based on this information.

5.2 PHYSICAL SETTING SOURCES

Sources used to evaluate the physical setting of the property include:

- USGS Topographic Maps
- Aerial Photographs
- Subject Property Reconnaissance

5.2.1 TOPOGRAPHY

The subject property is relatively level with regional topography decreasing to the east According to the United States Geological Survey (USGS) 2019 Central Park, New York, 7.5-minute Series topographic map, the subject property's topographic elevation is approximately 38.74 feet above mean sea level (msl). The EDR Topographic Map Report is attached to this Report as **Appendix D**.

5.2.2 SURFACE WATERS AND WETLANDS

The closest open surface water to the subject property is the Harlem River located approximately 0.56 miles west of the subject property. There were no noted wetlands identified historically or currently at the subject property.

5.2.3 GEOLOGY AND GROUNDWATER

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as UtB (Urban land, till substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 3 to 8 percent slopes. Based on the 2024 Phase II Investigation conducted by SESI, the overburden consists of brown coarse to fine sand, some silt, some gravel and trace clay. Historic fill was also identified from approximately two (2) to 10 feet below ground surface (ft-bgs) (**REC 2**). The groundwater flow direction is expected to be in the western direction based on the direction of the Harlem River and regional topography.

5.3 HISTORICAL USE INFORMATION FOR THE PROPERTY

Sources used to determine the historical use of the property include:

- Aerial Photographs,
- EDR City Directory Abstract,
- USGS Topographic Maps,
- Sanborn Fire Insurance Maps, and

EDR Reports are attached to this Report as **Appendix D.**

5.3.1 AERIAL PHOTOGRAPHS

The EDR report identified aerial photographs of the subject property dated 1924, 1940, 1951, 1954, 1961, 1966, 1974, 1976, 1984, 1991, 1995, 2002, 2006, 2011, 2015 and 2019.

A summary of SESI's observations from the aerial photographs is included below. The EDR Aerial Photo Decade Package is provided in **Appendix D.**

Table 5.2—Aerial Photographic Review

Year	Quality of Photograph	Observations
1924	Poor/fair	**Subject property:** The subject property appears to be cleared. **Adjacent parcels:** A road forms the northern boundary, and a railroad forms the western boundary. The property to the east and south appears vacant.
1940, 1951	Fair- Good	**Subject property:** The subject property appears to be vacant. **Adjacent parcels:** Dwellings are present to the east of the subject property. The property to the south appears to be vacant as well.

Year	Quality of Photograph	Observations
1954, 1961, 1966, 1974, 1976, 1984	Poor-Good	**Subject property:** Car garages are present on the subject property. **Adjacent parcels:** Car garages are present to the south of the subject property.
1991, 1995	Fair-Good	**Subject property:** The subject property appears to be paved for parking. **Adjacent parcels:** The property to the south appears demolished. A structure is present on the property to the east.
2002	Good	**Subject property:** No significant discernable changes. **Adjacent parcels:** The property to the south is a parking lot.
2006, 2011, 2015, 2019	Fair-Good	**Subject property:** No significant discernable changes. **Adjacent parcels:** Buildings are present on the property to the south.

The former car garage operations are considered **REC 3,** and the adjacent railroad is considered **BER 2**.

5.3.2 EDR CITY DIRECTORY ABSTRACT

SESI reviewed the City Directory Abstract, provided by EDR, for the subject property and conducted a limited municipal tenant search. The City Directory Abstract did not identify former operations at the subject property. A copy of the City Directory Abstract is included in **Appendix D**.

5.3.4 USGS TOPOGRAPHIC MAPS

Following is a summary of the EDR review of Topographic Map Reports:

Table 5.3—Topographic Map Review

Source	Year	Minute	Scale
Harlem	1897, 1898, 1900	15	62500
Central Park	1947, 1956, 1966, 1979, 1997, 2013, 2016, 2019	7.5	24000

The topographic maps depict the subject property level with an approximate 38.74-feet above msl. Regional topography slopes slightly downward to the south-southwest. No wetlands were

noted on the maps within or adjacent to the subject property. A review of these maps suggests the subject property was developed prior to 1897.

Based on a review of the EDR Historical Topographic Map Report, the surrounding properties are relatively level. No wetlands were observed within the general vicinity of the surrounding properties on the topographic maps. However, a change in topography at the subject property circa 1947-1956 indicates potential historic fill on the property. Historic fill is considered **REC 2**.

5.3.5 SANBORN FIRE INSURANCE MAPS

The subject property was covered on 15 of the Sanborn maps from 1891, 1909, 1951, 1969, 1970, 1977, 1978, 1979, 1980, 1981, 1984, 1986, 1989, 1991, 1992, 1993, 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006, and 2007 described below:

Table 5.4—Sanborn Map Review

Year	Quality of Map	Observations
1891, 1909	Good	**Subject property:** The subject property is vacant. **Adjacent parcels:** A road is present to the north and west of the subject property. The properties to the east and south of the subject property are vacant.
1951	Good	**Subject property:** No discernible changes. **Adjacent parcels:** The property to the northeast and south remain vacant. Dwellings are present on the property to the east.
1969, 1970, 1977, 1978, 1979, 1980, 1981	Fair-Good	**Subject property:** Four (4) structures identifying a quantity of 10-20 cars that resemble garages, and one (1) shop is located in the northwest corner. **Adjacent parcels:** Structures identified as cars (garages) are present on the property to the south and partially located to the northeast.
1984	Good	**Subject property:** The subject property is vacant. **Adjacent parcels:** The properties to the north and south are vacant.
1986, 1989, 1991	Fair-Good	**Subject property:** No significant discernible changes. **Adjacent parcels:** The properties to the northeast, east and south are vacant.
1992, 1993, 1995, 1996, 1998,	Good	**Subject property:** No discernible changes. **Adjacent parcels:** A structure is present on the property to the east. The property to the south is vacant.

Year	Quality of Map	Observations
2001, 2002, 2003, 2004		
2005, 2006, 2007	Good	**Subject property:** No discernible changes. **Adjacent parcels:** Apartment buildings are present on the property to the south.

The subject property was noted as containing a car storage or garages (circa 1969-1981) These historic operations are considered **REC 3**.

5.3.6 ENVIRONMENTAL LIEN AND AUL SEARCH REPORT

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

5.4 ENVIRONMENTAL PERMITS

Review of the EDR Radius Map Report for the subject property indicates no environmental permits attributed to the Subject Property.

6.0 SUBJECT PROPERTY RECONNAISSANCE

6.1 METHODOLOGY AND LIMITING CONDITIONS

An environmental professional from SESI visited the subject property on August 12, 2024 to identify potential RECs. The subject property was observed to the extent that it was accessible and not obstructed. An inspection photolog is attached as **Appendix E**.

6.2 SUBJECT PROPERTY OBSERVATIONS

The subject property is improved by a courtyard, dumpsters and parking lot. There is an above-ground railroad to the west of the subject property along River Avenue. This railroad is considered **BER 2**.

6.3 CHEMICAL STORAGE AND USAGE

SESI did not observe any chemical storage or cleaning supplies.

6.4 BULK STORAGE TANKS

SESI did not observe any aboveground or below ground storage tanks.

6.5 SUBJECT PROPERTY WASTE AND WASTEWATER

SESI observed several dumpsters for the adjacent residential building to the east. The concrete pad appeared to be chipped; however, no staining around the containers was observed. These dumpsters are considered **BER 3**.

SESI did not observe any wastewater present at the time of the subject property walkthrough.

6.6 STAINED SOIL, STAINED PAVEMENT, OR STRESSED VEGETATION

SESI did not observe any indications of stained soil, pavement or stressed vegetation.

6.7 PITS, PONDS, OR LAGOONS

SESI did not observe any pits, ponds or lagoons on the subject property.

6.8 WELLS

SESI observed one (1) monitoring well in the center of the parking lot. This is considered **BER 4**. SESI did not observe any on-site dry wells, irrigation wells, injection wells, potable water wells, recovery wells, or abandoned wells.

6.9 FLOOR DRAINS AND SUMPS

No sumps or floor drains were observed. Additionally, one (1) stormwater catch basin was observed at the southwest entrance to the parking lot. No signs of staining or sheen were observed.

6.10 PCB

No pad-mounted or pole-mounted transformers were observed on or along the property perimeter. A PCB survey was not completed during this Phase I ESA. However, there is not anticipated to be PCB caulking due to the lack of structure. Therefore, this is not considered a REC.

6.11 ASBESTOS-CONTAINING MATERIAL (ACM)

An ACM surveying was not included in SESI's scope of work; however, as no structures are currently present on the property, an ACM survey is not recommended.

6.12 RADON

Radon surveying was not included in SESI's scope of work; however, the subject property is identified within EPA Zone 3, which has low risk of radon. Therefore, a radon test is not recommended for this subject property.

6.13 UNIVERSAL WASTE

Universal waste includes batteries, pesticides, mercury containing equipment, lamps and aerosol cans. Due to the lack of buildings, a universal waste is not recommended.

6.14 CONCRETE

Concrete pads and walkways were observed throughout the property that may require future disposal. No staining was observed; however, additional characterization should be considered for concrete that is stained. Proper disposal of this concrete is recommended.

6.15 LEAD-BASED PAINT (LBP)

An LBP survey was not included in SESI's scope of work; however, as no structures are currently present on the property, an LBP survey is not recommended.

6.16 VAPOR INTRUSION

Based on a review of information related to the subject property and SESI's 2024 Phase II investigation, there is an elevated level of benzene found in the soil vapor of the northeastern corner of the subject property that may need further evaluation. This contamination identified in the Phase II ESA is considered **REC 1**.

7.0 DATA GAPS

Based on a review of the available documentation, the following data gaps have been identified:

- SESI was not provided with responses to FOIA requests from the NYSDEC, FDNY or NYC Mayor's Office of Environmental Remediation. Should SESI receive responsive records that alter the findings or conclusions of this Phase I ESA, SESI reserves the right to update this Report.
- No property valuation was provided for review; therefore, SESI is unable to comment on whether the purchase price being paid for subject property reasonably reflects the fair market value of the subject property. SESI does not consider this data gap to be a significant constraint on our ability to provide an opinion regarding RECs on the subject property.
- SESI was unable to interview former owners of the subject property; however, the previous uses of the subject property are documented in the historical sources reviewed by SESI. SESI does not consider this data gap to be a significant constraint on our ability to provide an opinion regarding RECs on the subject property.

8.0 FINDINGS

Based on our investigation, we conclude that there is evidence to indicate areas of potential environmental concern on the subject property due to the historical usage of the site for auto repair garage. See **Section 10.0 CONCLUSIONS AND RECOMMENDATIONS** of this Report.

9.0 OPINION

In our professional judgment, the scope and character of our environmental assessment were sufficient to justify the stated conclusions after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the subject property as found in historical records, and visual observation of the subject property.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the investigation, it is concluded that there is evidence to indicate areas of recognized environmental concern on the subject property and that additional investigation of these areas is warranted. The conclusions and recommendations in this regard are as follows:

The following RECs were identified:

- **REC 1 – Known Subject Property Contamination:** An environmental Phase II investigation was completed by SESI in 2024. Pesticides, metals and SVOCs were found above NYSDEC soil cleanup objectives in soil. Additionally, VOC, SVOC, pesticides, PAHs, metals and PFAS were found above NYSDEC groundwater quality standards in groundwater. Finally, elevated benzene was detected in soil vapor. **Therefore, further investigation/remediation is warranted.**
- **REC 2 – Subject Property Historic Fill:** SESI identified historic fill throughout the subject property up to 10 feet during the 2024 Phase II investigation. Furthermore, the 1947 and 1956 topographic maps indicate historic fill due to the changes in contour lines. **Therefore, further investigation/remediation is warranted.**
- **REC 3 – Historic Subject Property Operations:** The Sanborn fire insurance maps indicated auto repair garages (circa 1969-1981) at the west on the subject property. Additionally, the aerial photographs indicated auto repair garages (1954-1984). This historic fill is associated with the rail fill and may be impacted by the rail activities. **Therefore, further investigation/remediation is warranted.**

The following BERs were identified:

- **BER 1 – Off-Site Operations:** Four (4) facilities (Cromwell Cleaners, Nancy Lewis Cleaners, Junior Dry Cleaners, Miguel Crespo Custod) were identified in the NY DRYCLEANERS and/or EDR Hist Cleaner databases within 445 feet hydraulically upgradient from the subject property. Additionally, one (1) facility (Mayer Garage Service Inc) was listed in the EDR Hist Auto database. **As no releases were reported, no additional investigation is required.**
- **BER 2 – Off-Site Railroad Operations:** During the 2024 site walkthrough, SESI observed a railroad to the west of the subject property. No releases were observed associated with the railroad. **No further investigation is warranted.**

- **BER 3 – Dumpsters:** During the 2024 site walkthrough, SESI observed several dumpsters associated with the apartment building to the east of the subject property. **No further investigation is warranted.**
- **BER 4 – Groundwater Monitoring Wells:** During the 2024 site walkthrough, SESI observed one (1) monitoring well at the center of the subject property. **No further investigation is warranted.**

A figure showing the locations of the RECs identified at this subject property is included as **Figure 10.1.**

11.0 DEVIATIONS

This Report was prepared with no significant deviation from ASTM Standard Practice E1527-21.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

As required in 40 CFR 312.21(d), this section includes statements made by the environmental professional conducting this assessment.

“I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.”

“I declare that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property.”

“I have developed and performed the ‘all appropriate inquiry’ in conformance with the standards, limitations, and practices set forth in 40 CFR Part 312.”

This Report incorporates the consultant's best professional judgment in conductance of this Phase I Environmental Site Assessment.

From: New York DEC FOIL Center
To: Annmarie Yannaco
Subject: FOIL Request :: W137929-102224
Date: Tuesday, October 22, 2024 6:35:33 AM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 10/22/2024 and given the reference number FOIL #W137929-102224 for tracking purposes. You may expect the Department's response to your request no later than **11/21/2024**.

Record Requested: **Site Address: 1140 River Avenue, Bronx, NY As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling. Please also provide previous assessment records/assessment cards, building department permits, tax and zoning maps, and any construction/development records or year that the current building was constructed. Electronic copies are preferred, if possible.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 10/22/2024, Reference # W137929-102224

Date: 10/25/2024

Dear Annmarie Yannaco,
In response to your Freedom of Information Law (FOIL) request seeking:

> *Site Address: 1140 River Avenue, Bronx, NY*
>
> *As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling. Please also provide previous assessment records/assessment cards, building department permits, tax and zoning maps, and any construction/development records or year that the current building was constructed. Electronic copies are preferred, if possible.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL

#W137929-102224, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RSCO and NYSDEC RRSCOs.

= concentration exceeds USCO
= concentration exceeds RSCO
= concentration exceeds RRSCO
= concentration exceeds RESGW

ABBREVIATIONS
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives (6 NYCRR 375-6.12(d)).
RSCO = NYSDEC Residential Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/ CP-51 (1/10) (6 NYCRR 375-6.12(d)).
mg/kg = Milligrams per kilogram.
Sample Depth is reported in feet below ground surface.
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I - The lower value for the two columns has been reported due to obvious interference.
P - The RPD between the results for the two columns exceeds the method-specified criteria.

User Questionnaire

Phase I Environmental Site Assessment Questionnaire
For ASTM E 1527-21

According to the American Society for Testing and Materials (ASTM) standard practice for environmental site assessments (Designation: E 1527-21) "All Appropriate Inquiry" (AAI) (40 CRF 312.20) standard, the client must provide the following information (if available) to the environmental consultant during a Phase I Environmental Site Assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Client/Responsible Party Information (person completing this questionnaire) :

Name:_____
Title: _____
Interest to Property:_____
Ownership/Operational Duration:_____
Street Address: _____
City: _____
State: _____
Phone: _____

Property Owner/Tenant Site Information:

Company Name:_____
Description of Operations: _____
Ownership/Operational Duration:_____
Street Address: _____
Township: _____
City: _____
County/State: _____
Size of Property: _____
Block/Lot: _____
Phone: _____
Contact: _____

I, _____, to the best of my knowledge, have truthfully provided the information herein.
(FULL NAME)

_____ _____
SIGNATURE DATE

Identification of the site contact and how the contact can be reached (person who will conduct or conducted the site walk and/or will provide or provided access):

1. ENVIRONMENTAL CLEANUP LIENS/OTHER LIENS

a. Are there any environmental cleanup liens/and or other liens that are filed or recorded against the site in any applicable jurisdiction?

2. ACTIVITY OR USE LIMITATIONS AND WETLANDS

A) Are you aware of any environmental restrictions/limitations to the use of the property? (i.e. Engineering or Institutional Controls)

i) If yes, please explain.

ii) Can you provide any lien or deed restriction paperwork (ie. deed notice or environmental lien)?

B) Is any of the site to your knowledge used as a child-care facility or are plans in place to have a child-care facility on-site?

C) Are there any wetlands or marshlands at the site to your knowledge?

3. COMMONLY KNOW OR REASONABLE ASCERTAINABLE INFORMATION ABOUT THE PROPERTY

A) Do you have any knowledge of the past uses of the property?

i) If so, please explain (dates or tenant contracts should be collected if available for any commercial or industrial uses).

ii) Has the property ever been used for industrial purposes?

a. If yes can you provide the NAICS code for the industrial use?

B) Do you know of any Environmental Spills Incident Numbers or Notices of Violation? (i.e., tank removals/Unregulated Heating Oil Tank removals)?

i) If yes, please provide information or available paperwork (ie. former reports or incident numbers)

C) Do you know if the site has been subject to an environmental cleanup or received a Closure Approval (No Further Action) or other Environmental Outcome in the past?

D) Do you know of any underground storage tanks (USTs), aboveground storage tanks (ASTs) and/or septic tanks?

E) Do any buildings on the site have a basement or crawlspace?

F) Does the site use/have an incinerator, compactor, or dumpster? (This should include any cooking oil containers or other media.)

G) How is heating and cooling supplied to the site?

a. If by oil, name of usual supplier:

b. If by gas, name of utility company:

c. If by electric, name of utility company:

H) How is water supplied to the site?

a. Local municipal hookup?
    i. If so, name of provider:

b. Potable Well?
    i. If so, well number/designation and location:

I) Is any portion of the site prone to flooding or has had a significant flood?

4. ADJOINING PROPERTIES

A) Have any of the adjoining properties been used for Industrial purposes currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

B) Have any of the adjoining properties been used as a gas station, dry cleaner or auto shop currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

C) Have any of the adjoining properties been used for commercial purposes currently or in the past?

i) If yes, please provide compass direction and name/ industry (if known) of the property.

D) Have any adjoining properties been used as a school currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

E) Are any of the adjoining properties currently or in the future (to your knowledge) a child-care facility?

i) If yes, please provide compass direction and name (if known) of the property.

5. ENVIRONMENTAL SITE CONDITIONS

A) Are there any present environmental conditions at the site that may prove an obvious threat to the environment or human health?

B) Do you have any chemical storage areas?

C) Do you have any drum storage areas?

D) Do you have any USTs or ASTs not related to heating?

E) Do you have any of the following at or on the site:

a. On-site dry cleaning or washing machine facilities?

b. Landfills or known fill areas?

c. Machinery or equipment that uses hazardous or petroleum compounds?

d. Dust collectors?

e. Spray booths?

f. Floor drains or sumps?

g. Other machinery or equipment?

7. ADDITIONAL PERTINENT INFORMATION

A) Please provide the reason why the Phase I is required (i.e., sale, purchase, transfer, due diligence, cessation of operation, off-site source of groundwater contamination).

B) Please provide the complete and correct address or addresses for the property (any previous surveys maps or any change in tax lot and blocks that are proposed or not yet recorded at the local/county municipality or re- zoning plans):

C) Any additional services or out-of-scope services you wish to be provided in addition to the standard set of services (mold assessment/asbestos assessment/geotechnical/ lead-based paint/indoor or sub-slab air sampling):

D) Please identify all parties to your knowledge who will rely on this ESA? (excluding regulatory agencies)

E) Please provide any former Phase I or Phase II reports, incident reports, state records, reports, current or former permits for the operation of machinery, tank registration documents, AIRS permits, or other environmental permits.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1140 RIVER AVENUE
BRONX, NY 10452

COORDINATES

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/06/2024 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/25/2024 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/06/2024 has revealed that there are

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 17 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Site Code Id: 241010

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/06/2024 has revealed that there are 20 NY Spills sites within approximately 0.125 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 75 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 15 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 6 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 97 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Facility Status: Complete (No Further Action)
Site Code: 203004

NY NYC OER: Properties remediated under OER's oversight, both in the E-Designation program and the NYC Voluntary Cleanup Program. Includes sites completed and in progress.

A review of the NY NYC OER list, as provided by EDR, and dated 03/04/2024 has revealed that there are 42 NY NYC OER sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MAYER GARAGE SERVICE	1169 RIVER AVE	N 0 - 1/8 (0.057 mi.)	D38	92

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Company:	999
Contact Name:	RICHARD HOOKER
DEC Memo:	9/22/20-Richard hooker sent the fallowing email. This site has an E-designation for hazardous material and is an active construction site being remediated under an OER approved RAWP. Yesterday during construction excavation a preciously unknown 550-gallon UST was encountered, pumped free of remaining product and removed from the ground. The tank ws found to be holed and petroleum contaminated soil was found beneath the tank. IT is not clear whether the UST had contained gasoline or fuel oil-the encountered petroleum was old. A spill was reported to NYSDEC. Future actions include excavation and off-site disposal of petroleum impacted soil and collection of endpoint samples. A spill closure report will be prepared and submitted to NYSDEC an appended to the Final Engineering Report Submitted to OER. 9/25/20 A CSL letter was sent to: Mr. Christopher Lacovara Esq. Chief Financial Officer and General Counsel Community Aces 17 Battery Place, Suite 1326 New York< NY 10004
Remarks:	TANK DISCOVERED DURING EXCAVATION, C/U PENDING SITE IS CURRENTLY BEING EXCAVATED AS A CONTAMINATED SITE

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

1165 GERARD AVE (Continued) **U003396376**

Tank Number: 001
Tank Id: 48448
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H99 - Tank Leak Detection - Other
I05 - Overfill - Vent Whistle
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1989
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

DEC Memo:	01/14/15-Hiralkumar Patel. alternate address: 81-85 Mc Clellan Street, 1150-1164 Gerard Ave no other spills found. PBS #: 2-362476. as per PBS record, the site has one (1) 6,000 gal #6 oil AST in contact with soil, in-service, installed in Jan. 1939. 85 McClellan Street Owners, Inc. **property owner** c/o Skyline NY Management Solutions LLC. 141 Halstead Avenue Mamaroneck, NY 10543 Attn.: Nancy Rodriquez **property manager** PH. (914) 813-1900 Ext. 1956 email: nancyr@skylinenymgmt.com 10:56 AM:- spoke with Rob at Riteway. as part of fuel grade conversion, they cleaned out the tank and tested it prior to refilling. the tank system failed a test. techinician believes hole in bottom of the tank. the tank is sitting on floor. Riteway installed two (2) 275 gal temporary tanks and will send work proposal for tank removal. Riteway was sub-contracted by Altas Welding. 11:13 AM:- sent TTF letter to Ms. Rodriquez requiring report submission by the end of 02/27/15. letter emailed to Ms. Rodriquez. case assigned to DEC Zhune (off-hour secondary). 2/13/15-David Chan from Riteway sent the following email dated 2/13/15. The property was performing a conversion. We pumped out and cleaned the tank. After

APT COMPLEX (Continued) **S117395187**

the tank cleaning we tested the tank and it failed. We cannot find any evidence of spill upon initial inspection. We suspect that during the cleaning process we dislodged some old sludge that may have been plugging a hole. We immediately set up temporary tanks for the buildings heat and hot water. We just sent a proposal to the client to lift and inspect the tank bottom for evidence of a leak and to make any necessary repairs and or remediation if required. Once we get the contract back and begin work on the tank, we can send you pictures of the tank bottom and area and give you an update. 5/1/15-David Chan sent the following email. For 85 McClellan, it failed the tank test on 1/13/2015. We evacuated the tank and installed temporary tanks on the same day. We did this for Atlas Welding 718-293-3300. We did not perform any follow up work. 5/1/15-Zhune spoke to Jean from Atlas Welding. he said he will find out about the repairs and he will call me back. 8/26/15-Zhune spoke to Jean. He said I have to contact the owner. Skyline Management 914-222-5350 Maribell. 8/26/15- Zhune poke to Marabell. Marabell is requesting an email from the Department to send the documentation to the DEC. maribellm@skylinenymgmt.com 3/24/16-Cardinal Tank Corp. sent spill closure letter. The letter stated that a tightness test was performed on 6000 gsllon #6 oil aboveground fuel oil tank and the tank failed wit a dry leak. The tank was being tested due to chsnge in grade of fuel. The tank was emptied and temporary tank was set up. The tank was resting on concrete saddles, There was no evidence of oil leak. All fuel oil lines were aboveground with no evidence of oil leak. Since the tank was going to store # 4 oil in future the owner asked us to investigate the failed tank test. The tank was disconnected and raised off concrete saddles and floor. The tank bottom was ultra -sounded and found to be in poor condition. A new steel bottom was welded on tank. All fuel oil lines tested tight. The tank was retested and placed on steel saddles. the tank was reconnected to fuel oil lines and repainted. The existing walls and floor in tank room were epoxy painted. Base on the above information this spill is closed.

Remarks: might rebuild it, don't know

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	NONE
Waste Description:	Not Defined

vent, ran along the curb for approx 2 blocks. Eastmond and Sons was contracted and currently have 7 men, 1 vac truck and 2 spill trucks on site. They already pumped out storm drain (DEP was notified and reported Spill 9903418). They will steam clean and pressure wash the street when they recover the product. They are currently looking into impact to the basement. 6/25/99 Greg White [770-831-0919] left a voice mail message that they checked the basement and did encounter three locations that had been impacted. These areas and the outside have been completely cleaned up and powerwashed.

Remarks: POSS GOT INTO A STORM DRAIN CLEAN UP CONTRACTOR ON THE WAY

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 05/01/1998
Capacity Gallons: 240
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 08/01/1996
Register: True
Modified By: MJGRIFFI
Last Modified: 05/09/2022
Material Name: #2 fuel oil (on-site consumption)

Tank Number: 011
Tank Id: 54280
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:
I04 - Overfill - Product Level Gauge (A/G)
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
D00 - Pipe Type - No Piping
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
B05 - Tank External Protection - Jacketed
G04 - Tank Secondary Containment - Double-Walled (Underground)
H99 - Tank Leak Detection - Other

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 05/01/1998
Capacity Gallons: 240
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 05/01/1998

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and

POWER TEST-GETTY STA 58513 (Continued) **1001119739**

compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Contact Name:	MARK ROSEN
DEC Memo:	Sharif Rahman responded to the site. 02/02/10 Responded to the site on 01/26/10 morning and met Marc Rosen, building super Pedro Gomes at the scene. Minor spill came out of the vent pipe outside of the building. Significant quantity of #4 oil spilled inside the tank vault, seeped through the vault wall, travelled around the floor. Rite Way was on scene to perform the surface clean up.I spoke with Rite Way the next day and Anthony Lara told me that the oil travelled vertically down in the tank room and now appearing in the boiler room.Obviously, travelling through the soil.Subsurface investigation required.CSl was sent to SUMMIT Transport Corp. P.O. Box 56 Passaic, NJ 07055-0056 Attn: Marc Rosen 1040 Gerard Ave. Owners Corp. 1660 49th Street Brooklyn, NY 11204 Attn: David Spira(sr) 02/11/10 Spoke with David Spira on 02/10/10, he received the letter. SUMMIT Transport also received the letter.Site meeting scheduled on 02/12/10 11:00 AM.(sr) ** Tank pictures taken by RiteWay in edocs.** GW investigation plan dated March 06, 2012 in edocs. H2M proposes to install four monitoring wells. Site diagram included. 9/30/2013: Mahat Received an email from Mr. Tim Graves stating the installation of the monitoring wells is scheduled to October 8, 2013. The work is scoped to be completed in two days. Tim Graves Project Scientist - Environmental 631.756.8000 x1626 phone 631.694.4122 fax 516.807.2870 cell www.h2m.com 10/2/13-Mahat: This case is transfered to Mahat as per Vought: A little more background check on the spill was performed.The PBS registration of the tank expired on 10/06/2012. H2M proposed to install monitoring well for subsurface and groundwater investigation back in March 2012, but have not received any report yet. 10/03/2013: Mahat Received an email from Mr. Tim Graves saying that the instalation of monitoring wells did not go as planned. He also

ROADWAY (Continued) **U003391300**

mention the subcontractor,
Windmill Oil Tank Services, will be at the site on Friday, November 1, to mark the utilities and to
remove the gate which allows access to the courtyard. The gate will be replaced with a secure
temporary fence which will allow easy access to the courtyard on Monday. 10/4/2013: Mahat Sent an
email to Mr. Graves requesting locations of proposed monitoring well.Provided site plan is missing
gradient level. It also indicated anticipated flow of ground water is from East to West of the
property. 10/07/2013: Mahat Received an email from Mr. Soul Friedman requesting for approval to
pour concrete in the basement. His complaint was about the bad appearance of the site. 10/09/13:
Mahat-File review and summary Mahat: Spill Report-1/10/2010- Received spill report due to overfill.
Email from H2M Taylor (Ph:631-756-8000x1014) to DEC Rahman-5/4/10. Email included Request for
Proposal (H2M)dated 03/09/2010 to Milro (Basso), Northeast Environmental(Nick Barnaba), Windmill
(Lee Selinger) with cc to Rahman how the remediation plan for the site will executed. The spill was
due to the over fill of 5000-gallon steel UST located inside a vault withnin the basement .
Free-phase fuel oil recovery is on-going at the site from three open excavations saw cut into the
concrete floor of the basement. Presence of the hole on the tank caused a historic leak. H2M
confirms that 4500 gallons of oil is removed from the site and is requesting a proposal to perform
the following scope of work: -Obtained all necessary permits to perform the scope of work. -Cutting
and removal of the UST from the vault. -Cut out, removal and proper disposal of approximately 1,500
sqaure feet of concrete. -Budgeting purposes, provide a cost to excavate, remove and properly
dispose of approximately 100 cubic yards(150 tons) of fuel oil impacted soil -Collection of ten
excavation endpoints soil sample to be analyzed vis EPA method 8021/8270. -Ten vaccum extraction
events for recovery of a #4 fuel oil/water mixture. -Instalation of a poly plastic excavation
liner, instalation of a passive venting system construction of PVC and terminating through the
foundation wall. Eamil from Graves (ph-631.756.8000)to DEC Rahman:12/29/2011- H2M sent 24 soil
analytical results.There are a total of seven excavations in the basement of the above referenced
building.Endpoint samples were collected every 15 feet along the sidewalls of excavations one
through four and excavation seven. Endpoint samples were not collected from excavation five because
it is currently inaccessible.Samples were not collected from excavation six because this excavation
is being left open in order to recover free-phase fuel oil from the groundwater within the

ROADWAY (Continued) **U003391300**

excavation. All analytical results are below CP 51 unrestricted standard. Based on the attached excavation analytical results, H2M respectfully requests permission to backfill excavations one through four and excavation seven. The property owners have requested that excavation seven be backfilled as soon as possible because it is currently blocking access to the Con Edison gas meters in the basement. 10/09/2013- Mahat Above spill notes are reviewed and approved by Vought DEC. Mahat and Vought to call H2M Graves to discuss soil sampling and site plan submission with recovery locations. 10/09/2013: Mahat Vought and Mahat had a conversation with Tim about the submission of the site plan including proposed location for monitoring wells. Waiting for his repsonse. 10/11/2013 : Mahat Mr. Graves sent an email with the work plan for the instlation of monitoring well. H2M proposes the installation of four monitoring wells at the subject site. Each monitoring well will be constructed of two-inch PVC and will be installed a minimum of five feet into the water table.Monitoring wells will be installed using Geoprobe direct-push technology and protected by man-hole covers set flush-to-grade. Prior to the installation of the monitoring wells, 112M will oversee the advancement of a soil boring in each well location. Soil samples will be collected in two-foot intervals. Soil lithology and moisture content will be logged and soil samples will be field screened using a photoionization detector (PID) for the presence of fuel oil impacts. The screened intervals and total depths of the wells will be determined in the field based on the conditions observed within the soil borings.112M proposes that a monitoring well (MW-1) be installed north (side-gradient) of the source of the release in the sidewalk along East 165 th Street. Two monitoring wells (MW-2 and MW-3) are proposed west (down-gradient) of the release source. Monitoring well MW-2 will be installed in the sidewalk along Gerard Avenue directly down-gradient from the former AST location. Monitoring well MW-3 will be installed south of MW-2 in the sidewalk along Gerard Avenue. H2M proposes installing a monitoring well (MW-4) south (side-gradient) of the release source in the courtyard of the 1040 Gerard Avenue building. However, the project file indicates that free-phase fuel oil was recovered from excavations #4, #6 and #7. Per our discussions on 10/09/13, Mr. Graves suggested to move the locations of proposed monitoring wells MW-1 and MW-3 closer to excavations #7 and #4, respectively. This strategy will be discussed with Vought DEC. 10/11/13: Magat : 2:00pm A voice message was left to Mr. Graves regarding precise locations of monitoring wells. 10/11/13: Mahat : 4:01pm A call was

ROADWAY (Continued) **U003391300**

received from Mr. Graves. A
discussion on the location of the monitoring well was performed. The work plan dated 03/06/12 was
approved for execution. Location of MW#1 and MW#3 has been moved because excavation #4, #6 and # 7
had free product at the time of excavation. An approval letter was sent to property owner having
Graves and Vought DEC on CC list. The Department is waiting on reply from Mr. Graves stating the
date and time of the Monitoring Well installation. 11/5/2013: Mahat A call was received from Mr.
Graves stating that MW # 4 is difficult to achieve. There is a very narrow space between south
sides of the building with adjacent building. DEC suggest to postpone MW # 4. GW is flowing mostly
toward MW # 2 and MW # 3. As per Tim, PID readings for the soil profile are all zero, so DEC gave
guidance to analyze the deepest dry sample. MW # 1 is schedule on 11/6/2013. DEC is making an
arrangement for site visit. 12/30/13: Mahat DEC received an email from Mr. Graves stating that the
instalation of MWs went well. H2M will read installed wells for six months for trending. 1/8/14:
Mahat An email was received from Mr. Graves stating that there was no free product on the wells.
The results of the initial well monitoring at 1040 Gerard Avenue, conducted on December 31, 2013,
(spill number 0911475) are as follows: MW-1 Depth to Water: 9.16 feet. No product detected. MW-2
Depth to Water: 9.18 feet. No product detected. MW-3 Depth to Water: 9.65 feet. No product
detected. H2M will conduct the next monitoring event on or about January 31, 2014. Please let me
know if you have any questions or concerns. 3/18/14: Mahat T/C : Mr. Graves notify that he is
conducting monthly inspection on the monitoring wells. No product has been detected from the well
yet. He is collecting the data and once the well is non dtected for three quarter in a row then he
will perform a labotory analysis of the GW for the closure report. 11/5/14: Mahat A closure report
has been recieved from Mr. Graves and it is uploaded on D2. Closure report in review. 11/5/14 :
Mahat Report Review : GW samples were taken from the monitoring well and they are all ND for CP-51
analytes list. (No VOC and SVOC were detected). Monitoring well treding were performed for four
quater and no product were detected. No further invetigation is required by the department for
remediation and deliniation. No free phase product was detected. Hence, the spill case is closed in
DEC database based on the data and report that were provided to the Department. DEC REQUIRES : -
Action to backfill request. - Submission of site plan with product recovery excavations as per
March 9th, 2010 proposal. - Approval on moving the location of proposed monitoring wells.

Tank Info:

Tank Number:	001
Tank Id:	43172
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

	D01 - Pipe Type - Steel/Carbon Steel/Iron
	G99 - Tank Secondary Containment - Other
	B00 - Tank External Protection - None
	J02 - Dispenser - Suction Dispenser
	K99 - Spill Prevention - Other
	C03 - Pipe Location - Aboveground/Underground Combination
	F06 - Pipe External Protection - Wrapped
	I04 - Overfill - Product Level Gauge (A/G)
	E00 - Piping Secondary Containment - None
	H00 - Tank Leak Detection - None
	A01 - Tank Internal Protection - Epoxy Liner
	L00 - Piping Leak Detection - None
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/22/1940
Capacity Gallons:	5000

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 3/05/2003 - Closed Due To The Nature / Extent Of The Spill Report02/17/04 - Transfered To Tibbe. Reopened because A File Exists. 9/8/06 B.F. takes over as lead. 10/27/09 On 10/5/09, received tank closure report from Thomas H. Bosshard of Envirotrac on behalf of Verizon. Tank only failed test. Piping was reconfigured to an 8700 gallon AST. Samples taken around tank with some limitation due to the tank's location, which is a small courtyard. There isd also a drain on one side active product piping on the other. Four samples taken.

VERIZON NEW YORK INC. (NY90105) (Continued) **S100153406**

Bedrock reached at aprroximately 6 feet. No water detected. No staining from petroleum observed. Some SVOC's exceeded RSCO's in Sample B-3: benzo(a)anthracene @ 520 ug/l (224 ug/l), benzo(a)pyrene @ 400 ug/l (61 ug/l), benzo(b)fluoranthene @ 570 ug/l (220 ug/l), and chrysene @ 510 ug/l (400 ug/l). bf

Remarks: 2K PETROTITE; -.077 TANK ONLY. TANK IN COURTYARD, MAY BE ABANDONED.

DEC Memo:	1/2/08 Called Milie Lopez of Castle Oil. Spill caused by overfill at vent pipe. Verizon is scheduled to receive daily deliveries. Little fuel is used each day. They will change the delivery cycle from now on. Approximately 32 gallons was spilled from vent onto sidewalk. Spill is contained and being cleaned up by Castle Oil. Product is prevented from going into sewer drain. I requested to speak to somebody doing the clean up. She will have one of the crew members call me back. Antonio called me back (914)760-5766. There are approx. 4 - 5 gallons in the basement. Clean up is underway. Nothing went to sewer. H. Patel is on the way there. bf 01/03/08-Hiralkumar Patel. visited site. met crew from Castle oil. oil found on concrete sidewalk and concrete basement floor. no soil/sewer affected. based on site visit observations, case closed.
Remarks:	caller feels that there is an overfill occuring; company has a scheduled fuel delivery and are not using up all the oil prior to deliverys causing overfill; has been contained; clean up in progress

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	01
Tank Id:	25951
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	K00 - Spill Prevention - None
	E00 - Piping Secondary Containment - None
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	F00 - Pipe External Protection - None
	J02 - Dispenser - Suction Dispenser
	I05 - Overfill - Vent Whistle
	C01 - Pipe Location - Aboveground
	L00 - Piping Leak Detection - None
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	12/4/10-Vought-Primary off hours responder. Called and spoke to NYCDEP Celeste Oloke (cell:347-672-6059) who was on-scene. As per Oloke building was being renovated which resulted in an oil spill from an AST located in the basement. Oloke noted that numerous city agencies on-site in addition to NYCDEP including FNDY, NYCDOB and that OEM was en-route. Oloke also noted that vapors were present in the building which was partially occupied and that the super was onsite but was unable to make decisions regarding contractors or spill cleanup. Vought told Oloke that he would call RSE for authorize site visit and return call. Vought called and spoke to RSE who authorized site visit by secondary responder (DEC Zhune). Vought called Zhune and ETA was 30-45

(Continued) **U003388473**

minutes. Vought informed her of status and called Oloke and informed him of her ETA. Oloke noted
that owner information as per super was: Dragreis Realty Sam Simone Ph: (718)972-5010 Cell:
(917)939-9922 and that he called but did not leave message on answering machine. Vought called
Simone Realty at office (no cell number yet on hand) and left message of spill, possible fines and
penalties by DEC if callback not received ASAP as well as fact that numerous city agencies were at
building. Vought called Zhune and RSE and informed them of same. Vought received callback from
Zhune who noted that spill was #6 and that was from top of AST and that vapors were minimal. Vought
requested that she call RSE and inform him of same and seek further instruction. Vought received
call later from RSE who noted that building was evacuated by OEM due to NYCDOB violations and
possible FDNY egress violations (not due to spill).
12/5/10-Vought-Received call from spoke Simone
at approximately 6pm who had been informed of evacuation and also of spill at site and that he was
willing to comply with any and all Department requests. Simone provided cell number contact above.
Vought informed him that he would inform RSE and Zhune of call and Zhune would return call tomorrow
with possible DEC requirements. 12/6/10-Vought-Vought changed spill material to #6 fuel oil from #2
fuel oil(later confirmed by DEC Zhune who performed authorized site visit as per RSE). Note also
PBS#2-277126 for site that shows an onsite 5000-gallon #6 fuel oil AST (in contact with soil).
Vought informed RSE and Zhune of call from Simone on 12/5 and need to call him back with Department
requirements. 12/4/10-Zhune responded to this site. Spoke to super Nelson Ruiz 646-372-4374. The
pump that supply with oil to the boiler was leaking a month ago. This pump was replaced but they
did not clean the spill. There is oil #6 on the floor of the tank room along the tank. The Fire
Department covered the spill with speedy dry. The AST 5000-gallons is on a platform of concrete.
the floor of the boiler room is in very bad condition. As per the super the building is been
renovated. They will renovate this floor and the tank room. Zhune Spoke to HPD City NY supervisor
Anthony Amalfitano 917-517-9105. he said agencies were call because of the bad conditon of the
building not because of the spill. During inspection the Fire Departemnt found this old oil spill
then they notified DEC. The Fire Department issued vacant the building because no secondary means
of Egreas. Mary O' Shaughnessy from Red Cross 212-787-1000 Ext. 1 said aproximately 30 people are
going to be relocated. The Red Cross will provide with shelter and food. MTA will porvide busses.
As per Mary they will be taking to PS 114 that night. If it's going to

(Continued) **U003388473**

be a long term evacuation
they will decide where they are going to be taking. Mary also said Red Cross, HPD and another
agencies will take care of the Bill. 01/06/11- Benie Bauer from NYC Tank test 718-731-7011 called.
He said they clean oil arround the tank. They took three samples. Report will be send next week.
02/23/11- New York City Tank Testing, Inc sent the report dated 02/04/11 . Letter stated the
following: This letter is to inform you that Dagreis Realty contacted us in reference to an old oil
pump seal leak causing a spill. Scope of work that was performed: Tank room floor was dug up on
both sides of the oil tank, the approximate area of excavation on the north side was 4'X 2'and up
to a depth of 9 ,on the south side was 12'X 3'and up to a depth of 3', we filled a total of 22
drums. Soil samples were taken from walls and bottom of the excavations. The soil analitycal
results show VOC's and SVOc's below the Recommmended Soil Clean Up Objectives. Spill Closed.

Remarks: Caller advised found leaking oil tank at Apt building at address given. Clean up is pending.

Date Last Modified: 2004-03-04

Tank Info:

Tank Number: 001
Tank Id: 3270
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

F06 - Pipe External Protection - Wrapped
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G99 - Tank Secondary Containment - Other
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
E00 - Piping Secondary Containment - None
L09 - Piping Leak Detection - Exempt Suction Piping
H00 - Tank Leak Detection - None
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1955
Capacity Gallons: 10000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

L07 - Piping Leak Detection - Pressurized Piping Leak Detector
G04 - Tank Secondary Containment - Double-Walled (Underground)
A00 - Tank Internal Protection - None
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring

Tank Number: 011
Tank ID: 274669
Tank Status: In Service
Material Name: In Service
Capacity Gallons: 8000
Install Date: 07/06/2017
Date Tank Closed: Not reported
Registered: True
Tank Location: Underground
Tank Type: Equivalent technology
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: LABATIST
Last Modified: 12/01/2023

Equipment Records:

L07 - Piping Leak Detection - Pressurized Piping Leak Detector
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
C02 - Pipe Location - Underground/On-ground
F04 - Pipe External Protection - Fiberglass
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
B04 - Tank External Protection - Fiberglass
J01 - Dispenser - Pressurized Dispenser
E04 - Piping Secondary Containment - Double walled UG
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
G04 - Tank Secondary Containment - Double-Walled (Underground)

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	09/19/07-Hiralkumar Patel. left message for David at Delta. 09/25/07-Hiralkumar Patel. received message from David. they tested tank system and will forward test result once he gets it. they are investigating reason for oil inside manhole. 10/24/07-Hiralkumar Patel. sent email to David

BP WEST COAST PRODUCTS - BP 30178 (Continued) **S108764538**

requiring updates. 10/29/07-Hiralkumar Patel. received email from DAvid. during site visit, he
found manhole next to dispenser # 1 and contained about 1/8 inch of gas floating on water. manhole
is about 14 inches deep with valve at bottom. as per station manager, about 1/2 gal of gas was
spilled during fueling car and that spill may have reached to manhole as it is close to dispenser.
they tested entire tank system on Sep. 17, 2007 and found tight. they are currently contacting
NYC/Bronx borough to see what kind of pipeline runs through manhole (water or gas). case closed.

Remarks: discovered less than 1 quart of gasoline on top of water inside a ten inch man hole; unknown valve in man hole; adjacent to dispenser # 1 and the Us T. The man hole is not going into any other sources of water.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 3/11/03 - SAMUEL- File available in active unassigned spill files. 4/12/04-Vought-Spill transferred from Tomasello to Rommel 07/12/04 See also spill 9506597 Rommel 3/01/06 - re-assigned to Hale - reviewed file. AEAS Report Indicates furthher soil analysis needed based on several PID concentrations up to 3000 in end-point samples. 6/21/06 Transferred to T Knizek 8/19/08 Transferred to Region 2 for reassignment 3/31/09 - Austin - Transferred from Needs Reassignment to Zhune for further work to remediate and close - end 8/26/19 - Spill reassigned to Kim as per Obligado. 1/14/20 - Kim - Closed Spill 9506597 was reported at 1236 Jerome Ave: 10 tanks all failed. Closed Spill 8607610 was reported at 1236 Jerome Ave: 50 gallons of gasoline spilled affecting the sewer when a tank was overfilled by a tank truck; FDNY responded, flushed sewer, Hazmat was sent to the site. 10/5/21 - Kim - Based on PBS No. 2-601220 there was one 5,000gal gasoline UST that was removed; PBS registration expired in 2004. 12/30/21 - Kim - Site visit performed on 12/2/21. No monitoring wells were found at the property and no vent lines or former fill ports were visible. I spoke with one of the workers at a nearby property on Jerome Ave, Vivo Live Poultry, who knows the owner. The workers at the property stated that they were unfamiliar with the UST that was there. Based on a review of DecDocs, Underground Storage Tank Removal Report dated June 1998 that was prepared by American Environmental Assessment Corp. on behalf of the previous owner Edward Cardinale, around the tanks that were removed, there was contaminated soil left in the ground. 1/31/22 - Kim - Contaminated Soil Letter sent via certified mail to Waleed Simreen, current owner of the property, at 1236 Jerome Ave, Bronx, NY 10452. Subsurface Investigation Required based on the available information in the file from Underground Storage Tank Removal Report dated June 1998 that was prepared by American Environmental Assessment Corp. on behalf of the previous owner Edward Cardinale. 2/10/23 - Kim - Soil Samples from the Underground Storage Tank Removal Report dated June 1998 prepared by American Environmental Assessment Corp. were analyzed for VOCs based on previous guidance STARS Memo #1. Soil Sample Results indicated exceedances of current CP-51 SCOs for VOCs in 8 of 8 soil samples. S-1: MTBE less than 3,125ug/kg; Benzene less than 3,125ug/kg; n-Butylbenzene 22,569ug/kg; sec-Butylbenzene 15,075ug/kg; Isopropylbenzene less than 3,125ug/kg; p-Isopropyltoluene 10,975ug/kg; Ethylbenzene less than 3,125ug/kg; Napthalene 32,825ug/kg; Toluene less than 3,125ug/kg; 1,2,4-Trimethylbenzene 89,925ug/kg; 1,3,5-Trimethylbenzene 42,231ug/kg; Total Xylene

JEROME TIRE CENTER INC (Continued) **U001841824**

40,838ug/kg S-2: MTBE less than
20,993ug/kg; Benzene less than 20,993ug/kg; tert-Butylbenzene less than 20,993ug/kg;
Isopropylbenzene less than 20,993ug/kg; Ethylbenzene 1,862ug/kg; Napthalene 51,468ug/kg; Toluene
1,740ug/kg; 1,2,4-Trimethylbenzene 64,415ug/kg; 1,3,5-Trimethylbenzene 36,942ug/kg; Total Xylene
27,328ug/kg S-3: MTBE 3,731ug/kg; Total Xylene 11,390ug/kg S-4: Total Xylene 344ug/kg S-5: MTBE
16,875ug/kg; Benzene 465ug/kg; Ethylbenzene 1,120ug/kg; Toluene 3,325ug/kg; 1,2,4-Trimethylbenzene
4,255ug/kg; Total Xylene 10,935ug/kg S-6: MTBE 82,730ug/kg; Benzene 80ug/kg; Toluene 1,375ug/kg;
Total Xylene 4,085ug/kg S-7: MTBE 8,051ug/kg S-8: MTBE 51,495ug/kg; Benzene 395ug/kg; Ethylbenzene
1,915ug/kg; Toluene 2,870ug/kg; 1,2,4-Trimethylbenzene 3,975ug/kg; Total Xylene 9,850ug/kg To date,
I have not received a response to the Contaminated Soil Letter that was sent to Waleed Simreen.
2/13/23 - Kim - Search of NYC Dept of Finance tax and property records indicated that the property
is owned by Summerain, Inc. Search of NYC Department of State Division of Corporations records
indicated that Waleed Simreen is the CEO and Principal Executive Office address is 126 Falmouth Rd,
Scarsdale, NY 10583. 4/11/23 - Kim - A Contaminated Soil Letter was sent to Waleed Simreen at 126
Falmouth Rd, Scarsdale, NY 10583 and at 1236 Jerome Ave, Bronx, NY 10452 on 2/13/23. Certified mail
receipt was received by DEC 2/21/23 that confirmed delivery 2/16/23. To date, I have not received a
response to the Contaminated Soil Letter that was sent to Waleed Simreen. 11/14/23 - Kim - Case was
initiated with Legal. NYSDEC-OGC Jonathan Agosta received correspondence from Joseph F.
Castiglione, Esq. with Young / Sommer LLC representing Summerain, Inc. (Owner) on 11/8/23. Case
outcomes pending discussions. 2/6/24 - Kim - Brad Summerville with PT Consultants, engineering
consultant for RP, contacted me requesting a copy of the consent order on 1/16/24. PT will prepare
a proposal for the RP. Brad Summerville, P.E., LSRP Vice President PT Consultants, Inc. 560 Benigno
Blvd, 2nd Floor Bellmawr, NJ 08031 (856) 251-9980(o) (856) 625-9229(m) 3/5/24 - Kim - Michelle
Nowak, Staff Geologist with American Petroleum Equipment & Construction Co. (AP). I called AP
Nowak. AP sent a proposal to the owner on 3/4/24. The consultant has reportedly found the RP to be
agreeable and responsive. Work plan to be sent to DEC following RP approval of proposal. 4/16/24 -
Kim - Received via RP a copy of a 2017 Phase II report performed for a neighboring property at 1222
Jerome Ave and the subject spill site at 1236 Jerome Ave. Based on Department's review of the soil
sample data, the report confirms the presence of significant petroleum contamination in soil above

JEROME TIRE CENTER INC (Continued) **U001841824**

Unrestricted Use SCOs for gasoline contaminated soils, CP-51 list VOCs. Consent Order being finalized. NOTE: from the 1998 UST Removal report, which has photos of the USTs being pulled, the excavations were backfilled with stone, so borings will need to be installed outside of the excavation areas.

Remarks: SOIL OF CONTAMINATION FOUND DURING REMOVAL OF TEN 550 GALLON GASOLINE TANKS. SOIL TO BE STOCPILED AS NECESSARY.

Tank Info:

Tank Number: 001
Tank Id: 212279
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

J00 - Dispenser - None
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping
I03 - Overfill - Automatic Shut-Off
K00 - Spill Prevention - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 250
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 01/01/2018

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
