Contact: Annmarie Yannaco

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/04/2024 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 55 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/03/2024 has revealed that there are

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 34 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND/KRIMGOLD 3/15/2004 Sangesland spoke with Steve Garber at Petro Oil. He said there was a patch on the tank that let go, spilled to basement. A Stop Delivery hold was put on the address until Petro inspected a repaired tank. Steve didn't know what work was done on the site, but he did say that the Stop Delivery hold was lifted on March 3rd. Site is managed by Dean Realty Corp. 212-860-0119 or 914-438-0279 3/30/2004 Sangesland spoke to manager at Dean Realty. He said the tank was repaired within 1-2 days of the problem and the spill is all cleaned up. Sangesland faxed a memo to Dean Realty requesting the following: 1) Documents from tank repair company showing what work was done. 2) Documents from Petro shwoing that they came back and saw the repair and they now deliver again. 3) Photo of the basement floor near the tank showing a clean floor. 4) Letter from Dean Realty saying the the spill was cleaned and requesting that the spill case be closed out. 5/3/2005 *** one year later*** no paperwork has been submitted. Dormant cases closed.
Remarks:	Driver was filling the tank. He did not hear the vent alarm and overfilled the tank. Spill occurred in the basement of the business which has a cement floor. Spill is contained and will be cleaned up tomorrow morning by PETRO.

DEC Memo:	12/27/2016: Rashad Called Petro on 12/24, she reported a pin hole leak in oil filter coming from a 275 AST. Tried to call homeowner numerous times and phone call was either unanswered or hung up. Text message received from homeowner saying she can not speak right now. Will follow up. Sons phone number obtained through texts with homeowner is 347-712-5426. 2772 Decatur Ave does not have an alternate address. No additional spill or PBS registrations found for site. 9:30 am: Called sons phone number, it does not ring. 10:09 am: Texted homeowner to see if there are any issues, no answer. 3:10 pm: Called sons phone number, it does not ring. 12/28/16-Hiralkumar Patel. 2:45 PM:- went to site for an inspection, but no one at home. left business card requesting call back. 12/30/2016: Rashad CSL prepared and sent to property owner, also uploaded to D2. Spill assigned to DEC Patel. 12/30/16-Hiralkumar Patel. 11:58 AM:- left message for Ms. Nova. 01/03/17-Hiralkumar Patel. 1:10 PM:- left message for Ms. Nova. 01/04/17-Hiralkumar Patel. went to the site for inspection, but no one at home. 8:11 AM:- spoke with Petro and received alternate phone number for property owner. 8:15 AM:- called alternate number for the owner. Cesar Nova answered the phone, but line got disconnected. tried Mr. Nova's number multiple times after that but no response. 8:21 AM:- sent text message to Cesar Nova and Ms. Nova. informed them about oil spill at the site. asked them to call back. 9:11 AM:- received text message from Ms. Nova. she is out of state and asked to contact her son Cesar Nova. 9:44 AM:- sent text to Mr./Ms. Nova including copy of letter dated 12/30/16. asked them to submit report by the end of 01/31/17. 12:54 PM:- spoke with Mr. Nova. he noticed minor drips from oil filter and approx. 3 gal of spill underneath the filter onto concrete floor. petro technician fixed the filter and cleaned up the spill. Mr. Nova confirmed no leak from the tank and no odors in the building. Cesar Nova **owner's son** Ph. (347) 712-4611 email: cesarnova362@gmail.com case closed based on information provided by Petro and Mr. Nova.
Remarks:	inside tank leaked unknown amount of oil to soil. clean up is pending. Not reported

DEC Memo:	10/03/2013: Mahat Spoke to John Wade (Notifier) about the spill situation. There is a spill inside the concrete vault. As per Mr. Wade, cleaning crew will be there clean the spill tomorrow early in the morning. He was not on the site but his Project manager Mr. Brian Lenahan was on the site. Left my phone number to Mr. Wade and requested him to inform Mr. Lenehan to call me back with more on site information. Spill is contained inside the concrete vault. As per Mr. Wade there is no soil and GW contamination. There is also no associated vapor in the site due to the spill. Brian Lanehan: 631-459-1244 David: 917.753.7207 (building manager) John Wade: 631.567.6545 10/04/2013: Mahat: Received a phone call from Brian mentioning spill is contained. Spill on the concrete is all cleaned up and speedy dry is on the floor to observe the left over. 10/04/13- Ahmed- Spoke to David (917-753-7207) from the building manager. As per him, they discover the spill and had his oil company inspect the tank. They hired AB Environmental to do the cleanup. AB Env. put speedy dry and cleaned up the spill. Spoke to Brian. He said spill happened from a pump on top of the tank. They cleaned the tank surface and picked up loase oil from the concrete floor by speedy dry. 3 drums of speedy dry were generated and AB Env. removed those from the site. 10/09/13-Hiralkumar Patel. alternate address: 2733-2735 Webster Ave no other spills found. PBS #: 2-149950. as per PBS record, the site has one 4,000 gal #6 oil AST in contact with soil. the tank was installed in Mar. 1988. 2735 Webster Operating Corp. **property owner** 2735 Webster Avenue

RESIDENTIAL APARTMENT BUILDING (Continued) **S114560447**

Bronx, NY 10458 Attn.: Joseph
Schmidt Ph. (718) 367-2040 12:55 PM:- spoke with Brian at AB Environmental. he mentioned that oil
spilled from broken pump, located on top of tank which pumps oil to boiler. oil spilled onto tank
room concrete floor. AB Environmental cleaned the spill using speedie dry. Brian mentioned that the
4,000 gal #4 oil tank is sitting on floor. Brian took some pics. asked him to submit pics for
review. Brian Linehan AB Environmental PH. (631) 567-6545 (O) (631) 459-1244 (C) Fax (631) 567-9390
email: blinehan@abenviro.com 2:13 PM:- received email from Brian including pic. pic shows
rectangular tank. it also shows minor seepage from underneath the tank. 2:25 PM:- spoke with Brian.
he confirmed that it is a rectangle tank. he obseverd very minor seepage of oil from underneath the
tank, which must be spilled material from tank top and got into space between the tank and the
floor. he also confirmed that no more oil found in tank room. based on available info, case closed.

Remarks: 30 gallons in the corner of the concrete vault. Absorbant is down.

Tank Info:

Tank Number: 001
Tank Id: 4080
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

D00 - Pipe Type - No Piping
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 12/01/1962
Capacity Gallons: 2000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MJGRIFFI
Last Modified: 05/09/2022
Material Name: #2 fuel oil (on-site consumption)

J01 - Dispenser - Pressurized Dispenser
C02 - Pipe Location - Underground/On-ground

Tank Number: 002
Tank ID: 6348
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 4000
Install Date: 08/01/1998
Date Tank Closed: 08/01/1998
Registered: True
Tank Location: Underground
Tank Type: Fiberglass coated steel
Material Code: 0009
Common Name of Substance: Gasoline

Tightness Test Method: 20
Date Test: 08/01/1997
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI
Last Modified: 05/09/2022

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
H00 - Tank Leak Detection - None
I02 - Overfill - High Level Alarm
A00 - Tank Internal Protection - None
B04 - Tank External Protection - Fiberglass
F00 - Pipe External Protection - None
G04 - Tank Secondary Containment - Double-Walled (Underground)
J01 - Dispenser - Pressurized Dispenser
C02 - Pipe Location - Underground/On-ground

Tank Number: 003
Tank ID: 6349
Tank Status: Closed - Removed
Material Name: Closed - Removed

DEC Memo:	No real spill that occurred on the site. TriState Environmental is working on a different portion of the property, but they saw the contractor in question cleaning out the sewer drains on the property. Nothing was actually dumped into the Bronx River, but the drains were cleaned so the rain water will flow into the river.
Remarks:	CALLER SAYS THAT SOMEONE WITNESS AN OIL SPILL THERE, AND A PRIVATE CONTRACTOR CAME PICKED IT UP AND DUMPED INTO THE BRONX RIVER: THE CONTRACTOR IS ON SITE MON-FRI 10AM-2PM;

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

CON EDISON (Continued) **1019907249**

storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	5/8/14: Mahat A TTF letter was sent to the following address: Dora Genao Pond Place Properties LLC 1325 Castle Hill Ave Bronx NY 10458 May 8, 2014 Also, a voice message was left to Ms. Raphel (7187926200) to call back with more information about the leak. 8/19/14: Mahat A phone message was left to Rafel Ravera to call back with more information. 8/19/14: Mahat Receivesd a call from Dora Genao and mentioned that the tank was empty during the test. They are on process of removing the tank and moving to the gas. The tank removal process will take place in 9/4/14. DEC Mahat's email add was provided to Genao so she can send a narrative about the progres on the spill. 8/20/14: Mahat An email was recieved from Dora Genao confirming that the tank removal process is going to take place on 9/4/14. Here is her email: Dear Mr. Mahat, The following is to confirm our conversation of yesterday, that Riteway Tank Maintenance will be removing tank at 2805 Pond Place on September 4th, 2014. If you have any questions, please do not hesitate to contact me. Sincerely,

APT BUILDING (Continued) **U003393590**

12/09/14: Mahat e/c : An email was sent out to Ms. Genoa requesting for a tank closure request. DEC is waiting for a clsoure report. 12/15/14: Mahat A tank removal letter was sent to the Department and it is uploaded on D2. An email was sent out to Ms. Genoa: Ms. Genao, Thank you for the paper work. I have updated my database with your attachments. In order to close the spill case I need a report. A letter report must be submitted to the Department including: site plan, cause of the release, summary of cleanup activities, site observations, post-excavation sampling results and contaminated material disposal manifests. The report must be submitted to this office as soon as possible, referencing the spill case number (see above) and the site address. DEC is waiting for a closure report. 12/15/15: Mahat DEC Mahat received an email with report from the retained contractor. Email: Hi Tosh, There was a failed tank test (ullage dry portion fail). We installed temps, pumped and clean out tank but no contamination was present. We scrape and washed tank, then removed it. The concrete floor was sound and solid, there was no contamination present (I apologize, I only have pre-removal pictures, but you can see the excellent condition of the floor). We had submitted a proposal for a new tank installed, but was not awarded any subsequent work. They may have gone to gas, we do not know. The clients contacted us in March of 2015 to remove the temp tanks. The clients did not pay for a closure report. If you need any additional information, let me know. I d hate to charge them for nothing Thank you in advance, David Chan Riteway Tank Maintenance Corp. 700 Hicks Street. Brookllyn, NY 11231 tel - 718-855-7272 fax - 718-855-7244 All report has been uploaded on D2 for reference. Tank is removed and no visible contamination on the concrete below. Building is running on natural gas. Based on the report, the Department does not warrant any further investigation on the spill case. Case is closed on NYSDEC Spill Database.

Remarks: tank test failure

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region: 2
DER Facility ID: 290223
Latitude: 40.8633590
Longitude: -73.8829260
DEC Memo: send TTF letter 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 12/27/05 TTF letter is send to: Mr. Emir kajoshi 200 St & Northern Blvd bronx, NY 10485 PH: 718-817-8002. A message is also kept for him to inform DEC the present status of that case. 1/6/2006 Sangesland spoke to Marc Cupkovic of NY Botanical Garden. He said the tank was repaired and retested at the time by Petroleum Tank Cleaners. Mr. Cupkovic has been in touch with PTC and PTC will submit a letter with all backup data to the DEC within the next few days. 01/30/06. Feroze. The old tank, oil in tank and contaminated soil were removed in a legal manner by Mercury tank & Pump , 233 Nevins street, Brooklyn. Two 275 gallons tanks were set at that site.They had taken five soil samples from that area and were tested for VOC & SVOC. All analytes were within accetable limit. They applied for registration for the new two tanks. The spill is closed.
Remarks: WAS A BELOW LIQUID LEAK.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	10/26/2005 Followup call to Petroleum Tank Cleaners says the spill was more than 5 gallons. Spill is outside of the building in a gravel area. They took 13 or 14 55gal drums of impacted gravel out and are now digging out the soil. PTC will take end point samples and then send a report into Jie Zhao. 03/06/06 Feroze Received a letter and a picture from PTC. They mentioned that soil contamination was around the fill line only. The fill line went to a concrete pad and there a 4 sand layer on the top of the concrete pad. Only that sand was contaminated. PTC removed all the contaminated sand. Concrete pad was not impacted. From the photo it is seen that the concrete pad is clean. The spill is closed.
Remarks:	WOULD LIKE A CALL BACK, HAS BEEN DRUMED UP.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Spill closed on 11/18/2005. The owner of the property claimed that he has no previous knowledge of this spill. They bought the property about a year after the spill occurs and there was no UST installed in the basement of the building. They installed a new AST at the property and it's working properly. By J. Perez on 11/18/05.
Remarks:	TANK FILLED TODAY AND TANK WHICH IS OLD HAS LEAKED. MATERIAL CONFINED TO BASEMENT. NO CLEANUP IN PROGRESS YET.

DEC Memo:	8/15/2012 TTF Spill Case transferred to DEC Tim DeMeo. 03-31-2015 - V. Brevdo As per discussion with Chief of Spill Response Section, this Tank Test Failure Spill Case is transferred to Remediation Section B for management of the project. Spill Case is further assigned to Ainura Doronova. VB 04/26/2015: Looked in PBS database for the information on a contact person. According to the files it is Michael Torres of Fordham Terrace Apartments Corp. Phone number is: (212)634-8900. Will send a letter. AD 05/01/2015: Issued and sent a certified TTF Letter (# 7010 0290 0000 9758 3407) to Mr. Michael Torres. Response is due June 1, 2015. AD 06/07/2016: Received a message from Cris of Marlboro Tank (718)975-3963. called and left a message for him with the receptionist. AD 06/10/2016: Received a call from Cris. He did some work at the site and collected soil samples. He said that the soil samples are very contaminated. He will submit the report next week. Tank is not removable. Suggested after reviewing the report to have a meeting where all remedial approaches

UNDERGROUND TANK - TTF (Continued) **S111063878**

could be discussed. Cris agreed to this plan. AD 02/08/2017; Called and spoke with the receptionist from AllBoroTank and left a message to Chis. She passed me back message rom him to contact the managing company. Tried to contact Mr. Torres with no success. Left a message on his company voice mail box. AD 02/14/2018: Received a call from Sidney Lane (718)-365-3062, e-mail: sidalone6@gmail.com). He is a president of COOP for the property. He wanted to know how to proceed with the case closure. Explained what type of documents need to be submitted and where to get them. AD 05/10/2018: Received a phone call from Mr. Lane. He informed me that they acquired an environmental consulting firm called Brookside Environmental, the contact person is Richard Taylor, his phone: (631)-608-8810. Mr. Lane asked how long will it take to get a permit for the spill cleanup. Asked what type of work their consultant proposed to do. According to the contract it is UST removal and soil excavation. Informed Mr. Lane that getting a permit from DOB will take some time. AD Called and spoke with Mr. Taylor of Brookside Env. regarding the site. Gave him my contact info and requested submission of the work plan for review and approval. AD 05/15/2018: Received the following e-mail from Mr. Galdun of A.R.T. Inc.: Ainura, As requested, see the attached work plan for the UST removal and post-removal site assessment work at the 2661 Marion Avenue property. Brookside Environmental (UST removal contractor) should soon be receiving the NYCDOB permit to conduct the work. We will notify you of the start date well in advance. Regards, Frank Galdun ART, Inc. 646.542.3465 Will review. Uploaded the work plan and previous reports to DDocs. AD 05/23/2018: Reviewed the report. It states that ART has reviewed a document titled Tank Spill Soil Investigation Report , for this spill, prepared by Associated Environmental Services, Ltd. in November 2017.(the AES Report). The AES Report states that a contractor was retained to clean the interior of the UST in May 2016; the extent of the interior cleaning/product removal is unknown. The AES Report further states that the UST cleaning contractor collected 4 soil samples through the bottom of the UST for laboratory analysis in 2016. ART s review of the laboratory analytical data pertaining to these 4 samples, shows that elevated concentrations of VOCs and SVOCs associated with petroleum fuel exists in soil beneath the UST. The AES Report states that a drill rig was used to install 7 soil borings near UST on November 26, 2017. The AES Report indicates that a total of 12 soil samples were collected from these borings for lab analysis. Bedrock was encountered at all borings at roughly 12’ bgs, and that no water-bearing deposits were encountered. Laboratory analysis of the soil samples (collected at depths ranging from eight feet to 12 feet bgs), show a substantial decrease in the number of detected VOCs and SVOCs at levels exceeding regulatory limits, as well as the magnitude of contaminant concentrations in comparison with those reportedly detected in the samples collected from directly beneath the UST in samples collected in 2016. The soil quality data from the AES Report suggests that localized soil impact exists as a result of the petroleum release. The AES Report includes a site plan with location of the UST; it also includes all soil sample laboratory analytical data gathered by both the investigation described in the AES Report and by the contractor retained to clean the interior of the UST in 2016. SCOPE OF WORK: According to the ART, the best and most efficient means of addressing the contamination caused by the UST is to excavate and properly remove the UST from the site. Contaminated soil will be excavated and removed for proper off-site disposal as

UNDERGROUND TANK - TTF (Continued) **S111063878**

necessary and as feasible. Based on a review of the AES Report, it appears that the UST is resting on bedrock and no water-bearing deposits above bedrock exist. This work includes the tasks necessary to properly remove the UST, monitor the UST removal, excavate petroleum-impacted soil as necessary, conduct post excavation soil sampling and laboratory analysis, and to submit the necessary reports to NYSDEC to gain closure of the active spill case. ART shall notify NYSDEC of the UST removal schedule at a minimum of one week prior to commencement of the work described herein. All necessary permits for the removal work are currently being obtained from the New York City Department of Buildings. A qualified contractor shall be retained to employ mechanical equipment to first expose the top of the UST. The contractor shall then use a vacuum truck to remove any residual fluids that may be present. The UST will be rendered vapor free, opened and manually cleaned. UST removal will then occur. Contractor will provide all manifests for disposal/recycling of the UST and any waste fluids generated during product removal and interior cleaning. All piping associated with the UST shall also be removed. Upon removal of the UST, contractor will be directed by ART to excavate soil that is visibly impacted by petroleum. The extent of this activity shall be based on physical evaluation of soil condition and on the information contained in the AES report pertaining to soil quality. ART shall also utilize a photoionization detector (PID) as an aid in soil quality field screening. Soil samples will be continuously evaluated with the PID to establish volatile organic vapor concentrations. Any soil exhibiting PID readings above 10 ppm shall be removed. All excavated and petroleum impacted soil will be stockpiled on-site by first laying down 6-mil; polyethylene sheeting (soil will be placed on this sheeting. The soil stockpile will be covered with 6-mil sheeting at the end of each work shift. Upon completion of contaminated soil removal, waste characterization sampling and laboratory analysis will be performed to meet soil disposal facility permit requirements. Impacted soil will then be transported from the Site for proper disposal at the licensed facility. ART will perform the following: - Perform post excavation soil sampling and analyses in accordance with NYSDEC regulations and guidelines1. Following excavation of the UST, removal of piping and removal of contaminated soil, soil samples will be collected from each side-wall and from the excavation bottom (total of up to eight samples) for laboratory analysis. All soil samples will be analyzed under EPA Method 8260-VOCs and EPA Method 8270: SVOCs. No composite samples will be collected as part of the post-UST removal assessment activities. The specific sample collection locations are to be determined and will be dependent upon the size and configuration of the open excavation. If, deemed necessary, more than eight soil samples may be collected for laboratory analysis. - Perform continuous observation and documentation of contaminated soil removal activities. - Provide all necessary documentation after the completion of all tasks (i.e.: waste manifests, trips tickets for the disposal/recycling of regulated wastes). - Prepare and submit a UST Closure Report to NYSDEC that includes all pertinent documentation AD Called and asked Mr. Galdun regarding correct contact information for his client. He promised to submit it by e-mail. AD 05/31/2018: Received the following e-mail from Mr. Galdun: Ainura, below is the attached owner name and point of contact as requested. Regards, Frank Galdun 646.542.3465 Fordham Terrace Cooperative Apartments Corp. c/o Domenick J. Tammaro Spolzino, Smith, Buss & Jacobs, LLP 733 Yonkers

UNDERGROUND TANK - TTF (Continued) **S111063878**

Avenue Yonkers, New York 10704 914.476.0600 x 4121 914.476.0614 AD 06/05/2018: Called and spoke with Mr. Tammaro. He is an attorney for the First Service Residential Corp. (FSR) and was involved in contract preparation. He gave the contact in for FSR. Steve Hyatt FSR 622 3rd Avenue New York NY 10017 718-943-9272 e-mail: steve.hyatt@fsresidential.com Called Mr. Hyatt. he is away on the seminar till 06/08/2018. AD 06/06/2018: Called and spoke with Mr. Lane. He advised to send an approval letter to Mr. Hyatt and copy to him. Issued and sent the WP approval letter. AD 08/28/2018: Received the following e-mail from Mr. Galdun: Ainura, the contractor has exposed the UST and is in the process of cutting it apart for removal. The tank can't be removed whole since the only access to the rear of the building is a narrow tunnel/alley. The tank was drained and cleaned before cutting operations began. I will be on-site this Thursday at 1pm to evaluate soil condition and discuss the next steps with Brookside Environmental (UST removal contractor). I will keep you apprised of progress as we move forward. Regards, Frank Galdun 646.542.3465 Sent Mr. Galdun the following e-mail: Dear Mr. Galdun, Please make sure that the UST removal process will be photo documented at every stage of its removal. Detailed pictures should be attached to the UST closure report. Please remember that end-point soil samples should be collected according to the state requirements. If groundwater is encountered in the excavation pit during the tank removal, a groundwater grab samples should be collected for laboratory analysis. Thank you. Regards, Ainura Doronova - Environmental Engineer AD 09/05/2018: Called and spoke with Mr. Galdun regarding site progress. He said that the tank is sitting on the bedrock. They had excavated contaminated soil around the tank and collected the soil samples. No GW was encountered. They are still cutting and removing the tank. Requested to update me on the progress. AD 10/21/2018: Received an e-mail from Mr. Galdun with a link to Dropbox for the report. AD 11/14/2018: Was not able to open the file. To inform Mr. Galdun. AD 11/20/2018: Spoke with Mr. Galdun. Asked to re-submit the report. later in the day received the PDF copy via e-mail. Will review. AD 11/21/2018: Reviewed the UST Closure Report. The report states that UST removal work occurred at the site between August 16, 2018 and September 7, 2018. A total of 2,945 gallons of petroleum and water mixture was removed from the UST by a vacuum truck and transported off-site for disposal. The UST and associated piping were removed and transported to a scrap metal yard for recycling. After the UST was removed, a total of 87 tons of petroleum-impacted soil were excavated and transported for disposal to the Clean Earth facility. in New Jersey. A total of ten post-excavation end-point soil samples were collected on August 31, 2018. Of the ten post-excavation soil samples collected, only one single sample was reported by the laboratory to contain VOCs and SVOCs at concentrations slightly exceeding NYS SCLs. No water-bearing deposits were encountered during excavation activities and competent bedrock was encountered at the bottom of the UST excavation in its entirety. The post-excavation soil analytical data indicate that only a residual level of petroleum-impacted soil remains at an isolated and localized area within the site, which could not be removed due to the structure integrity concerns. Based on the results of soil data, the consultant requested closure of the spill case. AD 11/27/2018: Case closed. AD

Remarks: TANK TEST FAILURE

DEC Memo:	Piper responded to the site with ECO. Upon arrival it was noted that spill was much smaller that what caller described. No spill ot vent. It occurred at fill box. 5 gallons spilled along curb and was cleaned with speedy dry, not water. I spoke with Empire fuel and stated that we need to know about even the little things as this did not warrante state rescources. Based on info .this spill is closed.
Remarks:	Caller states an unknown oil company was making a delivery at above

STREET (Continued) **S102960502**

address when the oil sprayed out of a pipe onto callers car. Caller states it is a substantial amount and the oil company is washing it down a sewer. Sean Marion from DEP called hotline immediatley after this caller to report same. DEP's caller was a Mr. Garcia.

DEC Memo:	3/7/08 Called maria Martino (718)798-5595. She put Tony (also from 276 Bedford Realty) on conference call. They told me the tank test was done by contractor of a prospective buyer. They do not believe tank failed. Explained that tank test needs to be addressed by property owner. Sent ttf letter to: Maria Martino 276 Bedford Realty Corp. 3092 Hull Avenue Bronx, NY 10467 Also faxed letter and spill report to (718)519-7392. bf 3/10/10 Yesterday, received message from Violet. Phone:(917)324-0636. She requested written explanation of what is required. I faxed her the 8/13/08 2nd Notice letter. Fax:(914)966-0021. Also sent a separate fax of the 3/7/08 letter that initially requests letter or report to close the spill. She faxed passing ttt report to me dated 3/17/08. She called me back and styated that she contacted New York City Tank testing inc. and they

(Continued) **S109064170**

will provide her with documentation, but they need a few days to locate their records. If she does not hear from them in a few days, she will contact me either Friday or Monday. bf 3/12/10 Spoke to A. Wachsler. Tank was repired with a patch and passsed tank only test. Called Violet told her to test piping or test whole tank sytem. bf 4/16/10 Received fax of passing tightness test report. Tested on 4/5/10. NFA. bf

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY The site is under NYCDDC Consent Order. It was remediated by Shaw,OBK and URS. Application of ORC successfully remediated the dissolved phase groundwatewr contamination. Since the application of ORC,monitoring wells have exhibited contaminant concentrations below NYSDEC guidelines for two consecutive sampling rounds. URS recommended discontinuation of groundwater monitoring and requested closure of the spill. The request was granted by Alex Zhitomirsky on February 3, 2004. The spill was originally assigned to Koon Tang and closed by Koon Tang in 1990

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY See also spill # 9507558. TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO I. ISLAM 4/25/05- The site is under remediation by URS Corp. & O'Brien-Kreitzberg (OBK). Reviewed the quarterly monitoring report(Oct.-Dec./04).Quarterly sampling results of monitoring wells (3 out of 5)still exhibit minor exceedances of one or two items of VOCs. One or two more sampling rounds to go to consider closure of the spill case.- II 7/27/05- Reviewed the monitoring report - 1st Quarter, 2005. Recent GW samplings from the three of the four monitoring wells still exhibit minor exceedances of MTBE only. On March 10/05, URS installed ORC socks in these wells to enhance biodegradation of dissolved phase petroleum contaminants. Routine monitoring of wells will continue until compliance is achieved by all the monitoring wells for two consecutive sampling events. Installed the report in the eDoc folder.- II 10/26/05- Reviewed the 2nd quarterly monitoring report dt. Sept. 26, 2005. GW sampling results from two monitoring wells still show persistently low level contaminants exceeding NYSDEC water quality criteria (120 ppb & 128 ppb). Routine monitoring will continue.- II 11/7/05- Reviewed the 3rd quarter/05 site monitoring report and a special report prepared in Nov/05 for spills potential to close out. The latest GW sampling results from the three monitoring wells exhibit no exceedances of NYCDEC GW Quality Criteria for two consecutive sampling events. Based on this results and in discussion with J. Kolleeny, the spill is closed and NFA letter issued.- II

DEC Memo:	11/1/19 - Kim - Desk Duty - Tank Test Failure. No petroleum odor was noted; source of tank test failure may be one of the tank's fittings. Tank in located in the courtyard and is enclosed in concrete. Church will have to have the top of the tank exposed and retest the tank. Spill assigned to Hiralkumar Patel. 11/18/19-Hiralkumar Patel. alternate address: 2922-2930 Valentine Ave, 231 East 199th St no PBS or other spills found. St. Samuel Cathedral Church of God in Christ **property owner** DEC Kim sent letter on 11/01/19 to Allen Manning. Allen Manning Ph. (646) 294-9364 email: godschild7449@aol.com 01/27/20-Hiralkumar Patel. 1:25 PM:- left message for Mr. Manning. 04/22/20-Hiralkumar Patel. 10:50 AM:- spoke with Mr. Manning. he mentioned that a leak was noted in the remote fill line. All Boro closed the leaking fill line (that runs beneath the sidewalk) in-place and installed a new line. informed Mr. Manning that the Department requires investigation along the former leaking fill line and remediation of any petroleum contaminated material associated with the leaking fill line. Mr. Manning provided different email address and requested email with requirements. Elder Manning Ph. (646) 294-9364 email: godchild755@gmail.com 11:01 AM:- left message for Milton at All Boro. 11:29 AM:- sent email to Mr. Manning. informed him that the department requires 1) investigation along the former leaking fill line for any petroleum release, 2) remediation of any petroleum contaminated material, and 3) tightness testing of the current tank system (including piping) to confirm no active leak in the system. email copied to Milton and Chris (All Boro). 2:10 PM:- received email from Milton. he mentioned that All Boro has tested the tank itself and found tank in good condition and not leaking. he also stated that the client has mistakenly reported installation of a new line and abandonment of previous line. the work is still in progress. All Boro will update once the new aboveground line is installed at which point a full system tank test will be conducted. All Boro is preparing a crew to go back to location to perform investigation along the former fill line. 04/23/20-Hiralkumar Patel. 12:48 PM:- sent email to Milton. asked him to submit copy of tank only test result to confirm its integrity. also inquired him about integrity of supply/return/vent lines. asked him to provide schedule for investigation/remediation along the former leaking fill line. email

ST SAMUEL CATHEDRAL CHURCH (Continued) **S125358713**

copied to Chris and Mr. Manning. 1:06 PM:- received email from Milton including a tank test result dated 11/21/2019. but the result is confusing. page 2 of the result states tight tank and system, but page 3 says technician tested an empty tank without fill line. 1:18 PM:- sent email to Milton and asked him to update page 2 of the test result with correct information (tank only or tank with supply/return/vent line). email copied to Chris and Mr. Manning. 04/28/20-Hiralkumar Patel. 10:49 AM:- sent email to Milton and inquired him update on revised test result and project status. email copied to Chris and Mr. Manning. 05/04/20-Hiralkumar Patel. 9:56 AM:- sent email to Milton and inquired him update on required revised test result (test conducted on 11/21/19) and project status. email copied to Chris and Mr. Manning. 10:29 AM:- received email from Milton stating that they are still waiting for payment and signed proposal to begin work. 05/05/20-Hiralkumar Patel. 7:20 AM:- received email from Milton including a revised result of tightness test conducted on 11/21/19. the tank was emptied and cleaned. after plugging the fill line inside the tank, the remaining tank system was tested tight confirming leak in the fill line. as per the report, the 1,080 gal tank buried 1.5 ft below the concrete floor, with the tank's invert at 5.5 ft. 9:20 AM:- received email from Milton including copy of result for tightness test conducted on 10/07/2019. the 1,080 gal UST system was tested and failed due to possible wet leak. available test results show that the tank system had failed on 10/07/2019, but the spill was not reported until 11/01/2019. ----------
05/15/20-Hiralkumar Patel. 10:34 AM:- received video call from Lopez (All Boro) from site. he mentioned that the oil tank is located underground in a courtyard behind the building. during initial system test, they got mixed result as dry and wet leak. upon further investigation, crew noted leak in a remote fill line (source of dry leak) and petrometer gauge (source of wet leak). All Boro has replaced both fill line and gauge line. after repair, the tank system was retested and it passed. Lopez mentioned that the remote fill line runs under the courtyard surface for about 15 ft before entering building basement, then it runs aboveground in basement for about 45-50 ft before crossing front foundation wall to the remote fill port. the remote fill port is in sidewalk by the wall (not by the curb). during call, Lopez screened soil from beneath the fill line location and noted 1.1 ppm. asked Lopez to send email including pics of open excavation (result of line replacement work) in the courtyard, remote fill port and result of soil screening at different locations. 05/18/20-Hiralkumar Patel. 7:12 AM:- received email from Milton including tank system test result. the tank system was tested tight on 05/14/20. 12:34 PM:- sent email to Milton and asked him to submit site pics (excavation and remote fill port area) and soil screening results as discussed with Lopez on 05/15/20. email copied to Mr. Manning. 12:42 PM:- received email from Milton including site pics and PID screening results. case closed based on review of available information. 1:06 PM:- sent spill closure letter to Mr. Manning. letter emailed to Mr. Manning and Milton.

DEC Memo:	TTF - off hours - non PBS - assigned to Off Hours Rep - Hasan Ahmed Church hired Rapid Environmental to do repair work. TTF letter sent to: Mr. Allan Manning St. Samuels Cathedral 2930 Valentine Ave Bronx, NY 10458 5/11/10-HRAHMED-Received call from Don of ATS. As per him, they repaired the tank and tested the tank. Again it failed. They

TTF- BUILDING (Continued) **S110140578**

will repair the tank again and retest. Contact person for the facility is Allen Manning (646 294 9364). 5/20/10 Sangesland received a call from Don at ATS. Once again they retested the tank and it failed again. Repair work is still needed. 8/24/2010 - Sangesland spoke to the pastor of the church. He said his plumber made additional repairs, there was no contamination found and they hired a different company to retest the tank (it passed!) Sangesland asked him to mail a copy of the passing tank test along with a letter outlining the repairwork done and a statement that no contamination was found. 10/27/11 - Austin - Spill Transferred from Ahmed to Rahman - end Spill case is closed administratively as based on DEC phone conversation with the pasture of the Church.

Remarks: TANK TEST FAILURE.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 10/10/95: This is additional information about material spilled from the translation of the old spill file: TTF. 11/01/01: SPILL# Re-assigned from Battista to J. Vought. Closure Report-10/16/01 L&C Burner Service(Brien Mackey 718-842-9000). During a tank test it was found that the tank did not hold air. The tank had been previously scheduled to be relined. The tank was pumped and cleaned. A new lining was welded and installed . Report recommends spill be closed. 11/2/2001-Vought-Spoke with Bernie Bauer and requested borings on each side of UST to a depth of at least 10' below tank invert. 11/13/2001-Vought-Spoke with Rene Lewis(Eastmond & Sons) who said that he will find boring contractor. Tank is a 4000-gallon #4 fuel oil tank 4' below grade in the basement of site. Consultant will be Parker Group(Andre Parker 718-325-3198). Vought sent letter requiring four soil borings to at least 15' below grade. 12/17/01-Vought-Spoke with Jim Romeo(718-857-1800) who is consultant who will peform borings in basement with a tripod to a depth of 18'. UST was relined and is currently is use. Romeo will submit proposal to DEC which will be received by 12/24/01. 12/26/01-Vought-Received fax from Don Carlo Environmental(Romeo Santos 718-857-1800). Fax included soil analyticals from four soil borings. Strong petroleum odors were noted and elevated HNU readings on all the samples collected . Report recommends additional borings for vertical and horizontal delineation, groundwater samples and well installation. 12/26/01-Vought sent letter to Santos requiring: 1)Site plan 2)boring logs 3)soil analyticals 4)proposed location of additional delineation borings 5)proposed depth of delineation borings 1/22/01-Vought-Spoke with Bernie Bauer and UST was taken out of service. Another tank test will be performed. Bauer who is owner hired Don Carlo environmental. Fax from NYC Tank Testing Inc(Bernie Bauer 718-731-7011)-3/8/02. Fax included boring logs for four soil borings and analyticals. Analyticals show 43400ppb napthalene(B1), 41000ppb 1,2,4-Trimethylbenzene(B1), 70118ppb napthalene(B2), 24960ppb napthalene(B3) and 45608ppb napthalene(B4). 10/3/2002-Vought-Subsurface Investigation Report(Northeast Environmental Dwayne Monaco 914-777-1930). Five geoprobe borings performed around perimeter of UST and collection of soil samples. Oil

2966 BRIGGS AVE (Continued) **S100781912**

contaminated soil was observed to extend down to the hard packed clay layer at the 9-10' depth. Groundwater in probe location #1 at depth of 8'. Soil analyticals show 31000ppb napthalene(S1), 47000ppb napthalene(S2) and 78000ppb napthalene(S4). Northeast recommends excavation of soil and in-situ remediation of soils that are unable to be recovered. 6/23/2003-Vought-Received call (Ken Friedman-Shaindel Environmental 914-762-2296 and cell 914-439-7493) who is working for Wasserman Managment (real estate management co.). Ken will contact previous environmental consultants. Vought faxed latest DEC correspondence (12/01) requiring additonal delineation. Free product at site. 9/12/2003-Vought-Spoke with Ken and owners will do required work due to bank loan. Ken will drill boring through bottom of tank and through tank pad and around tank sides to obtain water and soil sample. UST is empty. Ken will fax DEC boring location. 12/3/2003-Vought-Reviewed proposed workplan from Shaindel Environmental (Ken Friedman-914-762-2296). 3000-gallon tank is empty and not being used. Proposal for the collection and analysis of four soil and four groundwater samples. Core drilling will be conducted around the perimeter and through the bottom of the tank. Drilling will proceed to a depth of 25' or until groundwater is reached. Vought called Friedman and explained that two previous drilling events were performed and analyticals indicated soil contamination. Vought faxed copies of previous analyticals to Friedman. Friedman will call vought back with owners info for workplan review letter and will also resubmit plan for excavation versus further investigation. 2/10/04-Vought-Office visit by Friedman. Excavation will be performed and endpoint samples and analyzed for 8260 collected after removal of contaminated soil by 3/15/04. Groundwater sample will be collected. New UST on-site. 02/09/04 As per Austin's request, spill reassigned from Vought to Sawyer. Rommel 10/29/04 - Sawyer - Received four clean samples and a supporting diagram. Ken wants to fill tank with concrete and close in place. No further action needed. Closed.

Remarks: WILL DIG UP LINES - PUMP OUT TANK.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 1/22/2003-Vought-Soil contamination letter sent by mail and by fax by Vought on 1/22/03. 10/14/2003-Vought-Spoke with R. Austin (DEC) and spill transferred to Vought due to gasoline contamination and prior history of correspondence with consultant. 10/15/2003-Vought-File review by Vought: Phase II Site Investigation Report and Reduced Deliverable Analytical Results-January 2003-AKRF (Amy Sivers-914-949-7336(ph) 914-949-7559(fax). Surrounding area is residential/commercial. A Phase I was performed in Sept 2002 which found that gasoline stations were present on the southern portion of the site since the early part of the twentieth century , including 24 gasoline USTs, one waste oil UST and two fuel oil USTs. No evidence was obtained to confirm that these tanks were removed from the ground or properly closed in place. The northern portion of the site was occupied by Fordham Hospital which had an ambulance garage in the south-central portion of the site. Fordham Hospital was demolished and grade was raised by 8'. Groundwater present at 8-11' below grade. Bedrock present at 2-8' below grade on the southern portion of the site and dips to a depth of 30'along a depression in the center of the site running northwest-southeast. Phase II by AKRF consisted of electromagnetic survey at the former gasoline station and ambulance garage and installation of 27 soil borings and four monitoring wells. Monitoring wells collect water from the perched groundwater system on top of the bedrock surface . GPR survey shows high amplitude anomaly in the area of the gasoline USTs. Soil analyticals show 51000ppb benzene(FU-SB-4 .5'-1'), 290000ppb toluene(FU-SB-4 .5-1'), 34000ppb napthalene(FU-SB-4 .5-1'), 69000ppb chrysene(FU-SB-15 2'-5'), 110000ppb phenanthrene(FU-SB-15 2-5'), 170000ppb fluoranthene(FU-SB-15 2-5') and 19000ppb chrysene(FU-SB-21 2'-4'). Groundwater analyticals show no TAGM exceedances eventhough wells are not located in areas of highest soil contamination. Report recommends 1)removal of all gasoline USTs and associated petroleum contaminated soil followed by collection of endpoint soil samples. 10/15/2003-Vought-Spoke with Amy Sivers and work has not been performed because owner has not

FORDHAM UNIVERSITY (Continued) **S102671806**

signed contract as of yet. The address of the responsible party is Tony Aloi, Fordham University,
441 East Fordham Road, Bronx, NY 10458. Vought sent letter to Aloi 1)approving of UST excavation
2)installation of one shallow and one deep monitoring well at SB-4 to monitor perched groundwater
and regional groundwater 3)notification of excavation date and collection of endpoint soil samples.
5/14/04-Vought-Review of Underground Storage Tank Removal and Spill Closure Report received on
3/5/04 from AKRF (Andrew Rudko). A total of fourteen (550-gallon) gasoline USTs were removed and
207 tons of impacted soil were also removed. The bottom of the excavation was competent bedrock .
Two monitoring wells were installed in the area of the release. Planned developement at the site
included construction of a multi-story covered parking facility. In the portion of the site
containing buried USTs, bedrock is present at depths from .5' to 14' below grade. The depth from
grade to perched groundwater varies from 12 to 13 feet in the northeastern portion of the site to 2
to 3 feet in the southwestern portion of the site . Removal of fourteen (550-gallon) gasoline USTs
(twelve USTs in one tank field and two additional USTs located immediately east adjacent to the
concrete tank vault. Associated piping appeared free of holes but could not be traced as it ran
offsite under the Crotona Avenue sidewalk. Excavation performed to bedrock. Five endpoint soil
samples were collected. Based on previous geotechinical studies, a bedrock valley exists in the
center of the sit, running northwest-southeast . Monitoring wells were installed (one deep bedrock
well and one perched groundwater shallow well). One well was dry resulting in collection of one
sample. A total of 207 tons of impacted soil was removed. Soil analyticals show no TAGM 4046
Required Soil Cleanup Objective exceedences. Groundwater analyticals show 6.2ppb
1,3,5-trimethylbenzene(MW25), 13ppb napthalene(MW25) and 33ppb sec-butylbenzene(MW35). AKRF
recommends spill closure. DEC requires: 1)excavation of contaminated soil at remote fills under
Crotona Avenue 2)well installation at Crotona avenue sidwalk if soil contamination is found after
utility inspection/excavation for adjacent Empire City Subway utility. Vought called Andy Rudko
(AKRF) to explain above requirements and sent letter requiring the same. 2/2/05-Vought-New file
review by Vought: Letter from AKRF(Mohamed Ahmed)-6/15/04. As you requested soil around and under
the piping associated with the former tanks that run offsite udnet the Crotona Avenue sidewalk will
be investigated. If soil contamination is encountered upon opening the sidewalk a monitoring well
will be installed to determine whether the petroleum contamination

FORDHAM UNIVERSITY (Continued) **S102671806**

impacted the groundwater .
Additional Sampling Data-Piping Removal (AKRF Ahmed)-September 2004. Fourteen 550-gallon gasoline
USTs were subsequently identified and removed in December 2003. Three segments of 2-inch diameter
metal piping were encountered on the southeastern side of the former excavation... Piping was
removed and was located 1 foot below grade situated on or near the bedrock surface . One endpoint
soil sample collected and shows no TAGM 4046 Required Soil Cleanup Objective exceedences. Report
requests No Further Action. Vought called Andy Rudko and left message to see if high SVOC
contamination at FU-SB-15 (former ambulance garage)from Phase II was addressed.
2/7/05-Vought-Received email from Rudko. There is indeed a high level of PAHs in the 2 to 5 foot
sample from SB-15. Like most of the other soil on the site, this is debris from the demolition of
the old Fordham Hospital. Judging from the boring log, the sample was mostly brick and had no
staining, odor, or PID readings. There could have been some asphalt, waterproofing, or coal mixed
in to account for the PAHs -- there's no evidence of petroleum contamination. All this debris on
the site is being excavated for the construction and is being disposed of at a C&D facility. In
addition, the city has required that we do the excavation work in accordance with a construction
health and safety plan to minimize any dust or other emissions from the operations. I hope this
takes care of this final issue and we can get the spill closed prior to the start of construction.
2/10/05-Vought-Called Rudko for copy of excavation plan. Rudko said he will email excavation plan
and that site grade was raised 8' from building demolition at location FU-SB-15. Vought received
email and responded with please provide the following in a letter with signature:1)excavation depth
at location of FU-SB-15 2)fate of soil removed (disposal procedures)3)endpoint sample collection(if
any). 2/11/05-Vought-Received letter from AKRF Rudko. The soil in this portion of the site will be
excavated to a depth of 10 to 15 feet below the existing grade. The excavation material will be
disposed of at a facility permitted to receive construction and demolition waste. . Spill closed by
Vought.

Remarks: results of a soil sample

DEC Memo:	01/29/18 - Lakhani Tank tightness testing was performed for the 1500 gallon #2 fuel oil AST encased in concrete. The tank failed with a dry leak due to a crack on top of the tank. East Coast Environmental (845-348-6355) will be on-site tomorrow to retest and make repairs. The buyer is represented by Teconic Investment Partners. PBS #2-153389 Current Owner: NYSANDY12 CBP3 LLC 1075 Gerard Ave Bronx, NY 10452 TTF sent to: SimplyBetter Apartment Homes 1075 Gerard Ave Bronx, NY 10452 Assigned to DEC Zhune. 3/9/18-James Wilson from East Coast emailed the report dated March 9, 2018. As per the letter On January 29, 2018, one (1)aboveground storage tank (AST)failed to pass a precision tightness test. On February 27, 2018, East Coast Environmental services of New York (ECES)was on site to performed an inspection of the AST andiscovered the fail tank test was due an improperly sealed manway located on the tank top. (ECES)repaired an sealed the mamway; the tank system was retested and passed on March 1, 2018. The result of the failing and passing tank test are

(Continued) **S121464547**

enclosed. No petroleum impacted soil or staining was observed during tank repair activities. Based on the preceding this spill is closed.
Remarks: test failure

DEC Memo:	9/4/2018 - Feng - Duty Desk. Spoke to Abraham Wachsler of NYC Tank Testing. He could not get any pressure during a tank test. It is a 5,000-gallon UST for #4 oil. He suspected maybe open line somewhere. They are exposing and isolating the tank and the line to do the retest. DEC has sent them a letter requiring the test, the deadline is tomorrow. Staff required updates to be sent upon the retest. Talked to DEC Leszek Zielinski of PBS unit. PBS is doing routine requirement of tank testing. No need for site/tank inspection. PBS 2-403962 Abraham Wachsler NYC Tank Testing 646-321-2876 ABE@NYCTankTestingInc.com 09/12/18-Hiralkumar Patel. 2:48 PM:- received message from Abraham from NYC Tank Testing. 09/13/18-Hiralkumar Patel. 12:30 PM:- spoke with Abraham. he mentioned that the tank is underground inside the building. today they exposed the tank top and noted holes in tank top. based on this findings, owner has decided to close UST in-place. temporary tanks are being installed and the UST will be cleaned tomorrow. informed Abraham that the department requires subsurface investigation along/under underground portion of entire tank system (including piping). he is planning to collect samples through tank's bottom. asked him to investigate along underground section of piping also. asked him to provide schedule for subsurface sampling so site inspection can be scheduled. alternate address: none PBS #: 2-403962. as per PBS record, the site has one (1) 5,000 gal #4 oil UST, in-service, installed in Dec. 1929. other spill #: 9911378 was reported on 12/29/1999 as 2 gal unknown petroleum was found in

RESIDENTIAL (Continued) **S122878531**

manhole. case closed. DEC Feng sent a letter on 09/11/18 requiring submission of tank system test and spill cleanup report within a month. 12:53 PM:- spoke with Mr. O'Connell and informed him about discussion with Abraham. Mr. O'Connell confirmed receipt of letter dated 09/11/18. Olin Bark Realty Co., Inc. **property owner** c/o Patrick O'Connell Vice President PO Box 817 Yonkers, NY 10704 Ph. (718) 324-0886 email: pocjja@aol.com 10/05/18-Hiralkumar Patel. 10:47 AM:- received call from NYC Tank Testing and scheduled a site inspection at 1 PM on 10/15/18 for subsurface investigation. 11/20/18-Hiralkumar Patel. DEC Piper requested to transfer case to him as part of ongoing investigation/remediation under spill #: 1804303. case transferred to DEC Piper. 1/16/19 - Obligado - This spill is transferred from Piper to Obligado as per Austin I received the following forwarded area: Dear Inspector Kumar Patel, New York City Tank Testing Inc was retained by Olin Bark Realty Co. Inc. regarding the tank test failure at 2888 Grand Concourse. NYCTT in turn, hired ABC Tank Repair & Lining Inc to pump out and clean the 5,000 gallon oil tank. Following the tank cleaning, we attempted to take a soil sample from the tank bottom. However, water started entering into the tank, making it unfeasible for us to collect a proper sample from below the tank bottom. Therefore, NYCTT collected a soil sample from the side of the tank. After several boring attempts encountered refusal, one soil sample was collected from the side of the oil tank, to a depth of nine feet (9) below surface grade, which is 12 below the bottom of the tank. The soil sample was placed on ice, picked up, and analyzed by York Analytical Laboratories, Inc. located at 120 Research drive, Stratford, CT 06615. Attached is a copy of the analytical report and the chain of custody. Should you require any further information, please do not hesitate to call our office or Abraham Wachsler at 646-321-2876. The results in ug/Kg were from the soil sample were: xylene: 3.3 ppb flourene: 61 phenanthrene: 290 pyrene: 110 1/18/19 - Obligado - I sent an email to Goldie at NYCtanktestinginc.com I requested a scaled Site Map showing the location of the UST, the location of the soil borings, and the location of the remote fill lines, and a copy of the tightness test report. 1/23/19 - Obligado - I resent the above email request. 9/30/20 - Obligado - I reviewed a Spill Closure Report dated May 21, 2019 and supplemental documentation provided by NYCTT. Spill summary - On September 4, 2018, a leak was detected in the ullage portion of the tank and the fill line. On 9/14/18, the tank was pumped and cleaned. Several borings were advanced around the tank but bedrock was encountered. Only one soil boring location was able to collect a soil sample from below the tank which was below standards, results tabulated above by Kumar. Manifests were provided for that work. On 4/2/19, NYCT excavated contaminated soil in the area of the old fill line until structural excavation limits were reached. The excavation was 8 ft x 4 ft x 52 in deep. 30 55 gallon drums of contaminated soil were removed and properly disposed of. The oil tank was abandoned in place with slurry. I inspected the excavation on 5/3/19 and determined further excavation was not feasible, and requested a well installation in the center of the excavation to recover product if present. I also required soil borings in the sidewalk down gradient. Soil boring logs and analytical data were submitted in the Spill Closure Report. 3 soil borings were advanced, from north to south along the sidewalk SB1, SB2, and SB3. The two southern most borings (sb2 and sb3) did show field evidence of petroleum contamination (droplets of free product and staining). VOCs

RESIDENTIAL (Continued) **S122878531**

were slightly above standards in SB2 (15-17ft) (.3 ppm benzene and .99 ppm xylene) and SB3 (15-18 ft)(.260 ppm benzene and 0.780 xylene), SB2 (15-17 ft)also had 4 SVOC compounds slightly above standards The northern most boring SB1 was clean with no evidence of contamination from 0 to 16 feet where refusal was encountered. Based on the absence of petroleum contamination in the northern most boring SB1 which is between the tank system and the subway tunnel seep point, it does not appear that this tank system was the source of the tunnel intrusion. The well installed in the center of the excavation was dry with no free product based on photodocumentation of the well from NYCTT. Based on the documentation submitted to date, this spill appears to have been remediated to the extent practicable and this is closed.

Remarks: Underground portion going under the sidewalk has been isolated. Tank will be uncovered for inspection tomorrow.

DEC Memo:	02/28/07-Vought-Called Ray Sojka and not in office. Vought called and spoke to HESS Steve King (732-750-6707) who indicated that Eastmond was responding to site and no sewers or drains affected. Spill onto concrete outside of vent and is less than five gallons. Hess will not perform additional delivery until gauge is repaired/replaced. As per King, building rep (Arthur-718-690-2005) ordered 3500 gallons and had 900 in tank at time of overfill and tank is 5000-gallon #6 fuel oil. Vought later spoke to Sojka and super not onsite at time of spill. King will return call to DEC with supers contact info to update PBS address. Vought called Arthure and contact info on PBS and Arthurs number was not valid and PBS contact info was outdated. 03/01/07-Vought-Received message from Ray Sojka that building manager is Arthur Pepaj (718-690-2005). Vought called Pepaj and answer is disconnected. Vought sent letter requiring petrometer repair and submission of PBS registration to building owner listed on Property Tax info and NYSDOH Corporations database: Mr. Arthur Pepaj Gore Creek, LLC. 590 56th Street West New York, NJ 07093 Spill closed by Vought due to no impact to soil and groundwater and cleanup of spill however lack of PBS registration submitted to DEC Falvey for enforcement.
Remarks:	SPILL WAS ON CONCRETE ON OUTSIDE OF ABOVE APARTMENT BUILDING DUE TO FAULTY TANK GAUGE:

Spiller Name:	JOHN MASINI
Spiller Company:	GORE CREEK LLC
Spiller Address:	2894 GRAND CONCOURSE
Spiller Company:	999
Contact Name:	JOHN MASINI
Latitude:	40.8708590
Longitude:	-73.8893010
DEC Memo:	02/27/09-Vought-Called John Misini (MMI Mechanical 718) 449-4166) and left message with secretary to return call to Vought. Vought called building manager (Arthur Pepaj (718-690-2005) and line was busy. ABC tank cleaners to clean out secondary containment and repair or replace the tank. Will install temporary tank. No sewers or drains affected and spill on concrete. Tank will be emptied as well and cleaned. 03/02/09-Vought-Called ABC Tank (718-272-2800) and left message with Frank to have someone return call to confirm cleanup of site. 05/04/09-Vought-DEC Austin received phone message from undeterminable caller from MMI. Vought called and spoke to MMI secretary and left message for Misini to return call to DEC with cleanup confirmation. Vought received call from and

(Continued) **S104650574**

spoke to Lester Starr (MMI) and report will be submitted to DEC. ABC cleaned and pumped tank. 13
barrels of oil absorbent and impacted debris. Tank was taken offline and fill port was sealed and
proposals submitted for tank replacement and building is short of funds and stopped job. MMI not
performing further work as they have not been paid to date. Tank is AST on saddles with debris
around tank and tank is butted up against rear wall of building so not sure if partially buried.
Tank leg broke that fractured seam and caused spill. Work to date summary will be faxed to DEC.
Contaminated soil letter to be sent out upon receiving faxed letter. 05/05/09-Vought-Received
letter from MMI Mechanical (Lester Starr Ph:718-449-4166 Fax:718-449-4173) dated 5/4/09. One page
summary of work performed to date including to pumping and cleaning of AST, disabling of fill
terminal and all noticeable contaminants were drumed and awaiting removal. Presently due to
financial complications we have halted work at this job site .
Awaiting approval for the demolition
of the existing tank any additional cleanup can be completed and including performance of
subsurface investigation. Vought sent CSL with one month due date with: 1)PBS requirements
2)delineation of soil and groundwater contamination (if applicable) to owner as per ACRIS with cc
to MMI: Gore Creek, LLC. 590 56th Street West New York, NJ 07093 07/13/09-Vought-Received call from
and spoke to Doichman and he hired Advanced Cleanup Technologies (Paul Stewart 516-933-0655x12) and
soil borings were performed and contamination found from 6.5' -4' below secondary containment
floor. Metropolitan Heating and Oil will remove and replace tank. Slab is 700 square foot and
contaminated soil will be excavated including proper disposal.
Excavation will be shored and ACT
will collect endpoint samples. No groundwater encountered in borings (approximately 4 borings).
Bedrock at 7' and no product found on bedrock due small crack width. DEC will require excavation of
contaminated soil only provided that DEC site inspection provided before backfill. Metropolitan
submitted PBS registration. 10/16/09-Vought-Received call from Doichman (347-739-1997) and Vought
returned call and spoke to Doichman. Customer obtained funds and site was excavated down to bedrock
(approximate depth was 5'bg). Three boring samples were performed. Excavation was shored and Paul
Stewart on site today and he will do PID screening and collecting soil samples from sidewalls for
analysis and will also document intergrity of bedrock and no fractures with photos in lieu of
bedrock groundwater samples. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per
DEC Austin and Vought transfer to Section A. 10/13/10 - Raphael

(Continued) **S104650574**

Ketani. The spill took place on
2/27/09 and consisted of a tank that was leaking from a seam. The seam leaked because one of the
footings had cracked. The PBS registration (#2-237523) lists an active 5,000 gal. AST with #6 oil.
The paper file and the E-docs have a CSL, and a May 2009 letter from MMI Mechanical. I tried to
contact Jay Doichman (doych-man; contractor) at (347) 739-1997 and at (347) 294-0110, but I could
only leave messages that the DEC had not received the investigation and remediation report. I
contacted Paul Stewart 516-933-0655, ext 12 of ACT and asked him whether he could send the
remediation report. He said that ACT did the soil borings, but that I should contact Mr. Doichman
for the report. 12/3/10 - Raphael Ketani. I spoke to Mr. Doichman. I asked him for the cleanup
report. He said to give him two weeks and he will send it to me. I said that would be fine.
12/20/10 - Raphael Ketani. I spoke to Mr. Doichman. He said that he and another person are putting
together the documentation regarding the remediation. He said that they have the end point sample
results and other documentation. I will get everything soon, but he didn't know how soon. I asked
him how much time he needed, but he couldn't say. I told him that I will wait to receive the
documentation. 3/14/11 - Raphael Ketani. As the cleanup and remediation documentation have not been
received, and as calls to the contractor have been fruitless, I sent a followup letter to the Gore
Creek LLC with an April 8 deadline for receipt of the documentation. 4/13/11 - Raphael Ketani. The
deadline past with no response from Mr. Doichman or Gore Creek LLC. Therefore, I sent a STIP
package to Gore Creek with a deadline of May 6, 2011. 5/6/11 - Raphael Ketani. I tried to contact
Mr. Doichman at (347) 739-1997, but I could only leave a message. The message stated that since the
DEC never received the signed STIP, the spill case will be referred to our legal division for
action. Mr. Doichman called me back. He said that he had been waiting for money in order to resume
the remediation work. He had just received a partial payment. So the work will start next week.
However, a remediation report can not be issued at this time as all of the work has not been
completed. I told Mr. Doichman that the case will be referred to our legal division as Gore Creek
has not submitted the report. He said that he understood. 5/9/11 - Raphael Ketani. I submitted a
Case Initiation form to Randall Austin, Chief of the Spills Unit, for his signature. The form was
submitted due to Gore Creek, LLC's failure to submit the investigation and remediation report and
their failure to submit the signed STIP. Mr. Austin signed the Case Initiation Form and it was

(Continued) **S104650574**

walked up to our legal division. 9/15/11 - Raphael Ketani. I contacted Mr. Doichman at (347)
739-1997 and asked him whether progress had been made at the site. He said that he will have to get
back to me. 10/4/11 - Raphael Ketani. An internet search for Jay Doichman turned up a person by the
name of Jay Deutchman with the same cell phone number - (347) 739-1997. The company listed with his
name was East Coast Cleaning and Restoration, LLC, 598 Grand Concourse, Bronx, 10451. From the
internet page that I found, East Coast Cleaning appears to be a home or business cleaning service.
As the cell phone numbers are the same and as the name sounds the same, I will now refer to Mr.
Doichman in the case notes as Mr. Deutchman. 12/12/11 - Raphael Ketani. Today I received the
12/9/11 MJ Engineering and Land Surveying (MJ) Summary of Remedial Activities. I began my review.
12/13/11 - Raphael Ketani. I finished my review of the MJ SRA. Initially, ACT (the investigation
consultant) performed 3 soil borings with the tank (AST) still in place near the boring locations.
Oil contamination was found at SB-1 at 5 feet down and at SB-3 at 6.5 feet down (top of bedrock).
Later, ACT removed the tank and excavated the area under and next to the tank. The contaminated
soil was hauled away. They took 5 end point samples. The samples were composited and submitted to
the lab for analysis. The composite sample results were entirely non-detect for all analytes,
except for some very low hits below CP-51 for 7 SVOCs. From the information in the report, it
appears that the remediation was completed. 1/9/12 - Raphael Ketani. The owner signed the Order on
Consent. From the information in the Summary of Remedial Activities report, it appears that the
site has been remediated. There should be no threat to the public or the environment from the
residual contamination. Therefore, I am closing the spill case effective today. A SCL was sent to
Gore Creek LLC.

Remarks: Caller states a building super noticed the seam on the tank leaking. Repairs are ongoing. Spill is contained in the tank room. Unknown quantity of oil at this time.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO . This spill case was reassigned from TJDemeo to Perez on 06/13/2005. Spill closed on 09/13/2005. There is no supporting documentation available at this time. However, the facility is registered in the Petroleum Bulk Storage Program and there were no leaks associated with the spill, therefore the potential impact to soil is unlikely. By Perez.

DEC Memo:	4/4/2005 Sangesland spoke to Renee at Petroleum Tank Cleaners. 5,000 gal tank was being repaired. Tank company started cutting one opening in the tank and then moved to another location to cut the opening. After work was done, they welded the second hole, but forgot the first hole. The tank was filled with oil and about 30 gal leaked out onto the basemnt floor. Eastmond says the site was cleaned, but the tank will not be patched until the oil level in the tank drops down. 8/15/05 - Haggerty - reviewed invoice from Al Eastmond detailing clean-up of property. Pumped out existing oil, suctioned and steam cleaned all lines, used existing pilot hole to cut tank and install new manhole. Oil was contained in basement, all wastes properly disposed of. Spoke with Al Giarretto, property manager, was who stated everything was properly cleaned up and there were no complaints of vapors in the apartment building. Spill closed.
Remarks:	GOING TO INVESTIGATE RIGHT NOW, BELIEVE ITS LEAKING

DEC Memo: proposal is out to owner. PTC will notify dept if repairs and retest aren't performed within 3 days. ttf letter on hold until then. 05/12/14-Hiralkumar Patel. alternate addresses: 200-206 East 201st Street, 2954-2960 Grand Concourse no other spills found. PBS #: 2-360163. as per PBS record, the site has one 5,000 gal #6 oil AST in contact with soil. the tank was installed in Dec. 1960. PJA Building, LLC. **property owner** c/o Kaye Levick Realty 12 East End Avenue New York, NY 10075 Attn.: Morley Kaye **property manager** Ph. (212) 772-7723 email: morjkay@aol.com 10:22 AM:- left message for Ray at PTC. 10:25 AM:- left message for Mr. Kaye. 10:27 AM:- received call from Ray. he mentioned that the tank is empty and cleaned. they were hired by Approved Oil. Ray has no further information. Mike Approved Oil Ph. (347) 254-4110 email: mikem@approvedoil.com 09/02/14-Hiralkumar Patel. 11:46 AM:- spoke with Mike. he mentioned that tank system failed the test due to loose thread at fill box end. as part of fuel grade conversion, they had to install a new spill container and they replaced the leaking part during the work. the tank system was retested and found tight. he mentioned that petroleum release was not observed around loose threads. asked Mike to submit report with cause of tank system failure, site observations and tank system retesting result. 11:49 AM:- spoke with Mr. Kaye and asked him to submit closure report. 12:01 PM:- sent email to Mr. Kaye requiring submission of closure report. email copied to Mike. 09/26/14-Hiralkumar Patel. 4:09 PM:- resent email, dated 09/02/14, to Mr. Kaye and asked him to submit report by the end of 10/03/14. email copied to Mike. 10/06/14-Hiralkumar Patel. received email from Chris (at 4:51 PM on 10/03/14) from All Boro Testing including a letter and tank test result. he mentioned that tank system failed a test due to bad threads on fill box. All Boro isolated the fill line and and re-tested the remaining system which was found tight. no visual contamination was evident on the surface surrounding the fill box during the test. letter from All Boro does not include confirmation of fill line repair and result of entire tank system test after fill line repairs. 10/07/14-Hiralkumar Patel. 1:29 PM:- sent email to Mr. Kaye. informed him about receipt of letter report from All Boro Testing dated 10/02/14. asked him to submit document confirming repair of faulty fill line and result of tank system test after the repairs were made. email copied to Mike and Chris. 11/12/14-Hiralkumar Patel. 1:12 PM:- spoke with Mr. Kaye and reminded him to submit documents confirming repair of faulty line, condition of subsurface around the leaking line and result of tank system test after the repairs. informed him that these documents must be submitted by the end of 11/14/14. 1:21 PM:- sent email to Mr. Kaye requiring documents submission by the end of 11/14/14. email copied to Mike and Chris. 11/13/14-Hiralkumar Patel. 11:40 AM:- received email from Chris. All Boro has been contracted to perform required subsurface investigation surrounding the remote fill line. work will begin tomorrow. 11/14/14-Hiralkumar Patel. 3:13 PM:- received call from Chris. All Boro crew started removing sidewalk flag along remote fill line and found oil under fill port at the curb. he will cover the excavation today and will submit remediation work plan on 11/17/14. 11/17/14-Hiralkumar Patel. 11:16 AM:- received email from Chris including pictures of excavation at remote fill port. some contamination found around the remote fill line. Chris will submit plan today. 11/28/14-Hiralkumar Patel. 11:14 AM:- left message for

CON EDISON (Continued) **S116551321**

Chris. 11:29 AM:- received call from Chris. he mentioned that due to hold on DOT permit, work has been stopped. he will send update on 12/01/14, alongwith remediation plan. 12/11/14-Hiralkumar Patel. 12:17 PM:- received email from Chris. they got sidewalk permit and will start work on 12/15/14. 12/29/14-Hiralkumar Patel. 11:34 AM:- spoke with Chris. they removed contaminated soil from fill line area. final excavation is about 5 ft by 5 ft and about 2 ft deep. Chris mentioned that no more contamination left in soil. based on field observations, Chris will collect one composite soil sample from sidewalls and bottom of the excavation. 08/31/15-Hiralkumar Patel. 2:50 PM:- spoke with John Skrelja, who handles violations on property. asked him to submit spill cleanup documents. PJA Building, LLC. **property owner** c/o Kaye Levick Realty 12 East End Avenue New York, NY 10075 Attn.: John Skrelja PH. (914) 908-5505 email: john.skrelja@interactiverealtyny.com 3:05 PM:- sent email to Mr. Skrelja including copy of email from All Boro dated 11/17/14. asked him to submit cleanup documents immediately. email copied to Mr. Kaye. 09/18/15-Hiralkumar Patel. received email from Francine (at 6:29 PM on 09/17/15) from All Boro including report. tank system, except the fill line, was tested tight on 05/07/14. tank system, including new fill line, was tested tight in 10/14/14. Chris mentioned that all contaminated soil around the fill box was removed. case closed based on available information (#6 oil tank system failure due to bad thread on fill box, removal of contaminated soil from around the fill box, installation of new fill line and passing tank system test result).

Longitude:	-73.8855464
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 1/29/2003-Vought-Spoke with Kearney on 1/28/2003. Lever which shuts automatic fill on pump malfunctioned spilling gasoline onto caller and onto floor. Spill area was approximately 3' x 3'. Spill on concrete and no sewers or drains affected. Another contact phone number for Kearney is 914-310-9028. 1/29/2003-Vought-Called Roberto Porcelli (Gaseteria 718-782-4200) and spoke with him. He will send a repairman immediately to fix lever and will call Ms. Kearney. Vought called Kearney and told her of repair and gave her Porcelli's cell and office phone. Spill closed as per Rommel.
Remarks:	caller states she was filling her gas tank and the pump malfunctioned and did not kick-off when the tank was filled - caused gas to spill onto the caller and the ground - caller would like a call back

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 9-19-05 - Obligado - File transferred from Vought to Obligado 12/5/05 - Obligado - File review : Baseline assessment report, Delta, 10/2/02. At time of assessment, site was an an active Gaseteria Service Station, with 3 4000 gallon gasoline USTs installed in 1973. Sensitiver receptors are the Bronx River 2200 ft away, a Federal PUblic Water Supply well located 0.75 mile to southeast, 4 school within 1000 ft radius, closest of which is 550 ft sw of site. Soil is fine grained silty sand to 16 ft, fine to medium sand to 20 ft. Geoprobe refusal at between 5 and 15 ft bgs. GW enconutered between 16 and 18 ft bgs. Ground water flow is likely southeasterly towards the bronx river. 5 soil borings advanced in Feb 02. 5 soil samples were collected. SB1(16-17) had 439 ppb MTBE. Ground water results in ppb: MW1 - 49.5 benzene, 21.8 toluene, 96.6 ethlybenzene, 32 xylenes, 27.9 MTBE, 200 BTEX MW5 - 384 toluene, 2590 ethylbenzene, 6290 xylenes, 9364 BTEX, 18367 VOCs UST Closure Report, AGS, June 2004. Documents removal of 3 4000 gallon USTs, Pump isalnds, dispensers, supply lines. EXcavation endpoint samples show no SCO exceedences. Requests no further action based on source removal, relatively clean soil endpoint samples. 12/7/05 - Obligado - NYSDEC with ASR and Gaseteria. DEC reject NFA because delineation is needed for ground water. Site has been rebuilt as an Exxon. Accoring to ASR, temporary wells were installed and there is ground water data for th is site. They will submit the groundwater data to DEC and DEC will reconsider NFA request. 1/27/06 - Obligado - Spoke to Steve Muller about this site. He said that Warrex (developer) installed wells on the property. During the well installation, Steve Muller was there and

AMG RETIAL 1 (Continued) **U001833048**

collected soil samples from
there split spoons. He will research the file and put the data
together. He will also find contact
information for Warrex properties so I can get the ground water data.
6/2/06 - Obligado - Received
UST Storage Tank Removal Oversight report, submitted to DEC by ASR.
Report dated June 9, 2004,
written by ENSR submitted to Warren Equities. Summarizes UST removal
activities. Both ENSR and ASR
were on site at time of UST removal. All USTs observed to have no
holes or pitting. Corrosion
around the fill port, sump, and piping ports of tank 2 was observed.
No visual evidence of a
petroleum release to soil. Excavation was to nine feet below grade.
ENSR collected 5 soil samples
from the excavation. Exceedences for MTBE 264 ppb only from north
sample. Called ENSR (978)
589-3000, spoke with Mark Drouin. He said they no longer work for that
client. Hasn't done work
since 2004. He said that they also installed five monitoring wells at
the site. He doesn't know if
the wells are still there. The contact he gave me was Ray Leather
-(401) 781-9900 at Warren
Equities or Warex Terminals. 7/11/06 - Obligado - PHone message from
Laura Liddy at Warren
Properties (212) 868-1447. 7/12/06 - Obligado - Called Laura Liddy,
left message to call DEC.
7/18/06 - Obligado - Received call back from Laura Liddy. She had no
new information for me.
8/25/06 - Obligado - Spoke to Karen from Warrex Terminals. I asked her
if she could submit the
ground water analytical results from the monitoring wells that were in
stalled. She said she didn't
have that data. She didn't know if wells were still there because the
site has been rebuilt.
5/12/09 - Obligado - Reviewed Investigation Work Plan. The plan
proposes to sample all the existing
montioring wells and propose new 2 downgradient wells in sidewalk.
Sent disapproval letter, because
the site plan was outdated (pre-development) and it is unknown how
many wells are still existing on
site. Required a site visit within 15 days to do a well inventory and
sampling and resubmit a
workpaln with an updated site plan reflecting current site
configuration and also including
historic features. Required resubmittal of workpaln within 30 days.
8/4/09 - Obligado - reviewed
revised workplan. The updated site plan was unnacceptable. It is
innacurate, not to scale, doesn't
show all current and former site features,a nd doesn't even include
the whole property. Required
resubmittal within 7 days or refer to legal. 8/19/09 - Obligado -
Revised work plan submitted.
10/7/09 - Obligado - After review of the plan. Disapproved again. SEnt
letter requiring resubmittal
within 15 days. Required wells to be relocated to Delta boring SB-5
and SB-3 11/20/09 - Obligado -

AMG RETIAL 1 (Continued) **U001833048**

Reviewed a revised plan. The revised plan proposes 4 monitoring well installations. The revised
well locations are acceptable. An RI investigation will be submitted within 60 days. I sent an
approval letter to Gaseteria. 2/9/11 - Obligado - I reviewed an Remedial Investigation report which
documented the installation of 4 monitoirng wells to add to existing monitoring well MW1. Low level
VOCs in excess of ground water standards were detected in MW1, MW3, and MW4. Monitoring wells MW1
through MW4 were sampled quarterly for 1 year. Low levels were consistent for the 4 quarters of
sampling. MW5 was installed recently and only sampled for one quarter. When last sampled in
DEcember, the only exceedence was ethylbenzene at 28 ug/L and xylenes, 8.2 ug/L in MW1 and
ethlybenzene at 6.8 ug/L in MW4. All soil samples were below Soil Cleanup Objectives. Due to low
levels of gw contamination, the removal of the original source tanks, the absence of soil
contamination, this spill is closed. 2/10/11 - Obligado - Emailed Spill Closure Letter to
Gaseteria, JCBroderick, Reliant.

Remarks: contaminated soil and groundwater found. Data reported to dec despite gaseteria knowledge as of 8/5/2002.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM O'DOWD TO VOUGHT. 06/21/04 See also 0402479 Rommel 08/31/2005 - Feng - Project transferred from Vought to Feng. 3/10/2006 - Feng - Tyree requested spill closure. File reviewed and summarized site history: 5/29/1998, Tank Closure. Removed 6 (550-gallon) gasoline, 1 (4,000-gallon) gasoline, 1 (550-gallon) waste oil and 1 (550-gallon) fuel oil USTs. Impacted soil were excavated down to 8' bg. 9 soil endpoint samples were taken from former tankfield excavation and 1 from waste oil tank excavation. High BTEX and MTBE found in the wall at 5' bg and bottom at 7' and 8' bg in the former tankfield. 4,000-gallon bottom (8') with 22,725 ppb BTEX and 2,960 ppb MTBE. 550-gallons south

GETTY # 323 (Continued) **S100153381**

bottom (7') with 65,892 ppb BTEX and 22,800 ppb MTBE. 550-gallons east wall (5') with 1,309,400 ppb
BTEX and 170,000 ppb MTBE. 10/30/1998, Quarterly Monitoring Report. 5 monitoring wells were
installed and started monitoring. 4 of these MWs were located at near the 4 corner of the property
and 1 at the center near the former tank field. Groundwater flows to south at the depth of 16.42'
to 25.57' bg. Only 3 were monitored this quarter. W-1, ND both. W-3, 16.5 ppb BTEX, 14.3 ppb MTBE.
W-4, 12,660 ppb BTEX, 8,040 ppb MTBE. Total Phase High Vacuum Extraction were conducted monthly on
W-4 for monitoirn quarter of 1/2000-3/2000, 7/2000-9/2000, 1/2001-6/2001. And this site has been
monitored since 1998. 9/29/2004, Quarterly Monitoirng Report, 7/2004-12/2004. Groundwater flows to
south at the depth of 16.28' to 24.34' bg. 5 monitoring wells onsite. W-1, usually not accessible.
W-2, BDL. W-3, BDL. W-4, decreased and 20.66 ppb BTEX, decreased and 1.96 ppb MTBE. W-5, decreased
and 347.4 ppb BTEX, BDL MTBE. 8/1/2008 - Project reassigned to Feng. 9/4/2008 - Getty Properties
portfolio meeting with Tyree and Delta. Resampling the wells and petition for closure. (RJF)
6/5/2009 - Reviewed Investigation Work Plan, dated 3/5/2009, by Tyree. Tyree proposed to install 4
soil borings as confirmatory sampling for closure petition. Comments to Tyree requiring 2 more soil
borings location at the east and south of the former tank area due to the previous high endpoint
samples. (RJF) 6/10/2009 - Quarterly Monitoring Report, 1/2009 - 3/2009, 3/2009, pdf via email
6/8/2009, by Tyree. Active gasoline retail service station. 5 monitoring wells. Monthly gauging and
quarterly sampling. Groundwater was sampled 4/23/2009. DTW 17.18' to 23.83' bg. Flows to south. NO
LNAPL. BTEX range 0.52 ppb to 46.2 ppb. MTBE ND. Groundwater was sampled for STARS and
bioparameters. (RJF) 8/21/2009 - Reviewed IWP revision, dated June 17, 2009, by Tyree, pdf via
email 6/18/2009. Tyree proposes to install 6 soil borings including 2 additional soil borings that
DEC required. Work Plan is approved, letter to Getty Properties. SIR due 11/2009. (RJF) 11/6/2009 -
3Q2009, 7/2009-9/2009, 9/1/2009, pdf, by Tyree. Active gasoline retail service station. 5
monitoring wells. Groundwater was gauged on 8/20/2009. NO LNAPL. DTW 16.35' to 24.31' bg. Flows to
south. Groundwater was sampled 8/20/2009. BTEX ND. MTBE ND. (RJF) 2/18/2010 - Reviewed Subsurface
Investigation Report, dated 11/2009, by Tyree. On October 8-9, 2009, E Phase 2 LLC installed 6 soil
borings using Geoprobe 6610DT direct push drilling machine. Refusal was hit before groundwater at
13 feet in SB-1 (south of dispensers), at 13 feet in SB-4 (north of tank pad), at 20 feet in SB-5
(south of tank pad) and at 15 feet in SB-6 (fuel oil tank area).

GETTY # 323 (Continued) **S100153381**

Groundwater was encountered at
16.5 feet in SB-2 (near W-3), and 26 feet in SB-3 (east of tank pad).
No PID reading. 6 soil
samples were collected. SB-1 (10-13'), BDL. SB-2 (15-17'), BDL. SB-3
(25-27'), BDL. SB-4 (11-13'),
BDL. SB-5 (18-20'), BDL. SB-6 (12-15'), BDL. Groundwater taken from
SB-2 and SB-3 on 10/8/2009.
SB-2, BDL, no exceedances. SB-3, low, no exceedances. Tyree requested
spill closure. (RJF) 1/19/12
- Raphael Ketani. I reviewed the case history for the site. From the
case notes, all of the USTs
were removed on 5/29/98 (6-550 gal. gasoline, 1-4,000 gal. gasoline,
1-550 gal. fuel oil, 1-550
gal. waste oil). Excavation in the tank field went down to 8' bgs. Ten
end point samples were taken
- 9 in the gas tank graves and 1 in the waste oil grave. There were
high to very high soil results
for 4 of the sidewall and 3 of the bottom samples. The results were up
to 1,309,400 ppb total BTEX
and 170,000 ppb MTBE. 10/30/98 Quarterly Report: Five wells were
installed - 4 at the corners and 1
in the center of the site. Three wells were sampled. MW-4 had 12,660
ppb total BTEX and 8040 ppb
MTBE. Total phase high vacuuming took place at MW-4 on a monthly basis
from 1/2000 to 6/2001.
Groundwater flow is to the south. 3/5/09 Investigation Work Plan:
Tyree intended to do 4 more soil
borings. The DEC asked for 2 additional borings. 3/2009 Quarterly
Monitoring Report 1/09 to 3/09:
Five wells were gauged and sampled. There was no product. Total BTEX
was up to 46.2 ppb and MTBE
was non-detect. 9/2009 Quarterly Monitoring Report 7/09 to 9/09: Five
wells were gauged and
sampled. There was no product nor any contamination. 11/09 SIR: 10/8
to 9/09 Tyree installed 6
borings. There were no PID hits for the soil samples. SB-1 is
downgradient to the pump islands.
SB-2 is on the downgradient side of the former waste oil UST. SB-3 is
about 8' from the 5/29/98
East boring. SB-4 is about 8' from the 5/29/98 North boring. SB-5 is
about 6' west of the 5/29/98
South boring. SB-6 is at the side of the former fuel oil UST location.
MW-4 is more sidegradient
than directly downgradient to the tank field. None of the wells are
directly downgradient, except
MW-1 to the fuel oil UST. However, it is some distance away. In
conclusion, Tyree failed to fully
delineate and remove the soil contamination and didn't submit
manifests for the tanks and soil that
were removed. 2/8/12 KGH reviews file for closure petition
determination. There appear to be valid
concerns about well placement. Need to visit site to ground-truth data
4/25/12 KGH on-ste with BF
(Antea) and PH (Tyree) to evaluate remedial efforts. Small site with
steep gradient. Topography
runs most steeply from tank area to MW-4. Wall/foundation of adjacent
building runs from MW1 to MW4

GETTY # 323 (Continued) **S100153381**

and would tend to intercept and direct interflow toward MW4. KGH comfortable that MW-4 serves as
off-site sentinel. No discernible odor from MW-4 upon opening. Consider closure. 6/5/12 KGH -
Reviewed EDOCs file as per PM notes. There has been significant remedial efforts on this site which
have apparently paid off. Over 500 tons of contaminated soil were excavated and removed from
moderate/small service station. Several years of EFR have further reduced soil contamination on
this operating service station. Groundwater standards are met before reaching off-site. There is
some indication of shallow residual soil contamination associated with service station
infrastructure but deeper soil and groundwater samples demonstrate it has no discernible effect or
impact. The Department accepts the petition for closure for Spill #97-11128. No Further Action is
required. KGH.

Remarks: Upon excavation for tank up grade soil contamination was discovered soil to be stockpiled for removal.

DEC Memo:	9/15/05 - Raphael Ketani. I called Cailyn Dinan at (518) 786-3200 ext. 214 to find out how they handled the spill. She was not in and I left a message. Ms. Dinan called me back and said that the anitfreeze didn't enter any drains and that the product was contained on the concrete. She said it was just sloppy housekeeping. I will close the case.

DEC Memo:	1/18/2017 - Feng - Duty Desk. Spoke to Adam Wolf (516-997-9300, AWolf@BWPetroleum.com). It is gasoline service station. The tank stores the primary regular gasoline. They have detected oil in the outer wall/secondary containment of the tank. They went ahead and tested the tank this morning and found it failed the test. They haven't checked the tank mat wells to see if there is any problem in those wells. They are working on to empty out the tank. There is

590 EAST FORDHAM CORP (Continued) **S119030009**

approximately 2,000 gallons gasoline still in the tank. He said selling the gasoline is the fastest way to empty out the tank and it shall be sold out by the end of the day. He said the records were checked and no discrepancy was found. The other 4 tanks were not in the alarm and assume they are fine. DEC required the tank to be out of services and to be empty out immediately. Contact information 100 Jericho Quadrangle Jericho, NY 11753 PBS 2-188905 Shell Service Station (4) 4,000-gallon gasoline/ethanol USTs (1) 4,000-gallon biodiesel UST Last inspection 11/13/2015 No other open spill was found. 2 closed spills 90-08724 and 93-08823 were found. Discussed with the runner Kumar Patel and sent an email to Adam Wolf Mr. Wolf, Thank you for your information over the phone regarding the above referenced spill. I tried to contact Impact Environmental also, but they haven t call me back yet. After discussing this spill with another duty officer Kumar Patel, the leaking tank is NOT allowed to be performed any services such as selling. Please take the tank out of service and empty out the tank immediately and seal out the fillport so no delivery shall be made to that leaking tank. You may transfer the oil to the other tanks that have no problem at this time. Please confirm that the outer wall/secondary containment has been tested tight and gauge the tank mat wells to make sure no leaking to the environment. Please note that Leszek Zielinski from PBS is copied in this email. You may contact him with any changes/updates to the PBS system. Thank you again, email reply back from Adam Wolf Thanks you and we do as instructed. We can not isolate the outer wall as there is a leak into the inner tank. We will know early next week the integrity of the outer-wall when we enter the tank. Sent from my iPhone Adam Wolf 516-521-5800 1/19/2017 - Received call from Chris of Impact Environmental. They are going to gauge the observation wells in the tank mat today. Told him that DEC required out service of the tank, empty out the tank, fillport to be sealed, and then test the secondary containment. call from Adam Wolf. He requested the methods to test the secondary containment since the inner tank was leaking and product in the secondary containment. Talked to Leszek of PBS unit and sent Adam Wolf email with link of testing methods. Mr. Wolf, As per your request for methods testing the secondary containment, Leszek from PBS has suggested EPA approved testing methods and you can pick anyone from the list. See attached and the link below. Any questions, please let us know.

Wolf June I want to report that the wells were sampled by impact today and no visible product was found. If you need a formal report please let me know. AWW 2/16/2017 - Received Tank Test results from Adam Wolf. Forwarded it to Leszek of PBS for review. 2/22/2017 - email from Leszek of PBS June, the report is acceptable. Thanks, Leszek Based on the available information, oil leaked to the secondary tank but not to the environmental. The tank is repaired and tested tight. The secondary tank is tested tight. No oil found in the tank mat wells. Spill is contained to the 2nd tank. Spill is closed.

Remarks: 4000 gal ust

DEC Memo:	10/16/14 : Mahat A TTF letter is sent out to the management team and it will uploaded on D2 shortly. PBS : 2-094072 DEC is waiting for a report as required by the letter. Case is assigned to DEC Patel for follow up. 10/27/14-Hiralkumar Patel. 10:38 AM:- spoke with Phil at A-1 Crown to confirm the site address (as 2525 Valentine Ave does not exist). he could not find record. he mentioned that tank test was conducted for ABC Tank. 10:40 AM:- spoke with ABC Tank and confirmed site address as 2545 Valentine Avenue. changed site address from 2525 Valintine Ave to 2545 Valentine Ave . alternate address: 2541-2549 Valentine Avenue no other spills found. PBS #: 2-094072, 2-602817 as per PBS #: 2-094072, the site has one 5,000 gal #6 oil AST in contact with soil, in-service, installed in Jan. 1942. PBS #: 2-602817 is closed. no tank info in PBS record. Ivanaj 2545 Realty Corp. **property owner** 2545 Valentine Avenue Bronx, NY 10458 Attn.: Tony Gjokaj Ph. (718) 365-6850 (914) 490-1619 email: ivanaj2545@aol.com 11:21 AM:- sent revised TTF to Mr. Gjokaj, as the previous one had wrong site address. letter emailed to Mr. Gjokaj. 12/05/14-Hiralkumar Patel. received message from Donna (at 4:47 PM on 12/04/14) from ABC Tank. 9:32 AM:- left message for Donna. 11:56 AM:- received call from Donna. after initial tank system test failure, they lifted the tank and found a pin hole in bottom of the tank. there was no sign of any petroleum release from this hole. ABC tank repaired the entire bottom of the tank and tested the tank only, which passed. to confirm no petroleum release, ABC tank also collected a soil sample from the area of tank location. the repaired tank will be installed on concrete saddles now. Donna will submit work summary and sample results for review prior to lowering the tank on saddles. after lowering the tank on saddles and connected to the piping, a system test will be done. 2:23 PM:- received email from Donna including letter with work summary and soil sample results. three soil samples were analyzed. no contamination noted in samples. 2:39 PM:- sent email to Donna. informed her that based on submitted information, no further investigation/remediation required underneath the tank, but investigation/remediation needed along associated piping. email copied to Mr. Gjokaj. 12/08/14-Hiralkumar Patel. 12:15 PM:- received email from Donna stating that ABC tank will test the lines. 12/16/14-Hiralkumar Patel. 1:25 PM:- sent email to Donna inquiring update. email copied to Mr. Gjokaj. 1:53 PM:- received email from Donna. during isolation test of the piping, fill, suction and return lines were found tight. the vent line did not hold the pressure. ABC Tank has sent proposal for replacement of the vent pipe. 12/30/14-Hiralkumar Patel. 10:32 AM:- left message for Donna.

IVANAJ 2545 REALTY CORP. (Continued) **S110772002**

01/06/15-Hiralkumar Patel. 2:55 PM:- spoke with Donna. they put a new plate on tank's bottom and a new cement pad underneath the tank. once the tank installed on new pad, they will do vent line work. 08/31/15-Hiralkumar Patel. 3:25 PM:- spoke with Donna and asked her to submit report. 10/30/15-Hiralkumar Patel. 11:11 AM:- sent email to Mr. Gjokaj and asked him to submit final report immediately. email copied to Donna. 12/23/15-Hiralkuma Patel. reviewed available information. the subject spill case was reported on 10/16/14 due to failure of 5,000 gal #6 oil tank system. the tank was lifted from the floor and holes were found on the bottom. soil samples were collected from area where tank was located. no contamination noted in soil samples. after repairing the tank bottom, tank was re-installed in same location and tested tight. the tank system piping were tested and noted leak in the vent pipe only. to date, the department has not received any document confirming repair of the leaking vent line, result of tank system test after necessary repairs on the vent line and removal of petroleum impacted material, if release occurred from the vent line. 11:28 AM:- left message for Mr. Gjokaj. 11:54 AM:- spoke with Maria at Mr. Gjokaj's office. informed her about open spill case and pending report. she will ask Mr. Gjokaj to call back. 3:19 PM:- received call from Mr. Gjokaj. he mentioned that the failed vent line was replaced. he confirmed that there was no release from the failed vent line. they have changed product from #6 to #4 oil. asked Mr. Gjokaj to submit statement confirming no release from the former vent line, work done to correct the problem, color photographs of entire tank system and result of tank system tightness test. informed him that these documents must be submitted by the end of 01/06/16 to avoid enforcement. 3:29 PM:- sent email to Mr. Gjokaj and asked him to submit required documents by the end of 01/06/16 to avoid enforcement. 01/05/16-Hiralkumar Patel. 1:45 PM:- sent email to Mr. Gjokaj reminding that spill investigation/cleanup report is due tomorrow. email copied to Donna. 3:16 PM:- received emails from Mr. Gjokaj including some site photos, but it does not include other required information/document (statement confirming no release from the former vent line, work done to correct the problem and result of tank system tightness test). 3:21 PM:- sent email to Mr. Gjokaj and asked him to submit required documents as per email dated 12/23/15. 01/06/16-Hiralkumar Patel. received fax from Mr. Gjokaj including copy of tank system test result (failed) dated 10/16/14 and few invoices from ABC tank, but it does not include required documents listed in email dated 12/23/15. 10:54 AM:- sent email to Mr. Gjokaj and informed him that fax does not include documents required as per email dated 12/23/15 and it must be submitted immediately. email copied to Donna. 01/07/16-Hiralkumar Patel. 9:59 AM:- left message for Mr. Gjokaj. 01/08/16-Hiralkumar Patel. 3:06 PM:- received call from Mr. Gjokaj. inquired him about submission of required documents. he mentioned that due to some payment conflicts with the contractor, he is not getting any documents from them. based on available information (letter report submitted by ABC Tank on 12/05/14, email from ABC Tank on 12/16/14 confirming tight fill/supply/return lines and pics submitted by property owner showing aboveground lines), asked Mr. Gjokaj to submit result of tank system test confirming no current leak in the tank system and that would be sufficient to close the spill case. he will look into file for any document confirming this. if not found, he will contact someone to conduct system test. asked him to submit system test result by 01/15/16. 01/15/16-Hiralkumar Patel. 2:43 PM:- received message from Mr.

IVANAJ 2545 REALTY CORP. (Continued) **S110772002**

Gjokaj. he mentioned that PTC will conduct system test on 01/27/16. 02/03/16-Hiralkumar Patel. received message from Mr. Gjokaj (at 5:03 PM on 02/02/16). 9:17 AM:- left message for Mr. Gjokaj. received fax from Mr. Gjokaj including tank system test result dated 01/28/16. the tank system was tested tight. case closed based on available information. 2:36 PM:- sent spill closure letter to Mr. Gjokaj. letter emailed to Mr. Gjokaj.

Remarks: caller reporting 5,000 gallon tank failed tank test, holes found in tank. tank will be inspected and retested

DEC Memo:	1/18/06- Vought-DEC Vought and DEC Piper responded to call. Due to broken petrometer, tank overfill of approx 75 gallons. Metro oil was delivery co. Spill came out of vent pipe and affected concrete courtyard and entered wall grate into boiler room and then into sump pit. Tank onsite is a (5000-gallon) #6 fuel oil UST. Eventhough tank was filled (as spill came out vent) at time of DEC site visit, petrometer read 2700 gallons. Building contact is Evelyn Norman 917-865-2884. DEC requires: 1)Concrete in courtyard needs to be cleaned w/ speedy dry. 2)Sump pit needs to be vacuumed and cleaning of boiler room floor 3)submission of work invoice from contractor. Vought and Piper spoke to Norman via phone with requirements. AL Eastmond to respond. Piper sent contaminated soil letter on 1/19/06 to: Mr. Ved Parkash 172-14 89th Avenue Jamaica, NY 11432. 1/23/06-Vought-Called Evelyn Norman sumbission of work invoice and left message to return call to DEC. Vought sent NFA letter to Parkash and cc'd AL Eastmond (Issac Mungra).
Remarks:	50gal of #2 fuel oil spilled in a court yard. Fire Dept. on scene

DEC Memo:	9/21/12 TJD TTF letter sent (on E-DOCS). 10/19/12 TJD File review. A dry Leak was reported due to a failed tank tightness test performed by NYC Tank Testing Inc. (Test Date 8/24/12). Following the failed test, ABC Tank Repair & Lining Inc (280 East 88th Street, Brooklyn 718-272-2800) replaced both the fill & vent lines associated with 5K AST and installed a new fill box. Following repairs a new system test was performed and passed (Test Date 9/6/12). ABC has provided a statement there was no evidence of contamination in the area of excavation . Tank has been converted from #6 >> #2 Fuel Oil and PBS registration modification must be submitted by tank owner to reflect change in product stored. Based upon the documents provided - no petroleum discharge occurred associated with reported tank test failure. All required closure documentation has been received. No further action is required at this time.
Remarks:	tank failure, unk

Program: BCP
Site Code: 617805
Acres: 0.818
HW Code: C203147
SWIS: 0301
Town: New York City
Record Added Date: 04/06/2021
Record Updated Date: 12/20/2022
Update By: AMSERVIS
Site Description: Location: The 0.82-acre site is located in the Belmont section of the Bronx, NY which is primarily a residential-use neighborhood. The site is comprised of three contiguous tax parcels with associated addresses of 4720 Third Avenue (Tax Block 3042, Lot 13), 4734 Third Avenue (Tax Block 3042, Lot 22), and 448 East 189th Street, Bronx, New York 10458, (Tax Block 3042, Lot 28). The site is bounded by East 189th Street to the north, a commercial building to the south, a parking lot and a middle school to the east, and Third avenue, a gas station, and a residential apartment building to the west of the site. Site Features: The site is flat and currently vacant. The former 18,800-square foot one-story building has been demolished and

FORMER SEARS AUTO CENTER SITE (Continued) **S128660452**

the foundation slab removed. The remaining portion of the site was covered by an asphalt parking lot. The foundation slab, asphalt, and contaminated soils have been removed under the implemented interim remedial measure (IRM) and Remedial Action Work Plan (RAWP). Current Zoning and Land Use: The site is currently located in the C4-5X Zoning District which allows for both commercial and residential uses. The surrounding properties consist of a commercial and retail shopping center, parking lot, school, gas station, residential apartment building, and post office. The closest residential area is a residential building 200 feet west of the site. The closest rail line is approximate 300 feet from the site to the northwest. Past Use of the Site: The site was first developed in approximately 1896 with six two-story apartment buildings and a stable. From 1914 through 1924, the site was improved with three two-story buildings along Third Avenue used for both commercial and residential purposes. The site was redeveloped with a larger one-story building in 1924 which contained two partial basements. Plaza Garage, an automotive service-related operation, occupied the site in 1927. A & L Knitting Mills was also an occupant of the site in 1949. The site was subsequently used as a car dealership from approximately 1950 until 1993. A Sears Automotive service and repair facility occupied the site from 1993 until approximately 2014 when it ceased operation and vacated the site. Site Geology and Hydrogeology: The stratigraphy of the site consists of a layer of fill material extending from ground surface to between 3 and 11 feet below ground surface (ft bgs). Based on soil borings, this fill layer contains broken pieces of rock, brick, and concrete. Beneath the fill, there is a layer of native fine to coarse grained sands ranging in thickness from 6 to over 20 ft bgs. Clay lenses are present in multiple spots throughout the site above bedrock. Bedrock, or refusal, was encountered approximately 15 to 20 ft bgs. Monitoring well data indicates groundwater flows from east to west beneath the site towards the Hudson River. The depth to groundwater ranges from approximately 13 to 15 ft bgs.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), specifically polyaromatic hydrocarbons (PAHs) and metals in soils. Remedial actions have successfully achieved soil cleanup objectives for unrestricted and residential uses.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Site Description:	Location: The 0.82-acre site is located in the Belmont section of the Bronx, NY which is primarily a residential-use neighborhood. The site is comprised of three contiguous tax parcels with associated addresses of 4720 Third Avenue (Tax Block 3042, Lot 13), 4734 Third Avenue (Tax Block 3042, Lot 22), and 448 East 189th Street, Bronx, New York 10458, (Tax Block 3042, Lot 28). The site is bounded by East 189th Street to the north, a commercial building to the south, a parking lot and a middle school to the east, and Third avenue, a gas station, and a residential apartment building to the west of the site. Site Features: The site is flat and currently vacant. The former 18,800-square foot one-story building has been demolished and the foundation slab removed. The remaining portion of the site was covered by an asphalt parking lot. The foundation slab, asphalt, and contaminated soils have been removed under the implemented interim remedial measure (IRM) and Remedial Action Work Plan (RAWP). Current Zoning and Land Use: The site is currently located in the C4-5X Zoning District which allows for both commercial and residential uses. The surrounding properties consist of a commercial and retail shopping center, parking lot, school, gas station, residential apartment building, and post office. The closest residential area is

FORMER SEARS AUTO CENTER SITE (Continued) **S128660452**

a residential building 200 feet west of the site. The closest rail line is approximate 300 feet from the site to the northwest. Past Use of the Site: The site was first developed in approximately 1896 with six two-story apartment buildings and a stable. From 1914 through 1924, the site was improved with three two-story buildings along Third Avenue used for both commercial and residential purposes. The site was redeveloped with a larger one-story building in 1924 which contained two partial basements. Plaza Garage, an automotive service-related operation, occupied the site in 1927. A & L Knitting Mills was also an occupant of the site in 1949. The site was subsequently used as a car dealership from approximately 1950 until 1993. A Sears Automotive service and repair facility occupied the site from 1993 until approximately 2014 when it ceased operation and vacated the site. Site Geology and Hydrogeology: The stratigraphy of the site consists of a layer of fill material extending from ground surface to between 3 and 11 feet below ground surface (ft bgs). Based on soil borings, this fill layer contains broken pieces of rock, brick, and concrete. Beneath the fill, there is a layer of native fine to coarse grained sands ranging in thickness from 6 to over 20 ft bgs. Clay lenses are present in multiple spots throughout the site above bedrock. Bedrock, or refusal, was encountered approximately 15 to 20 ft bgs. Monitoring well data indicates groundwater flows from east to west beneath the site towards the Hudson River. The depth to groundwater ranges from approximately 13 to 15 ft bgs.

Summary: Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination.

Summary: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), specifically polyaromatic hydrocarbons (PAHs) and metals in soils. Remedial actions have successfully achieved soil cleanup objectives for unrestricted and residential uses.

DEC Memo:	7/28/16 - Obligado - Desk Duty - I called Rich Levato. His client did a subsurface investigation at a property which he purchased. ASR found BTEX contamination. I requested Rich email the report to Kumar Patel for review. Spill assigned to Patel. 09/16/16-Hiralkumar Patel. alternate address: 4732 Park Ave no PBS or other spills found. as per NYC DOB record, a permit application was filed on 12/16/15 for construction of a new 9-story hotel. site has 'e' designation for hazmat/noise. ---------- 12:17 PM:- spoke with Rich and asked him about reports. he mentioned that reports were submitted to OER and was told that OER will contact DEC. informed Rich that all future correspondences related to the subject spill case must be submitted to

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

DEC for review and approval
(if needed). 12:29 PM:- received email from Rich including Phase I and Phase II reports. 12:44 PM:-
received email from OER Amanda including RIR summary with RAWP scoping details. abstract of Phase I
dated May 2016: - historically, the site was utilized as a filling station from 1945 to 1986 and an
auto repair from 1989 to 2007 - active gulf gas station located on south of the site - active auto
center located to the east of the site - it is expected that the subject property was initially
developed around 1901 and contained one (1) story structure abstract of Phase II dated Aug. 2016: -
proposed new 9-story hotel with basement - basement will be 10 ft in height - basement use: a
breakfast area, a business center, pantry, an employee break room, a meeting room, a fitness
center, a laundry room and rooms for trash compactor, gas meter, electrical meter, water meter,
fire sprinkler, cable and a fuel tank ---------- - depth to groundwater varied across the site
from 12 to 22 ft bg - proposed depth of basement is only 10 ft and should not intercept the
groundwater table - elevation of property is approx. 61 ft above mean sea level - a GPR survey was
performed - GPR survey identified the four gasoline USTs in central portion of the site and one
additional UST located on the southeast area of the site which most likely used for the storage of
fuel oil - installed ten (10) soil borings (SB-1 through SB-10) to a depth of 15 ft bg -
stratigraphy of the site, from the surface down, consists of approx. 4 ft of fill material
consisting of asphalt, concrete, bricks and incinerator ash. the stratigraphy from 4 ft to 15 ft bg
consists interlayered poorly sorted sands, clayey sands, silty sands, clays and silty clays
---------- - two soil samples were
collected from each soil boring:
shallow soil sample was collected at depths less than 5 ft bg. deeper soil sample was collected
between 12 and 14 ft bg - highest PID reading was 1 ppm - only one soil sample where there was
observed contamination by visual and olfactory means - petroleum odor was observed in soil sample
from 13.45-13.55 ft bg at SB-6 - boring SB-6 was located on north side of existing gasoline USTs
---------- - incinerator ash was obaserved at a depth of 8-8.5 ft bg in SB-9 - no VOC contamination
noted in soil samples, but lab reporting limits for VOCs were above 660 ppb for soil sample from
13-14 ft bg at boring SB-6 ---------- - found some SVOCs in shallow soil samples, but not
detected in deeper soil samples - at the completion of soil sampling activities at soil boring
locations SB-5, SB-7 and SB-9, the boreholes were deepened to approx. 25 ft bg and installed 1-inch

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

temporary well points with 10 ft of screen (TW-1 at SB-, TW-2 at SB- and TW-3 at SB-) - depth to
groundwater from the top of well casing ranged from 11.54 ft at TW-1 to 22.88 ft at TW-2 -
groundwater samples were not analyzed for metals, pesticides or PCBs - groundwater flow is from
southwest to northeast ---------- - found contamination in
groundwater samples from TW-1 and
TW-2 groundwater analyticals:
----------TW-1--------TW-2
Benzene----------190
Toluene----------2,200
Ethylbenzene----------20-------1,800
Xylene----------95------10,700
1,2,4-Trimethylbenzene---------150-------1,800
1,3,5-Trimethylbenzene----------26---------870
Naphthalene----------47---------960 - at four soil boring locations, SB-4, SB-6, SB-8
and SB-9, a vapor implant was installed at a depth of 12 ft bg - minor CVOCs noted in soil-vapor
samples (max. 32.6 ug/m3 of PCE in SV-1) 09/19/16-Hiralkumar Patel. 12:20 PM:- spoke with Rich
about depth of tank bottom. he mentioned that current property owner purchased an abandoned gas
station and never used oil tanks. current property owner was unaware of any tanks on property.
currently, they don't know the tank size. 2918 Arnow Real Estate Corp. **property owner** c/o
Neelam Chadha **from DOB site. confirm it** 55 Wildwood Drive Syosset, NY 11791 Ph. (516) 265-2910
email: allborough76@yahoo.com 12:27 PM:- left message for Manny Kumar (917-939-9667). 12:29 PM:-
left message for Neelam Chadha. the Phase II report was prepared for Chand Springfield Corp. as per
NYS business entity database, Chand Springfield Corp. has following addresses: Chand Springfield
Corp. 2525 3rd Avenue Bronx, NY 10481 Vinod Chandha CEO Chand Springfield Corp. 731 Main Street New
Rochelle, NY 10801 the subject property is owned by 2918 Arnow Real Estate Corp. and as per NYS
business entity database, it has following addresses: Rajni Bala CEO 2918 Arnow Real Estate Corp.
731 Main Street New Rochelle, NY 10801 12:56 PM:- spoke with Binny (914-654-8900) at Shell gas
station at 2525 3rd Ave and left message for Manny Kumar. after discussing with DEC Vought, case
assigned to DEC Kann. 2:32 PM:- sent letter to Manny Kumar/Rajni Bala requiring delineation of
groundwater contamination and submission of redevelopment plans. asked them to submit investigation
report by the end of 11/30/16. letter emailed to Manny Kumar, OER Chawla and Rich. 10/24/16: J.Kann
- received RIWP from ASR on 10/18/16. Reviewed RIWP and provided the following email to ASR and OER
today: The RIWP prepared for the referenced site dated October 11, 2016 has been reviewed and is
acceptable. As a reminder, development plans for the referenced site

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

were requested in the
September 19, 2016 letter from the Department. The development plans and the results of the
investigation must be submitted to the Department by November 30, 2016. 11/21/16: J.Kann - spoke
with Amanda at OER. She just wanted to follow-up with me on the site. I indicated that I am just
waiting on the additional investigative work that ASR plans to do which includes the installation
of 3 permanent wells on site. I also asked her whether the site is an e designated site or a VCP.
She indicated that it currently is still an e designated site but it is possible the owner will opt
in to OER's VCP program. 12/5/16: J.Kann - Remedial Investigation Report submitted on Dec 2 and
under review. 12/23/16: J.Kann - Impacts to groundwater. Additional downgradient wells needed. Will
prepare and sent out email after I return from break. Draft Remedial Action Work Plan was received
on 12/21 and will also be reviewed upon my return. 1/6/17: J.kann - called Amanda Duchesne to ask
about whether the site was an e designated or VCP. She said she did not hear back from the
consultant/owner yet. The RAWP was received on 12/21 and we both agreed to discuss it later in the
week of 1/9. 1/13/17: J.Kann - spoke to Amanda. OER and DEC are still completing their internal
reviews. Will place comments in the RAWP and will discuss with OER week of 1/23. Groundwater
delineation is necessary as well as groundwater remediation. Vapor mitigation will also need to be
addressed. OER is still waiting on feedback from the RP to determine if they are joining the OER
VCP. 5/12/17: J.Kann - spoke with Amanda and Shaminder and sent the following email after our
conversation: Amanda The Department has received the RIR and the RAWP for the referenced site.
Petroleum impacts exist at the site and the contamination has not been delineated. The Department
therefore requires the following: Delineation of Groundwater Contamination: The Department requires
that groundwater contamination be completely delineated via the collection of groundwater samples.
The groundwater contamination must be delineated on-site and off-site. Additional wells must be
installed downgradient and north of the ASR-1 and ASR-4 locations. During installation of the
monitoring wells, soil must be screened continuously with a PID. The deepest dry soil sample and
the sample with the highest PID reading must be sent to a NYSDOH certified laboratory for analysis
by EPA Method 8260/8270 and the results must be sent to the Department. Groundwater samples must be
analyzed for EPA Method 8260/8270. Prior to installation, all utilities must be located and marked
out. A report summarizing the findings of the subsurface investigation including boring logs, well

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

installation logs, sample results, site plan, conclusions and recommendations are to be submitted to the Department. Additional borings/monitoring wells may be necessary based upon review of the investigation report. Please re-gauge the wells and reconfirm the groundwater flow direction. Submission of additional information on groundwater remediation and vapor mitigation for the Site: The Department requires the submission of plans for groundwater remediation and discussion of vapor mitigation techniques planned for use in the development of the site such as sub-slab depressurization systems. On-site groundwater contamination exists. Note that plans for vapor mitigation will be forwarded to the New York State Department of Health for review and approval. In addition, as discussed earlier today, the Department does not object to the tank removals being performed as per your May 10, 2017 email. Please have the consultant revise the RAWP to address these changes. If you have any questions, please let me know. 6/6/17: J.Kann - As per Austin, spill reassigned to Lakhani. 07/25/17 - Lakhani The work performed under the RIR included ten (10) soil borings that were advanced to 15'bgs. Three (3) soil borings were drilled to a terminal depth of 25'bgs and converted into temporary groundwater monitoring wells. Four (4) soil borings were set with soil vapor implants to an appropriate depth of 12'bgs and were used to collect subsurface soil gas samples. Three (3) soil borings were installed around the existing gasoline USTs to a terminal depth of 15'bgs. Two (2) soil samples were collected at each soil at each soil boring locations. Additional soil samples were collected based on visual or olfactory observations. A representative groundwater sample was collected from each of the temporary monitoring wells. RAWP (ASR, 07/19/17) - The proposed remedial action will consist of: 1) Excavation and removal of soil/fill exceeding SCOs, 2) Completion of a waste characterization study prior to excavation activities, 3) Excavation and removal of soil/fill exceeding Track 1 SCOs. The entire footprint of the property will be excavated to a depth of approx. 10'bg for development purposes, 4) Removal of four (4) gasoline USTs and one (1) 1500 gallon UST located on the east side of the former building on site, 5) Removal of LNAPL, treatment of groundwater plume, and the implementation of a groundwater monitoring program, 6) Additional wells will be installed downgradient and north of ASR-1 and ASR-4 locations. Groundwater flow direction will be confirmed, 7) Passive SSDS installation and vapor barrier system, and 8) Collection and analysis of endpoint samples. DEC Lakhani approved the revised RAWP pending the submission of a site map with additional well

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

locations and NYSDOH review.
DEC Lakhani emailed NYSDOH Nathan Walz regarding the site and the passive SSDS that is intended to
be installed. 07/27/17 - Lakhani NYSDOH Nathan Walz reviewed the RIR and RAWP. OER Anna Brooks will
be sending the SSDS plans for NYSDOH review. NYSDOH Nathan Walz responded: I reviewed the RIR and
RAWP for the above referenced site and offer the following comments: All instance where the
statement The NYS DOH Guidance on Soil Vapor Intrusion only requires the reporting of three
compounds of concern, methylene chloride (dichloromethane), Tetrachloroethene, and Trichloroethene.
Needs to be removed as it is in accurate. All compounds detected on the TO-15 scan need to be
reported, and will be taken into consideration when making decisions on the potential for soil
vapor intrusion to occur. This being said, the NYSDOH SVI Matrices account for the following VOCs:
Matrix A TCE, c1,2-DCE, 1,1,-DCE and Carbon Tetrachloride; Matrix B PCE, 1,1,1-TCA, Methylene
Chloride; Matrix C Vinyl Chloride, please revise your document(s) accordingly. Based on
concentrations of contaminants of concern that are present in on-site groundwater and with the
knowledge that the basement level of the building will be occupied, I recommend that the proposed
SSDS be designed as an active system or a heating season soil vapor intrusion (SVI) investigation
be conducted once the building has been constructed and can be operated under occupied conditions.
A SVI work plan will need to be submit for department review and approval. If you have any
questions regarding my comments or recommendations please feel free to contact me. 07/28/17 -
Lakhani NYSDOH requirements were sent to OER Anna Brooks who will notify the consultant and will
build them in to the RAWP. 08/22/17 - Lakhani Advanced Site Restoration Christine Camardella
(office: 212-809-1110, cell: 516-946-1121, ccamardella@askASR.com) emailed to inform that the
removal of the USTs has commenced today. So far, they have removed five (5) USTs, it is believed
that there are several more however that they will not know until tomorrow. The USTs have been
emptied of all contents and have been staged on-site if you would like to come and see them prior
to disposal. ASR has been on-site to screen soils during the activities and to collect sidewall and
endpoint samples. PBS records will be updated to reflect the amount and size of the tanks removed.
08/25/17 - Lakhani ASR Christine emailed to inform the ASR will not be the consultant on record for
the site anymore. 09/01/17 - Lakhani OER Anna Brooks sent the information for the new consultant on
the project: Patricia Badding, Environmental Management Solutions, Inc. pbadding@aol.com (908)

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

604-2291 Sent email to Environmental Management Solutions Patricia to inform her of the DEC
requirements and the NYSDOH's recommendations, which the DEC concurs with. 09/12/17 - Lakhani OER
Brooks emailed to inform that the project team is proposing that the contamination from the spill
did not on-site. The project team will put together a proposal for review. Research reveals that
there are two (2) closed spills in the surrounding area: Spill #8906198 and Spill #0002358.
However, these spills are not upgradient of the site. There are no known upgradient spills. The
open-air underground Metro-North railroad track is located upgradient of the site. 10/10/17 -
Lakhani Spoke to Patricia Badding (cell: 908-500-7160) and Environmental Management Solutions will
be removing the tanks and completing boring and additional well installation. DEC Lakhani is
awaiting a work plan. Recommended that only final excavation samples be collected since the tanks
were located only 5'bg and the final depth of excavation is 12'bg. 11/27/17 - Lakhani Spoke to
Patricia and she informed that a new 550 gallon UST was discovered on the site. The soils presented
gasoline-like odors. OER Brooks emailed confirming that as EMS was working on test pits for waste
characterization onsite and when they dug down to approx. 10' in the area in which the tanks were
removed, they came across an odor. 11/28/17 - Lakhani Patricia sent a map with the locations of the
USTs and a table of analyticals and the tank information from the PBS application. Another 550
gallon presumed gasoline UST was found between the building and the fuel oil tank. Thirteen (13)
tanks have been found on the property thus far. Sample results indicate no VOC exceedances.
12/06/17 - Lakhani Patricia Badding emailed the UST Closure report. UST Closure Report
(Environmental Management Solutions, 11/16/17) - During Phase II investigation, conducted by ASR,
contaminated groundwater was encountered. Various items were identified and implemented during the
scope of this investigation including: 1) field screening of the tank pit excavation, 2) sampling
of the tank pit excavation, and 3) analytical testing of the soil samples obtained. Historically
the site was utilized as a filling station from 1945 to 1986, for auto repair from 1989 to 2007 and
for vehicle parking until recently. A single-story masonry building, demolished approximately a
year ago, was located on the southern portion of the site. Subsequent to excavation, a total of
twelve unregistered USTs were identified on the property. UST information is as follows: four (4)
1000 gallon tanks filled with sand and gasoline, four (4) 550 gallon tanks filled with sand, three
(3) empty 250 gallons tank, and one (1) 550 gallon tank containing

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

heating oil. All USTs were
located centrally on the property except a 550 gallon heating oil UST which was found on the
southeast corner of the property. Removed tanks were inspected. During closure activities, piping
was observed on the northern portion of the site, alongside 3rd Ave. Tank tops were exposed and any
product remaining in the lines was drained and flushed into the tanks. The tanks were pumped free
of residual fuel via vacuum truck. The fill, product and vent lines were disconnected, and the open
ends capped. All piping, contents removal and tank cleaning was completed by Dover Environmental
Sciences. The cleaned-out tanks were removed. The contents, including sludge and absorbent pads
associated with tank clean-out were containerized in 55 gallon drums. After the tanks were exhumed,
they were carefully examined for signs of structural damage. Upon visual inspection of the tanks,
they all appeared to the by tight. Any piping associated with the tank was cut, cleaned and
removed. There were no petroleum impacted soils identified with any tank. Sample collection
followed excavation activities. Twelve (12) endpoint samples were obtained from the area od the
previously located tanks. Samples were collected at a depth of approx. 5’bgs. The excavation
dimensions were approx. 30’ long x 29’ wide. Samples S-1 through S-11 were only analyzed for VOCs
and S-12 was only analyzed for SVOCS. S-1 through S-11 were either non-detect for VOCs or below
unrestricted standards. SVOCs in S-12 were below unrestricted standards. 01/29/18 - Lakhani Dave
Clark (516-680-5706, dcmerco@yahoo.com), the contractor, and his consultants from Cody Ehlers
Group, Michael J Cody and Andy Ledins (O: 203-930-3145, M: 203-216-6931,
Michael.Cody@codyehlers.com) contacted DEC Lakhani to address the Stip Agreement for the proposed
SSDS at the site. 03/27/18 - Lakhani Dave Clark called and informed that five (5) wells on the
property were installed. Two (2) wells were found to have free-product within them. Product
thicknesses were not determined. Well socks were introduced in the wells with free product to
recover the oil. 05/14/18 - Lakhani Cody Ehlers Michael emailed to inform that he has completed a
groundwater and soil sampling program at the site. The client is interested in having them meet
with DEC and OER. 05/15/18 - Lakhani Spoke to Micahel Cody and he informed that five (5) 2 wells
were installed (CEG1 - CEG5). 1.75 of product, most likely to be weathered gasoline, was found in
CEG4 on 03/24/18. Well socks were placed in the well. On 05/04/18, the socks were removed and 6
ounces of oil were recovered. Approx. 7/8 of product remained in the well. No product was observed

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

in the remaining wells. The groundwater was sampled and analyzed. Samples were turbid. Results were as follow: 1,2,4-trimethylbenzene 290 ug/L(CEG2), 1,3,5-trimethylbenzene 66 ug/L(CEG2), ethylbenzene 29 ug/L(CEG2), naphthalene 86 ug/L(CEG2), m/p-xylene 49 ug/L(CEG2), o-xylene 46 ug/L(CEG2), 1,2,4-trimethylbenzene 580 ug/L(CEG3), 1,3,5-trimethylbenzene 190 ug/L(CEG3), benzene 11 ug/L(CEG3), ethylbenzene 170 ug/L(CEG3), m/p-xylene 620 ug/L(CEG3), naphthalene 200 ug/L(CEG3), o-xylene 250 ug/L(CEG3), toluene 45 ug/L(CEG3), 1,2,4-trimethylbenzene 18 ug/L(CEG5), 1,3,5-trimethylbenzene 18 ug/L(CEG5). Groundwater is flowing to the southwest. Soils were sampled between 15'-20'bgs. Soils in CEG3 had 3870 Total BTEX and 65940 Total VOCs. 06/19/18 - Lakhani Dave Clark visited the site to check for product in the three (3) wells with socks. Previously, only one (1) well CEG-4 had any gasoline in it during the previous visit. Two (2) wells CEG-2 and CEG-5 had socks in them. As before, there is no product in either well. This is consistent with previous findings. There still is a gas odor from these two (2) wells. CEG-4 previously had 1.75 of gasoline and Cody Ehlers Group 6 ounces of gasoline using a absorbent sock. During the last inspection, it was found that vandals had broken through the fence and taken the sock out of CEG-4. A sock was replaced in CEG-4. When the sock was placed in the well, it was checked within a few minutes and there was no gas. Cody Ehlers believes that the gasoline in CEG-4 is limited as to its footprint. No product has been observed in well CEG-5 or in the ASR well to the north. 08/05/19 - Lakhani - Spill being transferred to Lin. 2/28/20-lin-recieved call from Elizabeth from JP Morgan Chase regarding a financial transcation shes doing for a property adjacent property (Elizabeth# 2108415850). 9/16/22-Lin-Elevated groundwater contamination found in monitoring well 21MW2. 2/29/24-Lin-Contractor conducted additional groundwater sampling and installed downgradient off-site wells. Overall SVOC and VOC concentration on-site decreased from the first round of sampling to the second, however the concentrations remained higher than those from the off-site wells. The SVOC and VOC concentrations in the downgradient off-site wells remained low during both rounds of sampling with all concentrations ranging from 1.1 g/L to 13.4 g/L. Based on the results from the sampling events the source and limit of contamination remains within the Sites boundaries. Redevelopment plans for the Site include the construction of a full cellar requiring excavation to a depth of approximately 10-12 feet below sidewalk grade (bsg). Excavation of the Site for the cellar and the removal of contaminated soil will overall improve

ON THE PROPERTY - PHASE II - OER (Continued) **S118707084**

onsite groundwater quality.
4/1/2024-Lin-Excavation is currently ongoing at the site. Endpoint soil samples will be collected
once excavation is complete. DEC Requirements: 1)Complete delineation of the groundwater
contamination at the site which include additional monitoring wells on-site and downgradient from
21MW2. You can have the consultant send me the work plan for the new wells installation for review
and approval. 2) Two rounds of groundwater sampling with at least one round of sampling from the
existing wells and the new wells that are to be installed.

Remarks: abandoned gas station and investigation found groundwater contamination. spill is contained and clean up is progress.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT sent a gasoline contaminated soil letter Owner: Patrick Carolan Paddy's Service Station 3100 Webster Ave. Bronx, NY 10467 Ms. Kerry's fax #845-624-7320 3/16/04-Vought-Spoke with Mike Oliva (MRO Pump and Tank) (914-391-1563) and required submission of soil sample analyticals. Groundwater sample not required as of yet due to bedrock drilling. DEC will see report by 5/1/04. 3/17/04-Vought-Spoke with Mike and previously tanks were abandoned. Contamination found around tanks. Bedrock not encountered at least 4' below excavation. Also for more info. see spill # 0330044 which has been closed. YK. 6/6/05-Vought-File review by Vought: Post Excavation Analyticals (MRO Tank and Pump, Inc Michael Oliva 845-624-8197). As you can see there exists varying degress of contamination, most of which I believe are a result of leakage from the ten old 550 gallon tanks found during the removal of the exisiting cloesd registered tank . Soil analyticals show: 25000ppb ethylbenzene(bottom old tanks), 180000ppb xylene(Bottom old tanks), 180000ppb 1,2,4-trimethylbenzene(bottom old tanks), 14000ppb xylene(south old tanks), 67000ppb 1,2,4-trimethylbenzene(south old tanks), 5700ppb xylene(west old tanks), 18000ppb 1,2,4-trimethylbenzene(west old tanks), 8200ppb ethylbenzene(east old tanks), 100000ppb xylene(east old tanks), 120000ppb 1,2,4-trimethylbenzene(east old tanks), 28000ppb xylene(north old tanks), 59000ppb 1,2,5-trimethylbenzene(north old tanks). Vought called site owner at two different numbers on PBS and left message to return call: Mr. Patrick Carolan 60 Blauvelt rd Blauvelt, NY 10913 845-359-8144 DEC requires: 1)site plan 2)groundwater samples from tankfield 3)locations of former pump islands and remote fills 4)delineation of soil contamination. Vought sent letter with above requirements. Vought received call from Carolan and he will be hiring environmental consultant. 6/14/05-Vought-Received call from Carolan. Vought returned call (718-547-6971) and he will call back by 7/5/05 with environmental consultant. 7/22/05-Vought-Received call from Axel Schwen (AKRF 646-388-9529) that he is consultant for site and will be sending in report. Vought returned call and spoke to Schwen. DEC will receive report by 9/15/05. SPILL TRANSFERRED FROM VOUGHT TO OBLIGADO - 9/12/05 2/1/06 - Obligado - Called Axel Schwen

PADDYS SERVICE STATION INC (Continued) **U003127451**

(AKRF). Left message to call back DEC. 2/3/06 - Obligado - Received call from Axel Schwen, not much
has been done at site (646-388-9529). 2/23/06 - Obligado - Called Axel Schwen, left message to call
DEC. 2/27/06 - Obligado - PHone call from Axel Schwen. Said his client is putting money together to
do the work. They should be able to sign a contract to do work within 30 days. 3/27/06 - Obligado -
Called Patrick Carolan, left message to call the NYSDEC. 3/30/06 - Obligado - PHone Call from Axel
Schwen, he will send a workplan for assessment to me by 4/6/06. 5/1/06 - Obligado - Sent
STIPULATION Agreeement to Patrick Carolan. Due date May 22, 2006. 6/5/06 - Obligado- Received
Subsurface investigation workplan. Proposes instalation of 4 monitoring wells via hollow stem
auger. Continuous soil sampling. Proposes 1 soil sample from each boring. Called Axel told him the
DEC requires at least one soil sample from water interface, and an additional sample if there are
high PID readings above. He said he doesn't have a start date, but he will call when he schedules
one. 6/12/06 - Obligado - Sent email to Axel Schwendt with above requirement with August 12,2006
due date. 9/5/06 - Obligado - Called Mr. Carolan. Not in, will be back Thursday. Left message to
call DEC. 9/14/06 - Obligado - RESENT STIPULATION Agreement. Due date for signing is October 12,
2006. 10/24/06 - Obligado - Stipulation executed by Oliva. 11/15/06 - Obligado - Spoke to Axel
Schwen. Plans to drill on November 20 and 21. will probably need another month to submit report.
Due date 12/8/06. 1/17/07 - Obligado - Spoke to Axel. He said they installed 3 overburden wells set
at the top of bedrock. All 3 wells had water, so they will plan to return to sample the wells. He
said I should expect to receive a report on 2/17/07. 3/27/07 - Obligado - Phone message from Axel
Schwen. He said they have been very backed up with work. Also according to Axel they were scheduled
to do gw sampling on March 16, but due to snow storm they could not do the sampling. He said they
will reschedule and do the sampling shortly. 4/13/07 - Obligado - Sent failure to comply letter.
Final due date for ISR is 5/31/07. 5/23/07 - Obligado - received voice mail from Axel Schwen. He
said I should expect to receive the report by 5/31/07 to meet deadline. 9/26/07 - Obligado - Review
Investigation Summary Report, Submitted by AKRF. 4 borings were advanced in November 2006. Borings
were advanced using HSA drill rig. Continuous soil sampling was completed to the water table or
auger refusal. Monitoring wells were installed at B1, B3, and B4. Bedrock refusal was at 20 -22 ft
bgs. GW was encountered between 11 and 13 ft bgs. Staining and petroleum odors were present in B2,
B3 and B4. VOC impacts were detected in soil above TAGM SCOs for

PADDYS SERVICE STATION INC (Continued) **U003127451**

several compounds in soil sample
B2 and B3 at the smear zone. Minor SVOCs were detected in soil as well in B2 and B3. VOCs were
detected in gw in all 3 monitoring wells. BTEX from 360 ug/L in MW1 to 2798 ug/L in MW3. MTBE from
ND to 270 in MW1. Total VOCs from 840 in MW1 to 4645 in MW3. Presumed gw direction in towards the
southeast, however no contour map was included. AKRF concludes residual contamination is present in
ground water, and the soil contamination found in the smear zone is due to this residual gw
contamination. AKRF proposes enhanced bioremediation by introduction of an ORC compound in the
former tank field areas and in the downgradient area near MW3. Regular groundwater monitoring would
be implemented n conjunction with the ORC remediation to monitor th effectiveness of the
remediation. 11/1/07 - Obligado - Send letter to Mr. Carolan requiring submission of well survey
and contour map and Senstive receptor survey within 45 days of receipt. 1/11/08 - Obligado - Called
Axel inquiring about the bolow requirements. 1/14/08 - Obligado - Received call back from Axel.
Survey work is scheduled for this week. 2/22/08 - Obligado - Received phone message from Axel.
Survey work is completed and they are waiting for data from surveyer. 5/7/08 - Obligado - Sent
Email to Axel requiring submission of the report by close of business Friday. 5/8/08 - Obligado -
Received email from Axel with pdf the survey report. GW flow is to the southwest, sensitive
receptors found downgradient were a school and a pond within 1/2 mile. Will require additional
delineation. I sent a letter requiring additional wells to complete the delineation. 5/27/08 -
Obligado - Call from Mr. Carolan. He requested an extension to due to financial hardship. He is
trying sell the property but if he can't he needs to get financing to do the clean up. I granted a
two month extension until September 8, 2008. 8/11/08 - Obligado - Spoke with Patrica Badding who is
the new environmental consultant on the job. She wants a copy of the old report, she says Mr.
Carolan can't find his copy. I asked her to send a written request. 12/17/08 - Obligado - Email
from Patricia Badding. They are trying to get access to adjacent parking lot to complete the
delineation. The are waiting for an access agreement from DEP. 2/9/09 - Obligado - Email from
Roseann C. Julien of DEP. She requested a work plan for the delineation work. I didn't find it in
file so I called Patricia and requested her to email me the work plan. 2/25/09 - Obligado - After
looking at workplan called Patricia and asked for some text modification, an additional well
location, details on soil sampling, and implemtation schedule. 3/3/09 - Obligado - Reviewed

PADDYS SERVICE STATION INC (Continued) **U003127451**

modifications. Sent approval letter. Investigation Report is due 90 days from approval. 6/10/09 - Obligado - Report overdue. Sent email to Patricia Badding that report is overdue and required submission ASAP to avoid violations. Received email from Patricia. They have had delays due to off-site access issues at adjoining property. She requested an extension to July 17 and I approved it. 9/22/09 - Obligado - Investigation Report submitted 12/4/09 - Obligado - Completed review of investigation report. 4 wells were installed to the property, one downgradient, one upgradient and two crossgradient. MW5 which was crossgradient to the south east had elevated soil and ground water contamination. The contamination is still not delineated in this direction. Sent a letter to Mr. Carolan requiring additional delineation, at least 2 addition wells south and southeast to define extent of contamination. Required submission of work plan within 30 days. 5/14/10 - Obligado - After review, I approved the investigation workpln 7/29/10 - Obligado - I sent an emailed to Julien at DEP regarded the requirement for additional delineation and forwarded a copy of the work plan and work plan approval letter 4/7/11 - Obligado - I emailed Patty to inquire about the status of the investigation. Her response was that they just received the approval from the DEP. She will get it notarized tomorrow and send back. She anticipates a drill date in two weeks. 5/16/11 - Obligado - Email from Patty, she is still working out access issues. 5/22/12 - EMS submits Investigatino Report: 2 additional wells installed. One additional down gradient well was installed on the DEP lot. Low level VOCs (12 ug/L total VOCs)were detected in that well. One additional cross gradient well was installed to the northeast. That well was ND. Shist is encountered between 6 and 14 ft bgs. All monitorign wells were sampled on 3/22/13. The maximum BTEX was in MW2 at 19,690 ug/L. Plume has been delineated (Obligado) 7/29/12 - Email request received from P. Badding inquiring about DEC requirements for the site, as the property owner has potential purchaser (Obligado). 8/1/12 - I responded via email that a Remedial Action Plan will be required (Obligado). 3/21/13 - Obligado - I received a voicemail from Chris at Hilmar consulting 908-377-8909. He is a consultant for the new owner of the property inquiring about Department requirements. I called back and left a message. 3/27/13 - Obligado - I spoke to Chris Hirschman at Hillman Consulting 908-377-8909. He is working for a potential purchaser of the property. A multistory residential development is planned at the site. I informed him that when his client takes ownership of the property, I would send him a Stipulation Agreement that will require submission of a Remedial

PADDYS SERVICE STATION INC (Continued) **U003127451**

Action Plan. He anticipates the closing to occur within the next 1 or 2 months. He said he will contact me. 6/12/13 - Obligado - According to Acris, property has been sold to Webster Green Housing Development Fund Corporation c/o John McDonald, 345 E 102nd St, Fl 3, New York, New York 10029. 12/3/13- Obligado - This site has entered the NYCOER Brownfield Program. 1/27/2014 - Obligado - I provided Shaminder with the following comments on the OER RAWP: Thank you for speaking with me earlier. As we discussed the Department is concerned with the residual soil and groundwater contamination in the area of the former USTs shown in the attached figure. This is the area with the greatest soil and groundwater contamination as demonstrated by the recent Hillman soil boring SB2 (over 200 ppm BTEX in soil), Hillman soil vapor point SV-4 (2,000 ug/m3 benzene) and former EMS monitoring well MW2 (19,690 ug/L BTEX when last sampled in March 2012). This hot spot is located outside of the proposed 12 ft deep cellar area excavation, and according to the plans I was provided, will be left unexcavated. In order to close spill number 0313721, the Department recommends extending the excavation in this direction to the extent feasible, or proposing an alternate remedy. Due to high levels of groundwater contamination, the Department will also require post-remediation monitoring wells to be installed in the landscaped area, which is down-gradient of the hot spot. Post-remediation quarterly groundwater monitoring will be required to demonstrate remedial effectiveness. Also as discussed, please provide confirmation that NYCDOH is satisfied with the vapor mitigation plans. 6/13/14 - Obligado - Shaminder provided a RAWP Amendment which addressed the above concerns. I emailed Shaminder approval for the amended RAWP. 4/11/16 - Obligado - I received the following update from Shaminder regarding the site status. Andre: This property is enrolled in City VCP, #14CVCP179X. We finalized RAWP with them and issued Notice to Proceed. They have completed building demolition and are waiting for DOB signoff on demolition. This signoff is expected in next two weeks. Once demo is signed off, they will proceed with remediation. Your comments (email dated 1/27/2014) regarding spill remediation were addressed in Stip letter dated 4/20/2014. Site remediation will include: 1. Excavation to 12 feet depths 2. Composite cover 3. End point samples 4. Active SSDS system (three loops total) 5. 46 mil Grace Preprufe Vapor Barrier 6. Spill remediation in vicinity of SB-2 and SB-4 to Track 1 SCOs 7. End point sampling per DER-10 in spill remediation area 8. Installation of 2 GW monitoring wells after excavation to monitor GW quality.

PADDYS SERVICE STATION INC (Continued) **U003127451**

We received a complaint from neighbor living across the street regarding dust and odors. Since them, we inspected the site and reached out to neighbor. Currently, no work is going on and there were no odors. But we expect these to occur when construction begins. We ll keep you posted through daily reports. Expect to hear from neighbor with more complaints. Let me know if you need any additional information. William Wong is my project manager. William can be reached at 212-341-0659 and is cc d above. 4/11/16 - Obligado - I sent an email to Shaminder inquiring whether the vapor mitigation plans underwent DOH health review. 5/11/16 - Obligado - I sent an email to William Wong requesting whether NYCDOH approved the vapor mitigation plans. He responded that NYCDOH reviewed and approved the SSDS plans on June 11, 2014 and attach a letter from the NYCDOH to OER regarding the review of the plans. 5/12/16-Vought-Assisting DEC Obligado on spill as Vought forwarded NYCDOH review letter of SSDS to NYSDOH Hughes and inquired if NYCDOH letter was sufficient and Obligado did not have to forward Plans to NYSDOH. NYSDOH Hughes noted that he reviewed letter and was going to call NYCDOH to discuss and would get back to Vought/Obligado as to if NYSDOH review was needed. 5/18/16-Vought-Received call from and spoke to NYSDOH Hughes who had spoken to NYCDOH D'Andrea who confirmed that NYCDOH (Maureen Little) reviewed and approved SSDS plans and that no NYSDOH review was needed. Vought informed DEC Obligado of same via email. 6/21/16 - Obligado - I received an email from Chris Hirschman stating that the hot spot had be excavated down to 8 ft and 5 endpoint samples were collected. All the samples were SCOs for petroleum compounds. 8/23/18 - Obligado - I reviewed the Remedial Action Commpletion Report. The Report documents remedial excavation associated with Spill No. 0313721. 4,220 tons of soil was removed and disposed of off-site at an approved facility. Endpoint sampling showed Petroleum compounds were below Track 2 SCOs. A 8 inch concrete slab with a vapor barrier and a wind turbine driven passive SSDS was installed beneath the new residential development. P.E. Signoff of SSDS design and installation was provided. Post installation testing demonstrated negative pressure below the slab. Ground water wells installed in the courtyard revealed only MTBE at 195 ug/L in one monitoring well. All other VOCs were below standards. This spill has been sufficiently remediated and no longer appears to be a threat to human health or the environment. REsidual groundwater impact expected to attenuate over time. This spill is closed.

Remarks: tank removal, 12 tanks present on site, no visible spill but odor in ground of gasoline. tanks were in a concrete encasement

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD Significant GW contamination was found in monitoring wells at the adjacent downgradient site NYC DEP's West/North Bronx Yard @ 415 East 203rd Street, Bronx. (See DDC file for details). 9/12/03. J. Krimgold

PADDYS SERVICE STATION INC (Continued) **U003127451**

inspected gas station. PBS # 2-055824. Found 9x550 gal USTs temp. closed, but registered as
permanently. These tanks have never been tested for tightness before closure. No site assesment was
done. Requested owner Patric Carolan to close tanks properly and perform a site assesment.
9/29/2003. J. Krimgold spoke to Patric via phone. Patric promised to submit a proposal for the site
assesment and tank closure on 10/3/2003. 3/12/2004 Mike (914-391-1563) from MRO Pump & Tank called
and informed that they will start excavation on 3/15/04. Agreed that he will call me back when
excavation competed. Also, J.Krimgold explain to Mark a site assessment procedures and PBS
requirements. Same as spill # 0313721 assigned to Jeff Vougt. Therefore this spill case has been
closed. YK.

Remarks: GW contamination was found at an adjacent site downgradient from the station.

Acres: Not reported
HW Code: 203061
Record Add: 08/09/2011
Record Upd: 02/17/2012
Updated By: SRHEIGEL
Site Description: Location: The site is located at 3200 Jerome Ave. in an urban section of the Bronx. It is located at the northeast corner of the intersection of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. Current Zoning/Use(s): Until recently, the building had been occupied by PS 51X (The Bronx New School), an elementary school serving Kindergarten through 5th grade. The site has been leased by the New York City School Construction Authority for this use since 1993. Historical Use(s): The on-site building was constructed in 1928. The building was occupied by an auto garage from 1928 until approximately 1950, when it was converted for manufacturing use. The building was occupied by Nessen Lamps, Inc. from circa 1950s until approximately 1993, when it was converted for academic use. Waste manifest data indicate that Nessen Lamps Inc. used trichloroethylene (TCE) in its manufacturing process, and generated waste TCE from 1982 through 1987. Site Geology and Hydrogeology: No site specific geological or hydrogeological data has been collected. Regional geology (based on USGS data) consists of glacial deposits and fill overlying bedrock (typically Manhattan Schist). Bedrock in the vicinity of the site has been reported at a depth of 15 to 20 feet below grade. Groundwater has been reported at 12 to 16 feet below grade in the vicinity of the site. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061.
Env Problem: Nature and Extent of Contamination: Currently, data has only been collected for indoor air and sub-slab soil vapor. In January 2011, indoor air samples collected at 2 locations inside the building detected TCE at concentrations up to 53 ug/m3. Subsequent indoor air samples collected in April 2011 at 3 locations in the building detected TCE at concentrations up to 310 ug/m3. (This maximum concentration was collected from an unoccupied partial basement, however these samples were also collected after ventilating the building for 3 hours then sealing the building for 24 hours.) Indoor air samples were also collected in May 2011 as part of a pilot study of enhanced building ventilation, which consisted of (1) opening windows in all first and second floor classrooms, (2) operating the HVAC system in ?summer mode?, and (3) activating a roof-mounted 8,000 CFM ventilation fan for approximately 9 hours prior to the sampling event. The indoor air results indicated maximum TCE concentration of 607 ug/m3 in the partial basement. Sub-slab samples collected in March (no concurrent indoor air samples collected) detected TCE at a maximum concentration of 53,300 ug/m3. Subsequent sampling in April, which coincided with concurrent indoor air samples, detected maximum sub-slab concentrations of 31,000 ug/m3. A Site Characterization is planned to determine if an on-site source of TCE is present. Significant Threat: Evaluation of significant threat will be made when the Site Characterization is completed. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061.

Site Description:	Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was

THE RINZLER FAMILY LTD PARTNER (Continued) **1000379735**

historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan.
Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Description:	Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently

THE RINZLER FAMILY LTD PARTNER (Continued) **1000379735**

	from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan.
Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education’s Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was

THE RINZLER FAMILY LTD PARTNER (Continued) **1000379735**

documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Code: 458527
Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential

THE RINZLER FAMILY LTD PARTNER (Continued) **1000379735**

buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

THE RINZLER FAMILY LTD PARTNER (Continued) **1000379735**

Site Code: 458527

Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently used as a school. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988).Four 550-gallon underground gasoline tanks existed at the site between 1945 and 1992. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987. NYC Departement of Education's Bronx New School (PS51X) used the building from 1993 through June 2011 and vacated during the investigation and remediation. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Dump: False

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description: The site is located in a commercial/residential area of the Kingsbridge Heights section of the Bronx. The property is currently occupied by a two-story brick building which contains a laundromat. The site is bordered by a convenience store and apartment building on the north, by a formerly vacant lot (now under construction for Home/Hospital for the Aged), by a parking garage to the east, and by Universtity Avenue (a.k.a Martin Luther King, Jr. Boulevard) to the west. Before its use as a laundromat the property was previously utilized by a dry cleaner for an unknown length of time. Investigations conducted immediately south of the site (at 2614-2620 University Avenue) in 1997 identified tetracholoethylene (PCE) at high levels in the soil (200 ppm) and groundwater (110,000 ppb). Based on subsequent investigations, a PCE hot spot was identified. In 2000, excavation of the hot spot area was completed. Confirmatory samples collected from the excavation showed non-detectable levels of PCE and associated breakdown products. Levels of contamination in the groundwater dropped by several orders of magnitude since 1997. The remaining groundwater contamination will be addressed under the Operations, Maintenance and Monitoring Plan. See also site no. 203008, which determined there was no source of contamination on 2628 University Ave. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.
Env Problem: The operations contaminated the soil and groundwater on the adjacent property with tetracholoroethylene (PCE) and its associated breakdown products. Excavations addressed soil contamination, and most of the groundwater contamiation. The remaining groundwater contamination is being addressed under the Operations, Maintenance and Monitoring Plan.

Site Description: Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.
Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene,

2614 KINGSBRIDGE CORP (Continued) **U001836650**

trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.

Health Problem:	Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Site Description:	Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to

2614 KINGSBRIDGE CORP (Continued) **U001836650**

be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.

Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.

Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.

Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Site Description:	Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. Site Description: Site Description: Location: The 79,000 square foot (1.814 acre) site is located in the Bronxdale section of the Bronx. It comprises the entirety of lot 13. The site is bounded on the north by Waring Avenue, on the east by Olinville Avenue, on the south by multi-story residential apartments, and on the west by Barker Avenue. Site Features: The site currently consists of a four-story public school building with an unoccupied basement, asphalt-paved playground and playground equipment. The NYCSCA constructed an addition southeast of the existing PS 96X main school building. Current Zoning/Use(s): The present zoning is R6 (residential), and current land use is defined as Public Facilities and Institutions. Historical Use(s): The history of the site as presented in Phase I Report indicates the site was a school since approximately 1929, prior to which it was either residential or undeveloped. Site Geology and Hydrogeology: Soil thickness ranges from approximately two (2) to 11 feet bgs. Historic fill material was observed throughout the Site between grade and depths of approximately two (2) feet bgs in the north portion of the Site and depths of approximately nine (9) feet bgs in the south portion of the Site. The historic fill generally consisted of brown sand and silt with fragments of brick. Native soil below the historic fill generally consisted of silt and clay with sand and gravel. Weathered bedrock was observed below the historic fill and/or native

650 WARING AVENUE (Continued) **S121933809**

soil. Bedrock was encountered at a depth of approximately 2 feet bgs in the northern portion of the Site and at a depth of approximately 11 feet bgs in the southeastern portion of the Site. The bedrock consists of mica schist and gneiss. Based on information gathered during the gauging of the permanent monitoring wells, groundwater is present in bedrock at the depths ranging from approximately 6 to 18 feet below ground surface. Based on groundwater surface elevation measurements, the inferred groundwater flow direction at the Site is in a south/southwest direction. Site entered BCP - site C203068.

Env Problem: Nature and Extent of Contamination: Soil: There were no volatile organic compounds (VOCs) detected in soil samples at concentrations above the 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). Groundwater: Chlorinated solvent-related VOCs were detected in groundwater at concentrations exceeding Class GA Values in samples collected from four (4) monitoring wells (three new and one existing) located on the Site. Specifically, the following analytes were present at concentrations above Class GA Values:1,1,1-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethene, Cloroform, Cis-1,2-dichloroethene, Tetrachloroethene and Trichloroethene. With the exception of chloroform in monitoring well MW-7, no chlorinated solvent-related VOCs were detected at concentrations above corresponding Class GA Values in the seven (7) monitoring wells located on the northern (upgradient), eastern (upgradient and cross-gradient), and western (cross-gradient and downgradient) property perimeter. Upgradient well MW-7 contained a chloroform concentration (8.1 ug/L) that exceeded the Class GA Value (7 ug/L). Soil Vapor (SV): The detected concentrations of the compounds analyzed in the sub-slab soil vapor samples in 2012 were generally lower than the concentrations reported in 2009. Site entered BCP - site C203068.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

(7 ug/L). Soil Vapor (SV): The detected concentrations of the compounds analyzed in the sub-slab soil vapor samples in 2012 were generally lower than the concentrations reported in 2009. Site entered BCP - site C203068.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

650 WARING AVENUE (Continued) **S121933809**

Site Code: 477937

Site Description: Site Description: Location: The 79,000 square foot (1.814 acre) site is located in the Bronxdale section of the Bronx. It comprises the entirety of lot 13. The site is bounded on the north by Waring Avenue, on the east by Olinville Avenue, on the south by multi-story residential apartments, and on the west by Barker Avenue. Site Features: The site currently consists of a four-story public school building with an unoccupied basement, asphalt-paved playground and playground equipment. The NYCSCA constructed an addition southeast of the existing PS 96X main school building. Current Zoning/Use(s): The present zoning is R6 (residential), and current land use is defined as Public Facilities and Institutions. Historical Use(s): The history of the site as presented in Phase I Report indicates the site was a school since approximately 1929, prior to which it was either residential or undeveloped. Site Geology and Hydrogeology: Soil thickness ranges from approximately two (2) to 11 feet bgs. Historic fill material was observed throughout the Site between grade and depths of approximately two (2) feet bgs in the north portion of the Site and depths of approximately nine (9) feet bgs in the south portion of the Site. The historic fill generally consisted of brown sand and silt with fragments of brick. Native soil below the historic fill generally consisted of silt and clay with sand and gravel. Weathered bedrock was observed below the historic fill and/or native soil. Bedrock was encountered at a depth of approximately 2 feet bgs in the northern portion of the Site and at a depth of approximately 11 feet bgs in the southeastern portion of the Site. The bedrock consists of mica schist and gneiss. Based on information gathered during the gauging of the permanent monitoring wells, groundwater is present in bedrock at the depths ranging from approximately 6 to 18 feet below ground surface. Based on groundwater surface elevation measurements, the inferred groundwater flow direction at the Site is in a south/southwest direction. Site entered BCP - site C203068.

Env Problem: Nature and Extent of Contamination: Soil: There were no volatile organic compounds (VOCs) detected in soil samples at concentrations above the 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). Groundwater: Chlorinated solvent-related VOCs were detected in groundwater at concentrations exceeding Class GA Values in samples collected from four (4) monitoring wells (three new and one existing) located on the Site. Specifically, the following analytes were present at concentrations above Class GA Values:1,1,1-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethene, Cloroform, Cis-1,2-dichloroethene, Tetrachloroethene and Trichloroethene. With the exception of chloroform in monitoring well MW-7, no chlorinated solvent-related VOCs were detected at concentrations above corresponding Class GA Values in the seven (7) monitoring wells located on the northern (upgradient), eastern (upgradient and cross-gradient), and western (cross-gradient and downgradient) property perimeter. Upgradient well MW-7 contained a chloroform concentration (8.1 ug/L) that exceeded the Class GA Value (7 ug/L). Soil Vapor (SV): The detected concentrations of the compounds analyzed in the sub-slab soil vapor samples in 2012 were generally lower than the concentrations reported in 2009. Site entered BCP - site C203068.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

BROWNFIELDS:

Name:	650 WARING AVENUE
Address:	650 WARING AVENUE
City,State,Zip:	BRONX, NY 10467
Program:	BCP
Site Code:	567790
Acres:	1.820
HW Code:	C203068
SWIS:	0301
Town:	New York City
Record Added Date:	03/09/2018
Record Updated Date:	02/16/2023
Update By:	AAOBLIGA
Site Description:	Site Features: The Site is improved with a four-story public school building with a basement. The original four-story main school building, P.S. 96X was constructed in 1929. A four-story Addition to P.S. 96X was completed in September 2015. The Addition is located south and east of the original school building. The remainder of the Site is the fenced-in play yard. Current Zoning and Land Use: The site is zoned R6 (residential use) and is currently occupied by a public school. Beyond the properties immediately adjacent to the site, property uses are commercial, residential, and institutional. Additionally, the Bronx River Parkway is approximately two blocks west of the site followed by New York Botanical Garden. Past Use of the Site: The four story original P.S. 96X school building was constructed in 1929. Site Geology and Hydrogeology: Bedrock at the site consists of fresh to weathered, very closely to closely fractured, gray white banded quartz mica garnet schist. The depth to top of sound rock varies from about 4 feet below ground surface (bgs) to a maximum depth of 19 feet bgs, but typically varies between 4 and 6 feet bgs. Fill material consisting of brown sand and silt with brick fragments was encountered at the Site to a maximum depth of approximately 2 feet in the northern portion of the site and 9 feet in the southern portion of the site. Native soil below the historic fill generally consists of silt and clay with sand and gravel.

650 WARING AVENUE (Continued) **S121933809**

Weathered bedrock is present below the historic fill and/or native soil. Groundwater is present in bedrock at the site at depths ranging from approximately 6 to 19 feet bgs and flows from the site radially toward the southeast, south, and southwest.

Env Problem: Nature and Extent of Contamination: Prior investigation and remediation at the site, which consisted preliminary groundwater treatment, was completed under a Consent Order prior to the site s entry into the BCP. See site no. 203068. Soil: Lead was found in shallow soil at a concentration of 63.4 parts per million (ppm), which marginally exceeds the unrestricted use soil cleanup objectives (UUSCO) of 63 ppm. There were no other parameters detected in soil samples at concentrations above the UUSCO. Data does not indicate any off site impacts in soil related to this site. Groundwater: The chlorinated solvent tetrachloroethylene (PCE) and its associated degradation products were found in groundwater at north-central portion of the site at concentrations exceeding the applicable ambient water quality standards (AWQS) which are typically 5 ppb. PCE was found at a maximum concentration of 240 parts per billion (ppb), trichloroethene (TCE) at 5400 ppb, and cis 1,2 dichloroethene (DCE) at 890 ppb. TCE has migrated about 400 feet down gradient off site. TCE was present at a maximum concentration of 1210 ppb at a location in the courtyard of the adjacent downgradient apartment building, located to the south of the school. Soil Vapor, Sub-Slab Vapor & Indoor Air: Sub-slab soil vapor testing completed on-site found PCE at a maximum concentration of 60 micrograms per cubic meter (ug/m3) and TCE at a maximum concentration of 6.9 ug/m3. In indoor air of the existing school, the maximum concentration of PCE detected was 1.8 ug/m3 and the maximum concentration of TCE detected was 0.54 ug/m3. In on-site soil vapor, PCE was detected on site in soil vapor at a concentration of 310 ug/m3 and TCE was detected in soil vapor at 31 ug/m3. Off site, TCE was detected in soil vapor at a maximum concentration of 370 ug/m3, and cis 1,2 dichloroethene (DCE) at a maximum concentration of 200 ug/m3. In indoor air, the maximum concentration of TCE was 47 ug/m3 which was measured at in the basement level gas meter room of the apartment building which is next door and down gradient from the site.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to control the potential inhalation of site contamination due to soil vapor intrusion for the onsite building. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in offsite buildings.

DEC Memo:	2/6/15-Zhune spoke to Mark Robbins from Hydrotech 631-462-5866. he said they were doing phase II for client who is going to bye the propety. They did GPR and found a gasoline UST. They drilled seven borings (7) and found contamination in two of the borings located in the vacinity of the tank. They will wrap up the report and send it next week to the DEC. 5/4/16-Mark Robbins from Hydrotech sent the following email circling back around on this property. We are not working on it. Rachel called Jonathan Yunason and David Flusberg and asked about it, and Jonathan told her that, their environmental consultant will contact the State. Rachel then send your contact info to David. His number is 646-627-4628. Good luck. 3/15/2023-Lin-During site excavation, a 550 gallon UST was discovered. EBC field employees screen the area of the removed tank and did not notice any olfactory or PID readings. The area was excavated to a depth of 15' bgs. Five (5) endpoint samples were taken around the tank area and they came back clean. All soil samples taken after excavation of the site came back clean. A composite cover and vapor barrier will be installed as part of the development of the site. Case closed.
Remarks:	LAB RESULTS ADVISING VOC'S ABOVE STANDARD IN SOIL. NO GW. HISTORIC UST ON PROPERTY.

DEC Memo:	3/6/20-Chawinie Relly email- As per our discussion, I am the environmental consultant for the site and the site is currently going through the OER program for Hazmat, noise and air. I have copied the OER PM on this email. 3/15/23-Lin-Duplicate spill. Refer to spill 1410749. Case closed. As a requirement of this program; the site is required to sample soil groundwater and soil vapor across the site. During these activities today a 550-gallon UST along 3rd Avenue was noted. We installed borings around the tank; to the north, east and west. There was no room for a boring south of the tank. Staining, odors and pid readings (200-500 ppm) were noted in these borings. Additional samples were collected from these locations and run for VOCs and SVOCs. Please give me a call with any additional questions. Thanks, Chawinie Reilly Senior Project Manager / Industrial Hygienist EBC Environmental Business Consultants Ph: 631.504.6000 ext. 123 Fax: 631.924.2870 Cell: 631.827.5007 creilly@ebcincny.com

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

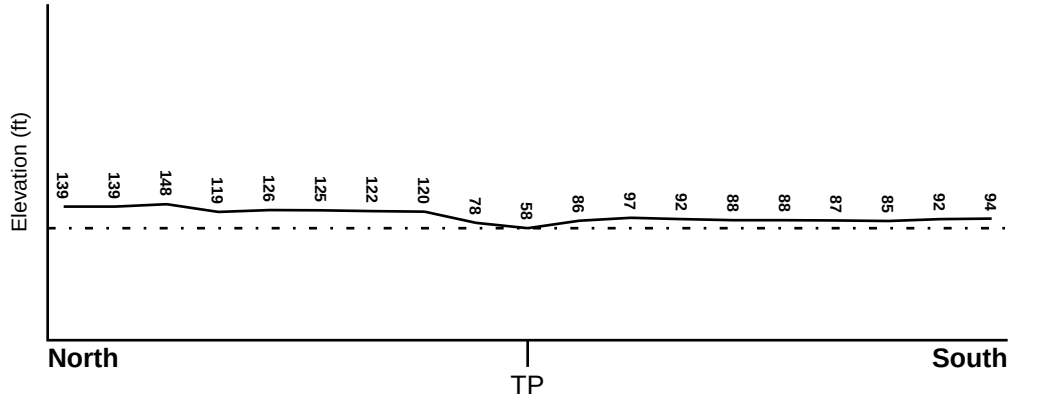
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

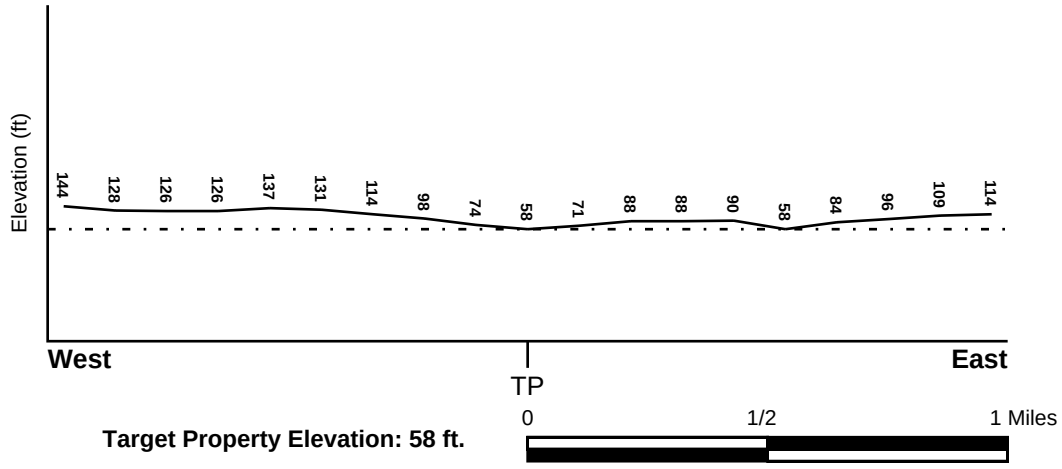
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 58 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970082F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970101F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

Surficial Soil Types: loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: gravelly - sandy loam
unweathered bedrock
gravelly - fine sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Environmental Record Search Results and Information Requests

From: New York DEC FOIL Center
To: Annmarie Yannaco
Subject: FOIL Request :: W142076-012725
Date: Monday, January 27, 2025 2:30:42 PM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 1/27/2025 and given the reference number FOIL #W142076-012725 for tracking purposes. You may expect the Department's response to your request no later than **2/25/2025**.

Record Requested: **Site Address: 2752 Webster Ave, Bronx NY Site Parcels: Block 3273; Lots 91 and 100 As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling. Please also provide previous assessment records/assessment cards, building department permits, tax and zoning maps, and any construction/development records or year that the current building was constructed. Electronic copies are preferred, if possible.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 1/27/2025, Reference # W142076-012725

Date: 01/31/2025

Dear Annmarie Yannaco,
In response to your Freedom of Information Law (FOIL) request seeking:

> *Site Address: 2752 Webster Ave, Bronx NY*
> *Site Parcels: Block 3273; Lots 91 and 100*
> *As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling. Please also provide previous assessment records/assessment cards, building department permits, tax and zoning maps, and any construction/development records or year that the current building was constructed. Electronic copies are preferred, if possible.*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. For further assistance, please call (718) 482-4912 and reference FOIL

#W142076-012725, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

From: donotreply@records.nyc.gov
To: Annmarie Yannaco
Subject: [OpenRecords] Request FOIL-2025-826-00379 Acknowledged
Date: Tuesday, January 28, 2025 6:54:04 AM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

The Department of Environmental Protection (DEP) has **acknowledged** your FOIL request FOIL-2025-826-00379.

You can expect a response on or about Tuesday, April 29, 2025.

Please visit FOIL-2025-826-00379 to view additional information and take any necessary action.

From: donotreply@records.nyc.gov
To: Annmarie Yannaco
Subject: [OpenRecords] Request FOIL-2025-826-00379 Closed
Date: Thursday, January 30, 2025 9:51:25 AM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

The Department of Environmental Protection (DEP) has **closed** your FOIL request FOIL-2025-826-00379 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.
- Your request under the Freedom of Information Law (FOIL) is being closed because this agency does not have the records requested. You should direct your request to a different agency.

For tax assessment contact Dept. of Finance, for building matters contact Dept of Buildings.

You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foilappeals@dep.nyc.gov within 30 days.

Please check your email inbox's spam folder to ensure you received all records provided by the agency.

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

The Mayor's Office of Environmental Remediation (OER) has **denied** your FOIL request FOIL-2025-002-00085 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.
- The property is subject to E-Designation E-249. General information about this E-Designation is available on OER's website at https://link.edgepilot.com/s/5c2f6253/xvPuWRnQHEuhjMyWHKAJNg?u=https://www.nyc.gov/site/oer/remediation/ceqr-documents.page?borough=Bronx
- OER issued Notices of No Objection to the NYC Department of Buildings (DOB) for proposed work at Bronx block 3273, lot 100, pursuant to the property's E-Designation requirements. Copies of the notices are publicly available via DOB's portal at:
- https://link.edgepilot.com/s/4b471bf8/0PRLHyio7UGXiODN7r17zA?u=https://a810-bisweb.nyc.gov/bisweb/BScanJobDocumentServlet?requestid=2%26passjobnumber=220362042%26passdocnumber=01%26allbin=2016233%26scancode=ES148274014
- https://link.edgepilot.com/s/b891804f/XkdPRe5Ys0i56kbZN-Dlrg?u=https://a810-bisweb.nyc.gov/bisweb/BScanJobDocumentServlet?requestid=2%26passjobnumber=220628328%26passdocnumber=01%26allbin=2016233%26scancode=ES912700721

Please visit FOIL-2025-002-00085 to view additional information and take any necessary action. You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foil-oer@cityhall.nyc.gov within 30 days.
