Contact Name:	TIM FISHER
DEC Memo:	"3/5/2014 - Feng - Spoke with Tim Fisher of Antea Group (timothy.fisher.@anteagroup.com, 949-375-1174). Antea Group has been retained by Getty Realty. Alliance Energy is the tenant and has been operated the site for a year. The contractor for Alliance Energy found impacts in the pea gravel beneath the dispensers. Antea Group has screened the pea gravel with PID and found one dispenser with 323 ppm and another dispenser with 273 ppm. Alliance's contractor has removed the pea gravel and cleaned the sump. The gravel will be stored into a 50-gallon drum and will be disposed. They have disconnected the dispensers and tested with water and found no leak in tht dispensers pan so it should not released to the subsurface. There is no indication of problem of the dispensers. The station is in the process of putting new dispensers and should be completing the

BELOW DISPENSORS (Continued) **S116553269**

work today or tomorrow, but there is no plan to collect soil sample beneath the dispensers upon they remove the whole dispensers out. Contact for Alliance's environmental management, David Went 339-368-0668. Spoke with David Went (339-369-0668, dwent@AllianceEnergy.com). Advised him on the removing of impacted soil, if there is any, and collecting soil sample while removing the dispensers. But he said that they are not removing the dispensers pans, the pans have been tested tighted so no need to remove that. Therefore, no soil will be exposed and removed. 3/31/2014 - received and reviewed a letter report from Tyree dated 3/31/2014 documenting the incidents associated with the dispensers and the removal of the stained and odored pea gravels. Spill is closed."

Remarks: "clean up underway."

GLOBAL MONTELLO GROUP CORP. #5421 (Continued) **A100168816**

Material Name: gasoline

Tank Number: 014
Tank Id: 50992
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
D00 - Pipe Type - No Piping
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
G10 - Tank Secondary Containment - Impervious Underlayment
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F00 - Pipe External Protection - None
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
C00 - Pipe Location - No Piping
J00 - Dispenser - None
I04 - Overfill - Product Level Gauge (A/G)
B05 - Tank External Protection - Jacketed
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 12/01/1993
Capacity Gallons: 180
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: DAFRANCI

DEC Memo:	"School is upgrading the elevator. Contractor pulled the piston and discovered some hydraulic oil in the 24ft piston hole in bedrock. Hole was bailed out and now they are planning what additional work is needed. Bore hole was pumped of water and oil. Recharge rate was observed to be very little over the course of a few days. Bore hole pumped again though minimal water and no product. Bore will be overdrilled to accomodate larger piston for larger elevator. Spill can be closed after submission of work to date, disposal for additional cuttings. 9/8/2011- AKRF was on site to conduct screening of the soil during the over-drilling of the piston hole. No staining or odors were noted during the drilling activities. All soil was containerized into 55-gallon drums, analyzed for waste characterization, and shipped off-site for disposal. Based on nature of spill and work to date, this spill is closed."
Remarks:	"elevator piston pulled out of ground - found leaking - cleanup in progress"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE

GETTY SERVICE STATION (Continued) **1000872182**

OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Name:	TIM FISHER
Spiller Company:	UNKNOWN
Spiller Address:	1185 BRONX RIVER AVE
Spiller Company:	999
Contact Name:	TIM FISHER
DEC Memo:	"12/12/17-Zhune spoke to Tim Fisher 914-495-9935. Tim said the owner of the property is Getty Realty. The tenant Global is removing the underground tanks, product tanks and the dispensers. The tenant is no longer operating the property. They are not going to install new tanks. During the process of removing the tanks contaminated soil was identified. They excavated soil contaminated. they are in the process

BUSINESS SERVICE STATION (Continued) **S121462961**

to collect end-point samples. Once they receive the soil analytical results they will make the decision of what the new step will be. 12/13/17-A CSL letter was sent to: Mr. Brad Fisher Director Environmental Getty Realty Corp. Two Jericho Plaza Wing C Suite 110 Jericho, NY 11753 12/15/17 - Lakhani As per his email, Antea Group Tim Fisher informed that all three (3) USTs were removed from the ground today. Sidewall soil samples on the northern, eastern, and western sidewalls of the tank pit did not exhibit evidence of petroleum impacts as there was no staining and the PIDS were less than 0.5 ppm. The southern sidewall did exhibit evidence of impacted soil as there was stained soil at approx. 7'-8'bgs that exhibited PID readings of 390 ppm and 1000 ppm. A concrete slab was present across the bottom of the tank pit, the slab is approx. 1' thick and is present from 15'-16'bgs. A portion of the slab was removed to allow for samples to be collected below the USTs today, those PIDs ranged from 300-1500 ppm. Pea gravel surrounded the USTs and did not exhibit evidence of petroleum impacts. The remainder of the concrete bottom slab was removed on 12/13/17 and stained soil will be over excavated. Endpoints samples will be collected to document endpoint excavation conditions. At this time soil samples have not yet been collected below the product dispensers. Antea does plan to over-excavate the southern wall of the tank pit for remedial purposes to remove impacted soil that had exhibited the PIDs of 390 ppm and 1000 ppm. 12/18/17 - Lakhani Antea Tim called to inform that as of 12/15/17, Antea over-excavated the footprint of the tank field down to bedrock, which was present a depths varying from approx. 16'-19'bgs. We collected two 2) excavation endpoint samples for the purpose of documenting the soil that was present immediately above the bedrock. It has been noted that while one (1) of these samples exhibited a PID reading of 2,613 ppm, additional excavation was not possible due to bedrock. Antea is currently on-site performing over-excavation of the southern sidewall of the tank field. The sidewall is being excavated further to the south. Once Antea reaches clean southern sidewall samples, Antea will proceed with backfilling. Bottom soil samples were collected at the gasoline dispensers. 01/02/18 - Lakhani Antea Tim called to inform that the excavation expansion was completed and endpoint samples were collected. The excavation was backfilled and Antea received the endpoint sample results. Results have yet to be submitted to DEC. 02/05/18 - Lakhani Spill Closure Request (Antea, 02/01/18) - Visual and PID evidence of petroleum impacts were observed during the removal of the USTs and related piping dispensers. The entire bottom of the tank field was over excavated to bedrock at depths ranging from 17.5'-18'bgs. The remedial excavation was also completed lateral from the tank field south and encompassed the footprint of the dispensers. This area of the excavation was also completed to bedrock at depths ranging from 18'-19'bgs. Soil samples were collected at the excavation extents. All bottom samples collected as part of the UST closure activities were over excavated. This area was over excavated to bedrock, but soil samples were collected immediately above bedrock to document soil conditions. A total of eleven (11) sidewall samples document the remedial excavation limits. Four (4) bottom samples were collected immediately above bedrock. Groundwater was not encountered. Most soil samples do not show any VOC or SVOC exceedances. EX-B1, EX-B2, and EX S-1 had some VOC exceedances. However, these sample points were collected on bedrock and scraped off. Since excavation was completed to bedrock and the remaining sidewall soil samples showed no VOC/SVOC

BUSINESS SERVICE STATION (Continued) **S121462961**

exceedances, the spill has been appropriately remediated. Spill is closed."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 08/31/2005 - Feng -

GETTY SERVICE STATION #26 (Continued) **S100494277**

Project transferred from Vought to Feng. 10/19/2005 - Feng - File reviewed by Feng: Tank Closure Report, by Tyree, 11/1993. During 8/1993, ten (10) 550-gallon gasoline USTs were excavated and removed by Main Elmsford Company. Soil samples were collected. Environmental Site Investigation Report, by Tyree, 12/1993. During 10/1993, Tyree installed four (4) monitoring wells. no groundwater encountered. Levels of aromatic hydrocarbons detected in split spoon soil samples collected during drilling, exceeded NYSDEC Soil Guidance Values. Vapor Extraction Influence Pilot Test Report, by Tyree, 1/1995. During 1/1995, Tyree performed a Vapor Extraction Influence Pilot Test. Based upon findings of the vapor extraction influence pilot test a ROI of 15' can be achieved if a flow rate of 122 CFM at 20 of water is supplied to vapor extraction wells VW-1, VW-4, VW-5 and VW-7. Remedial Action Plan, by Tyree, 2/1995. Outlines design and construction details of the SVES to remediate soil contamination detected during removal of the former gasoline UST. SVES installed by Tyree, 4/1995. the SVES consists of six (6) 4-inch diameter vapor extraction wells which are individually manifolded to 2 diameter Schedule 40 PVC headers. The PVC headers are extended to a 12' squared concrete pad. The PV headers were then manifolded to a skid mounted SVE skid. The SVE skid consists of a Roots 5 hp positive displacement blower and is equiped with pressure and temperature switches, a vapor drop tank (coalescer) with high water level switch, and an integrated control panel. The SVE skid was started during 3/1996. Monitoring and gauging monthly on Vapor extraction wells VW-1 through VW-5, and VW-7 from the top of the well casings using a product/water interface probe. The SVES was inspected, monthly, during the 12/1998 through 2/1999 monitoring quarter. Semi Anuual Monitoring Report, by Tyree, 7/2003-12/2003. 6 monitoring wells on site, only 2 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 255.7ppb BTEX and MTBE below MDL in VW-1 (20.21' bg), 6409.9ppb BTEX and MTBE below MDL in VW-4 (19.05' bg). Semi Anuual Monitoring Report, by Tyree, 1/2004-6/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 4676.6ppb BTEX and MTBE below MDL in VW-4 (18.5' bg). Semi Anuual Monitoring Report, by Tyree, 7/2004-12/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 1408.5ppb BTEX and MTBE below MDL in VW-4 (18.64' bg). 05/04/07-Sun:Based on the Subsurface Investigation Report, dated November 2006 ,all of the groundwater samples collected from the sampling event were non detect, indicating that the groundwater has not been impacted from this spill.No free product was detected in any monitoring wells. Based on 1/2/07 data, BTEX ranged from non-detect to 2.53 ppb, and MTBE ranged from non-detect to 42 ppb.Based on these low concentrations of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Remarks: "4 @ 550 GALS WILL REPAIR IN MORNING"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #142864: 18-MAY-2002 06:05 Flush Mech W. Silkowski #82003 reports that he responded to a emergency outage to assist number nine when he observed ~ 2 gallons of unknown oil possibly from a car that was parked over the structure at the time that of the secondary burn out occurred. Environmental tag #32975 has been placed, and a sample has been taken. There was fire, and smoke involved and private property affected. There has been buildings evacuated at this location. How many is unknown at this time. 06:10 Astoria has no tanker. 06:15 Shift Manager has notified EH&S that the crew will be cutting all the mains that lead to the structure avoiding working in the unknown oil. 06:15 Chemist has been requested by Shift Manager T. Curley. 06:19 Chemist is being called in from home. 06:29 All State is in route to location. 18-MAY-2002 06:40 CIG Morris #85791 notified. Car that was involved in the incident is a 1986 Honda NYS licence plate #BRS-1355. 18-May-2002 07:30 Chemist was canceled, Flush Mech W. Silkowski will bring three samples out to chem lab to save time. Sample types taken. Oil ID, Flash point, and PCB. 18-May-2002 08:00 Update: There were six buildings involved in the evacuation, and all occupants were let back into the buildings at 06:30. 18-May-2002 09:15 Flush Mech E. Gafur #19528 reports All State

MANHOLE 17607 (Continued) **S106003712**

Tanker on location. 09:25 EPA # requested from ERT S. Mahoney #86887. 09:30 EPA #NYP 004 098 471 generated. Update: Feeder number 4X55 OA at the time of this incident, and the fault is believed to be in this structure. 18-May-2002 10:00 Flush Mech W. Silkowski #82003 reports that the product in the structure was ignited by the faulty cable in the structure, and was extinguished by the FDNY. It appears that most of the product burnt off. Chem labs reports that the product is mostly water, and they will not be able to test for flash point. 18-May-2002 10:19 Flush Mech E. Gafur #19528 reports that clean up is complete at this time. All State Power Vac Tanker removed 600 gallons of unknown liquid the is being treated as 50-499 PCB. The structure was double washed by E. Gafur, and no solid waste other than a 4' X 8 piece of wood which was drumed, and transported back to Van Nest in a Con Ed Van that is not normally used for this fuction. Clean up complete, and environmental tag is removed. 18-May-2002 11:20 Solid waste drum is not being transported to Van Nest, it will be picked up by Astoria Transportation. O.S. T. Tottora reported the there is no oil coming from the secondary, but the lead jacketed secondary is badly burnt. The waste is being treated as lead hazardous. 11:25 called Astoria for a drum pickup. 18-May-2002 14:00 Solid waste drum has been picked up. Page 1 of 1 5/18/2002 Consolidated Edison Environment, Health and Safety ChemLab NELAP NY Lab ID No: 10380 Lab Sequence Number: 02-04476-001 Date Approved: 5/18/2002 E2 Incident Number: 142864 Date Received: 5/18/2002 Chain of Custody ID: CC01259 Date Sampled: 5/18/2002 PCB Analysis by EPA 608/8082 MATRIX: WATER GRAB DESCRIPTION: WATER/OIL FROM MH#17607 LOCATION: F/O 1431 LONGFELLOW AVE STRUCTURE: MANHOLE 17607 FEEDER ID: QC ID: 01-200205120902 TEST DESCRIPTION RESULT UNIT METHOD Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 < 1.0 ppm EPA 608/8082 THE DCB SURROGATE WAS OUT OF THE QC LIMITS. SINCE ALL OF THE SAMPLE WAS USED, RE-ANALYSIS WAS NOT POSSIBLE. THE REPORTED PCB VALUE IS THE MINIMUM AMOUNT DETECTED.FLASHPOINT WAS NOT RUN DUE TO NATURE OF THE SAMPLE-ALL WATER MATRIX. Approval Status: APPROVED Approved By: Edward Chin Title: SUPERVISOR --End of Report-- Search for Results at: http://q137lims/lims 18-May-2002 14:10 All waste from this structure both liquid, and solid are being disposed of as lead hazardous waste due to sample result that were received less than 1 ppm PCB that is the only known hazardous substance in the waste. "

Remarks: "caller states that there was a manhole fire. a car was parked on top of the manhole and the oil is poss from the veh. unk coned#142864"

DEC Region:	2
DER Facility ID:	111634
DEC Memo:	"7/27/05 - Transferred for closure review to M Johnson. 6/15/06 - Transferred for closure review to T Knizek. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 11/1/06 - Raphael Ketani. Site is an apartment building. There was a tank failure. Tanks-A-Lot was pumping out a mix of asbestos and oil from a pit. The site is block/lot 02758/0036. The site is owned by the Human Resources Administration, 250 Church Street, New York, 10013-3429. The agency involved was DPM/HPD, 100 Gold Street, #6Z1, New York, 10038. Assistant Commissioner of DPM was at (212) 863-7087. I called up the 7087 number, but the person answering the phone said that the building was not in the HPD database. I called up Tanks A Lot from the Bronx (718) 387-8300/927-0350. I spoke to a woman who answered the phone and explained that I needed information on this old spill. She said she wasn't sure there were any records, but she will take a look. I called up Mr. Edwin Lugo of DPM at Gold Street (212) 863-7312. I could only leave a voice mail. 11/2/06 - Raphael Ketani. I made an unannounced site visit. I went to the entrance to 1275 Westchester Avenue and was met by heavy security. I was told that the building is an HRA building and to wait outside. Women, some with babies and young children, were coming and going from the building. I was directed to a side entrance at 1138 Longfellow Avenue. Heavy security met me there. I met the super of HRA Adult Institutions, Mr. Hollis. He showed me the boiler room, the first electrical room, and the second electrical room. Each room was absolutely dry and clean with a solid concrete floor that did not have cracks and was painted. No vapors were detected with the PID in the boiler room and the first electrical room. However, the second electrical room had about 70 ppb of vapors. What these vapors were I could not tell as there were no odors. Also, this room had a side room or large niche where an oil tank might have once been kept. Mr. Hollis told me the building was

APARTMENT BUILDING (Continued) **S107782552**

converted to gas a long time ago. I brought this spill case to the attention of Randall Austin, Chief Spills Engineer Region 2. He told me that I can close this case. Based upon the lack of impirical or incidental evidence of a spill, the lack of direct evidence that a spill event took place, the lack of any personnel who were present at the time of the spill from the apartment building or the cleanup company, the lack of any papers documenting the spill, I am closing the case. 1/8/07 - Raphael Ketani. I received a call from Naim (na-eem) Brown of the CPC (Community Preservation Corporation). He asked whether the spill had been closed. I told him it had. He asked that I send him an NFA letter. I told him I would. The letter went out today to Mr. Brown at the CPC, 31-54 Albany Crescent, Bronx, 10463. "

Remarks: "TANKS-A-LOT IS PUMPING OUT OIL MIXED WITH ASBESTOS FROM 1275 WESTCHESTER AVENUE, PUMPING OIL FROM PIT."

Classification: Large Quantity Generator

. Waste code: D000
. Waste name: Not Defined

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D005
. Waste name: BARIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED

ADHESIVE PRODUCTS CORP (Continued) **1000222173**

SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

DEC Region:	2
DER Facility ID:	288930
DEC Memo:	"3/29/05-Vought-Spill contained before hitting concrete. No sewers or drains affected. Vought called Correa for status of tank repair and she called USA Tanks. Proposal sent to owner for tank replacement by USA Tank. Vought called Garcia and to leave message that for spill to be closed, copy of invoice must be received for AST replacement. Stuyvesant Fuel Oil will no longer make deliveries until AST is repaired. No answer of phone. Spill referred to DEC Rahman to send out letter requiring invoice of repair or replace. 03/29/05-SR// Sent a leaking tank repair letter. 04/18/05-SR//No reply received from the home owner. No body picks up the phone. USA tanks also unable to hold the owner. So, they sent a proposal for the repair work via mail. Need site inspection. 04/18/05-SR// Visited the site.Homwowner was not available and could not access the basement. 04/19/05-SR//After a series of attempt, homeowner Ms. Juan Garcia(718-861-4158) was found on the phone this evening. She informed about the possible repair work to be done by this week. "
Remarks:	"Homeowner noticed fuel oil leaking under 275 gallon oil tank in basement. Bucket was placed to catch spill. USA Tanks on scene, and will handle. No oil spilled onto basement floor. 1/2 gallon oil is in bucket."

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110004333579

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"***NOTE**** Tank at 1148 Colgate failed AND tank at 1150 Colgage failed**** 8/10/2009 TTF Letter sent to: Ms. Maria McCullough Zevrone Realty Corp 1601 Bronxdale Ave Suite 201 Bronx, NY 10462 8/12/2009 Rep from Langsan Properties called Sangesland and said ABC Tank has been hired to deal with the repairs/retest. They will forward the documentation to the DEC as soon as the work is done. 9/2/09. J.Krimgold reviewed the letter submitted by ABC Tank dated 08/31/09. Based on this letter two USTs 2000 gal each failed the t/test due to a leaky mainway gasket. The gasket was replaced along with a part on the vent pipe. After that both tanks passed the test. Case closed."
Remarks:	"TANK TEST FAILURE ON 2 2000 GALLON ASTS. One tank in 1148 Colgate Ave One tank in 1150 Colgate Ave"

DEC Memo: "11/03/11- Zhune responded to this site. Oil company (F&S Petroleum) while doing delivery at School PS 50 the hose broke. Approximately 20 to 25 gallons of oil # went to the street to the curb and probably some spill to the catch basin located at E 173 Street. Oil company cleaned mostly the spill. Speedy-dry was left along the curb. 11/04/11- Zhune spoke to Jim Carey fom oil company F&S Petroleum 347-597-2821. Rite-Way is goimg to the site to remove the speedy-dry along the curb and clean the catch basin. Rite-Way-Pete Mirabild718-855-7272. 11/09/11- F&S Petroleum Corporation sent a letter including invoices. On Friday 11/4/2011. Riteway Tank Maintenance cleaned via vac-truck the storm drain located at Vyse Avenue and East 172nd street. In addition. The coating of absorbent

NYC DEPT OF EDUCATION - PS 50X (Continued) **1004755971**

material curbside was removed. The material removed by F&S on 11/3/2011 was disposed of by Milro Environmental of Freeport, NY. Spill closed. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

GETTY PETROLEUM CORP 00276 (Continued) **1001215596**

corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region:	2
DER Facility ID:	196147
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 4/8/2004 Sangesland spoke to Mr. Ruben Carbrear, owner of 1349 Boynton Ave, Bronx. He says oil is coming through the ground from a leak on his neighbor's property at 1347 Boynton Ave. House at 1347 Boynton is in foreclosure and has had alot of Emergency Repair work done on it in the last 2 years by the city HPD. This house has an outdoor #2 oil tank standing in the back of the house. It looks like a new copper line going from the tank into the basement. The old copper line is discarded nearby. The area under this oil tank is saturated with oil and this oil has now migrated over the property line into the yard of 1349 Boynton. Access to the yard of 1349 Boynton is available by ringing the bell at #2B of 1349. Sangesland spoke to Deputy Inspector Harry Brown (718-579-6772) at the NYC- HPD. Mr. Brown was told that it appears that HPD contractors have done work on this site over the last several months which seems to have caused the spill problem. This area needs to be dug out, cleaned and then refilled and tank set up again. Mr. Brown said he would send an inspector to the site and if a spill was found, a contractor would be hired to conduct the cleanup. Sangesland requested that HPD contact the DEC to arrange a joint visit to the building to discuss the clean up. 4/13/2004 Sangesland spoke with HPD Harry Brown. He said an inspector did go to the site and did see an oil leak problem. The case was referred to the HPD Emergency Repairs dept. Contact is Persey Young 212-863-8747. A message was left at this number for Mr. Young. 4/23/2004 Sangesland spoke with Persey Young of HPD. He said a contract was awarded to clean up the site at 1347 Boynton. He didn't know why this work has not yet started. Sangesland asked Mr. Young to contact Ruben Carberear (owner of 1349) to tell him what work would be done and when it would be done. DEC needs to make contact with the HPD hired contractor to confirm that proper endpoint samples will be taken and a complete closure report will be submitted. 09/09/2005 - Changed DEC lead from Demeo to Zalewski. (Zalewski) 11/3/2005 - Spoke with Persey Young (HPD). He said that his records show that they inspected the site on May 12, 2004 and the spill was taken care of by the property owner. They closed the case on May 12, 2004. Placed a phone call to the original caller. He was NA. (Zalewski) 11/4/2005 - Placed another phone call to the original caller. He was NA. I was given his cellphone number. Tried cellphone. No answer. (Zalewski) 1/12/2006 - Placed a phone call to the original caller's cellphone.

TANK LEAK IN REAR YARD (Continued) **S106385805**

He confirmed that the new owner remediated the spill. He was satisfied with the cleanup. Based on the available information, no further action. (Zalewski) "

Remarks: "CALLER SAYS HIS NIEGHBORS OIL LINE IS BROKEN AND IS LEAKING ON HIS PROPERTY< WOULD LIKE SOMEONE TO CHECK OUT SOAKED IN SOIL: "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE Transferred for closure review to M Johnson 7/29/05. 6/15/06 Transferred for closure review to T Knizek. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 10/31/06 - Raphael Ketani. The last contact was LT. Broderick of the NYC Fire Department. The spill was an overfill and the tank opening was repaired. Less than 1 gallon was reported lost. Based upon the nature of the loss, the small size of the spill and the fact that 14 years have passed since the incident, I am closing the case administratively. "
Remarks:	"WILL REPAIR OPENING ON TOP TO PREVENT FUTURE OVERFLOW."

1471-3 WATSON AVENUE (BRONXDALE HOUSES) (Continued) **U003644487**

03/23/06: This spill transferred to K.Tang - SK 07/22/10: J.Kann - spill transferred to J.Kann. Investigation Work Plan received on 7/15/10. 1/3/2012: J.Kann - provided comments investigative work plan in an email (edoced). 4/12/12: J.kann - Work plan approved in an email from 3/19/2012. 9/5/12: J.Kann - should observe field work to confirm that there is no room to sample between tank and building. 4/1/13: J.Kann - sent Stip and Cover letter to NYCHA today. 9/9/13: J.Kann - SIR received 8/12/13. Email sent to NYCHA today stating the report is incomplete - tables are not in the report and the figures are illegible. Will review report once all information is received. 10/8/13: J.Kann - revised SIR received on 9/24/13 and under review. 10/8/13: J.Kann - Report reviewed. 10,000 gallon UST removed in 1998 and replaced with a 4,000 gallon UST. 2013 Investigation included the advancement of thirteen soil borings and the installation of 3 monitoring wells. The spill has been closed based on the following: -source was removed in 1998 -Of the 13 soils samples collected, only one sample contained one SVOC minimally above CP-51, no VOC exceedences. -No free product in the wells -No SVOCs exceedences in groundwater. Minor VOCs detected (6-10 ppb)in groundwater and expected to naturally attenuate. -NFA. NYCHA emailed"

Remarks: "CALLER STATING THEY ENCOUNTERED CONTAMINATED SOIL WHILE REMOVING AN OLD TANK. SOIL WILL BE REMOVED."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE TTF ltr 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 02/23/06. Feroze talked with Mr.Paul 718-441-6800 of New York heating. They did the tank tightness test at this site. He will submit me the report soon. It is 1500 gallons capacity tank but it is not registered. 03/15/06. Spill is transferred from Feroze to Kumar Patel. 03/21/06-Hiralkumar Patel. Spoke with John at Protest and he will call back with information. 03/23/06-Hiralkumar Patel. REceived call from John from Protest. as per him, they did tank test only. the dry portion was leaking. John is not sure about isolation test. they haven't did any further work on site. Spoke with Mr. Dryland (FAX: 718-849-2905) at New York Heating. as per him this tank on site is UST of 1500 gal capacity. tank has two fill lines, one is remote one and this remote fill port was not in use for last 10 years. old fill line is plugged with cement at street level, but never capped at tank end. Paul is going on site to cap the old fill line at tank end. when

CHASE BANK (Continued) **S106011034**

Protest did tank test in 06, 2004 they found test failed, but Pual thikns that was because of old fill line. ONce Paul done with caping old fill line, he will contact ProTest and ProTest will do tank test again. if tank fails, they will do isolation test. i have asked Paul to call me back once they decide with tank test date. this property has another tank on site also. and property also using gas heating system. Paul knows about registration of those tank. Paul gave me person's name and number who is handling this site. Tom Oteranto Chase Manhattan Bank (347) 386-4670 Spoke with Tom and he told me that Paul Deri is handling the tank registration and testing thing at bank. as per Tom property has only one tank. due to signal problem, line disconnected before i get Paul Deri's number. from reverse phone directory, phone number for site address is (718) 935-9935. dialed general number and got Paul Deri on phone. Correspondence address: Paul Deri Chase Manhattan Bank Area Branches Boynton Avenue 1536 Westchester Ave Bronx, NY 10472 Ph. (516) 574-6276 (917) 440-6327 FAX (516) 574-6262 Alternate Address: Paul Deri 1985 Marcus Avenue New Hyde Park, NY 11042 as per Mr. Deri they have only one tank on location and they are already in process of registering it. Paul Dryland will excavate soil and will remove old fill line from location. TTF sent out to Mr. Deri requesting tank test and tank registration. 04/24/06-Hiralkumar Patel. REceived call from Charles Powers (Off.: 516-932-3228 Ext. 101, Cell: 516-448-5004). as per Mr. Powers, Mr. Deri is done with registration of tanks. Mr. powers knows that they have disconnected fill line and filled with cement. the tank top is open. asked Mr. Power to do isolation test of tank only to find out integrity of tank before abondoning it. he will email me with his plan of work. Received email from Mr. Powers. 06/05/06-Hiralkumar Patel. Left message for Mr. Powers. 06/06/06-Hiralkumar Patel. REceived call from Mr. Powers. they will do isolation test tomorrow. he will call back as soon as he gets test results. 06/09/06-Hiralkumar Patel. Received message from Mr. Powers. Left message for Mr. Powers. 06/16/06-Hiralkumar Patel. Received message from Mr. Powers. Spoke to Mr. Powers. as the tank is so close to building and have only single access is sidewalk, it is so hard to remove tank from location. asked Mr. Powers to take soil samples around the tank atleast 2 bt below bottom of tank and also soil samples through bottom of tank. he will email me PID readings of this soil samples and once he gets lab results, will call/email me. 08/14/06-Hiralkumar Patel. spoke with Mr. Powers. he got approval for geoprobe and will call once he gets soil results. 11/22/06-Hiralkumar Patel. left message for Mr. Powers. 11/24/06-Hiralkumar Patel. spoke with Mr. Powers. they got lab analyticals and as per him, samples came back clean. asked him to send closure report (with scaled site plan including sampling locations and full diagram of tank system). 11/29/06-Hiralkumar Patel. received Phase-II Investigation report from Mr. Powers. abstract: - groundwater is assumed to flow in a south/southeastern direction towards the Flushing Bay - four soil samples taken around 2000 gal underground tank (one from each side) - no groundwater encountered in any of the borings - CNS attempted to punch through the UST to collect soil samples beneath the tank, however, this boring was unattainable due to damaged equipment caused from attempting the said boring - samples were collected from these borings at depths ranging between six to eight ft bgs. - only compound found over TAGM limit is total Xylene (S-01A: 2.81 ppm and S-04A: 4.5 ppm, limit: 1.2 ppm) - found 17.3 ppm PID reading in S-01A at depth of 8-9 ft. spoke with Mr. Powers. explained him that as site

CHASE BANK (Continued) **S106011034**

has about 4 times high Xylene, it requires groundwater testing as they can't remove tank due to site restriction. Mr. Powers asked to send this in writing. sent out letter requiring groundwater analysis to Mr. Deri. letter faxed to Mr. Deri and to Mr. Powers (cpowers@cnsmanagement.net). 12/28/06-Hiralkumar Patel. received call from Mr. Powers. he tried to get groundwater sample and hit bedrock at depth 15 ft. he will bring larger drill and will try again. 04/18/07-Hiralkumar Patel. left message for Mr. Powers. spoke with Mr. Deri at bank. he will call Mr. Powers and ask him to call DEC. 05/07/07-Hiralkumar Patel. spoke with Mr. Powers. they can't bring rig for well installation as tank is located at side of building with small access. discuss with DEC Vought. he suggest if they find clean soil between previous depth (8 ft) and bedrock, then contamination could be considered contained. spoke with Mr. Powers again and asked him for 'clean' soil sample between boring depth and bedrock. 07/19/07-Hiralkumar Patel. received phase II report from Mr. Powers. abstract: - installed four borings at site (SB-01B to SB-04B) and collected composite samples from three borings between the depths of 8 to 12 ft bg (SB-01B, SB-02B & SB-04B) - found some VOCs and SVOCs in sample SB-02B, but under limit from available reports, found that contamination is limited to depth of 8 ft. due to tank location close to building wall, not possible to remove any contamination. no contamination found under 8 ft depth. based on available information, case closed. sent NFA to Mr. Deri. letter emailed to Mr. Powers."

DEC Memo:	"01/30/06: This spill transferred from J.Kolleeny to S.Kraszewski.

BRONX RIVER HOUSES -NYCHA (Continued) **U000410692**

This site was previously served by three 25K USTs that stored #6 fuel oil until 1990 when they were switched to #4 fuel oil. Currently, three 17K tanks are in use with #2 fuel oil. A 1993 Phase II report revealed free product in one MW and isolated areas of contamination. Some PID results were inconsistent with the soil and GW observations. A pneumatic recovery system with two RWs were installed in 1995. The latest report for this system indicated that there is no product in the recovery wells. Must have a current update for the site. Contact NYCHA. - SK 9/22/06: Spill transferred from Kraszewski to Kann. 7/31/07 - Work Plan submitted in March 2007 and approved in April 2007. Work performed on site and investigation results due by August 15, 2007. 7/19/10: J.Kann - SAR submitted in 12/07. Supplemental work plan submitted on 7/15/10. 9/9/10: J.Kann - a meeting was held with NYCHA (R. Trocchio and Y.Tkach) to discuss DEP green project at the site. The following email was sent in response to the meeting: Based on our meeting of this morning, NYCHA has indicated that NYCDEP will be installing Green Infrastructure and Stormwater Pilots at Bronx River Houses. Bronx River Houses has one open spill. DEC's involvement at this site is limited to spill remediation. NYCHA's environmental consultants and NYCDEP's project engineers should be able to determine the effects of the green project on the spill remedy. It appears there may be no impact, but ultimately it is NYCDEP and NYCHA's task to make this determination and inform DEC. In addition, the work plan prepared by preferred environmental and dated June 2010 was approved in an email dated 9/9/10. 10/26/10: J.Kann - visited site. Borings were being advanced using a rotosonic rig. Met with Ralph Trochio, Yelena Tsack of NYCHA and Jessica Ferngren of Gannett Fleming. Some field adjustments were made to boring/well locations in the work plan. The wells located on the opposite side of the building were moved closer to the former tank area. 1/10/11: J.Kann - Quarterly report sumitted on 1/6/11. 1/25/11: J.Kann - Based on review of the Site Investigation Report, NFA is warranted. Historic tanks were closed in place. Confirmatory borings and wells were advanced around the historic tanks. No free product remains in any on-site wells. Groundwater samples were collected from 8 wells. One recovery well contained minor exceedences of PAHs in groundwater. Wells located upgradient and downgradient of the recovery well had no exceedances. Soils were clean with the exception of some PAHs detected in one location cross-gradient and on the other side of the building away from the tanks at a depth of 10 ft bgs. Historic fill was present in that boring. As per the recommendation of the consultant, NYCHA will need to over drill the recovery wells for removal because smeers of old product are present along the casing. Spill closed. NFA. "

Remarks: "SUSPECT UNDERGROUND FUEL LINE FAILURE WILL EXCAVATE CONTAMINATED AREA LOCATE LEAK,MAKE REPAIRS-PICK UP AND DISPOSE CONTAMINATED SOIL."

Site Description: Location: The 900 square foot site is located at 1120 Westchester Avenue in Bronx County, NY in an urban area. Site Features: The site is located at 1120 Westchester Avenue, Bronx, New York. According to the New York City Department of Buildings the site is listed as block 2750 and lot 11. Records indicated that the subject building was built in approximately 1922. The building is a two story brick structure with a retail wine and liquor store currently occupying the first floor and one residential apartment on the second floor. The building occupies the entire lot, which is served by public water supply. Current Zoning and Land Use: The site is bordered by mixed use residential and retail properties on all three sides and Westchester Ave in front (to the north). Past Use of the Site: According to Sanborn History Maps, the subject property was vacant from the 1890s to the 1910s. There is no information regarding property use from the 1910s until the 1950s. The property was then used for both a retail store (including a drycleaner) and residential from 1950 to the present day. The Phase II Report did not note for how long the drycleaner operated on the property. Site Geology and Hydrogeology: The subsurface lithology encountered during the investigation consisted of brown fine silt-sand with some gravel. The site topography is generally flat and is situated approximately fifty (50) feet above mean sea level. Refusal due to competent bedrock was encountered at approximately three (3) feet below grade in the basement and twenty-two (22) feet below grade in the sidewalk area. Based upon a review of a groundwater contour map for the area it is anticipated the regional groundwater flow is from the west to the east towards the Bronx River.
Env Problem: Nature and Extent of Contamination: Preliminary investigation results indicate the site is contaminated with volatile organic compounds (VOCs). Soil The analytical results for the soil samples were compared to the unrestricted use soil cleanup objectives (SCOs) listed in the NYSDEC CP-51 and NYCRR Part 375-6.8(a). The maximum tetrachloroethene (PCE) concentration in soil was 100 parts per million (ppm), at a depth of 0-3 below grade (SB-1B). A maximum

BETHEL CLEANERS (Continued) **1004565965**

observed xylene concentration of 2.7 ppm, and 1,2,4-trimethylbenzene concentration of 7 ppm were detected at depth range of 0 -3 in SB-3. All other analytes are below unrestricted use SCOs. Groundwater Not sampled due to drilling refusal. Soil Vapor Analytical results of soil vapor samples were compared to NYSDOH sub-slab guidelines. The maximum tetrachloroethene (PCE) sample concentration was 125,000 ug/m3 at a SSV-1. The maximum trichloroethene (TCE) concentration of 179 ug/m3 was observed at SSV-1. The corresponding indoor air concentration of PCE was 196 g/m3 at IA-1, located in the basement of the building; and IA-2 at 45.8 g/m3, located on the first floor in the liquor store.

Health Problem: People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Since the site is covered by pavement and the building basement has a concrete floor, people should not come into direct contact with site-related soil contamination unless the pavement, building, or basement floor is disturbed. Volatile organic compounds in the soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has identified impacts associated with soil vapor intrusion at the on-site building and actions are recommended to address exposure. In addition, environmental sampling is recommended to determine if soil vapor intrusion is a concern for off-site buildings.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Line test failure - Contractor will repair and retest line. TTF letter sent 2/9/2004 02/10/04 - Spoke to Bill Simmons of ECS, hired by Cumberland Farms. ABS Carpet Warehouse located adjacent to gas station has complained of gasoline odors. ECS performed indoor air survey and detected some volatiles coming from cracks in floor. A 3/4-HP blower and duct work has been rigged to abate vapors. USTs are approx 40 feet from wall. DTW is approx 18-19 ft below grade, basement floor approx 6 feet above water table. Bill will send fax summarizing indoor vapor sampling, sealing of floor and wall with hydraulic cement, line failure info, proposed SVE and monitoring well locations. They hope to install SVE wells on Friday, 02/13/04. -Rommel 02/18/04 - STIP emailed to Bill Simmons and mailed certified to Angela Pimental at Cumberland Farms. Deadline for signing and returning, 3/3/04. Rommel 03/08/04 - Effective date of Stip. Rommel 6/7/04 - Email to Bill Simmons, Investigation Summary Report was due 6/6/04. Rommel 06/10/04 - Mailed certified letter to Angela Pimento, Cumberland Farms, conditionally approving Investigation Summary Report dated 6/2/04 therefore requiring the submittal of a RAP within 20 days (as per CAP) on June 29, 2004. Rommel 06/21/04 - Received call from Kevin and Bill Simmons from ECS Marin. They will schedule drilling NE, SE and E of SVE-4, sample existing MW, delineate GW to west and notify DEC. Still gas in indoor air samples. This spill report associated with Super Manhole. Addt'l testing, performed within last month? and inner walls of both Regular & Plus tanks (adjacent) failed. USTs have been emptied and Cumberland Farms is determining whether to close in place or remove. Rommel Indoor air

EXXONMOBIL (Continued) **S102149618**

and SVE sampling scheduled 6/22. Wells scheduled 6/23 and 6/24. RAP deadline extended to 7/15/04 Rommel. >>> Bill Simmons <WSIMMONS@ecsconsult.com> 01/13/05 01:17PM >>> Hello Jennifer, I wanted to let you know that beginning next week (January 18, 2005) Cumberland Farms Inc. shall be removing and replacing five (5) 4,000 gal USTs. Work shall include tank accessories, all meeting NYC requirements; DWFG piping, as required; new dispensers and their accessories; new monitoring system; new fire suppression system; shoring for new tank installation; new island curbs; and repair vent lines, as required. Tyree is contractor. ECS will oversee UST removals and oversight for contaminated soil excavation and post-ex sampling. If you have any questions, please contact myself or Angela Pimental at 800-225-9702. Thank you. -Rommel 06/10/05: Spill transferred from Rommel to J. Kolleeny. - JK 6/23/05: Reviewed UST Closure Report, dated March 2005. End-pt. samples showed residual contamination, especially at north and northwest edges of tank pit. ECS and Tyree put in a 6th SVE well, between USTs 3 & 4, on 6/22/05. Spoke with Bill Simmons of ECS on 6/23/05, telling him DEC must be given 5 days advance notice of fieldwork, and that location of SVE well should be reviewed and approved by DEC. He explained that site conditions limited choice of where to put SVE well, and that it was a field decision made after tanks were removed and new replacement tanks put it, putting in the casing before backfilling tank pit with pea gravel. JK agreed this was better than nothing, but in future efforts should be made to contact and confer with DEC regarding any system modifications. - J. Kolleeny 6/23/05: Reviewed Site Status Update Report for Jan.-Mar. 2005., dated May 2005. JK contacted Bill Simmons of ECS by phone and requested that SVE system effluent data be included in data table in future reports, rather than Appendix, and that results for benzene effluent be converted into lb/hr and compared to benzene discharge limit from Stip agreement (SVE data sheets). Faxed Bill 2 examples of such conversion calculations and monitoring reports presenting benzene data to show compliance with discharge standard. - J. Kolleeny 6/27/05: Received NYSDOH letter approving ECS recommendation to suspend indoor air sampling at adjacent carpet warehouse, but noting that SVE system operation should continue, and that DOH should be consulted at point when system is shut down, to discuss whether any additional indoor air testing is needed. - J. Kolleeny 06/14/06: Reviewed quarterly site status update rpts from 2nd Quarter ’05 through 1st Quarter ’06, and sent email to Bill Simmons of ECS: I’ve reviewed several Site Status Update Rpts (April-June ’05, July-Sept. ’05, Oct.-Dec. ’05 and Jan.-March ’06), and it seems that monitoring wells and SVE wells are showing virtually no remaining GW contamination, and SVE system is recovering minimal quantities of hydrocarbon vapors. I suggest ECS advance some soil borings in locations where soil contamination was identified in past investigations, to evaluate extent to which SVE system has cleaned up soil. (Do you have site plan showing historic soil data?) If you agree with idea of doing confirmation soil sampling to evaluate remedial progress, please put together work plan for soil investigation. - J. Kolleeny 03/05/07: Reviewed ECS Site Status Update Rpt for April-Sept.’06, dated Nov.’06 and received 12/13/06. GW results from Sept.’06 show minimal GW contamination remaining, and SVE system performance data show little or no hydrocarbon vapor recovery, suggesting system has reached limit of effectiveness. Report states that ECS will put together soil investigation work plan to evaluate soil remediation progress. Also,

EXXONMOBIL (Continued) **S102149618**

spoke with Bill Simmons of ECS on 3/5/07 and agreed that ECS will prepare confirmation soil sampling plan, which will include most recent GW data from Jan. '07. Sent an email confirming this (cc to Chris Johnson of Cumberland Farms), and asked for electronic copy of Site Status report (now in eDocs). - J. Kolleeny 05/11/07: Reviewed ECS's Site Status Update Report for Oct. '06 - March '07 and Confirmation Soil Boring Work Plan dated 4/30/07 and 5/3/07, respectively. Site Status Update Report presents monitoring data for on-site SVE system (currently not operational) and results of recent and historic groundwater sampling. SVE system data suggest that system may have reached limit of effectiveness, and recent GW data show low levels of petroleum contaminants remaining in a few on- and off-site wells. Based on GW data, ECS asked that NYSDEC consider discontinuing GW monitoring program. Confirmation Soil Boring Work Plan proposes advancing three (3) soil borings to 25 feet below grade at locations where soil contamination was previously identified, to evaluate whether SVE system has effectively addressed contam. I sent letter (in eDocs) to Christopher Johnson of Cumberland Farms (cc'd Bill Simmons of ECS) approving work plan but asking for additional soil boring near well ECS-4, full round of GW sampling, and analysis of soil & GW samples full range of VOCs, and noting that future reports should include site location figure. - J. Kolleeny 06/14/07: Received email from Bill Simmons of ECS on 6/12/07, saying he'd met with adjacent property owner (ABC Carpet Warehouse), and owner is adamantly refusing to allow any drilling on his property (i.e., in alleyway), or in sidewalk in front of his property. I called Bill Simmons on 6/14/07 and agreed that in light of this circumstance, ECS could eliminate boring I requested in sidewalk, and relocate boring in alleyway further to south, onto Cumberland Farms' property, so total no. of borings will be 3. Drilling planned for late June. - JK 02/28/08: Reviewed Confirmatory Soil Boring & GW Investigation Closure Report by ECS, dated 2/14/08, received on 2/19/08. Report summarizes confirmation soil sampling done on 11/27/07 and GW sampling done on 1/29/08. Three soil borings were advanced near north edge of gas station property, near wells SVE-4 and SVE-5, where soil contam was identified in past. Boring CSB-1B (near SVE-5) and boring CSB-2B (near SVE-4) had PID readings of 39 and 35.4 ppm, resp., in 19-21 ft. interval, but no compounds above TAGM 4046 RCO's. Boring CSB-2B in 23-25 ft. interval had benzene exceedance, 106 ug/kg. GW results showed 2 exceedances: 1.3 ug/L of benzene in SVE-2 (in alley between gas station and warehouse), and 5.9 ug/L of total xylenes in SVE-4. Results suggest SVE system has been effective in addressing soil contam. Review of DEC Remarks showed that Mike Hughes of NYS Dept. of Health wanted chance to decide if addt'l indoor air monitoring at ABC Carpet is warranted prior to spill closure, so I contacted him on 2/26/08. He wanted to talk to owner of warehouse, so I contacted Bill Simmons of ECS for contact info. Bill gave me name Paul Chapman, 718-842-8775; Bill noted that ECS field personnel have asked Mr. Chapman over years if he still has any odors in basement, and he has replied not since mid-2004; in response to my question does carpet bldg have complete or partial basement, Bill said it has complete basement, sent pdf of bldg plan plus photos of Bronx River at rear of bldg (in eDocs). I gave contact info to Mike Hughes (DOH), who contacted Mr. Chapman; Chapman told him he still occassionally smells gasoline odors in basement and store, and also mentioned seeing sheen on nearby Bronx River (behind warehouse and gas station) that he thinks could be related to this spill. I contacted Bill

EXXONMOBIL (Continued) **S102149618**

Simmons and relayed this, and he said Chapman had told him he'd been seeing sheen there since 1970s, long before this spill, and repeated that Chapman had not had any odor complaints for long time. I arranged a conference call on 2/28/08 with Simmons and Hughes to discuss these discrepancies, with outcome that I agreed to contact Mr. Chapman to discuss odor problems and access to alleyway for addt'l soil sampling (which Bill Simmons said Chapman had refused to grant for confirm soil invest). I called Mr. Chapman on 2/28/08, and he said he occassionally smells gasoline in basement and store (esp. when humidity is high), and also said he observed sheen in river only after this spill occurred, suggesting soil west of gas station along river had never been adequately investigated. He agreed to allow access to alley for addt'l soil sampling (denying that he had refused access to ECS) and for indoor air sampling; I promised to provide him copy of work plan for addt'l investigation and cc him on my approval letter. His mailing address is: ABC Carpet & Home Attn: Paul Chapman, Vice Chairman & President 1055 Bronx River Ave. Bronx, NY 10472 I then contacted Bill Simmons of ECS and requested work plan for addt'l invest involving soil borings in alley near SVE-1 and SVE-2, plus boring in parking lot area west-northwest of gas station, and indoor air sampling at location in basement where monthly sampling had been done. To follow up on this conversation and keep RP in loop, I sent email to Chris Johnson of Cumberland Farms, with cc's to Mike Hughes of DOH and Bill Simmons of ECS: I want to fill you in on recent developments regarding this site. I reviewed Confirmatory Soil Boring & GW Investigation Closure Report dated 2/14/08, prepared by ECS. Although data available in report suggest that impacts from spill at this site have largely been addressed, in going through spill file I realized that Mr. Michael Hughes of NYSDOH had requested opportunity to comment on whether or not addt'l indoor air sampling might be appropriate at Carpet Warehouse adjacent to site, prior to closing spill case. I contacted Mr. Hughes, and he contacted owner of adjacent property, Mr. Paul Chapman. Reportedly, Mr. Chapman told Hughes that he still occassionally notices gasoline odors in basement and store. I should also mention that confirmatory soil sampling work done recently by ECS did not include any soil borings in alley between Exxon station and carpet warehouse, where soil contam was detected in past and vapor extraction wells were installed. (Reportedly, borings could not be done in alley because Mr. Chapman would not grant access.) Today, I spoke with Mr. Chapman, who again said he occassionally notices gasoline odors in basement and store. I explained that it would be desirable to sample soil in alley to evaluate whether or not soil impacts observed there in past have been addressed, and he agreed to allow access to alley for drilling and soil sampling. He also stated he has repeatedly observed sheen on Bronx River that he believes may be related to spill at Exxon station, and he expressed concern that soil west of Exxon station (between station and river) has never been adequately investigated. As a result, I have asked Bill Simmons of ECS to prepare work plan to advance addt'l soil borings in alley and in parking lot west-northwest of Exxon station, collect and analyze soil samples from these borings, and perform indoor air sampling in basement of warehouse, at location where monthly indoor air sampling was done in past. Data from this addt'l investigation should make possible more definitive evaluation of spill cleanup. I promised to provide Mr. Chapman with copy of ECS's work plan, and to copy him on my work plan approval letter. If you have any questions or comments about this,

EXXONMOBIL (Continued) **S102149618**

please do not hesitate to contact me. - J. Kolleeny 04/08/08: On 4/1/08 received pdf of Confirmation Soil Boring Work Plan Addendum, dated 4/1/08 by ECS (in eDocs), by email from Bill Simmons of ECS (received hard copy 4/2/08). Plan proposes drilling two soil borings in alleyway between site and ABC Carpet warehouse, adjacent to vapor extraction wells SVE-1 and SVE-2, and a third boring in parking area near west edge of site (towards Bronx River), plus performing indoor air sampling in basement of ABC Carpet, as discussed (see above entry). Email from Bill Simmons stated they'd like to drill borings on 4/22/08 and requested I contact ABC Carpet owner, Paul Chapman, for his permission. I mailed copy of report to Mr. Chapman, and after several attempts to reach him by phone, I spoke with Mr. Chapman on 4/7/08 and he agreed to allow drilling and air monitoring on his property. I sent letter approving work plan, but requesting that if soil impacts are observed in boring near west edge of property, a GW grab sample be taken, to Chris Johnson of Cumberland Farms (cc's to Bill Simmons of ECS and Paul Chapman of ABC Carpet) on 4/7/08 (letter in eDocs). - J. Kolleeny 04/23/08: Visited site on 4/22/08 to observe fieldwork. Boring drilled near NW corner of ABC Carpet Warehouse parking lot, soil in 5'-7' interval had PID reading = 300 ppm, GW at about 20' bgs, GW grab sample taken with bailer after purging well of several bailers' worth of very turbid, silty water (poured some of this into glass jar and let sit, eventually silt settled to fill bottom 1/3 of jar, water above had slight sheen on surface, could be petrol or organic, and very slight petroleum odor, I thought) and letting well recover for several hours. Borings in alley between gas station and warehouse had very little contam.: boring near SVE-2 had 17 ppm on PID for 18'-20' interval, 1 ppm for 20'-22', and boring near SVE-1 had 2 ppm in 18'-20' interval; all else were BDL. Indoor air sample collected with Summa canister from lower level of warehouse; I noticed no petroleum odors, only smells related to carpeting and furniture. Lab results pending. See photos in eDocs image folder. - J. Kolleeny 06/24/08: Received pdf of Confirmatory Soil Boring & GW & Indoor Air Investigation Closure Request Addendum report (in eDocs) via email on 6/6/08 from Bill Simmons of ECS; got hard copy on 6/9/08. Forwarded pdf to Mike Hughes of NYSDOH on 6/11/08 for his review of indoor air data. Reviewing report I noted that GW data table missing compound naphthalene; checked lab data sheets and found that GW grab sample from boring CSB-6, near west edge of ABC Carpet's parking lot, near Bronx River, had exceedance for naphthalene, 119 ug/L. Contacted Bill Simmons and requested that they revise GW data table to include naphthalene, and add mention of exceedance in CSB-6 to text. Received revised text and Table 2 on 6/17/08 (in eDocs). On 6/13/08, received email from Mike Hughes of DOH stating: Levels of petroleum-related compounds in April 08 indoor air sample results for ABC Carpet are similar to background and consistent with sample results from 2005. There does not appear to be any discernable impact from gasoline vapors. Unless your evaluation of soil and GW sample results suggest any potential petroleum vapor concerns, we do not recommend any further air testing at this time. Owner should be advised to contact your office in event gasoline odors should be detected in ABC Carpet building. Report still under review. - J. Kolleeny 08/20/08: In early August, I contacted Bill Simmons of ECS and requested they prepare short discussion of most recent investigation results, focussing on minor exceedances found in soil & GW samples. On 8/4/08 received pdf of Data Evaluation Summary Addendum dated 8/11/08 by ECS (in eDocs), received hard copy on

EXXONMOBIL (Continued) **S102149618**

8/15/08. Document concludes that overwhelming majority of contam originally identified in spill investigation has been addressed, and that residual contam is minor, poses no threat to environment or public, and will naturally attenuate. Also concludes that contam detected in boring at west end of small parking lot is extremely unlikely to have been caused by this spill, considering distance from source, lack of contam detected in intervening borings, and shallow soil interval affected (ruling out GW transport mechanism). Instead, ECS states contam there could be from fill materials, since site is constructed atop former landfill materials. I asked Vadim Brevdo and Amar Nagi of Region 2 DER and Bob Cozzy of DEC Central Office DER to evaluate spill cleanup history and residual soil & groundwater impacts, plus DOH statement regarding indoor air sample. All concluded that spill cleanup has been adequate and that residual impacts pose no significant threat to environment or public health. I closed spill and issued NFA letter (in eDocs) by email and regular mail to Chris Johnson of Cumberland Farms, with cc by email to Bill Simmons of ECS and by regular mail to Mr. Paul Chapman, owner of adjacent Carpet Warehouse. - J. Kolleeny "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 4/12/04-Vought-Spill transferred from Miller to Vought as per Rommel. 3/10/05-Vought-Spoke to Mike Morris (ATC 212-353-8280x345) who is requesting site status. Vought told him to call back in two weeks if DEC has not contacted him with review results. 3/17/2004-File review by Vought: Underground Storage Tank Closure Plan (Tone Tank and Pump) Dec 1993. The facility is bounded on the south by Bruckner Blvd, on the north, east and west by commercial properties . The site contains twelve (550-gallon) gasoline USTs and one (550-gallon) fuel oil UST. Report covers procedures for tank contents removal, purging of vapors, cleaning of tanks, tank removal, laboratory analysis, waste disposal, reports and recommendations. Final Site Assessment Work Plan-5/27/94. Revised Final Site Assessment Workplan-7/8/94. Fax from American Hi-Tech-10/13/94. Fuel oil excavation endpoints. Six sidewall endpoints and two bottom endpoints collected. Sample analyticals show only minor SVOC exceedences attributable to fill material. Fax from American Hi-Tech-10/13/94. Gasoline UST excavation endpoints. Eight endpoint soil samples taken from sidewall of excavation and no bottom endpoint samples were collected. Soil analyticals show 2300ppb xylene(TB1 at

U- HAUL (Continued) **S101658297**

8’bg), 9800ppb xylene(TB3 at 10’bg), 1100ppb MTBE(TB3 at 10’bg), 620ppb benzene(TB4 at 8’bg), 18000ppb toluene(TB4 at 8’bg), 33000ppb ethylbenzene(TB4 at 8’bg), 120000ppb xylene(TB4 at 8’bg). Site Assessment Report (American Hi-Tech)-10/31/94. The gasoline tanks had on dispenser island located approximately ten feet away from the tanks . One soil sample was collected as dispenser island and showed no TAGM 4046 Soil Cleanup Objective exceedences. Report recommends that additional remedial activity may be warranted for both the heating oil and gasoline tank excavations . 3/17/05-Vought-DEC requires: 1)groundwater sample at former UST tankfield in particular at former sidewall sample location TB4 and TB3. Vought sent letter with above requirement on 3/17/05. 4/5/05-Vought-Received message from Michael Morris. Vought returned call and left message to return call to DEC. Vought received message from Morris. 4/6/05-Vought-Called Morris (212-353-8280x345) and left message to return call to DEC. Vought spoke to Morris and he will perform groundwater sampling at required locations. If contamination is found additional Geoprobe locations will be performed as opposed to installation of monitoring wells. 6/8/05-Vought-Reviewed Remedial Action Report (ATC Associates) dated 5/5/05 and received on 5/13/05. Six soil borings were performed at site. Based on these findings, petroleum impacted soils remain at the Site. The extent of soil contamination appears to be delineated to the west; however, additional delineation is required to the north, south and east . Additionally ATC recommends that a groundwater monitoring well be installed by a hollow stem auger drill rig to evaluate if groundwater beneath the Site has been impacted . 121.69 tons of soil were removed with UST removal. Four soil samples were collected for analysis. Soil analyticals show: 11000ppb ethylbenzene(B3 8-10’bg), 50200ppb xylenes(B3 8-10’bg), 5290ppb toluene(B4B 8-9’bg), 84800ppb ethylbenzene(B4B 8-9’bg), 301ppb xylene(B4B 8-9’bg). Vought sent letter approving of installation of proposed monitoring wells and delineation to the north, south and east. 8/5/05-Vought-Received call from Michael Moore (ATC) and bedrock encountered at 19-21’ below grade. Vought agreed that no groundwater sample is required if clean soil encountered before bedrock. Delineation investigation will be performed via hollow stem auger. 9/26/05 - Obligado- FILE TRANSFERRED FROM VOUGHT TO OBLIGADO 1/10/06 - Obligado - Received phone call from Charlie Talinger -ATC - (212)353-8280. Said they did a soil investigation with 6 borings. Will send the report. 2/23/06 - Obligado - phone call from Charlie Tallinger, asked if DEC hs reviewed subsurface investigation report yet. Told him it has not been reviewed. 2/24/06 - Obligado - Review subsurface investigation report. Impacts at only 1 additional boring location, B9, located south of the former USTs at the 5-6 ft depth interval. Bedrock in this well was located at 15 ft bgs. Soil results in ppb showed 6850 n-propylbenzene, 15,200 1,2,4 trimethlybenzene, 8,300 xylenes. Requests closure based on, UST source removed, no grossly impacted soils remain beneath the Site, and no impacted soils were observed near the soil/bedrock interface. 4/11/06 - Obligado - Sent letter denying no further action due to soil contamination. Required submission of RAP to remediate soil contamiation due 6/11/06 6/9/06 - Obligado - Email request for deadline extension from Michael Morris. Granted 1 month extension, new due date is July 11, 2006. 9/18/06 - Obligado - Spoke to Cecil Flekton of Environmental Resource Management (315-445-2554 ext 27 and 315-506-9537), she is new consultant for this site. Because of the change in consultant I gave

U- HAUL (Continued) **S101658297**

a new RAP deadline of October 13, 2006. 10/9/06 - Obligado - Received Email from Cecil Flekton. They received all the files transferred from ATC. 10/20/06 - Obligado - Spoke to Cecil Flekton, she said the RAP will be ready 11/27/06 11/17/06 - Obligado - Reviewed RAP for soil vapor extraction to treat vadose soil contamination. Install extraction well and vacuum monitoring points in December 2006. Conduct SVE pilot test in January 2007. Submit SVE Pilot Test Report by February 2007. Approved RAP, sent Robert Fraley approval letter via certified mail. 1/3/07 - Obligado - Emailed Cecile Flekton to inquire in SVE well and vapor monitoring points have been installed. Reply: The extraction well and vapor monitoring points are scheduled for installation next week, January 8 -9th. And the pilot is tentatively schedule for January 15 -18th. 1/23/07- Obligado - Email from Flekton - completed the installation of the vapor monitoring points and extraction well during the week of January 8th and completed the SVE pilot test last week (week of the 15th). The SVE pilot went well and we are currently compiling the data 3/1/07 - Obligado - Spoke with Flekton. She said the SVE pilot was not successful. The radiu of influence was only 6' and there was high flow with low vacuum suggesting short circuiting possibly through utilily conduit. She will submit a report and she recommends doing limited excavation instead since soils are only 9' deep. 4/13/07 - Obligado - Review Rrevised RAP. SVE pilot test was not successful. Poor vacuum influence might have been due to short circuiting. Proposes source removal via excavation of contaminated soil instead of SVE. Plans to excavate up to 300 cubic yards of soil. Plan includes a CAMP with site monitoring for VOCs with a PID. I called Cecile Fleckton to discuss. I asked if they would be stockpiling any contaminated soil on site. She said no and that the contaminated soil would be transported off-site the same day. I told her that if they do need to stockpile then piles should be staged on and covered with tarps to prevent storm water runoff and control odors. I told her I would approve the RAP. 4/17/07 - Obligado - Sent RAP approval letter via mail and emailed cc to Cecile. 5/1/07 - Obligado - Cecile Fleckton called to update on status of excavation work, she said contamination was deeper then the 9 ft interval documented in the reports. I told her to excavate as deep as health and safety constraints would allow to remove as much contaminated soil as possible. 5/2/07 - Obligado - Met Bill Marris on site to see excavation. At time of visit there were two open excavations. A large stockpile (~200 cubic yards) of soil on northern portion of the site resting on tarps. Area around b4 and b4b had already been excavated and soil endpoints had been collected and the holes backfilled. In central portion of tank area a test pit was dug down to 12 ft where PID readings were ~400 ppm at bottom, but could not go any further down due to large boulders. According to onsite staff additional excavation needed to be performed north of B3, west of test pit area, and in B1 area. 5/10/07 - Obligado - Email from Cecile Fleckton. 4 unknown USTs were found at the site. They are in the process of being removed. Excavation expected to proceed until next Thursday. 6/21/07 - Obligado - UST Closure report received by DEpartment. 575.99 tons of contaminated soil removed from the site and transported to Soil Safe Inc. of Bridgeport NJ. 4 previously unknown abandoned USTs were removed as well. Endpoint sampling below SCOs for VOCs for 16 of 19 soil samples. Most samples had minor SVOC PAH exceedences. Of 3 soil samples with VOC exceedences, 1 sample EX5E had 3770 ppb 1,3,5 trimethlybenzene, 470 ppb over limit. Sample EX 5SW was 360 ppb over

U- HAUL (Continued) **S101658297**

the same limit and 100 ppb over the xylene limit. EX5SE was the only sample with significant impacts over SCO limits. 1,3,5 trimethly benzene was 24,000 ppb, while the limit is 3,300 and total xylenes was 12,300 ppb, while the limit is 1200. 4 other compounds exceeded SCOS of this sample as well. Waste manifests were included. I discussed this site with Joe Sun. We agreed to close the site based on the following: 1) only 1 sample had significant exceedences of SCOs. 2) There was an 87% reduction in total VOC concentrations from the hottest sample collected before and the hottest sample collected after excavation. 3) 600 tons of contaminated soil removed and properly disposed of 4) Bedorck at 20 ft and no ground water encountered above the bedrock 5) 4 additional USTs were found and removed so no known source of contamination is remaining. 6) Remaining soil contamination is of limited extent. Send NFA to Cecile and Uhaul. "

Town:	New York City
Record Added Date:	11/16/2010
Record Updated Date:	05/23/2018
Update By:	JHOCONNE
Site Description:	Location: The site is located at 1095 Southern Boulevard in the Bronx. It is bordered by Southern Boulevard to the east, residential buildings immediately adjacent to the north and west, and a commercial building immediately adjacent to the south. Further east across Southern Boulevard are commercial properties. Site Features: The site is approximately 0.23 acres and is currently vacant and unused. The previous on-site building was destroyed in a fire in 2008. Current Zoning and Land Use: The site is currently vacant and undeveloped, following a fire in 2008 which destroyed the on-site building. The site is zoned R7-1 (residential district), with a C2-4 commercial overlay meaning that it can be used for residential, commercial, or mixed (residential plus commercial) use. Past Use of the Site: The site has historically been used for several commercial uses including, most recently, as a dry cleaning facility. It appears that chlorinated solvents detected on-site are related to the historical dry cleaning use. Site Geology and Hydrogeology: The elevation of the site is approximately 59 feet above mean sea level. Bedrock has been identified at a depth of approximately 24 feet below surface grade. The depth to groundwater beneath the site is approximately 9 feet to 11 feet below ground surface. The groundwater flow direction beneath the site is east.

1095 SOUTHERN BLVD.- OFF-SITE (Continued) **S110748432**

Env Problem: Nature and extent of contamination: The contaminants of concern are chlorinated solvents, consistent with the previous use of the site for dry cleaning. Tetrachloroethylene (PCE) and its breakdown products have been detected in soil, groundwater, and soil vapor. Soil - Chlorinated volatile organic compounds (cVOCs) are present in soil predominantly near the eastern border of the site, in the depth range of 14 feet to 20 feet below surface grade. Concentrations of chlorinated VOCs exceed the Unrestricted Use Soil Cleanup Objectives (UUSCOs) in 4 of 14 on-site soil borings, all on the east side of the site. In these borings, PCE was detected as high as 1,200 parts per million (ppm); trichloroethylene (TCE) as high as 120 ppm; and cis-1,2-dichloroethene (DCE) as high as 40 ppm. In comparison, the UUSCOs for these contaminants, respectively, are: 1.3 ppm, 0.47 ppm, and 0.25 ppm. Low concentrations of petroleum-related VOCs and semi-volatile organic compounds (SVOCs) were detected on site, at concentrations below the UUSCOs. Metals detected in soil at concentrations exceeding the UUSCO include: trivalent chromium at 33.8 ppm (UUSCO is 30 ppm); copper at 122 ppm (UUSCO is 50 ppm); lead at 357 ppm (UUSCO is 63 ppm); and zinc at 618 ppm (UUSCO is 109 ppm). Groundwater - The contaminants of concern in groundwater are cVOCs. Similar to soil, concentrations are highest in monitoring wells installed in the eastern portion of the site. PCE and its breakdown products were detected at levels exceeding NYSDEC Ambient Ground Water Quality Standards (AGWQS) in 9 of 11 on-site overburden groundwater monitoring wells, in addition to one monitoring well installed in the sidewalk to the east of the site. Contaminants include: PCE as high as 66,000 parts per billion (ppb) compared to the AGWQS of 5 ppb; TCE as high as 17,000 ppb on-site and 52,000 ppb in an off-site well, compared to AGWQS of 5 ppb; DCE as high as 63,000 ppb compared to AGWQS of 5 ppb; and vinyl chloride detected as high as 7,920 ppb on-site and 13,000 ppb in an off-site well, compared to AGWQS of 2 ppb. These contaminants were also detected in a bedrock monitoring well, at lesser concentrations (the maximum concentration detected in bedrock groundwater was TCE at 410 ppb). Soil vapor - The contaminants of concern are present in on-site soil vapor. PCE was detected as high as 2,800 micrograms per cubic meter (ug/m3) and TCE as high as 280 ug/m3.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Access to the site is restricted and contact with contaminated soil is unlikely unless persons dig below the ground surface. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Off-site soil vapor intrusion sampling has not identified any exposures to date. However, additional sampling is recommended as part of the off-site portion of this project.

Update By:	JHOCONNE
Site Description:	Location: The site C203055A is the off-site area associated with BCP site C203055, which is located at 1095 Southern Boulevard in the Bronx. The off-site area was defined to reflect the potential migration of contaminants from the BCP site, and includes the eastern sidewalk of Southern Boulevard across from the BCP site; and the buildings adjacent to the BCP site on the north, south, and west. Site Features: The off-site area consists of the residential buildings immediately adjacent to the north and west of 1095 Southern Blvd, a commercial building immediately adjacent to the south, and Southern Blvd to the east followed by a parking lot further east across Southern Blvd. To the northeast and southeast across Southern Blvd are mixed commercial/residential buildings. The BCP site at 1095 Southern Boulevard is vacant. Current Zoning/Uses: The off-site area consists of residential and commercial buildings. The BCP site at 1095 Southern Boulevard is currently vacant, undeveloped, and is zoned R7-1 (residential district), with a C2-4 commercial overlay meaning that the property can be used for residential, commercial, or mixed (residential plus commercial) use. The proposed on-site development is for an office building, with below-grade parking. Past Use of the Site: The BCP site C203055 has historically been used for several commercial uses including, most recently, a dry cleaning facility. Site Geology and Hydrogeology: The elevation at the BCP site is approximately 59 feet above mean sea level. Bedrock has been identified at depths ranging from 12 to 24 feet below surface grade. The depth to groundwater beneath the site is approximately 9 feet to 12 feet below ground surface. The groundwater flow direction beneath the site is east.
Env Problem:	This site represents an off-site project to investigate the area surrounding, and downgradient of, BCP Site C203055 (1095 Southern Blvd). The investigation determined that no further action is required. Nature and extent of contamination: The contaminants of concern at BCP site C203055 are chlorinated solvents, consistent with the previous use of the site as a dry cleaner. Chlorinated solvents including tetrachloroethylene (PCE) and its breakdown products have

1095 SOUTHERN BLVD.- OFF-SITE (Continued) **S110748432**

been detected in soil, groundwater, and soil vapor in the subsurface of site C203055. Chlorinated solvents were therefore the focus of the investigation for the off-site project. Soil: The off-site investigation did not include soil analysis since there was no reason to believe that contaminants were disposed off-site. Groundwater: During the remedial investigation for the BCP site, elevated concentrations of chlorinated solvents were detected in groundwater in one off-site monitoring well located on the sidewalk just outside the property boundary. At this location, PCE was detected at 51,000 parts per billion (ppb); trichloroethylene (TCE) was detected at 52,000 ppb; and cis-1,2-dichloroethylene was detected at 12,000 ppb. The applicable groundwater quality standard for each of these contaminants is 5 ppb. Vinyl chloride was also detected at 13,000 ppb compared to the standard of 2 ppb. An off-site investigation was performed to determine if these contaminants were migrating further off-site. Groundwater samples were collected from both permanent monitoring wells and grab samples across Southern Boulevard, in the downgradient direction of groundwater flow. No contaminants of concern were detected in these samples. The extent of off-site contamination appears to be limited to the area just outside the property boundary from the highest area of on-site contamination. Soil vapor and indoor air: Soil vapor intrusion evaluations were performed in the two buildings immediately adjacent to the north and south of the site, and two buildings to the west of the site. In the sub-slab soil vapor samples, PCE was detected at a maximum of 52 micrograms per cubic meter (mcg/m3) in one building; however, it was not detected in the indoor air samples collected from that building. In the indoor air samples from other buildings, PCE was detected at a maximum of 8.7 mcg/m3. Based on the sampling that was conducted actions were not needed to address exposures related to soil vapor intrusion. To the east of the site, two soil vapor samples were collected from beneath the sidewalk across Southern Boulevard. PCE was detected at concentrations of 45 mcg/m3 and 6.2 mcg/m3. Trichloroethene (TCE) was also detected at concentrations of 5.4 mcg/m3 and 0.37 mcg/m3. Based on these sampling results and other site-related information no additional actions were recommended.

Health Problem: People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is not a concern for buildings adjacent to the 1095 Southern Boulevard site.

Update By: RXSCHICK
Site Description: Location This site is located at 1800 Southern Boulevard in the Borough of the Bronx, New York City. This is an urban area. Site Features The site is approximately 0.27 acres in area and is a triangular shaped parcel of land. The 174th Street MTA Station is located above this intersection (elevated tracks). Current Zoning Uses The site is zoned for commercial use. The surrounding area is a mixture of commercial, recreational and residential uses. Historical Uses Prior to remediation, beginning sometime between 1927 and 1940, the site was occupied at various times by a gasoline filling station and an auto repair shop/car wash. The car wash operation closed in 1993 and the service station closed in 2003. BP-Amoco was operating the station at the time of closure in 2003. In July of 2003, BP arranged for the removal of four 4,000-gallon underground storage tanks (USTs), five dispensers and associated piping. An investigation performed by Delta prior to the UST removal, confirmed that groundwater was significantly impacted with constituents of gasoline as well. The results of this investigation resulted in the assignment of NYSDEC Spill Number 02-12264. A remedial investigation performed by Roux Associates in 2008 confirmed that soil, groundwater and soil vapors were contaminated with petroleum-related VOCs in excess of the NYSDEC remedial objectives and groundwater standards. SB 1800 LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in May 2009,

1800 SOUTHERN BOULEVARD (Continued) **S109321475**

	to investigate and remediate the site. Site Geology and Hydrogeology The Site contains shallow occurring bedrock (approximately 24 feet bls) that was directly overlain by weathered rock and glacial deposits consisting of a mix of sand, silt, and clay in varying thickness. Groundwater at the Site ranged in depth from approximately 6 to 10 feet bls. It was determined that groundwater flows in a northwesterly direction, perpendicular to the long axis of the site. The project consists of construction of a ten-story low-income housing/mixed use development. The off-site aspect of this project will be monitored/remediated under spill number 0212264. There is a fully executed Brownfield Cleanup Agreement for this site. The Remedial Action Work Plan (RAWP) and the Remedial Investigation Report (RIR) were approved in August 2009. Remedial Construction started in September 2010. The Final Engineering Report (FER) was submitted in December 2011. 12/23/11-the Department signed the Certificate of Completion for this site.
Env Problem:	Nature and Extent of Contamination: Prior to remediation A Remedial Investigation (RI) was completed in July 2008. The investigation found contamination in soil, groundwater, and soil vapor. Contaminants in soil which exceeded Part 375 Unrestricted Soil Cleanup Objectives include the VOCs (ethylbenzene 77 mg/kg and 1,2,4 trimethylbenzene at 310 mg/kg), SVOCs (naphthalene at 25 mg/kg), and metals (mercury at 0.7 mg/kg and lead at 580 mg/kg). Contaminants in groundwater which exceed groundwater standards include VOCs (Benzene at 960 ug/L), SVOCs (naphthalene at 650 ug/L, and metals (manganese at 8,700 ug/L and lead at 340 ug/L). Elevated levels of VOCs were also detected in soil vapor samples (xylenes at 43 ug/m3, as well as numerous other VOC compounds). This site was determined to pose a significant threat to the human health and the environment. The Remedial Investigation Report (RIR) and Remedial Action Work Plan (RAWP) were both approved in August 2009. Remedial Action started in September 2010: Post Remediation No contamination remains at the Site. The Final Engineering Report (FER) was submitted in December 2011.
Health Problem:	The remedy has removed all site-related contamination from the property, thereby eliminating all potential human exposure pathways at the site.

Site Description: Location: The site is located in an urban area on Rodman Place in the Bronx, NY. The site lies along the west side of West Farms Road between Rodman Place and the Cross Bronx Expressway Service Road North. Site Features: The site is currently vacant. Prior to remediation, a single-story masonry building with a concrete slab-on-grade foundation with a partial basement was on the site. Metal storage containers, a wooden shed, and a semi-covered storage area were located off the northwest exterior of the building. Current Zoning and Land Use: The property is zoned for residential use and is assigned Residential District R8X zoning. The surrounding area is mostly residential with a marble business and hotel in the next block. The site was most recently leased by a construction company for construction supply storage and a janitorial supply company for soap and paper product storage. The undeveloped section of the property was recently used as an outdoor storage area for dumpsters and empty drums. Past Use of the Site: The 1899 West Farms Road portion of the site operated as a dry-cleaning facility from

1899-1905 WEST FARMS ROAD (Continued) **S116041501**

1977-1996 and a towing/collision company from 1999-2001. The 1903-1905 West Farms Road portion operated as an auto repair garage from 1924-1986 and as a steel door manufacturing facility from 1989-2005. Site Geology and Hydrogeology: Prior to site remediation, the site was underlain with intermixed layers of brown and orange silts and sands, brown/black clays, with varying amounts of gravels, cobbles, mica, and schist. Bedrock exists at depths between 1.0 and 14.0 feet below ground surface. There was limited shallow groundwater (approximately 8 feet below grade in the east section, but only 2 feet below grade in the southern section) in the area due to the shallow bedrock. The general flow direction is to the east-southeast towards the Bronx River.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related compounds and metals in soil (ethylbenzene, lead, mercury). Tetrachloroethylene (PCE) was found in groundwater just above standards. Trichloroethylene (TCE) and cis-1,2 Dichloroethene were found in soil vapor at the site. All site-related contamination was removed. All soil was removed above bedrock. Six underground tanks were also removed along with associated contaminated soil. Groundwater was treated using in-situ chemical oxidation. Indoor air sampling in the new building will occur to evaluate the potential for soil vapor intrusion (SVI). A Site Management Plan and Easement are in place and will remain in place until the SVI evaluation is complete.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 488955
Site Description: Location: The site is located in an urban area on Rodman Place in the Bronx, NY. The site lies along the west side of West Farms Road between Rodman Place and the Cross Bronx Expressway Service Road North. Site Features: The site is currently vacant. Prior to remediation, a single-story masonry building with a concrete slab-on-grade foundation with a partial basement was on the site. Metal storage containers, a wooden shed, and a semi-covered storage area were located off the northwest exterior of the building. Current Zoning and Land Use: The property is zoned for residential use and is assigned Residential District R8X zoning. The surrounding area is mostly residential with a marble business and hotel in the next block. The site was most recently leased by a construction company for construction supply storage and a janitorial supply company for soap and paper product storage. The undeveloped section of the property was recently used as an outdoor storage area for dumpsters and empty drums. Past Use of the Site: The 1899 West Farms Road portion of the site operated as a dry-cleaning facility from 1977-1996 and a towing/collision company from 1999-2001. The 1903-1905 West Farms Road portion operated as an auto repair garage from 1924-1986 and as a steel door manufacturing facility from 1989-2005. Site Geology and Hydrogeology: Prior to site remediation, the site was underlain with intermixed layers of brown and orange

1899-1905 WEST FARMS ROAD (Continued) **S116041501**

silts and sands, brown/black clays, with varying amounts of gravels, cobbles, mica, and schist. Bedrock exists at depths between 1.0 and 14.0 feet below ground surface. There was limited shallow groundwater (approximately 8 feet below grade in the east section, but only 2 feet below grade in the southern section) in the area due to the shallow bedrock. The general flow direction is to the east-southeast towards the Bronx River.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related compounds and metals in soil (ethylbenzene, lead, mercury). Tetrachloroethylene (PCE) was found in groundwater just above standards. Trichloroethylene (TCE) and cis-1,2 Dichloroethene were found in soil vapor at the site. All site-related contamination was removed. All soil was removed above bedrock. Six underground tanks were also removed along with associated contaminated soil. Groundwater was treated using in-situ chemical oxidation. Indoor air sampling in the new building will occur to evaluate the potential for soil vapor intrusion (SVI). A Site Management Plan and Easement are in place and will remain in place until the SVI evaluation is complete.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 8/31/02 Received Subsurface Hydrocarbon Assessment Report (Delta, 8/29/02). 12/9/03 Reassigned from Vought to Foley. Adjacent Getty station approx 45' west of site (upgradient) across Whittier Ave. See spill #9901256.(Not currently impacting BPAmoco site) Reviewed SHAR. Land use is commercial. Railroads on both east and west sides. Bronx River is nearest downgradient surface water body approx 170' east of site, approx 50' below site elevation. There are two schools within one-quarter mile radius of the site. PS 75 is located 530' west of the site. Soil analyticals indicate xylenes(6150ppb > TAGM 1200ppb) and 1,2,4-tri-methylbenzene(14500ppb > TAGM 10000ppb) in SB-4 (11-12') above soil cleanup guidance values. No MTBE. Only BTEX compounds detected were in the 11-12' interval of

GETTY (Continued) **S104620177**

SB-4. Total VOCs in SB-4(14-15') was 182ppb. Groundwater was not encountered. It is suspected that groundwater is located at a depth approx 40'bgs and flows southeasterly towards the Bronx River. During advancement of soil borings, refusal on bedrock was encountered between 10.5' and 25' bgs. Refusal at 15' in SB-4. (KMF) 2/17/04 Investigation Report(IE, 1/3/03) and Remediation Report (IE, 1/26/04) received. 2/18/04 NFA faxed and mailed to Mr. Henry Alpert, David Oil Corp. Copied R. Parrish, Impact Environmental."

GETTY (Continued) **S104620177**

VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/9/03 Adjacent Amoco station. Approx 45' across Whittier Ave. See spill #0202858. (KMF) 5/10/2007 - Feng - Spoke to D. Madigan (Tyree). Investigation was performed. Soil and groundwater samples were collected and shows ok. SIR will be submitted to DEC this month. (RJF) 7/13/2007 - Feng - Subsurface Investigation Report, 5/16/2007, submitted by Tyree. Tyree installed 5 soil borings on 2/28/2007 to 3/12/2007. Three borings located in the former tank farm area, one boring located in the former waste oil tank area and one boring located in the former heating oil area. Groundwater was encountered at 30 feet during this investigation. Groundwater is anticipated to flow in a southeastern direction. Soil and groundwater samples were collected. Soil collcted from BP-2/W-2 at depth of 10' to 12' bg located in the former tank farm area show some slight exceedance, 3,190 ppb Xylene. There are some minor exceedances in some SVOCs compounds. For groundwater, 5.2 ppb Toluene in W-5. Tyree requested spill closure. Discussed with J. Sun and V. Brevdo, spill closed. 1) All the USTs, pump islands and piping were removed during the 1999 tank removal process. 2) Only slight exceedance in soil and groundwater detected during the subsurface investigation. Spill closed. (RJF) 7/16/2007 - Feng - NFA issued to Getty Properties. (RJF)"

Tank is a 15000-gallon heating oil UST. Tank

SPILL NUMBER 0301007 (Continued) **U000398780**

	was isolated from piping and individual components were tested. Tank was excavated and loose connections included dipstick, petrometer, supply and return lines. Impacted soil was removed. 22.78 tons of impacted soil was removed from the site. Six endpoint soil samples were collected for analysis and showed concentrations of PAH's exceeding TAGM (benzo(a)anthracene, chrysene, benzo(b,k)fluornathene and benzo(a)pyrene). Looose connections were replaced and tank system was retested. Tank passed tank system test. Disposal manifest, analyticals and site plan provided to NYSDEC. PAH exceedances due to ubiquitous fill material. Spill closed by Vought. NFA sent 9/17/03."

Schwartz. i was out of office. bf 6/14/07 Called S. Schwartz. They plan on excavating and isolating parts of system. If failure again they will install temporary tank and then sample. If necessary, they will close tank. He will send me a letter describing their plan. He requested a copy of spill report for 0301007. A closed ttf at the same site. I faxed it to him. Fax:(631)691-1711. Sent ttf letter to Stellar's engineer: Smajlje Srdanovic Stellar Management 156 William Street New York, NY 10038 Also faxed ttf letter to S. Schwartz. bf 6/19/07 Received phone call from Mr. Srdanovic. He plans on closing tank and installing new tank. Will sample if tank to be closed in place and or will remove tank and sample if contamination is found. bf 7/10/07 Received message from Stacy Rigieri of Star Management. Ph. (212)624-6703. She has a letter from Cardinal tank explaining what work will be done and she wants to fax it to me. bf 7/11/07 Called S. Rigieri and left message with fax number. bf 7/24/07 On 6/16/07, received letter from S. Ruggieri of Stellar. Cardinal Tank and Boiler was hired to remedy the situation. Proposal was attached to letter. Tank was a wet leak and will be emptied immediately. Will install temporary tank. bf 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf 2/12/15 TJD Spill reassigned from DeMeo to Patel 02/19/15-Hiralkumar Patel. alternate address: 1222-1242 Morrison Ave PBS #: 2-091782. as per PBS record, the site has one (1) 15,000 gal #2 oil AST in subterranean vault, in-service, installed in Dec. 1968. other spill #: 9313718, 0301007 spill # 9313718 was reported on 02/22/1994 due to findings of raw sewage in back yard. case closed. spill # 0301007 was reported on 04/29/2003 due to dry leak in UST. during isolation test, loose pipe connections were found on tank top. 22.78 tons of contaminated soil was removed. after repair, tank system passed the test. case closed. as per a cost estimate from Cardinal Boiler dated 07/09/2007, wet leak was found in 15,000 gal UST. Cardinal Boiler proposed to install a new tank. as per NYC DOB record, a permit was approved on 03/04/2008 for installation of a new 11,500 gal rectangular fuel oil tank. also, a permit was approved on 02/04/2014 for conversion of fuel grade from #6 to #2 fuel oil. based on available information, the site had one 15,000 gal UST which was either closed or removed and a new 11,500 gal AST was installed sometime in 2008. but PBS record shows only one 15,000 gal AST. 03/20/15-Hiralkumar Patel. 9:30 AM:- visited site. met Miguel Mendez, building super. site has 11,500 gal #2 oil square AST on beams, located in secondary room in basement, which was installed in 2008. the 15,000 gal tank is located underground, in backyard, just behind the boiler room wall. Mr. Mendez mentinoed that the UST was cleaned, but never closed. fill ports for the UST and AST are located by the curb along Harrod Ave. fill port for the UST has been sealed. noted three sealed pipes on boiler room wall: two of which were supply lines from UST for two boilers and one was the return line. no signs of oil seepage noted from the area of these closed pipes. PBS record is incorrect. as per the PBS record, the site has one (1) 15,000 gal

SPILL NUMBER 0301007 (Continued) **U000398780**

AST in vault, in-service. but the site has two tanks: one (1) 11,500 gal AST in-service and one (1) 15,000 gal UST out-of-service. PBS record does not include any information about temporary closure of the UST or installation of new AST. ---------- Miguel Mendez **building super** Ph. (917) 662-0483 03/23/15-Hiralkumar Patel. 10:50 AM:- spoke with Katina Vazquez at Stellar Management. she works with Mr. Jimenez, property manager. informed Ms. Vazquez regarding open spill case, incorrect PBS record and unregistered tank system. informed her that the department requires investigation/cleanup of any petroleum release from the UST system (including remote fill line) and PBS correction. Stellar Morrison LLC. **property owner** c/o Stellar Management 156 William Street, 10th floor New York, NY 10038 Attn.: Eduardo Jimenez **property manager** Ph. (212) 406-0030 Ext. 12 (347) 672-3064 email: ejimenez@stellarmanagement.com Katina Vazquez Stellar Management PH. (212) 843-3783 email: kvazquez@stellarmanagement.com 12:55 PM:- sent letter to Mr. Jimenez requiring submission of report (including investigation of tank system failure and cleanup of any associated contamination) and PBS application (reflecting correct information and status). asked Mr. Jimenez to submit PBS application immediately and spill investigation/cleanup report by the end of 05/29/15. informed Mr. Jimenez that the case will be referred for enforcement, if required documents are not received by 05/29/15. 04/27/15-Hiralkumar Patel. received message for Greg Collins (at 12:45 PM on 04/24/15). Greg Collins GC Environmental PH. (631) 206-3700 Ext. 111 email: gc@gcenvironmental.com 10:30 AM:- spoke with Greg. GC Env. has been retained to conduct required investigation. informed Greg that as per cost estimate in 2007, the tank system had failed in wet portion. based on available information, the department requires subsurface investigation underneath the tank and and along the remote fill line. Greg will submit a work plan. 11:49 AM:- received email from Greg including work plan. he proposed to clean the tank, collect soil samples from below the tank and test the remote fill line. 12:42 PM:- sent email to Greg approving the proposed work plan. informed him that prior to tank abandonment, the department may require additional investigation/remediation. email copied to Mr. Jimenez and Ms. Vazquez. 05/28/15-Hiralkumar Patel. 12:23 PM:- received call from Greg. today, they cut hole in tank bottom for subsurface sampling and groundwater started coming in. due to groundwater right underneath the tank, Greg proposed to collect soil samples via geoprobe (3 borings: one at each end and one on side away from the building wall) around the tank. he will also test the remote fill line. 07/21/15-Hiralkumar Patel. 8:51 PM:- received email from Greg including investigation report. abstract: - during tank abandonment activity (after cutting the second hole on the tank), observed an unknown amount of water entering into the tank - on 06/22/15, six soil borings (SB-1 through SB-6) were advanced around the UST, to a depth of approx. 12 ft bg - groundwater was encountered at a depth of 4 ft bg around the tank location - during the sampling, visual or olfactory signs of contamination were found in SB-3 and SB-4 at 8-12 ft interval - no visual or olfactory contamination found in borings SB-1, SB-2, SB-5 and SB-6 - found light to dark brown coarse sand with rocks in all borings - soil samples were collected from each boring from a depth of 8 to 12 ft bg; except SB-1 where sample was collected from 4 to 8 ft bg - found some SVOC contamination (max: 2,900 ppb Fluoranthene) in endpoint samples, but no VOC contamination 07/24/15-Hiralkumar Patel. 3:16 PM:- sent email

SPILL NUMBER 0301007 (Continued) **U000398780**

to Greg and asked him about fill line investigation result and update of PBS registration. email copied to Mr. Jimenez and Ms. Vazquez. 3:54 PM:- received email from Greg inquiring about comments on investigation report. he mentioned that upon approval, they will dig up the tank end of the fill line and will test it. 07/31/15-Hiralkumar Patel. 1:49 PM:- left message for (and sent email at 1:52 PM to) Greg and informed him that based on available information, the department approves permanent closure of the underground tank. also informed him that a subsurface investigation may be required along the remote fill line for the underground tank, if the fill line fails a tightness test. also asked him to update the PBS record. 09/21/15-Hiralkumar Patel. 1:55 PM:- received call from Greg. he tested the remote fill line which failed. based on available information, asked Greg to conduct either further investigation and remediation (if needed) along the remote fill line or remove the line along with any associated contamination. he will call back with plan. 10/30/15-Hiralkumar Patel. 11:53 AM:- left message for Greg. 12:52 PM:- received call from Greg. they removed the remote fill line and found contamination under the sidewalk. they removed the contaminated material and collected endpoint samples yesterday. will submit report once sample results are available. 11/06/15-Hiralkumar Patel. 9:11 AM:- received message from Greg Collins from GC Env. 11:23 AM:- spoke with Greg. he mentioned that they removed contamination from under the sidewalk from the area of 3 ft by 3 ft to a depth of 4 ft bg. one endpoint sample and one waste characterization sample were collected for analysis. Greg mentioned that surprisingly no contamination noted in the waster characterization sample which was collected from dark soil removed from excavation and some SVOC contamination noted in endpoint sample. he believes samples were switched in lab. received email from Greg including lab report and pics of impacted soil and endpoint soil sample. reviewed samples results. found some SVOC contamination (max. 9,200 ppb Phenanthrene) in endpoint sample. Greg will send site update with more pics. the excavation has been backfilled and cemented. 11/17/15-Hiralkumar Patel. received email from Greg (at 3:20 PM on 11/14/15) including closure report. case closed based on available information. 11:18 AM:- sent email to Greg and reminded him to submit updated PBS application. 11:55 AM:- sent spill closure letter to Mr. Jimenez. letter emailed to Mr. Jimenez and Greg. informed Mr. Jimenez that the PBS record must be corrected with updated information about both tank systems at the site."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Last EDR Contact: 09/10/2018
Next Scheduled EDR Contact: 12/24/2018
Data Release Frequency: Varies

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

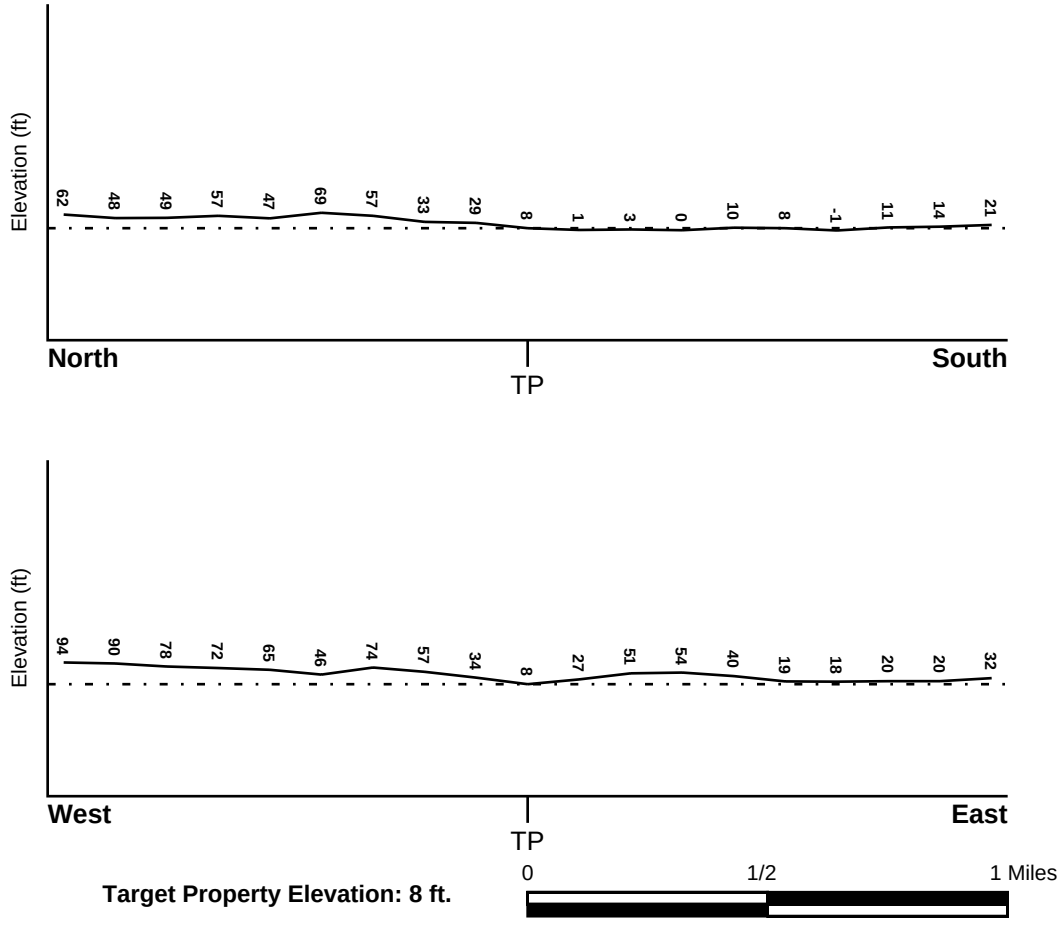
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 8 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Middle Ordovician (Mohawkian)
Code:	O2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by CDM Smith, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

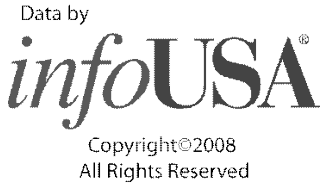
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILDFAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of CDM Smith, Inc. on Oct 31, 2018.

TARGET PROPERTY

1428, 1458 ,1460, 1480 Sheridan Expressway
Bronx, NY 10459

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

1.0 EXECUTIVE SUMMARY

1.1 REPORT FINDINGS

The following details the environmental professional's specific findings of LCS' all appropriate inquiries of the above-referenced site in accordance with ASTM E1527-13. It should be noted that this Phase I Environmental Site Assessment includes only a portion of what is required by the user to comply with all appropriate inquiries (See Appendix 10.13). This section is provided for convenience to the reader. The reader is encouraged to read the entire report.

This report was requested by the user for the purpose of identifying recognized environmental conditions on-site. It is LCS' understanding that this report is not intended to meet the all appropriate inquiries provisions necessary to qualify for landowner liability protections under CERCLA (See Appendix 10.13).

1.1.1 Site Description

The subject property is identified as a commercial building located at 1460 Sheridan Expressway, Bronx Borough, New York. The subject property tax map shows the subject property to measure approximately 0.94 acres. Refer to the Section *10.2 SITEMAPS.* The subject property is developed with a single-story, 14,000 square foot structure that was constructed in 1962. The subject structure is occupied by Federal Mogul Motorparts (auto parts warehouse) and Car Gurus (auto repair training facility); no repair operations are conducted on-site. Exterior portions of the property included asphalt-paved parking and concrete sidewalks.

1.1.2 Site Reconnaissance

The subject property is located in a highly developed commercial area. Public utility companies provide the following services to the subject property: electric; natural gas; water; and sanitary sewer.

No conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified during the site reconnaissance.

1.1.3 Site History

The historical use of the subject property has been researched through review of historic maps, historic aerial photographs, municipal records, city directories, and/or other reasonably obtainable documents. In general, the historical site uses were determined to be as follows.

Date Range	Apparent Use	Source
At least 1896 through 1950	Portion of various railway companies	Sanborn maps
1962 through present	Developed with the existing structure with later additions and including various commercial/industrial uses including iron works, auto repair, and warehousing. Current operations include offices, auto parts warehousing, and auto training.	Sanborn maps, city directories, municipal records, site contact, and site reconnaissance

1.1.3 Site History (continued)

The following conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified based on LCS' historical research:

- According to Sanborn maps and city directories, the property included a portion of a railway powerhouse from at least 1896 through at least 1901, a portion of Union Railway Company (garage and storehouse and small area labeled "oils and paints") in at least 1915, and portion of a bus repair shop and paint shop in at least 1950. [Municipal records indicated on-site repair operations in at least 1947 and 2014.] In addition, iron work operations took place on-site from at least 1977 through at least 2007 and auto wrecking operations were on-site in at least 2005; according to the site contact, an auto parts company was on-site from 1999 through 2014 (potentially associated with the wrecking operations noted in the 2005 city directory).
- According to historic Sanborn maps, railway company and bus repair operations were historically conducted west adjacent to the subject property; gasoline tanks were also historically located west adjacent to the subject property. It should be noted that the west adjacent property was subsequently redeveloped with the existing Sheridan Expressway.

1.1.4 Regulatory Information

A review of regulatory database information and any additional regulatory information reviewed by LCS identified the following conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property:

- According to the EDR report, the subject property, listed as LKQ Hunts Point Auto Parts at 1460 Sheridan Expressway, was identified as an AST facility with one 275-gallon hydraulic oil AST and one 276-gallon transmission fluid AST installed in 2012 and closed/removed in 2013 and one 275-gallon waste oil AST, one 275-gallon oil AST, and one 1,000-gallon waste oil AST installed in 2012 and closed/removed in 2014.
- The following adjacent sites were identified in the EDR report:
    - A west adjacent site, NYCDEP at 1508 Boone Avenue, was identified as a Former RCRA Generator with no violations listed and within the Manifest database due to the RCRA listing.
    - A west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as the following:
        - UST facility
        - RCRA-CESQG with no violations listed and within the Manifest database due to the RCRA listing
        - NY Spills site with the following releases:
            - Spill No. 9913455 which involved oil at the bottom of a manhole and is classified as "inactive."
            - Spill No. 0300164 involved the discovery of impact following a tank removal and is classified as "inactive."

1.1.5 Interviews

Interviews were conducted with various municipal representatives and/or other persons knowledgeable about the subject property.

No conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified based on these interviews, other than as included above.

1.1.6 Other Findings

LCS did not identify additional significant potential concerns.

1.2 SUMMARY

FINDINGS

This assessment has revealed no evidence of recognized environmental conditions[1] in connection with the subject property except for the following:

- According to Sanborn maps and city directories, the property included a portion of a railway powerhouse from at least 1896 through at least 1901, a portion of Union Railway Company (garage and storehouse and small area labeled "oils and paints") in at least 1915, and portion of a bus repair shop and paint shop in at least 1950. [Municipal records indicated on-site repair operations in at least 1947 and 2014.] In addition, iron work operations took place on-site from at least 1977 through at least 2007 and auto wrecking operations were on-site in at least 2005; according to the site contact, an auto parts company was on-site from 1999 through 2014 (potentially associated with the wrecking operations noted in the 2005 city directory).
- According to historic Sanborn maps, railway company and bus repair operations were historically conducted west adjacent to the subject property; gasoline tanks were also historically located west adjacent to the subject property. It should be noted that the west adjacent property was subsequently redeveloped with the existing Sheridan Expressway.
- According to the EDR report, a west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as an UST facility.

This assessment has revealed no evidence of controlled recognized environmental conditions[2] in connection with the subject property except for the following:

- According to the EDR report, a west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as a NY Spill site. Spill No. 9913455 involved oil at the bottom of a manhole and is classified as "inactive." Spill No. 0300164 involved the discovery of impact following a tank removal and is classified as "inactive."

---

1 *Recognized environmental condition* is defined by the ASTM E1527-13 standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

2 *Controlled recognized environmental condition* is defined by the ASTM E1527-13 Standard as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

FINDINGS (continued)

While not considered recognized environmental conditions under the ASTM standard[3], LCS notes the following:

- According to the EDR report, the subject property, listed as LKQ Hunts Point Auto Parts at 1460 Sheridan Expressway, was identified as an AST facility with two ASTs installed in 2012 and closed/removed in 2013 (one 275-gallon hydraulic oil and one 275-gallon transmission fluid) and three ASTs installed in 2012 and closed/removed in 2014 (one 275-gallon waste oil, one 275-gallon oil, and one 1,000-gallon waste oil).
- The following adjacent sites were identified in the EDR report:
    - A west adjacent site, NYCDEP at 1508 Boone Avenue, was identified as a Former RCRA Generator with no violations listed and within the Manifest database due to the RCRA listing.
    - A west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as a RCRA-CESQG with no violations listed and within the Manifest database due to the RCRA listing

OPINION/RECOMMENDATIONS

1) Based on the above known or suspect recognized environmental conditions, LCS' opinion is summarized below.

Known or Suspect RECs	Rationale/Opinion	Recommendation(s)
Former on-site operations included a railway company that included that included a powerhouse, garage, bus repair, and a paint shop. After construction of the existing building in 1962, operations included iron works and auto repair.	Due to the nature of former operations, the potential exists for on-site impact.	**Unless sufficient documentation is provided, a subsurface investigation is warranted to assess the environmental conditions on-site. If such identifies a concern, additional work may be required.**
Adjacent properties of potential environmental concern	While the potential exists for on-site impact relative such adjacent listings/uses, LCS did not discover any visual evidence or records suggesting a significant on-site concern.	**No further work recommended at this time; however, should future site development/excavation work encounter any impacted soils and/or materials, such should be properly addressed at that time.**
Controlled RECs	**Rationale/Opinion**	**Recommendation(s)**
Adjacent "inactive" spills	These spills appear to have been addressed to the satisfaction of the NYSDEC.	**No further work recommended at this time.**

[3] This listing includes de minimis conditions and historic RECs. A de minimis condition is defined in ASTM E1527-13 as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are nor recognized environmental conditions (RECs) or controlled RECs. An historic REC is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

OPINION/RECOMMENDATIONS (continued)

2) A full asbestos inspection was not completed. Based on LCS' limited observations, as suspected ACMs were not friable or greatly damaged, the materials can remain in-place. However, should significant renovations or demolition be anticipated, state and federal regulations require an asbestos survey and proper handling and disposal of ACMs. If such renovations or demolition is anticipated, costs for addressing ACMs should be provided in any project estimates.

3) A full lead-based paint inspection was not completed. Based on LCS' limited observations, suspect lead-based paint surfaces were not considered to be peeling or chipping at the time of the site investigation. However, caution is recommended if renovations and/or remodeling of this facility are to take place. Although the on-site operations are not residential in nature, worker safety should be considered during any future site renovations or demolition.

4) A cursory visual assessment for suspect mold was undertaken as a part of this environmental site assessment. A full mold inspection was not requested nor completed as part of this assessment. Based on LCS' limited observations, there was no visible evidence of mold and mold related odors at the time of the site inspection. It should be noted that molds can grow in hidden areas not observed during LCS' site reconnaissance. Of particular concern would be areas that experience water damage and areas of high humidity. Caution should be taken following any future water releases within the subject structure. Such water releases should be addressed immediately to help prevent the formation of the mold spores. Visual evidence of mold should be addressed immediately. It is recommended that professional remediation contractors be hired to properly address such issues.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 1460 Sheridan Expressway, Bronx, New York, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except for the following:

- Former on-site operations included a railway company that included that included a powerhouse, garage, bus repair, and a paint shop. After construction of the existing building in 1962, operations included iron works and auto repair.
- Adjacent properties of potential environmental concern

1.3 DATA GAPS

The following data gaps[4] were encountered in completion of this inquiry:

Type of Data Gap	Details of Data Gap	Sources Consulted	Significance
Historical Use	Historical uses for each five year period were not obtained.	Aerial photographs, Sanborn maps, city directories, topographic map, municipal records, and site contact	While data for each year was not obtained, the data did provide relatively complete records of site uses.
Site Reconnaissance	LCS' observations of the subject property were limited due to stored materials. The roof of the subject structure was not inspected as it was not readily accessible.	N/A	Not anticipated to be significant, based on information reviewed to date.
Regulatory Review	Complete responses from regulatory agencies yet to be received.	NYSDEC, NYCDEP, and NYCDOH	Unknown; however, not anticipated to be significant based on information reviewed to date.
Interviews	LCS was not able to identify and/or contact historic owners and/or occupants.	Current owners and municipal records for historic ownership information.	Unknown. LCS cannot be liable for information known to previous owners/occupants and not shared with LCS.

To the best of LCS' knowledge, the information contained in this report is true and accurate. LCS personnel have exercised due diligence in the compilation of the information contained herein appropriate to environmental professionals engaged in investigations of this sort. LCS makes no guarantees regarding the accuracy of information gained from other sources.

Refer to Section 10.12 for additional limitations.

[4] A data gap is defined by 40 CFR 312.10 as "a lack of or inability to obtain information required by the standards and practices" of preparation of this document "despite good faith efforts by the environmental professional" or others to gather such information.

1.4 RELIANCE AND DECLARATION

LCS authorizes Sterling National Bank to use the above-referenced LCS report in order to determine its interest in the said subject property.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312.10. [See Qualifications in Section 11.]

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR part 312.

Heather Lamb
Environmental Professional

2.0 PURPOSE

The primary purpose of this study was to document the inquiry of the environmental professional for all appropriate inquiries for the subject property. The scope is intended to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property. LCS understands that the report is not intended for CERCLA protection for land owners.

3.0 SCOPE OF WORK

This Environmental Assessment report has been prepared in accordance with "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," ASTM E 1527-13. This standard was devised to address the site assessment portion for *Innocent Landowners, Standards for Conducting All Appropriate Inquiries* (40 CFR 312). The scope of work is intended to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property, via the following task.

A) Review of information provided by the person seeking liability protection relative to: environmental cleanup liens; specialized knowledge or experience regarding the subject property; relationship of the purchase price to the fair market value of the property, if the property were not contaminated; and, commonly known or reasonably available information about the subject property.

B) Interviews with past and present owners, operators and occupants.

C) Review of historical sources of information documenting the subject property's first use.

D) Review of Federal, State, tribal and local government records, as defined in 40 CFR 312.26.

E) A visual inspection of the subject property and adjoining properties (to the extent possible).

F) Preparation of this written report on all appropriate inquiries.

4.0 SUBJECT PROPERTY/VICINITY DESCRIPTION

4.1 SITE RECONNAISSANCE

A visual site review of the subject property was completed to document site conditions and to identify recognized environmental conditions. The site reconnaissance included a walkthrough of all units/spaces on-site, including interior and exterior areas with the exception of the roof, as such was not readily accessible. Stored materials also limited LCS' observations.

The following summarizes LCS' observations.

Current Owner/Operator Interviews

The owner of the subject property had been identified as West Farms Realty, LLC.

At the time of the site inspection, LCS was accompanied by Robert Rosario (Property Manager associated with the site for 17 years), who provided access and background information about the subject property. Additional background information was provided by Mr. Rosario via the LCS Owner/Operator Questionnaire. Such information has been incorporated herein and is included in the LCS Owner/Operator Questionnaire.

Overview

General Site Information	
Name of Site	Commercial Building
Site Address	1460 Sheridan Expressway
Municipality, County, State	Bronx Borough, New York
Fronting Streets	Sheridan Expressway
Site Size (acres)	0.94
Site Elevation (feet above mean sea level)	Approximately 50
Site Topography	Level at grade
Nearest Water Body (Name/Distance)	Bronx River/east adjacent
Exterior Conditions/Improvements	Asphalt-paved parking and concrete sidewalks
Building Information	
No. Buildings	One
Square Footage of Building	14,000
No. Stories	One
Basement Present?	None
Roof Type/Age	Flat/age unknown
Current Building Uses	Auto parts warehouse and auto repair training (no repair operations conducted on-site).
Heating System	Natural gas
Building Construction Date	1962
Utilities Provided	All public
Wastes Generated	General refuse and recyclables

Refer to Sections *10.2 SITE SURVEY/TAX MAP*, *10.3 SITE CONDITION REPORT* and *10.5 OWNER/ OPERATOR QUESTIONNAIRE.*

Storage Tanks

During the LCS site inspection, there was no indication of any on-site USTs or ASTs for the containment of petroleum products (e.g., fill ports, vent pipes, accessways, etc.).

See Regulatory information below for additional information regarding on-site tanks.

Hazardous and/or Regulated Materials

The only hazardous and/or regulated materials stored or utilized on the subject property are associated with sanitary cleaning and/or maintenance practices. These materials were noted properly stored within several containers of one-gallon or less within the structure. There was no evidence of any releases (staining, odors, etc.) in the area of these materials at the time of the site inspection.

There were no visible signs of unidentified substance containers (unlabeled drums, etc.) noted at the time of the site inspection.

Solid, Hazardous, and/or Regulated Waste

Operations on the subject property produce general wastes associated with commercial operations. Refuse and recyclables are stored in dumpsters and bags and transferred off-site by Avid Waste Systems.

Currently, there is no hazardous or regulated waste generated on-site.

Staining, Corrosion, Stressed Vegetation and/or Dead Vegetation

During the LCS site reconnaissance, there were no stained soils, stained pavement, stressed vegetation or corroded surfaces noted on-site.

Fill Dirt and/or Land Disposal

During the LCS site reconnaissance, there was no evidence of placement of fill dirt or land disposal activities currently or previously conducted on-site.

Wastewaters

The subject property is served by a municipal sewer system; however, the date of connection was not provided to LCS. Operations on the subject property are not believed to produce wastewaters that require treatment or monitoring.

At the time of the site inspection, neither floor drains nor storm drains were noted.

There was no evidence of a current or historic private septic system or cesspool on the subject property. Additionally, there was no evidence of any pits, ponds or lagoons used in connection with waste treatment or waste disposal.

Potable Water Supply/Wells

The subject property is served by a municipal water supply system. There was no evidence of an active or abandoned supply well, drywell, monitoring well or irrigation well on-site.

Air Emissions

There were no process exhaust systems noted on-site at the time of the LCS site investigation.

Suspect PCBs

The following suspect PCB-containing materials were noted on-site.

Suspect PCB Container	Location	Owner	Evidence of Leaks (Y/N)
Lifts (aboveground)	Two within training area	Property owner	None
Fluorescent lights*	Throughout structure	Property owner	N/A

*Utility-owned transformers and any subsequent contamination that may result are the responsibility of the utility company.
**According to ASTM, PCB-containing light ballasts are not considered a recognized environmental condition.

Suspect ACMs

A cursory visual assessment for ACMs was undertaken as a part of this environmental site assessment. At the time of the cursory inspection, there were suspect ACMs located within the subject structure. Asbestos may be present in the following partial list of suspect materials:

Materials*	Location	Condition	Approx. Quantity of Damaged Materials
Ceiling Tiles – 2' x 4'	Office and classroom areas	Good	None
Drywall and plaster	Throughout structure	Good	None
Roofing felts and/or materials	Roof	Unknown, not inspected	N/A

*It should be noted that a cursory visual assessment was conducted by LCS; the observations listed above are based on the limited areas observed during the LCS site reconnaissance, additional suspect materials may be present on-site.

Caution is recommended if renovation and/or remodeling of this facility are to take place. Prior to renovation, remodeling or demolition of this facility, a detailed asbestos inspection and sampling protocol is recommended. All federal, state and local government rules, laws and regulations must be followed.

Suspect Lead Based Paint

The Consumer Product Safety Commission banned the manufacture of lead-based paints for residential and commercial application in 1978; Federal regulations enforced this ban in 1993. Structures completed prior to 1978 may contain lead-based paints. The possibility exists for the presence of lead-based paints in the existing structure.

The painted surfaces observed by LCS were in good condition with no significant peeling or chipping paint. If the painted surfaces peel, chip and/or are intended to be removed, safety precautions should be taken to prevent inhalation or digestion. This cursory lead-based paint review did not include identification of suspect lead-based paint dust associated with windows, doors, etc.

Lead in Drinking Water

The subject property is supplied with municipal water through the City of New York. Municipal water supplies are regulated under the USEPA to follow drinking water standards. The USEPA action level applicable to municipal potable water supplies and distribution systems is 0.015 mg/L. Although the municipal water supplies are below the USEPA standard, elevated lead levels are commonly a result of the piping systems. Both lead pipes and lead solder account for this elevation in lead within the municipal supplies. No on-site water samples were collected and analyzed for the presence of lead; no testing is recommended at this time.

It should be noted that at the time of the site inspection, lead pipes were not noted within the subject structure. Such are possible due to the age of the subject structure.

Suspect Mold

Mold can germinate and colonize when a food source (i.e., drywall, wood, insulation, paper), a certain temperature and moisture are present. The speed of the growth all depends on the combination of these conditions; roof leaks often lead to accelerated mold growth. The musty odor commonly present with mold is associated with the mVOCs produced by molds. Some, but not all, molds produce a Mycotoxin that is considered a poison and may have negative health effects on humans.

At the time of the site inspection, there were no suspect mold covered areas or mold-related odors noted within the subject structure. This does not preclude the presence of molds in hidden areas (behind walls, moldings, etc.) or the potential for future mold growth.

Other Issues

At the time of the site inspection, there was no evidence of any other issues of concern associated with the subject property.

4.2 ADJACENT SITE USE

The adjacent properties were visually inspected from the subject property at the time of the site reconnaissance. The surrounding property uses include the following:

Direction	Current Use	Apparent Past Use	Concerns
North:	Park entrance	Commercial	None
South:	Vacant commercial lot (1458 Sheridan Expressway)	Commercial	None
East:	Bronx River	Same	None
West:	Residential/commercial (1512 Boone Avenue)	Same	None

4.3 SUBJECT SITE PHOTOGRAPHS

Photographs of the subject property were taken by LCS on October 5, 2017. Photographs were taken with the objective of documenting the physical condition of the subject property and any improvements thereon. Photographs are included in Appendix 10.4.

4.4 SUMMARY OF OBSERVATIONS OF POTENTIAL CONCERNS

No conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified during LCS' site reconnaissance.

5.0 SUBJECT PROPERTY HISTORY AND USE

The historical use of the subject property has been researched through review of historic maps, historic aerial photographs, municipal records, city directories, historic topographic maps, and/or other reasonably obtainable documents. The following summarizes LCS' historical research.

5.1 HISTORIC AERIAL PHOTOGRAPHS

Historical aerial photographs serve to reveal former topography, buildings, structures, and man made works such as canals, lagoons, and railroads that may have been altered or may no longer be in existence. However, due to the metropolitan nature of the area of the subject property and sufficient historical data collected from additional sources, aerial photographs were not reviewed for this property.

5.2 HISTORICAL MAPS/DIRECTORIES

Sanborn Maps

EDR provided, and LCS reviewed, historical Sanborn maps. Based on those maps, included within the appendix of this report, the historical uses of the subject property and those of adjacent properties are described as below.

YEAR /SITE	OCCUPANTS/PROPERTY USE
1896	
Subject Property	Developed with a portion of an apparent railway company powerhouse
North	Coal and wood storage
South	Not labeled
East	Bronx River
West	Remaining portion of railway powerhouse
1901	
Subject Property	Developed with a portion of Union Railway Company (powerhouse); one large coal pocket was noted on-site.
North	Lumber yard
South	Coal yard
East	Bronx River
West	Remaining portion of Union Railway Company (powerhouse)
1915	
Subject Property	Developed with a portion of Union Railway Company (garage and storehouse and small area labeled "oils and paints").
North	Brick cement storage
South	John Bell Company (building materials)
East	Bronx River
West	Remaining portion of Union Railway Company (garage/storehouse)

Sanborn Maps (continued)

YEAR /SITE	OCCUPANTS/PROPERTY USE
1950	
Subject Property	Developed with a portion of Third Avenue Railway Station & Surface Transportation Corporation, including bus repair, welding, storage, paint shop, and a blacksmith.
North	Auto parts and office
South	Tire storage and vacant
East	Bronx River
West	Remaining portion of Third Avenue Railway Station & Surface Transportation Corporation, including bus repair and two gasoline USTs.
1977-1981, 1983, 1985, 1986, 1989, 1991-1996, 1998, and 2001-2007	
Subject Property	Developed with a portion of the existing structure (built 1962), utilized as Iron Works. The southern portion is utilized as an iron yard.
North	Vacant/portion of expressway
South	Vacant lot
East	Bronx River
West	Expressway

It should be noted that although provided, the subject property is not included on the maps dated 1908, 1919, 1928, and 1969. In addition, although the 1903 maps suggests the property is undeveloped, the maps before and after that date show development and LCS suspects that development is not depicted on the 1903 map.

City Directories

LCS reviewed a City Directory Abstract provided by EDR, which researches former on-site occupants through available street directories. Based on EDR's research, the following occupants of the subject property were identified:

- 1927, 1931, 1940, 1949, 1956, 1961, and 1965: not listed
- 1971: Roy Killingsworth
- 1976: not listed
- 1983 and 1993: Belco Steel Corporation
- 2000: Belco Steel Corporation
- 2005: Hunts Point Auto Wreckers
- 2010 and 2014: not listed

Historic Topographic Maps

The subject property is included on the Central Park Quadrangle Topographic Map dated 1995. Due to the extensive development in the area of the subject property, individual structures are not indicated on this map.

Other Sources

According to Robert Rosario, the existing subject structure was utilized by LKQ Hunts Point Auto Parts Corporation (1999-2014) and the land was utilized as a parking lot by East End Parking (2010-2017).

5.3 MUNICIPAL RECORDS

Municipal research available through local municipalities was completed by LCS and is summarized below.

Subject Property Information	
Sources	www.propertyshark.com and www.oasisnyc.net, and www.nyc.gov
BL No.	3017-74
Size (acres)	0.94
Current Owner	West Farms Realty, LLC
Past Owners	None listed
Square Footage of Buildings	14,000
Date of Construction	1965
Utilities Provided	Not listed

Permits for the subject property include the following.

Permit Date	Nature of Permit
1947	Certificate of Occupancy for an auto repair shop
2014	Renovation of auto repair shop

There was no indication of historic heating systems.

The Abstract of Title Search for the subject property was not available for review.

5.4 PREVIOUS STUDY

No previous studies were supplied to LCS for review relative to the subject property.

5.5 SUMMARY OF HISTORIC USES

The historical use of the subject property has been researched through review of historic maps, historic aerial photographs, municipal records, city directories and/or other reasonably obtainable documents, as detailed below.

Date Range	Apparent Use	Source
At least 1896 through 1950	Portion of various railway companies	Sanborn maps
1962 through present	Developed with the existing structure with later additions and including various commercial/industrial uses including iron works, auto repair, and warehousing. Current operations include offices, auto parts warehousing, and auto training.	Sanborn maps, city directories, municipal records, site contact, and site reconnaissance

5.5 SUMMARY OF HISTORIC USES (continued)

The following conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified based on LCS' historical research:

- According to Sanborn maps and city directories, the property included a portion of a railway powerhouse from at least 1896 through at least 1901, a portion of Union Railway Company (garage and storehouse and small area labeled "oils and paints") in at least 1915, and portion of a bus repair shop and paint shop in at least 1950. [Municipal records indicated on-site repair operations in at least 1947 and 2014.] In addition, iron work operations took place on-site from at least 1977 through at least 2007 and auto wrecking operations were on-site in at least 2005; according to the site contact, an auto parts company was on-site from 1999 through 2014 (potentially associated with the wrecking operations noted in the 2005 city directory).
- According to historic Sanborn maps, railway company and bus repair operations were historically conducted west adjacent to the subject property; gasoline tanks were also historically located west adjacent to the subject property. It should be noted that the west adjacent property was subsequently redeveloped with the existing Sheridan Expressway.

6.0 PHYSICAL AND HYDROGEOLOGIC SETTING

The subject property is included on the Central Park Quadrangle Topographic Map dated 1995. Regional groundwater would appear to flow in an easterly direction based on a review of geological/soils and USGS quadrangle maps.

6.1 GEOLOGY

Geologic mapping of the area reveals the underlying bedrock as belonging to the Middle Ordovician period, consisting of the Manhattan Formation, undivided. The subject property area is characterized by the pelitic schists, amphibolite, sillimanite, garnet, muscovite, biotite, plagioclase schistose gneiss, sillimanite nodules, local quartz rich layers

Surficial geologic mapping of the area indicates that the subject property is underlain primarily by till. Till, deposited beneath glacier ice, is described as being poorly sorted and variably textured (clay, silt-clay, boulder-clay).

6.2 HYDROLOGY

The subject property is situated regionally in the Bronx River Major Drainage Basin and locally within the East River Sub-Basin.

The subject property does not have any open water bodies or surficial water bodies located on-site. Surface drainage appears to flow in a direction toward the lowest elevated points on-site and/or toward the closest storm drains on-site. Localized groundwater flow would be influenced by utilities, subsurface structures, etc. A site-specific hydrogeologic study would be required to confirm specific on-site groundwater flow direction.

7.0 REGULATORY INFORMATION

Regulatory information involving the subject property was obtained through a commercial database search company, interviews with local municipalities and/or other knowledgeable persons, FOIA requests, and user-supplied information. The following summarizes LCS' regulatory research.

The following information was reviewed in order to evaluate the potential for migration on-site or onto the subject property. [Migration is defined in ASTM E1527-13 as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface."] This evaluation included a review of regulatory records, hydrologic information, distance to the subject property and geologic information.

The following environmental records sources were reviewed.

Source	Date Contacted	Comment
EDR	Dates for the databases are provided within the EDR report.	See 7.1 below
NYSDEC FOIA	October 5, 2017	See 7.3 below
NYCDOH FOIA	October 5, 2017	See 7.3 below
NYCDEP FOIA	October 5, 2017	See 7.3 below

7.1 DATABASE

Federal and state environmental regulatory information was provided by EDR.

[It should be noted that the search radii has been adjusted due to the metropolitan area in which the subject property is located.]

Refer to MAP FINDINGS SUMMARY pages within the EDR report for a tabulated list of databases reviewed and sites identified within specified radii.

Any sites unplottable by EDR were also reviewed, to the extent practical based on site name and address, to assess whether they are also present within their appropriate radii. Any listings for the subject property or any adjacent sites are included in the details below.

No sites were identified within the appropriate radii, except for the following:

SUBJECT PROPERTY:

According to the EDR report, the subject property, listed as LKQ Hunts Point Auto Parts at 1460 Sheridan Expressway, was identified as an AST facility with one 275-gallon hydraulic oil AST and one 276-gallon transmission fluid AST installed in 2012 and closed/removed in 2013 and one 275-gallon waste oil AST, one 275-gallon oil AST, and one 1,000-gallon waste oil AST installed in 2012 and closed/removed in 2014.

ADJACENT SITES:

The following adjacent properties were identified in the EDR report:

- A west adjacent site, NYCDEP at 1508 Boone Avenue, was identified as a Former RCRA Generator with no violations listed and within the Manifest database due to the RCRA listing.
- A west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as the following:
    - UST facility
    - RCRA-CESQG with no violations listed and within the Manifest database due to the RCRA listing
    - NY Spills site with the following releases:
        - Spill No. 9913455 which involved oil at the bottom of a manhole and is classified as "inactive."
        - Spill No. 0300164 involved the discovery of impact following a tank removal and is classified as "inactive."

OTHER LISTINGS:

The following sites of potential environmental concern were identified in the EDR report:

There is one NYSDEC listed hazardous waste site (equivalent to NPL sites) located within a one-mile radius of the subject property. This site is located over one-half mile from the subject property. This information is not considered a recognized environmental condition at the subject property based on the listed site due to the distance to the subject property.

There are six NYSDEC listed spill sites attributed to LTANKs and 58 additional NY Spill sites located within a one-quarter mile radius of the subject property. Of these spill sites, two are still considered "active" by the NYSDEC, while the remaining sites are classified as either "inactive" or "closed." [A status of "closed" indicates the spill was remediated and the NYSDEC file closed with no further remediation required. A status of "inactive" indicates the contamination may remain but no further remediation is required. A status of "active" indicates further remediation or investigation is necessary.] The closest "active" site (1277 Bronx River Avenue) is located approximately 485 feet from the subject property and involved a fuel oil leak to soil. Based upon this limited information, this release is not anticipated to pose a significant concern at the subject property. In addition, LCS' experience suggests the property owner would not be liable for on-site contamination that resulted from such an off-site release. This information is not a recognized environmental condition at the subject property based on the listed spill sites due to the "closed" or "inactive" status of most of the listed spills and/or the distance to the subject property.

There is one NYSDEC listed solid waste facility located within a one-half mile radius of the subject property. This site is located over one-quarter mile from the subject property. This information is not a recognized environmental condition at the subject property based on the listed site due to the distance to the subject property.

There are two NYSDEC listed Brownfield sites located within a one-half mile radius of the subject property. Those sites are located over one-quarter mile from the subject property. This information is not considered a recognized environmental condition at the subject property based on the listed sites due to the distance to the subject property.

OTHER LISTINGS (continued):

The discussion included above regarding adjacent and/or nearby properties is based on information supplied to LCS as well as LCS' observations of nearby properties at the time of the site reconnaissance. It should be noted that any property can be affected by various sources of point and non-point source pollution. The number of reported spills and complaints in the vicinity of the subject property may be an indicator of point source pollution in the area of the subject property. Non-point sources are common in rural areas (e.g., runoff from agricultural fields). Further study would be required to positively confirm whether the subject property has been impacted by nearby properties. Refer to Section *10.6 REGULATORY INFORMATION*.

7.1.1 Regulatory Agency File and Record Review

All regulatory listings for the subject property and adjoining sites were evaluated in order to determine the need for a file and/or record review. The purpose of a regulatory file review would be to obtain sufficient information to assist in determining whether a listing indicates that RECs, Controlled RECs or de minimis conditions (including Historic RECs) exist on the subject property.

Based on that evaluation, the following was noted:

- Sufficient information was included in the database report and through USEPA and NYSDEC records to evaluate the subject property and adjacent property regulatory listings.

7.2 ENFORCEMENT ACTIONS/PERMITTED ACTIVITIES/INSTITUTIONAL CONTROLS

According to obtainable information to date, there have been no enforcement actions, orders or institutional controls imposed against the referenced subject property.

According to obtainable information to date, the subject property does appears to have been subject to tank permitting, as discussed above.

7.3 INTERVIEWS/USER PROVIDED INFORMATION

Local Regulators
FOIA requests were sent to the NYCDOH and the NYCDEP for information concerning the subject and adjacent sites. As of date of this report, a complete reply has not been received from these offices. Any response information that would alter or affect the findings and conclusions of this report will be forwarded as an addendum to this report when it is received by LCS.

State Regulators
To augment the information provided by EDR, a FOIA request was forwarded to the NYSDEC for information concerning the subject property. To date, a complete response has not been received by this agency.

7.3 INTERVIEWS/USER PROVIDED INFORMATION (continued)

User
Sterling National Bank is currently considering a lending relationship and associated mortgage for the subject property. In this regard, LCS was informed that the Bank maintains no specialized knowledge of environmental concerns at the subject property. As such, Sterling National Bank could not provide useful answers to the ASTM 1527-13 Phase I Environmental Site Assessment User Questionnaire. [As required under 40 CFR 312, only those seeking liability protection under CERCLA must provide the environmental professional certain information and documentation.]

Current Owner/Operators
LCS also requested information from the current property owner and site contact relative to pending, threatened or past litigation, administrative proceedings or any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. No concerns were identified.

Former Owner/Operators
As required by 40 CFR 312.23, LCS has attempted to contact and interview the former owners and/or operators of the subject property to discuss historic use and storage of hazardous substances. To-date, LCS has been unable to interview any relevant previous owners or operators.

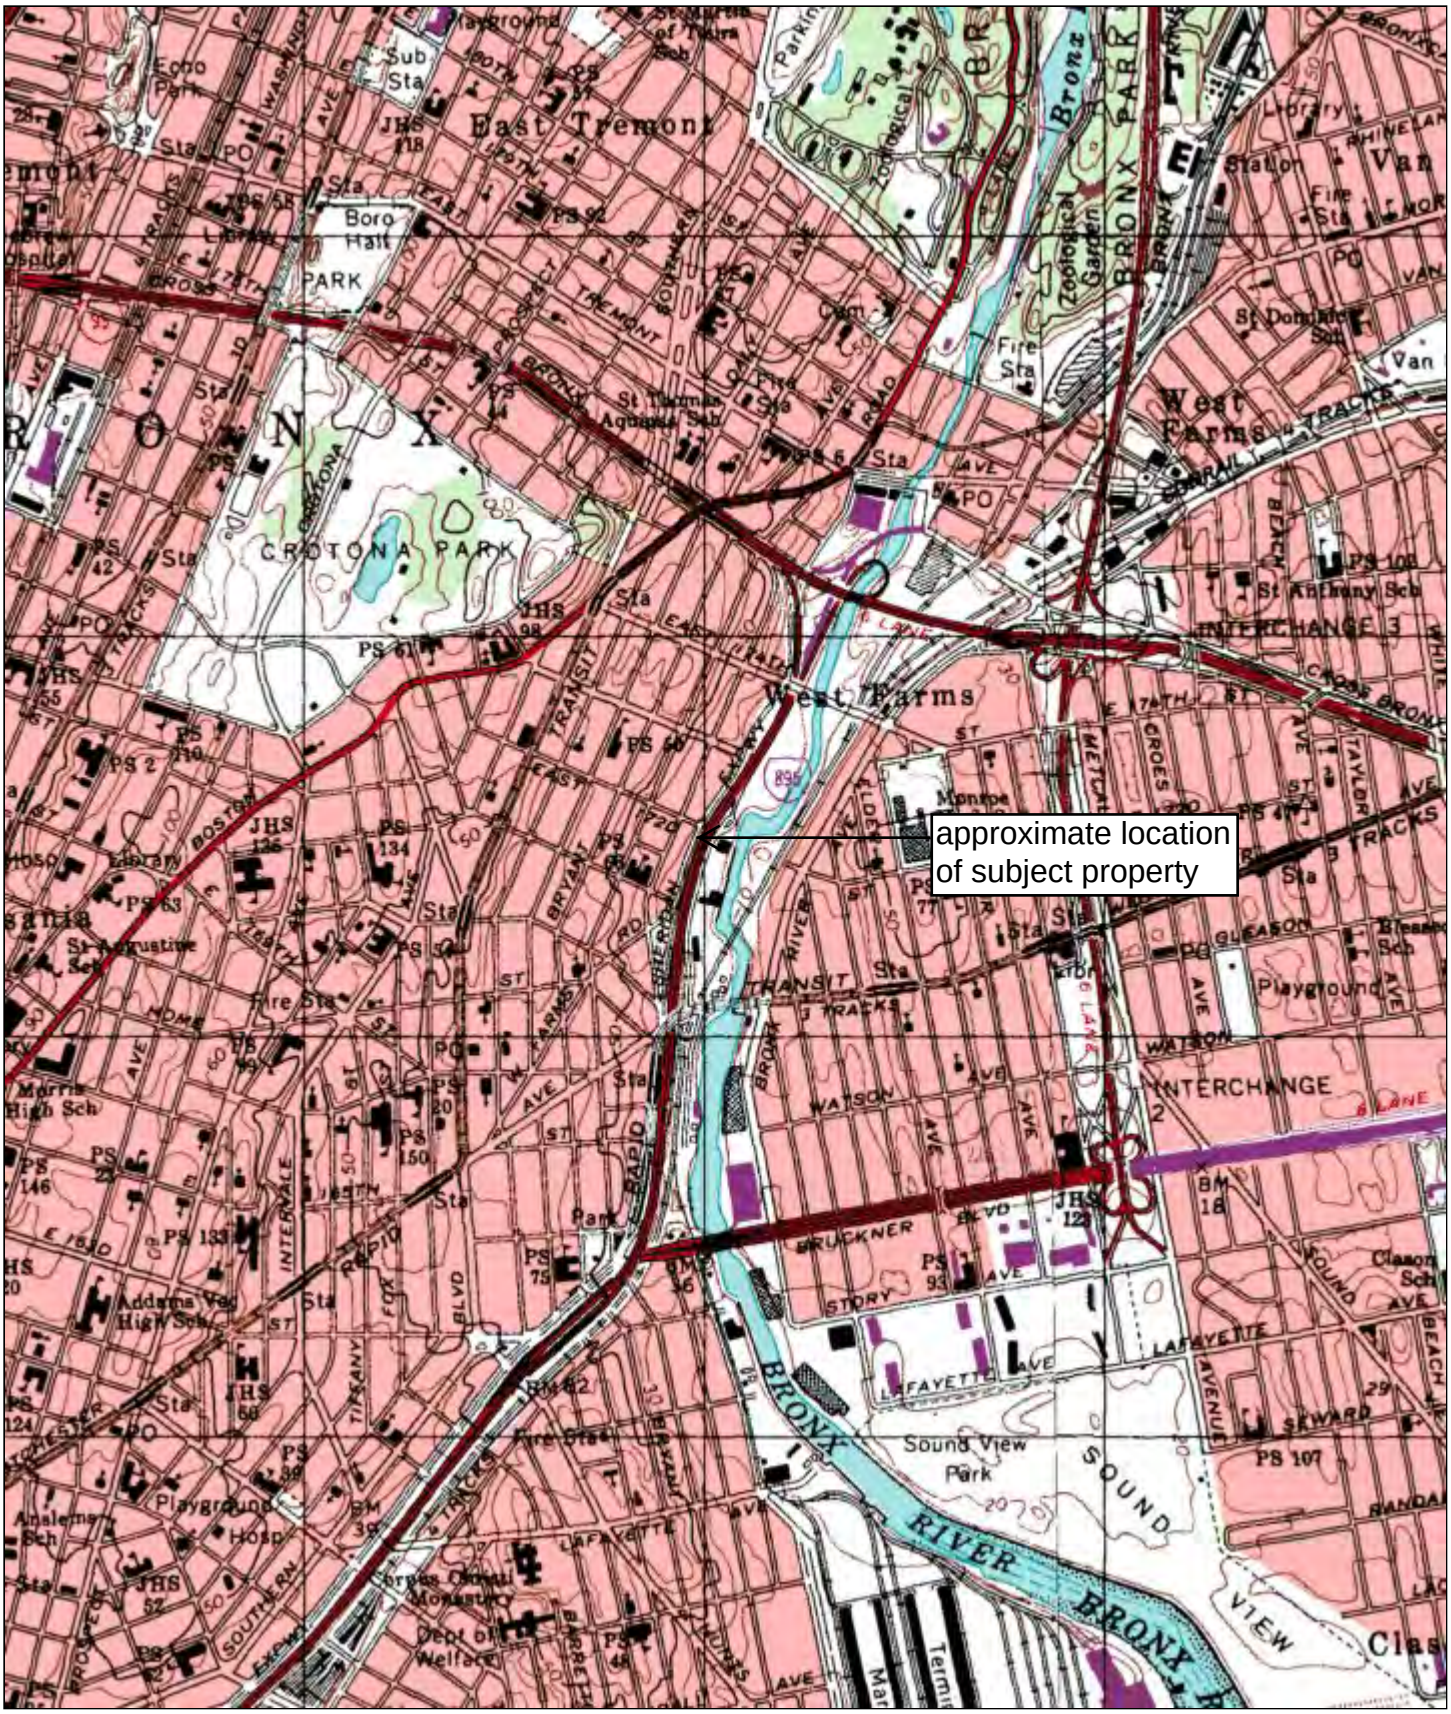
7.4 SUMMARY OF REGULATORY AND USER PROVIDED INFORMATION

The following conditions indicative of releases or threatened releases of hazardous substances or petroleum products in, on, or at the subject property were identified based on LCS' review of regulatory information:

- According to the EDR report, the subject property, listed as LKQ Hunts Point Auto Parts at 1460 Sheridan Expressway, was identified as an AST facility with one 275-gallon hydraulic oil AST and one 276-gallon transmission fluid AST installed in 2012 and closed/removed in 2013 and one 275-gallon waste oil AST, one 275-gallon oil AST, and one 1,000-gallon waste oil AST installed in 2012 and closed/removed in 2014.
- The following adjacent sites were identified in the EDR report:
    - A west adjacent site, NYCDEP at 1508 Boone Avenue, was identified as a Former RCRA Generator with no violations listed and within the Manifest database due to the RCRA listing.
    - A west adjacent site, J & A Auto Service at 1471 West Farms Road, was identified as the following:
        - UST facility
        - RCRA-CESQG with no violations listed and within the Manifest database due to the RCRA listing
        - NY Spills site with the following releases:
            - Spill No. 9913455 which involved oil at the bottom of a manhole and is classified as "inactive."
            - Spill No. 0300164 involved the discovery of impact following a tank removal and is classified as "inactive."

8.0 RADON

Radon is a radioactive gas that occurs naturally from the breakdown of uranium in rock. Radon can be found in high concentrations in soils and rock containing uranium, shale, granite, phosphate and pitchblende. Radon may also be found in soils contaminated with certain types of industrial wastes such as the byproducts from uranium or phosphate mining. Radon gas can move through small fractures in soil and rock and can seep into a structure through dirt floors, cracks in the floors and walls, drains, sumps pipes and pores. Radon has been associated with increased risks of developing lung cancer.



The NYSDOH Radon Detector Distribution Program report for October 2016 suggests an average basement radon reading of 1.59 pCi/L for the Bronx. The NYSDOH recommends taking measures to reduce basement radon concentration to below 4.0 pCi/L. Based on the low average radon concentration for the area of the subject property, radon does not appear to pose a concern to the subject property.

9.0 WETLANDS

Due to the highly developed area in that the subject property is located, the lack of any surficial water bodies on-site, and the lack of any surficial soils, no delineated wetlands are suspected on-site or in the immediate area of the subject property.

ADDITIONAL NOTES:

LCS Project No.:

The Site Contact and the Owner (if not the same person) must be asked the following questions:

(1) Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?

SITE CONTACT RESPONSE: None

OWNER RESPONSE: N/A

(2) Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?

SITE CONTACT RESPONSE: None

OWNER RESPONSE: N/A

(3) Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

SITE CONTACT RESPONSE: None

OWNER RESPONSE: N/A

Also, ask for copies of any of the following:

- Environment site assessment *reports*,
- Environment compliance audit *reports*,
- Environmental permits (for example, solid waste disposal permits, *hazardous waste* disposal permits, *wastewater* permits, NPDES permits, *underground injection* permits),
- Registrations for underground and above-ground storage tanks,
- Registrations for *underground injection* systems,
- *Material safety data sheets*,
- Community right-to-know plan,
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc.,
- *Reports* regarding hydrogeologic conditions on the *property* or surrounding area,
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the *property* or relating to *environmental liens* encumbering the *property*,
- *Hazardous waste* generator notices or *reports*,
- Geotechnical studies,
- Risk assessments, and
- Recorded activity and use limitations (AULs).

10.5 OWNER/OPERATOR QUESTIONNAIRE

As required by 40 CFR 312.23, LCS has attempted to contact and interview the former owners and/or operators of the subject property to discuss historic use and storage of hazardous substances. To-date, LCS has been unable to interview any relevant previous owners or operators.

LCS, INC.
OWNER/OPERATOR QUESTIONNAIRE

PROJECT # _____ DATE: _____
SITE NAME: _____
ADDRESS: 1460 Sheridan Expressway
ABUTING STREET(S): _____

COMPLETED BY: Robert Rosario
TITLE/RELATIONSHIP TO SUBJECT PROPERTY: manager YRS. IN POSITION: 16

1. HAVE ANY PREVIOUS STUDIES OR TESTING REPORTS BEEN COMPLETED FOR THE SUBJECT PROPERTY? ___ NO ___ YES (If yes, please provide copies for review.)

2. SIZE AND NATURE OF OPERATION:
TOTAL SQ. FTG. OF BLDG. 22,260, PROPERTY SIZE (FT./ACRES): 41,038 Sq FT
DESCRIP OF OPER: _____
CURRENT TENANTS: (1) T M motorparts.

3. WHAT ARE THE PAST USES/OCCUPANTS OF THIS FACILITY/PROPERTY AND DATES OF OCCUPANCY? LKQ Hunts Point Auto Parts, Corp - 11/99 — 8-14
East End Parking - 6-15-to 9-17 land only

WHAT IS THE INTENDED USE OF THE SUBJECT PROPERTY AND/OR STRUCTURES LOCATED ON THE SUBJECT PROPERTY? ware House light Industrial Training Center AND OFFICE

4. MISCELLANEOUS UTILITIES:
FLOOR DRAINS: _____ DISCHARGE POINT _____
SUMP PUMPS: _____ DISCHARGE POINT _____
STORM DRAINS: _____ DISCHARGE POINT _____
OTHER: _____
ON-SITE UTILITIES: Con Ed Gas Electric
WHEN WAS SUBJECT PROPERTY CONNECTED TO MUNICIPAL SEWER, IF CURRENTLY CONNECTED? _____

5. LIST AND DESCRIBE THE STORMWATER AND WASTEWATER DISCHARGES FROM THE FACILITY, INCLUDING THE SOURCES, DISCHARGE POINTS, AND RECEIVING WATERS OR FACILITY:
Provided By the City of New York

6. WHAT IS THE NATURE OF THE WASTES GENERATED ON-SITE (INCLUDING HAZ./REG. WASTES, THE DISPOSAL METHODS AND WASTE DISPOSAL VENDORS)?
HOW IS IT STORED ON-SITE? _____
WHO COLLECTS THE WASTES? _____ OF _____
7. HAS THE REFUSE SERVICE EVER REFUSED TO COLLECT THE WASTE? ___ NO ___ YES, EXPLAIN
DO YOU RECYCLE? ___ YES ___ NO

8. HAVE THERE BEEN ANY COMPLAINTS OR NOTICES OF VIOLATIONS ABOUT YOUR FACILITY?
✓ NO ___ YES, NATURE _____
ARE ANY COMPLAINTS PENDING? ___ NO ___ YES

9. WHAT TYPE OF HVAC (HEATING, VENTILATION & AIR CONDITIONING) SYSTEM DOES THIS FACILITY HAVE? (NAT. GAS, ELECTRIC, HEATING OIL, PROPANE, ETC./FORCED AIR, RADIANT, HVAC, ETC.) _____

10. WAS THIS FACILITY EVER HEATED WITH OIL? ✓ NO ___ YES
WHEN? _____
STORAGE CONTAINER OF OIL: _____
WAS THE FACILITY EVER HEATED WITH STEAM? ✓ NO ___ YES
WHEN? _____
WAS THE HEATING SYSTEM EVER CONVERTED? ✓ NO ___ YES
PREVIOUS SYSTEM? _____

11. WAS THIS SITE EVER A CAR REPAIR SHOP, PAINT SHOP, OR GAS STATION?
✓ NO ___ YES, WHEN? _____ OWNER? _____

12. ARE THERE ANY ABOVEGROUND OR UNDERGROUND STORAGE TANKS? ___ NO ___ YES
___ UST ___ AST, CAPACITY _____ PRODUCT _____
___ UST ___ AST, CAPACITY _____ PRODUCT _____
___ UST ___ AST, CAPACITY _____ PRODUCT _____
DO THE TANKS COMPLY WITH DECEMBER 1998 REQUIREMENTS? (including overfill protection, monitoring systems, cathodic protection/double walled tank and piping, etc.) _____
WHEN WERE THE TANKS LAST TESTED? _____
ARE THEY REGISTERED? _____
LEAK DETECTION DEVICES IN PLACE? _____ IF YES, TYPE OF SYSTEM? _____
MONITORING REPORTS AVAILABLE? _____ IF YES, PLEASE SUPPLY COPIES
SPCC PLAN IN PLACE (ASTs totaling over 1,320 gallons): _____

13. WERE THERE EVER TO YOUR KNOWLEDGE ANY UNDERGROUND OR ABOVEGROUND TANKS LOCATED ON-SITE PREVIOUSLY?
✓ NO ___ YES, WHEN? _____
ARE CLOSURE REPORTS AVAILABLE? _____ IF SO, PLEASE SUPPLY COPIES

14. WHAT TYPES OF CHEMICALS ARE USED IN THE OPERATIONS?
(ATTACH LIST) _____
_____
DO YOU HAVE MSDS'S FOR THESE CHEMICALS? ___ NO ___ YES
LIST HAZ. WASTE/MATERIAL STORAGE FACILITY _____
_____

HAVE YOU EVER TRANSPORTED HAZARDOUS WASTE FROM THIS SITE? ✓ NO ___ YES
ARE HAZ. WASTE MANIFESTS ON FILE? _____
HAS AN EMERGENCY PLAN BEEN PREPARED AND SUBMITTED TO THE LOCAL FIRE DEPARTMENT? _____

DO YOU STORE ANY HAZ./REG. WASTES ON-SITE FOR TRANSFER TO A DISPOSAL FACILITY?
✓ NO ___ YES, RECIPIENT OF WASTES _____ PERMIT # _____

15. LIST THE ENVIRONMENTAL OR SAFETY REPORTS TO BE SUBMITTED TO REGULATORY AGENCIES, THE FREQUENCY OF SUCH REPORTS, AND THE AGENCIES TO WHICH THEY ARE SUBMITTED. _____

16. DO YOU HAVE ANY FEDERAL, STATE OR LOCAL PERMITS FOR THE FOLLOWING? ("TO EMIT TO AIR OR WATER?") SPDES _____ RCRA(WASTES) _____ HAZ. USE EPA ID# _____ AIR EMISSIONS _____

17. ARE PCBS OR PCB-CONTAINING EQUIPMENT PRESENT ON THE SUBJECT PROPERTY, INCLUDING BALLASTS OR OTHER EQUIPMENT? __ YES ✓ NO
LOCATION: _____ TYPE OF EQUIP.? _____
LOCATION: _____ TYPE OF EQUIP.? _____

18. ARE THERE TRANSFORMERS LOCATED ON-SITE? __ YES ✓ NO
IF SO AND THEY ARE UTILITY OWNED, WHAT IS THE NAME OF THE UTILITY COMPANY?
_____

19. DO YOU TREAT OR DISPOSE OF ANY WASTE MATERIALS ON-SITE INCLUDING INCINERATION, NEUTRALIZATION, OR LANDFILLING?
✓ NO __ YES, TYPE _____

20. HAS THIS FACILITY EVER BEEN TESTED FOR THE FOLLOWING?
DRINKING WATER _____ INDOOR AIR _____ ASBESTOS ____ RADON ____
LEAD PAINT _____ EMISSIONS _____ WASTES ____
IF YES, PLEASE PROVIDE COPIES OF THE REPORTS OR SURVEYS.

21. HAVE YOU EVER BEEN THE SUBJECT OF AN ENFORCEMENT ACTION BY ANY FEDERAL, STATE, OR LOCAL AGENCY REGARDING ENVIRONMENTAL ISSUES?
✓ NO __ YES, NATURE _____

22. HAVE THERE BEEN ANY SPILLS, UNPERMITTED DISCHARGES, OR RELEASES OF HAZARDOUS OR CONTAMINATED MATERIALS AT OR NEAR THIS FACILITY?
✓ NO ___ YES, NATURE _____

23. ARE THERE ANY STAINED, STRESSED OR DEAD VEGETATION/SURFACES ON-SITE?
✓ NO ___ YES, SUSPECTED CAUSE _____

24. ARE YOU PRESENTLY UNDER ANY FEDERAL, STATE, OR LOCAL CONSENT ORDERS, DECREES OR CAUSES OF ACTION? ✓ NO ___ YES, ARE ANY PENDING? ___ NO ___ YES

25. HAVE YOU EVER ALLOWED OR PERMITTED ANY OTHER ENTITY TO DUMP, STORE, DISPOSE, TRANSPORT, BURY, INCINERATE, OR LANDFILL ANY MATERIALS AT THIS SITE?
✓ NO ___ YES, WHO?_____ WHEN? _____

26. DOES ANYONE OTHER THAN YOUR OPERATIONS UTILIZE THIS SITE PRESENTLY?
___ NO ___ YES, WHO? _____
NATURE OF THEIR OPERATIONS: _____

27. HAVE YOU EVER EXPERIENCED ANY PROBLEMS FROM ODORS, DRAINAGE, STORAGE PRACTICES, OR OPERATIONS FROM YOUR NEIGHBORS?
___ NO ___ YES, NATURE _____
WHAT WERE THE ACTIONS TAKEN TO CORRECT THESE PROBLEMS?
_____

28. ARE YOU AWARE OF ANY ENVIRONMENTAL LIENS ON THE PROPERTY?
___ NO ___ YES, NATURE _____

29. WAS THERE EVER A SEPTIC TANK, LEACH FIELD, INJECTION WELL, OR DRY WELL LOCATED ON THE PROPERTY?
___ NO ___ YES, WHEN _____
IF A SEPTIC IS CURRENTLY LOCATED ON-SITE, WHEN DID IT PASS THE LAST PERCOLATION TEST? _____
ARE THERE, OR WERE THERE EVER, ANY WATER WELLS LOCATED ON-SITE?
___ NO ___ YES, WHEN _____

30. ARE THERE ANY LEAD PIPES/SOLDERING WITHIN THE SUBJECT STRUCTURE(S)?
___ NO ___ YES, LOCATION? _____

31. ARE YOU AWARE OF ANY MOLD HAZARDS WITHIN THE SUBJECT STRUCTURE(S)?
NO ___ YES, IF YES, WHERE? _____
WHAT ACTION HAS BEEN TAKEN? _____

- Is, or has there been, any visual mold growth or moldy odors identified within the subject building?
  No ___ Yes ___ Explain: _____
- Is, or has there been, any, moisture, condensation or high humidity problems within the subject building?
  No ___ Yes ___ Explain: _____
- Have any areas of the subject building been impacted by a flood, plumbing/sewer leak, roof/window leak, groundwater intrusion or discharge of a sprinkler system? If "yes," what repairs and/or corrective measures were undertaken to address such issues.
  No ___ Yes ___ Explain: _____
- Is a sump pump located within the basement of the subject building? If "yes," has the basement been characterized by dampness or periodic wetness?
  No ___ Yes ___ Explain: _____
- Have any occupants of the subject building complained as to water intrusion or moldy odors within their tenant spaces or reported any adverse health problems that have been alleged to be related to the subject building?
  No ___ Yes ___ Explain: _____
- Does the HVAC system have any drip pans or other open discharge of condensate water, steam or other moisture? If "yes," does the HVAC system have a written maintenance program?
  No ___ Yes ___ Explain: _____
- Has a state or local health agency issued any notices of violation to the subject building as to indoor air quality, odors, moisture or mold growth? **If "yes," please supply copies.**
  No ___ Yes ___ Explain: _____
- Have any moisture surveys, indoor air quality reports or surveys been conducted for the subject building? **If "yes," please supply copies.**
  No ___ Yes ___ Explain: _____
- Has an insurance claim ever been filed for water or mold-related damage to the subject building?
  No ___ Yes ___ Explain: _____

32. ARE THERE ANY DRY CLEANING OPERATIONS CONDUCTED ON-SITE? ✓ NO ___ YES
IF SO, WHAT IS THE CURRENT MACHINE GENERATION USED ON-SITE? _____
HOW OLD IS THE CURRENT MACHINE? _____
WAS THERE A PREVIOUS MACHINE UTILIZED ON-SITE? ___ NO ___ YES
HOW LONG HAS DRY CLEANING BEEN CONDUCTED ON-SITE? _____

33. IS THERE CURRENTLY ANY X-RAY DEVELOPING OR FILM DEVELOPING CONDUCTED ON-SITE?
✓ NO ___ YES, IF YES, IS THERE A SILVER RECOVERY SYSTEM IN USE? ___ NO ___ YES

34. ARE THERE CURRENTLY ANY UNOCCUPIED SPACES WITHIN THE BUILDING(S)? NO
(PLEASE LIST BY IDENTIFYING UNIT NUMBER, FLOOR, BUILDING, ETC.)
_____
_____

35. DO YOU HAVE SPECIALIZED KNOWLEDGE THAT WOULD PROVIDE INFORMATION REGARDING PREVIOUS OWNERSHIP OR USES OF THE PROPERTY THAT MAY BE MATERIAL TO IDENTIFYING RECOGNIZED ENVIRONMENTAL CONDITIONS ABOUT THE SITE?
✓ NO ___ YES, NATURE _____
_____

36. WHAT ARE THE PAST AND PRESENT USES OF THE PROPERTIES ADJACENT TO YOU? PLEASE INCLUDE DATES OF OCCUPANCY.

DIRECTION	CURRENT USE/OCCUPANT	PAST USES/OCCUPANTS
NORTH:	Park	
SOUTH:	Industrial	
EAST:	Water	
WEST:	Residential	

37. ARE THERE ANY PENDING, THREATENED OR PAST LITIGATION RELEVANT TO HAZARDOUS SUBSTANCES OR PETROLEUM PRODUCTS IN, ON OR FROM THE SUBJECT PROPERTY? NO
_____

38. ARE THERE ANY PENDING, THREATENED OR PAST ADMINISTRATIVE PROCEEDINGS RELEVANT TO HAZARDOUS SUBSTANCES OR PETROLEUM PRODUCTS IN, ON OR FROM THE SUBJECT PROPERTY? NO
_____

39. ARE THERE ANY NOTICES FROM ANY GOVERNMENTAL ENTITY REGARDING ANY POSSIBLE VIOLATION OF ENVIRONMENTAL LAWS OR POSSIBLE LIABILITY RELATING TO HAZARDOUS SUBSTANCES OR PETROLEUM PRODUCTS? NO
_____

CERTIFICATION OF RESPONSES:

I, Robert Rosario, the owner/operator and/or responsible person for this facility, do hereby attest and certify that to the **best of my knowledge**, the answers and information provided in this questionnaire, are true and accurate. I have not willfully withheld information that may be pertinent to the questions contained herein and have not distorted or misrepresented the facts regarding the content of this questionnaire.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NYCSCA - PUBLIC SCHO	***1001 JENNINGS ST***	***W 0 - 1/8 (0.102 mi.)***	***G15***	***42***

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-CESQG sites within approximately 0.125 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/16/2017 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/30/2017 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/16/2017 has revealed that there are 7 NY LTANKS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there are 2 NY RES DECL sites within approximately 0.18 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following:

EXECUTIVE SUMMARY

Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/16/2017 has revealed that there are 60 NY Spills sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL E2MIS 130160 Feb 28, 2000 @ 10:45 Lopriore, mechanic A , reports while clean and flushing manhole # 26176 he noticed that oil was being sucked into truck. He immediately stopped cleanup. Mechanic reports approximately 1 quart of unknown oil in mud at bottom of manhole. Samples were taken and cleanup will resume as 50-499 ppm. Conduit plate (15-l-3) indicates no sewer connection. Manhole has earthen sump and Chem-lab will be notified when sample of earthen sump can be taken. Mar. 04, 2000 Cleanup completed by 00:40 hrs. by A. Guarino and E. Henn. The manhole was power washed with cleaning solution. According to A. Guarino there were no earthen sump. 400 gallons of water was removed along with 1 quart of unknown oil, which test results came back as less than 1 PPM. Tag number 24377 was removed. 03/04/00 @ 07:30 Hrs. Closed out job. 17-DEC-2002 13:40 NYSDEC Return the following question: DEC WAS GIVEN VERBAL SAMPLE RESULTS FROM CIG ON 2/28/00 AT 0500 HRS. OF 58 PPM PCB. E2MIS REPORT SAYS RESULTS ARE 1 PPM. WHY THE DISCREPANCY? This incident did not occurred until 2/28/00 at 10:45, No verbal would have been given at 05:00 on 2/28/00. NYSDEC was notified that the results of a Manhattan Electrical Distribution Incident 130079 were 58 ppm PCB by CIG R. Roach on 2/28/2000 05:18. This incidents NYS DEC spill number is 99-13455, the Manhattan incident with 58 ppm PCB is 99-13255. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT DEC Sigona sent letter notification for contaminated soil investigation on April 4, 2003. 4/8/2003-Vought-Received message from Roland Fischer (Tyree - 631-249-3150x352). Vought returned call and left message to return call. Vought received another message and again returned call and spoke with Roland. 6 (550-gallon) UST's were removed. Contaminated soil found at dispenser island. Tyree will excavate contaminated soil and take endpoint samples. Tanks in vaulted concrete on top of bedrock. Lines to be excavated are 20' long. Sidewalls will be composited and two grab samples from bottom of trench. Tank closure report will be sent including site plan, analyticals and disposal manifests. 4/24/2003-Vought-Received message from Roland on 4/14. Vought returned call on 4/24 and left message with Roland to return call with updates. 5/5/2003-Vought-Spoke with Roland and soil contamination found (30'x 20' excavation was performed, bottom was bedrock). One sample had xylene at 4000ppb. Roland will send tank closure report and spill closure report including site plan, disposal manifest and analyticals. 7/18/2003-Vought-Spoke with Roland Fisher and report is being sent to

ABANDONED SERVICE STATION (Continued) **S106012861**

NYSDEC today. 9/8/2003-Vought-UST Closure Report-May 2003-Tyree Organization-Six (550-gallon) gasoline USTs were removed in 3/03. Groundwater not encountered in excavation but suspected at depth of 60' and flowing to the southwest. Bedrock at depth of 8' below grade. USTs were in a vault constructed by direct pour of concrete onto the bedrock . Endpoint samples were collected from sidewalls and not collected from bottom due to bedrock. Soil analyticals show up to 3380ppb toluene(south wall), 70900ppb xylene(south wall) and 24000ppb napthalene(south wall). Tyree returned to site to peform additional soil removal under the former pump island area and removed 50 tons of soil. Seven subsequent soil endpoint samples were collected and soil analyticals showed two exceedances at 3050ppb xylene(west wall) and 3320ppb 1,3,5-trimethylbenzene(west wall). Spill closed by Vought as per Rommel due to 60' suspected depth to groundwater and excavation to bedrock (and hence no sensitive receptors). Spill closed by Vought. "

Remarks: "caller did tank removal and test results show soil contamination caller believes line failed causing release"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 114487 01/30/98 1944 HRS. G.LOPRIORE (FL) FOUND UNKNOWN SUBSTANCE IN VS 1773. SAMPLE TAKEN & YELLOW TAG PLACED IN VS. TAG #09500 FORMAN COULD NOT TELL IF THERE WAS A SUMP PUMP PRESENT DUE TO AMOUNT OF SUBSTANCE IN VS. NO SEWER CONNECTION & NO OUTSIDE IMPACT. UNKNOWN SUBSTANCE IS COMMING FROM UNDER A GARAGE DOOR UNIT FROM THE FERRIS STAHL MEYER PACKING CORP. AT 1560 BOOM AV. PHOTO REQ. CIG NOTIFY ABOUT UPDATE 2105 HRS. A REPRESENTIVE OF THE ABOVE STORE DID NOT WANT TO TALK ABOUT THE SUBSTANCE & WAS NOT CONCERNED.J.SCHLEMBACH 32616. ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~A.Bucci #57523~~~~~~~~~~~~~~~~~~~~~~ I was instructed by A.Chang told to notify CIG that this is going to be a third party spill. I spoke with R.Roach at 0821. 10 feb. 1998 16:40..... A.Tortora went out to loc. and took another sample. He is sampling for I.D not PCB. ~~~~~~ 12-FEB-98 THE SECOND SAMPLE INDICATED AGAIN INSUFICIENT MATERIAL. ENV AFFAIRS A. CHANG TO VISIT THE LOCATION AND PROVIDE DIRECTION. E. DE LA HOZ 79237 == SAMPLE RESULTS RECIEVED 3/2/98...<1PPM 1254 AROCLOR P SCHMID 58060 3/3/98 == 05-MAR-98 ENV A.CHANG RECOMMEDS TCLP SAMPLING BEFORE CLEANUP. A NEW SAMPLE WILL BE REQUESTED. From: Chang, Angel CHANGA - CONED To: Delahoz, Eddy EDELAHOZ - TAODGN cc: Cawley, Timothy P. CAWLEYT - CONED Subject: FW: By R. NEVIN 98-02528 The benzene value came below the RCRA limits. This is the job near the packaging facility and a candidate for a third party spill. Maybe we should also include it for sealing. The clean-up can proceed as less than 50ppm. 29-MAY-1998 14:30 HRS CLEANUP STARTED AT THIS LOCATION TODAY. UG L.FISCHER REPORTS THAT THERE ARE FIVE 55- GAL GARBAGE CANS OUTSIDE THE FERRIS PACKING HOUSE FILLED WITH FOUL-SMELLING MEAT BYPRODUCTS. FISCHER REQUESTED THAT DEP BE NOTIFIED. I CONTACTED ERT AND EXPLAINED THE SITUATION. ERT

UNDERGROUND TRANSFORMER (Continued) **S102962130**

LUKSHIDES SPOKE TO STANLEY BALDWIN FROM THE DEP. DEP REFERRED HER TO THE ENVIRONMENTAL POLICE UNIT (DEP DOES NOT COVER THESE TYPE OF CASES). NO ONE AVAILIABLE AT THE E.P.U. CLEANUP IN PROGRESS USING 5000 GAL TANKER. FISCHER REPORTS THERE IS NO OIL PRESENT - SLIGHT GREASY FILM & ODOR. LUKSHIDES RECOMMENDS THAT ANY FUTURE CLEANUP OF THIS MATERIAL WOULD NOT REQUIRE A TANKER TRUCK BASED ON OUR KNOWLEDGE OF THE SITUATION AND THE SAMPLE RESULTS. MAY 29, 1998 JOB COMPLETED AND TAG REMOVED. CREW REPORTS THAT HOLE HAS A FRESH WATER LEAK AND THE CITY NEEDS TO RESPOND TO THE SITUATION. 8/19/09 - Austin - Material appears to be animal waste product from a meat packing plant - not a regulated substance under the DEC spills program - Con Ed took care of material impacting their vault, and contacted NYCDEP for followup by city on this matter. closed - end "

Remarks: "unk material has entered the a underground transformer material seems to be comming from under a garage door that belongs to Ferris Stahl Meyer packing corp. at 1560 Boone Ave Bronx owner of that business has been contacted by caller but has not responded to scene spill is contained in the vs "

DEC Memo: "site is entering into NYC vcp program and impact is working with NYC OER Moore on the project. Phase II will be sent ot me for reviwew. IT is a vacant lot know and is going to be redeveloped. 8/5/14-Vought-Received email from OER Moore that Morning Jeff would you please tell us who the DEC PM is for Spill # 14-03152 (1544 Boone Avenue)? They are working through our program, and we want coordinate on the investigation.Thanks,Hannah. Vought sent reply that Hannah,The Project Manager for the spill is Ryan Piper (copied above) and you can also reach him at (718)482-4927. He is on vacation this week and will be returning to the office on Monday 8/11. As per his last notes, a Phase II report is to be sent to him for review. Thanks for the coordination as always,-Jeff. 4/21/15- DEC Piper recieved and reviewed work plan. RAWP approved though excavation of pet cont soils to encompass former tank. RAWP in DEC DOCS. spill closure report to follow. 9/7/16- DEC Piper emailed Hannah Moore for info. 2/6/2017- DEC Piper received closure report. A 14-story, 304,000 gross square foot mixed use residential/commercial retail building with 292 residential units is currently in the process of being constructed. Sub-grade construction is limited for this development; the foundation structure is predominantly slab-on-grade construction with the exception of two cellars located in the northwestern and southeastern corners of the building. The GPR survey identified ten (10) subsurface anomalies within the footprint of the former warehouse building (northwest corner of the Site) that were interpreted to represent USTs. Twenty-two (22) soil borings were installed throughout the Site to depths of 12 to 13 feet below grade surface; five (5) of the soil borings were installed proximal to the USTs identified in the GPR survey. Laboratory analysis of the soil samples detected the presence of several volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and heavy metals at concentrations exceeding regulatory standards. the soil quality in the location of the former warehouse/building in the northwestern portion of the Site (the area surrounding the historic USTs) and the area to the east and southeast of the USTs appeared to be impacted by gasoline related constituents. Spill remediation was performed in conjunction with redevelopment construction and in accordance with the scope of work presented in the Spill RAWP dated February 25, 2015. A total of 332.08 tons of grossly petroleum contaminated material from the spill area was transported for off-site disposal as non-hazardous waste to Bayshore Soil Management in Keasbey, NJ. A total of 3,777.34 tons of petroleum contaminated soil/fill from the spill area and surrounding areas that did not exhibit evidence of free petroleum product was transported for off-site disposal as non-hazardous waste. A total of 96,176 gallons of petroleum impacted groundwater was pumped from the spill area excavation and transported off-site for disposal to Clean Waters of New York in Staten Island, NY and Lorco Petroleum in Elizabeth, NJ. On September 17, 2015, IEC applied 1,911 gallons of RegenOx, chemical oxidizing solution manufactured by Regenesis. A waterproofing/vapor barrier system consisting of Bituthene Preprufe 160R 32 mils thick was installed behind all cellar blind side foundation walls below grade, Bituthene Preprufe 300R 46 mils was installed beneath all cellar foundation slabs and Husky Yellow Guard 20 mils non-waterproofing membrane was installed beneath all slab-ongrade foundation slabs. The vapor barrier membranes were installed according to manufacturer specifications. An active sub-slab depressurization system (SSDS) was

LOT 9,TAXBLOCK 3014 (Continued) **S116291059**

also installed beneath the new building foundation slab. The SSDS consists of 3-inch slotted screen PVC pipes aligned horizontally beneath the building slab and attached to 4-inch solid PVC pipe and steel risers. The SSDS was installed within porous granular material consisting of 3/4-inch stone. The SSDS horizontal screen piping provide the correct coverage in accordance with US EPA SSDS design specifications which recommend a separate vent loop/branch for every 4,000 square feet of slab area. Each branch is outfitted with a riser that extends to the roof of the building and connected to an electrical inline fan. 04/24/2017- DEC Piper - Based on work completed to date, this spill is closed. report is in DEC Docs. "

Remarks: "Soil investigation results showed gasoline contamination. Clean up will be done by Allied West Farms NY II LLC"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY WHILE ADVANCING GEOTECH BORING, URS FOUND FREE PRODUCT COMING INTO BOREHOLE, AT 1-2 FOOT DEPTH. ABANDONED BORING. DEC HAS ASKED FOR TIGHTNESS TEST OF NEARBY DIESEL TANK, AND DDC MUST PERFORM SITE SPECIFIC INVESTIGATION TO DETERMINE EXTENT OF CONTAMINATION. TRANSFERRED FROM Y.KRIMGOLD. The spill Lead_DEC Field is I. Islam with effect from 02/02/05. The site is under remediation by LiRo Engineers. -II 4/28/05- Reviewed the quarterly monitoring report(Nov./04-Jan./05). DEC approved NFA for soil and installation of skimmer pump at 3 wells in April, 2003. An absorbent sock has been installed to one well to subside the water level and make it conducive to skimmer operation. Persisting layer of motor oil at 3 wells is a concern and it's mentioned that malfunction of a nearby oil/water separator may be the cause. However EFR is being performed besides monthly checking of water levels and free product thickness and quarterly sampling of groundwater. Over all situation is

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

improving and performance monitoring to continue as usual.- II. 7/27/05- Reviewed the monitoring report (Feb.-Apr./05). Persistent GW contamination in well MW-19 across the East 173rd St. is said to be attributed to off-site source and is not migrating to this site. It is supported by the same time sampling results of the nearby on-site wells MW-13 and MW-11. Persisting layer of motor oil at 3 wells (MW-9, MW-16 & MW-17) is still a concern even though LiRo is performing EFR on them. If the nearby existing oil/water separator malfunctioning is the root cause, then it must be taken with NYCDOS management people to fix it. The above observations and remarks are sent to LiRo & NYCDDC via email. Installed the report in the eDoc folder.- II 10/04/05- Filed the report in the eDoc.- II 3/09/06: This spill transferred from I.Islam to Q.Abidi. 07/11/06: Received email from John Busse of URS inquiring as to status of LiRo's recommendation of spill closure in their Nov. '05 - Mar. '06 monitoring report. Reviewed report and sent back following email: I'm not comfortable closing this spill/site just yet. Report notes that well MW-17 had 0.38 ft. of free product in Dec. 2005, and MW-11 had total VOCs of 462 ppb when last sampled in Aug. 2005 - not that high, but a bit higher than some of sites I've been closing recently that still had residual contamination. LiRo states in report that contamination in MW-11 is not attributable to DOS site, but they present no supporting arguments and well is clearly down-gradient from USTs at site. I suggest that URS gauge all wells for product and depth to water to determine current groundwater flow, collect groundwater samples from selected wells, and perhaps perform a Sensitive Receptor Survey in support of No Further Action request. If this seems reasonable, please put together a brief plan for groundwater sampling - i.e., let me know which wells you intend to sample so I can review them and have some input. If you strongly disagree with this approach, you or Jane should give me a call to discuss. - J. Kolleeny 07/18/06: Received email from John Busse of URS, saying they intend to sample wells MW-1, MW-5, MW-6, MW-8, MW-9, MW-11, MW-16, MW-17, and MW-19, and that groundwater samples will be analyzed for VOCs only. I wrote back email saying list of wells is fine, and reminding them to gauge wells for depth to water/product, determine up-to-date groundwater flow direction and identify presence of free product. - J. Kolleeny 10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM 6/21/07 Reviewed Letter submitted by URS dated June 19, 2007. On July 26, 2007, URS gauged site wells and detected free product in well MW-17. A product recovery pump operated on the site, however, since no product was detected in over a year, URS requested to shut the system down. URS requested info from DSNY concerning the oil/water separator system, which appeared to be the source of product in MW-17. DSNY notified URS that all tank systems tested tight. To elimate the possibility that surface runoff was entering the well, URS inspected the well and verified well covers were tight. URS initiated monthy vac truck visits to remove product from MW-17 in Jan. 2007 and at the time measured 7 feet of product. On April 30, 2007 URS sampled the product from the well and from the oil/water separator and determined that it is the same product. URS requested that DSNY inspect the entire oil/water separator system as well as other potential sources such as floor drains, etc. URS will continue monthly vac truck visits. Letter is uploaded to edocs. - JAM 2/28/08 Site Update: Reviewed Product Recovery Reports dated October 18, 2007 and January 24, 2008 submitted by URS. URS has been conducting monthly vac truck visits to

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

address free product observed in MW-17. The level of free product seems to fluctuate with the groundwater levels and free product thickness has been as high as 7 feet and as little as 0.95 feet. URS has analyzed samples from product in the oil/water separator and product in well MW-17. They concluded the product is the same. Tightness tests have been conducted on all the tanks including the oil/water separator and they passed. URS believes there is an active source of the product in well MW-17 and since the tanks and associated lines tested tight, it may be from the floor drains. They have tried to contact DSNY to investigate the source of the free product but have had no response from DSNY. I spoke to Jane Staten at URS. She said there is a new contact at DSNY, Mike Murphy, and she will try and get more information on the oil/water separator. She said they are visiting the site tomorrow for the monthly vac truck visit and they will be gauging all the wells for product. I requested that groundwater samples be collected and analyzed for VOCs and SVOCs from wells MW-03, MW-05, MW-06, MW-08, MW-11, and MW-19 if free product is not present. She agreed and said that they may have to wait until the March 08 visit to sample. I expect a report in March 08. - JAM 5/30/08 Reviewed Free Product Recovery and Quarterly Groundwater Sampling Report for period Jan through Mar 2008. On March 27, 2008 the free product recovery skimmer pumps were removed from MW-03, MW-05, and MW-06. Product recovery was conducted in Feb and Mar 2008. Product was observed then removed from wells MW-01, MW-09 and MW-17 in Feb and MW-01, MW-05, MW-09 and MW-17 in March. As a result wells MW-01, MW-05 and MW-09 will be added to the monthly product recovery program. On Mar 19, 2008, URS sampled wells MW-03, MW-04, MW-07, MW-08, MW-11 and MW-19 and analyzed for VOCs and SVOCs. Well MW-05 was not sampled because free product was observed and MW-06 was not sampled because of an obstruction from the skimmer pump. No VOCs or SVOCs were detected in wells MW-04, MW-07, MW-11, and MW-19. Minor VOC exceedences were detected in MW-03 and MW-08 with total VOC concentrations of 16ppb and 88ppb, respectively. Naphthalene was also in exceedence in MW-08. URS concludes that free product levels in MW-17 are decreasing, however wells MW-01, MW-05 and MW-09 are impacted and will be added to the IRM program. Groundwater results show minor dissolved phase contamination and conclude that free product is not significantly impacting GW. Free product recovery will continue and the product source is still being investigated. The report is uploaded to edocs. - JAM 8/15/08 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period April through June 2008. Monitoring wells MW-01, MW-05, MW-06, MW-09 and MW-17 are included in the monthly IRM program due to the presence of free product. Groundwater analytical results indicate minor dissolved phase contamination in two wells. Based on fingerprint analysis, the free product in well MW-17 is closely related to hydraulic oil and product in the well and oil water/separator are the same. DASNY performed a tightness test on all tanks including the oil/water separator, and all systems tested tight. No conclusion as to how the product reached the well. URS will continue monthly IRM program and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 12/11/08 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period July through October 2008. Since the product recovery program was initiated, minor amounts of free product was observed in wells MW-01, MW-02, MW-05, MW-06, MW-09 and MW-17. Product thickness in well MW-17 has reduced and was last measured at 0.25 feet in October, 2008.

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

Groundwater analytical results indicate minor dissolved phase VOC contamination in wells MW-08 and MW-11, with Total VOC concentrations of 83ppb and 3ppb, respectively. URS will continue monthly product recovery and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 9/17/09 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period November 2008 through January 2009 dated February 19, 2009. URS detected product in each of the wells monitored except for MW-10. Product thicknesses ranged from 0.01ft to 0,04ft, which is less than 1 inch in every well with one exception: 0.11ft was recorded in Nov 2008 in well MW-2. A vacuum truck was used to evacuate 0.25 gallons of product from each well. No dissolved phase contamination was detected during this monitoring event. Report uploaded to eDocs. Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period February through April 2009 dated May 27, 2009. URS detected product in the following seven wells: MW-01, MW-02, MW-03, MW-05, MW-06, MW-09, and MW-17. Product thickness in most wells was either 0.01 ft of 0.02 ft. Well MW-17 exhibited the greatest amount of product, with 0.03 ft, 0.04 ft and 0.05 ft (all less than 1 inch) between Feb and Apr. A vacuum truck was used to evacuate 0.25 gallons of product from each well. No VOCs or SVOCs exceeded criteria in six of secen groundwater samples: the exception was benzene detected a 3ppb in well MW-11. Report uploaded to eDocs. Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period May through July 2009 dated August 21, 2009. URS detected minor amounts of product, 0.01 ft (1/10-inch) in wells MW-01, MW-03, MW-05, MW-06 and MW-09. Well MW-17 contained 0.04 ft (1/2-inch) and MW-02 contained 0.01 ft, 0.22 ft and 0.72 feet in May, June and July, respectively. The reason for the increase is unknown. The vacuum truck was unavailable for the June monitoring event. In May and July, URS removed approx 0.25 gallons of product from each well. To date 63 gallons of product have been recovered from the site. On July 30, 2009, URS collected groundwater samples and wells MW-08 and MW-11 showed minor exceedences for Benzene at 4ppb and 2 ppb, respectively. URS states, In July, there was an unexpected increase in product thickness in well MW-02. Future measurements will determine whether this represents a temporary issue or a new problem that requires special attention. URS will continue monthly product recovery and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 1/6/10 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period August through October 2009 dated November 24, 2009. URS detected product in wells MW-01, MW-02, MW-03, MW-05, MW-06 and MW-09 and MW-17. Product thickness in well MW-17 increased to 0.22 ft in October 2009. Product thickness in well MW-02 decreased from a high of 0.72ft in July 2009 to 0.06ft in October 2009. URS removed approx 0.25 gallons of product from each well. To date 67 gallons of product have been recovered from the site. On October 21, 2009, URS collected groundwater samples and the only exceedence was in well MW-11 with a Benzene concentration at 6ppb. URS will continue monthly product recovery and quarterly groundwater sampling. This report is uploaded to eDocs. - JAM 03/08/2010: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period November 2009 through January 2010 dated February 17, 2010. Reviewed the report. URS detected product in 7 wells MW-01, MW-02, MW-03, MW-05, MW-06, MW-09 and MW-17. Product thickness ranged from 0.01' to 0.46' in well MW-17. URS removed approx 0.25 gallons of product from each well. To date 71

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

gallons of product have been recovered from the site. On October 21, 2009, URS collected groundwater samples o January 25, 2010 and no exceedences were detected in any of the sampled wells (MW-04, MW-7, MW-11, MW-18 and MW-19). URS will continue monthly product recovery and quarterly groundwater sampling. This report is uploaded to eDocs. - JAM 08/31/2010: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period May through July 2010 dated August 31, 2010. Reviewed the report. Between May and July 2010, URS detected product in MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.25 feet in June and 0.42 feet in July. A significant quantity of product was also measured in MW-09 with 0.06 feet in May, 0.10 feet in June, and 0.18 feet in July. Measurements at the remaining locations were all 0.02 feet or below. URS evacuated approximately 3.5 gallons of free product from the six wells that exhibited product. To date, approximately 77 gallons of free product have been recovered from the site. On August 3, 2010, URS collected groundwater samples from monitoring wells MW-04, MW-07, MW-08, MW-10 and MW-18. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. The analytical results showed only one detection (benzene at 2.2 ppb in MW-08) above NYSGQS. This report is uploaded to eDocs. - JAM 10/25/10 In the quarterly status update meeting with DDC and URS on 10/19/10, DEC requested that wells MW-3, MW-5, and MW-6 be added to the quarterly sampling schedule. - JAM 11/05/2010: This spill case was transferred to A. Doronova. - AD 02/14/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period August through November 2010 dated February 14, 2011. Reviewed the report. Between August and November 2010, URS detected product in MW-01, MW-02, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.29 feet in August, 0.69 feet in September, 0.36 feet in October, and 0.40 feet in November. A significant quantity of product was also measured in MW-02 and MW-09 with thicknesses ranging from 0.05 to 0.24 feet. Measurements at the remaining locations were all 0.01 feet or less. Between August and November, URS evacuated approximately 4.75 gallons of free product from all wells that exhibited product, except for MW-06 (which contained only 0.01 feet). To date, approximately 81.75 gallons of free product have been recovered from the site. On November 15, 2010, URS collected groundwater samples from monitoring wells MW-03, MW-04, MW-05, MW-07, MW-08, MW-10 and MW-18. MW-06 was not sampled due to the presence of product. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. The analytical results showed TVOCs detections above New York State Groundwater Quality Standards in MW-03 (45ppb), MW-05 (6ppb) and MW-08 (68ppb). Detections above standards in MW-05 were PAHs only. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. AD 06/28/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period December 2010 through February 2011 dated June 28, 2011. 08/29/2011: Reviewed the report. It states that currently, URS personnel visit the site each month to measure groundwater levels and estimate free product thickness in up to 13 monitoring wells: MW-01 through MW-11, MW-17, and MW-18. All wells are checked for product and groundwater levels are measured at least quarterly. During this quarterly monitoring period, URS personnel visited the site on December 22, 2010, January 24, 2011, and February 24, 2011. URS

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

detected product in monitoring wells MW-01, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.35 feet in December, 0.40 feet in January and 0.45 feet in February. Measurements at the remaining locations were all 0.05 feet or less. During this monitoring period, URS evacuated approximately 2.5 gallons of free product from the four wells that exhibited product using a vacuum truck. To date, approximately 84.25 gallons of free product have been recovered from the site. The most recent sampling event was conducted on February 10, 2011. URS collected groundwater samples from monitoring wells MW-03, MW-04, MW-05, MW-07, MW-08, MW-10 and MW-18. MW-06 was not sampled due to the presence of product. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. Well MW-16 was destroyed and therefore cannot be sampled. The analytical results showed one detection above NYS GQS (1,2,4-trimethylbenzene) in MW-03. The total VOCs in well MW-03 was only 30 ppb. All compounds in all other wells sampled were below the NYSDEC GQSC. Based on data collected in February 2011, the free product plume at the site extended to three monitoring wells. Product measurements during this quarter were comparable to the previous quarter, although measurements in MW-06 were slightly higher and measurements in MW-09 and MW-17 were lower. It is significant to note that no product was detected in well MW-02 during this monitoring period, marking a potential trend of no product detected west of the oil/water separator. The data shows that no product has been detected and that no compounds were detected above the NYSDEC Groundwater Criteria for two quarters or more in the following wells: MW-04, MW-07, MW-10 and MW-18. Based on this data, URS requesting that these wells be removed from the quarterly sampling schedule with the exception of well MW-07, which is a downgradient well. These wells will be removed from the quarterly sampling schedule upon approval by the NYSDEC. Other than continued product removal, no additional remediation action is warranted at the site at this time. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. AD 10/11/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period March 2011 through May 2011 dated October 11, 2011. DL the report to eDocs. Will review. AD 11/30/2011: Reviewed the report. It states that the most recent sampling event was conducted on May 31, 2011. Monitoring wells included in the quarterly groundwater sampling are: MW-03, MW-04, MW-05, MW-06, MW-07, MW-08, MW-10 and MW-18. MW-17 is not part of the sampling program because it consistently contains product. Samples were not collected from MW-06 due to the presence of product and from well MW-05 because a heavy sheen was observed in this well. The analytical results showed that VOCs from MW-04, MW-07, MW-10, and MW-18 were all below the standards. The highest total VOCs from these wells was negligible (0.19 parts per billion (ppb)). Monitoring wells MW-03 and MW-08 each had only one VOC slightly above their respective criterion. The total VOC concentrations in these two wells were 21 and 13 ppb, respectively. SVOCs in all monitoring wells were below the criteria, with only a few trace detections of naphthalene. In summary, dissolved phase VOCs in groundwater are very low and do not warrant remediation. Based on data collected through May 2011, the free product plume appears to be decreasing since no product has been detected at MW-01 or MW-02 for several months; the plume recently has been limited to three monitoring wells: MW-06, MW-09, and MW-17. Product measurements during this quarter were comparable to the

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

previous quarter. No product has been detected in well MW-02, indicating a potential trend of no product detected west of the oil/water separator. Other than continued product removal, no additional remediation action is warranted at the site at this time. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. AD 01/03/2012: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period June 2011 through August 2011 dated January 3, 2012. DL the report to eDocs. Will review. AD 02/23/2012: Reviewed the report. It states that monitoring wells currently checked on a monthly basis include 7 wells: MW-01, MW-02, MW-03, MW-05, MW-06, MW-09, and MW-17. 5 wells: MW-04, MW-07, MW-08, MW-10, and MW-18 typically do not contain product and are only monitored on a quarterly basis. During this quarterly monitoring period, URS visited the site 4 times: on June 21, July 22, August 10 and August 25, 2011. During this quarter, URS detected measureable product in 6 monitoring wells MW-01, MW-02, MW- 05, MW-06, MW-09, and MW-17. Product was found at more locations during this quarter than previous quarters (i.e., MW-01, MW-02, and MW-05); however, detections at these locations were all less than 0.02 feet. The greatest amount of product was detected in well MW-17 with 0.34 feet in June, 0.13 feet in July, and 0.17 feet in August. Product measurements at the other five wells were all 0.07 feet or less. During this monitoring period, URS evacuated approximately 4 gallons of free product, using a vacuum truck, from the six wells that exhibited product. To date, approximately 90.5 gallons of free product have been recovered from the site. URS states that the product detections at MW-01, MW-02, and MW-05 during this quarter most likely are only temporary fluctuations as the plume continues to decrease in extent and thickness. The most recent sampling event was conducted on August 1, 2011. All wells in the program were sampled except for wells MW-05 and MW-06; these wells could not be sampled due to the presence of product in the wells. Depth to groundwater at the site ranges from less than 1' bgs to approximately 6' bgs. The estimated groundwater flow direction ranges from east to south-southeast. The analytical results showed that no VOCs or SVOCs were detected in well MW-07, and only one VOC was detected above criteria in wells MW-03 and MW-08. The TVOCs in well MW-03 was 19ppb and in well MW-08 the TVOCs were 35 ppb. SVOCs in all monitoring wells were below the criteria, with only a few trace detections of naphthalene. In summary, dissolved phase VOCs in groundwater are very low and do not warrant remediation. URS is requesting that the SVOCs be removed from the groundwater analytical program for this site. Based on data collected through August 2011, URS concludes that the free product plume appears to be decreasing in size and thickness, although recently there have been some trace product detections at two outlying wells. Groundwater contaminant concentrations remain low in all monitoring wells sampled. Based on a lack of detections in the analytical samples, URS requests that the SVOCs be removed from the analytical program. Other than continued product removal, no additional remediation action is warranted at this time. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. To issue an approval. AD 03/20/2012: Sent an e-mail to A. Samani approving removal of SVOCs from analytical program. AD 05/16/2012: Received Quarterly Groundwater Sampling Reports for 4th quarter 2011 and 1st quarter 2012. DL the reports to eDocs. Will review. AD 06/08/2012: Reviewed the 4th quarter 2011 and 1st quarter 2012 report. It states that monitoring wells currently

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

included in the quarterly groundwater sampling are: MW-03, MW-05, MW-06, MW-07, and MW-08. In the period from September 2011 through January 2012, URS personnel visited the site for either product collection or groundwater sampling on five occasions. Over these events, product was detected in a total of six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. Except for MW-17, the detected product thickness in the monitoring wells was 0.05 feet or less for all monitoring events in this period. The detected product in MW-17 ranged in thickness from 0.02 feet to 0.57 feet. Overall, product thickness measurements were similar to those from previous site visits. According to the historic data, product thickness have fluctuated over the past three years, especially in well MW-17. As for wells MW-02, MW-06 and MW-09, product thickness levels have historically fluctuated but remain low. During the period from September 2011 through January 2012, URS used a vacuum truck to collect an estimated 4.5 gallons of free product from the six monitoring wells that exhibited product. To date, an estimated 94.5 gallons of free product have been recovered from the site. The product detections measured at MW-01 and MW-02 during the last several sampling events are most likely only temporary fluctuations as the plume continues to decrease in extent and thickness. If significant product is observed or recovered in the quarterly events, URS will increase the frequency of the product collection events to monthly. All wells in the sampling program were sampled during the fourth quarter 2011 on October 31, 2011 and first quarter 2012 on January 30, 2012 sampling events except for wells MW-05 and MW-06, due to the presence of product. Depth to groundwater at the site ranges from less than 1 foot bgs to approximately 6 feet bgs. Previous investigations at the site indicate a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to south-southeast. The analytical results from the latest sampling event on January 30, 2012 showed that no VOCs or SVOCs were detected in wells MW-07 or MW-08, and only one VOC (1,2,4-trimethylbenzene) was detected above criteria in well MW-03. The total VOCs in well MW-03 was only 14 ppb. Based on data collected through February 2012, URS concludes that the free product plume appears to be decreasing in size and thickness. Due to the small quantities of product being recovered, URS has reduced the frequency of product collection to quarterly. If significant product is observed or recovered in the quarterly events, URS will increase the frequency of the events to monthly. Groundwater contaminant concentrations remain low in all monitoring wells sampled. URS will continue the quarterly groundwater sampling program. Other than continued product removal, no additional remediation action is warranted at this time. AD 10/02/2012: Received Quarterly Groundwater Sampling Reports for 2nd quarter 2012. DL the report to eDocs. Will review. AD 11/09/2012: Reviewed the 2nd ans 3rd quarters 2012 report. It states that in the period from February through July 2012, URS personnel visited the site for either product collection or groundwater sampling on four occasions. Over these events, product was detected in a total of six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The maximum product thickness detected during this period at monitoring well MW-06 was 0.59 feet and at well MW-17 it was 0.14 feet. The detected product thickness in the remaining monitoring wells was 0.04 feet or less for all monitoring events in this period. Overall, product thickness measurements were similar to those from previous site visits. During

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

the period from February through July 2012, URS used a vacuum truck to collect an estimated 2.5 gallons of free product from the five monitoring wells that exhibited product. To date, an estimated 97 gallons of free product have been recovered from the site. URS states that the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events to monthly. Only monitoring wells MW-03, MW-07, and MW-08 were sampled during the second quarter sampling event on April 16, 2012; wells MW-05 and MW-06 were not sampled due to the presence of product. The same three wells were also sampled for the third quarter sampling event on July 31, 2012 since wells MW-05 and MW-06 again contained product for the third quarter sampling event. Depth to groundwater at the site ranges from less than 1' bgs to approximately 6' bgs. The estimated groundwater flow direction ranges from east to southeast. The analytical results from the latest sampling event on July 31, 2012 showed no detection of any VOCs in any of the three monitoring wells sampled. Results from the previous sampling event in April were similar with only 5.6 ppb TVOCs detected in MW-03 and no VOCs detected in the other two wells. URS concludes that dissolved phase contamination in groundwater is very low and does not warrant remediation. Based on data collected through July 2012, URS states that the free product plume appears to be decreasing in size and thickness. Due to the small quantities of product being recovered, URS conducts product collection on a quarterly basis. If significant product is observed or recovered in future quarterly events, URS will increase the frequency of the events to monthly. Groundwater contaminant concentrations remain low or non-existent in all monitoring wells sampled. URS will continue the quarterly groundwater sampling program. Other than continued product removal, no additional remediation action is warranted at this time. AD 04/05/2013: Received 4th Quarter 2012 and 1st Quarter 2013 Monitoring Report for the site. DL to eDocs. Will review. AD 05/23/2013: Reviewed the report. It states that in the period from August 2012 through January 2013, URS personnel visited the site for either product collection or groundwater sampling on four occasions. Over these four events, product was detected in six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The maximum product thickness detected during this period was 0.71 feet at monitoring well MW-09. The product thickness measured in the other wells was much lower, ranging from 0.01 feet to 0.2 feet. The affected wells and product thickness measurements over this period were similar to those from previous site visits with the exception of the 0.71 feet detected at well MW-09 in January 2013. During the six month period from August 2012 through January 2013, URS collected an estimated total of 3.75 gallons of product using a vacuum truck. To date, an estimated 100.75 gallons of free product have been recovered from the site. The report states that the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events to monthly. Groundwater sampling: Monitoring wells MW-03, MW-06, MW-07, and MW-08 were all sampled during the both the fourth quarter

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

sampling event on October 10, 2012, and the first quarter 2013 sampling event on January 7, 2013. Monitoring well MW-05 was not sampled during either event due to the presence of product. The analytical results from the latest sampling event on January 7, 2013 showed no exceedances of the NYSDEC Groundwater quality criteria in the samples from wells MW-03, MW-07, and MW-08. The highest TVOCs was in well MW-06 at 7,877 ppb which is a huge increase from previous October 2012 sampling. GW data (ppb): October 2012 January 2013 1. MW-3 ND ND 2. MW-6 64 7877 3. MW-7 ND ND 4. MW-8 2.7 ND Conclusions: URS concludes that based on data collected through January 2013, the free product plume continues to decrease in size and thickness, although there are fluctuations and occasional events such as in January 2013 where the product thickness increases. Due to the small quantities of product being recovered, URS will continue to collect product on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained, URS will increase the frequency of the collection events to monthly. URS will continue the quarterly groundwater sampling and monitoring program. Other than continued product removal, no additional remediation action is warranted at this time. If future sampling events verify that the elevated total VOCs in well MW-06 as indicated by the January 2013 sampling event are valid, URS will evaluate implementation of further remedial actions. AD 10/01/2013: Received 2nd Quarter 2013 Monitoring Report for the site. DL to eDocs. Will review. AD 11/12/2013: Reviewed the report. It states that during the reported period from February through August 2013, URS personnel visited the site for either product collection or groundwater sampling in April, July, and August of 2013. Product recovery: During these three events, product was detected in five wells: MW-01, MW-02, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.43 feet at monitoring well MW-09. The maximum product thickness measured in the other four wells ranged from 0.03 feet to 0.34 feet. Product thickness measurements have fluctuated over the past several years, especially in well MW-17. As for wells MW-02, MW-06 and MW-09, product thickness levels have historically fluctuated but remain low, with the exception of the unusually high product thickness measurement in MW-09 during the January 2013 event; the product level in this well has decreased considerably in the last two events. Product has not been detected at well MW-06 since September 2012. During the six month period from February through August 2013, URS collected an estimated total of 4 gallons of product using a vacuum truck. To date, an estimated 104.75 gallons of free product have been recovered from the site. Both the quantity of the product recovered and the number of wells affected have decreased since 2009. As noted above, the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events. Groundwater sampling: Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water occasionally is as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions comprise a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

groundwater flow direction ranges from east to southeast. Monitoring wells currently included in the quarterly groundwater sampling are: MW-03, MW-05, MW-06, MW-07, and MW-08. For the second quarter monitoring event on April 16, 2013, URS sampled all wells in the program except for MW-05, which was found to contain product. For the third quarter event on August 20, 2013, URS sampled all wells except for MW-05 because it contained product and MW-03 because the area was submerged with surface water. The analytical results from the second and third quarter sampling events showed no detections of any VOCs or naphthalene in wells MW-07 and MW-08. Well MW-03 was only sampled in the second quarter and had a total VOC concentration of 40 parts per billion (ppb) with only methyl tert-butyl ether (MTBE) detected above its criterion. During the first quarter 2013 sampling event, the total VOC concentration in the sample collected from monitoring well MW-06 was 7,877 ppb. According to URS, this elevated concentration was unexpected considering that the highest concentration of total VOCs detected in this well previously was 197 ppb in April 1999. Based on the results from the second and third quarter 2013, it appears that the elevated result from the first quarter 2013 sampling event was an anomaly. URS will continue to monitor the groundwater conditions at this well and evaluate any additional fluctuations in VOC concentrations that may occur. Dissolved-phase groundwater impacts at this site have historically been too low to warrant remediation, but if elevated groundwater concentrations persist in well MW-06 or are found at other monitoring wells, remediation will be evaluated and implemented. GW data (ppb): January 2013 April 2013 August 2013 1. MW-3 ND 40 NS 2. MW-6 7877 71 29 3. MW-7 ND ND ND 4. MW-8 ND ND ND Based on data collected through August 2013, the URS states that the free product plume continues to decrease in size and thickness, although there are fluctuations and occasional events where the product thickness increases. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: " URS will continue the quarterly groundwater monitoring program. " URS will continue to collect product on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. " No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of further remedial actions if warranted. There are no proposals requiring DEC approvals. AD 05/05/2014: Received 4th Quarter 2013 and 1st Quarter 2014 Monitoring Report for the site. Will review. AD 06/18/2014: Reviewed the report. It states that for the fourth quarter 2013 monitoring event on November 6, URS only sampled wells MW-06, MW-07, and MW-08 since the remaining wells contained product at the time of the sampling. For the first quarter 2014 sampling event on March 26, 2014, all wells in the program were sampled except for well MW-03 which was found to be damaged and could not be opened. URS additionally collected samples from wells MW-02 and MW-09 during this event to verify that there was still no dissolved phase contamination at these locations. These wells were last sampled in 2006 and 2005, respectively, and typically contained product. GW data (ppb): March 2014 November 2013 1. MW-2 ND NS 2. MW-5 3.6 NS 3. MW-6 28 24 4. MW-7 ND ND 8. MW-8 6 12 9. MW-9 ND NS The analytical results from the most recent sampling event in

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

March 2014 showed no detections of any VOCs or naphthalene in wells MW-02, MW-07, and MW-09, and only 4 parts per billion (ppb) total VOCs in well MW-05. Wells MW-06 and MW-08 both exceeded only the NYSDEC Groundwater Quality Criteria for benzene. The total VOC concentrations in these two wells were very low at only 28 ppb and 6 ppb, respectively. The highest total VOC concentration of any monitoring well over the past year was 71 ppb at well MW-06. Dissolved-phase groundwater impacts at this site have historically been too low to warrant remediation. However, there are still a few wells that have not been sampled recently due to product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through March 2014, URS states that free product plume at this site continues to decrease in size and thickness. Over the last quarter, product was detected in only two wells, and has decreased to the point where product can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. DSNY has indicated to URS that the oil/water separator was being replaced in 2014. The separator was considered a potential source of free product and replacement may result in improvements in free product detections in the future. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program. - URS will monitor product at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of further remedial actions, if warranted. There sre no proposals requiring DEC approval at this time. AD 09/15/2014: Received 2nd Quarter 2014 Monitoring Report for the site. Will review. AD 10/21/2014: Reviewed the report. It states that monitoring wells checked during the second quarter product recovery event on April 21, 2014 were: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. Other wells at the site usually do not contain product and are typically only monitored during the quarterly groundwater sampling event which is conducted separately from the product recovery events. During the second quarter sampling event on June 13, 2014, wells MW-01, MW-02, MW-05 through MW-09, and MW?17 were monitored for product. During the second quarter 2014, product or a product sheen was detected in 4 wells: MW-01, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.02 feet at monitoring well MW-09. Product thickness have fluctuated over the past several years, especially in well MW-17. However, all of the wells have been on a downward trend for the past year, and have been significantly lower in 2014. To the date, an estimated 119.75 gallons of free product have been recovered from the site. Both the quantity of product recovered and the number of wells affected have decreased since 2009. The product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. GW sampling: Depth

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water occasionally is as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-03, MW-05, MW-06, MW-07, and MW-08. For the second quarter 2014 monitoring event on June 13, 2014, URS sampled 4 wells: MW-02, MW-06, MW-07, and MW-08. Well MW-03 was not sampled because it is damaged and could not be opened; well MW-05 was not sampled because there was a heavy sheen of product. Well MW-02 is an additional well that was sampled during this event to verify that there was still no dissolved phase contamination at this location. The analytical results from the most recent sampling event in June 2014 showed slight exceedances only for benzene in wells MW-06 and MW-08. The total VOCs in these two wells were very low at only 2.5 ppb and 3.2 ppb, respectively. There were no exceedances of the NYSDEC Groundwater Quality Criteria in the remaining wells MW-02 and MW-07. Conclusions: Based on data collected through June 2014, the free product plume at this site continues to decrease in size and thickness. Over the last quarter, minor quantities of product were detected in only four wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved?phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. DSNY replaced the piping between the oil/water separator and the oil/water separator overflow UST in 2014; based on recent monitoring data, it appears that the new piping has addressed the source of free product at the site. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. - URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. - No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of additional remedial actions, if warranted. There are no proposals which require DEC's approval at this time. AD 03/03/2015: Received a Groundwater MOnitoring Report for the 3rd and 4th quarters of 2014. Will review. AD 04/06/2015: Reviewed the report. It states that Free product recovery: During the third and fourth quarter 2015, product or a product sheen was detected in monitoring wells MW-01, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.06 feet at monitoring wells MW-09 and MW-17. Product absorbent socks have been utilized for product collection from wells MW-09 and MW-17 since September 2014. Because there are socks installed in the wells, no product is detected in the well with the oil/water interface probe. However, it is assumed that product is still present and being collected by the socks. During the latest monitoring event

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

in November, the socks were reported as 5% and 50% saturated in wells MW-09 and MW-17, respectively. A total of four product collection and groundwater sampling events were conducted during the third and fourth quarters of 2014. A total of eight monitoring wells were monitored for product during these events. Product thickness measurements have fluctuated over the past several years, especially in well MW-17. However, according to URS, all of the wells have been on a downward trend for the past year, and have been significantly lower in 2014. To date, an estimated 120.5 gallons of free product have been recovered from the site. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. Groundwater Sampling Results: URS collects GW samples on a quarterly basis to monitor the dissolved phase of groundwater plume. Monitoring wells currently included in the quarterly GW sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the third quarter samples on September 16, 2014 and the fourth quarter on November 10, 2014. Well MW-03 was not sampled because it was damaged and cannot be opened; well MW-05 was not sampled because there was a heavy sheen of product during both events. Well MW-01 was sampled during the fourth quarter only. This well has not been sampled since 2005 since it typically contains product. The analytical results from the most recent sampling event in November 2014 showed that the highest TVOCs was in MW-01 with 430 ppb of total VOCs, all of which was toluene. Well MW-06 contained only a slight exceedance for benzene. There were no exceedances of the NYSDEC Groundwater Quality Criteria in the remaining wells MW-02, MW-07, and MW-08. The results from the third quarter sampling were similar to the fourth quarter. Other than the recent sample at MW-01, the highest total VOC concentration of any monitoring well over the past year was 28 ppb at well MW-06. Dissolved?phase groundwater impacts at this site have historically been low and do not warrant remediation. However, if the results from MW-01 are sustained in future monitoring events, remedial actions will be implemented to address the dissolved-phase contamination in this area. There are also wells such as MW?17 which have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions Based on data collected through November 2014, the free product plume at this site continues to decrease in size and thickness. Over the last two quarters, minor quantities of product were detected in only four wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the fourth quarter sample from MW-01. Actions and Proposals: Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. - URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. - URS will

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

monitor MW-01 for at least one additional quarter to determine whether the total VOCs at this well remains elevated and warrants further remedial actions. No additional remedial actions are warranted at this time for the remaining wells at the site. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of additional remedial actions, if warranted. No actions requiring DEC approval were proposed at this time. AD 08/14/2015: Received the following e-mail from URS: Document report.sp9810571.2015.08.14.bronx_dist_3a. 1st_and_2nd_quarter_2015_monitoring_report.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the First and Second Quarter 2015 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 09/29/2015: Reviewed the report. It states that URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the first quarter samples on February 3, 2015; wells MW-01, MW-02, and MW-05 were not sampled because they contained product. Well MW-03 is damaged and could not be opened. The second quarter samples were collected on June 3, 2015. Well MW-01 was not sampled during the second quarter event because it contained product. Wells MW-03, MW-05, and MW-06 were not sampled because they were damaged and could not be opened. Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water is occasionally as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. Analytical data: The analytical results from the most recent sampling event in June 2015 showed that no VOCs or naphthalene were detected in wells MW-02, MW-07, or MW-08. Results from the first quarter event were similar; the highest total VOC concentration was only 7.7 parts per billion (ppb) in well MW-02. URS stated that dissolved-phase groundwater impacts at this site have historically been low and do not warrant remediation. However, a sample from MW-01 in November 2014 showed a total VOC concentration of 430 ppb. Well MW-01 has not been sampled in the subsequent sampling events due to the presence of product. If the results from MW-01 are sustained in future monitoring events, remedial actions will be implemented to address the dissolved-phase contamination in this area. There are also wells such as MW-17 which have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through June 2015, the free product plume at this site continues to decrease in size and thickness. Over the last two quarters, minor quantities of product were detected in only five wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the fourth quarter 2014 sample from MW-01. Additional monitoring will be required to determine whether dissolved phase

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

impacts are present at this well and other wells that have not been sampled due to the continued presence of product. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: " URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. " URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. " URS will add monitoring well MW-01 to the list of wells included in the quarterly groundwater sampling program. " URS will repair monitoring wells MW-03, MW-05, and MW-06. Proposals/Approval Required: " None AD 12/14/2015: Received the following e-mail from URS: Document report.sp9810571.20151214.bronx_dist_3a. 3rd_quarter_2015_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the Third Quarter 2015 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. URS Will review. AD 01/12/2016: Reviewed the report. It states that URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the third quarter of 2015 (through September). Free product: During the third quarter 2015, product or a product sheen was not detected in any monitoring wells. Product absorbent socks have been utilized for product collection from wells MW-09 and MW-17 since September 2014 and in MW-01 since June 2015. Because there are socks installed in the wells, no product is detected in the well with the oil/water interface probe. However, it is assumed that product is still present and being collected by the socks. The absorbent socks in wells MW-01 and MW-09 were each replaced once during the third quarter 2015.To date, an estimated 120.5 gallons of free product have been recovered from the site. The product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. Remaining product at the site is likely minor remnants that will continue to slowly decrease over time. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. GW sampling: Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the third quarter samples on September 23, 2015. Well MW-01 was not sampled during the third quarter event because it contained a petroleum absorbent sock. Wells MW-03, MW-05, and MW-06 were not sampled because they were located within remediation vaults and could not be opened. URS repaired these wells in late October. Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water is occasionally as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. GW data: Dissolved-phase groundwater impacts at this site have historically been low and do not warrant remediation. However, a sample from MW-01 in November 2014 showed a total VOC concentration of 430 parts per billion (ppb). Well MW-01 has not been sampled in the subsequent sampling events due to the presence of product. If the results from MW-01 are sustained in future monitoring events, remedial actions will be implemented to address the dissolved-phase contamination in this area. In addition, some wells such as MW-17 have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through September 2015, URS states that: the free product plume at this site continues to decrease in size and thickness. Product has decreased to the point where it can be collected with absorbent socks instead of a vacuum truck. Socks are installed in 3 wells and no product has been detected since June 2015. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the 4th quarter 2014 sample from MW-01. Additional will be required to determine whether dissolved-phase impacts are present at this well and other wells that have not been sampled due to the continued presence of product. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will conduct monthly product recovery events to inspect or replace petroleum absorbent socks. If product levels increase, URS will implement alternative technologies, such as manual pumping using a peristaltic pump. Proposals/Approval Required: - None AD 03/18/2016: Received the following e-mail from K. Shanahan of URS: Hi Ainura, Attached is a table with the most recent information regarding free product and VOC/SVOC detections at the Bronx District 3A site. Also attached are two figures: Figure 3 illustrates the site plan with monitoring well locations on-site Figure 4 shows groundwater monitoring data over the past four quarters and four additional wells east and southeast of the site. Wells MW-13, MW14, MW15, MW16, MW-19 and MW-20 are either destroyed or located in a median covered with soil and could not be located. In February 2016, free product was not detected in wells MW-01 through MW-09 and MW-17. In addition, no VOCs were detected in samples collected from wells MW-02, MW-03, MW-04, MW-05, MW-06, MW-07, MW-09 and MW-17; the samples from wells MW-01 and MW-08 had VOC detections at 23 and 3 ug/L, respectively. In accordance with our telephone conversations today, we would like to sample wells MW-10, MW-11, MW-12 and MW-18 in an effort to gather sufficient data to justify a spill closure request. This of course assumes these four wells remain functional. Please send me your response to this plan at your earliest convenience. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit, Metro New York Region D +1-716-923-1215 M +1-716-480-7352 kevin.shanahan@aecom.com Will review. AD 03/23/2016:

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

Looked at the submitted documents. According to sampling data, all sampled wells were free of LNAPL and had ND VOCs. Six wells out of twenty were destroyed or could not be located. Latest data from these wells was ND for VOCs. The site conditions look favorable for spill closure. AD 03/24/2016: Sent an e-mail to K. Shanahan telling to proceed with the plan. AD 05/24/2016: Received the following e-mail from URS: Document report.sp9810571.20160524.bronx_dist_3a. 1st_and_2nd_quarter_2016_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the First and Second Quarter of 2016 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 06/21/2016: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the first and second quarters of 2016 (through May). Product recovery: Product recovery events during the first and second quarters of 2016 were conducted on January 19, February 19, March 30, April 5, and May 4. The socks were removed from all affected wells in January 2016 to determine whether product would continue to accumulate. During the following monitoring event in February, no product was detected in any of the ten monitoring wells that were checked, including the four wells (MW-01, MW-03, MW-09, and MW-17) that had contained product in the previous year. Based on these findings, and based on limited dissolved-phase contamination at the site as discussed below, URS contacted the NYSDEC in March 2016 to discuss additional monitoring and sampling data requirements prior to considering closure of this spill number. NYSDEC and URS agreed that a well inventory should be conducted. On March 30, 2016, URS completed the well inventory and checked water/product levels at a total of 15 monitoring wells, including six locations that had not been monitored for up to 10 years. During this event, product was measured in well MW-17 at a thickness of 0.01 feet so petroleum absorbent socks were reinstalled in this well. Product was also measured in wells MW-12 and MW-16 at a thickness of 0.31 feet and 0.42 feet, respectively, so petroleum absorbent socks were also installed in these wells. This was the first monitoring at well MW-12 since February 2008 and at well MW-16 since July 2006. During the next monitoring event on April 5, 2016, the petroleum absorbent socks in wells MW-12, MW-16, and MW-17 were observed to be approximately 25% saturated. Based on the low accumulation, the petroleum absorbent socks were again removed from all wells during this event to determine whether product would continue to accumulate. GW monitoring: The most recent monitoring event was conducted on May 4, 2016. During this event, product was again measured in wells MW-01 (0.02 feet), MW-12 (0.05 feet), and MW-17 (0.01 feet); petroleum absorbent socks were installed in these wells. Well MW-16 which recently contained product could not be accessed during this event because it was blocked by a disabled street sweeper. GW sampling: The site is on quarterly sampling program. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected samples from all wells in the program during the first quarter sampling event on February 19, 2016. Samples were also collected from wells MW-04, MW-09, and MW-17 during this event. Conclusions: Based on data collected through May 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. URS removed the petroleum absorbent socks from all wells most recently in April 2016 to determine whether product continues to collect in the wells. During the following event in May, small amounts of product were found at wells MW-01, MW-12, and MW-17, so the socks were reinstalled. Fifteen of the 20 monitoring wells installed at this site were analyzed during the first and second quarter 2016. Only well MW-19 has not been sampled recently. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all site wells in the program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - If product is found at any wells during the next monitoring event(s), URS will reinstall petroleum absorbent socks at those locations. URS will conduct monthly product recovery events to inspect or replace petroleum absorbent socks as required. - As proposed below, URS will include all known monitoring wells on the list of wells to monitor and sample quarterly. Proposals/Approval Required: - In an e-mail to the NYSDEC dated March 18, 2016, URS proposed a list of wells to be sampled in advance of requesting spill closure. Table 3 presents an updated list of proposed wells and the most recent information regarding free product and dissolved phase contamination for each well. The wells that have been sampled as part of the routine monitoring are indicated with green shading. The additional wells that URS proposes to sample in advance of submitting a request for spill closure are indicated in blue shading. - URS does not intend to replace monitoring wells MW-13, MW-14, MW-15, or MW-20. These wells are all located downgradient of the site and historically had little or no dissolved phase or free product impacts. The available wells provide sufficient coverage to indicate the presence of product and dissolved phase impacts at the site. Response to this proposal was sent to URS on March 24th, 2016. AD 10/31/2016: Received a notification to upload 3rd quarter 2016 report. AD 11/18/2016: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the third quarter of 2016 (through August). Free product recovery: Product recovery events during the third quarter of 2016 were conducted on June 2, June 27, and August 5. On June 2, 2016 the petroleum absorbent socks in wells MW-01, MW-12, and MW-17 were removed to observe whether product would continue to accumulate. The sock in well MW-16 was replaced since 1.07 feet of product were measured in this well. During the next event on June 27, 2016, product was measured at a thickness of 0.001 feet in MW-01, 0.03 feet in MW-12, and 0.01 feet in MW-17 (MW-16 was not accessible). Petroleum absorbent socks were installed in wells MW-12 and MW-17 during that event. During the most recent event on August 5, 2016, product was measured with a thickness of 0.07 feet in well MW-01 and a petroleum absorbent sock was installed. The product observed at this well may be due to surface infiltration as a result of the poor condition of the well. No product was measured in wells MW-12 and MW-17, and the petroleum absorbent socks were removed. The sock in well MW-16 was

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

observed to be 100% saturated and was replaced; 0.06 feet of product was measured in this well. As of August 2016, socks are installed only in wells MW-01 and MW-16. According to URS, product thickness measurements have fluctuated over the past several years, especially in well MW-17. However, product thickness measurements in all wells except MW-16 have been consistently lower since the first quarter 2014. Any remaining product at the site is likely minor remnants that will continue to slowly decrease over time. URS will continue to monitor for product on a monthly basis, periodically removing the absorbent socks to check for the presence of product. GW sampling: URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected samples from all wells in the program during the third quarter sampling event on June 27, 2016 except for well MW-01 because it contained product. A sample was also collected from well MW-09 during this event. The analytical results from the third quarter sampling event in June 2016 showed that of the wells sampled, the only well with VOCs detected was MW-06 with total a VOC concentration of only 6 ppb. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through August 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. Fifteen of the 20 monitoring wells installed at this site were analyzed during the first through third quarters of 2016. Only well MW-19 has not been sampled recently. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Actions and Proposals Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. URS will install new steel protective casings at monitoring wells MW?01 and MW?02 to prevent surface infiltration. Proposals/Approval Required: None. AD 12/29/2016: Received the following e-mail from URS: The document Bronx District 3A - 4Q 2016 Report has been posted to the NYCDDC SharePoint site. Please click here to access the site. https://nycddc.aecomonline.net/SitePages/Home.aspx Please click here to open the file. https://nycddc.aecomonline.net/All_Reports/Bronx%20District%203A/report.sp9810571.2016-12-29.Bronx_Dist_3A.4th_Quarter_2016_Monitoring_Rpt.pdf Will review. AD 01/27/2017: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the fourth quarter of 2016 (through September). Product recovery: The most recent product recovery event was conducted on September 27, 2016.

BRONX EAST 03A DOS -DDC (Continued) **S104952537**

During this event, petroleum absorbent socks were installed in wells MW?12 and MW?17 due to the presence of product in these wells at thicknesses of 0.09 feet and 0.02 feet, respectively. The petroleum absorbent socks in wells MW?01 and MW?16 were observed to be 100% saturated with product and replaced during this event. As of September 2016, socks are installed only in wells MW?01, MW?12, MW?16, and MW?17. GW sampling: URS collected samples from all wells in the program during the fourth quarter sampling event on September 27, 2016 except for well MW?01 because it contained product. A sample was also collected from well MW?09 during this event. Depth to groundwater at the site typically ranges from 1' bgs to approximately 6' bgs, although is occasionally as deep as 8 feet bgs at some locations. The depth to groundwater at each location was relatively consistent over the past year. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. The analytical results from the sampling event in September 2016 showed that of the wells sampled, the only well with VOCs detected was MW-03 with total a VOCs of only 1 ppb. There were no exceedances of NYSDEC groundwater quality criteria. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through September 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. Sixteen of the 20 monitoring wells installed at this site were analyzed at least once during the first through fourth quarters of 2016. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. - URS will install new steel protective casings at monitoring wells MW-01 and MW-02 to prevent surface infiltration. Proposals/Approval Required: None. AD"

Remarks: "IT IS SUSPECTED THAT AN UNDERGROUND STORAGE TANK CAUSED THE CONTAMINATION. UNKNOWN AMOUNT OF SOIL CONTAMINATED. IT IS UNDER INVESTIGATION AT THIS TIME."

DEC Memo:	"08/24/06-Vought-Off hours spill responder. Vought repsonded to spill on 8/23/06 at 21:00 and fire still in progress so site inspection not possible. Vought inspected Bronx River (separated from Apex Sales by train tracks) and no impact to Bronx River other than sheen. Sheen may also be biological but unable to tell due to lack of light. No free product or impacted wildlife noted. As per FDNY Hazamat three tanks were onsite: two (275-gallon) fuel oil and one (275-gallon) waste oil and currently tanks were not comprimised. Buildings adjacent to site were evacuated however no toxic fumes noted (other than burning cars and debris). Contact information for owner is: Apex Sales Bill Maio 718-328-7000 cell: 914-760-3831. Fire may have been started on adjacent train tracks. Vought received call from FDNY Chief Weinlein (718-999-7900) on 8/23 at 21:16pm and access to site still not possible. Vought told him that site inspection would be performed on 8/24/06 and he would be called with results. Vought called Weinlein and left message informing him that site inspection was performed and DEC's only requirement was recovery of small puddle of transmission oil (approximately 10' in diameter) in rear of property. Vought conveyed requirement to Bill Maio (owner) and owner will submit invoice and documents of cleanup (possible disposal manifest). Vought also met with Resa Dimino (Bronx River Alliance 718-430-4648) and walked River and site with her. She agreed on no spill to Bronx River and requested no further action from DEC. Vought received call from USCG (718-354-4121) and returned call and left message with DEC requirement. Vought will followup with with cleanup of puddle of transmission oil on 8/25/06. 08/29/06-Vought-received letter from Apex Sales Towing & Leasing dated 8/25/06. We have rectified all hazards to the yard at to your specifications. Enclosed please find receipt for the materials purchased to facilitate the removal of these hazards . Receipt from S&S Adsorbents and EnviroWaste Oil Recovery also included for druming and disposal of used adsorbent materials. Spill closed by Vought. 12/28/15-Vought-Received email from DEC Erin Shirkey that site is part of the Bronx River Greenway project and she was inquiring about spill status. Vought sent her copy of these spill notes and note that spill had been closed and that if she needed further assistance to let Vought know. Vought sent email that Erin, My apologies for my delay in response. The above spill was closed on August 29, 2006. I have attached the Spill Report above that has more information on the

APEX SALES, TOWING & LEASING, INC. (Continued) **S108130286**

response and cleanup. I also ran the address under the NYCDOB database for alternate addresses, found that there were no others, and then searched our Spills database and found no other open or closed spills associated with the site. If you need anything else, please don t hesitate to ask. DEC Shirkey replied with thanks."

Remarks: "Caller reports a fire at a salvage yard. Fire caused the spill of the materials. No cleanup company has been contacted. FDNY is on the scene. 2nd call at same time from FF Morris Hazmat 1 FDNY at 914.552.2516 requests on call rep to call. Petty Officer Sierra of US Coast Guard req call back from reg 2 DEC Rep in ref to impact of Bronx River @ 718-354-4121 "

DEC Memo: "School is upgrading the elevator. Contractor pulled the piston and discovered some hydraulic oil in the 24ft piston hole in bedrock. Hole was bailed out and now they are planning what additional work is needed. Bore hole was pumped of water and oil. Recharge rate was observed to be very little over the course of a few days. Bore hole pumped again though minimal water and no product. Bore will be overdrilled to accomodate larger piston for larger elevator. Spill can be closed after submission of work to date, disposal for

NYC BD OF ED - PUBLIC SCHOOL 84 BRONX (Continued) **1004759428**

additional cuttings. 9/8/2011- AKRF was on site to conduct screening of the soil during the over-drilling of the piston hole. No staining or odors were noted during the drilling activities. All soil was containerized into 55-gallon drums, analyzed for waste characterization, and shipped off-site for disposal. Based on nature of spill and work to date, this spill is closed."

Remarks: "elevator piston pulled out of ground - found leaking - cleanup in progress"

Spiller Address: Not reported
Spiller City,St,Zip: ZZ
Spiller Company: 001
Contact Name: PAUL CRYSTAL
Contact Phone: (718) 991-1621
DEC Memo: "04/01/08-Hiralkumar Patel. spoke with Ms. Crystal on 03/31/08, in evening. asked her for landlord and oil company's information. she didn't had any number. she complained about odors inside her apartment. suggest her to call FDNY for initial cleanup. she reject to call FDNY as she wants DEC representative to look at spill site first before any cleanup. explained her that as no contact info available for property owner or oil company, the department has very little resource for cleanup and if she is concerned about health, she should call FDNY. she refused and hung up. spoke with DEC Austin after talking to Ms. Crystal. DEC Austin mentioned that as tenant is rejecting to call FDNY for initial cleanup, no need for response in evening and can visit site in next day morning. visited site on 04/01/08, in morning at 8 AM. found minor oil spilled near fill box and minor odor around fill box area. the spill area is in front of basement door and Ms. Crystal is living in basement. no sign of overfill found at vent pipe. spoke with Mr. Crystal. he mentioned that every time after oil delivery, oil drips from fill box on to floor in front of their entrace door. site has two 275 gal ASTs inside basement. found stain on tank walls, representing old overfill from valves/joints on top of tank. no odors found inside basement around tank. small stain found on floor under tank. no sign of leak from tank bottom. Mr. Crystal mentioned that oil drips from fill box even after oil delivery. inspect fill box and vent line and found that vent line is little higher in elevation (about one foot) than fill box and its possible that during delivery, driver might be filling tank to the top and oil which comes into vent line, push back under gravity and as fill box is lower in elevation, that oil comes out from loose fill box. during site visit, Ms. Crystal gave delivery ticket, which she found later in last night. as per delivery ticket, 149 gal of oil delivered on 03/31/08. spoke with John at New Age fuel oil. John mentioned that Crystal transportation delivers oil at the site. asked John to send crew for cleanup, immediately. also asked to hold further deliveries until tank system tested and passed. spoke with Mr. Arzu, property owner. he ownes building for eight years and tanks were installed before that. asked Mr. Arzu to cleanup oil spill by end of today and also to test sytem before any more oil deliveries. also asked Mr. Arzu to fill tank to 90% capacity to prevent such situation. Mr. Arzu will do tank test. Ajuince Arzu **property owner** 5 Hanover Square, 14th Floor New York, NY 10004 Ph. (212) 785-1525 (O) (732) 284-0990 (C) Fax (212) 785-0629 email: ajuince@optonline.net John **oil company** New Age Fuel Oil Corp. 1111 Calhoun Ave Bronx, NY 10465 PH. (718) 239-9276 04/02/08-Hiralkumar Patel. received call from John on 04/01/08. he mentioned that oil company went to site for cleanup. spoke with Mr. Crystal today. he confirmed that cleanup done and no odors in area. tenant is satisfied. spoke with Mr. Arzu. mentioned to him that as tenant satisfied with cleanup and as no odors in area, the department doesn't requires anymore in reference to spill cleanup. but the department still requires tank test and test must be performed in two

DER Facility ID:	288930
DEC Memo:	"3/29/05-Vought-Spill contained before hitting concrete. No sewers or drains affected. Vought called Correa for status of tank repair and she called USA Tanks. Proposal sent to owner for tank replacement by USA Tank. Vought called Garcia and to leave message that for spill to be closed, copy of invoice must be received for AST replacement. Stuyvesant Fuel Oil will no longer make deliveries until AST is repaired. No answer of phone. Spill referred to DEC Rahman to send out letter requiring invoice of repair or replace. 03/29/05-SR// Sent a leaking tank repair letter. 04/18/05-SR//No reply received from the home owner. No body picks up the phone. USA tanks also unable to hold the owner. So, they sent a proposal for the repair work via mail. Need site inspection. 04/18/05-SR// Visited the site.Homwowner was not available and could not access the basement. 04/19/05-SR//After a series of attempt, homeowner Ms. Juan Garcia(718-861-4158) was found on the phone this evening. She informed about the possible repair work to be done by this week. "
Remarks:	"Homeowner noticed fuel oil leaking under 275 gallon oil tank in basement. Bucket was placed to catch spill. USA Tanks on scene, and will handle. No oil spilled onto basement floor. 1/2 gallon oil is in bucket."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #142864: 18-MAY-2002 06:05 Flush Mech W. Silkowski #82003 reports that he responded to a emergency outage to assist

MANHOLE 17607 (Continued) **S106003712**

number nine when he observed ~ 2 gallons of unknown oil possibly from a car that was parked over the structure at the time that of the secondary burn out occurred. Environmental tag #32975 has been placed, and a sample has been taken. There was fire, and smoke involved and private property affected. There has been buildings evacuated at this location. How many is unknown at this time. 06:10 Astoria has no tanker. 06:15 Shift Manager has notified EH&S that the crew will be cutting all the mains that lead to the structure avoiding working in the unknown oil. 06:15 Chemist has been requested by Shift Manager T. Curley. 06:19 Chemist is being called in from home. 06:29 All State is in route to location. 18-MAY-2002 06:40 CIG Morris #85791 notified. Car that was involved in the incident is a 1986 Honda NYS licence plate #BRS-1355. 18-May-2002 07:30 Chemist was canceled, Flush Mech W. Silkowski will bring three samples out to chem lab to save time. Sample types taken. Oil ID, Flash point, and PCB. 18-May-2002 08:00 Update: There were six buildings involved in the evacuation, and all occupants were let back into the buildings at 06:30. 18-May-2002 09:15 Flush Mech E. Gafur #19528 reports All State Tanker on location. 09:25 EPA # requested from ERT S. Mahoney #86887. 09:30 EPA #NYP 004 098 471 generated. Update: Feeder number 4X55 OA at the time of this incident, and the fault is believed to be in this structure. 18-May-2002 10:00 Flush Mech W. Silkowski #82003 reports that the product in the structure was ignited by the faulty cable in the structure, and was extinguished by the FDNY. It appears that most of the product burnt off. Chem labs reports that the product is mostly water, and they will not be able to test for flash point. 18-May-2002 10:19 Flush Mech E. Gafur #19528 reports that clean up is complete at this time. All State Power Vac Tanker removed 600 gallons of unknown liquid the is being treated as 50-499 PCB. The structure was double washed by E. Gafur, and no solid waste other than a 4’ X 8 piece of wood which was drumed, and transported back to Van Nest in a Con Ed Van that is not normally used for this fuction. Clean up complete, and environmental tag is removed. 18-May-2002 11:20 Solid waste drum is not being transported to Van Nest, it will be picked up by Astoria Transportation. O.S. T. Tottora reported the there is no oil coming from the secondary, but the lead jacketed secondary is badly burnt. The waste is being treated as lead hazardous. 11:25 called Astoria for a drum pickup. 18-May-2002 14:00 Solid waste drum has been picked up. Page 1 of 1 5/18/2002 Consolidated Edison Environment, Health and Safety ChemLab NELAP NY Lab ID No: 10380 Lab Sequence Number: 02-04476-001 Date Approved: 5/18/2002 E2 Incident Number: 142864 Date Received: 5/18/2002 Chain of Custody ID: CC01259 Date Sampled: 5/18/2002 PCB Analysis by EPA 608/8082 MATRIX: WATER GRAB DESCRIPTION: WATER/OIL FROM MH#17607 LOCATION: F/O 1431 LONGFELLOW AVE STRUCTURE: MANHOLE 17607 FEEDER ID: QC ID: 01-200205120902 TEST DESCRIPTION RESULT UNIT METHOD Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 < 1.0 ppm EPA 608/8082 THE DCB SURROGATE WAS OUT OF THE QC LIMITS. SINCE ALL OF THE SAMPLE WAS USED, RE-ANALYSIS WAS NOT POSSIBLE. THE REPORTED PCB VALUE IS THE MINIMUM AMOUNT DETECTED.FLASHPOINT WAS NOT RUN DUE TO NATURE OF THE SAMPLE-ALL WATER MATRIX. Approval Status: APPROVED Approved By: Edward Chin Title: SUPERVISOR --End of Report-- Search for Results at: http://q137lims/lims 18-May-2002 14:10 All waste from this structure both liquid, and solid are being disposed of as lead hazardous waste due to sample result that were received less than 1 ppm PCB that is the only known hazardous substance in the waste. "

FINDS:

Registry ID: 110012206889

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT SEE ALSO 97-04954 & 97-12845 & 95-04305. CHANGE DEC INVESTIGATOR TO VOUGHT 3/27/03 REASSIGNED FROM ROMMEL TO VOUGHT. 10/20/2005 - case reviewed by Feng: Received a complaint of gasoline vapors at 1209 Colgate Ave in Bronx (97-00109). Getty service station located next door @ 1441 Westchester ave, had a tank overfill. This gasoline traveled underground into the basement of 1209 Colgate Ave. This overfill compounded an existing soil and groundwater problem from the former gasonline tanks (#95-04305). STIP on January 6, 1998. by sighing this STIP, Getty takes the responsiblity of cleanup of 1209 Colgate Ave contamination. Dual Phase Extraction System has been on to address the contamination. Quarterly Monitoring Report, 3/2005 - 5/2005. Quarterly gauging and sampling. groundwater flow in west direction. 20 monitoring wells onsite. BTEX and MTBE in low concentration, such as 93.39ppb BTEX and 37.4ppb MTBE in W-1 (12.16' bg). 11/16/2006 - Feng - Quarterly Monitoring Report, 5/2006 - 7/2006, 7/2006, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 7/3/2006. 20 monitoring wells. DTW 10.70' to 14.55' bg. Flow direction west. No LNAPL. BTEX range ND to 680.7 ppb (MW-4). MTBE range ND to 16.4 ppb (MW-6). Monthly inspection of the air stripper system and the SVE system. No effluent samples taken this quarter until system fixed. (RJF) 11/17/2006 - Feng - Quarterly Monitoring Report, 8/2006 - 10/2006, 10/2006, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 10/18/2006. 20 monitoring wells. DTW 9.07' to 14.75' bg. Flow direction west. No LNAPL. BTEX range ND to 662.1 ppb (MW-4). MTBE range ND to 18.2 ppb (MW-6). 1/18/2007 - Feng - Getty Properties portfolio meeting with Tyree and Delta. System shutdown 12/2006 and quarterly monitoring for 2007. (RJF) 2/22/2007 - Feng - Quarterly Monitoring Report, 10/2006 - 1/2007, 1/2007, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 1/2/2007. 20 monitoring wells. DTW 9.20' to 13.17' bg. Flows westerly. No LNAPL. MW-1, BTEX BDL, 4.2 ppb MTBE. MW-2, 11.99 ppb BTEX, 2.4 ppb MTBE. MW-3, BTEX BDL, 3.1 ppb MTBE. MW-4, 511.3 ppb BTEX, 21.1 ppb MTBE. MW-5, 125.2 ppb BTEX, 18.9 ppb MTBE. MW-6, 270.7 ppb BTEX, 19 ppb MTBE. MW-7, BDL. MW-8, BTEX BDL, 1.4 ppb MTBE. MW-9, 0.52 ppb BTEX, 1.9 ppb MTBE. MW-10, BTEX BDL, 0.85 ppb MTBE. MW-11, 52.95 ppb BTEX, 15.1 ppb MTBE. MW-12, BDL. MW-13, BTEX BDL, 12 ppb MTBE. MW-14, BDL. MW-15, 77 ppb BTEX, 10.2 ppb MTBE. MW-16, BTEX BDL, 8.98 ppb MTBE. MW-17, BTEX BDL, 0.66 ppb MTBE. MW-18, BTEX BDL, 3.5 ppb MTBE. GPW-1, not sampled. GPW-2, BTEX BDL, 7 ppb MTBE. (RJF) 7/3/2007 - Feng - Quarterly Monitoring Report, 2/2007 - 5/2007, 5/2007. Groundwater sampled 4/26/2007. 20 monitoring wells. DTW 9.63' to 12.5' bg. Flows to west. No LNAPL. BTEX range ND to 144.67 ppb (MW-4). MTBE range ND to 18.9 ppb (MW-5). (RJF) 9/28/2007 - Feng - Quarterly Monitoring Report, 5/2007 - 7/2007, 7/2007. Groundwater sampled 7/23/2007. 20 monitoring wells. DTW 8.96' to 14.59' bg. Flows to west. No LNAPL. MW-4, 384.6 ppb BTEX, 8.3 ppb MTBE. MW-5, 48.9 ppb

NYC HUMAN RESOURCES (Continued) **S102560528**

BTEX, 6.9 ppb MTBE. MW-6, 193.3 ppb BTEX, 11.7 ppb MTBE. The other wells are BDL or low. (RJF) 10/2/2007 - Feng - Sensitive Receptor Survey, 7/20/2007. Tyree requested spill closure. The dual phase extraction system was shutdown 12/2006. It needs 8 quarters of monitoring after the remedial system is shutdown. Groundwater concentration is fluctuating in MW-4. Spill closure denied. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. The benzene level is still high as indicated in the quarterly report. Need to reduce the benzene level for closure. (RJF) 1/23/2008 - Feng - Quarterly Monitoring Report, 8/2007 - 10/2007, 10/2007. Active gasline retail/service station. Groundwater gauged and sampled 10/9/2007. 20 monitoring wells. DTW 9.61' to 13' bg. Flows to west. No LNAPL. BTEX range ND to 363.1 ppb (MW-4). MTBE range ND to 48.7 ppb (MW-3). (RJF) 5/14/2008 - Feng - Quarterly Monitoring Report, 11/2007 - 1/2008, 3/2008. Active gasoline retail/service station. Groundwater was gauged and sampled 1/16/2008. 20 monitoring wells. DTW 9.00' to 14.64' bg. Flows to west. No LNAPL. BTEX range ND to 403.4 ppb (MW-4). MTBE range ND to 9.6 ppb. (RJF) 7/11/2008 - 2Q2008, 2/2008 - 5/2008, 5/2008. Active gasoline retail service station. Groundwater was gauged and sampled 4/23/2008. 20 monitoring wells. DTW 9.93' to 14.16' bg. Flows to west. No LNAPL. BTEX range ND to 472 ppb (MW-4). MTBE range ND to 22 ppb (MW-3). Email to Tyree for additional remediation to address the benzene problem. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. Need to bring down the benzene level for closure. Will put borings in the historical contaminated area. Petition plan for closure by 1Q2009. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Tyree and Delta. Closure petition plan by 3/2009. (RJF) 4/20/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 9/2008, by Tyree. Active gasoline retail service station. Groundwater was gauged and sampled 7/31/2008. 20 monitoring wells. DTW 9.34' to 14.72' bg. Flows to west. NO LNAPL> BTEX range ND to 362 ppb (W-4). MTBE range ND to 49.2 ppb (W-3). System turned off as of December 2006 due to low effluent levels and low groundwater levels. (RJF) 4/23/2009 - Reviewed Investigation Work Plan, dated 3/20/2009, by Tyree. Tyree proposed 3 soil borings. DEC provided comments on the work plan and email to Tyree. see eDocs. Revision due 5/23/2009. (RJF) 6/8/2009 - Reviewed Investigation Work Plan revision, dated 5/6/2009, by Tyree. Tyree proposed 8 soil borings, will run STARS for every borings, and run TCLP for 3 soil borings. Work plan is approved. Investigation Report due within 90 days of the approval, 9/8/2009. (RJF) 6/18/2009 - Quarterly Monitoring Report, 1/2009 - 3/2009, 5/2009, pdf via email, by Tyree. Active gasoline retail service station. Monthly gauging and quarterly sampling. Groundwater was sampled 3/27/2009. 20 monitoring wells. DTW 9.73' (MW-18) to 14.34' (MW-16) bgs. Flows to west. NO LNAPL. BTEX range ND to 312.5 ppb (MW-4), residual mainly is benzene. MTBE range ND to 44.7 ppb (MW-3). System turned off as of 12/2006 due to low effluent levels and low groundwater levels. (RJF) 2/1/2012 - KGH meets with R2 staff to discuss Getty Bankruptcy Case and closure petitions. Consensus of senior staff is that Spill # 97-00109 has been cleaned-up significantly and it is appropriate to consider closure 9/25/2012 - 2/8/12 - KGH - Vapor impacts to neighboring buildings first grought this site to DEC attention. This was quickly resolved by NYFD & DEC Spills Unit. Inaccesible residual soil contamination may remain beneath this active retail station but will biodegrade over time and present no off-site impacts. GW concentrations have steadily decreased and have remained beneath 0.25

NYC HUMAN RESOURCES (Continued) **S102560528**

ppm Total BTEX for several years. The Department is requiring No Further Action at this time. Spill is being closed as currently Not Meeting Standards. Additional data may be submitted in the future for consideration of an upgrade in closure status. NFA"

DEC Memo:	"DECPiper responded to site. upon arrival Eastmond was completing pumping any liquid product though only sludge was left in the tank. The tank had 3500 gal. The tank is above ground vaulted with debris surrounding it. The floor wasnt solid as oil was observed dripping out of a retaining wall of the adjacent building approx 15' from the edge of the subject buildiing. This area is a raised alley as topography is sloped. I left message for Carmen that Eastmond should return Sat as alot of oil is still missing. 2/23/09- I spoke with Lisete of Eastmond. They were there on Sat bbreaking the containment wall and will continue to remove debris today. There is alot of debris around tank that needs to be reoved. ie- sheet rock, concrete pieces, garbage, wood. 5/7/ 2009- DECPiper received call from eastmond stating they have removed temporary fill due to non payment and observed that old leaking fill was reconnected. N other required work was completed. Cherokee Partners- 718- 798- 4900 Victor Fein 718- 652- 4241 fax Due to non payment, Eastmond removed temporary fill. don Carlo hired to cleanup remainder of spill. Digging out tank and alleyway. Texie- 718-857-3100 6/14/13- DEC Piper reviewed closure and supplemental closure report. Based on work to date, this spill is

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND A citizen called in a spill (#0008407)on the Bronx River, just south of Westchester Ave along the west side bulkhead of an abandoned cement plant. Sangesland responded to the site and did NOT see any sheen on the river. Sangesland reported the spill to the USCG. Since Sangesland was headed out to the site, the USCG was short staffed and asked for a site report. Once at the site, Sangesland called the USCG back and said no spill was seen. At the site, was a crew (15 people) from the NYC Parks Dept. who were cleaning up the lot and water's edge. Mr. Brian Aucoin (718-430-18) a Conservation Specialist with the Parks Dept. explained that the city got special funding to fight the West Nile Problem and they were removing several hundred old tires from the shore area and generally cleaning the site up. To prevent any garbage from floating downstream, the NYC DEP set up a boom across the river which is cleared frequently. In addition to the garbage/tire issue, there was a break in the water main (to the on site fire hydrants) which was flooding the site and could have flushed out some surface contamination onto the river. DEP has been notified and they are trying to isolate and fix the line. On the property Sangesland found 5 aboveground petroleum storage tanks which were abandoned when the cement plant was abandoned. They all appeared to be empty for quite some time with no signs of contamination around them. They are all closed (no rainwater going in) and all appeared to be secure. The Parks Dept person said this whole area was going to be demolished and rebuilt as a park. Sangesland did not see any petroleum spillage or any obvious sources. Parks Dept. is cleaning up the site and they were asked to call the Spills Hotline if they see any type of spillage or sheen on the river."
Remarks:	"caller reports sheen on water from pipe thet goes into river."

Contact Phone:	(949) 375-1174
DEC Memo:	"3/5/2014 - Feng - Spoke with Tim Fisher of Antea Group (timothy.fisher.@anteagroup.com, 949-375-1174). Antea Group has been retained by Getty Realty. Alliance Energy is the tenant and has been operated the site for a year. The contractor for Alliance Energy found impacts in the pea gravel beneath the dispensers. Antea Group has screened the pea gravel with PID and found one dispenser with 323 ppm and another dispenser with 273 ppm. Alliance's contractor has removed the pea gravel and cleaned the sump. The gravel will be stored into a 50-gallon drum and will be disposed. They have disconnected the dispensers and tested with water and found no leak in tht dispensers pan so it should not released to the subsurface. There is no indication of problem of the dispensers. The station is in the process of putting new dispensers and should be completing the work today or tomorrow, but there is no plan to collect soil sample beneath the dispensers upon they remove the whole dispensers out.

BELOW DISPENSORS (Continued) **S116553269**

Contact for Alliance's environmental management, David Went 339-368-0668. Spoke with David Went (339-369-0668, dwent@AllianceEnergy.com). Advised him on the removing of impacted soil, if there is any, and collecting soil sample while removing the dispensers. But he said that they are not removing the dispensers pans, the pans have been tested tighted so no need to remove that. Therefore, no soil will be exposed and removed. 3/31/2014 - received and reviewed a letter report from Tyree dated 3/31/2014 documenting the incidents associated with the dispensers and the removal of the stained and odored pea gravels. Spill is closed."

Remarks: "clean up underway."

Clean up in progress. 22-MAY-2002 11:45 Environmental Flush Operating Supervisor C. D'Alisera reports cleanup complete at 11:30. 6 drums of oily non-hazardous waste was generated. Transportation contacted for drum pickup. Environmental Flush Mech B. R. Amelio 48985, Mech B R. Budhoo 82277, GUW M. Williams 83739, and Mech B M. McDonnell 17152 performed cleanup of 15' X 20' area utilizing simple green and absorbent materials. The spilled hydraulic fluid was absorbed with speedy dry, then the area was scrubbed with simple green and absorbent was reapplied and the area was re-scrubbed with simple green. Clean up complete. 22-MAY-2002 12:16 Vehicle 60402 to be turned in to transportation for permanent repairs. Temp repairs completed by transportation on location. Update 4/29/03 Permanent repairs completed."

DEC Memo:	"11/03/11- Zhune responded to this site. Oil company (F&S Petroleum) while doing delivery at School PS 50 the hose broke. Approximately 20 to 25 gallons of oil # went to the street to the curb and probably some spill to the catch basin located at E 173 Street. Oil company cleaned mostly the spill. Speedy-dry was left along the curb. 11/04/11- Zhune spoke to Jim Carey fom oil company F&S Petroleum 347-597-2821. Rite-Way is goimg to the site to remove the speedy-dry along the curb and clean the catch basin. Rite-Way-Pete Mirabild718-855-7272. 11/09/11- F&S Petroleum Corporation sent a letter including invoices. On Friday 11/4/2011. Riteway Tank Maintenance cleaned via vac-truck the storm drain located at Vyse Avenue and East 172nd street. In addition. The coating of absorbent material curbside was removed. The material removed by F&S on 11/3/2011 was disposed of by Milro Environmental of Freeport, NY. Spill closed. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

GETTY PETROLEUM CORP 00276 (Continued) **1001215596**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

(212) 689-8833 Ext. 8723 (646) 472-8723 Fax (212) 689-3888 email: pmirani@nycmgmt.com 9:43 AM:- left message for Ms. Mirani. 9:45 AM:- sent email to Ms. Mirani requesting a call back. email copied to Robert Jenny (managing director at NYC Management; rjenny@nycmgmt.com). 9:51 AM:- received call from Ms. Mirani. she mentioned that John Catalic, their field manager is on-site and asked to contact him. 9:55 AM:- left message for Mr. Catalic. John Catalic NYC Management LLC. Vice President of Field Operations Ph. (917) 682-7823 email: jcatalic@nycmgmt.com duplicate spill reported by NYC DEP (spill #: 1110694). 9:59 AM:- received call from Mr. Catalic. he mentioned that the site contains multiple single story stores. each store has their own electrical heating system. Mr. Catalic mentioned that the oil tank and boiler in the building basement were abandoned more than 30 years ago. it was a 275 gal AST on legs in middle of basement. yesterday around 3 PM, tenants noticed noise in the basement and saw few people taking away metals including the oil tank. lateron one of the tenant spoke with management company on different issue and complained about noise in basement. Mr. Catalic spoke with other managers in company and found that no one authorized any work in basement so they reported to NYPD. NYPD responded and found oil spill. its look like someone stole the oil tank and spilled oil on floor. FDNY Hazmat cleaned up spill and put contaminated material/oil into a barrel. Mr. Catalic has contacted County Oil to remove the barrel. he mentioned that no drains/sump in basement and no cracks observed in floor where spill occurred (about 20 ft diameter area). asked Mr. Catalic to submit color photographs of the impacted area to confirm no cracks in floor. 10:13 AM:- sent email to Mr. Catalic to submit a letter including observation about the condition of the basement floor and color pics of impacted area. email copied to Ms. Mirani and Mr. Jenny. 3:55 PM:- received email from Mr. Catalic with floor pics. 12/05/11-Hiralkumar Patel. 1:20 PM:- visited site. inspected basement. floor, where spill occurred, was found in good condition. no odors in basement. based on observations during the site visit, case closed."
Remarks: "concrete - clean up in progress"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/19/2005 - Feng - File reviewed by Feng: Tank Closure Report, by Tyree, 11/1993. During 8/1993, ten (10) 550-gallon gasoline USTs were excavated and removed by Main Elmsford Company. Soil samples were collected. Environmental Site Investigation Report, by Tyree, 12/1993. During 10/1993, Tyree installed four (4) monitoring wells. no groundwater encountered. Levels of aromatic hydrocarbons detected in split spoon soil samples collected during drilling, exceeded NYSDEC Soil Guidance Values. Vapor Extraction Influence Pilot Test Report, by Tyree, 1/1995. During 1/1995, Tyree performed a Vapor Extraction Influence Pilot Test. Based upon findings of the vapor extraction influence pilot test a ROI of 15' can be achieved if a flow rate of 122 CFM at 20 of water is supplied to vapor extraction wells VW-1, VW-4, VW-5 and VW-7. Remedial Action Plan, by Tyree, 2/1995. Outlines design and construction details of the SVES to remediate soil contamination detected during removal of the former gasoline UST. SVES installed by Tyree, 4/1995. the SVES consists of six (6) 4-inch diameter vapor extraction wells which are individually manifolded to 2 diameter Schedule 40 PVC headers. The PVC headers are extended to a 12' squared concrete pad. The PV headers were then manifolded to a skid mounted SVE skid. The SVE skid consists of a Roots 5 hp positive displacement blower and is equiped with pressure and temperature switches, a vapor drop tank (coalescer) with high water level switch, and an integrated control panel. The SVE skid was started during 3/1996. Monitoring and gauging monthly on Vapor extraction wells VW-1 through VW-5, and VW-7 from the top of the well casings using a product/water interface probe. The SVES was inspected, monthly, during the 12/1998 through 2/1999 monitoring quarter. Semi Anuual Monitoring Report, by Tyree, 7/2003-12/2003. 6 monitoring wells on site, only 2 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 255.7ppb BTEX and MTBE below MDL in VW-1 (20.21' bg), 6409.9ppb BTEX and MTBE below MDL in VW-4 (19.05' bg). Semi Anuual Monitoring Report, by Tyree, 1/2004-6/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were

GETTY S/S #268 - GETTY PROPERTIES (Continued) **S100494277**

dry. groundwater flow southerly. Analyticals show 4676.6ppb BTEX and MTBE below MDL in VW-4 (18.5' bg). Semi Anuual Monitoring Report, by Tyree, 7/2004-12/2004. 6 monitoring wells on site, only 1 were sampled, the others wells were dry. groundwater flow southerly. Analyticals show 1408.5ppb BTEX and MTBE below MDL in VW-4 (18.64' bg). 05/04/07-Sun:Based on the Subsurface Investigation Report, dated November 2006 ,all of the groundwater samples collected from the sampling event were non detect, indicating that the groundwater has not been impacted from this spill.No free product was detected in any monitoring wells. Based on 1/2/07 data, BTEX ranged from non-detect to 2.53 ppb, and MTBE ranged from non-detect to 42 ppb.Based on these low concentrations of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

GETTY PETROLEUM CORP (Continued) **1000872182**

that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"8/22/05 - Austin - On 8/20, I spoke with Anne Marie Runfolo (sp?) of the Bronx River Alliance, who had called NYC Parks about a sheen along the western shoreline of the Bronx River, between the Cross Bronx X-way and Westchester Ave. (upland area is a City Park know as Concrete Plant Park.)She also indicated that there was a pipe discharging from the eastern shoreline of the river, across from the park. The pipeline was located at the northern parking lot of ABC Carpets, on Bronx River Ave. She had seen these events while on a canoe trip on the river. I then went to the site, and investigated the complaints. No sheen was observed in the river, but there was leaf matter floating on the water, indicating a storm sewer discharge from the storm event that had occurred on 8/19. I also observed the discharge on the eastern shoreline, which appeared momentarily, and then stopped. I went to the parking lot by ABC Carpet, but by them there was no floatables/foam from the discharge, so could not locate the pipe amongst the brushy and inacessible shoreline. Will refer latter complaint to DOW/DEP for outfall investigation. Spill closed - end "
Remarks:	"Oil slick found on shoreline of river, going into river with tide."

DEC Memo: "05/03/07 - See e-docs for Con Ed report detailing cleanup and closure. 161244. 27-Sep-2005 04:45 hrs. FOD Operating Supervisor, Bill Reschke (11649) while placing protective grounds on another location near V-1744, located e/s Edgewater Road 985' s/o Westchester Ave, Bronx, NY reports finding ~ 10 gallons of dielectric fluid has leaked out of an abandoned Pad Mounted transformer (V-1744) onto asphalt and soil. No fire/smoke is/was involved. No sewers/waterways were affected. There were no injuries. This is on the property of theTransit Mix Concrete Company that has gone out of business. An

VAULT 1744 (Continued) **S107409212**

area of asphalt ~ 15' x 75' is affected. Additional crews have spread absorbant speedi-dri over the entire area to absorb the oil. A puddle (25' x 15') of oil & water has gathered at the bottom of the hill. An 80' piece of absorbant boom has been deployed around the pool to contain it. A oil sample has been taken for PCB on chain of custudy (ee-04778). An environmental tag #43612 has been placed on the pad mount transformer. The clean up will continue as more crews are assembled at the start of the 7-3 shift. L Fischer 55784 "

Remarks: "ABANDONED TRANSFORMER, FAULTY EQUIPMENT. NO TO 5 QUESTION. CLEAN-UP IS IN PROGRESS. 161244."

TANK LEAK IN REAR YARD (Continued) **S106385805**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 4/8/2004 Sangesland spoke to Mr. Ruben Carbrear, owner of 1349 Boynton Ave, Bronx. He says oil is coming through the ground from a leak on his neighbor's property at 1347 Boynton Ave. House at 1347 Boynton is in foreclosure and has had alot of Emergency Repair work done on it in the last 2 years by the city HPD. This house has an outdoor #2 oil tank standing in the back of the house. It looks like a new copper line going from the tank into the basement. The old copper line is discarded nearby. The area under this oil tank is saturated with oil and this oil has now migrated over the property line into the yard of 1349 Boynton. Access to the yard of 1349 Boynton is available by ringing the bell at #2B of 1349. Sangesland spoke to Deputy Inspector Harry Brown (718-579-6772) at the NYC- HPD. Mr. Brown was told that it appears that HPD contractors have done work on this site over the last several months which seems to have caused the spill problem. This area needs to be dug out, cleaned and then refilled and tank set up again. Mr. Brown said he would send an inspector to the site and if a spill was found, a contractor would be hired to conduct the cleanup. Sangesland requested that HPD contact the DEC to arrange a joint visit to the building to discuss the clean up. 4/13/2004 Sangesland spoke with HPD Harry Brown. He said an inspector did go to the site and did see an oil leak problem. The case was referred to the HPD Emergency Repairs dept. Contact is Persey Young 212-863-8747. A message was left at this number for Mr. Young. 4/23/2004 Sangesland spoke with Persey Young of HPD. He said a contract was awarded to clean up the site at 1347 Boynton. He didn't know why this work has not yet started. Sangesland asked Mr. Young to contact Ruben Carberear (owner of 1349) to tell him what work would be done and when it would be done. DEC needs to make contact with the HPD hired contractor to confirm that proper endpoint samples will be taken and a complete closure report will be submitted. 09/09/2005 - Changed DEC lead from Demeo to Zalewski. (Zalewski) 11/3/2005 - Spoke with Persey Young (HPD). He said that his records show that they inspected the site on May 12, 2004 and the spill was taken care of by the property owner. They closed the case on May 12, 2004. Placed a phone call to the original caller. He was NA. (Zalewski) 11/4/2005 - Placed another phone call to the original caller. He was NA. I was given his cellphone number. Tried cellphone. No answer. (Zalewski) 1/12/2006 - Placed a phone call to the original caller's cellphone. He confirmed that the new owner remediated the spill. He was satisfied with the cleanup. Based on the available information, no further action. (Zalewski) "

Remarks: "CALLER SAYS HIS NIEGHBORS OIL LINE IS BROKEN AND IS LEAKING ON HIS PROPERTY< WOULD LIKE SOMEONE TO CHECK OUT SOAKED IN SOIL: "

SWIS:	0301
Town:	New York City
Record Added Date:	08/05/2008
Record Updated Date:	12/12/2012
Update By:	RXSCHICK
Site Description:	Location This site is located at 1800 Southern Boulevard in the Borough of the Bronx, New York City. This is an urban area. Site Features The site is approximately 0.27 acres in area and is a triangular shaped parcel of land. The 174th Street MTA Station is located above this intersection (elevated tracks). Current Zoning Uses The site is zoned for commercial use. The surrounding area is a mixture of commercial, recreational and residential uses. Historical Uses Prior to remediation, beginning sometime between 1927 and 1940, the site was occupied at various times by a gasoline filling station and an auto repair shop/car wash. The car wash operation closed in 1993 and the service station closed in 2003. BP-Amoco was operating the station at the time of closure in 2003. In July of 2003, BP arranged for the removal of four 4,000-gallon underground storage tanks (USTs), five dispensers and associated piping. An investigation performed by Delta prior to the UST removal, confirmed that groundwater was significantly impacted with constituents of gasoline as well. The results of this investigation resulted in the assignment of NYSDEC Spill Number 02-12264. A remedial investigation performed by Roux Associates in 2008 confirmed that soil, groundwater and soil

1800 SOUTHERN BOULEVARD (Continued) **S109321475**

vapors were contaminated with petroleum-related VOCs in excess of the NYSDEC remedial objectives and groundwater standards. SB 1800 LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in May 2009, to investigate and remediate the site. Site Geology and Hydrogeology The Site contains shallow occurring bedrock (approximately 24 feet bls) that was directly overlain by weathered rock and glacial deposits consisting of a mix of sand, silt, and clay in varying thickness. Groundwater at the Site ranged in depth from approximately 6 to 10 feet bls. It was determined that groundwater flows in a northwesterly direction, perpendicular to the long axis of the site. The project consists of construction of a ten-story low-income housing/mixed use development. The off-site aspect of this project will be monitored/remediated under spill number 0212264. There is a fully executed Brownfield Cleanup Agreement for this site. The Remedial Action Work Plan (RAWP) and the Remedial Investigation Report (RIR) were approved in August 2009. Remedial Construction started in September 2010. The Final Engineering Report (FER) was submitted in December 2011. 12/23/11-the Department signed the Certificate of Completion for this site.

Env Problem:	Nature and Extent of Contamination: Prior to remediation A Remedial Investigation (RI) was completed in July 2008. The investigation found contamination in soil, groundwater, and soil vapor. Contaminants in soil which exceeded Part 375 Unrestricted Soil Cleanup Objectives include the VOCs (ethylbenzene 77 mg/kg and 1,2,4 trimethylbenzene at 310 mg/kg), SVOCs (naphthalene at 25 mg/kg), and metals (mercury at 0.7 mg/kg and lead at 580 mg/kg). Contaminants in groundwater which exceed groundwater standards include VOCs (Benzene at 960 ug/L), SVOCs (naphthalene at 650 ug/L, and metals (manganese at 8,700 ug/L and lead at 340 ug/L). Elevated levels of VOCs were also detected in soil vapor samples (xylenes at 43 ug/m3, as well as numerous other VOC compounds). This site was determined to pose a significant threat to the human health and the environment. The Remedial Investigation Report (RIR) and Remedial Action Work Plan (RAWP) were both approved in August 2009. Remedial Action started in September 2010: Post Remediation No contamination remains at the Site. The Final Engineering Report (FER) was submitted in December 2011.
Health Problem:	The remedy has removed all site-related contamination from the property, thereby eliminating all potential human exposure pathways at the site.

Site Code:	488955
Site Description:	Location: The site is located in an urban area on Rodman Place in the Bronx, NY. The site lies along the west side of West Farms Road between Rodman Place and the Cross Bronx Expressway Service Road North. Site Features: The site is currently vacant. Prior to remediation, a single-story masonry building with a concrete slab-on-grade foundation with a partial basement was on the site. Metal storage containers, a wooden shed, and a semi-covered storage area were located off the northwest exterior of the building. Current Zoning and Land Use: The property is zoned for residential use and is assigned Residential District R8X zoning. The surrounding area is mostly residential with a marble business and hotel in the next block. The site was most recently leased by a construction company for construction supply storage and a janitorial supply company for soap and paper product storage. The undeveloped section of the property was recently used as an outdoor storage area for dumpsters

1899-1905 WEST FARMS ROAD (Continued) **S116041501**

and empty drums. Past Use of the Site: The 1899 West Farms Road portion of the site operated as a dry-cleaning facility from 1977-1996 and a towing/collision company from 1999-2001. The 1903-1905 West Farms Road portion operated as an auto repair garage from 1924-1986 and as a steel door manufacturing facility from 1989-2005. Site Geology and Hydrogeology: Prior to site remediation, the site was underlain with intermixed layers of brown and orange silts and sands, brown/black clays, with varying amounts of gravels, cobbles, mica, and schist. Bedrock exists at depths between 1.0 and 14.0 feet below ground surface. There was limited shallow groundwater (approximately 8 feet below grade in the east section, but only 2 feet below grade in the southern section) in the area due to the shallow bedrock. The general flow direction is to the east-southeast towards the Bronx River.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related compounds and metals in soil (ethylbenzene, lead, mercury). Tetrachloroethylene (PCE) was found in groundwater just above standards. Trichloroethylene (TCE) and cis-1,2 Dichloroethene were found in soil vapor at the site. All site-related contamination was removed. All soil was removed above bedrock. Six underground tanks were also removed along with associated contaminated soil. Groundwater was treated using in-situ chemical oxidation. Indoor air sampling in the new building will occur to evaluate the potential for soil vapor intrusion (SVI). A Site Management Plan and Easement are in place and will remain in place until the SVI evaluation is complete.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Prior to remediation, a single-story masonry building with a concrete slab-on-grade foundation with a partial basement was on the site. Metal storage containers, a wooden shed, and a semi-covered storage area were located off the northwest exterior of the building. Current Zoning and Land Use: The property is zoned for residential use and is assigned Residential District R8X zoning. The surrounding area is mostly residential with a marble business and hotel in the next block. The site was most recently leased by a construction company for construction supply storage and a janitorial supply company for soap and paper product storage. The undeveloped section of the property was recently used as an outdoor storage area for dumpsters and empty drums. Past Use of the Site: The 1899 West Farms Road portion of the site operated as a dry-cleaning facility from 1977-1996 and a towing/collision company from 1999-2001. The 1903-1905 West Farms Road portion operated as an auto repair garage from 1924-1986 and as a steel door manufacturing facility from 1989-2005. Site Geology and Hydrogeology: Prior to site remediation, the site was underlain with intermixed layers of brown and orange silts and sands, brown/black clays, with varying amounts of gravels, cobbles, mica, and schist. Bedrock exists at depths between 1.0 and 14.0 feet below ground surface. There was limited shallow groundwater (approximately 8 feet below grade in the east section, but only 2 feet below grade in the southern section) in the area due to the shallow bedrock. The general flow direction is to the east-southeast towards the Bronx River.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related compounds and metals in soil (ethylbenzene, lead, mercury). Tetrachloroethylene (PCE) was found in groundwater just above standards.
