CERTIFICATION

I, Brian Gochenaur, certify that I am currently a Qualified Environmental Professional (QEP) as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation DER Green Remediation (DER-31).

DRAFT

_____

Brian Gochenaur, QEP

DRAFT

1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of 1480 Sheridan Affordable Owner LLC (the Requestor), which is the developer of the property at 1480 Sheridan Boulevard in Bronx, New York (the site). This RIWP is being submitted in conjunction with the Requestor's application for the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP).

The objective of the Remedial Investigation (RI) is to characterize the nature and extent of environmental impacts at and emanating from the site and to provide sufficient information to evaluate remedial alternatives and threats to human health and the environment, as required. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC Division of Environmental Remediation (DER)-10: *Technical Guidance for Site Investigation and Remediation* (May 2010), the New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* (October 2006, with updates including February 2024) and *Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs* (April 2023).

DRAFT

2.0 SITE BACKGROUND

2.1 Site Description

The about 61,988 square-foot (±1.42 acre) site is located at 1480 Sheridan Boulevard within an urbanized area of the Crotona Park East neighborhood of the Bronx, New York and is identified on the Bronx Borough Tax Map as Block 3017, Lot 29. Lot 29 is being subdivided into two lots: Lots 29 and 30. Proposed Lot 29 (the site) is the subject of this RIWP. A site location map is provided as Figure 1. The site is improved with part of the East End Parking Corporation commercial building in the southwestern part of the site; the remainder of the site is a paved parking lot with a garage structure in the northeastern part of the site. A site plan is provided as Figure 2.

According to the New York City Planning Commission Zoning Map 3d, the site is located within the R7-3/C2-4 (medium-density residential and commercial) district. This project responds to and is fully consistent with the goals of the City Council as embodied in the NYC Zoning Districts and provides additional affordable housing in a growing neighborhood.

2.2 Surrounding Property Land Use

The site is in a mixed-use area with residential, commercial, institutional, and industrial properties. The following is a summary of adjacent and surrounding property usage:

Direction	Adjoining Properties	Surrounding Area
North	Vacant lot owned by Sheridan Blvd Apartments LLC (1428 Edgewater Road)	Residential and mixed-use buildings, and miscellaneous use properties and parking lots.
East	Bronx River and City of New York Railroad (Westchester Avenue)	Public parks, City of New York Railroad, and mixed-use buildings.
South	City of New York Railroad, auto body repair followed by Westchester Avenue (1476 Sheridan Boulevard)	Public transportation and parks.
West	Proposed Lot 30 (1484 Sheridan Boulevard) followed by Edgewater Road	Public parks and schools, followed by mixed-use residential buildings.

Public infrastructure (e.g., storm drains, sewers, and underground utility lines) exists within the streets surrounding the site. A land use map showing the adjacent and surrounding properties is provided as Figure 3.

Land use within a half-mile radius is urban and includes residential, commercial and industrial uses, institutional/public services, and parks. The nearest ecological receptors are the Bronx River (located directly east of the site) and the Harlem River (located about 2.5 miles west of the site).

DRAFT

Sensitive receptors, as defined in DER-10, located within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	Daniel Boone Playground (about 0.01 miles west of the site)	1340 West Farms Road Bronx, NY 10459
2	P.S. X811 (about 0.12 miles west of the site)	1434 Longfellow Avenue Bronx, NY 10459
3	Fannie Lou Hamer Freedom High School (about 0.1 miles northwest of the site)	1021 Jennings Street Bronx, NY 10460
4	Starlight Park Dog Run (about 0.1 miles east of the site)	1374 East 172nd Street Bronx, NY 10459
5	P.S. 066 School of Higher Education (about 0.15 miles northwest of the site)	10001 Jennings Street Bronx, NY 10469
6	Fannie Lou Hamer Middle School – X286 (about 0.15 miles northwest of the site)	10001 Jennings Street Bronx, NY 10460
7	Samara Community School (about 0.3 miles north of the site)	1570 Boone Avenue Bronx, NY 10460
8	Tiny Tunes Daycare Evergreen Inc - XCEQ (about 0.43 miles southeast of the site)	1144 Evergreen Avenue Bronx, NY 10472
9	Saint John Chrysostom School - XADT (about 0.47 miles southwest of the site)	1144 Hoe Avenue Bronx, NY 10459
10	East Bronx Day Care Center - XAHL (about 0.47 miles southeast of the site)	1113 Colgate Avenue Bronx, NY 10472
11	"Magical Beginnings" Day Care (about 0.3 miles northwest of the site)	1016 East 172nd Street Bronx, NY 10460
12	Star Light Start Bright Daycare (about 0.5 miles southeast of the site)	1145 Evergreen Avenue Bronx, NY 10472
13	Fairmont Neighborhood School – X314 (about 0.38 miles northwest of the site)	1550 Vyse Avenue Bronx, NY 10460
14	Yaby's Family Daycare (about 0.5 miles southwest of the site)	1138 Colgate Avenue Bronx, NY 10472

2.3 Site Physical Conditions

2.3.1 Topography

According to the 2023 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Central Park, New York-New Jersey, the site elevation (el) ranges from about el 7 in the central part of the site to about el 20 in the northwestern part of the site. The regional

DRAFT

topography slopes downward toward the east, toward the Bronx River (adjacent to the east of the site).

2.3.2 Geology

According to observations noted in the November 23, 2021 Phase II Environmental Site Assessment (ESA) Report prepared by Environmental Engineering Compliance Control, D.P.C. (EECC), the March 2026 Geotechnical Evaluation Report prepared by GEODesign, Inc. P.C. (GEODesign), and the April 2026 Limited Subsurface Investigation (LSI) completed by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan), the site is underlain by a fill layer predominantly consisting of grayish to dark tan to black, fine-grained sand with varying amounts of fine gravel, brick and concrete, and cobbles from surface grade to depths ranging from 5 to 15 feet below grade surface (bgs). The observed fill layer is followed by a grayish tan to black clay layer across the site.

According to a review of the "Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties, New York" by Charles A. Baskerville, et al., the bedrock underlying the site is of the Hartland formation, which consists of muscovite-biotite-quartz schist, gneiss, and amphibolite. Geological surface features (e.g., rock outcroppings) were not observed at the site. According to the March 2026 Geotechnical Evaluation Report, soft rock was identified at depths ranging from 8.5 to 38.5 feet bgs and competent bedrock was identified from 5 to 45 feet bgs at the site. Weathered bedrock was observed between 7 and 13 feet across the site during the LSI.

2.3.3 Hydrogeology

Groundwater was encountered between about 4 feet and 8 feet bgs during the previous Phase II ESA and LSI. Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction in the vicinity of the site is to the east or southeast toward the Bronx River.

2.3.4 Wetlands

Wetlands were evaluated by reviewing the National Wetlands Inventory and NYSDEC-regulated wetlands map; there are no wetlands on the site. The closest wetland to the site is the Bronx River, located directly east of the site.

2.4 Proposed Redevelopment

Current plans call for the development of a 30-story residential building with a cellar level. The cellar level will primarily contain storage areas, mechanical rooms and parking. The remaining floors will include a residential tower with associated amenities such as a fitness center, a children's playroom, coworking space, and a multi-purpose room. All of the residential units will be designated as affordable housing.

DRAFT

2.5 Summary of Previous Site Use

A review of historical records indicates that the site has been located in a densely developed urban area characterized by commercial and industrial uses since at least the 1890s.

Between at least 1896 and 1915, the site was occupied by a coal and lumber yard. By 1950, relevant site uses included a contractor's yard, building materials storage, and a concrete slab manufacturer (Flexicore Co.) The site was operated as a contractor's yard (Corbetta Construction Co.) with an auto parts warehouse/auto wrecking yard from at least 1977 to at least 2007. According to city directories, the site was operated by an automotive parts retail/wholesale business and auto wrecking yard in the mid-2000s to mid-2010s, and the site is currently operating as a truck parking yard with open garage structures and a commercial office building.

The presence of petroleum-related volatile organic compounds (VOC) in site soil above 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 protection of groundwater (PGW) soil cleanup objectives (SCO) in a discrete area in the northern part of the site, and the presence of petroleum-related VOCs in groundwater above the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values for Drinking Water (Class GA) (collectively referred to as "SGVs") and in soil vapor throughout the site are likely related to former industrial site operations, including the former auto parts warehouse and auto wrecking yard. Semivolatile organic compounds (SVOC), particularly polycyclic aromatic hydrocarbons (PAH), identified in site soil are likely associated with former site operations as a coal and lumber yard due to the storage of raw coal and wood, and the use of wood preservatives, but may also be attributed to historical infilling. Lead, arsenic and mercury in site soil can possibly be attributed to historical industrial use of the site.

2.6 Summary of Previous Environmental Investigations

Previous environmental reports were reviewed to inform this RIWP. These reports are summarized below and are included in Appendix A, and historical sample locations and analytical results that exceed applicable regulatory criteria for soil, groundwater and soil vapor are presented on Figures 4, 5, and 6, respectively.

- *December 21, 2018 Phase I Environmental Site Assessment (ESA) for 1460 and 1480 Sheridan Expressway, prepared by CDM Smith*
- *November 23, 2021 Phase II Environmental Investigation (EI) Report for 1460 and 1480 Sheridan Expressway, prepared by Environmental Engineering Compliance Control, D.P.C.*
- *July 20, 2026 Limited Subsurface Investigation (LSI) Report for 1484 Sheridan Boulevard, prepared by Langan*

DRAFT

Environmental reports and sampling events are summarized below and included with this attachment.

December 21, 2018 Phase I ESA for 1460 and 1480 Sheridan Expressway, Bronx, New York, prepared by CDM Smith

CDM Smith prepared a Phase I ESA in December 2018 for Simone Development Companies. The Phase I ESA identified the following Recognized Environmental Conditions (REC):

- Historical uses of the site for an iron yard, concrete manufacturing, and automotive maintenance since the 1890s
- Potential vapor intrusion due to the historical operations at the site
- Three gasoline/diesel underground storage tanks (UST) that were closed and removed from the site however no post-excavation sampling was documented; four aboveground storage tanks (AST) were reportedly closed and one AST was reportedly removed from the property. The possible presence of USTs and ASTs on the site and lack of documentation was considered a REC.
- Presence of trench drains on-site; the possible migration of contamination through trench drains from historical site uses is considered a REC.
- An in-ground hydraulic lift was observed at the subject property; potential contamination from possible releases of hydraulic oil and fluids is considered a REC
- Surficial staining was observed at the subject property and is considered a REC.
- Potential off-site contamination from upgradient neighboring sites (e.g. drycleaners, voluntary cleanup program and BCP sites with industrial past uses, and multiple auto repair and gas/service stations)

Environmental Site Investigations

November 23, 2021 Phase II ESA for 1460 and 1480 Sheridan Expressway, Bronx, New York, prepared by Environmental Engineering Compliance Control (EECC), D.P.C.

EECC prepared a Phase II ESA for the properties located at 1460 and 1480 Sheridan Expressway in November 2021 on behalf of Simone Development Companies. For proposed new Lot 29, the Phase II ESA included a geophysical survey of all accessible areas, advancement of ten soil borings to a maximum depth of 10 feet bgs, installation of three permanent groundwater monitoring wells, and the collection and laboratory analysis of soil and groundwater samples. The observations and analytical results are summarized below.

Soil samples were analyzed for NYCRR Part 375 VOC, SVOC, polychlorinated biphenyls (PCB), diesel range organics (DRO), gasoline range organics (GRO), and target analyte list (TAL) metals. Groundwater samples were analyzed for target compound list (TCL) VOCs, SVOCs, and TAL metals.

DRAFT

Soil analytical results were compared to the NYCRR Part 375 PGW, Restricted Use Restricted-Residential (RURR), Commercial Use (RUC), Industrial Use (RUI) and Soil Cleanup Objectives (SCO). Groundwater analytical results were compared to the NYSDEC SGVs. Photoionization detector (PID) readings above background and/or petroleum-like odors were observed in four soil borings and a maximum PID reading of 1,990 parts per million (ppm) was observed. VOCs, SVOCs, metals, and total PCBs were detected above applicable SCOs in soil samples. Petroleum-related VOCs, SVOCs, metals and PFAS were detected in groundwater samples. Soil vapor samples were not collected during the Phase II ESA.

The associated laboratory analytical reports and soil boring logs from the Phase II ESA are included in the Phase II ESA report as an attachment.

July 20, 2026 Limited Subsurface Investigation Report for 1480 Sheridan Boulevard, Bronx, New York, conducted by Langan

Langan prepared an LSI Report documenting the investigation completed in April 2026 on behalf of 1480 Sheridan Affordable Owner LLC for the property located at 1480 Sheridan Boulevard in Bronx, New York, Tax Block 3017, Lot 29. Lot 29 is being subdivided into two lots: Lots 29 and 30. The LSI report summarizes work completed for proposed Lot 29. The LSI included a geophysical survey of all accessible areas, advancement of five soil borings to a maximum depth of 15 feet bgs, installation of one temporary groundwater monitoring well and two temporary soil vapor points, and the collection and laboratory analysis of soil, groundwater and soil vapor samples.

Soil and groundwater samples were analyzed for NYSDEC NYCRR Part 375 VOCs, SVOCs, PCBs, pesticides and/or TAL metals including trivalent and hexavalent chromium. Soil vapor samples were analyzed for TO-15 VOCs.

Results

Soil analytical results were compared to the NYCRR Part 375 PGWs, RURRs, RUCs, RUIs and SCOs Groundwater analytical results were compared to the NYSDEC SGVs.

Field observations and laboratory analytical results of the Phase II ESA and LSI are summarized below:

- Site Geology and Hydrogeology: The site is underlain by fill, predominantly consisting of grayish to dark tan to black, fine-grained sand with varying amounts of fine gravel, brick and concrete, and cobbles that extends below the surface cover to between 5 and 15 feet bgs across the site. The observed fill layer is followed by a grayish tan to black clay layer across the site. According to a March 2026 Geotechnical Evaluation Report prepared for the site by GEODesign, soft rock was identified at depths ranging from 8.5 to 38.5 feet bgs and competent bedrock was identified from 5 to 45 feet bgs at the site. Weathered bedrock was observed between 7 and 13 feet across the site. Groundwater

DRAFT

was encountered between about 3 and 9 feet below bgs during the LSI and geotechnical investigation. Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction in the vicinity of the site is to the east or southeast toward the Bronx River.

- Soil: PID readings above background and/or petroleum-like odors were observed in one soil boring, with a maximum PID reading of 18 ppm. VOCs, SVOCs, PCBs, and metals were detected above the PGW, RURR, RUC and/or RUI SCOs in soil borings located throughout the site.
- Groundwater: SVOCs, and total and dissolved metals were detected above the SGVs in groundwater samples.
- Soil Vapor: Petroleum-related VOCs were detected in each of the two soil vapor samples. Total VOCs were detected at 17,856.1 micrograms per cubic meter (µg/m^3) in SSV05 and 27,628.4 µg/m^3 in SSV01.

The referenced reports and available laboratory data packages for the investigation are included in Appendix A.

2.7 Areas of Concern

The areas of concern (AOC) to be further investigated during the RI are described below and shown on Figure 7:

AOC 1: Sitewide Historical Use as a Coal and Lumber Yard

Non-native fill, predominantly consisting of grayish to dark tan to black, fine-grained sand with varying amounts of fine gravel, brick and concrete, and cobbles extends below the surface cover to between 5 feet and about 15 feet bgs. Contaminants associated with non-native fill were identified in soil samples (0 to 12 feet bgs), including concentrations of SVOCs and metals exceeding the PGW, RURR, RUC and RUI SCOs. The source of SVOCs, particularly PAHs, and metals identified in site soil are likely attributed to historical industrial operations as a coal and lumber yard.

AOC 2: Historical Site Use as a Concrete Manufacturer and Auto Parts Warehouse and Wrecking Yard

By 1850, operations in the southwestern part of the site included a concrete slab manufacturer and by at least 1979 to the mid-2000s operations included an auto parts warehouse and wrecking yard. Petroleum-related VOCs were identified in site soil vapor and can be attributed to historical use as an auto parts warehouse and wrecking yard. Lead, arsenic, and mercury identified in site soil can be attributed to historical use of the site as an auto parts warehouse and wrecking yard as well as a concrete slab manufacturer as these metals can be found in cement and concrete manufacturing.

DRAFT

AOC 3: Petroleum Impacts in Soil, Groundwater, and Soil Vapor

Previous investigations identified petroleum-related VOCs in soil, groundwater, and soil vapor in the northern part of the site at concentrations above the NYSDEC 6 NYCRR UU, RURR, PGW, Restricted Use Industrial (RUI) SCOs and/or NYSDEC SGVs. A maximum PID reading of 1,990 ppm, petroleum-like odors and staining were observed in soil borings B-2 and B-3. Petroleum-related VOCs were detected at concentrations exceeding the PGW, RURR, and/or the RUI SCOs were identified in soil borings B-2 and B3, and above the NYSDEC SGVs in groundwater collected from monitoring well MW-1.

AOC 4: Suspected Underground Storage Tank (UST)

The EECC 2021 Phase II ESA identified a remaining UST on the eastern side of the property. The size and operating status of the UST were unable to be determined at that time. Due to access limitations, additional soil borings have not been advanced in this location and the potential for impacts may exist.

DRAFT

3.0 SCOPE OF INVESTIGATION

The objective of the RI is to determine and characterize the nature and extent of environmental impacts at or emanating from the site, and to provide sufficient information to evaluate remedial alternatives and threats to human health and the environment. The rationale for each sampling location in relation to the AOCs and analytical parameters for each proposed sample are provided in Table 1. Proposed sample locations are shown on Figure 7. The field tasks are discussed in more detail in the following sections.

Geophysical Survey

- Perform a geophysical survey to locate potential unidentified USTs or underground structures and identify utilities. Proposed RI sample locations may be relocated as necessary based on the findings of the geophysical survey.

Soil Borings and Sampling

- Advance 28 soil borings to either the first underlying depth interval without evidence of impacts or non-native material or to about 15 feet bgs.
- Collect three samples from each soil boring for a total of 60 soil samples (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis.

Monitoring Well Installation and Sampling

- Install and develop twelve permanent monitoring wells.
- Collect one groundwater sample from each of the permanent groundwater monitoring wells (plus QA/QC samples) for laboratory analysis.
- Survey and gauge monitoring wells to establish groundwater elevations and flow direction, and to evaluate the potential presence of non-aqueous phase liquid (NAPL).
- Develop a groundwater contour map.

Soil Vapor and Ambient Air Sampling

- Install eight soil vapor points beneath the site cover.
- Collect eight soil vapor samples, and one ambient air sample for laboratory analysis.

Modifications to this scope of work may be required: 1) due to site operations, equipment or other access restrictions; 2) in the event that unexpected contamination is detected, and additional analytical data is needed; and 3) to adequately characterize and delineate subsurface impacts in compliance with the Brownfield Law, regulations and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be contacted to obtain approval for these modifications.

DRAFT

The field investigation will be completed in accordance with NYSDEC DER-10 Guidance and the procedures specified in the Health and Safety Plan (HASP) and the Quality Assurance Project Plan (QAPP) included as Appendices B and C, respectively. A Community Air Monitoring Plan (CAMP) will be implemented during this investigation (see Section 3.7.1 and Appendix D).

The names, contact information and roles of the principal personnel who will participate in the investigation are listed below. The HASP contains emergency contact information (HASP Table 5). Resumes for Langan employees involved in the project are included in the QAPP (Appendix C).

Personnel	Investigation Role	Contact Information
Brian Gochenaur, QEP Langan	Qualified Environmental Professional	Phone – 212-479-5479 Email – bgochenaur@langan.com

Tony Moffa, CHMM Langan	Langan Health & Safety Officer	Phone – 215-491-6500 Email – tmoffa@langan.com
William Bohrer, PG Langan	Field Safety Officer	Phone – 410-984-3068 Email – wbohrer@langan.com
Kimberly Semon, PE Langan	Project Manager	Phone – 212-479-5486 Email – ksemon@langan.com
Caroline Devin Langan	Field Team Leader	Phone – 212-479-5743 Email – cdevin@langan.com
Joseph Conboy Langan	Program Quality Assurance Monitor/Data Validator	Phone – 609.282.8055 Email – jconboy@langan.com

3.1 Geophysical Survey

A geophysical survey will be performed prior to the RI to locate unidentified USTs or underground structures and identify utilities. Proposed RI sample locations may be relocated as necessary based on the findings of the geophysical survey.

3.2 Soil Investigation

3.2.1 Drilling and Logging

An environmental drilling subcontractor will advance 28 soil borings (designated RISB01 through RISB28) to further investigate the AOCs identified in Section 2.6. A plan showing the AOCs and the proposed boring locations is included as Figure 7. Langan field personnel will document the work, screen the soil samples for environmental impacts, and collect environmental samples for laboratory analyses under the direct supervision of a Qualified Environmental Professional.

DRAFT

Soil borings will be advanced to 15 feet bgs or the top of bedrock (whichever is shallower), using direct-push drilling technology (Geoprobe®). Soil will be screened continuously to the boring termination depth or until bedrock is observed with a PID equipped with a 10.6 electron volt (eV) bulb and for visual and olfactory evidence of environmental impacts (e.g., staining and odor). Soil descriptions will be recorded in a field log. Boring logs will be presented in the Remedial Investigation Report (RIR).

3.2.2 Soil Sampling and Analysis

Up to three grab soil samples will be collected from each soil boring for laboratory analysis. One sample will be collected from the 0-2-foot bgs interval. A second sample will be collected from the interval exhibiting the greatest degree of contamination (based on the presence of staining, odor, and/or PID readings above background). A third sample will be collected from the first underlying depth interval without evidence of impacts or fill (i.e., native soil). If borings are advanced to a termination depth of 15 feet bgs and no evidence of impacts is identified, samples will be collected from the bottom of the fill layer and the underlying native soil interval. Green spaces are not present and the site is entirely covered with asphalt or concrete pavement and pavers; therefore, surface soil samples will not be collected.

The proposed soil samples are summarized in Table 1. Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox® and water.

The samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to attempt to maintain a temperature of about 4°C) for delivery to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples will be analyzed using the latest United States Environmental Protection Agency (USEPA) methods as follows:

- Part 375 List and TCL VOCs by USEPA methods 8260C/5035
- Part 375 List and TCL SVOCs by USEPA method 8270D
- Part 375 List PCBs by USEPA method 8082A
- TAL/Part 375 List metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010C/7471B/9010C/7196A
- Part 375 List pesticides and herbicides by USEPA methods 8081B and 8151A, respectively
- NYSDEC List PFAS by USEPA Method 1633. A list of the PFAS compounds is provided in Table 2.
- 1,4-dioxane by USEPA Method 8270D

DRAFT

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.3 Groundwater Investigation

3.3.1 Monitoring Well Installation

Twelve soil borings will be converted to permanent groundwater monitoring wells. Soil from each borehole will be logged continuously from surface grade to the boring termination prior to monitoring well installation. A plan showing the proposed well locations is included as Figure 7.

The proposed monitoring wells will be installed across the observed water table and will be constructed using 2-inch-diameter polyvinyl chloride (PVC) riser pipe with 10-foot-long, 0.01-inch slotted screens, or 10-foot-long, 2-inch-diameter pre-pack well screens. The proposed monitoring wells will be installed such that the well screens straddle the observed groundwater table. The well annulus around the slotted screen in each well will be a minimum of 2 inches (minimum 6-inch-diameter boreholes) and will be backfilled with clean sand to about 2 feet above the top of the screen. A minimum 1-foot-thick bentonite seal will be installed above the sand in each well, and the borehole annuli will be backfilled with non-impacted soil cuttings and/or clean sand.

The final installation depths of permanent groundwater monitoring wells and screen intervals will be based on field observations. In the absence of impacts, the bottoms of the well screens will be set at about five feet below the groundwater table (estimated to not more than 15 feet bgs). If impacts are identified (odors, staining, and/or elevated PID readings) additional monitoring wells will be installed to horizontally and vertically delineate the contamination. If required based on field observations, clustered and/or nested monitoring wells may be installed.

Following installation, the wells will be developed using a surge block across the well screen to agitate and remove fines. The surge block will be moved within the well screen in 2- to 3-foot increments for approximately 2 minutes per increment. After surging, the well will be purged via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). The well will then be allowed to equilibrate for a minimum of one week prior to collecting groundwater samples.

3.3.2 Monitoring Well Survey

The location and elevation of the groundwater monitoring wells (top of casing elevations) will be surveyed. This data will be used with synoptic groundwater well gauging data to prepare a groundwater contour map to evaluate the direction of groundwater flow. Vertical control will be established by surveying relative to the North American Vertical Datum of 1988 (NAVD88) by a New York State-licensed land surveyor. Elevations of the top of monitoring well casings and protective well casings will be surveyed to the nearest 0.01 foot.

DRAFT

3.3.3 Groundwater Sampling and Analysis

One groundwater sample will be collected from each of the five wells. Prior to sampling, the monitoring wells will be gauged for static water levels and for the presence of NAPL and purged. Purging will consist of pumping, at a minimum, the stabilized drawdown volume plus the pump's tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells, dated July 30, 1996, and 4th revision September 19, 2017. Samples will be collected with a low-flow submersible pump and dedicated polyethylene tubing. Development and purge water will be containerized for off-site disposal.

The groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of about 4ºC) for delivery to the laboratory. Groundwater samples will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA Method 8260C
- TCL SVOCs by USEPA Method 8270D
- Pesticides by USEPA Method 8081B
- Herbicides by USEPA Method 8151A
- PCBs by USEPA Method 8082A
- Metals (filtered and unfiltered) by USEPA Method 6010D/6020B/7470A
- Hexavalent/Trivalent Chromium by USEPA Method 7196A
- Total cyanide by SM 4500
- NYSDEC List PFAS by EPA Method 1633
- 1,4-dioxane by EPA Method 8270D

Should free product be observed during monitoring well development or sampling, a sample will be collected and analyzed via fingerprint analysis. QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.4 Soil Vapor Investigation

3.4.1 Soil Vapor Point Installation

Eight temporary soil vapor points will be installed in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, with updates including the February 2024 update). A plan showing the proposed soil vapor sample locations is included as Figure 7. Soil vapor points will be installed using direct-push technology by advancing a vapor

DRAFT

probe to about 2 feet above the observed groundwater interface or to the proposed development depth, whichever is shallower. The soil vapor collection points will consist of inert sample tubing (i.e., polyethylene) and the annulus (i.e., the sampling zone) around the installed tubing will be filled with a clean, coarse sand pack followed by a hydrated bentonite seal to surface grade.

3.4.2 Soil Vapor Sampling and Analysis

Samples will be collected in general accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates February 2024). The proposed vapor samples are summarized in Table 1. A plan showing the proposed soil vapor locations is included as Figure 7. Before collecting soil vapor samples, a minimum of three vapor probe volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample point at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE® meter. Samples will be collected within one day of installing temporary vapor points. Purged soil vapor will be monitored for VOCs with the MultiRAE® during this process.

A helium tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC technique to document the integrity of each soil vapor sampling point seal before and after sampling. The tracer gas will be introduced into a container surrounding the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal is considered compromised and should be enhanced or reconstructed to reduce outside air infiltration.

After the integrity of each seal has been confirmed, soil vapor will be collected over a 2-hour sampling period into laboratory-supplied, batch-certified clean 6.0-liter Summa® canisters with calibrated flow controllers. One ambient air sample will be concurrently collected from the breathing zone (about 3 to 5 feet above grade) of an exterior area to provide information regarding background air conditions. The samples will be analyzed for VOCs by USEPA Method TO-15.

A log sheet for each soil vapor sample will be completed to record sample identification, date and time of sample collection, sampling depth, name of the field staff responsible for sampling, sampling methods and equipment, vapor purge volumes, volume of vapor extracted, flow rate, and vacuum levels of canisters before and after sample collection.

3.5 Data Management and Validation

Laboratory analyses of soil, groundwater, and soil vapor samples will be conducted by a NYSDOH ELAP-approved laboratory in accordance with USEPA SW-846 methods and NYSDEC Analytical Services Protocol (ASP) Category B deliverable format. Environmental data will be reported electronically using the database software application EQuIS as part of NYSDEC's Environmental Information Management System (EIMS).

DRAFT

Table 1 summarizes the proposed samples and laboratory analyses. QA/QC procedures required by the NYSDEC ASP and SW-846 methods, including initial and continuing instrument calibrations, standard compound spikes, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates), will be followed. The laboratory will provide sample bottles, which will be pre-cleaned and preserved in accordance with the SW-846 methods. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP shall take precedence.

Data validation will be performed in accordance with the USEPA validation guidelines for organic and inorganic data review. Validation will include the following:

- Verification of QC sample results (both qualitative and quantitative).
- Verification of sample results (both positive hits and non-detects).
- Recalculation of 10 percent of all investigative sample results.
- Preparation of Data Usability Summary Reports (DUSR).

The DUSRs will be prepared and reviewed by the Program Quality Assurance Monitor (PQAM). The DUSRs will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain of custody (COC) procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. A detailed assessment of each sample delivery group (SDG) will follow. Additional details on the DUSRs are provided in the QAPP in Appendix C.

3.6 Management of Investigation-Derived Waste

Soil cuttings will be returned to the borehole unless:

- NAPL or grossly contaminated soil is present in the cuttings;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; or
- The soil cannot fit into the borehole.

Boreholes requiring disposal of drill cuttings will be filled with hydrated bentonite chips or clean sand and capped with asphalt or concrete. Excess investigation-derived waste (IDW), including soil cuttings, purged groundwater, and decontamination fluids, will be containerized in properly labeled and sealed United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums and temporarily staged for future waste characterization and off-site disposal at a facility permitted to accept the waste. The drums will be staged in an area on-site, pending receipt of laboratory data and off-site disposal to an appropriate facility. IDW will be removed from the site

DRAFT

within one month of completing the investigation. The site will be secured during and after investigation to prevent public access to the site.

3.7 Air Monitoring

Air monitoring will be conducted for site workers and the community pursuant to the CAMP provided as Appendix D. Air monitoring results will be recorded in the field book during the investigation activities, downloaded from field instruments and summarized in daily reports.

3.7.1 Personnel Air Monitoring

Langan will conduct air monitoring of the breathing zone periodically during drilling and sampling activities to evaluate health and safety protection for the field personnel. Initially, ambient air monitoring will be performed within the work area. Langan will monitor VOCs with a PID (MultiRAE 3000 or similar) in accordance with the HASP (Appendix B). If air monitoring during intrusive operations identifies the presence of VOCs, on-site personnel will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal protective equipment. If the VOC action level is exceeded, work will cease, and the work location will be evacuated. Monitoring will be continued until the levels drop to safe limits. At that time, work can resume with continued monitoring. If high levels persist, field activities will be halted, and the work relocated to another area. If dust emissions are observed, work will stop, and dust suppression measures will be used.

3.7.2 Community Air Monitoring Plan

Community air monitoring will be performed in compliance with the NYSDOH Generic CAMP during any intrusive work. The CAMP is included in Appendix D.

CAMP will consist of continuous monitoring for VOCs and dust emissions during ground-intrusive activities (i.e., soil boring and monitoring well installation). Two units will be deployed in the upwind and downwind directions. The locations of these CAMP stations will be determined each day in the field based on the prevailing wind direction. Upwind concentrations will be measured at the start of each workday, and periodically thereafter, to establish background concentrations. VOCs and dust emissions will be monitored at the downwind perimeter of the work zone, which will be established at a point on the site where the general public or site employees may be present. VOC monitoring will be conducted with a PID equipped with a 10.6 eV lamp. VOC community air monitoring requirements will be conducted until it is determined that the site is not a source of organic vapors and will not be terminated unless the NYSDEC and NYSDOH approve discontinuation. Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM10) and capable of averaging a period of 15 minutes (or less) for comparison to the airborne particulate action level (e.g., DustTrak). If dust emissions are observed, work will stop, and dust suppression measures will be used. The results will be presented in the daily reports (see DER-10 for details).

DRAFT

Special Requirements, as included in Appendix D, will be adhered to during ground-intrusive work within 20 feet of potentially exposed populations or occupied structures. Community air monitoring requirements will be conducted until it is determined that the site is not a source of organic vapors.

3.8 Green Remediation Standards

Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per the NYSDEC DER-31 Green Remediation Policy (DER-31). DER-31 requires the following green remediation/sustainability concepts be considered and/or implemented, to the extent feasible, during investigations:

- Increase energy efficiency/minimize total energy use and direct and indirect CO2/greenhouse gas (GHG) emissions to the atmosphere
- Reduce emissions of air pollutants
- Minimize habitat disturbance and create or enhance habitat or usable land
- Conserve natural resources such as soil and water; promote the sequestration of carbon through reforestation or afforestation
- Minimize fresh water consumption and maximize water reuse during daily operations and treatment processes
- Prevent long-term erosion, surface runoff, and off-site water quality impacts Prevent unintended soil compaction
- Minimize waste or implement beneficial use of materials that would otherwise be considered a waste
- Minimize equipment and truck idling and use sustainably produced biofuels to reduce discharges of pollutants and GHGs to the atmosphere
- Utilize clean diesel (new or retrofitted) equipment to reduce emissions to the atmosphere
- Minimize truck travel for disposal to save energy, reduce emissions, reduce localized noise, vibration, and wear and tear on roads
- Minimize use of heavy equipment to save energy and reduce emissions

During implementation of this RIWP, the following elements will be implemented, to the extent feasible, to reduce greenhouse gas and other emissions:

- Use of Ultra Low Sulfur Diesel in vehicles and machinery by drilling contractor
- Use of diesel exhaust purifier scrubbers on machinery (drill rigs) by drilling contractor
- Minimization of idling of all vehicles in accordance with 6 NYCRR Part 217 Motor Vehicle

DRAFT

Emissions, Subpart 217-3 Idling Prohibition for Heavy Duty Vehicles

- Reduction of materials consumption and off-site transport by reuse of non-impacted drilling spoils as backfill within the boring of origin and containerization of drilling spoils exhibiting visual, olfactory, and instrumental signs of contamination

3.9 Environmental Footprint Analysis

To evaluate the investigation with respect to GSR principles an environmental footprint analysis was conducted using SiteWise™. The results of the environmental footprint analysis are provided in Appendix E and detailed below.

The following metrics were quantified:

- Greenhouse Gas Emissions
- Total Energy Used
- Water Consumption
- Electrical Usage
- Onsite Nitrogen Oxides (NOx) Emissions
- Onsite Sulphur Oxides (SOx) Emissions
- Total NOx Emissions
- Total SOx Emissions
- Total PM10 Emissions

Using the above identified information, the SiteWise™ model estimated the following emissions and total energy usage:

Emissions and Energy Usage	Quantity (based on assumptions)
GHG Emissions (metric ton)	25
Total Energy Used (million british thermal unit [MMBTU])	370
Water Consumption (gallons)	100
Electricity Usage (megawatt hours [MWH])	0.0
Onsite NOx Emissions (metric ton)	0.0021
Onsite SOx Emissions (metric ton)	0.00019

DRAFT

Emissions and Energy Usage	Quantity (based on assumptions)
Total NOx Emissions (metric ton)	0.12
Total SOx Emissions (metric ton)	0.086
Total PM10 Emissions (metric ton)	0.0097

A climate screening assessment was also conducted for the investigation and is provided in Appendix F.

3.10 Qualitative Human Health and Fish/Wildlife Exposure Assessment

A Qualitative Human Health Exposure Assessment and Fish and Wildlife Resources Impact Analysis (FWRIA) will be conducted in accordance with Appendix 3B and Appendix 3C of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. These assessments will be submitted as part of the RIR.

DRAFT

4.0 REPORTING

4.1 Remedial Investigation Report

Following completion of the RI and receipt of analytical data, an RIR will be prepared. The report will include:

- A summary of the site history and previous investigations
- A description of on- and off-site conditions
- Sampling methodology and field observations
- An evaluation of the results and findings
- Conclusions and recommendations for any further assessment (if warranted), and remedial action objectives

The report will summarize the nature and extent of contamination at each area of concern and identify unacceptable exposure pathways (as determined through a Qualitative Human Health Exposure Assessment). DUSRs will be included in the RIR, and electronic data deliverables will be submitted to the NYSDEC EQuIS database prior to submission of the draft RIR.

The RIR will include soil boring, monitoring well and soil vapor point construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The tabulated analytical results will include sample location, media sampled, sample depth, field/laboratory identification numbers, analytical results and the applicable Standards, Criteria, and Guidance (SCG) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, and soil vapor points, sample concentrations above SCGs for each media, groundwater elevation contours and flow direction, and, if appropriate, groundwater contaminant concentration contours.

4.2 Daily Reports

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers by the end of each day following the reporting period and will include:

- An update of progress made during the reporting day
- Locations of work and quantities of material imported and exported from the site
- References to alpha-numeric map for site activities
- A summary of any and all complaints with relevant details (names, phone numbers)
- A summary of CAMP findings, including any exceedances
- An explanation of notable site conditions

DRAFT

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (e.g., accident, spill), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the site that identifies work areas. These reports will include a summary of CAMP results, odor and dust problems and corrective actions, and all complaints received from the public.

The NYSDEC-assigned project number will appear on all reports.

4.3 Monthly Reports

After approval of this RIWP, monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of each month following the reporting period and will include:

- Activities relative to the site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e., tons of material exported and imported, etc.)
- Description of approved activity modifications, including changes of work scope and/or schedule
- Sampling results received following internal data review and validation, as applicable
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays

4.4 Other Reporting

Photographs will be taken of all investigation activities and submitted to NYSDEC in digital format. Photos will illustrate remedial program elements and will be of acceptable quality. Representative photos will be provided of each contaminant source, source area and site structures during site investigation. Photos will be included in the daily reports as needed and a comprehensive collection of photos will be included in the Remedial Investigation Report.

Job-site recordkeeping for all remedial work will be appropriately documented. These records will be maintained on-site at all times during the project and be available for inspection by NYSDEC and NYSDOH staff.

DRAFT

5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP. A chart showing an overall project schedule is included in Appendix G. If the schedules changes, it will be updated and re-submitted to the NYSDEC.

Milestone	Weeks from NYSDEC Approval of RIWP	Estimated Duration (weeks)
RI Mobilization	2	1
RI Field Investigation	4	3
Laboratory Analysis	6	4
Remedial Investigation Report Preparation and Submission to the NYSDEC	10	6

DRAFT

Areas of Concern (AOCs):
AOC 1 - Sitewide Historical Use as a Coal and Lumber Yard
AOC 2 - Historical Site Use as a Concrete Manufacturer and Auto Parts Warehouse and Wrecking Yard
AOC 3 - Known Petroleum Impacts in Soil, Groundwater, and Soil Vapor
AOC 4 - Suspected Underground Storage Tank

Notes and abbreviations:
1. Soil sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. TBD = to be determined (in the field)
4. VOC = volatile organic compound
5. SVOC = semivolatile organic compound
6. PCB = polychlorinated biphenyl
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = quality assurance/quality control
10. NA = not applicable
11. NYSDEC = New York State Department of Environmental Conservation
12. PFAS = per- and polyfluoroalkyl substances as limited to the list of compounds designated by NYSDEC

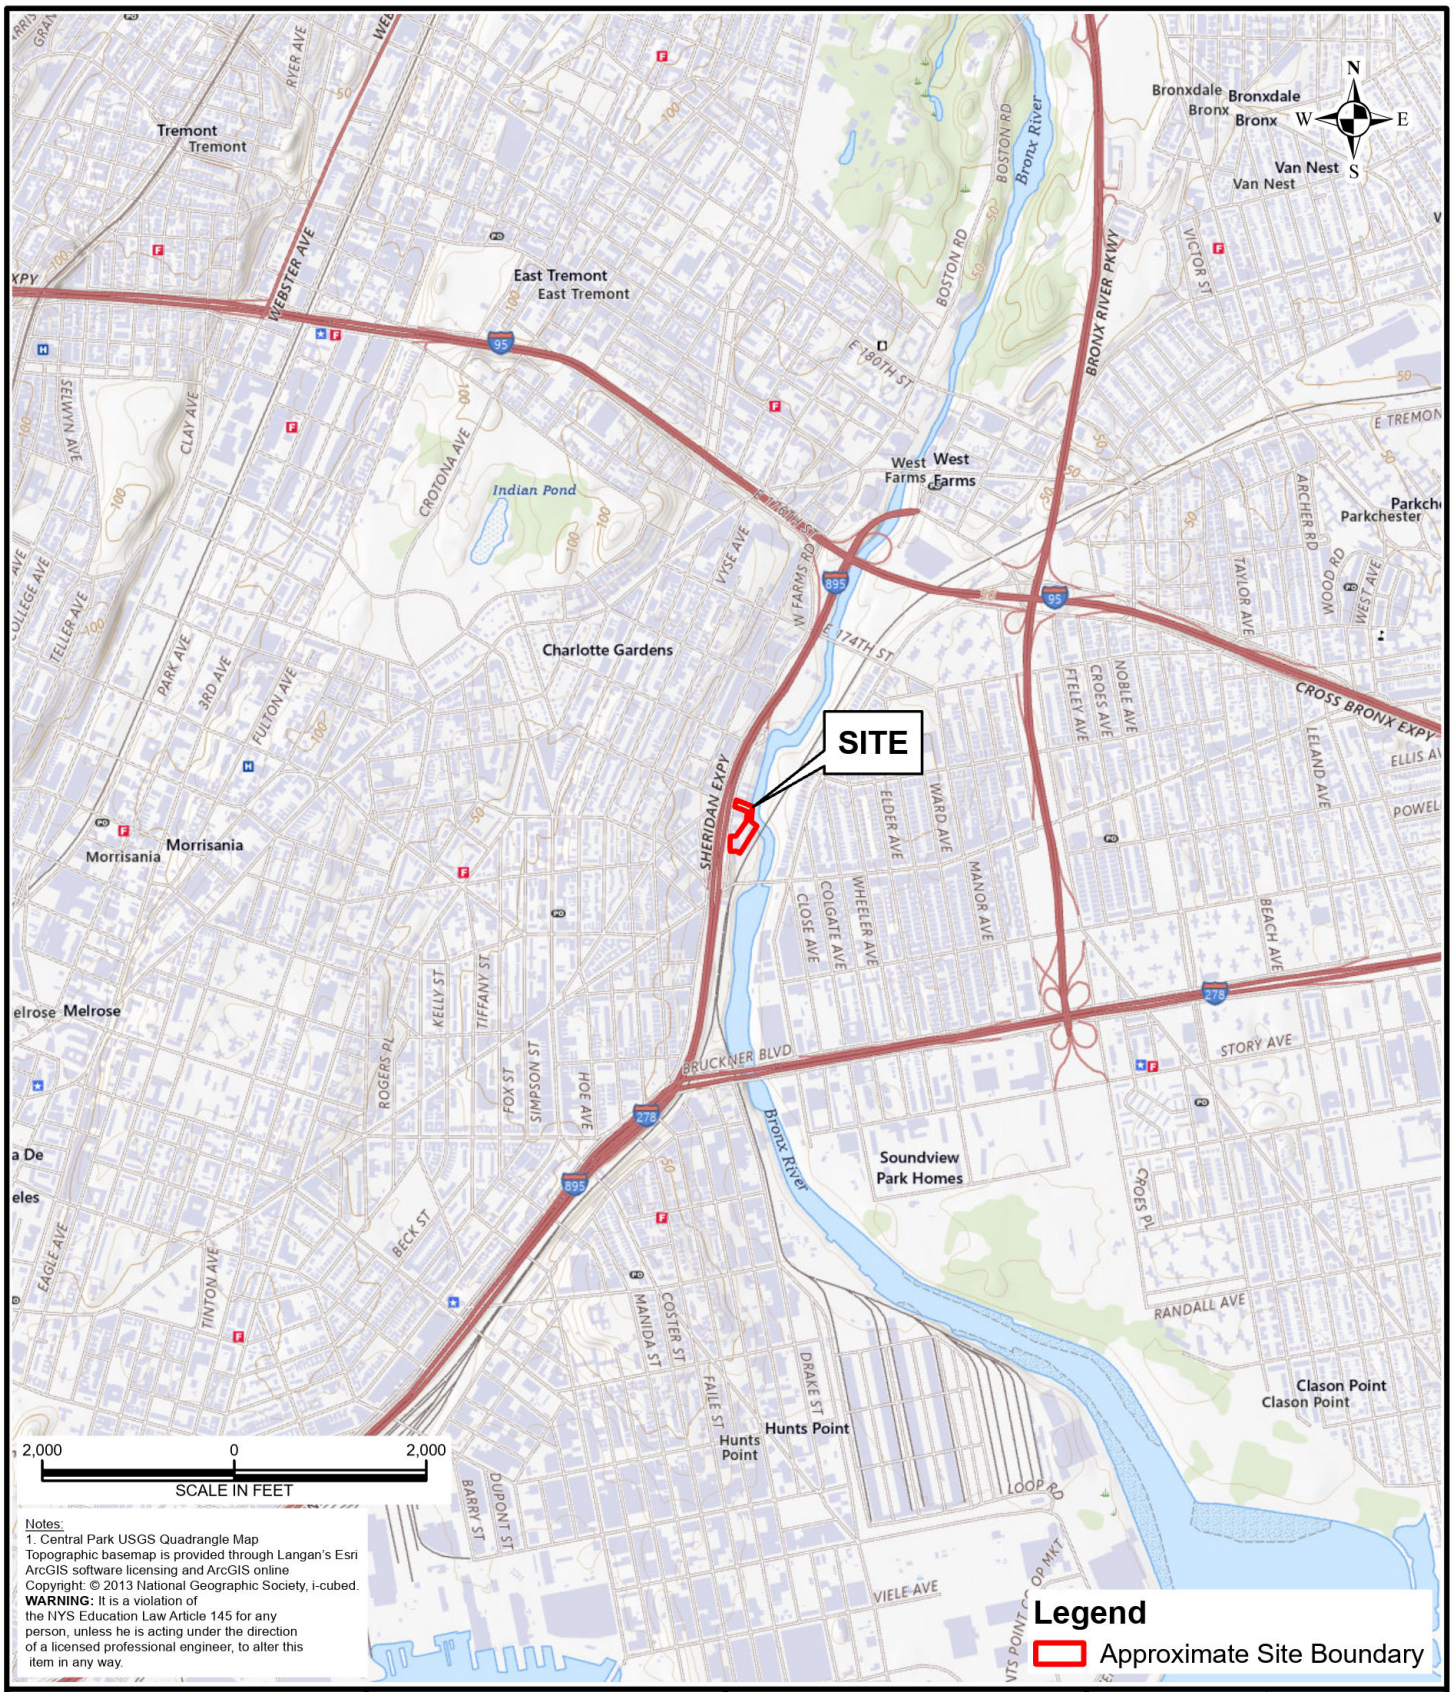

Table 2
List of Per- and Polyfluoroalkyl Substances
Remedial Investigation Work Plan

1480 Sheridan Boulevard
Bronx, New York
Langan Project No. 170824801

Compound Name	Analytical Method
Perfluoroalkyl sulfonic acids	
Perfluorobutanesulfonic acid (PFBS)	
Perfluoropentanesulfonic acid (PFPeS)	
Perfluorohexanesulfonic acid (PFHxS)	
Perfluoroheptanesulfonic acid (PFHpS)	
Perfluorooctanesulfonic acid (PFOS)	
Perfluorononanesulfonic acid (PFNS)	
Perfluorodecanesulfonic acid (PFDS)	
Perfluorododecanesulfonic acid (PFDoS)	
Perfluoroalkyl carboxylic acids	
Perfluorobutanoic acid (PFBA)	
Perfluoropentanoic acid (PFPeA)	
Perfluorohexanoic acid (PFHxA)	
Perfluoroheptanoic acid (PFHpA)	
Perfluorooctanoic acid (PFOA)	
Perfluorononanoic acid (PFNA)	
Perfluorodecanoic acid (PFDA)	
Perfluoroundecanoic acid (PFUnA)	
Perfluorododecanoic acid (PFDoA)	
Perfluorotridecanoic acid (PFTrDA)	
Perfluorotetradecanoic acid (PFTeDA)	
Per- and Polyfluoroether carboxylic acids	
Hexafluoropropylene oxide dimer acid (HFPO-DA)	
4,8-Dioxa-3H-perfluorononanoic acid (ADONA)	
Perfluoro-3-methoxypropanoic acid (PFMPA)	USEPA Method 1633
Perfluoro-4-methoxybutanoic acid (PFMBA)	
Nonafluoro-3,6-dioxaheptanoic acid (NFDHA)	
Fluorotelomer sulfonic acids	
4:2 Fluorotelomer sulfonic acid (4:2-FTS)	
6:2 Fluorotelomer sulfonic acid (6:2-FTS)	
8:2 Fluorotelomer sulfonic acid (8:2-FTS)	
Fluorotelomer carboxylic acids	
3:3 Fluorotelomer carboxylic acid (3:3 FTCA)	
5:3 Fluorotelomer carboxylic acid (5:3 FTCA)	
7:3 Fluorotelomer carboxylic acid (7:3 FTCA)	
Perfluorooctane sulfonamides	
Perfluorooctane sulfonamide (PFOSA)	
N-methylperfluorooctane sulfonamide (NMeFOSA)	
N-ethylperfluorooctane sulfonamide (NEtFOSA)	
Perfluorooctane sulfonamidoacetic acids	
N-methylperfluorooctane sulfonamidoacetic acid (N-MeFOSAA)	
N-ethylperfluorooctane sulfonamidoacetic acid (N-EtFOSAA)	
Perfluorooctane sulfonamide ethanols	
N-methylperfluorooctane sulfonamidoethanol (MeFOSE)	
N-ethylperfluorooctane sulfonamidoethanol (EtFOSE)	
Ether sulfonic acids	
9-Chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (F-53B Major) (9Cl-PF3ONS)	
11-Chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (F-53B Minor) (11Cl-PF3OUdS)	
Perfluoro(2-ethoxyethane) sulfonic acid (PFEESA)	

Notes:
1. PFAS - per- and polyfluoroalkyl substances

Exceedance Summary:

- **10** - Result exceeds Protection of Groundwater SCOs
- 10 - Result exceeds Restricted Use Restricted-Residential SCOs
- 10 - Result exceeds Restricted Use Commercial SCOs
- 10 - Result exceeds Restricted Use Industrial SCOs

Notes:

1. Aerial imagery provided through Langan's subscription to NearMap.com, flown 7/3/2025.
2. Parcel data is provided by the New York City Department of City Planning.
3. All features shown are approximate.
4. Block 3017, Lot 29 is being subdivided into two lots, Lots 29 and 30. The Brownfield Cleanup Program (BCP) site will be future Lot 29.
5. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Protection of Groundwater, Restricted Use Residential and Restricted Use Commercial Soil Cleanup Objectives (SCO) and Restricted Use Industrial (December 2025).
6. Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).
7. The criteria comparison for total chromium is provided for reference. The promulgated SCO shown is for hexavalent chromium.
8. Results are shown in mg/kg (milligrams per kilogram)
9. <RL - Not detected
10. Add note that "Soil samples taken from soil borings SB01 and SB02 during the 2026 Limited Subsurface Investigation were only analyzed for volatile organic compounds (VOC) and semi-vclatile organic compounds (SVOC).

Qualifiers:

J - The analyte was detected above the method detection limit (MDL), but below the reporting limit (RL); therefore, the result is an estimated concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

WARNING: It is a violation of the NYS Education Law Article 145 for any person, unless acting under the direction of a licensed professional engineer, land surveyor or geologist, to alter this item in any way.

Exceedance Summary:

10 - Result exceeds NYSDEC SGVs

Notes:
1. Aerial imagery provided through Langan's subscription to NearMap.com, flown 7/3/2025.
2. Parcel data is provided by the New York City Department of City Planning.
3. All features shown are approximate.
4. Block 3017, Lot 29 is being subdivided into two lots, Lots 29 and 30. The Brownfield Cleanup Program (BCP) site will be future Lot 29.
5. ECC - Environmental Compliance & Control, Inc.
6. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water and published addenda (herein collectively referenced as "NYSDEC SGVs").
7. The criteria comparison for total metals (Chromium, Total) is provided for reference. The promulgated SGV shown is for hexavalent chromium.
8. Results are shown in µg/l (micrograms per liter)
9. <RL - Not detected

Qualifiers:
G - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
J - The analyte was detected above the method detection limit (MDL), but below the reporting limit (RL); therefore, the result is an estimated concentration.
F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

WARNING: It is a violation of the NYS Education Law Article 145 for any person, unless acting under the direction of a licensed professional engineer, land surveyor or geologist, to alter this item in any way.

J - The analyte was detected above the method detection limit (MDL), but below the reporting limit (RL); therefore, the result is an estimated concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Re: Phase II Environmental Site Assessment Report
Environmental Sampling
1460 + 1480 Sheridan Expressway
Bronx, New York

Dear Ms. Guy,

Environmental Engineering Compliance Control, D.P.C. (EECC), on behalf of Sustainable Development Inc. (SDI), is pleased to submit this Phase II Environmental Site Assessment (ESA) report summarizing the subsurface investigation, environmental sampling, and laboratory analyses services performed at 1460 and 1480 Sheridan Expressway, Bronx, NY (i.e., the subject properties), which are planned to be redeveloped by Simone Development Companies (Simone) into residential complexes. A site location map is provided as **Figure 1**.

1.0 INTRODUCTION

EECC has prepared this Phase II ESA at the request of Simone for the addresses 1460 and 1480 Sheridan Expressway (herein referred to as 1460 and 1480, respectively). The purpose of this Phase II ESA was to perform intrusive soil and groundwater sampling to supplement a Phase I ESA completed by CDM Smith for the subject properties in December 2018. The Phase II ESA was also performed to provide Simone with additional environmental information regarding the subject property in relation to a proposed property redevelopment. Finally, the Phase II ESA was performed to evaluate potential site impacts from on-site historic use for possible entry into the United State Environmental Protection Agency (US EPA) Brownfield Program.

The objectives of the site assessment activities were to characterize the current on-site chemical impacts in the soil and groundwater, if any. Representative samples of soil collected at the subject properties were selected for analysis of New York State Department of Environmental Conservation (NYSDEC) target-compound-list (TCL) volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), gasoline-range organics (GRO), diesel-range organics (DRO), and target analyte list (TAL) metals. Representative groundwater samples collected at the subject property were selected for analysis of VOCs, SVOCs, TAL metals, and per- and polyfluoroalkyl substances (PFAS). This report details the findings of the Phase II sampling investigation at the subject properties.

2.0 SITE DESCRIPTION

The subject properties are owned by Simone and currently multiple commercial businesses operate on the properties. Details regarding the current property uses and historic property uses are provided below.

2.1 Physical Setting

According to the USGS 7.5–minute topographic map of the area (Central Park, 2013) and the EDR Physical Setting Source Summary, the subject property is situated in an area with a slight easterly slope and a surface elevation of approximately 8 feet above mean sea level (MSL). The groundwater flow direction is likely to the east, following the topography toward the Bronx River, which is adjacent to the subject properties. The groundwater elevation is likely influenced by the tides. The Harlem River is located approximately 2.5 miles west of the subject properties. The properties are located in a mixed residential/commercial/industrial area in the South Bronx.

2.2 Site Location and Identified Recognized Environmental Conditions

2.2.1 1460 Sheridan

The property located at 1460 is a 1.02-acre plot which is occupied by Garage Gurus, Federal-Mogul Motorparts, an automotive parts store, and Moncon, Inc., a construction drilling and foundation company which utilizes the property as an equipment yard. The automotive parts store is located on the northern portion of 1460 and is constructed with a warehouse building and a paved parking area. The equipment yard is located on the southern end of 1460 and has temporary structures made of shipping containers. To the north of 1460 is Starlight Park, to the south is the Sheridan Hotel. To the east is the Bronx River, and Sheridan Expressway is to the west.

According to the Phase I by CDM Smith, the following recognized environmental conditions (RECs) were identified on 1460:

- 1460 has been used as a coal and lumber yard, railway company, including a powerhouse, garage, bus repair, and paint shop.
- Spills and/or removals of petroleum aboveground storage tank (ASTs) and underground storage tanks (USTs) on-site and directly adjacent to the subject properties.
- Several upgradient or nearby properties were identified for their potential to impact groundwater on the subject property. The upgradient sites include known Hazardous Waste Sites, Volunteer Cleanups, Brownfields, and historic automotive properties.

2.2.2 1480 Sheridan

The property located at 1480 is a 2.34-acre plot which is a commercial parking facility and office building. There are several structures on the premises, including parking garages and bays, and an office building. To the north of 1480 is Marine Boiler and Welding, Inc., and an automobile detailing center. To the south is On the Spot Auto Collision auto repair shop. A train line runs across the southeastern end of the property. The Bronx River is to the east, and Sheridan Expressway is to the west.

According to the Phase I by CDM Smith, the following RECs were identified:

- 1480 has been used as an iron yard, concrete manufacturing, and automotive maintenance and demolition facility since the 1890s. Potentially significant residual soil and groundwater quality contamination associated with on-site fill materials and historical property use.
- Three gasoline/diesel fuel USTs were reportedly closed and removed from 1480. Details regarding the tank size, closure information and tank conditions were not provided to EECC. Additionally, four aboveground storage tanks (ASTs), including two 1,000-gallon diesel and waste oil and two 249-gallon gasoline tanks were reportedly closed in March 2014. A 1,000-gallon diesel fuel AST was reportedly removed from the site in 2017.
- Hazardous materials used at automotive repair and demolition shops may have been removed off-site using the drainage system. Trench drains were observed near the former location of a UST. Interior floor drainage systems and external storm drains located near historic car maintenance areas of the property are additional potential locations for contamination associated with former site operations.
- Stained concrete was observed on site. Reddish fluid was observed to be spilled on the concrete. This may be indicative of contamination related to site operations or poor housekeeping practices. Empty and partially full containers, spray paint cans, cleaning agents, and 5-gallon buckets were observed throughout the subject property. Debris piles were scattered in the rear southern portion of the property.
- Potential vapor intrusion with historical site use and presence of nearby commercial and light industrial properties.
- An in-ground hydraulic lift was observed in the garage warehouse at 1480. Hydraulic oil and fluids used to operate the hydraulic lift are a potential source of contamination at the site through leaks in lines or hoses.
- Several upgradient or nearby properties were identified for their potential to impact groundwater on the subject property. Sites include known Hazardous Waste Sites, Volunteer Cleanups, Brownfields, and historic automotive properties.

A Phase II ESA was recommended to identify contamination from on-site uses and historical use of the properties, and to identify any contamination from off-site sources.

3.0 INTRUSIVE ENVIRONMENTAL INVESTIGATION

ECC Horizon, Inc. (ECC Horizon) was retained to conduct the field activities associated with the intrusive environmental investigation with technical oversight and coordination provided by EECC. The following sections provide a summary of the field activities conducted at the subject properties.

3.1 Ground Penetrating Radar Survey

Prior to performing ground intrusive activities, a ground penetrating radar (GPR) survey was performed on both properties to locate potential underground utilities in the vicinity of the proposed drilling locations. Drilling locations were adjusted in the field to maintain a minimum distance of three feet away from any sub-grade utilities.

3.1.1 1460 Sheridan

No unique subsurface structures were identified on site.

3.1.2 1480 Sheridan

A UST was identified on the eastern side of the property. The approximate location of the UST and the sub-grade vent port piping are included in **Figure 3**. The UST vent stubs up from the ground at the fence line on the eastern side of the property and is piped vertically along the fence. ECC Horizon was unable to determine the size of the UST or whether the UST is active.

3.2 Intrusive Investigation

Field activities performed by ECC Horizon were conducted on October 12 through 14, 22, and 28, 2021 and included the following:

3.2.1 1460 Sheridan

- Nine soil borings were advanced to a depth of 15 feet below grade surface (bgs), or to refusal, whichever was encountered first. Soil samples were collected from the surface soil (approximately between 1 and 3 feet bgs) and from the top of the saturated zone. A total of 8 samples were analyzed for TCL VOCs, TCL SVOCs, DRO, GRO, PCBs, and TAL metals.
- Two permanent groundwater monitoring wells were installed on the property.
- Groundwater samples were collected from the two wells and analyzed for TCL VOCs, TCL SVOCs, and TAL Metals. One well was sampled and analyzed for PFAS.

A map depicting the locations of the soil boring locations and groundwater wells on 1460 is provided in **Figure 2**.

3.2.2 1480 Sheridan

- Fifteen soil borings were advanced to a depth of 10 feet bgs, or refusal, whichever was encountered first. Soil samples were collected from the surface soil (approximately between 1 and 3 feet bgs) and from the top of the saturated zone. A total of 20 samples were analyzed for TCL VOCs. TCL SVOCs, DRO, GRO, PCBs, and TAL metals.
- Three permanent groundwater wells were installed on the property.
- Groundwater samples were collected from the three wells and were analyzed for TCL VOCs, TCL SVOCs, and TAL metals. One well was sampled and analyzed for PFAS.

A map depicting the locations of the soil boring locations and groundwater wells on 1480 is provided in **Figure 3**.

3.3 Soil Boring and Soil Sample Collection

Coastal Environmental Services, Inc. (Coastal) was contracted to complete the drilling activities. Soils were recovered in dual core liners then field screened with a photoionization detector (PID) and logged. Sample collection was biased toward the highest PID reading, the surface soil interval, the top of groundwater, or any combination thereof. Samples were placed in chilled coolers and transported to Alpha Analytical Laboratory (Alpha) under chain-of-custody.

3.3.1 1460 Sheridan

Borings were advanced to a maximum depth of 15 feet bgs, or to refusal, whichever was encountered first. Drilling in this area was difficult due to the many layers of paving encountered to a depth of approximately 9 feet bgs. Refusal was generally encountered between 4 and 11 feet bgs, and only three borings on the property were advanced to 15 feet bgs, into native soil. Groundwater was encountered at approximately 9 feet bgs.

On the northern portion of 1460, fill material was encountered throughout the borings and included brick, concrete, and anthracite coal fragments. Native soils were predominantly silty sands and clay.

On the southern portion of 1460, the top 9 feet recovered in the borings were primarily identified as fill, concrete, brick, asphalt, and pavement leveling sand. Native soils on the southern portion of 1460 were generally encountered below 9 feet bgs and were identified as brown fine silt and sand, followed by soft brown clay with a slight organic odor and black staining, followed by fine sand.

3.3.2 1480 Sheridan

On the 1480 property, borings were advanced to 10 feet bgs, or refusal, whichever was encountered first, and groundwater was encountered around 4.5 feet bgs.

Soils on the 1480 property were generally characterized as historic fill with anthracite coal, brown silt and sand in the surface soil interval (to approximately 4 feet bgs), underlain by native brown/gray fine silt and clay to approximately 9 feet bgs, underlain by fine sands.

3.4 Groundwater Well Installation

A total of five permanent wells were installed across 1460 and 1480. Groundwater well locations were biased toward the soil borings with the highest PID readings, and in locations to capture potential up-gradient contamination.

Wells were installed using 4-inch diameter hollow-stem augers and 2-inch diameter polyvinyl chloride (PVC) well material. Due to the native soil stratification (clay and silt atop sand), wells were installed with augers as opposed to using direct-push methods as originally proposed to prevent the clay and silt from smearing into the sand layer, which could clog the pore space and prevent groundwater infiltration to the well.

Wells were finished at grade with a locking cap and flush mount cover. Following the installation, the wells were developed to clear the well and filter pack of debris. Wells were developed until they ran dry.

All soil cuttings and purge water were containerized for off-site disposal.

3.4.1 1460 Sheridan

Wells on 1460 were installed to a depth of 15 feet bgs and are constructed with a 0.010 slot screen installed between 5 and 15 feet bgs, and riser installed between 0 and 5 feet bgs. The annular space around the screen was filled with #2 Morrie sand to a depth of 3 feet bgs. A one-foot-thick hydrated bentonite seal was emplaced above the sand pack, then the annular space was grouted to the surface. The locations of the wells are included in **Figure 2**.

3.4.2 1480 Sheridan

Wells on 1480 were installed to a depth of 10 feet bgs with a 0.010 slot screen installed between 3 and 7 feet bgs, and riser installed between 0 and 3 feet bgs. The annular space around the screen was filled with #2 Morrie sand to a depth of 2 feet bgs. A half-foot thick hydrated bentonite seal was emplaced above the sand pack, then the annular space was grouted to the surface. The locations of the wells are included on **Figure 3**.

3.5 Groundwater Sampling

On October 28, ECC Horizon mobilized to the site to collect groundwater samples from the five monitoring wells. Groundwater samples were collected following the US EPA low flow sampling techniques as detailed in the Standard Operating Procedure (SOP)[1] with dedicated tubing for each well. PFAS samples were collected following the *Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances Under NYSDEC's Part 375 Remedial Program*, dated June 2021.

Groundwater sampling logs are included as **Attachment 1a and 1b** for 1460 and 1480, respectively. Samples were placed in chilled coolers and transported to Alpha under chain-of-custody.

4.0 RESULTS OF THE INTRUSIVE ENVIRONMENTAL INVESTIGATION

The results of the Phase II ESA are presented below.

4.1 Soil Sample Analysis Results

Analytical results of the soil samples were compared to New York Codes, Rules and Regulations (NYCRR) Part 375 Restricted Commercial (RES-C), Restricted Residential (RES-RR), and Unrestricted Use (UNRES) criteria. Results are summarized below:

4.1.1 1460 Sheridan

- **Tables 1a, 2a,** and **4a** present only the samples and compounds which exceed regulatory criteria for VOCs, SVOCs, and metals, respectively.
- No GRO or DRO constituents, or PCBs were detected above regulatory criteria on 1460.
- Only acetone was detected above regulatory criteria in sample B-22 (14-15). Acetone is a common laboratory contaminant, thus, EECC assumes the presence of acetone in the sample is not representative of the site conditions.
- SVOCs were detected above regulatory criteria in two boring locations on the northern portion of 1460.
- Metals were detected above regulatory criteria in four locations across 1460.

4.1.2 1480 Sheridan

- **Tables 1b, 2b, 3,** and **4b** present only the samples and compounds which exceed regulatory criteria for VOCs, SVOCs, PCBs, and metals, respectively.
- No GRO or DRO constituents were detected above regulatory criteria on 1480.
- VOC contamination was present predominantly in boring B-2, and the presumed downgradient location, B-3. Compounds detected include benzene,

1 The low flow sampling techniques used during the sample collection can be accessed at: https://www.epa.gov/quality/low-stress-low-flow-purging-and-sampling-procedure-collection-groundwater-samples-monitoring

ethylbenzene, toluene, and xylenes (BTEX), and other gasoline and diesel constituents. The B-2 boring was advanced through a brick paved area under parked buses and trucks. It is opined that the BTEX, and gasoline/diesel constituents originate from incidental spills from the buses and trucks in the area.

- SVOCs were detected in borings B-7 and B-8 above regulatory criteria. Slight exceedances of UNRES criteria were detected in B-2.
- PCBs were detected above RES-C and RES-RR criteria in sample B-10, which was collected outside the garage where the former hydraulic lift was located. PCBs were detected in samples B-1, B-3, and B-7 over the UNRES criteria.
- Metals were detected above regulatory criteria in many samples collected across the site.

Laboratory analytical results are included in **Attachment 2**.

4.2 Groundwater Sample Analysis Results

Groundwater samples were collected from the permanent wells installed on the properties. Analytical results were compared to New York Ambient Water Quality Standards and Guidance Values (AWQS) as defined in the Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1. Analytical results for each of the properties is discussed below.

4.2.1 1460 Sheridan

- **Table 5a** presents only the compounds which exceed regulatory criteria for VOCs, SVOCs, and metals for wells MW-4 and MW-5. All detections of PFAS compounds are included in **Table 5a**.
- Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in MW-5 at concentrations of 0.0143 µg/l and 0.0187 µg/l, respectively. NYSDEC has not established an AWQS for PFAS.[2] There is no indication that PFAS originated from an on-site use.
- SVOCs and Metals were detected above regulatory criteria in both wells on-site.

4.2.2 1480 Sheridan

- **Table 5b** presents only the compounds which exceed regulatory criteria for VOCs, SVOCs, and Metals for wells MW-1, MW-2, and MW-3. All detections of PFAS compounds are included in **Table 5b**.

2 Although PFAS does not have an AWQS, under Subpart 5-1 of Title 10 (Health) of the Official Compilation of Codes, Rules and Regulations of the State of New York, the state established drinking water standards for perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) of 0.010 µg/l (each). The PFAS concentration in the groundwater sample from MW-5 exceeded this drinking water standard.

- PFOA and PFOS were detected in well MW-1 at concentrations of 0.015 µg/l and 0.027 µg/l, respectively.
- SVOCs and Metals were detected above regulatory criteria in all wells on-site.
- VOC analysis exhibited BTEX and gasoline/diesel constituents in MW-1. MW-1 was installed in the same location as borehole B-2.

Laboratory analytical results are included in **Attachment 2**.

5.0 SUMMARY AND CONCLUSIONS

EECC completed a Phase II ESA at the request of Simone which focused on areas identified as RECs by CDM Smith's 2018 Phase ESA I report issued for the subject properties located at 1460 and 1480 Sheridan Expressway, Bronx, New York. The following conclusions are based on the laboratory analytical data and field observations from EECC's investigation:

5.1 1460 Sheridan

- Fill material, including anthracite coal, was identified in the borings collected from the property.
- SVOCs and metals were detected above regulatory criteria in both the soil and groundwater on site.
- PFOA and PFOS were detected in MW-5. There is no indication that PFAS originated from an on-site source or historic property use.

5.2 1480 Sheridan

- Fill material, including anthracite coal, was identified in the borings collected from the property.
- SVOCs and metals were detected above regulatory criteria in both the soil and groundwater on site.
- A UST is located on site. EECC recommends confirming the volume and status of the UST prior to removing it from the property. The tank may need to be registered and tank closure may need to be reported to NYSDEC depending on the volume of the tank.
- BTEX and gasoline/diesel constituents were detected above regulatory criteria in the soil and groundwater in B-2 and B-3, and MW-1, respectively. The presence of these contaminants is presumed to be from incidental spills from the busses and trucks parked atop a brick paved area.
- PCBs were detected outside the garage containing the former hydraulic lift, and above UNRES criteria in three other locations on site.
- PFOA and PFOS were detected in MW-1. There is no indication that PFAS originated from an on-site source or historic property use.

EECC appreciates the opportunity to provide these services to Simone. Please feel free to contact us should you have questions or require additional information regarding this Phase II ESA and the sampling results.

Sincerely,

Nicholas Krasnecky, P.E.

NOTES
All results reported in milligrams per kilogram (mg/kg)
B-1 - Sample ID
(4.5-5) - Sample Depth in feet below grade
NY-RESC: New York NYCRR Part 375 Commercial Criteria
NY-RESRR: New York NYCRR Part 375 Restricted-Residential Criteria
NY-UNRES: New York NYCRR Part 375 New York Unrestricted use
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
U - Not detected at the reported detection limit for the sample.
J - Presumptive evidence of compound
Exceeds RES-C
Exceeds RES-RR
Exceeds UNRES
Method Dection Limit exceeds UNRES

NOTES
All results reported in micrograms per liter (ug/L)
NY-AWQS - New York TOGS 1.1.1 Ambient Water Quality Standards criteria
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
U - Not detected at the reported detection limit for the sample.
J - Presumptive evidence of compound
F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
Exceeds AWQS TOGS 1.1.1
Method Dection Limit exceeds NY-UNRES
-- - Not analyzed

NOTES
All results reported in micrograms per liter (ug/L)
NY-AWQS - New York TOGS 1.1.1 Ambient Water Quality Standards criteria
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
U - Not detected at the reported detection limit for the sample.
J - Presumptive evidence of compound
F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
Exceeds AWQS TOGS 1.1.1
Method Dection Limit exceeds NY-UNRES
-- - Not analyzed

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number:	SHERIDAN	**Report Date:**	10/28/21

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2156166-01 through -27: The encores for Volatile Organics analysis were received beyond the required 48 hour holding time for extrusion. The client was notified and the results of the analysis are reported.

L2156166-07, -10, -18, -20, -23, -24, -31, -34, -40, and -44: At the client's request, these samples were placed on hold.

Volatile Organics

L2156166-02, -05, and -30: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

Semivolatile Organics

L2156166-01, -03, -06, -09, -11, -13, and -14: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix.

The WG1559692-2/-3 LCS/LCSD recoveries, associated with L2156166-01 through -06, -08, -09, and -11 through -14, are below the acceptance criteria for benzoic acid (3%/5%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

The WG1559757-2/-3 LCS/LCSD recoveries, associated with L2156166-37, -41, -42, and -43, are below the acceptance criteria for hexachlorocyclopentadiene (LCS 37%) and benzoic acid (2%/2%); however, they have been identified as "difficult" analytes. The results of the associated samples are reported.

Diesel Range Organics

Project Name:	1460+1480 SHERIDAN BLVD.	**Lab Number:**	L2156166
Project Number:	SHERIDAN	**Report Date:**	10/28/21

Case Narrative (continued)

L2156166-14: The sample has an elevated detection limit due to the limited sample volume utilized during extraction, as required by the sample matrix.
The WG1559572-3 Laboratory Duplicate RPD for dro (c10-c28) (29%), performed on L2156166-02, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.
WG1559761: A Matrix Spike and Laboratory Duplicate were prepared with the sample batch, however, the native sample was not available for reporting; therefore, the results could not be reported.

PCBs
L2156166-30D: The surrogate recoveries are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.
The WG1562534-1 Method Blank, associated with L2156166-28 and -38, has a concentration above the reporting limit for Aroclor 1268. Since the associated sample concentrations are non-detect to the RL, no corrective action is required.

Total Metals
L2156166-01 through -06, -08, -09, -11 through -17, -19, -21, -22, -25, -26, -27, -30, -32, -33, -35, -36, -37, -41, -42, and -43: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.
The WG1560483-3 MS recoveries for aluminum (820%), iron (307%), and lead (0%), performed on L2156166-01, do not apply because the sample concentrations are greater than four times the spike amounts added.
The WG1560483-3 MS recoveries, performed on L2156166-01, are outside the acceptance criteria for antimony (61%), cadmium (57%), cobalt (68%), copper (72%), nickel (69%), potassium (69%), and thallium (67%). A post digestion spike was performed and yielded unacceptable recoveries for antimony (58%), cadmium (50%), cobalt (62%), copper (74%), nickel (61%), potassium (78%), and thallium (61%). The serial dilution recoveries were not applicable; therefore, these elements fail the matrix test and the results reported in

Project Name:	1460+1480 SHERIDAN BLVD.	**Lab Number:**	L2156166
Project Number:	SHERIDAN	**Report Date:**	10/28/21

Case Narrative (continued)

the native sample should be considered estimated.

The WG1560483-3 MS recoveries, performed on L2156166-01, are outside the acceptance criteria for barium (73%), calcium (64%), chromium (57%), and manganese (53%). A post digestion spike was performed and yielded unacceptable recoveries for barium (76%), calcium (67%), chromium (70%), and manganese (63%). The serial dilution recoveries were not acceptable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.

The WG1560487-3 MS recovery, performed on L2156166-01, is outside the acceptance criteria for mercury (193%/125%). A post digestion spike was performed and was within acceptance criteria.

The WG1560492-3 MS recoveries for aluminum (56%), iron (782%), and manganese (0%), performed on L2156166-27, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1560492-3 MS recoveries, performed on L2156166-27, are outside the acceptance criteria for antimony (60%), cobalt (73%), and lead (68%). A post digestion spike was performed and yielded unacceptable recoveries for antimony (79%), cobalt (75%), and lead (73%). The serial dilution recoveries were not applicable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.

The WG1560493-3 MS recovery, performed on L2156166-27, is outside the acceptance criteria for mercury (125%). A post digestion spike was performed and was within acceptance criteria.

The WG1560483-4 Laboratory Duplicate RPDs for barium (31%), calcium (72%), copper (30%), lead (177%), and potassium (24%), performed on L2156166-01, is outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

The WG1560492-4 Laboratory Duplicate RPD for manganese (24%), performed on L2156166-27, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1560483-6 serial dilution analysis, associated with L2156166-01, had a %D above the acceptance criteria for aluminum (23%), barium (28%), calcium (30%), chromium (29%), iron (31%), lead (32%), magnesium (30%), manganese (30%), and vanadium (27%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Project Number: SHERIDAN **Report Date:** 10/28/21

SAMPLE RESULTS

Lab ID: L2156166-43 Date Collected: 10/14/21 11:40

Client ID: B-20 (11-12) Date Received: 10/14/21

Sample Location: BRONX, NY Field Prep: Not Specified

Sample Depth:

Matrix: Soil

Percent Solids: 80%

Parameter	Result	Qualifier	Units	RL	MDL	Dilution Factor	Date Prepared	Date Analyzed	Prep Method	Analytical Method	Analyst

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	1460+1480 SHERIDAN BLVD.	**Lab Number:**	L2156166
Project Number:	SHERIDAN	**Report Date:**	10/28/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	1460+1480 SHERIDAN BLVD.	**Lab Number:**	L2156166
Project Number:	SHERIDAN	**Report Date:**	10/28/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

Project Name:	1460+1480 SHERIDAN BLVD.	**Lab Number:**	L2156166
Project Number:	SHERIDAN	**Report Date:**	10/28/21

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: SHERIDAN **Lab Number:** L2159421
Project Number: Not Specified **Report Date:** 11/15/21

Case Narrative (continued)

Report Submission
November 15, 2021: This final report includes the results of all requested analyses.
November 05, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt
The analyses performed were specified by the client.

Volatile Organics
L2159421-04: The pH of the sample was greater than two; however, the sample was analyzed within the method required holding time.

Semivolatile Organics
The WG1565519-2/-3 LCS/LCSD recoveries, associated with L2159421-01 through -06, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Semivolatile Organics by SIM
L2159421-01D: The sample has elevated detection limits due to the dilution required by the sample matrix.

Perfluorinated Alkyl Acids by Isotope Dilution
L2159421-01: The sample was centrifuged and decanted prior to extraction due to sample matrix.
L2159421-01 and -05: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.
WG1569327-4: Extracted Internal Standard recoveries were outside the acceptance criteria for individual

Project Name: SHERIDAN **Lab Number:** L2159421
Project Number: Not Specified **Report Date:** 11/15/21

Case Narrative (continued)

analytes. Please refer to the surrogate section of the report for details.

Total Metals

L2159421-06: The Field Blank has a result for sodium present above the reporting limit. The sample was verified as being labeled correctly by the laboratory and the previous analysis showed there was no potential for carry over.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SHERIDAN	**Lab Number:**	L2159421
Project Number:	Not Specified	**Report Date:**	11/15/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	SHERIDAN	**Lab Number:**	L2159421
Project Number:	Not Specified	**Report Date:**	11/15/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

Project Name: SHERIDAN
Project Number: Not Specified
Lab Number: L2159421
Report Date: 11/15/21

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

SUBJECT: Phase I Environmental Site Assessment
Targeted Brownfields Assessments
1460 and 1480 Sheridan Expressway
Bronx, New York

Dear Ms. Devine:

CDM Federal Programs Corporation (CDM Smith) is pleased to submit the Phase I Environmental Site Assessment conducted at the Targeted Brownfields Assessment 1460 and 1480 Sheridan Expressway in Bronx, New York.

If you have any questions regarding this report, please contact me at your earliest convenience at (212) 377-4527.

Very truly yours,

CDM SMITH FEDERAL PROGRAMS CORPORATION

Executive Summary

This report presents the results of the CDM Federal Programs Corporation (CDM Smith) Phase I Environmental Site Assessment (ESA) for the 1460 and 1480 Sheridan Expressway Targeted Brownfields Assessment (TBA) site, herein referred to as the "Site" or "subject properties" located at 1460 and 1480 Sheridan Expressway, Bronx County, New York (Figure 1-1). This Phase I ESA was conducted on behalf of the U.S. Environmental Protection Agency (EPA) in response to a request from the South Bronx Overall Economic Development Corporation (SoBro) (the Grantee), who intends to use the subject properties for redevelopment to provide public access to the waterfront and improve quality of life for surrounding residents.

According to local tax records, the parcel numbers for the subject properties are Block 3017, Lot 74 (1460 Sheridan Expressway) and Block 3017, Lot 29 (1480 Sheridan Expressway). The approximately 3-acre properties are owned by PDJ Simone Realty Co. The subject properties at 1460 and 1480 Sheridan Expressway were historically used for industrial and commercial purposes and operated for a variety of businesses since the late 1890s, including as an automotive repair and demolition facility, concrete slab manufacturing facility, iron yard, coal and lumber yard, and a railway company. 1460 Sheridan Expressway is currently used as an automotive parts shop. 1480 Sheridan Expressway is a mixed-use lot, predominantly used as a long- and short-term parking yard, with several open garage spaces and an office area. Both properties are currently zoned for industrial use. The subject properties are situated in a mixed residential/commercial/industrial area in the South Bronx and is secured with metal fencing.

This Phase I ESA was conducted in general accordance with the following:

- EPA All Appropriate Inquires (AAI) Rule (40 Code of Federal Regulations [CFR] Part 312)
- American Society for Testing and Materials (ASTM) International Standard E1527-13 (Standard Practice for ESAs: Phase I ESA Process)
- New York Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation-10 (DER-10) Technical Guidance for Site Investigation and Remediation dated May 2010
- Title 6 of the New York Code of Rules and Regulations Part 375 Remediation Programs (6 NYCRR Part 375)

Based on CDM Smith's review of file information, databases, and historical records review and reconnaissance, the following recognized environmental conditions (RECs) are identified:

REC 1 – Historical Use: 1460 Sheridan Expressway has been used as a coal and lumber yard, railway company, including a powerhouse, garage, bus repair, and paint shop. 1480 Sheridan Expressway has been used as an iron yard, concrete manufacturing, and automotive maintenance and demolition facility since the 1890s. Based on CDM Smith's review of historical aerial photographs, Sanborn maps, and other documents, the adjacent properties to the subject properties have been used in similar industrial settings since the 1950s. Hazardous materials

used or generated by the subject properties would likely have included solvents, cleaners, waste oil, coolants, and petroleum products.

REC 2 – Underground and Aboveground Storage Tanks: Three gasoline/diesel fuel underground storage tanks (USTs) were reportedly closed and removed from 1480 Sheridan Expressway. No documentation of post excavation sampling during the removal activities or confirmation of absence of contamination at these locations was available at the time of this Phase I ESA. Additionally, four aboveground storage tanks (ASTS), including two 1,000-gallon diesel and waste oil and two 249-gallon gasoline tanks, located at 1480 Sheridan Expressway were reportedly closed in March 2014. A 1,000-diesel fuel AST was reportedly removed from the site in 2017.

REC 3 – Drainage: Hazardous materials used at automotive repair and demolition shops may have been removed off-site at 1480 Sheridan Expressway using the drainage system. Trench drains were observed near the former location of a UST. Interior floor drainage systems and external storm drains located near historic car maintenance areas of the property are additional potential locations for contamination associated with former site operations.

REC 4 – Hydraulic Lifts: An in-ground hydraulic lift was observed in the garage warehouse at 1480 Sheridan Expressway. Hydraulic oil and fluids used to operate the hydraulic lift are a potential source of contamination at the site through leaks in lines or hoses.

REC 5 – Vapor Intrusion: Potential vapor intrusion issues associated with historical operations and neighboring commercial and light industrial properties may be present at the site.

REC 6 – Staining and Potentially Hazardous Material/Debris: Stained concrete was observed at 1480 Sheridan Expressway. Reddish fluid was observed to be spilled on the concrete. This may be indicative of contamination related to site operations or poor housekeeping practices. Empty and partially full containers, spray paint cans, cleaning agents, and 5-gallon buckets were observed throughout the subject property. Debris piles were scattered in the rear southern portion of the property.

REC 7 – Potential Off-site Contamination: Several upgradient or nearby properties were identified for their potential to impact groundwater on the subject properties. Upgradient or nearby properties and their respective distance from the subject properties include:

- Bethel Cleaners (0.365 miles), which is listed as a New York Solid Hazardous Waste Site (NY SHWS) (site with on-site sources of volatile organic compounds [VOCs] impacting soil and indoor air). Impacts to groundwater could not be assessed due to drilling refusal; however, groundwater is not used as a drinking water source in the area. The primary contaminants of concern in soil are tetrachloroethene (PCE), xylene, and 1,2,4-trimethylbenzene.
- 1544 Boone Avenue (0.071 miles), which is listed as a Voluntary Cleanup Program (VCP) site with contaminated soil, groundwater, and soil vapor on-site. Approximately 10 historic USTs were on-site. Soil sample results detected several VOCs, semi-volatile organic compounds (SVOCs), and heavy materials at concentrations exceeding regulatory

standards. A total of 3,777 tons of petroleum-impacted soil and 96,000 gallons of petroleum-impacted groundwater have been removed from the site.

- 1560 Boone Avenue (0.113 miles), which is listed as a VCP site with historical uses as a contractor's shop, automotive repair shop, machine shop, and metal door manufacturing shop. Contaminants of concern at this site include VOCs, SVOCs, copper, lead, and mercury.
- 1125 Whitlock Avenue (0.355 miles), which is listed as a VCP site previously occupied by a plastics manufacturer and used as storage with small automotive repair shops. Historical data show previous uses of the parcel as a gas station and automotive garages. VOCs, SVOCs, and metals were detected at concentrations exceeding cleanup objectives.
- 1825 Boston Road (0.492 miles), which is listed as a VCP site previously used as a transit rail car and bus maintenance and repair facility for approximately 100 years. Two 5,000-gallon tanks and one 10,000-gallon tank was removed from the site in the 1990s. Based on historical use, petroleum products and solvents are among potential contaminants at this site.
- 1095 Southern Boulevard (0.430 miles), which is listed as a New York Brownfields site. Historically, this parcel has been used for commercial businesses, including a dry cleaning facility. Known or suspected contaminants include chlorinated solvents, PCE, trichloroethylene, 1,2-dichloroethene, chlorinated VOCs, and metals. Soil, groundwater, and soil vapor at this property have shown significant concentrations of the contaminants of concern.
- Historical auto stations within 0.125 miles of the subject properties represent a high potential for impacting the site's groundwater. Expressway service station (0.043 miles), J & L Auto Service (0.047 miles), and Esteven Service Station (0.121 miles) have auto-related operations dating to the 1960s. These three sites are a potential source of off-site contamination to the subject properties.

Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, these sites should be evaluated as primary responsible parties.

Other Items of Environmental Concern:

- ***Lead-Based Paint (LBP):*** Structures located at 1460 and 1480 Sheridan Expressway was constructed prior to 1977. Therefore, the buildings have a significant potential for LBP and/or LBP dust. Materials removed as part of property redevelopment should be characterized for lead prior to handling and disposal.
- ***Asbestos-Containing Materials (ACMs):*** The manufacturing of most ACMs was banned in 1979. Prior to this time, asbestos was a common constituent of numerous building materials such as floor and ceiling tiles, mastic, caulking, pipe insulation, window glazing, roofing materials, and exterior siding. No suspected ACMs were observed during CDM Smith's reconnaissance. However, based on the age of buildings on the subject properties, materials removed as part of property redevelopment may contain ACMs. Materials

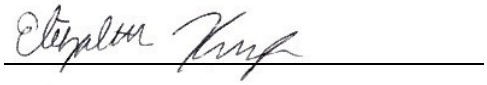
removed as part of property redevelopment should be characterized for asbestos prior to handling and disposal.

- ***Light Ballasts:*** Structures at 1460 and 1480 Sheridan Expressway were observed to have fluorescent light ballasts in place. Prior to 1979, polychlorinated biphenyl (PCB)-containing oils were commonly used in transformers and fluorescent light ballasts, after which these uses were banned. Proper handling and disposal of the light ballasts should be used during property redevelopment.

Based on the presence of RECs, a Phase II site investigation (SI) is recommended at the subject properties to confirm the presence of hazardous materials. The following components should be considered for the Phase II SI:

- Geophysical survey to identify the presence of any potential USTs, vaults, buried drums/containers, underground piping, buried building foundations, buried utilities, or subsurface anomalies at and around the properties.
- Surface and subsurface soil sampling to investigate the potential for soil contamination. During soil sampling, soil screening, using a photoionization detector (PID) to assist in site assessment and selection of soil sampling intervals, should be performed.
- Groundwater sampling via temporary well point or screen point sampling to determine groundwater flow and potential for groundwater contamination.
- Soil vapor sampling to investigate potential vapor intrusion.

Analysis should include VOCs, SVOCs, polycyclic aromatic hydrocarbons (PAHs), PCBs, petroleum hydrocarbons, and metals. Soil analytical results must be compared to NYSDEC Subpart 375-6 restricted residential use soil cleanup objectives, and groundwater analytical results to NYSDEC Class GA Groundwater Criteria.



Based on the properties' historical operations, concern for exposure could exist during future earthwork and health and safety precautions should be considered. Construction worker and subject property worker use scenarios should be considered during any redevelopment plan. It is recommended that the owner, or future use developer, enlist a professional engineer to develop a health and safety plan, construction contingency plans, and a soils management plan to safely and appropriately remove (or control) potentially impacted materials. During any future construction activities at the property, it is recommended that all waste and excavated materials be tested, appropriately managed, and properly disposed.

Considering the lack of information regarding the current state of the subsurface materials beneath the subject properties and the known impacts of nearby properties, the quality of soils may not meet residential criteria and may preclude portions of the subject properties from certain future uses.

Declaration of Environmental Professional

I declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in § 312.10 of this part.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 1
Introduction

This report presents the results of the CDM Federal Programs Corporation (CDM Smith) Phase I Environmental Site Assessment (ESA) for the 1460 and 1480 Sheridan Expressway Targeted Brownfields Assessment (TBA) site, herein referred to as the "Sites" or "subject properties" located at 1460 and 1480 Sheridan Expressway in Crotona Park East/West Farms, Bronx County, New York (Figure 1-1). This Phase I ESA was conducted on behalf of the U.S. Environmental Protection Agency (EPA) in response to a request from the South Bronx Overall Economic Development Corporation (SoBro) (the Grantee), who intends to use the subject properties for city redevelopment to provide public access to the waterfront and improve quality of life for surrounding residents. Current plans for the subject properties include mixed-use residential buildings with ground floor commercial spaces.

The subject properties are surrounded by a mix of residential, commercial, and industrial properties. According to New York City Department of Finance tax maps, the subject properties are listed as Block 3017, Lot 74 (1460 Sheridan Expressway) and Block 3017, Lot 29 (1480 Sheridan Expressway). The subject properties are approximately 3 acres combined and are owned by PDJ Simone Realty Co. 1460 Sheridan Expressway is currently used as an automotive parts shop. 1480 Sheridan Expressway is a mixed-use lot, predominantly used as a long- and short-term parking yard, with several open garage spaces and an office area. Both properties are currently zoned for industrial use.

1.1 Purpose and Objectives

The purpose of this Phase I ESA is to identify the presence of recognized environmental conditions (RECs) at the subject properties and to determine if a site investigation (SI) is needed. RECs refer to the presence or likely presence of any hazardous substances or petroleum products under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the properties or into the ground, groundwater, or surface water of the properties.

This Phase I ESA was conducted in general accordance with the following:

- EPA All Appropriate Inquires (AAI) Rule (40 Code of Federal Regulations [CFR] Part 312)
- American Society for Testing and Materials (ASTM) International Standard E1527-13 (Standard Practice for ESAs: Phase I ESA Process)
- New York Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation-10 (DER-10) Technical Guidance for Site Investigation and Remediation dated May 2010
- Title 6 of the New York Code of Rules and Regulations Part 375 Remediation Programs (6 NYCRR Part 375)

The assessment procedures used to conduct this Phase I ESA included a review of file information, a request and review of government records, interviews, and reconnaissance of the subject properties. This report summarizes these procedures and the subsequent conclusions developed by CDM Smith.

1.2 Scope of Work

Upon receipt of the notice to proceed, CDM Smith arranged a conference call with EPA and SoBro officials to discuss the purpose of the Phase I ESA and to gather background information on the current and historical use of the subject properties. CDM Smith also initiated a database/records search of the subject properties and requested copies of all available property records from EPA and City of New York. The database/records search and user-provided information were used to develop background information, identify points of contact that could provide access to the properties, and provide working knowledge of the properties' history. CDM Smith has based its conclusions on the above sources and on observations made during reconnaissance. The following paragraph summarizes specific sources used to acquire information for this report.

CDM Smith performed reconnaissance of the subject properties on October 26, 2018, to obtain information on current conditions of the immediate and surrounding areas. The reconnaissance was performed by Elizabeth Krupka and Emily Wong of CDM Smith. Ms. Krupka and Ms. Wong were accompanied by Kathryn Wheeler (SoBro point of contact) and Al Nesheiwat (owner's representative). Copies of the reconnaissance photographs are provided in Appendix A.

CDM Smith reviewed the results of the Environmental Data Resources, Inc. (EDR) search of state and federal environmental databases to meet the search requirements of EPA AAI and ASTM E 1527-13 for the evaluation of environmental risk associated with a parcel of real estate. The EDR Radius Report (EDR 2018g) identifies databases including the following:

- Federal National Priority List (NPL) Sites existing near the Sites
- Any past or current hazardous waste disposal on the subject properties
- Reported petroleum or hazardous waste releases
- Listed hazardous waste generation, transportation, storage, or disposal facilities
- Listed solid waste disposal facilities
- Reported leaking underground storage tanks (USTs)
- Listed USTs

EDR also conducted an environmental lien search for the subject properties. A copy of the environmental lien search is provided in Appendix B. Records requests were submitted to NYSDEC, New York State Department of Health (NYSDOH), New York State Department of Labor (NYSDOL), New York State Department of State, New York City Department of Environmental Protection (NYCDEP), and EPA Region 2. Additionally, CDM Smith conducted internet searches for information relevant to the subject properties. A copy of information obtained through record

requests and internet searches for the subject properties is provided in Appendix C. The EDR radius report is provided in Appendix D.

Aerial photographs of the subject properties that were provided by EDR and were reviewed as part of this Phase I are included in Appendix E. Historical 15- and 7.5-minute series topographic maps provided by EDR were reviewed for the subject properties and are included in Appendix F. Sanborn maps provided by EDR were reviewed for the subject properties and are included in Appendix G. A city directories report prepared by EDR and reviewed for the subject properties is included in Appendix H. A building permit report prepared by EDR and reviewed for the subject properties is provided in Appendix I.

Phase I reports were previously completed in 2017 for each of the subject properties. Copies of the reports are provided in Appendix J and Appendix K.

1.3 Limitations and Statement of Use

The results of this Phase I ESA are based on a review of information obtained during reconnaissance, interviews, historical records review, and review of acquired environmental regulatory agency documents and property information obtained by CDM Smith. Furthermore, this assessment has been prepared and conducted under the guidance of an environmental professional as defined in EPA 40 CFR Part 312, Standards and Practices for AAI. The conclusions therefore represent CDM Smith's professional opinions based on these sources of information.

A Phase I ESA is not a comprehensive subject property characterization or regulatory compliance audit and should not be construed as such. CDM Smith cannot represent that the subject properties contain no hazardous or toxic materials, products, or other latent conditions beyond that observed by CDM Smith during the Phase I ESA. The performance of this Phase I ESA is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with the subject properties. Further, the services herein shall not be construed, designed, or intended to be relied upon as legal interpretation or advice. This Phase I ESA report for the TBA site located at 1460 and 1480 Sheridan Expressway was prepared for the exclusive use of EPA. It is not intended for use by any other parties. Use of this report by any other party is at the party's sole risk without liability to CDM Smith. This Phase I ESA does not formally cover issues regarded as business environmental risk. Business environmental risk is a risk associated with the parcel that is beyond the scope of a standard ASTM Phase I ESA but which may be prudent to evaluate as a part of the Phase I ESA. The ASTM standard for Phase I ESAs was originally designed to invoke the innocent landowner defense to Superfund liability. However, many clients use the Phase I ESA for a different purpose, that is to evaluate a variety of "environmental" risks associated with a property transaction. This is why the term "business environmental risk" has now made its appearance in the standard. Examples of business environmental risk include:

- Asbestos
- Lead-based Paint
- Radon
- Regulatory Compliance

- Cultural and Historical Resources
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Wetlands Delineation
- Endangered Species
- Indoor Air Quality
- Biological Agents
- High Voltage Power Lines
- Lead in Drinking Water
- Mold

The ASTM standard recommends that the need for consideration of specific business environmental risks is determined and agreed upon by the client and the consultant before conducting the Phase I ESA.

As per ASTM E1527-13, data gaps are defined as "a lack of or inability to obtain information required by ASTM E-1527-13 despite good faith efforts by the environmental professional to gather such information." The Phase I ESA performed for the subject properties is considered complete and does not include data gaps.

1.4 Previous Environmental Investigations

The following reports were available for review:

- LCS Inc. *Phase I Environmental Assessment Report: 1460 Sheridan Expressway*. October 2017.
- Team Environmental Consultants, Inc. *Phase I Environmental Assessment Report: 1480 Sheridan Expressway*. May 2017.

The ESAs were conducted at the request of the property owner to identify RECs on-site. The Phase I reports identified potential or existing environmental contamination based on historical and background information at the subject properties and designated RECs. The RECs identified for 1460 Sheridan Expressway include:

- Historical use of the subject properties and their adjacent lots as a railway powerhouse, bus repair and paint shop, ironwork operations facility, and auto parts shop.
- Spills and/or removals of petroleum aboveground storage tanks (ASTs) and USTs on-site and directly adjacent to the subject properties.

- Adjacent properties of potential environmental concern.

The RECs identified for 1480 Sheridan Expressway include:

- Potentially significant residual soil and groundwater quality contamination issues associated with on-site fill materials and historical property use as a coal storage yard, concrete slab manufacturing, and vehicle dismantling operations.
- Spills and/or removals of ASTs and USTs on-site and directly adjacent to the subject properties.
- Interior floor drainage structures, exterior storm drainage systems, and a reported on-site oil/water separator allegedly discharging into the Bronx River.
- Potential vapor intrusion issues with historical site use and presence of nearby commercial and light industrial properties.

1.5 Qualifications of Environmental Professionals

Principal Environmental Professional:	Elizabeth Krupka, ENV SP
Professional Experience	16 Years
Education:	MPH, Environmental and Occupational Health, 2018; MS, Environmental Science, 2004; and BS, Environmental Science, 2001, Rutgers University
Project Role:	Environmental Professional
Principal Technical Review:	Jessica Beattie, P.G., ENV SP
Professional Experience:	21 Years
Education:	ME, Environmental Engineering Stevens Institute of Technology, 2004 and BA, Geological Science, SUNY Geneseo, 1997
Project Role:	Technical Review

This page intentionally left blank.

Section 2
Project Description

2.1 Project Location

The subject properties are located at 1460 and 1480 Sheridan Expressway, Bronx, New York. The sites are bounded on the west by Sheridan Expressway and are bounded on the east by the Bronx River. Bronx County was first settled in the 1600s and was incorporated into New York City as one of five boroughs beginning in 1874. It is approximately 42 square miles. As part of a large metropolitan area, the Bronx is composed of a wide variety of land use, including residential properties, commercial businesses, and industrial settings. It is bordered to the north by Westchester County and to the south by Manhattan. It is separated from New Jersey on the west by the Hudson River and separated from Queens on the east by the East River.

2.2 Site Conditions and Current Uses

The subject properties are collectively approximately 3 acres and are currently owned by PDJ Simone Realty Co. 1460 Sheridan Expressway (0.94 acres) is currently an automotive parts shop, Auto Yard Auto Parts, and occupies a large 14,000-square-foot building. The newly remodeled two-story building contains office space and is attached to a large warehouse. 1480 Sheridan Expressway (1.93 acres) is currently used as a long- and short-term parking yard, with five garage buildings and an office area. The subject properties are currently designated for industrial use and are secured with metal gates, fencing, and wiring. Unused construction equipment and materials are found in the rear of the site. The garage buildings on-site exhibit some damage, including chipped paint, damaged walls, and rusted metal. Stains, likely from petroleum products, can be seen on concrete across the lot.

Surface conditions of the subject properties are shown on Figure 1-1, and site photographs are provided in Appendix A.

2.3 Past Uses of the Subject Properties

Historical maps and documentation indicate that the subject properties were occupied by commercial and industrial businesses dating to the 1890s. Based on this information, the subject properties have been occupied by the following:

1460 Sheridan Expressway		
Occupant Name	**Description**	**Dates**
Unknown	Coal and wood yard	1893
Union Railway Company	Coal yard	1903
Union Railway Company	Garage and store with oil and paints storage on-site	1915
Third Avenue Railway System & Surface Transportation Corporation	Paint shop, storage, bus repair shop, blacksmith shop, welding	1950
Unknown	Iron yard	1970s–1980s

1460 Sheridan Expressway		
Occupant Name	**Description**	**Dates**
Belco Steel Corp.	Iron yard	1980s–2005
Hunts Point Auto Wreckers	Iron yard, automotive demolition	2005

1480 Sheridan Expressway		
Occupant Name	**Description**	**Dates**
Unknown	Coal and lumber yard	1896
Unknown	Coal yard	1901
Olin J. Stephens Coal & Wood Yard	Coal and wood yard	1915
Flexicore Co.	Concrete slab manufacturing with shop and shed	1950
Gorbetta Construction Co., Inc.	Contractors yard with shop and storage	1977–1978
Unknown	Contractors yard with shop and storage	1979–2007

2.4 Current and Past Uses of Surrounding Properties

The subject properties are located along Sheridan Expressway in the South Bronx. They are bounded to the east by Sheridan Expressway and to the west by the Bronx River. Historical use of the properties surrounding the subject properties have been predominantly commercial and industrial businesses, including laundromats, steel storage, and welding companies. Current uses of lots immediately adjacent to the subject properties include a hotel and automotive junk and repair shops. As part of a large metropolitan city, residential houses, apartment buildings, and other commercial properties quickly developed in the neighborhood where the subject properties are located, beginning in the late 1800s. The local area continues to be improved with schools, new housing, and a variety of businesses.

Section 3
Environmental Setting

3.1 Physical Setting

The 2013 Central Park and Flushing 7.5-minute series topographic map (EDR 2018f) shows the subject properties situated at an elevation of approximately 8 feet above mean sea level, with a slight slope east toward the Bronx River. The subject properties immediately border the Bronx River along the eastern property boundary and are a part of the Long Island Sound Drainage Basin. The Harlem River is located approximately 2.5 miles west of the subject properties. A copy of the Central Park and Flushing 7.5-minute series topographic map is provided as Figure 3-1.

3.2 Soil

The U.S. Department of Agriculture (USDA) Soil Conservation Service leads the National Cooperative Soil Survey and is responsible for collecting, storing, maintaining, and distributing soil survey information for privately owned lands in the U.S. A custom soil map was generated using the USDA Natural Resource Conservation Service WebSoil survey website on October 29, 2018.

The subject properties are identified as being on 100 percent urban land. The soil surface texture and hydrologic group are not identified.

3.3 Geologic Conditions

The EDR radius report identifies the rock stratigraphic unit as classified as being Paleozoic Era, Ordovician system, and Middle Ordovician (Mohawkian) series. Subordinate soils that may appear in the vicinity of the subject properties include silt loam, loamy sand, sandy loam, and fine sandy loam. (See Appendix D, A-4.) According to the *Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties, New Yor*k (USGS 1992) Hartland Formation (Middle Ordovician to Lower Cambrian), which consists of gray and medium-gray thinly laminated and fine-grained muscovite-biotite-quartz schist with minor garnet; white to pinkish white fine to medium-grained gneissic quartz-microcline-muscovite-biotite-plagioclase granite with minor garnet, dark greenish-black quartz-biotite-hornblende amphibolite with some white and pink granite pegmatite; and gray unevenly foliated sillimanite-plagioclase-muscovite-biotite-microcline-quartz gneissic schist with minor garnet and mica-feldspar.

3.4 Hydrogeologic Conditions

CDM Smith reviewed the well search information provided by EDR (EDR 2018g), which reported that three U.S. Geological Survey (USGS) wells within 1 mile of the subject properties. Hydrogeologic information obtained through the wells' installation can be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, when

downgradient sites might be impacted. Groundwater at the subject properties is expected to flow east toward the Bronx River. The subject properties are located within the 100-year floodplain.

There are three wells located within one-half mile of the subject properties, and no public supply water wells are within 1 mile. As part of the USGS program for disseminating water data within USGS, to USGS cooperators, and to the general public, the USGS maintains a distributed network of computers and fileservers for the acquisition, processing, review, and long-term storage of water data. These water data are collected at over 1.5 million sites around the country and at some border and territorial sites. This distributed network of computers is called the National Water Information System (NWIS). Details provided for each USGS well located within 1 mile of the subject properties are presented below.

Well ID	Monitor Location	Site Type	Aquifer	Well Depth (feet)	Hole Depth (feet)	Groundwater Data Provided
USGS40000833952	B51	Well	Not Reported	350	Not Reported	No
USGS40000834130	B76.1	Well	New England crystalline-rock	20	80	No
USGS40000833763	B55	Well	Not Reported	210	69	No

Section 4

User Provided Information

4.1 Environmental Liens or Activity and Use Limitations

An environmental LienSearch report (EDR 2018d) for the subject properties was prepared by EDR for CDM Smith. The EDR Environmental LienSearch Report includes search results of available current land title records for environmental cleanup liens and other activity use limitations, including engineering and institutional controls. No environmental liens or other activity and use limitations were identified for the subject properties. The Environmental LienSearch Report is provided as Appendix B.

4.2 Specialized Knowledge

Neither EPA nor SoBro has specialized knowledge of environmental conditions that currently exist on the subject properties.

4.3 Owner and Occupant Information

The subject properties are currently owned by PDJ Simone Realty Co. New York City Department of Finance records indicate that the property ownership for:

- 1460 Sheridan Expressway was transferred from Hunts Point Auto Wreckers in December 1984. This transfer is recorded in Deed Book 557, Page 384.
- 1480 Sheridan Expressway was transferred from1460 Sheridan Expressway Corp. in 2000. This transfer is recorded in Deed Book 1728, Page 185.

This page intentionally left blank.

Section 5
Records Information

5.1 Standard Environmental Records Sources

This section summarizes findings of agency databases that were reviewed to identify facilities that generate, transport, store, or dispose of hazardous materials or wastes on or near the subject properties and to identify sites having or suspected of having soil or groundwater contamination that may impact the subject properties. The EDR report (EDR 2018g), which provides detailed descriptions of each database, summaries of listed sites, and figures with locations and other pertinent information, is included with this report in Appendix D. In addition, public information available from NYSDEC, City of New York, and EPA was searched to identify known contaminated sites in the vicinity of the subject properties. Information obtained from federal, state, and city agencies is provided in Appendix C.

The table below lists the number of federal and state sites listed under the ASTM standard by database within the prescribed search radius with results appearing in the EDR report. The subject properties were not listed in any of the databases searched by EDR. The database findings are summarized in the following table.

Summary of Database Findings

Databases Reviewed	Minimum Search Area	Subject	# of Sites Within Area
Federal Databases			
Corrective Action Report (CORRACTS)	One Mile Radius	0	1
Resource Conservation and Recovery Act of 1976 (RCRA) Large Quality Generator (LQG)	One-fourth Mile Radius	0	1
RCRA – Small Quality Generator (SQG)	One-fourth Mile Radius	0	4
RCRA – Conditionally Exempt Small Quantity Generator (CESQG)	One-fourth Mile Radius	1	6
State and Local Records Databases			
New York Solid Hazardous Waste Site (NY SHWS)	One Mile Radius	0	1
New York Solid Waste Facilities/Landfill Sites (NY SWF/LF)	One-Half Mile Radius	1	5
Leaking Storage Tank Incident (LTANKS) Report	One-Half Mile Radius	1	45
NY Underground Storage Tank (UST)	One-fourth Mile Radius	0	17
NY Chemical Bulk Storage Database (CBS)	One-Fourth Mile Radius	1	3

Databases Reviewed	Minimum Search Area	Subject	# of Sites Within Area
NY Chemical Bulk Storage Database (CBS UST)	One-fourth Mile Radius	0	1
NY Aboveground Storage Tank (NY AST)	One-fourth Mile Radius	2	57
NY Chemical Bulk Storage Database (CBS AST)	One-fourth Mile Radius	1	1
Restrictive Declarations Listing (RES DECL)	One-Eighth Mile Radius	0	2
State Registry of Institutional Controls (INST CONTROL)	One-Half Mile Radius	0	1
NY Voluntary Cleanup Program (VCP)	One-Half Mile Radius	0	5
NY Brownfields	One-Half Mile Radius	0	3
Additional Environmental Records			
Registered Recycling Facility List (SWRCY)	One-Half Mile Radius	0	1
New York Spills (NY Spills)	One-Eighth Mile Radius	0	34
Other Ascertainable Records			
Resource Conservation and Recovery Act Non Generators (NonGen)	One-fourth Mile Radius	0	34
NY Drycleaners	One-fourth Mile Radius	0	2
NY Manifest	One-fourth Mile Radius	1	80
NJ Manifest	One-fourth Mile Radius	0	12
Aerometric Information Retrieval System Facility Subsystem (US AIRS)	Target Property	1	1
Facility Index System/Facility Registry System (FINDS)	Target Property	1	1
Enforcement and Compliance History Information (ECHO)	Target Property	1	1
NY E Designation	One-Eighth Mile Radius	0	3
State Pollutant Discharge Elimination System (NY SPDES)	Target Property	1	1
EDR High Risk Historical Records			
EDR Manufactured Gas Plant (MGP)	One Mile Radius	0	1
EDR Historical Auto	One-fourth Mile Radius	0	6

Databases Reviewed	Minimum Search Area	Subject	# of Sites Within Area
EDR Recovered Government Archives			
Recovered Government Archive Solid Waste Facilities List (NY RGA LF)	Target Property	1	1

The following databases were searched but did not identify any sites within the search radius.

Federal Records

- NPL
- Superfund Enterprise Management System (SEMS- Archive)
- Comprehensive Environmental Response, Compensation, and Liability Information System
- (CERCLIS)
- RCRA Transporters, Storage and Disposal (TSDF)
- Federal Institutional Controls/ Engineering Controls Registries (US ENG/INST CONTROLS)
- Federal Emergency Response Notification System (ERNS)
- FEMA (Federal Emergency Management Agency) Underground Storage Tank (FEMA UST)
- US Clandestine Drug Labs (CDL/ HIST CDL)
- US Brownfields
- Torres Martinez Reservation Illegal Dump Site Locations (DEBRIS REGION 9)
- CERLCA Lien Information (LIENS 2)
- Land Use Control Information System (LUCIS)
- Hazardous Material Information Reporting System (HMIRS)

State and Tribal List

- VAPOR REOPENED – Vapor Intrusion Legacy Site List
- INDIAN LUST – Leaking USTs on Indian Land
- TANKS – Storage Tank Facility List
- MOSF UST – Major Oil Storage Facilities Database
- MOSF AST – Major Oil Storage Facilities Database
- MOSF – Major Oil Storage Facility Site Listing
- INDIAN UST – Underground Storage Tanks on Indian Land
- FEMA UST – Underground Storage Tank Listing
- ENG CONTROLS – State Registry of Engineering Controls
- INDIAN VCP – Voluntary Cleanup Priority Listing
- ERP – Environmental Restoration Program Listing
- NY HIST SPILLS – New York Historic Spills

Additional Environmental Records

- DEBRIS REGION 9 – Torres Martinez Reservation Illegal Dump Site Locations
- ODI – Open Dump Inventory
- SWTIRE – Registered Waste Tire Storage & Facility List
- INDIAN ODI – Report on the Status of Open Dumps on Indian Lands
- US CDL – Clandestine Drug Labs
- DEL SHWS – Delisted Registry Sites
- US HIST CDL – National Clandestine Laboratory Register
- HIST AST – Historical Petroleum Bulk Storage Database

- LIENS 2 – CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) Lien Information
- LUCIS – Land Use Control Information System
- LIENS – Spill Liens Information
- HMIRS – Hazardous Materials Information Reporting System
- HSWDS – Hazardous Substance Waste Disposal Site Inventory

Other Ascertainable Federal Records

- Department of Transportation, Office of Pipeline Safety Incident and Accident Data (DOT OPS)
- Department of Defense Sites (DOD)
- Formerly Used Defense Sites (FUDS)
- Superfund (CERCLA) Consent Decree (CONSENT)
- Uranium Mill Tailings Sites (UMTRA)
- Mines Master Index File (MINES)
- Toxic Release Inventory System (TRIS)
- Toxic Substances Control Act (TSCA)
- Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)/Toxic Substances Control Act (TSCA)
- Section 7 Tracking System of the Federal Insecticide, Fungicide and Rodenticide Act (SSTS)
- Integrated Compliance Information System (ICIS)
- PCB Activity Database (PADS)
- Material Licensing Tracking System (MLTS)
- Radiation Information Database (RADINFO)
- RCRA Administrative Action Tracking System (RAATS)
- Coal Combustion Residues Surface Impoundments List (COAL ASH EPA)
- Steam-Electric Plan Operation Data (COAL ASH DOE)
- PCB Transformer Registration Database (PCB TRANSFORMER)
- State Coalition for Remediation of Dry Cleaners (SCRD DRYCLEANERS)
- Record of Decision (ROD)
- NY Hazardous Substance Waste Disposal (HSWD)

Other Ascertainable Federal Records

- EDR Historical Cleaner (EDR Hist Cleaner)

Subject Properties

A summary of the subject properties identified by EDR located within the minimum required search radius from the subject properties is provided in subsequent paragraphs.

According to the EDR report, the subject properties have been identified on several databases with potential for environmental contamination. The databases are provided below.

Subject properties	Address	Databases	Status
LKQ Hunts Point Auto	1460 Sheridan Expressway, Bronx, NY	NY AST	Closed
Hunts Point Auto Warehouse	1480 Sheridan Expressway, Bronx, NY	NY AST	Closed
		NY CBS	Closed

1460 Sheridan Expressway

The subject property at 1460 Sheridan Expressway is listed as closed on the AST database.

1480 Sheridan Expressway

The subject property at 1480 Sheridan Expressway is listed as closed on the AST, CBS, and CBS AST databases. It is listed on the LTANKS database due to two gas tanks and one diesel tank that were closed and were abandoned at 1480 Sheridan Expressway. Despite the tanks being no longer in use, they were listed as active in the Petroleum Bulk Storage (PBS) database and subjected to the 10-year pressure test by the fire department. All three tanks failed and were subsequently removed off-site.

The subject property at 1480 Sheridan Expressway is listed on the RGA LF and SWF/LF databases. This location listed in the NY Manifest database due to the removal of hazardous material contained within two metal drums in 1992. No further details were provided for any of the three databases. The subject property also appears on the RCRA-CESQG list. Sites on this list produce less than 100 kilogram (kg) of hazardous waste or less than 1 kg of acutely hazardous waste per month.

1480 Sheridan Expressway is listed in the NY SPDES database, which controls point source discharges to groundwaters and surface waters. Documents made available from Freedom of Information Act (FOIA) requests submitted for the subject property reveal two general permits submitted in 2007 and 2013, with plans to discharge runoff into the Bronx River. Discharge monitoring reports dating to 2010 reveal the subject property's participation in the SPDES program. Based on the subject property's ongoing compliance with the program, CDM Smith does not consider it to be a REC at this time. 1480 Sheridan Expressway is listed on the ECHO database, which provides integrated compliance and enforcement information for about 800,000 regulated

facilities nationwide. 1480 Sheridan Expressway is listed on the ECHO database with air, water, and hazardous waste records. Records from the previous 3 years show five violations of the Clean Water Act.

The target property, 1480 Sheridan Expressway, is listed in the US AIRS database under the Stratospheric Ozone Protection dating to 1996; the US AIRS database is a subsystem of AIRS. The AIRS database contains compliance data on air pollution point sources regulated by the EPA and/or state and local regulatory agencies. This information comes from source reports by various stationary sources of air pollution. It is used to track emissions and compliance data from industrial plants. The site was reportedly involved in compliance monitoring and inspected or evaluated. No other details are provided.

1480 Sheridan Expressway is listed on the FINDS database, which contains both facility information and points to another source that contain more detail. The EDR report includes the following FINDS databases in this report: Permit Compliance System (PCS), AIRS, DOCKET (docket management system used to manage and track information on civil judicial enforcement cases for all environmental statutes), Federal Facilities Information System (FFIS), State Environmental Laws and Statutes (STATE), and PADS.

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally defined corrective action core events have occurred for every handler that has had corrective action activity. One CORRACTS site is located within 1 mile of the subject properties. It is located 0.912 miles south-southwest of the subject properties. The site was assigned a low corrective action priority, and human exposures have been verified as under control. Thus, CDM Smith does not consider this site to be a REC.

RCRA Non Generators List: The RCRA NonGen database is the EPA's comprehensive information system, providing access to data supporting RCRA and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on which sites generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The EDR radius report identified 34 sites within one-fourth mile of the subject properties. RCRA Non Generators do not presently generate hazardous waste.

RCRA Generators Lists: The RCRA Info database includes selective information about sites that generate, transport, store, treat, and/or dispose of hazardous waste. Generators are classified by type and quantity of waste generated and are identified as LQGs, SQGs, or CESQGs. LQG area sites that generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. SQG are sites that generate between 100 kg and 1,000 kg of hazardous waste per month. CESQG are sites that generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. One LQG, four SQGs, and six CESQGs are located within one-fourth mile of the subject properties.

Sites listed as generators do not necessarily indicate the presence of contamination but rather document the generation of hazardous waste. These sites are not identified on any other database indicative of contamination and are not considered to be RECs.

***State Hazardous Waste Sites*:** The NY SHWS records are the states' equivalent to CERCLIS. These sites may or may not be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified, along with sites where cleanup will be paid for by PRPs. This list includes known contaminated sites in New York, except those associated with the Bureau of Underground Storage Sites. One NY SHWS site was found within 1 mile of the subject properties.

Site	Address	Direction/Distance	Databases
Bethel Cleaners	1120 Westchester Avenue, Bronx, NY	SW ¼ – ½ (0.365 mile)	LQG, NY SHWS, ICIS, FINDS, ECHO, NY MANIFEST

- **Bethel Cleaners:** Bethel Cleaners (Site ID# 513986) is listed as a NY SHWS site with on-site sources of volatile organic compounds (VOCs) impacting soil and indoor air. Impacts to groundwater could not be assessed due to drilling refusal; however, groundwater is not used as a drinking water source in the area. The primary contaminants of concern in soil are PCE, xylene, and 1,2,4-trimethylbenzene. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this active NY SHWS should be evaluated as a PRP.

LTANKS: LTANKS records contain an inventory of reported leaking storage tank incidents from April 1, 1986, through the most recent update. They can be either leaking USTs or leaking ASTs. The causes of the incidents are tank test failures, tank failures, or tank overfills. The EDR radius report identified a total of 44 LTANKS sites within a one-half mile radius of the subject properties. All LTANKS are listed with spill closure dates, indicating that corrective actions were taken. The subject property (1480 Sheridan Expressway) was listed as 1 of the 44 LTANKS sites. Refer to information provided earlier in Section 5 regarding the subject properties for further details.

Site	Address	Direction/Distance	Tank Details
NYS Sanitation	1661 West Farms Road, Bronx NY	N < ⅛ (0.112 mile)	2,000-gallon #2 fuel oil AST tank. Failed test with a dry and wet leak.
PRG Packing	1560 Boone Avenue, Bronx, NY	N < ⅛ (0.113 mile)	10,000-gallon tank AST leaking fuel oil.
Getty Station #329	1441 Westchester Avenue, Bronx, NY	SSE < ⅛ (0.121 mile)	Multiple tank overfills by customers. Leak was detected within inner wall of double walled tank.
Getty Station #26	1185 Bronx River Avenue, Bronx, NY	S < ⅛ (0.124 mile)	Multiple tank overfills by customers and antifreeze spills < 1 gallon tank failure.
Abalon Precision MFG. Corp.	1174 Longfellow Avenue, Bronx, NY	SE ⅛ – ¼ (0.160 mile)	2,000-gallon UST test failure, tank was reportedly removed from site.
Apartment Building	1275 Westchester Avenue, Bronx, NY	SSW ⅛ – ¼ (0.169 mile)	Tank failure, oil and asbestos mixture pumped out from pit. No evidence of spill remained during time of inspection.

Site	Address	Direction/Distance	Tank Details
1150 Longfellow Avenue	1150 Longfellow Avenue, Bronx, NY	SW ⅛ – ¼ (0.172 mile)	Minor spill of #2 fuel oil on driveway.
Garcia Residence	1316 Wheeler Avenue, Bronx, NY	E ⅛ – ¼ (0.173 mile)	275-gallon UST leaking fuel oil in basement of private home. Tank was replaced.
1256 Wheeler Ave	1256 Wheeler Avenue, Bronx, NY	ESE ⅛ – ¼ (0.199 mile)	Product was spilled outside residence and leaked inside by Edgewood Oil without proper cleanup.
Langsan Property	1148-1150 Colgate Avenue, Bronx, NY	SSE ⅛ – ¼ (0.209 mile)	Two 2,000-gallon USTs failed test due to leaky gasket.
1347 Boynton Avenue	1347 Boynton Avenue, Bronx, NY	ENE ⅛ – ¼ (0.238 mile)	Outdoor #2 fuel AST leaking onto neighboring property, spill was remediated.
Apartment Building	1134 West Farms Road, Bronx, NY	SW ¼ – ½ (0.259 mile)	Five gallons on sidewalk and 15 gallons in tank room spilled due to storage tank overfill. Spill was cleaned up.
1210 Elder Avenue	1210 Elder Avenue, Bronx, NY	ESE ¼ – ½ (0.264 mile)	Tank was overfilled due to faulty gauge and spilled onto sidewalk.
1705 Byrant Avenue	1705 Byrant Avenue, Bronx, NY	NNW ¼ – ½ (0.280 mile)	Tank test failure after union on vent line replaced.
1151 E 165 Street	1151 E 165 Street, Bronx, NY	SSW ¼ – ½ (0.285 mile)	Tank was overfilled, and tank opening was repaired to prevent future overflow.
1095 Close Avenue	1095 Close Avenue, Bronx, NY	SSE ¼ – ½ (0.285 mile)	Three 550-gallon tanks and one 1,080-gallon tank failed air pressure tests.
1535 Westchester Avenue	1535 Westchester Avenue, Bronx, NY	ESE ¼ – ½ (0.295 mile)	Tank overfill likely caused by equipment failure; 50 gallons were spilled. Cleanup complete.
Bronxdale Houses	1471-1473 Watson Avenue, Bronx, NY	SSE ¼ – ½ (0.300 mile)	10,000-gallon UST likely spilled during removal in 1998 and contaminated soil.
1075 Longfellow Avenue	1075 Longfellow Avenue, Bronx, NY	SSW ¼ – ½ (0.304 mile)	Test tank failure with visual leaks.
Chase Bank	1536 Westchester Avenue, Bronx, NY	SE ¼ – ½ (0.319 mile)	1,500-gallon UST test failure, tank was abandoned, and fill line was filled with cement.
Madison Square Boys and Girls Club House	1665 Hoe Avenue, Bronx, NY	NW ¼ – ½ (0.321 mile)	Tank was retested and passed.
Archdiocese St. John	985 East 167 Street, Bronx, NY	SW¼ – ½ (0.337 mile)	Cleanup requirements not met, tank test failure.
Con Edison	1213 Ward Avenue, Bronx, NY	ESE ¼ – ½ (0.339 mile)	Tank overfill of #2 fuel oil.
Montebello Fuel Oil	1050 Bronx River Avenue, Bronx, NY	S ¼ – ½ (0.345 mile)	Two 8,000-gallon tank trucks leaking # 2 fuel oil.

Site	Address	Direction/Distance	Tank Details
Bronx River Houses-NYCHA	1575 East 174 Street, Bronx, NY	ENE ¼ – ½ (0.351 mile)	Three 25,000 USTs were replaced with three 17,000 USTs. Contaminated soil and groundwater likely due to underground fuel line failure.
Verizon New York #90201	1106 Hoe Avenue, Bronx, NY	SW ¼ – ½ (0.366 mile)	Generator malfunction caused some fuel to go down the drain. Tank was to be filled with concrete, holes were discovered.
Minford Place and East 172 Street	Minford Place & East 172 Street, Bronx, NY	WNW ¼ – ½ (0.371 mile)	Oil was pumped from an abandoned underground tank, causing oil to spill onto surface.
1080 Wheeler Avenue	1080 Wheeler Avenue, Bronx, NY	SSE ¼ – ½ (0.377 mile)	Approximately 100 gallons of oil leaked onto concrete floor of tank room and courtyard after valve ruptured.
Simchester Realty	1105 Boynton Avenue, Bronx, NY	SE ¼ – ½ (0.400 mile)	Tank was overfilled due to faulty overfill gauge, 5 gallons spilled onto dirt area.
1787 Vyse Avenue	1787 Vyse Avenue, Bronx, NY	N ¼ – ½ (0.405 mile)	Contaminated soil found during tank removal.
137 Strafford Avenue	137 Strafford Avenue, Bronx, NY	E ¼ – ½ (0.413 mile)	A 5,000-gallon tank failed test. High volume leak due to tank failure.
Exxon Mobil	1419 Bruckner Boulevard, Bronx, NY	S ¼ – ½ (0.417 mile)	Approximately 30 gallons of water-gasoline mixture found in sump. Line test failed.
U-Haul	1365 Bruckner Boulevard, Bronx, NY	S ¼ – ½ (0.417 mile)	Twelve 550-gallon gasoline USTs and one 550-gallon fuel oil UST were removed and contaminated soil was found.
1035 Wheeler Avenue	1035 Wheeler Avenue, Bronx, NY	SSE ¼ – ½ (0.423 mile)	Resident ordered too much fuel on 2 occasions, oil was sprayed on outside of private residence and onto concrete, cleanup ensued. Fifty gallons was spilled from truck.
1025 Aldus Street	1025 Aldus Street, Bronx, NY	SSW ¼ -–½ (0.424 mile)	Spill was contained in tank room and cleaned up.
1605 E 174 Street	1605 E 174 Street, Bronx, NY	ENE ¼ – ½ (0.432 mile)	Excavated soil after 30 gallons of # 4 fuel oil was spilled.

Site	Address	Direction/Distance	Tank Details
Urban Home Ownership	1700 Crotona Park East, Bronx, NY	NW ¼ – ½ (0.456 mile)	Tank overfill spill of 15 gallons to sidewalk due to tank driver error.
1326 Morrison Ave	1326 Morrison Avenue, Bronx, NY	E ¼ – ½ (0.458 mile)	Three gallons of fuel spilled in basement.
Amoco	1499 Bruckner Boulevard, Bronx, NY	SSE NW ¼ – ½ (0.462 mile)	Tank test failure.
1057 Ward Avenue	1057 Ward Avenue, Bronx, NY	SE ¼ – ½ (0.476 mile)	Tightness test was conducted, and a dry leak was found in 550-gallon UST.
Getty	1340 Bruckner Boulevard, Bronx, NY	S ¼ – ½ (0.486 mile)	Tank was pulled from abandoned gas station was contamination was found.
Fabco	1052 Southern Boulevard, Bronx, NY	SW ¼ – ½ (0.456 mile)	A few gallons of fuel oil spilled onto sidewalk from a vent line. Cleanup was completed.
1240 Morrison Avenue	1240 Morrison Avenue, Bronx, NY	E ¼ – ½ (0.492 mile)	Tank test failure for 15,000 heating oil UST. Approximately 23 tons of impacted soil was removed.

SWF/LF: SWF/LF records database typically contains an inventory of solid waste disposal facilities or landfills in a particular state. A review of the SWF/LF list, as provided by EDR, has identified four SWF/LF site located within one-half mile of the subject properties. 1480 Sheridan Expressway is listed as a SWF/LF site; refer to information provided earlier in Section 5 regarding the subject properties for further details. All four sites are located upgradient from the subject properties; however, they are not listed on any other database indicative of environmental contamination. Therefore, CDM Smith does not consider these sites to be RECs at this time.

UST*:* USTs refer to facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons. USTs are regulated under Subtitle 1 of RCRA. The data provided in the EDR report come from the NYSDEC PBS database. The EDR report identified 17 UST sites within one-fourth mile radius of the subject properties. Five sites have active USTs located upgradient of the subject properties and are summarized below.

Site	Address	Direction/Distance	Tank Details
Global Montello Group	1441 Westchester Avenue, Bronx, NY	SSE <⅛ (0.121 mile)	Tank 001 Contents: Gasoline/ethanol Tank 2001A Contents: Gasoline/ethanol Tank 2001B Contents: Gasoline/ethanol
1150 Colgate Avenue	1150 Colgate Avenue, Bronx, NY	SSE ⅛ – ¼ (0.204 mile)	Tank 001 Contents: #2 fuel oil

Site	Address	Direction/Distance	Tank Details
1148 Colgate Avenue	1148 Colgate Avenue, Bronx, NY	SSE ⅛ – ¼ (0.209 mile)	Tank 001 Contents: #2 fuel oil
1125 Close Avenue	1125 Close Avenue, Bronx, NY	SSE ⅛ – ¼ (0.240 mile)	Tank 01 Contents: Unknown
Murphy Private Sebco	Bryant Avenue East 174 Street, Bronx, NY	NNW ¼ – ½ (0.280 mile)	Tank 1 Contents: #2 fuel oil

CDM Smith reviewed the 17 UST sites identified in the EDR report. None of these sites are listed on the LTANKS or NY Spills database as open cases; as such they are not considered to be RECs.

CBS: The CBS database records registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597 in ASTs with capacities of 185 gallons or greater and/or in USTs of any size. It includes facilities registered (and closed) since the effective date of CBS regulations (July 15, 1988) through the date the request is processed. The subject property (1480 Sheridan Expressway) is listed as a CBS site. Refer to information provided earlier in Section 5 regarding the subject properties for further details. The EDR report identified two additional CBS UST sites located upgradient, within one-fourth mile of the subject properties.

Site	Address	Direction/Distance	Databases
Apex Sales Towing & Leasing, Inc.	1235 Bronx River Ave, Bronx, NY	SSE <⅛ (0.073 mile)	NYC CBS NY Spills NY SPDES
Adhesive Products	1660-1668 Boone Avenue, Bronx, NY	N ⅛ – ¼ (0.171 mile)	NY CBS NY UST NY CBS UST

Adhesive Products (CBS # 2-000246) and Apex Sales Towing (CDB # 2-000425) are closed CBS UST sites as of January 1, 2012. Neither site is considered a REC, as neither is listed on the LTANKS and NY Spills databases.

NY AST*:* AST refers to facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons. ASTs are regulated under Subtitle 1 of RCRA. The data provided in the EDR report come from the NYSDEC PBS database. Both subject properties (1460 and 1480 Sheridan Expressway) were listed on the AST database as closed sites. Refer to information provided earlier in Section 5 regarding the subject properties for further details. The EDR report identified an additional 55 upgradient AST sites within one-fourth mile of the subject properties. The remaining 47 upgradient active sites are detailed below.

Site	Address	Direction/Distance	Tank Details

CDM Smith reviewed the 47 active upgradient sites listed in the EDR report. None of the sites are listed on the LTANKS or NY Spills database as open cases; as such they are not considered RECs.

NY RES DECL: A restrictive declaration is a covenant running with the land that binds the present and future owners of the property. As a condition of certain special permits, the city planning commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. A review of the NY RES DECL list as provided by EDR has revealed two NY RES DECL sites within 0.125 miles of the subject properties. The two sites are not listed on the LTANKS or NY Spills database as open cases; as such they are not considered RECs.

VCP: The NY VCP enhances private sector cleanup of Brownfields by enabling parties to remediate sites using private funds as opposed to public funds. Through the VCP, responsible parties, developers, local officials, or individuals may work with NYDEP to remediate non-priority contaminated sites that pose no immediate threat to human health or the environment. A review of the NY VCP list revealed five sites within one-half mile of the subject properties. The following five sites were identified as located in close proximity to and upgradient of the subject properties with potential for contamination.

Site	Address	Direction/Distance	Databases
1544 Boone Avenue (Site ID# 15VCP124X)	1544 Boone Avenue, Bronx, NY	NNW <⅛ (0.071 mile)	NY RES DECL NY Spills
1560 Boone Avenue (Site ID# 18CVCP028X)	1560 Boone Avenue, Bronx, NY	N < ⅛ (0.113 mile)	—
1125 Whitlock Avenue (Site ID# 18CVCP033X)	1125 Whitlock Avenue, Bronx, NY	SSW ¼- ½ (0.355 mile)	—
1825 Boston Road	1825 Boston Road, Bronx, NY	N ¼ – ½ (0.492 mile)	—
1815 West Farms Road	1815 West Farms Road Bronx, NY	NNE ¼ – ½ (0.327 mile)	—

- 1544 Boone Avenue was a vacant lot with contaminated soil, groundwater, and soil vapor. Approximately 10 historic USTs were on-site. Several VOCs, semi-volatile organic compounds (SVOCs), and heavy materials were detected in soil samples at concentrations exceeding regulatory standards. Remediation has been completed, with 3,777 tons of petroleum-impacted soil and 96,000 gallons of petroleum-impacted groundwater removed from the site. Additionally, all USTs have been removed. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this VCP site should be evaluated as a PRP.
- 1560 Boone Avenue was a vacant lot with historic uses as a contractor's shop, automotive repair shop, machine shop, and metal door manufacturing shop. Contaminants of concern at this site include VOCs, SVOCs, copper, lead, and mercury. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this VCP site should be evaluated as a PRP.

- 1125 Whitlock Avenue was occupied by a plastics manufacturer and used as storage with small automotive repair shops. Historical data show previous uses of the parcel as a gas station and automotive garages. VOCs, SVOCs, and metals were detected at concentrations exceeding cleanup objectives. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this VCP site should be evaluated as a PRP.

- 1825 Boston Road was a vacant lot that was used previously as a transit rail car and bus maintenance and repair facility for approximately 100 years. Two 5,000-gallon tanks and one 10,000-gallon tank was removed from the site in the 1990s. Based on historical use, petroleum products and solvents are among potential contaminants at this site. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this VCP site should be evaluated as a PRP.

- 1815 West Farms Road was partially undeveloped lot used for miscellaneous storage and office space. Sanborn maps (EDR 2018e) for this parcel show a garage labeled "auto junk" or "auto repair" for approximately 30 years. Moderate levels of SVOCs were detected in soil and petroleum-related VOCs were detected at moderate levels in soil vapor. Groundwater sample results showed exceedances in metals. Disposal of significant amounts of hazardous waste is not suspected at this site.

NY Brownfields: Brownfields are identified as former or current commercial or industrial sites presently vacant or underutilized on which there is suspected to have been a discharge of contamination to the soil or groundwater at concentrations greater than applicable criteria. The EDR report identified three NY Brownfields sites, within one-half mile of the subject properties, summarized below.

- 1095 Southern Boulevard (Site ID# 442053 and 461295) located 0.430 mile southwest from the subject properties. Historically, this parcel has been used for commercial businesses, including a dry cleaning facility. Known or suspected contaminants include chlorinated solvents, PCE, trichloroethylene, 1,2-dichloroethene, chlorinated volatile organic compounds, and metals. Soil, groundwater, and soil vapor at this property have shown significant concentrations of the contaminants of concern. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, this Brownfields site should be evaluated as a PRP.

- 1776, 1778, and 1800 Southern Boulevard (Site ID# 402262) is located 0.445 mile north-northwest from the subject properties. Soil, groundwater, and soil vapor at this site have been significantly contaminated with petroleum-related VOCs in excess of NYSDEC remedial objectives and groundwater standards. The source of the contamination was discovered during the removal of four 4,000-gallon USTs related to the site's historical uses as a gas station, car wash, and auto repair wash. Remediation at this property was completed in September 2011; therefore, this Brownfields site is likely to be a PRP for contamination that cannot be traced to an on-site source.

- 1899–1905 West Farms Road (Site ID# 488955) is located 0.480 mile north-northeast from the subject properties. The site was most recently used for construction supply storage and a janitorial supply company for soap and paper product storage, with an outdoor storage area for dumpsters and empty drums. Petroleum-related compounds and metals were detected in soil, groundwater, and soil vapor at high concentrations. Primary contaminants include PCE, TCE, ethylbenzene, lead, and mercury. Additionally, six USTs were found during excavation and were subsequently removed. All remediation activities have been completed at this site; therefore, this Brownfields site is unlikely to be a PRP for contamination that cannot be traced to an on-site source.

NY Spills*:* The NY Spills database reports data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regulations), or 6 NYCRR Section 595.2 (from CBS regulations). NY Spills includes spills active from April 1, 1986, to the present. In 2002, NYSDEC stopped providing updates to its original Spills Information database. This database, now known as the NY HIST SPILLS database, includes fields that are no longer available from the NYSDEC as of January 1, 2002. Current information may be found in the NY Spills database.

The EDR database identified 34 sites on the NY Spills databases located within 0.125 mile of the subject properties. All NY Spills are listed with spill closure dates indicating that corrective actions were taken, with the exception of a private residence at 1277 Bronx River Avenue. The status of this NY Spills site, located 0.091 mile east-southeast of the target properties, remains unreported since September 23, 2011. A subsurface return line was allegedly leaking an unknown quantity into the soil floor. A new aboveground return line was installed, although it is unclear if corrective cleanup activities took place.

CDM Smith reviewed the sites listed on the database and did not identify any RCRA Non Generator sites of environmental concern.

NY INST CONTROL: This registry contains a listing of classification exemption area sites where groundwater contamination exists above a state standard. The EDR database report identified one NY INST CONTROL site within 1 mile of the subject properties. Refer to NY Brownfields database discussion earlier under this section for details regarding 1899–1905 West Farms Road.

NY Drycleaners: This database is a listing of registered dry cleaners in New York. Two sites were identified within 0.250 mile of the subject properties. However, because no contamination has been identified on the property, CDM Smith does not consider the site to be a REC.

NY MANIFEST: A manifest is a document that lists and tracks hazardous waste from generator through transporters to a transporter, storage, and disposal (TSD) facility. The subject property, 1480 Sheridan Expressway, was identified as a NY MANIFEST site. Refer to information provided earlier in Section 5 regarding the subject properties for further details. A total of 79 additional sites were identified as having a documented manifest originating from its site, confirming the generation and transportation of hazardous waste to TSD facilities. CDM Smith reviewed the manifest list and did not identify any sites with the potential to impact the subject properties, and therefore no RECs were identified.

Refer to Appendix C for copies of the SPDES general permits and correspondence with NYSDEC.

EDR MGP: The EDR MGP database includes records of coal gas plants compiled by EDR researchers. MGPs were used in the U.S. from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that produced a significant amount of waste. Many of the gas production byproducts, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant sites and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination. EDR identified one MGP within 1 mile of the subject properties. There is no additional information listed about this site in the database. CDM Smith does not consider it to be a REC at this time.

EDR Historical Auto: EDR has searched selected national collections of business directories and has collected listings of potential gasoline station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gasoline station/filling station/service station establishments. The categories reviewed included gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and service station. A review of EDR's historical auto stations list identified six historical stations within 0.125 mile of the subject properties. The sites are summarized below.

Site/Address	Direction/Distance	Occupant Name	Description	Dates
Expressway Service Station 1476 Sheridan Expressway, Bronx, NY	SSW <⅛ (0.016 mile)	Expressway Service Station	Gasoline service stations	1980–1989
		On Point Auto Center	General automotive repair shop	1996–1997
		1476 AAA Automobile Inc	General automotive repair shop	2010–2014
Expressway Service Station 1355 West Farms Road, Bronx, NY	SW <⅛ (0.043 mile)	Expressway Service Station	Gasoline service stations	1969–1975
J & L Auto Service 1471 West Farms Road, Bronx, NY	W <⅛ (0.047 mile)	J & L Auto Service	Gasoline service station	1970s–1987
			General automotive repair shop	1988–1994
Esteven Service Station Inc. 1441 Westchester Avenue, Bronx, NY	SSE < ⅛ (0.121 mile)	George & Petes Service Center	Gasoline service station	1969–1976
		Getty Gas & Service Station	Gasoline service station	1991–1995
		Esteven Service Station Inc.	Gasoline service station	2000–2012
		E & S Auto	General automotive repair shop	2005–2008

Based on the concentration of automotive body shops and gasoline stations to the subject properties with operations dating to the 1960s, there is a high potential for any of these properties to impact groundwater at the subject properties. Thus, these properties are recognized as a REC at this time. Should environmental investigations that identify groundwater contamination that cannot be traced to an on-site source be performed at the subject properties, these nearby former auto body centers and gasoline stations should be evaluated as PRPs.

Orphan Sites: The EDR report identified six un-mappable sites in the general vicinity of the subject properties that are listed as "orphan sites" and are not plotted on the EDR maps. CDM Smith reviewed the list of orphan sites and, due to lack of available information, was unable to identify any sites suspected of having had a direct impact on the subject properties.

5.2 New York City Department of Environmental Protection

CDM Smith filed a FOIA request with NYCDEP on October 1, 2018, to obtain copies of all current and historical records pertaining to the subject properties. NYCDEP responded to the request on October 11, 2018, advising that no records for the request were located.

5.3 New York State Department of Labor

CDM Smith filed a FOIA request with NYSDOL on October 1, 2018, to obtain copies of all current and historical records pertaining to the subject properties. NYSDOL responded to the request on October 17, 2018, advising that no records for the request were located.

5.4 New York State Department of Health

CDM Smith filed a FOIA request with NYSDOH on October 1, 2018, to obtain copies of all current and historical records pertaining to the subject properties. NYSDOH responded to the request on October 17, 2018, advising that no records for the request were located.

5.5 New York State Department of Environmental Conservation

CDM Smith filed a FOIA request with NYSDEC on October 1, 2018. Records received from NYSDEC on October 30, 2018 included correspondence with the Bureau of Water Permits regarding requests and renewals, PBS applications, National Pollutant Discharge Elimination System (NPDES) discharge monitoring reports, Storm Data Event Forms, NPDES general permit requests, and monthly tank inspection forms.

Copies of these records and other information provided by NYSDEC are provided in Appendix C.

5.6 U.S. Environmental Protection Agency Records

CDM Smith performed a property search query via MyPropertyInfo on the EPA FOIA website. CDM Smith queried the database using the addresses 1460 and 1480 Sheridan Expressway in Bronx, New York. One property was listed on the Facility Registry Services (FRS) database with the following Standard Industrial Classification (SIC) code associated with the subject properties.

Property	Information Systems ID	SIC Code	Description
LKQ Hunts Point Auto Parts, 1480 Sheridan Expressway	NY0000002600500852	5015	Motor vehicle parts, used

No records for 1460 Sheridan Expressway were reported.

The MyPropertyInfo tool allows numerous professionals, including real estate agents, mortgage banks, and engineering and environmental consultants, and the general public to determine if EPA databases have records on specific properties without the need for filing a FOIA request. The results of the electronic search are identical to the information received by filing a FOIA request.

This page intentionally left blank.

Section 6

History

6.1 Historical Use of the Subject Properties and Adjoining Properties

The history of the subject properties was determined based on CDM Smith's review of historical aerial photographs, topographic maps, property records, and information provided by the New York City Department of Finance and EDR. Historical records indicate that the subject properties were used as a railroad company, automotive repair and demolition shop, welding shop, and a variety of other businesses. The subject properties have been used in industrial settings since records were reported in the 1890s.

6.1.1 Aerial Photographs

CDM Smith reviewed aerial photographs provided by EDR (2018a) for the years 1924, 1951, 1954, 1962, 1966, 1974, 1976, 1984, 1991, 1994, 2006, 2009, 2013, and 2017 (scale range: 1 inch = 500 feet) . (See Appendix E.) Descriptions of the aerial photographs are provided below.

1460 Sheridan Expressway

The 1924 aerial photograph shows a large building present at 1460 Sheridan Expressway, toward the southern end of the property. The remainder of the lot appears to be partially vegetated and partially undeveloped.

The 1951 aerial photograph shows the 1460 Sheridan Expressway parcel improved with the addition of three buildings.

The 1954 aerial photograph shows little to no change to the subject property.

The 1962 aerial photograph shows a new, large building on 1460 Sheridan Expressway on the northern half of the parcel. All previous buildings on the lot have been removed.

The 1966 aerial photograph shows little change to 1460 Sheridan Expressway.

The 1974, 1976, and 1984 aerial photographs show little change to the subject property.

The 1991 aerial photograph shows the subject property improved with structures on-site.

The 1994 aerial photograph shows little change to the subject property.

The 2006 aerial photograph shows a new large building on-site at 1460 Sheridan Expressway directly adjacent to the previous building. Rows of cars and trucks are now parked on-site in the southern portion.

The 2009 and 2013 aerial photographs show little change to the subject property and surrounding properties.

The 2017 aerial photographs show the large, irregular building removed from 1460 Sheridan Expressway.

1480 Sheridan Expressway

The 1924 aerial photograph shows several structures are located at 1480 Sheridan Expressway, which borders an active railroad track to the south. The surrounding area is densely populated with residential homes and industrial and commercial businesses.

The 1951 aerial photograph shows the structures previously scattered across 1480 Sheridan Expressway, appearing to have been razed, leaving one large building and a few structures remaining. Debris piles are located on-site. The railroad track to the south of the property remains active. The surrounding area has become significantly populated as the Bronx continues to develop as part of a major metropolitan area. Multiple story buildings have replaced the residential homes seen in the previous aerial photograph.

The 1954 aerial photograph shows little to no change to the subject property.

The 1962 aerial photograph shows structures at 1480 Sheridan Expressway with little to no change from the previous photograph. Debris piles have been removed from the lot. Cars and other large vehicles can be seen parked across the parcel in significant numbers. The subject properties have been reduced in size as construction on the Sheridan Expressway has begun.

The 1966 aerial photograph shows some remaining structures previously located on 1480 Sheridan Expressway that have been removed. The road west of the subject properties has been improved with fully paved roads and more lanes.

The 1974, 1976, and 1984 aerial photographs show little change to the subject property.

The 1991 aerial photograph shows the subject property improved with structures on-site.

The 1994 aerial photograph shows little change to the subject property.

The 2006 aerial photograph shows the large building previously at 1480 Sheridan Expressway that has been removed, with a new, irregular-shaped building in the same area of the lot. The parcel contains several new structures. Cars and other vehicles continue to be present across the site.

The 2009 and 2013 aerial photographs show little change to the subject property and surrounding properties.

The 2017 aerial photographs show several structures from 1480 Sheridan Expressway that have been removed. Cars and trucks remain parked on-site, although at a significantly lower number. The property appears to have covered or replaced its asphalt surface with concrete.

6.1.2 Historic Topographic Maps

CDM Smith reviewed the following historical topographic maps provided by EDR (2018f): Harlem 15-minute topographic maps for 1897, 1898, and 1900 (scale 1:62500) and Flushing and Central Park 7.5-minute topographic maps for 1947, 1955, 1956, 1966, 1979, 1995/1997, and 2013 (scale 1:24000). Copies of the EDR historical topographic maps are provided in Appendix F. Summaries of the topographic maps reviewed are provided below.

The 1897 topographic map shows the subject properties as occupied with small buildings/structures. There is a large network of roads running throughout the borough. Structural development is well-established in the area. The Bronx River and a set of railroad tracks are located east of the subject properties. Areas southeast of the properties are more undeveloped.

The 1898 and 1900 topographic maps show little change to the subject properties. The surrounding properties are continuing to develop.

The 1947 topographic map shows little change to the subject properties. Additions of larger buildings are observed on the lots. Significant development of the surrounding area can be seen by the addition of new subway lines, schools, and increased occupation of previously vacant areas. Major road improvements have gone underway, and highways and interstates now run throughout the city.

The 1955 topographic map shows little change to the subject properties. Railroad tracks located directly south of 1480 Sheridan Expressway have been reduced. The pink-shaded areas of the map indicate the city is continuing to develop.

The 1966, 1979, and 1995/1997 topographic maps show little change to the subject properties. The pink-shaded areas of the map indicate the city is continuing to develop. The purple areas of the map indicate additional buildings or development.

The 2013 topographic map shows little change to the subject property. Railroad tracks located south of 1480 Sheridan Expressway have been reduced.

6.1.3 Sanborn Fire Insurance Maps

Sanborn maps constitute a database of prior site uses of real property for many cities and towns in the U.S. The maps were originally created to assist insurance underwriters in understanding the potential fire risk of structures requiring insurance; however, they also are useful for determining the previous uses of a property. Sanborn maps often contain information relating to uses of individual structures, location of certain fuel storage tanks, chemical storage tanks, or both and storage of other potentially toxic substances. Sanborn maps begin their coverage in 1846 and continue through the present.

CDM Smith reviewed Sanborn maps for 1896, 1901, 1903, 1915, 1919, 1928, 1950, 1969, 1977, 1980, 1981, 1983, 1985, 1986, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006, and 2007, which were provided by EDR (see Appendix G), for the subject properties. A summary of the subject properties' development as depicted in historical Sanborn maps is presented below.

The 1896 Sanborn map shows 1460 Sheridan Expressway occupied by a railroad company power house. The lot is accessible by West Farms Road. The adjacent properties to the south are occupied by several small structures. Farther south, 1480 Sheridan Expressway is used as a coal and lumber yard. It is located by Charlotte Street and Edgewater Road and is not directly adjacent to another parcel to the north.

The 1901 Sanborn map shows 1460 Sheridan Expressway as occupied by Union Railway Power House. 1480 Sheridan Expressway remains a coal yard; the property has been improved with a rail line. The street previously identified as Charlotte Street has been renamed Jennings Street.

The 1903 Sanborn map does not show any information relating to the subject properties.

The 1915 Sanborn map shows little to no change for 1460 Sheridan Expressway; Union Railway Co Garage & Storage remains on-site. The Olin J. Stephens Coal & Wood Yard occupies 1480 Sheridan Expressway. Jennings Street no longer continues to the Bronx River. 1480 Sheridan Expressway shares its northern border with the adjacent property, absorbing the old roadway.

The 1919 and 1928 Sanborn maps do not show any information relating to the subject properties.

The 1950 Sanborn map shows Third Avenue Railway System & Surface Transportation Company occupying 1460 Sheridan Expressway. The property has been improved with a building expansion and the construction of a secondary building. A paint shop, a welding shop, a blacksmith shop, a bus repair shop, and storage areas are on-site. 1480 Sheridan Expressway is occupied by Flexicore Co., a concrete slab manufacturer. The property contains a shed, shop, storage structure, and contractor's yard. Industrial businesses, including an auto work shop and a plaster castings manufacturer, have begun occupying surrounding parcels.

The 1969 Sanborn map does not show any information relating to the subject properties.

The 1977 Sanborn map shows 1460 Sheridan Expressway used as an iron works facility and yard; only one large rectangular building remains on the lot. 1480 Sheridan Expressway is used for welding, building repair, and storage. A shed has been removed or grazed from the site, and the parcel is now occupied by Corbetta Construction Co., Inc. The adjacent West Farms Road has been renamed to Arthur V. Sheridan Expressway and improved to provide increased vehicular traffic. Property lines for the subject properties have been moved inward to the east for the development of the new expressway. Surrounding parcels near the subject properties continue to develop and improve.

The 1978 Sanborn map shows little to no change on the subject properties.

The 1979 Sanborn map show Auto Parts W & Yard replacing Corbetta Construction Co., Inc. as the occupant at 1480 Sheridan Expressway. No other changes are seen on the subject properties.

The 1980, 1981, 1983, 1985, 1986, 1989, 1991, and 1993 Sanborn maps show little to no change at the subject properties. Surrounding parcels near the subject properties continue to develop and improve.

The 1994 Sanborn map shows little to no change at the subject properties. A new road immediately adjacent to the subject properties has been developed. Edgewater Road, located next to Arthur V. Sheridan Expressway, extends along the western side of both parcels.

The 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006, and 2007 Sanborn maps show little to no change at the subject properties. Surrounding parcels near the subject properties continue to develop and improve.

6.1.4 City Directories

City Directories have been published for cities and towns across the U.S. since the 1700s. Business directories, including city, cross reference, and telephone directories, were reviewed at approximately 5-year intervals for years spanning 1969 through 2014.

CDM Smith reviewed the City Directories report provided by EDR (2018c), which included a summary of ascertainable information between 1927 and 2014 from Hill-Donnelly Information Services, New York Telephone Company, Manhattan and Bronx Directory-Publishing Company Residential Directory, and Cole Information Services. The subject properties were identified in the City Directories report.

1460 Sheridan Expressway was identified through the city directory as occupied by Belco Steel Corp in 1983, 1993, and 2005. Hunts Points Auto Wreckers appeared in the directory in 2005. 1480 Sheridan Expressway was occupied by Hunts Point Auto Wreckers in 1983, 1993, and 2000, with Hunts Point Auto Parts appearing concurrently in 1993 and 2000. LKQ Hunts Point Auto Parts is listed in the city directory as the occupant in 2005.

The adjoining properties as identified through the city directory have been occupied historically by commercial and industrial businesses or have been residential. A copy of the City Directories report prepared by EDR is provided as Appendix H.

6.1.5 Interviews

CDM was unable to perform an interview due to lack of access to persons with historical knowledge of the sites. Al Nesheiwat, the owner's representative, provided background information in relation to the subject properties. Mr. Nesheiwat stated that 1460 Sheridan Expressway was partially remodeled prior to the arrival of its current occupants. Equipment and machinery related to auto repair or demolition was removed off-site. Currently, a large trailer containing unknown items left from the previous occupant remains on-site in the parking lot. Regarding the storm drains located at 1460 and 1480 Sheridan Expressway, Mr. Nesheiwat stated that runoff from the sites do not dump directly into the Bronx River.

6.2 Ownership History

Property owner information was gathered from the EDR lien search. 1460 Sheridan Expressway is owned by West Farms Realty LLC, c/o PDJ Simone Realty Co., who received the property from 1460 Sheridan Expressway Corporation via a bargain and sale deed on November 15, 1999, recorded in Deed Book 1728, Page 185. 1480 Sheridan Expressway is owned by PDJ Simone Realty Co., who received the property from Hunts Point Auto Wreckers, Inc. on July 12, 1984, recorded in Deed Book 557, Page 384.

The tables provide a summary of ownership based on the records reviewed.

1460 Sheridan Expressway				
Grantor	**Grantee**	**Book**	**Page**	**Date**
1460 Sheridan Expressway Corporation	West Farms Realty LLC	1728	185	11/15/1999

1480 Sheridan Expressway				
Grantor	**Grantee**	**Book**	**Page**	**Date**
Hunts Point Auto Wreckers	PDJ Simone Realty Co.	557	384	07/12/1984

A copy of the EDR lien search is provided as Appendix D.

6.3 Raw Materials, Finished Products, Formulations, and Hazardous Substances

As discussed under Sections 2.3 and 6.1, the subject properties were used for industrial and commercial purposes. Occupants used the parcels for automotive repair and demolition, an iron yard, concrete manufacturing welding, a construction yard, and a coal and lumber yard. Hazardous materials used or generated by previous operations typically include solvents, cleaners, waste oil, coolants, and petroleum products.

6.4 Permits and Violations

EDR conducted a search for building permits issued for the subject properties. The following permits were identified:

1460 Sheridan Expressway			
Permit Type	**Permit Number**	**Date**	**Description**
Plumbing	220422219-03-PL	04/21/2016	Mechanical and plumbing work associated with renovation of existing auto repair shop.
Electrical	Y173721	07/02/2015	No description provided.
Sign	220455344-01-SG	05/06/2015	No description provided.
Sign	220455353-01-SG	05/06/2015	No description provided.
Equipment Work	220422219-01-EW-OT	02/26/2015	Renovation of existing auto-repair shop.
Equipment Work	220422219-01-EW-OT	02/26/2015	Structural work associated with the renovation of existing auto repair shop.
Equipment Work	220422219-03-EW-OT	02/26/2015	Mechanical and plumbing work associated with renovation of existing auto repair shop.
Electrical	Y019808	04/09/1988	No description provided.
Electrical	Y019986	12/15/1986	No description provided.

1480 Sheridan Expressway			
Permit Type	**Permit Number**	**Date**	**Description**
Plumbing	220251625-01-PL	04/04/2013	New heating, ventilation, and air conditioning (HVAC) units and unit heaters to replace existing, new gas piping, existing as meter to be unlocked. No change in egress, use or occupancy as part of this application.
Equipment Work	220251625-01-EW-MH	03/01/2013	New HVAC units and unit heaters to replace existing, new gas piping, existing as meter to be unlocked. No change in egress, use or occupancy as part of this application.

See Appendix I for the EDR building permit report (2018b).

6.5 Discharges and Remedial Activity

CDM Smith is unaware of any discharges or remedial activities at the subject properties. The Phase I ESA performed by TEAM Environmental Associates (2017) for 1480 Sheridan Expressway reported a potential on-site oil/water separator allegedly discharging into the Bronx River; however, no further information was available. No discharges or dumping activities were observed by CDM Smith during the site reconnaissance.

This page intentionally left blank.

Section 7
Site Reconnaissance

7.1 Methodology and Limiting Conditions

CDM Smith performed a site reconnaissance of the subject properties on October 26, 2018. Elizabeth Krupka and Emily Wong of CDM Smith performed the reconnaissance. Copies of the reconnaissance photographs are provided in Appendix A**.**

7.2 General Site Setting

The subject properties are located in a mixed industrial/commercial/residential area of the South Bronx. The properties are secured with metal gates and fencing. At 1460 Sheridan Expressway is a newly remodeled office building with a two-story warehouse. The office building occupies majority of the parcel, with exception of the parking area west of the building. 1480 Sheridan Expressway is a large, irregularly shaped parcel that is primarily used for parking. On this property are five garage buildings. One of the buildings contains two floors, with an office space sitting above the garage. The parcel slopes toward the east due to the proximity and location of the Bronx River.

7.3 Exterior Observations

The subject properties were visually assessed for RECs.

7.3.1 Hazardous Substances

Empty and partially full containers, spray paint cans, cleaning agents, and 5-gallon buckets were observed in various areas at 1480 Sheridan Expressway. See Appendix A for photographs.

7.3.2 Storage Tanks

No evidence of storage tanks was observed on the properties. However, three gasoline/diesel fuel USTs were reportedly removed from 1480 Sheridan Expressway.

7.3.3 Odors

No strong, pungent, or noxious odors were observed.

7.3.4 Pools of Liquid

No pools of liquid were observed.

7.3.5 Drums

No drums were observed.

7.3.6 Polychlorinated Biphenyls

No surficial evidence of polychlorinated biphenyls (PCBs) was observed.

7.3.7 Stained Soil or Pavement

The concrete pavement at 1480 Sheridan Expressway was observed to be stained with a dark, greasy material. Reddish fluid with unknown origins was observed to be spilled on the concrete. No cracks within the concrete or potential for soil contamination was observed. See Appendix A for photographs.

7.3.8 Drywells and Sumps

No surficial evidence of exterior drywells or sumps was observed. Storm drains were observed at both subject properties. No staining or discharge points were observed; however, based on the heavy presence of vehicles on the subject properties, runoff from cars or trucks could be a potential source of contamination.

7.3.9 Pits, Ponds, and Lagoons

No surficial evidence of pits, ponds, or lagoons was observed within the limits of the properties.

7.3.10 Wells

No surficial evidence of groundwater wells was observed.

7.3.11 Solid Waste and Debris Piles

Debris piles were scattered in the rear southern portion at 1480 Sheridan Expressway. The material appeared to be construction-related equipment and tools. Open bags of sand and fill were observed.

7.3.12 Stressed Vegetation

No areas of stressed vegetation were observed on the subject properties.

7.3.13 Wastewater

A possible discharge point was observed through the gate access to the Bronx River at 1480 Sheridan Expressway; however, there was no wastewater or other liquids observed being discharged into a drain, ditch, underground injection system, or stream on or adjacent to the subject properties.

7.3.14 Septic Systems

No septic systems or cesspools were observed on the subject properties.

7.3.15 Asbestos-Containing Materials

No ACMs were observed at the subject properties. Based on the age of the buildings at 1460 and 1480 Sheridan Expressway, structures on-site may contain ACMs. Proper precautions must be adhered to during redevelopment of the subject properties.

7.3.16 Mold

No mold was observed on the subject properties.

7.4 Interior Observations

The subject properties were visually assessed for RECs.

7.4.1 Hazardous Substances

Empty and partially full containers, spray paint cans, cleaning agents, and 5-gallon buckets were observed in various areas at 1480 Sheridan Expressway. See Appendix A for photographs.

7.4.2 Storage Tanks

No storage tanks were observed on the properties.

7.4.3 Odors

No strong, pungent, or noxious odors were observed.

7.4.4 Pools of Liquid

No pools of liquid were observed.

7.4.5 Drums

No drums were observed.

7.4.6 Polychlorinated Biphenyls

Fluorescent light ballasts were observed in buildings at 1460 and 1480 Sheridan Expressway, but it is unknown if the lights had PCB-containing oils. Proper handling of the light ballasts should be used during property redevelopment.

7.4.7 Stained Soil or Pavement

The concrete pavement at 1480 Sheridan Expressway was observed to be stained with a dark, greasy material. Reddish fluid with unknown origins was observed to be spilled on the concrete. No cracks within the concrete or potential for soil contamination was observed. See Appendix A for photographs.

7.4.8 Drywells and Sumps

No drywells or sumps were observed at the subject properties.

7.4.9 Pits, Ponds, and Lagoons

No surficial evidence of pits, ponds, or lagoons was observed within the limits of the properties.

7.4.10 Wells

No surficial evidence of groundwater wells was observed.

7.4.11 Solid Waste and Debris Piles

No solid waste or debris piles were observed.

7.4.12 Stressed Vegetation

No areas of stressed vegetation were observed on the subject properties.

7.4.13 Wastewater

Floor drains were observed on the first floors of the buildings at 1480 Sheridan Expressway. No wastewater or other liquids were observed discharging into the floor drains.

7.4.14 Septic Systems

No septic systems or cesspools were observed on the subject properties.

7.4.15 Asbestos-Containing Materials

No ACMs were observed at the subject properties. Based on the age of the buildings at 1460 and 1480 Sheridan Expressway, structures on-site may contain ACMs. Proper precautions must be adhered to during redevelopment of the subject properties.

7.4.16 Mold

No mold was observed on the subject properties.

Section 8
Findings, Conclusions, and Recommendations

CDM Smith completed this Phase I ESA of the subject properties on behalf of EPA as a result of a TBA request from SoBro, the Grantee. This Phase I ESA was completed in conformance with the scope of requirements of EPA AAI Rule and ASTM Standard Practice for ESAs: Phase I ESA Process E 1527-13. No exceptions to or deletions from this practice were taken. Several RECs associated with the subject properties were identified. See below for details.

8.1 Findings and Conclusions

1460 and 1480 Sheridan Expressway was used historically for industrial and commercial purposes and operated for a variety of businesses since the late 1890s, including as an automotive repair and demolition, a concrete slab manufacturing facility, and an iron yard. The subject properties are secured with metal fencing and gates. Currently, 1460 Sheridan Expressway is an automotive parts yard, and 1480 Sheridan Expressway is a long-term parking facility.

The conclusions noted below are based on CDM Smith's review of file information, databases, historical records review, and site reconnaissance.

- 1460 Sheridan Expressway was used predominantly in an industrial setting, including approximately 35 years as an iron yard. Recently, it was used as an automotive demolition facility, before becoming an automotive parts yard. 1480 Sheridan Expressway was occupied by a coal and lumber yard dating to the 1890s. It was later occupied by a concrete slab manufacturing facility and later as a contractor's yard for approximately 30 years. It is currently as a long-term parking facility.
- The subject properties are owned by PDJ Simone Realty Co.
- The surrounding area is used for residential, commercial, and industrial purposes.
- No environmental liens or activity and use limitations were found.
- No public water supply wells were identified in the well search information provided by EDR in the Radius Report (2018g).

Based on CDM Smith's review of file information, databases, historical records review, and site reconnaissance, the following RECs are identified:

REC 1 – Historical Use: 1460 Sheridan Expressway has been used as a coal and lumber yard, railway company, including a powerhouse, garage, bus repair, and paint shop. 1480 Sheridan Expressway has been used as an iron yard, a concrete manufacturing, and an automotive maintenance and demolition facility since the 1890s. Based on CDM Smith's review of historical aerial photographs, Sanborn maps, and other documents, the properties adjacent to the subject properties have been used in similar industrial settings since the 1950s. Hazardous materials

used or generated by the subject properties would likely have included solvents, cleaners, waste oil, coolants, and petroleum products.

REC 2 – Underground and Aboveground Storage Tanks: Three gasoline/diesel fuel USTs were reportedly closed and removed from 1480 Sheridan Expressway. No documentation of post excavation sampling during the removal activities or confirmation of absence of contamination at these locations was available at the time of this Phase I ESA. Additionally, four ASTS, including two 1,000-gallon diesel and waste oil and two 249-gallon gasoline tanks, located at 1480 Sheridan Expressway were reportedly closed in March 2014. A 1,000-diesel fuel AST was reportedly removed from the site in 2017.

REC 3 – Drainage: Hazardous materials used at automotive repair and demolition shops may have been removed off-site at 1480 Sheridan Expressway using the drainage system. Trench drains were observed near the former location of a UST. Interior floor drainage systems and external storm drains located near historic car maintenance areas of the property are additional potential locations for contamination associated with former site operations.

REC 4 – Hydraulic Lifts: An in-ground hydraulic lift was observed in the garage warehouse at 1480 Sheridan Expressway. Hydraulic oil and fluids used to operate the hydraulic lift are a potential source of contamination at the site through leaks in lines or hoses.

REC 5 – Vapor Intrusion: Potential vapor intrusion issues that are associated with historical operations and neighboring commercial and light industrial properties may be present at the site.

REC 6 – Staining and Potentially Hazardous Material/Debris: Stained concrete was observed at 1480 Sheridan Expressway. Reddish fluid was observed to be spilled on the concrete. This may be indicative of contamination related to site operations or poor housekeeping practices. Empty and partially full containers, spray paint cans, cleaning agents, and 5-gallon buckets were observed throughout the subject property. Debris piles were scattered in the rear southern portion of the property.

REC 7 – Potential Off-site Contamination: Several upgradient or nearby properties were identified for their potential to impact groundwater on the subject properties. Upgradient or nearby properties and their respective distance from the subject properties include:

- Bethel Cleaners (0.365 miles), which is listed as a NY SHWS (site with on-site sources of VOCs impacting soil and indoor air). Impacts to groundwater could not be assessed due to drilling refusal; however, groundwater is not used as a drinking water source in the area. The primary contaminants of concern in soil are PCE, xylene, and 1,2,4-trimethylbenzene.

- 1544 Boone Avenue (0.071 miles), which is listed as a VCP site with contaminated soil, groundwater, and soil vapor on-site. Approximately 10 historic USTs were on-site. Soil samples results detected several VOCs, SVOCs, and heavy materials at concentrations exceeding regulatory standards. A total of 3,777 tons of petroleum-impacted soil and 96,000 gallons of petroleum-impacted groundwater have been removed from the site. All USTs have been removed. Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject property, this VCP site should be evaluated as a PRP.

- 1560 Boone Avenue (0.113 miles), which is listed as a VCP site with historical uses as a contractor's shop, an automotive repair shop, a machine shop, and a metal door manufacturing shop. Contaminants of concern at this site include VOCs, SVOCs, copper, lead, and mercury.

- 1125 Whitlock Avenue (0.355 miles), which is listed as a VCP site previously occupied by a plastics manufacturer and used as storage with small automotive repair shops. Hisotrical data show previous uses of the parcel as a gas station and automotive garages. VOCs, SVOCs, and metals were detected at concentrations exceeding cleanup objectives.

- 1825 Boston Road (0.492 miles), which is listed as a VCP site previously used as a transit rail car and bus maintenance and repair facility for approximately 100 years. Two 5,000-gallon tanks and one 10,000-gallon tank were removed from the site in the 1990s. Based on historical use, petroleum products and solvents are among potential contaminants at this site.

- 1095 Southern Boulevard (0.430 miles), which is listed as a NY Brownfields site. Historically, this parcel has been used for commercial businesses, including a dry cleaning facility. Known or suspected contaminants include chlorinated solvents, PCE, trichloroethylene, 1,2-dichloroethene, chlorinated volatile organic compounds, and metals. Soil, groundwater, and soil vapor at this property has shown significant concentrations of the contaminants of concern.

- Historical auto stations within 0.125 mile of the subject properties represent a high potential for impacting the site's groundwater. Expressway service station (0.043 mile), J & L Auto Service (0.047 mile), and Esteven Service Station (0.121 mile) have auto-related operations dating to the 1960s. These three sites are a potential source of off-site contamination to the subject properties.

Should environmental investigations that identify contamination that cannot be traced to an on-site source be performed at the subject properties, these sites should be evaluated as PRPs.

Other Items of Environmental Concern:

- ***Lead-Based Paint:*** Structures located at 1460 and 1480 Sheridan Expressway were constructed prior to 1977. Therefore, the buildings have a significant potential for LBP and/or LBP dust. Materials removed as part of property redevelopment should be characterized for lead prior to handling and disposal.

- ***Asbestos Containing Materials:*** The manufacturing of most ACMs were banned in 1979. Prior to this time, asbestos was a common constituent of numerous building materials, such as floor and ceiling tiles, mastic, caulking, pipe insulation, window glazing, roofing materials, and exterior siding. No suspected ACMs were observed during CDM Smith's reconnaissance. However, based on the age of buildings on the subject properties, materials removed as part of property redevelopment may contain ACMs. Materials removed as part of property redevelopment should be characterized for asbestos prior to handling and disposal.

- ***Light Ballasts:*** Structures at 1460 and 1480 Sheridan Expressway were observed to have fluorescent light ballasts in place. Prior to 1979, PCB-containing oils were commonly used in transformers and fluorescent light ballasts; these uses has since then been banned. Proper handling and disposal of the light ballasts should be used during property redevelopment.

8.2 Recommendations

The purpose of this Phase I ESA is to identify the presence of RECs at the subject properties and to determine if an SI is needed.

Based on the presence of RECs, a Phase II SI is recommended at the subject properties to confirm the presence of hazardous materials. The following components should be considered for the Phase II SI:

- Geophysical survey to identify the presence of any potential USTs, vaults, buried drums/containers, underground piping, buried building foundations, buried utilities, or subsurface anomalies.
- Surface and subsurface soil sampling to investigate the potential for soil contamination.
- Soil screening using a PID to assist in site assessment and selection of soil sampling intervals.
- Groundwater sampling via temporary well point or screen point sampling to determine groundwater flow and the potential for groundwater contamination.
- Soil vapor sampling to investigate potential vapor intrusion.

Analysis should include VOCs, SVOCs, PAHs, PCBs, petroleum hydrocarbons, and metals. Soil analytical results must be compared to NYSDEC Subpart 375-6 restricted residential use soil cleanup objectives, and groundwater analytical results must be compared to NYSDEC Class GA Groundwater Criteria.

Based on historical operations of the properties, concern for exposure could exist during future earthwork, and health and safety precautions should be considered. Construction worker and subject property worker use scenarios should be considered during any redevelopment plan. It is recommended that the owner, or future use developer, enlist a professional engineer to develop a health and safety plan, construction contingency plans, and a soils management plan to safely and appropriately remove (or control) potentially impacted materials.

Considering the lack of information regarding the current state of the subsurface materials beneath the subject properties and the known impacts of nearby properties, the quality of soils may not meet residential criteria and may preclude portions of the subject properties from certain future uses. During any future construction activities at the properties, it is recommended that all waste and excavated materials be tested, appropriately managed, and properly disposed.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

REEL PG 384
00557 0084

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 12 day of July, nineteen hundred and eighty-four

BETWEEN

HUNTS POINT AUTO WRECKERS, INC. having its principal office at 1480 Sheridan Expressway, Bronx, N.Y.

party of the first part, and

P.D.J. SIMONE REALTY COMPANY, having its principal office at 1480 Sheridan Expressway, Bronx, N.Y.

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, as follows:

PARCEL A: All that certain lot, piece or parcel of land, with the buildings thereon, situate, lying and being in the Borough and County of the Bronx, City and State of New York, known and designated by the numbers 13 to 23, both inclusive, on map entitled, "Map of lands of Estate of Harriet Bates, situate in the 23rd Ward of the City of New York" dated New York, May 10, 1887, made by Louis A. Risse, C.E. and C.S. and filed in the Office of the Register of the County of New York, by the No. 995, excepting thereout such portion as has been taken therefrom for the opening and laying out of Edgewater Road and West Farms Road, and all that certain strip of land conveyed by Ephraim C. Bates and others to the New York, New Haven and Hartford Railroad Company by deed dated July 24, 1893, recorded on the same day in the Office of the Register of New York County, in Liber 10 Section 11 of conveyances at page 183, bounded and described as follows:
BEGINNING at a point on the easterly side of Sheridan Expressway distant 324.96 feet northerly from the corner formed by the intersection of the northerly side of Westchester Avenue and the easterly side of Sheridan Expressway; thence northerly along the easterly side of Sheridan Expressway, 15.55 feet to a point of curve; thence still northerly along the easterly side of Sheridan Expressway as it curves to the right a distance of 75.10 feet to a point of compound curve; thence still northerly along the said easterly side of Sheridan Expressway as it curves to the right a distance of 446.98 feet to a point; thence easterly along a line forming an angle of 6 degrees 43 minutes 10 seconds on its northerly side with the radial line of the last mentioned course 180.54 feet to a point in the U.S. Pier and Bulkhead line; thence southerly along the said Pier and Bulkhead line on a line forming an interior angle of 91 degrees 35 minutes 39 seconds with the last mentioned course a distance of 7.04 feet; thence still along said Pier and Bulkhead line on a line forming an exterior angle of 164 degrees 36 minutes 15 seconds a distance of 151.27 feet to a point; thence southeasterly and still

(SEE ANNEXED SHEET)

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.
The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

Joseph P. Simone Pres.
Hunts Point Auto Wreckers Inc
c/o Joseph Simone, Pres

475-00-948 Standard N.Y.B.T.U. Form 8002 Bargain and Sale Deed, with Covenant Against Grantor's Acts—Individual or Corporation

HUNTS POINT AUTO WRECKERS/P.D.J. SIMONE REALTY COMPANY

REEL 00557 PG 0385

Description(Cont'd.)

along the said Pier and Bulkhead on a line forming an interior angle of 236 degrees 11 minutes 15 seconds with the last mentioned course a distance of 33.58 feet to a point; thence southwesterly on a line forming an interior angle of 96 degrees 00 minutes 26 seconds with the last mentioned course, a distance of 337.29 feet to a point; thence westerly on a line forming an interior angle of 124 degrees 21 minutes 36 seconds with the last mentioned course, a distance of 63.70 feet to the point or place of BEGINNING;.

PARCEL B: All the certain piece of parcel of land, situate, lying and being in the Borough and County of the Bronx, City and State of New York, bounded and described as follows: BEGINNING at a point at the most easterly corner of the herein described premises, said point being in the U.S. Pier and Bulkhead Line of the Bronx River and distant 66.23 feet northwesterly of and measured at right angles from Station 196 and 27.38 of the monumented six track center line of the railroad leading from New York, New York, to New Haven, Connecticut; thence southwesterly in a line parallel to and distant 66.23 feet northwesterly of and measured at right angles to said monumented six track center line tangent and tangent extended southwesterly and bounding southeasterly on remaining railroad land 332.97 feet to a point; thence northwesterly at right angles to the last described line and bounding southwesterly on said remaining railroad land 41.00 feet to a point; thence northeasterly at right angles to the last described line and bounding northwesterly on land of Corbetta Construction Co., Inc. 337.29 feet to a point in said U.S. Pier and Bulkhead Line; thence along said U.S. Pier and Bulkhead Line and making an interior angle of 83 degrees 59 minutes 22 seconds with the last described line 41.23 feet to the point or place of beginning.

Demographic Profile

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

Radius of Area:	3	Land Area:	86%	Households in Area:	372,898
Center Latitude:	40.82989	Water Area:	14%	Housing Units in Area:	394,635
Center Longitude:	-73.88466	Population Density:	45,661/sq.mi.	Households on Public Assistance:	34,463
Total Persons:	1,101,614	Percent Minority:	94%	Persons Below Poverty Level:	625,763

Race Breakdown	Persons (%)	Age Breakdown	Persons (%)
White:	271,273 (25%)	Child 5 years and younger:	85,005 (8%)
African-American:	380,013 (35%)	Minors 17 years and younger:	303,555 (28%)

Race Breakdown	Persons (%)	Age Breakdown	Persons (%)
Hispanic-Origin:	680,201 (62%)	Adults 18 years and older:	798,059 (72%)
Asian/Pacific Islander:	37,144 (3%)	Seniors 65 years and older:	101,090 (9%)
American Indian:	16,778 (2%)		
Other/Multiracial:	396,406 (36%)		

Education Level (Persons 25 & older)	Persons (%)	Income Breakdown	Households (%)
Less than 9th Grade:	119,542 (18.4%)	Less than $15,000:	109,516 (29.9%)
9th through 12th Grade:	116,718 (17.96%)	$15,000 - $25,000:	56,100 (15.31%)
High School Diploma:	180,271 (27.74%)	$25,000 - $50,000:	96,090 (26.23%)
Some College/2-yr:	142,133 (21.87%)	$50,000 - $75,000:	53,351 (14.56%)
B.S./B.A. or More:	91,114 (14.02%)	Greater than $75,000:	51,261 (13.99%)

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT-THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY

THIS INDENTURE, made the 31st day of October , 2017

BETWEEN

W.N.F. Holding Corp
4 Elba Place
Scarsdale, NY 10583

party of the first part, and

Sheridan Blvd Apartments LLC
3 2nd Street
Englewood Cliff, NJ 07632

party of the second part,

WITNESSETH, that the party of the first part, in consideration of

paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever, Three Million ($ 3,000,000.00) dollars

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the

County of Bronx, City of New York, State of New York, bounded and described as follows:

PLEASE SEEE SCHEDULE A ANNEXED HERETO AND MADE A PART HEREOF

BEING the same premises conveyed to W.N.F. Hold Corp from Hold Contracting Corp. by deed dated May 31, 1992 and recorded October 9, 1992 in Reel 1124 Page 771.

SAID PREMISES being known and designated by the street address 1428-1432 Sheridan Expressway, Bronx, New York.

This conveyance has been made with the unanimous consent in writing of all the stockholders of the party of the first.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose. The word "party" shall be construed as if it read "parties" when ever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

DEED EXHIBIT

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 5th day of November, in the year ninety-nine

BETWEEN 1460 Sheridan Expressway Corp., a New York Corporation with its principal place of business located at 1460 Sheridan Expressway, Bronx, New York 10459

party of the first part, and West Farms Realty LLC, a New York Limited Liability Company with its principal place of business located at c/o Simone Realty , 1000 Main Street, New Rochelle, New York

party of the second part.

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough and County of the Bronx, City and State of New York, more particularly described as follows:

BEGINNING at the corner formed by the intersection of the easterly side of Sheridan Expressway (Bronx River Expressway) as legally opened May 25, 1950, with the southerly side of E. 172nd Street;

THENCE easterly along the southerly side of E. 172nd Street, a distance of 134.88 feet to the pier and bulkhead lines of the Bronx River, as approved by the Secretary of War on August 9, 1940;

THENCE southerly along said pier and bulkhead line a distance of 254.43 feet to the division line of land conveyed to WNF Holding Corp. by deed dated June 10, 1997 and recorded August 14, 1997 in Reel 1490 Page 2379 in the Bronx County Register's Office;

THENCE westerly along said last mentioned division line a distance of 180.98 feet to the easterly side of Sheridan Expressway;

THENCE northerly along said easterly side of Sheridan Expressway 265.11 feet to the corner first above-mentioned, the point or place of BEGINNING.

This conveyance has been consented to by two-thirds of all the shareholders of 1460 Sheridan Expressway Corp. at a meeting duly noticed and called for the purpose of obtaining said consent.

Together with all rights, title and interest to all the lands now or formerly under the waters of the Bronx

TOGETHER with all rights, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

TOGETHER with all the right, title and interest of the party of the first part, of in and to The Street in front of and adjoining said premises

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

1460 Sheridan Expressway Corp.

   - ● Permit Renewal
   - ○ Modification (There has been a change in information since the earlier submission)
   - ○ Want to terminate general stormwater permit coverage

3. Provide the Geographic Coordinates for the facility in NYTM units.

   594039 X Coordinates (Easting)

   4520282 Y Coordinates (Northing)

These coordinates can be obtained through the NYSDEC Stormwater Interactive Map on the DEC Website at: http://www.dec.state.ny.us/website/imsmaps/stormwater/viewer.htm
Directions: Go to the above website. Zoom into your project location such that you can accurately click on the center of your facility. Once you have located your facility, go to the drop-down menu on the left and choose "Get Coordinates". Click on the center of your facility and a small window containing the X, Y coordinates in NYTM units will pop up. Transcribe these coordinates into the spaces above. For problems with the interactive map, please try the help function.

4. Identify all applicable Industrial Activities from the Industrial Sectors shown below that are located within areas subject to the stormwater discharges covered under this permit. Check all that apply to your facility.

Sampling Notes	Mark all that apply	SIC Code or Activity Code	Activity Represented
		Sector A: Timber Products	
B,C	○	2411	Log Storage and Handling (Wet deck storage areas are only authorized if no chemical additives are used in the spray water or applied to the logs).
B	○	2421	General Sawmills and Planning Mills
B	○	2426	Hardwood Dimension and Flooring Mills
B	○	2429	Special Product Sawmills, Not Elsewhere
B	○	2431-2439 (except 2434 - see sector W)	Millwork, Veneer, Plywood, and Structural Wood.
B	○	2441, 2448, 2449	Wood Containers
B	○	2451, 2452	Wood Buildings and Mobile Homes
B	○	2491	Wood Preserving
B	○	2493	Reconstituted Wood Products
B	○	2499	Wood Products, Not Elsewhere Classified
		Sector B: Paper and Allied Products	
	○	2611	Pulp Mills
	○	2621	Paper Mills
B	○	2631	Paperboard Mills
	○	2652-2657	Paperboard Containers and Boxes
	○	2671-2679	Converted Paper and Paperboard Products, Except Containers and Boxes
		Sector C: Chemical and Allied Products	
B	○	2812-2819	Industrial Inorganic Chemicals.
B	○	2821-2824	Plastics Materials and Synthetic Resins, Synthetic Rubber, Cellulosic and Other Manmade Fibers Except Glass.
	○	2833-2836	Medicinal Chemicals and Botanical Products; Pharmaceutical Preparations; In Vitro and In Vivo Diagnostic Substances; Biological Products, Except Diagnostic Substances.
B	○	2841-2844	Soaps, Detergents, and Cleaning Preparations; Perfumes, Cosmetics, and Other Toilet Preparations.
	○	2851	Paints, Varnishes, Lacquers, Enamels, and Allied Products.
	○	2861-2869	Industrial Organic Chemicals.
B,C	○	2873-2879	Agricultural Chemicals.
	○	2891-2899	Miscellaneous Chemical Products.
	○	3952 (limited to list)	Inks and Paints, Including China Painting Enamels, India Ink, Drawing Ink, Platinum Paints for Burnt Wood or Leather Work, Paints for China Painting, Artist's Paints and Artist's Watercolors.
		Sector D: Asphalt Paving and Roofing Materials and Lubricants	
B,C	○	2951, 2952	Asphalt Paving and Roofing Materials
	○	2992, 2999	Miscellaneous Products of Petroleum and Coal
		Sector E: Glass Clay, Cement, Concrete, and Gypsum Products	
	○	3211	Flat Glass
	○	3221, 3229	Glass and Glassware, Pressed or Blown
	○	3231	Glass Products Made of Purchased Glass
C	○	3241	Hydraulic Cement
B	○	3251-3259	Structural Clay Products
B	○	3261-3269	Pottery and Related Products
B,C	○	3271-3275	Concrete, Gypsum and Plaster
	○	3281	Cut Stone and Stone Products
	○	3291-3299	Abrasive, Asbestos, and Miscellaneous Non-metallic Mineral Products

Sampling Notes	Mark all that apply	SIC Code or Activity Code	Activity Represented
		Sector F: Primary Metals	
B	○	3312-3317	Steel Works, Blast Furnaces, and Rolling and Finishing Mills
B	○	3321-3325	Iron and Steel Foundries
	○	3331-3339	Primary Smelting and Refining of Nonferrous Metals
	○	3341	Secondary Smelting and Refining of Nonferrous Metals
B	○	3351-3357	Rolling, Drawing, and Extruding of Nonferrous
B	○	3363-3369	Nonferrous Foundries (Castings)
	○	3398, 3399	Miscellaneous Primary Metal Products
		Sector G: Metal Mining (Ore Mining and Dressing)	
B	○	1011	Iron Ores
B	○	1021	Copper Ores
B	○	1031	Lead and Zinc Ores
B	○	1041, 1044	Gold and Silver Ores
B	○	1061	Ferroalloy Ores, Except Vanadium
B	○	1081	Metal Mining Services
B	○	1094, 1099	Miscellaneous Metal Ores
		Sector H: Coal Mines and Coal Mining Related Facilities	
		Sector I: Oil and Gas Extraction and Refining	
B	○	1311	Crude Petroleum and Natural Gas
B	○	1321	Natural Gas Liquids
B	○	1381-1389	Oil and Gas Field Services
B	○	2911	Petroleum Refineries
		Sector J: Mineral Mining and Dressing	
B	○	1411	Dimension Stone
B,C	○	1422-1429	Crushed and Broken Stone, Including Rip Rap
B,C	○	1442, 1446	Sand and Gravel
	○	1455, 1459	Clay, Ceramic, and Refractory Materials
	○	1474-1479	Chemical and Fertilizer Mineral Mining
B	○	1481	Nonmetallic Minerals Services, Except Fuels
B	○	1499	Miscellaneous Nonmetallic Minerals, Except Fuels
		Sector K: Hazardous Waste Treatment, Storage, or Disposal Facilities	
B,C	○	HZ	Hazardous Waste Treatment, Storage or Disposal
		Sector L: Land Fills and Land Application Sites	
B,C	○	LF	Landfills, Land Application Sites, and Open Dumps
		Sector M: Automobile Salvage Yards	
B	●	5015	Automobile Salvage Yards
		Sector N: Scrap Recycling Facilities	
B	○	5093	Scrap Recycling Facilities
B	○	4499 (limited to list)	Dismantling Ships, Marine Salvaging, and Marine Wrecking - Ships for Scrap
		Sector O: Steam Electric Generating Facilities	
B,C	○	SE	Steam Electric Generating Facilities

Sampling Notes	Mark all that apply	SIC Code or Activity Code	Activity Represented
		Sector P: Land Transportation and Warehousing	
B	○	4011, 4013	Railroad Transportation
B	○	4111-4173	Local and Highway Passenger Transportation
B	○	4212-4231	Motor Freight Transportation and Warehousing
B	○	4311	United States Postal Service
B	○	5171	Petroleum Bulk Stations and Terminals
		Sector Q: Water Transportation	
B	○	4412-4499 (except 4499 as specified in Sector N)	Water Transportation
		Sector R: Ship and Boat Building or Repairing Yards	
	○	3731, 3732	Ship and Boat Building or Repair Yards
		Sector S: Air Transportation	
B	○	4512-4581	Air Transportation Facilities
		Sector T: Treatment Works	
B	○	TW	Treatment Works
		Sector U: Food and Kindred Products	
	○	2011-2015	Meat Products
	○	2021-2026	Dairy Products
	○	2032-2038	Canned, Frozen and Preserved Fruits, Vegetables and Food Specialties
B	○	2041-2048	Grain Mill Products
	○	2051-2053	Bakery Products
	○	2061-2068	Sugar and Confectionery Products
B	○	2074-2079	Fats and Oils
	○	2082-2087	Beverages
	○	2091-2099	Miscellaneous Food Preparations and Kindred Products
	○	2111-2141	Tobacco Products
		Sector V: Textile Mills, Apparel, and Other Fabric Product Manufacturing, Leather and Leather Pruducts	
	○	2211-2299	Textile Mill Products
	○	2311-2399	Apparel and Other Finished Products Made From Fabrics and Similiar Materials
	○	3131-3199 (except 3111- see sector Z)	Leather and Leather Products, except Leather Tanning and Finishing
		Sector W: Furniture and Fixtures	
	○	2434	Wood Kitchen Cabinets
	○	2511-2599	Furniture and Fixtures
		Sector X: Printing and Publishing	
	○	2711-2796	Printing, Publishing, and Allied Industries
		Sector Y: Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries	
B	○	3011	Tires and Inner Tubes
B	○	3021	Rubber and Plastics Footwear
B	○	3052, 3053	Gaskets, Packing, and Sealing Devices and rubber and Plastics Hose and Belting
B	○	3061, 3069	Fabricated Rubber Products, Not Elsewhere Classified
B	○	3081-3089	Miscellaneous Plastics Products
	○	3931	Musical Instruments
	○	3942-3949	Dolls, Toys, Games and Sporting and Athletic Goods
	○	3951-3955	Pens, Pencils, and Other Artists' Materials
	○	3961, 3965	Costume Jewelry, Costume Novelties, Buttons, and Miscellaneous Notions, Except Precious Metal
	○	3991-3999	Miscellaneous Manufacturing Industries

Sampling Notes	Mark all that apply	SIC Code or Activity Code	Activity Represented
		Sector Z: Leather Tanning and Finishing	
B	○	3111	Leather Tanning, Currying and Finishing
		Sector AA: Fabricated Metal Products	
B	○	3411-3499	Fabricated Metal Products, Except Machinery and Transportation Equipment
B	○	3911-3915	Jewelry, Silverware, and Plated Ware
		Sector AB: Transportation Equipment, Industrial or Commercial Machinery	
	○	3511-3599 (except 3571-3579 see Sector AC)	Industrial and Commercial Machinery (Except Computer and Office Equipment)
	○	3711-3799 (except 3731 & 3732 see Sector R)	Transportation Equipment (Except Ship and Boat Building and Repairing)
		Sector AC: Electronic, Electrical, Photographic, and Optical Goods	
B	○	3571-3579	Computer and Office Equipment
B	○	3612-3699	Electronic, Electrical Equipment and Components, Except Computer Equipment
B	○	3812-3873	Measuring, Analyzing and Controlling Instrument; Photographic and Optical Goods
		Sector AD & AE: Non-Classified Facilities/Storm Water Discharges Designated By the Board As Requiring Permits	
B	○	Sector AD	Other Storm Water Discharges Designated By the Department As Needing a Permit or Any Facility Discharging Storm Water Associated With Industrial Activity Not Described By Any of Sectors A-AC. Note: Facilities may not elect to be covered under Sector AD. Only the Department may assign a facility to Sector AD.
B	○	Sector AE	

Notes: B - Benchmark Monitoring Required
C - Compliance Monitoring for Point Source Category Effluent Limitations

5. Has a Stormwater Pollution Prevention Plan (SWPPP) been prepared for this facility in accordance with the requirements of the SPDES Multi-Sector General Permit? Please be advised that you cannot obtain coverage under this permit without having first prepared a SWPPP. ..... ◉ Yes ○ No

6. For each stormwater discharge associated with industrial activity at your facility identify the outfall number (e.g., 001, 002, etc.); the four digit Standard Industrial Classification (SIC) codes or 2-letter Industrial Activity Codes that best represent the principal products or services rendered by the facility for that drainage area; and the acreage of industrial activity exposed to stormwater for each outfall (round to nearest tenth of an acre):

	Outfall No.	Industrial Activities (SIC or 2-letter Codes) A	B	C	Acreage
1	001	5015			2.3
2					.
3					.
4					.
5					.
6					.
7					.
8					.
9					.
				Total Acreage	2.3

(Note: SIC information can be obtained at the following web sites: http://www.osha.gov/pls/imis/sicsearch.html and http://www.softshare.com/tables/sic/. The 2-letter Industrial Activity Codes are: **HZ** - hazardous waste treatment, storage or disposal facilities; **LF** - landfills/disposal facilities that receive or have received any industrial waste; **SE** - steam electric power generating facilities; or **TW** - treatment works for treating domestic sewage.)

7. Does this facility have coal piles that are exposed to precipitation? ..... ○ Yes ● No

8. Does this facility discharge have salt piles that are exposed to precipitation? ..... ○ Yes ● No

9. Does this facility discharge stormwater from secondary containment areas for liquid bulk storage or transfer areas? ..... ○ Yes ● No

10. Is the facility subject to any of the following EPA Point Source Category Effluent Limitations?

- Runoff from material storage piles at cement manufacturing facilities (40 CFR Part 411 Subpart C)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Contaminated runoff from phosphate fertilizer manufacturing facilities (40 CFR Part 418 Subpart A)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Coal Pile runoff at steam electric power generating facilities (40 CFR Part 423)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Discharges resulting from spraydown or intentional wetting of logs at wet deck storage areas (40 CFR Part 429 Subpart I)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Mine dewatering discharges at crushed stone, construction sand and gravel, and industrial sand mines (40 CFR Part 436)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Runoff from asphalt emulsion facilities (40 CFR Part 443 Subpart A)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

- Runoff from landfills (40 CFR 445 Subpart A and B)? ..... ○ Yes ● No

If yes, list Outfall Nos. [ ] [ ] [ ] [ ] [ ] [ ]

11. Provide the name(s) of the surface waterbody(ies) into which site runoff will discharge:

BRONX RIVER

12(a). Does site runoff enter a Municipal Separate Storm Sewer System including roadside drains, swales, ditches, culverts, etc.? ..... ○ Yes ● No

12(b). If yes, what is the name of the municipality/entity that owns the Municipal Separate Storm Sewer System?

13. Identify any other DEC Permits that are required for this facility:

○ Air Pollution Control	○ Stream Protection/Article 15
○ Coastal Erosion	○ Water Quality Certificate
○ Hazardous Waste	○ Dam Safety
○ Long Island Wells	○ Water supply
○ Mined Land Reclamation	○ Freshwater Wetlands
○ Other SPDES	○ Tidal Wetlands
○ Solid Waste	○ Wild, Scenic and Recreational Rivers

Subject: RE: Question on DEC's Stormwater General Permit for LQD HuntsPoint Auto Parts

Mr. Terbush
We're sorry for that oversight.
Yes, we do in fact have a Stormwater Pollution Prevention Plan in place that is maintained and current.
Thanks

Subject: Question on DEC's Stormwater General Permit for LQD HuntsPoint
Auto Parts

Mr. Scarnati,
I am in the process of reviewing the Notice of Intent form submitted for the LQD Hunts Point Auto Parts facility to obtain permit coverage under the new SPDES Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity.
As you are aware this is a renewal of the old general permit for the LQD Hunts Point Auto Parts facility which has been assigned permit ID No. NYR00B428.
During the review I noticed that you did not answered question 5 "Has a Stormwater Pollution Prevention Plan (SWPPP) been prepared for this facility in accordance with the requirements of the SPDES Multi-Sector General Permit?" Under the permit requirements you should have a Stormwater Pollution Prevention Plan in place although you do not have to update your Stormwater Pollution Prevention Plan to reflect the new general permit until August 25, 2007. I did want to make sure that the facility does have a Stormwater Pollution Prevention Plan in place for the LQD Hunts Point Auto Parts facility (as required under the old general permit).
Please confirm that the facility does have a Stormwater Pollution Prevention Plan so that processing of the Notice of Intent form can proceed.

Thank you in advance for your assistance on this matter.

Notice of Intent

For Stormwater Discharges Associated with Industrial Activity under the State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit GP-0-12-001 (MSGP)

All Sections must be completed unless otherwise noted. Incomplete forms will be returned to you, thereby delaying your coverage under this General Permit. Applicants must read and understand the conditions of the permit prior to submitting this Notice of Intent (NOI) Form. Applicants are responsible for identifying and obtaining other DEC permits that may be required.

IMPORTANT:

-USE THIS NOI TO OBTAIN COVERAGE UNDER GP-0-12-001.
-TYPE OR PRINT IN BOXES. AVOID CONTACT WITH THE EDGE OF THE BOXES.
-FILL IN CIRCLES COMPLETELY AND DO NOT USE CHECK MARKS.
-OWNER/OPERATOR MUST SIGN FORM.

1. Does your facility meet all the eligibility requirements listed in Part I.C of the SPDES Multi-Sector General Permit to gain coverage under this general permit? ..... ● Yes ○ No

If No, contact the Department to discuss next steps. If Yes, go to question 2.

2. Does your facility conduct any activities listed in Part I.D of the SPDES Multi-Sector General Permit which would make your facility inelibible for coverage under this general permit? ..... ○ Yes ● No

If Yes, contact the Department to discuss next steps. If No, go to question 3.

3. Provide the name(s) of the nearest surface waterbody(ies) into which site runoff will discharge:

BRONX RIVER

4(a). Does site runoff enter a Municipal Separate Storm Sewer System including roadside drains, swales, ditches, culverts, etc.? ..... ● Yes ○ No

4(b). If Yes, what is the name of the municipality/entity that owns the Municipal Separate Storm Sewer System

NEW YORK CITY

5(a). Has a Stormwater Pollution Prevention Plan (SWPPP) been prepared for this facility in accordance with the requirements of the SPDES Multi-Sector General Permit? Please be advised that you cannot obtain coverage under this permit without having first prepared a SWPPP. ..... ● Yes ○ No

5(b). How will you make your SWPPP available to the public?

○ Posting a copy online (Provide URL).

● Maintain copy at the facility address listed in the facility information section of the NOI

○ Maintain copy at the following location (Provide address).

Street Address

City State Zip -

6(a). Has the surface waterbody(ies) in question 3 been identified as an impaired waterbody on the CWA 303(D) list or in a watershed for which a Total Maximum Daily Load (TMDL) strategy has been approved? Information about impaired waters identified in the 303(d) list is found on the Department's public web site at: http://www.dec.ny.gov/chemical/31290.html. ..... ● Yes ● No

6(b). If Yes, is the pollutant(s) causing the impairment a pollutant of concern included in the benchmarks and/or effluent limitations to which the facility is subject to in Part VIII of the SPDES Multi-Sector General Permit? A list of applicable pollutant(s) of concern for the SPDES Multi-Sector General Permit can be found in Appendix G of the permit. ..... ○ Yes ● No

6(c). If Yes, does your SWPPP include measures to address the pollutant(s) of concern as required by Part III.F.4 of the SPDES Multi-Sector General Permit? ..... ○ Yes ○ No

7. Provide the geographic coordinates in decimal degrees for the latitude & longitude of the facility. The NYS DEC Stormwater Interactive Map on the DEC's website can be used to get coordinates. Go to: www.dec.ny.gov/imsmaps/stormwater/viewer.htm

4	0	.	8	2	9		-	7	3	.	8	8	4

Latitude Longitude

8(a). Has this facility been assigned a SPDES MSGP ID under previous versions of the MSGP? ..... ● Yes ○ No

8(b). If Yes, Provide the ID if known (Note: All SPDES MSGP IDs begin with NYR00:)

○ I don't know the facility's ID

● The facility's existing ID is: | N | Y | R | 0 | 0 | B | 4 | 2 | 8 |

9. Identify all applicable Industrial Activities from the Industrial Sectors shown below that are located within areas subject to the stormwater discharges covered under this permit. Check all that apply to your facility.

Sampling Notes	Mark all that apply	SIC Code or Activity Code	Activity Represented
		Sector A: Timber Products	
B,C	○	2411	Log Storage and Handling (Wet deck storage areas are only authorized if no chemical additives are used in the spray water or applied to the logs).

Note: Facilities may not elect to be covered under Sector AD. Only the Department may assign a facility to Sector AD.
B	○	Sector AE	

Notes: B - Benchmark Monitoring Required
C - Compliance Monitoring for Point Source Category Effluent Limitations

10. For each stormwater discharge associated with industrial activity at your facility identify the outfall number (e.g., 001, 002, etc.); the four digit Standard Industrial Classification (SIC) codes, Section N Subsector, or 2-letter Industrial Activity Codes that best represent the principal products or services rendered by the facility for that drainage area; and the acreage of industrial activity exposed to stormwater for each outfall (round to nearest tenth of an acre):

	Outfall No.	Industrial Activities (SIC or 2-letter Codes) A	N	B	N	C	N	Acreage
1	001	5015						4.0
2								.
3								.
4								.
5								.
6								.
7								.
8								.
9								.
							Total Acreage	4.0

(Note: SIC information can be obtained at the following web sites: http://www.osha.gov/pls/imis/sicsearch.html and http://www.softshare.com/tables/sic/. The 2-letter Industrial Activity Codes are: **HZ** - hazardous waste treatment, storage or disposal facilities; **LF** - landfills/disposal facilities that receive or have received any industrial waste; **SE** - steam electric power generating facilities; or **TW** - treatment works for treating domestic sewage.)

11. Does this facility have coal piles that are exposed to precipitation? ..... ○ Yes ● No

12. Does this facility discharge have salt piles that are exposed to precipitation? ..... ○ Yes ● No

13. Does this facility discharge stormwater from secondary containment areas for liquid bulk storage or transfer areas? ..... ○ Yes ● No

14. Is the facility subject to any of the following EPA Point Source Category Effluent Limitations?

- Runoff from material storage piles at cement manufacturing facilities (40 CFR Part 411 Subpart C)? ○ Yes ● No
  If Yes, list Outfall numbers.

- Contaminated runoff from phosphate fertilizer manufacturing facilities (40 CFR Part 418 Subpart A)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

- Coal Pile runoff at steam electric power generating facilities (40 CFR Part 423)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

- Discharges resulting from spraydown or intentional wetting of logs at wet deck storage areas (40 CFR Part 429 Subpart I)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

- Mine dewatering discharges at crushed stone, construction sand and gravel, and industrial sand mines (40 CFR Part 436)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

- Runoff from asphalt emulsion facilities (40 CFR Part 443 Subpart A)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

- Runoff from landfills (40 CFR 445 Subpart A and B)? ..... ○ Yes ● No
  If Yes, list Outfall numbers.

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for assuring that this facility is in compliance with all sections of 6 NYCRR Parts 612, 613 and 614, and applicable sections of 6 NYCRR Subpart 360-14 (used oil tanks only), not just those cited below:

-- The facility must be re-registered if there is a transfer of ownership.
-- The Department must be notified within 30 days prior to adding, replacing, reconditioning, or permanently closing a stationary tank.
-- The facility must be operated in accordance with the code for storing petroleum, 6NYCRR Part 613.
-- Any new facility or substantially modified facility must comply with 6NYCRR Part 614.
-- This certificate must be signed and posted on the premises at all times. Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.
-- Any person with knowledge of a spill, leak or discharge must report the incident to DEC within two hours **(1-800-457-7362)**.

Is this form being used to report a Corrective Action or a Non Compliance Event? ● Corrective Action ○ Event of Non Compliance

Instruction for using this form:
- Complete a separate attachment for each Parameter/Pollutant of Concern exceeded and for every outfall where the exceedance occurred.
- If using this form as a Corrective Action Form, all questions (1 through 12) on each attachment must be answered
- If using this form as a Non-Compliance Event Form, questions 1, 2, 3, and 9 through 12 on each attachment must be answered
- Number each attachment (1 of XX, 2 of XX, 3 of XX, etc.)
- Initial and date each attachment
- Fill in number of attachments included in the box below
- The Owner/Operator must sign and date the certification statement below

Number of attachments included: 4

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possiblity of fine and imprisonment for knowing violations.

1. Parameter/Pollutant of Concern Exceeded: IRON ✓

2. Outfall No.: 001 3. Date of Exceedance: 09/12/2014

4. Permitted Value: 1 Units: ● mg/L ○ ng/L ○ ug/L ○ s.u. ○ NTUs

5. Reported Value: 5.9 Units: ● mg/L ○ ng/L ○ ug/L ○ s.u. ○ NTUs

6. Is the Parameter/Pollutant of Concern exceeded subject to quarterly compliance monitoring for discharges to impaired waterbodies? ○ Yes ○ No

If No, provide Corrective Action Sample information below. If Yes, you next quarterly sample can be used as your Corrective Action Sample.

7. Corrective Action Sample Date: 06/25/2014

8. Corrective Action Sample Value: 8600 Units: ● mg/L ○ ng/L ○ ug/L ○ s.u. ○ NTUs

9. Have you claimed this outfall as a Representative Outfall? ○ Yes ● No

If Yes, Corrective Actions must be must be completed for all outfalls claming the Representative Outfall Waiver.

10. Describe the exceedance and its cause(s):

THE IRON EXCEEDANCE WAS CAUSED BY WATER SAMPLING BEING TAKEN TOO CLOSE TO AREAS WHERE FERROUS SCRAP OR PARTS VEHICLES WERE STORED AND SAMPLE BECAME CONCENTRATED.

11. Describe the Corrective Action(s) taken to address the exceedance:

MORE DILIGENCE WITH HOUSEKEEPING, INCLUDING SWEEPING UP THE CONCRETE SURFACES ON A MORE REGULAR BASIS.

12. Describe the preventative (long term) Corrective Action(s) taken (including any SWPPP modifications) to prevent a future exceedance:

IT IS NOT NECESSARY AT THIS TIME TO PUT ANY STRUCTURAL PROCESSES IN PLACE OR AMEND THE SWPPP OTHER THAN TO STRESS GREATER ADHERENCE TO THE PROPER BMP'S.

Initial LB Date 10/27/14

3548554622

1. Parameter/Pollutant of Concern Exceeded: ALUMINUM ✓

2. Outfall No.: 001 3. Date of Exceedance: 09/12/2013

4. Permitted Value: 750 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

5. Reported Value: 2700 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

6. Is the Parameter/Pollutant of Concern exceeded subject to quarterly compliance monitoring for discharges to impaired waterbodies? ○ Yes ● No

If No, provide Corrective Action Sample information below. If Yes, you next quarterly sample can be used as your Corrective Action Sample.

7. Corrective Action Sample Date: 06/25/2014

8. Corrective Action Sample Value: 1900 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

9. Have you claimed this outfall as a Representative Outfall? ○ Yes ● No

If Yes, Corrective Actions must be must be completed for all outfalls claming the Representative Outfall Waiver.

10. Describe the exceedance and its cause(s):

THE ALUMINUM EXCEEDANCE WAS CAUSED BY THE SAMPLE BEING TAKEN IN AREAS WHERE ALUMINUM SIDING OR ROOFING WAS PRESENT AND THIS INCREASED THE CONCENTRATION IN THE SAMPLE.

11. Describe the Corrective Action(s) taken to address the exceedance:

BECAME BETTER EDUCATED AS TO WHERE TO COLLECT WATER SAMPLE FROM SO ALUMINUM PARTICLES DO NOT APPEAR IN SAMPLE.

12. Describe the preventative (long term) Corrective Action(s) taken (including any SWPPP modifications) to prevent a future exceedance:

IT IS NOT NECESSARY AT THIS TIME TO PUT ANY STRUCTURAL PROCESSES IN PLACE OR AMEND THE SWPPP OTHER THAN TO STRESS GREATER ADHERENCE TO THE PROPER BMP'S.

Initial: [signature] Date: 6/27/14

9731554622

1. Parameter/Pollutant of Concern Exceeded: LEAD ✓

2. Outfall No.: 001 3. Date of Exceedance: 09 / 12 / 2013

4. Permitted Value: 69 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

5. Reported Value: 72 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

6. Is the Parameter/Pollutant of Concern exceeded subject to quarterly compliance monitoring for discharges to impaired waterbodies? ○ Yes ● No

If No, provide Corrective Action Sample information below. If Yes, you next quarterly sample can be used as your Corrective Action Sample.

7. Corrective Action Sample Date: 06 / 25 / 2014

8. Corrective Action Sample Value: 38 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

9. Have you claimed this outfall as a Representative Outfall? ○ Yes ● No

If Yes, Corrective Actions must be must be completed for all outfalls claming the Representative Outfall Waiver.

10. Describe the exceedance and its cause(s):

THE LEAD EXCEEDANCE WAS CAUSED BY THE SAMPLE BEING TAKEN TOO CLOSE TO AREAS WHERE ENGINES WERE STORED AND WATER FLOW BECAME CONCENTRATED.

11. Describe the Corrective Action(s) taken to address the exceedance:

FACILITY BECAME MORE AWARE REGARDING PLACEMENT OF LEAD TIRE WEIGHTS. THEY ARE NOW IN CONTAINERS, NOT ON GROUND.

12. Describe the preventative (long term) Corrective Action(s) taken (including any SWPPP modifications) to prevent a future exceedance:

IT IS NOT NECESSARYAT THIS TIME TO PUT ANY STRUCTURAL PROCESSES IN PLACE OR AMEND THE SWPPP OTHER THAN TO STRESS GREATER ADHERENCE TO THE PROPER BMP'S.

Initial: [illegible] Date: 6/27/14

9731554622

1. Parameter/Pollutant of Concern Exceeded: TOTAL SUSPENDED SOLIDS

2. Outfall No.: 001 3. Date of Exceedance: 09 / 12 / 2013

4. Permitted Value: 100 Units: ● mg/L ○ ng/L ○ ug/L ○ s.u. ○ NTUs

5. Reported Value: 120 Units: ● mg/L ○ ng/L ○ ug/L ○ s.u. ○ NTUs

6. Is the Parameter/Pollutant of Concern exceeded subject to quarterly compliance monitoring for discharges to impaired waterbodies? ○ Yes ● No

If No, provide Corrective Action Sample information below. If Yes, you next quarterly sample can be used as your Corrective Action Sample.

7. Corrective Action Sample Date: 06 / 25 / 2014

8. Corrective Action Sample Value: 59 Units: ○ mg/L ○ ng/L ● ug/L ○ s.u. ○ NTUs

9. Have you claimed this outfall as a Representative Outfall? ○ Yes ● No

If Yes, Corrective Actions must be must be completed for all outfalls claming the Representative Outfall Waiver.

10. Describe the exceedance and its cause(s):

THE EXCEEDANCE OF TOTAL SUSPENDED SOLIDS WAS CAUSED BY IMPROPER TESTING. WATER SAMPLE WAS TAKEN FROM RAIN PUDDLE THAT FORMED AND SOLID MATTER SETTLED ON BOTTOM. WHEN DISTURBED, SAMPLE BECAME CLOUDED WITH THE SUSPENDED SOLIDS.

11. Describe the Corrective Action(s) taken to address the exceedance:

BECAME MORE DILIGENT WITH SWEEPING SO THAT DUST AND DIRT PARTICLES THAT REMAIN ON GROUND DO NOT BECOME PART OF THE RAIN RUNOFF.

12. Describe the preventative (long term) Corrective Action(s) taken (including any SWPPP modifications) to prevent a future exceedance:

IT IS NOT NECESSARY AT THIS TIME TO PUT ANY STRUCTURAL PROCESSES IN PLACE OR AMEND THE SWPPP OTHER THAN TO STRESS GREATER ADHERENCE TO THE PROPER BMP'S.

Dear Petroleum Bulk Storage Tank Manager/Owner:

The enclosed Petroleum Bulk Storage Registration application and/or fee is being returned to you. This application cannot be processed for the following reason(s) checked below:

____ Your fee of $_____ was not enclosed.
____ The fee of $_____ you sent is incorrect. The correct fee is $_____.
____ Federal Tax ID Number or SS# has changed and application must be submitted as a Change of Ownership with applicable fee of $_____.
____ You used an outdated application. Please use the application form enclosed.
____ Federal Tax ID Number or SS# (in case of proprietorship) was not submitted or is incorrect.
____ The combined petroleum storage capacity of this facility is less than or equals 1,100 gallons and, therefore, registration of this facility is not required.
____ Duplicate tank numbers are unacceptable. Tank # _____ already exists at your facility.
____ Tank information is incorrect. Please see attached sheet and correct error items marked.

LKQ HUNTS POINT AUTO PARTS CORP
1480 SHERIDAN EXPY
BRONX, NY 10459

Re: **REMINDER TO SUBMIT CORRECTIVE ACTION FORM**
FACILITY: LKQ HUNTS POINT AUTO PARTS CORP
SPDES ID**: NYR00B428**

Dear Permittee:

You submitted a Notice of Intent (NOI) to the Department to gain coverage under New York's State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities (GP-0-12-001)(general permit). The facility, LKQ HUNTS POINT AUTO PARTS CORP, 1480 SHERIDAN EXPY, BRONX, is now operating under the general permit and needs to comply with the terms and conditions of the permit.

According to Part IV.B.1.c.(6) and Part IV.B.1.e.(5) of the general permit, if the results of one or more parameters exceeds the applicable benchmark or effluent limitation, the owner or operator must report to the Department on a Corrective Action Form, the results of the exceedance(s), corrective action(s) taken and the results of a follow-up sample.

A follow-up stormwater sample must be collected between January 1st and June 30th. The sample needs to be taken from the same outfall(s) where the exceedance(s) occurred; this includes any outfalls not tested the previous year because of the use of the representative outfall waiver (Example: you sampled outfall 001 and claimed it represented the discharge at outfall 002. You must sample and analyze the exceeded parameter(s) at both outfalls 001 and 002). Complete laboratory analysis for the pollutant(s) that exceeded the limit(s) must be conducted. This sample collection and analysis is in addition to the sample collection required for the annual compliance sampling. Please consult the applicable section of the permit for more information on this requirement. A copy of the permit is located on the Department website at the following link:
http://www.dec.ny.gov/docs/water_pdf/gp12001.pdf

If corrective actions do not result in achieving benchmark monitoring cut-off concentrations and/or effluent limitation guidelines, the facility must continue its efforts to implement additional best management practices (BMPs) to reduce the pollutant being discharged from the property. Continued exceedance of benchmark cut-off concentrations and/or effluent limitations guidelines may identify facilities that would be more appropriately covered under an individual SPDES permit.

The DMR you submitted to the Department for the annual monitoring period ending 12/31/2013, indicated exceedance(s) of the benchmark and/or effluent limitation(s) for the following outfall(s)

and parameter(s):

Outfall 001 - Aluminum, total recoverable Outfall 001 - Iron, total recoverable Outfall 001 - Lead, total recoverable Outfall 001 - Solids, total suspended

The Corrective Action Form, with the results from follow-up sampling, is due to the Department by July 31st, 2014. Failure to submit the Corrective Action Form to the Department and/or take the necessary corrective actions, are violations of your SPDES permit and Article 17 of the New York State Environmental Conservation Law (ECL) and could result in civil penalties.

A copy of the Corrective Action Form is enclosed. It is located on the DEC website at the following link: http://www.dec.ny.gov/docs/water_pdf/msgpcaf.pdf Please note that this form also serves as the Report of Non-Compliance Event Form.

If you have any questions regarding this matter or need assistance in completing the Corrective Action Form, please contact Holly Shear at 518-402-8175.

Sincerely,

Meredith Streeter

LKQ HUNTS POINT AUTO PARTS CORP
1480 SHERIDAN EXPY
BRONX, NY 10459

Re: **NOTICE OF VIOLATION FOR FAILURE TO SUBMIT THE ANNUAL CERTIFICATION REPORT (ACR)**
FACILITY: LKQ HUNTS POINT AUTO PARTS CORP

SPDES ID: NYR00B428

Dear Permittee:

You submitted a Notice of Intent (NOI) form to this Department to gain authorization to discharge stormwater from your industrial facility, LKQ HUNTS POINT AUTO PARTS CORP, 1480 SHERIDAN EXPY, BRONX, to the waters of the State. Having submitted your NOI, you are operating under New York's State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities (GP-0-12-001) and are therefore bound to comply with the terms and conditions of the permit.

Part IV. D. of the general permit requires you to submit an ACR to the Department by February 28th of each year. As of the date of this letter, the ACR has not been received for calendar year 2017.

Failure to submit a required ACR is a violation of your SPDES permit and Article 17 of the New York State Environmental Conservation Law (ECL). ECL §71-1929 provides for civil penalties of up to thirty-seven thousand five-hundred dollars ($37,500) per day per violation.

In order to resolve and settle this matter without a financial penalty, you must complete the ACR form for year 2017 and submit it to this office no later than 30 days from the date of this letter: **New York State Department of Environmental Conservation, Bureau of Water Permits, 625 Broadway - 4th Floor, Albany, New York 12233-3506.**

The form may be downloaded from the DEC website at the following address: http://www.dec.ny.gov/docs/water_pdf/msgpanncertform.pdf .

If you have any questions regarding this matter or if you need assistance in completing the ACR, please contact Holly Shear at 518-402-8175 or via email at: holly.shear@dec.ny.gov.

Sincerely,

Meredith Streeter, P.E.

Re: Acknowledgement of Notice of Intent for Coverage under SPDES Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity (GP-0-12-001)

Dear LOUIS SCARNATI:

This is to acknowledge that the New York State Department of Environmental Conservation (the Department) has received a complete Notice of Intent (NOI) for coverage under the State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity (MSGP) GP-0-12-001 for the following facility:

LKQ HUNTS POINT AUTO PARTS CORP
1480 SHERIDAN EXPY
BRONX, NY 10459

The permit identification number for this facility is NYR00B428. Please be sure to include this permit identification number on any forms or correspondence you send the Department related to this general permit.

Unless notified by the Department to the contrary, this authorization becomes effective 30 calendar days after the NOI receive date of 12/31/2012, and is conditioned upon the following:

- The information submitted in the NOI received by the Department is accurate and complete.
- The Owner or Operator has developed and is implementing a Stormwater Pollution Prevention Plan (SWPPP) that complies with MSGP GP-0-12-001.
- When applicable, project review pursuant to the State Environmental Quality Review Act (SEQR) has been satisfied.
- All applicable Uniform Procedures Act (Environmental Conservation Law, 6NYRCC Part 621) permits have been obtained. Contact your Regional Permit Administrator (http://www.dec.ny.gov/permits/363.html) for further information.

Please be advised that an Annual Certification Report (ACR) must be completed and submitted for each facility that has obtained permit coverage under this general permit. A copy of the ACR can be found on the Departments website, listed on the next page. An ACR must be completed at the end of calendar year 2013 and must be submitted by February 28, 2014, to:

MSGP Permit Coordinator
NYSDEC, Division of Water
Bureau of Water Permits
625 Broadway
Albany, New York 12233-3505

An ACR must be completed and submitted for each calendar year, thereafter, by February 28th.

In addition to the above, if your facility has stormwater discharges that are subject to benchmark or compliance monitoring (based upon information submitted in your NOI), then you are required to submit your sampling results on Discharge Monitoring Report (DMR) forms. These forms must be completed and submitted along with your Annual Certification Report as indicated above. DMRs will be sent to your facility in 2013. Only results submitted on DMRs provided by the Department will be accepted. The Owner or Operator is responsible for making sure they understand all monitoring requirements and have the appropriate forms. If you do not receive the correct DMRs, please contact the Department.

If the result of one or more parameters for which analysis of benchmark or compliance monitoring was required exceeds the applicable benchmark cut-off concentration or effluent limitation, the facility must implement corrective actions to address the exceedance. Corrective actions include identifying the cause of the exceedance, implementing BMPs to address the cause of the exceedance, revisions to the facility's SWPPP to prevent the exceedance from reoccurring, and collecting an additional sample to determine the effectiveness of the corrective action. The facility must collect the additional sample at the outfall where the exceedance occurred during the first six months of the following calendar year and complete analysis for the pollutant(s) that exceeded the benchmark cut-off concentration or effluent limitation. Results of the analysis must be reported on a Corrective Action Form by July 31st of the calendar year which the sample was collected. A copy of the Corrective Action Form can be found on the Department's website.

If there are changes to your existing general permit or if you no longer need this general permit you must submit a Notice of Modification (NOM) form to modify your general permit or a Notice of Termination (NOT) form to terminate your general permit as soon as possible. If you are selling the facility, it is your responsibility to submit a NOT terminating your coverage and you must notify the new owner, in writing, of the need to obtain the general permit for stormwater discharges.

LKQ HUNTS POINT AUTO PARTS CORP
1480 SHERIDAN EXPY
BRONX, NY 10459

Re: **NOTICE OF VIOLATION FOR FAILURE TO SUBMIT DISCHARGE MONITORING REPORT (DMR)**
FACILITY: **LKQ HUNTS POINT AUTO PARTS CORP**
SPDES ID**: NYR00B428**

Dear Permittee:

You submitted a Notice of Intent (NOI) form to this Department to gain authorization to discharge stormwater from your industrial facility, LKQ HUNTS POINT AUTO PARTS CORP, 1480 SHERIDAN EXPY, BRONX, to the waters of the State. Having submitted your NOI, you are operating under New York's State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities (GP-0-12-001) and are therefore bound to comply with the terms and conditions of the permit.

Part IV. D. of the general permit requires you to submit Discharge Monitoring Reports (DMR(s)) to the Department by February 28th of each year. As of the date of this letter, the DMR(s) for the following outfall(s) and/or limit set(s) has not been received or is incomplete for calendar year 2017:

001A

Failure to submit a required DMR is a violation of your SPDES permit and Article 17 of the New York State Environmental Conservation Law (ECL). ECL §71-1929 provides for civil penalties of up to thirty-seven thousand five-hundred dollars ($37,500) per day per violation.

In order to resolve and settle this matter without a financial penalty, you must complete the attached page and return it along with any required complete DMRs within 30 days of the date of this letter.

If you have any questions regarding this matter, need a copy of your blank DMR or need assistance in completing the DMR, please contact Holly Shear at 518-402-8175 or via email at: Holly.shear@dec.ny.gov.

SPDES Multi-Sector General Permit for Stormwater
Discharges Associated with Industrial Activity (GP-0-06-002)

The permittee shall complete this Annual Certification Report form by answering the following questions, describing improvements to the facility's Stormwater Pollution Prevention Plan (SWPPP), provide copies of monitoring results on appropriate Monitoring Reports Forms and signing the certification at the end of this form. This completed report is to be submitted each calendar year by March 31st of the following year to: Industrial Stormwater General Permit Coordinator, NYSDEC, Bureau of Water Permits, 625 Broadway, Albany, NY, 12233-3505

SECTION I: FACILITY INFORMATION

Permit I.D. No.: NYR00 B428 **Report for Calendar Year:** 2007

Owner Name

LKQ HUNTS POINT AUTO PARTS CORP.

Facility Name

LKQ HUNTS POINT AUTO PARTS CORP.

SECTION II: GENERAL INFORMATION:

1. List the number of stormwater outfalls at the facility that are from areas of industrial activity. .....

2. Is the facility claiming any monitoring waivers? ..... ○ Yes ● No
[describe and certify in your cover letter]
   - ○ Representative Outfall
   - ○ Inactive or Unstaffed Site
   - ○ Adverse Climatic Conditions
   - ○ Alternate Certification of "Not Present" or "No Exposure"

3. Is the information provided in your original Notice of Intent or Termination (NOIT) submission still accurate and up to date? If not, please submit an updated NOIT indicating the correct facility information. ..... ● Yes ○ No

4. Has a comprehensive site compliance evaluation been conducted at the facility in the past year? ..... ● Yes ○ No

5. Is the facility's Stormwater Pollution Prevention Plan (SWPPP) kept up to date and modified when necessary? ..... ● Yes ○ No

SECTION III: QUARTERLY VISUAL EXAMINATIONS AND DRY WEATHER FLOW INSPECTIONS:

6. Have the required quarterly visual examinations of stormwater at the facility been performed during this reporting period? ..... ● Yes ○ No

7. Did any of the quarterly visual examinations result in observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, or other indicators of stormwater pollution and contamination? ..... ● Yes ○ No

8. Was the annual dry weather flow inspection performed during this reporting period? ..... ● Yes ○ No ○ NA

9. Were any indicators of stormwater pollution or unauthorized discharges identified? ..... ○ Yes ● No ○ NA

10. Did any of these findings result in modification of the SWPPP? ..... ○ Yes ● No ○ NA

SECTION IV: STORMWATER MONITORING - BENCHMARK PARAMETERS:

11. Is the permittee required to monitor stormwater at the facility for benchmark parameters? (If no, skip to Section V) ..... ● Yes ○ No

12. Were there any of the sampling results from this year higher than the cut-off values listed in the permit? ..... ○ Yes ● No

13. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ● No

14. If any of the sampling results were higher than the benchmark values listed in the permit, was the facility inspected to identify the source? ..... ○ Yes ○ No ● NA

15. Did this result in modification of the SWPPP? ..... ○ Yes ● No

SECTION V: STORMWATER MONITORING - COMPLIANCE MONITORING

16. Is the permittee required to conduct compliance monitoring for storm water discharges subject to Point Source Category Effluent Limitation? ..... ○ Yes ● No

17. Is the permittee required to conduct compliance monitoring for storm water discharges from coal piles? (If no to questions 16 & 17, go to Section VI) ..... ○ Yes ● No

18. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ● No

19. Were any of the sampling results from this year higher than the effluent limitation listed in the permit? ..... ○ Yes ● No

20. If any of the sampling results were higher than the effluent limitations listed in the permit, was the facility inspected to identify the source? ..... ○ Yes ○ No ● NA

21. Did this result in modification of the SWPPP? ..... ○ Yes ● No

SECTION VI: SUMMARY

Provide a brief description of any facility changes; problems identified during comprehensive compliance evaluations, quarterly visual observations or monitoring results; and action taken to improve the quality of the stormwater discharge.

This facility was unaware that analytical testing was required during 2007. Notice from NYS DEC Division of Water enclosing the Discharge Monitoring Report was received too late to do analytical testing during calendar year 2007. The required testing will be performed during 2008.

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

   - ○ Adverse Climatic Conditions
   - ○ Alternate Certification of "Not Present" or "No Exposure"

3. Is the information provided in your original Notice of Intent or Termination (NOIT) submission still accurate and up to date? If not, please submit an updated NOIT indicating the correct facility information. ..... ● Yes ○ No

4. Has a comprehensive site compliance evaluation been conducted at the facility in the past year? ..... ● Yes ○ No

5. Is the facility's Stormwater Pollution Prevention Plan (SWPPP) kept up to date and modified when necessary? ..... ● Yes ○ No

SECTION III: QUARTERLY VISUAL EXAMINATIONS AND DRY WEATHER FLOW INSPECTIONS:

6. Have the required quarterly visual examinations of stormwater at the facility been performed during this reporting period? ..... ● Yes ○ No

7. Did any of the quarterly visual examinations result in observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, or other indicators of stormwater pollution and contamination? ..... ○ Yes ● No

8. Was the annual dry weather flow inspection performed during this reporting period? ..... ● Yes ○ No ○ NA

9. Were any indicators of stormwater pollution or unauthorized discharges identified? ..... ○ Yes ● No ○ NA

10. Did any of these findings result in modification of the SWPPP? ..... ○ Yes ● No ○ NA

SECTION IV: STORMWATER MONITORING - BENCHMARK PARAMETERS:

11. Is the permittee required to monitor stormwater at the facility for benchmark parameters? (If no, skip to Section V) ..... ● Yes ○ No

12. Were there any of the sampling results from this year higher than the cut-off values listed in the permit? ..... ● Yes ○ No

13. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ● No

14. If any of the sampling results were higher than the benchmark values listed in the permit, was the facility inspected to identify the source? ..... ● Yes ○ No ○ NA

15. Did this result in modification of the SWPPP? ..... ● Yes ○ No

SECTION V: STORMWATER MONITORING - COMPLIANCE MONITORING

16. Is the permittee required to conduct compliance monitoring for storm water discharges subject to Point Source Category Effluent Limitation? ..... ○ Yes ● No

17. Is the permittee required to conduct compliance monitoring for storm water discharges from coal piles? (If no to questions 16 & 17, go to Section VI) ..... ○ Yes ● No

18. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ● No

19. Were any of the sampling results from this year higher than the effluent limitation listed in the permit? ..... ○ Yes ● No

20. If any of the sampling results were higher than the effluent limitations listed in the permit, was the facility inspected to identify the source? ..... ○ Yes ○ No ● NA

21. Did this result in modification of the SWPPP? ..... ○ Yes ● No

SECTION VI: SUMMARY

Provide a brief description of any facility changes; problems identified during comprehensive compliance evaluations, quarterly visual observations or monitoring results; and action taken to improve the quality of the stormwater discharge.

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Permit I.D. No.: NYR00 B 4 2 8 **Report for Calendar Year:** 2 0 1 3

Owner Name

LKQ HUNTS POINT AUTO PARTS CORP

Facility Name

LKQ HUNTS POINT AUTO PARTS CORP

SECTION II: GENERAL INFORMATION:

1. List the number of stormwater outfalls at the facility that are from areas of industrial activity 0 0 1

2. Is the facility claiming any monitoring waiver(s)? ..... ○ Yes ● No

If yes, which waiver(s) are you claiming?

- ○ Adverse Climatic Conditions*
- ○ Alternate Certification of "Not Present" or "No Exposure"
- ○ Inactive or Unstaffed Site*
- ○ Representative Outfall*

* If you are claiming a monitoring waiver the appropriate monitoring waiver form must be included with your Discharge Monitoring Report form.

3. Is the information provided in your original Notice of Intent (NOI) submission still accurate and up to date? If not, please submit a Notice of Modification (NOM) to update the facility information ..... ● Yes ○ No

4. Has a comprehensive Site Compliance Inspection and Evaluation been conducted at the facility in the past year? ... ● Yes ○ No

5. Is the facility's Stormwater Pollution Prevention Plan (SWPPP) kept up to date and modified when necessary? ..... ● Yes ○ No

SECTION III: QUARTERLY VISUAL MONITORING:

1. Have the required quarterly visual examinations of stormwater at the facility been performed during this reporting period (See Part.IV.1.a of the MSGP)? ..... ● Yes ○ No

2. Did any of the quarterly visual examinations result in observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, or other indicators of stormwater pollution and contamination? (If yes, question 2.A, 2.B, and 2.C below must be answered) ..... ○ Yes ● No

A. Were corrective and follow up actions taken (See Part IV.B.1.a.(5) of the MSGP)? ..... ○ Yes ● No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent stormwater pollution and contamination from reoccurring (See Part IV.B.1.a.(5)(c) of the MSGP)?..... ○ Yes ● No

C. Was a follow up visual inspection conducted to ensure corrective and follow up actions were successful (See Part IV.B.1.a.(5)(d) of the MSGP)? ..... ○ Yes ● No

SECTION III: ANNUAL DRY WEATHER FLOW MONITORING:

1. Was the annual dry weather flow inspection performed during this reporting period (See Part IV.B.1.b of the MSGP)? ... ● Yes ○ No

2. Were any non-stormwater dischargers or indicators of non-stormwater discharges identified? (If no, proceed to Section IV) ... ○ Yes ● No

3. Was the source of the non-stormwater discharge identified? (If no, proceed to question 5) ... ○ Yes ○ No

4. Is the source an allowable non-stormwater discharge (i.e., discharge covered by another SPDES permit or an allowable non-stormwater discharge covered in Part I.C.3 of the MSGP)? (If yes, question 4.A. below must be answered; if no, proceed to question 5) ... ○ Yes ○ No

A. Has the facility's SWPPP been updated to address the newly identified allowable non-stormwater discharge(s) (See Part IV.B.1.b.(3)(d) of the MSGP)? ... ○ Yes ○ No

5. Were corrective and follow up actions taken to eliminate the unauthorized non-stormwater discharge (See Part IV.B.1.b.(3) of the MSGP)? ... ○ Yes No

6. Were corrective and follow up actions successful in eliminating the unauthorized non-stormwater discharge? ... ○ Yes No

Note: If it is not possible to eliminate the non-authorized stormwater discharge the owner/operator must notify the Department with 14 days.

SECTION IV: STORMWATER MONITORING - BENCHMARK PARAMETERS:

1. Is the owner/operator required to monitor stormwater at the facility for benchmark parameters (See Part IV.B.1.c)? (If no, proceed to Section V) ... ● Yes ○ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ... ○ Yes ● No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations listed in the permit? (If yes, questions 3.A and 3.B below must be answered) ... ○ Yes ● No

A. Were corrective and follow up actions taken (See Part IV.B.1.c.(6) of the MSGP)? ... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark exceedance from reoccurring (See Part IV.B.1.c.(6)(c) of the MSGP) ? ... ○ Yes ○ No

Note: If you had a benchmark exceedance your Corrective Action Form with follow up sample results are due by June 30 (See Part IV.B.1.c.(6)(d)(iii) of the MSGP).

SECTION V: STORMWATER MONITORING - COAL PILE RUNOFF:

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges from coal piles (See Part IV.B.1.d of the MSGP? (If no, proceed to Section VI) ... ○ Yes ● No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet or if the laboratory indicated quality insurance assurance/quality control problems) ... ○ Yes ● No

3. Were any of the sampling results from this year higher than the effluent limitations listed in Table IV-1 of the MSGP? (If yes, questions 3.A and 3.B. below must be answered) ... ○ Yes ● No

A. Were corrective and follow up actions taken (See Part IV.B.1.d.(6) of the MSGP)? ... ○ Yes ● No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceedance from reoccurring (See Part IV.B.1.d.(6) of the MSGP)? ... ○ Yes ● No

Note: If you had a effluent limitation exceedance your Corrective Action Form with follow up sample results are due by June 30 (See Part IV.B.1.e.(5)(e)(ii) of the MSGP).

2643243509

SECTION VII: STORMWATER MONITORING - COMPLIANCE MONITORING

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges subject to Point Source Category Effluent Limitations (See Part IV.B.1.e of the MSGP)? (If no, proceed to Section VII) ..... ○ Yes ☑ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ☑ No

3. Were any of the sampling results from this year higher than the effluent limitations listed in the permit? (If yes, questions 3.A and 3.B. below must be answered) ..... ○ Yes ☑ No

A. Were corrective and follow up actions taken (See Part IV.B.1.e.(5) of the MSGP)? ..... ○ Yes ☑ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceeding from reoccurring (See Part IV.B.1.e.(5)(c) of the MSGP? ..... ○ Yes ☑ No

Note: If you had an effluent limitation exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.e.(5)(e)(ii) of the MSGP).

SECTION VIII: STORMWATER MONITORING - DISCHARGES TO IMPAIRED WATERBODIES:

1. Is the owner/operator required to conduct compliance monitoring for discharges to impaired waterbodies (See Part IV.B.1.g of the MSGP)? (If no, proceed to Section VIII)..... ○ Yes ☑ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations or effluent limitations listed in the permit? (If yes, questions 3.A and 3.B below must be answered). ..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.g.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark cutoff concentrations or effluent limitations exceedance from reoccurring (See Part IV.B.1.g.(6)(c) of the MSGP)? ..... ○ Yes ○ No

C. Did the follow-up quarterly sample show the corrective and follow up actions to be successful? ..... ○ Yes ○ No

SECTION IX: SUMMARY:

Provide a brief description of any facility changes; problems identified during comprehensive compliance evaluations, quarterly visual observations or monitoring results; and actions taken to improve the quality of the stormwater discharge.

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

C. Was a follow up visual inspection conducted to ensure corrective and follow up actions were successful (See Part IV.B.1.a.(5)(d) of the MSGP)? ..... ○ Yes ○ No

SECTION IV: ANNUAL DRY WEATHER FLOW MONITORING:

1. Was the annual dry weather flow inspection performed during this reporting period (See Part IV.B.1.b of the MSGP)? ..... ☑ Yes ○ No

2. Were any non-stormwater dischargers or indicators of non-stormwater discharges identified? (If no, proceed to Section V)..... ○ Yes ● No

3. Was the source of the non-stormwater discharge identified? (If no, proceed to question 5) ..... ○ Yes ○ No

4. Is the source an allowable non-stormwater discharge (i.e., discharge covered by another SPDES permit or an allowable non-stormwater discharge covered in Part I.C.3 of the MSGP)? (If yes, question 4.A. below must be answered; if no, proceed to question 5)..... ○ Yes ○ No

A. Has the facility's SWPPP been updated to address the newly identified allowable non-stormwater discharge(s) (See Part IV.B.1.b.(3)(d) of the MSGP)? ..... ○ Yes ○ No

5. Were corrective and follow up actions taken to eliminate the unauthorized non-stormwater discharge (See Part IV.B.1.b.(3) of the MSGP)? ..... ○ Yes ○ No

6. Were corrective and follow up actions successful in eliminating the unauthorized non-stormwater discharge? ..... ○ Yes ○ No

Note: If it is not possible to eliminate the non-authorized stormwater discharge the owner/operator must notify the Department with 14 days.

SECTION V: STORMWATER MONITORING - BENCHMARK PARAMETERS:

1. Is the owner/operator required to monitor stormwater at the facility for benchmark parameters (See Part IV.B.1.c)? (If no, proceed to Section VI)..... ● Yes ○ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ● No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations listed in the permit? (If yes, questions 3.A and 3.B below must be answered)..... ○ Yes ● No

A. Were corrective and follow up actions taken (See Part IV.B.1.c.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark exceedance from reoccurring (See Part IV.B.1.c.(6)(c) of the MSGP) ? ..... ○ Yes ○ No

Note: If you had a benchmark exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.c.(6)(d)(iii) of the MSGP).

SECTION VI: STORMWATER MONITORING - COAL PILE RUNOFF:

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges from coal piles (See Part IV.B.1.d of the MSGP? (If no, proceed to Section VII)..... ○ Yes ● No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet or if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the effluent limitations listed in Table IV-1 of the MSGP? (If yes, questions 3.A and 3.B. below must be answered)..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.d.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceedance from reoccurring (See Part IV.B.1.d.(6) of the MSGP)? ..... ○ Yes ○ No

Note: If you had a effluent limitation exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.e.(5)(e)(ii) of the MSGP).

2643243509

SECTION VII: STORMWATER MONITORING - COMPLIANCE MONITORING

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges subject to Point Source Category Effluent Limitations (See Part IV.B.1.e of the MSGP)? (If no, proceed to Section VIII) ..... ○ Yes ◉ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the effluent limitations listed in the permit? (If yes, questions 3.A and 3.B. below must be answered) ..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.e.(5) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceeding from reoccurring (See Part IV.B.1.e.(5)(c) of the MSGP? ..... ○ Yes ○ No

Note: If you had an effluent limitation exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.e.(5)(e)(ii) of the MSGP).

SECTION VIII: STORMWATER MONITORING - DISCHARGES TO IMPAIRED WATERBODIES:

1. Is the owner/operator required to conduct compliance monitoring for discharges to impaired waterbodies (See Part IV.B.1.g of the MSGP)? (If no, proceed to Section IX)..... ○ Yes ◉ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations or effluent limitations listed in the permit? (If yes, questions 3.A and 3.B below must be answered). ..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.g.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark cutoff concentrations or effluent limitations exceedance from reoccurring (See Part IV.B.1.g.(6)(c) of the MSGP)? ..... ○ Yes ○ No

C. Did the follow-up quarterly sample show the corrective and follow up actions to be successful? ..... ○ Yes ○ No

SECTION IX: SUMMARY:

Provide a brief description of any facility changes: problems identified during comprehensive compliance evaluations, quarterly visual observations or monitoring results: and actions taken to improve the quality of the stormwater discharge.

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Annual Certification Report
SPDES Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity (GP-12-01-001)

The owner/operator shall complete this Annual Certification Report form by answering the following questions, describing improvements to the facility's Stormwater Pollution Prevention Plan (SWPPP), providing copies of monitoring results on appropriate Discharge Monitoring Reports forms and signing the certification at the end of this form. This completed report is to be submitted each calendar year by February 28th of the following year to:

MSGP Permit Coordinator
NYSDEC, Bureau of Water Compliance
625 Broadway, Albany, NY, 12233-3506

SECTION I: FACILITY INFORMATION:

Permit I.D. No.: NYR00 B 4 2 8 **Report for Calendar Year:** 2 0 1 6

Owner Name
L K Q H U N T S P O I N T A U T O P A R T S C O R P

Facility Name
L K Q H U N T S P O I N T A U T O P A R T S C O R P

SECTION II: GENERAL INFORMATION:

1. List the number of stormwater outfalls at the facility that are from areas of industrial activity..... 0 0 1

2. Is the facility claiming any monitoring waiver(s)? ..... ○ Yes ✓ No

If yes, which waiver(s) are you claiming?

- ○ Adverse Climatic Conditions*
- ○ Alternate Certification of "Not Present" or "No Exposure"
- ○ Inactive or Unstaffed Site*
- ○ Representative Outfall*

* If you are claiming a monitoring waiver the appropriate monitoring waiver form must be included with your Discharge Monitoring Report form.

3. Is the information provided in your original Notice of Intent (NOI) submission still accurate and up to date? If not, please submit a Notice of Modification (NOM) to update the facility information ..... ✓ Yes ○ No

4. Has a comprehensive Site Compliance Inspection and Evaluation been conducted at the facility in the past year? ... ● Yes ○ No

5. Is the facility's Stormwater Pollution Prevention Plan (SWPPP) kept up to date and modified when necessary? ..... ● Yes ○ No

SECTION III: QUARTERLY VISUAL MONITORING:

1. Have the required quarterly visual examinations of stormwater at the facility been performed during this reporting period (See Part.IV.1.a of the MSGP)? ..... ● Yes ○ No

2. Did any of the quarterly visual examinations result in observations of color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, or other indicators of stormwater pollution and contamination? (If yes, question 2.A, 2.B, and 2.C below must be answered) ..... ○ Yes ◉ No

A. Were corrective and follow up actions taken (See Part IV.B.1.a.(5) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent stormwater pollution and contamination from reoccurring (See Part IV.B.1.a.(5)(c) of the MSGP)?..... ○ Yes ○ No

C. Was a follow up visual inspection conducted to ensure corrective and follow up actions were successful (See Part IV.B.1.a.(5)(d) of the MSGP)? ..... ○ Yes ○ No

SECTION IV: ANNUAL DRY WEATHER FLOW MONITORING:

1. Was the annual dry weather flow inspection performed during this reporting period (See Part IV.B.1.b of the MSGP)? ..... ✓ Yes ○ No

2. Were any non-stormwater dischargers or indicators of non-stormwater discharges identified? (If no, proceed to Section V)..... ○ Yes ◉ No

3. Was the source of the non-stormwater discharge identified? (If no, proceed to question 5) ..... ○ Yes ○ No

4. Is the source an allowable non-stormwater discharge (i.e., discharge covered by another SPDES permit or an allowable non-stormwater discharge covered in Part I.C.3 of the MSGP)? (If yes, question 4.A. below must be answered; if no, proceed to question 5)..... ○ Yes ○ No

A. Has the facility's SWPPP been updated to address the newly identified allowable non-stormwater discharge(s) (See Part IV.B.1.b.(3)(d) of the MSGP)? ..... ○ Yes ○ No

5. Were corrective and follow up actions taken to eliminate the unauthorized non-stormwater discharge (See Part IV.B.1.b.(3) of the MSGP)? ..... ○ Yes ○ No

6. Were corrective and follow up actions successful in eliminating the unauthorized non-stormwater discharge? ..... ○ Yes ○ No

Note: If it is not possible to eliminate the non-authorized stormwater discharge the owner/operator must notify the Department with 14 days.

SECTION V: STORMWATER MONITORING - BENCHMARK PARAMETERS:

1. Is the owner/operator required to monitor stormwater at the facility for benchmark parameters (See Part IV.B.1.c)? (If no, proceed to Section VI)..... ◉ Yes ○ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not met or if the laboratory indicated quality assurance/quality control problems) ..... ○ Yes ◉ No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations listed in the permit? (If yes, questions 3.A and 3.B below must be answered)..... ○ Yes ◉ No

A. Were corrective and follow up actions taken (See Part IV.B.1.c.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark exceedance from reoccurring (See Part IV.B.1.c.(6)(c) of the MSGP) ? ..... ○ Yes ○ No

Note: If you had a benchmark exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.c.(6)(d)(iii) of the MSGP).

SECTION VI: STORMWATER MONITORING - COAL PILE RUNOFF:

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges from coal piles (See Part IV.B.1.d of the MSGP? (If no, proceed to Section VII)..... ○ Yes ◉ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet or if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the effluent limitations listed in Table IV-1 of the MSGP? (If yes, questions 3.A and 3.B. below must be answered)..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.d.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceedance from reoccurring (See Part IV.B.1.d.(6) of the MSGP)? ..... ○ Yes ○ No

Note: If you had a effluent limitation exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.e.(5)(e)(ii) of the MSGP).

SECTION VII: STORMWATER MONITORING - COMPLIANCE MONITORING

1. Is the owner/operator required to conduct compliance monitoring for storm water discharges subject to Point Source Category Effluent Limitations (See Part IV.B.1.e of the MSGP)? (If no, proceed to Section VIII) ..... ○ Yes ◉ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the effluent limitations listed in the permit? (If yes, questions 3.A and 3.B. below must be answered) ..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.e.(5) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the effluent limitation exceeding from reoccurring (See Part IV.B.1.e.(5)(c) of the MSGP? ..... ○ Yes ○ No

Note: If you had an effluent limitation exceedance your Corrective Action Form with follow up sample results are due by July 31 (See Part IV.B.1.e.(5)(c)(ii) of the MSGP).

SECTION VIII: STORMWATER MONITORING - DISCHARGES TO IMPAIRED WATERBODIES:

1. Is the owner/operator required to conduct compliance monitoring for discharges to impaired waterbodies (See Part IV.B.1.g of the MSGP)? (If no, proceed to Section IX)..... ○ Yes ◉ No

2. Were there any monitoring problems? (Answer "Yes" if storm event criteria was not meet of if the laboratory indicated quality insurance assurance/quality control problems) ..... ○ Yes ○ No

3. Were any of the sampling results from this year higher than the benchmark cut-off concentrations or effluent limitations listed in the permit? (If yes, questions 3.A and 3.B below must be answered). ..... ○ Yes ○ No

A. Were corrective and follow up actions taken (See Part IV.B.1.g.(6) of the MSGP)? ..... ○ Yes ○ No

B. Has the facility's SWPPP been updated to include modification to existing BMPs or installation of new BMPs to prevent the benchmark cutoff concentrations or effluent limitations exceedance from reoccurring (See Part IV.B.1.g.(6)(c) of the MSGP)? ..... ○ Yes ○ No

C. Did the follow-up quarterly sample show the corrective and follow up actions to be successful? ..... ○ Yes ○ No

SECTION IX: SUMMARY:

Provide a brief description of any facility changes; problems identified during comprehensive compliance evaluations, quarterly visual observations or monitoring results; and actions taken to improve the quality of the stormwater discharge.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

AMERICAN BANK NOTE C EPA ID:: NYD091214718	***TIFFANY ST & GARRISO***	***SSW 1/2 - 1 (0.912 mi.)***	***291***	***715***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

VERIZON EPA ID:: NYP000971580	***WESTCHESTER AVE & HO***	***SSW 1/8 - 1/4 (0.136 mi.)***	***Q115***	***309***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/09/2018 has revealed that there is 1

NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/08/2017 has revealed that there are 4 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/16/2018 has revealed that there are 44 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there are 2 NY RES DECL sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 34 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - EAST 17	WEST FARMS RD. AND B	NE 1/8 - 1/4 (0.131 mi.)	105	296

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Tank Info:

Tank Number:	001
Tank Id:	228444
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

A01 - Tank Internal Protection - Epoxy Liner
B01 - Tank External Protection - Painted/Asphalt Coating
C00 - Pipe Location - No Piping
E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
G02 - Tank Secondary Containment - Vault (w/access)
D00 - Pipe Type - No Piping
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None

Tank Location:	3
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	03/26/2012
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	03/28/2014

Site name: HUNTS POINT AUTO WRECKERS
Classification: Large Quantity Generator

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

LKQ HUNTS POINT AUTO PARTS (Continued) **1006199823**

of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Name:	ROLAND FISHER
Spiller Company:	ABANDONED SERVICE STATION
Spiller Address:	1471 W FARM RD
Spiller Company:	001
Contact Name:	ROLAND FISHER
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT DEC Sigona sent letter notification for contaminated soil investigation on April 4, 2003. 4/8/2003-Vought-Received message from Roland Fischer (Tyree - 631-249-3150x352). Vought returned call and left message to return call. Vought received another message and again returned call and spoke with Roland. 6 (550-gallon) UST's were removed. Contaminated soil found at dispenser island. Tyree will excavate contaminated soil and take endpoint samples. Tanks in vaulted concrete on top of bedrock. Lines to be excavated are 20' long. Sidewalls will be composited and two grab samples from bottom of trench. Tank closure report will be sent including site plan, analyticals and disposal manifests. 4/24/2003-Vought-Received message from Roland on 4/14. Vought returned call on 4/24 and left message with Roland to return call with updates. 5/5/2003-Vought-Spoke with Roland and soil contamination found (30'x 20' excavation was performed, bottom was bedrock). One sample had xylene at 4000ppb. Roland will send tank closure report and spill closure report including site plan, disposal manifest and analyticals.

ABANDONED SERVICE STATION (Continued) **S106012861**

7/18/2003-Vought-Spoke with Roland Fisher and report is being sent to NYSDEC today. 9/8/2003-Vought-UST Closure Report-May 2003-Tyree Organization-Six (550-gallon) gasoline USTs were removed in 3/03. Groundwater not encountered in excavation but suspected at depth of 60' and flowing to the southwest. Bedrock at depth of 8' below grade. USTs were in a vault constructed by direct pour of concrete onto the bedrock . Endpoint samples were collected from sidewalls and not collected from bottom due to bedrock. Soil analyticals show up to 3380ppb toluene(south wall), 70900ppb xylene(south wall) and 24000ppb napthalene(south wall). Tyree returned to site to peform additional soil removal under the former pump island area and removed 50 tons of soil. Seven subsequent soil endpoint samples were collected and soil analyticals showed two exceedances at 3050ppb xylene(west wall) and 3320ppb 1,3,5-trimethylbenzene(west wall). Spill closed by Vought as per Rommel due to 60' suspected depth to groundwater and excavation to bedrock (and hence no sensitive receptors). Spill closed by Vought. "

Remarks: "caller did tank removal and test results show soil contamination caller believes line failed causing release"

DEC Memo:	"site is entering into NYC vcp program and impact is working with NYC OER Moore on the project. Phase II will be sent ot me for reviwew. IT is a vacant lot know and is going to be redeveloped. 8/5/14-Vought-Received email from OER Moore that Morning Jeff would you please tell us who the DEC PM is for Spill # 14-03152 (1544 Boone Avenue)? They are working through our program, and we want coordinate on the investigation.Thanks,Hannah. Vought sent reply that Hannah,The Project Manager for the spill is Ryan Piper (copied above) and you can also reach him at (718)482-4927. He is on vacation this week and will be returning to the office on Monday 8/11. As per his last notes, a Phase II report is to be sent to him for review. Thanks for the coordination as always,-Jeff. 4/21/15- DEC Piper recieved and reviewed work plan. RAWP approved though excavation of pet cont soils to encompass former tank. RAWP in DEC DOCS. spill closure report to follow. 9/7/16- DEC Piper emailed Hannah Moore for info. 2/6/2017- DEC Piper received closure report. A 14-story, 304,000 gross square foot mixed use residential/commercial retail building with 292 residential units is currently in the process of being constructed. Sub-grade construction is limited for this development; the foundation structure is predominantly slab-on-grade construction with the exception of two cellars located in the northwestern and southeastern corners of the building. The GPR survey identified ten (10) subsurface anomalies within the footprint of the former warehouse building (northwest corner of the Site) that were interpreted to represent USTs. Twenty-two (22) soil borings were installed throughout the Site to depths of 12 to 13 feet below grade surface; five (5) of the soil borings were installed proximal to the USTs identified in the GPR survey. Laboratory analysis of the soil samples detected the presence of several volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and heavy metals at concentrations exceeding regulatory standards. the soil quality in the location of the former warehouse/building in the northwestern portion of the Site (the area surrounding the historic USTs) and the area to the east and southeast of the USTs appeared to be impacted by gasoline related constituents. Spill remediation was performed in conjunction with redevelopment construction and in accordance with the scope of work presented in the Spill RAWP dated February 25, 2015. A total of 332.08 tons of grossly petroleum contaminated material from the spill area was transported for off-site disposal as non-hazardous waste to Bayshore Soil Management in Keasbey, NJ. A total of 3,777.34 tons of petroleum contaminated soil/fill from the spill area and surrounding areas that did not exhibit evidence of free petroleum product was transported for off-site disposal as non-hazardous waste. A total of 96,176 gallons of petroleum impacted groundwater was pumped from the spill area excavation and transported

LOT 9,TAXBLOCK 3014 (Continued) **S116291059**

off-site for disposal to Clean Waters of New York in Staten Island, NY and Lorco Petroleum in Elizabeth, NJ. On September 17, 2015, IEC applied 1,911 gallons of RegenOx, chemical oxidizing solution manufactured by Regenesis. A waterproofing/vapor barrier system consisting of Bituthene Preprufe 160R 32 mils thick was installed behind all cellar blind side foundation walls below grade, Bituthene Preprufe 300R 46 mils was installed beneath all cellar foundation slabs and Husky Yellow Guard 20 mils non-waterproofing membrane was installed beneath all slab-ongrade foundation slabs. The vapor barrier membranes were installed according to manufacturer specifications. An active sub-slab depressurization system (SSDS) was also installed beneath the new building foundation slab. The SSDS consists of 3-inch slotted screen PVC pipes aligned horizontally beneath the building slab and attached to 4-inch solid PVC pipe and steel risers. The SSDS was installed within porous granular material consisting of 3/4-inch stone. The SSDS horizontal screen piping provide the correct coverage in accordance with US EPA SSDS design specifications which recommend a separate vent loop/branch for every 4,000 square feet of slab area. Each branch is outfitted with a riser that extends to the roof of the building and connected to an electrical inline fan. 04/24/2017- DEC Piper - Based on work completed to date, this spill is closed. report is in DEC Docs. 8/11/17- DEC Piper- copied on email from NYSDOH: Shaminder, I have reviewed the results of the Soil Vapor Intrusion Study performed to evaluate conversion of the active sub-slab depressurization system (SSDS) to a passive system. Concentrations off all compounds detected were below their respective Matrix values and Air Guidelines. Furthermore, when compounds in indoor air are detected that do not apply to a Matrix, we compare the concentrations to the NYSDOH Study Volatile Organic Chemicals in Air of Fuel Oil Heated Homes values to determine whether levels of VOCs are elevated compared to typical background ranges. The values in this study come from over 100 homes tested in New York State that have not been affected by any chemical releases. The indoor air results were all within typical background, additionally, concentrations of VOCs in sub-slab soil vapor were detected at levels that do not have the potential to impact indoor air in the future. Based on this information, I agree with the conclusion that the SSDS can be made passive. If you wish to discuss my recommendations further please feel free to contact me. Thanks Nate Nathan M. Walz Public Health Specialist III Bureau of Toxic Substance Assessment Exposure Characterization and Response Section New York State Department of Health Center for Environmental Health Empire State Plaza, Corning Tower, Room 1762 Albany, New York 12237 "

Remarks: "Soil investigation results showed gasoline contamination. Clean up will be done by Allied West Farms NY II LLC"

DEC Memo:	"08/24/06-Vought-Off hours spill responder. Vought repsonded to spill on 8/23/06 at 21:00 and fire still in progress so site inspection not possible. Vought inspected Bronx River (separated from Apex Sales by train tracks) and no impact to Bronx River other than sheen. Sheen may also be biological but unable to tell due to lack of light. No free product or impacted wildlife noted. As per FDNY Hazamat three tanks were onsite: two (275-gallon) fuel oil and one (275-gallon) waste oil and currently tanks were not comprimised. Buildings adjacent to site were evacuated however no toxic fumes noted (other than burning cars and debris). Contact information for owner is: Apex Sales Bill Maio 718-328-7000 cell: 914-760-3831. Fire may have been started on adjacent train tracks. Vought received call from FDNY Chief Weinlein (718-999-7900) on 8/23 at 21:16pm and access to site still not possible. Vought told him that site inspection would be performed on 8/24/06 and he would be called with results. Vought called Weinlein and left message informing him that site inspection was performed and DEC's only requirement was recovery of small puddle of transmission oil (approximately 10' in diameter) in rear of property. Vought conveyed requirement to Bill Maio (owner) and owner will submit invoice and documents of cleanup (possible disposal manifest). Vought also met with Resa Dimino (Bronx River Alliance 718-430-4648) and walked River and site with her. She agreed on no spill to Bronx River and requested no further action from DEC. Vought received call from USCG (718-354-4121) and returned call and left message with DEC requirement. Vought will followup with with cleanup of puddle of transmission oil on 8/25/06. 08/29/06-Vought-received letter from Apex Sales Towing & Leasing dated 8/25/06. We have rectified all hazards to the yard at to your specifications. Enclosed please find receipt for the materials purchased to facilitate the removal of these hazards . Receipt from S&S Adsorbents and EnviroWaste Oil Recovery also included for druming and disposal of used adsorbent materials. Spill closed by Vought. 12/28/15-Vought-Received email from DEC Erin Shirkey that site is part of the Bronx River Greenway project and she was inquiring about spill status. Vought sent her copy of these spill notes and note that spill had been closed and that if she needed further assistance to let Vought know. Vought sent email that Erin, My apologies for my delay in response. The above spill was closed on August 29, 2006. I have attached the Spill Report above that has more information on the response and cleanup. I also ran the address under the NYCDOB database for alternate addresses, found that there were no others, and then searched our Spills database and found no other open or closed spills associated with the site. If you need anything else, please don t hesitate to ask. DEC Shirkey replied with thanks."

APEX SALES TOWING & LEASING CORP (Continued) **S108130286**

Remarks: "Caller reports a fire at a salvage yard. Fire caused the spill of the materials. No cleanup company has been contacted. FDNY is on the scene. 2nd call at same time from FF Morris Hazmat 1 FDNY at 914.552.2516 requests on call rep to call. Petty Officer Sierra of US Coast Guard req call back from reg 2 DEC Rep in ref to impact of Bronx River @ 718-354-4121 "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND A citizen called in a spill (#0008407)on the Bronx River, just south of Westchester Ave along the west side bulkhead of an abandoned cement plant. Sangesland responded to the site and did NOT see any sheen on the river. Sangesland reported the spill to the USCG. Since Sangesland was headed out to the site, the USCG was short staffed and asked for a site report. Once at the site, Sangesland called the USCG back and said no spill was seen. At the site, was a crew (15 people) from the NYC Parks Dept. who were cleaning up the lot and water's edge. Mr. Brian Aucoin (718-430-18) a Conservation Specialist with the Parks Dept. explained that the city got special funding to fight the West Nile Problem and they were removing several hundred old tires from the shore area and generally cleaning the site

BRONX RIVER (Continued) **S104879841**

up. To prevent any garbage from floating downstream, the NYC DEP set up a boom across the river which is cleared frequently. In addition to the garbage/tire issue, there was a break in the water main (to the on site fire hydrants) which was flooding the site and could have flushed out some surface contamination onto the river. DEP has been notified and they are trying to isolate and fix the line. On the property Sangesland found 5 aboveground petroleum storage tanks which were abandoned when the cement plant was abandoned. They all appeared to be empty for quite some time with no signs of contamination around them. They are all closed (no rainwater going in) and all appeared to be secure. The Parks Dept person said this whole area was going to be demolished and rebuilt as a park. Sangesland did not see any petroleum spillage or any obvious sources. Parks Dept. is cleaning up the site and they were asked to call the Spills Hotline if they see any type of spillage or sheen on the river."

Remarks: "caller reports sheen on water from pipe thet goes into river."

Contact Name:	ANNMARIE RUNFOLA
DEC Memo:	"8/22/05 - Austin - On 8/20, I spoke with Anne Marie Runfolo (sp?) of the Bronx River Alliance, who had called NYC Parks about a sheen along the western shoreline of the Bronx River, between the Cross Bronx X-way and Westchester Ave. (upland area is a City Park know as Concrete Plant Park.)She also indicated that there was a pipe discharging from the eastern shoreline of the river, across from the park. The pipeline was located at the northern parking lot of ABC Carpets, on Bronx River Ave. She had seen these events while on a canoe trip on the river. I then went to the site, and investigated the complaints. No sheen was observed in the river, but there was leaf matter floating on the water, indicating a storm sewer discharge from the storm event that had occurred on 8/19. I also observed the discharge on the eastern shoreline, which appeared momentarily, and then stopped. I went to the parking lot by ABC Carpet, but by them there was no floatables/foam from the discharge, so could not locate the pipe amongst the brushy and inacessible shoreline. Will refer latter complaint to DOW/DEP for outfall investigation. Spill closed - end "
Remarks:	"Oil slick found on shoreline of river, going into river with tide."

DEC Memo:	"05/03/07 - See e-docs for Con Ed report detailing cleanup and closure. 161244. 27-Sep-2005 04:45 hrs. FOD Operating Supervisor, Bill Reschke (11649) while placing protective grounds on another location near V-1744, located e/s Edgewater Road 985’ s/o Westchester Ave, Bronx, NY reports finding ~ 10 gallons of dielectric fluid has leaked out of an abandoned Pad Mounted transformer (V-1744) onto asphalt and soil. No fire/smoke is/was involved. No sewers/waterways were affected. There were no injuries. This is on the property of theTransit Mix Concrete Company that has gone out of business. An area of asphalt ~ 15’ x 75’ is affected. Additional crews have spread absorbant speedi-dri over the entire area to absorb the oil. A puddle (25’ x 15’) of oil & water has gathered at the bottom of the hill. An 80’ piece of absorbant boom has been deployed around the pool to contain it. A oil sample has been taken for PCB on chain of custudy (ee-04778). An environmental tag #43612 has been placed on the pad mount transformer. The clean up will continue as more crews are assembled at the start of the 7-3 shift. L Fischer 55784 "
Remarks:	"ABANDONED TRANSFORMER, FAULTY EQUIPMENT. NO TO 5 QUESTION. CLEAN-UP IS IN PROGRESS. 161244."

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D008
. Waste name: LEAD

Historical Generators:
Date form received by agency: 10/15/2007

FINDS:

Registry ID: 110069666631

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110069646057

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY WHILE ADVANCING GEOTECH BORING, URS FOUND FREE PRODUCT COMING INTO BOREHOLE, AT 1-2 FOOT DEPTH. ABANDONED BORING. DEC HAS ASKED FOR TIGHTNESS TEST OF NEARBY DIESEL TANK, AND DDC MUST PERFORM SITE SPECIFIC INVESTIGATION TO DETERMINE EXTENT OF CONTAMINATION. TRANSFERRED FROM Y.KRIMGOLD. The spill Lead_DEC Field is I. Islam with effect from 02/02/05. The site is under remediation by LiRo Engineers. -II 4/28/05- Reviewed the quarterly monitoring report(Nov./04-Jan./05). DEC approved NFA for soil and installation of skimmer pump at 3 wells in April, 2003. An absorbent sock has been installed to one well to subside the water level and make it conducive to skimmer operation. Persisting layer of motor oil at 3 wells is a concern and it's mentioned that malfunction of a nearby oil/water separator may be the cause. However EFR is being performed besides monthly checking of water levels and free product thickness and quarterly sampling of groundwater. Over all situation is improving and performance monitoring to continue as usual.- II. 7/27/05- Reviewed the monitoring report (Feb.-Apr./05). Persistent GW contamination in well MW-19 across the East 173rd St. is said to be attributed to off-site source and is not migrating to this site. It is supported by the same time sampling results of the nearby on-site wells MW-13 and MW-11. Persisting layer of motor oil at 3 wells (MW-9, MW-16 & MW-17) is still a concern even though LiRo is performing EFR on them. If the nearby existing oil/water separator malfunctioning is the root cause, then it must be taken with NYCDOS management people to fix it. The above observations and remarks are sent to LiRo & NYCDDC via email. Installed the report in the eDoc folder.- II 10/04/05- Filed the report in the eDoc.- II 3/09/06: This spill transferred from I.Islam to Q.Abidi. 07/11/06: Received email from John Busse of URS inquiring as to status of LiRo's recommendation of spill closure in their Nov. '05 - Mar. '06 monitoring report. Reviewed report and sent back following email: I'm not comfortable closing this spill/site just yet. Report notes that well MW-17 had 0.38 ft. of free product in Dec. 2005, and MW-11 had total VOCs of 462 ppb when last sampled in Aug. 2005 - not that high, but a bit higher than some of sites I've been closing recently that still had residual contamination. LiRo states in report that contamination in MW-11 is not attributable to DOS site, but they present no supporting arguments and well is clearly down-gradient from USTs at site. I suggest that URS gauge all wells for product and depth to water to determine current groundwater flow, collect groundwater samples from selected wells, and perhaps perform a Sensitive Receptor Survey in support of No Further Action request. If this seems reasonable, please put together a brief plan for groundwater sampling - i.e., let me know which wells you intend to sample so I can review them and have some input. If you strongly disagree with this approach, you or Jane should give me a call to discuss. - J. Kolleeny 07/18/06: Received email from John Busse of URS, saying they intend to sample wells MW-1, MW-5, MW-6, MW-8, MW-9,

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

MW-11, MW-16, MW-17, and MW-19, and that groundwater samples will be analyzed for VOCs only. I wrote back email saying list of wells is fine, and reminding them to gauge wells for depth to water/product, determine up-to-date groundwater flow direction and identify presence of free product. - J. Kolleeny 10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM 6/21/07 Reviewed Letter submitted by URS dated June 19, 2007. On July 26, 2007, URS gauged site wells and detected free product in well MW-17. A product recovery pump operated on the site, however, since no product was detected in over a year, URS requested to shut the system down. URS requested info from DSNY concerning the oil/water separator system, which appeared to be the source of product in MW-17. DSNY notified URS that all tank systems tested tight. To elimate the possibility that surface runoff was entering the well, URS inspected the well and verified well covers were tight. URS initiated monthy vac truck visits to remove product from MW-17 in Jan. 2007 and at the time measured 7 feet of product. On April 30, 2007 URS sampled the product from the well and from the oil/water separator and determined that it is the same product. URS requested that DSNY inspect the entire oil/water separator system as well as other potential sources such as floor drains, etc. URS will continue monthly vac truck visits. Letter is uploaded to edocs. - JAM 2/28/08 Site Update: Reviewed Product Recovery Reports dated October 18, 2007 and January 24, 2008 submitted by URS. URS has been conducting monthly vac truck visits to address free product observed in MW-17. The level of free product seems to fluctuate with the groundwater levels and free product thickness has been as high as 7 feet and as little as 0.95 feet. URS has analyzed samples from product in the oil/water separator and product in well MW-17. They concluded the product is the same. Tightness tests have been conducted on all the tanks including the oil/water separator and they passed. URS believes there is an active source of the product in well MW-17 and since the tanks and associated lines tested tight, it may be from the floor drains. They have tried to contact DSNY to investigate the source of the free product but have had no response from DSNY. I spoke to Jane Staten at URS. She said there is a new contact at DSNY, Mike Murphy, and she will try and get more information on the oil/water separator. She said they are visiting the site tomorrow for the monthly vac truck visit and they will be gauging all the wells for product. I requested that groundwater samples be collected and analyzed for VOCs and SVOCs from wells MW-03, MW-05, MW-06, MW-08, MW-11, and MW-19 if free product is not present. She agreed and said that they may have to wait until the March 08 visit to sample. I expect a report in March 08. - JAM 5/30/08 Reviewed Free Product Recovery and Quarterly Groundwater Sampling Report for period Jan through Mar 2008. On March 27, 2008 the free product recovery skimmer pumps were removed from MW-03, MW-05, and MW-06. Product recovery was conducted in Feb and Mar 2008. Product was observed then removed from wells MW-01, MW-09 and MW-17 in Feb and MW-01, MW-05, MW-09 and MW-17 in March. As a result wells MW-01, MW-05 and MW-09 will be added to the monthly product recovery program. On Mar 19, 2008, URS sampled wells MW-03, MW-04, MW-07, MW-08, MW-11 and MW-19 and analyzed for VOCs and SVOCs. Well MW-05 was not sampled because free product was observed and MW-06 was not sampled because of an obstruction from the skimmer pump. No VOCs or SVOCs were detected in wells MW-04, MW-07, MW-11, and MW-19. Minor VOC exceedences were detected in MW-03 and MW-08 with total VOC concentrations of 16ppb and 88ppb, respectively.

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

Naphthalene was also in exceedence in MW-08. URS concludes that free product levels in MW-17 are decreasing, however wells MW-01, MW-05 and MW-09 are impacted and will be added to the IRM program. Groundwater results show minor dissolved phase contamination and conclude that free product is not significantly impacting GW. Free product recovery will continue and the product source is still being investigated. The report is uploaded to edocs. - JAM 8/15/08 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period April through June 2008. Monitoring wells MW-01, MW-05, MW-06, MW-09 and MW-17 are included in the monthly IRM program due to the presence of free product. Groundwater analytical results indicate minor dissolved phase contamination in two wells. Based on fingerprint analysis, the free product in well MW-17 is closely related to hydraulic oil and product in the well and oil water/separator are the same. DASNY performed a tightness test on all tanks including the oil/water separator, and all systems tested tight. No conclusion as to how the product reached the well. URS will continue monthly IRM program and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 12/11/08 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period July through October 2008. Since the product recovery program was initiated, minor amounts of free product was observed in wells MW-01, MW-02, MW-05, MW-06, MW-09 and MW-17. Product thickness in well MW-17 has reduced and was last measured at 0.25 feet in October, 2008. Groundwater analytical results indicate minor dissolved phase VOC contamination in wells MW-08 and MW-11, with Total VOC concentrations of 83ppb and 3ppb, respectively. URS will continue monthly product recovery and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 9/17/09 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period November 2008 through January 2009 dated February 19, 2009. URS detected product in each of the wells monitored except for MW-10. Product thicknesses ranged from 0.01ft to 0,04ft, which is less than 1 inch in every well with one exception: 0.11ft was recorded in Nov 2008 in well MW-2. A vacuum truck was used to evacuate 0.25 gallons of product from each well. No dissolved phase contamination was detected during this monitoring event. Report uploaded to eDocs. Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period February through April 2009 dated May 27, 2009. URS detected product in the following seven wells: MW-01, MW-02, MW-03, MW-05, MW-06, MW-09, and MW-17. Product thickness in most wells was either 0.01 ft of 0.02 ft. Well MW-17 exhibited the greatest amount of product, with 0.03 ft, 0.04 ft and 0.05 ft (all less than 1 inch) between Feb and Apr. A vacuum truck was used to evacuate 0.25 gallons of product from each well. No VOCs or SVOCs exceeded criteria in six of secen groundwater samples: the exception was benzene detected a 3ppb in well MW-11. Report uploaded to eDocs. Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period May through July 2009 dated August 21, 2009. URS detected minor amounts of product, 0.01 ft (1/10-inch) in wells MW-01, MW-03, MW-05, MW-06 and MW-09. Well MW-17 contained 0.04 ft (1/2-inch) and MW-02 contained 0.01 ft, 0.22 ft and 0.72 feet in May, June and July, respectively. The reason for the increase is unknown. The vacuum truck was unavailable for the June monitoring event. In May and July, URS removed approx 0.25 gallons of product from each well. To date 63 gallons of product have been recovered from the site. On July 30, 2009, URS collected groundwater samples and wells MW-08 and MW-11

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

showed minor exceedences for Benzene at 4ppb and 2 ppb, respectively. URS states, In July, there was an unexpected increase in product thickness in well MW-02. Future measurements will determine whether this represents a temporary issue or a new problem that requires special attention. URS will continue monthly product recovery and quarterly groundwater sampling. The report is uploaded to eDocs. - JAM. 1/6/10 Reviewed Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period August through October 2009 dated November 24, 2009. URS detected product in wells MW-01, MW-02, MW-03, MW-05, MW-06 and MW-09 and MW-17. Product thickness in well MW-17 increased to 0.22 ft in October 2009. Product thickness in well MW-02 decreased from a high of 0.72ft in July 2009 to 0.06ft in October 2009. URS removed approx 0.25 gallons of product from each well. To date 67 gallons of product have been recovered from the site. On October 21, 2009, URS collected groundwater samples and the only exceedence was in well MW-11 with a Benzene concentration at 6ppb. URS will continue monthly product recovery and quarterly groundwater sampling. This report is uploaded to eDocs. - JAM 03/08/2010: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period November 2009 through January 2010 dated February 17, 2010. Reviewed the report. URS detected product in 7 wells MW-01, MW-02, MW-03, MW-05, MW-06, MW-09 and MW-17. Product thickness ranged from 0.01' to 0.46' in well MW-17. URS removed approx 0.25 gallons of product from each well. To date 71 gallons of product have been recovered from the site. On October 21, 2009, URS collected groundwater samples o January 25, 2010 and no exceedences were detected in any of the sampled wells (MW-04, MW-7, MW-11, MW-18 and MW-19). URS will continue monthly product recovery and quarterly groundwater sampling. This report is uploaded to eDocs. - JAM 08/31/2010: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period May through July 2010 dated August 31, 2010. Reviewed the report. Between May and July 2010, URS detected product in MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.25 feet in June and 0.42 feet in July. A significant quantity of product was also measured in MW-09 with 0.06 feet in May, 0.10 feet in June, and 0.18 feet in July. Measurements at the remaining locations were all 0.02 feet or below. URS evacuated approximately 3.5 gallons of free product from the six wells that exhibited product. To date, approximately 77 gallons of free product have been recovered from the site. On August 3, 2010, URS collected groundwater samples from monitoring wells MW-04, MW-07, MW-08, MW-10 and MW-18. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. The analytical results showed only one detection (benzene at 2.2 ppb in MW-08) above NYSGQS. This report is uploaded to eDocs. - JAM 10/25/10 In the quarterly status update meeting with DDC and URS on 10/19/10, DEC requested that wells MW-3, MW-5, and MW-6 be added to the quarterly sampling schedule. - JAM 11/05/2010: This spill case was transferred to A. Doronova. - AD 02/14/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period August through November 2010 dated February 14, 2011. Reviewed the report. Between August and November 2010, URS detected product in MW-01, MW-02, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.29 feet in August, 0.69 feet in September, 0.36 feet in October, and 0.40 feet in November. A significant quantity of product was also measured in MW-02 and MW-09

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

with thicknesses ranging from 0.05 to 0.24 feet. Measurements at the remaining locations were all 0.01 feet or less. Between August and November, URS evacuated approximately 4.75 gallons of free product from all wells that exhibited product, except for MW-06 (which contained only 0.01 feet). To date, approximately 81.75 gallons of free product have been recovered from the site. On November 15, 2010, URS collected groundwater samples from monitoring wells MW-03, MW-04, MW-05, MW-07, MW-08, MW-10 and MW-18. MW-06 was not sampled due to the presence of product. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. The analytical results showed TVOCs detections above New York State Groundwater Quality Standards in MW-03 (45ppb), MW-05 (6ppb) and MW-08 (68ppb). Detections above standards in MW-05 were PAHs only. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. AD 06/28/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period December 2010 through February 2011 dated June 28, 2011. 08/29/2011: Reviewed the report. It states that currently, URS personnel visit the site each month to measure groundwater levels and estimate free product thickness in up to 13 monitoring wells: MW-01 through MW-11, MW-17, and MW-18. All wells are checked for product and groundwater levels are measured at least quarterly. During this quarterly monitoring period, URS personnel visited the site on December 22, 2010, January 24, 2011, and February 24, 2011. URS detected product in monitoring wells MW-01, MW-06, MW-09, and MW-17. The greatest amount of product was detected in well MW-17 with 0.35 feet in December, 0.40 feet in January and 0.45 feet in February. Measurements at the remaining locations were all 0.05 feet or less. During this monitoring period, URS evacuated approximately 2.5 gallons of free product from the four wells that exhibited product using a vacuum truck. To date, approximately 84.25 gallons of free product have been recovered from the site. The most recent sampling event was conducted on February 10, 2011. URS collected groundwater samples from monitoring wells MW-03, MW-04, MW-05, MW-07, MW-08, MW-10 and MW-18. MW-06 was not sampled due to the presence of product. Monitoring wells MW-11 and MW-19 were not sampled because no compounds were detected in these wells for two quarters or more. Well MW-16 was destroyed and therefore cannot be sampled. The analytical results showed one detection above NYS GQS (1,2,4-trimethylbenzene) in MW-03. The total VOCs in well MW-03 was only 30 ppb. All compounds in all other wells sampled were below the NYSDEC GQSC. Based on data collected in February 2011, the free product plume at the site extended to three monitoring wells. Product measurements during this quarter were comparable to the previous quarter, although measurements in MW-06 were slightly higher and measurements in MW-09 and MW-17 were lower. It is significant to note that no product was detected in well MW-02 during this monitoring period, marking a potential trend of no product detected west of the oil/water separator. The data shows that no product has been detected and that no compounds were detected above the NYSDEC Groundwater Criteria for two quarters or more in the following wells: MW-04, MW-07, MW-10 and MW-18. Based on this data, URS requesting that these wells be removed from the quarterly sampling schedule with the exception of well MW-07, which is a downgradient well. These wells will be removed from the quarterly sampling schedule upon approval by the NYSDEC. Other than continued product removal, no additional remediation action is warranted at the site at this time. URS will continue the monthly

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

product recovery visits and the quarterly groundwater monitoring. AD 10/11/2011: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period March 2011 through May 2011 dated October 11, 2011. DL the report to eDocs. Will review. AD 11/30/2011: Reviewed the report. It states that the most recent sampling event was conducted on May 31, 2011. Monitoring wells included in the quarterly groundwater sampling are: MW-03, MW-04, MW-05, MW-06, MW-07, MW-08, MW-10 and MW-18. MW-17 is not part of the sampling program because it consistently contains product. Samples were not collected from MW-06 due to the presence of product and from well MW-05 because a heavy sheen was observed in this well. The analytical results showed that VOCs from MW-04, MW-07, MW-10, and MW-18 were all below the standards. The highest total VOCs from these wells was negligible (0.19 parts per billion (ppb)). Monitoring wells MW-03 and MW-08 each had only one VOC slightly above their respective criterion. The total VOC concentrations in these two wells were 21 and 13 ppb, respectively. SVOCs in all monitoring wells were below the criteria, with only a few trace detections of naphthalene. In summary, dissolved phase VOCs in groundwater are very low and do not warrant remediation. Based on data collected through May 2011, the free product plume appears to be decreasing since no product has been detected at MW-01 or MW-02 for several months; the plume recently has been limited to three monitoring wells: MW-06, MW-09, and MW-17. Product measurements during this quarter were comparable to the previous quarter. No product has been detected in well MW-02, indicating a potential trend of no product detected west of the oil/water separator. Other than continued product removal, no additional remediation action is warranted at the site at this time. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. AD 01/03/2012: Received Monthly Free Product Recovery and Quarterly Groundwater Sampling Report for period June 2011 through August 2011 dated January 3, 2012. DL the report to eDocs. Will review. AD 02/23/2012: Reviewed the report. It states that monitoring wells currently checked on a monthly basis include 7 wells: MW-01, MW-02, MW-03, MW-05, MW-06, MW-09, and MW-17. 5 wells: MW-04, MW-07, MW-08, MW-10, and MW-18 typically do not contain product and are only monitored on a quarterly basis. During this quarterly monitoring period, URS visited the site 4 times: on June 21, July 22, August 10 and August 25, 2011. During this quarter, URS detected measureable product in 6 monitoring wells MW-01, MW-02, MW- 05, MW-06, MW-09, and MW-17. Product was found at more locations during this quarter than previous quarters (i.e., MW-01, MW-02, and MW-05); however, detections at these locations were all less than 0.02 feet. The greatest amount of product was detected in well MW-17 with 0.34 feet in June, 0.13 feet in July, and 0.17 feet in August. Product measurements at the other five wells were all 0.07 feet or less. During this monitoring period, URS evacuated approximately 4 gallons of free product, using a vacuum truck, from the six wells that exhibited product. To date, approximately 90.5 gallons of free product have been recovered from the site. URS states that the product detections at MW-01, MW-02, and MW-05 during this quarter most likely are only temporary fluctuations as the plume continues to decrease in extent and thickness. The most recent sampling event was conducted on August 1, 2011. All wells in the program were sampled except for wells MW-05 and MW-06; these wells could not be sampled due to the presence of product in the wells. Depth to groundwater at the site ranges from less than 1’ bgs to approximately 6’ bgs. The

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

estimated groundwater flow direction ranges from east to south-southeast. The analytical results showed that no VOCs or SVOCs were detected in well MW-07, and only one VOC was detected above criteria in wells MW-03 and MW-08. The TVOCs in well MW-03 was 19ppb and in well MW-08 the TVOCs were 35 ppb. SVOCs in all monitoring wells were below the criteria, with only a few trace detections of naphthalene. In summary, dissolved phase VOCs in groundwater are very low and do not warrant remediation. URS is requesting that the SVOCs be removed from the groundwater analytical program for this site. Based on data collected through August 2011, URS concludes that the free product plume appears to be decreasing in size and thickness, although recently there have been some trace product detections at two outlying wells. Groundwater contaminant concentrations remain low in all monitoring wells sampled. Based on a lack of detections in the analytical samples, URS requests that the SVOCs be removed from the analytical program. Other than continued product removal, no additional remediation action is warranted at this time. URS will continue the monthly product recovery visits and the quarterly groundwater monitoring. To issue an approval. AD 03/20/2012: Sent an e-mail to A. Samani approving removal of SVOCs from analytical program. AD 05/16/2012: Received Quarterly Groundwater Sampling Reports for 4th quarter 2011 and 1st quarter 2012. DL the reports to eDocs. Will review. AD 06/08/2012: Reviewed the 4th quarter 2011 and 1st quarter 2012 report. It states that monitoring wells currently included in the quarterly groundwater sampling are: MW-03, MW-05, MW-06, MW-07, and MW-08. In the period from September 2011 through January 2012, URS personnel visited the site for either product collection or groundwater sampling on five occasions. Over these events, product was detected in a total of six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. Except for MW-17, the detected product thickness in the monitoring wells was 0.05 feet or less for all monitoring events in this period. The detected product in MW-17 ranged in thickness from 0.02 feet to 0.57 feet. Overall, product thickness measurements were similar to those from previous site visits. According to the historic data, product thickness have fluctuated over the past three years, especially in well MW-17. As for wells MW-02, MW-06 and MW-09, product thickness levels have historically fluctuated but remain low. During the period from September 2011 through January 2012, URS used a vacuum truck to collect an estimated 4.5 gallons of free product from the six monitoring wells that exhibited product. To date, an estimated 94.5 gallons of free product have been recovered from the site. The product detections measured at MW-01 and MW-02 during the last several sampling events are most likely only temporary fluctuations as the plume continues to decrease in extent and thickness. If significant product is observed or recovered in the quarterly events, URS will increase the frequency of the product collection events to monthly. All wells in the sampling program were sampled during the fourth quarter 2011 on October 31, 2011 and first quarter 2012 on January 30, 2012 sampling events except for wells MW-05 and MW-06, due to the presence of product. Depth to groundwater at the site ranges from less than 1 foot bgs to approximately 6 feet bgs. Previous investigations at the site indicate a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to south-southeast. The analytical results from the latest sampling event on January 30, 2012 showed that no VOCs or SVOCs were detected

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

in wells MW-07 or MW-08, and only one VOC (1,2,4-trimethylbenzene) was detected above criteria in well MW-03. The total VOCs in well MW-03 was only 14 ppb. Based on data collected through February 2012, URS concludes that the free product plume appears to be decreasing in size and thickness. Due to the small quantities of product being recovered, URS has reduced the frequency of product collection to quarterly. If significant product is observed or recovered in the quarterly events, URS will increase the frequency of the events to monthly. Groundwater contaminant concentrations remain low in all monitoring wells sampled. URS will continue the quarterly groundwater sampling program. Other than continued product removal, no additional remediation action is warranted at this time. AD 10/02/2012: Received Quarterly Groundwater Sampling Reports for 2nd quarter 2012. DL the report to eDocs. Will review. AD 11/09/2012: Reviewed the 2nd ans 3rd quarters 2012 report. It states that in the period from February through July 2012, URS personnel visited the site for either product collection or groundwater sampling on four occasions. Over these events, product was detected in a total of six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The maximum product thickness detected during this period at monitoring well MW-06 was 0.59 feet and at well MW-17 it was 0.14 feet. The detected product thickness in the remaining monitoring wells was 0.04 feet or less for all monitoring events in this period. Overall, product thickness measurements were similar to those from previous site visits. During the period from February through July 2012, URS used a vacuum truck to collect an estimated 2.5 gallons of free product from the five monitoring wells that exhibited product. To date, an estimated 97 gallons of free product have been recovered from the site. URS states that the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events to monthly. Only monitoring wells MW-03, MW-07, and MW-08 were sampled during the second quarter sampling event on April 16, 2012; wells MW-05 and MW-06 were not sampled due to the presence of product. The same three wells were also sampled for the third quarter sampling event on July 31, 2012 since wells MW-05 and MW-06 again contained product for the third quarter sampling event. Depth to groundwater at the site ranges from less than 1’ bgs to approximately 6’ bgs. The estimated groundwater flow direction ranges from east to southeast. The analytical results from the latest sampling event on July 31, 2012 showed no detection of any VOCs in any of the three monitoring wells sampled. Results from the previous sampling event in April were similar with only 5.6 ppb TVOCs detected in MW-03 and no VOCs detected in the other two wells. URS concludes that dissolved phase contamination in groundwater is very low and does not warrant remediation. Based on data collected through July 2012, URS states that the free product plume appears to be decreasing in size and thickness. Due to the small quantities of product being recovered, URS conducts product collection on a quarterly basis. If significant product is observed or recovered in future quarterly events, URS will increase the frequency of the events to monthly. Groundwater contaminant concentrations remain low or non-existent in all monitoring wells sampled. URS will continue the quarterly groundwater sampling program. Other than continued product removal, no additional remediation action is warranted at

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

this time. AD 04/05/2013: Received 4th Quarter 2012 and 1st Quarter 2013 Monitoring Report for the site. DL to eDocs. Will review. AD 05/23/2013: Reviewed the report. It states that in the period from August 2012 through January 2013, URS personnel visited the site for either product collection or groundwater sampling on four occasions. Over these four events, product was detected in six monitoring wells: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. The maximum product thickness detected during this period was 0.71 feet at monitoring well MW-09. The product thickness measured in the other wells was much lower, ranging from 0.01 feet to 0.2 feet. The affected wells and product thickness measurements over this period were similar to those from previous site visits with the exception of the 0.71 feet detected at well MW-09 in January 2013. During the six month period from August 2012 through January 2013, URS collected an estimated total of 3.75 gallons of product using a vacuum truck. To date, an estimated 100.75 gallons of free product have been recovered from the site. The report states that the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events to monthly. Groundwater sampling: Monitoring wells MW-03, MW-06, MW-07, and MW-08 were all sampled during the both the fourth quarter sampling event on October 10, 2012, and the first quarter 2013 sampling event on January 7, 2013. Monitoring well MW-05 was not sampled during either event due to the presence of product. The analytical results from the latest sampling event on January 7, 2013 showed no exceedances of the NYSDEC Groundwater quality criteria in the samples from wells MW-03, MW-07, and MW-08. The highest TVOCs was in well MW-06 at 7,877 ppb which is a huge increase from previous October 2012 sampling. GW data (ppb): October 2012 January 2013 1. MW-3 ND ND 2. MW-6 64 7877 3. MW-7 ND ND 4. MW-8 2.7 ND Conclusions: URS concludes that based on data collected through January 2013, the free product plume continues to decrease in size and thickness, although there are fluctuations and occasional events such as in January 2013 where the product thickness increases. Due to the small quantities of product being recovered, URS will continue to collect product on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained, URS will increase the frequency of the collection events to monthly. URS will continue the quarterly groundwater sampling and monitoring program. Other than continued product removal, no additional remediation action is warranted at this time. If future sampling events verify that the elevated total VOCs in well MW-06 as indicated by the January 2013 sampling event are valid, URS will evaluate implementation of further remedial actions. AD 10/01/2013: Received 2nd Quarter 2013 Monitoring Report for the site. DL to eDocs. Will review. AD 11/12/2013: Reviewed the report. It states that during the reported period from February through August 2013, URS personnel visited the site for either product collection or groundwater sampling in April, July, and August of 2013. Product recovery: During these three events, product was detected in five wells: MW-01, MW-02, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.43 feet at monitoring well MW-09. The maximum product thickness measured in the other four wells ranged from 0.03 feet to 0.34 feet. Product

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

thickness measurements have fluctuated over the past several years, especially in well MW-17. As for wells MW-02, MW-06 and MW-09, product thickness levels have historically fluctuated but remain low, with the exception of the unusually high product thickness measurement in MW-09 during the January 2013 event; the product level in this well has decreased considerably in the last two events. Product has not been detected at well MW-06 since September 2012. During the six month period from February through August 2013, URS collected an estimated total of 4 gallons of product using a vacuum truck. To date, an estimated 104.75 gallons of free product have been recovered from the site. Both the quantity of the product recovered and the number of wells affected have decreased since 2009. As noted above, the product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to collect the product via vacuum truck on a quarterly basis. However, if significant product is observed or recovered in future events, URS will increase the frequency of the product collection events. Groundwater sampling: Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water occasionally is as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions comprise a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. Monitoring wells currently included in the quarterly groundwater sampling are: MW-03, MW-05, MW-06, MW-07, and MW-08. For the second quarter monitoring event on April 16, 2013, URS sampled all wells in the program except for MW-05, which was found to contain product. For the third quarter event on August 20, 2013, URS sampled all wells except for MW-05 because it contained product and MW-03 because the area was submerged with surface water. The analytical results from the second and third quarter sampling events showed no detections of any VOCs or naphthalene in wells MW-07 and MW-08. Well MW-03 was only sampled in the second quarter and had a total VOC concentration of 40 parts per billion (ppb) with only methyl tert-butyl ether (MTBE) detected above its criterion. During the first quarter 2013 sampling event, the total VOC concentration in the sample collected from monitoring well MW-06 was 7,877 ppb. According to URS, this elevated concentration was unexpected considering that the highest concentration of total VOCs detected in this well previously was 197 ppb in April 1999. Based on the results from the second and third quarter 2013, it appears that the elevated result from the first quarter 2013 sampling event was an anomaly. URS will continue to monitor the groundwater conditions at this well and evaluate any additional fluctuations in VOC concentrations that may occur. Dissolved-phase groundwater impacts at this site have historically been too low to warrant remediation, but if elevated groundwater concentrations persist in well MW-06 or are found at other monitoring wells, remediation will be evaluated and implemented. GW data (ppb): January 2013 April 2013 August 2013 1. MW-3 ND 40 NS 2. MW-6 7877 71 29 3. MW-7 ND ND ND 4. MW-8 ND ND ND Based on data collected through August 2013, the URS states that the free product plume continues to decrease in size and thickness, although there are fluctuations and occasional events where the product thickness increases. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

and product recovery data as summarized above, URS recommends the following: Actions: " URS will continue the quarterly groundwater monitoring program. " URS will continue to collect product on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. " No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of further remedial actions if warranted. There are no proposals requiring DEC approvals. AD 05/05/2014: Received 4th Quarter 2013 and 1st Quarter 2014 Monitoring Report for the site. Will review. AD 06/18/2014: Reviewed the report. It states that for the fourth quarter 2013 monitoring event on November 6, URS only sampled wells MW-06, MW-07, and MW-08 since the remaining wells contained product at the time of the sampling. For the first quarter 2014 sampling event on March 26, 2014, all wells in the program were sampled except for well MW-03 which was found to be damaged and could not be opened. URS additionally collected samples from wells MW-02 and MW-09 during this event to verify that there was still no dissolved phase contamination at these locations. These wells were last sampled in 2006 and 2005, respectively, and typically contained product. GW data (ppb): March 2014 November 2013 1. MW-2 ND NS 2. MW-5 3.6 NS 3. MW-6 28 24 4. MW-7 ND ND 8. MW-8 6 12 9. MW-9 ND NS The analytical results from the most recent sampling event in March 2014 showed no detections of any VOCs or naphthalene in wells MW-02, MW-07, and MW-09, and only 4 parts per billion (ppb) total VOCs in well MW-05. Wells MW-06 and MW-08 both exceeded only the NYSDEC Groundwater Quality Criteria for benzene. The total VOC concentrations in these two wells were very low at only 28 ppb and 6 ppb, respectively. The highest total VOC concentration of any monitoring well over the past year was 71 ppb at well MW-06. Dissolved-phase groundwater impacts at this site have historically been too low to warrant remediation. However, there are still a few wells that have not been sampled recently due to product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through March 2014, URS states that free product plume at this site continues to decrease in size and thickness. Over the last quarter, product was detected in only two wells, and has decreased to the point where product can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. DSNY has indicated to URS that the oil/water separator was being replaced in 2014. The separator was considered a potential source of free product and replacement may result in improvements in free product detections in the future. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program. - URS will monitor product at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of further remedial actions, if warranted. There sre no proposals

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

requiring DEC approval at this time. AD 09/15/2014: Received 2nd Quarter 2014 Monitoring Report for the site. Will review. AD 10/21/2014: Reviewed the report. It states that monitoring wells checked during the second quarter product recovery event on April 21, 2014 were: MW-01, MW-02, MW-05, MW-06, MW-09, and MW-17. Other wells at the site usually do not contain product and are typically only monitored during the quarterly groundwater sampling event which is conducted separately from the product recovery events. During the second quarter sampling event on June 13, 2014, wells MW-01, MW-02, MW-05 through MW-09, and MW?17 were monitored for product. During the second quarter 2014, product or a product sheen was detected in 4 wells: MW-01, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.02 feet at monitoring well MW-09. Product thickness have fluctuated over the past several years, especially in well MW-17. However, all of the wells have been on a downward trend for the past year, and have been significantly lower in 2014. To the date, an estimated 119.75 gallons of free product have been recovered from the site. Both the quantity of product recovered and the number of wells affected have decreased since 2009. The product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. GW sampling: Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water occasionally is as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-03, MW-05, MW-06, MW-07, and MW-08. For the second quarter 2014 monitoring event on June 13, 2014, URS sampled 4 wells: MW-02, MW-06, MW-07, and MW-08. Well MW-03 was not sampled because it is damaged and could not be opened; well MW-05 was not sampled because there was a heavy sheen of product. Well MW-02 is an additional well that was sampled during this event to verify that there was still no dissolved phase contamination at this location. The analytical results from the most recent sampling event in June 2014 showed slight exceedances only for benzene in wells MW-06 and MW-08. The total VOCs in these two wells were very low at only 2.5 ppb and 3.2 ppb, respectively. There were no exceedances of the NYSDEC Groundwater Quality Criteria in the remaining wells MW-02 and MW-07. Conclusions: Based on data collected through June 2014, the free product plume at this site continues to decrease in size and thickness. Over the last quarter, minor quantities of product were detected in only four wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved?phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. DSNY replaced the piping between the oil/water separator and the oil/water separator overflow UST in 2014; based on recent monitoring data, it appears that the new piping has addressed the source of free product at the site. Based on the most recent groundwater monitoring and product recovery data as

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. - URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. - No additional remedial actions are warranted at this time. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of additional remedial actions, if warranted. There are no proposals which require DEC's approval at this time. AD 03/03/2015: Received a Groundwater MOnitoring Report for the 3rd and 4th quarters of 2014. Will review. AD 04/06/2015: Reviewed the report. It states that Free product recovery: During the third and fourth quarter 2015, product or a product sheen was detected in monitoring wells MW-01, MW-05, MW-09, and MW-17. The maximum product thickness detected during this period was 0.06 feet at monitoring wells MW-09 and MW-17. Product absorbent socks have been utilized for product collection from wells MW-09 and MW-17 since September 2014. Because there are socks installed in the wells, no product is detected in the well with the oil/water interface probe. However, it is assumed that product is still present and being collected by the socks. During the latest monitoring event in November, the socks were reported as 5% and 50% saturated in wells MW-09 and MW-17, respectively. A total of four product collection and groundwater sampling events were conducted during the third and fourth quarters of 2014. A total of eight monitoring wells were monitored for product during these events. Product thickness measurements have fluctuated over the past several years, especially in well MW-17. However, according to URS, all of the wells have been on a downward trend for the past year, and have been significantly lower in 2014. To date, an estimated 120.5 gallons of free product have been recovered from the site. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. Groundwater Sampling Results: URS collects GW samples on a quarterly basis to monitor the dissolved phase of groundwater plume. Monitoring wells currently included in the quarterly GW sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the third quarter samples on September 16, 2014 and the fourth quarter on November 10, 2014. Well MW-03 was not sampled because it was damaged and cannot be opened; well MW-05 was not sampled because there was a heavy sheen of product during both events. Well MW-01 was sampled during the fourth quarter only. This well has not been sampled since 2005 since it typically contains product. The analytical results from the most recent sampling event in November 2014 showed that the highest TVOCs was in MW-01 with 430 ppb of total VOCs, all of which was toluene. Well MW-06 contained only a slight exceedance for benzene. There were no exceedances of the NYSDEC Groundwater Quality Criteria in the remaining wells MW-02, MW-07, and MW-08. The results from the third quarter sampling were similar to the fourth quarter. Other than the recent sample at MW-01, the highest total VOC concentration of any monitoring well over the past year was 28 ppb at well MW-06. Dissolved?phase groundwater impacts at this site have historically been low and do not warrant remediation. However, if the results from MW-01 are sustained in future monitoring events,

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

remedial actions will be implemented to address the dissolved-phase contamination in this area. There are also wells such as MW?17 which have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions Based on data collected through November 2014, the free product plume at this site continues to decrease in size and thickness. Over the last two quarters, minor quantities of product were detected in only four wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the fourth quarter sample from MW-01. Actions and Proposals: Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. - URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. - URS will monitor MW-01 for at least one additional quarter to determine whether the total VOCs at this well remains elevated and warrants further remedial actions. No additional remedial actions are warranted at this time for the remaining wells at the site. URS will continue to monitor free product and dissolved phase impacts and evaluate implementation of additional remedial actions, if warranted. No actions requiring DEC approval were proposed at this time. AD 08/14/2015: Received the following e-mail from URS: Document report.sp9810571.2015.08.14.bronx_dist_3a. 1st_and_2nd_quarter_2015_monitoring_report.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the First and Second Quarter 2015 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 09/29/2015: Reviewed the report. It states that URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the first quarter samples on February 3, 2015; wells MW-01, MW-02, and MW-05 were not sampled because they contained product. Well MW-03 is damaged and could not be opened. The second quarter samples were collected on June 3, 2015. Well MW-01 was not sampled during the second quarter event because it contained product. Wells MW-03, MW-05, and MW-06 were not sampled because they were damaged and could not be opened. Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water is occasionally as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. Analytical data: The analytical results from the most

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

recent sampling event in June 2015 showed that no VOCs or naphthalene were detected in wells MW-02, MW-07, or MW-08. Results from the first quarter event were similar; the highest total VOC concentration was only 7.7 parts per billion (ppb) in well MW-02. URS stated that dissolved-phase groundwater impacts at this site have historically been low and do not warrant remediation. However, a sample from MW-01 in November 2014 showed a total VOC concentration of 430 ppb. Well MW-01 has not been sampled in the subsequent sampling events due to the presence of product. If the results from MW-01 are sustained in future monitoring events, remedial actions will be implemented to address the dissolved-phase contamination in this area. There are also wells such as MW-17 which have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through June 2015, the free product plume at this site continues to decrease in size and thickness. Over the last two quarters, minor quantities of product were detected in only five wells; product has decreased to the point where it can be collected with petroleum absorbent socks instead of a vacuum truck. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the fourth quarter 2014 sample from MW-01. Additional monitoring will be required to determine whether dissolved phase impacts are present at this well and other wells that have not been sampled due to the continued presence of product. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: " URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. " URS will collect product from affected wells at a minimum on a quarterly basis. If significant product is observed or recovered in future quarterly events, or if the elevated product thickness appears to be sustained or increasing, URS will increase the frequency of the collection events. " URS will add monitoring well MW-01 to the list of wells included in the quarterly groundwater sampling program. " URS will repair monitoring wells MW-03, MW-05, and MW-06. Proposals/Approval Required: " None AD 12/14/2015: Received the following e-mail from URS: Document report.sp9810571.20151214.bronx_dist_3a. 3rd_quarter_2015_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the Third Quarter 2015 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. URS Will review. AD 01/12/2016: Reviewed the report. It states that URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the third quarter of 2015 (through September). Free product: During the third quarter 2015, product or a product sheen was not detected in any monitoring wells. Product absorbent socks have been utilized for product collection from wells MW-09 and MW-17 since September 2014 and in

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

MW-01 since June 2015. Because there are socks installed in the wells, no product is detected in the well with the oil/water interface probe. However, it is assumed that product is still present and being collected by the socks. The absorbent socks in wells MW-01 and MW-09 were each replaced once during the third quarter 2015.To date, an estimated 120.5 gallons of free product have been recovered from the site. The product detections measured at most monitoring wells are relatively minor as the plume continues to decrease in extent and thickness. Remaining product at the site is likely minor remnants that will continue to slowly decrease over time. URS will continue to evaluate the most effective method for product collection based on the product observations and the quantity of affected wells in the upcoming year. GW sampling: Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected the third quarter samples on September 23, 2015. Well MW-01 was not sampled during the third quarter event because it contained a petroleum absorbent sock. Wells MW-03, MW-05, and MW-06 were not sampled because they were located within remediation vaults and could not be opened. URS repaired these wells in late October. Depth to groundwater at the site typically ranges from less than 1 foot below ground surface (bgs) to approximately 6 feet bgs, although the depth to water is occasionally as deep as 8 feet bgs in some locations. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. GW data: Dissolved-phase groundwater impacts at this site have historically been low and do not warrant remediation. However, a sample from MW-01 in November 2014 showed a total VOC concentration of 430 parts per billion (ppb). Well MW-01 has not been sampled in the subsequent sampling events due to the presence of product. If the results from MW-01 are sustained in future monitoring events, remedial actions will be implemented to address the dissolved-phase contamination in this area. In addition, some wells such as MW-17 have not been sampled recently due to the presence of product. If elevated groundwater concentrations are found in any of the monitoring wells, remediation of the dissolved phase will be evaluated and implemented, if warranted. Conclusions: Based on data collected through September 2015, URS states that: the free product plume at this site continues to decrease in size and thickness. Product has decreased to the point where it can be collected with absorbent socks instead of a vacuum truck. Socks are installed in 3 wells and no product has been detected since June 2015. Dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions with the exception of the 4th quarter 2014 sample from MW-01. Additional will be required to determine whether dissolved-phase impacts are present at this well and other wells that have not been sampled due to the continued presence of product. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program. Once the free product at the site has been addressed, URS will collect groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will conduct monthly product recovery events to

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

inspect or replace petroleum absorbent socks. If product levels increase, URS will implement alternative technologies, such as manual pumping using a peristaltic pump. Proposals/Approval Required: - None AD 03/18/2016: Received the following e-mail from K. Shanahan of URS: Hi Ainura, Attached is a table with the most recent information regarding free product and VOC/SVOC detections at the Bronx District 3A site. Also attached are two figures: Figure 3 illustrates the site plan with monitoring well locations on-site Figure 4 shows groundwater monitoring data over the past four quarters and four additional wells east and southeast of the site. Wells MW-13, MW14, MW15, MW16, MW-19 and MW-20 are either destroyed or located in a median covered with soil and could not be located. In February 2016, free product was not detected in wells MW-01 through MW-09 and MW-17. In addition, no VOCs were detected in samples collected from wells MW-02, MW-03, MW-04, MW-05, MW-06, MW-07, MW-09 and MW-17; the samples from wells MW-01 and MW-08 had VOC detections at 23 and 3 ug/L, respectively. In accordance with our telephone conversations today, we would like to sample wells MW-10, MW-11, MW-12 and MW-18 in an effort to gather sufficient data to justify a spill closure request. This of course assumes these four wells remain functional. Please send me your response to this plan at your earliest convenience. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit, Metro New York Region D +1-716-923-1215 M +1-716-480-7352 kevin.shanahan@aecom.com Will review. AD 03/23/2016: Looked at the submitted documents. According to sampling data, all sampled wells were free of LNAPL and had ND VOCs. Six wells out of twenty were destroyed or could not be located. Latest data from these wells was ND for VOCs. The site conditions look favorable for spill closure. AD 03/24/2016: Sent an e-mail to K. Shanahan telling to proceed with the plan. AD 05/24/2016: Received the following e-mail from URS: Document report.sp9810571.20160524.bronx_dist_3a. 1st_and_2nd_quarter_2016_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring Report for the First and Second Quarter of 2016 for the Bronx District 3A Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 06/21/2016: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the first and second quarters of 2016 (through May). Product recovery: Product recovery events during the first and second quarters of 2016 were conducted on January 19, February 19, March 30, April 5, and May 4. The socks were removed from all affected wells in January 2016 to determine whether product would continue to accumulate. During the following monitoring event in February, no product was detected in any of the ten monitoring wells that were checked, including the four wells (MW-01, MW-03, MW-09, and MW-17) that had contained product in the previous year. Based on these findings, and based on limited dissolved-phase contamination at the site as discussed below, URS contacted the NYSDEC in March 2016 to discuss additional monitoring and sampling data requirements prior to considering closure of this spill number. NYSDEC and URS agreed that a well inventory should be conducted. On March 30, 2016, URS completed the well inventory and checked water/product levels at a total of 15 monitoring wells, including six locations that had not been monitored for up to 10 years. During this event, product was measured in well MW-17 at a thickness of 0.01 feet so petroleum

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

absorbent socks were reinstalled in this well. Product was also measured in wells MW-12 and MW-16 at a thickness of 0.31 feet and 0.42 feet, respectively, so petroleum absorbent socks were also installed in these wells. This was the first monitoring at well MW-12 since February 2008 and at well MW-16 since July 2006. During the next monitoring event on April 5, 2016, the petroleum absorbent socks in wells MW-12, MW-16, and MW-17 were observed to be approximately 25% saturated. Based on the low accumulation, the petroleum absorbent socks were again removed from all wells during this event to determine whether product would continue to accumulate. GW monitoring: The most recent monitoring event was conducted on May 4, 2016. During this event, product was again measured in wells MW-01 (0.02 feet), MW-12 (0.05 feet), and MW-17 (0.01 feet); petroleum absorbent socks were installed in these wells. Well MW-16 which recently contained product could not be accessed during this event because it was blocked by a disabled street sweeper. GW sampling: The site is on quarterly sampling program. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected samples from all wells in the program during the first quarter sampling event on February 19, 2016. Samples were also collected from wells MW-04, MW-09, and MW-17 during this event. Conclusions: Based on data collected through May 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. URS removed the petroleum absorbent socks from all wells most recently in April 2016 to determine whether product continues to collect in the wells. During the following event in May, small amounts of product were found at wells MW-01, MW-12, and MW-17, so the socks were reinstalled. Fifteen of the 20 monitoring wells installed at this site were analyzed during the first and second quarter 2016. Only well MW-19 has not been sampled recently. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all site wells in the program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - If product is found at any wells during the next monitoring event(s), URS will reinstall petroleum absorbent socks at those locations. URS will conduct monthly product recovery events to inspect or replace petroleum absorbent socks as required. - As proposed below, URS will include all known monitoring wells on the list of wells to monitor and sample quarterly. Proposals/Approval Required: - In an e-mail to the NYSDEC dated March 18, 2016, URS proposed a list of wells to be sampled in advance of requesting spill closure. Table 3 presents an updated list of proposed wells and the most recent information regarding free product and dissolved phase contamination for each well. The wells that have been sampled as part of the routine monitoring are indicated with green shading. The additional wells that URS proposes to sample in advance of submitting a request for spill closure are indicated in blue shading. - URS does not intend to replace monitoring wells MW-13, MW-14, MW-15, or MW-20. These wells

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

are all located downgradient of the site and historically had little or no dissolved phase or free product impacts. The available wells provide sufficient coverage to indicate the presence of product and dissolved phase impacts at the site. Response to this proposal was sent to URS on March 24th, 2016. AD 10/31/2016: Received a notification to upload 3rd quarter 2016 report. AD 11/18/2016: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the third quarter of 2016 (through August). Free product recovery: Product recovery events during the third quarter of 2016 were conducted on June 2, June 27, and August 5. On June 2, 2016 the petroleum absorbent socks in wells MW-01, MW-12, and MW-17 were removed to observe whether product would continue to accumulate. The sock in well MW-16 was replaced since 1.07 feet of product were measured in this well. During the next event on June 27, 2016, product was measured at a thickness of 0.001 feet in MW-01, 0.03 feet in MW-12, and 0.01 feet in MW-17 (MW-16 was not accessible). Petroleum absorbent socks were installed in wells MW-12 and MW-17 during that event. During the most recent event on August 5, 2016, product was measured with a thickness of 0.07 feet in well MW-01 and a petroleum absorbent sock was installed. The product observed at this well may be due to surface infiltration as a result of the poor condition of the well. No product was measured in wells MW-12 and MW-17, and the petroleum absorbent socks were removed. The sock in well MW-16 was observed to be 100% saturated and was replaced; 0.06 feet of product was measured in this well. As of August 2016, socks are installed only in wells MW-01 and MW-16. According to URS, product thickness measurements have fluctuated over the past several years, especially in well MW-17. However, product thickness measurements in all wells except MW-16 have been consistently lower since the first quarter 2014. Any remaining product at the site is likely minor remnants that will continue to slowly decrease over time. URS will continue to monitor for product on a monthly basis, periodically removing the absorbent socks to check for the presence of product. GW sampling: URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, and MW-08. URS collected samples from all wells in the program during the third quarter sampling event on June 27, 2016 except for well MW-01 because it contained product. A sample was also collected from well MW-09 during this event. The analytical results from the third quarter sampling event in June 2016 showed that of the wells sampled, the only well with VOCs detected was MW-06 with total a VOC concentration of only 6 ppb. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through August 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. Fifteen of the 20 monitoring wells installed at this site were analyzed during the first through third quarters of 2016. Only well MW-19 has not been sampled recently. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved phase groundwater impacts at this site remain at low concentrations and do not warrant

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

any remedial actions. Actions and Proposals Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. URS will install new steel protective casings at monitoring wells MW?01 and MW?02 to prevent surface infiltration. Proposals/Approval Required: None. AD 12/29/2016: Received the following e-mail from URS: The document Bronx District 3A - 4Q 2016 Report has been posted to the NYCDDC SharePoint site. Please click here to access the site. https://nycddc.aecomonline.net/SitePages/Home.aspx Please click here to open the file. https://nycddc.aecomonline.net/All_Reports/Bronx%20District%203A/report.sp9810571.2016-12-29.Bronx_Dist_3A.4th_Quarter_2016_Monitoring_Rpt.pdf Will review. AD 01/27/2017: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the fourth quarter of 2016 (through September). Product recovery: The most recent product recovery event was conducted on September 27, 2016. During this event, petroleum absorbent socks were installed in wells MW?12 and MW?17 due to the presence of product in these wells at thicknesses of 0.09 feet and 0.02 feet, respectively. The petroleum absorbent socks in wells MW?01 and MW?16 were observed to be 100% saturated with product and replaced during this event. As of September 2016, socks are installed only in wells MW?01, MW?12, MW?16, and MW?17. GW sampling: URS collected samples from all wells in the program during the fourth quarter sampling event on September 27, 2016 except for well MW?01 because it contained product. A sample was also collected from well MW?09 during this event. Depth to groundwater at the site typically ranges from 1' bgs to approximately 6' bgs, although is occasionally as deep as 8 feet bgs at some locations. The depth to groundwater at each location was relatively consistent over the past year. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1 to 9 feet thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction ranges from east to southeast. The analytical results from the sampling event in September 2016 showed that of the wells sampled, the only well with VOCs detected was MW-03 with total a VOCs of only 1 ppb. There were no exceedances of NYSDEC groundwater quality criteria. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through September 2016, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. Sixteen of the 20 monitoring wells installed at this site were analyzed at least once during the first through fourth quarters of 2016. The four remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site remain at low

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. - URS will install new steel protective casings at monitoring wells MW-01 and MW-02 to prevent surface infiltration. Proposals/Approval Required: None. AD 03/20/2017: Received an e-mail with a link to 1st QMR-2017. Will upload and review. AD 05/01/2017: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the first quarter of 2017 (through January). LNAPL: Over the last quarter, URS has conducted product recovery events on November 21 and December 29, 2016, and January 9, 2017. During the event on November 21, 2016, the petroleum absorbent socks in all four wells were observed to be 100% saturated with product and were replaced. Despite the presence of absorbent socks, measurable product was also present in all four wells, ranging from 0.01 feet in MW-12 to 0.08 feet in MW-16. During the next event on December 29, 2016, the petroleum absorbent sock in well MW-16 was 100% saturated with product and was replaced; 0.05 feet of product was measured at this location. The petroleum absorbent socks in wells MW-12 and MW-17 were each observed to be 25% saturated with product and were removed to determine whether product would continue to accumulate in these wells. Well MW-01 could not be accessed during this monitoring event because it was blocked by a vehicle. The most recent product recovery event was conducted on January 9, 2017. The petroleum absorbent socks in wells MW-01 and MW-16 were observed to be 100% saturated with product and were replaced; 0.02 feet and 0.01 feet of product were measured in these wells, respectively. Wells MW-12 and MW-17 each contained product at a thickness of 0.01 feet so petroleum absorbent socks were reinstalled in these wells during this event. URS believes that the product observed at well MW?01 may have been from surface infiltration as a result of the poor condition of the well. Well MW?02 was also in poor condition. Both wells were repaired by installing new steel protective casings installed on February 21, 2017. GW sampling: URS collected samples from all wells in the program during the first quarter sampling event on January 9, 2017 except for wells MW-01 and MW-17 because they contained product. The analytical results from the first quarter sampling event in January 2017 showed that of the wells sampled, the only well with VOCs detected was MW-09 with total a VOC concentration of only 1.6 part per billion (ppb). There were no exceedances of NYSDEC groundwater quality criteria. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through January 2017, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be collected with petroleum absorbent socks instead of a vacuum truck. Fifteen of the 20 monitoring wells installed at this site were analyzed at least once during the past year. Four of the remaining monitoring wells are either destroyed and/or lost. The recent monitoring data continues to

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

show that dissolved?phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. AD 06/20/2017: Received the following e-mail from URS: The document Bronx District 3A - 2Q 2017 Report has been posted to the NYCDDC SharePoint site. Please click here to access the site. https://nycddc.aecomonline.net/SitePages/Home.aspx Please click here to open the file. https://nycddc.aecomonline.net/All_Reports/Bronx%20District%203A/report.sp9810571.2017-06-20.Bronx_Dist_3A.2nd_Quarter_2017_Monitoring_Rpt.pdf Will review. AD 07/18/2017: Reviewed the 2nd quarter 2017 report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the second quarter of 2017 (through April). Over the last quarter, URS has conducted product recovery events on February 16, March 9, and April 5, 2017. Wells MW-01, MW-16, and MW-17 all contained measurable product during at least one event over the last quarter. The greatest product thickness found was 0.35 feet in MW-01, 0.03 feet in MW-16, and 0.01 feet in MW-17. The socks in these wells were replaced during each event. No measurable product was found in well MW-12, and the socks were not replaced during the quarter. URS believes that the product observed at well MW-01 may have been from surface infiltration as a result of the poor condition of the well. Well MW-02 was also in poor condition. Both wells were repaired by installing new steel protective casings on February 21, 2017. URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, MW-08, MW-09, and MW-17. URS collected samples from all wells in the program during the second quarter sampling event on April 5, 2017 except for wells MW-01 and MW-17 because they contained product. The analytical results from the second quarter sampling event in April 2017 showed that of the wells sampled, the only wells with VOCs detected were MW-03 and MW-07, with total VOCs of only 1.5 part per billion (ppb) and 2.3 ppb, respectively. There were no exceedances of NYSDEC groundwater quality criteria. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through April 2017, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be effectively collected with petroleum absorbent socks instead of a vacuum truck. The recent monitoring data continues to show that dissolved?phase groundwater impacts at this site remain at low concentrations and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. Proposals/Approval Required: - None. AD 08/31/2017: Received an e-mail from URS: The document Bronx District 3A - 3Q 2017 Report has been posted to the NYCDDC SharePoint site and copied to the public file store. 3rd_Quarter_2017_Monitoring_Rpt.pdf Please click here to access the SharePoint site. https://nycddc.aecomonline.net/ Will review. AD 09/29/2017: Reviewed the report. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the third quarter of 2017 (through July). Over the last quarter, URS conducted product monitoring events on May 3, June 2, and July 5, 2017. On May 3, 2017, there was no measurable free product in any site wells; the petroleum absorbent socks were removed from wells MW-01, MW-12, and MW-17 to determine whether product would continue to accumulate in the wells. The absorbent sock in MW-16 was fully saturated; as a result it was replaced during this event. On June 2, 2017, the only measurable product was 0.01 feet in well MW-17. A sock was installed in MW-17 due to the presence of product. The sock in MW-16 was removed. During the most recent monitoring event on July 5, 2017, several wells contained product including MW-01 (0.06 feet), MW-08 (0.06 feet), MW-12 (0.01 feet), MW-16 (0.02 feet), and MW-17 (0.01 feet). As a result of the product detections, petroleum adsorbent socks were installed in wells MW-01, MW- 08, MW-12, and MW-16; the sock in MW-17 was 100% saturated with product and replaced. The detection of product in monitoring well MW-08 (0.06 feet) is the first time that product has been detected at this well since monitoring began in 1999. URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Monitoring well locations are shown on Figure 3. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, MW-08, MW-09, and MW-17. URS collected samples from all wells in the program during the third quarter sampling event on July 5, 2017 except for wells MW-01, MW-08, and MW-17 because they contained product. The analytical results from the third quarter sampling event in July 2017 showed that no VOCs were detected in any of the wells sampled. MW-03 was the only well sampled that contained naphthalene with a concentration of 1 ppb. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through July 2017, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be effectively collected with petroleum absorbent socks instead of a vacuum truck. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site are negligible and do not warrant any remedial actions. Based on the most

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: Actions: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program (shown in green on Table 3). If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. Proposals/Approval Required: - None. AD 01/05/2018:Received an e-mail from URS: The document Bronx District 3A - 4Q 2017 Report has been posted to the NYCDDC SharePoint site and copied to the public file store. Please click here to open the file on the public server. report.sp9810571.2018-01-05.Bronx_Dist_3A. 4th_Quarter_2017_Monitoring_Rpt.pdf Please click here to open the file on the SharePoint site (requires log in). https://nycddc.aecomonline.net/All_Reports/Bronx%20District%203A/ report.sp9810571.2018-01-05.Bronx_Dist_3A. 4th_Quarter_2017_Monitoring_Rpt.pdf Will review. AD 02/14/2018: Reviewed the 4th quarter 2017 report. It states that over the last quarter, URS conducted product monitoring events on August 3, September 14, and October 9, 2017. The petroleum absorbent socks were removed from all monitoring wells at least once during this quarter. In all cases, product was again observed in the well and new petroleum absorbent socks were installed. During the most recent monitoring event on October 9, 2017, several wells contained product including MW-01 (0.02 feet), MW-08 (0.01 feet), MW?-6 (0.001 feet), and MW-17 (0.01 feet). As a result of the product detections, petroleum adsorbent socks were installed in wells MW-01, MW-08, and MW-12; the socks in wells MW-16 and MW-17 were 75% and 100% saturated with product and were replaced. The detection of product in monitoring well MW-08 (0.01 feet) is only the second time that product has been detected at this well since monitoring began in 1999. The product thickness measurements fluctuated over the years until the oil/water separator piping was repaired in early 2014. Since then, product thickness measurements have been consistently lower. Any remaining product at the site is likely minor remnants that will continue to slowly decrease over time. URS will continue to monitor for product on a monthly basis, periodically removing the absorbent socks to check for the presence of product in the surrounding aquifer. URS believes that the product observed at well MW?01 may have been from surface infiltration as a result of the poor condition of the well. Well MW?02 was also in poor condition. Both wells were repaired by installing new steel protective casings on February 21, 2017. GW monitoring: Depth to groundwater at the site typically ranges from 1 foot below ground surface (bgs) to approximately 6 feet bgs, although is occasionally as deep as 8 or 9 feet bgs at some locations. The depth to groundwater at each location was relatively consistent over the past year. Previous investigations at the site indicate the subsurface conditions are comprised of a layer of fill 1’ to 9’ thick overlying silty fine sand with traces of gravel and cobbles. The estimated groundwater flow direction is from the northwest to the southeast. URS collects groundwater samples on a quarterly basis to monitor the dissolved phase groundwater plume. Wells currently included in the quarterly groundwater sampling program are: MW?01, MW?02, MW?03, MW?05, MW?06, MW?07, MW-08, MW?09, and MW?17. URS collected samples from all wells in the program during

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

the fourth quarter sampling event on October 9, 2017 except for wells MW?01, MW?08, and MW?17 because they contained product. The analytical results from the fourth quarter sampling event in October 2017 showed that no VOCs were detected above the NYSDEC criteria in any of the wells sampled except wells MW?02 and MW?06, with total VOCs of only 6 ppb and 28 ppb, respectively. The results from the most recent monitoring events are consistent with previous events showing that dissolved?phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through October 2017, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be effectively collected with petroleum absorbent socks instead of a vacuum truck. The recent monitoring data continues to show that dissolved?phase groundwater impacts at this site are negligible and do not warrant any remedial actions. Based on the most recent groundwater monitoring and product recovery data as summarized above, URS recommends the following: - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program. If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. Proposals/Approval Required: - None. AD 03/22/2018: Received the following e-mail from URS: The document Bronx District 3A - 1Q 2018 Report has been posted to the NYCDDC SharePoint site and copied to the public file store. 1st_Quarter_2018_Monitoring_Rpt.pdf Please click here to access the SharePoint site. https://nycddc.aecomonline.net/ Uploaded the report. Will review. AD 04/24/2018: Reviewed Groundwater Monitoring Report for the First Quarter 2018. This report summarizes the free product recovery efforts and groundwater monitoring data at the site for the first quarter of 2018 (through January). Over the last quarter, URS conducted product monitoring events on November 9 and December 1, 2017 and January 3, 2018. The petroleum absorbent socks were removed from all monitoring wells at least once during this quarter. Product was again observed in wells MW-01, MW-16, and MW-17 so petroleum absorbent socks were installed in these wells. Product has not been found in wells MW-08 and MW-12 in the two months since the socks were last removed. During the most recent monitoring event on January 3, 2018, product was detected in MW-01 (0.03 feet), MW-16 (0.02 feet), and MW-17 (0.01 feet). As a result of the product detections, petroleum adsorbent socks were installed in wells MW-01 and MW-16; the sock in well MW-17 was 100% saturated with product and was replaced. Monitoring wells currently included in the quarterly groundwater sampling program are: MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, MW-08, MW-09, and MW-17. URS collected samples from all wells in the program during the first quarter sampling event on January 3, 2018 except for wells MW-01 and MW-17 because they contained product. A sample was also collected from well MW-12 since this well had recently contained product. The analytical results from the first

CON EDISON - MANHOLE M14350 (Continued) **S104952537**

quarter sampling event in January 2018 showed that no VOCs were detected above the NYSDEC criteria in any of the wells sampled except well MW-06, with a total VOC concentration of 41 ppb. The results from the most recent monitoring events are consistent with previous events showing that dissolved-phase groundwater impacts at this site are low and do not warrant remediation. Conclusions: Based on data collected through October 2017, the free product plume at this site continues to decrease in size and thickness. Remaining product has decreased to the point where it is found intermittently at low levels and can be effectively collected with petroleum absorbent socks instead of a vacuum truck. The recent monitoring data continues to show that dissolved-phase groundwater impacts at this site are negligible and do not warrant any remedial actions. - URS will continue the quarterly groundwater monitoring program, collecting groundwater samples from all monitoring wells in the monitoring program (shown in green on Table 3). If dissolved phase impacts are present, URS will implement remedial actions as appropriate. - URS will continue monthly product recovery events to inspect or replace petroleum absorbent socks as required. All wells shown in blue or green on Table 3 will be checked for free product at least quarterly. Proposals/Approval Required: - None. AD"

Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: X001
. Waste name: WASTE OILS

Violation Status: No violations found

FINDS:

Registry ID: 110004436646

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"7/18/18-Zhune spoke to John Bonanno from AARCO 631-339-3468. John said the tank is a 2000-gallons # 2 fuel oil AST tank. The tank failed the test with a dry and wet leak. 7/18/18-Zhune spoke to Tony Pellegrino. Tony said the site is a NYC Departement of Sanitation facility . They put a new boiler. They tested the old tank and it failed the test. They are going to eliminate the tank and replace it with a new tank. The person in charge of the project is Roy Bloomfield. Tony Pellegrino 718-334-9100 Roy Bloomfield 212-437-4561 7/19/18-A TTF letter sent to: Tonny Pelegrino 52-35 58th Street room

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

G M T TILE CORP (Continued) **1000141173**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility Has Received Notices of Violations:

WELFARE OFFICE BLDG - GETTY PROPERTIES #329 (Continued) **S102560528**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT SEE ALSO 97-04954 & 97-12845 & 95-04305. CHANGE DEC INVESTIGATOR TO VOUGHT 3/27/03 REASSIGNED FROM ROMMEL TO VOUGHT. 10/20/2005 - case reviewed by Feng: Received a complaint of gasoline vapors at 1209 Colgate Ave in Bronx (97-00109). Getty service station located next door @ 1441 Westchester ave, had a tank overfill. This gasoline traveled underground into the basement of 1209 Colgate Ave. This overfill compounded an existing soil and groundwater problem from the former gasonline tanks (#95-04305). STIP on January 6, 1998. by sighing this STIP, Getty takes the responsiblity of cleanup of 1209 Colgate Ave contamination. Dual Phase Extraction System has been on to address the contamination. Quarterly Monitoring Report, 3/2005 - 5/2005. Quarterly gauging and sampling. groundwater flow in west direction. 20 monitoring wells onsite. BTEX and MTBE in low concentration, such as 93.39ppb BTEX and 37.4ppb MTBE in W-1 (12.16' bg). 11/16/2006 - Feng - Quarterly Monitoring Report, 5/2006 - 7/2006, 7/2006, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 7/3/2006. 20 monitoring wells. DTW 10.70' to 14.55' bg. Flow direction west. No LNAPL. BTEX range ND to 680.7 ppb (MW-4). MTBE range ND to 16.4 ppb (MW-6). Monthly inspection of the air stripper system and the SVE system. No effluent samples taken this quarter until system fixed. (RJF) 11/17/2006 - Feng - Quarterly Monitoring Report, 8/2006 - 10/2006, 10/2006, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 10/18/2006. 20 monitoring wells. DTW 9.07' to 14.75' bg. Flow direction west. No LNAPL. BTEX range ND to 662.1 ppb (MW-4). MTBE range ND to 18.2 ppb (MW-6). 1/18/2007 - Feng - Getty Properties portfolio meeting with Tyree and Delta. System shutdown 12/2006 and quarterly monitoring for 2007. (RJF) 2/22/2007 - Feng - Quarterly Monitoring Report, 10/2006 - 1/2007, 1/2007, by Tyree. Active gasoline retail/service station. Groundwater sampled and gauged 1/2/2007. 20 monitoring wells. DTW 9.20' to 13.17' bg. Flows westerly. No LNAPL. MW-1, BTEX BDL, 4.2 ppb MTBE. MW-2, 11.99 ppb BTEX, 2.4 ppb MTBE. MW-3, BTEX BDL, 3.1 ppb MTBE. MW-4, 511.3 ppb BTEX, 21.1 ppb MTBE. MW-5, 125.2 ppb BTEX, 18.9 ppb MTBE. MW-6, 270.7 ppb BTEX, 19 ppb MTBE. MW-7, BDL. MW-8, BTEX BDL, 1.4 ppb MTBE. MW-9, 0.52 ppb BTEX, 1.9 ppb MTBE. MW-10, BTEX BDL, 0.85 ppb MTBE. MW-11, 52.95 ppb BTEX, 15.1 ppb MTBE. MW-12, BDL. MW-13, BTEX BDL, 12 ppb MTBE. MW-14, BDL. MW-15, 77 ppb BTEX, 10.2 ppb MTBE. MW-16, BTEX BDL, 8.98 ppb MTBE. MW-17, BTEX BDL, 0.66 ppb MTBE. MW-18, BTEX BDL, 3.5 ppb MTBE. GPW-1, not sampled. GPW-2, BTEX BDL, 7 ppb MTBE. (RJF) 7/3/2007 - Feng - Quarterly Monitoring Report, 2/2007 - 5/2007, 5/2007. Groundwater sampled 4/26/2007. 20 monitoring wells. DTW 9.63' to 12.5' bg. Flows to west. No LNAPL. BTEX range ND to 144.67 ppb (MW-4). MTBE range ND to 18.9 ppb (MW-5). (RJF) 9/28/2007 - Feng - Quarterly Monitoring Report, 5/2007 - 7/2007, 7/2007. Groundwater sampled 7/23/2007. 20 monitoring wells. DTW 8.96' to 14.59' bg. Flows to west. No LNAPL. MW-4, 384.6 ppb BTEX, 8.3 ppb MTBE. MW-5, 48.9 ppb BTEX, 6.9 ppb MTBE. MW-6, 193.3 ppb BTEX, 11.7 ppb MTBE. The other wells are BDL or low. (RJF) 10/2/2007 - Feng - Sensitive Receptor Survey, 7/20/2007. Tyree requested spill closure. The dual phase extraction system was shutdown 12/2006. It needs 8 quarters of monitoring after the remedial system is shutdown. Groundwater concentration is fluctuating in MW-4. Spill closure denied. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. The benzene level is still high as indicated in the quarterly report. Need to reduce the benzene level for closure. (RJF) 1/23/2008 - Feng

WELFARE OFFICE BLDG - GETTY PROPERTIES #329 (Continued) **S102560528**

- Quarterly Monitoring Report, 8/2007 - 10/2007, 10/2007. Active gasline retail/service station. Groundwater gauged and sampled 10/9/2007. 20 monitoring wells. DTW 9.61' to 13' bg. Flows to west. No LNAPL. BTEX range ND to 363.1 ppb (MW-4). MTBE range ND to 48.7 ppb (MW-3). (RJF) 5/14/2008 - Feng - Quarterly Monitoring Report, 11/2007 - 1/2008, 3/2008. Active gasoline retail/service station. Groundwater was gauged and sampled 1/16/2008. 20 monitoring wells. DTW 9.00' to 14.64' bg. Flows to west. No LNAPL. BTEX range ND to 403.4 ppb (MW-4). MTBE range ND to 9.6 ppb. (RJF) 7/11/2008 - 2Q2008, 2/2008 - 5/2008, 5/2008. Active gasoline retail service station. Groundwater was gauged and sampled 4/23/2008. 20 monitoring wells. DTW 9.93' to 14.16' bg. Flows to west. No LNAPL. BTEX range ND to 472 ppb (MW-4). MTBE range ND to 22 ppb (MW-3). Email to Tyree for additional remediation to address the benzene problem. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. Need to bring down the benzene level for closure. Will put borings in the historical contaminated area. Petition plan for closure by 1Q2009. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Tyree and Delta. Closure petition plan by 3/2009. (RJF) 4/20/2009 - Quarterly Monitoring Report, 6/2008 - 8/2008, 9/2008, by Tyree. Active gasoline retail service station. Groundwater was gauged and sampled 7/31/2008. 20 monitoring wells. DTW 9.34' to 14.72' bg. Flows to west. NO LNAPL> BTEX range ND to 362 ppb (W-4). MTBE range ND to 49.2 ppb (W-3). System turned off as of December 2006 due to low effluent levels and low groundwater levels. (RJF) 4/23/2009 - Reviewed Investigation Work Plan, dated 3/20/2009, by Tyree. Tyree proposed 3 soil borings. DEC provided comments on the work plan and email to Tyree. see eDocs. Revision due 5/23/2009. (RJF) 6/8/2009 - Reviewed Investigation Work Plan revision, dated 5/6/2009, by Tyree. Tyree proposed 8 soil borings, will run STARS for every borings, and run TCLP for 3 soil borings. Work plan is approved. Investigation Report due within 90 days of the approval, 9/8/2009. (RJF) 6/18/2009 - Quarterly Monitoring Report, 1/2009 - 3/2009, 5/2009, pdf via email, by Tyree. Active gasoline retail service station. Monthly gauging and quarterly sampling. Groundwater was sampled 3/27/2009. 20 monitoring wells. DTW 9.73' (MW-18) to 14.34' (MW-16) bgs. Flows to west. NO LNAPL. BTEX range ND to 312.5 ppb (MW-4), residual mainly is benzene. MTBE range ND to 44.7 ppb (MW-3). System turned off as of 12/2006 due to low effluent levels and low groundwater levels. (RJF) 2/1/2012 - KGH meets with R2 staff to discuss Getty Bankruptcy Case and closure petitions. Consensus of senior staff is that Spill # 97-00109 has been cleaned-up significantly and it is appropriate to consider closure 9/25/2012 - 2/8/12 - KGH - Vapor impacts to neighboring buildings first grought this site to DEC attention. This was quickly resolved by NYFD & DEC Spills Unit. Inaccesible residual soil contamination may remain beneath this active retail station but will biodegrade over time and present no off-site impacts. GW concentrations have steadily decreased and have remained beneath 0.25 ppm Total BTEX for several years. The Department is requiring No Further Action at this time. Spill is being closed as currently Not Meeting Standards. Additional data may be submitted in the future for consideration of an upgrade in closure status. NFA"

Remarks: "FIRE DEPT HAZ MAT TEAM THINKS THERE IS A LEAK IN AN UNDERGROUND TANK - THEY REQ A REP FROM DEC TO RESPOND"
