| DEC Memo: | 8/18/16- DEC piper spoke with Rob Hill. They received a call this morning that the tank was leaking. Approx 5-10 gallons on floor under vaulted tank. A vac truck is onsite to empty the tank. Rite Way is going to set up temp tanks for hot water and investigate. Spill assigned to DEC Zhune for follow up and closure. 2-603894 11/7/16-David from Riteway sent the following email. For 2754 Claflin Ave The existing tank was removed, the floor underneath was sound and solid. We are now currently waiting for the permits for the new install of a 3000 AST. ( I am trying to get you photos of the floor) 10/7/20-David from Riteway sent the report dated October 06,2020. I couldn't find all the documents needed. As I am sure you know that in 2018 we had a fire at 700 Hicks street and we had to move to the Bronx. Some of our documentation was lost during this incident. What I did find (please see attached) was the invoice and job tickets as well as the liquid manifest for the destination disposal site for the 500 gallons. I could not find the manifest that we wrote for the500 gallon that was disposed of from the tank and I cannot find 1 drum manifest for the drum that was disposed. But I find a composite load manifest for a container that we consolidated drums into. 99% that the one drum from 2754 Clafin was consolidated into the 15 yard container (manifest attached). At this time the NYSDEC came to our site at 700 Hicks Stand ordered us to remove and dispose of the drums we have accumulated onsite(due to insufficient funds in our company at that time). AS for the spill,... It appears that there was a small leak on the tank which discharge onto a solid concrete floor. We were there 0n 8/18/2016 only. According our tickets (please see attached , the spill cleaned up was completed and the disposal was 1 drum an 500 gallons of liquid from the tank. I've included the composite manifest for the drum and the composite manifest for the 500 gallons in the attachment. I hope this helps as we do not have any other documentation and unfortunately the men who were on the job as well as Rob Hill has no longer been with the company for over 2 years now, and I have no one to ask for details, but the |

work tickets were helpful.

| Remarks: | the former underground storage tanks at 2614 University Avenue, which were removed as part of the remedy implemented under the VCA. Remediation implemented to date included soil excavation; tanks removal; and operation of the Soil Vapor Extraction system that proved to be ineffective to address groundwater contamination. To address residual contamination in the soil and in the groundwater, consultant for the Volunteer had initially (in April 2003) proposed dual phase extraction system, however, is now proposing additional excavation instead. Rommel 12/29/03 The on-site remedial actions were completed by RP. Spill number closed. Walsh underground tanks abandoned several years ago-soil contamination has been recently discovered by caller |

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Site Description: | Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft. |
| Env Problem: | Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation |

| Health Problem: | Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building. |

Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.
Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.
Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Site Description: Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.
Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| DEC Memo: | 9/9/25-Zhune called Mark from Mercury Tank Could not get him. Left a message. DEC Piper spoke with Mark Salamack. He tested and tank and it failed a dry leak. He has a proposal into the owner to isolate, retest, and will then look to facilitate the repair whatever the issue is. Manager is Philip Roth at 718-664-6650 his email address is prothrealtygroup@gmail.com The Company is : REALTY GROUP NORTH 109 Montgomery Ave. Suite 102 Scarsdale, N.Y. 10583 718-664-6650 10/7/25-Zhune- Mark Salamack from Mercury Tank & Pump Service, Inc. email the Closure Report. The report stated that Mercury Tank was engaged to perform a precision tightness test on a 3,000 gallon underground tank (the tank is a tank that sits above ground, but wrapped in concrete, therefore considered underground) at this location. This tank contained # 2 fuel oil. The test was performed on 09, September 2025 and the tank failed. Subsequently the tank was isolated and tested and the associated piping was all tested individually; it was determined that the tank was sound, but the fill line which is under |

concrete for a distance indicted a problem. The fill line was excavated and a hole was found in a niple (short piece of piping) just below ground in concrete. fortunately, the concrete seems to have prevented any oil to escape. The surrounding area was inspected and no contamination was found. The fill line was replaced and the tank system was retested and passed. This work was performed on 22, September 2025. The tank test results is attached. Spill Closed.

Record Added Date: 06/30/2025
Record Updated Date: 07/25/2025
Update By: AMSERVIS
Site Description: Site Location: The site is located at 101 East Kingsbridge Road, Bronx, New York and is identified as Block 3314 Lot 1 on the New York City tax map. The site is approximately 0.14 acres (5,928 square feet) in size and is located in the Kingsbridge Heights neighborhood of the Bronx, New York. The site is bounded to the north by one four-story religious building occupied by the New United Holy Church of God, followed by an eight-story residential building; to the east by a one-story commercial building occupied by El Lapiz Stilo (a barber shop) and a nine-story mixed-use commercial residential building with a deli and grocery on the first floor and residential spaces on the above floors; to the south by East Kingsbridge Road followed by a four-story building occupied by P.S. 246 Poe Center; and to the west by Creston Avenue followed by a single-story building occupied by New Way Deli & Lottery Corporation, Fruit and Vegetable Corp., and New Illusion Beauty Salon and Creston Barbershop. Site Features: The site is currently improved with a vacant single-story commercial building with a partial cellar. Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 3c, the site is in an R8 zoning district with a C1-3 commercial overlay. The proposed future use and development are consistent with the current zoning. Past Site Use: Based on a Phase I Environmental Site Assessment (ESA) completed by Haley & Aldrich of New York for the site in March 2025, the site was first developed as early as 1896 with a two-story dwelling in the southeastern corner of the site along East Kingsbridge Road. By 1900, another two-story building was added to the southwestern corner of the lot. By 1945, the buildings were replaced with a single-story building encompassing the majority of the lot with a basement in the southwest corner of the site. The site was listed as operating as Green Spot Cleaners from 2014 through 2020. The site was also reported to be a generator of spent halogenated solvents in the 1990s, including Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, and 1,1,2-Tricholoroethane. Additionally, there was a fire on the site on April 26, 1972, however, no changes to the structure are depicted. While there is no further information on the nature, extent, or treatment of the fire, it is possible that there was use of firefighting foam during the response. Aqueous film-forming foam (AFFF) is a source of per- and polyfluoroalkyl substances (PFAS) and/or perfluorooctanoic acid (PFOA), and was developed in the 1960s, with widespread use for firefighting in the 1970s. It is possible that firefighting foam was used in the response to the fire and contained hazardous materials such as PFAS/PFOA. Site Geology and Hydrogeology: Fill material generally consisting of tan silt with black gravel was observed from surface grade to approximately 0.5 feet (ft) below the slab. The fill layer was underlain by a potential native layer consisting of brown, fine to medium sand with varying amounts of silt, clay, gravel, and stone up to the terminus depth in each soil boring. Refusal, presumed to potentially be bedrock, was encountered between approximately 2 to 4 feet below ground surface (bgs) in each soil boring. The topography of the site is generally flat with a gentle slope to the southwest. The ground level elevation on the site is approximately 137 ft above mean sea level (amsl). Based on the USGS NYC Bedrock and Groundwater

**101 EAST KINGSBRIDGE ROAD REDEVELOPMENT SITE (Continued)** **S130611709**

| | |
|---|---|
| | Mapper, the depth to groundwater encountered at the site is anticipated to be encountered at approximately 12 to 15 ft bgs. Groundwater is anticipated to flow to the northwest toward the Jerome Park Reservoir and the Harlem River. Groundwater was not encountered during the Limited Phase II ESI. |
| Env Problem: | Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. |

DEC Memo: 6/5/06: Gas crew excavating for Con Ed found fuel oil contamination. Location is in front of
building that has 3,000 gallon fuel oil tank (PBS # 2-331414). Referred to R. Austin for follow up
by PBS unit. (JHO) 6/6/06 - Austin - Reassigned to Rahman for further investigation of oil
contamination and to work with PBS unit on regulatory issues. - end 07/17/06 Rahman- Sharif
performed a site visit on 06/16/06. The Con Edision gas curb is IFO 2767 Morris Ave. on
sidewalk.Contaminated soil with petroleum odor was observed near the gas curb valve. The fill port
is attached to the wall and close to the gas curb.No indication of oil spill in the tank
room.Letter was sent to(on 06/20/06) JMV Realty Corp. 280 East 204th Street Bronx, NY 10467 Attn:
Joseph Zagreda(914.374.0291) asking i)Tightness testing of the tank system including piping
ii)Removal of cont. soil followed by end point sampling . 02/26/07 Rahman- Rec'd report from A.B.C
Tank.Tank and System passed the tightness testing.ABC Tank broke up cement near the gas curb
valve,removed contaminated soil and took one end point sample.Sample result shows contamination
below TAGM limit.NFA required.
Remarks: three 55 gal drums of contaminated soil were taken during an excavation. Soil contaminated with unknown oil. No to the five questions. The contractor on site (unknown company) will be continuing the clean up. 200233

| DEC Memo: | 02/16/11-Hiralkumar Patel. visited site (at 7:30 PM on 02/15/11). met Juan Garcia, building super and Marc from Royal Environmental. Royal was hired by fuel company. found large stain on sidewalk and on aspalt street along the curbside. oil spilled from the vent line onto concrete sidewalk and ran about 100 ft along curbside. no catch basin impacted. Royal cleaned up all loose material which was mostly covered by snow on street. found a manhole on street right near the fill port area. asked Marc to check this manhole. inspected tank room. site has one 2,000 gal #2 oil aboveground tank sitting on soil. minor oil spilled from manhole and gauge also. found oil on tank wall only and no oil on floor. also found oil on water along the foundation wall. this area is right underneath the vent pipe location and it looks like oil that spilled at the vent pipe, came into the building following the pipe. asked Marc to clean spill in tank room. no leak from from other part of tank. as manhole and gauge area are leaking, asked Marc to seal the fill port to avoid further oil deliveries until the tank system is tested and confirmed tight. spoke with super about any odors in building. super mentioned that there is no petroleum odors in building, but he has stong sewer odors in his apartment, which is right above the tank room. super mentioned that they are getting sewer water into the tank room from the adjacent property and he has reported it to the city agency. | DEC Memo: | need to trace property manager and send TTF letter 8/24/06 ttf letter sent today. bf 4/20/11 sent 2nd ttf letter. bf 2/8/12 PBS settlement conference scheduled for today. Plan is to hand deliver and explain what needs to be done to close the case. Case may be referred to General Counsel. I was informaed by General Counsel that I need to open a separate case for the spill. This is the second PBS case with this faciltiy and the spill was not addressed in the earlier case. That being said, I am going to send one more letter giving a final ultimatum to the respondent to resolve the case immediately or the case will be referred to General Counsel. bf 3/1/12 On 2/17/12, sent ttf letter to: Eugene Holland WK Nursing Home 100 West Kingsbridge Road Bronx, NY 10468 Letter allows ten days to resolve the issue. Entry to database was not made untuil today when I realized that I already sent the letter. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 3/18/14- DEC Piper received and reviewed sub surface investigation report for spill 1309050 at same location. See report in spill 1309050. Passing tightness test could not be perfromed from 06 so a subsurface investigation was required . No contamination found. Fill line was replaced in 2006 and passed tightness in 2012. . Based on findings, this spill is closed , no further action is warranted. See edoc if warranted for spill 1309050 |

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 06/21/2012 Spoke with Heather Sonnenberg of J.R. Holzmacher P.E., LLC,Consulting Engineers Tel: 631-234-2220. Ms. Sonnenberg is a consultant for Jewish Home for VCP project, however, she stated she does not deal with spills and gave me number for Ms. Rosa Cardona of Jewish Home (718-933-1501), stating Ms. Cardona would be the right person |

to speak to or she would refer me to right persons. Brevdo 06/22/2012 - Brevdo Brevdo's December 2, 1998 letter commenting on the RAWP for VCP site located at 2614 University Avenue seems to have been placed into e-docs for this site erroneously. 100 West Kingsbride Rd. and 2614 University Avenue are two different buildings at two intersecting streets. Brevdo. 06/22/2012 - Brevdo. Left message on Ms. Roda Cordona's (Jewish Home) voice mail ((718-933-1501) explaining that DEC has an open spill case at 100 West Kingsbridge Road and I want to discuss this with her. Left my number on Ms. Cardona's voice mail. Brevdo 06/22/2012 - Brevdo. Called and spoke with Neil Tomasetti of Al Eastman (718)-378-300 a company which removed the tank in 1997 and representative of which on site noticed contaminated soil around the removed UST, and reported spill to DEC. Mr. Tomasetti stated that his company does not have any records regarding this UST removal case or spill case because 1997 is too old and they can not keep files that old. Mr. Tomasetti confirmed that Al Eastman, when removing UST and having encountered contaminated soil associated with removed UST, always and definitely remove such contaminated soil. Mr. Tomasetti expressed confidence that contaminated soil was removed in this case just like it would be removed at any UST removal where contaminated soil was encountered, that removed soil was tested and disposed off appropriately according to NYS regulations. Given that this is very old spill and no information or sampling data is available, and taking Mr. Tomasetti's explanation into account, it is appropriate to close this spill case. Brevdo 06/26/2012 - Spill is closed effective 06/26/2012. Brevdo

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 3/10/2004 - Sangesland spoke with Rene from Eastmond. He said they opened up the walkway in 2 areas in front of the building along where the remote fill line ran. A 30 sqft area and a 70 sqft area were opened. 20 drums of contmainted soil pulled. Eastmond finished the excavation work on 3/10/04. End point samples were taken. When results come back, Eastmond will put together a closure report and submit it to DEC. 06/13/2005 - This spill case was reassigned from DEC (DEMEO) to PEREZ. 11/28/05 Spill closed. According to the contractor the clean-up of the area and the equipment repairs were completed. By J. Perez. |
| Remarks: | Fill line for the tank broke. Leak has been ongoing for a week. Were just notified today. Right now AL Eastman & sons is taking bags of dirt out of the contaminated trench. Would like DEC to come because the owner of spill sight would like to cut some corners and Eastman & Sons wants to be sure this is done correctly because they are the one's doing the cleanup. |

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| Site Description: | Location: The 2732, 2736 & 2738 Creston Avenue site is a 0.17-acre site located on the eastern side of Creston Avenue between East 197th Street and East 196th Street in the Bronx, NY. The site is bordered by residential buildings to the north, south and east. Site Features: The site is 7,329 square feet in area and is relatively flat. Three former residential structures were demolished in October 2020. The property is now bare ground and fenced off in preparation for remediation and construction. Current Zoning and Land Use: The site |

Env Problem:

is zoned R8 (residential district) but currently vacant. The adjacent properties are residential. Past Use of the Site The site has been developed with residential structures since the 1920s. Site Geology and Hydrology: The elevation of the site is approximately 148 feet above mean sea level. Urban fill material is present in surface soil. Soil stratigraphy below the fill material consists of coarse dark brown sand with quartz and pebbles, clayey brown sand and fine light to dark brown sand from surface to groundwater interface at approximately 10 ft below grade. Groundwater flows to the northwest. Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and metals in soil related to urban fill. Remedial action has successfully achieved soil cleanup objectives for unrestricted use. Prior to Completion of Remediation Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern are SVOCs and metals in soil related to urban fill. Soil: Contamination related to historic urban fill is present on-site. Benzo(a)pyrene was detected up to 1.31 parts per million or ppm, exceeding the unrestricted Soil Cleanup Objective (UUSCO) of 1 ppm. Benzo(a)anthracene was detected up to 1.38 ppm, exceeding the UUSCO of 1 ppm. Benzo(b)fluoranthene was detected up to 1.22 ppm, exceeding the UUSCO of 1 ppm. Benzo(k)fluoranthene was detected up to 1.23 ppm, exceeding the UUSCO of 0.8 ppm. Chrysene was detected up to 1.37 ppm, exceeding the unrestricted SCO of 1 ppm. Indeno(1,2,3-cd)pyrene was detected up to 1.02 ppm, exceeding the unrestricted SCO of 0.5 ppm. Barium was detected up to 525 ppm, exceeding the UUSCO of 350 ppm. Lead was detected up to 1,600 ppm, exceeding the UUSCO of 63 ppm. Chromium was detected up to 40.6 ppm, exceeding the UUSCO of 30 ppm. Copper was detected up to 138 ppm, exceeding the UUSCO of 50 ppm. Arsenic was detected up to 17.1 ppm, exceeding the UUSCO of 13 ppm. Mercury was detected up to 1.18 ppm, exceeding the UUSCO of 0.18 ppm. Nickel was detected up to 47.9 ppm, exceeding the UUSCO of 30 ppm. Zinc was detected up to 498 ppm, exceeding the UUSCO of 109 ppm. 4,4'-DDE was detected up to 0.015 ppm, exceeding the UUSCO of 0.0033 ppm. 4,4'-DDT was detected up to 0.0046, exceeding the UUSCO of 0.0033 ppm. Perfluorooctanesulfonic acid (PFOS) was detected up to 3.79 parts per billion or ppb, exceeding the guidance value for unrestricted use of 0.88 ppb. The source of PFOS is unknown, however it does not appear to be associated with the site. No VOCs were detected in soil exceeding unrestricted SCOs and data does not indicate any off-site impacts in soil related to this site. Groundwater: VOCs were not detected in groundwater. Dissolved metals and per/ poly-fluorinated alkyl substances (PFAS) were detected exceeding Ambient Groundwater Standards and Guidance Values. Manganese was detected up to 727 parts per billion or ppb (compared to a standard of 300 ppb) and PFOS was detected up to 18.7 parts per trillion or ppt, exceeding the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater.) Data does not indicate potential for off-site impacts to groundwater related to this site. Soil Vapor: Petroleum and chlorinated volatile organic compounds (CVOC) were detected in soil gas. Tetrachloroethene (PCE) was detected from 0.45 - 12 micrograms per cubic meter (ug/m3), carbon tetrachloride was detected from 0.25

Petroleum-related compounds, namely benzene, toluene, ethylbenzene, and xylenes, were detected between 0.45 - 39 g/m3. Data does not indicate potential for off-site impacts to soil vapor related to this site. |
| Health Problem: | Remedial actions are complete, the site has been cleaned up to unrestricted use, and no exposure pathways remain to the previously identified site contamination. |

replace fill box, supply and return
lines. no tank test done after that. all these work was performed based on earlier investigation
report. asked Lizette to submit earlier investigation report for review. received investigation
report. abstract: - Phase II investigation was performed by Enviroscience based on result of Phase
I investigation - 5000 gal #2 oil AST - three soil borings were installed: SB1 was installed in
tank room's floor beneath the elevated (in ceiling) abandoned fill line, SB2 was installed in the
tank room immediately adjacent to sewer cleanout sump and SB3 was installed outside of the building
in the sidewalk immediately adjacent to the abandoned fill port - found refusal at 18 inches below
surface in boring SB1; collected two soil samples from SB1 for analysis: one at 6 inch below
surface (right underneath concrete layer) and second at 18 inches below surface - soil from SB-2
was characterized as clayey-sand with significant visual and olfactory indications of petroleum
impacted soil; highest PID was 12 ppm - refusal encountered at approx. 2 ft below sidewalk at
boring SB-3, which was shallower than the estimated depth of an abandoned fill pipe. therefore,
soil immediately beneath the fill line was not evaluated <---------- - tank's sidewalls were
corroded and delaminating, and the fuel supply and return lines from tank to the boiler were in a
significantly deteriorated condition - no VOC or SVOC contamination found in two samples anlayzed
from boring SB-1 - found high TPH for both samples: 17,000 ppm in soil at 6 inch below surface and
14,000 ppm in soil at 18 inches below surface <--------- spoke with Lizette. she mentioned that
they replaced old aboveground supply and return lines and removed old abandoned fill line from area
under the sidewalk. they removed about 8 bags of contamination. asked her to submit letter report
with summary of cleanup activities with color photographs of excavation trench, excavation depth
and tank system tightness test result. PBS #: 2-607914. spoke with Salman (718-733-0465), building
super. he confirmed that Eastmond replaced supply and return lines and they removed entire length
of previously abandoned fill line under sidewalk. spoke with Maria Martino, property manager. asked
her to submit tank test result and cleanup summary report. sent email to Ms. Martino. Maria Martino
**property manager** Ph. (718) 881-4203 email: marmasi@aol.com
05/22/09-Hiralkumar Patel. 1:15 PM:-
received report from Lizette. they removed 15 bags of contmainated soil from fill line excavation.
they tested tank system after parts replacement and found tank system tight. based on submitted
documents, case closed.

Remarks: Clean up Complete.

Issac Mungra at 718-378-7000. I left a message for Mr. Lewis to call me back. JDG 7/9/05 Called Mr. Lewis and left a message for him to call me back. 7/14/05 Called Mr. Lewis and he said he has pulled the files and will be getting back to me shortly. JDG 7/27/05 Called Mr. Lewis on 10/26/05. Mr. Lewis will call back. 1/04/06 Changed address to 2545 University (the proper address for the Jewish Home and Hospital). 1/04/06 It is apparent that Mr. Lewis is not going to produce any further information on this spill. Several other spills have been noted at 2545 University, as well as at 100 West Kingbridge (an alternate address for the same facility). As this spill may be the same release as other spills (open or closed) for the hospital, Regional staff should determine if the location has already been addressed. 4/26/07 Spill has been reassigned to Falvey. Received message from Jim DeMartinis of J.R. Holzmacher. (631)234-2220. He will call me back regarding the next action to be taken. He is researching past documentation and exploring the possibility of obtaining proper documentation from Eastmond. Other route is to test area of tank for contamination. bf 5/18/07 Spoke with Jim Demartinis of J.R. Holzmacher. He sent me a fax of a sketch of the boring locations. I told him 2 more borings were needed. He agreed and said that he will send me an email with an updated sketch. he will also tell me when they are going to take the samples. bf 6/18/07 Received email on 6/14/07 containing cover letter and sampling results. results are below soil cleanup objectives to protect gw quality. | DEC Memo: | Sangesland spoke to building owner Chris Spencer. He said Hess made a delivery on Friday and caused a 3 ft x 3 ft spill to cement. Super spread speedie dry. Fill is a curb fill with a 10 ft underground run to building. Sangesland spoke to Ray Sojka at Hess. He said the fill line failed |

**CON EDISON (Continued)** **S109414935**

and the driver stopped the delivery. Sangesland called back to Mr. Spencer and told him to hire an
environmental to open the sidewalk in the area of the spill and make repairs & remediate the area.
Mr. Spencer will hire someone and will call back with the name BEFORE the work is done.

Remarks: CALLER STATES THAT THERE IS A SPILL ON THE SIDE WALK FROM A DELIVERY. UNK AMOUNT. UNK CLEAN UP STATUS.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| DEC Memo: | 12/9/13-Zhune spoke to Rich Cliffors from Castle Oil 718-579-3410. He said we wemt there to make a delivery, after 500 - 800 gallons we saw oil coming up from the concrete about 5 feet from the fill box. The guy stopped the delivery. We beleive the fill line is an undreground line and is leaking. We dont konw yet how many qallons went to the soil. He also said that there is about a gallon of oil spilled on the surface outside the building and no oil spilled inside the building. 12/9/13-Zhune spoke to Lewis Gutierrez (914)574-5400 Ext. 117 manager of the building. he called the super to find out if there is oil inside the buiding. The super confirmed no oil inside the building. Lewis said the plumber and a clean up company are coming to fix and clean the spill. 01/31/14-David Chan from Riteway updated this spill. As per David It's a bad fill line and they are currently waiting for the permit to allow them to begin work. 5/29/14-David from Riteway emailed the report dated 5/20/14. In December of 2013 , The Morgan Group had |

another contractor performing
work outside. That contractor accidentally saw cut the fill line that ran across the sidewalk in
front of the building. The building installed a new fill line mounted at the building wall and
disconected the use of the compromised fill line. Uporn arrival Riteway Tank Maintenance Corp.
proceeded to excavate fill and observed some contamination within the excavation area.
Contamination soil was found in the area around the cut of the fill line. Riteway began to excavate
and remediate the contaminated soil. All soil was remediated until free from contamination. Clean
endpoint samples were retried. The first set of samples were retrieved on 3/17/2014, from the first
excavation ( from the curb to the middle of the sidewalk). Sample number 3 came back dirty so that
area was more clean while excavating the second half of the sidewalk to the building wall. The
second set of samples were retrieved on 3/26/2014 and sample 1 is from the same area as the first
sample 3 (clean the second time). Whole area is clean . The soil analytical results indicate that
VOCS and SVOCs were detected below acceptable limit. The old line ws removed, impacted soil was
remediated, the area has been backfilled and recemented to grade. Spill closed.

Remarks: during delivery driver noted fuel coming up from soil.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
