# FACT SHEET

## Brownfield Cleanup Program

2 Ingraham Street

2 Ingraham Street  
East Williamsburg, NY 11206

January 2023

**SITE No. C224036**

**NYSDEC REGION 2**

## Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the 2 Ingraham Street site ("site") located at 2 Ingraham Street, East Williamsburg, NY under New York State's Brownfield Cleanup Program (BCP). Please see the map for the site location.

Cleanup activities were performed by 74 Bogart LLC and Bogart Holdings LLC ("applicants") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicants have submitted a draft Final Engineering Report (FER) for NYSDEC review which states that cleanup requirements have been achieved to fully protect public health and the environment for the proposed site use.

- Access project documents online through the DECinfo Locator:  
<https://www.dec.ny.gov/data/DecDocs/C224036/>.
- The documents also are available at the locations identified at left under "Where to Find Information."

**Highlights of the Site Cleanup:** The following activities have been or will shortly be completed to achieve the remedial action objectives:

- Demolition and off-site disposal of the former building, including impacted building materials.
- Excavation - Excavation and off-site disposal of 2,789 tons of concrete, 519 tons of hazardous soils, and 32,768 tons of contaminated soil exceeding the Restricted Residential Use soil cleanup objectives (RRUSCOs), the site-specific cleanup criteria. Clean fill was brought in to replace the excavated soil and to establish the design grades at the site.
- In-situ Solidification (ISS) - Solidification of metal-impacted soils to depths of up to twenty-five (25) feet below ground surface in the former metal plating drain area. The contaminated soil was mixed in-place together with a solidifying agent (Portland cement) and other binding agents using an excavator. This mixture of soil, cement, and binding agents will slow groundwater flow and inhibit the movement of contaminants.
- Site Cover System - Placement of a cover system, including a demarcation layer over areas without hardscape (buildings, asphalt, or concrete) to address contamination remaining above RRUSCOs.

# BROWNFIELD CLEANUP PROGRAM

- Development of a Site Management Plan (SMP) for long-term management of residual contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting.
- An Environmental Easement was recorded to prevent future exposure to any contamination remaining at the site and to ensure implementation of the SMP.

**Next Steps:** When NYSDEC approves the FER, it will be made available to the public (see "Where to Find Information"). NYSDEC then will issue a Certificate of Completion (COC) that will be announced in a fact sheet. The applicants would be able to redevelop the site after receiving a COC. In addition, the applicants will be eligible for tax credits to offset a portion of the costs of performing cleanup activities and for redevelopment of the site.

**Site Description:** The site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, NY, and is identified as Block 3084, Lot 1 on the New York City Tax Map. The site is a rectangular parcel about 1.8 acres in size and is located on the city block bordered by Ingraham Street to the north, Morgan Avenue to the east, Harrison Place to the south, and Bogart Street to the west. Historic uses included an orphanage, an umbrella manufacturing plant, and a metal plating operation. The site is being redeveloped into a seven-story storage building and a parking lot.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224036) at:

<https://www.dec.ny.gov/cfm/x/xtapps/derexternal/index.cfm?pageid=3>

**Brownfield Cleanup Program:** New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business, or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the SCO's or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:
