January 2004

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Certified Lumber to perform an Environmental Site Assessment of an approximately 165,000-square foot property located at 460 Kent Avenue in the Williamsburg neighborhood of Brooklyn, New York. The legal definition of the property is Tax Block 2134, Lots 1 and 150. Two commercial warehouse structures currently occupy the property. Residential and commercial properties are located in the subject area.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current usage of the site as well as similar usage of neighboring properties.

This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 7.0 of this report. This assessment revealed no evidence of environmental conditions in connection with the property except for the following:

- The regulatory databases, historical land-use atlases, and visual site inspection indicated that the subject property and surrounding neighborhood have over a 100-year history of primarily manufacturing and industrial uses. Construction for the current three-story warehouse was completed in 1940. Construction for the northern portion of the current two-story building was completed in 1939 and the two-story southern addition was completed prior to 1979. Sanborn maps indicated that a manufactured gas plant (Brooklyn Union Gas, Peoples Works) occupied the subject property circa 1880 through at least 1887. Other historical manufacturing uses for the subject property include a stave yard, a molasses storage yard, a sugar refinery, a storage warehouse, and the F.M. Schaefer Brewing Company.

Various light manufacturing facilities were noted north, east and south of the subject property, including a power house and a manufactured gas plant (Brooklyn Union Gas, Nassau Works) to the south of the property.

- Twelve Comprehensive Environmental Response, Compensation and Liability Information System listings were identified within a one-mile radius of the project site, including two Brooklyn Union Gas manufactured gas plants: the former Peoples Works, which was located on the subject property circa 1880 through circa 1887, and Nassau Works, which was located south of the subject property on the northwest corner of the intersection of Cross Street and Kent Avenue from circa 1887 through circa 1935. Both listings included a notation stating that one of the by-products produced during plant operating years was hydrocarbon tar, which was temporarily stored on the site until it was sold. According to the listings, Brooklyn Union Gas affirmed that when the Peoples Works was decommissioned in 1895 and when the Nassau Works was decommissioned in 1936, all remaining tars were removed and the facilities were razed.
- Ten state Hazardous Substance Waste Disposal Site Study listings were identified within a one-mile radius of the subject property, including a listing for the Brooklyn Union Gas, Peoples Works, formerly located on the study site. The listing indicated that a coal gasification plant was operational on the study site from 1871 to 1895 and that when the plant was decommissioned in 1895, all remaining coal tars were removed and the facility was razed. Soil potentially

contaminated with hydrocarbon tar was noted as a potential threat to the environment in the listing.

- Six Solid Waste Facilities were identified within a one-mile radius of the study site, including a construction and demolition debris landfill listed as being located at the “foot of Division Avenue,” which, based on this description, may be located on the project site. The exact location of this facility and the source of the fill material are not provided in the listing.
- During the site inspection, several small metals plates were noted in the basement of the three-story building and on the first floor of the two-story building. A metal plate was noted in the paved area to the south of the buildings. These may be associated with underground storage tanks (USTs). Several patched areas were noted in the pavement, which may be indicative of past or present USTs located on the subject property. A Phase I Environmental Site Assessment Report prepared by Middleton Environmental, Inc., dated December 19, 2002, cited a fill cap on the south side of the three-story building on the project site. This fill cap was not observed during the site inspection for this report. Ms. Gruenwald, a representative of the property owner, had no knowledge of current or former tanks on the property. A review of the State regulatory records did not cite any USTs for the subject property. As indicated in the 2002 Phase I, a search of New York City Fire Department records for fuel (heating) oil tanks for the addresses 430-480 Kent Avenue did not identify any such tanks. New York City Fire Department records for gasoline storage tanks and Brooklyn Buildings Department records were not reviewed as part of this assessment.
- Fluorescent lighting fixtures observed in the structure may include PCB-containing components, including capacitors, and potting compounds. Hydraulic lifts associated with two garage bays on the southern side of the three-story building, freight elevators located in both the two-story building and the three-story building, and fork lifts noted in both structures may utilize PCB-containing petroleum products. Additionally, a utility-owned transformer vault that may contain PCB-containing petroleum products was noted on the Kent Avenue sidewalk outside of the three-story building.
- Suspect asbestos-containing materials (ACMs) were observed during the site visit, including vinyl floor tile, suspended ceiling tile, thermal pipe insulation, and roofing materials in both on-site structures. Additionally, suspect asbestos-containing insulation was noted around a vapor recovery system on the roof of the three-story structure. Additional suspect ACMs may be present within pipe chases, above ceiling tiles, behind walls, beneath carpeting and floor tiles, or in other hidden locations.
- Since the subject buildings were constructed prior to 1977, lead-based paint may be present. Painted surfaces observed in the structure were noted to be in poor to good condition. At the time of the site inspection, these commercial structures did not include a childcare center or other facility where the extended presence of young children would be typical.
- Certified Lumber, which is the current occupant of the two-story structure on the project site, warehouses and sells building materials, including latex, paint, primer and other chemicals used in building construction. These chemicals were contained in one- to five-gallon containers and they were stored on pallets. The containers appeared to be in good condition at the time of inspection. A service area for forklifts was noted on the first floor of the two-story building located on the project site. This area included 55-gallons drums of fresh oil and waste oil stored on a pallet. No leaks or spills were noted in the vicinity of the stored chemicals.

A large printer and a 55-gallon drum of ammonium hydroxide were noted on the second floor of the three-story building. No leaks or spills were noted in the vicinity of the drum. A small wood workshop was noted on the third floor of the building. An air compressor, saws, tools, paints and varnishes were noted in this area. The paints and varnishes were noted in one-gallon or smaller containers. No leaks or spills were noted in the vicinity of the stored chemicals.

The following actions are recommended:

- On-site soil and/or groundwater may have been affected by the site's industrial history that included a manufactured gas plant (Peoples Works) and by off-site sources, including a manufactured gas plant (Nassau Works). AKRF recommends a Phase II Subsurface Investigation be performed prior to any redevelopment of the site to determine the presence and extent of any on-site contamination. Keyspan Energy, the successor to Brooklyn Union Gas, should be contacted to obtain any additional information or maps relating to the former manufactured gas plants. This information will help to target boring and well locations for the subsurface investigation. The investigation should include the collection of both soil and groundwater samples and the samples should be analyzed for volatile organic compounds, semivolatile organic compounds, metals, polychlorinated biphenyls and pesticides.
- Depending on any proposed development plans for the subject property, further investigation should be conducted to determine the presence and location of potential underground storage tanks. A review of New York City Fire Department records for gasoline tanks and a review of Brooklyn Buildings Department records may provide additional information related to current and/or historical gasoline and/or fuel oil tank permits and/or blueprints indicating tank locations. An electromagnetic survey may be warranted to determine the location of the underground storage tanks. If tanks are discovered, they should be properly registered, if required, with the New York State Department of Environmental Conservation and the New York City Fire Department. Prior to and/or during any renovation or demolition activities with the potential to disturb known tanks, they should be removed along with any contaminated soil from the property in accordance with all federal, state and local regulations.
- Prior to any renovation or demolition activities that would disturb suspect ACMs, testing should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state and federal regulations.

If any of the aforementioned ACMs are to be unaffected by future renovation activities, they can remain in the buildings, but need to be managed in accordance with applicable federal regulations (29 CFR 1910.1001 and 1926.1101) of the Occupational Health and Safety Administration (OSHA). These OSHA regulations include requirements for the training of building occupants and workers, posting of warning signs and labeling of the ACMs, appropriate maintenance procedures to avoid disturbances of ACMs, and record keeping, etc. ACMs should be regularly inspected by a New York City-certified asbestos investigator and maintained by New York State-licensed contractors to prevent deterioration.

- Any renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data which indicates that fluorescent lights, lighting fixtures, elevator equipment, and hydraulic lift equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Certified Lumber to perform an Environmental Site Assessment of an approximately 165,000-square foot property located at 460 Kent Avenue in the Williamsburg neighborhood of Brooklyn, New York. (See Figure 1 for a map of the area.) The legal definition of the subject property is Tax Block 2134, Lots 1 and 150. The subject block is bound to the north by Broadway, to the east by Kent Avenue, to the south by Division Avenue, and to the west by the East River. Two commercial warehouse structures currently occupy the site. Residential and commercial properties are located in the subject area.

The scope of services for this assessment included the following:

- Visual observations of the project site and surrounding property were made to identify potential sources or indications of chemical contamination. The potential sources of contamination included, but were not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), objects that could contain polychlorinated biphenyls (PCBs), and areas where hazardous materials were used, stored, treated, generated and/or disposed. Indications of chemical contamination include stained surfaces and chemical odors.

In addition, readily-observable portions of the properties immediately adjacent to the study site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

- Published geological and groundwater information was obtained from available sources to determine the possibility of contamination from off-site sources.
- A visual inspection of the property was conducted to identify and evaluate the condition of any suspect asbestos-containing materials (ACMs) on-site. No samples of suspect materials were collected for analysis as part of this assessment.
- The structures were evaluated for the potential presence of lead-based paint, and the condition of painted surfaces was assessed. No samples were collected for analysis as part of this assessment.
- A review of radon concentrations in Kings County (Brooklyn) was conducted to determine whether radon levels in the general area comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use atlases for the site and adjacent properties were reviewed to evaluate previous land use.
- Previous environmental studies performed on the project site were reviewed as part of this assessment, including an Environmental Site Assessment prepared by AKRF, Inc., dated October 2000; and a Phase I Environmental Site Assessment Report prepared by Middleton Environmental, Inc., dated December 19, 2002.
- The following federal regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); and Air Discharge Facilities (ADF).

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the site and adjacent areas was performed on December 16, 2003 by Mimi Sotiriou of AKRF. Ms. Helen Gruenwald, a credit manager with Certified Lumber, accompanied AKRF personnel through the site and answered pertinent questions. At the time of the inspection, the weather was sunny and approximately 40EF, the visibility good, and the premises adequately illuminated. The site was inspected for the presence of stained surfaces and soils, stressed vegetation, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials, suspect lead-containing paint, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A.

2.1 GENERAL SITE CONDITIONS

The project site contained a three-story warehouse building with a basement fronting Kent Avenue, a two-story warehouse building fronting the East River and a paved area. The three-story structure was occupied by V.I.M., a clothing and shoe warehouse, in the basement and on the first and third floors and by Street Beat, a cloth-cutting factory, on the second floor. The two-story structure was occupied by Certified Lumber, a building materials wholesale and retail store. A corrugated metal roof covered a paved area between the two structures, which was used by Certified Lumber for building materials storage.

The three-story building was constructed of brick, concrete and steel beams. Two garage bays with hydraulic lifts were noted on the south side of the building. The interior of the building contained concrete, carpeted, wooden and vinyl floor-tiled floors; brick, cinderblock and sheetrock walls; and concrete or suspended ceiling tile-tiled ceilings. Fluorescent lights were noted on all floors. Several small metal plates were noted in the floor of the basement of the building. Floor drains were noted on all floors. Suspect asbestos-containing thermal pipe insulation was noted on piping in the structure. The building contained an older freight elevator and a newer passenger elevator. The elevator machine for the freight elevator was located on the roof of the building and the machine room for the new elevator was located in the basement. The roof of the building consisted of roll-on built-up tar and loose gravel with flashing on the parapet and around penetrations. The parapet included coping stones with suspect caulking. Penetrations included air vents, HVAC equipment and a vapor recovery system that was likely associated with the former Schaefer Brewery. A suspect asbestos-containing insulation was noted around this recovery system.

The cutting of cloth occurred on the second floor of the building. Large cutting tables were noted in this area. Reams of fabric and shelves of patterns were also stored on this floor. A large printer and a 55-gallon drum of ammonium hydroxide were noted on this floor. A small wood workshop was noted on the third floor of the building. An air compressor, saws, tools, paints and varnishes were noted in this area. The paints and varnishes were in one-gallon or smaller

containers. No other manufacturing uses were noted in the building; the remainder of the floors was used for office space or for the warehousing of clothing, shoes and cloth.

The construction of the two-story building occurred in two phases. According to historical Sanborn Maps, the northern portion of the building was constructed in 1939 and a two-story addition was constructed prior to 1979. The northern portion of the building was constructed of brick and concrete with a concrete roof. The southern portion of the building was constructed of brick and concrete with a corrugated metal roof with steel beams. Suspect asbestos-containing fireproofing was noted on these beams. The interior of the building contained concrete, carpeted, wooden and vinyl floor-tiled floors; brick, cinderblock, plywood and sheetrock walls; and concrete, corrugated metal or suspended ceiling tiled ceilings. Fluorescent lights were noted on all floors. A small metal plate was noted on the first floor of the building. Floor drains were noted on all floors. Suspect asbestos-containing thermal pipe insulation was noted on piping in the structure. The building contained a freight elevator in the southern portion of the building. The roof of the building was inaccessible during the site inspection, however, it was viewed from the roof of the three-story building. The roof appeared to be built-up tar with flashing.

Contractors building materials were warehoused in the two-story building. Rows of these materials, including five-gallon containers of latex, primer and other chemicals, were noted during the site inspection. The chemicals were stored on pallets and the containers appeared in good condition. A service area for forklifts was noted on the first floor of the two-story building. This area included 55-gallons drums of fresh oil and waste oil stored on a pallet. No other operations involving chemicals or manufacturing operations were noted during the site inspection.

Two asphalt and concrete paved areas were located on the project site: a small one to the north of the structures and a larger one to the south of the structures. The southern paved area was used for truck loading and unloading and for parking. Patched areas were noted in several areas on the pavement. A small metal plate was noted in the southern paved area.

2.2 TOPOGRAPHY AND HYDROGEOLOGY

The surface topography slopes down to the west towards the East River. The southwestern portion of the site is constructed on a platform over the river supported by piles. Based on reports compiled by the U.S. Geological Survey (Brooklyn Quadrangle), the property lies at an elevation of approximately ten feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The approximate depth to bedrock is 100 feet below the surface. The approximate depth to the water table is ten feet, based on the elevation of the property relative to sea level. Groundwater most likely flows in a westerly direction toward the East River, which is west-adjacent to the project site. However, actual groundwater flow at the site is likely tidal and can be affected by many factors including past filling activities, underground utilities and other subsurface openings or obstructions and other factors beyond the scope of this study. Groundwater in Brooklyn is not used as a source of potable water.

2.3 STORAGE TANKS

2.3.1 Underground Storage Tanks (USTs)

During the site inspection, several small metal plates were noted in the basement of the three-story building and on the first floor of the two-story building. A metal plate was noted in the paved area to the south of the buildings. These may be associated with

underground storage tanks (USTs). Several patched areas were noted on the pavement, which may be indicative of past or present USTs located on the subject property. A Phase I Environmental Site Assessment Report prepared by Middleton Environmental, Inc., dated December 19, 2002, cited a fill cap on the south side of the three-story building. This fill cap was not observed during the site inspection. Ms. Gruenwald had no knowledge of current or former tanks on the property. A review of the State regulatory records did not cite any USTs for the subject property. As indicated in the 2002 Phase I, a search of New York City Fire Department records for fuel (heating) oil tanks for the addresses 430-480 Kent Avenue did not identify any such tanks. New York City Fire Department records for gasoline storage tanks and Brooklyn Buildings Department records were not reviewed as part of this assessment. Off-site USTs are discussed in Section 4.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as concrete foundations, containment walls, pedestals, or steel support structures, was observed during the site visit to indicate that aboveground storage tanks (ASTs) were located on-site either at the time of the inspection or in the past. Previous studies did not cite any ASTs on the project site. Ms. Gruenwald had no knowledge of current or former tanks on the property. A review of the State regulatory records did not cite any ASTs for the subject property. As indicated in the 2002 Phase I, a search of New York City Fire Department records for fuel (heating) oil tanks for the addresses 430-480 Kent Avenue did not identify any such tanks. Brooklyn Buildings Department records were not reviewed as part of this assessment. Off-site ASTs are discussed in Section 4.2.2.

2.4 POLYCHLORINATED BIPHENYLS (PCBS)

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used for their cooling properties in electrical equipment such as transformers, capacitors, switches and voltage regulators.

Fluorescent lighting fixtures observed in the structure may include PCB-containing components, including capacitors, and potting compounds. No evidence of leaks or stains from these lighting fixtures was observed. Hydraulic lifts associated with two garage bays on the southern side of the three-story building, freight elevators located in both the two-story building and the three-story building, and fork lifts noted in both structures may utilize PCB-containing petroleum products. Additionally, a utility-owned transformer vault that may contain PCB-containing petroleum products was noted on the Kent Avenue sidewalk outside of the three-story building.

2.5 LEAD-BASED PAINT

The use of lead-based paint in commercial structures was severely restricted by the Consumer Products Safety Commission in 1977. Since the subject buildings were constructed prior to 1977, lead-based paint may be present. Lead-based paint is potentially hazardous when in a deteriorating condition (i.e. chipped, broken, crumbling, pulverized); lead is potentially harmful to humans, particularly children, if ingested, inhaled or otherwise absorbed.

Painted surfaces observed in the structure were noted to be in poor to good condition. At the time of the site inspection, these commercial structures did not include a childcare center or other facility where the extended presence of young children would be typical.

2.6 UTILITIES

Natural gas and electricity are supplied to the study site and surrounding area. The study site was connected to New York City municipal water and sewer systems.

2.7 WASTE MANAGEMENT AND CHEMICAL HANDLING

Ms. Gruenwald stated that each tenant of the project site (Certified Lumber in the two-story structure and V.I.M. and Street Beats in the three-story building) collects their waste and it is removed on an as-needed basis by private haulers. Office waste and packaging are the primary wastes generated by the tenants.

Certified Lumber, which occupied the two-story structure on the project site, warehouses and sells building materials, including latex, paint, primer and other chemicals used in building construction. These chemicals were contained in one- to five-gallon containers and they were stored on pallets. The containers appeared to be in good condition at the time of inspection. A service area for forklifts was noted on the first floor of the two-story building located on the project site. This area included 55-gallons drums of fresh oil and waste oil stored on a pallet. No leaks or spills were noted in the vicinity of the stored chemicals.

A large printer and a 55-gallon drum of ammonium hydroxide were noted on the second floor of the three-story building. No leaks or spills were noted in the vicinity of the drum. A small wood workshop was noted on the third floor of the building. An air compressor, saws, tools, paints and varnishes were noted in this area. The paints and varnishes were noted in one-gallon or smaller containers. No leaks or spills were noted in the vicinity of the stored chemicals.

2.8 RADON

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products that include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.

According to data compiled by the Bureau of Radiation Protection, a division of the New York State Department of Health, Kings County (Brooklyn) has one of the lower average levels of basement radon measurements in New York State, 1.9 picocuries/liter. The USEPA recommended action level is 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos, a known human carcinogen, is a generic name assigned to a group of naturally occurring minerals exhibiting high tensile strength and possessing excellent fire resistance and insulating properties. These minerals include chrysotile, amosite, crocidolite, actinolite, tremolite and anthophyllite. Asbestos is commonly found as a component of building materials including: Thermal System Insulation (TSI), spray-applied fireproofing, spray- or trowel-applied surfacing materials, vinyl asbestos floor tiles and sheeting, plaster, sheetrock, ceiling tiles, fire door fill, roofing materials, thermal gaskets, mastics, and a range of other products.

Building materials containing greater than one percent asbestos are considered to be Asbestos-Containing Materials (ACMs). ACMs are classified as friable or non-friable. Friable ACMs are those that can be crumbled, pulverized, or reduced to powder when dry by hand or other mechanical pressure. Friable ACMs, such as thermal system insulation and spray-applied fireproofing, are generally associated with a higher risk of releasing potentially hazardous fibers than non-friable ACMs, such as vinyl floor tiles and built-up roofing materials.

Mimi Sotiriou, a New York State-licensed asbestos inspector, conducted a limited visual inspection for suspect asbestos-containing materials in the accessible areas on-site. Suspect ACMs observed during the site visit included vinyl floor tile, suspended ceiling tile, thermal pipe insulation, and roofing materials in both on-site structures. Additionally, suspect asbestos-containing insulation was noted around a vapor recovery system on the roof of the three-story structure. Additional suspect ACMs may be present within pipe chases, above ceiling tiles, behind walls, beneath carpeting and floor tiles, or in other hidden locations.

4.0 ADJACENT LAND USE

The subject property is located in a mixed-use industrial, manufacturing and residential area of Brooklyn. A new multi-level residential structure is currently under construction to the north of the project site. A clothing warehouse and several residential and commercial structures were noted to the east of the project site. A multi-level brick utility building and a parking lot were observed south-adjacent to the subject property, south of Division Avenue. The East River is located west-adjacent to the subject property.

5.0 SITE HISTORY AND RECORDS REVIEW

5.1 PRIOR OWNERSHIP AND USAGE

5.1.1 Historical Land Use maps

Historical insurance maps were reviewed for indications of industrial usage or other evidence suggesting the use or disposal of hazardous materials on or adjacent to the subject property. Specifically, Sanborn Fire Insurance Maps from 1887, 1918, 1935, 1950, 1965, 1979, 1986 and 2003 were reviewed. Additionally, a Hopkins Map dated 1880 was reviewed.

1880

Hopkins Maps from 1880 indicated the project site to be occupied by a “Gas Works” and a “Stave Yard,” or barrel maker. A structure that appeared to be a gasometer (gas holder) was noted in the northeastern portion of the project site.

A sugar refinery was depicted on the north-adjacent parcel to the project site and vacant land and light manufacturing structures were noted east of the project site, including a steam pump works and a toy factory.

1887

Sanborn Maps from 1887 indicated the People’s Gas Light Company to be located on the northern portion of the project site and Mollenhauer & Sons Storage Yard on the southern portion of the site. An extension of South Eleventh Street divided these

facilities. Notes indicated the Gas Light Company to contain a gasometer, a retort house, an oil storage house, a coal shed, a purifying house, and three large tanks used for storing iron, coal and oil. Notes indicated the Mollenhauer & Sons property was used for the storage of molasses.

De Castro & Donner's sugar refinery was depicted on the north-adjacent parcel, across an extension of South Tenth Street. Moller, Sierck & Company Sugar Refinery and Knickerbocker Ice Company were depicted on the south-adjacent parcel, across Division Avenue. Various light manufacturing facilities were noted east of the subject property, including a cooperage, a toilet soap maker and perfumery, Riverside Chemical Works, Bell & Fyfe Iron Foundry, N.Y. Leather Belting Company, Merrill Brothers machinists, Guild & Garrison Pump Works and McLoughlin Bro's Publishers & Toy Manufacturers.

1918

Sanborn Maps from 1918 indicated the project site to contain the National Sugar Refining Company of New Jersey and vacant land. A note on the Schaefer building indicated it was constructed in 1915. Notes on the Sugar Refining Company indicated several horizontal steam tanks on the property.

The F.M. Schaefer Brewing Company was depicted on the north-adjacent parcel, across Division Avenue. Notes indicated the Brewery contained a garage with a 19-car capacity, a bottling house, three coal burners, a wagon shed and a cooper shed. The Brooklyn Rapid Transit Company power station was noted south of the subject property, across Division Street. This area was indicated to contain several engines and dynamos, an oil storage room, a battery storage room, rows of horizontal steam tanks, coal elevators, two large gas oil tanks and a purifying house. The Brooklyn Union Gas Company Nassau Branch manufactured gas plant was noted south of the Brooklyn Rapid Transit Company. Various light manufacturing facilities were noted east of the subject property, including Consolidated Wafer Company, Knickerbocker Bag Company, H. Bridgman Smith Company Paper Box Manufacturing and Storage, N.Y. Leather Belting Company, Garrison Works Machine Shop, a pen manufacturer, and a chlorozone manufacturer.

1935

Sanborn Maps from 1935 indicated the project site to contain the South 11th Street Storage Warehouse Corporation and vacant land. Two warehouse structures were noted on the project site.

The F.M. Schaefer Brewing Company was depicted on the north-adjacent parcel, across Division Avenue; no significant changes were noted for the brewery. The Brooklyn Manhattan Transit Company Power Station was noted on the south-adjacent block, across Division Avenue. The Brooklyn Union Gas Company was depicted south of the Power Station, however, most of the structures that appeared in the 1918 map were demolished and do not appear in the 1935 map. Various light manufacturing facilities were noted east of the subject property, including Feigel & Bros Shellac Manufacturing, La Rosa & Sons Macaroni Manufacturing, Meskin Bros Fur Dressing, Guild & Garrison Works Machine Shop, King Paint Manufacturing, and Elbee Chocolate Manufacturing.

1950

Sanborn Maps from 1950 indicated the subject property and the north-adjacent property were occupied by the F. M Schaefer Brewing Company. A three-story warehouse structure used for case storage and bottling and a two-story garage were depicted on the project site. Notations indicated the three-story structure was constructed in 1940 and the two-story structure was constructed in 1939. An extension of South 11th Street was no longer shown to bisect the project site.

The south-adjacent property was shown to contain the New York City Transit System Williamsburg Power Station. U.S. Government property was indicated south of the Power Station. Various light manufacturing facilities were noted east of the subject property, including F. R Studding Metal Stamping, a pickle works, auto parking, La Rosa and Sons, Inc. macaroni manufacturing and the F.M. Schaefer Brewing Company.

1965

Sanborn Maps from 1965 indicated the subject property and the north-adjacent property were occupied by the F.M. Schaefer Brewing Company. No significant changes were noted for these parcels.

The south-adjacent property was noted to contain the Consolidated Edison Company of New York, Inc. and U.S. Government Property. Various light manufacturing facilities were noted east of the subject property, including a pickle works, auto parking, La Rosa and Sons, Inc. macaroni manufacturing and the F.M. Schaefer Brewing Company.

1979

Sanborn Maps from 1965 indicated the subject property and the north-adjacent property were occupied by manufacturing and warehouse structures and the south-adjacent property was occupied by the Consolidated Edison Company of New York, Inc. A two-story addition was depicted as having been added to the existing two-story building on the project site; this structure was noted as having a manufacturing use. No further significant changes were noted for these parcels.

The east-adjacent parcels were shown to contain factories, warehouses, garages, and parking lots.

1986

No significant changes were noted for the subject property or the surrounding area.

2003

No significant changes were noted for the subject property or the surrounding area.

To summarize, the Sanborn maps indicated that the subject property and surrounding area were developed prior to 1880 and maintained their industrial uses through the present. The project site historically contained a manufactured gas plant circa 1880 through at least 1887. Other historical manufacturing uses for the subject property include a stave yard, a molasses storage yard, a sugar refinery, a storage warehouse, and the F.M. Schaefer Brewing Company. The two structures currently located on the project site were constructed in 1939 and 1940. An addition was added to the two-story structure prior to 1979.

Various light manufacturing facilities were noted north, east and south of the subject property, including a power house and a manufactured gas plant to the south of the property.

5.1.2 Historical Aerial Photographs

Complete and thorough coverage was available for the subject property utilizing historical land-use maps. The maps typically include detailed information such as dates of construction, building occupants or a vacant status, and use and/or zoning use of structures on the site and surrounding area. Aerial photographs would, most likely, not provide additional, unique information that is pertinent to the environmental condition of the property. As such, aerial photographs were not reviewed for the project site.

5.1.3 Site Interviews

Ms. Helen Gruenwald, a credit manager for Certified Lumber, toured AKRF personnel through the project site during site inspection and answered pertinent questions. Ms. Gruenwald had no knowledge of the history of the property or of any tanks historically or currently located on the project site.

5.2 REGULATORY REVIEW

Toxics Targeting, Inc. of Ithaca, New York, was contracted to obtain information regarding the regulatory status of the property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage, treatment and/or disposal of hazardous material and chemicals, or releases of such materials that may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the Toxics Targeting, Inc. report are included in Appendix C.

5.2.1 Federal

The federal records reviewed included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); and the USEPA Civil Enforcement Docket. The federal listing of facilities that are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

No NPL sites were identified within a one-mile radius of the project site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites that the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

Twelve CERCLIS listings were identified within a one-mile radius of the project site, ten of which are located greater than a ½-mile away from the subject property. Two Brooklyn Union Gas manufactured gas plants, the former Peoples Works, which was located on the subject property circa 1880 through circa 1887, and Nassau Works, which was located south of the subject property on the northwest corner of the intersection of Cross Street and Kent Avenue from circa 1887 through circa 1935, were included in the CERCLIS database. Both listings included a notation stating that one of the by-products produced during plant operating years was hydrocarbon tar, which was temporarily stored on the site until it was sold. According to the listing, Brooklyn Union Gas affirmed that when the Peoples Works was decommissioned in 1895 and when the Nassau Works was decommissioned in 1936, all remaining tars were removed and the facilities were razed.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on reported releases of petroleum and other potentially hazardous substances.

The subject property was not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site.

No TRIS sites were identified within a ¼-mile radius of the subject property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This federal- and state-maintained database contains a listing of sites that discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ¼-mile radius of the subject property.

United States Environmental Protection Agency Civil Enforcement Docket

This database is the USEPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a ¼-mile radius of the subject property.

Air Discharge Facilities Index (ADF)

This listing of sites tracked by the US EPA AIRS Database includes address information on each facility and the source of its associated air emissions.

Ten Air Discharge Facilities were identified within a ¼-mile radius of the study site. Of the eight listings that provide classification information, all eight facilities were listed as having potential uncontrolled emissions of less than 100 tons/year of volatile organic compounds, total particulate matter or total hydrocarbons. Although two facilities were listed as being out of compliance for not having a schedule, no violations were listed for any of the ten facilities. It is unlikely that discharges from any of these facilities would have affected the study site.

5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); and Air Discharge Facilities (ADF).

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

Nineteen spills were reported within a .-mile radius of the subject site, including seven active status spills and twelve closed status spills. Of the seven active spill listings, six are located cross-gradient from the project site with respect to anticipated groundwater flow direction. The one up-gradient listing is for a tank test failure of a 20,000-gallon fuel oil tank located at 60 Division Avenue, approximately 460 feet southeast of the project site, in May 2003.

It should be noted that four closed-status spills were listed in the immediate vicinity of the project site. Details of these spills follows:

- Consolidated Edison reported the discovery of approximately 2 quarts of unknown petroleum on 200 gallons of water in a manhole located at the intersection of Division and Kent Avenues in August 1999. The source of the spill was reportedly repaired and the spill was reportedly remediated. The spill was closed in November 1999.

- Consolidated Edison reported the release of 3 gallons of unknown oil on 300 gallons of water in a manhole located on Division Avenue, approximately 215 feet west of Kent Avenue in August 1999. Remediation reportedly occurred and the spill was closed in December 1999.
- The New York City Department of Environmental Protection (NYC DEP) discovered raw sewage in a regulator at the intersection of Division and Kent Avenues in June 1987. The spill was closed in June 1987; and
- The NYC DEP reported a release to the State in June 1987 in the same regulator for the above spill in June 1987. The nature of the released material was not included in the listing. The spill was closed in June 1987.

Based on distance from the site, nature and quantity of material released, and likely groundwater flow direction, it is unlikely that these or any of the other spill listings would have affected the study site.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those that have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities that are subject to corrective action under RCRA.

Four TSD facilities were identified within a one-mile radius of the subject area, all of which are located greater than ½-mile away from the project site and in cross-gradient directions from the project site. Therefore, releases from these facilities would be unlikely to affect the project site. Ten RCRA Generators/Transporters were reported within a .-mile radius of the subject site. Only one of the ten listings was located upgradient with respect to expected groundwater flow direction from the project site; the remaining nine facilities are located cross-gradient with respect to expected groundwater flow direction from the project site. The one potentially upgradient listing was for Consolidated Edison, who reportedly generated 500 kilograms of petroleum or other liquid containing PCBs from a vault located at 473 Kent Avenue in 1998. No spill was reported for this location to New York State. It is unlikely that any releases from this or any other generator, would be expected to affect the project site.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities are listed within a .-mile radius of the subject property.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites that manage solid waste.

Six Solid Waste Facilities were identified within a one-mile radius of the study site, five of which are located greater than one-mile away from the project site and would be, therefore, unlikely to have affected the project site. The nearest listing is for a construction and demolition debris landfill listed as being located at the "foot of Division Avenue," which, based on this description, may be located on the project site. No waste is stored or disposed at transfer stations; waste is mainly transferred from small garbage trucks to larger vehicles for transportation to a landfill, recycling center or incinerator.

Petroleum Bulk Storage (PBS) Database

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

Twenty-four PBS facilities were identified within a ¼-mile radius of the subject site. Two facilities were located on adjacent blocks to the study site and six additional facilities were located presumably upgradient with respect to groundwater flow direction from the site. Details of these facilities are given in Table 5.

Table 5
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Study Site
Domsey Trading Corp. 431 Kent Avenue	5,000 AST 4,000 UST 4,000 UST 4,000 UST 4,000 UST 3,000 UST	Fuel Oil Gasoline Diesel Diesel Diesel Diesel	Closed Closed Closed Closed Closed Closed	East-adjacent Block
Kent Avenue Station 500 Kent Avenue	40,000 AST 40,000 AST 275 AST	Kerosene Kerosene Kerosene	Closed Closed Closed	South-adjacent Block
LID-FLA Realty Corp. 55 South 11 th Street	17,000 UST	Fuel Oil	Closed	460 Feet East
Kent Village Housing, Inc. 60 Division Avenue	20,000 UST	Fuel Oil	Active	460 Feet East
77 Division Avenue	2,000 AST 750 AST	Fuel Oil Fuel Oil	Active Closed	680 Feet East
95 South 10 th Street	2,500 AST	Fuel Oil	Active	990 Feet East
108 Division Avenue	3,000 AST	Fuel Oil	Active	1,125 Feet East
456-458 Bedford Corp. 454-456 Bedford Avenue	4,000 AST	Fuel Oil	Active	1,160 Feet East

Notes: AST - aboveground storage tank
UST - underground storage tank

Details of the additional 16 PBS facilities located within a ¼-mile of the study site are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

Seven State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the subject property. The closest active four listings are for the Brooklyn Navy Yard, located approximately 500 feet south of the project site. One listing indicated that an investigation and remediation had occurred in the vicinity of transformers where PCBs had impacted soil and groundwater. This listing indicated that no further remedial action was planned. A second listing indicated previous investigations were performed on a portion of the navy yard that identified PCBs, lead, petroleum, polynuclear aromatic hydrocarbons, and manufactured gas plant wastes (Brooklyn Union Gas – Nassau Works) in soil and/or groundwater. This listing indicated a need for further action. The third listing indicated that an investigation was underway in the vicinity of an incinerator on the Brooklyn Navy Yard property. The fourth and final listing indicated that an investigation was underway on a portion of the Brooklyn Navy Yard property. Given the distance and presumed cross-gradient location with respect to groundwater flow direction from the project site, it is unlikely that environmental conditions related to the Brooklyn Navy Yard would have affected on-site soil and/or groundwater conditions.

The next three listings are located greater than one-half mile away and in a presumed crossgradient flow direction from the project site.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment, but that cannot be remediated using monies from the Hazardous Waste Remediation Fund.

Ten SHSWDSs were identified within a one-mile radius of the subject property, six of which are located greater than ½-mile away from the project site and are not of concern. One listing was for the former Brooklyn Union Gas, Peoples Works, formerly located on the study site. The listing indicated that a coal gasification plant was operational on the study site from 1871 to 1895 and that when the plant was decommissioned in 1895, all remaining coal tars were removed and the facility was razed. Soil potentially contaminated with hydrocarbon tar was noted as a potential threat to the environment in the listing.

One listing for the Brooklyn Navy Yard indicated soil and groundwater contamination on the Brooklyn Navy Yard site. Another listing was for the Brooklyn Union Gas Nassau Works, which is located on Brooklyn Navy Yard property. This listing indicated potential soil and groundwater contamination on the property. The fourth and final listing located within ½-mile of the project site was for the Berry Street Housing Project, a vacant lot located on South 10th Street, presumably at the intersection of Berry Street (the listing does not indicate a physical address or cross street), where construction of a low income housing structure was planned. Investigation indicated a former cleaning fluid mixing and storage facility occupied the property and contaminated soil was

discovered during investigation. This facility was located approximately 870 feet east and presumably upgradient with respect to groundwater flow from the project site.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

Three Major Oil Storage Facilities were reported within a one-mile radius of the subject property. All of these facilities are located greater than a ¼-mile from the subject property and are presumably crossgradient with respect to groundwater flow direction from the project site and are, therefore, not of concern.

5.2.3 Local

Records maintained by the New York City Fire and Brooklyn Buildings Departments were not reviewed as part of this assessment. New York City Fire Department Records for fuel (heating) oil tanks were reviewed as part of a previous study performed on the project site. Please see Section 6.0 for detailed information.

6.0 PREVIOUS STUDIES

Previous environmental studies performed on the project site were reviewed as part of this assessment, including an Environmental Site Assessment prepared by AKRF, Inc., dated October 2000; and a Phase I Environmental Site Assessment Report prepared by Middleton Environmental, Inc., dated December 19, 2002. Summaries of these reports are included in this section:

- **Environmental Site Assessment, AKRF, Inc., October 2000.** The study area for this assessment included not only the subject property, but also the north-adjacent parcels (the former Schaefer Brewery Site and the former Kedem Winery Site) and the south-adjacent parcel (currently occupied by Consolidated Edison). The assessment included a review of historical Sanborn Maps, a site reconnaissance, and a review of selected federal and state regulatory databases within one mile of the study area. This study concluded that the study area (including the project site) has had more than a 100-year industrial and manufacturing history, including use as a manufactured gas plant, a brewery, and a winery. The assessment identified the following environmental conditions for the study area: aboveground storage tanks, potential underground storage tanks, suspect asbestos-containing building materials, potential lead-based paint, suspect PCB- and mercury-containing lighting fixtures, 55-gallon drums of chemicals and potentially contaminated soil and groundwater resulting from on- and off-site sources (including on-site and off-site manufactured gas plants). Additional studies, including testing of soil and groundwater, were recommended in the assessment.
- **Phase I Environmental Site Assessment, Middleton Environmental, Inc., December 19, 2002.** The study area for this assessment included a three-story building with a basement located at 458-490 Kent Avenue. This structure is located on the eastern portion of the project site. The study area for this assessment did not include the two-story building fronting the East River that is also located on the western portion of the project site. The scope of work for this assessment conformed with the scope and limitations of ASTM Standard E1527-00 and included a review of historical maps, a site reconnaissance, an interview with the property owner, and a review of selected federal and state regulatory databases within one mile of the study area. The assessment identified the following

environmental conditions for the study area: a potential underground chemical storage tank and presumed asbestos-containing materials. A sealed fill port was observed on the south side of the subject building; this fill port may be connected to an underground storage tank. A search of New York City Fire Department records for the addresses 430-480 Kent Avenue for heating oil tanks and a search of New York State Petroleum Bulk Storage records did not indicate any tanks for the study area. The assessment concluded that any releases from the suspect tank could have impacted on-site soil or groundwater and recommended that a ground penetrating radar survey be conducted in the vicinity of the fill port.

7.0 LIMITATIONS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-00. The following limitations should be noted:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The roof of the two-story building was inaccessible at the time of site inspection.

8.0 CONCLUSIONS AND RECOMMENDATIONS

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage and usage of neighboring properties. Based on this study, there appears to be a moderate potential for environmental impairments on the subject property. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except for the following:

- The regulatory databases, historical land-use atlases, and visual site inspection indicated that the subject property and surrounding neighborhood have over a 100-year history of primarily manufacturing and industrial uses. Construction for the current three-story warehouse was completed in 1940. Construction for the northern portion of the current two-story building was completed in 1939 and the two-story southern addition was completed prior to 1979. Sanborn maps indicated that a manufactured gas plant (Brooklyn Union Gas, Peoples Works) occupied the subject property circa 1880 through at least 1887. Other historical manufacturing uses for the subject property include a stave yard, a molasses storage yard, a sugar refinery, a storage warehouse, and the F.M. Schaefer Brewing Company.

Various light manufacturing facilities were noted north, east and south of the subject property, including a power house and a manufactured gas plant (Brooklyn Union Gas, Nassau Works) to the south of the property.

- Twelve Comprehensive Environmental Response, Compensation and Liability Information System listings were identified within a one-mile radius of the project site, including two Brooklyn Union Gas manufactured gas plants: the former Peoples Works, which was located on the subject property circa 1880 through circa 1887, and Nassau Works, which was located south of the subject property on the northwest corner of the intersection of Cross Street and Kent Avenue from circa 1887 through circa 1935. Both listings included a notation stating that one of the by-products produced during plant operating years was hydrocarbon tar, which was temporarily stored on the site until it was sold. According to the listings, Brooklyn Union Gas affirmed that when the Peoples Works was decommissioned in 1895 and when the Nassau Works was decommissioned in 1936, all remaining tars were removed and the facilities were razed.
- Ten state Hazardous Substance Waste Disposal Site Study listings were identified within a one-mile radius of the subject property, including a listing for the Brooklyn Union Gas, Peoples Works, formerly located on the study site. The listing indicated that a coal gasification plant was operational on the study site from 1871 to 1895 and that when the plant was decommissioned in 1895, all remaining coal tars were removed and the facility was razed. Soil potentially contaminated with hydrocarbon tar was noted as a potential threat to the environment in the listing.
- Six Solid Waste Facilities were identified within a one-mile radius of the study site, including a construction and demolition debris landfill listed as being located at the “foot of Division Avenue,” which, based on this description, may be located on the project site. The exact location of this facility and the source of the fill material are not provided in the listing.
- During the site inspection, several small metals plates were noted in the basement of the three-story building and on the first floor of the two-story building. A metal plate was noted in the paved area to the south of the buildings. These may be associated with underground storage tanks (USTs). Several patched areas were noted in the pavement, which may be indicative of

past or present USTs located on the subject property. A Phase I Environmental Site Assessment Report prepared by Middleton Environmental, Inc., dated December 19, 2002, cited a fill cap on the south side of the three-story building on the project site. This fill cap was not observed during the site inspection for this report. Ms. Gruenwald, a representative of the property owner, had no knowledge of current or former tanks on the property. A review of the State regulatory records did not cite any USTs for the subject property. As indicated in the 2002 Phase I, a search of New York City Fire Department records for fuel (heating) oil tanks for the addresses 430-480 Kent Avenue did not identify any such tanks. New York City Fire Department records for gasoline storage tanks and Brooklyn Buildings Department records were not reviewed as part of this assessment.

- Fluorescent lighting fixtures observed in the structure may include PCB-containing components, including capacitors, and potting compounds. Hydraulic lifts associated with two garage bays on the southern side of the three-story building, freight elevators located in both the two-story building and the three-story building, and fork lifts noted in both structures may utilize PCB-containing petroleum products. Additionally, a utility-owned transformer vault that may contain PCB-containing petroleum products was noted on the Kent Avenue sidewalk outside of the three-story building.
- Suspect asbestos-containing materials (ACMs) were observed during the site visit, including vinyl floor tile, suspended ceiling tile, thermal pipe insulation, and roofing materials in both on-site structures. Additionally, suspect asbestos-containing insulation was noted around a vapor recovery system on the roof of the three-story structure. Additional suspect ACMs may be present within pipe chases, above ceiling tiles, behind walls, beneath carpeting and floor tiles, or in other hidden locations.
- Since the subject buildings were constructed prior to 1977, lead-based paint may be present. Painted surfaces observed in the structure were noted to be in poor to good condition. At the time of the site inspection, these commercial structures did not include a childcare center or other facility where the extended presence of young children would be typical.
- Certified Lumber, which is the current occupant of the two-story structure on the project site, warehouses and sells building materials, including latex, paint, primer and other chemicals used in building construction. These chemicals were contained in one- to five-gallon containers and they were stored on pallets. The containers appeared to be in good condition at the time of inspection. A service area for forklifts was noted on the first floor of the two-story building located on the project site. This area included 55-gallons drums of fresh oil and waste oil stored on a pallet. No leaks or spills were noted in the vicinity of the stored chemicals.

A large printer and a 55-gallon drum of ammonium hydroxide were noted on the second floor of the three-story building. No leaks or spills were noted in the vicinity of the drum. A small wood workshop was noted on the third floor of the building. An air compressor, saws, tools, paints and varnishes were noted in this area. The paints and varnishes were noted in one-gallon or smaller containers. No leaks or spills were noted in the vicinity of the stored chemicals.

The following actions are recommended:

- On-site soil and/or groundwater may have been affected by the site's industrial history that included a manufactured gas plant (Peoples Works) and by off-site sources, including a manufactured gas plant (Nassau Works). AKRF recommends a Phase II Subsurface Investigation be performed prior to any redevelopment of the site to determine the presence and extent of any on-site contamination. Keyspan Energy, the successor to Brooklyn Union Gas,

should be contacted to obtain any additional information or maps relating to the former manufactured gas plants. This information will help to target boring and well locations for the subsurface investigation. The investigation should include the collection of both soil and groundwater samples and the samples should be analyzed for volatile organic compounds, semivolatile organic compounds, metals, polychlorinated biphenyls and pesticides.

- Depending on any proposed development plans for the subject property, further investigation should be conducted to determine the presence and location of potential underground storage tanks. A review of New York City Fire Department records for gasoline tanks and a review of Brooklyn Buildings Department records may provide additional information related to current and/or historical gasoline and/or fuel oil tank permits and/or blueprints indicating tank locations. An electromagnetic survey may be warranted to determine the location of the underground storage tanks. If tanks are discovered, they should be properly registered, if required, with the New York State Department of Environmental Conservation and the New York City Fire Department. Prior to and/or during any renovation or demolition activities with the potential to disturb known tanks, they should be removed along with any contaminated soil from the property in accordance with all federal, state and local regulations.
- Prior to any renovation or demolition activities that would disturb suspect ACMs, testing should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state and federal regulations.

If any of the aforementioned ACMs are to be unaffected by future renovation activities, they can remain in the buildings, but need to be managed in accordance with applicable federal regulations (29 CFR 1910.1001 and 1926.1101) of the Occupational Health and Safety Administration (OSHA). These OSHA regulations include requirements for the training of building occupants and workers, posting of warning signs and labeling of the ACMs, appropriate maintenance procedures to avoid disturbances of ACMs, and record keeping, etc. ACMs should be regularly inspected by a New York City-certified asbestos investigator and maintained by New York State-licensed contractors to prevent deterioration.

- Any renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data which indicates that fluorescent lights, lighting fixtures, elevator equipment, and hydraulic lift equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

9.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with ASTM Standard E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. It is intended for use as a supplement to the property appraisal, and is only to be used as a guide in determining the possible presence or absence of hazardous materials on the subject property at the time of the inspection. This assessment is based upon the review of readily available records relating to previous use of both the project site and the surrounding area, as well as a visual inspection of the current condition of the property. Environmental characteristics at this site and surrounding sites may be subject to change in the future.

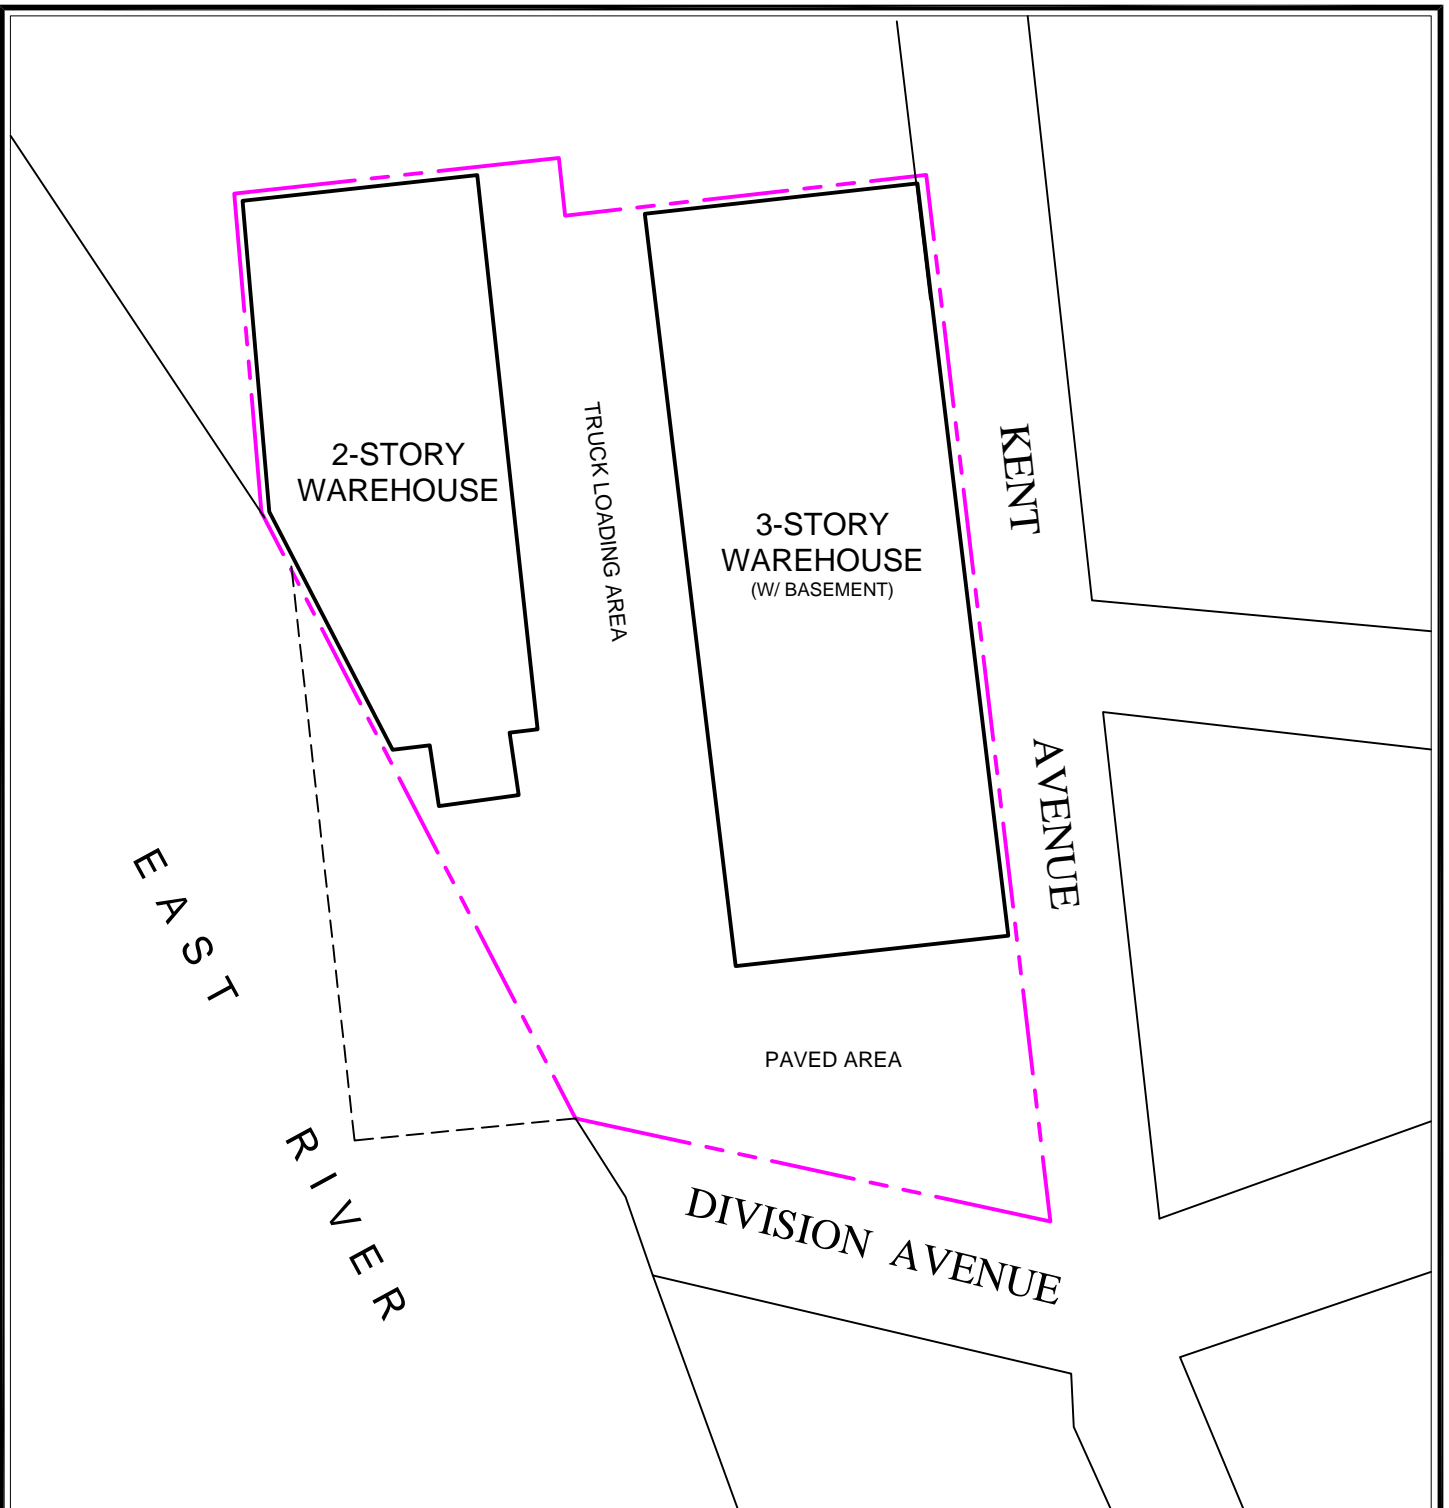

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the site and its surrounding area. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Certified Lumber and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or negligent or willful acts or omissions.

APPENDIX A
PHOTOGRAPHIC DOCUMENTATION

Photograph 1. COVER - Photograph of the southern portion of the two-story warehouse building fronting the East River. This portion of the building was constructed prior to 1979. Note the corrugated metal roof that extends between the two- and three-story buildings in the southeastern portion of the photograph.

Photograph 2. Oil changing area for forklifts on the first floor of the two-story warehouse structure.

Photograph 3. Suspect fill cap noted on the concrete floor inside the two-story warehouse structure on the project site.

Photograph 4. Suspect asbestos-containing thermal pipe insulation observed in the two-story warehouse structure. Suspect pipe insulation was noted in both on-site structures.

Photograph 5. Pallets of 5-gallon containers of chemicals used in building construction, such as latex, primers, etc. in the two-story warehouse building. The containers were observed to be in good condition and no staining or spills were noted in the vicinity of the pallets.

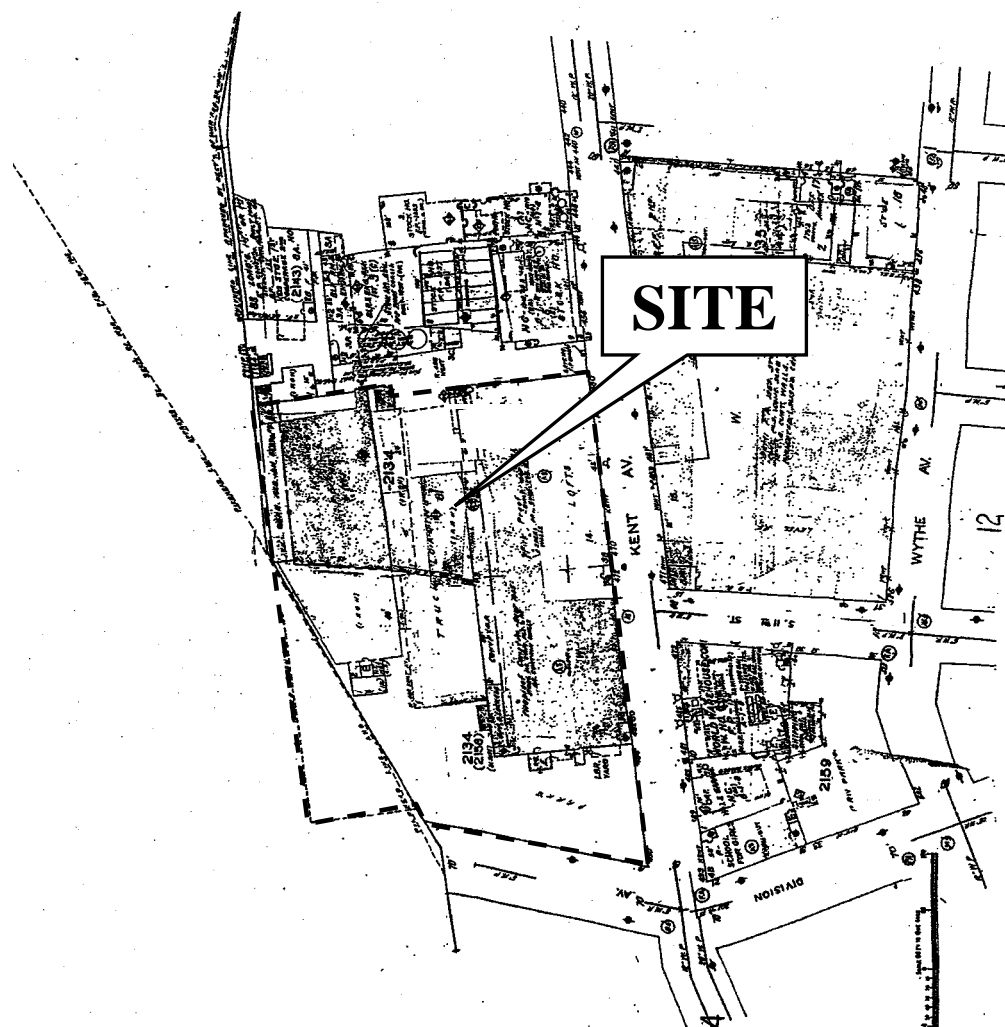

Photograph 6. Metal floor plate noted on the paved area south of the two on-site structures. The place could potentially access a petroleum or chemical storage tank.

Photograph 7. Suspect fill cap observed in the basement of the three-story warehouse structure. Several such fill caps were noted in the basement of this structure.

APPENDIX C
REGULATORY RECORDS REVIEW

Toxics Targeting Computerized Environmental Report

**460 Kent Avenue
Brooklyn, NY 11211**

December 05, 2003

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Computerized Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FOUR FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS COMPUTERIZED ENVIRONMENTAL REPORT.

Table of Contents

Introduction..... 1

- *The Three Sections of Your Report*
- *How to Use Your Report*
- *Toxic Site Databases Analyzed In Your Report*
- *Limitations Of the Information In Your Report*

Section One: Your Report Summary..... 5

- *Table One: Number of Identified Toxic Sites By Distance Interval*
- *Table Two: Identified Toxic Sites By Direction*
- *Table Three: Identified Toxic Sites Ranked by Proximity*
- *Table Four: Identified Toxic Sites By Category*
- *Map One: One-Mile Radius Map*
- *Map Two: Half-Mile Radius Map*
- *Map Three: Quarter-Mile Radius Map*
- *Map Four: Quarter-Mile Radius Close-up Map*

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *How Toxic Sites Are Mapped*
- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Computerized Environmental Report*. It checks for the presence of 17 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. Finally, a close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

Search Radius

One-Mile

1) ***New York Inactive Hazardous Waste Disposal Site Registry***: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

2) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

3) ***National Priority List for Federal Superfund Cleanup***: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

One-Mile

4) ***New York Hazardous Substance Disposal Site Draft Study***: a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

One-Mile

5) ***New York Solid Waste Facilities Registry, including New York City 1934 Sites***: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

One-Mile

6) ***New York State Major Oil Storage Facilities***: sites with more than a 400,000 gallon capacity for storing petroleum products.

One-Mile

7) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities***: sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

- ***RCRA violations***: waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.
- ***RCRIS corrective action activity (CORRACTS)***: waste facilities with RCRIS corrective action activity reported by the USEPA.

Half-Mile

8a) ***Toxic Spills: active*** stationary source spills reported to state environmental authorities, including unremediated leaking underground storage tanks.

Half-Mile

8b) ***Toxic Spills: closed*** stationary and non-stationary source spills reported to state authorities, including remediated leaking underground storage tanks.

Quarter-Mile

9) ***New York and Local Petroleum Bulk Storage Facilities***: sites with more than an 1,100 gallon capacity for storing petroleum products.

Quarter-Mile

10) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System.

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.
- ***RCRIS corrective action activity (CORRACTS):*** waste facilities with RCRIS corrective action activity reported by the USEPA.

Quarter-Mile

11) ***New York Chemical Bulk Storage Facilities:*** Sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Quarter-Mile

12) ***New York Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile

13) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Quarter-Mile

14) ***Air Discharges:*** Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile

15) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile

16) ***Federal Civil Enforcement Docket:*** civil judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only

17) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Computerized Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: 1) additional information on individual sites may be available, 2) newly discovered sites are continually reported and 3) all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The computerized map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;
- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 17 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;
- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section One:

Report Summary

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code (This information does not appear in the headings for Inactive Hazardous Waste Disposal Sites).
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers;
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites
(A complete description of the codes follows the profiles section).

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced)

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications: 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;

2 -- Significant threat to the public health or environment -- action required;

3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;

4 -- Site properly closed --requires continued management;

5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;

2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law.

D1, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed)

* **NPL/CERCLIS/INACTIVE HAZARDOUS WASTE DISPOSAL SITES IDENTIFIED WITHIN 1 MILE SEARCH RADIUS** *

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

NAME.....: U.S. Department of the Navy
ADDRESS...: 10 Industrial Highway, Mail Stop 82, Lester, PA 191132090

HAZARDOUS WASTE DISPOSAL PERIOD: from unknown to 1994

SITE DESCRIPTION:

Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three

transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retrofilled. Remedial work began in the summer of 1994. This work included powerwashing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. This work was concluded in the fall of 1995. Three monitoring wells were installed in the fall of 1996 to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. Further monitoring at this site is not warranted.

CONFIRMED HAZARDOUS WASTE DISPOSED:

 GROUNDWATER DEPTH: Range: 5 to 10 feet.

LEGAL ACTION:	Type:	State-	Federal-
STATUS:	Negotiation in Progress-	Order Signed-	
REMEDIAL ACTION:	Proposed- Under Design-	In Progress-	Completed-X
NATURE OF ACTION:	IRM-removal of contaminated soil.		

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Due to the location and limited amounts, remaining PCB contamination in the soils will not impact the East River. Recent groundwater samples were non-detect for PCBs.

ASSESSMENT OF HEALTH PROBLEMS:

The site is in a restricted Naval base. Since the electrical transformers are located in walled courtyards with locked gates, the potential for human exposure is low. The majority of the contaminated soils have been removed and replaced with clean stone. Some contaminated soils and concrete remain directly below transformers. All PCB transformers have either been removed or retrofilled with non-PCB fluids. Area groundwater is not used for drinking as public water serves the site and the community. Post-remediation groundwater monitoring has shown no PCB contamination.

CLASSIFICATION CODE DESCRIPTION:

Significant threat to the public health or environment - action required.

NAME OF SITE: Brooklyn Navy Yard 13 Acre Parcel

STREET ADDRESS: Kent Avenue

TOWN/CITY: Brooklyn

ZIP: 11205

COUNTY: Kings

SITE TYPE: Dump-X Structure-X Lagoon- Landfill- Treatment Pond-

ESTIMATED SIZE: 13 Acres

SITE OWNER/OPERATOR INFORMATION:

CURRENT OWNER(S):

NAME.....: CITY OF NEW YORK, CITY CORP. COUNSEL

ADDRESS...: 100 CHURCH STREET, NEW YORK, NY 10007

OWNER DURING DISPOSAL:

NAME.....: THE CITY OF NEW YORK

OPERATOR(S) DURING DISPOSAL:

NAME.....: CITY OF NEW YORK

ADDRESS...: 100 CHURCH STREET, NEW YORK, NY 10007

HAZARDOUS WASTE DISPOSAL PERIOD: from 1925 to 1995

SITE DESCRIPTION:

This site is on the north-east portion of the BNYDC site (ID #224019) and is operated by the NYC Department of Sanitation as a storage for road salt, impounded vehicles, parking of trailer vehicles, etc. The site includes Barge Basin, Building 419, two former drum storage areas, former Boat Shop and Saw Mill areas. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. From 1890s to 1940s, the northern part of the site was occupied by the coal gasification plant that was used to power Brooklyn City Railroad before Navy reconstructed the area to its current configuration in 1940s. Groundwater flow direction is predominantly to the southwest towards Barge Basin. Depth to groundwater level is 5 ft. to 10 ft. which is 1.23 ft. to 5.95 ft. above mean sea level. Previous site investigations performed in 1988 and from October 1996 to December 1997 indicated hazardous levels of PCBs in soil at two locations (Building 419); hazardous level of lead in the soil in the former drum storage area, petroleum contamination in the groundwater and soil in

former Boat Shop and Saw Mill areas; hazardous levels of benzene in the groundwater beneath Boat Shop Area related to the former Manufactured Gas Plant (MGP) operations; and polynuclear aromatic hydrocarbons (PAHs).

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
-----	-----
Benzene (D018 Waste)	unknown
PCBs (B007 Waste)	unknown
Lead (D008 Waste)	Unknown
Chlorobenzene (D021 Waste)	unknown

ANALYTICAL DATA AVAILABLE FOR:	Air-	Surface Water-	Groundwater-	Soil-	Sediment-
APPLICABLE STANDARDS EXCEEDED IN:	Groundwater-	Drinking Water-	Surface Water-	Air-	

GEOTECHNICAL INFORMATION:

SOIL/ROCK TYPE:
GROUNDWATER DEPTH:

LEGAL ACTION:	Type:	State-	Federal-
STATUS:	Negotiation in Progress-	Order Signed-	
REMEDIAL ACTION:	Proposed- Under Design-	In Progress-	Completed-
NATURE OF ACTION:			

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Presence of the consequential amount of hazardous waste on the site (PCB and lead in the soil and benzene and chlorobenzene in the groundwater) poses threat to the environment and human health. Groundwater contaminated with hazardous levels of benzene poses threat to Barge Basins potential use as a nursery for immature fish and shellfish. The site also contains levels of benzene that are above Class GA standards and have impacted an EPA-designated sole-source aquifer. Listing of the site in the Registry as Class 2 is appropriate.

ASSESSMENT OF HEALTH PROBLEMS:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

This site was listed in the Eckhardt subcommittee report as having had disposal from 1960-'79. An on-site inspection was carried out by DEC, Region 2 on April 29, 1980. The entire manufacturing building is four stories high and there was a freight unloading area adjacent to the buildings and parking lot. Facility is bounded by Prospect Street and York Street. There appears to be no disposal ever practiced here.

action may be deferred.

NAME OF SITE: BQE/Ansbacher Color & Dye Factory

STREET ADDRESS: Meeker Avenue

TOWN/CITY: Brooklyn

ZIP:

COUNTY: Kings

SITE TYPE: Dump- Structure- Lagoon- Landfill-X Treatment Pond-

ESTIMATED SIZE: 0.6 Acre

SITE OWNER/OPERATOR INFORMATION:

CURRENT OWNER(S):

NAME.....: NYS Department of Transportation

ADDRESS...: State Campus, Building 5, Albany, NY 12232

OWNER DURING DISPOSAL:

NAME.....: Ansbacher Color & Dye Factory

OPERATOR(S) DURING DISPOSAL:

NAME.....: Ansbacher Color & Dye Factory

ADDRESS...: Meeker Avenue, Brooklyn, NY

HAZARDOUS WASTE DISPOSAL PERIOD: from unknown to unknown

SITE DESCRIPTION:

Most of this site lies underneath the elevated Brooklyn - Queens Express (I-278) along Meeker Avenue between North 6th and North 8th Streets in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath buildings, asphalt and concrete. A Preliminary Site Assessment was completed

during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
-----	-----
arsenic (D004 Waste)	unknown
lead (D008 Waste)	unknown

ANALYTICAL DATA AVAILABLE FOR:	Air-	Surface Water-	Groundwater-X	Soil-X	Sediment-
APPLICABLE STANDARDS EXCEEDED IN:	Groundwater-X	Drinking Water-	Surface Water-	Air-	

GEOTECHNICAL INFORMATION:

SOIL/ROCK TYPE: Fill over alluvium.
 GROUNDWATER DEPTH: Range: 25 to 30 feet.

LEGAL ACTION:	Type:	State-	Federal-
STATUS:	Negotiation in Progress-	Order Signed-	
REMEDIAL ACTION:	Proposed- Under Design-	In Progress-	Completed-X
NATURE OF ACTION:	IRM-soil removal.		

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The contaminated soil is covered by existing layers of asphalt and concrete.

ASSESSMENT OF HEALTH PROBLEMS:

Contaminated soil was removed during reconstruction of the BQE. Soil with residual arsenic and lead contamination under the BQE is covered with several layers of concrete and asphalt. Groundwater is contaminated but not used. Additional investigation is necessary to determine the extent of contamination in areas of the former factory beyond those areas now covered by the BQE.

Site Code: 2A
Description: COAL GASIFICATION PLANT

Acres: 0.00
Completed Investigation? PA
Is Site Active: Unknown
Years of Operation: 1871 to 1895

Quadrangle: Unknown
HRS Score: Unknown
HRS Date: Unknown

Site Description:

A former coal-gasification plant was purchased by BUG Co. During the operations as a CG plant, a hydrocarbon tar was produced and stored on site until sold for use in roofing or road surfacing. The plant was decommissioned in 1895, all remaining tars were reportedly removed and the facility was razed. Ownership and use of the property since 1895 is unknown.

THREAT TO THE ENVIRONMENT OR PUBLIC HEALTH

Threat to the Environment or the Public Health: Environment

Threat Posed by Disposed Hazardous Substance:

The soil is possibly contaminated with trace amounts of hydrocarbon tar. (impact probably reduced due to time and excavation of soils) Leachate into groundwater is not a major concern because area groundwater is not a potable supply.

HAZARDOUS SUBSTANCES DISPOSED:

VOCs: No Semi-VOCs: Unknown PCBs: No Pesticides: No Metals: No Asbestos: No

Hazardous Substances Disposed:

Suspected hydrocarbon tars (benzene, pyridene, cresols, toluene, naphthalene, hydrogen sulfide, phenol)

US EPA No Further Remedial Action Planned? False

Site Code: 1
Description: INDUSTRIAL SITE

Acres: 13.00
Completed Investigation? 5-other
Is Site Active: No
Years of Operation: 1785 to 1965

Quadrangle: BROOKLYN
HRS Score: N/A
HRS Date: N/A

Site Description:

The site is on the northern portion of the BNYDC Site (#224019) bordering Kent Avenue. In the past, the NYC Dept. of Sanitation has proposed to build a 3,000 ton/day garbage incinerator on this property. However, the plan to build an incinerator was subsequently abolished. A 1988 and 1996/97 environmental assessments has indicated soil and groundwater contamination with petroleum hydrocarbons, PAHs, PCB's, and metals. The origin of the petroleum PAHs, and metals is unknown. The PCB's are from an onsite transformer that has leaked. Four separate drum storage areas were also located on or immediately adjacent to this site. The contents of the drums, which numbered over 1000 before their removal, are also unknown. During the 1996/97 Interim Remedial Measure (IRM) the transformer located in Building 419 was drained of PCB contaminated fluid, dismantled and removed to an approved off-site facility.

THREAT TO THE ENVIRONMENT OR PUBLIC HEALTH

Threat to the Environment or the Public Health: Environment/Public Health

Threat Posed by Disposed Hazardous Substance:

An environmental investigations completed in 1988 and 1996/97 show soil and groundwater contamination with petroleum hydrocarbons, PAHs, PCB's, and metals. The site also housed several former drum storage areas that contained unknown materials. The groundwater contamination is located within a sole source aquifer. The area is used as an unauthorized recreation spot, and there are at least 5000 people living within a 1/4 mile of the site.

Years of Operation: 1954 to Unknown

Quadrangle: BROOKLYN
HRS Score:
HRS Date:

Site Description:

In 1989, this site was a vacant lot awaiting construction of low income housing by the New York City Housing Authority(NYCHA). The lot was previously occupied by various apartment houses and light industry such as assembly and fabrication, scrap metal storage, and auto maintenance. According to Brooklyn Buildings Department records, a cleaning fluid mixing and storage facility(Lightning Cleaner Company) utilized a 2500 gallon underground storage tank to store Solvasol #5, a xylene based solvent. The NYCHA attempted to excavate the tank in 1989, but could not locate it. However, during excavation, soil contaminated with xylene and ethylbenzene was found, indicating that Solvasol #5 was either dumped or spilled on the ground in this location.

Contamination of...

...Surface Water? No
...Groundwater? Unknown
...Drinking Water? No
Surface Water Class: SC
Groundwater Class: SoleSource

Hazardous Substance Exposed? No
Controlled Site Access? No
Ambient Air Contamination? Unknown
Threat of Direct Contact? No
Documented Fish or Wildlife Mortality? No
Impact on Special Status Fish or Wildlife Resource? No
Active Drinking Water Supply? Yes

Descriptions:

Surface Water:
1000 ft; west

Groundwater:
15 ft; flows west

Drinking Water:
5 miles; east

Fish or Wildlife Mortality: None provided
Special Status Fish or Wildlife Resource: None provided

Building:

0 feet; adjacent residential area

THREAT TO THE ENVIRONMENT OR PUBLIC HEALTH

Threat to the Environment or the Public Health: Environment

Threat Posed by Disposed Hazardous Substance:

Leakage of a cleaning solvent from an underground storage tank has caused the surrounding soil to become contaminated with xylene and ethylbenzene (the primary ingredients in Solvasol #5). The extent of contamination in the soil is unknown. It is also unknown whether the contaminants have leached to the groundwater, which is located within a sole source aquifer.

HAZARDOUS SUBSTANCES DISPOSED:

VOCs: Yes Semi-VOCs: No PCBs: No Pesticides: No Metals: No Asbestos: No

Hazardous Substances Disposed:

xylene (CAS #1330-20-7) ethylbenzene (CAS #100-41-4)

Description: COAL GASIFICATION PLANT

Acres: 0.00
Completed Investigation? PA
Is Site Active: No
Years of Operation: 1869 to 1936

Quadrangle: Unknown
HRS Score: Unknown
HRS Date: Unknown

Site Description:

This was formerly the site of a coal-gasification plant, purchased by Brooklyn Union at the turn of the century. One of the by-products produced was a hydrocarbon tar which was temporarily stored on-site.

Ownership and use of the property since 1936 is unknown.

Site Description:

This is a potential site. This site was the location of major US Navy activity for over 180 years. Major

functions at the site included shop building and repair, research and development, housing, motion picture services, a naval hospital, a foundry, and administrative offices. All major functions have been moved to Naval Station New York at Staten Island. The property is now abandoned, except for a guard post and several storage areas. The property is to be investigated as part of an Environmental Baseline Survey Phase II to be conducted at a later date. In the future, the property is to be conveyed to the City of New York for use as a homeless shelter.

On site; abandoned building

THREAT TO THE ENVIRONMENT OR PUBLIC HEALTH

Threat to the Environment or the Public Health: Environment/Public Health

Threat Posed by Disposed Hazardous Substance:

Heavy industry took place at this site for almost 200 years. There is the potential for contamination of soils and groundwater with solvents and metals. Onsite buildings are in badly deteriorated condition, with lead and asbestos contamination as the main problem. A Phase II investigation set to begin sometime in the Fall of 1994 will determine if there is onsite groundwater and soil contamination, and further delineate the lead paint and asbestos problem.

HAZARDOUS SUBSTANCES DISPOSED:

Site Description:

This site was listed in the Eckhardt subcommittee report as having wastes dumped on it from 1960-1979.

An onsite inspection was carried out by DEC, Region 2 on April 29, 1980. The entire manufacturing building is four stories high and there was a freight unloading area adjacent to the buildings and parking lot. The facility is bordered by Prospect St and York St. There appears to be no disposal ever practiced here.

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in Manhattan) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

* - Compass directions can vary substantially for sites located very close to the subject property address.

**Site profiles in this report section contain up to 36 data fields of information obtained from the New York Department of Environmental Conservation. Since 1/1/02, the DEC has only released information for 12 of those data fields: spill name, address components, spill date, close date, material spilled, quantity spilled, units, cause of spill and resource affected. The date after "Information updated through:" indicates when these 12 data fields were last updated. The other 24 data fields are only updated through 1/1/02.

Caller Remarks: PLUGGED VENT CAUSED BACK UP - BEING CLEANED UP

DEC Investigator Remarks:

On November 15, 2000, PTC (Lara) reported that they completed the removal of 2 X 275 ABOVEGROUND AND 1 X 2,000 Aboveground mounded completed the excavation on Monday November 13, 2000. The bottom of the tank was resting on concrete and not sure if the product went through the concrete. The building owner is rennovating the building. There no impact to sumps and basement is clean.

On November 17, 2000, DEC Sigona performed an inspection with PTC (Lara) of the basement area impacted by the tank failure. The spill impacted two separate rooms which had concrete surface. There was cardboard and debris which emitted a petroleum odor. There was also a noticeable petroleum odor in the entrance. DEC requested that 4 soil borings being advanced in each of the two rooms. The soil will be screened with a PID and submitted for laboratory analysis.

** See beginning of spills section for more details.

UNKNOWN PETROLEUM		UNKNOWN	1000	GALLONS	NO	0	GALLONS	NO

Caller Remarks: MANHOLE WITH OIL, GREASE, AND WATER, POSS FROM A TRUCKING FIRM. RUNOFF FROM VEH WASH.

DEC Investigator Remarks:

4/4/96, 1945 hrs: Mr. O'Neil - 1000 gallons is volume of water/oil. Can see it running out of garage. Was reported to O'Neil @6:30 by Joe Criscitello. This happens repeatedly. Spiller is local trucking firm. As of now sample taken for PCB analysis.
 4/4/96, 1120 hrs: Mr. O'Neil left message - they took video footage. Gave Steve Zalloughi's home as contact.
 4/8/96: Steve Zalloughi - Flash point 98 degrees C (if less than 140 degrees C Con Ed uses private contractor). Manhole type: service box. Fingerprint - #2 oil. Manhole MH-58944 on east side of Kent Ave. 120 feet south of 6th. Also MH-952 and service box SB-12600. Service box has ducts which overflow to manholes which house primary and secondary cables.

ACTIVE HAZARDOUS SPILLS - MISC. SPILL CAUSES - EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM - IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.

All spills mapped and profiled within 1/4 Mile. Between 1/4 Mile and 1/2 Mile, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

* - Compass directions can vary substantially for sites located very close to the subject property address.

**Site profiles in this report section contain up to 36 data fields of information obtained from the New York Department of Environmental Conservation. Since 1/1/02, the DEC has only released information for 12 of those data fields: spill name, address components, spill date, close date, material spilled, quantity spilled, units, cause of spill and resource affected. The date after "Information updated through:" indicates when these 12 data fields were last updated. The other 24 data fields are only updated through 1/1/02.

CON ED E2MIS NOTES 7-21-99

Approx. 1 gal. diesel fuel found on approx. 20 gals. of water in SB-8860, F/O 206 Ross St. No sewers or waterways affected. Spill was discovered when responding to Fire Dept. report of diesel fuel spill. No fuel was found on street, only in service box. Customer reported that cause of spill was unknown person siphoning fuel oil from unknown vehicle. Env. Ops will remain on location pending arrival of Clean Harbors to start cleanup.

21:17 Clean Harbors ETA will be about 2 hrs.

6-03-99 0600

Structure cleaned by Clean Harbors and tag removed.
Incident closed.

Diesel fuel oil 1 gal. Contained.

** See beginning of spills section for more details.

CLOSED STATUS HAZARDOUS SPILLS - MISC. SPILL CAUSES - EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM - IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/4 Mile. Between 1/4 Mile and 1/2 Mile, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

* - Compass directions can vary substantially for sites located very close to the subject property address.

**Site profiles in this report section contain up to 36 data fields of information obtained from the New York Department of Environmental Conservation. Since 1/1/02, the DEC has only released information for 12 of those data fields: spill name, address components, spill date, close date, material spilled, quantity spilled, units, cause of spill and resource affected. The date after "Information updated through:" indicates when these 12 data fields were last updated. The other 24 data fields are only updated through 1/1/02.

5-20-99 E-Mailed con Ed ERTs for copy of E2MIS report.

CON ED E2MIS NOTES 5-20-99

While inspecting VS5333 transformer leaked when the network housing door was opened. The door was closed and diapers placed. 1/2 gal. leaked from the unit due to leaking secondary bushing into the dirt(debris) on concrete floor. Records dated 1996, indicate oil to be 8ppm. No sewers or waterways were affected, unit will be replaced. Unit pressure tested ok.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B001	PCB Oil (concentrated) from transformers, capacitors, etc.
B002	Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
B003	Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
B005	PCB Articles containing 500 ppm or greater of PCBs, excluding small capacitors.
B006	PCB Transformers. "PCB Transformers" means any transformer that contains 500 ppm PCB or greater.
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.
B009	
CR04	
CR05	
D000	
D001	Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.
D002	Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.
D003	Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.
D004	Arsenic
D005	Barium
D006	Cadmium
D007	Chromium
D008	Lead
D009	Mercury
D010	Selenium
D011	Silver
D012	Endrin(1,2,3,4,10,10-hexachloro-1,7-epoxy- 1,4,4a,5,6,7,8,8a-octahydro-1,4-endo, endo-5,8-dimeth- ano-naphthalene)

D013	Lindane (1,2,3,4,5,6-hexachlorocyclohexane, gamma isomer).
D014	Methoxychlor(1,1,1-Trichloro-2,2-bis[p-methoxyphenyl]ethane).
D016	2,4-D, (2,4-Dichlorophenoxyacetic acid).
D018	BENZENE
D019	Carbon Tetrachloride
D020	Chlordane
D021	Chlorbenzene
D022	Chloroform
D023	o-Cresol
D024	m-Cresol
D025	p-Cresol
D026	Cresol
D027	1,4-Dichlorobenzene
D035	Methyl ethyl ketone
D038	Pyridine
D039	Tetrachloroethylene
D040	Trichlorethylene
F001	The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
F002	The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the

recovery of these spent solvents and spent solvent mixtures. (T)

- F003 The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*
- F004 The following spent non-halogenated solvents: Cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)
- F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)
- F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)
- F007 Spent cyanide plating bath solutions from electroplating operations. (R, T)
- F008 Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process. (R, T)
- F009 Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process. (R, T)
- F012 Quenching waste water treatment sludges from metal heat treating operations where cyanides are used in the process. (T)
- F017
- F032 Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use, or have previously used, chlorophenolic formulations <except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with Section 261.35 (i.e., the newly promulgated equipment cleaning or replacement standards), and where the generator does not resume or initiate use of chlorophenolic formulations>. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.
- K022 Distillation bottom tars from the production of phenol/acetone from cumene. (T)
- K031 By-product salts generated in the production of MSMA and cacodylic acid. (T)

K078

K079

K086 Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead. (T)

U122	Formaldehyde
U123	Formic acid (C,T)
U125	2-Furancarboxaldehyde (I)
U128	1,3-Butadiene, 1,1,2,3,4,4-hexachloro-
U129	Lindane
U130	Hexachlorocyclopentadiene
U131	Hexachloroethane
U133	Hydrazine (R,T)
U134	Hydrogen fluoride (C,T)
U135	Hydrogen sulfide H ₂ S

U136	Arsinic acid, dimethyl-
U138	Methane, iodo-
U144	Lead acetate
U147	2,5-Furandione
U151	Mercury
U154	Methanol (I)
U158	4,4-Methylenebis(2-chloroaniline)
U159	Methyl ethyl ketone (MEK) (I,T)
U160	Methyl ethyl ketone peroxide
U161	Methyl isobutyl ketone (I)
U162	2-Propenoic acid, 2-methyl-, methyl ester (I,T)
U165	Naphthalene
U166	1,4-Naphthalenedione
U169	Benzene, nitro-
U170	p-Nitrophenol
U176	N-Nitroso-N-ethylurea
U177	Urea, N-methyl-N-nitroso-
U180	N-Nitrosopyrrolidine
U181	Benzenamine, 2-methyl-5-nitro-
U182	Paraldehyde
U188	Phenol
U190	1,3-Isobenzofurandione

U196	Pyridine
U201	1,3-Benzenediol
U202	1,2-Benzisothiazol-3(2H)-one, 1,1-dioxide, & salts
U208	1,1,1,2-Tetrachloroethane
U209	1,1,2,2-Tetrachloroethane
U210	Ethene, tetrachloro-
U211	Carbon tetrachloride
U213	Furan, tetrahydro-(l)
U214	Acetic acid, thallium(1+) salt
U218	Thioacetamide
U219	Thiourea
U220	Benzene, methyl-
U223	Toluene diisocyanate (R,T)
U225	Bromoform
U226	Ethane, 1,1,1-trichloro-
U227	Ethane, 1,1,2-trichloro-
U228	Ethene, trichloro-
U236	2,7-Naphthalenedisulfonic acid, 3,3-[(3,3-dimethyl[1,1-biphenyl]-4,4-diyl)bis(azo)bis[5-amino-4-hydroxy]-, tetrasodium salt
U238	Ethyl carbamate (urethane)
U239	Benzene, dimethyl- (l,T)
U240	Acetic acid, (2,4-dichlorophenoxy)-, salts & esters
U246	Cyanogen bromide (CN)Br

U247 Benzene, 1,1--(2,2,2-trichloroethylidene)bis[4- methoxy-
U248 2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenyl-butyl)-, & salts, when present at concentrations of 0.3% or less

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a computerized version of the U. S. Census map using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each *Toxic Site Profile*, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a computerized version of the U. S. Census map. These site locations are identified "address-matched."

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxics Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Computerized Environmental Reports contain government and other information compiled on 18 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **Inactive Hazardous Waste Disposal Site Registry**: New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.²

Profile data updated through: 5/24/2000.

Data obtained by Toxics Targeting: 10/5/2000.

New Facilities updated to: 6/30/2001.

Data obtained by Toxics Targeting: 9/17/2001.

2) **CERCLIS**: Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. NPL sites are also included in CERCLIS. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹

Profile data updated through: 04/10/2003.

Data obtained by Toxics Targeting: 05/16/2003.

New Facilities updated through: 04/10/2003.

Data obtained by Toxics Targeting: 05/16/2003.

3) **National Priority List for Federal Superfund Cleanup**: Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.¹

Profile data updated from: 05/01/2002.

Data obtained by Toxics Targeting: 09/25/2002.

New Facilities updated through: 09/16/2002.

Data obtained by Toxics Targeting: 09/26/2002.

4) **Hazardous Substance Waste Disposal Site Study**: NYS database of waste disposal sites that may pose threats to public health or the environment, but cannot be remediated using monies from the Hazardous Waste Remedial Fund.

Source: New York State Department of Environmental Conservation.²

Data updated to: 5/16/2000.

Data obtained by Toxics Targeting: 5/16/2000.

5) **Solid Waste Facilities**: NYS database of solid waste facilities, including, but not limited to, landfills, incinerators, transfer stations, recycling centers. ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

Data updated to: 1/01/1998.

Data obtained by Toxics Targeting: 6/30/1998.

Also includes a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Source: City of New York Department of Sanitation (1984). Waste Disposal Problem in New York City: A Proposal For Action.

6) **Major Oil Storage Facilities**: NYS database of facilities licensed pursuant The to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. Data withheld by the NYSDEC as of 4/1/2002. Fannie Mae required.**

Source: New York State Department of Environmental Conservation.² Data update schedule: rolling basis.

New facilities updated through: 1/1/2002.

New facilities data obtained by Toxics Targeting: 1/11/2002.

Tank data updated through: 1/1/2002.

Tank data obtained by Toxics Targeting: 1/11/2002.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases**:

(a) **Manifest Information**: New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law and the Resource Conservation and Recovery Act (RCRA).

ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

New facilities updated through: 9/28/2000.

New facilities obtained by Toxics Targeting: 10/5/2000.

Manifest transactions data updated to: 2/12/2003.

Manifest transactions data obtained by Toxics Targeting: 2/18/2003.

(b) **RCRA Notifier, Violations, and Corrective Action Activity (CORRACTS) Information**: U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.* Fannie Mae required.**

Source: U. S. Environmental Protection Agency¹

New facilities updated through: 2/20/2001.

Data obtained by Toxics Targeting: 2/20/2001.

Data attributes updated through: 5/9/2003.

Data obtained by Toxics Targeting: 6/10/2003.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). The database includes *active* and *closed* spills reported before 05/30/2003. Data updated on a rolling basis. ASTM required.* Fannie Mae.**
Source: NYS Department of Environmental Conservation.²

New spills through: 05/29/2003.

Most spill attribute data updated through 01/01/2002.

Limited spill attribute data updated to between 01/01/2002 and 05/29/2003. (See individual spill profiles.)

Active spills: paperwork not completed.

Closed spills: paperwork completed.

Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Petroleum Bulk Storage Facilities:** Local and State databases of aboveground and underground petroleum storage facilities with a combined storage capacity over 1,100 gallons. ASTM required.* Fannie Mae required.**

All New York Counties except Cortland, Nassau, Rockland, and Suffolk:

Source: NYS Department of Environmental Conservation.²

Update schedule: rolling basis; Data has been withheld by the NYSDEC since 4/1/2002.

Facility data updated through: 1/1/2002 (10/1/98 for Westchester Co.).

Facility data obtained by Toxics Targeting: 1/11/2002.

Tank data updated through: 1/1/2002 (10/1/98 for Westchester Co.).

Tank data obtained by Toxics Targeting: 1/11/2002.

Nassau County:

Heat producing products and other products with less than 1,000 gallons storage capacity:

Source: Nassau County Department of Health.³ Data update schedule: rolling basis

Data updated through: 10/4/2000.

Data obtained by Toxics Targeting: 11/5/2000.

Generally non-heat producing products with more than 1,000 gallons storage capacity:

Source: Nassau County Fire Marshall.⁴ Data update schedule: rolling basis with annual update

Data updated through: 9/27/1996 for mapped sites; 03/21/2000 for on-site checks.

Rockland County:

Source: Rockland County Department of Health.⁵

Data updated through: 8/11/1998.

Data obtained by Toxics Targeting: 8/17/1998.

Suffolk County:

Source: Suffolk County Department of Health Services.⁶

Data updated through: 1/12/1999.

Data obtained by Toxics Targeting: 2/26/1999.

10. **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the New York State Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law. ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

New facilities updated through: 9/28/2000.

New facilities obtained by Toxics Targeting: 10/5/2000.

Manifest transactions data updated to: 2/12/2003.

Manifest transactions data obtained by Toxics Targeting: 2/18/2003.

(b) **RCRA Notifier, Violations, and Corrective Action Activity (CORRACTS) Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA). ASTM required.* Fannie Mae required.**

Source: U. S. Environmental Protection Agency¹

New facilities updated through: 2/20/2001.

Data obtained by Toxics Targeting: 2/20/2001.

Data attributes updated through: 5/9/2003.

Data obtained by Toxics Targeting: 6/10/2003.

11) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. Data withheld by NYSDEC as of 4/1/2002. ASTM required.* Fannie Mae required.**

Source: New York State Department of Environmental Conservation.²

Data updated through: 1/1/2002.

Data obtained by Toxics Targeting: 1/11/2002.

12) **Toxic Release Inventory:** New York State and Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.

Source: NYS Department of Environmental Conservation²/U. S. Environmental Protection Agency.¹

Data update schedule: rolling basis, with annual information summary for previous year's activities available from NYSDEC each July 1, with corrections and additional information available approximately mid-August.

Data updated through: 5/9/1996.

Data obtained by Toxics Targeting: 5/14/1996

13) **Historic New York City Utility Facilities (1898 to 1950)**: An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Air Discharge Facilities**: EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.

See Fannie Mae requirement** below.

Source: U. S. Environmental Protection Agency¹

Data updated through: 11/24/1999.

Data obtained by Toxics Targeting: 1/06/2000

15) **Toxic Wastewater Discharges (Permit Compliance System)**: Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.¹

Data updated through: 9/23/1996.

Data obtained by Toxics Targeting: 9/30/1996

16) **Civil Enforcement & Administrative Docket**: This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**

Source: U. S. Environmental Protection Agency.¹

New Sites through: 4/1996.

Data updated through: 10/14/1999.

Date information obtained by Toxics Targeting: 11/18/1999.

17) **New York City Fire Department Tank Data**: On-Site searches only.

Source: New York City Fire Department.

Data obtained by Toxics Targeting: 2/13/1997

18) **Emergency Response Notification System (ERNS)**: Federal database of spills compiled by the Emergency Response Notification System. On-site searches only. ASTM required.* See Fannie Mae requirement** below.

Source: U. S. Environmental Protection Agency.¹

Data updated through: 1/31/2000.

Data obtained by Toxics Targeting: 2/15/2000

*American Society of Testing Materials Standards on Environmental Site Assessments for Commercial Real Estate (E 1527-93, E 1528-93).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).
