Re: Revised Hot Spot Excavation and Secant Pile Wall Remedial Design Document
470 Kent Avenue – Brooklyn, NY
Block 2134, Lots 1 and 150 (portion)
BCP Site #C224053

Dear Erick:

In accordance with the approved October 2023 Remedial Action Work Plan (RAWP) prepared by Matthew M. Carroll, PE and Tenen Environmental, LLC (Tenen), the remedy includes the completion of hot spot excavations and the installation of a secant pile wall. Additional information regarding the support-of-excavation design and secant pile wall design are detailed below.

Background

Figure 8 of the approved RAWP, attached, includes the extents of the remedial excavations for the Site. Three hot spots, around PWSB-21, around PWSB-45 and around PWSB-27, -31 and -35 will be completed during the next phase of work. These are the final hot spot excavations to be completed.

Figure 8 of the approved RAWP also shows the minimum extent of a secant pile wall to be installed on the northern border to prevent recontamination from nonaqueous phase liquid (NAPL) observed in borings PWSB-27 and PWSB-31 and which may remain off-site.

The Tetratech Final Site Characterization Report (SCR), dated April 2018, notes that the NAPL was "noted primarily in the northwest corner of the Site at PWSB-27, PWSB-31, and to a lesser extent at PWSB-35. The impacts observed were primarily located north of the former MGP facility, in the area of a former embayment that was filled in between 1935 and 1947." The embayment area is located north of the proposed secant pile wall.

The contaminant distribution of NAPL through the borings is as follows: "Sand and gravel coated with NAPL was noted in PWSB-27 between 14 and 15 feet bgs and in PWSB-31 between 9 and 11 feet bgs. Solid NAPL was observed in PWSB-31 at 13 feet bgs. NAPL blebs and sheen were observed in PWSB-31 between 14.5 and 18 feet bgs." For reference, the borings were advanced at approximately +9 feet NAVD88 whereas current grade following demolition is assumed in the attached drawings to be +8 feet NAVD88; therefore, the proposed depths below grade are conservative. The proposed secant pile wall is being installed to elevation -22 feet, well below the 15 feet below grade required in the RAWP (which would correlate to elevation -7, as shown on the attached Design Drawing, Figure 2).

Remedial Design – Hot Spot Excavation

The objective of the hot spot excavations is to remove soil with concentrations above the remedial goals. All three hot spot locations are shown on drawing SOE-101.00 and the support-of-excavation to remove these areas are shown on the following drawings. Outside of these hot spot areas, the approved remedial depth is two feet.

Consistent with the RAWP, end-point samples will be collected to document the post-remedial conditions, as shown on Figure 10. A Community Air Monitoring Plan (CAMP, Appendix A) and Soil/Materials Management Plan (SMMP, Appendix C) will be implemented during the invasive Site activities to prevent or minimize potential impacts to human health and the environment.

Tenen notes that the bottom of slab for the new building in all instances is below the minimum measured groundwater elevation and a sub-slab depressurization system (SSDS) will not be installed; however, consistent with the RAWP, the potential for soil vapor intrusion will be evaluated through a review of post-remedial soil and groundwater results as well as indoor air sampling.

Secant Pile Wall Design

The objective of the secant pile wall is to prevent recontamination from NAPL observed in borings PWSB-27 and PWSB-31 and which may remain off-site. The secant pile wall is required to be waterproofed.

As shown on drawing SOE-101.00 and Design Drawing Figure 1, the secant pile wall will extend 90 feet along the northern border of the Site, beyond the minimum RAWP requirement of 45 feet. As shown on drawing SOE-302 and Design Drawing Figure 2, the bottom of the secant pile wall is elevation -22, which is approximately 31 feet below existing grade. As shown on RAWP Figure 8, the minimum requirement is 15 feet below grade.

As shown on detail SOE-501 number 3, the secant pile wall will have waterproofing on the interior face of the wall.

Conclusions

The hot spot excavations will be completed in accordance with the attached design drawings. Post-remediation end-point samples will be collected to confirm the soil conditions and extended as need to meet the soil remedial goals.

The secant pile wall extents along the northern border of the Site exceeds the requirements of the RAWP both vertically and horizontally and will serve as a permanent, long-term engineering control to prevent recontamination of the Site from potential NAPL.

Tenen Environmental, LLC

MONITORING NOTES

1. SURVEY MONITORING POINTS AND SEISMOGRAPHS SHALL BE INSTALLED AT LOCATIONS SHOWN ON THE DRAWINGS.
2. PRIOR TO START OF WORK, PERFORM PRECONSTRUCTION CONDITIONS DOCUMENTATION OF ADJACENT STRUCTURES.
3. INSTALL SURVEY MONITORING POINTS ON ADJACENT BUILDINGS AND STRUCTURES AS SHOWN ON THIS DRAWING, AND NOT LESS THAN TWO POINTS PER WALL.
4. AT A MINIMUM, SURVEY MONITORING POINTS SHALL BE INSTALLED AT A MAXIMUM OF 25 FT INTERVALS AT THE TOP OF SOLDIER PILES AND SOIL-MIX COLUMNS.
5. MONITORING INTERVALS MAY BE INCREASED WHERE MOVEMENTS ARE FOUND TO EXCEED THE THRESHOLD LIMIT PRESCRIBED ALERT LEVELS.
6. IN THE EVENT THAT MONITORING INDICATES LATERAL MOVEMENT EXCEEDS THE LIMIT LEVELS DEFINED IN THE PROJECT SPECIFICATIONS AND IN THE TABLE BELOW, THE CONTRACTOR SHALL CEASE CONSTRUCTION ACTIVITIES. WHERE REQUIRED, THE CONTRACTOR SHALL PROVIDE STABILIZATION OF THE EXCAVATION SUPPORT SYSTEM VIA INSTALLATION OF TEMPORARY EARTHEN BERMS AND/OR ADDITIONAL BRACING. ADDITIONAL EXCAVATION ACTIVITIES SHALL NOT PROCEED WITHOUT THE AUTHORIZATION OF THE SOE ENGINEER OF RECORD AND ANY AGENCIES HAVING JURISDICTION.
7. ALL SURVEY MONITORING POINTS SHALL BEAR A UNIQUE IDENTIFICATION. AS-BUILT PLANS SHALL BE PREPARED FOR ALL SURVEY MONITORING POINTS INSTALLED. PLANS SHALL BE AMENDED AS REQUIRED DURING CONSTRUCTION FOR THE ABANDONMENT, REPLACEMENT, OR ADDITION OF NEW SURVEY MONITORING LOCATIONS. ALL MONITORING RESULTS SHALL BE PROVIDED TO THE CONSTRUCTION MANAGER AND ALL PARTIES WITHIN 24 HOURS OF TAKING READINGS.
8. THRESHOLD AND LIMIT VALUES:

INSTRUMENT RESPONSIBILITY, INSTALLATION AND MONITORING SCHEDULE

SYMBOL	INSTRUMENTS	READING FREQUENCY	ALERT CRITERIA	LIMITING CRITERIA
VM	SEISMOGRAPH (ADJACENT BUILDINGS)	CONTINUOUS 15-MIN. HISTOGRAM SUPPLEMENTED WITH A WAVEFORM FOR EVENTS ABOVE THE THRESHOLD CRITERIA, MONITOR CONTINUOUSLY THROUGHOUT SOE INSTALLATION, GENERAL EXCAVATION AND FOUNDATION CONSTRUCTION.	0.5 IN/SEC	1.0 IN/SEC
SP	OPTICAL MONITORING POINT (BUILDINGS AND STRUCTURES)	MONITORING ALL POINTS (X, Y, Z POSITION) TWICE PER WEEK DURING EXCAVATION. MONITORING ALL POINTS (X, Y, Z POSITION) ONCE PER WEEK AFTER COMPLETING EXCAVATION UNTIL GROUND FLOOR IS CONSTRUCTED.	0.5 INCH	0.75 INCH
SOE	OPTICAL MONITORING POINT (SOIL-MIX WALL)		0.5 INCH	1.0 INCH
SOE	OPTICAL MONITORING POINT (CANTILEVER SOLDIER PILES)		1.0 INCH	2.0 INCH

9. IN THE EVENT THAT MONITORING INDICATES MOVEMENT EXCEEDS THE ABOVE DEFINED ALERT LEVELS (LATERAL OR VERTICAL), SOE EOR WILL EVALUATE THE READINGS AND INFORM THE CONTRACTOR IF THEY NEED TO CEASE EXCAVATION AND PROVIDE STABILIZATION OF THE EXCAVATION SUPPORT SYSTEM VIA INSTALLATION OF TEMPORARY EARTHEN BERMS AND/OR ADDITIONAL BRACING.
10. EXCEEDANCE ACTION PLAN:
   A. IF ANY MONITORING MEASUREMENT EXCEEDS ALLOWABLE LIMITS, THE OWNER, CONSTRUCTION MANAGER, AND CONTRACTOR WILL BE NOTIFIED AND THE FOLLOWING ACTIONS SHALL BE TAKEN.
      a. THE CONTRACTOR WILL IMMEDIATELY STOP WORK IN THE VICINITY OF THE EXCEEDANCE.
      b. INSPECT THE BUILDING (OR PORTIONS THEREOF) FOR POTENTIAL DAMAGE. INSPECTIONS SHALL BE MADE BY SPECIAL INSPECTION ENGINEER FOR STRUCTURAL STABILITY, THE CONTRACTOR, HIS ENGINEER, ARCHITECT, THE CONSTRUCTION MANAGER, OWNER'S ENGINEERS, AND THE ADJACENT BUILDING'S ENGINEERS.
      c. IMMEDIATE NOTIFICATION TO DOB IN CASE OF DAMAGE OR UNSAFE CONDITION.
      d. EXCAVATION AND FOUNDATION CONSTRUCTION PROCEDURES SHALL BE RE-ASSESSED AS NECESSARY TO MAINTAIN VIBRATION LEVELS AND MOVEMENTS WITHIN ACCEPTABLE LIMITS.
      e. WORK STOPPAGE TO ASSESS EXCAVATION METHODS AND TO INSPECT THE BUILDINGS IDENTIFIED HEREIN FOR DAMAGE IS AT THE OWNER'S DISCRETION.
      f. DEVELOP ALTERNATE METHODS AND PROCEDURES, SUBJECT TO THE REVIEW AND APPROVAL OF THE OWNER'S ENGINEERS AND THE ADJACENT BUILDING'S ENGINEERS.
      g. RESUME WORK USING THE AGREED UPON ALTERNATIVE METHOD.
      h. DOB WILL BE NOTIFIED OF EVENTS THAT EXCEED ALLOWABLE LIMITS AND OF CORRECTIVE MEASURES IMPLEMENTED TO MAINTAIN ACCEPTABLE LIMITS.
      i. MONITORING SHALL REMAIN IN PLACE AND WILL BE INSPECTED DURING ALL PHASES OF CONSTRUCTION.
