1. Introduction

This Construction Completion Report (CCR) is being prepared on behalf of Rolling Frito-Lay Sales, LP (Frito-Lay). The purpose of this report is to provide information and documentation for the electrical vehicle (EV) charging station excavation activities performed at the Frito-Lay Brownfield Cleanup Program (BCP) site located at 202-218 Morgan Avenue, Brooklyn, Kings County, New York and designated as BCP Site #C224133 (the Site, Figure 1) between November 17, 2025 and November 25, 2025. Frito-Lay currently leases the Site and continues to utilize it for parking of delivery and employee vehicles.

Following the excavation, Frito-Lay installed 19 EV charging stations, capable of charging up to 38 vehicles, on the Site as part of their plan to electrify their delivery vehicle fleet. The installation of the required electrical conduits and charger supports required penetration of the Site's soil cover engineering control and excavation and management of potentially contaminated soils, which was performed in accordance with the New York State Department of Environmental Conservation (NYSDEC) approved Excavation Work Plan (EWP, dated November 5, 2025 and approved by NYSDEC on November 7, 2025) and Site Management Plan, and 29 CFR 1910.120, by qualified contractors.

Additional details are provided below.

1.1 Scope and Limitations

This report has been prepared by GHD for Rolling Frito-Lay Sales, LP (Frito-Lay), Rolling Frito-Lay Sales, LP, the New York State Department of Environmental Conservation, and the New York State Department of Health and may only be used and relied on by Rolling Frito-Lay Sales, LP (Frito-Lay), Rolling Frito-Lay Sales, LP, the New York State Department of Environmental Conservation, and the New York State Department of Health for the purpose agreed between GHD, Rolling Frito-Lay Sales, LP (Frito-Lay), Rolling Frito-Lay Sales, LP, the New York State Department of Environmental Conservation, and the New York State Department of Health, as set out in this report.

GHD otherwise disclaims responsibility to any person other than Rolling Frito-Lay Sales, LP (Frito-Lay) arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions, and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions, and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

The opinions, conclusions, and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the Site may be different from the Site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular Site conditions, such as the location of buildings, services, and vegetation. As a result, not all relevant Site features and conditions may have been identified in this report.

GHD has prepared this report on the basis of information provided by Rolling Frito-Lay Sales, LP (Frito-Lay) and others who provided information to GHD (including Government authorities), which GHD has not independently verified or checked beyond the agreed scope of work. GHD does not accept liability in connection with such unverified information, including errors and omissions in the report which were caused by errors or omissions in that information.

2. Summary of Activities

Excavation activities were performed by Posillico (contractor) with GHD providing general oversight and air monitoring in accordance with the EWP and Community Air Monitoring Plan (CAMP). Excavation activities took place between

November 17-20, 2025, followed by the installation of electrical conduits and charger supports for EV charging stations and final backfill of excavations on November 24-25, 2025. An approximate 125-foot length of trench, approximately 3-feet wide and 2-feet deep, was excavated along the northern side of the Site. In total, approximately 35 cubic yards of soil were excavated, with 5.09 tons (approximately 2-3 cubic yards) disposed of at Conestoga Landfill, a permitted off-site facility located in Morgantown, Pennsylvania. The remaining soil was reused to backfill the excavated trench and conduit. The excavation area was repaved to restore the soil cover engineering control.

A qualified person, who directly reports to a PE who is licensed and registered in New York State, oversaw all invasive work, including the excavation and load-out of excavated material, and the placement of backfill. Approximate extents of excavations are depicted on Figure 2. A photo log of the excavation activities is provided in Appendix A.

2.1 Soil Screening Methods

Visual, olfactory, and instrument-based (e.g. photoionization detector) soil screening was performed during all excavations into known or potentially contaminated material (remaining contamination) or a breach of the cover system. Soil was not observed to be stained or discolored, have a sheen, or produce elevated PID readings (i.e., sustained 10 parts per million [ppm] or greater) during the excavation activities, and therefore were not considered to be potentially contaminated and did not need to be segregated. Pre-characterization soil sample analytical results similarly did not indicate the presence of impacted soils in the excavation area (refer to the summary provided in the EWP for additional details).

2.2 Soil Staging Methods

Soil staging was necessary on a temporary basis until the soils were returned to the excavation. The soils were placed on polyethylene sheeting and stockpiles were kept covered at all times with appropriately anchored tarps unless they were being actively accessed. Excess soils that could not be placed back into the excavation were disposed of at an approved landfill.

2.3 Materials Excavation, Transport, and Disposal Off-Site

As discussed in Section 2, a total of approximately 35 cubic yards of soil was excavated. Prior to excavation, soils around the Site were pre-characterized for disposal facility approval and reuse determination by advancing soil borings and collecting soil samples for laboratory analysis. Soils were analyzed for toxicity characteristic leaching procedure (TCLP) volatile organic compounds (VOCs), TCLP semi-volatile organic compounds (SVOCs), TCLP Resource Conservation and Recovery Act (RCRA) metals, TCLP herbicides and pesticides, poly-chlorinated biphenyls (PCBs), pH, and total solids.

The previous soil sample results that were applicable to the areas of proposed excavations can be found in Appendix A of the EWP.

Since soils were only evidenced to be minimally impacted and were determined to be acceptable from a structural standpoint by the contractor, excavated materials were used to backfill the excavation below the asphalt pavement engineering control.

In total, 5.09 tons of materials (approximately 2-3 cubic yards) was transported off-Site in a single truck and disposed of at the Conestoga Landfill in Morgantown, Pennsylvania on November 25, 2025. In addition to the excavated materials, the contents of three drums containing waste soil from the pre-characterization boreholes were also disposed of (included in the 5.09 tons). All transport of materials was performed by a licensed hauler in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. The hauler was appropriately licensed, trucks properly placarded, and truck routes were followed (to the extent GHD is aware). Manifest and delivery tickets can be found in Appendix B. As the truck never left the asphalt-paved area, there was no need to implement a truck wash during these activities.

2.4 Materials Reuse On-Site

Of the approximate 35 cubic yards excavated, approximately 32-33 cubic yards were reused to backfill the excavated trench. Soils used to backfill the excavation were screened by GHD personnel as they were removed and determined to be suitable for reuse from an environmental perspective. The contractor made the determination that excavated soils were suitable for reuse from a structural standpoint. On November 24, 2025, excavated soil was used as backfill to within six inches of the ground surface, leaving room for the cover system restoration discussed in 2.1.6. No soil was reused on-Site in an area other than the excavation from which it came during completion of these activities.

2.5 Fluids Management

No groundwater was encountered during the excavation activities that required management. No dewatering was required, and no waters requiring handling, transportation, or disposal were generated.

2.6 Cover System Restoration

After the completion of soil removal and other invasive activities, the existing cover system was restored in kind (i.e., asphalt pavement) in a manner that complied with the Decision Document prepared by NYSDEC and dated July 2011.

No changes were made to the type of cover system from that which existed prior to the excavation. Therefore, there is no need to update the Site Management Plan or Environmental Easement following the completion of this work.

2.7 Backfill From Off-Site Sources

No backfill materials were imported to the Site as part of the excavation activities.

2.8 Stormwater Pollution Prevention

A Stormwater Pollution Prevention Plan was developed and included in the EWP. There are no catch basins or discharge points located in the vicinity of the excavation area and the area beyond the excavation limits was asphalt pavement. As such, there was no need for any type of barrier to prevent runoff. Soil stockpiles were kept on polyethylene sheeting and covered when not in use, as previously indicated, in order to limit potential transport of materials.

2.9 Excavation Contingency Plan

An excavation contingency plan was included in the EWP in the event that underground tanks, grossly impacted soils, drums, or other previously unidentified contaminant sources were found during post-remedial subsurface excavations or development related construction.

There were no underground tanks, grossly impacted soils, drums, or other previously unidentified contaminant sources discovered during excavation activities.

2.10 Community Air Monitoring Plan

Air monitoring was conducted during intrusive Site work, in accordance with a NYSDEC-approved Site-specific Community Air Monitoring Plan (CAMP), as required by Appendix A-1 of NYSDEC's DER-10 guidance document. The CAMP was included as Appendix C of the EWP.

Portable air monitoring stations were set up on the Site perimeter to measure VOCs and respirable dust as appropriate for wind or weather conditions. The location of air sampling stations was based on generally prevailing wind conditions observed at the Site during work activities. These locations were adjusted on a daily or more frequent basis based on actual wind directions to provide an upwind and a downwind monitoring station, to the extent

practicable given the Site's proximity to the English Kills and public roadways. The upwind and downwind CAMP stations were monitored to ensure that there were no exceedances of the CAMP action levels at the downwind location. Action levels were 5 ppm over background (upwind) for VOCs and 100 ug/m³ above background (upwind) for particulate, each over a 15-minute average.

There were no exceedances of action levels listed in the CAMP during construction activities. The complete VOC and dust CAMP data in raw form is contained in Appendix C.

2.11 Odor Control Plan

An odor control plan was included in the EWP in the event nuisance odors arose during the excavation activities.

There were no issues regarding nuisance odors or odor complaints during excavation activities.

2.12 Dust Control Plan

As discussed in Section 2.10, particulate monitoring was conducted according to the CAMP provided in Appendix C of the EWP. Particulate levels at the Site did not exceed the thresholds listed in the CAMP and no airborne dust was observed on the Site or leaving the Site.

Due to the majority of the Site being covered in asphalt pavement and the limited excavation areas, there was no need for dust control during excavation activities.

2.13 Other Nuisances

A plan was developed and utilized by the contractor for all remedial work to ensure compliance with local noise control ordinances.

No equipment or operations are known to have exceeded permissible sound levels for construction and equipment operations established by all Federal, State, and local agencies having jurisdiction. No complaints were received from Site occupants or the surrounding community during completion of the work.

3. Summary and Conclusions

Frito-Lay has completed excavation activities and installation of 19 EV charging stations at the Frito-Lay BCP Site located at 202-218 Morgan Avenue, Brooklyn, New York. The installation of the required electrical conduits and charger supports required penetration of the Site's soil cover engineering control, and excavation and management of potentially contaminated soils, which was performed in accordance with the NYSDEC approved EWP and SMP.

Approximately 35 cubic yards of soil were excavated with 5.09 tons (approximately 2-3 cubic yards) disposed of at a permitted off-site facility. The excavation was backfilled with the remainder of the excavated materials, and the soil cover engineering control was restored to its original condition.

No grossly contaminated materials were encountered during excavation activities and no complaints were received.

All excavation, backfilling, and disposal activities complied with the NYSDEC-approved November 2025 EWP and satisfied the requirements of the SMP approved by NYSDEC.

4. Certification

I, Jeffrey Paul Lambert, certify that I am currently a NYS registered Professional Engineer, I had primary direct responsibility for the implementation of the subject construction program, and I certify that the Excavation Work Plan was implemented and that all construction activities were completed in substantial conformance with the DER-approved Excavation Work Plan.

Jeffrey Paul Lambert, P.E.
