Notes Utilized Throughout Tables	
Groundwater Tables	
J -	Estimated Value
U -	Compound was analyzed for but not detected
B -	The analyte was found in an associated blank as well as in the sample
R -	Sample results rejected by validator
UJ -	Analyte was not detected. The associated reported quantitation limit is an estimate
FD -	Duplicate
µg/L -	Micrograms per liter
NYSDEC -	New York State Department of Environmental Conservation
AWQSGVs -	Ambient Water-Quality Standards and Guidance Values
--	No NYSDEC AWQSGV available
Bold data indicates that parameter was detected above the NYSDEC AWQSGVs

APPENDIX A

Survey Map, Metes and Bounds and Environmental Easement

Section 3, Block 7969, Lot 9

ALL that certain plot, piece or parcel of land situate, lying and being and the Borough of Manhattan, and County, City and State of New York bounded and described as follows:

BEGINNING at a point on the Easterly side of Utica Avenue distant 200 feet northerly from the corner formed by the intersection of the Easterly side of Utica Avenue and the northerly side of Glenwood Road;

RUNNING THENCE easterly along the southerly side of former Folger Place now closed 362.56 feet to the westerly side of Kings Highway 270.93 feet to the land formerly of Bertha Campbell;

RUNNING THENCE westerly along said land formerly of Bertha Campbell and parallel with the northerly side of former Folger Place 508.28 feet to the easterly side of Utica Avenue; and

RUNNING THENCE southerly along the easterly side of Utica Avenue 228.42 feet to the point or place of BEGINNING.

Said premises being known as and by the street number 5200 Kings Highway, Brooklyn, New York.

VICINITY MAP

**METES & BOUNDS DESCRIPTION
ENVIRONMENTAL EASEMENTS 1 THROUGH 3**

ENVIRONMENTAL EASEMENT 1

BEGINNING AT A POINT ON THE SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), SAID POINT BEING DISTANT THE FOLLOWING THREE (3) COURSES FROM THE INTERSECTION OF THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH) WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
 - CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 51.75 FEET TO A POINT ON SAID SOUTHERLY LINE OF LOT 9, BLOCK 7969, THENCE;
 - ALONG SAID SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), WESTERLY, TURNING AN EXTERIOR ANGLE OF 122 DEGREES - 32 MINUTES - 06 SECONDS, A DISTANCE OF 121.06 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
- NORTHERLY TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 18.42 FEET TO A POINT, THENCE;
 - EASTERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 6.77 FEET TO A POINT, THENCE;
 - NORTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 80.00 FEET TO A POINT, THENCE;
 - NORTHERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 40.00 FEET TO A POINT, THENCE;
 - SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 70.00 FEET TO A POINT, THENCE;
 - WESTERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 66.77 FEET TO A POINT, THENCE;
 - SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 18.42 FEET TO A POINT ON THE AFOREMENTIONED SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), THENCE;
 - EASTERLY, ALONG SAID FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 180.00 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 8,915 SQUARE FEET OR 0.2047 ACRE

ENVIRONMENTAL EASEMENT 2

BEGINNING AT A POINT ON THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH ROW), SAID POINT BEING DISTANT THE FOLLOWING TWO (2) COURSES FROM THE INTERSECTION OF SAID WESTERLY SIDE OF KINGS HIGHWAY WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
 - CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 115.11 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
- NORTHERLY, CONTINUING ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 21.84 FEET TO A POINT, THENCE;
 - NORTHERLY, TURNING AN INTERIOR ANGLE OF 147 DEGREES - 27 MINUTES - 54 SECONDS, A DISTANCE OF 16.76 FEET TO A POINT, THENCE;
 - WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 40.00 FEET TO A POINT, THENCE;
 - SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - EASTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 28.36 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 1,294 SQUARE FEET OR 0.0297 ACRE

ENVIRONMENTAL EASEMENT 3

BEGINNING AT A POINT ON THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH ROW), SAID POINT BEING DISTANT THE FOLLOWING TWO (2) COURSES FROM THE INTERSECTION OF SAID WESTERLY SIDE OF KINGS HIGHWAY WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
 - CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 281.17 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
- CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 41.52 FEET TO A POINT, THENCE;
 - WESTERLY, TURNING AN INTERIOR ANGLE OF 57 DEGREES - 27 MINUTES - 54 SECONDS, A DISTANCE OF 60.00 FEET TO A POINT, THENCE;
 - SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - EASTERLY, TURNING AN ANGLE OF 90 DEGREES - 00 MINUTES - 00 SECONDS, A DISTANCE OF 37.67 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 1,709 SQUARE FEET OR 0.0392 FEET

ALL THREE (3) ENVIRONMENTAL EASEMENTS
CONTAINING A TOTAL AREA OF 11,918 SQUARE FEET OR 0.2736 ACRE

NOTES:

- PROPERTY KNOWN AS LOT 9, IN BLOCK 7969 AS DESIGNATED ON THE NEW YORK CITY DIGITAL TAX MAP, HAVING AN EFFECTIVE DATE OF NOVEMBER 10, 2015.
- AREA OF LOT 9, BLOCK 7969: 99,456 S.F. OR 2.2832 AC.
AREA OF ENVIRONMENTAL EASEMENT 1: 8,915 S.F. OR 0.2047 AC.
AREA OF ENVIRONMENTAL EASEMENT 2: 1,294 S.F. OR 0.0297 AC.
AREA OF ENVIRONMENTAL EASEMENT 3: 1,709 S.F. OR 0.0392 AC.
TOTAL AREA OF ENVIRONMENTAL EASEMENT: 11,918 S.F. OR 0.2736 AC.
- LOCATION OF UNDERGROUND UTILITIES HAVE BEEN OMITTED FROM THIS PLAN. BEFORE ANY EXCAVATION IS TO BEGIN, ALL UNDERGROUND UTILITIES SHOULD BE VERIFIED AS TO THEIR LOCATION, SIZE AND TYPE BY THE PROPER UTILITY COMPANIES.
- THIS SURVEY WAS PREPARED WITH REFERENCE TO A TITLE COMMITMENT REPORT PREPARED BY KENSINGTON VANGUARD TITLE AGENCY AS AGENTS FOR STEWART TITLE INSURANCE COMPANY, TITLE NO. 831691 (S-NY-CP-KT), HAVING AN EFFECTIVE DATE OF DECEMBER 20, 2017.**
BY GRAPHIC PLOTTING, PROPERTY IS LOCATED IN FLOOD HAZARD ZONE X (AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN) PER NATIONAL FLOOD INSURANCE PROGRAM FLOOD INSURANCE RATE MAP NO. 3604970218F, MAP REVISED: SEPTEMBER 5, 2007.
BE ADVISED THAT FEMA HAS POSTED A PRELIMINARY MAP FOR THIS AREA AND SHOWS THE PROPERTY LOCATED IN FLOOD HAZARD ZONE X (AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN) PER NATIONAL FLOOD INSURANCE PROGRAM FLOOD INSURANCE RATE MAP NO. 3604970218G, DATED: DECEMBER 5, 2013.
- THERE WERE NO VISIBLE STREAMS OR NATURAL WATER COURSES IN THE PROPERTY AT THE TIME OF FIELD SURVEY.

- PROPOSED EXCAVATION DEPTHS AND ADDITIONAL ENDPOINT SAMPLES, KRISTAL AUTO MALL, 5200 KINGS HIGHWAY, BROOKLYN, NEW YORK, PREPARED FOR: BRIDGES DEVELOPMENT GROUP, PREPARED BY ROUX ASSOCIATES, INC., DATED: SEPTEMBER 27, 2018, PROJECT NO. 2861.0001Y000, PLATE NO. 2A.

DESCRIPTION FOR LOT 9, BLOCK 7969:

ALL THAT CERTAIN PLOT, PIECE OR PARCEL OF LAND, WITH THE BUILDINGS AND IMPROVEMENTS THEREON, ERECTED, SITUATE, LYING AND BEING IN THE BOROUGH OF BROOKLYN, COUNTY OF KINGS, CITY AND STATE OF NEW YORK, BOUNDED AND DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT ON THE EASTERLY SIDE OF UTICA AVENUE, DISTANT 200 FEET NORTHERLY FROM THE CORNER FORMED BY THE INTERSECTION OF THE EASTERLY SIDE OF UTICA AVENUE AND THE NORTHERLY SIDE OF GLENWOOD ROAD;

RUNNING THENCE EASTERLY, ALONG THE SOUTHERLY SIDE OF FORMER FOLGER PLACE, NOW CLOSED, 362.56 FEET TO THE WESTERLY SIDE OF KINGS HIGHWAY;

THENCE NORTHERLY ALONG THE WESTERLY SIDE OF KINGS HIGHWAY 270.93 FEET TO A POINT;

THENCE WESTERLY, AND PARALLEL WITH THE NORTHERLY SIDE OF FORMER FOLGER PLACE, 508.28 FEET TO THE EASTERLY SIDE OF UTICA AVENUE;

THENCE SOUTHERLY, ALONG THE EASTERLY SIDE OF UTICA AVENUE, 228.42 FEET TO THE POINT OR PLACE OF BEGINNING.

This property is subject to an environmental easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the New York Environmental Conservation Law. The engineering and institutional controls for this Easement are set forth in the Site Management Plan (SMP). A copy of the SMP must be obtained by any party with an interest in the property. The SMP can be obtained from NYS Department of Environmental Conservation, Division of Environmental Remediation, Site Control Section, 625 Broadway, Albany, NY 12233 or at denweb@dec.ny.gov.

UNAUTHORIZED ALTERATION OR ADDITION TO A SURVEY MAP BEARING A LICENSED LAND SURVEYOR'S SEAL IS A VIOLATION OF SECTION 7209, SUB-DIVISION 2, OF THE NEW YORK STATE EDUCATION LAW.

METES & BOUNDS DESCRIPTION
ENVIRONMENTAL EASEMENTS 1 THROUGH 3
LOT 9, BLOCK 7969
BOROUGH OF BROOKLYN
KINGS COUNTY, CITY & STATE OF NEW YORK

ENVIRONMENTAL EASEMENT 1

BEGINNING AT A POINT ON THE SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), SAID POINT BEING DISTANT THE FOLLOWING THREE (3) COURSES FROM THE INTERSECTION OF THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH) WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- A) NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
 - B) CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 51.75 FEET TO A POINT ON SAID SOUTHERLY LINE OF LOT 9, BLOCK 7969, THENCE;
 - C) ALONG SAID SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), WESTERLY, TURNING AN EXTERIOR ANGLE OF 122 DEGREES – 32 MINUTES – 06 SECONDS, A DISTANCE OF 121.06 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
- 1. NORTHERLY TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 18.42 FEET TO A POINT, THENCE;
 - 2. EASTERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 6.77 FEET TO A POINT, THENCE;
 - 3. NORTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - 4. WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 80.00 FEET TO A POINT, THENCE;
 - 5. NORTHERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
 - 6. WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 40.00 FEET TO A POINT, THENCE;

7. SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 70.00 FEET TO A POINT, THENCE;
8. WESTERLY, TURNING AN EXTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 66.77 FEET TO A POINT, THENCE;
9. SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 18.42 FEET TO A POINT ON THE AFOREMENTIONED SOUTHERLY SIDE OF FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), THENCE;
10. EASTERLY, ALONG SAID FORMER FOLGER PLACE PER DEED (ALSO BEING THE SOUTHERLY LINE OF LOT 9, BLOCK 7969), TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 180.00 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 8,915 SQUARE FEET OR 0.2047 ACRE

ENVIRONMENTAL EASEMENT 2

BEGINNING AT A POINT ON THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH ROW), SAID POINT BEING DISTANT THE FOLLOWING TWO (2) COURSES FROM THE INTERSECTION OF SAID WESTERLY SIDE OF KINGS HIGHWAY WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- A) NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
- B) CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 115.11 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
1. NORTHERLY, CONTINUING ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 21.64 FEET TO A POINT, THENCE;
2. NORTHERLY, TURNING AN INTERIOR ANGLE OF 147 DEGREES – 27 MINUTES – 54 SECONDS, A DISTANCE OF 16.76 FEET TO A POINT, THENCE;
3. WESTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 40.00 FEET TO A POINT, THENCE;
4. SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;

5. EASTERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 28.36 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 1,294 SQUARE FEET OR 0.0297 ACRE

ENVIRONMENTAL EASEMENT 3

BEGINNING AT A POINT ON THE WESTERLY SIDE OF KINGS HIGHWAY (VARIABLE WIDTH ROW), SAID POINT BEING DISTANT THE FOLLOWING TWO (2) COURSES FROM THE INTERSECTION OF SAID WESTERLY SIDE OF KINGS HIGHWAY WITH THE NORTHERLY SIDE OF GLENWOOD AVENUE (80' WIDE):

- A) NORTHERLY, ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 201.34 FEET TO A POINT, THENCE;
- B) CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 281.17 FEET TO THE POINT AND PLACE OF BEGINNING AND FROM SAID BEGINNING POINT RUNNING, THENCE;
1. CONTINUING NORTHERLY ALONG SAID WESTERLY SIDE OF KINGS HIGHWAY, A DISTANCE OF 41.52 FEET TO A POINT, THENCE;
2. WESTERLY, TURNING AN INTERIOR ANGLE OF 57 DEGREES – 27 MINUTES – 54 SECONDS, A DISTANCE OF 60.00 FEET TO A POINT, THENCE;
3. SOUTHERLY, TURNING AN INTERIOR ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 35.00 FEET TO A POINT, THENCE;
4. EASTERLY, TURNING AN ANGLE OF 90 DEGREES – 00 MINUTES – 00 SECONDS, A DISTANCE OF 37.67 FEET TO THE POINT AND PLACE OF BEGINNING.

CONTAINING 1,709 SQUARE FEET OR 0.0392 FEET

ALL THREE (3) ENVIRONMENTAL EASEMENTS
CONTAINING A TOTAL AREA OF 11,918 SQUARE FEET OR 0.2736 ACRE

SEPTEMBER 2019

CERTIFICATIONS

I, Charles McGuckin, P.E., am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Remedial Action Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Remedial Action Work Plan.

I certify that the data submitted to the Department with this Final Engineering Report demonstrates that the remediation requirements set forth in the Remedial Action Work Plan and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established for the remedy.

I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Remedial Action Work Plan.

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an environmental easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by the Department.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Charles McGuckin, P.E., of Roux Environmental Engineering and Geology, D.P.C., am certifying as Owner's Designated Site Representative and I have been authorized and designated by the site owner to sign this certification for the site.

Charles McGuckin

FINAL ENGINEERING REPORT

1.0 BACKGROUND AND SITE DESCRIPTION

Irma C. Pollack, LLC (Pollack) entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in April 2012 to investigate and remediate a 2.28-acre property located in Brooklyn, Kings County, New York (Figure 1). (Prior to that time, from approximately 2007 through 2010, NYSDEC made repeated attempts to have the responsible parties, the long-term tenant and subtenant of the site, undertake the investigation and remediation. The tenant refused to sign the NYSDEC Stipulation and/or Order on Consent; the subtenant signed but failed to implement either the investigation or the remediation.) Pollack submitted and, after NYSDEC approval, implemented a Remedial Investigation Work Plan (RIWP), and subsequently submitted the Remedial Investigation Report for the site on January 8, 2016, which was approved by NYSDEC on September 20, 2016. In January 2017, an Interim Remedial Measure Work Plan (IRMWP) was submitted to NYSDEC and approved on March 7, 2017. The IRM called for manual collection of free phase hydrocarbons. The IRM was implemented between April 2017 and July 2018. A Remedial Action Work Plan (RAWP) was submitted by Pollack in December 2017 that proposed a Track 4 cleanup. On March 23, 2018, PTMA 5200 Kings Highway LLC (PTMA) was added to the BCA by amendment. At or about the same time, Pollack submitted the required Change of Use notice to NYSDEC for the anticipated sale of the site to PTMA. On June 5, 2018, PTMA purchased the site. In August 2018, a revised RAWP was submitted that called for Track 1 cleanup with Track 2 as a potential alternative. The revised RAWP was approved on August 15, 2018. Implementation of the revised RAWP began in November 2018 and was completed in August 2019. The property was remediated to a combination of unrestricted and residential use, and will be used for retail space.

The site is located in the County of Kings, New York and is identified as Block 7969 and Lot 9 on the New York City Tax Map. The site is situated on an approximately 2.28-acre area bounded by a plastic manufacturing company, Favorite Plastics Corp., to the north, a car dealership to the south, Kings Highway to the east, and Utica Avenue to the west (see Figure 1). The boundaries of the site are fully described in Appendix A: Survey Map, Metes and Bounds. An electronic copy of this FER with all supporting documentation is included as Appendix B.

2.0 SUMMARY OF SITE REMEDY

2.1 Remedial Action Objectives

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this site.

2.1.1 Groundwater RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Remove the source of ground or surface water contamination.

2.1.2 Soil RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

2.1.3 Soil Vapor RAOs

RAOs for Public Health Protection

- Prevent impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at the Site.

2.2 Description of Selected Remedy

The site was remediated in accordance with the remedy selected by the NYSDEC in the Decision Document dated August 15, 2018.

The factors considered during the selection of the remedy are those listed in 6NYCRR 375-

1.8. The following are the components of the selected remedy:

1. A Pre-design Investigation (PDI) was conducted to collect waste characterization samples and collect in-situ end-point samples that were used to pre-establish the lower limit of the excavation that is required to meet Unrestricted Use Soil Cleanup Objectives (UUSCOs). Soil sampling on the western edge of the Site along Utica Avenue and the east side of the Site along Kings Highway (which had limited excavation where only slab-on-grade retail construction is proposed) was also conducted during the PDI. Soil samples were also collected from the 10-inch strip between the planned Support of Excavation (SOE) and the adjacent property to the north. A PDI work plan was submitted to NYSDEC under separate cover on June 19, 2018 and approved the next day.
2. A remedial design program was implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program.
3. Survey of the soil borings and monitoring well locations prior to demolition.
4. Site mobilization involving Site security setup, equipment mobilization, utility markouts and marking and staking excavation areas.
5. Implementation of erosion and sediment controls.
6. Site monitoring of airborne volatile organic compounds (VOCs) and particulates in accordance with a NYSDEC approved Community Air Monitoring Plan (CAMP) was conducted during all ground intrusive and soil handling activities. Odor suppression equipment including foaming agents and dispersion pumps and sprayers were mobilized to the Site before the start of ground intrusive activities.
7. The SOE consisting of a drilled secant wall was installed on the northern side of the Site bordering Favorite Plastics. Approximately 261 linear feet of the drilled cut-off wall were installed to approximately 40 feet below grade. For structural reasons, the drilled secant piles were installed approximately 10 inches away from the property line (instead of 24-inch as originally planned) (Figure 2). Twenty two tiebacks were installed through the secant wall for structural stability. The quality of soil in the 10-inch strip was determined during the PDI.
8. Steel sheet piling were installed along the perimeter of the non-aqueous phase liquid (LNAPL) Zone. This included approximately 334 linear feet of the steel sheet piling installed to approximately 28 feet below grade (Figure 2).
9. Drilled soldier piles, rakers, sheeting, walers and heel blocks were installed around the remainder of the north property line and along the south and east property lines so the non LNAPL remedial excavation could be completed.
10. Soil was excavated to approximately 9 to 15 feet below grade across the 77,000 SF of the site where below grade construction is proposed. Within the LNAPL zone, soil was excavated to approximately 13 to 18 feet below grade. Soil was also excavated to a depth of approximately 5 to 9 feet below grade along the

western portion of the Site (by Utica Avenue). All excavated soils were disposed of off-site.

11. Four feet of smear zone soils that straddle the water table within the LNAPL Zone were excavated and disposed of off-site. These saturated soils were stockpiled for shipping the following day. These soils were managed with drying agents (such as saw dust or fly ash) as necessary prior to shipment off-site. The soils were also covered overnight to manage odors.
12. Free-product recovery was actively conducted in the open excavation via skimming technology using a combination of vacuum truck and oil absorbent booms. Recovered free-product was temporarily stored on-site in an aboveground tank for off-site disposal. Recovery continued as long as oil recharge occurred. When only small amounts of sheen were present, oil absorbent booms were deployed in the area to recover the residual product.
13. Dewatering at the Site was required to enable the excavation and subgrade work. Contaminated groundwater from dewatering operations was treated as necessary prior to discharge to the municipal sewer system. Excavation was conducted in conjunction with controlled dewatering using well points to final depths ranging from 15 to 19 feet below grade.
14. Additional endpoint samples were collected within the LNAPL zone in grids 35, 37, 44, 45, 46, and 48 per NYSDEC request. Additional endpoint samples were also collected in grids 4, 7, 8, 9, 11, 12, 18, 19, 28, 29, 59 and along Utica Avenue (DL-63 through DL-67) to determine final excavation depths to achieve Track 1 UUSCOs or Track 2 Residential Soil Cleanup Objectives (RSCOs).
15. Appropriate off-site disposal of all material removed from the Site to permitted facilities in accordance with all Federal, State and local rules and regulations for handling, transport and disposal, and this plan. Sampling and analysis of excavated media was performed as required by the disposal facilities.
16. An in-situ chemical oxidation (ISCO) application of a sodium persulfate-based technology for treatment of VOCs in soil and groundwater was conducted following the completion of product recovery and remedial excavation. The chemical was placed in the LNAPL zone at the bottom of the final excavation depth as well as along sidewalls. ISCO was also applied via 20 injection points along the 10-inch strip behind the SOE to further address soils that exceeded Track 1 UUSCOs to depths of 2 and 6 feet below the water table (Figure 2). A trench (120ft long by 3ft wide) was excavated between the southeast edge of the sheeting (downgradient side) and the newly installed temporary monitoring wells (MW-21, MW-22 and MW-23) and ISCO was applied in the trench below the water table.
17. Two rounds of groundwater sampling were conducted on September 3 and 13, 2019 in the three new monitoring wells in accordance with the Site Management Plan (SMP) submitted to the NYSDEC in July 2019. The results verify the successful remediation of VOCs of concern in groundwater. Results are described in Section 4.6.2.

18. Controlled backfill of the excavated areas to the desired grade with imported clean stone and imported clean soil. Clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) was brought in to complete the backfilling of the excavation and establish the designed grades at the Site.
19. A waterproofing/vapor barrier (Stego Wrap [15 mil] Vapor Barrier by Stego Industries, LLC (for slabs on grade); Preprufe 300R, 160R Plus, Bituthene 4000 and Liquid Membrane by GCP Applied Technologies) (for below grade areas) will be installed on the underside of the foundation slabs, basement slabs, foundation walls and elevator pits.
20. As part of the Track 1 remedy, a soil vapor intrusion evaluation was completed. The evaluation included a provision for implementing actions recommended to address exposures related to soil vapor intrusion.
21. Completion of a Statistical Evaluation (per NYSDEC recommendation) to determine appropriate bounds for the Environmental Easement using the most recent version of USEPA's ProUCL software, version 5.1.002 (5.1) and in accordance with the ProUCL guidance document. Results are described in Section 4.6.1.
22. Submission of a Draft Site Management Plan in July 2019, which describes the Institutional Controls (Environmental Easement) and Groundwater Monitoring Plan.
23. All responsibilities associated with the remedial action, including permitting requirements and pre-treatment requirements, were addressed in accordance with all applicable Federal, State and local rules and regulations.
24. Submission of a Final Engineering Report (FER) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, and describes all Institutional and Engineering Controls to be implemented at the Site, and lists any changes from this RAWP.

A Track 1 cleanup was achieved in 89% of the Site. The remaining 11% of the Site achieved a Track 2 Residential Cleanup therefore the following remedial elements are required:

- Recording of an Environmental Easement, including Institutional Controls to prevent future exposure to any residual contamination remaining at the Site. A copy of the Environmental Easement is being submitted as part of the FER and it will be recorded in the property title records for the Site.

3.0 INTERIM REMEDIAL MEASURES, OPERABLE UNITS AND REMEDIAL CONTRACTS

3.1 Interim Remedial Measures

An Interim Remedial Measure (IRM) Work Plan dated January 18, 2017 was submitted and approved by the NYSDEC on March 7, 2017. The work plan prescribed the use of manual bailing of the free-phase product on a bi-weekly basis from all accessible wells on-site that exhibited free-phase product. This effort began in April 2017 and continued to be performed by Roux until July 2018 just before demolition activities began for the new development. The results of the bailing/gauging activities have been included in the Monthly Progress Reports submitted to NYSDEC during this period (April 2017 through July 2018). [The information and certifications made in these reports were relied upon to prepare this report and certify that the remediation requirements for the site have been met.](#)

3.2 Operable Units

Not applicable.

3.3 Remedial Contracts

Not applicable.

4.0 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved Remedial Action Work Plan (RAWP) for the Kristal Auto Mall site (August, 2018). All deviations from the RAWP are noted below.

4.1 Governing Documents

The applicable documents governing the remedial action are described below.

4.1.1 Site Specific Health & Safety Plan (HASP)

All remedial work performed under this Remedial Action was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal OSHA.

The Health and Safety Plan (HASP) was complied with for all remedial and invasive work performed at the Site.

4.1.2 Quality Assurance Project Plan (QAPP)

The QAPP was included as Appendix I of the Remedial Action Work Plan (RAWP) approved by the NYSDEC. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

4.1.3 Construction Quality Assurance Plan (CQAP)

The Construction Quality Assurance Plan(s) (CQAPs) managed performance of the Remedial Action tasks through designed and documented QA/QC methodologies applied in the field and in the lab. The CQAP provided a detailed description of the observation and testing activities that were used to monitor construction quality and confirm that remedial construction was in conformance with the remediation objectives and specifications.

- Responsibilities and authorities of the organizations and key personnel involved in the design and construction of the remedy.
- The observations and tests that were used to monitor construction and the frequency of performance of such activities.

- The sampling activities, sample size, sample locations, frequency of testing, acceptance and rejection criteria, and plans for implementing corrective measures as addressed in the plans and specifications.
- Requirements for project coordination meetings between the Applicant and its representatives, the Construction Manager, Excavation Contractor, remedial or environmental subcontractors, and other involved parties.
- Description of the reporting requirements for quality assurance activities including such items as daily summary reports, schedule of data submissions, inspection data sheets, problem identification and corrective measures reports, evaluation reports, acceptance reports, and final documentation.
- Description of the final documentation retention provisions.

4.1.4 Soil/Materials Management Plan (SoMP)

The following sections provide the Soil/Material Management Plan (SoMP) that was implemented during the Remedial Action.

4.1.4.1 Soil Screening Methods

Visual, olfactory and PID soil screening and assessment were performed by an experienced field geologist under the direction of the Remedial Engineer during all remedial and development excavations into known or potentially contaminated material. Soil screening was performed regardless of when the invasive work was done and included all excavation and invasive work performed during the remedy and during development phase, such as excavations for foundations and utility work, prior to issuance of the COC.

All primary contaminant sources identified during the remedial action was surveyed by a surveyor licensed to practice in the State of New York. This information is provided on maps in the FER.

Screening was performed by a qualified environmental professional. Resumes were provided for all personnel responsible for field screening (i.e., those representing the Remedial Engineer) of invasive work for unknown contaminant sources during remediation and development work.

4.1.4.2 Stockpile Methods

Excavated soils were directly loaded into trucks, when possible. The excavated soils from the LNAPL zone were saturated, therefore temporary stockpiling was necessary so drying agents could be mixed with the soil prior to loading the material onto the trucks.

Stockpiles were inspected periodically and after every storm event. Results of inspections were recorded in a logbook and maintained at the Site and available for inspection by NYSDEC.

Stockpiles were kept covered at all times with appropriately anchored tarps. Stockpiles were routinely inspected, and damaged tarp covers were promptly replaced.

Soil stockpiles were continuously encircled with silt fences. Hay bales were used as needed near catch basins, surface waters and other discharge points.

Water was available on-site at suitable supply and pressure for use in dust control.

4.1.4.3 Materials Excavation and Load Out

The qualified environmental professional under his supervision oversaw all invasive work and the excavation and load-out of all excavated material.

The Volunteer and its contractors were solely responsible for safe execution of all invasive and other work performed under this Plan.

The remedy included excavation and off-site disposal of contaminant source areas, including:

- grossly contaminated soil, as defined in 6 NYCRR Part 375-1.2(u);
- non-aqueous phase liquids;
- soil with visual waste material or non-aqueous phase liquid; and
- soils which exceed the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs), as defined by 6 NYCRR Part 375-6.8 for those contaminants found in Site groundwater above standards.

Excavation and off-site disposal of on-site soils which exceed UUSCOs, RSCOs, Restricted Residential SCOs (RRCOs) and Restricted Commercial SCOs (RCSCOs), as defined by 6 NYCRR Part 375-6.8.

Soil was excavated to approximately 9 to 15 feet below grade across the 77,000 SF of the site where below grade construction is proposed. Within the LNAPL zone, soil was excavated to approximately 13 to 18 feet below grade. Soil was also excavated to a depth of approximately five to nine feet below grade along the western portion of the Site (by Utica Avenue). All excavated soils were disposed of off-site.

Any excavated saturated soils were managed with the use of drying agents such as fly ash or sawdust to minimize loading of soils with high moisture content.

Loaded vehicles leaving the Site were appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and NYSDOT requirements (and all other applicable transportation requirements).

A truck wash operated on-Site. The Remedial Engineer was responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the Site until the remedial construction is complete.

Locations where vehicles enter or exit the Site were inspected daily for evidence of off-Site sediment tracking.

The Remedial Engineer was responsible for ensuring that all egress points for truck and equipment transport from the Site were clean of dirt and other materials derived from the Site during Site remediation and development. Cleaning of the adjacent streets were performed as needed to maintain a clean condition with respect to Site-derived materials.

The Volunteer and associated parties preparing the remedial documents submitted to the State, and parties performing this work, were responsible for the safe performance of all invasive work, the structural integrity of excavations, and for structures that may be affected by excavations (such as building foundations and bridge footings).

The Remedial Engineer ensured that Site development activities did not interfere with, or otherwise impair or compromise the remedial activities proposed.

Three known USTs were uncovered during excavation. These USTs were properly closed and removed off-site by a licensed Contractor. The USTs were intact and the surrounding soil was excavated which was part of the original excavation plan. The UST documentation is provided in Appendix C.

Development-related grading cuts and fills was not performed without NYSDEC approval and did not interfere with, or otherwise impair or compromise, the performance of remediation required.

Mechanical processing of historical fill and contaminated soil on-Site was not performed.

All primary contaminant sources identified during the Remedial Action was surveyed by a surveyor licensed to practice in the State of New York. The survey information is shown on maps reported in the FER.

4.1.4.4 Materials Transport Off-Site

All transport of materials was performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers were appropriately licensed and trucks properly placarded.

Truck transport routes were described in the RAWP. All trucks loaded with Site materials exited the vicinity of the Site using only these approved truck routes.

Trucks were prohibited from stopping and idling in the neighborhood outside the project Site.

Egress points for truck and equipment transport from the Site were kept clean of dirt and other materials during Site remediation and development.

Queuing of trucks was performed on-Site in order to minimize off-Site disturbance. Off-Site queuing was minimized to the extent practical.

Material transported by trucks exiting the Site were secured with tight-fitting covers.

All trucks were washed prior to leaving the Site. Truck wash waters were collected and disposed of off-Site in an appropriate manner.

4.1.4.5 Materials Disposal Off-Site

All soil/ fill/ solid/ liquid waste excavated and removed from the Site was treated as contaminated and regulated material and was disposed in accordance with all local, State (including 6NYCRR Part 360) and Federal regulations.

Any excavated soil with significant moisture content (sediments, wet soil) was pre-treated on-site with the use of drying agents before it was disposed of off-site.

Material that did not meet Track 1 UUSCOs was not taken to a New York State recycling facility (6NYCRR Part 360-16 Registration Facility).

All disposal facility applications and acceptance letters are provided in Appendix D. The Site information, as well all historical data and environmental reports as well as the waste characterization data were provided to each facility during the application process.

Non-hazardous historic fill and contaminated soils taken off-Site were handled, at minimum, as a Municipal Solid Waste per 6NYCRR Part 360-1.2.

Historical fill and contaminated soils from the Site were not disposed at Part 360-16 Registration Facilities (also known as Soil Recycling Facilities).

Construction and Demolition (C&D) material was disposed of off-site at permitted facilities.

Hazardous wastes derived from on-Site were transported, and disposed of in full compliance with applicable local, State, and Federal regulations.

Appropriately licensed haulers were used for material removed from this Site and were in full compliance with all applicable local, State and Federal regulations.

Waste characterization was performed for off-Site disposal in a manner suitable to the receiving facility and in conformance with applicable permits. Sampling and analytical methods, sampling frequency and analytical results are included in Appendix E. All data available for soil/material to be disposed at a given facility was submitted to the disposal facility with suitable explanation prior to shipment and receipt.

4.1.4.6 Materials Reuse On-Site

On-site soil was not reused for backfill.

4.1.4.7 Fluids Management

Dewatering at the Site was required to enable the excavation and subgrade work. Contaminated groundwater from dewatering operations was treated as necessary prior to discharge to the municipal sewer system. The well point system lowered the groundwater level to approximately two feet below the proposed depth of excavation.

All liquids removed from the Site, including dewatering fluids (free-product, groundwater), were handled, transported and disposed in accordance with applicable local, State, and Federal regulations. Liquids discharged into the New York City sewer system were addressed through approval by NYCDEP (Appendix F).

Dewatered fluids were not recharged back to the land surface or subsurface of the Site. Dewatering fluids were managed off-Site.

Free-product recovery was actively conducted in the LNAPL zone via skimming technology using a combination of vacuum truck and oil absorbent booms by AARCO. Recovered free-product was temporarily stored on-site in an appropriate above ground tank and disposed of off-site at a later date. The free-product was trucked off site periodically by a licensed waste hauler for disposal at an NYSDEC-licensed facility.

4.1.4.8 Demarcation

A Track 1 Unrestricted Use cleanup was achieved in 89% of the Site, the remaining 11% achieved a Track 2 Residential Use cleanup and therefore a physical demarcation is not required.

4.1.4.9 Backfill from Off-Site Sources

Clean Soil from Archer Green, Queens, Front Street, Brooklyn and the NYSDEC BCP Powerhouse Site in Brooklyn, New York were imported to the Site per NYSDEC approval. Prior to importation, Roux collected soil samples from the Archer Green and Front Street sites and the results were submitted to NYSDEC for review and approval. Sampling at the NYSDEC BCP Powerhouse Site was completed by their own team and satisfied DER-10 requirements.

Clean stone (structural fill) was used to backfill some areas prior to placement of imported clean fill to meet the redevelopment grade.

All clean soil required to backfill the excavated areas met the clean fill requirements of 6 NYCRR Part 375-6(d). All materials proposed for import onto the Site were approved by the Remedial Engineer and were in compliance with provisions in the RAWP prior to receipt at the Site.

Material from industrial sites, spill sites, other environmental remediation sites or other potentially contaminated sites were not imported to the Site.

The FER includes the following certification by the Remedial Engineer: “I certify that all import of soils from off-Site, including source evaluation, approval and sampling, has been performed in a manner that is consistent with the methodology defined in the Remedial Action Work Plan.”

All imported soils met NYSDEC approved backfill or cover soil quality objectives for this Site. These NYSDEC approved backfill or cover soil quality objectives are the Unrestricted Use Soil Cleanup Objectives set forth in Table 375-6.8(a) of 6 NYCRR Part 375. Non-compliant soils were not imported onto the Site.

Solid waste was not imported onto the Site.

Trucks entering the Site with imported soils were securely covered with tight fitting covers.

4.1.4.10 Stormwater Pollution Prevention

Barriers and hay bale checks were installed and inspected once a week and after every storm event. Results of inspections were recorded in a logbook and maintained at the Site and available for inspection by NYSDEC. All necessary repairs were made immediately.

Accumulated sediments were removed as required to keep the barrier and hay bale check functional.

All undercutting or erosion of the silt fence toe anchor were repaired immediately with appropriate backfill materials.

Manufacturer's recommendations were followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the RAWP were observed to ensure that they were operating correctly. Where discharge locations or points are accessible, they were inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

Silt fencing or hay bales were installed around the entire perimeter of the remedial construction area.

4.1.4.11 Contingency Plan

No unknown or unexpected contaminated media were identified during invasive Site work.

4.1.4.12 Community Air Monitoring Plan

The CAMP reports are included in Appendix G. Minor temporary exceedances were addressed on-site with the use of water spray and halting work, when necessary.

4.1.4.13 Odor, Dust and Nuisance Control Plan

The FER includes the following certification by the Remedial Engineer: "I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Remedial Action Work Plan."

4.1.4.13.1 Odor Control Plan

Odor suppression equipment including foaming agents and dispersion pumps and sprayers were mobilized to the Site before the start of ground intrusive activities. Specific odor

control methods to be used on a routine basis included limiting open excavation areas and covering excavated soil. In addition, a vacuum truck was deployed at all times during excavation if any LNAPL accumulated in the excavation area that could potentially cause odors. The LNAPL is comprised of motor oil based on previous fingerprinting during the RI and as such, is a petroleum hydrocarbon with high viscosity and low volatility compared to other petroleum hydrocarbons such as gasoline or diesel. Implementation of all odor controls, including the halt of work, were implemented during the remedial action.

All necessary means were employed to prevent on- and off-Site nuisances. At a minimum, procedures included: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils; If odors developed and could not be otherwise controlled, additional means to eliminate odor nuisances included: (d) direct load-out of soils to trucks for off-Site disposal; and (e) use of chemical odorants in spray or misting systems.

4.1.4.13.2 Dust Control Plan

A dust suppression plan that addresses dust management during invasive on-Site work, was implemented, including:

- Dust suppression was achieved through the use of a water hose.
- Gravel was used on roadways to provide a clean and dust-free road surface.
- On-Site roads were limited in total area to minimize the area required for water spraying.
- Stockpiles were covered as necessary.

4.1.4.13.3 Other Nuisances

A plan for rodent control was developed and utilized by the contractor prior to and during Site clearing and Site grubbing, and during all remedial work.

A plan was developed and utilized by the contractor for all remedial work and conformed at a minimum, to NYCDEP noise control standards.

4.1.5 Storm-Water Pollution Prevention Plan (SWPPP)

The erosion and sediment controls for all remedial construction were performed in conformance with requirements presented in the New York State Guidelines for Urban

Erosion and Sediment Control and the site-specific Storm Water Pollution Prevention Plan dated September 26, 2018.

4.1.6 Community Air Monitoring Plan (CAMP)

CAMP equipment was comprised of two sets of a dust meter (Dustrak II) and a PID meter (MiniRAE 3000), each set located downwind and upwind of the work area. Action levels for the dust meter was 100 ug/mL and for the PID meter it was 5ppm.

4.1.7 Contractors Site Operations Plans (SOPs)

The Remediation Engineer reviewed all plans and submittals for this remedial project (i.e., those listed above plus contractor and subcontractor submittals) and confirmed that they were in compliance with the RAWP. All remedial documents were submitted to NYSDEC and NYSDOH in a timely manner and prior to the start of work.

4.1.8 Community Participation Plan

A copy of the PDIWP were mailed to the document repositories on June 18, 2018. A copy of the RIR and RAWP were mailed to the document repositories on July 12, 2018. A Fact Sheet describing the start of the Environmental cleanup for the Site was mailed out on August 30, 2018 to the CPP-approved Contact List.

4.2 Remedial Program Elements

4.2.1 Contractors and Consultants

The project team was comprised of:

- United Construction & Construction Corp/TSD resources (Foundation/Excavation Contractor)
- Ancora Engineering (SOE Engineer)
- MJ&E (controlled inspection of SOE)
- Domani (vibration monitoring)
- Trinity Environmental Corp. (well drilling)
- GTL Construction LLC (Construction Management)
- NYCO Environmental & Dewatering Corp. (Dewatering Contractor)
- AARCO Environmental Services (subcontracted by NYCO, well installation, LNAPL recovery)
- Rain For Rent (Dewatering Tanks and Equipment)
- Alpha Analytical (Environmental Laboratory)

- Gallas Surveying (Surveyor)
- Earth Efficient (Soil Broker, Trucking Management)
- Innovative Recycling (UST Removal Contractor)
- Roux Environmental Engineering and Geology, D.P.C (Charles McGuckin, P.E., Engineer of Record certifying this FER)

4.2.2 Site Preparation

The following was completed prior to the start of the remedial action.

4.2.2.1 Mobilization

A building permit was obtained from the NYCDOB on July 1, 2019. In addition, NYCDEP permits were obtained on June 21, 2019. Documentation of agency approvals are included in Appendix F.

A pre-construction meeting was held with NYSDEC and all contractors on September 17, 2018.

All SEQRA requirements and all substantive compliance requirements for attainment of applicable natural resource or other permits were achieved during this Remedial Action.

A NYSDEC-approved project sign was erected at the project entrance and remained in place during all phases of the Remedial Action.

Mobilization and Site preparation activities included:

1. Mobilization of equipment to the work area.
2. Installation of fencing surrounding the Site limits.
3. Installation of supplemental erosion and sediment control measures in accordance with the New York Guidelines for Urban Erosion and Sediment Control.
4. Limited set-up of decontamination facilities, due to the nature of the project.
5. Truck wash construction.

4.2.2.2 Site Fencing

The fences and gates were closed and locked when there is no activity on the Site and any breaks or gaps were repaired immediately. Temporary fencing (e.g., cones, caution tape, etc.) supplemented the perimeter fencing to delineate and secure the area of on-going remediation activities within the Site such as soil stockpiles, and health and safety exclusion zones. A guard and/or security camera system was present on-site at all times.

4.2.2.3 Erosion and Sedimentation Controls

Soil erosion and sediment control measures for management of storm water were installed in accordance with the New York Guidelines for Urban Erosion and Sediment Control. Hay bales and/or silt fence were placed by the remedial contractor at locations surrounding excavation areas, within the perimeter fencing, to control storm water runoff and surface water from entering or exiting the excavation. These control measures were installed prior to initiating the soil excavation.

4.2.2.4 Stabilized Construction Entrance(s)

Stabilized construction entrances were installed at the egress points from the Site. Any soil spilled on the sidewalk or street immediately adjacent to the Site were promptly removed and the street was cleaned.

4.2.2.5 Utility Markout Layer

The Volunteer and its contractors were solely responsible for the identification of utilities that might be affected by work under the RAWP and implementation of all required, appropriate, or necessary health and safety measures during performance of work under this RAWP. The Volunteer and its contractors were solely responsible for safe execution of all invasive and other work performed under this RAWP. The Volunteer and its contractors obtained local, State or Federal permits or approvals pertinent to such work that was required to perform work under this RAWP.

4.2.2.6 Building Demolition

Prior to the start of active remediation, the Kristal Auto Mall building had a controlled asbestos abatement followed by building demolition including all foundation elements and footings.

4.2.2.7 Support of Excavation (SOE)

As described in the RAWP, the support of excavation consisted of approximately 261 linear feet of drilled secant wall (24-inch diameter tangent grout filled piles), which were installed to approximately 40 feet below grade. The drilled cutoff wall was installed approximately 10 inches from the property line (instead of 24-inch as originally planned) (Figure 2). Twenty two tiebacks were installed through the secant wall for structural stability. The quality of soil in the 10-inch strip was determined during the PDI.

Steel sheet piling were installed along the perimeter of the LNAPL zone. This included

approximately 334 linear feet of steel sheeting being installed to approximately 28 feet below grade. This was done to facilitate excavation and product recovery of the LNAPL zone. The SOE is shown in Figure 2.

Drilled soldier piles, rakers, sheeting, walers and heel blocks were installed around the remainder of the north property line and along the south and east property lines so the non-LNAPL remedial excavation could be completed.

4.2.3 General Site Controls

4.2.3.1 Site Security

Security for the work, equipment, materials, supplies, facilities, personnel, and incidentals was provided throughout the performance of the work at the Site. A perimeter chain-link fence was in place and was maintained and upgraded to construction fence, as appropriate, by the Volunteer during implementation of the remedial action and redevelopment. The Volunteer maintained a sign in/sign out sheet for all visitors to the Site.

4.2.3.2 Reporting

All daily reports are included in the FER (Appendix H). Daily reports were submitted to NYSDEC Project Manager on a daily basis during the performance of the work. The reporting included:

- An update of progress made during the reporting day;
- Locations of work and quantities of material imported and exported from the Site;
- References to alpha-numeric map for Site activities;
- Photolog;
- A summary of any and all complaints with relevant details;
- A summary of CAMP findings, including excursions; and
- An explanation of notable Site conditions.

A digital photolog is also included in Appendix I.

4.2.4 Nuisance Controls

All invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Remedial Action Work Plan. No dust and odor complaints were received during Site excavation work.

4.2.4.1 Truck Wash and Egress Housekeeping

All construction work occurred between 7 A.M. and 4 P.M. from Monday to Friday. Disturbances to the local community were minimized to the extent practical. Trucking for waste disposal from the Site and for backfill materials into the Site followed the proposed truck routes for ingress and egress to the Site are shown in Figure 8 of the RAWP. All trucks loaded with Site materials exited the vicinity of the Site using only these approved truck routes. Trucks were prohibited from stopping and idling in the neighborhood outside the project Site, to the extent practical. Egress points for truck and equipment transport from the Site were kept clean of dirt and other materials during Site remediation. A truck wash pad was set up on-site.

The contractors operating on the Site were responsible for providing all necessary personnel and materials (i.e., traffic lanes, safety cones, etc.) to control traffic entering and exiting the Site and for coordinating traffic control measures with the New York City Police Department, as necessary. Contractors operating on the Site were responsible for all applicable New York City Department of Transportation (NYCDOT) traffic control and notification requirements incorporated into the Traffic Control Plan.

4.2.4.2 Dust Control Plan

A dust suppression plan that addressed dust management during invasive on-site work included:

- Water was available on-site at suitable supply and pressure for use in dust control.
- Gravel was used on roadways to provide a clean and dust-free road surface.
- On-site roads were limited in total area to minimize the area required for water spraying.

4.2.4.3 Odor Control Plan

No nuisance odors were identified during construction.

4.2.4.4 Truck Routing

Trucking for waste disposal from the Site and for backfill materials into the Site followed the proposed truck routes for ingress and egress to the Site are shown in Figure 8 of the RAWP. All trucks loaded with Site materials exited the vicinity of the Site using only these approved truck routes. These routes took into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility, to the extent practicable; (d) limiting total

distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport.

4.2.4.5 Response to Complaints

No odor or dust complaints were received during construction.

4.2.4.6 Other Nuisances

A plan for rodent control was developed and utilized by the contractor prior to and during Site clearing and during all remedial work. A plan was developed and utilized by the contractor for all remedial work and conformed to NYCDEP noise control standards.

4.2.5 CAMP results

CAMP was performed between October 29, 2018 and August 9, 2019. There were no VOCs or dust exceedances caused by excavation activities. Occasional exceedances were caused by nearby truck idling, generator operation and equipment malfunction. Copies of all field data sheets related to the CAMP are provided in electronic format in Appendix G.

4.3 Contaminated Materials Removal

The following media were removed from the Site: non-hazardous soil and lead hazardous soil, petroleum hydrocarbon impacted soil within the LNAPL zone and three known USTs uncovered in the northeast portion of the Site.

A lead hazardous hotspot located in grid 61 (61-WC [0-7']) was delineated on August 31, 2018 per coordination with the soil disposal broker. A 10 ft by 10ft by 7ft deep hotspot was sampled by Roux personnel in all directions (north, west, south and east) and in two depths intervals per location (2.5-3ft deep and 6.5-7ft deep) totaling 8 samples.

As described in the RAWP, the SCO for the Site is Track 1 Unrestricted Use. This was achieved in 89% of the Site, with exception of 9 cells in which a Track 2 Residential SCO was achieved. A list of the SCOs is provided in Table 1.

[A figure showing where the excavation was performed is shown in Figure 3.](#)

4.3.1 Non-Hazardous and Hazardous Soil Disposal

Soil was excavated across the Site to a depth of approximately 9 to 15 feet below grade across the Site where below grade construction is proposed. Within the LNAPL zone, soil was excavated to approximately 13 to 18 feet below grade. Soil was also excavated to a depth of approximately 5 to 9 feet below grade along the western portion of the Site (near

Utica Avenue) (Figure 3). All excavated soils were disposed of off-site.

Letters from Applicants to disposal facility owners and acceptance letters from disposal facility owners are attached in Appendix D.

Table 2 shows the total quantities of each category of material removed from the site and the disposal locations. A summary of the samples collected to characterize the waste, and associated analytical results are summarized in Appendix E.

Approximately 44,611 tons of non-hazardous soils were disposed of off-site and 91 tons of (lead-contaminated) hazardous soils were disposed of off-site, totaling 44,703 tons of soil disposal. Disposal documentation (manifests and weight tickets) are provided in Appendix J (non-hazardous soils) and Appendix K (hazardous soils).

The disposal facilities used during construction and their respective soil volume transported to each facility are:

- Earth Efficient BTL Pocono Summit, Pennsylvania (204 tons)
- Earth Efficiency Greenview, Stroudsburg, Pennsylvania (20,634 tons)
- Barnsdale/Freemansburg Road Facility, Bethlehem, Pennsylvania (3,382 tons)
- Doremus Avenue Redevelopment Project (DARP), Newark, New Jersey (2,467 tons)
- Bethlehem Earth LP Facility, Bethlehem City, Pennsylvania (10,524 tons)
- Soil Safe Metro 12, Carteret, New Jersey (4,035 tons)
- Soil Safe Bridgeport, Logan Township, New Jersey (3,366 tons)
- Cycle Chem, Inc., Elisabeth, New Jersey (91 tons)

4.3.2 C&D Disposal

Approximately 8,490 CY of rock, construction demolition and debris (C&D) was disposed of off-site to the facilities described below. A C&D tracking summary table is provided in Table 3 and disposal documentation is provided in Appendix J.

- Earth Efficient BTL Pocono Summit, Pennsylvania (460 CY)
- Earth Efficient Greenview, Stroudsburg, Pennsylvania (2,640 CY)
- Rockcrete, Elizabeth, New Jersey (880 CY)
- Prospect Park, Prospect Park, New Jersey (3,360 CY)
- Rock Teck, Newark, New Jersey (30 CY)
- Richmond Vanbro, Staten Island, New York (1,120 CY)

4.3.3 Liquid Disposal

The following quantities of oil/oily water were disposed of off-site to the facilities below. Disposal documentation is provided in Appendix L.

- Clean Water of NY, Staten Island, New York (24,952 gallons)
- Dale Transfer Facility, West Babylon, New York (3,543 gallons)

4.3.4 UST Removal

Three known USTs were uncovered on November 5, 2018 and May 24, 2019. These tanks were previously registered under PBS #2-610629, however the PBS application documents for these tanks (labeled UG-1, UG-2 and UG-3) were incorrectly coded. On November 6, 2019, the two hydraulic fluid 550-gallon USTs located in the eastern corner of the former building were closed and removed by IRT, a licensed tank contractor. On May 29, 2019, the other known tank, a waste oil 500-gallon UST was located outside to the east of the former building and was closed and removed by IRT. The location of the USTs are shown in Figure 3. Documentation about the closure is provided in a letter dated August 14, 2019 to the NYSDEC and included as Appendix C.

4.3.5 On-Site Reuse

Site soils were not reused on-site.

4.4 Remedial Performance/Documentation Sampling

4.4.1 PDI Sampling (2018)

A PDI report was submitted to NYSDEC on October 15, 2018 and included as Appendix M. The PDI sampling program was completed between June 18 and 28, 2018 and included the collection of:

- 25 in-situ endpoint soil samples in the LNAPL area;
- 67 (plus 5 duplicates) in-situ endpoint soil samples outside the LNAPL area;
- 26 (plus 1 duplicate) post-excavation sidewall soil samples surrounding the LNAPL excavation area;
- 18 delineation soil samples adjacent to Utica Avenue and southeast corner of the Site; and
- 14 (plus 3 duplicates) delineation soil samples behind the proposed SOE.

Soil samples were analyzed for Target Compound List (TCL) VOCs, TCL SVOCs, TAL Metals, and TCL Pesticides and Herbicides.

In addition, as requested by NYSDEC, Roux collected 4 (plus 1 duplicate) groundwater samples from existing wells and analyzed for emerging contaminants (ECs).

Tables and figure summarizing all end-point sampling is included in Tables 4 through 11 and Figure 3, respectively, and all exceedances of SCOs are highlighted.

The laboratory reported the analytical results in ASP Category B deliverable packages. An EDD in the required NYSDEC format was prepared. QA/QC procedures was used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures was used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses were used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) were collected and analyzed at an ELAP-certified laboratory.

Data Usability Summary Reports (DUSRs) were prepared for all data generated in this remedial performance evaluation program. These DUSRs are included in Appendix N and associated raw is provided electronically in Appendix O.

4.4.2 Waste Characterization Sampling (2018)

A Waste characterization sampling was completed concurrently with the PDI. A total of 100 soil samples were collected and was provided to the disposal facilities as a separate submittal package. The Waste Characterization Report which includes the tables, analytical reports, soil boring logs and a map is provided in Appendix E.

A lead hazardous hotspot located in grid 61 (61-WC (0-7')) was delineated on August 31, 2018 per coordination with the soil disposal broker. A 10 ft by 10ft by 7ft deep hotspot was sampled for TCLP lead by Roux personnel in all directions (north, west, south and east) and in two depths intervals per location (2.5-3ft deep and 6.5-7ft deep) totaling 8 samples. A summary of the results is included in Appendix E and a figure showing the hotspot location is presented in Figure 3.

4.4.3 Additional Endpoint Sampling (2019)

Additional endpoint sampling was completed between January 10 and July 17, 2019. These endpoint samples were collected within the LNAPL zone in grids 35, 37, 44, 45, 46 and 48 in accordance with NYSDEC's request following their review of the PDI sampling results.

Additional endpoint samples were also collected in grids 4, 7, 8, 9, 11, 12, 18, 19, 28, 29, 59 and along Utica Avenue strip (DL-63 through DL-67) to determine final excavation depths to achieve a Track 1 or Track 2 Residential/Restricted Residential SCOs.

A total of 39 soil samples (including 5 duplicates) soil samples were analyzed for TCL VOCs, TCL SVOCs, TAL Metals, and TCL Pesticides and Herbicides.

Tables and figure summarizing all end-point sampling is included in Tables 12 through 16 and Figure 3, respectively, and all exceedances of SCOs are highlighted.

The laboratory reported the analytical results in ASP Category B deliverable packages. An EDD in the required NYSDEC format was prepared. QA/QC procedures was used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures was used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses were used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) were collected and analyzed at an ELAP-certified laboratory.

DUSRs were prepared for all data generated in this remedial performance evaluation program. These DUSRs are included in Appendix N and associated raw is provided electronically in Appendix O.

4.5 Imported Backfill

The following quantities were imported from each facility.

- Archer Green Site, 92-93 168th Street, Queens, NY (2,240 CY of clean fill)
- Front Street Site, 30 Front Street, Brooklyn, NY (2,600 CY of clean fill)
- NYSDEC BCP Powerhouse Site, 322 3rd Ave, Brooklyn, NY (2,480 CY if clean fill)
- Rocktech (Liberty Stone), Newark, NJ (4,041 CY of structural fill/ 1 ½” dense graded aggregate [DGA])
- Russo Recycling, Queens, NY (600 CY of ¾” clean gravel stone)
- Evergreen Recycling of Corona, Queens, NY (375 CY of ¾” clean gravel stone)

Imported documentation (manifests/tickets) is provided in Appendix P. A table of all sources of imported backfill with quantities for each source is shown in Table 17. Location

of placed backfill is presented in Figure 4.

Facility documentation which includes the sampling results and approval letters from NYSDEC for the Archer Green Site (NYCOER Site) and Front Street Site is provided in Appendix D. The NYSDEC BCP Powerhouse Site has been previously sampled by Roux and approved by its NYSDEC case manager. Email documentation is also included in Appendix D. Permit documentation from Rocktech, Russo Recycling and Evergreen Recycling of Corona is provided in Appendix D.

4.6 Contamination Remaining at the Site

After completion of the remedial work and statistical evaluation, soil that exceeded Track 1 UUSCOs but met Track 2 RUSCOs remained in nine grids (grids 2, 3, 4, 9, 10, 11, 13, 19 and 51). The soil in these nine cells is hereafter referred to as the “remaining contamination.” Institutional Controls (ICs), specifically an Environmental Easement, has been incorporated into the Site remedy to control exposure to remaining contamination to ensure protection of public health and the environment as described in the SMP. An Environmental Easement for a portion of the Site was granted to the NYSDEC and recorded with the Kings County Clerk and requires compliance with this SMP and all ICs placed on the Site.

4.6.1 Statistical Evaluation of Soil Data

Post excavation endpoint data collected during the PDI (2018) and remedial action phase (2019) were used to perform a statistical evaluation to determine appropriate bounds for the Track 2 Easement for the Site. The proposed Track 2 Easement encompasses a contiguous area including grids 2, 3, 4, 9, 10, 11, 13, 19 and 51. The analytical dataset utilized for the background statistics is presented Appendix Q.

All statistical tests described below were performed using the most recent version of USEPA’s ProUCL software, version 5.1.002 (5.1) and in accordance with the ProUCL guidance document.

For each contaminant of potential concern (COPC), the maximum detected concentration from the dataset was compared with the NYSDEC Part 375 Unrestricted Use SCOs. Only parameters that exceeded the SCO in one or more samples were retained for additional analyses. For each of these parameters, the 95% upper confidence limit of the mean concentration ($UCL_{95_{mean}}$) was calculated for the Site as a whole (i.e., all grids).

The $UCL_{95_{mean}}$ provides a conservative estimate of the central tendency of each dataset. The results of these analyses are recorded in Table 1 below. Parameters with the

UCL95_{mean} for All Grids exceeding the SCO were retained as COPCs.

Table 1

Parameter	Units	NYSDEC Part 375 Unrestricted Use SCO	UCL95 _{mean} for All Grids
VOC	µg/kg		
Acetone		50	25.17
Xylenes (total)		260	41.04
SVOC	µg/kg		
3&4-Methylphenol		330	160.3
Indeno[1,2,3-cd]pyrene		500	118.9
MET	mg/kg		
Chromium, Trivalent		30	13.99
Chromium		30	14.40
Copper		50	22.69
Lead		63	79.39
Mercury		0.18	0.265
Nickel		30	20.59
Zinc		109	116.9
PCB	µg/kg		
PCBs, Total		100	31.94
PEST	µg/kg		
4,4'-DDD		3.3	2.986
4,4'-DDE		3.3	5.463
4,4'-DDT		3.3	14.48

The COPCs in the highlighted cells in the UCL95_{mean} column in Table 1 exceed the NYSDEC Part 375 Unrestricted Use SCOs and were therefore retained for further calculation. The UCL95_{mean} for the retained COPCs were recalculated after removing Grids 2-4, 9-11, 13, 19, and 51. The results of these analyses are recorded in Table 2 below.

Table 2

Parameter	Units	NYSDEC Part 375 Unrestricted Use SCO	UCL95 _{mean} for the Proposed Track 1 Area
VOC	µg/kg		
Acetone		50	16.92
Xylenes (total)		260	47.61
SVOC	µg/kg		
3&4-Methylphenol		330	NA
Indeno[1,2,3-cd]pyrene		500	91.72
MET	mg/kg		
Chromium, Trivalent		30	14.15
Chromium		30	14.40
Copper		50	18.15
Lead		63	51.92
Mercury		0.18	0.165
Nickel		30	21.28
Zinc		109	63.49
PCB	µg/kg		
PCBs, Total		100	11.23

Parameter	Units	NYSDEC Part 375 Unrestricted Use SCO	UCL95 _{mean} for the Proposed Track 1 Area
PEST	µg/kg		
4,4'-DDD		3.3	1.102
4,4'-DDE		3.3	1.080
4,4'-DDT		3.3	3.639

Note: Highlighted cells exceed the NYSDEC Part 375 Unrestricted Use SCO

By removing Grids 2-4, 9-11, 13, 19, and 51, the recalculated UCL95_{mean} no longer exceed the SCO for all COPCs except 4,4'-DDT. For this parameter, however, the greatest concentration from the remaining grids (Grid 59) is subject to a qualifier; as stated in the DUSR report dated June 26, 2019 (sample L1824059-08), the Percent Difference between the results for the two columns was outside the QC limits and therefore, the sample result is qualified as estimated. By removing this result, the recalculated UCL95_{mean} at a value of 2.383 no longer exceeds the SCO.

Table 3

Parameter	Units	NYSDEC Part 375 Unrestricted Use SCO	UCL95 _{mean} for the Proposed Track 1 Area
VOC	µg/kg		
Acetone		50	16.92
Xylenes (total)		260	47.61
SVOC	µg/kg		
3&4-Methylphenol		330	NA
Indeno[1,2,3-cd]pyrene		500	91.72
MET	mg/kg		
Chromium, Trivalent		30	14.15
Chromium		30	14.40
Copper		50	18.15
Lead		63	51.92
Mercury		0.18	0.165
Nickel		30	21.28
Zinc		109	63.49
PCB	µg/kg		
PCBs, Total		100	11.23
PEST	µg/kg		
4,4'-DDD		3.3	1.102
4,4'-DDE		3.3	1.080
4,4'-DDT		3.3	2.383

Therefore, the grids included in the Track 1 area shown on the attached figure meet the unrestricted SCO under a 95% confidence upper limit analysis and this portion of the site is protective of human health and the environment in accordance with a Track 1 Cleanup.

In summary, based on this statistical evaluation of the endpoint sample results, all grids with the exception of 2, 3, 4, 9, 10, 11, 13, 19, and 51 have met Track 1 UUSCOs. Grids

2, 3, 4, 9, 10, 11, 13, 19, and 51 met Track 2 RUSCOs. Exceedances of RUSCOs were limited to the following:

- VOCs: only acetone was detected in two locations (grids 2 and 19) exceeding UUSCOs. Acetone is a typical lab contaminant and not indicative of Site conditions.
- SVOCs: only 3&4-methylphenol was detected in two locations (grids 3 and 10) exceeding UUSCOs.
- Metals: at least one metal (copper, lead, mercury and/or zinc) was detected in 8 locations (grids 2, 4, 9, 10, 11, 13, 19 and 51) exceeding UUSCOs.
- PCBs: total PCBs was detected in only one location, grid 2 exceeding UUSCOs.
- Pesticides: at least one pesticide (4,4'-DDD, 4,4'-DDE, and/or 4,4'-DDT) was detected in 4 locations (grids 2, 9, 11 and 19) exceeding UUSCOs.

Tables 18 through 22 and Figure 3 summarize the results of the soil samples collected that exceed the UUSCOs but meet RUSCOs at the Site after completion of remedial action.

4.6.2 Groundwater

Implementation of the approved remedial plan was intended to significantly improve groundwater quality and eliminate VOC exceedances. Specifically this included: site-wide excavation, removal of the LNAPL zone with impacted petroleum contaminated soils and free-phase product, and application of ISCO inside the bottom of the excavated LNAPL zone as well as in the trench outside the zone.

To verify that VOC concentrations meet NYSDEC groundwater quality standards, two rounds of performance groundwater samples and associated field parameters (i.e., ORP, dissolved oxygen, pH, turbidity, conductivity) were collected in new wells MW-21, 22, and 23 on September 3 and 13, 2019. Field parameter results collected on August 7, September 3, and September 13, 2019 as well as historical data collected in June 2018 are presented in Table 23 and the analytical results are presented in Tables 24 and 25. Figure 6 shows the location of the monitoring wells and the analytical results.

Groundwater monitoring results indicate that the contaminants of concern: chlorinated VOCs and BTEX hydrocarbons have all been successfully remediated by the removal of source material and the ISCO application. All VOCs are below detection limits in both rounds of samples. A review of the field parameters indicates that during the first sample event the impact of the ISCO was still apparent in MW-23 based on the DO reading. By the second round of sampling on September 13, 2019, the DO concentration was 0 mg/l, which is consistent with long term background. Field parameters in the other wells were

also equivalent to long term background showing no remaining impact from the ISCO application.

Based on groundwater data meeting AWQSGVs after completion of the Remedial Action, no additional groundwater monitoring is considered necessary.

4.6.3 Soil Vapor

It is expected that there will be no remaining soil vapor contamination to address following implementation of the RAWP. The remedial elements including excavation, free-phase hydrocarbon recovery and ISCO application will address soil and groundwater and are expected to improve on-site soil vapor quality by reducing or eliminating potential source material. In addition, as part of construction, a waterproofing barrier will be installed below the foundation and the along subsurface walls of the main retail building and the slab-on-grade retail along Kings Highway. The waterproofing barrier will also act as a vapor barrier to prevent vapor migration into all new structures on site.

4.7 Cover System

The remaining contamination in soil meets Track 2 Residential Use SCOs. The cover systems in place at the site are comprised of:

- Paving for loading dock along Utica Avenue along: 10-inch thick slab;
- Slab beneath main retail building with partial cellar: 6-inch thick slab and 6-inch gravel;
- Beneath the retail strip along Kings Highway: 6-inch thick slab and 6-inch gravel; and
- Ramps in the southeast and southwest corners of the Site: 8-inch thick slab.

Detailed drawings of the cover systems are provided in Figure 5 and Appendix R.

A waterproofing/vapor barrier (Stego Wrap [15 mil] Vapor Barrier by Stego Industries, LLC, Preprufe 300R, 160R Plus, Bituthene 4000 and Liquid Membrane by GCP Applied Technologies) will be installed on the underside of the foundation slabs, basement slabs, foundation walls and elevator pits. Detailed drawings of the proposed vapor barriers are provided in Appendix S.

4.8 Other Engineering Controls

The remedy for the site did not require the construction of any other engineering control systems. As described in the SMP dated July 2019, only groundwater monitoring was performed to verify the effectiveness of the ISCO application after the soil remedial action

was completed. Procedures for monitoring are provided in the SMP. The results of the first and second rounds of sampling are presented in Section 4.11.

4.9 Institutional Controls

The site remedy requires that an environmental easement be placed on the property to (1) implement, maintain and monitor the Engineering Controls; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and, (3) limit the use and development of the site to residential, commercial or industrial uses only.

The environmental easement for the site was executed by the Department on [date], and filed with the Kings County Clerk on [date]. The County Recording Identifier number for this filing is [number]. A copy of the easement and proof of filing is provided in Appendix A.

4.10 Deviations from the Remedial Action Work Plan

All deviations from the RAWP are noted below:

- As suggested by NYSDEC, a Statistical Evaluation was completed to determine appropriate bounds for the Environmental Easement using the most recent version of USEPA's ProUCL software, version 5.1.002 (5.1) and in accordance with the ProUCL guidance document.
- After completion of the remedial work and the statistical evaluation, soil that exceeded Track 1 UUSCOs but met Track 2 RUSCOs remained in nine grids (grids 2, 3, 4, 9, 10, 11, 13, 19 and 51), therefore Track 1 UUSCO was achieved in 58 of the 67 cells. The statistical evaluation was described in Section 4.6.1.
- For structural reasons and the presence of the Favorite Plastic footings, the drilled piles of the secant wall located on the north site of the property were installed approximately 10 inches away from the property line (instead of 24-inch as originally planned). 20 injection points were used to apply ISCO behind the secant wall and they were performed on April 27, April 29 and May 22, 2019. The ISCO was injected at 10 to 16 feet below grade (2 to 6 feet into the water table) to address any residual contamination. A Secant Wall Design Plan was submitted to NYSDEC on December 7, 2018 (Appendix T).
- As described in the June 14, 2019 letter to NYSDEC (Appendix U), limited excavation was performed in Grid 4 due to structural reasons and presence of footings of the Ford dealership building. Approximately 88% of the soil in Grid 4 was excavated leaving behind 12% to ensure the structural stability of the adjacent building, equating to 68 CY of a total grid 4 excavation of 564 CY.
- A trench (120 ft by 3ft wide) behind the southeast edge of the LNAPL sheeting was excavated and ISCO was applied below the water table.

- MW-21, MW-22 and MW-23 were installed per the RAWP as shown in Figure 6 to monitor groundwater quality after the remedial action; however, MW-21 was relocated to the southeast corner of the Site outside the building as a protective measure.

Notes Utilized Throughout Tables	
Soil Tables	
J - Estimated value	
U - Indicates that the compound was analyzed for but not detected	
P - The RPD between the results for the two columns exceeds the method-specified criteria	
I - The lower value for the two columns has been reported due to obvious interference	
RPD - Relative Percent Difference	
ft bls - Feet below land surface	
NA - Compound was not analyzed for by laboratory	
µg/kg - Micrograms per kilogram	
mg/kg - Milligrams per kilogram	
su - Standard units	
NYSDEC - New York State Department of Environmental Conservation	
SCO - Soil Cleanup Objectives	
-- No SCO available	
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use SCO	
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Residential SCO	
Red data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential SCO	
Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial SCO	
Groundwater Tables	
NYSDEC - New York State Department of Environmental Conservation	
AWQSGVs - Ambient Water-Quality Standards and Guidance Values	
-- No NYSDEC AWQSGV available	
µg/L - Micrograms per liter	
Bold data indicates that parameter was detected above the NYSDEC AWQSGVs	
J - Estimated Value	
U - Compound was analyzed for but not detected	

Table 4. Summary of Volatile Organic Compounds in 2018 PDI Soil Sampling, 5200 Kings Highway, Brooklyn, New York

						Sample Designation:	1-EP (9-10)	1-EP (12-13)
						Sample Date:	07/23/2018	06/18/2018
Parameter	NYSDEC Part 375 Unrestricted Use SCO	NYSDEC Part 375 Residential SCO	NYSDEC Part 375 Restricted Residential SCO	NYSDEC Part 375 Commercial SCO	Units			
1,1,1,2-Tetrachloroethane	--	--	--	--	µg/kg	0.54 U		0.9 U

Notes Utilized Throughout Tables	
Soil Tables	
J -	Estimated value
U -	Indicates that the compound was analyzed for but not detected
P -	The RPD between the results for the two columns exceeds the method-specified criteria
I -	The lower value for the two columns has been reported due to obvious interference
RPD -	Relative Percent Difference
ft bls -	Feet below land surface
DUP -	Duplicate sample
µg/kg -	Micrograms per kilogram
mg/kg -	Milligrams per kilogram
NYSDEC -	New York State Department of Environmental Conservation
SCO -	Soil Cleanup Objectives
--	No SCO available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use SCO	
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential SCO	
Italicized data indicates that parameter was detected above the NYSDEC Part 375 Commercial SCO	
Red data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater SCO

Notes Utilized Throughout Tables	
Groundwater Tables	
J -	Estimated Value
U -	Compound was analyzed for but not detected
B -	The analyte was found in an associated blank as well as in the sample
R -	Sample results rejected by validator
UJ -	Analyte was not detected. The associated reported quantitation limit is an estimate
FD -	Duplicate
µg/L -	Micrograms per liter
NYSDEC -	New York State Department of Environmental Conservation
AWQSGVs -	Ambient Water-Quality Standards and Guidance Values
--	No NYSDEC AWQSGV available
Bold data indicates that parameter was detected above the NYSDEC AWQSGVs
