**GENERAL COMMENTS:**  
 As part of the of the NYSDEC-approved Remedial Action Work Plan and NYSDEC-approved modified inspection schedule, Roux Environmental Engineering and Geology D.P.C. (Roux) performed a weekly inspection to document the site conditions during superstructure erection/crane activities. The Community Air Monitoring Plan (CAMP) continues to be implemented continuously.

RAWP Activities Performed:

- Blakeslee mobilized and is operating a crawler crane on top of a designated crane pad constructed of RCA and wooden planks. The crane is being used to offload precast building materials from trailers and erect onsite.
- Roux performed weekly site inspection on October 26, 2022, to document the site conditions. No intrusive work is being performed. There was no evidence of fugitive particulates or volatiles traveling offsite and sediment and erosion controls remain to be in place.

CAMP Performed:

- Remote CAMP is being implemented continuously during superstructure erection/crane activities. No exceedances of fust of VOCs were recorded.

Other Relevant Comments or Issues:

- None

Upcoming work activities:

- Blakeslee will continue precast concrete erection, moving south to north across the site. The superstructure erection phase of construction is estimated to continue through approximately February 2023.
