Re: Remedial Investigation Report
55 Eckford St LLC Site
55 Eckford Street, Brooklyn, NY 11222
Block 2698, Lot 32
BCP Site No. C224168

Dear Ms. Lozewski:

On behalf of the 55 Eckford St LLC (Volunteer/Owner), Goldberg-Zoino Associates of New York P.C. d/b/a GZA GeoEnvironmental of New York (GZA) is pleased to submit this Remedial Investigation Report (RIR) for the above referenced property (Site) managed under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site No. C224168.

This RIR summarizes the nature and extent of contamination as evaluated from data gathered during the Remedial Investigation of the Site performed from December 2024 to August 2025. Should you have questions, please contact Reinbill Maniquez at (347) 443-1059 or Reinbill.Maniquez@gza.com or Victoria Whelan at (631) 793-8821 or Victoria.Whelan@gza.com

Very truly yours,
GZA GEOENVIRONMENTAL OF NEW YORK

Reinbill Maniquez, CHMM

1.0 INTRODUCTION

This Remedial Investigation Report (RIR) was prepared by Goldberg-Zoino Associates of New York P.C. d/b/a GZA GeoEnvironmental of New York (GZA) on behalf of 55 Eckford St LLC (Volunteer/Owner), which entered into the Brownfield Cleanup Program (BCP) as a Volunteer, to investigate and remediate the property located at 55 Eckford Street, in the Greenpoint-Williamsburg Special Mixed Use District (MX-8) of Brooklyn, New York (herein referred to as the Site). The Brownfield Cleanup Agreement (BCA) was executed between the Volunteer and New York State Department of Environmental Conservation (NYSDEC) on October 21, 2024, under BCAG Index No. C224168-10-24. GZA submitted Drafts of the RIR and received comments from the NYSDEC on April 30, 2025, and June 2, 2025. In a letter dated July 1, 2025, NYSDEC recommended additional Remedial Investigation work as detailed in Section 3.0. This report was prepared and revised with the limitations set forth in **Appendix A**.

This RIR summarizes the findings of the Remedial Investigation (RI) conducted at the property to characterize the Site. The RIR will be utilized to develop a Remedial Action Workplan (RAWP) in a manner that will render the Site protective of public health and the environment consistent with the contemplated end use. The RI activities included the following scope of work:

- (i) delineation of the horizontal and vertical extent of impacted soils, groundwater, and soil vapor on Site;
- (ii) assess of the potential fate and transport of contaminants; and
- (iii) evaluation of potential remedial alternatives for exposure mitigation.

This RI is consistent with the procedures defined in NYSDEC Technical Guidance for Site Investigation and Remediation (DER-10) issued May 3, 2010, with revisions dated April 9, 2019, and other applicable Federal, State, and local laws, regulations, and requirements. GZA performed the RI in accordance with the NYSDEC-approved Remedial Investigation Work Plan (RIWP) dated November 2024, the RIWP Addendum dated February 2025, and the Supplemental RIWP, dated July 22, 2025.

1.1 SITE LOCATION AND DESCRIPTION

The 55 Eckford St LLC Site (The Site) is located in an area zoned for residential (R6A, R6B), light manufacturing (M1-2). The 10,376 square feet (approximately 0.238 acres) Site is identified as Block 2698, Lot 32. A topographic map showing the location of the Site is provided as **Figure 1**.

The Site had remnants of a 6-story steel structure and an unfinished building with a partially constructed cellar including an elevator pit and unfinished foundation elements (e.g. spread footing, cellar slab, etc.) that were demolished by the Client in June 2025. **Figure 2** shows a Site Plan. Site photographs are included in **Appendix B**.

1.2 PROPOSED REDEVELOPMENT PLAN

The proposed Site redevelopment includes a 5-story multi-family residential building with a cellar. The building will provide twenty-one residential units, an eight-car garage and a landscaped rear yard on-grade (at the western portion of the Site), and a cellar that will be used for bike parking and utility spaces. A copy of the Site redevelopment plan is included in **Appendix C**.

1.3 DESCRIPTION OF SURROUNDING PROPERTIES AND AREA HISTORY

Information about the surrounding properties was assessed from the Phase I Environmental Site Assessment (ESA), performed in October 2023, by Touchstone Environmental Geology, P.C. The Phase I ESA included records from as early as 1887 showing the surrounding areas to the north, west and east of the Site as subdivided vacant interspersed with 2- to 3-story dwellings while the property to the south of the Site is shown with several 1-to 2-story story buildings labeled as “Plastering Hair Manufacturing Co.”. By early 1900s until the mid-2000s, the surrounding vicinity saw denser development with multiple 2 to 3-story -story dwellings and several manufacturing and commercial facilities (e.g., cooperage, lumber yards, moving pictures, cab company, garage, printing, furniture manufacturing, etc.). By late 2000s, the manufacturing properties were redeveloped into multi-story residential apartments. By July 16, 2015, the property that abuts the Site to the north (Former Carter Spray Finishing Corp. at 65 Eckford Street), was entered into the BCP under Site No. C224218 with documented contamination in soil related to historical operations and fuel storage in underground tanks (USTs).

Currently the surrounding properties remain mostly residential and commercial and are described as follows:

Direction	Street Address / Block and Lot	Property Use / Name
North	65 Eckford St./Block 2698 Lot 26	5-story residential building, with cellar and sub-cellar / Hotel Condominium
West Northwest	488 Leonard St. / Block 2698 Lot 7	1-story warehouse / Kam Kuo Wine Co. Wine Wholesaler
West Southwest	482 Leonard St./ Block 2698 Lot 5	Vacant / Unlicensed Parking Lot
South	49 Engert Avenue/ Block 2698 Lot 7501	Eight 4-story residential buildings / Condominium
	67 Engert Avenue/ Block 2698 Lot 37	3-story residential building with rear yard
East (across Eckford St.)	62 Eckford Street / Block 2699 Lot 5	2-story residential building with cellar / rear yard
	60 Eckford Street / Block 2699 Lot 4	2-story residential building with cellar / rear yard
	58 Eckford Street / Block 2699 Lot 3	2-story residential building with cellar / rear yard
	56 Eckford Street / Block 2699 Lot 2	2-story residential building with cellar / rear yard
	54 Eckford Street / Block 2699 Lot 1	2-story residential building with cellar / rear yard

The Site is currently located in an area designated by the US Environmental Protection Agency (EPA) as a Disadvantaged Community Environmental and Climate Justice area. The surrounding vicinity property use is shown on **Figure 3**.

2.0 SITE HISTORY

The following sections outline the Site History, including previous environmental assessments of the Site and surrounding area.

2.1 PAST USES AND OWNERSHIP

Records from 1887 show the Site as four abutting vacant undeveloped lots. By 1905, the Site is shown as being part of Meisel Danowitz & Co. woodworking operation and contained four 1- to 2-story buildings identified as “moulding shed”, “planning & moulding lumber racks”, “kiln house” and an office. By 1916, the structures remain but were identified as “vacant and dilapidated”; by 1942 identified as “wool & rags sorting and baling”; and from 1951 until 1992 identified as “electric plating, storage, lacquer spraying”. NYC Department of Finance (DOF) records showed the Site was owned by the Berkman Family from 1971-2003. Between 1993 and 2004, the structures remain but the use was unknown. By 2003, the Berkman Family sold the property to Blue Diamond Development, LLC.

In August 2005, the NYC Department of Buildings (DOB) issued a demolition, and buildings were later demolished. By 2009, the Site was sold to 55 Eckford Street Brooklyn LLC / Madison Realty Capital L.P. Between 2009 and 2015, construction permits were issued by NYCOB for the Site redevelopment into residential apartments. By 2016, a stop work order had been issued for the Site, and construction has been paused since. The Site was entered into the BCP under Site No. C224168 in 2017, with the Applicant, TCJ Construction, deemed a Volunteer, then subsequently withdrew from the program. By April 24, 2024, 55 Eckford St LLC obtained ownership of the property.

The NYC Department of Finance (DOF) website lists the following ownership records and deed transfers:

Party 1	Party 2	Address	Date of Ownership or Operation
Eckford-Greenpoint LLC	55 Eckford St LLC	100 Jericho Quadrangle, Jericho, NY	04/24/2024 to present
55 Eckford Street Brooklyn LLC	Eckford-Greenpoint LLC	10 Glenville Street, Greenwich CT	12/28/20212 to 02/12/2013
Blue Diamond Development LLC	55 Eckford Street Brooklyn LLC	825 Third Avenue, New York, NY	06/22/2009 to 12/17/2009
Berkman, Theodore as co-trustees of Arlyne Berkman Revocable Living Trust	Blue Diamond Development LLC	199 Lee St., Suite 287 Brooklyn, NY	09/16/2003 to 03/16/2004
Berkman, Donald	Berkman, Gerald	55 Eckford St., Brooklyn, NY	01/30/2002 to 02/25/2002
Berkman, Arlyne	Berkman, Arlyne Revocable Living Trust	6655 NY 15 th St. Margate, FL	10/31/1995 to 12/21/1995
Berkman, Lillie	Berkman, Donald	71 Margaret Drive, Valley Stream, NY	03/04/1994 to 04/15/1994
Berkman, Lillie	Berkman, Donald	71 Margaret Drive, Valley Stream, NY	01/05/1972 to 01/05/1972
Berkman, Lillie	Berkman, Donald	71 Margaret Drive, Valley Stream, NY	12/27/1971 to 12/27/1971

2.2 PREVIOUS ENVIRONMENTAL SITE ASSESSMENTS

The following sub-sections outline previous environmental assessments conducted at the Site. The previous environmental assessments are included in **Appendix D**.

2.2.1 Phase I Environmental Site Assessment Report – October 27, 2011

In October 2011, Hydro Tech Environmental, Corp. (HTE) of Hauppauge, NY performed a Phase I ESA for 55 Eckford Street Brooklyn LLC (former Owner) and identified two Recognized Environmental Conditions (RECs) related to the Site which are as follows:

- The historical use of the Site as manufacturing facility
- The undocumented removal of a 2,500-gallon #2 fuel oil aboveground storage tank (AST).

As a manufacturing facility, the Site was known to use chemicals during its operations. The Site was listed under NYSDEC Chemical Bulk Storage (CBS) facility no. 2-000058 with documented 500-gallon fiberglass reinforced plastic (FRP) tank that contained sodium hypochlorite. The CBS tank was reportedly closed in 1998.

The Site was listed under NYSDEC Petroleum Bulk Storage (PBS) facility no. 2-268666 which identified the 2,500-gallon #2 fuel oil AST as being installed in 1976 and subsequently closed and removed in January 2005. The AST was in contact with soil within a vault. On March 26, 1993, the Site was listed under NYSDEC Spill Case No. 92-14462 for a release due to tank overfilling. The Spill was subsequently closed on March 31, 1993.

2.2.2 Draft Phase II Environmental Subsurface Investigation – December 2011

In December 2011, EEA Inc. of Garden City, NY, performed a Phase II Environmental Subsurface Investigation (ESI) for Madison Realty Capital to address the RECs noted in the 2011 HTE Phase I ESA. The 2011 EEA Phase II ESI included the advancement of six (6) soil borings for the collection of soil samples and the installation of four (4) monitoring wells for the collection of groundwater samples.

Based upon visual, olfactory, and photoionization detector (PID) screening analysis, the soils were observed with strong solvent odors, grey staining and elevated PID readings (at a maximum [max.] of 1,085 parts per million [ppm]) at or in close proximity to the groundwater interface.

Based upon their analysis of laboratory and field data, the Site soils contained volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) that exceeded the NYSDEC Commissioner Policy-51 (CP-51) soil cleanup guidance values and groundwater contained metals that exceeded the NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). Metals such as mercury and arsenic were listed as past hazardous wastes produced at the Site and were detected above regulatory guidelines in soil and unfiltered groundwater (arsenic also found above guidelines in filtered groundwater). According to EEA, Inc., these contaminants were likely due to releases from the former electroplating facility operations performed at the Site.

2.2.3 Phase II Subsurface Investigation – April 5, 2012

In April 2012, HTE performed a Phase II Subsurface Investigation for Mr. Tomer Yogev which included the advancement of nine (9) soil probes and the installation seven (7) monitoring wells and seven (7) soil vapor implants to collect soil, groundwater, and soil vapor samples for laboratory analyses.

The laboratory analytical results reported soil samples detected at concentrations that exceeded regulatory standards containing:

- SVOCs, specifically:
 - o benzo (a) anthracene [max. of 2.25 mg/kg]
 - o benzo (a) pyrene [max. of 1.57 mg/kg],
 - o benzo(b)fluoranthene [max. of 1.21mg.kg],
 - o benzo(k)fluoranthene[max. of 1.81 mg/kg], and,
 - o chrysene [max. of 2.14 mg/kg]
- metals, specifically:
 - o arsenic [max. of 273 milligrams per kilogram {mg/kg}},
 - o barium [max. of 605 mg/kg],
 - o cadmium [max. of 4.62 mg/kg],
 - o trivalent chromium [max. of 51.5 mg/kg],
 - o copper [max. of 1,020 mg/kg],
 - o lead [max. of 2,980 mg/kg],
 - o nickel [max. of 1,030 mg/kg], and
 - o mercury [max. of 27.4 mg/kg]

The laboratory analytical results revealed groundwater samples at concentrations that exceeded regulatory standards containing:

- VOCs specifically:
 - o sec-butylbenzene [at max. of 8.82 micrograms per liter { $\mu\text{g/L}$ }] and
 - o tert-butylbenzene [max. of 6.98 $\mu\text{g/L}$]
- metals specifically:
 - o arsenic [max. of 0.564 milligrams per liter { mg/L }],
 - o iron [max. of 30.5 mg/L],
 - o manganese [max. of 0.822 mg/L],
 - o silver [max. of 0.073 mg/L], and
 - o sodium [max. of 298 mg/L].

The laboratory analytical results revealed soil vapor samples containing:

- acetone (max. of 2,400 micrograms per cubic meter [ug/m^3]),
- petroleum-related VOCs, specifically:
 - o benzene [max. of 19 ug/m^3],
 - o 1,3,5-trimethylbenzene [max. of 40 ug/m^3],
 - o n-heptane [max. of 28 ug/m^3],
 - o n-hexane [max. of 95 ug/m^3],
 - o p & m-xylene [max. of 33 ug/m^3], and
 - o toluene [max. of 39 ug/m^3]
- chlorinated VOCs specifically:
 - o 1,1 dichloroethene [max. of 26 ug/m^3],
 - o cis-1,2 dichloroethene [max. of 49 ug/m^3],
 - o methylene chloride [max. of 33 ug/m^3],
 - o PCE [max. of 84 ug/m^3], and,
 - o TCE [max. of 1,700 ug/m^3],)

The maximum total VOC concentration in soil vapor is 4,344 micrograms per cubic meter [ug/m^3].

2.2.4 Phase I Environmental Site Assessment Report – June 3, 2013

In June 2013, HTE performed a Phase I ESA for Olden Equities of Brooklyn, NY and identified five RECs in connection with the Site, namely:

- The historic use of the Site as a manufacturing facility;
- The presence of SVOC and metal-impacted soil at the Site;
- The presence of VOC and metal impacted groundwater at the Site;
- The presence of both petroleum and chlorinated solvent-impacted soil vapors at the Site; and
- The undocumented removal of the fuel oil AST.

2.2.5 Phase I Environmental Site Assessment Report – July 25, 2016

In July 2016, HTE performed a Phase I ESA for Madison Realty Capital of New York, NY and identified the following RECs in connection with the Site:

- The historic use of the Site as a manufacturing facility;
- The presence of SVOC and metal-impacted soil at the Site;
- The presence of VOC and metal impacted groundwater at the Site;
- The presence of both petroleum and chlorinated solvent-impacted soil vapors at the Site;

- The undocumented removal of an aboveground fuel oil storage tank;
- The presence of NYS BCP Site No. C224218 in the northern adjacent property;
- The presence of a petroleum and chlorinated potential vapor encroachment condition (PVEC) at the Site; and
- The presence of mold at the Site.

2.2.6 Phase I Environmental Site Assessment Report – October 2019

In October 2019, HTE performed a Phase I ESA for Avo Construction of New York, NY and identified the following RECs in connection with the Site:

- The historic use of the Site as a manufacturing facility;
- The presence of SVOC and metal-impacted soil at the Site;
- The presence of VOC and metal impacted groundwater at the Site;
- The presence of both petroleum and chlorinated solvent-impacted soil vapors at the Site;
- The undocumented removal of an aboveground fuel oil storage tank;
- The presence of NYS BCP Site No. C224218 in the northern adjacent property;
- The listing of the Site under BCP Site No. C224168.

The October 2019 Phase I ESA noted that the Site was entered into the NYS BCP in 2017. The entrant, TCJ Construction Inc. (TCJ), was accepted into the program as a Volunteer.

2.2.7 Phase I Environmental Site Assessment Report – October 2023

In October 2023, Touchstone Environmental Geology, P.C. (Touchstone) performed a Phase I ESA for the Requestor, Daniel Kaykov, and identified several RECs for a potential vapor encroachment condition (VEC) in connection with the Site:

- The listing of the Site under BCP Site No. C224168 (which was subsequently rescinded in September 2021)
- The historic use of the Site as a manufacturing facility (listed as Former Berkman Bros. Site);
- The presence of a BCP Site No. C224218 (65 Eckford Street / Former Carter Spray Finishing) located adjacent to the north.

Touchstone also identified the following Historical Recognized Environmental Condition (HREC):

- The Site was listed in the State Leaking Tanks (LTANKS) database under Spill Number 92-14462. According to the database, the incident occurred on March 26, 1993, as the result of a tank overfill. The database indicated petroleum/No. 6 Fuel Oil was spilled and that the spill was cleaned by Mystic with Speedi-Dry which was picked up and disposed of. The spill case was closed to the satisfaction of the NYSDEC on March 31, 1993.

2.3 ADDITIONAL HISTORICAL DOCUMENTATION

GZA also performed a file review of the documents at NYSDEC Document Repository under BCP Site No. C224168. The documents reviewed included the aforementioned investigation reports and two additional documents listed below in sections 2.3.1 and 2.3.2.

2.3.1 Remedial Investigation Work Plan - December 2018

HTE prepared a Remedial Investigation Work Plan for TCJ in accordance with the requirements of the BCP and proposed the advancement of ten (10) soil borings, installation of six (6) monitoring wells, and eight (8) soil vapor sampling points. No other information on the implementation of the RIWP is available in the NYSDEC Document Repository.

2.3.2 Brownfield Cleanup Program Application – March 4, 2020

A BCP Application was filed with the NYSDEC on March 4, 2020, by 55 Eckford Acquisition LLC (former Requestor). The application indicated that the known contaminants were CVOs and metals in the soil. The BCP Application also noted the change of ownership for 55 Eckford 1875 DNB LLC to 55 Eckford Acquisition LLC.

3.0 REMEDIAL INVESTIGATION ACTIVITIES

GZA performed the RI in accordance with the RIWP for BCP Site No.C224168 dated November 20, 2024, and approved by NYSDEC on December 3, 2024, and the Quality Assurance Project Plan (QAPP), dated November 2024. During implementation of the RIWP, GZA communicated with the NYSDEC Project Manager regarding field observations and evaluations. Based on the preliminary findings, an RIWP addendum was prepared and approved by the NYSDEC, dated February 2025. In a letter dated July 1, 2025, NYSDEC required additional groundwater and soil vapor sampling. On July 22, 2025, GZA submitted a Supplemental RIWP, that was subsequently approved by NYSDEC. The approved deviations were then implemented (see **Section 3.8**).

The RI was performed in accordance with DER-10 and other applicable Federal, State, and local laws, regulations, and requirements. Details of the RI conducted are presented in the following subsections. During ground intrusive activities, continuous, real-time air monitoring for VOCs and particulate levels at the perimeter of the work area were performed in accordance with the approved Community Air Monitoring Plan (CAMP).

3.1 REMEDIAL INVESTIGATION ACTIVITIES

The objectives of the RI:

1. Define the nature and extent of Site contamination;
2. Identify contaminant source areas; and
3. Produce data of sufficient quantity and quality to support the development of a NYSDEC acceptable Remedial Action Work Plan.

The December 2024 to February 2025 RI the scope of work includes the following:

- The advancement of soil borings, collection of soil samples, installation of permanent groundwater monitoring wells, collection of groundwater samples from new monitoring wells, installation of soil vapor points, and sampling of new soil vapor points;
- The collection of soil, groundwater, and soil vapor sufficient to define the nature and extent of impacted media and current Site conditions and offsite groundwater and/or soil vapor migration potential;
- The collection of a synoptic round of groundwater level measurements and the collection of additional land survey data as needed for developing a groundwater elevation contour map; and
- The performance of a qualitative human health exposure assessment (QHHEA) to identify existing and potential exposure pathways and evaluate contaminant fate and transport.

Soil

- Advancement of ten (10) soil borings to a maximum depth of 30 feet below ground surface (bgs) (or 20 feet below the existing cellar slab (bcs). Seven (7) of the borings were located at the exterior portion of the partially constructed building structure. Three (3) of the borings were located within the cellar of the partially constructed building structure.
- Collection and laboratory analyses of 63 samples from the exterior borings, and 16 samples from the interior borings. In total, 79 soil samples were collected for laboratory analyses.

Groundwater

- Conversion of six (6) borings to permanent stick-up monitoring wells.
- Gauging and development of the permanent monitoring wells.
- Collection and laboratory analyses of six (6) groundwater samples.

Soil Vapor

- Advancement of eight (8) soil vapor points to a depth of 2 feet above the groundwater interface.
- Collection and laboratory analyses of eight soil vapor samples.

Outdoor Air

- Collection and laboratory analyses of two outdoor ambient air samples.

The August 2025 Supplemental RI the scope of work includes the following:

Groundwater

- Install four (4) monitoring wells (designated as GMW-07 to MW-10) to 20 feet below ground surface (bgs).
- Collect and analyze groundwater samples from the four installed wells.

Soil Vapor

- Advanced four (4) soil vapor probes (designated GSV-09 to GSV-12) to a depth of 2 feet above the groundwater interface.
- Collect and analyze four soil vapor samples.

The summary of samples collected with corresponding laboratory analyses are shown on **Table 1**. The sample locations are shown on **Figure 4**. Photographs of the RI activities are included in **Appendix B**.

3.2 CHEMICAL ANALYTICAL WORK PERFORMED

Chemical analytical work presented in this RIR has been performed in the following manner:

Sample	Sample Depth	Laboratory analyses
Chemical Analytical Laboratory		The chemical analytical laboratory used in this RI is York Analytical Laboratories (York) of Richmond Hill, NY. York is a NYS ELAP-certified laboratory.
Soil Analytical Methods		Focused Soil Samples + PFAS

Sample	Sample Depth	Laboratory analyses
		- o Target compound list (TCL) VOCs by EPA Method 8260 (discrete) with TICs; - o TCL SVOC by EPA Method 8270 with TICs, including 1,4 Dioxane; - o Target analyte list (TAL) Metals by EPA Method 6010C / 7471B, including hexavalent chromium and total cyanide; - o Per- and Polyfluoroalkyl Substances (PFAS) by EPA Method 1633.
		Full Suite Soil - o TCL VOCs by EPA Method 8260 (discrete) with TICs; - o TCL SVOC by EPA Method 8270 with TICs, including 1,4 Dioxane; - o TAL Metals by EPA Method 6010C / 7471B, including hexavalent chromium and total cyanide; - o TCL Pesticides by EPA Method 8081/ Herbicides by EPA Method 8151; - o PCBs by EPA Method 8082A; and - o PFAS by EPA Method 1633.
		Limited - o (TCL VOCs by EPA Method 8260 (discrete) with TICs; - o TCL SVOC by EPA Method 8270 with TICs; including 1,4 dioxane; - o TAL Metals by EPA Method 6010C / 7471B, including hexavalent chromium and total cyanide;
Groundwater Analytical Methods		Full Suite Groundwater - o TCL VOCs by EPA Method 8260C with TICs (rev. 2006); - o TCL SVOCs by EPA Method 8270D with TICs (rev. 2007); - o Total TAL Metals by EPA Method 6010C/6020/7470 (rev. 2007) including hexavalent chromium and total cyanide by Methods 9010/9012B (rev. 2004); - o Pesticides by EPA Method 8081B (rev. 2000); - o Herbicides by EPA method 8151; - o PCBs by EPA Method 8082A (rev. 2000); - o 1,4-Dioxane by EPA Method SW 846 8260 (isotope dilution for 1-4 Dioxane); and - o PFAS by EPA Method 1633. Focused Groundwater - o Total and dissolved TAL Metals by EPA Method 6010C/6020/7471B; - o Total and dissolved Cyanide by EPA method 9010/9012; and - o Total and dissolved Mercury by EPA method 7471
Soil vapor and outdoor air analytical methods:		o TCL VOCs by TO-15 VOC parameters.

3.3 SOIL BORING INSTALLATION AND SAMPLING

Between December 10, 2024, to February 10, 2025, GZA subcontracted with Coastal Environmental Solutions, Inc. (Coastal) of Holbrook, NY to install seven (7) exterior soil borings, namely: GZ-01 through GZ-07, and three (3) soil borings within the cellar level, namely: GZ-08, GZ-09 and GZ-10. Exterior borings were all advanced to approximately between 20 to 33 feet bgs and advanced using Geoprobe®7822 direct-push technology equipped with 5-foot interval steel macro-cores with acetate liners. Interior (cellar level) borings were advanced to approximately between 10 to 22 feet bcs and advanced using Geoprobe 420M limited access drill rig. Soil borings depths are shown in **Table 1**.

Soil recovered from the borings were field screened for the presence of VOCs with a Photo-Ionization Detector (PID) and visually inspected for evidence of contamination. A total of 78 soil samples were collected and submitted for laboratory analysis, including QA/QC samples. At each exterior soil boring, GZA collected up to ten (10) soil samples per boring representing:

- the surface layer (between 0 to 2 in bgs),
- shallow layer (between 0-2 ft bgs),
- mid-point between shallow layer and the water table (between 4-6 ft bgs),

- layer directly above the water table (8-10 ft bgs),
- layer within the water table (12-14 ft bgs) and
- the deep native layers (18-20 ft bgs, 20-23 ft bgs, 23-26 ft bgs, 26-30 ft bgs, and 30-32 ft bgs).

At each cellar level soil boring GZA collected up to seven soil samples per boring, representing:

- the layer directly above the water table (0-2 ft bcs),
- layer in the water table (4-6 ft bcs) and
- the deep native layers (8-10 ft bcs, 10-13 ft bcs, 13-16 ft bcs, 16-20 ft bcs, and 20-22 ft bcs).

The sampling depths varied based on the depths of the observed contamination and/or observed groundwater interface in each boring. Modifications were made to adjust for sampling intervals observed by the field engineer (e.g., volume of soil recovered or stratigraphic layer with the highest apparent in-field contamination).

Soil samples were containerized and analyzed at a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory, York Analytical Laboratory Inc. (NYSDOH Nos. 10854 and 12058) of Richmond Hill, NY. Completed sample labels were affixed to the side of the laboratory provided sample bottles. Once the sample bottles were filled, they were immediately placed in the cooler with ice (in Ziploc plastic bags to prevent leaking) to maintain the samples at below 4°C and transported, via courier to York, under proper chain of custody procedures for analysis (see **Section 3.10**).

The soil sample depths are shown in **Table 1**. The soil sample locations are shown on **Figure 4**. Photographs of the soil boring installation activities and sampling are included in **Appendix B**. Descriptive information concerning soil from each sampling location was recorded on individual soil boring logs and classified using visual observations and a modified Burmister classification system. The boring log, including the sample designation, sample collection date and depth, total depth of the boring, depth and apparent thickness of any identified layers of contaminated soil, PID measurements and recovery percentages are provided in **Appendix E**.

3.4 GROUNDWATER MONITORING WELL INSTALLATION AND SAMPLING

Between December 13 and 16, 2024, and August 21 and 22, 2025, GZA subcontracted with Coastal to install ten (10) permanent monitoring wells. The monitoring wells were installed using a Geoprobe 7822 drill rig. Each well was constructed with Schedule 40 Poly-Vinyl Chloride (PVC), 2-inch diameter PVC riser pipe and 1 to 2-inch diameter 0.010-inch PVC screens. The wells (GMW-01 to GMW-10) were screened from approximately 10 to 20 ft bgs. The annular space of the wells was filled with #2 sand extending two feet above the top of the screen, to the extent feasible. A layer of hydrated bentonite was placed above the sand pack, and bentonite and #2 sand was placed from the bentonite layer to approximately 2 ft bgs where the well annulus backfill was finished with cement extending to the ground surface. Each well was completed with a stickup well cover. The monitoring well termination depths are shown in **Table 1**. Well construction logs are provided in **Appendix F**.

After installation, each permanent well was developed using a submersible pump equipped with dedicated high-density polyethylene (HDPE) tubing to remove fine materials generated during well installation activities. The groundwater was pumped until it was turbidity free or when 3-5 well volumes had been removed. The development water was containerized in 55-gallon drums and characterized for off-site disposal (see **Section 3.10**). The groundwater sample locations are shown on **Figure 4**. Photographs of the groundwater sampling activities are included in **Appendix B**.

Prior to sampling, each monitoring well headspace was measured using a PID and water level was measured using an electronic oil-water interface probe to measure the groundwater depth and detect for the presence of light non-aqueous phase liquids (LNAPL) or dense non-aqueous phase liquids (DNAPL) in the well.

Prior to the collection of groundwater samples GZA developed the monitoring wells in accordance with the *USEPA "Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring wells" revised January 19, 2010 (EQASOP-GW001)*, by purging at least three well volumes of groundwater, or until the water quality parameters stabilized for three consecutive readings. Wells were purged until turbidity, pH, temperature, dissolved oxygen, and specific conductivity stabilized. Field measurements, taken from the flow cell, were recorded in the field logbook during and after purging, and before sampling. Purging was performed with the pump intake placed at approximately 3-6 ft above the bottom of the well screen. Field water quality and gauging measurements were documented during sampling and well purge logs are provided in **Appendix G**.

On January 3, 2025, (approximately 2-3 weeks after installation/well development) a groundwater sample was collected from six monitoring wells (MW-01 to MW-6) utilizing dedicated high-density polyurethane (HDPE) tubing and pump. Groundwater samples were containerized and analyzed at a NYSDOH ELAP-certified laboratory, York Analytical Laboratory Inc. (NYSDOH Nos. 10854 and 12058) of Richmond Hill, NY. Completed sample labels were affixed to the side of the laboratory provided sample bottles. Once the sample bottles were filled, they were immediately placed in the cooler with ice (in Ziploc plastic bags to prevent leaking) to maintain the samples at below 4°C and transported, via courier to York, under proper chain of custody procedures for analysis. A total of 6 groundwater samples were collected from the monitoring wells and analyzed for a full suite of analytical parameters (see **Section 3.2**).

On August 28, (1 week after the installation / well development) a groundwater sample was collected from four monitoring wells (MW-07 to MW-10) utilizing dedicated high-density polyurethane (HDPE) tubing and pump. Groundwater samples were containerized and analyzed at a NYSDOH ELAP-certified laboratory, Pace Analytical Services (Pace) of Mansfield, MA. Completed sample labels were affixed to the side of the laboratory provided sample bottles. Once the sample bottles were filled, they were immediately placed in the cooler with ice (in Ziploc plastic bags to prevent leaking) to maintain the samples at below 4°C and transported, via courier to Pace, under proper chain of custody procedures for analysis. A total of 4 groundwater samples were collected from the monitoring wells and analyzed for focused analytical parameters (see **Section 3.2**).

The groundwater laboratory analyses are detailed in **Table 1**.

3.5 SOIL VAPOR POINT INSTALLATION AND SAMPLING

On December 12, 2024, eight (8) temporary soil vapor implants (GSV-01 to GSV-08) were installed at the Site using a Geoprobe® direct push technology drill rig. Each implant was comprised of stainless-steel screens, installed to approximately 8 feet below ground surface, and attached to ¼ inch polyethylene tubing which extended approximately 18 inches above the surface. A PID was attached to the ¼ inch polyethylene tubing to screen for the concentration of VOCs in the soil vapor implant. Prior to sampling, one to three volumes of soil gas were purged using a calibrated air pump. The soil vapor sample locations are shown on **Figure 4**.

On August 22, 2025, four (4) additional temporary soil vapor implants (GSV-09 to GSV-12) were installed at the Site using a Geoprobe® direct push technology drill rig. Each implant was comprised of stainless-steel screens, installed to approximately 5 feet below ground surface (approximately 2 feet above the measured water table), and attached to ¼ inch polyethylene tubing which extended approximately 18 inches above the surface. A PID was

attached to the ¼ inch polyethylene tubing to screen for the concentration of VOCs in the soil vapor implant. The soil vapor sample locations are shown on **Figure 4**.

Sampling was performed in accordance with the *October 2006 NYSDOH Soil Vapor Intrusion Guidance Document (and subsequent updates)*. The adequacy of the bentonite seal was tested using a plastic cased box shroud placed over the borehole, and helium tracer gas was pumped into the shroud. A helium gas detector was attached to the shroud using ¼ inch polyethylene tubing to measure helium concentrations in the above grade end of the tubing. The adequacy of the seal was verified by direct helium readings (e.g., less than 10%-15% of total helium in shroud).

Following field screening, the tubing was then connected to a laboratory-supplied and certified 6-liter Summa canister equipped with a 2-hour flow regulator calibrated for less than 0.2 liters per minute. The soil vapor samples were sent to NYSDOH-certified laboratories (York and Pace) for VOC analysis via EPA method TO-15 with chain-of-custody documentation. Upon completion, the tubing was removed, and the soil vapor point was backfilled to near grade surface with the bentonite / cement. Soil vapor sampling logs are provided as **Appendix H**.

3.6 OUTDOOR AIR SAMPLING

Concurrently with the soil vapor sample collection performed on December 13, 2024, GZA collected two (2) outdoor air samples (GOA-01 and GOA-02). GOA-01 was collected from the former cellar level of the structure on Site, while GOA-02 was collected from the exterior portion of the Site. The ambient air samples were placed at approximately 3 ft above the ground surface. The outdoor air samples were collected with a laboratory-supplied and certified 6-liter Summa canister equipped with a 2-hour flow regulator calibrated for less than 0.2 liters per minute. After sampling, the summa canister flow regulator was closed and detached. Air sampling logs generated during sample collection are provided as **Appendix H**. The location of each of the ambient air samples are shown on **Figure 4**.

3.7 INVESTIGATION-DERIVED WASTE

Waste generated from remedial investigation activities, including soil boring installation, soil vapor point installation, monitoring well installation, and subsequent sampling, was handled in accordance with DER-10. Soil cuttings were containerized in properly labeled DOT-approved 55-gallon drums. Boreholes in the onsite concrete and asphalt surfaces were restored to prevent potential pathways through the cover. Waste generated during monitoring well development, purging, and decontamination, including decontamination water, were placed into DOT-approved 55-gallon drums with sealed tops. These drums will be transported offsite by a licensed waste hauler and disposed of at a permitted facility. Disposable sampling equipment, including spoons, gloves, bags, and paper towels that came in contact with environmental media, were placed into DOT-approved 55-gallon drums with sealed tops. Drums were staged on-Site prior to off-Site disposal. Disposal records will be submitted as an addendum to the RIR once available.

3.8 DEVIATIONS FROM REMEDIAL INVESTIGATION WORK PLAN

Throughout the implementation of the 2024 RIWP, GZA communicated our field observations and evaluations with the NYSDEC Project Manager. Several meetings were held to discuss and modify the scope based on our findings, and the modifications were as follows:

- As analytical results were received it was evident that additional soil samples would need to be collected to delineate the impacted soil vertically. Based on the analytical results an RIWP Addendum was prepared and submitted to NYSDEC. The addendum scope of work is summarized below:

GZA proposed to extend the soil borings to collect additional soil samples in accordance with the below summary table for TCL SVOCs by EPA Method 8270 and TAL metals by EPA Method 6010/7000.

Sample Name	Location	Sample / Boring Termination Depth (feet below ground surface (bgs) or cellar slab (bcs))	Approximate Number of Samples	Rationale for Sampling	Sample Name and Laboratory Analysis
Soil					Analyses
GZ-01	Approximately 20 feet east and 10 feet south of the northwest property corner	30 ft bgs	3	To characterize soil conditions and delineate extent and depths of contamination outside of the existing structure	GZ-01 (20-23 ft bgs) – TAL Metals; GZ-01 (23-26 ft bgs) – TAL Metals; and GZ-01 (26-30 ft bgs) – TAL Metals
GZ-02	Approximately 35 feet south and 3 feet east of the northwest property corner	30 ft bgs	3		GZ-02 (20-23 ft bgs) – SVOCs, TAL Metals; GZ-02 (23-26 ft bgs) – SVOCs, TAL Metals; and GZ-02 (26-30 ft bgs) – SVOCs, TAL Metals
GZ-03	Approximately 18.5 feet east and 18.5 feet north from the southwest property corner	30 ft bgs	3		GZ-03 (20-23 ft bgs) – TAL Metals; GZ-03 (23-26 ft bgs) – TAL Metals; and GZ-03 (26-30 ft bgs) – TAL Metals
GZ-04	Approximately 65 feet east and 5 feet north from the southwest property corner	30 ft bgs	3		GZ-04 (20-23 ft bgs) – SVOCs, TAL Metals; GZ-04 (23-26 ft bgs) – SVOCs, TAL Metals; and GZ-04 (26-30 ft bgs) – SVOCs, TAL Metals
GZ-06	Approximately 17 feet south and 17 feet west of the northeast property corner	30 ft bgs	3		GZ-06 (20-23 ft bgs) – TAL Metals; GZ-06 (23-26 ft bgs) – TAL Metals; and GZ-06 (26-30 ft bgs) – TAL Metals
GZ-07	Approximately 16.5 feet south and 40 feet west of the northeast property corner	30 ft bgs	3		GZ-07 (20-23 ft bgs) – TAL Metals; GZ-07 (23-26 ft bgs) – TAL Metals; and GZ-07 (26-30 ft bgs) – TAL Metals
GZ-08	Approximately 30 feet south and 25 feet east of the northwest property corner	20 ft bcs	3	To characterize soil conditions and delineate extent and depths of contamination below existing cellar and structure.	GZ-08 (10-13 ft bcs) – TAL Metals; GZ-08 (13-16 ft bcs) – TAL Metals; and GZ-08 (16-20 ft bcs) – TAL Metals
GZ-09	Approximately 43 feet west and 45 feet south of the northeast property corner	20 ft bcs	3		GZ-09 (10-13 ft bcs) – TAL Metals; GZ-09 (13-16 ft bcs) – TAL Metals; and GZ-09 (16-20 ft bcs) – TAL Metals
GZ-10	Approximately 11 feet north and 20 feet west of the southeast property corner	20 ft bcs	3		GZ-10 (10-13 ft bcs) – TAL Metals; GZ-10 (13-16 ft bcs) – TAL Metals; and GZ-10 (16-20 ft bcs) – TAL Metals

The Addendum to the RIWP was subsequently approved by the NYSDEC on February 7, 2025.

- 2. Section 5.2 of the RIWP indicates that the groundwater will be analyzed for both total and dissolved TAL metals by EPA Method 6010C/7471B. During groundwater sample collection the field parameter measurements of the turbidity decreased significantly over a short period of time to less than 50 NTU. Based on the field information collected, total metals were not originally analyzed for dissolved.
- On July 22, 2025, in accordance with NYSDEC recommendation, GZA prepared and submitted a Supplemental RIWP to install four additional permanent monitoring wells (GMW-07 to GMW-10) for the collection of groundwater samples that were analyzed for total and dissolved TAL metals, total and dissolved cyanide, and total and dissolved mercury.

In addition, the Supplemental RIWP included the installation of four soil vapor points (GSV-09 to GSV-12) for the collection of soil vapor samples that were analyzed for VOCs.

3.9 QUALITY ASSURANCE /QUALITY CONTROL PROTOCOL

As part of the quality assurance and quality control (QA/QC) protocol, field blanks, trip blanks, field duplicate samples, matrix spike/matrix spike duplicate (MS/MSD) samples, and ambient air samples were collected and submitted for laboratory analysis of each environmental media.

QA/QC Sample Type		Sample Name
Soil QA/QC	4 Field Blanks	12.10.2024 – FB-PFAS, 12.11.2024-GZ-FB-01, 12.12.2024-FB-PFAS, 12.12.2024 - GZ-FB-02,
	2 Trip Blank	12.11.2024-GZ-TB-01, 12.12.2024 - GZ-TB-02,
	4 Field Duplicates	12.10.2024-GZ-FD-01, 12.11.2024-GZ-FD-02, 12.12.2024-GZ-FD-03, 02.10.2025-GZ-FD,
	4 MS/MSD	12.11.2024-GZ-09A-MS/MSD, 12.12.2024-GZ-03F-MS/MSD, 12.12.2024- GZ-04D-MS/MSD, 02.10.2025-GZ-04-MS/MSD
Groundwater QA/QC	2 Field Blanks	01.03.2025 – GMW-FB-01, FB_2025-08-28
	1 Trip Blanks	01.03.2025 – GMW-TB-01
	2 Field Duplicates	01.03.2025 – GMW-FD-01, GMW-DUP_2025-08-28
	1 MS/MSD	01.03.2025 – GMW-05 - MS/MSD
Soil Vapor QA/QC	2 Field Duplicates	GSV-06 – GSV-F, GSV-FD_2025-08-28

3.10 COMMUNITY AIR MONITORING

In accordance with the CAMP and Health and Safety Plan (HASP) appended to the 2024 RIWP, community air monitoring was implemented during the remedial investigation activities to assess potential exposures and emissions associated with the investigation. Continuous air monitoring for VOCs and particulates was conducted using calibrated handheld instruments throughout each day on Site. A handheld TSI Dustrak DRX 8534 and a Honeywell MiniRae3000 PID were utilized. The data was presented in Daily Field Reports to the NYSDEC. No exceedances were reported during the investigation.

3.11 FIELD REPORTING

At the end of each field day during this RI, daily field reports were submitted to the NYSDEC, which included a summary of field activities, updates on investigation progress, CAMP data, and photographs of the fieldwork. Copies of these submitted daily field reports are included in **Appendix J**.

3.12 PERMANENT MONITORING WELL SURVEY

On January 8, 2025, Fehringer Surveying (Fehringer) surveyed the locations and elevations of each of the permanent monitoring wells. Elevations are based upon the North American Vertical Datum of 1988 (NAVD88). Survey control points and individual well measurements were established using an RTK/KEYNET. The survey information is provided in **Appendix J**.

4.0 ENVIRONMENTAL EVALUATION

4.1 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS

Based on our review of the *1776-7 Original High and Low Grounds, Salt Marsh and Shorelines in the City of Brooklyn Map*, the Site lies within the border line where a salt marsh was located adjacent to a stream flowing

into the East River (see below). The grade in this area was raised by backfilling to develop the street grid. The fill used to raise grades in the area of the Site is underlain by clayey silts.

In January 2025, Fehringer conducted a survey of the Site which showed that the ground elevation ranges (proximate to monitoring wells) from EL 17.27 feet NAVD88 at the western portion of the Site, to 15.62 feet NAVD88 to the eastern portion of the Site. The topographic gradient at the Site slopes generally down from southwest to northeast. (See **Figure 1**). The nearest water body is the East River at approximately 2,800 feet to the west, and

Newtown Creek at approximately 4,000 feet to the North, of the Site.

According to USGS Publication, Bedrock-Surface Elevation and Overburden Thickness Maps of the Five Boroughs, New York City, New York (De Mott, 2023), the anticipated depth to bedrock is approximately 150 ft bgs or greater. Bedrock is generally comprised of consists of interbedded units of gray thinly laminated muscovite-biotite-quartz schist, and white to pinkish with light green weathering gneiss. Bedrock was not encountered during this RI.

4.1.1 Subsurface Soil Conditions

Based on the results of our subsurface exploration program, the subsurface conditions at the Site generally consist of the following observed soil profile.

- **SURFACE COVER**: Surface cover on the Site consists of either exposed soil (fill) or concrete. Soil boring locations were advanced in areas without concrete.
- **FILL**: Fill, consisting of brown/dark brown fine to medium sand containing construction debris (such as brick and concrete), was encountered below the Surface Cover in the borings extending to depths of approximately between 12 to 17 ft bgs.
- **CLAYEY SILT**: A clayey silt layer was encountered interbedded with the peat stratum that extended to depths ranging from approximately 12 to 25 ft bgs. This stratum consists of gray/dark gray clayey silt, and trace fine to coarse sand.
- **FIBROUS PEAT / FINE GRAINED PEAT**: A peat stratum was encountered interbedded with clayey silt stratum to depths ranging from approximately 11 ft bgs to 33 ft bgs. This peat stratum consisted of fibrous peat that transitioned into fine grained peat. Fibrous peat is identified as a coarse, organic, fibrous dark gray to black colored material while organic peat is identified as a more decomposed, colloidal organic material.

- **SAND:** A sand stratum was encountered underlying the peat and clayey silt layers ranging from approximately 25 ft bgs to deepest boring termination depth of 35 ft bgs. The sand stratum is comprised of gray to brown fine to medium Sand, little Silt.

The subsurface condition at the Site is typical of a subsurface tidal waterbody. The Site was historically part of a salt marsh adjacent to an East River tributary which received an intermittent inflow and outflow of discharges. The subsurface profiles are shown included as **Figures 5A to 5B**.

4.1.2 Groundwater Conditions

GZA performed a synoptic groundwater well gauging event of the wells on January 3, 2025. The groundwater elevation data collected from each monitoring well was used to prepare a groundwater contour map with measurements presented in elevations (EL) above mean sea level (amsl) relative to the North American Vertical Datum 1988 (NAV88). During this groundwater gauging event, depth to groundwater (i.e., below top of casing [BTOC]) ranges from 11.90 to 13.97 ft. Based on Fehringer's survey of each monitoring well, groundwater elevation ranged from 5.19 to 5.63 ft amsl NAVD88.

The groundwater elevation data (at the time of the gauging event) shows that groundwater flows generally from southwest to northeast across the Site, towards Newton Creek. Note that the area was part of a historical salt marsh, so the water table may be tidally influenced. The groundwater contour map from the shallow wells is included as **Figure 6**. The following table summarizes the depth to water table readings and calculated groundwater elevations from the monitoring wells.

Well ID	Well Diameter (inches)	Depth to Bottom ¹ (ft BTOC) ²	Well Screen Interval (BTOC)	Ground Elevation (ft amsl NAVD88)	TOC Elevation ³ (ft amsl NAVD88)	Depth to Water (BTOC)	Groundwater Elevation ⁴ (ft amsl NAVD88)
GMW-01	2	21.45	11.45-21.45	17.27	19.20	13.97	5.23
GMW-02	2	22.81	12.81-22.81	16.09	17.42	11.90	5.52
GMW-03	2	22.85	12.85-22.85	16.53	18.08	12.45	5.63
GMW-04	2	21.95	11.95-21.95	16.66	18.03	12.42	5.61
GMW-05	2	22.75	12.75-22.75	15.62	17.48	12.29	5.19
GMW-06	2	22.07	12.07-22.07	16.32	18.53	13.32	5.21

Table Notes:

1. BTOC – Below top of casing
2. Depth to bottom – Distance of the top of casing to the bottom of the well during gauging in feet.
3. TOC – Top of casing
4. Elevations – feet above mean sea level based (amsl) on North American Vertical Datum of 1988 (NAVD 88)

The monitoring wells were gauged prior to the collection of samples, details of the gauging are provided in the well purge logs included in **Appendix G**.

4.2 CONTAMINATION CONDITIONS

The following sections detail the contamination conditions that exist at the Site in soil, groundwater and soil vapor based on remedial investigation findings.

4.2.1 Description of Areas of Concern

Based on the history and the findings of the previous studies, the Areas of Concern (AOCs) that were investigated during the RI are as described below:

AOC-1 Site and Area Historical Use

Information obtained from multiple historic sources revealed that the Site was utilized for various industrial/manufacturing operations as lumber processing facility (ca1887-1905), a wool rag sorting and baling facility (ca1942), a lacquer spraying and electric plating facility (ca1951-1992). In addition, the Site was previously approved to enter the BCP. Previous investigations also documented the presence of metals in the soil and groundwater, with limited SVOCs and minimal VOCs. Operations electric plating typically utilize chemical agents, metals and/or hazardous materials, the discharge of which may have adversely impacted the environmental quality of the property. Therefore, the historical use of the Site as a manufacturing facility with chemical storage represented a potential for historic operations to have impacted the subsurface.

Historic information also revealed that several adjacent/surrounding properties were also historically utilized for various industrial/manufacturing uses such as: a plastering hair manufacturer, lumber yard, cab company, printer, furniture manufacturer and a spray finishing business. Furthermore, the property that abuts the Site to the north (65 Eckford Street) was entered into the BCP with documented soil and groundwater contamination related to historical operations and fuel storage in USTs. As such, there is a potential for historic operations at these properties to have impacted the subsurface (soil vapor and/or groundwater quality).

AOC-2 – Historical Petroleum Storage and Release

Multiple Phase I ESAs completed between 2011 and 2023 identified the undocumented removal of a #2 fuel-oil AST. The 2011 Phase I conducted by HTE states that a 2,500-gallon #2 fuel oil AST was installed in 1976 and subsequently closed and removed in January 2005. This Phase I assessment also notes a release of fuel due to tank over filling in 1993. The Phase I ESA database indicated that the spill was cleaned by Mystic with Speedi-Dry which was picked up and disposed of. The spill case was closed to the satisfaction of the NYSDEC on March 31, 1993. This AST release may have a minimal impact to the subsurface.

4.2.2 Identification of Standards, Criteria and Guidance

The following Standards, Criteria, and Guidance documents were used to assess contamination conditions:

- 6 NYCRR Part 375 - Environmental Remediation Programs;
- CP-51: Soil Cleanup Guidance Policy - Issued October 21, 2010; Effective December 03, 2010;
- DER-10: NYSDEC Technical Guidance for Site Investigation and Remediation (DER-10) issued May 3, 2010, with revisions through April 9, 2019.
- Guidelines for Sampling and Analysis of PFAS, Issued January 6, 2021;
- Technical Operational Guidance Series (TOGS) 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations with revisions through June 2021;
- Public Water Systems and NYS Drinking Water Standards for PFAS and Other Emerging Contaminants, July 2022;
- Technical Fact Sheet: Drinking Water Health Advisories for Four PFAS (PFOA, PFOS, GenX chemicals, and PFBS), June 2022; and

- Sampling, analysis, and assessment of per- and polyfluoroalkyl substances (PFAS) under the NYSDEC Part 375 Remedial Programs, April 2023
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 with revisions through February 2024.

4.3 SOIL ANALYTICAL RESULTS

The soil analytical results were compared to 6 NYCRR Part 375 Unrestricted Use SCOs (UUSCOs), Restricted - Residential Use SCOs (RRUSCOs), and Protection of Groundwater Resources SCOs (PGWSCOs). Perfluoroalkyl substances (PFAS) results were compared 6 NYCRR Part 375-6 PFOA and PFOS Guidance Values for Anticipated Site Use. The RI sampling summary is presented in **Table 1**. Laboratory data packages are provided in **Appendix K**.

Volatile Organic Compounds

- Most VOCs were either below detection limits or below UUSCOs, RRUSCOs, and PGWSCOs. Acetone (max. of 0.51 mg/kg at GZ-06 [0-2 ft bgs]) and methylene chloride (max. of 0.069 mg/kg at GZ-07 [18-20 ft bgs]) were detected above UUSCOs and PGWSCOs in some samples, but below RRUSCOs throughout the site.

Semi-Volatile Organic Compounds

- Acenaphthene (max. of 128 mg/kg), anthracene (max. of 120 mg/kg), benzo(a)anthracene (max. of 142 mg/kg), benzo(a)pyrene (max. of 138 mg/kg), benzo(b)fluoranthene (max. of 105 mg/kg), benzo(g,h,i)perylene (max. of 153 mg/kg), benzo(k)fluoranthene (max. of 81.9 mg/kg), chrysene (max. of 97.9 mg/kg), dibenzo(a,h)anthracene (max. of 36.3 mg/kg), dibenzofuran (max. of 95.2 mg/kg), fluoranthene (max. of 298 mg/kg), fluorene (max. of 149 mg/kg), indeno(1,2,3-cd)pyrene (max. of 175 mg/kg), naphthalene (max. of 86.3 mg/kg), phenanthrene (max. of 337 mg/kg) and pyrene (max. of 243 mg/kg) were detected above UUSCOs, PGWSCOs and/or RRUSCOs in multiple samples. The SVOC maximum detections were found in sample GZ-02F (18-20ft bgs). SVOCs were found throughout the sites entirely except for the soil samples collected on the Eckford Street side (east) of the Subject Property.
- 1,4-dioxane was below the detection limit in every sample.

Metals

- Several metals were detected above the UUSCOs, RRUSCOs, and PGWSCOs in multiple samples including: arsenic (max. of 240 mg/kg at GZ-01 [8-10 ft bgs]), cadmium (max. of 16.5 mg/kg at GZ-10[8-10 ft bcs]), copper (max. of 1,810 mg/kg at GZ-06[4-6 ft bgs]), lead (max. of 2,370 mg/kg at GZ-03 [0-2ft bgs]), mercury (max. of 24.1 mg/kg at GZ-02 [18-20ft bgs]), nickel (max. of 1,300 mg/kg at GZ-08 [10-13ft bcs]).
- Hexavalent chromium (max. of 2.94 mg/kg at GZ-03 [16-18ft bgs]) was detected above UUSCOs, but below RRUSCOs and PGWSCOs in multiple samples.
- Barium (max. of 725 mg/kg at GZ-10 [8-10 ft bcs]) was detected above UUSCOs and RRUSCOs, but below PGWSCOs in multiple samples.
- Zinc (max. of 4,690 mg/kg at GZ-10 [13-16ft bcs]) and selenium (max. of 12.8 mg/kg at GZ-04C [4-6ft bgs]) were detected above UUSCOs and PGWSCOs, but below RRUSCOs in multiple samples.

Pesticides, Herbicides and polychlorinated biphenyls

- The pesticide Dieldrin (max. of 0.00774 mg/kg), was detected above UUSCOs, but below RRUSCOs and PGWSCOs in one sample.
- PCBs were either below their detection limits or detected below their respective UUSCOs, RRUSCOs and PGWSCOs.
- *Herbicides* were either below their detection limits or detected below their respective UUSCOs, RRUSCOs and PGWSCOs.

Per and Polyfluoroalkyl Substances

- Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) were either below their detection limits or detected below their respective UUSCOs, RUSCOs and PGWSCOs.

The soil analytical results for the Remedial Investigation are summarized in **Tables 2 to 6. Figure 7A, 7B, and 7C** show the soil sample locations and spider diagrams summarizing exceedances of UUSCOs, RUSCOs, and PGWSCOs.

4.4 GROUNDWATER ANALYTICAL RESULTS

The groundwater analytical results were compared to NYSDEC TOGS 1.1.1 AWQS and Guidance Values. PFAS results were compared to NYSDEC Part 375 PFAS Remedial Program April 2023. The RI sampling summary is presented in **Table 1**. Laboratory data packages are provided in **Appendix K**.

Volatile Organic Compounds

- tert-Butylbenzene at (max. of 7.25 µg/L from GMW-04) was detected above the TOGS 1.1.1 AWQS in one sample. Note that the field blank sample (GMW-FB-01) show a detection of chloroform (max. of 16.8 µg/L) above TOGS 1.1.1 AWQS.

Semi-Volatile Organic Compounds

- Benzo(a)anthracene and chrysene were detected above the TOGS 1.1.1 AWQS in two monitoring wells (GMW-01 and GMW-02). Benzo(a)pyrene, benzo(b)fluoranthene and benzo(k)fluoranthene were detected above TOGS 1.1.1 AWQS in one well (GMW-02).
- 1,4- dioxane was below the detection limit in every sample.

Total Metals

- Antimony (max. of 6.80 µg/L), arsenic (max. of 763 µg/L), iron (max. 16,900 µg/L), lead (max. of 182.60 µg/L), magnesium (max. of 54,000 µg/L), manganese (max. of 864 µg/L) and sodium (max. of 200,000 µg/L) were detected above the TOGS 1.1.1 AWQS in multiple monitoring wells.

Dissolved Metals

- Dissolved arsenic (94.19 µg/L) was detected in one groundwater sample (GMW-07)
- Dissolved magnesium (51,400 µg/L) was detected in one groundwater sample (GMW-09)
- Dissolved Iron (max. of 1,520 µg/L), dissolved manganese (max. of 712 µg/L), and dissolved sodium (max. of 169,000 µg/L) were detected above TOGS 1.1.1 AWQS in multiple monitoring wells.

Pesticides / Herbicides / Polychlorinated Biphenyls

- Pesticides, herbicides, and PCBs were below detection limits or were detected below TOGS 1.1.1 AWQS.

Per- and Polyfluoroalkyl Substances

- PFOS (max. of 0.00885 ug/L) were detected in three (3) samples above NYSDEC Part 375 PFAS Remedial Program 2023 of 0.0027 ug/L and PFOA (max. of 0.0488 ug/L) were detected in six (6) samples above NYSDEC Part 375 PFAS Remedial Program 2023 of 0.0067 ug/L. Note: these concentrations of PFOS and PFOA are consistent with background concentrations in the area and are not considered attributable to the site.

The groundwater analytical results are summarized in **Tables 7 to 11**. **Figure 8** shows the sample locations and spider diagrams summarizing the exceedances, compared to TOGS 1.1.1 AWQS / Part 375 PFAS Remedial Program.

4.5 SOIL VAPOR AND OUTDOOR AIR ANALYTICAL RESULTS

The RI soil vapor and outdoor sample summary is presented in **Table 1** and further described below.

Soil Vapor – Volatile Organic Compounds

The total CVOCs concentrations ranged from 13 µg/m³ to 4,432.1 µg/m³, while total petroleum hydrocarbon concentrations ranged from 9.2 µg/m³ to 3,545.8 µg/m³

Chlorinated VOCs

- Carbon tetrachloride (max. of 0.44 µg/m³) was detected in three soil vapor samples
- 1,1-dichloroethene (max. of 7.53 µg/m³) was detected in three soil vapor samples
- Cis-1,2-Dichloroethylene (max. of 151 µg/m³) was detected in nine soil vapor samples.
- Trichloroethylene (max. of 3,910 µg/m³) was detected in all twelve soil vapor samples.
- Methylene chloride (max. of 3.2 µg/m³) was detected in two soil vapor samples.
- Tetrachloroethylene (max. of 477 µg/m³) was detected in all twelve soil vapor samples.
- 1,1,1-trichloroethane (max. of 11.3 µg/m³) was detected in four soil vapor samples.
- Vinyl Chloride (25.3 µg/m³) was detected in five soil vapor samples.

Petroleum Hydrocarbons

- Benzene (max. of 35 µg/m³) was detected in nine soil vapor samples
- Ethylbenzene (max. of 28.5 µg/m³) was detected in six soil vapor samples
- Naphthalene (max. of 2.86 µg/m³) was detected in one soil vapor sample
- Cyclohexane (max. of 104 µg/m³) was detected in five soil vapor samples
- 2,2,4 trimethylpentane (max. of 1,880 µg/m³) was detected in four soil vapor samples
- 1,2,4-trimethylbenzene (max. of 129 µg/m³) was detected in six soil vapor samples
- 1,3,5-trimethylbenzene (max. of 69.8 µg/m³) was detected in three soil vapor samples
- O-xylene(max. of 22 µg/m³) was detected in eight soil vapor samples
- m,p-xylene (max. of 42 µg/m³) was detected in eight soil vapor samples
- N-Heptane (max. of 1,300 µg/m³) was detected in six soil vapor samples
- N-Hexane (max. of 1,120 µg/m³) was detected in seven soil vapor samples
- Toluene (max. of 49.4 µg/m³) was detected in ten soil vapor samples

Outdoor Air – Volatile Organic Compounds

- No elevated concentrations of VOCs were detected in the outdoor air samples.

The soil vapor results are summarized in **Table 12**. **Figure 9** shows the sample locations and spider diagrams summarizing the results. Laboratory data packages are provided in **Appendix K**.

4.6 DATA USABILITY

Data from the York Analytical Laboratories and Pace Analytical Services provided the soil, groundwater and soil vapor reports for the RI, following New York Analytical Services Protocols (ASP) Category B. These reports were validated by Christine Camardella, an independent third-party validator. The DUSR indicated that the data package is complete as per DEC ASP Category B. It was evaluated as per NYSDEC DER 10 Appendix 2B – Guidance for the Development of DUSRs. The DUSR stated that all the QC Data falls within the protocol required limits and specifications and data is deemed acceptable. The Data Usability Summary Reports (DUSR) for the samples collected during the RI are provided in **Appendix L**.

5.0 ENVIRONMENTAL AND PUBLIC HEALTH ASSESSMENTS

A Qualitative Human Health Exposure Assessment (QHHEA) for the Site has been prepared in accordance with the requirements of DER-10/Technical Guidance for Site Investigation and Remediation, Appendix 3B, May 2010, and is presented in the following subsections. The QHHEA characterizes the exposure setting, identifies potentially complete exposure pathways, and qualitatively evaluates potential fate and transport of constituents from one medium to another (i.e., soil-to-air or soil-to-groundwater).

5.1 SITE SETTING

The Site is located in the Greenpoint-Williamsburg neighborhood of Brooklyn, New York in an area zoned for mostly residential and commercial use. The Site is bound:

- to the north by a 5-story building (65 Eckford Street, BCP Site No. C224218);
- to the east by Eckford Street and several 2-story residential buildings;
- to the south by a 3-story residential building (67 Engert Avenue) and eight interconnected 5-story residential buildings (49 Engert Avenue), and
- to the west by 1-story warehouse building (488 Leonard Street) and a parking garage.

The Site is situated in an area with documented historical contamination. The Site was formerly utilized as a lacquer spraying and electric plating facility (ca1951-1992). Operations electric plating typically utilize chemical agents, metals and/or hazardous materials, the discharge of which may have adversely impacted the environmental quality of the Site. Previous investigations documented the presence of metals in the soil and groundwater. In addition, the property located to the north, (65 Eckford Street) was entered into the BCP under Site No. C224218 with documented soil and groundwater contamination related to historical operations and fuel storage in USTs.

Groundwater beneath the Site is not used as potable drinking water. The entire area is serviced by the New York City Drinking Water System. Since there are no public or private potable supply wells in the area, exposure from ingesting Site groundwater is not a concern. General Site use, a description of previous investigations, and the results of subsurface investigations can be found in **Sections 2.0** through **4.0**.

5.2 EXPOSURE ASSESSMENT

An exposure pathway is the way that humans or the environment come into contact with Chemicals of Potential Concern (COPC). An exposure pathway is considered complete when the following five conditions are met:

1. Source (i.e., VOCs, metals etc.);
2. Release and transport mechanism from source to environmental media (i.e., into the subsurface or volatilization to the air of an overlying building);
3. Point of human exposure (i.e., surface soil);
4. A route of exposure (ingestion, dermal contact, or inhalation); and
5. A receptor population (i.e., on-site workers or residents).

An exposure assessment will identify these pathways and includes a review of the potential sources of COPC and their release mechanisms, and identification of potential human receptors.

5.3 EXPOSURE CONCEPTUAL SITE MODEL

A conceptual site model has been developed based on the findings of the Site subsurface investigations described above and from the anticipated future use of the Site.

5.3.1 *Potential Sources of Constituent of Potential Concern*

Soil

Constituents of potential concern (COPCs) identified in Site shallow soils above RRUSCOs include:

- SVOCs
 - Acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene and pyrene
- Metals
 - Arsenic, barium, cadmium, copper, lead, mercury, nickel, and zinc

Groundwater

COPCs identified in groundwater above TOGS 1.1.1 AWQS include:

- VOCs
 - tert-Butylbenzene
- SVOCs
 - PAHs – benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and chrysene
- Dissolved Metals
 - Antimony, arsenic, iron, lead, magnesium, manganese and sodium.
 - Note: The dissolved metals above AWQSs (iron, manganese and sodium) are consistent with general groundwater quality throughout the area.

Soil Vapor and Outdoor Air

COPCs identified in soil vapor include:

- VOCs
 - Cis-1,2-Dichloroethylene, n-Heptane, n-Hexane, 2,2,4-Trimethylpentane, tetrachloroethylene, trichloroethylene and vinyl chloride.

There were no COPCs identified in outdoor air.

5.3.2 Potential Release Mechanisms

The possible explanations as to the occurrence of constituents of potential concern in soil, groundwater, and soil vapor at the Site are described below.

- Constituents of potential concern in SVOCs above RUSCOs were mainly observed in the fill layer (0-23 ft bgs) and metals above RUSCOs were mainly observed (0-26 ft bgs) at the Site.
- PAHs and metals in the groundwater may be from the groundwater in close proximity to elevated soil concentrations associated with the fill material with these constituents.
- Constituents of concern such as chlorinated VOCs and petroleum hydrocarbons in soil vapor may be related to the historical use of the Site, but are likely sourced from surrounding properties with soil vapors migrating through the unsaturated soils

5.3.3 Potential Human Receptors and Exposure Pathways

Potential On-Site Exposures: Inhalation, ingestion and dermal contact are the possible routes of exposure to potential receptors with respect to impacted soils on Site. The Site is currently partially developed with a steel framed structure. The Site is secured with a locked construction fence. Note that exterior air sample results did not report COPCs. On-site receptors are currently limited to trespassers, Site representatives, and visitors granted access to the Site. Under proposed future conditions, potential on-site receptors will include workers, visitors, and construction and utility workers who are engaged in intrusive activities / excavation of impacted soil at the Site.

A site-specific Construction Health and Safety Plan (CHASP) has been developed to identify and minimize the potential hazards to on-site workers. The CHASP will be discussed and included as an appendix to the Remedial Action Workplan (RAWP). Site trespassers could also be exposed to impacted soil during excavation; however, security measures including an 8-foot high construction fence and 24-hour security will minimize potential exposure to trespassers.

Potential Off-Site Exposures: Off-Site residents could also be exposed to dust or vapors during the excavation of impacted soil. A site-specific CAMP has been developed to identify and minimize the potential for off-site exposure to residents through continuous air monitoring during excavation activity. The CAMP will be discussed and included as an appendix to the RAWP.

5.4 POTENTIAL ECOLOGICAL IMPACTS

Based upon the investigations conducted at the Site, it does not appear that a Fish and Wildlife Impact Analysis (FWIA) is necessary. A search of the United State Fish and Wildlife Service Information for Planning and Consultation shows that there are no critical habitats within the Site boundary. The Site is in an area consisting of mostly residential, commercial, and industrial buildings with minimal ecological habitat. The majority of soils on Site will be covered thereby reducing the potential for ecological impact. Therefore, the potential for Site-related constituents of potential concern to migrate to the fish and wildlife resources, if present, is considered minimal.

5.5 QHHEA CONCLUSIONS

A summary of the QHHEA is provided in the table below. The QHHEA identified soil, groundwater and soil vapor as the primary impacted media and the primary potential sources of COPCs. Construction or utility workers conducting intrusive subsurface activities could be exposed to COPCs in Site soils and groundwater. The Site Management Plan (SMP) will outline soil and groundwater handling practices to minimize exposure.

Environmental Media & Exposure Route	Human Exposure Assessment
Direct Contact with Surface and Subsurface Soils (and incidental ingestion)	• People are not coming into contact because public access to the site, to areas with contaminated surface soils is restricted by fencing. • People can come to contact if they are trespassing • Visitors to the site and workers may come into contact via walking on exposed soils. • During remediation and construction, there is a risk of exposure for workers conducting ground intrusive work at the Site. A site-specific CHASP has been developed and will be included in the forthcoming RAWP, which will protect on-site workers from exposure during remediation and construction. • After remediation and redevelopment, exposure to residual contaminated soil will be prevented by installation and maintenance of a site cover system.
Direct contact with groundwater (and incidental ingestion)	• Under current conditions, visitors to the Site will not contact the impacted groundwater which is between 5 to 12 feet below ground surface. • During remediation, remedial workers, construction workers and utility workers could encounter contaminated groundwater through dermal contact and/or incidental ingestion during ground intrusive work and potential drilling activities. Exposure will be prevented by utilizing proper PPE. A CHASP will be included in the forthcoming RAWP, which will protect on-Site workers from exposure during remediation and construction. • If necessary, dewatering will be handled by a dewatering contractor and a closed loop system will be installed to mitigate any exposure. As required, engineering controls will be used to mitigate any vapors off-gassing from groundwater. • Future exposure will be reduced or eliminated with the implementation of engineering controls that will be developed during the remedial design phase and by implementing the RAWP. • A CAMP will be utilized to protect the public during construction activities.
Ingestion of Groundwater	• Groundwater is not being used for drinking water; the area is served by the public water supply.
Inhalation of Air	• During remediation, workers may be exposed to soil vapors through inhalation while soil is exposed through dermal contact and/or incidental ingestion during ground intrusive work and potential drilling activities. Exposure will be prevented by utilizing proper PPE. The CHASP will be included in the forthcoming RAWP, which will protect on-Site workers from exposure during remediation and construction. • After remediation and redevelopment, it is not anticipated for workers or the public to come into contact with soil vapors because active engineering

Environmental Media & Exposure Route	Human Exposure Assessment
	controls will be included in the construction of the planned new building on Site.

Based on the results of the QHHEA, a remedial plan will be developed to prevent exposures to the soil, soil vapor and the groundwater. A RAWP will be developed that includes the remediation and mitigation of the impacted soil, groundwater and soil vapor as well as the implementation of engineering and institutional controls if Track 1 Unrestricted Use SCOs cannot be achieved to prevent exposure pathways.

5.6 GREEN AND SUSTAINABLE REMEDIATION (GSR)

According to the NYSDEC DER-31 Green Remediation guidance document, Green Remediation approaches were implemented for the RI. GZA and its subcontractors incorporated sustainability practices to reduce the environmental footprint during the RI. The completed GSR tracking sheet is included in **Appendix M**.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 SUMMARY OF REMEDIAL INVESTIGATION

The Site was investigated in accordance with DER-10 and other applicable Federal, State, and local laws, regulations, and requirements. The RI was performed in accordance with the Remedial Investigation Work Plan (RIWP) for BCP Site No.C224168 dated November 20, 2024, by GZA, approved by NYSDEC on December 3, 2024, and the RIWP Addendum dated, February 7, 2025, prepared by GZA.

This RI was performed to evaluate Site data and information necessary to develop a Remedial Action Workplan (RAWP) in a manner that will render the Site protective of public health and the environment during construction and renders the Site consistent with the contemplated end use. RI activities included the following scope of work:

- (i) delineation of the horizontal and vertical extent of impacted soils, groundwater, and soil vapor on Site;
- (ii) (ii) assessment of the potential fate and transport of contaminants; and
- (iii) (iii) data collection to allow for evaluation of potential remedial alternatives for exposure mitigation.

The following is a brief presentation of the RI findings:

1. A January 2025 survey of the Site showed that the ground elevation ranges (proximate to monitoring wells) from EL 17.27 feet NAVD88 at the western portion of the Site, to 15.62 feet NAVD 88 to the eastern portion of the Site.
2. Based on the January 2025 gauging event, depth to groundwater (i.e., below top of casing [BTOC]) ranges from 11.90 to 13.97 feet, or elevation of 5.19 to 5.63 ft amsl NAVD88. The groundwater elevation data (at the time of gauging event) shows that groundwater flows generally from southwest to northeast across the Site, towards Newton Creek. Note that the area was part of a historical salt marsh, so the water table may be tidally influenced.

3. Soils observed in boring logs advanced on Site indicate that subsurface soil at the Site consists of the following: A surface cover which consists of either exposed soil (fill) or concrete underlain by fill layer, consisting of brown/dark brown fine to medium sand containing construction debris, such as brick and concrete to depths of approximately 12 to 17ft bgs. A clayey silt stratum was encountered interbedded with a peat stratum that extended to depths ranging from approximately 12 to 25 ft bgs. This stratum consists of gray/dark gray clayey silt, and trace fine to coarse sand. A peat stratum was encountered interbedded with the clayey silt stratum ranging from approximately 11 ft bgs to 33 ft bgs. This peat stratum consisted of fibrous peat that transitioned into fine grained peat. Fibrous peat is identified as a coarse, organic, fibrous dark gray to black colored material while organic peat is identified as a more decomposed, colloidal organic material. A sand stratum was encountered underlying the peat and clayey silt layers ranging from approximately 25 ft bgs to deepest boring termination depth of 35 ft bgs.
4. Constituents of potential concern identified in shallow soils (from 0 to 30 ft bgs) above UUSCOs, RUSCOs and/or PGWSCOs include: SVOCs (Acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, dibenzofuran, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene and pyrene; and Metals (arsenic, barium, cadmium, copper, lead, mercury, nickel, and zinc).
5. Constituents of potential concern identified in groundwater above TOGS 1.1.1 AWQS include: VOC (tert-Butylbenzene); SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and chrysene; and dissolved metals (arsenic, magnesium, iron, manganese, and sodium). The dissolved metals above AWQSs (iron, manganese and sodium) are consistent with general groundwater quality throughout the area.
6. Constituents of potential concern identified in soil vapor include: VOCs such as cis-1,2-Dichloroethylene, n-Heptane, n-Hexane, 2,2,4-trimethylpentane, tetrachloroethylene, trichloroethylene and vinyl chloride.
7. Contamination from historical Site use and the area's historical industrial use. Constituents of potential concern in SVOCs above RRUSCOs were observed in the fill layer (0-23 ft bgs) and metals above RRUSCOs were observed (0-30 ft bgs) at the Site. PAHs and metals in the groundwater may be from the groundwater in close proximity to elevated soil concentrations associated with the fill material with these constituents. Constituents of concern such as chlorinated VOCs and petroleum hydrocarbons in soil vapor may be related to the historical use of the Site, but are likely sourced from surrounding properties with soil vapors migrating through the unsaturated soils.
8. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

6.2 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT (QHHEA)

The QHHEA identified soil, groundwater, and soil vapor as the primary impacted media and the primary potential sources of COPCs. There is one complete pathway for exposure to contaminated soil, visitors to the site would be exposed to on-site surface soil contamination. The site is fenced off to keep people off of the site. During remediation and redevelopment, construction or utility workers conducting intrusive subsurface activities could potentially be exposed to COPCs in Site soils, groundwater, and soil vapor. The RAWP will outline soil and

groundwater handling practices to prevent exposure. After remediation and redevelopment is complete, there will be no complete exposure pathways due to the implementation of engineering controls to prevent exposure to residual contamination (e.g., installation of a composite cover over residual site soils, Sub-Slab Depressurization System (SSDS), and a chemical vapor barrier, etc.).

6.3 POTENTIAL REMEDIAL ACTION OBJECTIVES

Based on the results of the Remedial Investigation, the following potential Remedial Action Objectives (RAOs) have been identified for this Site.

6.3.1 *Groundwater*

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Remove the source of groundwater contamination.
- Restore groundwater aquifer to pre-disposal/pre-release conditions, to the extent practicable

6.3.2 *Soil*

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater contamination.

6.3.3 *Soil Vapor*

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at the Site.

TABLES

Table 1 - Sample Summary and Rationale

Remedial Investigation Report
BCP Site No. C224168

Sample Name	Location	Sample / Boring Termination Depth (feet below ground surface [bgs] or cellar slab [bcs])	Number of Samples	Rationale for Sampling	Laboratory Analysis
Soil					Analyses
GZ-01	Approximately 20 feet east and 10 feet south of the northwest property corner	30 ft bgs	9	To characterize soil conditions and delineate extent and depths of contamination outside of the existing structure	GZ-01(0-2 in) - Focused; GZ-01 (0-2 ft bgs) - Full suite; GZ-01 (4-6ft bgs) - Focused +PFAS; GZ-01 (8-10 ft bgs) - Full suite; GZ-01 (12-14 ft bgs) - Focused; GZ-01 (18-20 ft bgs) - Focused; GZ-01 (20 -23 ft bgs) - TAL Metals; GZ-01 (23-26 ft bgs)- TAL Metals; and GZ-01 (26-30 ft bgs)- TAL Metals
GZ-02	Approximately 35 feet south and 3 feet east of the northwest property corner	30 ft bgs	9		GZ-02(0-2 in) - Focused; GZ-02 (0-2 ft bgs) - Full suite; GZ-02 (4-6ft bgs) - Focused +PFAS; GZ-02 (8-10 ft bgs) - Full suite; GZ-02 (12-14 ft bgs) - Focused; GZ-02 (18-20 ft bgs) - Focused; GZ-02 (20 -23 ft bgs) - TAL Metals,TCL SVOCs; GZ-02 (23-26 ft bgs)- TAL Metals, TCL SVOCs; and GZ-02 (26-30 ft bgs)- TAL Metals, TCL SVOCs.
GZ-03	Approximately 18.5 feet east and 18.5 feet north from the southwest property corner	30 ft bgs	9		GZ-03(0-2 in) - Focused; GZ-03 (0-2 ft bgs) - Full suite; GZ-03(4-6ft bgs) - Focused +PFAS;GZ-03 (8-10 ft bgs) - Full suite; GZ-03 (12-14 ft bgs) - Focused; GZ-03 (16-18 ft bgs) - Focused; GZ-03 (20 -23 ft bgs) - TAL Metals; GZ-03 (23-26 ft bgs)- TAL Metals; and GZ-03 (26-30 ft bgs)- TAL Metals
GZ-04	Approximately 65 feet east and 5 feet north from the southwest property corner	30 ft bgs	9		GZ-04(0-2 in) - Focused; GZ-04 (0-2 ft bgs) - Full suite; GZ-04 (4-6ft bgs) - Focused +PFAS; GZ-04 (8-10 ft bgs) - Full suite; GZ-04 (12-14 ft bgs) - Focused; GZ-04 (18-20 ft bgs) - Focused; GZ-04 (20 -23 ft bgs) - TAL Metals,TCL SVOCs; GZ-04 (23-26 ft bgs)- TAL Metals, TCL SVOCs; and GZ-04 (26-30 ft bgs)- TAL Metals, TCL SVOCs;
GZ-05	Approximately 60 feet south and 12 feet west from the northeast property corner	20 ft bgs	6		GZ-05(0-2 in) - Focused; GZ-05 (0-2 ft bgs) - Full suite; GZ-05 (4-6ft bgs) - Focused +PFAS; GZ-05 (8-10 ft bgs) - Full suite; GZ-05 (12-14 ft bgs) - Focused; and GZ-05 (18-20 ft bgs) - Focused
GZ-06	Approximately 17 feet south and 17 feet west of the northeast property corner	32 ft bgs	10		GZ-06(0-2 in) - Focused; GZ-06 (0-2 ft bgs) - Full suite; GZ-06 (4-6ft bgs) - Focused +PFAS; GZ-06 (8-10 ft bgs) - Full suite; GZ-06 (12-14 ft bgs) - Focused; GZ-06 (18-20 ft bgs) - Focused; GZ-06 (20 -23 ft bgs) - TAL Metals; GZ-06 (23-26 ft bgs)- TAL Metals; GZ-06 (26-30 ft bgs)- TAL Metals; and GZ-06 (30-32 ft bgs)- TAL Metals;
GZ-07	Approximately 16.5 feet south and 40 feet west of the northeast property corner	33 ft bgs	10		GZ-07(0-2 in) - Focused; GZ-07 (0-2 ft bgs) - Full suite; GZ-07 (4-6ft bgs) - Focused +PFAS; GZ-07 (8-10 ft bgs) - Full suite; GZ-07 (12-14 ft bgs) - Focused; GZ-07 (18-20 ft bgs) - Focused; GZ-07 (20 -23 ft bgs) - TAL Metals; GZ-07 (23-26 ft bgs)- TAL Metals; GZ-07 (26-30 ft bgs)- TAL Metals; and GZ-07 (30-32 ft bgs)- TAL Metals
GZ-08	Approximately 30 feet south and 25 feet east of the northwest property corner	22 ft bcs	7	To characterize soil conditions and delineate extent and depths of contamination below existing cellar and structure.	GZ-08 (0-2 ft bcs) - Full Suite; GZ-08 (4-6ft bcs) - Focused; GZ-08 (8-10 ft bcs) - Focused; GZ-08 (10 -13 ft bcs) - TAL Metals; GZ-08 (13-16 ft bcs)- TAL Metals; GZ-08 (16-20 ft bcs)- TAL Metals; and GZ-08 (20-22 ft bcs)- TAL Metals
GZ-09	Approximately 43 feet west and 45 feet south of the northeast property corner	10 ft bcs	3		GZ-09 (0-2 ft bcs) - Full Suite; GZ-09 (4-6ft bcs) - Focused; and GZ-09 (8-10 ft bcs) - Focused
GZ-10	Approximately 11 feet north and 20 feet west of the southeast property corner	20 ft bcs	6		GZ-10 (0-2 ft bcs) - Full Suite; GZ-10 (4-6ft bcs) - Focused; GZ-10 (8-10 ft bcs) - Focused; GZ-10 (10 -13 ft bcs) - TAL Metals; GZ-10 (13-16 ft bcs)- TAL Metals; and GZ-10 (16-20 ft bcs)- TAL Metals

Soil Analysis Description

Full Suite : TCL VOCs + TICs, including 1-4 Dioxane (EPA Method SW 846 8260, isotope dilution for 1-4 Dioxane), TCL SVOCs + TICs (EPA Method 8270), TAL metals (EPA Methods SW 846 6010/6020/7470) + cyanide (EPA Method SW 846 9010/9012) and hexavalent chromium, pesticides/herbicides/PCBs (EPA Methods SW 846 8081/8151/8082), Per- and polyfluoroalkyl substances (EPA Method 1633)

Focused : TCL VOCs + TICs, including 1-4 Dioxane (EPA Method SW 846 8260, isotope dilution for 1-4 Dioxane), TCL SVOCs + TICs (EPA Method 8270), TAL metals (EPA Methods SW 846 6010/6020/7470) + cyanide (EPA Method SW 846 9010/9012) and hexavalent chromium

Notes:

ft bgs = feet below ground surface

ft bcs = feet below cellar slab

TCL = Target Compound List

TAL = Target Analyte List

VOCs + TICs = volatile organic compounds plus tentatively identified compounds

SVOCs + TICs = semi-volatile organic compounds plus tentatively identified compounds

PCBs = polychlorinated biphenyls

PFAS = per and polyfluoroalkyl substances

Table 1 - Sample Summary and Rationale

Remedial Investigation Report
BCP Site No. C224168

Sample Name	Location	Sample / Boring Termination Depth	Number of Samples	Rationale for Sampling	Laboratory Analysis
Soil Vapor					Analysis
GSV-01	Approximately 5.5 feet south and 25 feet east of northwest property corner	2 feet above water table	1	To characterize the soil vapor and delineate the extent of impacts	EPA Method TO-15 for VOCs
GSV-02	Approximately 35 feet south and 3 feet east of the northwest property corner	2 feet above water table	1		
GSV-03	Approximately 20 feet north and 25 feet east of southwest property corner	2 feet above water table	1		
GSV-04	Approximately 5 feet north and 65 feet east of southwest property corner	2 feet above water table	1		
GSV-05	Approximately 10 feet west and 58 feet south of northeast property corner	2 feet above water table	1		
GSV-06	Approximately 20 feet west and 5 feet south of northeast property corner	2 feet above water table	1		
GSV-07	Approximately 38 feet east and 48 feet north of southwest property corner	2 feet above water table	1		
GSV-08	Approximately 26 feet north and 67 feet east of southwest property corner	2 feet above water table	1		
GSV-09	Approximately 25 feet south and 45 feet west of northeast property corner	2 feet above water table	1		
GSV-10	Approximately 17 feet south and 75 feet west of northeast property corner	2 feet above water table	1		
GSV-11	Approximately 8 feet south and 20 feet west of northeast property corner	2 feet above water table	1		
GSV-12	Approximately 45 feet south and 15 feet west of northeast property corner	2 feet above water table	1		
Ambient Air/Indoor Air					Analysis
OA-01	Approximately 68 feet east and 50 feet north of southwest property corner	3 feet above ground surface	1	To characterize the concentration of VOCs in ambient air and analyze vapor intrusion of the existing cellar	EPA Method TO-15 for VOCs
OA-02	Approximately 8 feet east and 45 feet north of southwest property corner	3 feet above ground surface	1		

Table 1 - Sample Summary and Rationale
55 Eckford Street, Brooklyn, NY

Remedial Investigation Report
BCP Site No. C224168

Sample Name	Location	Well Termination Depth (feet below ground surface)	Number of Samples	Rationale for Sampling	Laboratory Analysis
Groundwater - Permanent Wells					Analyses
GMW-01	Approximately 20 feet east and 10 feet south of the northwest property corner	20	1	To characterize the groundwater conditions at the Site	Full Suite
GMW-02	Approximately 40 feet north and 6 feet west of the southeast property corner	20	1		Full Suite
GMW-03	Approximately 18.5 feet east and 18.5 feet north from the southwest property corner	20	1		Full Suite
GMW-04	Approximately 65 feet east and 5 feet north from the southwest property corner	20	1		Full Suite
GMW-05	Approximately 60 feet south and 12 feet west from the northeast property corner	20	1		Full Suite
GMW-06	Approximately 17 feet south and 17 feet west of the northeast property corner	20	1		Full Suite
GMW-07	Approximately 15 feet south and 55 feet west of the northeast property corner	20	1		Focused
GMW-08	Approximately 50 feet north and 10 feet east of the southwest property corner	20	1		Focused
GMW-09	Approximately 10 feet north and 45 feet east of the southwest property corner	20	1		Focused
GMW-10	Approximately 50 feet south and 15 feet west of the northeast property corner	20	1		Focused

Notes:

Based on the Previous Phase II Reports, the water table is anticipated to be between 7 to 13 feet below ground surface, or 10 to 13 feet below ground surface.

Groundwater Analysis Description

Full Suite: TCL VOCs + TICs, including 1-4 Dioxane (EPA Method SW 846 8260, isotope dilution for 1-4 Dioxane), TCL SVOCs + TICs (EPA Method SW 846 8270), pesticides/herbicides/PCBs (EPA Methods SW 846 8081/8151/8082), total and dissolved TAL metals (EPA Methods SW 846 6010/6020/7470), cyanide (EPA Method SW 846 9010/9012), and mercury (EPA Method SW 846 7471); PFAS (EPA Method 1633)

Focused: Total and dissolved Target Analyte List (TAL) Metals by EPA Method 6010C/6020/7471B; Total and dissolved Cyanide by EPA method 9010/9012; and Total and dissolved Mercury by EPA method 7471

Table Notes:

- ~: No guidance value.
- mg/kg: Milligrams per Kilogram.
- U: Not detected at the reported detection limit for the sample.
- B: Analyte found in the analysis batch blank.
- J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL)
- E: Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- in / ft bgs: inches / feet below ground surface.
- in / ft bcs: inches / feet below cellar slab.
- Value exceeds its Part 375 Unrestricted Use and Protection of Groundwater Soil Cleanup Objectives.

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

B: Analyte found in the analysis batch blank.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit.

E: Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

in / ft bgs: inches / feet below ground surface.

in / ft bcs: inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use and Protection of Groundwater Soil Cleanup Objectives.

1,4-Dioxane	0.1	13	0.1	0.0185	U	0.0190	U	0.019							

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs)

Value exceeds its Part 375 Protection of Groundwater Use Soil Cleanup Objectives (PGWSCOs).

Value exceeds its Part 375 UUSCOs and Residential Use Soil Cleanup Objectives (RUSCOs) or PGWSCOs

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs)

1,4-Dioxane	0.1	13	0.1	0.0196	U	0.0183	U	0.0196	U	0.0189	U	0.0194	U	0.0196	U

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs)

Value exceeds its Part 375 Protection of Groundwater Use Soil Cleanup Objectives (PGWSCOs).

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs)

Value exceeds its Part 375 Protection of Groundwater Use Soil Cleanup Objectives (PGWSCOs).

Value exceeds its Part 375 UUSCOs and

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

Semi-Volatiles, 1,4-Dioxane 8270 SIM-Soil (mg/kg)															
1,4-Dioxane	0.1	13	0.1	0.0194	U	0.0190	U	0.0190	U	0.0187	U				

Table Notes:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

NA: Not analyzed

in / ft bgs: inches / feet below ground

in / ft bcs: inches / feet below cellar slab.

	Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs)
	Value exceeds its Part 375 Protection of Groundwater Use Soil Cleanup Objectives (PGWSCOs

Table 3 - Semi-Volatile Organic Compounds in Soil

Table Notes:

--: No guidance value

mg/kg: Milligrams per Kilogram

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL)

in / ft bgs inches / feet below ground surface

in / ft bcs inches / feet below cellar slab

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs).

Value exceeds its Part 375 UUSCOs and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs).

Value exceeds its Part 375 Unrestricted, Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) and/ or PGWSCOs.

Table Notes:

--: No guidance value

mg/kg: Milligrams per Kilogram

U: Not detected at the reported detection limit for the sample.

J: Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL)

in / ft bgs inches / feet below ground surface

in / ft bcs inches / feet below cellar slab

	Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs).
	Value exceeds its Part 375 UUSCOs and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs).
	Value exceeds its Part 375 Unrestricted, Restricted Residential Use Soil Cleanup Objectives (RRUSCOs) and/ or PGWSCOs.

TABLE NOTES:

--: No guidance value.

mg/kg: Milligrams per Kilogram.

U: Not detected at the reported detection limit for the sample.

Concentration of analyte was quantified from diluted analysis.

Flag only applies to field samples that have detectable concentrations of the analyte.

NT: Indicates the analyte was not a target for this sample.

in / ft bgs inches / feet below ground surface.

in / ft bcs inches / feet below cellar slab.

Value exceeds its Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs).

TABLE NOTES:

--: No Guidance Value.
mg/kg: Milligrams per kilogram.
NA: Not Analyzed
U: Not detected at the reported detection limit for the sample.
Estimated value. The analyte concentration is below the reporting
J: limit (RL), but above the method detection limit (MDL) or estimated
detection limit (EDL).

TABLE NOTES:

--: No Guidance Value.
mg/kg: Milligrams per kilogram.
NA: Not Analyzed
U: Not detected at the reported detection limit for the sample.
Estimated value. The analyte concentration is below the reporting
j: limit (RL), but above the method detection limit (MDL) or estimated
detection limit (EDL).

*GMW-FD-01 is a duplicate sample of GMW-01

TABLE NOTES:

- : No Guidance Value.
ug/L: Microgram per Liter.
MW: Monitoring Well
FD: Field Duplicate
FB: Field Blank
NA: Not Analyzed
U: Not detected at the reported detection limit for the sample.
J: Estimated value. The analyte concentration is below the reporting limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).
P The sample specific % recovery between the results for the two columns exceeds the method-specified criteria.

Value exceeds NYSDEC TOGS Standards and Guidance Values

*GMW-FD-01 is a duplicate sample of GMW-01

TABLE NOTES:

- : No Guidance Value.
ug/L: Micrograms per Liter.
FD: Field duplicate sample
FB: Field Blank Sample
U: Not detected at the reported detection limit for the sample.
J: Estimated value. The analyte concentration is below the reporting limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).
NA: Not Analyzed

Value exceeds NYSDEC Technical Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values.

TABLE NOTES:

NYSDEC TOGS 1.1.1 AWQS GV	New York State Department of Conservation Technical Operational Guidance Series 1.1.1 Ambient Water Quality Standard and Guidance Values
11	The recording limit exceeds the NYSDEC TOGS 1.1.1 AWQS GV
J	Estimate Value. The analyte concentration is below the quantitative limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL)
U	Not detected at the reported detection limit for the sample
--	No Guidance Value
ug/L	Results are reported in microgram per liter

TABLE NOTES:

- GSV: Soil vapor sample
GOA: Outdoor air sample
--: No Guidance Value.
ug/m³: micrograms per cubic meter
NA: Not Analyzed
U: Not detected at the reported detection limit for the sample.
J: Estimated value. The analyte concentration is below the reporting limit (RL), but above the method detection limit (MDL) or estimated detection limit (EDL).
P The sample specific % recovery between the results for the two columns exceeds the method-specified criteria.
- Total CVOCs : Chlorinated volatile organic compounds (VOCs) listed on the New York State Department of Health (NYSDOH) Soil Vapor Intrusion (SVI) Guidance Matrices A to C
- Petrol : Total Petroleum Hydrocarbons listed on the NYSDOH SVI Matrices D to E
- Hydrocarbons :
GSV-FD Duplicate sample of GSV-06

TABLE NOTES:

GSV: Soil vapor sample

GOA: Outdoor air sample

--: No Guidance Value.

ug/m³: micrograms per cubic meter

NA: Not Analyzed

U: Not detected at the reported detection limit for the

J: Estimated value. The analyte concentration is below the reporting limit (RL), but above the method

detection limit (MDL) or estimated detection limit (EDL).

P The sample specific % recovery between the results for the two columns exceeds the method-specified criteria.

Total CVOCs: Chlorinated volatile organic compounds (VOCs) listed on the New York State Department of Health (NYSDOH) Soil Vapor Intrusion (SVI) Guidance Matrices A to C

Petrol Total Petroleum Hydrocarbons listed on the NYSDOH SVI Matrices D to E

Hydrocarbons: GSV-FD Duplicate sample of GSV-06

GSV-FD_2025-08-28 - Duplicate sample of GSV-06

GENERAL NOTES

- BASE MAP DEVELOPED FROM DRAWING TITLED "ADDITIONAL EXCAVATION AREA DIAGRAM, SKC-1", DATED AUGUST 30, 2024.
- DRAWING DISPLAYS EXISTING BUILDING FOOTPRINT PROFILE AND PROPOSED CELLAR LAYOUT.
- SEE LABORATORY REPORTS FOR ADDITIONAL INFORMATION INCLUDING QUALIFIER DESCRIPTIONS.
- ONLY EXCEEDANCES OF THE APPLICABLE NYSDEC PART 375 SOIL CLEANUP OBJECTIVES ARE SHOWN. FOR FULL ANALYTICAL RESULTS, SEE THE TABLES LOCATED IN THE RIR.
- DEPTHS ARE SHOWN NEXT TO BORING NAME. "BGS" = DEPTH BELOW GROUND SURFACE; "BCS" = DEPTH BELOW CELLAR SURFACE.

APPENDIX A – LIMITATIONS

USE OF REPORT

1. GZA GeoEnvironmental, Inc. (GZA) prepared this Report on behalf of, and for the exclusive use of our Client for the stated purpose(s) and location(s) identified in the Proposal for Services and/or Report. Use of this Report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not expressly identified in the agreement, for any use, without our prior written permission, shall be at the party's sole risk, and without any liability to GZA.

STANDARD OF CARE

2. GZA's findings and conclusions are based on work conducted as part of the Scope of Services set forth in the Proposal for Services and/or Report and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. Conditions other than described in this report may be found at the subject location(s).
3. GZA's services were performed using the degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or similar property. No warranty, express or implied, is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during its study. Additionally, GZA makes no warranty that any response action or recommended action will achieve all of its objectives or that the findings of this study will be upheld by a local, state, or federal agency.
4. In conducting our work, GZA relied upon certain information made available by public agencies. Client and/or others. GZA did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information which we have noted, if any, are discussed in the Report.

SUBSURFACE CONDITIONS

5. The generalized soil profile(s) provided in our Report are based on widely-spaced subsurface explorations and are intended only to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, were developed utilizing interpolation/extrapolation methods, and were based on our assessment of subsurface conditions. The composition of strata, and the transitions between strata, may be more variable and more complex than indicated. For more specific information on soil conditions at a specific location refer to the exploration logs. The nature and extend of variations between these explorations may not become evident until further exploration or construction. If variations or other latent conditions then become evident, it will be necessary to reevaluate the conclusions and recommendations of this Report.
6. Water level readings have been made, as described in this Report, in the specified monitoring wells at the specified times and under the stated conditions. These data have been reviewed and interpretations have been made in this Report. Fluctuations in the level of the groundwater, however, occur due to temporal or spatial variations in areal recharge rates and heterogeneities, the presence of subsurface utilities, and/or natural or artificially induced perturbations. The observed water table and hydraulic heads may be other than indicated in the Report.

COMPLIANCE WITH CODES AND REGULATIONS

7. We used reasonable care in identifying and interpreting applicable codes and regulations necessary to execute our scope of work. These codes and regulations are subject to various, and possibly contradictory, interpretations. Interpretations and compliance with codes and regulations by other parties is beyond our control.

SCREENING AND ANALYTICAL TESTING

8. GZA collected environmental samples at the locations identified in the Report. These samples were analyzed for the specific parameters identified in the Report. Additional constituents, for which analyses were not conducted, may be present in soil, groundwater, surface water, sediment, and/or air. Future Site activities and uses may result in a requirement for additional testing.
9. Our interpretation of field screening and laboratory data is presented in the Report. Unless noted otherwise, we relied upon the laboratory's QA/QC program to validate these data.
10. Variations in the types and concentrations of contaminants observed at a given location or time may occur due to release mechanisms, disposal practices, changes in flow paths, and/or the influence of various physical, chemical, biological, or radiological processes. Subsequently observed concentrations may be other than indicated in the Report.

INTERPRETATION OF DATA

11. Our opinions are based on available information and data as described in the Report, and on our professional judgment. Additional observations made over time, and/or space, may not support the opinions provided in the Report.

ADDITIONAL INFORMATION

12. In the event that the Client or others authorized to use this report obtain additional information on environmental or hazardous waste issues at the Site not contained in this Report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this Report.

ADDITIONAL SERVICES

13. GZA recommends that we be retained to provide services during any future investigations, design, implementation, activities, construction, and/or property development/redevelopment of the Site. This will allow us the opportunity to: i) observe conditions and compliance with our design concepts and opinions; ii) allow for changes in the event that conditions are other than anticipated; iii) provide modifications to our design; and iv) assess the consequences of changes in technologies and/or regulations.

CONCEPTUAL SITE MODEL

14. Our opinions were developed, in part, based upon a comparison of site information and data available at the time of development to conditions anticipated within our Conceptual Site Model (CSM). The CSM is based on available

information, and professional judgment. There are rarely sufficient data to develop a definitive CSM. Therefore, observations over time, and/or space, may vary from those depicted in the CSM provided in this Report. The inherent variability and complexity of subsurface conditions mean that the CSM should be considered a dynamic tool rather than a static representation. Therefore, the CSM should be evaluated and refined (as appropriate) whenever significant new information and/or data is obtained.

T: (973) 837-6066

1 CELLAR
3/16" = 1'-0"

GENERAL NOTES

1. ALL PARTITION TO BE FULL HEIGHT U.O.N. SEE SHEET A020 FOR ALL TYPES.
2. SEE STRUCTURAL, CIVIL, MEP DRAWINGS FOR ADDITIONAL INFORMATION AND COORDINATION.
3. PROVIDE WATERPROOF MEMBRANE AT TOILETS AND PANTRIES AT FLOOR AND 18" UP THE WALLS.
4. ALL MECHANICAL SYSTEMS LOCATED/CROSSING OVER EGRESS CORRIDORS ARE TO BE SEISMICALLY BRACED.
5. FOR FINISHES, SEE SCHEDULES
6. FOR PLUMBING AND EQUIPMENT SEE MEP PLANS
7. ALL WINDOW AND LOUVER INFORMATION WILL BE ON ELEVATIONS. LOUVERS ARE TO BE DRAINABLE.
8. ALL GYPSUM BOARD IN TOILET AND PANTRY ARE TO BE MOISTURE RESISTANT TYPE.
9. ALL GYPSUM BOARD IN SHOWER AREAS ARE TO BE CEMENTITIOUS BOARD.
10. HINGE FACE OF ALL DOORS ARE TO BE 3" FROM ADJACENT PERPENDICULAR WALL U.N.O.
12. FURNISH AND INSTALL NEW SEMI RECESSED FIRE EXTINGUISHER AND HOSE CABINET WITH APPROPRIATE FIRE RATING ENCLOSURE AS INDICATED. PROVIDE BLOCKING AS NECESSARY.
13. SEE DETAIL PAGES FOR ROOF DETAILS.
14. FUR OUT ALL CMU WALLS EXCEPT IN THE GARAGE AND STAIRS.
15. SEE WALL SECTIONS FOR PARAPET WALL CONSTRUCTION
16. PROVIDE PITCH POCKETS ABOVE MECHANICAL SHAFTS, COORDINATE WITH PLUMBING DRAWINGS
17. PROVIDE RESTRICTED KEY ACCESS ELEVATOR AS SHOWN ON THE PLANS. PROVIDED CUT SHEET FOR MANUFACTURER IS REFERENCE ONLY. PROVIDE APPROVED EQUAL

SHEET NOTES

1. MILLWORK: BUILT-IN KITCHEN CABINETS WITH COUNTER TOP
2. MILLWORK: VANITIES
3. TEMPERED GLASS GUARD, 42" H PROTECTION FROM FINISHED FLOOR. SEE SECTIONS, ELEVATIONS AND DETAILS FOR CURB/KNEE WALL HEIGHT BELOW GLASS
4. WINDOW OPENING PROTECTED BY WATER CURTAIN (SEE SPRINKLER DRAWING)
5. VIDEO INTERCOM SYSTEM PER MDL SEC 50.

MDL NOTES

SEC. 35 ENTRANCE DOORS AND LIGHTS
THE OWNER OF EVERY MULTIPLE DWELLING SHALL INSTALL AND MAINTAIN A LIGHT OR LIGHTS AT OR NEAR THE OUTSIDE OF THE FRONT ENTRANCE-WAY OF THE BUILDING WHICH SHALL IN THE AGGREGATE PROVIDE NOT LESS THAN FIFTY WATTS INCANDESCENT ILLUMINATION FOR A BUILDING WITH A FRONTAGE UP TO TWENTY-TWO FEET AND ONE HUNDRED WATTS INCANDESCENT ILLUMINATION FOR A BUILDING WITH A FRONTAGE IN EXCESS OF TWENTY-TWO FEET, OR EQUIVALENT ILLUMINATION AND SHALL BE KEPT BURNING FROM SUNSET EVERY DAY TO SUNRISE ON THE DAY FOLLOWING.

SEC. 50. ENTRANCES: DOORS, LOCKS AND INTERCOMMUNICATION SYSTEMS

1. EVERY ENTRANCE FROM THE STREET, PASSAGEWAY, COURT, YARD, CELLAR, OR SIMILAR ENTRANCE TO A CLASS A MULTIPLE DWELLING ERRECTED OR CONVERTED AFTER JANUARY FIRST, NINETEEN HUNDRED SIXTY-EIGHT, EXCEPT AN ENTRANCE LEADING TO THE MAIN ENTRANCE HALL OR LOBBY WHICH MAIN ENTRANCE HALL OR LOBBY IS EQUIPPED WITH ONE OR MORE AUTOMATIC SELF-LOCKING DOORS, SHALL BE EQUIPPED WITH AUTOMATIC SELF-CLOSING AND SELF-LOCKING DOORS AND SUCH DOORS SHALL BE LOCKED AT ALL TIMES EXCEPT WHEN AN ATTENDANT SHALL ACTUALLY BE ON DUTY. EVERY ENTRANCE FROM THE ROOF TO SUCH A DWELLING SHALL BE EQUIPPED WITH A SELF-CLOSING DOOR WHICH SHALL NOT BE SELF-LOCKING AND WHICH SHALL BE FASTENED ON THE INSIDE WITH MOVABLE BOLTS, HOOKS OR A LOCK WHICH DOES NOT REQUIRE A KEY TO OPEN FROM INSIDE THE DWELLING.

2. EVERY CLASS A MULTIPLE DWELLING ERRECTED OR CONVERTED AFTER JANUARY FIRST, NINETEEN HUNDRED SIXTY-EIGHT CONTAINING EIGHT OR MORE APARTMENTS SHALL ALSO BE EQUIPPED WITH AN INTERCOMMUNICATION SYSTEM. SUCH INTERCOMMUNICATION SYSTEM SHALL BE LOCATED AT AN AUTOMATIC SELF-LOCKING DOOR GIVING PUBLIC ACCESS TO THE MAIN ENTRANCE HALL OR LOBBY OF SAID MULTIPLE DWELLING AND SHALL CONSIST OF A DEVICE OR DEVICES FOR VOICE COMMUNICATION BETWEEN THE OCCUPANT OF EACH APARTMENT AND A PERSON OUTSIDE SAID DOOR TO THE MAIN ENTRANCE HALL OR LOBBY AND TO PERMIT SUCH APARTMENT OCCUPANT TO RELEASE THE LOCKING MECHANISM OF SAID DOOR FROM THE APARTMENT.

SEC. 54. CELLAR ENTRANCE.

THERE SHALL BE A DIRECT ENTRANCE TO THE CELLAR, OR TO THE LOWEST STORY IF THERE BE NO CELLAR, FROM THE OUTSIDE OF EVERY MULTIPLE DWELLING ERRECTED AFTER APRIL EIGHTEENTH, NINETEEN HUNDRED TWENTY-NINE, EXCEPT THAT IN NON-FIREPROOF MULTIPLE DWELLINGS ERRECTED AFTER SUCH DATE WHICH ARE THREE STORIES OR LESS IN HEIGHT AND OCCUPIED BY NOT MORE THAN TWO FAMILIES ON ANY STORY, ANY STAIR LEADING TO SUCH CELLAR OR LOWEST STORY MAY BE LOCATED INSIDE THE DWELLING PROVIDED IT IS ENCLOSED IN FIREPROOF WALLS AND FIREPROOF DOORS AND ASSEMBLIES WITH THE DOORS SELF-CLOSING, AT BOTH THE LEVEL OF SUCH CELLAR OR LOWEST STORY AND THAT OF THE STORY ABOVE.
NO SUCH OUTSIDE ENTRANCE EXISTING IN ANY MULTIPLE DWELLING ON APRIL EIGHTEENTH, NINETEEN HUNDRED TWENTY-NINE, SHALL BE OBSTRUCTED.

DOOR NOTES

- 1) SEE DOOR SCHEDULES FOR HARDWARE AND DOOR TYPES AND COMPLY WITH ANY ADDITIONAL INFORMATION ON THE DRAWINGS
- 2) ALL DOORS THROUGH THE BUILDING SHALL BE PROVIDED WITH DISABLED PERSON COMPLIANT DOOR HARDWARE AND DOOR SADDLES

October 27, 2011

Hydro Tech Environmental, Corp. appreciates the opportunity to work for 55 Eckford Street, LLC. at the property located at 55 Eckford Street, Brooklyn, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, Hydro Tech personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,
Hydro Tech Environmental, Corp.

1.0 EXECUTIVE SUMMARY

Hydro Tech Environmental, Corp. (Hydro Tech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-05. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a Hydro Tech Project Manager and under the guidance of a Hydro Tech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Conditions (RECs) at the Subject Property:

- The historic use of the Subject Property as a manufacturing facility (§ 6.0; 7.0)
- The undocumented removal of an aboveground fuel oil storage tank (§7.0)

Based on the Recognized Environmental Conditions identified above, the following recommendations are provided:

- A subsurface investigation should be conducted to determine any impact to the Subject Property from historic manufacturing activities and the former aboveground fuel oil storage tank

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

Hydro Tech Environmental, Corp. (Hydro Tech, the **“Preparer”**) has been retained by 55 Eckford Street, LLC. (the **“User”**) to perform a Phase I Environmental Site Assessment at the property located at 55 Eckford Street in the Borough of Brooklyn, NY. The Phase I was prepared for diligence purposes toward acquisition and financing. The User is the **“owner”** of the property. The property will hereafter be referred to as the **“Subject Property”**.

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property” (ASTM E 1527-05, §1.1.1). Similarly, the goal of an AAI-compliant Phase I Assessment is to identify “conditions indicative of releases or threatened releases of hazardous substances...” (40 CFR Part 312).

To this end, Hydro Tech has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by Hydro Tech and the User may have collected some information used in this report. Some or all of the Assessment has been performed or supervised by environmental professionals as required by 40 CFR Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations (“AULs”) by Hydro Tech is beyond the scope of this practice (ASTM E1527-05) and investigation.

2.2 Scope of Work

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with both ASTM E 1527 and the AAI Rule except where noted in Section 2.3 and Hydro Tech’s Proposal. As required by ASTM & AAI, the user has supplied information that has been relied upon by Hydro Tech in the rendering of findings, conclusions and opinions, except where indicated in Section 2.3 or elsewhere in the report.

2.3 Limitations, Deviations and Exceptions

In addition to those items outlined by ASTM E 1527 and the AAI rule, asbestos, radon, lead-based paint and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full asbestos survey or lead-based paint survey. These surveys are commonly performed for the purpose of building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they be performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for general Site characterization or waste disposal purposes. This Phase I Assessment is not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third party sources or the user. As such, Hydro Tech relies upon these sources and has recorded findings, conclusions and opinions based upon this information. Hydro Tech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report. This Phase I is not intended to address soil vapor intrusion conditions.

It should be noted that the USEPA has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquiries) of November 1, 2005 that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in exceedances(s) of the ASTM E1527-05 standard, persons attempting to utilize this ESA while seeking one of CERCLA's LLPs must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E1527-05) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Hydro Tech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 Subject Property Vicinity

The Subject Property is located on the eastern side of Eckford Street between Driggs Avenue to the north and Engert Avenue to the south in the Borough of Brooklyn, New York. The Borough of Brooklyn is situated in the southeastern portion of the City of New York.

The vicinity of the Subject Property consists of residential and commercial properties and public natural areas. McCarren Park is located in the western vicinity of the Subject Property. The ground covering in the vicinity of the Site consists of asphalt, concrete and landscaped surfaces.

3.2 Subject Property Description

The Subject Property is a square shaped lot of approximately 10,190 square feet in area and is occupied by a 6-story unfinished steel frame construction with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. The remaining portions of the Subject Property consist of bare soil, piles of construction materials and overgrown weeds.

No utility services including New York City sewer system, water, electric and gas services are currently available at the Subject Property. The main access to the Subject Property is via a chain link fence along Eckford Street to the east. No heating systems are associated with the Subject Property.

The topography of the Subject Property is generally level. The topography of the vicinity of Subject Property is slightly declined toward the west. **Figure 1** provides a Site Plan.

3.3 Adjacent Land Use

The Subject Property is located in a residential and commercial area. The following properties were identified immediately adjacent to the Subject Property:

<u>Direction</u>	<u>Adjacent Parcel</u>	<u>Surrounding Parcels</u>
North	2-story industrial (Carter)	Residential / Commercial
South	2-story building (unknown use)	
East	2-story residential	
West	Parking lot; 2-story building (unknown use)	Residential/Commercial/Public recreational area

Hydro Tech does not believe that the present uses of the adjacent properties identified above should impact upon the environmental quality of the Subject Property.

3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7-½ Minute Topographic Map containing the properties indicate two (2) environmentally sensitive receptors are located within less than ¼ miles of the Subject Property. The sensitive receptors are identified as a day care facility “CMYK Day Care” and as a medical office “EG Greenpoint Pediatrics”. Hydro Tech believes that the Subject Property should not impact upon the environmental quality of these sensitive receptors.

3.5 Environmental Setting

The Site is located in the northwestern portion of the Borough of Brooklyn, New York. The elevation of the Subject Property is approximately 16 feet above mean sea level (USGS 7 ½-Minute Brooklyn, New York Quadrangle, 1969, Photorevised 1979).

Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock. The thickness of these deposits ranges from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine, and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member increases to the southeast and ranges in depth from 200 to 800 feet below sea level (from northwest to southeast). The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

Long Island has a humid, temperate climate that is strongly influenced by the Long Island Sound and the Atlantic Ocean. These bodies of water temper extremes of heat in summer and cold in winters. Climate affects the formation of soil through its influence on chemical, biological and physical processes. The amount and content of rainwater, as it percolates through the soil, chemically alters the composition of the soils. Chemical and biological processes are also affected by temperature changes. The physical weathering of the soil and rocks is affected by freezing.

The soils of Long Island are relatively young, having developed since the last recession of glaciation approximately 25,000 years ago. Over thousands of years, the minerals in the bedrock debris slowly decayed and disintegrated, providing the necessary substrate to support biological activity. Rock-forming minerals such as feldspars and micas, that are rich in potassium and aluminum, release their important elements as they are converted to clays. Soils formed in glacial drift are commonly known as loam, a mixture of sand, silt and clay.

The soils of Long Island formed three distinct soil horizons or zones on glacial deposits. The lowest horizon, designated as the C-horizon, is similar in composition to the transported glacial rock debris. The B-horizon is above the C-horizon and consists of sediments that have been considerably altered from their C-horizon source. Vadose zone water percolates through the B-horizon, carrying compounds of clay, iron, aluminum oxides, carbonates and humic acid. These materials are redeposited within the lower portions of the B-horizon, and form the zone of accumulation. The zone of accumulation may also be the zone of ground water saturation.

The zone of leaching is found in the A-horizon, which is the upper, organic-rich and life sustaining layer with abundant roots and organic matter at the surface. The A-horizon is distinct from the underlying B & C-horizons because it is darker and more friable.

Differentiation in soil horizons are the result of various soils-forming processes such as the physical breakdown of particles, the leaching of salts, the accumulation of organic matter and the chemical weathering of primary minerals. The chemical weathering of primary minerals occurs through processes such as chelation, the formation of silicate clay minerals, the translocation of silicate clay minerals by percolating water from one horizon to another and the accumulation of iron.

The depth to groundwater in the vicinity of the Site is estimated at approximately 10 feet. The groundwater flow direction beneath the Site is presumed toward the East River.

4.0 SITE RECONNAISSANCE

Mr. Mark E. Robbins of Hydro Tech performed the site reconnaissance portion of the Phase I Assessment on October 17, 2011. The weather during the inspection was cloudy and approximately 65 degrees Fahrenheit. **Appendix A** provides photographs of the Subject Property.

Hydro Tech inspected all accessible portions of the Subject Property. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes:

No industrial processes were observed at the Subject Property. No evidence of historical industrial processes was observed at the Subject Property.

2. Suspect Asbestos-Containing Materials:

No suspect asbestos-containing material (ACM) is present at the Subject Property.

3. Suspect Lead-Based Paint:

No peeling paint was identified at the Subject Property.

4. Drum Storage:

No current or former drum storage areas were observed at the Subject Property.

5. Storage Tanks:

No aboveground storage tanks (ASTs) or underground storage tanks (USTs) is observed at the Subject Property. No evidence of former ASTs or former USTs was observed at the Subject Property.

6. Drains:

No evidence of floor drains was observed at the Subject Property.

7. PCB-Containing Equipment:

No leaking electric transformers containing PCBs or PCB-containing equipment were observed at the Subject Property.

8. Monitoring / Potable Water Wells:

No monitoring wells or potable water wells were observed at the Subject Property. No monitoring wells were observed on adjacent properties.

9. Mold

No evidence of mold growth was identified at the Subject Property.

10. Pits, Ponds, or Lagoons:

No evidence of ponds, lagoons or ponds was observed at the Subject Property.

11. Distressed Vegetation:

No distressed vegetation was observed at the Subject Property.

12. Fill / Land Disposal:

No areas of fill or evidence of land disposal of material(s) were observed at the Subject Property.

13. Engineering Controls:

No engineering controls were noted at the Subject Property.

14. Odors:

No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property.

15. Hazardous Substance / Petroleum Containers:

No evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.

5.0 REGULATORY AGENCY DOCUMENTS

Freedom of Information Act (FOIA) requests were issued to the following regulatory agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. **Appendix B** provides copies of the regulatory agency documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection

New York City Department of City Planning

A FOIA request was submitted to the New York City Zoning Department on October 21, 2011. The address of the Subject Property is identified as 55 Eckford Street. The Subject Property is alternatively addressed 55-63 Eckford Street.

The New York City Zoning Department indicated that the Subject Property is zoned "M1-2/R6B". The Little "E" Restriction is listed as "Not Applicable".

The Department of Finance Occupancy Code is listed as "D3-Elevator Apartment" for the Subject Property.

New York City Department of Building

A FOIA request was submitted to the New York City Department of Building (NYCDOB) on October 21, 2011.

The Tax Map number for the Subject Property is Block 2698, Lot 32. The NYCDOB indicates that a "Stop Work Order" exists for the Subject Property. The NYCDOB records further indicates there is one (1) open complaint, nine (9) open DOB violations and twenty four (24) open Environmental Control Board (ECB) violations reported for Lot 32. The open complaint is related to construction. The open DOB violations are related to construction (1 violation), boiler (5 violations) and elevator (3 violations). The ECB open violations are related construction (23 violations) and elevator (1 violation). The boiler open violations are listed during 2006 until 2009.

The NYCDOB records also indicate there are fourteen (14) jobs and twenty (20) actions listed for the Subject Property. The listed jobs files are related to interior and exterior building amendments and the installation of gas/oil burner and boiler. The job application for the gas/oil burner and boiler installation was filed during August 1996 and involved a change in the heating energy from number 4 fuel oil to number 2 fuel oil and gas. Listed actions include elevator application, oil burner application, alteration, new building, certificate of occupancy, construction, plumbing & drainage, plumbing repair slip, sprinklers and the NYCDOB violations. The actions associated with oil burner application are dated 1904 and 1945.

Two (2) certificate of occupancy documents dated 1945 and 1946 are provided in the NYCDOB records for the Subject Property. In both documents, the Subject Property is described as a 2-story building with cellar. During 1945, the building was utilized for the storage and sorting of baled rags and office space. During 1946, the building was utilized as a factory. No further information was provided in the CO documents for the Subject Property.

The historic presence of number 2 fuel oil burner/boiler at the Subject Property is indicative of the suspect presence number 2 fuel oil USTs at the property. As will be subsequently discussed in this report, a number 2 fuel oil AST was closed /removed at the Subject Property during 2007. The historic presence of manufacturing activities will be further discussed in Section 6.0 and 7.0.

New York City Department of Housing Preservation and Development

A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD) on October 21, 2011. The NYCHPD records indicate no pen violations associated with the presence of lead paint or mold growth are listed for the Subject Property.

New York City Department of Health

A FOIA request was submitted to the New York City Department of Health (NYCDOH) on October 21, 2011. The NYCDOH was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCDOH has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

New York City Bureau of Fire Prevention

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP) on October 21, 2011. The NYCBFP was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCBFP has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

New York State Department of Environmental Conservation

A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC) on October 21, 2011. The NYSDEC was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYSDEC has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated.

The NYSDEC website was also searched for any records associated with the Subject Property. Information obtained from the NYSDEC website indicates the Subject Property is listed as a Chemical Bulk Storage (CBS) facility under CBS number **2-000058** and as a Petroleum Bulk Storage (PBS) facility under PBS number **2-268666**. The CBS listing indicates a tank registration expired in June 1999 and the tank information can only be released under the Freedom of Information Law. The PBS listing indicates a 2,500 gallon number 2 fuel oil AST was installed during December 1976 and was then closed and removed during January 2005. The AST was located in contact with soil within a vault. The PBS and CBS listings will be further discussed in Section 7.0.

The NYSDEC website further indicates the presence of a closed NYSDEC Spill **#92-14462** at the Subject Property. Number 6 fuel oil was spilled on March 26, 1993 due to tank overfill. Resource affected by this spill is reported as soil. This spill was closed on March 31, 1993. No further information is provided in this spill report. The closed spill **#92-14462** will be further discussed in Section 7.0

New York City Department of Environmental Protection

A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP) on October 21, 2011. The NYCDEP was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCDEP has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCDEP will be provided as soon as it has been received and evaluated.

6.0 SITE HISTORY

6.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007 were obtained from EDR and evaluated in order to establish the history of the Site. **Appendix C** provides a copy of the Sanborn Fire Rate Insurance Maps.

Date	Subject Property Shown As	Surrounding area
1887	4 abutting vacant and undeveloped lots	vacant lots
1905	2 abutting lots occupied by 4 interconnected structures; one 2-story building with basement in southern portion; two 1-story buildings in western portion and one 1-story shed in the northern portion. The Subject Property is listed as "Planning & Moulding" of lumber	residential; lumber yards; vacant lots
1916	Same layout of the buildings as in 1905. The Subject Property is listed as vacant	residential; auto repair garages; industrial facility; junk yard
1942	3 abutting lots occupied by 2 interconnected buildings; one 2-story building in the central and southern portions and a 1-story building in the northern portion. The Subject Property is listed as "Sorting & Bailing" of "Wool Rags"	residential; commercial; auto laundry, auto repair garages; parking lots, carpet dying and cleaning facility
1951-1991	Same layout of the buildings as in 1942. Southern portion of 2-story building is listed as "Lacquer Spraying" and central portion as "storage".	residential; commercial; auto repair garages; auto renting lot; parking lots; carpet dying and cleaning facility
1993-2004	Same layout of the buildings as in 1991. The use of the Subject Property is unknown	residential; commercial; auto repair garages; parking lots
2005-2007	One vacant and undeveloped lot	residential; commercial; vacant lots

6.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document known occupants of specific properties and sorted by individual addresses. **Appendix D** provides a copy of the City Directory Search.

The following provides a listing of all documented usages of the Subject Property:

Date	Use of Subject Property	Surrounding Property Use
1934	Miramar Trading Corp.	Residential
1945	Schoolsky Bros Wool Stock Corp.	
1949	Berkman Bros Plater	
1960	Berkman Bros Plater/Simpson Geo	
1962	Processing Techniques Inc.	
1965-1973	Berkman Bros Plater/Processing Techniques Inc.	
1976	Processing Techniques Inc.	
1980	Berkman Bros Plater	
1985	Berkman Bros Plater/Processing Techniques Inc.	
1982	Berkman Bros Plater	
1997	Berkman Bros Plater/Processing Techniques Inc.	

2000	Berkman Bros Plater/BG Finishing, Inc./ Processing Techniques Inc	
2005	Processing Techniques Inc.	

6.3 Previous Studies

According to the site contacts no prior environmental studies were previously performed at the Subject Property.

6.4 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears that the Subject Property was vacant and undeveloped prior to 1887 and was then developed as a manufacturing facility before or during 1905. The manufacturing facility occupied the property until 2005, until which time it was again vacant between 2005 and 2007. Historic manufacturing uses of environmental concern include a lacquer spraying practice noted in the southern portion of the Site. Lacquer spraying at the Subject property may have involved the use of chemicals including paint thinners and lacquers. Such a use may have affected the environmental quality of the Subject Property and should be considered a REC.

The historical uses of surrounding properties included a mixture of residential and commercial buildings, auto repair facilities, industrial facility, junk yard, car wash, carpet dying and cleaning. Except for the residential and commercial buildings, none of the other surrounding land uses were located upgradient to the Subject Property and therefore, they do not appear to represent any conditions affecting the environmental integrity of the Subject Property.

Numerous data gaps (maximum 26 years) were noted in the historical map review. Due to other historical information obtained over the course of this investigation, Hydro Tech does not consider this data failure/data gap significant, as it appears unlikely to have affected potential Recognized Environmental Conditions at the subject site.

7.0 NEIGHBORHOOD HAZARDOUS WASTE DATABASES

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. The search areas for each database were specified by both ASTM E 1527 and the AAI rule. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed). **Appendix E** provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

ASTM Standard Environmental Record Source	Approx. ASTM Minimum Search Distance (MSD)	Number of Mapped Sites within MSD	Number of Orphan Sites
1. NPL (Superfund) <i>National Priorities List</i>	1.0 Mile	0	0
2. Delisted NPL Site <i>Delisted National Priorities List Site</i>	0.5 Mile	0	0
3. CERCLIS <i>Comprehensive Environmental Response Compensation & Liability Information System</i>	0.5 Mile	0	0
4. CERCLIS NFRAP <i>CERCLIS No Further Remedial Action Planned Site</i>	0.5 Mile	1	0
5. RCRA-TSD CORRACTS <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility Subject to Corrective Action</i>	1.0 Mile	1	0
6. RCRA-TSD <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility (Non-Corrective Action)</i>	0.5 Mile	0	0
7. RCRA-LG <i>Resource Conservation & Recovery Large Quantity Generator</i>	Site & Adjoining	0	0
8. RCRA-SG <i>Resource Conservation & Recovery Small Quantity Generator</i>	Site & Adjoining	0	0
9. ERNS <i>Emergency Response Notification System</i>	Property Only	0	0
10. Local / State / Tribal UST, PBS <i>Registered Storage Tanks</i>	Site & Adjoining	1	0
11. Local / State / Tribal LTANKS <i>Leaking Underground Storage Tanks</i>	0.5 Mile	22	0
12. State Spill Incidents <i>NYSDEC Spill Sites</i>	0.125 Mile	12	7
13. Local / State / Tribal SWF <i>Solid Waste Facility / Landfill</i>	0.5 Mile	2	0
14. Local / State / Tribal CERCLIS <i>Inactive Hazardous Waste Disposal Site</i>	0.5 Mile	0	0
16. Inst. / Engineering Controls <i>Registry of Institutional and/or Engineering Controls</i>	Property Only	0	0
17. Voluntary Cleanup Program Sites <i>Local / State / Tribal VCP Sites</i>	0.5 Mile	0	0
18. Brownfield Sites <i>Local / State / Tribal Brownfield Sites</i>	0.5 Mile	0	0
19. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources	

The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property was identified in seven (7) different databases. The Subject Property appears in the AST database under a Petroleum Bulk Storage (PBS) #**2-26866** for a 2,500 gallon number 1, 2 or 4 fuel oil tank. This listing indicates the AST was installed on December 1, 1976 and was closed/removed on January 7, 2005. No additional information pertaining to the AST was provided in the database. Since no information involving the potential impact to the Subject Property from the AST has been provided (including a NYFD Affidavit), the undocumented removal of the AST removal should be considered a REC.

The AST PBS listing at the Subject Property is associated with three other listings in the RCRA Conditionally Exempt Small Quantity Generator (CESQG) database, Finds Database and Manifest database. Available records indicate that the facility listed as Berkman Brothers, Inc. generated small quality hazardous wastes and has received notices of violations noted as unknown (4 violations) and generators general (2 violations). A total of twenty (20) manifests are documented for this facility between 1990 and 2003. The manifests indicate hazardous waste identified as reactive waste, mercury, arsenic, cyanide, and other unknown material were generated at the Subject Property. No information pertaining to these listings could be obtained from the Site contacts for that period. The historic generation of hazardous materials at the Subject Property, which resulted in reported notices of violations, related to the previously reported REC associated with the historical use as a manufacturing facility.

The Subject Property is listed in the Leaking Tanks (LTANKs) and Historic LUST databases under Spill #**92-14462**. The LUST spill case #**92-14462** occurred at the Subject Property on March 26, 1993 following a tank overflow. Number 6 fuel oil was reported to have spilled. Corrective actions associated with this spill indicated spiller cleaned the spill utilizing speedy-dry. The spill was closed on March 31, 1993. No other information was provided for this Spill in the LTANKs database. The presence of closed spill case at the Subject Property should not be considered a REC.

The Subject Property also appears in the AST Chemical Bulk Storage (CBS) database under CBS #**2-000058**. This listing is associated with a 500 gallon fiberglass reinforced plastic AST containing Sodium Hypochlorite. The CBS AST was installed during 1985 and was closed during 1989. The historic use of the Sodium Hypochlorite is related to the previously identified REC as a manufacturing facility.

One (1) site is listed in the CERCLIS database upgradient within a 0.19 mile radius of the Subject Property. This site is not qualified for NPL listing, does not presently generate hazardous waste and has not generators open violation. Hydro Tech concludes that this site should not impact upon the environmental quality of the Subject Property.

One (1) facility is listed in the RCRA CORRACT databases upgradient within a 0.96 mile radius of the Subject Property. Due to its proximity, Hydro Tech does not believe this RCRA CORRACT facility should impact upon the environmental quality of the Subject Property.

Twenty two (22) sites are listed in the LTANKs database within a ½ mile radius of the Subject Property. Fourteen (14) of these sites are located upgradient of the Subject Property. Three (3) LUST sites located upgradient at distances exceeding 0.18 miles from the Subject Property are associated with open spill cases. Corrective actions at these open LUST sites have been undertaken. Hydro Tech believes the presence of open upgradient LUST spill cases should not be considered a REC.

Twelve (12) properties are listed in the NY Spills database within a ⅛ mile radius of the Subject Property. Nine (9) spills are located upgradient to the Subject property and have all been resolved by the NYSDEC. The presence of closed upgradient spills should not impact upon the environmental quality of the Subject Property.

Two (2) sites are listed in the Solid Waste Facilities (SWF) database at distances exceeding 0.47 miles from the Subject Property. One SWF site is located upgradient to the Subject property and is listed as a transfer facility. Due to its location and status, this upgradient SWF site should not impact upon the environmental quality of the Subject Property.

None of the remaining properties identified in the databases should impact upon the environmental quality of the Subject Property.

8.0 INTERVIEWS & CLIENT / USER-PROVIDED INFORMATION

During the course of the Phase I Assessment, interviews were conducted with respect to the operation and history of the Site and a Client/User Questionnaire was provided.

1. The client/user did not respond to Hydro Tech's request for information regarding Environmental Liens or Activity and Use Limitations against the property that may have been filed or recorded under federal, tribal, state, or local law.
2. The client/user reported no specialized or actual knowledge or experience related to potential Recognized Environmental Conditions at the Subject Property or nearby properties.
3. The client/user did not respond to Hydro Tech's request for information regarding the relationship of the purchase price of the property to fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.
4. The client/user reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.
5. The client/user reported no environmental contamination or cleanups have occurred at the property.
6. Hydro Tech's Environmental Questionnaire for the client/user. A review of the Questionnaire did not reveal the presence of any potential Recognized Environmental Conditions in connection with the subject site, and did not provide any additional information with respect to the environmental integrity of the Subject Property that was not obtained from other sources over the course of this investigation. **Appendix F** provides a copy of the Phase I Questionnaire.

8.1 Past and Present Site Associates

Hydro Tech was not provided with any other owner, operator or occupant information for the Subject Property. The interview did not reveal the presence of any potential Recognized Environmental Conditions in connection with the subject site, and did not provide any additional information with respect to the environmental integrity of the subject property that was not obtained from other sources over the course of this investigation.

In addition, although an interview with the former owner(s) was not possible as none were provided to Hydro Tech as of the date of this ESA, we do not believe that any such owner(s) would have additional material information regarding the potential for contamination at the property that was not obtained from other sources over the course of this investigation.

9.0 CONCLUSIONS

Hydro Tech has performed a Phase I Environmental Site Assessment at the Subject Property, and has identified the following Recognized Environmental Conditions (RECs):

- The historic use of the Subject Property as a manufacturing facility (§ 6.0; 7.0)
- The undocumented removal of an aboveground fuel oil storage tank (§7.0)

Other than the item(s) listed above, no RECs were identified at the Subject Property.

10.0 RECOMMENDATIONS

Based on the Recognized Environmental Conditions identified above, the following recommendations are provided:

- A subsurface investigation should be conducted to determine any impact to the Subject Property from historic manufacturing activities and the former aboveground fuel oil storage tank

11.0 CREDENTIALS & DECLARATION

11.1 Credentials

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this Phase I are provided with this report. **Appendix G** provides a copy of the personnel credentials.

11.2 Environmental Professional Declaration

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 CFR Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Subject Property. Only where indicated we have developed and performed the AAls in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

13.0 EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, **Hydro Tech Environmental, Corp.** may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to **Hydro Tech Environmental, Corp.** at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, **Hydro Tech Environmental, Corp.** did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Hydro Tech Environmental, Corp. did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, **Hydro Tech Environmental, Corp.** has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject property.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold Hydro Tech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

**PHASE II ENVIRONMENTAL SUBSURFACE INVESTIGATION
FOR PROPERTY LOCATED AT
55 ECKFORD STREET
BROOKLYN, NEW YORK**

Executive Summary

EEA, Inc. performed a Phase II Environmental Subsurface Investigation at 55 Eckford Street in the Brooklyn, New York to address Recognized Environmental Conditions (RECs) noted during EEA's Phase I Environmental Site Assessment (ESA #11306) of the same property (dated November 2011). The subject property contained a partially completed development consisting of a six-story building structure of support beams and flooring. The location of the subject property is shown on **Figure 1**.

The following two (2) Recognized Environmental Conditions (RECs) were noted during EEA's 2011 Phase I site inspection and were addressed as part of this Phase II Environmental Subsurface Investigation:

Former On-site Hazardous Waste Generation

From approximately 1942-2007, the *subject property* was occupied by an electroplating facility which is listed as a USEPA Hazardous Waste Generator (USEPA Facility Id: NYD001236017) associated with the storage, generation and/or use of the following hazardous wastes: solid waste that exhibits the characteristics of corrosivity and reactivity, Mercury, wastewater treatment sludges from electroplating operations, Spent cyanide plating bath solutions from electroplating operations, Zinc cyanide, Arsenic, Spent non-halogenated solvents, and plating bath residues from the bottom of plating baths.

In addition, a lacquer spray finishing facility was also formerly present on the subject property during the same time period. This former spray facility was also likely associated with the generation, storage and/or use of solvents used during spraying operations. It should also be noted that the subject property was identified in the NYSDEC Chemical Bulk Storage (CBS) database for the following: a "closed", 500 gallon aboveground tank containing sodium hypochlorite.

Adjacent Hazardous Waste Generation

From approximately 1965-present, the adjacent/contiguous property to the north, Carter Spray Finishing, is/was occupied by a metal finishing facility, which is listed as a USEPA Hazardous Waste Generator associated with the storage, generation and/or use of hazardous wastes such as spent halogenated and non-halogenated solvents. In addition, this same property was identified on the Chemical Bulk Storage (CBS) database for the following: two (2) "closed" 275 gallon aboveground tanks containing trichloroethene.

Findings

Soil Conditions

Based upon visual, olfactory and PID screening analysis, borings B-1 and B-3 through B-6, contained strong solvent odors, grey staining and PID readings ranging from 129-1085 ppm, at or in close proximity to the groundwater interface.

According to analytical laboratory results, the VOC sec-Butylbenzene, was detected at levels exceeding NYSDEC CP-51 guidelines in soil obtained from boring B-4. In addition, the following SVOCs were detected at levels above NYSDEC CP-51 and Brownfield Part 375 Restricted Use Residential Guidelines in sample B-5 11'-12': Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Chrysene. Finally, several Metals were detected at levels above NYSDEC guidelines in all soil samples collected including: Arsenic, Lead, Mercury and Selenium.

It should be noted that VOC and SVOC analytical results of soil samples obtained from borings B-1 and B-3 through B-6, depict raised laboratory report limits due to interference caused by the presence of target and non-target list compounds in each sample. Furthermore, soil samples collected for laboratory analysis from borings B-1 and B-4 contained the highest reporting limits in addition to the highest PID readings observed during the Phase II Investigation. Lastly, many of these raised reporting limits are above NYSDEC CP-51 guidelines and indicate the presence of unknown contaminants present in soil.

Groundwater Conditions

The table below represents VOC compounds detected in groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

VOC	Samples above TOGS 1.1.1 Guidelines
2-Isopropyltoluene	B-1GW, B-4GW, B-6GW
Isopropylbenzene	B-1GW, B-4GW
Sec-Butylbenzene	B-1GW, B-4GW
Tert-Butylbenzene	B-1GW, B-4GW, B-6GW
n-Butylbenzene	B-4GW

The table below represents metals detected in unfiltered groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

Metal	Samples above TOGs Guidelines
Arsenic	B-1GW, B-2GW, B-4GW, B-6GW
Barium	B-1GW, B-2GW, B-4GW, B-6GW
Chromium	B-1GW, B-2GW, B-4GW, B-6GW
Lead	B-1GW, B-2GW, B-4GW, B-6GW
Mercury	B-1GW
Selenium	B-1GW, B-2GW, B-4GW, B-6GW

The table below represents metals detected in filtered groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

Metal	Samples above TOGs Guidelines
Arsenic	B-2GW and B-4GW
Lead	B-1GW, B-2GW and B-4GW
Selenium	B-1GW, B-2GW, B-4GW, B-6GW

As depicted in tables above, six (6) metals were detected in unfiltered groundwater samples, and three (3) metals in filtered groundwater samples, at concentrations exceeding their respective NYSDEC TOGS 1.1.1 GQS. Barium, Chromium and Mercury were not detected in filtered groundwater samples; furthermore, the high levels of Barium, Chromium and Mercury in unfiltered samples are the result of the affinity of these metals to adhere to suspended soil particles present in groundwater. However, it should be noted that filtered groundwater sample results show that Arsenic, Lead and Selenium are present in the groundwater at levels above NYSDEC Guidelines revealing that metals have dissolved in and contaminated on-site groundwater.

Conclusions

Based upon analysis of laboratory and field data, the subject property soils are contaminated with VOCs and SVOCs and groundwater is contaminated with VOCs. The presence of these VOCs and SVOCs are due to releases from the lacquer spray facility once present on the subject property. Furthermore, the following four (4) VOCs detected at levels above guidelines in groundwater are typically used as coating agents or thinners in lacquer applying applications: sec-Butylbenzene, 2-isopropyltoluene, Isopropylbenzene, and tert-Butylbenzene.

Based upon analysis of laboratory and field data, the subject property soils and groundwater are contaminated with Metals. These contaminants are due to releases from the electroplating facility once present on the subject property. Furthermore, such metals as Mercury and Arsenic were listed as past hazardous wastes produced at the subject property and were detected above regulatory guidelines in soil and unfiltered groundwater (arsenic also found above guidelines in filtered groundwater).

Recommendations

REPORTING REQUIREMENTS

Results of this Phase II Investigation depict the presence of contaminants due to past releases/spills from the electroplating and lacquer spraying facility once present on the subject property. Federal and State law require that appropriate government agencies be notified of any spilled/contaminated materials found on a property upon their discovery. EEA recommends that this report is forwarded to the NYSDEC for review and comment prior to any further investigation or remedial action.

The NYSDEC considers each property investigation findings on a case-by-case basis in consideration of the history and surrounding neighborhood property use and its location to sensitive human, wildlife and environmental interests. Industrial and commercial properties may be treated differently than residential or environmentally sensitive areas.

**The NYSDEC will likely require additional testing and remediation of this property.*

If there are any questions regarding the findings of this report please contact us.

DRAFT

I. INTRODUCTION

EEA, Inc. performed a Phase II Environmental Subsurface Investigation at 55 Eckford Street in the Brooklyn, New York to address Recognized Environmental Conditions (RECs) noted during EEA's Phase I Environmental Site Assessment (ESA #11306) of the same property (dated November 2011). The subject property contained a partially completed development consisting of a six-story building structure of support beams and flooring. The location of the subject property is shown on **Figure 1**.

The following two (2) Recognized Environmental Conditions (RECs) were noted during EEA's 2011 Phase I site inspection and were addressed as part of this Phase II Environmental Subsurface Investigation:

Former On-site Hazardous Waste Generation

From approximately 1942-2007, the *subject property* was occupied by an electroplating facility which is listed as a USEPA Hazardous Waste Generator (USEPA Facility Id: NYD001236017) associated with the storage, generation and/or use of the following hazardous wastes: solid waste that exhibits the characteristics of corrosivity and reactivity, Mercury, wastewater treatment sludges from electroplating operations, Spent cyanide plating bath solutions from electroplating operations, Zinc cyanide, Arsenic, Spent non-halogenated solvents, and plating bath residues from the bottom of plating baths.

In addition, a lacquer spray finishing facility was also formerly present on the subject property during the same time period. This former spray facility was also likely associated with the generation, storage and/or use of solvents used during spraying operations. It should also be noted that the subject property was identified in the NYSDEC Chemical Bulk Storage (CBS) database for the following: a "closed", 500 gallon aboveground tank containing sodium hypochlorite.

Adjacent Hazardous Waste Generation

From approximately 1965-present, the adjacent/contiguous property to the north, Carter Spray Finishing, is/was occupied by a metal finishing facility, which is listed as a USEPA Hazardous Waste Generator associated with the storage, generation and/or use of hazardous wastes such as spent halogenated and non-halogenated solvents. In addition, this same property was identified on the Chemical Bulk Storage (CBS) database for the following: two (2) "closed" 275 gallon aboveground tanks containing trichloroethene.

EEA, Inc. performed this Phase II Environmental Subsurface Investigation to determine the soil and groundwater quality at the subject property and address the aforementioned RECs identified in EEA's 2011 Phase I ESA. EEA initiated field activities on December 3, 2011 and completed the field investigation by this date. The photographs of the work performed are presented in the **Appendix A** to this report. This report summarizes the work performed, the results of the investigation, and the recommendations.

II. SCOPE OF WORK PERFORMED

a. Health and Safety Plan

EEA uses a company Generic Health and Safety Plan for all investigative work relating to performing Phase II Environmental Subsurface Investigations. The HASP assigns responsibilities, establishes personal protection standards, recommends operating procedures, and provides for contingencies that may arise during performance of the assessment at the site. The protocols in the HASP apply to all personnel involved in the work activities including EEA, all outside subcontractors, client, or regulatory agencies present during the performance of the work. In addition, the following safety equipment is maintained on-site for responding to potential emergency situations: portable eyewash, ABC fire extinguisher, and first aid kit. Telephone numbers of emergency response units in the area are also posted where all those working at the site can easily see them. All personnel working at the site will also be required to receive training in respirator fitting, emergency procedures, equipment decontamination and specific task procedures. All personnel involved with the collection of soil or water will have successfully completed the 40-hour OSHA Hazardous Materials Training Program.

b. Subsurface Utility Location, Permits and Bonding

EEA notified DigNet New York under the New York State Regulation Code 753 prior to initiating the work to identify the location of underground utilities in the vicinity of the proposed boring locations. Any permits for soil boring were obtained from the local agencies. In addition, any license and permit bonding required was secured for the work.

c. Investigation Work Summary

On December 3, 2011, EEA conducted a Phase II Subsurface Investigation at the subject property. Six (6) borings were advanced on the subject property, using a Geoprobe Model 54LT rig, in order to determine if former electroplating and lacquer spraying operations at the subject property impacted property soils and groundwater.

All borings were advanced until groundwater was encountered, which ranged between 7-13 feet below grade, depending on surface elevation. Soil samples were collected from 0-4 foot depth intervals from each boring and were screened using visual, olfactory and PID screening techniques. The soil sample exhibiting the highest PID reading was selected for laboratory analysis.

Temporary screened PVC piping was inserted into all six (6) borings on-site and with the intent to collect groundwater. However, borings B-3 and B-5 did not produce enough water to sample due to silty soils encountered at these locations. Therefore, only four (4) groundwater samples were collected (B-1GW, B-2GW, B-4GW and B-6GW). It should be noted that in soil boring B-3, the soil sample yielding the highest PID reading was collected near the groundwater interface (9'-11' below grade). In regards to soil boring B-5, the soil sample yielding the highest PID reading was collected at approximately 11' below grade, which was above the groundwater

interface; however, an additional soil sample was collected from this boring at the groundwater interface (approximately 13' below grade) since a groundwater sample could not be collected.

III. RESULTS OF LABORATORY ANALYSES

EcoTest Laboratories, Inc., (NYSDOH #10320) prepared the results of soil samples, which were analyzed for contaminants using USEPA methods 8260 VOCs, 8270 SVOC BN only and RCRA Metals. **Tables 1 to 5** represent a comparison of the soil sampling results, obtained from on-site borings, as compared to NYSDEC CP-51 guidelines and NYSDEC Part 375 Restricted Use Residential Guidelines.

EcoTest Laboratories, Inc., also prepared the results of groundwater samples, which were analyzed for contaminants using USEPA methods 8260 VOCs, and RCRA Metals (Filtered/Unfiltered). **Tables 6 and 7** represent a comparison of the groundwater sampling results obtained from on-site borings, as compared to NYSDEC TOGS 1.1.1 guidelines.

The chain-of-custody records, as well as the analytical laboratory data sheets, are presented in the **Appendix B and C** to this report, respectively.

IV. FINDINGS

Soil Conditions

As previously mentioned, six (6) borings (B-1 through B-6) were advanced on-site until groundwater depth. Based upon visual, olfactory and PID screening analysis, borings B-1 and B-3 through B-6, contained strong solvent odors, grey staining and elevated PID readings at or in close proximity to the groundwater interface. The table below depicts the highest PID readings encountered in each soil sample and corresponding information (i.e., depth of reading, boring location, water table depth).

Boring	Highest PID reading	Depth of reading (ft)	Groundwater Depth (ft)
B-1	1085	12	12
B-2	0.0	NA*	12
B-3	129	8	8
B-4	1030	11	7
B-5	389	10	13
B-6	400	13	13

*NA = Not Applicable

According to analytical laboratory results, the VOC sec-Butylbenzene, was detected at levels exceeding NYSDEC CP-51 guidelines in soil obtained from boring B-4. In addition, the following SVOCs were detected at levels above NYSDEC CP-51 and Brownfield Part 375 Restricted Use Residential Guidelines in sample B-5 11'-12': Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Chrysene.

It should be noted that VOC and SVOC analytical results of soil samples obtained from borings B-1 and B-3 through B-6, depict raised laboratory report limits due to interference caused by the presence of target and non-target list compounds in each sample. Furthermore, soil samples collected for laboratory analysis from borings B-1 and B-4 contained the highest reporting limits in addition to the highest PID readings observed during the Phase II Investigation. Lastly, many of these raised reporting limits are above NYSDEC CP-51 guidelines and indicate the presence of unknown contaminants present in soil.

The table below depicts metals detected in soil samples at concentrations above NYSDEC Guidelines:

Metal	Samples above CP-51	Samples above Residential Use
Arsenic	B-1, B-2, B-3, B-6	B-2, B-3, and B-6
Lead	B-1 through B-6	B-1, B-2, B-3, B-5 13'-15', B-6
Mercury	B-1 through B-6	B-1, B-3 and B-4
Selenium	B-1 and B-3	None

Groundwater Conditions

The table below depicts VOC compounds detected in groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

VOC	Samples above TOGs 1.1.1 Guidelines
2-Isopropyltoluene	B-1GW, B-4GW, B-6GW
Isopropylbenzene	B-1GW, B-4GW
Sec-Butylbenzene	B-1GW, B-4GW
Tert-Butylbenzene	B-1GW, B-4GW, B-6GW
n-Butylbenzene	B-4GW

The table below depicts metals detected in unfiltered groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

Metal	Samples above TOGs Guidelines
Arsenic	B-1GW, B-2GW, B-4GW, B-6GW
Barium	B-1GW, B-2GW, B-4GW, B-6GW
Chromium	B-1GW, B-2GW, B-4GW, B-6GW
Lead	B-1GW, B-2GW, B-4GW, B-6GW
Mercury	B-1GW
Selenium	B-1GW, B-2GW, B-4GW, B-6GW

The table below depicts metals detected in filtered groundwater samples at concentrations above NYSDEC TOGs 1.1.1 Guidelines:

Metal	Samples above TOGs Guidelines
Arsenic	B-2GW and B-4GW
Lead	B-1GW, B-2GW and B-4GW
Selenium	B-1GW, B-2GW, B-4GW, B-6GW

As depicted in tables above, six (6) metals were detected in unfiltered groundwater samples, and three (3) metals in filtered groundwater samples, at concentrations exceeding their respective NYSDEC TOGS 1.1.1 GQS. Barium, Chromium and Mercury were not detected in filtered groundwater samples; furthermore, the high levels of Barium, Chromium and Mercury in unfiltered samples are the result of the affinity of these metals to adhere to suspended soil particles present in groundwater. However, it should be noted that filtered groundwater sample results show that Arsenic, Lead and Selenium are present in the groundwater at levels above NYSDEC Guidelines revealing that metals have dissolved in and contaminated on-site groundwater.

V. CONCLUSIONS

Based upon analysis of laboratory and field data, the subject property soils are contaminated with VOCs and SVOCs and groundwater is contaminated with VOCs. The presence of these VOCs and SVOCs are due to releases from the lacquer spray facility once present on the subject property. Furthermore, the following four (4) VOCs detected at levels above guidelines in groundwater are typically used as coating agents or thinners in lacquer applying applications: sec-Butylbenzene, 2-isopropyltoluene, Isopropylbenzene, and tert-Butylbenzene.

Based upon analysis of laboratory and field data, the subject property soils and groundwater are contaminated with Metals. These contaminants are due to releases from the electroplating facility once present on the subject property. Furthermore, such metals as Mercury and Arsenic were listed as past hazardous wastes produced at the subject property and were detected above regulatory guidelines in soil and unfiltered groundwater (arsenic also found above guidelines in filtered groundwater).

VI. RECOMMENDATIONS

Results of this Phase II Investigation depict the presence of contaminants due to past releases/spills from the electroplating and lacquer spraying facility once present on the subject property. Federal and State law require that appropriate government agencies be notified of any spilled/contaminated materials found on a property upon their discovery. EEA recommends that this report is forwarded to the NYSDEC for review and comment prior to any further investigation or remedial action.

The NYSDEC considers each property investigation findings on a case-by-case basis in consideration of the history and surrounding neighborhood property use and its location to sensitive human, wildlife and environmental interests. Industrial and commercial properties may be treated differently than residential or environmentally sensitive areas.

**The NYSDEC will likely require additional testing and remediation of this property.*

VII. SAMPLING METHODOLOGY

a. Soil Sampling

Soil samples were collected with a Geoprobe drill rig, were visually inspected and field screened using a portable Photo ionization detector (MiniRae 3000 10.6 ev lamp) for evidence of impacted soils. The selected soil/groundwater sample was placed in a laboratory pre-cleaned sample jar which was then placed in a cooler and chilled to a temperature of 4 degrees C in accordance with standard operating procedures. A Chain of Custody form was completed at the time of sampling.

b. Quality Assurance and Quality Control QA/QC Plan

EEA implements a QA/QC Plan to ensure sample integrity and avoid contamination and/or cross-contamination of samples. All sampling equipment is cleaned before each sample is collected. The following procedures are followed in the decontamination process:

Step 1: Steam clean equipment.

Step 2: Scrub with a bristle brush using a non-phosphate detergent (such as Alconox).

Step 3: Rinse with hot tap water.

Step 4: Rinse twice with deionized water.

Step 5: Air dry.

Step 6 Nitric Acid (5%) solution rinse (if sampling for metals)

Step 7: Rinse twice with deionized water.

Step 8: Air dry

VIII. QUALIFICATIONS

EEA, Inc. is an environmental consulting firm that has undertaken environmental pollution investigations, development feasibility studies, and environmental site assessment studies since 1979. These site evaluation studies have been prepared for major lenders, public corporations, businesses, developers and governmental agencies. Approximately 4,000 parcels have been evaluated in the metropolitan New York-New Jersey area during the past twenty years, ranging from Phase I Environmental Site Assessments to comprehensive subsurface hazardous material investigations and testing programs. EEA also prepares bid specifications for remedial cleanup actions and supervises site cleanup.

EEA's principals and senior managers for the hazardous waste investigations each have over 20 years experience in environmental consulting, with established credentials in the field. Individual qualifications of EEA personnel, including specific credentials of persons involved in the preparation of this report can be provided upon request.

IX. DISCLAIMER

This report is for use by Madison Realty Capital and its successors and/or assigns and is only to be used as a guide in determining the potential for contamination by toxic or hazardous materials on the subject property at the time of the site visit. This Phase II Environmental Subsurface Investigation was undertaken in accordance with generally accepted protocols, including ASTM Standards Related to the Phase II Environmental Site Assessment Process. This Phase II Investigation is based principally on the review of historic and regulatory records (made available within a reasonable time period), relating to past occupants and usage of the subject property, as well as activities at nearby sites, and upon a visual assessment of the subject property, and makes no determinations with respect to portions of the subject property and its structures which were not inspected. Our professional services have been performed using that degree of care and skill ordinarily exercised under similar circumstances by reputable qualified professionals practicing in this or similar situations. The interpretation of the field data is based on good judgment and experience. However, no matter how qualified the professional or detailed the investigation, subsurface conditions cannot always be predicted beyond the points of actual sampling and testing. No other warranty, expressed or implied, is made to the professional advice included in this report.

Any and all liability on the part of EEA, Inc. shall be limited solely to EEA's professional liability insurance (errors and omissions coverage of one million dollars). EEA, Inc. shall have no liability for any other damages, whether consequential, compensatory, punitive, or special, arising out of, incidental to, or as a result of, this assessment. EEA, Inc. assumes no liability for the use of this report by any person or entity other than the institution and/or entities or persons for whom it has been prepared.

Comments:

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

Elevated reporting limits for volatiles due to the presence of target and non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

Elevated reporting limits for volatiles due to the presence of target and non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatile analysis.

Elevated reporting limits for volatiles due to the presence of target and non-target compounds.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

ND=Not detected BDL=Below Detection Level RL=Reporting Level

New York, New York 10022

Re: **55 Eckford Street, Brooklyn, New York**
Subsurface Investigation

Dear Mr. Yogev:

This letter is intended to provide you with the results of our recent subsurface investigation performed at the above referenced site. The scope work is based upon the requirements set forth by the client. The investigation was performed for the current property owner.

Site Description

The Subject Property is a square shaped lot of approximately 10,190 square feet in area and is occupied by a 6-story unfinished steel frame construction with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. The remaining portions of the Subject Property consist of bare soil, piles of construction materials and overgrown weeds.

Fieldwork

The fieldwork was performed during February and March 2012. Prior to the performance of the fieldwork, an NYC One-Call Public Utility mark-out was requested. Confirmation number **120811520** was issued to the mark-out.

The fieldwork consisted of the installation and sampling of nine (9) soil probes, seven (7) monitoring wells, and seven (7) soil vapor implants. Soil probes SP-1, SP-2 and SP-7 were installed in the northern portion of the site. Soil probes SP-3 and SP-4 are installed in the western portion of the site and soil probes SP-5 and SP-6 were installed in the southern portion of the site. Soil probes, SP-8 and SP-9, were installed along the sidewalk between the property and Eckford Street and were installed to establish background soil concentrations. The monitoring wells (designated MW-1 through MW-7) and soil vapor implants (designated SV-1 through SV-6) were installed in their coordinating soil probe locations.

Figure 1 provides sampling locations. The fieldwork is photo documented. **Appendix A** contains photographs of the fieldwork.

Soil Probes

All soil probes were installed with Hydro Tech's remote operated Geoprobe® unit. This unit installs soil probes utilizing direct-push technology. Soil samples were collected utilizing a four-foot long Macro core sampler fitted with dedicated acetate liners. Each sampler was installed with 1½-inch diameter drill rods.

Soil probes SP-1 through SP-4 and SP-6 through SP-9 were installed until groundwater was encountered at depth varying from 8 feet below grade to 12 feet below grade. Soil probe SP-5 was installed to 12 feet below grade since groundwater was not encountered at this location. No olfactory or visual evidence of petroleum was identified during the installation of any of the soil probes. The soil mainly consisted of fine grained silty sand with pebbles and fill material.

A Hydro Tech geologist performed infield characterization and screening of each soil sample utilizing the Unified Soil Classification System and a Photo Ionization Detector (PID). **Appendix B** provides soil probe logs.

Based upon the field screening results two soil samples were collected from the on-site soil boring locations (SP-1 through SP-7) and one soil sample was collected from the off-site boring locations SP-8 and SP-9. The following samples were collected:

- SP-1, 0'-2' & 8'-10'
- SP-2, 0'-2' & 6'-8'
- SP-3, 0'-2' & 6'-8'
- SP-4, 0'-2' & 6'-8'
- SP-5, 0'-2' & 6'-8'
- SP-6, 0'-2' & 8'-10'
- SP-7, 0'-2' & 9'-11'
- SP-8, 7'-9'
- SP-9, 6'-8'

Groundwater Monitoring Wells

A Groundwater monitoring well (total of 7) was then installed at each on-site soil probe location. The monitoring wells were installed to determine water quality and groundwater flow direction. The monitoring wells were installed utilizing similar technology as the soil probes. All monitoring wells were constructed of 1-inch diameter PVC. The screened interval of the wells consists of 0.010-inch slots. The wells were installed to 20 feet below grade and consisted of 5 feet of solid riser and 15 feet of screen. Following their installation the monitoring wells designated MW-1 through MW-3 were installed, surveyed, monitored and sampled.

Two rounds of static water levels were obtained prior and following groundwater purging and sampling to determine groundwater elevation and groundwater flow direction. Groundwater head measurements were collected utilizing a Solinst® 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch. The depth to water was measured in each well from the northern portion of the casing top. Water level data is included in **Table 1**.

As **Table 1** indicates the depth to water at the site ranges from 10.39 in MW-6 to 12.94 in MW-1. The groundwater elevations range from 11.29 in MW-5 to 12.94 in MW-1. Based upon this information the site-specific groundwater flow was determined to be towards the southeast. This groundwater flow is consistent with regional groundwater flow direction. **Figure 2** depicts the groundwater flow direction.

Soil Vapor Probes

Seven (7) soil vapor probes designated SV-1 through SV-7 were installed during the investigation. All seven soil vapor probes were installed to a depth of 15. The probes were constructed with inert tubing. Vapor implants were sealed to the surface with non-VOC containing product. After installation of the probes, one to three volumes were purged prior to collecting the samples.

The soil vapor probes were installed utilizing similar technology as the soil probes and were installed in accordance with the NYSDOH Guidance of Evaluating Soil Vapor Intrusion, dated October 2006. Each soil vapor sampling point consisted of a stainless steel screen, or implant, fitted with dedicated polyethylene tubing. Each of the implants is of 1½-inch diameter. The soil vapor implant was installed in the subsurface soil. Glass beads were poured into the hole to fully encompass the screen implant and the hole was sealed with bentonite and quick dry-lock non VOC quick set cement.

Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*. Accordingly, a soil vapor sample from each soil vapor probe was collected utilizing 6-liter pre-cleaned, passivated, evacuated whole air Summa® Canister. A 12-inch by 12-inch piece of plastic sheeting was sealed with beeswax around the edges over the sampling probe in order to keep the tracer gas in contact with the probe and the ambient air from entering the probe during testing.

In order to insure the integrity of the borehole seal and to verify that ambient air is not inadvertently drawn into the sample, a tracer gas, Helium, was used to enrich the atmosphere in the immediate vicinity of the sampling location.

Plastic sheeting was used to keep the tracer gas in contact with the soil vapor probe during the sampling. Prior to soil vapor sampling, approximately 0.3 ml of air was purged out of all vapor points utilizing a syringe. The Summa Canisters were calibrated for 6 hours and the soil vapor sampling was run on each canister for a time period of 6 hours. The initial vacuum (inches of mercury) and start time was recorded immediately after opening each Summa Canister. After the sampling was complete, the final vacuum and stop time was recorded.

Laboratory Analyticals

A total of sixteen soil samples and seven groundwater samples were transported to a State-certified laboratory and analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270BN, pesticides via EPA Method 8081, PCBs via EPA Method 8082A and TAL Metals via EPA Method 6010C. The Summa Canisters were analyzed for VOCs via EPA Method TO-15. Laboratory reports are provided as **Appendix C**. Additionally, appropriate field and trip blank samples were obtained and analyzed.

Decontamination Procedures and Quality Assurance/Quality Control

Each piece of sampling or other down hole equipment was decontaminated prior to each use in order to ensure that cross-contamination between sampling locations did not occur. The following procedure was utilized in the decontamination process:

- Wipe clean and wash with Alconox®
- Potable water rinse
- Methanol rinse
- Deionized water rinse
- Air dry

All decontamination procedures were performed in an area segregated from any sampling areas. Any rinsate from the decontamination area was contained and removed from the Site.

All samples were properly handled and placed into the appropriately labeled containers. The samples were placed in a cooler filled with ice and maintained at a maximum of 4 degrees Celsius. All samples were transmitted under proper chain of custody procedures to a State-certified (ELAP) laboratory for confirmatory laboratory analyses. All holding times were met. The laboratory did not report any irregularities with respect to their internal Quality Assurance/Quality Control.

Analytical Results

Table 2 through **Table 9** provides the soil analytical results. Where applicable **Table 2** through **Table 9** also provides a comparison to each compound's respective SCO as published in 6 NYCRR Part 375. The soil results indicate that semi-volatile organic compounds (SVOCs) and heavy metals are present in both shallow and deep soil at concentrations exceeding their respective Soil Cleanup Objectives (SCOs). The SVOCs detected are typically associated with urban fill material. The SVOCs in shallow soil are present in the southwest and northeast portions of the property. The SVOCs in deep soil are present in the south central and southeast portions of the property. Heavy metals, which primarily consist of lead, arsenic, nickel and chromium, are present in both shallow soil and deep soil throughout the property. The levels of heavy metals may be related to urban fill material or an off-site source since heavy metals such as mercury and lead were also identified in the background samples. Both volatile organic compounds (VOCs) and Pesticides were also identified in several soil samples, but at concentrations less than the soil cleanup objectives. **Figure 3** and **Figure 4** provide the locations of organic and inorganics present in the soil at concentrations exceeding their respective SCOs.

Tables 10 through **Table 13** provide groundwater samples analytical results. **Table 10** and **Table 13** also provide a comparison to each analyte's respective GQS from NYSDEC TOGS 1.1.1. The findings of the groundwater results indicate that both VOCs and heavy metals are present in groundwater at concentrations exceeding Groundwater Quality Standards (GQS). The VOCs, which consist of both sec- and tert-Butylbenzene, are present in groundwater beneath the northeast and south central portions of the property. The VOCs may be related to an off-site source since no levels of VOCs were detected in the soil. The heavy metals were detected in both filtered and unfiltered samples from beneath the entire site. **Figure 5** and **Figure 6** provide the locations of organics and inorganics present in the groundwater.

Table 14 provides the soil vapor analytical results. **Table 14** provides a comparison to the NYSDEC background levels in indoor air. As **Table 14** indicates, vapors associated with both petroleum (such as Xylenes and Toluene) and chlorinated solvents (such as Tetrachloroethylene and Trichloroethylene) were detected in the soil vapor samples collected from the perimeter of the property. **Figure 7** provides the location of the vapors identified at concentrations exceeding their background standard.

Conclusions and Recommendations

The results of the investigation indicate that levels of SVOCs are present in the soil at concentrations exceeding their respective SCOs. The SVOCs are most likely related to urban fill materials since no evidence of petroleum was identified in the soil. Heavy metals were also identified in the soil at concentrations exceeding their respective SCOs. The heavy metals may be related to urban fill since they were identified in the background soil samples.

Volatile organic compounds were identified in the groundwater at concentrations exceeding their respective GQS. The VOCs may be related to an off-site source since no VOCs were detected in the soil at concentrations exceeding regulatory standards. Heavy metals were detected in both the filtered and unfiltered samples from beneath the entire site. The heavy metals in the groundwater may be related to urban fill at the property.

Based upon these results and the current site conditions, Hydro Tech recommends that the site be capped with concrete. The concrete cap should be installed throughout the parking lot area and any proposed open spaces. Additionally, the concrete cap should be inspected to assure soil is not being exposed in the future.

If in the future soil is excavated from the site the New York State Department of Environmental Conservation should be conducted prior to any soil removal. The soil should then be disposed of in accordance with the NYSDEC guidelines.

Should you have any questions or comments, please feel free to contact me at your convenience.

Very Truly Yours

¹Summary of Indoor and Outdoor Levels of Volatile Organic Compounds From Fuel Oil Heated Homes in NYS, 1997 to 2003. Unpublished. New York State Department of Health, Bureau of Toxic Substance Assessment. http://www.nyhealth.gov/environmental/indoors/air/fuel_oil.htm

²The ranges provided in the table represent the 25th percentile to 75th percentile, (middle half), of the results and are labeled as background. A single value is the minimum reporting limit for that compound, and indicates that more than 75% of the data are below the detection limit. This database is comprised of air testing results from homes where there were no known sources of chemicals or chemical spills.

NS – No Standard

All reported values are in microgram per cubic meter (mcg/m³)

< Means "less than." The number following a "less than sign" (<) is the lowest level the laboratory test can reliably measure (reporting limit).

Shaded values represent concentration exceeding the NYSDEC Background Standards

NA...Air volume not available after sampling for analysis

APPENDIX C
LABORATORY REPORTS

Technical Report

prepared for:

Hydro Tech Environmental (Brooklyn)

15 Ocean Avenue

Brooklyn NY, 11225

Attention: Paul Matli

Report Date: 02/24/2012

Client Project ID: 55 Eckford St. Bklyn NY #120031

York Project (SDG) No.: 12B0576

CT License No. PH-0723

New Jersey License No. CT-005

New York License No. 10854

PA License No. 68-04440

Hydro Tech Environmental (Brooklyn)

15 Ocean Avenue
Brooklyn NY, 11225
Attention: Paul Matli

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 16, 2012 and listed below. The project was identified as your project: **55 Eckford St. Bklyn NY #120031**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 12B0576

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
HT-02	This sample was received outside the EPA recommended holding time.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

Corrective Action:

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 23, 2012 and listed below. The project was identified as your project: **#120031 55 Eckford St, Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 12B0775

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

Corrective Action: The caniste for SV-2 still had full vacuum, thus nos sample was collected. The analysis was not reported. PM

Phase I Environmental Site Assessment Report

55 Eckford Street
Brooklyn, New York

July 25, 2016

Hydro Tech Environmental, Corp. appreciates the opportunity to work Madison Realty Capital at the property located at 55 Eckford Street in Brooklyn, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, Hydro Tech personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. Part 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,

Hydro Tech Environmental, Corp.

1.0 EXECUTIVE SUMMARY

Hydro Tech Environmental, Corp. (Hydro Tech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property located at 55 Eckford Street in Brooklyn, New York. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-13. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a Hydro Tech Project Manager and under the guidance of a Hydro Tech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Condition(s) at the Subject Property:

- The historical use of the Subject Property as a manufacturing facility (§4.0, §4.3);
- The presence of SVOC and metal-impacted soil at the Subject Property (§4.3);
- The presence of VOC and metal impacted groundwater at the Subject Property (§4.3);
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property (§4.3);
- The undocumented removal of an aboveground fuel oil storage tank (§4.3, §5.0);
- The presence of adjacent Brownfield Site C224218 (§5.1);
- The presence of a petroleum and chlorinated PVEC at the Subject Property (§5.1);
- The presence of mold at the Subject Property (§6.0).

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

Hydro Tech Environmental, Corp. (Hydro Tech, HTE, the “Preparer”) has been retained by Madison Realty Capital (the “User”) to perform a Phase I Environmental Site Assessment (ESA, Assessment) at the property located at 55 Eckford Street in Brooklyn, New York. The User is the “Prospective Lender” of the property. The Phase I was prepared for due diligence purposes towards a future purchase transaction of the property. The property will hereafter be referred to as the “Subject Property”.

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” (ASTM E 1527-13, §1.1.1). As defined by the ASTM, a Controlled Recognized Environmental Condition (CREC) is, “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.” (ASTM E 1527-13, §3.2.18). As defined by the American Society of Testing and Materials (ASTM), a HREC is, “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls” (ASTM E 1527-13, §3.2.42). Adjacent and surrounding sites are evaluated as part of a Phase I Assessment with regards to conditions that may indicate high probability of the migration of hazardous substances or petroleum products to a property. As defined by ASTM, migrate/migration is, “the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.” (ASTM E 1527-13, §3.2.56).

To this end, Hydro Tech has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by Hydro Tech and the User may have collected some information used in this report. Some or all of the Assessment has been performed or supervised by environmental professionals as required by 40 C.F.R. Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations (“AULs”) by HTE is beyond the scope of this practice (ASTM E 1527-13) and investigation.

2.2 Scope of Work

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with ASTM E 1527 except where noted in Section 2.3 and Hydro Tech’s Proposal. As required by ASTM, the User has supplied information that has been relied upon by Hydro Tech in the rendering of findings, conclusions and opinions, except where indicated in Section 2.3 or elsewhere in the report.

2.3 Limitations and Exceptions & Data Gaps

In addition to those items outlined by ASTM E 1527, asbestos, radon, lead-based paint and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full or complete asbestos survey or lead-based paint survey. These surveys are commonly performed for the purpose of building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they be performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for general Site characterization or waste disposal purposes. This Phase I Assessment is not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third party sources or the user. As such, Hydro Tech relies upon these sources and has recorded findings, conclusions and opinions based upon this information. Hydro Tech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report.

It should be noted that the United States Environmental Protection Agency (USEPA) has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquiries) of December 30, 2013 that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E 1527-13 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in exceedance(s) of the ASTM E 1527-13 standard, persons attempting to utilize this ESA while seeking one of the Comprehensive Environmental Response, Compensation, and Liability Act's (CERCLA's) Limited Liability Protections (LLPs) must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E 1527-13) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Hydro Tech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

As defined by ASTM, a Data Gap is defined as an inability to obtain information during the Phase I process, as required under the Standard, despite a good faith effort by the Environmental Professional to obtain this information. The Phase I ESA report must contain information pertaining to Data Gap(s) and evaluate their relative significance.

The following table provides a breakdown of the Data Gap(s) encountered and their relative significance.

Data Gap	Significance
Site History - not conducted to time of first development and/or 5 year intervals.	Low - unlikely to alter conclusions due to findings of other resource(s).
No environmental lien provided.	Low - unlikely to alter conclusions due to findings of other resource(s).
Municipal Records - FOIAs not returned as of date of report.	Unknown - Any FOIA responses that alter the conclusions of the report will be provided upon receipt.

Due to other historical information obtained over the course of this investigation, Hydro Tech does not consider these data failures/data gaps significant, as they appear unlikely to have affected potential Recognized Environmental Conditions at the Subject Property.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 Subject Property Vicinity

The Subject Property is located on the eastern side of Eckford Street between Driggs Avenue to the north and Engert Avenue to the south in the Borough of Brooklyn, New York. The borough of Brooklyn is situated in the southeast portion of New York City.

The vicinity of the Subject Property consists of residential and commercial properties and public natural areas. McCarren Park is located in the western vicinity of the Subject Property. The ground covering in the vicinity of the Site consists of asphalt, concrete and landscaped surfaces.

3.2 Subject Property Description

The Subject Property is identified as 55 Eckford Street, NY. The Subject Property is 10,376 square feet in area and is occupied by a 6-story unfinished steel frame construction with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. The remaining portions of the Subject Property consist of bare soil, piles of construction materials and overgrown weeds. No heating systems are associated with the Subject Property.

Appendix A provides photographs of the Subject Property.

Access to the Subject Property is via a chain link fence along Eckford Street to the east. The Subject Property is not currently connected to the municipal water, sewer, gas and electric services. These services are available and run underneath Eckford Street.

The topography of the Subject Property and its vicinity is generally level. **Figure 1** provides a Site Plan.

3.3 Adjacent Land Use

The Subject Property is located in a residential and commercial area. The following properties were identified immediately adjacent to the Subject Property:

Direction	Adjacent Parcel	Surrounding Parcels
North	Vacant Land	Residential / commercial
South	2-story building (unknown use) ; 5-story residential	Residential / commercial
East	2 -story residential	Residential / commercial
West	Parking lot; 1 - story commercial (unspecified use)	Residential / commercial

Hydro Tech does not believe that the present uses of any adjacent properties identified above should impact upon the environmental quality of the Subject Property.

Hydro Tech has verified an impact at the northern adjacent site which may impact upon the environmental quality of the Subject Property, and is further evaluated in this report.

3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7.5 Minute Topographic Map containing the properties indicate there are no sensitive receptors present within a 1/8-mile radius of the Subject Property.

3.5 Environmental Setting

The Site is located in northwestern portion of Brooklyn, New York. The elevation of the Subject Property is approximately 16 feet above mean sea level (USGS 7.5-Minute Brooklyn, New York Quadrangle, 2013).

Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock.

The thickness of these deposits ranges from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member ranges in depth from 200 to 800 feet below sea level and increases in thickness to the southeast. The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

Long Island has a humid, temperate climate that is strongly influenced by the Long Island Sound and the Atlantic Ocean. These bodies of water temper extremes of heat in summer and cold in winters. Climate affects the formation of soil through its influence on chemical, biological and physical processes. The amount and content of rainwater, as it percolates through the soil, chemically alters the composition of the soils. Chemical and biological processes are also affected by temperature changes. The physical weathering of the soil and rocks is affected by freezing.

The soils of Long Island are relatively young, having developed since the last recession of glaciation approximately 25,000 years ago. Over thousands of years, the minerals in the bedrock debris slowly decayed and disintegrated, providing the necessary substrate to support biological activity. Rock-forming minerals such as feldspars and micas, that are rich in potassium and aluminum, release their important elements as they are converted to clays. Soils formed in glacial drift are commonly known as loam, a mixture of sand, silt and clay.

The soils of Long Island formed three distinct soil horizons or zones on glacial deposits. The lowest horizon, designated as the C-horizon, is similar in composition to the transported glacial rock debris. The B-horizon is above the C-horizon and consists of sediments that have been considerably altered from their C-horizon source. Vadose zone water percolates through the B-horizon, carrying compounds of clay, iron, aluminum oxides, carbonates and humic acid. These materials are redeposited within the lower portions of the B-horizon, and form the zone of accumulation. The zone of accumulation may also be the zone of ground water saturation.

The zone of leaching is found in the A-horizon, which is the upper, organic-rich and life sustaining layer with abundant roots and organic matter at the surface. The A-horizon is distinct from the underlying B & C-horizons because it is darker and more friable.

Differentiation in soil horizons are the result of various soils-forming processes such as the physical breakdown of particles, the leaching of salts, the accumulation of organic matter and the chemical weathering of primary minerals. The chemical weathering of primary minerals occurs through processes

such as chelation, the formation of silicate clay minerals and the translocation of silicate clay minerals by percolating water from one horizon to another and the accumulation of iron.

The depth to groundwater was determined during a 2012 Phase II ESA performed by Hydro Tech Environmental, Corp and ranges from 10.39 to 12.94 feet. According to the USGS Groundwater Conditions Map, the regional groundwater flow direction in the vicinity of the Site is toward the west in the direction of East River.

4.0 HISTORICAL USE

4.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979 through 1983, 1986 through 1989, 1991, 1993, 1995, 1996, and 2001 through 2007 were obtained from EDR and evaluated in order to establish the history of the Site. **Appendix B** provides a copy of the Sanborn Fire Rate Insurance Maps:

Date	Subject Property Shown As	Surrounding area
1887	4 abutting vacant and undeveloped lots	Vacant lots
1905	2 abutting lots occupied by 4 interconnected structures; one 2-story building with basement in southern portion; two 1-story buildings in western portion and one 1-story shed in the northern portion. The Subject Property is listed as "Planing & Moulding" of lumber	Residential and Commercial; lumber yards; vacant lots
1916	Same layout of the buildings as in 1905. The Subject Property is listed as "vacant and dilapidated"	Residential; auto repair garages; industrial facility; junk yard
1942	3 abutting lots occupied by 2 interconnected buildings; one 2-story building in the central and southern portions and a 2-story building in the northern portion. The Subject Property is listed as "Sorting & Bailing" of "Wool Rags"	Residential; commercial; auto laundry, auto repair garages; parking lots, carpet dying and cleaning facility
1951 - 1991	Same layout of the buildings as in 1942. Southern portion of 2-story building is listed as "Lacquer Spraying" and central portion as "storage". Northern 2-story identified as Electric Plating.	Residential; commercial; auto repair garages; auto renting lot; parking lots; carpet dying and cleaning facility
1993 - 2004	Same layout of the buildings as in 1991. The use of the Subject Property is majorly unknown, with offices noted on the second floor of the northern 2-story building.	Residential; commercial; auto repair garages; parking lots
2005 - 2007	One vacant and undeveloped lot	Residential; commercial; vacant lots

4.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document known occupants of specific properties and sorted by individual addresses. **Appendix C** provides a copy of the City Directory Search.

The following provides a listing of all documented usages of the address 55 Eckford Street.

Date	Use of Subject Property	Surrounding Property Use
1934	Formetatl Peter Mgr Miramar Trading Corp.	Residential/commercial
1945	Schoolsky Bros Wool Stock Corp.	
1949, 1960, 1965, 1970, 1973	Berkman Bros Platers/ Processing Techniques Inc.	

Date	Use of Subject Property	Surrounding Property Use
1976	Processing Techniques Inc.	
1980	Berkman Bros Platers	
1985, 1992, 1997	Berkman Bros Platers/ Processing Techniques Inc.	
2000	BG Finishing Inc. / Processing Techniques Inc.	
2005, 2013	Processing Techniques Inc.	

4.3 Previous Studies

Hydro Tech Environmental, Corp completed several reports pertaining to the Subject Property which are summarized below. These reports include an October 27, 2011 Phase I ESA, an April 2012 Phase II ESA and a June 3, 2012 Phase I ESA.

- Hydro Tech Environmental, Corp (October 2011): *Phase I ESA Report: 55 Eckford Street*

According to the October 2011 Phase I ESA two (2) Recognized Environmental Conditions (RECs) were identified: the historical use of the Subject Property as a manufacturing facility and the undocumented removal of an aboveground fuel oil storage tank.

- Hydro Tech Environmental, Corp (April 2012): *Phase II ESA Report: 55 Eckford Street*

Hydro Tech performed a Phase II ESA during April 2012. A total of 9 soil probes, 7 monitoring wells and 7 soil vapor implants were installed to assess soil, groundwater, and soil vapor impacts, respectively. The laboratory analytical results revealed semi-volatile organic compounds (SVOCs) and Metals in soil at concentrations exceeding regulatory standards. The maximum concentration of total SVOCs is 32,232 milligrams per kilogram. Arsenic, Barium, Cadmium, Trivalent Chromium, Copper, Lead, Nickel, and Mercury were detected at concentrations exceeding their regulatory standards in various soil samples.

Volatile organic compounds (VOCs) and Metals were detected in several groundwater samples at concentrations exceeded regulatory standards. The maximum total VOC concentration was 16.91 micrograms per liter beneath the southern portion of the Site. Arsenic, Iron, Manganese, Silver and Sodium were detected in various groundwater samples at concentrations exceeding regulatory standards. VOCs associated with both petroleum (such as Xylenes and Toluene) and chlorinated solvents (such as Tetrachloroethylene and Trichloroethylene) were detected in the soil vapor samples collected from the perimeter of the property. The maximum total VOC concentration in soil vapor is 4,344 micrograms per cubic meter.

The presence of the SVOC- and metal-impacted soil should be considered a REC. The presence of VOC and Metal-impacted groundwater should be considered a REC. The petroleum- and chlorinated solvent impacted vapor should be considered a REC.

At the request of the client, the findings of the Phase II investigation were discussed with the NYC Office of Environmental Remediation (NYCOER) to potentially develop the site under the Voluntary Cleanup Program. The NYCOER indicated that due to the nature of the contamination identified during the Phase II, the property development would require coordination with the NYSDEC. The client did not request that Hydro Tech pursue remedial approaches with the NYSDEC.

- Hydro Tech Environmental, Corp (June 2012): *Phase I ESA Report: 55 Eckford Street*

According to the June 2012 Phase I ESA five (5) Recognized Environmental Conditions (RECs) were identified: The historic use of the Subject Property as a manufacturing facility; the presence of SVOC and metal-impacted soil at the Subject Property; the presence of VOC and metal impacted groundwater at the Subject Property; the presence of both petroleum and chlorinated solvent-impacted soil vapors at the Subject Property and the undocumented removal of an aboveground fuel oil storage tank.

The previous reports associated with the Subject Property are available in **Appendix D**.

4.4 Previous Owners

According to the property listing on Property Shark, documents on file with the NYC Automated City Register Information System (ACRIS) database and the New York City Department of City Planning, the following provides a list of historical owners of the Site:

Year	Name Of Previous Owner(s)
Unknown - 1971	Berkman Lillie
1971 - 1972	Berkman, Donald
1972 - 1994	Berkman Lillie
1994 - 1995	Berkman Donald
1995	Berkman, Arlyne
1995- 2002	Arlyne Berkman Revocable Living Trust
2002	Berkman, Donald
2002-2003	Berkman, Gerald
2003	Berkman, Theodore
2004	Theodore Berkman As Co- trustees
2004 - 2009	Blue Diamond Development LLC
2009- 2013	55 Eckford Street Brooklyn LLC
2013 - Present	Eckford Green point LLC

4.5 Historic Aerials

Publicly available historical aerial photographs for the Subject Property and its vicinity dated 1954, 1966, 1980, 1994, 2004, 2006, 2008 through 2009 and 2011 through 2013 were reviewed and evaluated. The following summary provides a summary of this evaluation.

Date	Subject Property Shown As	Surrounding area
1954-2004	Two (2) abutting buildings located on the northern and southern portions of the Subject Property.	Developed with residential and commercial buildings
2006-2013	Partially constructed building located in the central portion of the Subject Property.	

4.6 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears that the Subject Property was developed between 1887 and 1905 with 4 abutting structures identified as lumber processing facility for planing and moulding. The 1916 Sanborn Map shows the Subject Property with the same 4 abutting structures but identified them as vacant and dilapidated. The Subject Property was then noted as 3 abutting lots occupied by 2 interconnected buildings; one 2-story building in the central and southern portions and a 2-story building in the northern portion identified as wool rag sorting and bailing, as evidenced by the 1942 Sanborn Map. The Subject Property remained with the same layout from 1951 to 1992 but with the use identified as lacquer spraying and electric plating. Between 1993 and 2004 the use of the Subject Property was unknown, with offices identified on the second floor of the northern 2-story building. Finally, between 2004 and 2005 the buildings were demolished and has remained a vacant lot until the most recent 2007 Sanborn Map. Additionally, the historical investigations performed at the Subject Property revealed impacted media; the presence of SVOC- and metal-impacted soil should be considered a REC. The presence of VOC and Metal-impacted groundwater should be considered a REC. The presence of petroleum- and chlorinated solvent impacted vapor should be considered a REC.

5.0 RECORDS REVIEW

5.1 Environmental Databases

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. ASTM E 1527 specifies the search area for each database. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed). **Appendix E** provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

ASTM Standard Environmental Record Source	Approx. ASTM Minimum Search Distance (MSD)	Number of Mapped Sites within MSD	Number of Orphan Sites
1. NPL (Superfund) <i>National Priorities List</i>	1.0 Mile	0	0
2. Delisted NPL Site <i>Delisted National Priorities List Site</i>	0.5 Mile	0	0
3. SEMS (Former CERCLIS) <i>Superfund Enterprise Management System (Former Comprehensive Environmental Response Compensation & Liability Information System)</i>	0.5 Mile	0	0
4. SEMS-ARCHIVE (Former CERCLIS-NFRAP) <i>SEMS Archive (Former CERCLIS No Further Remedial Action Planned Site)</i>	0.5 Mile	1	3
5. RCRA-TSD CORRACTS <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility Subject to Corrective Action</i>	1.0 Mile	1	0
6. RCRA-TSD <i>Resource Conservation & Recovery Treatment/Storage/Disposal Facility (Non-Corrective Action)</i>	0.5 Mile	0	0
7. RCRA-LG <i>Resource Conservation & Recovery Large Quantity Generator</i>	Site & Adjoining	1	0
8. RCRA-SG <i>Resource Conservation & Recovery Small Quantity Generator</i>	Site & Adjoining	0	0
9. ERNS <i>Emergency Response Notification System</i>	Property Only	0	0
10. Local / State / Tribal UST, PBS <i>Registered Storage Tanks</i>	Site & Adjoining	2	0
11. Local / State / Tribal LTANKS <i>Leaking Underground Storage Tanks</i>	0.5 Mile	21	1
12. State Spill Incidents <i>NYSDEC Spill Sites</i>	0.125 Mile	16	0
13. Local / State / Tribal SWF <i>Solid Waste Facility / Landfill</i>	0.5 Mile	2	0
14. Local / State / Tribal CERCLIS <i>Inactive Hazardous Waste Disposal Site</i>	0.5 Mile	2	5
16. Inst. / Engineering Controls <i>Registry of Institutional and/or Engineering Controls</i>	Property Only	0	0
17. Voluntary Cleanup Program Sites <i>Local / State / Tribal VCP Sites</i>	0.5 Mile	0	8
18. Brownfield Sites <i>Local / State / Tribal Brownfield Sites</i>	0.5 Mile	1	1
19. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources	

The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property is identified in eight different databases. They are as follows: RCRA Conditionally Exempt Small

Quantity Generator (RCRA-CESQG), NY Manifest, NY State and tribal landfill and/or solid waste disposal site (NY SHWS), NY State and tribal leaking storage tanks (NY LTANKS), NY state and tribal registered storage tanks (NY CBS), NY Aboveground Storage tanks (NY AST), Facility Index System/Facility Registry System (FINDS) and Enforcement and Compliance History Information (ECHO) databases. The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property is associated with the RCRA Conditionally Exempt Small Quantity Generator (CESQG) database and NY Manifest database. Available records indicate that the facility listed as Berkman Brothers, Inc. generated small quantity hazardous wastes and has received notices of violations noted as unknown (3 violations) and generators general (1 violation). A total of nineteen (19) manifests are documented for this facility between 1990 and 2003. The manifests indicate hazardous waste identified as reactive waste, mercury, arsenic, cyanide, zinc cyanide, non-listed reactive waste and other unknown material were generated at the Subject Property.

The Subject Property is also listed in NY SHWS database under site code 470590. Site was referred to DER by the NYCOER due to elevated concentrations of arsenic in on-site surficial soil. Additional investigation is suggested to determine the contamination of the soil. No other additional information is available. Neither the NYSDEC nor the New York State Department of Health (NYSDOH) has determined whether this site poses a significant threat to human and environmental health. This site should not impact upon the environmental quality of the Subject Property due to its current regulatory status and proximity to the Subject Property.

The Subject Property is listed in the Leaking Tanks (LTANKs) under the New York State Department of Environmental Conservation (NYSDEC) Spill #92-14462. The LUST spill case #92- 14462 occurred at the Subject Property on March 26, 1993 following a tank overflow. Number 6 fuel oil was reported to have spilled. Corrective actions associated with this spill indicated spiller cleaned the spill utilizing speedy-dry. The spill was closed on March 31, 1993. No other information was provided for this Spill in the LTANKs database. The presence of closed spill case at the Subject Property should not be considered a REC.

The Subject Property is listed in the AST Chemical Bulk Storage (CBS) database under CBS #2-000058. "Berkman Bros Inc." - Subject Property is associated with a 500 gallon fiberglass reinforced plastic AST containing Sodium Hypochlorite. The CBS AST was installed during 1985 and was closed during 1989. The historic use of the Sodium Hypochlorite is related to the previously identified REC as a manufacturing facility.

The Subject Property appears in the AST database under a Petroleum Bulk Storage (PBS) #2-26866 for a 2,500-gallon number 2 fuel oil tank. This listing indicates the AST was installed on December 1, 1976 and was closed/removed on January 7, 2005. No additional information pertaining to the AST was provided in the database. Since no information involving the potential impact to the Subject Property from the AST has been provided (including a NYFD Affidavit), the undocumented removal of the AST removal should be considered a REC.

The Subject Property is listed in the FINDS and ECHO databases under the name of "Berkman Brothers". It is associated with registry number 110004332883. No other information was provided by the databases. The presence of the Subject Property on the FINDS and ECHO database should not impact upon the environmental quality of the Subject Property and does not represent a REC.

The Subject Property is not listed on any other databases.

One (1) site at 421- 429 Meeker Street is listed in the CERCLIS NFRAP database within a ¼- mile radius of the Subject Property. The NFRAP site is located 1,123 feet to the southeast and upgradient of the Subject Property. This site is not qualified for NPL listing, does not presently generate hazardous waste and has not recorded any violations. This site should not impact upon the environmental quality of the Subject Property.

One (1) facility is listed in the RCRA CORRACTS databases within a 1-mile radius of the Subject Property. This site is located approximately 4,826 feet to the northeast and crossgradient of the Subject Property. The RCRA-TSD CORRACTS site has been assigned a high corrective action priority and any human exposure is

under control and verified. Due to its proximity and regulation, it is believed that the facility should impact upon the environmental quality of the Subject Property.

One (1) adjacent property is listed in the Resource Conservation & Recovery Large Quantity Generator (RCRA-LQG) database. The site is located at 65 Eckford Street and is identified as the Con Edison – Manhole 4397 site. The generator contained Lead and had no violations listed. This site should not impact upon the environmental quality of the Subject Property.

One (1) adjacent property is identified in the NY CBS AST databases. The northeastern adjacent property located at 65 Eckford Street is identified as “Carter Spray Finishing Corp”. The facility 82 feet, crossgradient from the Subject Property has the PBS Site No. 2-125096. The facility status is “in service” and identified two (2) 275 gallon trichloroethene ASTs. The tanks were installed in 1959 and 1968 and closed in 1998 respectively. The presence of adjacent CBS facility should not impact upon the environmental quality of the Subject Property.

Twenty-one (21) sites are listed in the NY LTANKS database and are located within a ½-mile radius of the Subject Property. None of the LTANKs are located adjacent to the Subject Property. Twenty (20) of the 21 LTANK sites have been cleaned up to the satisfaction of the NYSDEC and are considered closed; the remaining site is currently active. The active site is reported to have impacted the groundwater and is located upgradient of the Subject Property. The site at 550 Humboldt Street is 1,057 feet to the east south-east of the Subject Property and consisted of a wet tank test failure. An unknown quantity of gasoline was reported on October 16, 1990 and assigned spill #9007766. The spill is under remediation including source removal and excavation as well as enhanced fluid recovery (EFR) events. None of the LTANK sites should impact upon the environmental quality of the Subject Property.

Sixteen (16) sites are listed in the NY Spills database and are located within an 1/8- mile radius of the Subject Property. One (1) adjacent upgradient property located at 65 Eckford Street is identified in the database and is associated with closed spill#1501158 and open spill#1411729.

Spill#1411729 occurred on March 16, 2015 following a Phase II investigation when several VOCs were detected at concentrations exceeding standards as a result from an unknown petroleum spill. The cause and the material of the spill is not identified. The spill is still open and the investigation is still pending. No remediation is recorded to have taken place at this site. According the spill case manager, Conor Shea of the NYSDEC, this spill is related to spill#1511507 and Brownfield site C224218 which is associated with 65 Eckford Street. This site was detected to have petroleum impacted soils, petroleum impacted groundwater, chlorinated solvents in the shallow soil and groundwater samples as well as heavy metals in the soil and groundwater. As mentioned, the presence of petroleum related compounds and heavy metals in soil, chlorinated solvents and SVOCs in groundwater and soil vapor at concentrations exceeding Unrestricted Use Soil Cleanup Objectives and Groundwater Quality Standards are RECs. Since the site is currently being addressed in the Brownfields Cleanup Program, this spill should not impact upon the environmental quality of the Subject Property.

Spill#1501158 occurred on May 1, 2015 as the result of a spill of an unknown quantity of gasoline and was assigned spill #1501158. The spill was recorded to be a duplicate spill# from the previous spill mentioned at the 65 Eckford site. The spill was closed on May 4, 2015. The spill should not impact upon the environmental quality of the Subject Property. All the other fourteen (14) spills have been cleaned up to the satisfaction of the NYSDEC and are considered closed. These sites should not impact upon the environmental quality of the Subject Property due to various factors such as their location relative to groundwater flow direction, proximity and their current regulatory status.

Two (2) NY Solid Waste Facility/ Land Fill (SWF/LF) sites are located within a ½ mile radius of the Subject Property. Both sites are located downgradient of the Subject Property and are listed as inactive. The SWF sites should not impact upon the environmental quality of the Subject Property.

One (1) Inactive Hazardous Waste Disposal Site (SHWS) is located within a ½-mile radius of the Subject Property. The ‘City Barrel’ site at 421 Meeker Street is located approximately 1,123 feet to the south south-

east and downgradient of the Subject Property. No violations are recorded for this site. This site should not impact upon the environmental quality of the Subject Property.

Six (6) sites are listed in the NY Brownfields database and are located within a ½ -mile radius of the Subject Property. The previously mentioned northern adjacent site at 65 Eckford is identified in the brownfield database and is identified as 'active'. A December 2015 remedial investigation discovered the presence of petroleum impacted soils, petroleum impacted groundwater, chlorinated solvents in the shallow soil and groundwater samples as well as heavy metals in the soil and groundwater. There was no mention of remedial activities at this site. The presence of an adjacent Brownfields site; detection of petroleum related compounds, heavy metals in soil, chlorinated solvents and SVOCs in groundwater and soil vapor above Unrestricted Use Soil Cleanup Objectives and Groundwater Quality Standards at this site are RECs.

The second 'Former Sterling Transformer Corp.' site is located approximately 2,459 feet to the southwest and upgradient of the Subject Property. The third 'Robinson Bros Industries' Corp site is located approximately 2,009 feet to the southwest and downgradient of the Subject Property. The fourth 'Former Driggs Plywood Corp' site is located approximately 2,301 feet to the south south-west and downgradient of the Subject Property. The fifth 'Former F&S Central MFG Corp' site is located approximately 2,306 feet to the west and downgradient of the Subject Property. The sixth '94 N. 13th Street' site is located approximately 2,356 feet to the west and downgradient of the Subject Property. These sites should not impact upon the environmental quality of the Subject Property due to various factors such as their location relative to groundwater flow direction, proximity and their current regulatory status.

A vapor encroachment screening consisting of a Tier 1 evaluation of potential Vapor Encroachment Conditions (PVEC) was performed in accordance with ASTM E2600-10. A Tier 1 evaluation determines the presence or likely presence of a PVEC based upon Federal, State and Local database search results and includes an evaluation of distance, depth to water, potential migration pathways, groundwater flow direction, hydraulic barriers, soil characteristics and other factors impacting soil vapor migration.

The results of the Tier 1 evaluation indicate that due to the impacts identified in section 4.3 and 5.1, there is a petroleum and chlorinated PVEC situated at the subject Property.

None of the remaining properties identified in the databases, including Orphan Sites, should impact upon the environmental quality of the Subject Property.

5.2 Municipal Records

FOIA requests were issued to the following municipal agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. **Appendix F** provides copies of the municipal documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection

New York City Department of City Planning

A FOIA request was submitted to the New York City Zoning Department. The Tax Map revealed that the Subject Property consist of Block 2698 and Lot 32.

The New York City Zoning Department indicated that both lots of the Subject Property are zoned for "M1-2/R6B". The Subject Property is not listed as an "E" Designation.

New York City Department of Building

All obtainable FOIA documents were obtained via written request or other means. A FOIA request was submitted to the New York City Department of Building (NYCDOB). The Subject Property is identified as a single Block 2698 and Lot 32 by the NYCDOB.

The NYCDOB file for the Subject Property has forty (40) complaints, thirty (30) violations, none open and forty eight (48) ECB violations and two (2) open. There are twenty (20) total jobs and twenty one (21) actions listed for the Subject Property. Nineteen (19) jobs are related to the installation of sprinkler heads & piping, scaffolding, installation of shed, office trailer at sidewalks, applications for paving plan, installation of gas/oil boilers & burners. One (1) ARA/LAA job was of installation of prevention devices on water. The 21 actions are related to alterations, building notice, construction, two (2) Certificates of Occupancy (COs), elevator applications, oil burner applications, sprinklers, plumbing & drainage, DOB & ECB violations. The job application for the gas/oil burner and boiler installation was filed during August 1996 and involved a change in the heating energy from number 4 fuel oil to number 2 fuel oil and gas.

The NYCDOB lists records for two (2) COs for the Subject Property and are as follows:

- A CO dated April 24, 1946 lists the Subject Property as a "factory". The cellar use as storage and factory and the first and second floors use as factory and third floor use as office.
- A CO dated January 12, 1944 lists the Subject Property as an "office & junk shop". The cellar use as storage of baled rags; the first floor and second floor use for sorting and bailing of rags and third floor use as office.

Two (2) commercial low pressure boilers since 1996 and one (1) commercial high pressure boiler since 1946 records are listed. These boilers were present in the cellar.

New York City Department of Housing Preservation and Development

A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD). The NYCHPD indicated that there are no open violations on file for the Subject Property.

New York City Department of Health

A FOIA request was submitted to the New York City Department of Health (NYCDOH). As of the date of this report, the NYCDOH has not provided any information pertaining to our FOIA request. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

New York City Bureau of Fire Prevention

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP). As of the date of this report, the NYCBFP has not responded to our search request. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

New York State Department of Environmental Conservation

A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC). As of the date of this report, the NYSDEC has responded to our initial search request and has provided our search control#W009497-071216. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated. Additionally, the 'Former Berkman Bros Site' is identified in the Environmental Site Remediation database under site code 224168. The site has a 'P' classification which states the information available is preliminary, and additional investigation is required for further determinations. It is also listed that the site was referred to the NYSDEC from the Mayor's Office of Environmental Remediation (MOER) due to elevated concentrations of arsenic in the soil.

New York City Department of Environmental Protection

A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP). As of the date of this report, the NYCDEP has not responded to our search request. Any information

provided by the NYCDEP will be provided as soon as it has been received and evaluated. Additionally, the DEP CATS database was searched and listed twelve (12) records associated with the Subject Property. Two (2) of the 12 are of the boiler records and remaining ten (10) are industrial. The 2 boiler records are for number 2 and 4 fuel oil and the owner is Berkman, Gerald. All the 12 records are on the name of "Berkman Brothers Inc". All of the records have a "cancelled" status.

6.0 SITE RECONNAISSANCE

Mr. Adam Nasiatka Hydro Tech performed the site reconnaissance portion of the Phase I Assessment on July 1, 2016. The weather during the inspection was sunny and approximately 74 degrees Fahrenheit.

Hydro Tech inspected all accessible portions of the Subject Property. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes

No evidence of current or historical industrial processes was observed at the Subject Property.

2. Suspect Asbestos-Containing Materials

No evidence of historical suspect asbestos-containing materials was observed at the Subject Property.

3. Suspect Lead-Based Paint

No evidence of suspect lead-based paint was observed at the Subject Property.

4. Lead in Water

The City of New York is provided with potable water from a series of reservoirs located to the north and northwest of the city. The City of New York is responsible for maintaining the quality of this potable water. The Subject Property is served by public water.

5. Drum Storage Areas

No current or former drum storage areas were observed at the Subject Property.

6. Storage Tanks

No visual evidence of USTs or aboveground storage tanks (ASTs) was identified at the Subject Property. No evidence of former USTs or ASTs was identified at the Subject Property.

7. Subsurface Drainage Structures/Drains/Sumps

No subsurface drainage structures, such as dry wells, leaching pools or cesspools were observed at the Subject Property. No evidence of former subsurface drainage structures was observed at the Subject Property.

No evidence of current or former septic/waste water/storm water discharge systems is identified at the Subject Property.

No floor drains were observed at the Subject Property. No evidence of former floor drains was identified at the Subject Property.

No sump pumps were identified at the Subject Property.

8. PCB-Containing Equipment

No suspect PCB-containing equipment was identified at the Subject Property.

9. Monitoring / Potable Water Wells

No potable water wells were identified at the Subject Property.

No monitoring wells were identified on the Subject Property.

No monitoring wells were identified at the adjacent properties.

10. Mold

Visual and olfactory evidence of mold was identified in the stairwell leading to the basement on the concrete foundation wall, located centrally in the raised structure on the Subject Property. The presence of mold should be considered a REC.

11. Pits, Ponds, or Lagoons

An elevator pit is located in the central portion of the steel frame structure located at the basement level. The pit was noted to be full of standing water and construction debris. No stains, odors or signs of spillage were noted in the vicinity of the pit. This pit should not impact upon the environmental quality of the Subject Property.

No waste disposal pits, ponds or lagoons were observed at the Subject Property. No evidence of former pits, ponds, pools of liquid or lagoons were observed at the Subject Property.

12. Wetlands

No evidence of wetlands or wetlands growth is identified at the Subject Property. The location of the Subject Property and its vicinity do not appear in the USA National Wetlands Inventory.

13. Staining/Stressed Vegetation

No significant staining was identified at the Subject Property. No stressed vegetation was observed at the Subject Property.

14. Fill / Land Disposal / Solid Waste

The Subject Property currently is an inactive construction site with construction debris and garbage littered throughout the property. A pile of trash bags, wooden pallets, concrete and vegetative debris is located in the eastern portion of the site. The presence of this solid waste should not impact upon the environmental quality of the Subject Property.

15. Engineering Controls

No engineering controls were noted at the Subject Property.

16. Odors/Air Emissions

No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property. No evidence of air emissions or air emission equipment was identified at the Subject Property.

17. Hazardous Substance / Petroleum Containers

Multiple 5-gallon pails of construction material including interior/exterior industrial gloss oil, primer sealer, masonry waterproofing and floor tile adhesive were observed to be stored on the first floor of the steel structure on the concrete slab. The containers were noted to be in good condition. No stains, odors or spillage was noted in the vicinity of the containers. The presence of these containers should not impact upon the environmental quality of the Subject Property.

No other evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.

18. Radon

USEPA's recommended action level is 4 picoCuries/liter and the average radon gas concentrations predicted in the Brooklyn area is 1.3 picoCuries/liter. Since Brooklyn is located in a Low Radon Potential area, radon gas should not represent a potential environmental concern that would warrant the sampling for radon gas at the Subject Property.

7.0 CLIENT / USER-PROVIDED INFORMATION & INTERVIEWS

7.1 Client / User-Provided Information

During the course of the Phase I Assessment, the Client/User Questionnaire is required to provide specific information. The following provides a breakdown of this information.

1. The client/user provided no records to Hydro Tech's request for information associated with Environmental Liens or Activity and Use Limitations against the property that may have been filed or listed under federal, tribal, state or local law.
2. The client/user reported no specialized or actual knowledge or experience related to any potential Recognized Environmental Conditions at the Subject Property or nearby properties.
3. The client/user did not respond to Hydro Tech's request for information regarding the relationship of the purchase price of the property to fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.
4. Other than provided in Section 7.2, the client/user reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.
5. The client/user could not confirm whether no environmental contamination or cleanups have occurred at the property in the past.
6. Hydro Tech Environmental provided the Questionnaire for the client/user to complete. The Questionnaire was not returned to Hydro Tech for review and evaluation.

7.2 Interviews

During the course of the Phase I Assessment, interviews were conducted with key site personnel with respect to the operation and history of the Subject Property.

Site Owner and/or Representative

- Mr. Steven Wu – General Contractor TCJ Construction Inc./ Site Owner
- Mr. David Baharestani- Lender- Madison Realty Capital

The following information was provided:

- Mr. Steven Wu stated that his company currently owns the site and is planning to continue the construction.
- Mr. Steven Wu stated that the construction was originally started by another company prior to the market crash in 2008; construction was then halted due to financial reasons.
- Mr. Baharestani stated that his company had previously been involved with the site around the time of the market crash, but was personally unfamiliar with the site.
- Both Mr. Wu and Mr. Baharestani stated they were unaware of any environmental spills or releases at the Subject Property.
- Both Mr. Wu and Mr. Baharestani were aware that Hydro Tech had previously completed environmental reports at the site, which are summarized in Section 4.3.

Occupants and/or Operators

No occupants and/or operators were identified and/or available to be interviewed during the course of this Assessment.

Past Owners and/or Occupants

No past owners and/or occupants were identified and/or available to be interviewed during the course of this Assessment.

The interviews did not reveal the presence of any other potential Recognized Environmental Conditions in connection with the subject site, and did not provide any additional information with respect to the environmental integrity of the subject property that was not obtained from other sources over the course of this investigation.

In addition, although an interview with the former owner(s) or occupant(s) or operator(s) was not possible as none were provided to Hydro Tech as of the date of this ESA, we do not believe that any such owner(s) would have additional material information regarding the potential for contamination at the property that was not obtained from other sources over the course of this investigation.

8.0 CONCLUSIONS

Hydro Tech has performed a Phase I Environmental Site Assessment at the Subject Property, and has identified the following Recognized Environmental Conditions (RECs):

- The historical use of the Subject Property as a manufacturing facility (§4.0, §4.3);
- The presence of SVOC and metal-impacted soil at the Subject Property (§4.3);
- The presence of VOC and metal impacted groundwater at the Subject Property (§4.3);
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property (§4.3);
- The undocumented removal of an aboveground fuel oil storage tank (§4.3, §5.0);
- The presence of adjacent Brownfield Site C224218 (§5.1);
- The presence of a petroleum and chlorinated PVEC at the Subject Property (§5.1);
- The presence of mold at the Subject Property (§6.0).

9.0 CREDENTIALS & DECLARATION

9.1 Credentials

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this report are provided with this report. **Appendix G** provides a copy of the personnel credentials.

9.2 Environmental Professional Declaration

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 C.F.R. Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Subject Property. Only where indicated we have developed and performed the AAIs in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

11.0 EXCLUSIONS & DISCLAIMERS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client. No warranty, expressed or implied, is made whatsoever in connection with this report.

In preparing this report, Hydro Tech Environmental, Corp. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Hydro Tech Environmental, Corp. at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, Hydro Tech Environmental, Corp. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a Subject Property (ASTM E 1527-13 Section 4.5.1). The intent of an environmental site assessment is to reduce but not eliminate uncertainty regarding the presence of potential RECs within reasonable limits of both time and cost.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, Hydro Tech Environmental, Corp. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non-hazardous or hazardous materials, in that portion of the subject property or structure. In addition, Hydro Tech Environmental, Corp. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

Hydro Tech Environmental, Corp. did not perform testing or analyses to determine the presence or concentration of asbestos or lead-based paint at the Subject Property or in the environment of the subject property under the scope of the services performed.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where an outside laboratory, Hydro Tech Environmental, has conducted such analyses Corp. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly. If in the opinion of the Client/User or any third party claiming reliance on this report, that Hydro Tech was negligent or in breach of contract, such aforementioned parties shall have 6 months from the date of Hydro Tech's visit to make a claim.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold Hydro Tech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

1.0 EXECUTIVE SUMMARY

HydroTech Environmental Engineering and Geology, DPC. (HydroTech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property located at 55 Eckford Street, Brooklyn. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-13. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a HydroTech Project Manager and under the guidance of a HydroTech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I ESA has identified the following Recognized Environmental Conditions (REC):

- The historical use of the Subject Property as a manufacturing facility (§4.0);
- The presence of SVOC and metal-impacted soil at the Subject Property (§4.3);
- The presence of VOC and metal impacted groundwater at the Subject Property (§4.3);
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property (§4.3);
- The undocumented removal of an aboveground fuel oil storage tank (§4.3, §5.0);
- The listing of the Subject Property as a Brownfield Site C224168 (§5.1);
- The presence of adjacent Brownfield Site C224218 (§5.1).

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

HydroTech Environmental Engineering and Geology, DPC (HydroTech, HTE, the "Preparer") has been retained by Avo Construction (the "User") to perform a Phase I Environmental Site Assessment (ESA, Assessment) at the property located at 55 Eckford Street in Brooklyn, New York. The User is a prospective purchaser of the property. The Phase I was prepared as part of standard due diligence for the Subject Property. The property will hereafter be referred to as the "Subject Property".

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." (ASTM E 1527-13, §1.1.1). As defined by the ASTM, a Controlled Recognized Environmental Condition (CREC) is, "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls." (ASTM E 1527-13, §3.2.18). As defined by the American Society of Testing and Materials (ASTM), a HREC is, "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls" (ASTM E 1527-13, §3.2.42). Adjacent and surrounding sites are evaluated as part of a Phase I Assessment with regards to conditions that may indicate a high probability of the migration of hazardous substances or petroleum products to a property. As defined by ASTM, migrate/migration is, "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." (ASTM E 1527-13, §3.2.56).

To this end, HydroTech has collected information through several sources including, but not limited to a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personal interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by HydroTech and the User may have collected some information used in this report. Some or all the Assessment has been performed or supervised by environmental professionals as required by 40 C.F.R. Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations ("AULs") by HTE is beyond the scope of this practice (ASTM E 1527-13) and investigation.

2.2 Scope of Work

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with ASTM E 1527 except where noted in Section 2.3 and HydroTech's Proposal. As required by ASTM, the User has supplied information that has been relied upon by HydroTech in the rendering of findings, conclusions, and opinions, except where indicated in Section 2.3 or elsewhere in the report.

2.3 Limitations and Exceptions & Data Gaps

In addition to those items outlined by ASTM E 1527, asbestos, radon, lead-based paint, radon, wetlands, and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full or complete asbestos survey or lead-based paint survey. These surveys are commonly performed for building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they are performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for general Site characterization or waste disposal purposes. This Phase I Assessment is not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third-party sources or the user. As such, HydroTech relies upon these sources and has recorded findings, conclusions, and opinions based upon this information. HydroTech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report.

It should be noted that the United States Environmental Protection Agency (USEPA) has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquiries) of December 30, 2013 that “persons conducting all appropriate inquiries may use the procedures included in the ASTM E 1527-13 standard to comply with today’s final rule.” Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in exceedance(s) of the ASTM E 1527-13 standard, persons attempting to utilize this ESA while seeking one of the Comprehensive Environmental Response, Compensation, and Liability Act’s (CERCLA’s) Limited Liability Protections (LLPs) must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that is beyond the scope of this practice (ASTM E 1527-13) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to HydroTech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

As defined by ASTM, a Data Gap is defined as an inability to obtain information during the Phase I process, as required under the Standard, despite a good faith effort by the Environmental Professional to obtain this information. The Phase I ESA report must contain information pertaining to Data Gap(s) and evaluate their relative significance.

The following table provides a breakdown of the Data Gap(s) encountered and their relative significance.

Data Gap	Significance
Site History – not conducted to the time of first development and/or 5-year intervals.	Low – unlikely to alter conclusions due to findings of other resource(s).
No environmental lien provided.	Low – unlikely to alter conclusions due to findings of other resource(s).
Municipal Records – FOIAs not returned as of the date of the report.	Unknown – Any FOIA responses that alter the conclusions of the report will be provided upon receipt.

Due to other historical information obtained over the course of this investigation, HydroTech does not consider these data failures/data gaps significant, as they appear unlikely to have affected potential Recognized Environmental Conditions at the Subject Property.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 Subject Property Vicinity

The Subject Property is located on the west side of Eckford Street between Driggs Avenue to the north and Engert Avenue to the south, in the borough of Brooklyn New York. The borough of Brooklyn is situated in the eastern portion of New York City.

The vicinity of the Subject Property consists of commercial and residential properties and public natural areas. McCarren Park is located in the western vicinity of the Subject Property. The ground surfaces in the vicinity of the Site consist of asphalt, concrete, and landscaped areas.

3.2 Subject Property Description

The Subject Property is identified as 55 Eckford Street, Brooklyn, NY. The Subject Property 10,376 square feet in area and is occupied by a 6-story unfinished steel frame building with concrete foundations. A partial basement is located beneath the southern portion of the unfinished construction. The remaining portions of the Subject Property consist of bare soil, piles of construction materials and overgrown weeds. No heating systems are associated with the Subject Property.

Access to this property is via Eckford Street to the east. This lot is not currently connected to municipal water, sewer, gas or electric services. **Appendix A** provides photographs of the Subject Property.

The topography of this lot and its vicinity is generally even. **Figure 1** provides a Site Plan.

3.3 Adjacent Land Use

The Subject Property is located in a residential and commercial area. The following properties were identified immediately adjacent to the Subject Property:

Direction	Adjacent Parcel	Surrounding Parcels
North	Vacant Land	Commercial/ Residential
South	2-story building (unknown use) ; 5-story residential	
East	2 -story residential	
West	Parking lot; 1 – story commercial (unspecified use)	

HydroTech does not believe that the present uses of the adjacent properties identified above should impact upon the environmental quality of the Subject Property.

HydroTech does not believe that any of the surrounding parcels should impact upon the environmental quality of the Subject Property.

3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7.5 Minute Topographic Map containing the properties indicate that there are two (2) sensitive receptors within 0.125 miles radius of the Subject Property: E.

G. Greenpoint Pediatrics and SMYK Day Care. Neither of the sensitive receptors are located in the direct vicinity of the Subject Property and should not be impacted by the Subject Property.

3.5 Environmental Setting

The Site is located in the northwestern portion of Brooklyn, New York. The elevation of the Subject Property is approximately 16 feet above mean sea level (USGS 7.5-Minute Brooklyn, New York Quadrangle, 2013).

Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie an ancient basement rock.

The thickness of these deposits ranges from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain groundwater that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel, and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial meltwater streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts, and gravels. These outwash deposits have a moderate to high permeability.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member ranges in depth from 200 to 800 feet below sea level and increases in thickness to the southeast. The clay member acts as an

aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

Long Island has a humid, temperate climate that is strongly influenced by the Long Island Sound and the Atlantic Ocean. These bodies of water temper extremes of heat in summer and cold in winters. Climate affects the formation of soil through its influence on chemical, biological and physical processes. The amount and content of rainwater, as it percolates through the soil, chemically alter the composition of the soils. Chemical and biological processes are also affected by temperature changes. The physical weathering of the soil and rocks is affected by freezing.

The soils of Long Island are relatively young, having developed since the last recession of glaciation approximately 25,000 years ago. Over thousands of years, the minerals in the bedrock debris slowly decayed and disintegrated, providing the necessary substrate to support biological activity. Rock-forming minerals such as feldspars and micas, that are rich in potassium and aluminum, release their important elements as they are converted to clays. Soils formed in glacial drift are commonly known as loam, a mixture of sand, silt, and clay.

The soils of Long Island formed three distinct soil horizons or zones on glacial deposits. The lowest horizon, designated as the C-horizon, is similar in composition to the transported glacial rock debris. The B-horizon is above the C-horizon and consists of sediments that have been considerably altered from their C-horizon source. Vadose zone water percolates through the B-horizon, carrying compounds of clay, iron, aluminum oxides, carbonates, and humic acid. These materials are redeposited within the lower portions of the B-horizon and form the zone of accumulation. The zone of accumulation may also be the zone of groundwater saturation.

The zone of leaching is found in the A-horizon, which is the upper, organic-rich and life-sustaining layer with abundant roots and organic matter at the surface. The A-horizon is distinct from the underlying B & C-horizons because it is darker and more friable.

Differentiation in soil horizons is the result of various soil-forming processes such as the physical breakdown of particles, the leaching of salts, the accumulation of organic matter and the chemical weathering of primary minerals. The chemical weathering of primary minerals occurs through processes such as chelation, the formation of silicate clay minerals and the translocation of silicate clay minerals by percolating water from one horizon to another and the accumulation of iron.

Based upon the findings from a Phase II ESA performed by HydroTech in 2012, the depth to groundwater is between 10.39 to 12.94 feet below sidewalk grade. Groundwater flow direction was not determined in this Phase II ESA but was assumed to be toward west in the direction of East River.

4.0 HISTORICAL USE

4.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1887, 1905, 1916, 1942, 1951, 1965, 1978 – 1983, 1986 – 1889, 1991, 1993, 1995, 1996 and 2001 – 2007 were obtained from EDR and evaluated in order to establish the history of the Site. **Appendix B** provides a copy of the Sanborn Fire Rate Insurance Maps:

Date	Subject Property Shown As	Surrounding area
1887	Four (4) vacant lots addressed as 53, 55, 59 & 61 Eckford Street.	Vacant land
1905	One (1) lot addressed as 53-57 and fully developed with a 2-story building with a partial basement and 1-story extension. The building is utilized for planing and moulding and operated by Meisel Danowitz & Co. Three (3) horizontal steam boilers are noted along the western property line.	Lumber yard; residential and commercial properties
1916	Similar building layout as in 1905 and is labelled as "vacant and dilapidated". Three (3) horizontal steam boilers are noted along the western property line.	Residential; garage; junk yard; industrial facility
1942, 1951, 1965, 1978 – 1983, 1986 – 1889, 1991, 1993, 1995, 1996, 2001 – 2004	Same building layout as in 1916 and is utilized for Wool Rags Sorting & Bailing (1942), Electric Plating/Office/Storage/Lacquer Spraying (1951 – 1991), Office and unknown use (1993 – 2004) The steam boilers are no longer noted on the map.	Vacant land; garage; industrial facility; residential properties 474-480 Leonard Street (49 Engert Avenue): Auto Repair and Auto Laundry (1942 – 2003) 488-494 Leonard Street: Auto Repair and Auto Parking (1951) 498-502 Leonard Street: Dyeing & Cleaning Facility (1942, 1951, 1965)
2005 – 2007	Vacant land	Vacant land; manufacturing facility (warehouse); residential properties

4.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document in known occupants of

specific properties and sorted by individual addresses. **Appendix C** provides a copy of the City Directory Search.

The following provides a listing of all documented usages of all the address for the Subject Property.

Date	Use of Subject Property	Surrounding Property Use
1934	Miramar Trading Corp; Peter Formentati Manufacturing General Merchandise	Residential/Commercial/Manufacturing
1945	Schoolsky Bros Wool Stock Corp.	
1949, 1960, 1965, 1970, 1973, 1980, 1985, 1992, 1997	Berkman Bros Platers	
2000	BG Finishing Inc.; Berkman Bros Platers	
2014	Dynatec Contracting Inc.	

4.3 Previous Studies

HydroTech performed the following assessments at the Subject Property:

- Phase I ESA Report: 55 Eckford Street (October 2011)

According to the October 2011 Phase I ESA two (2) Recognized Environmental Conditions (RECs) were identified: the historical use of the Subject Property as a manufacturing facility and the undocumented removal of an aboveground fuel oil storage tank.

- Phase II ESA Report: 55 Eckford Street (April 2012)

HydroTech performed a Phase II ESA during April 2012. A total of 9 soil probes, 7 monitoring wells and 7 soil vapor implants were installed to assess soil, groundwater, and soil vapor impacts, respectively. The laboratory analytical results revealed semi-volatile organic compounds (SVOCs) and Metals in soil at concentrations exceeding regulatory standards. The maximum concentration of total SVOCs is 32,232 milligrams per kilogram. Arsenic, barium, cadmium, trivalent chromium, copper, lead, nickel, and mercury were detected at concentrations exceeding their regulatory standards in various soil samples.

Volatile organic compounds (VOCs) and Metals were detected in several groundwater samples at concentrations exceeded regulatory standards. The maximum total VOC concentration was 16.91 micrograms per liter beneath the southern portion of the Site. Arsenic, iron, manganese, silver and sodium were detected in various groundwater samples at concentrations exceeding regulatory standards. VOCs associated with both petroleum (such as xylenes and toluene) and chlorinated solvents (such as Tetrachloroethylene and Trichloroethylene) were detected in the soil vapor samples collected from the perimeter of the property. The maximum total VOC concentration in soil vapor is 4,344 micrograms per cubic meter.

At the request of the client, the findings of the Phase II investigation were discussed with the NYC Office of Environmental Remediation (NYCOER) to potentially develop the site under the NYCOER Voluntary Cleanup Program. The NYCOER indicated that

due to the nature of the contamination identified during the Phase II, the property development would require coordination with the NYSDEC. The client did not request that HydroTech pursue remedial approaches with the NYSDEC.

- Phase I ESA Report: 55 Eckford Street (June 2013)

According to the June 2012 Phase I ESA, five (5) Recognized Environmental Conditions (RECs) were identified: The historic use of the Subject Property as a manufacturing facility; the presence of SVOC and metal-impacted soil at the Subject Property; the presence of VOC and metal impacted groundwater at the Subject Property; the presence of both petroleum and chlorinated solvent-impacted soil vapors at the Subject Property and the undocumented removal of an aboveground fuel oil storage tank.

- Phase I ESA Report: 55 Eckford Street (July 2016)

According to the July 2016 Phase I ESA, following RECs were identified:

- The historic use of the Subject Property as a manufacturing facility;
- The presence of SVOC and metal-impacted soil at the Subject Property;
- The presence of VOC and metal-impacted groundwater at the Subject Property;
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property;
- The undocumented removal of an aboveground fuel oil storage tank;
- The presence of Brownfield Site C224218 in the northern adjacent property;
- The presence of a petroleum and chlorinated PVEC at the Subject Property;
- The presence of mold at the Subject Property.

The property was entered into the NYS Brownfield Cleanup Program (BCP) during 2017. The entrant, TCJ Constrution, was accepted into the program as a Volunteer. Do date, TCJ Contstruction has not performed any work toward developing the property within the BCP.

A copy of the July 2016 Phase I ESA is included in **Appendix D**, which also includes all the previous reports between 2011 and 2013. The BCP Application is also included in **Appendix D**.

HydroTech requested copies of any available historical environmental reports associated with the Subject Property. No other environmental reports were available for review.

4.4 Previous Owners

According to the property listing on file with the NYC Automated City Register Information System (ACRIS) database and the New York City Department of City Planning, the following provides a list of historical owners of the Site:

Year	Name of Previous Owner(s)
Prior to 1994	Berkman Lillie; Berkman Donald
1994 - 1995	Arlyne Berkman; Arlyne Berkman Revocable Living Trust
1995 - 2002	Donald Berkman; Gerald Berkman
2002 - 2003	Theodore Berkman
2003 - 2004	Theodore Berkman; Blue Diamond Development LLC
2004 - 2009	Blue Diamond Development LLC; 55 Eckford Street Brooklyn LLC
2009 - 2013	55 Eckford Street Brooklyn LLC; Eckford-Greenpoint LLC

4.5 Historic Aerials

Publicly available historical aerial photographs for the Subject Property and its vicinity dated 1954, 1966, 1980, 1994, 2004, 2006, 2008, 2009, 2011-2013 and 2015 were reviewed and evaluated. The Subject Property couldn't be located on the aerial photo from 1954 due to the poor quality of the photo. The following summary provides a summary of this evaluation.

Date	Subject Property Shown As	Surrounding area
1954-2004	Two (2) abutting buildings located on the northern and southern portions of the Subject Property.	Developed with commercial/residential
2006-2013	Partially constructed building located in the central portion of the Subject Property.	

4.6 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears was developed between 1887 and 1905 with 4 abutting structures identified as lumber processing facility for planing and moulding. The Subject Property was then fully developed with a 2-story building with a partial basement and 1-story extensions. The building has been utilized for Wool Rags Sorting & Bailing in 1940s, for Electric Plating/Office/Storage/Lacquer Spraying between 1950s and early 1990s and for Office and unknown use between late 1990s and early 2000s. This building was demolished in 2005 and the Site remained vacant till at least 2007.

Based upon the previous Phase I/II reports, the following RECs were identified and should be remained:

- The historic use of the Subject Property as a manufacturing facility;
- The presence of SVOC and metal-impacted soil at the Subject Property;
- The presence of VOC and metal-impacted groundwater at the Subject Property;
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property;
- The undocumented removal of an aboveground fuel oil storage tank;
- The presence of Brownfield Site C224218 in the northern adjacent property;
- The presence of a petroleum and chlorinated PVEC at the Subject Property;

The following non-scope consideration was identified and will be further discussed in Section 7.0:

- The presence of mold at the Subject Property.

The historic use of adjacent properties consist of commercial, manufacturing, industrial, residential and vacant land. The property at 474-480 Leonard Street (a.k.a. 49 Engert Avenue) to the south and crossgradient of the Subject Property was utilized as Auto Repair and Auto Laundry between 1942 and 2003. Due to the relative location to groundwater flow direction and absence of open spill at this property, this site should be considered a REC. The property at 488-494 Leonard Street to the west and downgradient of the Subject Property was utilized as Auto Repair and Auto Parking in 1951. However, no evidences of historic release or on-site usage/storage of petroleum related materials could be found. Thus this property should not be considered a REC. The property at 498-502 Leonard Street to the northwest and crossgradient of the Subject Property was utilized as Dyeing & Cleaning Facility in 1942, 1951 and 1965. However, no evidences (manifests or RCRA listing) could be found related to this operation showing the historic use of chlorinated solvents. Thus this historic use should not be considered a REC. None of the historic use of the remaining adjacent properties should be considered a REC.

5.0 RECORDS REVIEW

5.1 Environmental Databases

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. ASTM E 1527 specifies the search area for each database. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed). **Appendix E** provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

ASTM Standard Environmental Record Source	Minimum Search Distance (MSD)	Number of Mapped Sites within MSD	Number of Orphan Sites
1. NPL (Superfund) <i>National Priorities List</i>	1.0 Mile	0	0
2. Delisted NPL Site <i>Delisted National Priorities List Site</i>	0.5 Mile	0	0
3. SEMS (Former CERCLIS) <i>Superfund Enterprise Management System</i>	0.5 Mile	0	0
4. SEMS-ARCHIVE (Former CERCLIS- NFRAP) <i>SEMS Archive</i>	0.5 Mile	3	0
5. RCRA-TSD CORRACTS <i>Resource Conservation & Recovery T/S/D Facility Subject to Corrective Action</i>	1.0 Mile	1	0
6. RCRA-TSD <i>Resource Conservation & Recovery T/S/D Facility (Non-Corrective Action)</i>	0.5 Mile	0	0
7. RCRA-LG <i>Resource Conservation & Recovery Large Quantity Generator</i>	Site & Adjoining	1	0
8. RCRA-SG <i>Resource Conservation & Recovery Small Quantity Generator</i>	Site & Adjoining	1	0
9. ERNS <i>Emergency Response Notification System</i>	Property Only	0	0
10. Local / State / Tribal UST, PBS <i>Registered Storage Tanks</i>	Site & Adjoining	1	0
11. Local / State / Tribal LTANKS <i>Leaking Underground Storage Tanks</i>	0.5 Mile	23	0
12. State Spill Incidents <i>NYSDEC Spill Sites</i>	0.125 Mile	17	0

13. Local / State / Tribal SWF <i>Solid Waste Facility / Landfill</i>	0.5 Mile	2	0
14. Local / State / Tribal CERCLIS <i>Inactive Hazardous Waste Disposal Site</i>	0.5 Mile	5	0
15. Inst. / Engineering Controls <i>Registry of Institutional/Engineering Controls</i>	Property Only	0	0
16. Voluntary Cleanup Program Sites <i>Local / State / Tribal VCP Sites</i>	0.5 Mile	37	0
17. Brownfield Sites <i>Local / State / Tribal Brownfield Sites</i>	0.5 Mile	11	0
18. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources.	

A review and evaluation of the above Federal and State/Tribal/Local Databases indicate that the Subject Property is identified in the following databases:

- Resource Conservation and Recovery Act (RCRA) – Conditionally Exempt Small Quantity Generator (CESQG)

The Subject Property is identified as Berkman Bros Inc. and listed as a Small Quantity Generator (SQG) in 1999 and 2006 and as a Large Quantity Generator (LQG) in 1980 and 2001 of spent cyanide plating bath solutions, plating bath residues from the bottom of plating baths and spent stripping and cleaning bath solutions from electroplating operations. One violation dated August 23, 1989 was noted and removed on August 21, 1990. In addition, 220 gallons of non-listed corrosive waste, 880 gallons of wastewater treatment sludges from electroplating operations and 605 gallons of waste containing mercury were shipped from the Site on December 22, 2003 under EPA ID#NYD001236017.

- State Hazardous Waste Site (SHWS), NY Brownfields

The Subject Property is identified as Former Berkman Bros Site and listed in the Brownfield Cleanup Program (BCP) with BCP #C224168. The Site related information was submitted with BCP application and currently under review. Further investigation will be needed to define the nature and extent of the contamination. The results shall be reviewed by NYSDOH to determine if Site contamination presents public health exposure concerns. The listing of the Subject Property as a BCP site should be considered a REC.

- Leaking Underground Storage Tank (LTANK)

The Subject Property is listed in the LTANK database with a closed spill #9214462. The spill was reported on March 26, 1993 when unknown amount of #6 fuel oil was released due to tank overfill. The spill was cleaned up to the satisfaction of NYSDEC and closed

on March 31, 1993. This listing should not be considered a REC due to minor nature of spill and its current regulatory status.

- Aboveground Storage Tank (AST)

The Site is listed under PBS #2-268666 with one (1) 2,500-gallon #2 fuel oil AST, which was closed and removed on January 7, 2015. No violation or spills are noted in the records. The undocumented tank removal was listed in previous Phase I ESA as a REC and should be remained a REC.

- Chemical Bulk Storage (CBS)

The Subject Property is listed in the CBS database as an unregulated/closed facility with CBS #2-000058. One (1) 500-gallon AST containing sodium hypochlorite was closed in January 1998. No violation or spills are noted in the records. No further information is provided. The historic use of the sodium hypochlorite is related to the previously identified REC as a manufacturing facility.

- Facility Information System (FINDS), Enforcement and Compliance History Online (ECHO), NY Aerometric Information Retrieval System (AIRS)

The Site is listed in FINDS and ECHO with Registry ID #110004332883 with no further information available. The Site is also listed as an air emission facility with a DEC ID #2610100250 and a permit issued on November 16, 1998 and expired on March 6, 2006. None of these listings should be considered a REC due to their regulatory status.

The Subject Property is not listed in any other databases.

Three (3) sites are listed in the Superfund Enterprise Management System (SEMS) - ARCHIVE database within a ½-mile radius of the Subject Property. The sites are located over 1,000 feet to the south-southeast/east-northeast/west and crossgradient/downgradient of the Subject Property. None of these sites should adversely impact upon the environmental quality of the Subject Property due to their proximity to the Subject Property and relative location to the groundwater flow direction.

One (1) Resource Conservation and Recovery Act (RCRA) - Corrective Action Activity (CORRACTS) site is listed in the database within a 1-mile radius of the Subject Property. The site is located over 4,900 feet to the northeast and crossgradient of the Subject Property. This site should not impact upon the environmental quality of the Subject Property due to its proximity to the Subject Property and relative location to the groundwater flow direction.

One (1) site is listed in the RCRA-LQG database located in the adjacent property. The site is identified as Con Edison - Manhole 4397 at 65 Eckford Street, which is located in the northern adjacent property. The site was also listed as a CESQG of 300 gallons of lead-containing waste in 2013. This site should not be considered a REC due to the nature of the waste.

One (1) site is listed in the CBS database located in the adjacent property. The site is identified as Carter Spray Finishing Corp. at 65 Eckford Street, which is located to the north and crossgradient of the Subject Property. The site is registered under CBS #2-000005 with two (2) 275 -gallon trichloroethene (TCE) ASTs that were closed in September 1998. The Site is now listed in RCRA Non-Generator (NonGen) database but was listed as an SQG in 1980, a CESQG in 1995, 2006 and 2007 and a LQG in 2017. The historically generated waste consisted of lead-containing waste, spent halogenated solvents used in degreasing, spent non-halogenated solvents and waste containing ethane, 1,1,1-trichloro- (or) methyl chloroform, ethene, trichloroethylene, benzene and dimethyl-xylene. No violation was noted. The Site was also listed in the NY Brownfields database with Site ID #C224218. A December 2015 remedial investigation discovered the presence of petroleum impacted soils, petroleum impacted groundwater, chlorinated solvents in the shallow soil and groundwater samples as well as heavy metals in the soil and groundwater. There was no mention of remedial activities at this site. The presence of an adjacent Brownfields site; detection of petroleum related compounds, heavy metals in soil, chlorinated solvents and SVOCs in groundwater and soil vapor above Unrestricted Use Soil Cleanup Objectives and Groundwater Quality Standards at this site are RECs.

Twenty-two (22) sites are listed in the LTANK database within a 1/8-mile radius of the Subject Property. None of the sites is located in the adjacent property. Twenty-one (21) sites have been cleaned up to the satisfaction of NYSDEC and considered closed; and the remaining one (1) site is active. The active site is identified as Mobil S/S #17-FX9 at 550 Humboldt Street, which is located over 900 feet to the east-southeast and crossgradient of the Subject Property. Spill #9007766 was reported on October 16, 1990 due to presence of leaking tanks. None of these closed LTANK sites should be considered a REC due to various factors such as their proximity to the Subject Property, relative location to the groundwater flow direction, regulatory status of the sites and/or nature of the spill.

Seventeen (17) sites are listed in the New York Spills database within a 0.125-mile radius of the Subject Property. Two (2) sites are located in the adjacent property. The active sites are identified as:

- Phase 2 at 65 Eckford Street, which is located in the northern adjacent property and crossgradient of the Subject Property. Spill #1411729 was reported on March 16, 2015 due to findings of contamination during Phase II investigation. The closure of the spill is pending upon further remediation. The Site is currently enrolled in BCP with Site ID #C224218 and discussed above as a REC.
- Ground at 65 Eckford Street, which is located in the northern adjacent property and crossgradient of the Subject Property. Spill #1501158 was reported on May 1, 2015 and was considered a duplicate report of spill #1411729. Therefore the spill was closed on May 4, 2015.

The remaining sites have been clean up to the satisfaction of NYSDEC and considered closed. The closed sites are located over 100 feet to the various directions and upgradient/crossgradient/downgradient of the Subject Property. None of these site should adversely impact upon the environmental quality of the Subject Property due to various factors such as their location relative to the groundwater flow direction, their

current regulatory status, the nature of the spills and/or their proximity to the Subject Property.

Two (2) sites are listed in the Solid Waste Facility/Landfill (SWF/LF) database within a ½-mile radius of the Subject Property. All the sites are located over 2,200 feet to the west-northwest/west-southwest and downgradient of the Subject Property. Neither of these sites should adversely impact upon the environmental quality of the Subject Property due to their proximity to the Subject Property, relative location to the groundwater flow direction and current regulatory status.

Four (4) sites are listed in the Inactive Hazardous Waste Sites (SHWS) in the database within a ½-mile radius of the Subject Property. The sites are located over 1,000 feet to the southwest/east-southeast/northeast/south-southeast and crossgradient of the Subject Property. None of these sites should adversely impact upon the environmental quality of the Subject Property due to their proximity to the Subject Property, relative location to the groundwater flow direction and current regulatory status.

Thirty-seven (37) sites are listed in the Voluntary Cleanup Program (VCP) in the database within a ½-mile radius of the Subject Property. All of the sites are located over 100 feet to the various directions and crossgradient/downgradient of the Subject Property. None of the remaining sites should adversely impact upon the environmental quality of the Subject Property due to their proximity to the Subject Property and relative location to the groundwater flow direction.

Ten (10) sites are listed in the NY Brownfield database within a ½-mile radius of the Subject Property. One (1) is located adjacent to the Subject Property and identified as Carter Spray Finishing Corp. at 65 Eckford Street, which was discussed above. All the remaining sites are located over 380 feet to the various directions and downgradient/crossgradient of the Subject Property. None of these sites should adversely impact upon the environmental quality of the Subject Property due to their proximity to the Subject Property and relative location to the groundwater flow direction.

A vapor encroachment screening consisting of a Tier 1 evaluation of potential Vapor Encroachment Conditions (PVEC) was performed in accordance with ASTM E2600-10. A Tier 1 evaluation determines the presence or likely presence of a PVEC based upon Federal, State and Local database search results and includes an evaluation of distance, depth to water, potential migration pathways, groundwater flow direction, hydraulic barriers, soil characteristics and other factors impacting soil vapor migration. As discussed in Section 4.3, petroleum related and chlorinated VOCs were identified in the soil vapor beneath the Site. No other PVEC were identified.

None of the remaining properties identified in the databases, including Orphan Sites, should impact upon the environmental quality of the Subject Property.

5.2 Municipal Records

FOIA requests were issued to the following municipal agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. **Appendix F** provides copies of the municipal documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection
-

New York City Department of City Planning

A FOIA request was submitted to the New York City Zoning Department. The Tax Map revealed that the Subject Property consists of one (1) lot which is identified as the following:

- Block 2698, Lot 32: 55-63 Eckford Street, Brooklyn, NY 11222

The New York City Zoning Department indicated that the Subject Property is zoned for M1-2/R6B (Greenpoint-Williamsburg Anti-Harassment). The Subject Property is not a local landmark.

New York City Department of Building

All obtainable FOIA documents were obtained via a written request or other means. A FOIA request was submitted to the New York City Department of Building (NYCDOB).

The NYCDOB file for the Subject Property lists 44 complaints (none open), 33 DOB violation (3 open), 49 ECB violation (3 open), 20 jobs/filings, 1 ARA/LAA job and 21 actions. The open DOB violations are related to construction and failure to file benchmarking report of energy use. The open ECB violations are related to failure to maintain building wall or appurtenances, miscellaneous violations and sidewalk shed not meeting code specifications. The jobs are related to proposed installation of pipe scaffold, sprinkler heads & related piping and joist cabinet, pipe scaffolding, sidewalk shed, automatic smoke/heat detection and gas/oil burner & boiler, changing #4 oil to #2 oil & gas.

The following Certificate of Occupancy (CO) records are available on NYCDOB's website:

- A CO dated April 24, 1946 lists the Subject Property as a "factory". The cellar use as storage and factory and the first and second floors use as factory and third floor use as office.

- A CO dated January 12, 1944 lists the Subject Property as an “office & junk shop”. The cellar use as storage of baled rags; the first floor and second floor use for sorting and bailing of rags and third floor use as office.

One (1) material lift was approved in 2005 and removed in 2013. Two (2) commercial low pressure boilers since 1996 and one (1) commercial high pressure boiler since 1946 records are listed. These boilers were present in the cellar. The type of buildings at the Subject Property are classified as D3-Elevator Apt.

New York City Department of Housing Preservation and Development

A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD). The NYCHPD indicated that there is no active violations listed for the Subject Property.

New York City Department of Health

A FOIA request was submitted to the New York City Department of Health (NYCDOH). As of the date of this report, the NYCDOH has not provided any information pertaining to our FOIA request. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

New York City Bureau of Fire Prevention

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP). As of the date of this report, the NYCBFP has not responded to our search request. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

New York State Department of Environmental Conservation

A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC). As of the date of this report, the NYSDEC has not responded to our search request. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated. The Site is listed in NYSDEC Petroleum Bulk Storage (PBS) database and Brownfield Clean-up Program (BCP) database as discussed in Section 5.1. The Subject Property is not listed in any other NYSDEC remedial programs database including the Spill Response Program (SRP) database, State Superfund Program (SSF) database, Voluntary Cleanup Program (VCP) database, or Environmental Remediation Program (ERP) database.

New York City Department of Environmental Protection

A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP). As of the date of this report, the NYCDEP has not responded to our search request. Any information provided by the NYCDEP will be provided as soon as it has been received and evaluated.

The following records are available on NYCDEP Clean Air Tracking System (CATS): two (2) boiler records and ten (10) industrial records. The 2 boiler records are for number

2 and 4 fuel oil and the owner is Berkman, Gerald. All the 12 records are on the name of "Berkman Brothers Inc". All of the records have a "cancelled" status. The boiler records should be indicative of historic on-site usage and storage of petroleum oil and likely associated with the undocumented tank removal, which was discussed as a REC in previous section.

6.0 SITE RECONNAISSANCE

Mr. Mark E. Robbins of HydroTech performed the site reconnaissance portion of the Phase I Assessment on October 4, 2019. The weather during the inspection was sunny and approximately 75 degrees Fahrenheit.

HydroTech inspected all accessible portions of the Subject Property. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes

No evidence of historical or current industrial processes was observed at the Subject Property.

2. Drum Storage Areas

No current or former drum storage areas were observed at the Subject Property.

3. Storage Tanks

No visual evidence of current underground storage tanks (USTs) or ASTs was identified at the Subject Property.

No evidence of former USTs/ASTs was identified at the Subject Property.

4. Subsurface Drainage Structures/Drains/Sumps

No subsurface drainage structures, such as dry wells, leaching pools or cesspools were observed at the Subject Property. No evidence of former subsurface drainage structures was observed at the Subject Property.

No evidence of current or former septic/wastewater/stormwater discharge systems was identified at the Subject Property.

No evidence of current or former floor drains was identified at the Subject Property.

No evidence of sump pumps was identified at the Subject Property.

5. PCB-Containing Equipment

No suspect PCB-containing equipment was identified at the Subject Property.

6. Monitoring / Potable Water Wells

No monitoring wells or potable wells were identified at Subject Property or the adjacent properties.

7. Pits, Ponds, or Lagoons

No waste disposal pits, ponds or lagoons were observed at the Subject Property. No evidence of former pits, ponds, pools of liquid or lagoons was observed at the Subject Property.

8. Staining/Stressed Vegetation

No stains noticed at the Subject Property.

No evidence of stressed vegetation was observed at the Subject Property.

9. Fill / Land Disposal / Solid Waste

The Subject Property currently is an inactive construction site with construction debris and garbage littered throughout the property. A pile of trash bags, wooden pallets, concrete and vegetative debris is located in the eastern portion of the site. The presence of this solid waste should not impact upon the environmental quality of the Subject Property.

No visual areas of fill or evidence of land disposal of solid waste material(s) were observed at the Subject Property.

10. Engineering Controls

No engineering controls were noted at the Subject Property.

11. Odors/Air Emissions

No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property. No evidence of air emissions or air emission equipment was identified at the Subject Property.

12. Hazardous Substance / Petroleum Containers

Multiple 5-gallon pails of construction material including interior/exterior industrial gloss oil, primer sealer, masonry waterproofing and floor tile adhesive were observed to be stored on the first floor of the steel structure on the concrete slab. The containers were noted to be in good condition. No stains, odors or spillage was noted in the vicinity of the containers. The presence of these containers should not impact upon the environmental quality of the Subject Property.

No evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.

7.0 NON-SCOPE CONSIDERATIONS

The following non-scope considerations were evaluated:

1. Suspect Asbestos-Containing Materials

No visual evidence of suspect asbestos-containing materials were identified at the Subject Property.

2. Suspect Lead-Based Paint

No visual evidence of suspect lead-based paint were identified at the Subject Property.

3. Lead in Water

The City of New York is provided with potable water from a series of reservoirs located to the north and northwest of the city. The City of New York is responsible for maintaining the quality of this potable water. The Subject Property is served by public water.

4. Mold

No suspect mold growth was identified at the Subject Property.

5. Wetlands

No evidence of wetlands or wetlands growth is identified at the Subject Property. The location of the Subject Property and its vicinity do not appear in the USA National Wetlands Inventory.

6. Radon

USEPA's recommended action level is 4 picocuries/liter and the average radon gas concentrations predicted in the Brooklyn area is 1.3 picocuries/liter. Since Brooklyn is located in a Low Radon Potential area, radon gas should not represent a potential environmental concern that would warrant the sampling for radon gas at the Subject Property.

7. NYC MTA

According to the OASISnyc.net, the closest NYC Transit line, tunnel for "G" train, is located over 200 feet to the west of the Subject Property. No other tunnels or elevated rail is located within 200 feet of the Subject Property.

8. NYC "E" Designation

NYC City Environmental Quality Review (CEQR) assigns an "E" Designation to properties that may have development issues related to Hazardous Materials, Noise or Air Quality. The assignment of an "E"

Designation to a property requires developers to obtain signoff from the NYC Office of Environmental Remediation.

The Subject Property is not listed as an "E" Designation site.

8.0 CLIENT / USER-PROVIDED INFORMATION & INTERVIEWS

8.1 Client / User-Provided Information

During the course of the Phase I Assessment, the Client/User Questionnaire is required to provide specific information. The following provides a breakdown of this information.

1. The Client/User provided no records to HydroTech's request for information associated with Environmental Liens or Activity and Use Limitations against the property that may have been filed or listed under federal, tribal, state or local law.
2. The Client/User reported no specialized or actual knowledge or experience related to potential Recognized Environmental Conditions at the Subject Property or nearby properties.
3. The Client/User did not respond to HydroTech's request for information regarding the relationship of the purchase price of the property to a fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.
4. Other than provided in Section 8.2, the Client/User reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.
5. The Client/User could not confirm whether no environmental contamination or cleanups have occurred at the property in the past.

8.2 Interviews

During the course of the Phase I Assessment, no interviews was conducted with key site personnel with respect to the operation and history of the Subject Property.

In addition, although an interview with the former owner(s) or occupant(s) or operator(s) was not possible as none were provided to HydroTech as of the date of this ESA, we do not believe that any such owner(s) would have additional material information regarding the potential for contamination at the property that was not obtained from other sources over the course of this investigation.

9.0 CONCLUSIONS

HydroTech has performed a Phase I Environmental Site Assessment at the Subject Property and has revealed the following Recognized Environmental Conditions:

- The historical use of the Subject Property as a manufacturing facility (§4.0);
- The presence of SVOC and metal-impacted soil at the Subject Property (§4.3);
- The presence of VOC and metal impacted groundwater at the Subject Property (§4.3);
- The presence of petroleum and chlorinated solvent-impacted soil vapor at the Subject Property (§4.3);
- The undocumented removal of an aboveground fuel oil storage tank (§4.3, §5.0);
- The listing of the Subject Property as a Brownfield Site C224168 (§5.1);
- The presence of adjacent Brownfield Site C224218 (§5.1).

10.0 CREDENTIALS & DECLARATION

10.1 Credentials

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this report are provided with this report. **Appendix G** provides a copy of the personnel credentials.

10.2 Environmental Professional Declaration

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 C.F.R. Part 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. Only where indicated we have developed and performed the AAIs in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

12.0 EXCLUSIONS & DISCLAIMERS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client. No warranty, expressed or implied, is made whatsoever in connection with this report.

In preparing this report, HydroTech Environmental Engineering and Geology, DPC. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to HydroTech Environmental Engineering and Geology, DPC. at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, HydroTech Environmental Engineering and Geology, DPC. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a Subject Property (ASTM E 1527-13 Section 4.5.1). The intent of an environmental site assessment is to reduce but not eliminate uncertainty regarding the presence of potential RECs within reasonable limits of both time and cost.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, HydroTech Environmental Engineering and Geology, DPC. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non-hazardous or hazardous material, in that portion of the subject property or structure. In addition, HydroTech Environmental Engineering and Geology, DPC. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

HydroTech Environmental Engineering and Geology, DPC. did not perform testing or analyses to determine the presence or concentration of asbestos or lead-based paint at the Subject Property or in the environment of the subject property under the scope of the services performed.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where an outside laboratory has conducted such analyses, HydroTech Environmental Engineering and Geology, DPC

has relied upon the data provided and has not conducted an independent evaluation of the reliability of the data.

The conclusions contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly. If in the opinion of the Client/User or any third-party claiming reliance on this report, that HydroTech was negligent or in breach of contract, such aforementioned parties shall have 6 months from the date of HydroTech's visit to make a claim.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold HydroTech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

REMARKS
1 - Groundwater encountered

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated.
Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

REMARKS
1 - Groundwater encountered

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard. All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

REMARKS
1 - Groundwater encountered

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard. All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.

SUMMARY

The following report summarizes the daily activities performed under the Remedial Investigation Work Plan (RIWP) at 55 Eckford Street, Brooklyn, NY. The Site has entered into an agreement with the New York State Department of Environmental Conservation (NYSDEC) under the New York State Brownfield Cleanup Program (BCP), BCP Site No. C224168. The RIWP was approved by the NYSDEC on November 20, 2024. Unless otherwise stated, the work observed and documented by GZA was performed in accordance with the Contract Documents.

WORK PERFORMED AND DOCUMENTED

Tuesday – 12/10/2024

Work Location (Attachment A):

1. GZA marked out all boring locations, observed soil boring drilling, logged soil borings, and collected soil samples for analysis. Soil boring locations are shown on **Attachment A**.
2. Coastal Environmental Solutions, Inc. (Coastal) used a Geoprobe 7822DT to advance 2 soil borings to a maximum depth of 20 feet below ground surface: GZ-06 and GZ-07.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld Ion Science Tiger XT PID
- Handheld TSI SidePak™ AM 520 Dust Monitor
- Geoprobe 7822DT

SOIL SAMPLES COLLECTED

- GZ-06A, GZ-06B, GZ-06C, GZ-06D, GZ-06E, GZ-06F
- GZ-07A, GZ-07B, GZ-07C, GZ-07D, GZ-07E, GZ-07F
- GZ-FD-01
- FB-PFAS-2024-12-10

GROUNDWATER, SOIL VAPOR, AND AMBIENT AIR SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID and DustTrak. No elevations were detected throughout the workday.

ADDITIONAL SOIL OBSERVATIONS

- GZA used a handheld PID to collect direct reading measurements throughout each sleeve of recovered soil. The highest reading of 88.1 ppb was recorded at approximately 17' below ground surface at soil boring GZ-07.

SUMMARY

The following report summarizes the daily activities performed under the Remedial Investigation Work Plan (RIWP) at 55 Eckford Street, Brooklyn, NY. The Site has entered into an agreement with the New York State Department of Environmental Conservation (NYSDEC) under the New York State Brownfield Cleanup Program (BCP), BCP Site No. C224168. The RIWP was approved by the NYSDEC on November 20, 2024. Unless otherwise stated, the work observed and documented by GZA was performed in accordance with the Contract Documents.

DATE: 12/11/2024
FILE NO: 41.0163263.00

WORK PERFORMED AND DOCUMENTED

Wednesday – 12/11/2024

Work Location (Attachment A):

1. GZA observed soil boring drilling, logged soil borings, and collected soil samples for analysis. Soil boring locations are shown on **Attachment A**.
2. Coastal Environmental Solutions, Inc. (Coastal) used a Geoprobe 7822DT to advance soil boring GZ-05 to a maximum depth of 20 feet below ground surface (bgs) and a hand auger to advance soil borings GZ-08, GZ-09 and GZ-10 to a maximum depth of 10 feet bgs.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld RAE Systems ppbRAE 3000
- Handheld TSI SidePak™ AM 520 Dust Monitor
- Geoprobe 7822DT
- Hand Auger

SOIL SAMPLES COLLECTED

- GZ-05A, GZ-05B, GZ-05C, GZ-05D, GZ-05E, GZ-05F
- GZ-08A, GZ-08B, GZ-08C
- GZ-09A, GZ-09B, GZ-09C
- GZ-10A, GZ-10B, GZ-10C
- GZA-09-MS, GZA-09-MSD
- GZ-FB-01
- GZ-FD-02

GROUNDWATER, SOIL VAPOR, AND AMBIENT AIR SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID and DustTrak. No elevations were detected throughout the workday.

ADDITIONAL SOIL OBSERVATIONS

- GZA used a handheld PID to collect direct reading measurements throughout each sleeve of recovered soil. The highest reading of 236.4 ppm was recorded at approximately 5' below the basement slab at soil boring GZ-10.

WORK PERFORMED AND DOCUMENTED

Friday – 12/13/2024

Work Location (Attachment A):

1. Coastal Environmental Solutions, Inc. (Coastal) used a Geoprobe 7822DT to install the GMW-02, GMW-03 and GMW-04 monitoring wells to approximately 20 feet below ground surface; screens were set from 10 to 20 feet bgs. Coastal developed all 3 wells after installation. Monitoring well locations are shown on **Attachment A**.
2. GZA collected 8 soil vapor samples (GSV-01-08), a duplicate at the location of GSV-06, and 2 ambient outdoor air (GOA-01 & GOA-2) for VOCs analysis (TO-15). The soil vapor samples were either collected at a depth of 8 feet below ground surface or 1 foot below the cellar level slab. All soil vapor samples were purged using an air sampling pump and passed a helium tracer test prior to sampling. Sampling locations are shown on **Attachment A**.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld RAE Systems ppbRAE 3000
- Handheld TSI SidePak™ AM 520 Dust Monitor
- Geoprobe 7822DT

SOIL VAPOR SAMPLES COLLECTED

- GSV-01, GSV-02, GSV-03, GSV-04, GSV-05, GSV-06, GSV-07 and GSV-08
- GOA-01 and GOA-02
- GOA-DUP

GROUNDWATER AND SOIL SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID and DustTrak. No elevations were detected throughout the workday.

SUMMARY

The following report summarizes the daily activities performed under the Supplemental Remedial Investigation Work Plan (RIWP) at 55 Eckford Street, Brooklyn, NY. The Site has entered into an agreement with the New York State Department of Environmental Conservation (NYSDEC) under the New York State Brownfield Cleanup Program (BCP), BCP Site No. C224168. The Supplemental RIWP was approved by the NYSDEC on July 22, 2025. Unless otherwise stated, the work observed and documented by GZA was performed in accordance with the Contract Documents.

WORK PERFORMED AND DOCUMENTED

Thursday – 8/21/2025

Work Location (Attachment A):

1. Coastal Environmental Solutions, Inc. (Coastal) used a Geoprobe 6620DT with Hollow Stem Augers to install monitoring wells GMW-07 and GMW-08 to approximately 20 feet below ground surface; screens were set from 10 to 20 feet bgs. Monitoring well locations are shown on **Attachment A**.
2. Coastal performed boring drilling prior to well installation to determine groundwater elevation following the demolition of the 6-story steel structure onsite. GZA observed the drilling and logged general descriptions of soil borings.
3. Renovation Group previously performed demolition of the 6-story steel structure onsite.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld RAE Systems MiniRAE 3000
- Heron dipper-T Water Level Meter
- Geoprobe 6620DT with Hollow Stem Augers

SOIL, GROUNDWATER, SOIL VAPOR, AND AMBIENT AIR SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID. No elevations were detected during this monitoring period. On-site ground was wet due to light rain in the morning and following rain event the previous day. There were no observations of dust associated with the project leaving the Site throughout the workday.

ADDITIONAL SOIL OBSERVATIONS

- GZA used a handheld PID to collect direct reading measurements throughout each sleeve of recovered soil. The highest reading of 340.2 ppm was recorded at approximately 11' bgs at soil boring advanced for GMW-07.

WORK PERFORMED AND DOCUMENTED

Friday – 8/22/2025

Work Location (Attachment A):

1. Coastal Environmental Solutions, Inc. (Coastal) used a Geoprobe 6620DT with Hollow Stem Augers to install monitoring wells GMW-09 and GMW-10 to approximately 20 feet below ground surface (bgs); screens were set from 10 to 20 feet bgs. Coastal developed all 4 monitoring wells (GMW-07 through GMW-10) after installation. Monitoring well locations are shown on **Attachment A**.
2. Coastal installed soil vapor points GSV-09 through GSV-12 to a depth of 5 feet bgs (approximately 2 feet above the water table). Soil vapor sample locations are shown on **Attachment A**.
3. GZA collected 4 soil vapor samples (GSV-09 through GSV-12) and a duplicate at the location of GSV-11 for VOCs analysis (TO-15 SIM). All soil vapor samples were purged using an air sampling pump and passed a helium tracer test prior to sampling.
4. Contractor is installing construction fencing along 65 Eckford Street foundation wall on the northern boundary of the Site.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld RAE Systems MiniRAE 3000
- Handheld TSI SidePak™ AM 520 Dust Monitor
- Heron dipper-T Water Level Meter
- MGD-2002 Dielectric Helium Leak Detector and Vapor Shroud
- GilAir Plus Personal Air Sampling Pump
- Geoprobe 6620DT with Hollow Stem Augers

SOIL VAPOR SAMPLES COLLECTED

- GSV-09, GSV-10, GSV-11 (+ GSV-FD 08-22-2025), and GSV-12

SOIL, GROUNDWATER, AND AMBIENT AIR SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID and DustTrak. No elevations were detected throughout the workday.

ADDITIONAL SOIL OBSERVATIONS

- GZA used a handheld PID to collect direct reading measurements throughout each sleeve of recovered soil. The highest reading of 110.4 ppm was recorded at approximately 1' bgs at soil boring advanced for GMW-09.

WORK PERFORMED AND DOCUMENTED

Thursday – 8/28/2025

Work Location (Attachment A):

1. GZA collected 4 soil vapor samples (GSV-09 through GSV-12) and a duplicate at the location of GSV-11 for VOCs analysis (TO-15 SIM). All soil vapor samples were purged using an air sampling pump. These soil vapor samples were recollected due to flow controller issues from the 08/22/25 sampling event.
2. GZA collected groundwater samples from GMW-07, GMW-08, GMW-09, and GMW-10 for Total and Dissolved TAL Metals, including Cyanide and Mercury. Soil vapor and groundwater sample locations are shown on **Attachment A**.

Photos of the Site activities are provided in **Attachment B**.

EQUIPMENT AND MATERIALS USED ON SITE

- Handheld RAE Systems MiniRAE 3000
- Handheld DustTrak II Aerosol Monitor 8532
- Solinst Oil/Water Interface Meter
- Horiba U-52 Water Quality Meter
- Pine Peristaltic Pump

SOIL VAPOR SAMPLES COLLECTED

- GSV-09, GSV-10, GSV-11 (+ Field Duplicate), and GSV-12

GROUNDWATER SAMPLES COLLECTED

- GMW-07 + Field Duplicate
- GMW-08
- GMW-09 + Matrix Spike and Matrix Spike Duplicate
- GMW-10
- Field Blank for QA/QC analysis

SOIL AND AMBIENT AIR SAMPLES COLLECTED

- None

AIR MONITORING RESULTS:

- Air monitoring was performed with a handheld PID and DustTrak. No elevations were detected throughout the workday.

ADDITIONAL SOIL OBSERVATIONS

- None

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 10, 2024 and listed below. The project was identified as your project: **55 Eckford Street**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24L0646

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.
