Veronica Zhune
Environmental Engineer, Region 2
New York State Department of Environmental Conservation
47-40 21 Street, Long Island City, New York 11101

Subject: Spill # 1604488
105 South 5th Street, Brooklyn, NY 11249

Dear Ms Zhune,

This report will summarize the results of Underground Storage Tank (UST) removal conducted in accordance with NYC fire prevention code sec R3404.1 & R3404.2.13 at the subject Site on August 2 and 3rd, 2016. The UST removal was performed by Action Remediation Inc. Environmental oversight and soil sampling was performed by Nicholas Pressly, a Qualified Environmental Professional with Pressly Associates, LLC (Pressly). A spill was reported by Pressly from the field during this UST removal based on visual observation of soil contamination at one of the UST locations (Tank 2).

Background

The subject property (Figure 1) is a vacant lot which is currently being developed under the NYS Brownfield Cleanup Program (BCP). A warehouse building was recently demolished as part of the development and 2 USTs were discovered which were initially thought to be 550 gallon heating oil tanks. An application was made to the NYS PBS program to register closure of the USTs prior to mobilization (Attachment 1). Upon excavation, the USTs were identified as 4,000 gallon (Tank 1) and 1,500 gallon (Tank 2) heating oil tanks. The PBS information shall be amended to reflect the correct UST sizes once the file becomes active on the PBS database.

UST Removal

Tank 1 was fully encased in concrete. Tank 2 was believed to be a former vaulted above ground tank in a sub-basement that had previously been backfilled with brick demolition debris. The vault was constructed with a poured concrete floor and cinderblock/brick walls.

Prior to removal 500 gallons of water were removed from Tank 1 and 827 gallons of oil were removed from Tank 2. The tanks were cut open and cleaned before disposal at TNT Scrap Metal, 340 Maspeth Ave., Brooklyn, NY. The UST removal documentation, FDNY Affidavit, and disposal manifests were included as Attachment 2.

A small hole was observed in the middle of the side of Tank 1, however, there was no evidence of contamination observed.

No holes were observed in Tank 2. A small amount of oil (less than 1 gallon) was observed pooled on the western end of the concrete floor slab. Speedy dry was applied to soak up the oil which was removed prior to further exploration. Approximately 2/3 of the concrete floor was removed until engineering constraints prohibited further excavation due to the proximity of the excavation to the sidewalk along Berry Street. Approximately 2 cubic yards of visually contaminated soil/brick/debris (very light contamination) was removed from the bottom of the Tank 2 excavation and stockpiled on the Site, where it remains pending disposal at an appropriately permitted facility.

The UST excavations were backfilled with existing soil and brick debris. Prior to backfilling, a plastic liner was placed in the Tank 2 excavation in the event that further remediation of soil becomes necessary based on the results of soil sampling.

Groundwater was not encountered at the Site.

Soil Sampling

A total of 10 soil samples were collected from the UST excavations analyzed for semi-volatile organic compounds (SVOCs) according to EPA Method 8270 by York Environmental Laboratories in Stratford, CT. Duplicate SVOC samples were collected by Equity Environmental Engineering in Mount Olive, NJ and analyzed by SGS Accutest New Jersey.

Four SVOC soil samples were collected from the bottom of the Tank 1 excavation (8 feet below grade) from west to east (T1-B1, T1-B2, T1-B3, T1-B4). Four SVOC soil samples were collected from the sidewalls (4 feet below grade) of the Tank 1 excavation (T-1N, T1-S, T1-E, T2E-T1-W). Note that Tank 1 and Tank 2 shared the common east/west sidewall (T2E-T1W).

A total of 4 soil samples were collected from the bottom (9 feet below grade) of the Tank 1 excavation for analysis of volatile organic compounds (VOCs) according to EPA Method 8260. The samples are identified from west to east as UST-1-Base-1(8.5'), UST-1-Base-2(8.5'), UST-1-Base-3(8.5'), UST-4-Base-1(8.5'). The VOC samples were collected by Equity Environmental Engineering in Mount Olive, NJ and analyzed by SGS Accutest New Jersey. Duplicate soil samples for VOC analysis were not collected.

A total of 2 soil samples were collected from the bottom of the Tank 2 excavation for analysis of SVOCs according to EPA Method 8270. These samples are identified from west to east as T2-BE and T2-BW.

A total of 2 soil samples were collected from the bottom of the Tank 2 excavation for analysis of volatile organic compounds (VOCs) according to EPA Method 8260. These samples are identified from west to east as UST-2-Base-2(9') and UST-2-Base-1(9').

The soil sampling locations were depicted in Figure 2.

Soil Sampling Results

The soil sampling results for SVOCs were summarized below in Table 1. The laboratory reports from York Environmental Laboratories and SGS Accutest New Jersey were included as Attachment 3.

		Total Xylene	1.92	0.26

Key: ND = Not Detected
NA = Not Applicable

Bold = Regulatory Level Exceeded

fbg = Feet Below Grade
SCO = NYS DEC Soil Cleanup Objective

The SCOs for VOCs were for Xylenes were exceeded in UST-2-Base-2. This corresponded the western side of the Tank 2 excavation. SCOs for VOCs were not exceeded in any of the other soil samples collected.

Photographs of the UST Removal were included as Attachment 4.

CONCLUSIONS

Based on the results of investigation, Pressly Associates, LLC provides the following conclusions:

1. Levels of SVOCs detected at Tank 1 and Tank 2 are below the unrestricted residential SCOs.
2. Levels of VOCs detected at Tank 1 are below the unrestricted residential SCOs.
3. Low levels of Xylenes were detected at Tank 2 above the unrestricted residential SCOs.

RECOMMENDATIONS

Based on the results of this investigation, Pressly recommends the following:

1. Closure of Spill # 1604488
2. Amendment of the the PBS file for the Site once the file becomes active on the PBS database.
3. Removal of the stockpiled soil remaining at the Site for disposal at an appropriately permitted facility.

We look forward to closure of this Spill. In the meantime, if you have any questions, please don't hesitate to call me at 607-264-9368.

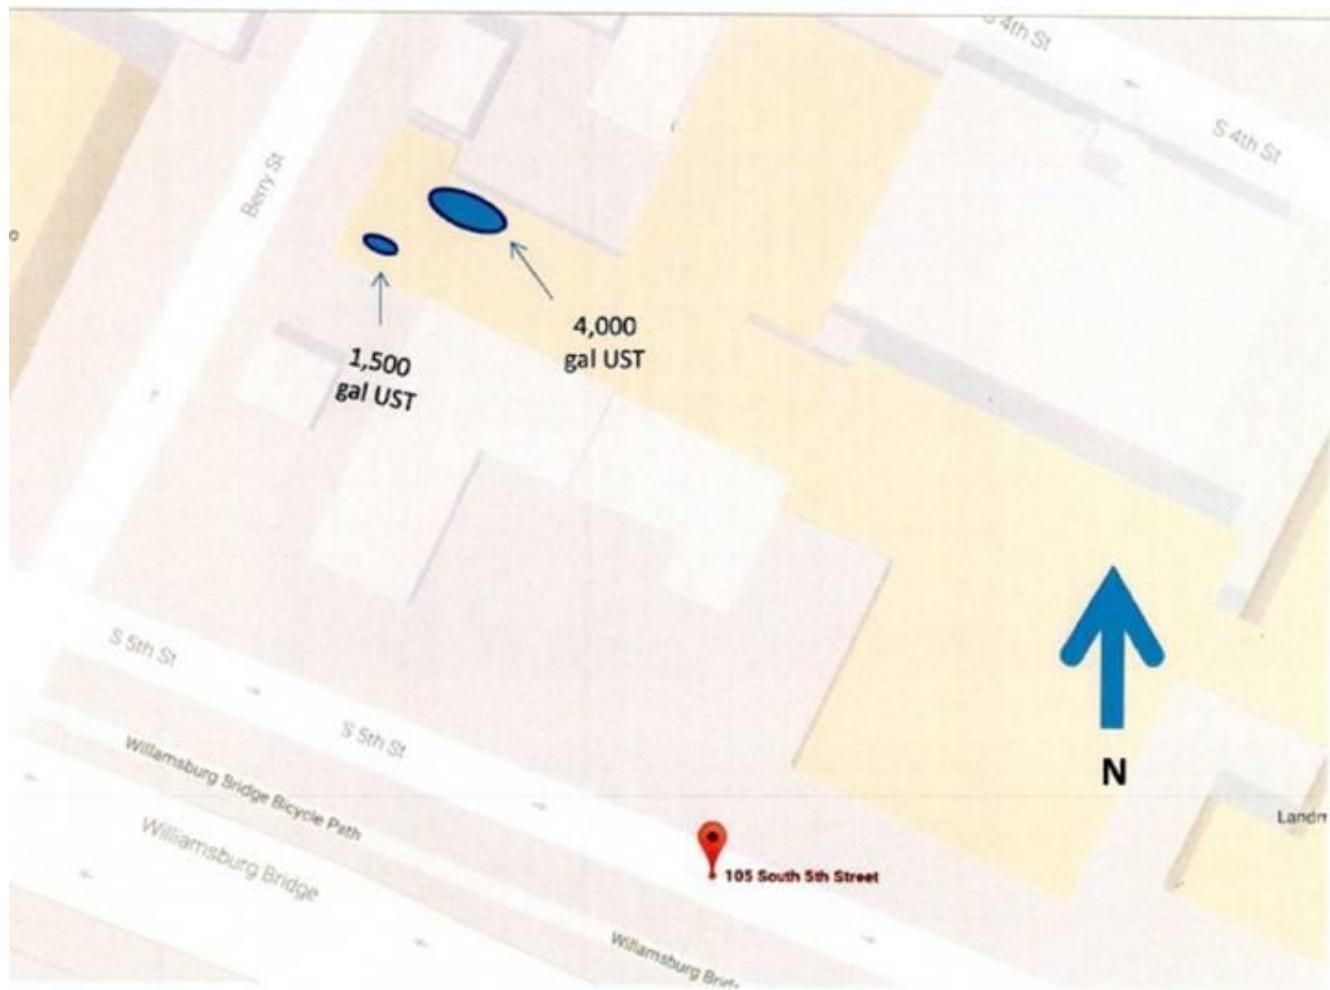

Sincerely,

Nicholas Pressly
Environmental Projects Manager

Re: Tank Removals
105 South 5th St, Brooklyn, NY 11249

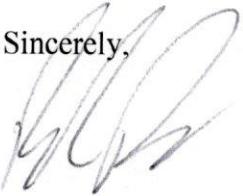

Dear Mr. Pressly,

Enclosed, please find the paperwork for the removal of (2) underground storage tanks from the above referenced location.

Included in this mailing are the following: Waste Manifest, bill of lading of legal disposal, NYC Fire Marshal Affidavit, Site Plan and Certificate of Completion.

We appreciate your business and if we can be of any further assistance, please do not hesitate to call.

Sincerely,

Ralph Pantony, III
Project Manager

Re: 105 South 5th St
Brooklyn, NY 11249

To whom it may concern:

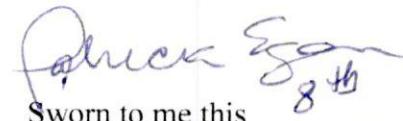

This correspondence is in regards to the completed removal of (1) 4,000 gallon and (1) 1,500 gallon underground #2 oil storage tanks from the above referenced location on 8/2/2016 & 8/3/2016. These tanks was pumped, cleaned & removed as per New York City rules and regulations. Accompanying piping was cut and removed. Attached for review is a site plan.

Action Remediation, Inc. is in compliance with New York City fire prevention code sec R3404-01 & R3404.2.13. My certificate #86389533; install, test, repair buried tank; expiration date: 9/15/18.

Sincerely,

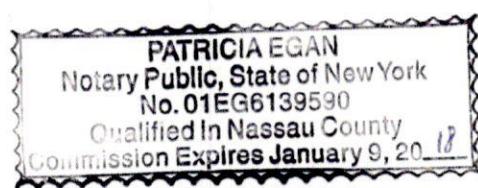

Kevin O'Connor

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 04, 2016 and listed below. The project was identified as your project: **105**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 16H0196

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- B Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW -846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Footnotes:

^a This compound in BS is outside in house QC limits bias high.

^b Pattern present in the range of Fuel Oil. Carbon ranges C8-C38.

Regulatory limits listed in this document have been obtained from the latest version of the regulations cited and are used for advisory purposes only. SGS Accutest assumes no responsibility for errors in regulatory documents or changes to criteria detailed in later versions of the referenced regulation. It is the responsibility of the user to verify these limits before using or reporting any data.

No results exceeded regulatory criteria.
