New 470 Project
12 ECKFORD STREET
BROOKLYN, KINGS COUNTY, NEW YORK

Final Engineering Report

NYSDEC Site Number: C224242

Prepared for:
New York State Department of Environmental Conservation
Division of Environmental Remediation, Remedial Bureau B
625 Broadway
Albany, New York 12233

Prepared on Behalf of:
New 470 LLC
100 Comac Street
Ronkonkoma, New York 11779

Prepared by:

AKRF, Inc.
440 Park Avenue South, 7th Floor
New York, New York 10016

DECEMBER 2019

CERTIFICATIONS

I, Michelle Lapin, P.E., am currently a registered Professional Engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Remedial Action Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Remedial Action Work Plan.

I certify that the data submitted to the Department with this Final Engineering Report demonstrates that the remediation requirements set forth in the Remedial Action Work Plan and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established for the remedy.

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an Environmental Easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by the Department.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Michelle Lapin, P.E., of AKRF, Inc. at 440 Park Avenue South, 7th Floor, New York, NY 10016, am certifying as Owner's Designated Site Representative for the site.

Michelle Lapin, P.E.
NYS Professional Engineer No. 073934-1

TWA	Time-Weighted Average
UST	Underground Storage Tank
UUSCO	Unrestricted Use Soil Cleanup Objective
VOC	Volatile Organic Compound

1.0 BACKGROUND AND SITE DESCRIPTION

New 470 LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) on December 1, 2016 (BCA Index No. C224242-10-16) as a Volunteer to investigate and remediate an approximately 0.5123-acre (approximately 22,315-square foot) property located at 12 Eckford Street in the Williamsburg neighborhood of Brooklyn, Kings County, New York (hereinafter referred to as the Site or Controlled Property). The Site was remediated to Track 4 restricted residential use. When completed, the Site will be developed with an 8-story building with mechanical space in the partial cellar on the southwestern portion of the Site, an at-grade parking garage and tenant lobby on the ground floor, and 101 residential units above. Thirty one percent of the residential units will consist of inclusionary housing. An exterior, open-air concrete dog run occupies the northwestern portion of the Site.

The Site is located in the County of Kings, New York and is identified as Brooklyn Block 2714, Lot 33 on the New York City Tax Map. The Site was entered into the BCP in December 2016 as BCP Site No. C224242, Brownfield Cleanup Agreement (BCA) Index No. C224242-10-16. A BCA Amendment Application was submitted to NYSDEC in August 2019 to document the alteration of the northern property boundary, resulting in an acreage increase from approximately 0.497 acres to approximately 0.5123 acres; and the merger of former Lot 33 and a portion of former Lot 1 into Lot 33. The modification reconciled the BCP Site boundary to match the newly merged lot boundary. The metes and bounds description of the Site is included in Appendix A. The Site location is shown on Figure 1 and a Site Plan is provided as Figure 2.

The Site is bounded by residential buildings and a former commercial building currently being used as a construction office for the Site to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest. The boundaries of the Site are fully described in Appendix A.

An electronic copy of this Final Engineering Report (FER) with all supporting documentation is included as Appendix B.

1.1 Site History

According to historic Sanborn fire insurance maps, the Site was undeveloped until prior to 1905. By 1916, former Lot 1 was developed with an unspecified factory building and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, former Lot 1 was developed with a sash and door storage facility and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. Sash & Door Manufacturer; former Lot 30 was developed with a two-story building used for window sash storage; former Lot 32 was labeled as "barrels, boxes, and automobile" with a gasoline tank on the southwestern portion; and former Lot 33 was developed with a cooperage and an office. By 1951, former Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled "to be: garage". Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage and motor freight storage between 1986 and 1991. The Site was vacant circa 2014-2016 and the former buildings were demolished in 2015 and 2016 to support the redevelopment. The surrounding area was developed historically with residential, commercial, educational, manufacturing, automotive, and woodworking uses.

1.2 Geology and Hydrogeology

Prior to development, the stratigraphy of the Site was documented to consist of between approximately 6 and 12 feet of historic fill characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the fill was an apparent native sand, gravel, and silt stratum to the

termination of each boring (approximately 20 feet below sidewalk grade). Groundwater was encountered between approximately 10 and 12.5 feet below grade during environmental investigations (detailed in Section 1.4). Based on the groundwater elevation measurements collected on June 6, 2016 from the Site and off-site portion of former Lot 1 (north-adjacent to the Site), groundwater flow is generally from east to west beneath the Site (Figure 3).

1.3 Development Plan

The Site is being developed with an 8-story building with mechanical space in the partial cellar on the southwestern portion of the Site, an at-grade parking garage and a lobby on the ground floor, and 101 residential units above. Thirty oney percent of the residential units consist of inclusionary housing. An open-air concrete dog run occupies the northwestern portion of the Site. Development plans are provided as Appendix C.

1.4 Environmental Reports

The following environmental reports were prepared for the Site:

Phase I Environmental Site Assessment (ESA) Report, 470 Manhattan Avenue, Brooklyn, New York, URS Corporation (URS), April 2013

URS prepared a Phase I ESA Report of former Lot 33 in April 2013. The scope of the Phase I ESA included a Site inspection and an evaluation of readily available historical information, selected environmental databases, and electronic records. The assessment identified the following recognized environmental concerns (RECs):

- Former Lot 33 contained an E-Designation for hazardous materials listed in the Department of City Planning E-Designation database, which was established as part of the rezoning of Williamsburg and Greenpoint.
- The surrounding area was developed historically with manufacturing facilities, including an electroplating facility, dry cleaners, a steel company, and Mobil Oil Corporation. These properties were listed in multiple databases with open- and closed-status spills, hazardous waste generation, soil and groundwater contamination and remediation, chemical and petroleum bulk storage (CBS and PBS), and leaking underground storage tanks (LUSTs).

Phase I Environmental Site Assessment Report, 119-125 Newton Street, Brooklyn, New York, Hydrotech Environmental, Corp. (Hydrotech), April 2013

Hydrotech prepared a Phase I ESA Report of former Lots 30 and 32 in April 2013. The scope of the Phase I ESA included a Site inspection and an evaluation of readily available historical information, selected environmental databases, and electronic records. The assessment identified the following RECs:

- Former Lots 30 and 32 contained E-Designations for hazardous materials, established as part of the rezoning of Williamsburg and Greenpoint.
- Historical Sanborn maps dated between 1942 and 2007 identified underground storage tanks (USTs) on former Lot 32.
- Former Lots 30 and 32 were developed historically with a garage, a metal fabrication shop, and a scrap metal yard.

Environmental Summary Report, 470 Manhattan Avenue, Block 2714, Lots 1, 30, 32, and 33, Brooklyn, New York, AKRF, Inc., September 2015

AKRF prepared an Environmental Summary Report of the Site and an off-site portion of former Lot 1 in September 2015. The report included the findings of an inspection and an evaluation of historical Sanborn insurance maps and selected environmental databases. The assessment identified the following RECs:

- The former Site lots contained E-Designations for hazardous materials listed in the Department of City Planning E-Designation database, established as part of the rezoning of Williamsburg and Greenpoint.
- Historical uses of the Site included: unspecified manufacturing, sash and door storage, and a woodworking shop associated with the I. Feldman & Son Inc. Sash & Door Manufacturer, a metal container manufacturer, and an enameling works with a baking oven and spray booths on former Lot 1; a garage and an unspecified factory on former Lot 30; a motor freight facility with a gasoline UST on former Lot 32; and a barrel shed, a carriage garage, and a cooperage on former Lot 33.
- An oil burner switch was observed on the wall of a former partially demolished Site building on former Lot 30; however, no tank was observed.
- The area surrounding the Site was developed historically with manufacturing, automotive, and woodworking uses, including: the Joseph Goetz Manhattan Cabinet Works, the I. Feldman Sash and Door Manufacturer, unspecified manufacturing and warehouses, textile printing, cloth combining, a wire spring manufacturer, a cabinet finisher, a tin smith, a fuel oil company, a blacksmith, the George N. Gardiner & Son Marine Paint Manufacturer, a beverage bottling, junk storage, Meisel Danowitz & Company with associated planning and molding facilities, lumber storage and yards, kilns, cooperages, Atlantic Hardwood Company, an iron pipe warehouse, a metal works, lacquer spraying, a machine shed and shop, a motor grinder, a motor freight station, garages with gasoline tanks, trucking and parking facilities, tractor storage, a truck bay, and automotive repair and washing, and gasoline filling stations. Additionally, several properties in the surrounding area were listed in the Resource Conservation and Recovery Act (RCRA), PBS, Spills, E-Designation, and LUST databases. A groundwater monitoring well was observed east of the Site in the Graham Avenue sidewalk. The purpose of the monitoring well was not able to be ascertained, but was noted to be possibly related to current or historical off-site uses. A vent pipe and a fill port for No. 2 fuel oil were observed on the northeastern exterior wall of an off-site, three-story residential building on former Lot 1, north-adjacent to the Site. Minor staining was observed around the fill port.

Phase II Work Plan (Short Form), 470 Manhattan Avenue, Block 2714, Lots 1, 30, 32, and 33, Brooklyn, New York, AKRF, Inc., September 2015

AKRF prepared a Phase II Work Plan and associated Health and Safety Plan (HASP) for the Site and an off-site portion of former Lot 1 (also owned by the Volunteer) in September 2015. The work plan proposed sampling locations and included the installation of 10 soil borings with the collection and laboratory analysis of 20 soil samples, the installation of five temporary groundwater monitoring wells with the collection and installation of five groundwater samples, and the installation of seven temporary soil vapor points with the collection and analysis of seven soil vapor points and 1 ambient air sample. The HASP provided Site-specific health and safety measures to be employed during implementation of the investigation. The scope of the investigation was based on the previous reports for the Site.

Remedial Investigation (RI) Report (RIR), 470 Manhattan Avenue, Block 2714, Lots 1, 30, 32, and 33, Brooklyn, New York, AKRF, Inc., October 2015

AKRF conducted an RI for the Site and an off-site portion of former Lot 1 (also owned by the Volunteer) and prepared an RIR in October 2015. The RI was conducted in accordance with the New York City Office of Environmental Remediation (NYCOER)-approved September 2015 Phase II Work Plan. Soil/fill beneath the Site consisted of approximately 12 feet of fill material characterized by sand, gravel, silt, concrete, asphalt, brick, and ash, underlain by apparent native sand, gravel, and silt. Groundwater was encountered between approximately 10 and 12 feet below surface grade.

The RIR concluded that some elevated concentrations of volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), metals, and polychlorinated biphenyls (PCBs) were detected in on- and off-site soil/fill samples. The VOC methyl tert-butyl ether (MTBE), SVOCs, and metals were detected in on-site groundwater at concentrations above their applicable standards [Ambient Water Quality Standards and Guidance Values (AWQSGVs)]; and the VOC 1,1-dichloroethane (1,1-DCA), metals, and the pesticide chlordane were detected in groundwater beneath the off-site portion of former Lot 1 at concentrations above their respective AWQSGVs. VOCs associated with petroleum were detected at concentrations up to 279 micrograms per cubic meter ($\mu g/m^3$) and solvent-related VOCs were detected at concentrations up to 2,580 $\mu g/m^3$. The highest concentrations of both chlorinated solvent- and petroleum-related VOCs were detected in the soil vapor samples collected on-site.

Remedial Action Work Plan (RAWP), 470 Manhattan Avenue, Block 2714, Lots 1, 30, 32, and 33, Brooklyn, New York, AKRF Engineering, P.C., October 2015

AKRF prepared a RAWP for the Site and an off-site portion of former Lot 1 (also owned by the Volunteer) in October 2015. The RAWP outlined the remedial action objectives (RAOs) and established procedures and cleanup objectives for the protection of public health and the environment, Track 4 soil cleanup objectives (SCOs), and soil/fill handling procedures. The RAWP also specified the installation of a vapor barrier and an active sub-slab depressurization system (SSDS) to address potential vapor intrusion into the Site building, a Site-wide composite cover system to prevent direct exposure to residual contamination in soil, and outlined a project schedule for construction. The RAWP and associated Stipulation List were approved by NYCOER in November 2015.

Delineation Sampling Work Plan, 470 Manhattan Avenue, Block 2714, Lots 1, 30, 32, and 33, Brooklyn, New York, AKRF, Inc., February 2016

AKRF prepared a Delineation Sampling Work Plan in February 2016 to establish a sampling protocol to delineate the solvent-related VOC contamination identified in soil vapor on the northeastern and eastern portions of the Site during the RI. The work plan was developed in response to AKRF's November 2015 RIR and a telephone conference with representatives of NYCOER. The work plan proposed sampling locations and included the installation of three soil borings with continuous sample collection and laboratory analysis of three soil samples, and the installation of four soil vapor points with collection and laboratory analysis of four soil vapor samples.

The results of the delineation sampling, which were submitted to NYCOER in an email dated April 20, 2016 and discussed in a conference call on May 3, 2016, did not identify elevated concentrations of VOCs in soil. Of note in soil vapor, tetrachloroethylene (PCE) was detected at concentrations up to 956 $\mu g/m^3$, trichloroethylene (TCE) was detected at concentrations up to 1,120 $\mu g/m^3$, 1,1-DCA was detected at concentrations up to 9,230 $\mu g/m^3$, and 1,1,1-trichlorethane (1,1,1-TCA) was detected at concentrations up to 37,300 $\mu g/m^3$.

Supplemental Remedial Investigation (SRI) and Soil Vapor Extraction (SVE) Pilot Test Work Plan, 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, Inc., May 2016

AKRF prepared an SRI and SVE Pilot Test Work Plan and associated HASP for the Site, an off-site portion of former Lot 1, and the east-adjacent lot (off-site Lot 29) in May 2016. The work plan proposed sampling locations and included: installation of eight soil borings with continuous sample collection and laboratory analysis of eight soil samples, installation of four temporary groundwater monitoring wells with collection and laboratory analysis of four groundwater samples, and installation of three temporary soil vapor points with collection and laboratory analysis of three soil vapor samples and one ambient air sample. The work plan also included the installation of two SVE wells and three clustered soil vapor points for use during an SVE pilot test, which was conducted to establish the necessary quantity and location of extraction wells, and optimize the design of a full-scale SVES. As part of the pilot test, six influent vapor samples were collected for laboratory analysis of VOCs. The associated HASP provided Site-specific health and safety measures to be employed during implementation of the investigation. The scope of the investigation was based on the previous reports for the Site.

Supplemental Remedial Investigation Report (SRIR), 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, Inc., July 2016

AKRF conducted an SRI at the Site and off-site portion of former Lot 1 in June 2016. The SRI was conducted in accordance with the AKRF's May 2016 SRI and SVE Pilot Test Work Plan and associated HASP, with the exception of the following deviations: the east-adjacent Lot 29 was inaccessible at the time of the investigation; therefore, the soil vapor points proposed in the rear yard were relocated west of the proposed locations onto former Lot 33 on the eastern portion of the Site; and the sub-slab soil vapor point and indoor air sample were not collected and an indoor air quality survey was not conducted proposed on Lot 29 due to access issues. Soil/fill beneath the Site consisted of approximately 12 feet of fill material characterized by sand, gravel, silt, concrete, asphalt, brick, and ash, underlain by apparent native sand, gravel, and silt. Groundwater was encountered between approximately 10 and 12 feet below grade.

Soil and groundwater samples were analyzed for VOCs. The SRI did not identify elevated concentrations of VOCs in on- or off-site soil samples. The VOC MTBE was detected above its AWQSGV in one on-site groundwater sample, and several VOCs were detected above applicable standards in two off-site groundwater samples.

A review of the soil vapor sample analytical results identified 22 VOCs in the three soil vapor samples collected on-site and from an off-site portion of former Lot 1. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2-butanone, 2-hexanone, cyclohexane, ethanol, tert-butyl alcohol, n-hexane, o-xylene, and 4-ethyltoluene] were detected at concentrations up to 1,680 µg/m^3 in the on-site soil vapor sample and chlorinated volatile organic compounds (CVOCs) (including PCE, 1,1,1-TCA, and 1,1-DCA) were detected at concentrations up to 92.8 µg/m^3 in an off-site soil vapor sample.

Soil Waste Classification Report, 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, October 2016

AKRF conducted waste classification sampling at the Site in October 2016 to obtain off-site disposal acceptance for soil/fill excavated during development. The waste classification sampling included the excavation of three test pits to approximately 12 feet below grade at the location of the partial cellar, and four test pits to approximately 4 feet below grade at the location of the slab-on-grade portion of the Site building. Prior to test pit excavation, a geophysical survey was

conducted across the entire Site to clear the proposed test pit locations of utilities and subsurface obstructions, and to locate potential USTs in the Site subsurface.

The geophysical survey identified an approximately 7-foot by 5-foot metallic anomaly on the southwestern portion of the Site at the approximate location of the gasoline UST shown on historical Sanborn maps. The results of the waste classification sampling identified some elevated levels of SVOCs, pesticides, metals, and hexavalent chromium in Site soil/fill. One test pit excavated at the eastern portion of the partial cellar contained lead at concentrations exceeding the United States Environmental Protection Agency (USEPA) hazardous waste threshold.

Remedial Action Work Plan – New 470 Project, 12 Eckford Street (470 Manhattan Avenue), AKRF, November 2016

In 2016, the Site enrolled in the New York State BCP (BCP Site No. C224242). AKRF prepared a NYSDEC RAWP for the Site in November 2016. After the Site was accepted into the BCP, NYSDEC became the primary agency overseeing remediation, with the NYSDEC RAWP superseding the October 2015 NYCOER-approved RAWP. The RAWP outlined the RAOs, which established procedures and cleanup objectives for the protection of public health and the environment. Similar to the October 2015 RAWP, the November 2016 RAWP established Track 4 SCOs and soil handling procedures, required the installation of a vapor barrier and active SSDS to address potential vapor intrusion into the Site building, a Site-wide composite cover system to prevent direct exposure to residual contamination in soil, and outlined a project schedule for construction. The November 2016 RAWP also required the installation of an SVES and noted that any petroleum storage tanks and/or soil exceeding hazardous waste criteria would be properly removed. The RAWP and associated Decision Document (DD) were approved by NYSDEC and New York State Department of Health (NYSDOH) in December 2016.

Soil Lead Delineation Report – 12 Eckford Street (470 Manhattan Avenue), Brooklyn, NY, AKRF, Inc., May 2018

AKRF conducted soil sampling at the Site to delineate the soil exceeding the hazardous waste criteria for lead, which was identified during soil waste classification sampling in 2016. The sampling included excavation of four test pits around the location where hazardous lead levels were previously detected, with the collection and laboratory analysis of 16 soil samples. Laboratory analysis indicated that none of the soil samples exceeded hazardous waste criteria, indicating that the limited hazardous lead hotspot had been delineated and confirmed to the area of the initial sample (collected in 2018).

Phase I Environmental Site Assessment Report, 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, Inc., May 2018

AKRF prepared a Phase I ESA Report for the Site in May 2018. The scope of the Phase I ESA included a Site inspection and an evaluation of readily available historical information, selected environmental databases, and electronic records. The assessment identified the following RECs:

- Historical uses of the Site had affected subsurface conditions. Based on the potential for contamination identified during environmental review for a 2005 rezoning, the Property was assigned hazardous materials and air quality E-Designations. Based on investigations conducted in 2015 and 2016, the Site entered into the BCP in 2016. Previous environmental investigations identified: fill materials containing elevated concentrations of various contaminants (primarily SVOCs and metals); groundwater containing elevated concentrations of the gasoline additive MTBE, SVOCs and metals; and VOCs, primarily those associated with chlorinated solvents, in soil vapor. In addition, a hotspot of soil exceeding hazardous waste criteria for lead was identified in 2016 and delineated in 2018.

- Computerized New York City Buildings Department (NYCDOB) records identified evidence of historical fuel oil use at the Site and a gasoline UST associated with a garage was identified on the southeastern portion of the Site on historical Sanborn maps.
- The surrounding area historically included factories, a tinsmith, a fuel oil facility, and garages and filling stations with gasoline USTs. Of note, the north-adjacent property was historically used for various factories, including a backing and coating factory, textile production and printing, lamp manufacturing, enameling, leather goods and purse production, woodcraft, and box dies manufacturing. Additionally, the regulatory database identified PBS facilities, a closed-status spill listing, and New York City Voluntary Cleanup Program (VCP) sites in close proximity to the Site.

The Phase I ESA Report identified a potential for subsurface vapors, and thus a potential for vapor migration into future buildings at the Property. The Phase I ESA Report provided recommendations, including conducting remediation and development in accordance with the requirements of the NYSDEC-approved RAWP.

Draft Site Management Plan, 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, Inc., August 2019

AKRF prepared a Draft Site Management Plan (SMP) for the Site in August 2019. The SMP was prepared to manage remaining contamination at the Site until the EE is extinguished and included Site-specific implementation procedures for the ICs and ECs required by the EE, including use restrictions and detailed media-specific maintenance requirements to ensure the ICs and ECs remain in-place and effective. The SMP is provided as Attachment D.

Environmental Easement, 12 Eckford Street (470 Manhattan Avenue), Brooklyn, New York, AKRF, Inc., August 2019

On September 5, 2019, the Environmental Easement (EE) for the Site was recorded with the Office of the City Register of Brooklyn/Kings County (CFRN 2019000281480). The EE prevents any future exposure to any residual contamination remaining at the Site by providing enforceable means of Site use and ensuring the performance of operation, maintenance, and monitoring requirements; and ensuring the restriction of future uses of the land inconsistent with the approved uses.

2.0 SUMMARY OF THE SITE REMEDY

2.1 Remedial Action Objectives (RAOs)

Based on the results of the RI, delineation sampling, and SRI, the following RAOs were identified for the Site:

Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater with contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer to pre-disposal/pre-release conditions, to the extent practicable.
- Remove the source of groundwater contamination.

Soil/Fill

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil/fill.
- Prevent inhalation of or exposure from contaminants volatilizing from contaminants in soil/fill.

RAO for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

Soil Vapor

RAO for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into the building at the Site.

2.2 Description of Selected Remedy

The Site was remediated in accordance with the remedy selected by NYSDEC and outlined in the November 2016 RAWP and Decision Document (DD). The NYSDEC approval of the RAWP and DD is provided in Appendix D. The factors considered during the selection of the remedy are those listed in 6 New York Codes, Rules, and Regulations (NYCRR) 375-1.8. The following are the components of the selected remedy:

1. Excavation and off-site disposal of soil/fill above RRSCOs across the upper 2 feet of the entire Site for the installation of the composite cover system. Additionally, soil/fill exceeding the United States Environmental Protection Agency (USEPA) and 6 NYCRR Part 371 hazardous criteria for lead and removal of one UST and its contents were disposed of off-site in accordance with applicable federal, state, and local regulations.

2. Screening for indications of contamination [by visual means, odor, and monitoring with photoionization detector (PID) equipped with an 11.7 electron Volt (eV) lamp] of all excavated soil/fill during intrusive Site work.
3. Collection and laboratory analysis of 24 Site-wide endpoint samples to document concentrations of contaminants of concern remaining after excavation for the new building foundation for the purposes of Site management and five UST endpoint samples from the tank grave following its removal.
4. Importation of virgin quarried stone in compliance with all federal, state, and local rules and regulations for handling and transport of material for use as part of the composite cover system.
5. Installation of a vapor barrier/waterproofing membrane beneath the partial cellar and slab-on-grade building slabs, and outside of the sub-grade foundation sidewalls of the cellar to grade to mitigate soil vapor migration into the building. The vapor barrier system consists of Grace Preprufe® 300R and Bituthene® 4000 beneath the cellar, other sumps/pits, along subgrade walls, and elevator pits; and Stego® Wrap 20 mil beneath the slab-on-grade portion of the building slab. The vapor barrier and waterproofing membranes meet the American Society for Testing and Materials (ASTM) E-1745 standard.
6. Installation of an active sub-slab depressurization system (SSDS) beneath the slab-on-grade portion of the Site to prevent vapor intrusion into the proposed building.
7. Installation of a soil vapor extraction (SVE) system (SVES) on the northeastern and eastern portions of the Site to extract and treat contaminated vapors in the Site subsurface prior to discharge to the atmosphere.
8. Construction and maintenance of an engineered composite cover system consisting of concrete building foundations, a minimum two-foot clean fill buffer with demarcation barrier in all landscaped and non-covered areas, and sidewalks/pathways to prevent human exposure to residual contaminated soil/fill remaining under the Site.
9. Recording of an Environmental Easement (EE), including Engineering Controls (ECs) and Institutional Controls (ICs), to prevent future exposure to any residual contamination remaining at the Site.
10. Preparation of a Site Management Plan (SMP) for long-term management of residual contamination as required by the EE, including plans for: (1) ICs and ECs, (2) monitoring, (3) operation and maintenance, and (4) reporting.

3.0 DESCRIPTION OF REMEDIAL ACTIONS (RAS) PERFORMED

RAs were completed between June 2018 and October 2019 in accordance with the Site-specific November 2016 NYSDEC-approved RAWP. The remedy for the Site was performed as a single project; therefore, no interim remedial measures (IRMs), operating units (OUs), or separate construction contracts were performed. All deviations from the RAWP are described in Section 3.9 of this FER. As described in Section 3.9, none of the deviations affected achievement of the RAOs outlined in the RAWP and DD.

3.1 Governing Documents

3.1.1 Site-Specific Health & Safety Plan (HASP)

The HASP was included in Appendix J of the RAWP. All remedial work performed under the RA was in full compliance with governmental requirements, including Site and worker safety requirements mandated by federal Occupational Safety and Health Administration (OSHA) requirements. The HASP was complied with for all applicable remedial and invasive work performed at the Site.

3.1.2 Quality Assurance Project Plan (QAPP)

The QAPP was included in Appendix K of the RAWP. The purpose of the QAPP was to establish policies, objectives, organization, functional activities, and quality assurance/quality control (QA/QC) activities designed to achieve the project data quality objectives. The QAPP was complied with for all applicable remedial and invasive work performed at the Site.

3.1.3 Construction Quality Assurance Plan (CQAP)

The CQAP was included in Appendix K of the RAWP. The purpose of the CQAP was to manage performance of the RA tasks through designed and documented QA/QC methodologies applied in the field and in the laboratory. The CQAP provided a detailed description of the observation and testing activities that were used to monitor construction quality and confirm that remedial construction was in conformance with the remediation objectives and specifications. The CQAP was complied with for all applicable remedial and invasive work performed at the Site.

3.1.4 Soil/Materials Management Plan (S/MMP)

An S/MMP was included in Section 5.4 of the RAWP. The S/MMP established procedures and methods for managing all soils/materials that were disturbed at the Site, including excavation, handling, storage, transport, and disposal. The S/MMP was implemented during material handling conducted under the remedial work to assure effective, nuisance free performance of soil management work in compliance with all applicable federal, state, and local laws and regulations. The S/MMP was complied with for all applicable remedial and invasive work performed at the Site.

3.1.5 Stormwater Pollution Prevention Plan (SWPPP)

Based on a review of New York City Department of Environmental Protection (NYCDEP) sewer mapping and the size of the Site, an SWPPP was not required. The erosion and sediment controls for all remedial construction were performed in conformance with requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control. Sediment control measures were installed at the Site prior to conducting ground-intrusive work in accordance with all applicable or relevant and appropriate federal, state, and local laws. The measures provided for abatement and control of environmental

pollution arising from proposed remediation and construction activities. The control measures included: procedures for perimeter Site controls, stabilized construction pads at each construction entrance, equipment decontamination, drainage inlet protection, and airborne particulate suppression. Designated personnel under the direct supervision of the Remedial Engineer (RE) conducted routine inspections and any repairs and/or maintenance of control measures were completed in a timely fashion to maintain the controls in proper working order. All vehicles leaving the Site were inspected to ensure that no soil adhered to the wheels or undercarriage of the vehicle leaving the Site. Any situations involving material spilled in transit, or dirt tracked off-site were immediately remedied. The access routes were routinely inspected for road conditions, overhead clearance, and weight restrictions. Road maintenance, including sweeping, was performed on an as-needed basis during all applicable remedial and invasive work performed at the Site.

3.1.6 Community Air Monitoring Plan (CAMP)

The CAMP was included in Appendix J of the RAWP. The purpose of the CAMP was establish air quality monitoring procedures and action limits in the vicinity of remedial activities, including for: airborne particulates concentrations, VOC concentrations, nuisance odors, and inspection and monitoring of the contractor's work practices were ongoing during the completion of remedial work. Proactive misting of the Site was conducted, weather-permitting, and response actions were implemented in response to CAMP exceedances.

Community air monitoring consisted of two fixed, automated stations to continuously log both instantaneous values and 15-minute time-weighted average (TWA) values for VOCs and particulates with a MiniRAE 3000 PID equipped with an 11.6 electron Volt (eV) lamp and TSI 8530 DustTrak particulate meter, respectively. The stations were generally located upwind and downwind of the intrusive work, along the perimeter of the Site. Station locations were determined prior to the start of work each day, depending on the location of work and wind direction, and were adjusted throughout the day. The CAMP station locations were presented in each daily report, which are included in Appendix E. The CAMP was complied with for all applicable remedial and invasive work performed at the Site.

3.1.7 Work Zone Air Monitoring

Roving (work zone) air monitoring was also performed periodically (at a minimum once per hour) during all ground-intrusive work except during periods of precipitation using a PID equipped with an 11.7 eV lamp and a particulate meter to address the health and safety concerns during RA implementation; and to monitor air quality within the breathing zone. Work zone air monitoring logs are provided in Appendix F.

3.1.8 Contractors Site Operations Plans (SOPs)

The RE reviewed all plans and submittals for the remedial project (i.e., those listed above plus contractor and subcontractor submittals) and confirmed that they were in compliance with the RAWP. All remedial documents were submitted to NYSDEC and NYSDOH in a timely manner and prior to the start of work.

3.1.9 Community Participation Plan (CPP)

A CPP was submitted to NYSDEC and NYSDOH for review in October 2016. A Fact Sheet describing the approved plan for RA was forwarded to persons on the contact list in accordance with the NYSDEC- and NYSDOH-approved CPP.

A certification of mailing was sent by the Applicant to the NYSDEC project manager following the distribution of all Fact Sheets and notices that included: (1) certification that the Fact Sheets were mailed; (2) the date they were mailed; (3) a copy of the Fact Sheet; and (4) a list of recipients (contact list).

No changes were made to approved Fact Sheets after authorization of release was granted by NYSDEC. No other information, such as brochures or flyers, was included with the Fact Sheet mailing.

Document repositories were established at the following location and contain all applicable project documents:

Document Repositories

Greenpoint Branch Brooklyn Public Library 107 Norman Avenue Brooklyn, New York 11222	Brooklyn Community Board 1 435 Graham Avenue Brooklyn, New York 11211

3.2 Remedial Program Elements

3.2.1 Contractors and Consultants

- AKRF, Inc. (AKRF) served as the environmental consultant and Qualified Environmental Professional (QEP) responsible for oversight and performance of the remedial work with respect to the NYSDEC-approved RAWP and DD under the oversight of the RE.
    - The RE was Michelle Lapin, P.E., of AKRF. Ms. Lapin is a registered P.E. licensed by the State of New York (License No. 073934-1) and had primary responsibility for implementation of the remedial program for the Site.
    - The project director was Marc Godick, LEP. Mr. Godick was responsible for the general oversight of all aspects of the project, including budgeting, data management, and field program decision-making. The project director communicated regularly with all members of the AKRF project team and the NYSDEC to ensure a smooth flow of information between involved parties.
    - The project manager was Amy Jordan. Ms. Jordan's primary responsibility was to oversee and manage implementation of the RAWP, including: assist with the remedial activities in the field, scheduling, reporting, attending Site meetings, correspondence with the Site owner and regulatory agencies, and preparing the SMP and this FER.
    - The primary Site Safety Officers (SSOs) and field technicians for the project were Victor Chang, Marco Balletta, and Tom Giordano. Mr. Chang, Mr. Balletta, and Mr. Giordano were responsible for implementing the RAWP, HASP, and CAMP in the field and daily reporting.
- RC Structures Inc. (RCS) of Roslyn, New York was the construction manager and general contractor for all remediation activities, including foundation construction, and excavation and off-site disposal of soil/fill material. RCS provided site-wide health and safety oversight for the duration of the development project.

- CANY Architecture & Engineering, DPC and CANY Technical Services, LLC served as the waterproofing inspector.
- AARCO Environmental Services Corp. (AARCO) of Lindenhurst, New York was the New York City Fire Department (FDNY)-certified tank removal contractor that conducted on-site pumping, cleaning, and removal of the UST encountered during remedial activities. AARCO also served as the drilling subcontractor for the SVE wells.
- Marine Bulkheading, Inc. (MBI) of Seaford, New York installed all piles and foundation support for new buildings.
- AmeriGEO of Mountainside, New Jersey provided the support of excavation (SOE) design.
- Earth Construction Services of Germantown, New York provided dewatering plans and implementation services.
- Derosier Engineering, PLLC of Warren, New Jersey served as the site connection plan manager.
- GeoLand Surveying, P.C. of New Hyde Park, New York served as the NYS-licensed surveyor.
- Severud Associates of New York, New York served as the structural engineer.
- Special Testing & Consulting of Farmingdale, New York served as the special testing and inspector.
- Goldstein, Hill & West Architects, LLC of New York, New York served as the architectural design consultant.
- WSP Flack & Kurtz of New York, New York served as the mechanical engineering consultant.
- Mr. Barry Cohen Esq., of Certilman Balin Adler & Hyman, LLP served as the environmental attorney.
- Environmental Waste Minimization Inc. of Northampton, Pennsylvania served as the soil broker and disposal approval manager.
- TestAmerica Laboratories, Inc. of Edison, New Jersey served as the environmental analytical laboratory.
- Medley Air Inc. of Bohemia, New York served as the HVAC consultant and installed the aboveground components of the SSDS and SVES.
- TT Mechanical Corporation of Maspeth, New York served as the plumber.
- Yaker Engineering, P.C. of Brooklyn, New York served as the construction fence and demolition engineer.
- World Class Demo of Maspeth, New York served as the demolition contractor.

3.2.2 Agency Approvals

The Volunteer complied with all federal, state, and local requirements during the remedial work at the Site. All permits and government approvals required for remedial construction were obtained prior to the start of remedial construction.

A complete list of all local, regional, and national governmental permits, certificates, or other approvals or authorizations required to complete the remedial and development work is summarized in In-Text Table 2.

In-Text Table 2
Agency Approvals

Agency	Permit	Agency Phone Number
NYCDOB	Work Permit	(718) 960-4700
	New Building Permit	
	Asbestos/Demolition Permit	
	Electrical Work Permit	
	After Hours Work Variance	
	Certificate of Occupancy	
NYCDEP	Hydrant Connections	(718) 595-3855
	Particulate Mitigation Plan	
	Construction Noise Mitigation Plan	
	Dewatering Permit	
NYCDOT	DOT Signoff	(212) 748-6680
	Temporary Construction Signs Permit	
	Temporary Pedestrian Walk Permit	
	Occupancy of Sidewalk Permit	
	Equipment in Roadway Permit	
	Temporary Security Structure	
	Occupancy of Roadway Permit	
FDNY	FDNY Signoff	(718) 999-2000

Notes:
NYCDOB – New York City Department of Buildings
NYSDEP – New York City Department of Environmental Protection
NYCDOT- New York City Department of Transportation
FDNY – Fire Department of New York

3.2.3 Site Preparation

A pre-construction call was held between members of AKRF, New 470 LLC (the Volunteer), the general and foundation contractors, NYCOER, and NYSDEC on June 18, 2018. The purpose of the call was to review the requirements of the RAWP prior to commencement of subsurface work. Site preparation activities involving major mobilization events for the completion of the remedial work included the following:

- Mobilization – Site mobilization occurred in May and June 2018, and included Site trailer installation, Site security setup, equipment mobilization, utility mark outs, and marking and staking excavation areas prior to beginning Site remediation activities.
- Erosion and Sediment Controls – Prior to the start of the RA, perimeter erosion and sediment controls and drainage inlet protection were installed, including a stabilized construction pad at the Site's entrance/exit location and appropriate Site grading to direct any surface water towards the central portion of the Site. Throughout the

duration of the RA, erosion and sediment controls were repaired or replaced on an as-needed basis. Erosion and sediment control measures are further discussed in Section 3.2.4.

- Site Fencing – Prior to the start of the RA, the Site was secured with a plywood construction fence installed around the eastern, southern, western, and western portion of the northern perimeters of the Site. The eastern portion of the northern Site boundary was not secured by a perimeter fence where the Site boundary was abutted to the north by a building used as the construction office for the Site. The building that housed the construction office is owned by the Applicant and was only accessible from the Site.

Documentation of agency approvals required by the RAWP are included in Appendix D.

No natural resource permits were required as part of the RA.

3.2.4 General Site Controls

The following Site controls were implemented during the completion of remedial work:

- Site Security – The Site was completely enclosed from public access during remedial activities by a plywood construction fence and a building owned by the Applicant. The Site was only accessible by locking gates on Manhattan Avenue and Newton Street. During some work activities, the entrance gates were ajar and/or unlocked, but entry into the Site was restricted to authorized personnel. A security guard was stationed at the Site entrance in a dedicated booth at all times during implementation of the RA.
- Job Site Record Keeping – Job site record keeping was appropriately documented during the completion of all phases of the remedial work by taking notes in dedicated field books, filling out appropriate sampling log sheets, taking digital photographs, and collecting available copies of disposal or material specification documentation from contractors completing the remedial work.
- Erosion and Sediment Controls – Erosion and sediment controls included a stabilized construction pad at truck entrances/exits, equipment decontamination, drainage inlet protection, and dust suppression using hoses connected to a fire hydrant. Routine inspections, repairs, and maintenance of control measures were completed in a timely fashion to maintain the controls in proper working order. All vehicles leaving the Site were inspected to ensure that no soil adhered to the wheels or undercarriage of the vehicles leaving the Site. No situations occurred involving material spilled in transit and all mud and dust tracked off-site was promptly cleaned up. The access routes were inspected for road conditions, overhead clearance, and weight restrictions. No erosion or sedimentation problems occurred during performance of the remedial work.
- Equipment and Material Staging – Staging and storage of equipment and materials were contained within the secured Site trailer or on-site locking storage sheds during completion of the remedial work. Site machinery was shut down and locked on-site at the end of each work day.
- Soil Screening Results – During the remedial excavation, elevated PID readings, odors, and staining were detected in soil/fill encountered on the southern portion of the Site along Newton Street in Grid C2 between approximately 6 and 12 feet below sidewalk grade. On January 23, 2019, in coordination with the soil broker, a waste classification sample was collected from the material exhibiting evidence of contamination. Based on the analytical results, the material was approved for disposal at the Bayshore Soil

Management, LLC facility in Keasbey, New Jersey. No other evidence of contamination was identified during RA implementation at the Site.

- Equipment Decontamination Procedures – All sampling equipment was either dedicated or decontaminated between sampling locations. The equipment decontamination procedure established in the QAPP, included in Appendix K of the November 2016 NYSDEC-approved RAWP, was implemented during use of any non-dedicated sampling equipment.
- Stockpile Methods – Excavated materials were screened continuously for contamination during all earth work. Material was separated by waste streams (i.e., disposal facility) and construction wastes. Excavated materials were segregated (based on field screening results) and placed on, and covered with, polyethylene sheeting pending off-site disposal at the appropriate receiving facility. To the extent feasible, material was live-loaded to avoid double handling on-site prior to disposal.

3.2.5 Nuisance Controls

- Stockpile Methods – Excavated materials were screened continuously for contamination during all earth work. Material was separated by waste streams (i.e., disposal facility) and construction wastes. Excavated materials were segregated (based on field screening results) and placed on, and covered with, polyethylene sheeting pending off-site disposal at the appropriate receiving facility. Staged soil/fill was inspected daily and any damaged tarps were replaced the same day. Soil/fill was staged as far from the Site boundaries as possible and the Site was graded to ensure erosion of any staged soil/fill piles did not leave the Site.
- Truck Wash and Egress Housekeeping – Egress points for truck and equipment transport from the Site were kept clean of dirt and other materials during remedial work using hoses connected the fire hydrants on Manhattan Avenue and Newton Street via a reduced pressure zone (RPZ) valve. Material transported by trucks exiting the Site was secured with tight-fitting covers. Trucks were washed prior to leaving the Site when deemed necessary by AKRF personnel. The truck tracking pad stone was constructed on geotextile fabric overlain by imported stone, which was replaced and/or repaired throughout RA implementation, as deemed necessary by on-site personnel.
- Airborne Particulate Control – Airborne particulate concentrations were monitored using hand-held particulate monitoring equipment on a periodic basis (minimum once per hour), and continuously during all work at upwind and downwind fixed monitoring stations. The fixed stations were capable of using radio telemetry to send real time alarms to field personnel if the CAMP air monitoring action levels were exceeded. Airborne particulate suppression necessitated by soil removal, demolition work, cutting concrete, and chopping bedrock was achieved through the use of hoses capable of spraying water directly onto excavations and temporary staging areas.
- Odor Control – Odors were monitored within the work zone and community via olfactory inspection and with a PID. Slight solvent- and petroleum-like odors were encountered in soil/fill encountered between approximately 6 and 12 feet below sidewalk grade at the southern portion of the Site along Newton Street in Grid C2. Odors were controlled by staging excavated material on top of and under polyethylene sheeting and live-loading the material. Based on work zone and community air monitoring results, additional odor control techniques were not deemed necessary

during contaminated material excavation or loading, or during the remainder of RA implementation.

- Truck Routing – Truck routes established in the RAWP were followed for all trucking to and from the Site. The truck routes are shown on Figure 4.
- Complaints Response – Complaints were received throughout the duration of the RA. Complaints, responses, and any action items are detailed below:
  - NYCDOB Complaint No. 3527613: On August 24, 2015, a complaint was received indicating that the scaffolding on the sidewalk adjacent to the Site was not structurally stable. The NYCDOB inspected the Site on September 3, 2015 and requested repairs be made. On September 9, 2015, NYCDOB re-inspected the scaffolding, and the complaint was resolved.
  - NYCDOB Complaint No. 3654865: On June 22, 2018, a complaint was received indicating that excavation was ongoing and that no sheeting had been installed to support the excavation. The same day, NYCDOB inspected the Site and did not observe excavation activities. The complaint was resolved.
  - On July 9, 2018, a complaint was received indicating that off-site excavation was ongoing. In response, AKRF submitted photographs to NYSDEC showing that no work was occurring off-site. No further action was required by NYSDEC.
  - NYCDOB Complaint No. 3664378: On August 24, 2018, a complaint was received from a neighbor indicating that work at the Site was affecting the structural integrity of the north-adjacent building. The NYCDOB inspected the Site the same day and served a full Stop Work Order (SWO) for failing to provide approved documents/permits and out of compliance with regard to the Site Safety Plan. The NYCDOB inspected the Site again on September 4, 2018, and the SWO was lifted.
  - NYCDOB Complaint No. 3664658: On August 27, 2018, a complaint was received indicating that work was being conducted on-site during a Stop Work Order. NYCDOB inspected the Site on August 28, 2018, and no work was occurring; therefore, the complaint was resolved.
  - NYCDOB Complaint No. 3664671: On August 27, 2018, a complaint was received indicating that excavation and pile driving work resumed during a SWO. NYCDOB inspected the Site on August 30, 2018, and no work was occurring; therefore, the complaint was resolved.
  - NYCDOB Complaint No. 3665765: On September 4, 2018, a complaint was received indicating that work was being conducted on-site during the SWO. On September 4, 2018, NYCDOB indicated that no violation was warranted, since the Stop Work Order was lifted on the morning of September 4, 2018; therefore, the complaint was resolved.
  - NYCDOB Complaint No. 3665771: On September 4, 2018, a complaint was received indicating that work was being conducted on-site during the SWO. On September 4, 2018, NYCDOB indicated that no violation was warranted since the SWO was lifted on the morning of September 4, 2018; therefore, the complaint was resolved.

- NYCDOB Complaint No. 3665867: On September 5, 2018, a complaint was received indicating that foundation pile installation caused buildings across the street from the Site to shake. On September 6, 2018, NYCDOB inspected the Site and observed that no vibration monitoring exceedances were recorded; therefore, the complaint was resolved.
- NYCDOB Complaint No. 3666121: On September 6, 2018, a complaint indicated that construction activities caused buildings across the street from the Site to shake. On September 10, 2018, NYCDOB inspected the Site and did not identify any activities being conducted that were not in compliance with development plans and vibration thresholds.
- NYCDOB Complaint No. 3668133: On September 20, 2018, a complaint was received indicating that construction activities caused the building adjacent to the Site to shake. NYCDOB inspected the Site on September 25, 2018 and did not identify any activities being conducted that were not in compliance with development plans and vibration thresholds. Therefore, the complaint was resolved.
- On September 20, 2018, a complaint was received indicating that the ongoing construction was toxic in nature, the walls of the adjacent structures were shaking, and that the Site was contaminated and was not being remediated. NYCDOB inspected the Site the same day and concluded that no violation was warranted, as the claims could not be corroborated and on-site vibration and environmental monitoring was ongoing. Therefore, the complaint was resolved.
- NYCDOB Complaint No. 3668324: On September 21, 2018, a complaint was received indicating that construction activities caused the building adjacent to the Site to shake. On September 25, 2018, NYCDOB inspected the Site and concluded that no violation was warranted, as the claims could not be corroborated. Therefore, the complaint was resolved.
- NYCDOB Complaint No. 3674093: On November 3, 2018, a complaint was received that construction activities were being conducted on-site without a weekend permit. NYCDOB concluded the complaint was unsubstantiated due to an after-hours variance issued on the date of the complaint under the new building permit No. 320909772. The complaint was resolved.
- NYCDOB Complaint No. 3681477: On January 3, 2019, a complaint was received indicating that the Site failed to safeguard all persons and properties. The same day, NYCDOB inspected the Site and a SWO was placed on the Site for "failure to provide protection at side of excavation more than 8 feet deep for elevator pit", "missing guardrails throughout Site", "earth ramp without timber curbs", and "missing statement of responsibility for foundation and footings poured". Immediately after receiving the SWO, excavation protection, guardrails, and rebar caps were installed. The NYCDOB re-inspected the Site the same day and partially rescinded the SWO. On January 11, 2019, NYCDOB re-inspected the Site and the SWO was lifted. The complaint was resolved.
- NYCDOB Complaint No. 3683888: On January 23, 2019, a complaint was received indicating that construction work was being conducted at the Site after hours. On January 24, 2019, NYCDOB inspected the Site and concluded that no

violation was warranted at the time of inspection; therefore, the complaint was resolved.

- NYCDOB Complaint No. 3686853: On February 16, 2019, a complaint indicated that construction work was being conducted at the Site after hours. NYCDOB concluded that no violation was warranted, as work was being conducted in accordance with an after-hours work variance; therefore, the complaint was resolved.

3.2.6 Community Air Monitoring Program (CAMP) Results

Community air monitoring was performed for VOCs and airborne particulate matter at upwind and downwind fixed monitoring stations at the perimeter of the Site during all remedial activities. Station locations were adjusted daily depending upon wind conditions, planned work locations, and logistical feasibility based on Site work. CAMP station location, wind direction, and work area location(s) were provided in each daily report submitted to NYSDEC and NYSDOH. Daily reports are provided in Appendix E and CAMP data is provided in Appendix F.

Instantaneous action level exceedances of airborne particulates and VOCs were reported in the daily report corresponding to the date of the exceedance(s) and were summarized in the Monthly Progress Reports (MPRs), which are included in Appendix E. No 15-minute exceedances of particulates or VOCs were detected.

As detailed in the MPRs (Appendix E), the majority of the instantaneous airborne particulate exceedances were caused by equipment malfunction or recalibration, ambient humidity, idling vehicles, equipment or machinery refueling, moving construction materials around the Site, welding, and woodworking. The only exceptions were the exceedances on February 4 and 25, 2019, which were caused by airborne particulates during sweeping and blowing air onto foundation elements to prepare for vapor barrier installation. However, no action was taken, as the exceedances were instantaneous and concentrations immediately fell below action limits. The only instantaneous VOC exceedances were caused by exhaust and fumes from idling or refueling vehicles and machinery near the CAMP stations, spray paint, and equipment recalibration and malfunction, elevated humidity in ambient air, and welding and cutting rebar nearby the station. In cases where the PID registered elevated readings with no known or observed cause, roving equipment was utilized around the CAMP stations to confirm that the readings were not representative, and VOC levels were found to be below the action levels.

Copies of all field data sheets relating to the CAMP are provided in electronic format in Appendix F.

3.2.7 Reporting

- Daily Reports – Daily reports were submitted to the NYSDEC project manager throughout the duration of the RA in accordance with the RAWP. The daily reports included an update of progress made during the reporting day, locations of work and quantities of material imported and exported from the Site, references to alphanumeric map for Site activities, a summary of CAMP finding, including exceedances, an explanation of notable Site conditions, photographs, and fixed monitoring station data.
- Monthly Progress Reports (MPRs) – MPRs were submitted to the NYSDEC project manager throughout the duration of the RA. Each MPR included a description of activities relative to the Site during the previous reporting period and those anticipated

for the next reporting period, including a quantitative presentation of work performed (i.e., tons of material exported, etc.), a description of approved activity modifications, including changes of work scope and/or schedule, sampling results received following internal data review and validation, as applicable, and an update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

All daily reports and MPRs are included in electronic format in Appendix E. The digital photographic log documenting the RA is included in electronic format in Appendix G.

3.3 Contaminated Materials Removal

The objectives for the remedial program were established through the remedy selection process stated in 6 NYCRR Part 375. The contaminated materials removal portion of the remedial program set out to restore the Site to pre-disposal conditions to the extent practicable. At a minimum, the remedy was established to eliminate or mitigate all significant threats to public health and the environment presented by the contamination identified at the Site through the proper application of scientific and engineering principles. Pre-remedial sample concentrations above NYSDEC UUSCOs and/or RRSCOs, and AWQSGVs are shown on Figures 5 and 6, respectively. Pre-remedial soil vapor sample concentrations are shown on Figure 7.

The contaminated materials removal portion of the remedial program was established based on a Restricted Residential Track 4 cleanup, as established in the RAWP and DD. The Track 4 cleanup included the excavation and off-site disposal of on-site soil that exceeded RRSCOs, and a hotspot of material containing concentrations of lead exceeding the hazardous waste threshold on the southern portion of the Site. As part of remedial development activities, soil/fill was excavated to approximately 12 feet below surface grade at the location of the proposed partial cellar on the southwestern portion of the Site and to approximately 4 feet below surface grade at the location of the slab-on-grade portion of the Site.

The UUSCOs and RRSCOs for the contaminants of concern for the Site are included in Attached Tables 1 and 2, respectively. A total of 241.47 tons of hazardous lead soil and 10,717.55 tons of non-hazardous soil were removed from the Site and transported for off-site disposal at the appropriate soil disposal receiving facilities. All contaminated soil was removed in accordance with the RAWP and DD. In-Text Table 3 summarizes the total quantities of each category of material removed from the Site and the disposal locations. An outgoing truck tracking log is provided as Attached Table 3. A figure of the location of original sources and areas where excavations were performed is provided as Figure 8. UST endpoint sample concentrations are shown on Figure 9. Post-excavation endpoint sample concentrations above UUSCOs and/or RRSCOs are shown on Figure 10.

3.3.1 Underground Storage Tank (UST) Closure and Removal

On October 5, 2016, prior to conducting soil waste classification sampling, a geophysical survey was conducted across the Site by Delta Geophysics, Inc. (Delta) of Catasauqua, Pennsylvania to clear the proposed test pit locations for subsurface utilities and to locate other potential buried structures. The geophysical survey included both electromagnetic (EM) and ground penetrating radar (GPR) methods. All utility locations were marked out with spray paint. An anomaly consistent with that of a UST, measuring approximately 7 feet by 5 feet, was detected on the southeastern portion of the Site. Historic Sanborn maps identified a gasoline UST on the southeastern portion of the Site between 1942 and 2007. The tank was previously unknown and unregistered.

One 550-gallon gasoline UST was encountered during remedial excavation on June 22, 2018. The UST was encountered on the south-central portion of the Site approximately 5 feet below sidewalk grade. As part of the BCP remediation work, NYSDEC was immediately notified upon tank discovery and throughout the tank removal and associated sampling activities as they occurred. AARCO pumped 603 gallons of petroleum-contaminated water from the tank(including tank cleaning fluids described below) into a vacuum truck for off-site disposal at Essential Environmental Technologies, Inc. in Farmingdale, New York. The interior and exterior of the tank were subsequently cleaned, and the tank was placed on and covered with plastic sheeting until it was transported off-site for recycling on June 28, 2018. Immediately following removal of the tank from the ground, the grave was inspected for evidence of contamination (e.g., staining, odors, and/or elevated PID readings). No evidence of contamination was observed. Four sidewall samples (UST-1 N 20180628, UST-1 E 20180628, UST-1 S 20180628, and UST-1 W 20180628) and one bottom sample (UST-1 B 20180628) were collected for laboratory analysis. After receipt of approval by the NYSDEC project manager to reduce the analytical methods to CP-51 VOCs and SVOCs only in a June 27, 2018 email, the samples were submitted to TestAmerica of Edison, New Jersey, a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory with Category B Deliverables.

In November 2019, after remedial excavation concluded and no additional tanks were discovered, the Volunteer submitted a PBS Application to NYSDEC to register and close the UST. The former location of the UST is shown on Figures 2, 8, and 9. The PBS registration documentation is included in Appendix H.

Six SVOCs were detected at concentrations above their respective RRSCO and UUSCO in one or more of the tank endpoint samples, including: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k) fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The SVOCs detected in the sidewalls and bottom tank endpoint samples may be related to residual petroleum contamination and/or fill material, both of which were observed within the tank grave. Regardless, the soil/fill surrounding the tank was excavated to depths up to approximately 12 feet below sidewalk grade to facilitate partial cellar foundation and stormwater detention tank installation. The excavated material was disposed of off-site at the facility approved to accept the material from Grid C2. Figure 9 presents tank endpoint sample concentrations above NYSDEC UUSCOs and/or RRSCOs. The tank endpoint sample location and elevation survey is provided in Appendix I. Tank endpoint analytical results are presented in Attached Tables 4 and 5.

3.3.2 Waste Classification Sampling

AKRF conducted soil waste classification sampling on October 5, 2016, the procedures and analytical results of which were documented in the October 31, 2016 Soil Waste Classification Sampling Report. On May 24, 2018, prior to off-site disposal, AKRF drafted a letter on behalf of the Volunteer at the request of the proposed soil disposal facilities considering accepting Site soil/fill. The purpose of the letter was to document that no work had occurred at the Site since the October 2016 waste classification sampling was conducted, therefore, the waste classification report was representative of Site conditions at the time of the letter issuance.

To provide supplemental data for the intended disposal facility(ies), lead delineation sampling was conducted on December 13, 2016 and March 26, 2018, as documented in the May 1, 2018 Lead Delineation Report.

The Waste Classification Reports, which included summaries of the samples collected, the sample locations, and analytical results, are provided in Appendix J. Approval letters from disposal facilities, and manifests and bills of lading are also included in Appendix J.

3.3.3 Hazardous Soil Delineation Sampling

AKRF collected additional samples at and around test pit TP-B2 in the 0 to 9-foot interval to delineate the vertical and horizontal extent of hazardous lead.

One grab sample was collected at approximately 12 feet below grade from the center of test pit TP-B2. Five-point composite samples were collected from the 0 to 5-foot interval and the 5 to 9-foot interval in four directions (north, south, east, and west) from the center of the test pit for a total of eight composite samples. Additional samples were collected approximately 10 feet from the center of test pit TP-B2 and placed on hold, pending the laboratory analysis of the prior samples. The soil samples were analyzed for toxic characteristic leaching procedure (TCLP) lead and total lead.

Samples slated for laboratory analysis were placed in laboratory-supplied containers in accordance with EPA protocols and the New Jersey Department of Environmental Protection (NJDEP) Field Sampling procedures manual to satisfy requirements for disposal of Site soil in New Jersey. All soil samples collected were submitted to a NYSDOH ELAP-certified laboratory for analysis of TCLP lead and total lead.

TCLP lead was not detected above the EPA hazardous waste threshold in any of the samples analyzed from the September 21, 2018 sampling event. Therefore, the extent of hazardous lead soil was defined from grade to 10 feet below grade in an approximately 10-foot by 10-foot area near the center of Grid B2.

The laboratory analytical results for this additional pre-characterization sampling were summarized in the waste classification reports provided in Appendix J.

3.3.4 Soil/Fill Excavation and Off-Site Disposal Details

Based on the results of the waste characterization soil sampling events, permitted disposal facilities were selected to receive soil excavated from the Site. To procure approval for the disposal of hazardous lead waste, an EPA Generator Identification Profile was submitted to and subsequently approved by representatives from EPA Region 2 offices. On February 27, 2019, the Site was assigned EPA Generator ID NYR000230789. Waste profiles were prepared and submitted to Clean Earth of Kearny, New Jersey.

All waste profiles and approval letters from the facilities used to dispose of soil from the Site are enclosed in Appendix J. The EPA Region 2 correspondence and EPA Generator ID confirmation is included in Appendix D.

After securing the formal approvals from the selected waste disposal facilities, remedial excavation was conducted in accordance with the NYSDEC-approved RAWP. A Site plan showing the remedial excavation areas is provided as Figure 8.

Between July 23, 2018 and February 6, 2019, 10,717.55 tons of non-hazardous soil were excavated to a maximum depth of approximately 12 feet below sidewalk grade. Of that total, 8,979.4 tons of non-hazardous material were disposed of at Bayshore Soil Management, LLC in Keasbey, New Jersey via 256 truckloads and 1,738.15 tons of non-hazardous material were disposed of at the Former NJ Zinc facility in Palmerton, Pennsylvania via 73 truckloads.

On August 6, 2018, November 7, 2018, and November 27, 2018, soil/fill containing hazardous characteristics of lead from surface grade to approximately 12 feet below surface grade was excavated and live-loaded from the central portion of waste classification grid B2. In total, 241.47 tons of hazardous lead material were disposed of off-site at Clean Earth of Kearny, New Jersey via 10 truckloads.

A summary of the samples collected to characterize the waste, and associated analytical results are summarized in the Waste Classification Reports and associated disposal facility approvals included in Appendix J. Manifests and bills of lading are also included in electronic format in Appendix J. In-Text Table 3 shows the total quantity of material removed from the Site at each disposal facility.

In-Text Table 3
Waste Disposal Summary

Waste Stream	Disposal Facility(ies)	Quantity (tons)	Disposal Dates
Non-Hazardous Soil/Fill	Bayshore Recycling Corp. Keasbey, New Jersey	8,979.40	7/23/2018-2/6/2019
PA Regulated Soil/Fill	NJ Zinc Brownfield, LLC Phase II Environmental, LLC Palmerton, Pennsylvania	1,738.15	8/7/2018-8/13/2018
Hazardous Lead Soil/Fill	Clean Earth of New Jersey	241.47	8/6/2018-11/27/2018
	Total	10,959.02	
Note: Disposal dates indicate date the material left the Site.			

3.3.5 On-Site Reuse

Material was not reused on-site.

3.4 Endpoint Sampling

In accordance with the NYSDEC-approved RAWP and NYSDEC DER-10 Section 5.4, 24 Site-wide endpoint samples were collected to document remaining concentrations of contaminants of concern in soil/fill beneath the composite cover system following completion of the RA. Sample nomenclature identified the samples with an "EP-" prefix, a number (01 through 24) in the order of collection, and the date in YYYMMDD format on which the samples were collected.

In addition to the documentation samples, five tank endpoint samples consisting of four sidewall samples and one bottom sample were collected from the tank grave after removal of the 550-gallon UST, as shown on Figure 9. Samples collected from tank excavation were indicated with "UST-", the cardinal direction of the sidewall the sample was collected (N, S, E, and W for north, south, east, and west, respectively) or B for the sample collected from the bottom of the tank grave, and the date on which they were collected in the sample name (i.e., UST-1 W 20180628). While each of the tank excavation endpoint samples exceeded the UUSCOs and/or RRSCOs, soil/fill surrounding the tank was further excavated as part of the Site-wide remedy and disposed of off-site at the designated facility.

Surveys of the endpoint sample locations and elevations by GeoLand Surveying, P.C., a New York State-licensed surveyor, is included in Appendix I.

At each of the endpoint sample locations (Site-wide and tank), AKRF field-screened all endpoint sample locations with a calibrated PID for VOCs, prior to sample collection. No elevated PID readings above background ranges were observed at any endpoint sampling location.

Confirmation and tank removal endpoint samples were collected in laboratory-supplied glassware and relinquished under standard chain-of-custody protocol to TestAmerica, a NYSDOH-ELAP certified laboratory with Category B deliverables. Confirmation and tank endpoint samples were submitted for laboratory analysis of VOCs by EPA Method 8260, PAHs by EPA Method 8270, Pesticides by EPA Method 8081, PCBs by EPA Method 8082, and TAL metals by EPA Method 6000/7000 series using Category B deliverables. In accordance with the Quality Assurance Project Plan (QAPP), one trip blank, one field blank, one blind duplicate sample, and one matrix spike/matrix spike duplicate (MS/MSD) were collected per every 20 samples or sample digestion group (SDG) and submitted for analysis during the endpoint sampling events. The field blank(s), blind duplicate(s), and MS/MSD(s) included all of the parameters included in the sample analysis while the trip blank was limited to VOCs. Post-excavation endpoint sample results are summarized in Attached Tables 6 through 9, and all exceedances of the UUSCOs and/or RRSCOs are shown on Figure 10. Tank removal endpoint sample results are summarized in Table 4 and 5, and exceedances of the UUSCOs and/or RRSCOs are shown on Figure 9. In-Text Table 4 summarizes endpoint sample elevations and locations.

Notes:

Elevations are referred to in NAVD88.

Locations are referred to in NAD83.

UST-1 X 20180628 is a blind duplicate sample of UST-1 W 20180628.

EP-X01_20190225 is a blind duplicate sample of EP-02_20190225.

EP-X02_20190403 is a blind duplicate sample of EP-08_20190403.

EP-X03_20190429 is a blind duplicate sample of EP-21_20190429.

EP-X04_20190701 is a blind duplicate sample of EP-24_20190701.

A qualified data validator (third-party) reviewed all Site-wide post-excavation and tank endpoint sample laboratory reports and prepared Data Usability Summary Reports (DUSRs). The third-party data validator's overall assessment indicated the data generated were of acceptable quality. The DUSR identified additional qualifiers for specific compounds for specific samples. The qualifiers have been added to the data summary tables and were included in the EDDs submitted to NYSDEC EQuIS™. Full laboratory analytical results and DUSRs are provided as Appendix I.

DUSRs were prepared for all data generated in this remedial performance evaluation program. The lab packages and DUSRs are included in Appendix I, and associated raw data was uploaded to the NYSDEC EQuIS™ electronically.

3.5 Imported Backfill

A total of 403.84 cubic yards of virgin quarried stone were imported for use as part of the composite cover system and was placed across the slab-on-grade portion of the Site. The locations of imported stone are shown on Figure 11. Import documentation is summarized in Appendix K and Attached Table 10.

3.6 Remaining Contamination

The selected remedy include a Track 4 cleanup. Therefore, contamination remains in the subsurface at the Site. Site-wide documentation endpoint samples were collected to document the remaining contamination. In addition, after discovery and removal of a UST, five samples were collected from the tank grave. Sample locations are shown on Figures 9 and 10. All endpoint sample results were compared to UUSCOs and RRSCOs, as shown in Attached Tables 4 through 9 and on Figures 9 and 10.

3.7 Engineering Controls (ECs)

Since remaining contaminated soil/fill, groundwater, and soil vapor exist beneath the Site, ECs are required to protect human health and the environment. The Site has the following primary Engineering Controls, as described in the following subsections:

- Composite Cover System
- Vapor Barrier Membrane
- Sub-Slab Depressurization System (SSDS)
- Soil Vapor Extraction System (SVES)

3.7.1 Composite Cover System

A Track 4 remedy was achieved. Therefore, exposure to remaining contamination of soil/fill at the Site is prevented by an engineered composite cover system installed across the entire Site. The composite cover system is composed of the following components:

- *Partial Cellar and Elevator Pit:* 6 inches of concrete underlain by Grace Preprufe® 300R vapor barrier/waterproofing, underlain by compacted subgrade.
- *Exterior Partial Cellar Foundation Walls:* concrete foundation wall adjacent to Grace Preprufe® 300R vapor barrier/waterproofing, adjacent to compacted subgrade.
- *Slab-On-Grade Building:* 6 inches of concrete underlain by Stego Wrap® 20 mil vapor barrier, underlain by 4-inch PVC SSDS and SVES piping in a minimum 6 inches of gas-permeable aggregate (GPA), underlain by non-woven geotextile fabric, underlain by prepared subgrade.
- *Exterior, Open-Air Dog Run:* 6 inches of concrete underlain by GPA, underlain by a demarcation barrier (snow fence), underlain by prepared subgrade.

Figure 11 shows the as-built cross sections and location(s) for each remedial cover type. An Excavation Work Plan (EWP), which outlines the procedures required in the event the cover system and/or underlying residual contamination are disturbed, is provided in Appendix A of the SMP (provided as Appendix L of this FER).

3.7.2 Vapor Barrier and Waterproofing Membranes

Waterproofing and vapor barrier membrane were installed beneath the Site building slabs. A Grace Preprufe® 300R and Bituthene® 4000 vapor barrier membrane that meets or exceeds the ASTM E-1745 standard was installed as a Site EC below the cellar slab and along subgrade cellar sidewalls, sumps, and pits. The Grace Preprufe® 300R and Bituthene® 4000 vapor barrier membranes also act as waterproofing, as the partial cellar construction extends into the water table; therefore, installation of an SSDS below the partial cellar slab was infeasible. Stego Wrap® 120R was installed under the slab-on-grade portion of the building. GCP Hydroduct 220 and Bituthene® 4000 were installed along the exterior vertical building walls to sidewalk grade. The membranes were installed in accordance with the manufacturer's installation specifications at the locations shown on Figure 11.

3.7.3 Sub-Slab Depressurization System (SSDS)

An active SSDS was installed below the slab-on-grade (parking garage) portion of the Site to mitigate the potential for soil vapor intrusion into the new Site building. The target area for the SSDS comprises the slab-on-grade portion of the Site building, which excludes a narrow exterior concrete-paved area along the northwestern portion of the Site and the partial cellar on the southwestern portion of the Site, which extends below the groundwater table. The SSDS maintains a negative pressure by inducing vacuum underneath the entire ground floor slab, allowing vapors to vent above the Site building roof without entering the building. The SSDS consists of a network of subgrade 4-inch, Schedule 40 slotted and solid PVC piping installed within a minimum 6-inch thick layer of GPA, all of which are underlain by non-woven geotextile fabric. The subgrade piping penetrates the slab within the ground floor, centrally-located mechanical room and is subsequently manifolded into a solid, 6-inch Schedule 40 chlorinated PVC (CPVC) solid riser, leading from a blower and vertically through the building to an exhaust stack located on the 8th floor roof.

The major components of the SSDS include:

- Four horizontal 4-inch diameter 0.020-inch slotted and solid PVC pipe runs;
- A minimum 6-inch layer of ¾-inch GPA stone bedding under, around, and above all SSDS piping;
- Three vacuum monitoring points (VMPs) (MP-01 through MP-03);
- A 2 horsepower (HP), 3-phase IPF model (CDD-200 ECO) suction fan capable of operating at 9.5 in.H_2O and 300 standard cubic feet per minute (SCFM) air flow rate; and
- A 6-inch galvanized riser pipe extending from the ground floor parking garage to an exhaust stack on the 8th floor mechanical roof.

The aboveground components of the SSDS have been procured and, after delivery to the Site, will be installed to facilitate system startup, balancing, and sampling in accordance with the SMP. The work will detailed in the inaugural Periodic Review Report (PRR), to be submitted to the Department no more than 18 months after receipt of the Certificate of Completion (COC). The location and components of the SSDS are shown on Figure 12. As-built drawings of the SSDS are provided in Appendix M.

3.7.4 Soil Vapor Extraction System (SVES)

An SVES was installed to remediate the vadose zone beneath the building on the eastern and northeastern portion of the Site and to help prevent the off-site migration of contaminated soil vapor. The target area for the SVES is the vadose zone, which is the unsaturated soil above the groundwater table, is an approximately 7,000-square foot area located on the eastern and northeastern portions of the Site. The SVES, in combination with the vapor barrier and SSDS, will help to prevent potential soil vapor intrusion into the new building. Based on the findings of the June 2016 pilot test, the SVES is capable of operating the four SVE wells at an approximate maximum applied vacuum of 30 inches of water (inH_2O) and approximate air flow rate of 75 SCFM per SVE well. The SVES maintains a negative pressure in a radius around each of the four SVE extraction wells to extract and treat contaminated vapors.

The major components of the SVES include:

- Four 4-inch diameter PVC SVE wells (SVE-01 through SVE-04), each constructed with 0.020-inch slotted well screen from 3.5 feet below grade to between 9 and 9.5 feet below the bottom of the concrete slab-on-grade; and
- Four runs of 4-inch diameter solid PVC piping connecting each individual SVE wells to enter into a mechanical room on the central portion of the Site.
- A 10 HP, 3-phase FPZ model (SCL-K09-MS-10-3) blower capable of operating at 55 inH_2O and 400 SCFM;
- Two (2) 400-pound GAC vessels connected in series to extracted treat vapors; and
- A 6-inch galvanized steel riser pipe extending from the ground floor parking garage to an exhaust stack on the 8th floor roof.

The aboveground components of the SSDS have been procured and, after delivery to the Site, will be installed to facilitate system startup, balancing, and sampling in accordance with the SMP. The work will detailed in the inaugural Periodic Review Report (PRR), to be submitted to the Department no more than 18 months after receipt of the COC. The location and components of the SVES are shown on Figure 12. As-built drawings of the SVES are provided in Appendix M. Procedures for monitoring the SVES are documented in the SMP, provided as Appendix L.

3.8 Institutional Controls (ICs)

The Site remedy requires placement of an EE on the Site to (1) implement, maintain, and monitor the ECs; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and (3) limit the use and development of the Site to restricted residential and commercial uses only.

The EE for the Site was executed by the Department on July 3, 2019, and filed with the Kings County Clerk on September 3, 2019. The Kings County Recording Identifier number for the filing is CFRN 2019000281480. A copy of the EE and proof of filing are provided in Appendix N.

3.9 Deviations from the Remedial Action Work Plan (RAWP)

The following components of the RA performed at the Site can be considered deviations from the RAWP:

- Effective August 24, 2018, the NYSDEC project manager was changed from Mr. Larry Alden, P.E. to Mr. Steven Walsh after Mr. Alden's retirement from the Department.

- The SSDS and SVES layout presented in the RAWP was a conceptual layout diagram. After the Site building foundation plans were finalized, AKRF modified the SSDS and SVES designs. During construction, minor modifications were made to the layout of the underground piping to address conflicts with underground foundation elements, utilities, and feasibility of construction. The NYS-licensed P.E. for the project was consulted prior to finalizing the design changes. The P.E.-stamped SSDS and SVES as-built drawings are provided in Appendix M.
- After consultation with the NSYDEC project manager on June 22, 2018, the endpoint samples collected from within the former tank grave were analyzed for CP-51 analysis only.
- The RAWP proposed the installation of GCP Florprufe vapor barrier beneath the ground floor slab. A vapor barrier was originally included in the foundation design to satisfy the NYCOER E Designation for hazardous materials. The vapor barrier design was later modified to include the use of Stego™ Wrap 20-mil. vapor barrier. The vapor barrier and waterproofing membrane installation locations are shown on Figure 11 and the construction details are shown in Appendix M.
- The proposed landscaped area on the northwestern portion of the Site was constructed as a concrete-paved exterior dog run. The composite cover system construction details are shown on Figure 11.
- A BCP sign was not erected at the Site entrance. In a December 8, 2016 email, the former NYSDEC project manager for the Site (Mr. Larry Alden, P.E.) indicated that a sign was not required.
- Soil/fill containing hazardous characteristics for lead encountered in Grid C2 during waste characterization sampling was not originally identified in the RAWP. Immediately upon its discovery, NYSDEC was notified. Hazardous soil/fill derived from the Site was transported and disposed of off-site in full compliance with the RAWP and applicable local, state, and federal regulations.
- Startup of the SSDS and SVES will be documented in the inaugural PRR.

The deviations did not materially affect achieving the RAOs established for the Site.

Concentration in Soil
Analyte/ Compound in Soil

NA : The analyte was not analyzed for this sample.

NE : The reported concentration does not exceed the standard.

Part 375 Soil Cleanup Objectives (SCOs): SCOs listed in the New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations (6 NYCRR Part 375).

Exceedances of NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) are presented in bold font.
Exceedances of NYSDEC Restricted Residential Soil Cleanup Objectives (RRSCOs) are presented in gray shading.

mg/kg - milligrams per kilogram = parts per million (ppm)

Notes

Qualifier	Description
J	The reported concentration is a value above the method detection limit, but is estimated and may be imprecise.
L	The reported concentration is a value above the method detection limit, but is reported low.
K	The reported concentration is proportional to dilution factor and may be exaggerated.
R	The reported concentration is unusable; the analyte may or may not be present in the sample.
U	The concentration was not detected above the rmethod detection limit; the compound is not present in the sample.

Blind Duplicate Sample
UST-1 X 20180628 is a blind duplicate of sample UST-1 W 20180628.

Part 375 Soil Cleanup Objectives (SCOs): SCOs listed in the New York State Department of Environmental

Exceedances of NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) are presented in bold font.
Exceedances of NYSDEC Restricted Residential Soil Cleanup Objectives (RRSCOs) are presented in gray shading.

mg/kg - milligrams per kilogram = parts per million (ppm)
ug/L - micrograms per Liter = parts per billion (ppb)

Standards

Part 375 Soil Cleanup Objectives	:	Soil Cleanup Objectives listed in NYSDEC (New York State Department of Environmental Conservation) "Part 375" Regulations (6 NYCRR Part 375).

Exceedances of Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCOs) are highlighted in gray.
Elevations are presented in North American Vertical Datum (NAVD) 88.

Notes

Qualifier	Description
J	The reported concentration is a value above the method detection limit, but is estimated and may be imprecise.
L	The reported concentration is a value above the method detection limit, but is reported low.
K	The reported concentration is proportional to dilution factor and may be exaggerated.
R	The reported concentration is unusable; the analyte may or may not be present in the sample.
U	The concentration was not detected above the method detection limit; the compound is not present in the sample.

Blind Duplicate Samples
EP-X01_20190225 is a blind duplicate of sample EP-02_20190225.
EP-X02_20190403 is a blind duplicate of sample EP-08_20190403.
EP-X03_20190429 is a blind duplicate of sample EP-22_20190429.
EP-X04_20190701 is a blind duplicate of sample EP-24_20190701.

Part 375 Soil Cleanup Objectives (SCOs): SCOs listed in the New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations (6 NYCRR Part 375).

Exceedances of NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) are presented in bold font.
Exceedances of NYSDEC Restricted Residential Soil Cleanup Objectives (RRSCOs) are presented in gray shading.

mg/kg - milligrams per kilogram = parts per million (ppm)
ug/L - micrograms per Liter = parts per billion (ppb)

Standards

Part 375 Soil Cleanup Objectives	:	Soil Cleanup Objectives listed in NYSDEC (New York State Department of Environmental Conservation) "Part 375" Regulations (6 NYCRR Part 375).

Exceedances of Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCOs) are highlighted in gray.
Elevations are presented in North American Vertical Datum (NAVD) 88.

APPLICATION FOR APPORTIONMENTS OR MERGERS

Instructions: Please complete this application and *submit in person* to: ***Department of Finance, Property Division - Tax Map Office, 66 John Street, 2nd floor,*** *New York, NY 10038.* Please read the instructions for further details before completing this form. Print clearly.

SECTION A: PROPERTY INFORMATION

Borough: BROOKLYN Block: 2714 Present Lot(s): 1, 30, 32, 33

DO NOT WRITE IN THIS SPACE - FOR OFFICE USE ONLY

Lot Number: 1, 33

☒ Merger ☐ Apportionment Number of Lots Requested 2

☐ Air ☐ Subterranean

Lot(s)Usage: (check one)

☒ *Residential* Building Gross Sq/Ft:

☐ *Commercial* Building Gross Sq/Ft:

☐ *Mix* (Residential & Commercial) Building Gross Sq/Ft:

1. Property Owner's Name (as per Deed): LAST NAME FIRST NAME

OR

Company Name: 470 MANHATTAN AVE, LLC / NEW 470 LLC

2. Property Address: 22 ECKFORD STREET, (NUMBER AND STREET) BROOKLYN, (CITY) NY (STATE) 11222 (ZIP CODE)

3. Filing Representative (if applicable):

SECTION B: CERTIFICATION

1. Architect/Engineer/Applicant's Name: HILL, (LAST NAME) L. STEPHEN (FIRST NAME)

2. Address: 11 BROADWAY, 17TH FLOOR (NUMBER AND STREET) NEW YORK (CITY) NY (STATE) 10004 (ZIP CODE)

3. Telephone Number: 212-213-8007 4. Email Address: LSHILL@HILLWEST.COM

The applicant hereby certifies that, in making this application for merger/apportionment, s/he is the owner, or acting under the direction of the owner.

Signature of Architect/ Engineer/Applicant: **Date:** /_____/_____

SCHEDULE "A" PROPERTY DESCRIPTION

Metes and Bounds Description
Block 2714
New Lot #33 and Environmental Easement

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the northeasterly side of Manhattan Avenue with the northerly side of Newton Street;

RUNNING THENCE along the northeasterly side of Manhattan Avenue 51 feet 6 inches to the easterly side of Eckford Street;

THENCE along the easterly side of Eckford Street 115 feet 6-3/8 inches;

THENCE easterly at 90 degree angles to Eckford Street 80 feet;

THENCE northerly at 90 degree angles to the last course 19 feet 3-3/4 inches;

THENCE at easterly at 90 degree angles to the last course 37 feet 1 1-1/4 inches;

THENCE northerly formerly an interior angle of 109 degrees 5 minutes 21 seconds, 20 feet 9-7/8 inches;

THENCE easterly 6 feet 1 inch;

THENCE southerly at 90 degree angles to Newton Street 117 feet 8-1/2 inches to the northerly side of Newton Street;

THENCE westerly along the northerly side of Newton Street 192 feet 10-1/2 inches to the point or place of BEGINNING.

Total Area 22,317.4 square feet (.5123 acres)

12 Eckford St. aka 470 Manhattan Avenue
Block: 2714
Lots: 1, 30, 32, 33

Zoning Section					
	1. Zoning district: M1-2/R6A				
	Special Mixed Use District, MX-8				
	Map: 13A				
	Community District: 1				
	2. Lot area: 22,317.4 SF				
123-20 22-00 42-00	3. A. <u>Permitted Use Groups:</u>				
	Use Groups 1-14, 16-17, as modified by 123-21 through 123-223				
	B. <u>Proposed Uses:</u>				
	Residential Use Group 2				
	4. <u>Floor Area Permitted</u>				
123-63 23-154 (b)	A. FAR Permitted				
	Base Residential FAR	2.7 x 22,317.4 SF =	60,257 SF		
	Maximum Residential w/ Inclusionary Housing*	3.6 x 22,317.4 SF =	80,343 SF		
	B. Maximum Total	3.6	80,343 SF		
	*Floor area may be increased by 1.25 SF for each SF of low income floor area provided, up to the maximum FAR specified.				
	5. A. <u>Floor Area Proposed</u>				
	Residential	3.5971 FAR	80,277 SF		
	B. <u>Inclusionary Housing Calculation</u>				
	Base Residential:	2.7 FAR	60,257 SF		
	Proposed Total ZFA:	3.5971 FAR	80,277 SF		
	Inclusionary Housing Bonus:	80,277 - 60,257 =	20,020 SF		
	Affordable Floor Area Required:	(80% of bonus)	16,016 SF		
	Affordable Floor Area Provided:		16,360 SF	Complies See A-007	
	6. Density				
23-22 23-24	A. Dwelling Unit Factor	680			
	Maximum Residential FAR permitted (3.6):	80,343			
	Non-Residential Floor Area provided:	0			
	Maximum number of dwelling units permitted:				
	80,343 / 680 =	118.15 (118)			
	B. Proposed Number of DUs	101		Complies	
	7. Yard Regulations				
	A. <u>Required Yards</u>				
23-42 23-47	Yard level shall not be higher than curb level except natural grade need not be disturbed.				
	Residential rear yard interior lot:	30'			
	30' provided.				
23-44(b)	B. Permitted Obstructions				
	Parking spaces, provided the height of a building or portion thereof doesn't exceed 15' above base plane.				
	C. Side yard not required, minimum 8' if provided.				
	Proposed side yard: 11'-6"			Complies See 1/Z-001	
123-63 23-153	8. Lot Coverage				
	A. Maximum lot coverage permitted				
	Corner lot: 100%, Interior Lot: 65%				
	Interior Lot:				
	11,252.3 x 65% =	7,314 SF			
	Proposed:	6,685 SF		Complies See 2/Z-002	
	9. Height & Setback				
123-662(b) 23-664 (a)	A. <u>Eligible Buildings</u>				
	50% or more of the floor area of the zoning lot contains residential uses and at least 20% of such residential floor area is affordable floor area per 23-154(b).				
	Proposed Residential floor area:	80,277 SF			
	80,277 x 20% =	16,055 SF			
	Affordable Floor Area Provided:	16,360 SF		Complies	
23-664 (b) Table 1	B. Minimum Base Height:	40'			
	Maximum Base Height:	65'			
	Proposed Base Height:	59'-8"			
	Maximum Building Height:	80'			
	Proposed Building Height:	80'			
	Maximum Number of Stories:	8		Complies	
	Proposed 8 stories.			See 2&3/Z-001	
23-662 (c)	C. Setback Requirements				
	Narrow street setback:	15'			
23-664 (c)	15' setback provided with dormer per 23-621.		Complies	See 6//Z-002	
23-661 (a)	D. Street wall location				
	The street wall shall not be located closer to the street line than the closest wall of an existing adjacent building.			Complies	
	On corner lots street wall location provisions apply along only one street line.			See 5/Z-002	
23-661 (d)	E. Street wall articulation				
	12" depth or projection permitted and			Complies	
	up to 50% of aggregate width at any level may recess or project up to 3'.			See 5/Z-002	
123-662(c) 23-62	F. Permitted Obstructions				
	(g) Elevator or stair bulkheads and accessory mechanical equipment, provided that:				
	(1) such obstructions shall be located not less than 10' from the street wall, except need not be more than 25' from a narrow street line.				
	(2) all mechanical equipment shall be screened on all sides.				
	(3-ii) the lot coverage of all such obstructions does not exceed 20% of the lot coverage of the building, and such obstructions are limited to a maximum height of 25'.				
	(j) Parapet walls not more than 4' in height.				
	Lot coverage of the building:	14,702 SF			
	14,702 x 20% =	2,940 SF			
	Proposed bulkhead coverage:	2,340 SF			
	Proposed bulkhead height:	24'			
		Complies See 3&4/Z-002			
123-32 91-411	10. Environmental Conditions				
	In Special Mixed Use Districts, all new dwelling units shall be provided with a minimum 35dB(A) of window wall attenuation to maintain an interior noise level of 45dB(A) or less, with windows closed, and shall provide an alternate means of ventilation.				
				Complies See A-200-202	
123-72 25-23 25-251	11. Accessory Off-Street Parking				
	A. Within the transit zone no accessory off-street parking required for income-restricted housing units.				
	Required Parking				
	101 Dwelling Units x 80% x 50% =		40 Cars		
	Income-restricted units:				
	21 Dwelling Units x 20% x 0% =		0 Cars		
	B. Proposed Attended Parking Facility:		41 Cars		
25-62	C. Minimum and Maximum Size of Parking Facility (Attended garage)				
	200 SF per space				
	200 x 41 Spaces =		8,200 SF		
	Proposed:		13,017 SF	Complies See 5/Z-002	
25-631(e)	D. Curb Cuts				
	1 curb cut permitted per street frontage.				
	Maximum width: 12'.			Complies	
	Proposed 2 curb cuts (on Eckford St. and Newton St.)			See 5/Z-002	
36-70 36-711	12. Accessory Bicycle Parking Regulations				
	A. Required bicycle parking:				
	For Residential:	1 per 2 DUs			
		101 / 2 =	51		
	B. Proposed Bicycle Parking				
	Number of parking spaces:		68		
36-73	C. Area (15 SF per space)*	51 x 15 SF =	1,020 SF		
	*May be reduced from 15 SF to 6 SF per space				
	Provided at First Floor		515.6 SF		
			7.6 SF/ space	Complies See 8/Z-002 & A-101	
23-011(c) 28-12	13. Quality Housing Program				
	A. Refuse Storage & Disposal				
	A refuse disposal room shall be provided on each story that has entrances to dwelling				
	Minimum Size: 12 SF			Complies	
	Minimum Dimension: 3 SF			Floors 2-8	
	Refuse storage room to be provided in an enclosed area within the zoning lot for residential at 2.9 cubic feet per dwelling unit.				
	101 DUs x 2.9 =		293 CF		
	Provided at First Floor:				
	275 SF x 10'-5" =		2,864 CF	Complies See 9/Z-002	
28-14	B. Daylight in Corridors				
	50% of the corridor may be excluded from floor area if a 20 SF clear window is provided which:				
	a) is directly visible from 50% of the corridor or the vertical circulation core.				
	b) is facing a street, yard or court per Art. 2, Ch. 3.				
	Proposed corridor windows are visible from 50% of the corridor and face a street and an outer court.			Complies Floors 2-8	
28-21	C. Recreation Space				
	Percentage of total residential area required:		3.30%		
	Required recreation space:		2,649 SF		
	Proposed recreation space at 1st Floor:		2,530 SF		
	Proposed recreation space at 2nd Floor Roof:		5,330 SF		
	Total:		7,860 SF	Complies	
	Area to be deducted:		2,530 SF	See 7/Z-002	
28-31	D. Density per corridor				
	If the number of dwelling units served by the vertical circulation core is 11 or less , 50% of the square footage of the corridor may be excluded from floor area.				
	Proposed 7 units at 7th Floor and 5 units at 8th Floor.			Complies Floors 7 & 8	
	14. Street Tree Planting				
33-03 26-41	A. Required trees: 1 tree/ 25' of street frontage				
	B. Street frontage provided:				
	Eckford St.	115.50'			
	Manhattan Ave.	51.50'			
	Newton St.	192.88'			
		359.88'			
	C. Total Trees required:	14	(359.88 / 25)		
	D. Proposed Number of Trees:	14	Complies

FOUNDATION ENERGY ANALYSIS

ENERGY COMPLIANCE CLASSIFICATION:	RESIDENTIAL
CLIMATE ZONE:	4A
STANDARD USED:	NYCECC 2016

STATEMENT OF COMPLIANCE - RESIDENTIAL

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PERSONAL JUDGEMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH 2016 NEW YORK CITY ENERGY CONSERVATION CODE.

BELOW GRADE WALLS		
EXISTING FOUNDATION 12 IN CONC.	0.75	ALL REFERENCE FROM ASHRAE 90.1 - 2013 APPENDIX A
2IN XPS	10.00	
$\Sigma(R_f...R_n)=$	10.75	
$C_{ass}=1/\Sigma(R_f...R_n)=$	0.085	
$C_{max}=$	0.119	

NYC ECC 2016
C402.1.4
ASSEMBLY U FACTOR, C FACTOR OF F FACTOR BASED METHOD
"...THE C FACTOR OF BELOW GRADE EXTERIOR WALLS OF THE BUILDING ENVELOPE AS REQUIRED IN ACCORDANCE WITH C402.1.4 SHALL EXTEND TO A DEPTH OF 10 FEET BELOW THE OUTSIDE FINISHED GROUND LEVEL OF THE LEVEL OF THE LOWEST FLOOR WHICH EVER IS LESS."

ENERGY ANALYSIS PER 2016 NYC ECC

CITATION	ITEM DESCRIPTION	PROPOSED DESIGN VALUE	CODE PRESCRIPTIVE VALUE	SUPPORT DOCUMENTATION
INSPECTION / TEST	THERMAL RESISTANCE OF BELOWGRADE WALLS	SEE ABOVE	C FACTOR 0.119	SEE DETAIL

TABLE II PROGRESS INSPECTIONS FOR ENERGY CODE COMPLIANCE -RESIDENTIAL BUILDINGS

	INSPECTION / TEST	FREQUENCY (MINIMUM)	REFERENCE STANDARD (SEE ECC CHAPTER 6) OR OTHER CRITERIA	NYCECC CITATION
IIA				
IIA 1	PROTECTION OF EXPOSED FOUNDATION INSULATION: INSULATION SHALL BE VISUALLY INSPECTED TO VERIFY PROPERTY PROTECTION WHERE APPLIED TO THE EXTERIOR OF BASEMENT CELLAR WALLS, CRAWL-SPACE WALLS AND/OR THE PERIMETER OF SLAB-ON-GRADE FLOORS.	AS REQUIRED DURING FOUNDATION WORK AND PRIOR TO BACKFILL	APPROVED CONSTRUCTION DOCUMENTS	C303.2.1
IIA 2	INSULATION PLACEMENT AND R-VALUES: INSTALLED INSULATION FOR EACH COMPONENT OF THE CONDITIONED SPACE ENVELOPE AND AT JUNCTIONS BETWEEN COMPONENTS SHALL BE VISUALLY INSPECTED TO ENSURE THAT THE R-VALUE ARE MARKED,THAT SUCH R-VALUES CONFORM TO THE R-VALUES IDENTIFIED IN THE CONSTRUCTION DOCUMENTS AND THAT THE INSULATION IS PROPERLY INSTALLED. CERTIFICATIONS FOR UNMARKED INSULATION SHALL BE SIMILARLY VISUALLY INSPECTED.	AS REQUIRED TO VERIFY CONTINUOUS ENCLOSURE WHILE WALLS, CEILINGS AND FLOORS ARE OPEN.	APPROVED CONSTRUCTION DOCUMENTS	C303.1, C303.1.1, C303.1.2, C402.1, C402.2

AMENDED NOTICE TO PROCEED
DOB Job Number NB 320909772

October 23, 2017

Re: 470 Manhattan Avenue: 6-14 Eckford Street, 466-470 Manhattan Avenue, and 105-117 Newton Street
Brooklyn Block 2714, Lots 30, 32, 33, and p/o 1 (Lots will be merged, project on p/o new Lot 1)
Hazardous Materials and Air Quality "E" Designation
E-138: Greenpoint-Williamsburg Rezoning - CEQR 04DCP003K - 5/11/2005
OER Project Number 16EH-A093K
NYSDEC BCP ID: New 470 Project, Site No. C-224242

Dear Brooklyn Borough Commissioner:

The New York City Office of Environmental Remediation (OER) hereby issues a Notice to Proceed for the above-referenced Department of Buildings Job Number. This correspondence is provided pursuant to OER's responsibilities as established in Chapter 24 of Title 15 of the Rules of the City of New York and Section 11-15 of the Zoning Resolution of the City of New York. The Applicant has filed a Hazardous Materials remedial action work plan with the New York State Department of Environmental Conservation and an Air Quality memorandum that are acceptable to this Office and has prepared a Construction Health and Safety Plan for implementation on this project. OER's Decision Document that defines the remedial actions required for this project has been prepared and filed and is available on request. A site map showing the location with respect to tax lots is attached to this Notice.

At the conclusion of remedial activities required under this action, the Zoning Resolution and §24-07 of the Rules of the City of New York requires that OER issue a Notice of Satisfaction signifying that all remedial action requirements established for this project have been satisfied prior to issuance of the Certificate of Occupancy or Temporary Certificate of Occupancy by Department of Buildings.

If you have any questions or comments, please feel free to contact Isabel McRae at 212-341-2034.

Sincerely,

Zach Schreiber, PhD
Assistant Director

RE: Brownfield Cleanup Application
New 470 Project
Site No. C224242

Dear Mr. Walker:

The New York State Department of Environmental Conservation (DEC) has received your application for participation in the Brownfield Cleanup Program (BCP) pursuant to Environmental Conservation Law (ECL) § 27-1401 et seq. We are pleased to advise you that your application has been determined to be complete based upon DEC's initial non-substantive review of your application package. While the application is complete, DEC may require additional information regarding site contamination in order to demonstrate that the site requires remediation pursuant to ECL § 27-1407(1). Additionally, if your application also seeks a determination that the site is eligible for tangible property credits under ECL § 27-1407(1-a), DEC may require additional information in order to make such a determination. If you propose additional material to supplement this application, DEC may consider it at its sole discretion. If additional material or information supplied significantly changes the scope of the site subject to the application, the Department may require you to publish another public notice of availability of the complete application. DEC would then adjust the time frame specified under ECL § 27-1407(6) for notifying you that your request for participation in the BCP is either accepted or rejected.

Pursuant to ECL § 27-1407(5), a 45-day public comment period is to begin after DEC's determination that an application is complete. DEC will publish a notice of the receipt of your application seeking public comment in the "Environmental Notice Bulletin." In accordance with the ECL and DEC regulations (see 6 NYCRR § 375-3.4(b)), you must notify, in writing, the Director of the Mayor's Office of Environmental Coordination and all parties on the site contact list[1] of the availability of the complete application for public review and comment.

In order to facilitate the notifications, DEC has prepared the enclosed document for your use as a Public Notice along with instructions. You are responsible for placing a copy of the application (including any attachments) and copies of all other related documents such as any site assessments, investigation reports, and/or remedial work plans in the document repository

[1] The site contact list includes (see section 375-1.2(as)) all interested "persons, government agencies, groups or organizations, including, but not limited to, the chief executive officer and zoning board of each county, city, town and village in which such site is located, the public water supplier which serves the area in which such site is located, any site residents, adjacent property owners, any person who has requested to be placed on the site contact list, and the administrator of any school or day care facility located on the site for the purposes of posting and/or dissemination at the facility. Provided, however, that where the site or adjacent real property contains multiple dwelling units, the remedial party may propose an alternative method, consistent with the citizen participation goals set forth in section 375-1.10, for providing such notice in lieu of mailing to each individual."

before the start of the public comment period. The language in the enclosed Public Notice must be used without alteration in the newspaper notice that you have published in accordance with sections 375-3.2(f) and 375-3.10.

The enclosed public notice must be provided to a local newspaper servicing the area including the site for publication no later than August 31, 2016. By August 30, 2016, the other notifications specified above must be distributed and documents placed in the repository. To the extent that the mailings and publications are not completed in accordance with these time frames, DEC will extend the comment period for a period sufficient to comply with the required public notice requirements running from the latest of these mailings and publications.

Within five days of the mailings, you must submit a "certificate of mailing" using the enclosed form. Additionally, you must submit a proof of publication provided by the newspaper within three days of your receipt of such document. Please submit these documents to DEC's Project Manager:

Larry Alden
NYS Dept. of Environmental Conservation
Division of Environmental Remediation – Bureau B
625 Broadway, 12th Floor
Albany, NY 12233-7016
larry.alden@dec.ny.gov

DEC will use all best efforts to notify you if the application is accepted or rejected within five days after the close of the public comment period. We look forward to working cooperatively to address the environmental conditions at the brownfield site and return this property to productive use.

Sincerely,

Kelly A. Lewandowski

Brownfield Cleanup Program
Public Notice Instructions to Requestor[2]

1) **Newspaper Notice**
   a) The Requestor must publish the language in the enclosed public notice, without modification, in a local newspaper of general circulation that services the area that includes the site not later than the date specified in the Division of Environmental Remediation's (DER) cover letter. The notice must be a paid newspaper advertisement, prominently located in the community bulletin section or comparable local section of the newspaper (not as a legal notice). The Requestor must publish the notice in English and in any other language spoken by a significant number of people within the site community.
   b) The Requestor must submit a proof of publication of the newspaper notice to the DER Project Manager by the date specified in the DER cover letter.

2) **Requestor's Instructions to Newspapers Regarding Printing the Public Notice**
   a) The enclosed public notice announces the receipt of a complete Brownfield Cleanup Program application package by the New York State Department of Environmental Conservation. Pursuant to ECL Section 27-1405(22), the public notice must be a paid newspaper advertisement, prominently located in the community bulletin section or similar local section of the newspaper (not as a legal notice). The public notice must be published by the date specified. Please provide a proof of publication to the DER Project Manager as soon as possible.

3) **Site Contact List**
   a) The Requestor must mail the enclosed public notice, without modification, to the parties on the site contact list included with the application. The mailing must be performed by the date specified in the DER cover letter. No other materials can be mailed with this notice with the exception of the instructions provided in #4a below.
   b) The Requestor must complete the certificate of mailing and submit it to the DER Project Manager by the date specified in the DER cover letter (see enclosed certificate of mailing form).

4) **Requestor's Instructions to Parties on the Site Contact List Receiving the Public Notice**
   a) The enclosed public notice announces the receipt of a complete Brownfield Cleanup Program application package by the New York State Department of Environmental Conservation. Pursuant to ECL Section 27-1407(5), a public notice announcing the receipt of an application must be sent to parties on the site contact list. Please read the enclosed public notice and review the application package in the site document repository for further information regarding the application and how to submit comments.

5) **Document Repository**
   a) The Requestor must put the application package (application and all attachments) in the site document repository specified in the application prior to the start of the public comment period.

---

[2] A requestor (§ 375-3.2(i)) is a person who has submitted an application to participate in the BCP whose eligibility has not yet been determined by DEC.

Public Notice
Fact Sheet

The New York State Department of Environmental Conservation (DEC) has received a Brownfield Cleanup Program (BCP) application, Draft Remedial Action Work Plan and Final Remedial Investigation Report from New 470 LLC for a site known as the New 470 Project, site ID #C224242. This site is located in the Borough of Brooklyn, within the County of Kings, and is located at 12 Eckford Street. Comments regarding this application must be submitted no later than October 15, 2016. A copy of the application, Draft Remedial Action Work Plan, Final Remedial Investigation Report and other relevant documents are available at the document repositories located at New York Public Library – Greenpoint, 107 Norman Ave, Brooklyn and Brooklyn Community Board District 1, 435 Graham Ave, Brooklyn. Information regarding the site and how to submit comments can be found at http://www.dec.ny.gov/chemical/60058.html or send comments to Larry Alden, Project Manager, NYSDEC – DER, 625 Broadway, 12th Floor, Albany, NY 12233-7016 ; larry.alden@dec.ny.gov; or call 518-402-9767.

To have information such as this notice sent right to your email, sign up with county email listservs available at www.dec.ny.gov/chemical/61092.html.

CERTIFICATION OF MAILING

Site Name: New 470 Project
Site No.: C224242

I certify that I mailed on _____ a copy of the attached public notice by first class mail upon the person(s) on the attached mailing list, by depositing a true copy thereof, securely enclosed in a postpaid wrapper, in the Post Office box at _____ in the City of _____, New York, which box is under the exclusive care and custody of the United States Post Office.

Re: New 470 Project
Site ID No. C224242
Brooklyn, Kings County
Remedial Work Plan & Decision Document

Dear Mr. Walker:

The New York State Department of Environmental Conservation (Department) and the New York State Department of Health (NYSDOH) have reviewed the Remedial Work Plan (RWP) for the New 470 Project site dated November 17, 2016 and prepared by AKRF Engineering, P.C. on behalf of New 470 LLC. The RWP is hereby approved. Please ensure that a copy of the approved RWP is placed in the document repositories. The draft plan should be removed.

Attached is a copy of the Department's Decision Document for the site. The remedy is to be implemented in accordance with this Decision Document. Please ensure that a copy of the Decision Document is placed in the document repositories.

Please contact the Department's Project Manager, Larry Alden, at 518-402-9767 or larry.alden@dec.ny.gov at your earliest convenience to discuss next steps. Please recall the Department requires seven days' notice prior to the start of field work.

Sincerely,

Robert J. Cozzy, P.E.
Director
Remedial Bureau B

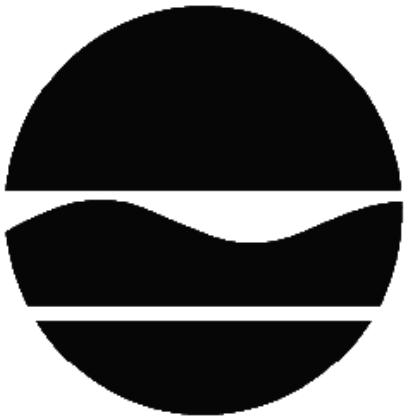
DECISION DOCUMENT

New 470 Project
Brownfield Cleanup Program
Brooklyn, Kings County
Site No. C224242
November 2016



Prepared by
Division of Environmental Remediation
New York State Department of Environmental Conservation

DECLARATION STATEMENT - DECISION DOCUMENT

New 470 Project
Brownfield Cleanup Program
Brooklyn, Kings County
Site No. C224242
November 2016

Statement of Purpose and Basis

This document presents the remedy for the New 470 Project site, a brownfield cleanup site. The remedial program was chosen in accordance with the New York State Environmental Conservation Law and Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York (6 NYCRR) Part 375.

This decision is based on the Administrative Record of the New York State Department of Environmental Conservation (the Department) for the New 470 Project site and the public's input to the proposed remedy presented by the Department.

Description of Selected Remedy

The elements of the selected remedy are as follows:

1. Remedial Design
A remedial design program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- Maximizing habitat value and creating habitat when possible;
- Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals; and
- Integrating the remedy with the end use where possible and encouraging green and sustainable re-development.

2. Excavation
Excavation and off-site disposal of contaminant source areas, including:

- grossly contaminated soil, as defined in 6 NYCRR Part 375-1.2(u);
- soil exceeding the USEPA and 6 NYCRR Part 371 hazardous criteria for lead; and
- removal of any underground storage tanks (USTs), fuel dispensers, underground piping or other structures associated with a source of contamination.

Approximately 1,600 cubic yards of contaminated soil (soil above restricted-residential SCOs in the upper 2 feet) will be removed from the site to allow installation of the cover system. Clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) will be brought in to complete the backfilling of the excavation and establish the designed grades at the site, where necessary. The site will be re-graded to accommodate installation of a cover system as described in remedy element 3. Additional excavation related to site development is not part of the remedy.

3. Cover System
A site cover will be required to allow for restricted-residential use of the site in areas where the upper two feet of exposed surface soil exceeds the applicable soil cleanup objectives (SCOs). The site cover may consist of paved parking areas, sidewalks, or a soil cover. Where a soil cover is to be used it will be a minimum of two feet of soil placed over a demarcation layer, with the upper six inches of soil of sufficient quality to maintain a vegetative layer. Soil cover material, including any fill material brought to the site, will meet the SCOs for cover material as set forth in 6 NYCRR Part 375-6.7(d). In areas where building foundations or building slabs preclude contact with soil, the requirements for a site cover will be deferred until such time that they are removed.

4. Soil Vapor Extraction
Soil vapor extraction (SVE) will be implemented to remove volatile organic compounds (VOCs) from the subsurface. VOCs will be physically removed from the soil by applying a vacuum to wells that have been installed into the vadose zone (the area below the ground but above the water table). The vacuum draws air through the soil matrix which carries the VOCs from the soil to the SVE well. The air extracted from the SVE wells is then treated as necessary prior to being discharged to the atmosphere.

Four SVE wells will be installed into the vadose zone and screened from 3 feet below the ground surface to a depth of approximately 7 feet. The air containing VOCs extracted from the SVE wells will be treated by passing the air stream through activated carbon, which removes the VOCs from the air prior to it being discharged to the atmosphere. The operation of the components of the remedy will continue until the remedial objectives have been achieved, or until the Department determines that continued operation is technically impracticable or not feasible.

5. Vapor Mitigation
Any on-site buildings will be required to have a sub-slab depressurization system, or a similar engineered system, to mitigate the migration of vapors into the building from soil and/or groundwater.

6. Institutional Control
Imposition of an institutional control in the form of an environmental easement for the controlled

property which will:

- require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8(h)(3);
- allow the use and development of the controlled property for restricted-residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;
- restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH; and
- require compliance with the Department-approved Site Management Plan.

7. Site Management Plan

A Site Management Plan is required, which includes the following:

1. an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details the steps and media-specific requirements necessary to ensure the following institutional and/or engineering controls remain in place and effective:

Institutional Controls: The environmental easement discussed in Paragraph 6, above.

Engineering Controls: The cover system discussed in Paragraph 3, the SVE system discussed in Paragraph 4, and the sub-slab depressurization system discussed in Paragraph 5, above.

This plan includes, but may not be limited to:

- an Excavation Plan which details the provisions for management of future excavations in areas of remaining contamination;
- descriptions of the provisions of the environmental easement including any land use and groundwater use restrictions;
- a provision that should a building foundation or building slab be removed in the future, a cover system consistent with that described in Paragraph 3, above, will be placed in any areas where the upper two feet of exposed surface soil exceed the applicable soil cleanup objectives (SCOs);
- provisions for the management and inspection of the identified engineering controls;
- maintaining site access controls and Department notification; and
- the steps necessary for the periodic reviews and certification of the institutional and/or engineering controls.

2. a Monitoring Plan to assess the performance and effectiveness of the remedy. The plan includes, but may not be limited to:

- monitoring of soil vapor to assess the performance and effectiveness of the remedy;
- a schedule of monitoring and frequency of submittals to the Department;

3. an Operation and Maintenance (O&M) Plan to ensure continued operation, maintenance, inspection, and reporting of any mechanical or physical components of the active vapor mitigation system(s). The plan includes, but is not limited to:

- procedures for operating and maintaining the system(s); and
- compliance inspection of the system(s) to ensure proper O&M as well as providing the data for any necessary reporting.

Declaration

The remedy conforms with promulgated standards and criteria that are directly applicable, or that are relevant and appropriate and takes into consideration Department guidance, as appropriate. The remedy is protected of public health and the environment.

November 30, 2016

Date

Robert Cozzy, Director
Remedial Bureau B

DECISION DOCUMENT

New 470 Project
Brooklyn, Kings County
Site No. C224242
November 2016

SECTION 1: SUMMARY AND PURPOSE

The New York State Department of Environmental Conservation (the Department), in consultation with the New York State Department of Health (NYSDOH), has selected a remedy for the above referenced site. The disposal of contaminants at the site has resulted in threats to public health and the environment that would be addressed by the remedy. The disposal or release of contaminants at this site, as more fully described in this document, has contaminated various environmental media. Contaminants include hazardous waste and/or petroleum.

The New York State Brownfield Cleanup Program (BCP) is a voluntary program. The goal of the BCP is to enhance private-sector cleanups of brownfields and to reduce development pressure on "greenfields." A brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant.

The Department has issued this document in accordance with the requirements of New York State Environmental Conservation Law and 6 NYCRR Part 375. This document is a summary of the information that can be found in the site-related reports and documents.

SECTION 2: CITIZEN PARTICIPATION

The Department seeks input from the community on all remedies. A public comment period was held, during which the public was encouraged to submit comment on the proposed remedy. All comments on the remedy received during the comment period were considered by the Department in selecting a remedy for the site. Site-related reports and documents were made available for review by the public at the following document repositories:

Greenpoint Library
107 Norman Avenue
Brooklyn, NY 11222
Phone: 718-349-8504

Brooklyn Community Board 1
435 Graham Avenue
Brooklyn, NY 11211
Phone: 718-389-0009

Receive Site Citizen Participation Information By Email

Please note that the Department's Division of Environmental Remediation (DER) is "going paperless" relative to citizen participation information. The ultimate goal is to distribute citizen participation information about contaminated sites electronically by way of county email listservs. Information will be distributed for all sites that are being investigated and cleaned up in a particular county under the State Superfund Program, Environmental Restoration Program, Brownfield Cleanup Program, Voluntary Cleanup Program, and Resource Conservation and Recovery Act Program. We encourage the public to sign up for one or more county listservs at http://www.dec.ny.gov/chemical/61092.html

SECTION 3: SITE DESCRIPTION AND HISTORY

Location: The site is located at 12 Eckford Street in an urban area in the Greenpoint neighborhood of Brooklyn, New York. The approximately 21,630-square foot site is bounded by a former commercial building currently being used as a construction office for the site and residential buildings to the north; residential buildings to the east; Newton Street to the southeast; Eckford Street to the west; and Manhattan Avenue to the southwest.

Site Features: Currently, the site is vacant and unpaved. The buildings on-site have been demolished.

Current Zoning and Land Use: The site is zoned as M1-2/R6A (light manufacturing and residential uses) and is currently vacant. This zoning is consistent with the proposed use of the site. The surrounding area is developed primarily with residential and commercial properties.

Past Uses of the Site: The site formerly comprised Lots 30, 32, 33, and a portion of Lot 1. Former Lots 30, 32, and 33 have now been merged into Lot 33. According to historic Sanborn fire insurance maps, the site was undeveloped between 1887 and 1905. By 1916, Lot 1 was developed as an unspecified factory building, and former Lot 33 was developed with a barrel shed, a carriage garage, and a cooperage with an office. By 1942, Lot 1 was developed with a sash and door storage and a woodworking shop associated with the north-adjacent I. Feldman & Son Inc. sash and door manufacturer. Former Lot 30 was developed with a two-story building used for window sash storage. A gasoline tank was shown on the southwestern portion of former Lot 32. Former Lot 32 was labeled as “barrels, boxes, and automobile”. Former Lot 33 was developed with a cooperage and an office. By 1951, Lot 1 was developed with a metal container manufacturer and an enameling works with a baking oven and spray booths and former Lot 30 was labeled “to be: garage”. Former Lot 1 was developed with a new factory building in 1963 and with a spray booth and storage on the eastern portion by 1965. By 1965, former Lot 30 was developed as a garage and as a factory by 1978. By 1983, former Lot 32 was used for freight storage, and for motor freight storage between 1986 and 1991.

Site Geology and Hydrogeology: The stratigraphy of the site from the surface down consists of approximately 6-12 feet of historic fill, characterized by sand, gravel, and silt with concrete, asphalt, brick, and ash. Below the historic fill is a native sand, gravel, and silt stratum to a depth of at least 20 feet below grade. Bedrock was not encountered during the investigations.

Groundwater was encountered between approximately 10 and 12.5 feet below grade and flow is generally from east to west beneath the site.

A site location map is attached as Figure 1.

SECTION 4: LAND USE AND PHYSICAL SETTING

The Department may consider the current, intended, and reasonably anticipated future land use of the site and its surroundings when evaluating a remedy for soil remediation. For this site, alternatives (or an alternative) that restrict(s) the use of the site to restricted-residential use (which allows for commercial use and industrial use) as described in Part 375-1.8(g) were/was evaluated in addition to an alternative which would allow for unrestricted use of the site.

A comparison of the results of the Remedial Investigation (RI) to the appropriate standards, criteria and guidance values (SCGs) for the identified land use and the unrestricted use SCGs for the site contaminants is available in the RI Report.

SECTION 5: ENFORCEMENT STATUS

The Applicant under the Brownfield Cleanup Agreement is a Volunteer. The Volunteer does not have an obligation to address off-site contamination. The Department has determined that this site poses a significant threat to human health and the environment and there are off-site impacts that require remedial activities; accordingly, enforcement actions are necessary.

The Department will seek to identify any parties (other than the Volunteer) known or suspected to be responsible for contamination at or emanating from the site, referred to as Potentially Responsible Parties (PRPs). The Department will bring an enforcement action against the PRPs. If an enforcement action cannot be brought, or does not result in the initiation of a remedial program by any PRPs, the Department will evaluate the off-site contamination for action under the State Superfund. The PRPs are subject to legal actions by the State for recovery of all response costs the State incurs or has incurred.

SECTION 6: SITE CONTAMINATION

6.1: Summary of the Remedial Investigation

A remedial investigation (RI) serves as the mechanism for collecting data to:

- characterize site conditions;
- determine the nature of the contamination; and
- assess risk to human health and the environment.

The RI is intended to identify the nature (or type) of contamination which may be present at a site and the extent of that contamination in the environment on the site, or leaving the site. The RI reports on data gathered to determine if the soil, groundwater, soil vapor, indoor air, surface water or sediments may have been contaminated. Monitoring wells are installed to assess

groundwater and soil borings or test pits are installed to sample soil and/or waste(s) identified. If other natural resources are present, such as surface water bodies or wetlands, the water and sediment may be sampled as well. Based on the presence of contaminants in soil and groundwater, soil vapor will also be sampled for the presence of contamination. Data collected in the RI influence the development of remedial alternatives. The RI report is available for review in the site document repository and the results are summarized in section 6.3.

The analytical data collected on this site includes data for:

- groundwater
- soil
- soil vapor

6.1.1: Standards, Criteria, and Guidance (SCGs)

The remedy must conform to promulgated standards and criteria that are directly applicable or that are relevant and appropriate. The selection of a remedy must also take into consideration guidance, as appropriate. Standards, Criteria and Guidance are hereafter called SCGs.

To determine whether the contaminants identified in various media are present at levels of concern, the data from the RI were compared to media-specific SCGs. The Department has developed SCGs for groundwater, surface water, sediments, and soil. The NYSDOH has developed SCGs for drinking water and soil vapor intrusion. For a full listing of all SCGs see: http://www.dec.ny.gov/regulations/61794.html

6.1.2: RI Results

The data have identified contaminants of concern. A "contaminant of concern" is a contaminant that is sufficiently present in frequency and concentration in the environment to require evaluation for remedial action. Not all contaminants identified on the property are contaminants of concern. The nature and extent of contamination and environmental media requiring action are summarized below. Additionally, the RI Report contains a full discussion of the data. The contaminant(s) of concern identified at this site is/are:

1,1,1-trichloroethane
trichloroethene (TCE)
tetrachloroethene (PCE)
1,1-dichloroethane
MTBE (methyl-tert-butyl ether)
benzo(b)fluoranthene
arsenic
lead
mercury

The contaminant(s) of concern exceed the applicable SCGs for:

- groundwater
- soil
- soil vapor intrusion

6.2: Interim Remedial Measures

An interim remedial measure (IRM) is conducted at a site when a source of contamination or exposure pathway can be effectively addressed before issuance of the Decision Document.

There were no IRMs performed at this site during the RI.

6.3: Summary of Environmental Assessment

This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors.

Nature and Extent of Contamination:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides.

Soil: Soil samples were compared to the restricted-residential soil cleanup objectives (SCOs). No VOCs, PCBs, or pesticides were found above SCOs. Several heavy metals such as arsenic (maximum of 39 parts per million [ppm], compared to the SCO of 16 ppm), lead (14,000 ppm vs. 400 ppm), and mercury (7.6 ppm vs. 0.81 ppm) were found in the shallow soil across the site.

Shallow soil was also contaminated above the SCOs with SVOCs in a class of contaminants called polycyclic aromatic hydrocarbons (PAHs) (for example, benzo(b)fluoranthene). The highest PAH concentration found during the investigations was benzo(b)fluoranthene at 21 ppm (1 ppm SCO). PAHs are typically associated with incomplete combustion of coal or oil. Soil with heavy metal and PAH contamination of this nature is consistent with historic fill. No source area for the VOCs was found in on-site soil, but based on the groundwater and soil vapor results, a source area may be present at the boundary with the off-site portion of Lot 1.

Groundwater: Groundwater samples were compared to Class GA Ambient Water Quality Standards. PAHs were the only SVOCs detected slightly above standards. Naturally-occurring metals were also detected above standards in several samples, and a pesticide was found in a single water sample from the off-site portion of Lot 1. There were no PCBs in any samples.

On-site groundwater samples contained methyl tert butyl ether (MTBE) at concentrations of up to 48 ppb, above the standard of 10 ppb. Although on-site groundwater samples did not contain chlorinated VOCs, samples from the off-site portions of Lot 1 had VOCs 1,1,1-trichloroethane (1,1,1-TCA) at a maximum concentration of 43 ppb, 1,1-dichloroethane at 740 ppb , and trichloroethene (TCE) at 7.6 ppb. All three of these VOCs have a standard of 5 ppb.

Soil Vapor: Soil vapor was analyzed for VOCs, and the primary contaminants of concern for the site include 1,1,1-TCA, tetrachloroethene (PCE), and TCE. The highest levels of these VOCs

were measured in the northeastern part of the site in the northern part of former Lot 30, with 1,1,1-TCA at 37,300 micrograms/cubic meter (ug/m3), PCE at 956 ug/m3, and TCE at 1,120 ug/m3. Because these soil vapor concentrations were measured near the site boundary, off-site soil vapor may be a concern for the residential buildings adjacent to the site.

Special Resources Impacted/Threatened: None.

6.4: Summary of Human Exposure Pathways

This human exposure assessment identifies ways in which people may be exposed to site-related contaminants. Chemicals can enter the body through three major pathways (breathing, touching or swallowing). This is referred to as *exposure.*

Access is restricted by a fence. However, people who enter may come into contact with contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People will not come into contact with site related groundwater contamination unless they dig below the surface. People are not drinking the contaminated water because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

6.5: Summary of the Remediation Objectives

The objectives for the remedial program have been established through the remedy selection process stated in 6 NYCRR Part 375. The goal for the remedial program is to restore the site to pre-disposal conditions to the extent feasible. At a minimum, the remedy shall eliminate or mitigate all significant threats to public health and the environment presented by the contamination identified at the site through the proper application of scientific and engineering principles.

The remedial action objectives for this site are:

Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater with contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of volatiles, from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer to pre-disposal/pre-release conditions, to the extent practicable.
- Remove the source of ground or surface water contamination.

Soil

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of or exposure from contaminants volatilizing from contaminants in soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

Soil Vapor

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

SECTION 7: ELEMENTS OF THE SELECTED REMEDY

The alternatives developed for the site and the evaluation of the remedial criteria are presented in the Alternative Analysis. The remedy is selected pursuant to the remedy selection criteria set forth in DER-10, Technical Guidance for Site Investigation and Remediation and 6 NYCRR Part 375.

The selected remedy is a Track 4: Restricted use with site-specific soil cleanup objectives remedy.

The selected remedy is referred to as the Vapor Mitigation and Cover System remedy.

The elements of the selected remedy, as shown in Figure 2, are as follows:

1. Remedial Design

A remedial design program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- Maximizing habitat value and creating habitat when possible;
- Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals; and

• Integrating the remedy with the end use where possible and encouraging green and sustainable re-development.

2. Excavation

Excavation and off-site disposal of contaminant source areas, including:

• grossly contaminated soil, as defined in 6 NYCRR Part 375-1.2(u);
• soil exceeding the USEPA and 6 NYCRR Part 371 hazardous criteria for lead; and
• removal of any underground storage tanks (USTs), fuel dispensers, underground piping or other structures associated with a source of contamination.

Approximately 1,600 cubic yards of contaminated soil (soil above restricted-residential SCOs in the upper 2 feet) will be removed from the site to allow installation of the cover system. Clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) will be brought in to complete the backfilling of the excavation and establish the designed grades at the site, where necessary. The site will be re-graded to accommodate installation of a cover system as described in remedy element 3. Additional excavation related to site development is not part of the remedy.

3. Cover System

A site cover will be required to allow for restricted-residential use of the site, in areas where the upper two feet of exposed surface soil will exceed the applicable soil cleanup objectives (SCOs). The site cover may consist of paved parking areas, sidewalks, or a soil cover. Where the soil cover is required it will be a minimum of two feet of soil placed over a demarcation layer, with the upper six inches of soil of sufficient quality to maintain a vegetative layer. Soil cover material, including any fill material brought to the site, will meet the SCOs for cover material as set forth in 6 NYCRR Part 375-6.7(d). In areas where buildings or building foundations are located which preclude contact with site soil, they will serve in place of a site cover.

4. Soil Vapor Extraction

Soil vapor extraction (SVE) will be implemented to remove volatile organic compounds (VOCs) from the subsurface. VOCs will be physically removed from the soil by applying a vacuum to wells that have been installed into the vadose zone (the area below the ground but above the water table). The vacuum draws air through the soil matrix which carries the VOCs from the soil to the SVE well. The air extracted from the SVE wells is then treated as necessary prior to being discharged to the atmosphere.

Four SVE wells will be installed into the vadose zone and screened from 3 feet below the ground surface to a depth of approximately 7 feet. The air containing VOCs extracted from the SVE wells will be treated by passing the air stream through activated carbon, which removes the VOCs from the air prior to it being discharged to the atmosphere. The operation of the components of the remedy will continue until the remedial objectives have been achieved, or until the Department determines that continued operation is technically impracticable or not feasible.

5. Vapor Mitigation

Any on-site buildings will be required to have a sub-slab depressurization system, or a similar engineered system, to mitigate the migration of vapors into the building from soil and/or groundwater.

6. Institutional Control
Imposition of an institutional control in the form of an environmental easement for the controlled property which will:

- require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8(h)(3);
- allow the use and development of the controlled property for restricted-residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;
- restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH; and
- require compliance with the Department-approved Site Management Plan.

7. Site Management Plan
A Site Management Plan is required, which includes the following:
1. an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details the steps and media-specific requirements necessary to ensure the following institutional and/or engineering controls remain in place and effective:

Institutional Controls: The environmental easement discussed in Paragraph 6, above.

Engineering Controls: The cover system discussed in Paragraph 3, the SVE system discussed in Paragraph 4, and the sub-slab depressurization system discussed in Paragraph 5, above.

This plan includes, but may not be limited to:

- an Excavation Plan which details the provisions for management of future excavations in areas of remaining contamination;
- descriptions of the provisions of the environmental easement including any land use and groundwater use restrictions;
- a provision that should an existing or future on-site building be demolished in the future, a cover system consistent with that described in Paragraph 3 above will be placed in any areas where the upper two feet of exposed surface soil exceed the applicable soil cleanup objectives (SCOs);
- provisions for the management and inspection of the identified engineering controls;
- maintaining site access controls and Department notification; and
- the steps necessary for the periodic reviews and certification of the institutional and/or engineering controls.

2. a Monitoring Plan to assess the performance and effectiveness of the remedy. The plan includes, but may not be limited to:

- monitoring of soil vapor to assess the performance and effectiveness of the remedy;
- a schedule of monitoring and frequency of submittals to the Department;

3. an Operation and Maintenance (O&M) Plan to ensure continued operation, maintenance, inspection, and reporting of any mechanical or physical components of the active vapor mitigation system(s). The plan includes, but is not limited to:

- procedures for operating and maintaining the system(s); and
- compliance inspection of the system(s) to ensure proper O&M as well as providing the data for any necessary reporting.

Commack, NY 11725

RE: Brownfield Cleanup Application
New 470 Project
Site No. C224242

Dear Mr. Walker:

The New York State Department of Environmental Conservation (DEC) has received your application for participation in the Brownfield Cleanup Program (BCP) pursuant to Environmental Conservation Law (ECL) § 27-1401 et seq. We are pleased to advise you that your application has been determined to be complete based upon DEC's initial non-substantive review of your application package. While the application is complete, DEC may require additional information regarding site contamination in order to demonstrate that the site requires remediation pursuant to ECL § 27-1407(1). Additionally, if your application also seeks a determination that the site is eligible for tangible property credits under ECL § 27-1407(1-a), DEC may require additional information in order to make such a determination. If you propose additional material to supplement this application, DEC may consider it at its sole discretion. If additional material or information supplied significantly changes the scope of the site subject to the application, the Department may require you to publish another public notice of availability of the complete application. DEC would then adjust the time frame specified under ECL § 27-1407(6) for notifying you that your request for participation in the BCP is either accepted or rejected.

Pursuant to ECL § 27-1407(5), a 45-day public comment period is to begin after DEC's determination that an application is complete. DEC will publish a notice of the receipt of your application seeking public comment in the "Environmental Notice Bulletin." In accordance with the ECL and DEC regulations (see 6 NYCRR § 375-3.4(b)), you must notify, in writing, the Director of the Mayor's Office of Environmental Coordination and all parties on the site contact list[1] of the availability of the complete application for public review and comment.

In order to facilitate the notifications, DEC has prepared the enclosed document for your use as a Public Notice along with instructions. You are responsible for placing a copy of the application (including any attachments) and copies of all other related documents such as any site assessments, investigation reports, and/or remedial work plans in the document repository

[1] The site contact list includes (see section 375-1.2(as)) all interested "persons, government agencies, groups or organizations, including, but not limited to, the chief executive officer and zoning board of each county, city, town and village in which such site is located, the public water supplier which serves the area in which such site is located, any site residents, adjacent property owners, any person who has requested to be placed on the site contact list, and the administrator of any school or day care facility located on the site for the purposes of posting and/or dissemination at the facility. Provided, however, that where the site or adjacent real property contains multiple dwelling units, the remedial party may propose an alternative method, consistent with the citizen participation goals set forth in section 375-1.10, for providing such notice in lieu of mailing to each individual."

before the start of the public comment period. The language in the enclosed Public Notice must be used without alteration in the newspaper notice that you have published in accordance with sections 375-3.2(f) and 375-3.10.

The enclosed public notice must be provided to a local newspaper servicing the area including the site for publication no later than August 31, 2016. By August 30, 2016, the other notifications specified above must be distributed and documents placed in the repository. To the extent that the mailings and publications are not completed in accordance with these time frames, DEC will extend the comment period for a period sufficient to comply with the required public notice requirements running from the latest of these mailings and publications.

Within five days of the mailings, you must submit a "certificate of mailing" using the enclosed form. Additionally, you must submit a proof of publication provided by the newspaper within three days of your receipt of such document. Please submit these documents to DEC's Project Manager:

Larry Alden
NYS Dept. of Environmental Conservation
Division of Environmental Remediation – Bureau B
625 Broadway, 12th Floor
Albany, NY 12233-7016
larry.alden@dec.ny.gov

DEC will use all best efforts to notify you if the application is accepted or rejected within five days after the close of the public comment period. We look forward to working cooperatively to address the environmental conditions at the brownfield site and return this property to productive use.

Sincerely,

Kelly A. Lewandowski

Remedial Work Plan & Decision Document

Dear Mr. Walker:

The New York State Department of Environmental Conservation (Department) and the New York State Department of Health (NYSDOH) have reviewed the Remedial Work Plan (RWP) for the New 470 Project site dated November 17, 2016 and prepared by AKRF Engineering, P.C. on behalf of New 470 LLC. The RWP is hereby approved. Please ensure that a copy of the approved RWP is placed in the document repositories. The draft plan should be removed.

Attached is a copy of the Department's Decision Document for the site. The remedy is to be implemented in accordance with this Decision Document. Please ensure that a copy of the Decision Document is placed in the document repositories.

Please contact the Department's Project Manager, Larry Alden, at 518-402-9767 or larry.alden@dec.ny.gov at your earliest convenience to discuss next steps. Please recall the Department requires seven days' notice prior to the start of field work.

Sincerely,

Dear Amy Jordan,

Thank you for your email. This email is to inform you that your application has been processed.

The EPA ID# for New 470 Project is NYR000230789

Please confirm receipt of this email.

Please let me know if you may have any questions.

Thank you,

Lilian Castro

Great, thanks. 'New 470 Project' is the official site name in the state BCP, so I was hoping we could be consistent for the hazardous waste ID.

RE: Request for sampling of Emerging Contaminants
New 470 Project
C224242

Dear Mr. Walker:

The New York State Department of Environmental Conservation (DEC) is undertaking a Statewide evaluation of remediation sites to better understand the risk posed to New Yorkers by 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). PFAS have historically not been evaluated at remediation sites, and 1,4-dioxane has not been evaluated at the levels that are now thought to represent a health concern. This initiative is being undertaken as a result of these "emerging contaminants" having been found in a number of drinking water supplies in New York. Accordingly, the DEC is requiring that you test site groundwater for these chemicals. To accommodate this requirement, a select number of existing monitoring wells or grab samples if no wells are available, representative of the potential of the above-referenced site to be a source of these emerging contaminants, must be sampled. As discussed with your consultant, AKRF, one grab sample shall be collected in the Northeast corner of the site and analyzed, for PFAS and 1,4-dioxane, as well as a full VOC scan to better inform the potential off-site contamination entering the site. Additionally, a second grab groundwater sample shall be collected near the center of the site and analyzed for PFAS and 1,4-dioxane.

The attached guidance provides information on the analytical methods and reporting requirements. A second guidance document describes special precautions that need to be considered when sampling for PFAS.

If you wish to discuss the scope of the requested water testing, please contact me at Steven.Walsh@dec.ny.gov or 518-402-9824.

Sincerely,

Steve Walsh

to me

Hi Amy,
I just talked with the group handling emerging contaminant sampling about your question of sampling while there is dewatering occurring. Because there are no wells currently on site, we are not requiring sampling for ECs at this site. I apologize for the late notice.

Steve

April 1, 2019

Dear Brownfield Cleanup Program Applicant:

I am pleased to advise you that the New York State Department of Environmental Conservation (Department) is currently tracking your site in the Brownfield Cleanup Program (BCP) for completion of remedial work and potential issuance of a Certificate of Completion (COC) in 2019. The list of sites currently scheduled for completion this year is attached. Issuance of the COC represents a significant accomplishment for the entire team. Our experience indicates that understanding the process and allowing sufficient time for review and approval is necessary in order to ensure timely issuance of the COC. This is especially true as the calendar year draws to a close and voluminous year-end work products are being finalized for those COCs being sought by December 31st.

In an effort to facilitate the timely issuance of the COCs, the Division of Environmental Remediation (DER) and the Office of General Counsel are holding an informational session for BCP Applicants on May 22, 2019 setting a schedule (see Enclosure 1) that facilitates – but doesn't guarantee – issuance by December. DER is currently tracking approximately 100 BCP completions for 2019. Given the number of projects, it will be critical that the meetings set forth in this letter be attended by the Applicant and that all submissions be made in strict accordance with the schedule set forth herein. We have found that these meetings were very successful in facilitating COC issuance in recent years.

Informational Session and Schedule

The information session will be held at the Empire State Plaza, Meeting Room 6 in Albany beginning at 10:30 am. A map of the plaza is enclosed. Applicants who are seeking to receive a COC by December 31st are expected to attend and should also bring their representatives (e.g., consultants and attorneys), who have also been copied on this letter.

This session will provide an overview of the technical and legal requirements for the balance of the remedial process as well as the various templates that are available for use to complete this project. Importantly, Department staff will share lessons learned from prior years' experiences that will provide valuable insight into navigating your project to remedial closure. The critical path to obtain a COC will be discussed in detail during the informational session. This letter also sets forth the critical path milestones (see Enclosure 1). For those seeking a COC by December 31st, failure to make submissions consistent with the enclosed schedule will not provide sufficient time for the COC to be issued by December 31st and may result in the delay or loss of the Brownfield Tax Credits.

In an effort to facilitate timely completion for Applicant's meeting the attached schedule, the Department will focus its staff time on those projects which timely submit the documents. Accordingly, absent unusual circumstances, submissions after the dates set forth below would preclude the issuance of the COC by December 31st and would affect the timing or availability of any tax credits to which you may be entitled. It is important to note that compliance with this schedule enhances the opportunity for the COC issuance, but it is not a guarantee and doesn't create any rights.

Due to the large number of projects scheduled for completion this year, the Department will not be holding Calendar Call meetings, as we have in the past. It will therefore be incumbent on you, your consultant and your attorney to ensure that your project meets the milestones listed in Enclosure 1 of this letter. The Department's project team will track your compliance with the milestones listed in Enclosure 1, and work with you to resolve outstanding issues.

I strongly encourage you to attend the May 22nd meeting, along with your technical and legal team, to take advantage of this opportunity to understand the process and timing necessary to receive a COC. Also enclosed is a reservation form (Enclosure 2). Please sign and return the form to the address noted by May 1, 2019 and include the names of those attending.

Feel free to call Ms. Jennifer Hathaway at 518-402-9706, if you have any questions or need additional information.

Sincerely,

Michael J. Ryan, P.E.

Re: Environmental Easement for New 470 Project *("Site")*
Site ID No.: C224242
Brooklyn, Kings County

Dear Mr. Walker*:*

The above referenced Site requires an Environmental Easement as part of the remediation process. Information on finalizing remedial projects may be found on the Department's website at http://www.dec.ny.gov/chemical/48236.html. There are several items which constitute the New York State Department of Environmental Conservation's standard Environmental Easement package. These items include the following:

a) Title requirements;
b) Survey requirements;
c) Attorney/Applicant Checklist and Certification; and
d) Notice form.

Please note that the requirements for completing an environmental easement have recently been significantly reduced. Information on these items can be found on the Department's website page at the following links:

Title Requirements - http://www.dec.ny.gov/chemical/48231.html

Survey Requirements - http://www.dec.ny.gov/chemical/48242.html

Easement Checklist - http://www.dec.ny.gov/chemical/65118.html

Please work with your attorney to compile the package and submit it within 60 days of the date of this letter. Upon receipt of these documents the Department will prepare the Environmental Easement and transmit it to you for signature. Any questions regarding the legal requirements should be addressed to **Bradford Burns, Senior Attorney,** Office of General Counsel, at 518-402-9188 or by email: bradford.burns@dec.ny.gov. When the package has been completed with site-specific information, a hard copy must be submitted in its entirety to:

Bradford Burns, Esq.
New York State Department of Environmental Conservation
Office of General Counsel
625 Broadway
Albany, NY 12233-1500

An electronic copy of the package should be forwarded to:

Bradford Burns, Esq.
bradford.burns@dec.ny.gov

Steve Walsh
steven.walsh@dec.ny.gov

and

Rachel Seebacher
rachel.seebacher@dec.ny.gov

Please be advised that failure to include all the necessary documentation/information required in the Environmental Easement package will result in a delay of Department review and approval of the Easement.

If you have any questions concerning the technical aspects of this matter, please contact me at steven.walsh@dec.ny.gov.

Sincerely,

Steve Walsh
