Subject: 145 Wolcott Well Gauging/VEFR Update
Date: Tuesday, March 18, 2025 5:48:23 PM
Attachments: Figure 2-MW Location Plan.pdf MW-002, MW-008, MW-012 LNAPL Trends_v2.pdf

Steve,

As we continue bi-monthly well gauging, I'm sending along the attached trend summary for the wells that have contained LNAPL: MW002, MW008, and MW012. As you can see, the 5 VEFR events coupled with passive recovery using absorbent socks have substantially reduced the product volume in each well. As of our March 12 gauging event, only well MW008 contained product (less than 0.5 inches), and we haven't detected more than one inch of LNAPL in a well (MW008) since our last VEFR event on February 24. We pulled the socks from wells MW008 and MW012 on March 4 (well MW002 hasn't contained a sock since we commenced VEFR on January 28) and will return next week to gauge conditions. We'll update you then and continue to evaluate whether another VEFR event is warranted.

Let me know if you'd like to discuss.

Thanks.

Stuart Knoop, P.G.
