CERTIFICATIONS

I, Kristine McCarthy MacWilliams, certify that I am currently a NYS registered professional engineer and that this Remedial Action Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

EXECUTIVE SUMMARY

This Remedial Action Work Plan (RAWP) was prepared by PSG Engineering & Geology, D.P.C (PSG) on behalf of Stewart Purchaser LLC and Gardner Purchaser LLC (Volunteer) to remediate the Avant Gardner property located at 111 Gardner Avenue and 140 Stewart Avenue in Brooklyn, New York (the Site). The Site was enrolled in the Brownfield Cleanup Program (BCP) on October 30, 2017, and was listed on the Brownfield Cleanup Agreement (BCA) under site name Avant Gardner, New York State Department of Environmental Conservation (NYSDEC) Site No. C224258.

This RAWP summarizes the nature and extent of contamination as determined from Remedial Investigation (RI) activities performed by PSG between 2019 and 2023. The remedy described in this RAWP is consistent with the procedures defined in the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (DER-10) and complies with NYSDEC standards, criteria, and guidance (SCG). The remedy described in this document also complies with applicable federal, state, and local laws, regulations, and requirements. The NYSDEC and New York State Department of Health (NYSDOH) have determined that this Site does not pose a significant threat to public health or the environment. The remedial investigation for this Site did not identify fish and wildlife resources.

In conjunction with the proposed RAWP scope of work, PSG also conducted Pre-Design Investigation (PDI) activities to address data gaps identified by the NYSDEC in a comment letter dated February 3, 2023. A more detailed description of the proposed Remedial Action (RA) is provided in Section 3.0 of this RAWP.

Site Description/Physical Setting/Site History

The Site is located in the Williamsburg section of Brooklyn, New York and identified as Block 2977 and Lots 1, 14, 15 and 16 on the New York City Tax Map. The Site is approximately 1.3-acres and is bound by Meserole Street to the north, railroad tracks to the south, Gardner Avenue to the east, and Stewart Avenue to the west. The Site is occupied by two (2) one-story buildings,

one on the northeast corner (111 Gardner Avenue) and one on the southwest corner (140 Stewart Avenue), with asphalt paved areas throughout most of the remaining areas of the Site.

The Site is currently an entertainment/music venue, but previously housed steel fabrication operations and a rubbish removal service. Onsite operations consist of an entertainment/music venue, office areas, full-service bars, temporary food stands and a ticket office. The "Brooklyn Mirage" is located in the courtyard between the two buildings. This area includes scaffolding consisting of a two-story catwalk and a four-story observation tower. This structure includes open bars, VIP seating areas, observation decks, and a stage. There are no enclosed areas intended for human occupation within the scaffolding structure.

Site occupation is limited to public and staff occupancy during events, staff required for setup, ticket and office areas, operation, and take-down immediately prior to, during and after the scheduled events. The ticketing area is unused during non-event hours, except for maintenance or repairs. The entire occupancy of the Site includes 15-20 staff members for daily activities and temporary occupancy of up to 4,000 guests on average for larger public events and 300 for smaller events.

From 2000 to 2013, Filco Carting utilized a portion of the 111 Gardner Avenue building and adjacent paved area as a truck maintenance garage for routine maintenance and repair of trucks. The garage used degreasers, lubricants, hydraulic oils, and antifreeze, stored in tanks, 55-gallon drums and other assorted containers. Based on previous assessments at the Site, housekeeping was noted to be poor, and there is the potential for the related use and disposal of these hazardous materials to have impacted environmental conditions at the Site.

Other historical activities included a chemical company/liquid bleach manufacturer that operated from at least 1933 to 1992. Based on Sanborn Maps for the Site, the manufacturing operations appear to have been conducted on the southeastern portion of this parcel. Regulatory records indicate that chemicals were stored in aboveground storage tanks (ASTs) and drums; however, data included in the regulatory database only date back to the 1980s. No information is known on the use, storage or disposal of hazardous materials or the chlorine manufacturing operations prior to the 1980s.

Summary of the Remedial Investigation

Site investigations conducted by GRS Group (GRS) in 2016 determined that the Site contains volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals impacts above applicable standards in soil and groundwater. PSG conducted Membrane Interface Probe (MIP) investigations between September 2017 and January 2020 to identify Areas of Concern (AOCs) for targeted investigation during the RI. Based on the MIP results, PSG identified ten (10) AOCs that warranted further investigation based on photoionization detector (PID), flame ionization detector (FID), or halogen specific detector (XSD) responses.

Sampling data suggest that chlorinated volatile organic compound (cVOC) soil hot spots are present in the vicinity of RI borings 7-B1 and 10-B6, where tetrachloroethene (PCE) concentrations of 2,200 milligram per kilogram (mg/Kg) and 200 mg/Kg, respectively, were identified. These soil hot spots may be source areas with the potential to contribute to additional groundwater impacts. Based on the soil analytical data obtained during the RI and the previous investigations, the remaining VOC exceedances do not appear to have resulted in significant impacts to Site groundwater. Remedial action is warranted to address the cVOC soil hot spots in AOC-7 and AOC-10.

Sitewide historic fill-related impacts are also present in shallow soils. However, these exceedances do not appear to have had a significant impact on groundwater quality at the Site. Additionally, Site soils are capped by the existing buildings and pavement.

Vertical groundwater profiling data collected by PSG in April 2022 identified increasing cVOC concentrations in groundwater from temporary well point 7-TW4. As such, remedial action is warranted to address cVOC impacted groundwater in AOC-7.

Subsurface investigations conducted at the Site between 2016 and 2021 also identified SVOCs, metals, dissolved metals, polychlorinated biphenyls (PCBs), perfluorooctanoic acid (PFOA), and perfluorooctane sulfonic acid (PFOS) in shallow zone groundwater samples at concentration marginally above Ambient Water Quality Guidance (AWQG) levels. These exceedances are likely a result of historical industrial activities and urban fill material at the Site.

Benzene was identified in a soil vapor sample collected at the northwestern property boundary. In addition, cVOCs, including cis 1,2 dichloroethene (c1,2-DCE), PCE, and trichloroethene (TCE), were identified in a soil vapor sample collected along the southern boundary in the vicinity of AOC-7. These findings are consistent with data identified during the previous investigations. No sensitive receptors are present in close proximity to the elevated soil vapor concentrations identified at the Site, with the exception of potentially occupied commercial properties located across the unpaved railroad tracks.

Qualitative Human Health Exposure Assessment (QHHEA)

The RI was sufficient to complete a Qualitative Human Health Exposure Assessment (QHHEA), which was performed to determine whether the Site poses an existing or future health hazard to the Site's occupants or surrounding population and off-site areas. The RI was evaluated to determine whether there is a potential health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport.

Potential pathways to human receptors include direct contact (dermal absorption), ingestion, and inhalation of identified constituents of concern. Offsite direct contact and ingestion with subsurface soils and groundwater is unlikely to occur since contaminated soil at the Site are covered by impervious materials and groundwater beneath the Site and surrounding area are not used for drinking purposes. In addition, no private potable and non-potable wells exist within ½-mile of the Site. Working in accordance with a HASP and a CAMP, as well as wearing proper personal protective equipment to prevent offsite migration of contaminations during construction, should prevent potential offsite exposures. Following remediation activities, occupants of the Site could potentially be exposed to vapor intrusion if remediation of the source area is not completed and if preventive measures are not incorporated to protect against contaminated soil vapor intrusion. However, two active sub-slab depressurization systems (SSDS) currently in place at the Site are effectively protecting the buildings from vapor intrusion and rendering the potential vapor intrusion pathway incomplete. Post-remedial soil vapor sampling will be conducted at the southern property boundary, adjacent to the AOC-7 cVOC hot spot, to determine if additional mitigation measures are warranted. No public events will take place during remediation activities or until the

cover system is complete, and no materials will be staged at the Site once the venue is reopened for public events.

Summary of the Remedy

The objective of this RAWP is to achieve a Track 4 remedy for commercial use consisting of cVOC soil and groundwater hot spot remediation, and engineering and institutional controls to prevent exposure to subsurface contaminated media. The developed remedial program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals;
- Integrating the remedy with the end use where possible and encouraging green and sustainable re-development; and
- Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this Site, any future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York (or most recent edition) to improve energy efficiency as an element of construction.

As part of the remedial program, to evaluate the remedy with respect to green and sustainable remediation principles, an environmental footprint analysis was completed. The environmental footprint analysis was completed using the U.S. Environmental Protection Agency (EPA) Spreadsheets for Environmental Footprint Analysis (SEFA) calculator. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction and material use were estimated, and goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, were incorporated into the remedial program, as appropriate. Progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the Final Engineering Report (FER), including a comparison to the goals established during the remedial program.

The Environmental Footprint Analysis, which incorporates a Green Remediation Implementation Plan to detail procedures and tracking of these items and a Climate Screening of the Site to identify potential changes in climate hazards, is included in **Appendix A**.

To ensure environmentally responsible remediation at the Site, the following goals have been established and will be tracked during the remedial action:

- Minimize Greenhouse Gas Emissions: Optimize fuel use and incorporate clean energy sources to reduce emissions.
- Reduce Energy Consumption: Use energy-efficient equipment and practices, minimizing idle times and excess usage.
- Conserve Water: Optimize water use for ISCR and implement water-saving practices.
- Minimize Soil Impacts: Conduct precise excavations and use locally sourced clean soil for backfilling.
- Effective Waste Management: Reduce waste generation and ensure proper disposal in compliance with regulations.
- Promote Worker Safety and Community Health: Implement protective measures and maintain open communication with the community.
- Sustainable Practices: Use environmentally friendly materials and green procurement practices.

Additionally, a Climate Screening Checklist was completed for the Site to evaluate the impact of climate change on the project site and the proposed remedy. Based on the results of the Climate

Screening Checklist, no further actions are required at this time. The Climate Screening Checklist is provided in **Appendix A**.

The following remedy is proposed for the Site:

1. **Excavation:** PSG will conduct remedial hot spot excavations at AOC-7 and AOC-10 to remove soils above the water table exceeding the protection of groundwater soil cleanup objectives (PGSCOs) for cVOCs. The remedial excavations are expected to encompass an area approximately 660 sf at AOC-7 and 330 sf at AOC-10 and extend from the ground surface to the water table (encountered between 5 to 10 feet below ground surface [bgs]). Excavated soil will be temporarily stockpiled or staged on-Site in roll-offs, pending disposal to an appropriate off-site disposal facility. All roll-off containers will be lined and covered at the end of each workday. The remedial excavations will be backfilled with clean soil meeting the requirements of 6 NYCRR Part 375-6.7(d), and the asphalt and concrete pavement will be restored. Prior to conducting the excavations, PSG will complete waste characterization sampling to obtain acceptance of the waste by the selected disposal facility. PSG obtained a Contained-In Determination from the NYSDEC on November 20, 2024 which clarified that soil excavated from AOC-10 and soils excavated from AOC-7 except the soil within the area delineated to the west by boring 7-B2; to the south by boring 7-1S; to the north by 7-B1N; and to the east by 7-B1E did not have to be managed as hazardous waste. The Contained-In Determination further stated that a contained-in request could be made for soils from borings 7-B1W, 7-B1WW, and 7B1 after the area was excavated and confirmatory samples were received; until that time, soils from these borings would be characterized as hazardous waste. An estimated 321 cubic yards of non-hazardous soil and up to 22 cubic yards of hazardous soil is expected to be excavated and removed from the Site.

2. **In-Situ Chemical Reduction (ISCR):** PSG consulted with Provectus Environmental Products, Inc. (Provectus) to develop an appropriate chemical injection plan to address the cVOC impacts in soil and groundwater at the Site. Provect-IR® is a unique mixture of reagents that optimizes the in situ reductive dechlorination of chemicals present in soil and groundwater. Following placement of Provect-IR® into the subsurface environment, a number of physical, chemical and microbiological processes combine to create very strong reducing conditions that

stimulate rapid and complete dechlorination of organic solvents and other recalcitrant compounds.

Prior to backfilling the cVOC soil hot spot excavation at AOC-7, Provect-IR® will be applied in the open excavation at 2% of soil mass using a 3-foot long vertical target interval at the water table. A total of 1,000 pounds of Provect-IR® is estimated for the excavation.

The ISCR program will also include using a direct push-drill rig to inject Provect-IR® into the subsurface to address the chlorinated solvent target area. The ISCR injection activities will include a 3,000 square foot target area with a maximum 110-foot-long vertical target zone, which is the effective limit of the direct-push equipment at the Site. The Provect-IR® will be applied at an average of 0.30% of soil mass, which will ensure effective reagent distribution while overcoming the reagent demand for contaminant destruction. The ISCR program will also incorporate bioaugmentation with Dehalococcoides (DHC; 29 liters) to ensure efficient cVOC destruction.

The injections will include the application of approximately 34,800 pounds of Provect-IR® which will be mixed with approximately 1,728 gallons of water. Injections will be applied to 23 injection points across the Site. Six of these injection points, which cover a 400 square foot area, will be applied from 15 to 110 feet bgs, where the highest degree of cVOC impacts in groundwater are located. The residual plume target zone is from 15 to 40 feet bgs and will be addressed via seventeen other injection points.

With the exception of a cVOC hot spot in AOC-7, relatively consistent cVOC impacts are present in intermediate and deep groundwater samples across the Site, with similar concentrations identified in offsite, upgradient borings and monitoring wells. These results indicate that the deep and intermediate zones have also been impacted by an offsite regional plume, which has migrating onto the Site. Based on prior measurements, the aquifer exhibits reducing biogeochemical conditions including dissolved oxygen (DO) at less than 1 part per million (ppm) and negative oxidation-reduction potential (ORP), and neutral pH. The objective of the ISCR program is to reduce the cVOC groundwater concentrations at AOC-7 such that

cVOC concentrations are more consistent with sitewide conditions and to enhance natural attenuation for further reduction of the residual concentrations.

3. Monitoring Well Installations: PSG will install monitoring wells around the injection area to ensure that the treatment does not alter groundwater flow and to monitor for potential off-site migration to the south. Two downgradient monitoring well clusters and one monitoring well couplet to the southwest will be installed to monitor the effectiveness of the ISCR program at AOC-7 and to monitor for potential off-site migration to the south. Each monitoring well cluster will include a shallow well screened at 5-20 feet bgs, two intermediate wells screened at 35-40 feet bgs and 65-70 feet bgs, respectively, and a deep well screened at 105-110 feet bgs. One monitoring well cluster will be installed immediately west-northwest of the ISCR treatment area at AOC-7, and a second downgradient monitoring well cluster will be installed in the sidewalk or edge of pavement along Stewart Avenue, immediately west-northwest of AOC-3. In addition, PSG will install two monitoring wells near the southern property boundary, in the vicinity of RI temporary well 7-TW3.The monitoring wells will be installed to 25 feet bgs and 45 feet bgs, respectively, to intersect the Provect-IR® residual plume target zone at 15 to 40 feet bgs. The shallow monitoring well will be screened at 5-20 feet bgs and the deeper monitoring well will be screened at 35-40 feet bgs.

4. Groundwater Sampling: PSG will conduct pre- and post-remediation groundwater sampling events to establish baseline conditions and monitor the effectiveness of the RA. Groundwater monitoring will include sampling the existing monitoring wells (MW-1, MW-3, MW-4, MW-5, and MW-6) and the newly installed cluster and couplet wells prior to and approximately 60-days after completing the ISCR injections, and on a quarterly basis thereafter. PSG notes that existing monitoring well MW-2 will be demolished during the cVOC hot spot excavation at AOC-7. Monitoring for contaminants of concern and geochemical degradation parameters will be completed up-gradient, down-gradient, and within the treatment zone. Groundwater samples will be analyzed for total and dissolved methods via Environmental Protection Agency (EPA) Method 6020B/7470A chloride, sulfate, nitrate, and nitrite via EPA Method 300, total organic carbon via EPA Method 9060A, and dissolved gases

via EPA Method 3810. PSG will conduct the groundwater sampling events in accordance with the procedures presented in the QAPP (Appendix I).

5. Engineering Controls - Site Cover System: The site currently has an existing cover system consisting of asphalt, concrete, and building slabs. This cover system will be restored following the completion of the excavation outlined in remedy element 1, above, and will be visually inspected to ensure that the engineering control is functioning to prevent direct exposure to remaining contaminated soil.

6. Engineering Controls – Sub-Slab Depressurization Systems: There are two existing SSDSs (one installed beneath 140 Stewart Avenue and one beneath 111 Gardner Avenue buildings). These systems were installed in May 2016 and June 2017, respectively, and have been operating continuously since then to mitigate the potential for vapor intrusion from the subsurface into the Site buildings. The SSDSs will continue to operate until permission is granted from NYSDEC to shut them down.

7. Institutional Controls – Environmental Easement: An Environmental Easement (EE) will be recorded against the property to ensure long-term management of remaining contamination and to require implementation of the Site Management Plan (SMP). The EE will include use restrictions limiting the use of the Site to commercial/industrial use, restricting the use of groundwater, and restricting unauthorized excavation or disturbance of the cover system.

8. Institutional Controls – Site Management Plan: An SMP will be developed which will include, but not be limited to: an Institutional and Engineering Control Plan; and Excavation Work Plan; a Monitoring Plan; and an Operation and Maintenance Plan.

REMEDIAL ACTION WORK PLAN

1.0 INTRODUCTION

Stewart Purchaser, LLC and Gardner Purchaser, LLC entered into a BCA with the NYSDEC in October 2017, to investigate and remediate the 1.83-acre property located at 111 Gardner Avenue and 140 Stewart Avenue in Brooklyn, Kings County, New York. Stewart Purchaser, LLC and Gardner Purchaser, LLC are collectively a Volunteer in the BCP. Commercial use is proposed for the property.

This RAWP summarizes the nature and extent of contamination as determined from data gathered during the RI performed between May and June 2021. The RAWP provides an evaluation of a Track 1 cleanup and other applicable Remedial Action alternatives, their associated costs, and the recommended and preferred remedy. The remedy described in this RAWP is consistent with the procedures defined in DER-10 and complies with applicable SCGs. The remedy described in this RAWP also complies with applicable Federal, State, and local laws, regulations, and requirements. The NYSDEC and NYSDOH have determined that this Site does not pose a significant threat to human health and the environment. The RI for this Site did not identify fish and wildlife resources.

A formal Remedial Design document /will not be prepared.

1.1 SITE LOCATION AND DESCRIPTION

The Site is located in Kings County, Brooklyn, New York and is identified as Block 2977 and Lots 1, 14, 15, and 16 on the Brooklyn Tax Map. The Site is situated on an approximately 1.83-acre area bounded by Meserole Street to the north, the Long Island Railroad to the south, Gardner Avenue to the east, and Stewart Avenue to the west. A United States Geological Survey (USGS) topographical quadrangle map (**Figure 1**) depicts the Site location. A Site Boundary Map is attached as **Figure 2**.

1.2 CONTEMPLATED END USE

The Site is currently an entertainment/music venue and will continue to serve as an entertainment/music venue following the completion of remedial activities. The RA to be performed under this RAWP is intended to make the Site protective of human health and the environment consistent with its current use. There is currently no proposed redevelopment plan for the Site.

1.3 DESCRIPTION OF SURROUNDING PROPERTY

According to the New York City (NYC) Oasis Map, the Site and surrounding area are located in a Manufacturing District, which is currently zoned "Industrial and Manufacturing Buildings". North of the Site, and across Meserole Street is Best Choice Trading Corporation and Alexander Supply, which operate in an industrial building. Oriental Lumber is located east of the Site and across Gardner Avenue. Another industrial building, D&M Lumber Products, is located west of the Site, across Stewart Avenue. The southern Site border is an active railroad line, owned by the Long Island Railroad. South of the railroad are the following industrial buildings; Caesarstone Quartz Surfaces, United Rentals, and Montebello Food Corporation. PSG identified no sensitive receptors within a 500-foot radius of the Site. Newtown Creek is approximately 1,190 feet to the west of the Site. Residential buildings are located approximately 1,460 feet southeast of the Site. No daycare facilities, hospitals, schools, senior living centers, or other potential sensitive receptors are located within 500 feet of the Site.

1.4 SITE HISTORY

1.4.1 Past Uses and Ownership

From 2000 to 2013, Filco Carting utilized a portion of the 111 Gardner Avenue building and adjacent paved area as a truck maintenance garage for routine maintenance and repair of trucks. The garage used degreasers, lubricants, hydraulic oils, and antifreeze, stored in tanks, 55-gallon drums and other assorted containers. Based on previous assessments at the Site, housekeeping was

noted to be poor and there is the potential for the related use and disposal of these hazardous materials to have impacted environmental conditions at the Site.

Other historical activities included a chemical company/liquid bleach manufacturer that operated from at least 1933 to 1992. Based on Sanborn Maps for the Site, the manufacturing operations appear to have been conducted on the southeastern portion of this parcel. Regulatory records indicate that chemicals were stored in aboveground storage tanks (ASTs) and drums; however, data included in the regulatory database only date back to the 1980s. No information is known on the use, storage or disposal of hazardous materials or the chlorine manufacturing operations prior to the 1980s.

1.4.2 Review of Sanborn Maps

Sanborn Maps available for this Site were reviewed prior to preparation of the RAWP and are summarized below.

1888, 1907: The Site is depicted as unimproved land.

1933: The Site is depicted as developed with a rail line and rail spur on the eastern portion of the property. To the west of the rail line, a liquid bleach manufacturing structure is depicted. The Site is depicted as developed with an iron and steel warehouse and iron storage area on the western portion of the property.

1951: The Site is depicted as developed with a rail line and rail spur on the eastern portion of the property. To the west of the rail line, a gas tank (near the northern property boundary), an office/warehouse/auto garage building, a liquid bleach manufacturing structure, and warehouse are depicted. Three storage areas are depicted in the central portion of the property. The Site is depicted as developed with an iron and steel warehouse on the western portion of the property.

1965: The Site is depicted as developed with a warehouse and office on the northeastern corner of the property. A rail line and rail spur are depicted on the eastern portion of the Site. To the west of the rail line, a gas tank (near the northern property boundary), an office/warehouse/auto garage building, a liquid bleach manufacturing structure, and warehouse are depicted. The Site is depicted as developed with a vacant structure on the western portion of the property.

1968, 1977, 1979, 1980-1982, 1986-1995: The Site is depicted as developed with a warehouse and office on the northeastern corner of the property. A rail line and rail spur are depicted on the eastern portion of the Site. To the west of the rail line, a gas tank (near the northern property boundary), an office/warehouse/auto garage building, a liquid bleach manufacturing structure, and warehouse are depicted. The Site is depicted as developed with a structure that appears to be utilized for lumber storage on the western portion of the property.

2001-2005: The Site is depicted as developed with a warehouse and office on the northeastern corner of the property. A rail line and rail spur are depicted on the eastern portion of the Site. The Site is depicted as developed with a structure that appears to be utilized for lumber storage on the western portion of the property.

2006-2007: The Site is depicted as developed with a warehouse and office on the northeastern corner of the property. A rail line and rail spur are depicted on the eastern portion of the Site. The Site is depicted as developed with a "Steel Co" on the western portion of the property.

1.4.3 Summary of Previous Investigations

1.4.3.1 Pre-BCP Reports

The following environmental work plans and reports were prepared for the Site prior to the Site's entry into the BCP on October 30, 2017.

- *Phase I Environmental Site Report,* January 2016, prepared by GRS,
- *Phase II Environmental Site Assessment Report,* February 2016, prepared by GRS,
- *Phase III Environmental Site Assessment Report,* March 2016, *prepared by GRS,*
- *SSDS Installation & Air Sampling Report,* May 2016, prepared by NYCO Environmental & Dewatering Corp (NYCO),
- *Sampling and Excavation Plan,* January 2017, prepared by GCE,
- *Additional Limited Site Investigation Report,* April 2017, prepared by GCE,
- *Geotechnical Engineering Report,* April 2017, prepared by GZA GeoEnvironmental of New York (GZA),
- *Vapor Intrusion Investigation,* May 2017, prepared by PSG; and

- *Preliminary Interior Investigation,* September 2017, prepared by PSG.

Salient information presented in these reports is summarized below.

Phase I ESA, GRS (January 2016):

- From 2000 to 2013, Filco Carting utilized a portion of the 111 Gardner Avenue building and adjacent paved area as a truck maintenance garage for routine maintenance and repair of the trucks that are part of Filco Carting. The garage used degreasers, lubricants, hydraulic oils, and antifreeze and all were stored in tanks, 55-gallon drums and other assorted containers. Housekeeping was noted to be poor. Based on the observed conditions, there is the potential for the related use and disposal of these hazardous materials to have impacted environmental conditions at the property.

- Historical activities included a chemical company/liquid bleach manufacturer that operated from at least 1933 to 1992. Based on the review of Sanborn Maps, the manufacturing operations were conducted in a set of connecting buildings on the southeastern portion of this parcel. Regulatory records indicate chemicals were stored in four ASTs and drums; however, data included in the regulatory database only date back to the 1980s. No information is known on the use, storage or disposal of hazardous materials or the chlorine manufacturing operations prior to the 1980s.

Phase II ESA, GRS (February 2, 2016):

- The scope consisted of the installation of 11 soil borings on the property on January 21, 2016. Three soil borings were advanced at the Skorr Steel property at 140 Stewart Avenue to depths between 15 and 20 feet bgs, and one temporary well was constructed. Seven soil borings were advanced at the Filco Carting property at 111 Gardner Avenue to depths of 15 feet bgs, and three temporary wells were constructed. No elevated PID readings above ambient air concentrations (<2.0 ppm) or olfactory/visual indications of contamination were observed in the samples collected. Groundwater was encountered in each of the borings at depths of between 9.0 and 14 feet bgs. Eleven soil samples (one from each boring) and four groundwater samples were analyzed for VOCs, polynuclear aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPH) as diesel range organics

(DRO), gasoline range organics (GRO), and oil range organics (ORO), and Resource Conservation Recovery Act (RCRA) 8 metals.

- Soil samples were collected from 9 and 10 feet bgs at 111 Gardner Avenue and from 14 feet bgs at 140 Stewart Avenue
- Evidence of soil and groundwater impact was detected during this investigation:
    - Numerous metals (mercury, arsenic, barium, cadmium, total chromium, lead, and selenium) were detected in one or more soil samples at concentrations above the NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs). Mercury, arsenic, and lead were detected in one or more of the soil samples at concentrations that exceed the NYSDEC Industrial Use SCO (IUSCO). Arsenic was detected at a maximum concentration of 50.3 mg/Kg; barium was detected at a maximum concentration of 4,040 mg/Kg; cadmium was detected at a maximum concentration of 2.5 mg/Kg; chromium was detected at a maximum concentration of 81.4 mg/Kg; lead was detected at a maximum concentration of 5,340 mg/Kg; mercury was detected at a maximum concentration of 429 mg/Kg; and selenium was detected at a maximum concentration of 4.36 mg/Kg.
    - Several PAHs, including benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)pyrene, chrysene, dibenz(a,h)anthracene, and indeno(1,3,4-cd)pyrene were detected in one or more of the soil samples above the NYSDEC UUSCOs, with benzo(a)pyrene detected in one soil sample above the NYSDEC IUSCO. Benzo(a)anthracene was detected at a maximum concentration of 4.05 mg/Kg; benzo(b)fluoranthene was detected at a maximum concentration of 0.849 mg/Kg; benzo(k)pyrene was detected at a maximum concentration of 3.44 mg/Kg; chrysene was detected at a maximum concentration of 3.68 mg/Kg; dibenz(a,h)anthracene was detected at a maximum concentration of 0.605 mg/Kg; and indeno(1,3,4-cd)pyrene was detected at a maximum concentration of 1.82 mg/Kg.
    - Dissolved arsenic (maximum concentration of 225 micrograms per liter (µg/L)), mercury (maximum concentration of 7.35 µg/L), and lead (maximum concentration of

1,610 µg/L) were detected in one or more of the groundwater samples at concentrations above the NYSDEC AWQS.

- PAHs including benzo(b)fluoranthene (maximum concentration of 0.625 µg/L), benzo(k)fluoranthene (maximum concentration of 0.259 µg/L), chrysene (maximum concentration of 0.87 µg/L), and indeno(1,3,4-cd)pyrene (maximum concentration of 0.204 µg/L) were also detected in one or more of the groundwater samples above the AWQS.
- CVOCs including PCE, TCE, c12-DCE, and vinyl chloride were detected in two groundwater samples above the AWQS. PCE was detected at a maximum concentration of 46.1 µg/L, TCE was detected at a maximum concentration of 9.65 µg/L, c12-DCE was detected at a maximum concentration of 124 µg/L, and vinyl chloride was detected at a maximum concentration of 17.8 µg/L.

Phase III Investigation, GRS (March 11, 2016):

- Twenty-two (22) soil borings were advanced on the property on February 24-26, 2016. Each soil boring was advanced to a depth of 10 bgs. Continuous soil samples were collected from the borings to the terminal depths. Soil samples were collected at intervals at 3, 6, and 9 feet bgs. In order to evaluate groundwater quality, four monitoring wells were installed at depths of 18 feet bgs.
- Soil encountered at the property consisted mainly of dark brown and black sand.
- The laboratory report indicated that numerous metals (arsenic, barium, cadmium, chromium, lead, mercury, and silver) were detected in one or more soil samples at concentrations above the UUSCOs. Mercury, arsenic, barium, and lead were detected in one or more of the soil samples at concentrations that exceeded the Commercial Use (CU) SCOs. Arsenic was detected at a maximum concentration of 263 mg/Kg; barium was detected at a maximum concentration of 5,570 mg/Kg; cadmium was detected at a maximum concentration of 4.45 mg/Kg; chromium was detected at a maximum concentration of 457 mg/Kg; lead was detected at a maximum concentration of 5,670

mg/Kg; mercury was detected at a maximum concentration of 52.3 mg/Kg; silver was detected in one soil sample at a concentration of 3.61 mg/Kg.

- The VOCs c12-DCE and TCE were detected in two soil samples above UUSCOs at maximum concentrations of 22.1 mg/Kg and 127 mg/Kg, respectively. TCE was detected in one soil sample above UUSCOs at a concentration of 6.25 mg/Kg and vinyl chloride was detected in the same soil sample above UUSCOs at 0.0782 mg/Kg.

- SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,3,4-cd)pyrene, naphthalene, phenanthrene, and pyrene were detected in one or more of the soil samples above the UUSCOs. Benzo(a)anthracene, benoz(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene were detected above CUSCOs in multiple soil samples. Benzo(a)anthracene was detected at a maximum concentration of 223 mg/Kg; benzo(a)pyrene was detected at a maximum concentration of 196 mg/Kg; benzo(b)fluoranthene was detected at a maximum concentration of 217 mg/Kg; benzo(g,h,i)perylene was detected at a maximum concentration of 115 mg/Kg; benzo(k)fluoranthene was detected at a maximum concentration of 71.7 mg/Kg; chrysene was detected at a maximum concentration of 165 mg/Kg; dibenz(a,h)anthracene was detected at a maximum concentration of 29.5 mg/Kg; fluoranthene was detected at a maximum concentration of 589 mg/Kg; fluorene was detected at a maximum concentration of 146 mg/Kg; indeno(1,3,4-cd)pyrene was detected at a maximum concentration of 93.6 mg/Kg; naphthalene was detected at a maximum concentration of 283 mg/Kg; phenanthrene was detected at a maximum concentration of 877 mg/Kg; and pyrene was detected at a maximum concentration of 555 mg/Kg.

- Dissolved arsenic (maximum concentration of 166 µg/L), chromium (maximum concentration of 697 µg/L), lead (maximum concentration of 672 µg/L), and mercury (maximum concentration of 0.884 µg/L) were detected in one or more of the groundwater samples at concentrations above the AWQS.

- SVOCs including benzo(a)pyrene (maximum concentration of 0.493 µg/L), benzo(b)fluoranthene (maximum concentration of 0.647 µg/L), benzo(k)fluoranthene (maximum concentration of 0.212 µg/L), chrysene (maximum concentration of 0.526 µg/L), and indeno(1,3,4-cd)pyrene (maximum concentration of 0.275 µg/L) were detected in two groundwater samples above the AWQS.

- VOCs including 1,2-dichlorobenzene, 1,1-trichloroethene, p-isopropyltoluene, PCE, TCE, toluene, 1,2,4-trimethylbenzene, 1,2,3-trimethylbenzene, 1,2,5-trimethylbenzene, and total xylenes were detected in one or more groundwater samples above the AWQS. 1,2-dichlorobenzenw was detected at 19.9 µg/L; 1,1,-dichloroethene was detected at 10.8 µg/L; p-isopropyltoluene was detected at 7.91 µg/L; PCE was detected at a maximum concentration of 34,900 µg/L; toluene was detected at 7.05 µg/L; TCE was detected at 3,360 µg/L; 1,2,4-trimethylbenzne was detected at 15.8 µg/L; 1,2,3-trimethylbenzene was detected at 8.41 µg/L; vinyl chloride was detected at 650 µg/L; 1,3,5-trimethylbenzene was detected at 7.86 µg/L; and total xylenes were detected at 10.3 µg/L.

Sub-Slab Depressurization System (SSDS) Letter Report, NYCO, May 20, 2016:

- This letter report indicated that a SSDS was installed in the 140 Stewart building and activated on May 16, 2016.

- NYCO collected vacuum readings on May 18, 2016, and sub-slab soil gas samples on May 19, 2021, which confirmed the operational effectiveness of the SSDS.

Confirmatory indoor air sampling was conducted on May 8, 2017, December 28, 2017, and December 31, 2017. The results were provided to the NYSDEC and NYSDOH on January 31, 2018.

Limited Site Investigation, GCE (February 2017):

- In February 2017, GCE collected six soil, 15 groundwater, four soil vapor, and one indoor air sample at the Site.

- PAHs were detected and metals were detected in soils above UUSCOs but below restricted residential SCOs (RRSCOs). Mercury, benzo(a)pyrene, and arsenic were detected above

RRSCOs.

- VOCs, including PCE, acetone and methyl ethyl ketone, were detected above the UUSCOs but below RRSCOs.
- Groundwater samples identified numerous metals and SVOCs above their respective AWQS. In addition, VOCs c12-DCE, PCE, TCE, vinyl chloride, total xylenes, p-isopropyl toluene, benzene, naphthalene, and toluene were detected above the AWQS.
- Carbon tetrachloride was detected in each of the air soil vapor samples, with a maximum concentration of 0.77 micrograms per cubic meter ($\mu g/m^3$). 1,1,1-trichloroethane (111-TCA) was detected in two air samples, with a maximum concentration of 2.43 $\mu g/m^3$. PCE was detected in each of the air samples, with a maximum concentration of 4,490 $\mu g/m^3$. Finally, TCE was detected in each of the air samples, with a maximum concentration of 1,440 $\mu g/m^3$.

In summary, previous environmental investigations have determined that the Site contains VOC, SVOC, and metal impacts above applicable NYSDEC standards and guidance values in both, soil, and groundwater. In addition, VOCs were detected in soil vapor below the building slabs. Following PSG's review of the previous environmental reports, PSG completed additional investigations, as summarized below.

Copies of the previous reports are included as Appendix A of the *Remedial Investigation Report* (RIR), prepared by PSG, dated March 2023. A Sample Location Map depicting historical sampling locations is provided as **Figure 3**. Historical soil and groundwater analytical data from previous reports are summarized in **Tables 1 and 2** and depicted on **Figures 4.1 through 4.9.**

PSG Interior Vapor Intrusion Investigation

On May 8, 2017, PSG collected four (4) indoor air samples from inside the 111 Gardner Avenue building and an ambient air sample from the western side of the building in the parking lot area. Samples were collected in 6-liter Summa canisters over an 8-hour period. One indoor air sample was collected from the men's restroom, one from the women's restroom, one from the

storage/office space, and one from the bar area. Samples were analyzed for VOCs via the United States Environmental Protection Agency (EPA) Method TO-15.

Additionally, on May 19, 2017, PSG collected three (3) indoor air samples and two (2) sub-slab soil gas samples from inside the 111 Gardner Avenue building, and an ambient air sample from the western side of the building in the parking lot area. Samples were collected in 6-liter Summa canisters over an 8-hour period. One indoor air sample was collected from the men's restroom, one from the women's restroom, and one from the bar area. Samples were analyzed for VOCs via EPA Method TO-15. The levels for TCE and PCE, when inputted into the NYSDOH air guideline values Matrices A and Matrix B respectively, require mitigation regardless of the indoor air concentrations.

On December 28, 2017, during the heating season, PSG collected four (4) indoor air samples (IA-A through IA-D) from inside the 140 Stewart Avenue building, two (2) indoor air samples (IA-E and IA-F) from inside the 111 Gardner Avenue building, and an ambient air sample (AA-1) from the western side of the 140 Stewart Avenue building. Samples were collected in 6-liter Summa canisters over an 8-hour period. One indoor air sample was collected from each approximate quarter of the indoor area. Samples were analyzed for VOCs via the TO-15 method. Benzene was detected in all indoor air samples (IA-B through IA-F). However, during the time of sampling, numerous generators and construction machines were operating and running inside the 140 Stewart Avenue and 111 Gardner Avenue buildings.

On December 31, 2017, PSG collected four (4) additional indoor air samples (DIA-1 through DIA-4) from inside the 140 Stewart Avenue building, two (2) additional indoor air samples (DIA-5 and DIA-6) from inside the 111 Gardner Avenue building, and an additional ambient air sample (DAA) from the eastern side of the 140 Stewart Avenue building in the open courtyard area. Samples were collected in 6-liter Summa canisters over an 8-hour period. One indoor air sample was collected from each approximate quarter of the indoor area. Samples were analyzed for VOCs via the TO-15 method. No indoor air or ambient air samples had compounds detected above the NYSDOH air guideline values Matrices A and Matrix B respectively.

PSG Preliminary Interior Investigation

Between September 1, 2017, to September 9, 2017, PSG conducted a MIP screening within the 140 Stewart Avenue and 111 Gardner Avenue buildings. MIP allows for the real-time monitoring of soil and groundwater components with depth. A total of five individual detectors mounted on a single direct push drill rod connected to an on-site laboratory quality analytical system provide real time subsurface physical and chemical data. The detectors utilized for this investigation include electrical conductivity (EC), hydraulic profile (HPT), along with relative magnitude of contamination as detected by a PID, FID, and XSD. The preliminary MIP logs were used to determine the locations and depths best suited for follow up soil, groundwater, and soil gas sample collection, for further delineation of impacted subsurface media.

In addition, PSG advanced six (6) soil borings within the 140 Stewart Avenue building for the collection of soil and groundwater samples, and advanced shallow borings for the collection of soil gas samples. Soil and groundwater samples were analyzed for VOCs, SVOCs, and metals. Numerous VOCs, SVOCs, and metals were detected above the UUSCOs. Arsenic was detected above the CUSCO in soil sample F4-SOIL. PCE and TCE were detected above the AWQS in groundwater samples A1-DEEP and F4-DEEP. TCE was detected above the AWQS in groundwater sample B6-DEEP. Numerous VOCs, SVOCs, and metals were detected above the AWQS in groundwater samples B6, B6 (lab filtered) F4-GW, and F4-GW (lab filtered). Finally, soil gas sample results identified numerous VOCs above laboratory reporting limits in soil gas.

Between September 20, 2017, to September 21, 2017, PSG advanced three (3) soil borings within the 111 Gardner Avenue building for the collection of six soil samples and two groundwater samples, and advanced shallow borings for the collection of soil gas samples. Soil and groundwater samples were analyzed for VOCs, SVOCs and metals. Numerous metals were detected above the UUSCOs, CUSCOs, and Protection of Groundwater (PW) SCOs. Vinyl chloride was detected above the AWQS in groundwater sample I1. Numerous metals were detected above the AWQS in groundwater samples I1 and I1 (lab filtered). Soil gas sample results identified numerous VOCs above laboratory reporting limits in soil gas samples SG-G1 and SG-I2. 1,3-Butadiene was detected at a concentration of 7.17 ug/m^3. 1,1-dichloroethane (DCA) was detected at a

concentration of 215 ug/m^3. Chloroform was detected in soil gas samples SG-G1 at a concentration of 100 ug/m^3 and in SG-I2 at a concentration of 591 mg/m^3.

1.4.3.1 BCP Reports

The following environmental work plans and reports were prepared for the Site after the Site's entry into the BCP on October 30, 2017.

- *Exterior MIP Investigation Work Plan*, April 2019, prepared by PSG
- *Exterior MIP Investigation Report*, September 2020, prepared by PSG
- *Remedial Investigation Work Plan,* April 2019, prepared by PSG
- *Remedial Investigation Report,* March 2023, prepared by PSG

PSG Exterior MIP Investigation

Between May 4, 2019, and January 31, 2020, PSG completed a MIP investigation on the exterior portions of the Site to identify AOCs that could require additional investigation and sampling. MIP allows for the real-time monitoring of soil and groundwater components with depth. A total of 34 exterior MIP borings were advanced during this portion of the investigation. The detectors utilized for this investigation included EC, HPT and relative magnitude of contamination as detected by a PID, FID, and XSD. The PID, FID, and XSD were installed in series so that the gas stream was analyzed for soil conditions, including the presence of groundwater, soil permeability, relative concentration of VOCs, relative concentration of flammable compounds, and relative concentrations of halogenated compounds. The terminal depth of the MIP borings varied based on the depths that no XSD, PID, or FID readings were registered, boring refusal, or the equipment capacity which was approximately 98 ft. bgs.

The majority of all MIP samples indicated the absence of a shallow/surface source area for vertical chlorinated soil solvent migration but the potential presence of petroleum compounds between 5 to 7 feet bgs and between 13 to 36 feet bgs. AOC numbers 1, 2, 4, 5, 6, and 9 were identified as a result of these MIP results.

MIP-02, MIP-04, MIP-05, MIP-06, MIP-07, MIP-08, MIP-09, MIP-10, MIP-11, MIP-12, MIP-21, MIP-25, MIP-26, MIP-27, MIP-28, MIP-29, MIP-30, MIP-31, MIP-32, MIP-33, and

MIP-34 indicated the potential for methane accumulation between 4 and 50 feet bgs, with the highest levels recorded between 10 and 26 feet bgs. AOC-10 was identified as a result of these MIP results.

The data indicate surficial chlorinated impacts surrounding the MIP-06 location (AOC 7) beginning at 9 feet bgs with vertical migration to 26 feet bgs; however, it does not appear to be the cause of the deeper interval groundwater impact that has been observed at the Site as no significant smear zone or vertical migration path was identified. The potential presence of a shallow/surface soil area for vertical chlorinated solvent migration was identified in MIP-15 at 3 to 4 feet bgs. The potential presence of a mixed chlorinated solvent and petroleum compounds impact was identified in MIP-13, MIP-14, MIP-15, MIP-17, MIP-18, MIP-27, MIP-28, MIP-29, MIP-31, MIP-32, MIP-33 and MIP-34 between 5 to 6 feet bgs and 16 to 30 feet bgs. AOC numbers 3, 7, and 8 were identified as a result of these MIP results.

In addition, an apparent confining layer of organic material is present within the saturated zone at approximately 15 ft bgs, which is evidenced by higher FID response/methane accumulation observed across the Site. PID response indicated potential shallow hot spot areas (MIP-20, F4, and surrounding I-2); however, the vertical migration pathway does not appear to be complete.

Based on the MIP data, PSG divided the Site into ten AOCs, as depicted on **Figure 5.1.** A cross-sectional plan of the AOC MIP data is provided as **Figure 5.2**.

2.0 DESCRIPTION OF REMEDIAL INVESTIGATION FINDINGS

The Site was investigated in accordance with the scope of work presented in the NYSDEC-approved Remedial Investigation Work (RIWP) dated April 2, 2019. The RI was conducted between May 2021 and June 2021, with additional RI work in April 2022 and in June 2023. The RI was initially submitted to NYSDEC in November 2021. The RIR was resubmitted in September 2022 to address NYSDEC and NYSDOH comments issued January 18, 2022. The RIR was resubmitted again in March 2023 to address additional NYSDEC and NYSDOH comments issued February 3, 2023, and January 23, 2023, respectively. The NYSDEC approved the RIR via correspondence dated May 2, 2023. Approval of the RIR was contingent upon the collection of additional groundwater samples to assess whether the heavy metal impacted soil in the middle

portion of the Site (AOC-8) is a source of groundwater contamination and whether remediation of the heavy metal impacted soil is warranted. The results of this additional assessment are provided in Section 2.1.3 of this RAWP.

2.1 SUMMARY REMEDIAL INVESTIGATIONS PERFORMED

The scope of RI was developed based on previous investigations by GRS in 2016, MIP logs and 3-D MIP model, the approved RIWP, and subsequent conversations with NYSDEC and NYSDOH.

2.1.1 Remedial Investigation – 2021-2022

The 2021-2022 RI activities consisted of the following:

- 21 soil borings - The advancement of 21 soil borings focusing on specific AOCs, to confirm the MIP results and further delineate areas where impacted soils were identified. Select borings were advanced to 35 feet bgs or to refusal to field-observe for the presence of dense non-aqueous-phase liquid (DNAPL).
- 16 temporary well points - Groundwater sampling via temporary well points was conducted, focusing on specific AOCs identified during the MIP investigation. At select locations, groundwater samples were collected at multiple depth intervals to evaluate the potential for vertical migration of cVOCs in groundwater, and at offsite locations in the sidewalks east and northeast of the property to evaluate the potential for an off-site source in deeper intervals.
- 6 permanent monitoring wells – To augment the temporary groundwater sampling plan, four permanent shallow-interval monitoring wells were installed to correspond with higher shallow-zone MIP responses. In addition, two additional shallow-interval monitoring wells were installed in the sidewalks east and northeast of the Site to evaluate the potential for an offsite source of cVOCs in the shallow interval.
- 6 soil vapor points – Six soil vapor points were advanced, focusing the perimeter of the Site for evaluation the potential for offsite migration of VOCs and methane in soil vapor.

On April 7 and 8, 2022, PSG directed the advancement of four additional borings at AOC-7, denoted as 7-TW4 through 7-TW7, and collected sixteen additional groundwater samples. The groundwater samples were collected to provide additional vertical profiling data in order to evaluate whether vertical migration of VOCs has occurred in the vicinity of monitoring well MW-2, where the highest concentrations of PCE were identified during the RI.

Refer to **Table 3** for summary of all RI boring locations, sample depths, matrices, analytes, and samples numbers. RI sample locations are depicted on **Figure 3.**

2.1.2 Summary of RI Findings

Subsurface soils at the Site include non-native fill with bricks, concrete, gravel, metal, and wood to depths as great as 18 feet bgs, which are underlain by native silty sand, sand, and clay to depths of up to 35 feet bgs. A noncontinuous peat layer was identified in several of the soil borings at various depths ranging approximately between 13 and 25 feet. Groundwater at the Site is present at a depth of approximately 5 to 10 feet bgs and generally flows in an east to west direction. Newtown Creek is located approximately 1,190 feet west of the Site.

Sampling data suggest that cVOC soil hot spots in the vicinity of boring 7-B1 and 10-B6, where PCE concentrations of 2,200 mg/Kg and 200 mg/Kg, respectively, were identified, may be source areas with the potential to contribute to additional groundwater impacts. Based on the soil analytical data obtained during this RI and the previous investigations, the remaining VOC exceedances do not appear to have resulted in significant impacts to Site groundwater. Remedial action is warranted to address cVOC impacted soils identified in AOC-7 and AOC-10.

Sitewide historic fill-related impacts are also present in shallow soils. However, these exceedances do not appear to have had a significant impact on groundwater quality at the Site. Additionally, site soils are capped by the existing buildings and pavement.

Vertical groundwater profiling data collected by PSG in April 2022 identified increasing cVOC concentrations with depth in temporary well point 7-TW4. Remedial action is warranted to address cVOC impacted groundwater in AOC-7.

Subsurface investigations conducted at the Site between 2016 and 2021 also identified SVOCs, metals, dissolved metals, PCBs, PFOA, and PFOS in shallow zone groundwater samples, at concentration marginally above the AWQG. These exceedances are likely a result of urban fill material at the Site.

Benzene was identified in a soil vapor sample collected at the northwestern property boundary. In addition, cVOCs, including c1,2-DCE, PCE, and TCE, were identified in a soil vapor sample collected along the southern boundary in the vicinity of AOC-7. These findings are consistent with data identified during the previous AKRF, GCE, and PSG investigations. No sensitive receptors are present in close proximity to the elevated soil vapor concentrations identified at the Site, with the exception of potentially occupied commercial properties located across the unpaved railroad tracks. The reported concentrations of VOCs identified near the southern Site boundary represent a low risk, and PSG recommends further investigation of soil vapor following the completion of remedial activities at AOC-7 to determine if mitigation is warranted.

RI soil, groundwater, and soil vapor analytical data are summarized in **Tables 4 through 7. Figures 6.1 through 6.7** depict exceedances of VOCs, SVOCs, metals (total and dissolved), PCBs, pesticides, and emerging contaminants in subsurface media at the Site. **Figures 7.1 through 7.7** depict VOC isoconcentrations.

2.1.3 Pre-Design Investigation – 2023

Pursuant to the NYSDEC RIR conditional approval letter, dated May 2, 2023, PSG collected additional soil and groundwater samples on June 20, 2023, to assess whether the heavy metal impacted soil in the middle portion of the Site (AOC-8) is a source of groundwater contamination, and whether remediation of the heavy metal impacted soil is warranted. PSG also conducted additional delineation of cVOC impacted soils above the water table at AOC-7 and AOC-10 to attempt to determine the limits constituents of concern in soil at concentrations above the Protection of Groundwater (PGW) SCOs that will require removal.

<u>AOC-7 and AOC-10</u>

On June 20, 2023, Coastal Environmental Solutions, Inc. (Coastal), under the direction of PSG, advanced six (6) borings in the vicinity of RI boring 7-B1 and six (6) borings in the vicinity of RI boring 10-B6 using Geoprobe direct-push equipment. The borings were advanced to a depth of approximately 5 feet below the soil/groundwater interface, or to a maximum depth of 15 feet bgs. Continuous soil samples were collected from each boring at 5-foot intervals using a MacroCore sampler. Each soil sample was inspected for visual and olfactory evidence of contamination and field-screened for volatile organic vapors using a PID. Depending on soil recovery, up to three (3) soil samples were collected from each boring; specifically, one near-surface soil sample was collected from shallow soils (1-2 feet bgs), one sample was collected from intermediate soils (4-6 feet bgs), and one sample was collected from the 6-inch interval immediately above the soil/groundwater interface.

Soil samples collected were placed in a laboratory-supplied cooler on ice and delivered under proper chain of custody to an Environmental Laboratory Approval Program (ELAP)-certified laboratory for analysis for analysis of VOCs via EPA Method 8260.

The following VOCs were detected in soil samples above the regulatory criteria in AOC-7:

- PCE was identified in soil samples 7-B1W (4.5-5) and 7-B1WW (1-1.5) above the above the CUSCO. PCE was identified in soil samples 7-B1W (1.5-2), 7-B1WW (4-4.5), 7-B1E (4-4.5), 7-B1E (5.5-6), and 7-B1S (4-4.5) above the PGWSCO and UUSCO.
- TCE was identified in soil samples 7-B1W (4.5-5), 7-B1WW (1-1.5), 7-B1WW (4-4.5), 7-B1E (4-4.5), and 7-B1S (4-4.5) above the PGWSCO and UUSCO.
- Cis-1,2-dichloroethene was identified in soil samples 7-B1W (1.5-2), 7-B1W (4.5-5), 7-B1WW (1-1.5), 7-B1WW (4-4.5), 7-B1E (4-4.5), 7-B1E (5.5-6), 7-B1S (4-4.5), and 7-B1S (5.5-6) above the PGWSCO and UUSCO.
- Vinyl chloride was identified in soil samples 7-B1E (4-4.5), 7-B1E (5.5-6), and 7-B1S (5.5-6) above the PGWSCO and UUSCO.
- Trans-1,2-dichloroethene was identified in soil samples 7-B1W (1.5-2) and 7-B1WW (1-1.5) above the PGWSCO and UUSCO.
- 1,1,1-Trichloroethane (1,1,1-TCA) was identified in soil samples 7-B1W (4.5-5) and 7-B1WW (1-1.5) above the PGWSCO and UUSCO.

- 1,2-Dichlorobenzene was identified in soil sample 7-B1WW (4-4.5) above the PGWSCO and UUSCO.
- Benzene was identified in soil sample 7-B1E (5.5-6) above the PGWSCO and UUSCO.
- Acetone was identified in soil samples 7-B1W (6.5-7), 7-B1E (1.5-2), and 7-B1S (1.5-2) above the PGWSCO and UUSCO.
- Chloroform was identified in soil samples 7-B1W (4.5-5), 7-B1WW (1-1.5), and 7-B1E (4-4.5) above the PGWSCO and UUSCO.

The following VOCs were detected in soil samples above the regulatory criteria in AOC-10:

- PCE was identified in soil samples 10-B6W (4.5-5), 10-B6N (4.5-5), and 10-B6E (4.5-5) above the PGWSCO and UUSCO.
- TCE was identified in soil samples 10-B6W (4.5-5) and 10-B6N (4.5-5) above the PGWSCO and UUSCO.
- Cis-1,2-dichloroethene was identified in soil sample 10-B6W (4.5-5) above the PGWSCO and UUSCO.
- Vinyl chloride was identified in soil sample 10-B6W (7.5-8) above the PGWSCO and UUSCO.
- Acetone was identified in soil samples 10-B6W (1.5-2), 10-B6N (9.5-10), 10-B6E (9.5-10), and 10-B6S (9.5-10) above the PGWSCO and UUSCO.

Based on the soil analytical results for AOC-7 and AOC-10, the area of soil containing cVOC constituents of concern above the PGWSCOs is delineated to an approximate 660 sf area on the north, south, and west of RI boring 7-B1 and 330 sf around boring 10-B6. Complete delineation to the PGWSCOs east of boring 7-B1 and north of 10-B6 could not be achieved due to the presence of facility structures that limited access. Soil analytical results for AOC-7 and AOC-10 are summarized in **Table 4.** Sample locations and VOC exceedances in soil are depicted on **Figure 8**.

AOC-8

On June 20, 2023, Coastal under the direction of PSG, advanced seven (7) borings in the vicinity of RI boring 8-B1 using Geoprobe direct-push equipment. The borings were advanced to a depth of approximately 5 feet below the soil/groundwater interface, or to a maximum depth of 15 feet bgs. Continuous soil samples were collected from each boring at 5 foot intervals using a MacroCore sampler. Each soil sample was inspected for visual and olfactory evidence of

contamination and field-screened for volatile organic vapors using a PID. Depending on soil recovery, up to three (3) soil samples were collected from each boring; specifically, one near-surface soil sample was collected from shallow soils (1-2 feet bgs), one sample was collected from intermediate soils (4-6 feet bgs), and one sample was collected from the 6" interval immediately above the soil/groundwater interface.

Following the completion of soil sampling at each boring, a groundwater sample was collected from each boring using via the installation of temporary 1" monitoring wells, which were removed following collection of the sample.

Soil samples collected were be placed in a laboratory-supplied cooler on ice and delivered under proper chain of custody to an ELAP-certified laboratory for analysis for analysis of Target Compound List (TAL) metals by the EPA Method 6010A/7470A. The two (2) samples exhibiting the highest metals concentrations were additionally analyzed for Toxicity Characteristic Leaching Procedure (TCLP) metals. Groundwater samples collected were analyzed for total and dissolved TAL metals.

The following metals were detected in soil samples above the regulatory criteria:

- Arsenic was identified soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), 8B-1WW (4.5-5.0), and 8B-1WW (6.0-6.5) above the PGWSCO. Arsenic was identified in soil sample 8B-1SS (1.5-2.0) above the UUSCO.
- Barium was identified in soil samples 8B-1N (5.0-5.5) and 8B-1W (6.5-7.0) above the CUSCO.
- Cadmium was identified in soil sample 8B-1W (4.5-5.0) above the CUSCO. Cadmium was identified in soil sample 8B-1SS (4.5-5.0) above the UUSCO.
- Copper was identified in soil samples 8B-1N (5.0-5.5), 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), and 8B-1WW (4.5-5.0) above the CUSCO. Copper was identified in soil samples 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1E (6.0-6.5), 8B-1S (1.5-2.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1W (1.5-2.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), and 8B-1WW (6.0-6.5) above the UUSCO.

- Lead was identified in soil samples 8B-1S (1.5-2.0), 8B-1W (4.5-5.0), and 8B-1WW (6.0-6.5) above the CUSCO. Lead was identified in soil samples 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1SS (4.5-5.0), and 8B-1W (6.5-7.0) above the PGWSCO. Lead was identified in soil samples 8B-1N (5.0-5.5), 8B-1NN (6.0-6.5), 8B-1E (6.0-6.5), 8B-1S (4.5-5.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1SS (6.5-7.0), 8B-1W (1.5-2.0), 8B-1WW (1.0-1.5), and 8B-1WW (4.5-5.0) above the UUSCO.
- Mercury was identified in soil samples 8B-1S (1.5-2.0), 8B-1S (6.5-7.0), 8B-1SS (4.5-5.0), 8B-1W (1.5-2.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), and 8B-1WW (4.5-5.0) above the CUSCO. Mercury was identified in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1E (6.0-6.5), 8B-1SS (6.5-7.0), and 8B-1WW (6.0-6.5) above the PGWSCO. Mercury was identified soil samples 8B-1NN (6.0-6.5) and 8B-1SS (1.5-2.0) above the UUSCO.
- Nickel was identified soil samples 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), and 8B-1WW (1.0-1.5) above the UUSCO.
- Selenium and silver were identified in soil samples 8B-1W (4.5-5.0) above the PGWSCO.
- Zinc was identified in soil sample 8B-1W (4.5-5.0) above the PGWSCO. Zinc was identified in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1S (1.5-2.0), 8B-1S (4.5-5.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1SS (4.5-5.0), 8B-1SS (6.5-7.0), 8B-1W (1.5-2.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), 8B-1WW (4.5-5.0), and 8B-1WW (6.0-6.5) above the UUSCO.

The following metals were detected in groundwater samples above the regulatory criteria:

- Antimony was identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW above the AWQS.
- Dissolved antimony was identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW above the AWQS.
- Arsenic was identified in groundwater samples 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, and 8B-1WW-GW above the AWQS.
- Dissolved arsenic was identified in groundwater sample 8B-1WW-GW above the AWQS.
- Barium was identified in groundwater sample 8B-1NN-GW above the AWQS.

- Chromium was identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, and 8B-1SS-GW above the AWQS.
- Copper was identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1S-GW, and 8B-1SS-GW above the AWQS.
- Iron, lead, manganese, mercury, and sodium were identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW above the AWQS.
- Dissolved iron was identified in groundwater samples 8B-1N-GW and 8B-1W-GW above the AWQS. Dissolved manganese was identified in groundwater samples 8B-1N-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW above the AWQS. Dissolved sodium was identified in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW above the AWQS.
- Nickel was identified in groundwater sample 8B-1NN-GW above the AWQS.
- Thallium was identified in groundwater sample 8B-1NN-GW above the Ambient Water Quality Guidance Value (AWQGV).

PSG selected two samples [8B-1W (4.5-5.0) and 8B-1W (6.5-7.0)], which indicated the highest metal concentrations, to run for TCLP metals. No detectable TCLP metals concentrations were identified.

Based on the soil analytical results for AOC-8, various metals, including arsenic, lead, mercury, selenium, and zinc, are present at concentrations above the PGWSCOs. The metals are likely the result of urban fill and historical commercial/industrial activities at the Site. The distribution of metals was determined to be heterogeneous both aerially and vertically, and no distinct source of metals was identified. TCLP results for select soil samples indicated no detectable concentrations, which indicates that the metals are immobile. Groundwater analytical results for total metals identified similar metals at concentrations above the AWQS; however, no significant dissolved metals concentrations were identified, which suggests that the total metals results were biased high due to suspended sediment in the samples. Based on the soil and groundwater analytical results, remediation of metals impacted soils at AOC-8 is not recommended.

Soil and groundwater analytical results for AOC-8 are summarized in **Tables 4** and **5**, respectively. Sampling locations and Metals exceedances in soil are depicted on **Figure 9.1**. Total metal exceedances in groundwater are depicted on **Figures 9.2**. Dissolved metals exceedances in groundwater are depicted on **Figure 9.3**.

2.1.3.1 Data Usability Summary Reports Discussion

Data validation for the June 20, 2023, sampling event was completed by Mr. Donald Anné of Alpha Geoscience. The data package contained the documentation as required by NYSDEC Analytical Services Protocol (ASP). The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile analyses for 31 soil samples; the results of TAL metal analyses for 18 soil samples and 1 field duplicate; the results of TCLP metal analyses for 2 soil samples; and the results of total and dissolved TAL metal analyses for 7 ground water samples.

The overall performances of the analyses are acceptable. Alpha Analytical Laboratories did fulfill the requirements of the analytical methods. The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for 4 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1W (1.5-2) because 1 of 4 surrogate recoveries was above control limits for the sample.
- The positive volatile results for 16 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1W (1.5-2)RE2 because 2 of 4 surrogate recoveries were above control limits for the sample.
- The positive volatile results for 27 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1E (5.5-6) because 1 of 4 surrogate recoveries was above control limits for the sample.
- The positive volatile results for 22 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1S (5.5-6) because 1 of 4 surrogate recoveries was above control limits for the sample.
- The positive volatile results for 23 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1S (5.5-6)RE because 2 of 4 surrogate recoveries were above control limits for the sample.

- The “not detected” volatile results for 14 compounds were qualified as “estimated” (UJ) for sample 7-B1W (1.5-2) because the areas for the internal standard used to quantitate these compounds was below control limits, but not below 25%.
- The “not detected” volatile results for 26 compounds were qualified as “rejected, unusable” (R) for sample 7-B1W (1.5-2) because the area for the internal standard used to quantitate these compounds was below control limits and below 25%.
- The volatile results for tetrachloroethene and cis-1,2-dichloroethene for sample 7-B1W (1.5-2)RE were quantitated using data that were extrapolated beyond the highest calibration standard and flagged “E” by the laboratory. The results for compounds marked “E” were qualified as estimated (J).
- The volatile results for tetrachloroethene for samples 7-B1W (4.5-5), 7-B1WW (1-1.5), 10-B6N (1.5-2), and 10-B6N (4.5-5) were quantitated using data that were extrapolated beyond the highest calibration standard and flagged “E” by the laboratory. The results for tetrachloroethene marked “E” were qualified as estimated (J).
- The “not detected” volatile results for 1,1,2,2-tetrachloroethane, naphthalene, and 1,2,4,5-tetramethylbenzene were qualified as “estimated” (UJ) for samples 7-B1W (1.5-2)RE2 and 7-B1W (4.5-5) because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.
- The “not detected” volatile results for 1,1,2,2-tetrachloroethane and 1,2,4,5-tetramethylbenzene were qualified as “estimated” (UJ) for samples 7-B1W (6.5-7), 7-B1S (4-4.5), 10-B6W (4.5-5), and 10-B6W (7.5-8) because 1 of 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSDs.
- The “not detected” volatile results for 1,1,2,2-tetrachloroethane were qualified as “estimated” (UJ) for the following samples because 1 or 2 percent recoveries for 1,1,2,2-tetrachloroethane were below QC limits, but not below 10% in the associated soil LCS/LCSDs.
    - 7-B1E (1.5-2), 7-B1E (5.5-6), 7-B1N (1.5-2), 7-B1S (1.5-2), 7-B1S (5.5-6), 7-B1S (5.5-6)RE, 10-B6W (1.5-2)
- The positive volatile results for 1,2,4,5-tetramethylbenzene were qualified as “estimated, biased low” (J-) for samples 7-B1E (1.5-2), 7-B1N (1.5-2), 7-B1S (1.5-2), and 10-B6W (1.5-2) because 1 of 2 percent recoveries for 1,2,4,5-tetramethylbenzene were below QC limits, but not below 10% in the associated soil LCS/LCSDs.
- The “not detected” volatile results for vinyl acetate were qualified as “estimated” (UJ) for samples 7-B1WW (4-4.5), 7-B1WW (4.5-5), 7-B1SS (5-5.5), 10-B6WW (4.5-5), and

10-B6EE (1.5-2) because 1 of 2 percent recoveries for vinyl acetate was below QC limits, but not below 10% in the associated soil LCS/LCSDs.

- The positive total metal results for arsenic were qualified as estimated, biased high (J+) for all 17 soil samples and the field duplicate because 2 of 2 percent recoveries for arsenic were above control limits in the associated soil MS/MSD sample.
- The positive metal results for antimony were qualified as estimated, biased high (J+) for all 17 soil samples and the field duplicate because 1 of 2 percent recoveries for antimony was above control limits in the associated soil MS/MSD sample.
- The positive metal results for barium and chromium were qualified as estimated, biased low (J-) for all 17 soil samples and the field duplicate because 1 of 2 percent recoveries for barium and chromium were below control limits, but not below 10% in the associated soil MS/MSD sample.
- The positive metal results for mercury were qualified as estimated, biased high (J+) for the following samples because the percent recovery for mercury was above the control limits in the associated soil spike sample.
    - 8B-1NN (1.5-2.0) 8B-1NN (4.5-5.0) 8B-1NN (6.0-6.5) 8B-1SS (1.5-2.0) 8B-1SS (6.5-7.0) 8B-1WW (1.0-1.5) 8B-1WW (4.5-5.0) 8B-1WW (6.0-6.5)
- The positive metal results for 11 metals were qualified as estimated (J) in samples 8B-1W (6.5-7.0) and 8B-1W (6.5-7.0) DUP because the relative percent differences for these 11 metals were above the allowable maximum in the soil field duplicate pair 8B-1W (6.5-7.0)/8B-1W (6.5-7.0) DUP.
- The positive dissolved metal result for mercury was qualified as estimated (J) for sample 8B-1NN-GW because the relative percent difference for mercury was above the allowable maximum in the associated aqueous dissolved duplicate sample.
- The positive total metal results for magnesium were qualified as estimated, biased low (J) for samples 8B-1NN-GW, 8B-1SS-GW, and 8B-1WW-GW because 1 of 2 percent recoveries for magnesium was below control limits, but not below 30% in the associated aqueous batch total MS/MSD sample.
- The positive total metal results for calcium, potassium, and sodium were qualified as estimated (J) for all 7 ground water samples because %Ds for calcium, potassium, and sodium were above the allowable maximum in the associated aqueous batch total serial dilution sample and results were above the RLs.
- The positive total metal results for magnesium were qualified as estimated (J) for samples 8B-1N-GW, 8B-1E-GW, 8B-1S-GW, and 8B-1W-GW because %D for magnesium was

above the allowable maximum in the associated aqueous batch total serial dilution sample and results were above the RLs.

- The positive dissolved metal result for potassium was qualified as "estimated" (J) in sample 8B-1SS-GW because the dissolved concentration was greater than the total concentrations plus 10%.
- The positive dissolved metal result for sodium was qualified as "estimated" (J) in sample 8B-1E-GW because the dissolved concentration was greater than the total concentrations plus 10%.

All data that are not qualified rejected, unusable (R) are considered usable with estimated (J, J-, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

A copy of the Data Usability Summary Report (DUSR) is included as **Appendix B**.

2.2 SIGNIFICANT THREAT

The NYSDEC and NYSDOH have determined that this Site does not pose a significant threat to human health and the environment. Notice of that determination has been provided for public review. A copy of the notice is included in **Appendix C**.

2.3 GEOLOGICAL CONDITIONS

Based on a review of the United States Geological Survey (USGS) Brooklyn, New York, 2016 Quadrangle topographic map, the Site is situated at an elevation approximately 14-17 feet above mean sea level, and the local topography is sloping gently to the west/southwest.

The Site is situated within the Atlantic Coastal Plain Physiographic Province of the State of New York. According to the New York State Geological Survey (NYSGS), the Atlantic Coastal Plain Province is an extensive plain of marine sands, clays, gravels, and marls that are seaward-sloping. Long Island is underlain by a mass of wedge-shaped unconsolidated geological deposits that overlie southward-sloping consolidated bedrock. According to the USGS, the bedrock underlying the Site consists of the Quaternary age Glacial and Alluvial Deposits.

Subsurface soils at the Site include non-native fill with bricks, concrete, gravel, metal, and wood to depths as great as 18 feet bgs, which are underlain by native silty sand, sand, and clay to depths of up to 35 feet bgs. A noncontinuous peat layer was identified in several of the soil borings at various depths ranging approximately between 13 and 25 feet.

Groundwater at the Site is present at a depth of approximately 5 to 10 feet bgs and generally flows in an east to west direction based on measurements collected for the monitoring wells in February 2022. Newtown Creek is located approximately 1,190 feet west of the Site. Geologic sections are shown in **Figures 7.4 through 7.7.** A groundwater flow map is shown in **Figure 6.1.**

2.4 CONTAMINATION CONDITIONS

2.4.1 Conceptual Model of Site Contamination

A conceptual site model has been developed based on the findings of the site subsurface investigations. The purpose of the conceptual site model is to develop a simplified framework for understanding the distribution of impacted materials, potential migration pathways, and potentially complete exposure pathways, as discussed below.

2.4.2 Description of Areas of Concern

Based on the MIP data, PSG identified ten AOCs, which were the focus of the RI. The AOCs are listed as follows:

- **AOC-1 PID RESPONSE AREA** (approximately 1,250 square feet);
- **AOC-2 PID RESPONSE AREA** (approximately 3,750 square feet);
- **AOC-3 XSD RESPONSE AREA** (approximately 100 square feet);
- **AOC-4 PID RESPONSE AREA** (approximately 1,250 square feet);
- **AOC-5 PID RESPONSE AREA** (approximately 100 square feet);
- **AOC-6 PID RESPONSE AREA** (approximately 625 square feet);
- **AOC-7 XSD RESPONSE AREA** (approximately 1,250 square feet);
- **AOC-8 XSD RESPONSE AREA** (approximately 50 square feet);

- **AOC-9 PID/FID RESPONSE AREA** (approximately 5,000 square feet); and
- **AOC-10 FID RESPONSE AREA** (approximately 51,000 square feet)

Based on the MIP PID data, AOC numbers 1, 2, 4, 5, 6, and 9 were identified as discreet, non-contiguous areas with potential petroleum compound impacts. Generally, these areas appear to be accumulation areas contained within more porous, larger grained sediments, and not the result of surface discharges. With the exception of AOC-2, the PID responses begin at approximately five feet below the surface and do not extend more than 15 feet vertically. AOC-2 PID responses appear to be related to an offsite source migrating toward the west and Stewart Avenue.

AOC numbers 3, 7, and 8 have been identified as discreet, non-contiguous areas with potential chlorinated and petroleum compound impacts based upon XSD response data. These AOCs appear to be more limited in horizontal and vertical extent than the PID-related AOCs.

AOC-10 has been identified as a potential methane accumulation, which appears to be contained in a coarse layer of sediments, possibly a historical stream channel. This AOC is generally situated in a discreet bedding plane between 10 and 20 feet beneath the surface across the majority of the Site.

2.4.3 Identification of Standards, Criteria and Guidance

The following SCGs are applicable to the project and will be used to determine whether the Remedial Action Objectives (RAOs) have been met:

- Soil – 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Soil Cleanup Objectives (December 2006); 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes; 6 NYCRR Part 376 - Land Disposal Restrictions; and 6 NYCRR Part 360 - Solid Waste Management Facilities.
- Groundwater – 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998), and TOGS 1.1.1 AWQSGV and Groundwater Effluent Limitations.

In addition, the following SCGs are applicable to the remedial program at the Site:

- NYSDEC DER-10 – Technical Guidance for Site Investigation and Remediation (May 2010);
- NYSDOH Generic Community Air Monitoring Plan (CAMP);
- NYSDEC DER-23 – Citizen Participation Handbook for Remedial Programs (January 2010);
- 6 NYCRR Part 372 – Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities (November 1998);
- 6 NYCRR Subpart 374-1 – Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities (November 1998);
- 6 NYCRR Subpart 374-3 – Standards for Universal Waste (November 1998);
- 6 NYCRR Part 375 – Environmental Remediation Programs (December 2006);
- 29 CFR Part 1910.120 – Hazardous Waste Operations and Emergency Response;
- 40 CFR Part 144 – Underground Injection Control Program;

- DAR-1 (formerly Air Guide 1) - Guidelines for the Control of Toxic Ambient Air Contaminants (1997);
- CP-43 – Commissioner Policy on Groundwater Monitoring Well Decommissioning (December 2009); and
- NYSDEC DER-31 – Green Remediation (2010)

Additional regulations and guidance may be applicable, relevant, and appropriate for the remedial actions and will be complied with during implementation of the remedial program. However, the list above is intended to represent the principal SCGs that will be considered in evaluating the remedial alternatives for the Site.

2.4.4 Soil/Fill Contamination

A total of 33 soil samples were collected during the RI from 10 identified AOCs for laboratory analysis of target compound list (TCL) VOCs, SVOCs, and pesticides/PCBs, total analyte list (TAL) metals, TCLP metals, and emerging contaminants. In addition, 47 soil samples were collected in June 2023 for further delineation of VOC-impacted soils at AOC-7 and AOC-10 and metals impacted soils at AOC-8. RI soil analytical results are summarized in **Table 4**. A Sample Location Plan is provided as **Figure 3**. June 2023 sample locations for AOCs 7 and 10 are shown on **Figure 8**. June 2023 sample locations for AOC-8 are shown on **Figures 9.1 through 9.3**.

cVOC constituents above UUSCOs were identified in the central and eastern portions of the Site based on the 2016, 2017, 2020, and 2021 investigations conducted at the Site. Based on the findings of the RI, these exceedances appear to be confined to AOCs 6, 7, and 8, between the 140 Stewart Avenue and 111 Gardner Avenue buildings, and at AOC-10, immediately south of the 111 Gardner building to depths of up to 14.5 feet bgs. The highest cVOC concentrations were identified in the vicinity of the former liquid bleach manufacturing building (AOC-7) at up to three orders of magnitude greater than surrounding areas and above CUSCOs. These data are consistent with results identified during the previous AKRF, GCE, and PSG investigations. No residual product or evidence of DNAPL was observed during advancement of the borings. However, vertical profiling of groundwater conducted by PSG at AOC 7 in April 2022 identified increasing cVOC concentrations in groundwater to a depth of at least 70 feet bgs in temporary well point 7-TW4, which are one to two orders of magnitude greater than the concentrations detected at this depth interval in upgradient and downgradient locations. These data suggest that a cVOC soil hot spot in the vicinity of boring 7-B1, where a PCE concentration of 2,200 mg/Kg was identified, may be a source area with the potential to contribute to additional groundwater impacts in this area of the Site. Based on the soil analytical data obtained during this RI and the previous investigations, the remaining VOC exceedances do not appear to have resulted in significant impacts to Site groundwater.

Sitewide historic fill-related impacts are also present in shallow soils. Subsurface investigations conducted at the Site between 2016 and 2021 have identified exceedances of SVOCs, metals, pesticides, and PCBs above UUSCOs throughout the Site. In addition,

benzo(a)pyrene, benzo(b)fluoranthene, arsenic, copper, lead, and mercury were identified above RRUSCOs and CUSCOs within the historic fill layer during the 2021 investigation. Based on TCLP soil analytical results and groundwater analytical results for dissolved metals, these exceedances are not a source of groundwater contamination.

2.4.4.1 Summary of Soil/Fill Data

Based on the June 2023 soil analytical results for AOC-7, the area of soil containing cVOC constituents of concern above the PGWSCOs is delineated to an approximate 660 sf area on the north, south, and west of RI boring 7-B1, and 330 sf to the east, west, and south of boring 10-B6. Complete delineation to the PGWSCOs east of boring 7-B1 and north of boring 10-B6 could not be achieved due to the presence of facility structures that limited access. Based on the soil analytical results for AOC-8, various metals, including arsenic, lead, mercury, selenium, and zinc, are present at concentrations above the PGWSCOs. The distribution of metals was determined to be heterogeneous both aerially and vertically, and no distinct source of metals was identified. TCLP results for select soil samples indicated no detectable concentrations, which indicates the metals are immobile, and analytical results for dissolved metals did not indicate significant concentrations of metals of concern.

AOC-1 Soil Contamination

PSG advanced two borings in AOC-1 (1-B1 and 1-B2) in the vicinity of a former 550-gallon underground storage tank (UST). At soil boring 1-B1, soil samples were collected from 7.5-8.5 and 24.5-25.0 feet bgs. At soil boring 1-B2, one sample was collected from 7.5-8.5 feet bgs.

Soil sample 1-B1(7.5-8.5) was analyzed for the full Total Compound List (TCL)/ TAL analytes including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil sample 1-B1(24.5-25.0) was analyzed for VOCs and soil sample 1-B2(7.5-8.5) was analyzed for VOCs and SVOCs.

The VOC acetone was reported above the UUSCO in soil sample 1-B1(24.5-25). However, this result may be attributed to laboratory contamination. PAHs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene,

and indeno(1,2,3-cd)pyrene were reported above the UUSCO in soil samples collected from 7.5-8.5 feet bgs. Benzo(a)pyrene was also found in one sample above the CUSCO. Copper and zinc were reported above the UUSCO in a soil sample collected from 7.5-8.5 feet bgs. Arsenic, lead, and mercury were reported above the UUSCOs in soil samples collected from 7.5-8.5 feet bgs. Arsenic also exceeded the CUSCO in one soil sample. No pesticides or PCBs were reported above the UUSCOs.

AOC-2 Soil Contamination

PSG advanced two borings in AOC-2 (2-B1 and 2-B2). Soil borings 2-B1 and 2-B2 were advanced in the 140 Stewart Avenue building in areas where elevated MIP responses were observed. At boring 2-B1, soil samples were collected from 7.5-8.0 and 24.5-25.0 feet bgs. At soil boring 2-B2, one sample was collected from 9.5-10.0 feet bgs. Soil samples 2-B1(7.5-8.0) and 2-B2(9.5-10.0) were analyzed for VOCs and SVOCs. Soil sample 2-B1(24.5-25) was analyzed for VOCs.

No VOCs were reported above the UUSCOs. SVOC benzo(a)pyrene was reported above the UUSCO and CUSCO in soil sample 2-B1(7.5-8), and indeno(1,2,3-cd)pyrene was reported above the UUSCO. No soil samples from this AOC were analyzed for metals, pesticides, or PCBs.

AOC-3 Soil Contamination

PSG advanced one boring in AOC-3 (3-B1). Soil boring 3-B1 was advanced in the 140 Stewart Avenue building in areas of elevated MIP detection (MIP-F4). At soil boring 3-B1, soil samples were collected from 7.5-8.0 and 17.5-18.0 feet bgs. Soil sample 3-B1(7.5-8) was analyzed for the full TCL/TAL analytes including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil sample 3-B1(17.5-18) was analyzed for VOCs.

Acetone and xylenes, and metals, lead and mercury, were reported above the UUSCOs in soil sample 3-B1(17.5-18). No SVOCs, pesticides, or PCBs were reported above the UUSCOs.

AOC-4 Soil Contamination

PSG advanced two borings in AOC-4 (4-B1 and 4-B2) in the vicinity of a dry well. At soil boring 4-B1, soil samples were collected from 6.5-7.0 and 24.0-24.5 feet bgs. At soil boring 4-B2,

one sample was collected from 6.5-7.0 feet bgs. Soil sample 4-B1(6.5-7) was analyzed for full TCL/TAL analytes including VOCs, SVOCs, TAL metals, pesticides, PCBs, and ECs. Soil sample 4-B1(24-24.5) was analyzed for VOCs and soil sample 4-B2(6.5-7) was analyzed for VOCs and SVOCs.

Acetone was reported above the UUSCO in soil sample 4-B1(24-24.5) and soil sample 4-B2(6.5-7). SVOCs chrysene and indeno(1,2,3-cd)pyrene were reported above the UUSCOs in soil sample 4-B2(6.5-7). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were reported above the UUSCOs in soil sample 4-B2(6.5-7), and benzo(a)pyrene additionally reported above the CUSCO. Metals copper, lead, mercury, and zinc were reported above the UUSCOs in soil sample 4-B1(6.5-7). No pesticides or PCBs were reported above the UUSCOs.

AOC-5 Soil Contamination

PSG advanced one boring in AOC-5 (5-B1). Soil boring 5-B1 was advanced in the vicinity of MIP-25. At soil boring 5-B1, one soil sample was collected from 8.5-9.0 feet bgs. Soil sample 5-B1(8.5-9.0) was analyzed for the VOCs and SVOCs.

Acetone was reported above the UUSCO in soil sample 5-B1(8.5-9). No SVOCs were reported above the UUSCOs. No samples were analyzed for metals, pesticides, or PCBs.

AOC-6 Soil Contamination

PSG advanced one boring in AOC-6 (6-B1) in the vicinity of MIP-09. At soil boring 6-B1, one soil sample was collected from 5.5-6.0 feet bgs. The soil sample 6-B1(5.5-6.0) was analyzed for the VOCs and SVOCs.

PCE, TCE, c1,2-DCE, vinyl chloride, and 2-butanone were reported above the UUSCOs in soil sample 6-B1(5.5-6). No SVOCs were reported above the UUSCOs. No samples were analyzed for metals, pesticides, or PCBs at AOC-5.

AOC-7 Soil Contamination

PSG advanced four borings in AOC-7 (7-B1, 7-B2, 7 -B3, and 7-B4) during the RI. Soil borings 7-B1 and 7-B2 were advanced in the vicinity of MIP-06, soil boring 7-B3 was advanced

in the vicinity of MIP-22, and soil boring 7-B4 was advanced in the vicinity of MIP-01. At soil boring 7-B1, soil samples were collected from 9.0-10.0 and 27.0-27.5 feet bgs. At soil boring 7-B2, soil samples were collected from 6.5-7.0 and 14.0-14.5 feet bgs. At soil boring 7-B3, one sample was collected from 10.5-11.5 feet bgs. At soil boring 7-B4, one sample was collected from 6.0-6.5 feet bgs. Soil samples 7-B1(9-10.0) and 7-B2(6.5-7.0) were analyzed for the full TCL/TAL list including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil samples 7-B3(10.5-11.5) and 7-B4(6-6.5) were analyzed for VOCs and SVOCs. Soil samples 7-B1(27-27.5) and 7-B2(14-14.5) were analyzed for VOCs.

SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and Indeno(1,2,3-cd)pyrene were reported above the UUSCOs in soil sample 7-B1(9-10). Benzo(a)pyrene was also reported above the CUSCO. Metals copper, mercury, and zinc were reported above the UUSCOs in soil sample 7-B1(9-10). Pesticides 4,4'-DDD and 4,4'-DDE were reported above the UUSCO in soil sample 7-B1(9-10). 4,4'-DDT was reported above the UUSCO in soil sample 7-B2(6.5-7). No PCBs were reported above the UUSCOs.

In June 2023, PSG advanced six (6) soil borings in ACO-7 to further delineate cVOCs around soil boring 7-B1. Soil samples were analyzed for VOCs.

Cis 1,2-DCE, toluene, and 1,2,4-trimethylbenzene were reported above the UUSCO in soil sample 7-B1(9-10). Cis 1,2-DCE was reported above the UUSCO in soil samples 7-B1W (1.5-2), 7-B1W (4.5-5), 7-B1WW (1-1.5), 7-B1WW (4-4.5), 7-B1E (4-4.5), 7-B1E (5.5-6), 7-B1S (4-4.5), and 7-B1S (5.5-6). Vinyl chloride was reported above the UUSCO in soil samples 7-B3(10.5-11.5), 7-B1E(4-4.5), 7-B1E(5.5-6), and 7-B1S(5.5-6). Naphthalene, acetone, and 2-butanone were reported above the UUSCO in soil sample 7-B2(14-14.5). Acetone was reported above the UUSCO in soil samples 7-B1W(6.5-7), 7-B1E(1.5-2), and 7-B1S(1.5-2). Chloroform was reported above the UUSCO in soil samples 7-B1W(4.5-5), 7-B1WW(1-1.5), and 7-B1E(4-4.5). PCE was also reported above the CUSCO in soil samples 7-B1(9-10), 7-B1W (4.5-5), and 7-B1WW(1-1.5). TCE was reported above the UUSCO in soil samples 7-B1W(4.5-5), 7-B1WW(1-1.5), 7-B1WW(4-4.5), 7-B1E(4-4.5), and 7-B1S(4-4.5). PCE was reported above the UUSCO in soil samples 7-B1W(1.5-2), 7-B1WW(4-4.5), 7-B1E(4-4.5), 7-B1E(5.5-6), and 7-B1S(4-4.5). 1,1,1-

TCA was reported above the UUSCO in soil samples 7-B1W(4.5-5) and 7-B1WW(1-1.5). 1,2-Dichlorobenzene was reported above the UUSCO in soil sample 7-B1E(5.5-6). Benzene was reported above the UUSCO in soil sample 7-B1WW(4-4.5). Trans-1,2-dichloroethene was detected above the UUSCO in soil samples 7-B1W(4.5-5) and 7-B1WW(1-1.5).

AOC-8 Soil Contamination

PSG advanced one boring in AOC-8 (8-B1) in the vicinity of MIP-04 during the RI. Soil samples were collected from 2.0-3.0, 7.5-8.0, and 14.0-15.0 feet bgs. Soil sample 8-B1(2-3) was analyzed for full TCL/TAL analytes including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil sample 8-B1(14-15) was analyzed for VOCs, SVOCs, and TAL metals. Soil sample 8-B1(7.5-8) was analyzed for VOCs and SVOCs.

PCE and 2-butanone were reported above the UUSCOs in soil sample 8-B1(2-3). Acetone was reported above the UUSCO in soil sample 8-B1(14-15). SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the UUSCOs in soil sample 8-B1(14-15). Benzo(a)pyrene was reported above the CUSCO. Metals arsenic, copper, lead, mercury, nickel, and zinc were reported above the UUSCOs in soil sample 8-B1(14-15) at a concentration of 91.8 mg/Kg. Arsenic and copper were reported above the CUSCOs. Pesticides 4,4'-DDT was reported above the UUSCO in soil sample 8-B1(2-3). No PCBs were reported above the UUSCOs.

In June 2023, PSG advanced seven (7) soil borings in ACO-8 to further delineate metals-impacted soils around soil boring 8-B1. Soil samples were analyzed for TAL metals.

Arsenic was detected above the UUSCO in soil sample 8B-1SS (1.5-2.0). Arsenic was detected above the CUSCO in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), 8B-1WW (4.5-5.0), and 8B-1WW (6.0-6.5). Barium was detected above the CUSCO in soil samples 8B-1N (5.0-5.5) and 8B-1W (6.5-7.0). Cadmium was detected above the UUSCO in soil sample 8B-1SS (4.5-5.0); and above the CUSCO in soil sample 8B-1W (4.5-5.0). Copper was detected above the UUSCO in soil samples 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1E (6.0-6.5), 8B-1S (1.5-2.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1W (1.5-2.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), and 8B-1WW (6.0-6.5). Copper was

detected above the CUSCO in soil samples 8B-1N (5.0-5.5), 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), and 8B-1WW (4.5-5.0). Lead was detected above the UUSCO in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1S (4.5-5.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1SS (4.5-5.0), 8B-1SS (6.5-7.0), 8B-1W (1.5-2.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), and 8B-1WW (4.5-5.0). Lead was detected above the CUSCO in soil samples 8B-1S (1.5-2.0), 8B-1W (4.5-5.0), and 8B-1WW (6.0-6.5). Mercury was detected above the UUSCO in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1E (6.0-6.5), 8B-1SS (1.5-2.0), 8B-1SS (6.5-7.0), and 8B-1WW (6.0-6.5). Mercury was detected above the CUSCO in soil samples 8B-1S (1.5-2.0), 8B-1S (6.5-7.0), 8B-1SS (4.5-5.0), 8B-1W (1.5-2.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), and 8B-1WW (4.5-5.0). Nickel was detected above the UUSCO in soil samples 8B-1SS (4.5-5.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), and 8B-1WW (1.0-1.5). Selenium and silver were both detected above the UUSCO in soil sample 8B-1W (4.5-5.0). Zinc was detected above the UUSCO in soil samples 8B-1N (5.0-5.5), 8B-1NN (1.5-2.0), 8B-1NN (4.5-5.0), 8B-1NN (6.0-6.5), 8B-1S (1.5-2.0), 8B-1S (4.5-5.0), 8B-1S (6.5-7.0), 8B-1SS (1.5-2.0), 8B-1SS (4.5-5.0), 8B-1SS (6.5-7.0), 8B-1W (1.5-2.0), 8B-1W (4.5-5.0), 8B-1W (6.5-7.0), 8B-1WW (1.0-1.5), 8B-1WW (4.5-5.0), and 8B-1WW (6.0-6.5).

AOC-9 Soil Contamination

PSG advanced one boring in AOC-9 (9-B1) in the vicinity of MIP-I2. Soil samples were collected from 6.0-7.0, and 8.5-9.0 feet bgs. Soil sample 9-B1(6.0-7.0) was analyzed for full TCL/TAL analytes including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil sample 9-B1(8.5-9) was analyzed for VOCs and SVOCs.

Acetone was reported above the UUSCO in soil sample 9-B1(8.5-9). SVOCs indeno(1,2,3-cd)pyrene and 3-Methylphenol/4-Methylphenol were reported above the UUSCOs in soil sample 9-B1(8.5-9). Metal lead and mercury were reported above the UUSCOs in soil sample 9-B1(6-7). No pesticides or PCBs were reported above the UUSCOs at AOC-9.

AOC-10 Soil Contamination

PSG advanced six borings in AOC-10 (10-B1, 10-B2, 10-B3, 10-B4, 10-B5, and 10-B6) during the RI. Soil boring 10-B1 was advanced in the vicinity of MIP-15. Soil boring 10-B2 was

advanced in the vicinity of MIP-34. Soil boring 10-B3 was advanced in the vicinity of MIP-02. Soil boring 10-B4 was advanced in the vicinity of MIP-16. Soil boring 10-B5 was advanced in the vicinity of MIP-09. Soil boring 10-B6 was advanced in the vicinity of MIP-30. Soil samples were collected from soil boring 10-B1 from 8.5-9.0 and 22.0-22.5 feet bgs. At soil boring 10-B2, soil samples were collected from 8.5-9.0 and 34.5-35.0 feet bgs. At soil boring 10-B3, one soil sample was collected from 7.0-8.0 feet bgs. At soil boring 10-B4, soil samples were collected from 7.0-8.0 and 18.0-18.5 feet bgs. At soil boring 10-B5, one soil sample was collected from 6.5-7.0 feet bgs. At soil boring 10-B6, one soil sample was collected from 3.5-4.5 feet bgs.

Soil sample 10-B2(8.5-9.0) was analyzed for full TCL/TAL list including VOCs, SVOCs, TAL metals, pesticides, PCBs, and emerging contaminants. Soil samples 10-B1(8.5-9.0), 10-B3(7.0-8.0), 10-B4(7.0-8.0), 10-B5(6.5-7.0), and 10-B6(3.5-4.5) were analyzed for VOCs and SVOCs. Soil samples 10-B1(22-22.5), 10-B2(34.5-35), and 10-B4(18-18.5) were analyzed for VOCs. In June 2023, PSG advanced soil borings to delineate cVOCs in the vicinity of 10-B6. Soil samples were analyzed for VOCs.

SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were reported above the UUSCOs in soil sample 10-B5(6.5-7). Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were also reported above the RRUSCOs in soil sample 10-B5(6.5-7), and benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were reported above the CUSCOs. Metals arsenic, copper, lead, mercury, and zinc were reported above the UUSCOs in in soil sample 10-B2(8.5-9). Lead was also reported above the CUSCOs. No pesticides were reported above the UUSCOs. PCB Aroclor 1254 was above the UUSCO in soil sample 10-B2(8.5-9).

In June 2023, PSG advanced six (6) soil borings in ACO-8 to further delineate metals-impacted soils around soil boring 8-B1. Soil samples were analyzed for TCL VOCs.

PCE, TCE, cis1,2-DCE, and chloroform were reported above the UUSCOs, and PCE was also reported above the CUSCO in soil sample 10-B6(3.5-4.5). TCE was reported above the UUSCOs in soil samples 10-B6W(4.5-5) and 10-B6N(4.5-5). Acetone and 2-Butanone were reported above

the UUSCO in soil sample 10-B4(18-18.5) at a concentration of 1 mg/Kg. Acetone was reported above the UUSCO in soil samples 10-B6W(1.5-2), 10-B6N(9.5-10), 10-B6E(9.5-10), and 10-B6S(9.5-10). Cis1,2-DCE was reported above the UUSCO in soil sample 10-B6W(4.5-5). Vinyl chloride was reported above the UUSCO in soil sample 10-B6W(7.5-8).

2.4.5 On-Site and Off-Site Groundwater Contamination

Shallow cVOC groundwater exceedances were identified at AOC-7 and at significantly lower concentrations across the remainder of the Site. Specifically, cVOC concentrations were identified in the shallow groundwater zone at AOC-7 at concentrations up to 9,200 µg/L PCE (MW-2); 1,100 µg/L TCE (MW-2); 7,100 µg/L; c1,2-DCE (7-TW3); 1,700 µg/L vinyl chloride (7-TW3); 18 µg/L 1,1-DCA (7-TW-1); 18 µg/L 1,1-DCE (7-TW-3); and 25 µg/L trans 1,2-DCE (7-TW3). The presence of degradation products of PCE and TCE indicate that natural attenuation is occurring. In addition, only two shallow groundwater samples collected downgradient of AOC-7 during the RI indicated the presence of PCE (6.6 µg/L [10-TW-1]) and (5.8 µg/L [MW-4]). PCE, TCE and degradation products were not detected in the remaining downgradient samples collected during the RI. With the exception of a cVOC hot spot in groundwater at AOC-7, in the vicinity of temporary well points 7-TW1 and 7-TW-4 and monitoring well MW-2, relatively consistent cVOC impacts were identified in intermediate and deep groundwater samples across the Site, with similar concentrations identified in offsite, upgradient borings. Additionally, cVOCs were not identified in shallow groundwater in upgradient offsite monitoring wells MW-5 and MW-6. These results suggest that the deep and intermediate zones have been impacted by an offsite plume that has migrating onto the Site, which is also consistent with the findings of the 2021 MIP investigation. However, vertical groundwater profiling data collected by PSG in April 2022 identified increasing cVOC concentrations with depth in temporary well point 7-TW4. Specifically, concentrations of PCE in 7-TW4 were detected at 580 ug/L within the 20’ to 25’ bgs interval, 950 ug/L at 35’ to 40’ bgs, 1,000 ug/L at 50-55’ bgs, and 1,300 ug/L at 65-70’ bgs.

Subsurface investigations conducted at the Site between 2016 and 2021 also identified SVOCs, metals, dissolved metals, PCBs, PFOA, and PFOS in shallow zone groundwater samples, at concentration marginally above NYSDEC AWQGs.

PSG conducted additional groundwater sampling in June 2023 to further assess metals in AOC-8. Total metals results identified various metals above the AWQS or AWQGVs including: antimony, arsenic, barium, chromium, copper, iron, lead, manganese, mercury, nickel, and sodium. However, no significant dissolved metals concentrations were identified, which suggests that the total metals results were biased high due to suspended sediment in the samples. A summary of groundwater data for each AOC is provided as follows:

2.4.5.1 Summary of Groundwater Data

AOC-1 Groundwater Contamination

Temporary well 1-TW1(5-15) was installed to the north-northwest of the former 550-gallon UST. 1-TW1(5-15) was screened from 5 to 15 feet bgs. A groundwater sample was collected from the temporary well and analyzed for VOCs, SVOCs, PCBs, pesticides, filtered/non-filtered metals, and emerging contaminants.

One VOCs, naphthalene was reported above the AWQG groundwater sample 1-TW1(5-15) monitoring well MW-1. PAHs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the AWQGVs in groundwater samples collected from 5-15 feet bgs. Metals, including antimony, arsenic, iron, lead, manganese, mercury, sodium, and thallium were reported above the AWQGVs in groundwater samples collected at 5-15 feet bgs. Dissolved metals that were reported above the AWQGVs included manganese and sodium. No PCBs and pesticides were detected above the AWQS at this AOC. 1,4-Dioxane was detected in groundwater one groundwater sample at a concentration of 0.242 ug/L.

AOC-2 Groundwater Contamination

Temporary well 2-TW1(10-20) was advanced within the 140 Stewart Avenue building in the vicinity where elevated MIP responses were observed. 2-TW1(10-20) was screened from 10 to 20 feet bgs. One groundwater sample was collected from the temporary well and analyzed for VOCs.

No VOC, SVOCs, metals, PCBs, pesticides, or ECs were reported above the AWQSs or AWQGVs.

AOC-3 Groundwater Contamination

PCE and TCE were detected above the AWQS in previous groundwater sample F4-DEEP (105-109 ft bgs). PSG installed four temporary well points surrounding F4-DEEP. One groundwater sample was collected from each temporary well and was analyzed for VOCs. Specifically, 3-TW1(65-70) and 3-TW1(105-110) were installed at the location of MIP-F4, TW2(20-30) and 3-TW2(65-70) were installed east of MIP-F4, 3-TW3(20-30) and 3-TW3(65-70) were installed north of MIP-F4, 3-TW4(20-30) and 3-TW4(65-70) were installed west of MIP-F4, and 3-TW5(20-30) and 3-TW5(65-70) were installed south of MIP-F4. Temporary well point 3-TW1(65-70) was screened from 65 to 70 feet bgs, 3-TW1(105-110) was screened from 105 to 110 feet bgs, 3-TW2(20-30) was screened from 20 to 30 feet bgs, 3-TW2(65-70) was screened from 65 to 70 feet bgs, 3-TW3(20-30) was screened from 20 to 30 feet bgs, 3-TW3(65-70) was screened from 65 to 70 feet bgs, 3-TW4(20-30) was screened from 20 to 30 feet bgs, 3-TW4(65-70) was screened from 65 to 70 feet bgs, 3-TW5(20-30) was screened from 20 to 30 feet bgs, and 3-TW5(65-70) was screened from 65 to 70 feet bgs.

PCE and TCE were reported above the AWQS in groundwater sample 3-TW1(105-110). C1,2-DCE was reported above the AWQS in groundwater sample 3-TW1(65-70) at a concentration of 10 ug/L. Naphthalene was reported above the AWQGV in groundwater sample 3-TW2(10-20). SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, were reported above the AWQGVs in groundwater sample MW-4. Metals, antimony, iron, lead, manganese, and sodium were reported above the AWQSs, and dissolved metals, antimony, manganese, and sodium, were reported above the AWQSs in groundwater sample MW-4. PCBs and pesticides were not detected above the NYSDEC AWQS at this AOC. Ten PFAS compounds were detected above the NYSDEC AWQGVs in MW-4.

AOC-4 Groundwater Contamination

Temporary well 4-TW1(20-30) was installed to the west of the dry well. 4-TW1(20-30) was screened from 20 to 30 feet bgs. A groundwater sample was collected from the temporary well and analyzed for VOCs and SVOCs.

No VOCs were reported above the AWQS at AOC-4. SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the AWQGVs in groundwater samples 4-TW1(20-30), and MW-1. Methylphenol, dibenzofuran, and phenol were reported above the AWQSs in groundwater sample MW-1. Metals antimony, arsenic, iron, lead, manganese, mercury, and sodium were reported above the AWQSs in groundwater sample MW-1. Dissolved metals manganese and sodium were reported above the AWQSs in groundwater sample MW-1. PCBs and pesticides were not detected above the AWQS at this AOC. Nine PFAS compounds were detected above the AWQGVs in MW-1.

AOC-5 Groundwater Contamination

No groundwater samples were analyzed for AOC-5.

AOC-6 Groundwater Contamination

No groundwater samples were analyzed for AOC-6.

AOC-7 Groundwater Contamination

MIP results for MIP-06 and MIP-22 indicated the potential presence of chlorinated solvents. To further investigate these areas, temporary well 7-TW1(25-30) was installed in the location of MIP-06, 7-TW2(20-30) was installed west of MIP-06, and 7-TW3(5-15) was installed in the location of MIP-22. Temporary well point 7-TW1(25-30) was screened from 25 to 30 feet bgs, 7-TW2(20-30) was screened from 20 to 30 feet bgs, and 7-TW3(5-15) was screened from 5-15 feet bgs. A groundwater sample was collected from each temporary well and analyzed for VOCs and SVOCs.

PSG directed the advancement of four additional borings at AOC-7, denoted as 7-TW4 through 7-TW7, and collected sixteen additional groundwater samples. The groundwater samples were collected to provide additional vertical profiling data in order to evaluate whether vertical migration of VOCs has occurred in the vicinity of monitoring well MW-2, where the highest concentrations of PCE were identified during the RI. Four groundwater samples were collected from each boring at depths of 25 feet, 40 feet, 55 feet and 70 feet bgs. A groundwater sample was collected from each temporary well point and analyzed for VOCs.

PCE was reported above the AWQS in groundwater sample 7-TW1(25-30) at a concentration of 1,400 ug/L and at a concentration of 9,200 ug/L in groundwater sample MW-2. TCE was reported above the AWQS in groundwater sample 7-TW4-70 at a concentration of 560 ug/L and at a concentration of 1,100 ug/L in groundwater sample MW-2. C1,2-DCE was reported above the AWQS in groundwater sample 7-TW3(5-15) at a concentration of 7,100 ug/L. 1,1-DCA was reported above the AWQS in groundwater sample 7-TW1(25-30) at a concentration of 18 ug/L. 1,1-DCE was reported above the AWQS in groundwater sample 7-TW3(5-15) at a concentration of 16 ug/L. Trans-1,2-DCE was reported above the AWQS in groundwater sample 7-TW3(5-15) at a concentration of 25 ug/L. Vinyl chloride was reported above the AWQS in groundwater sample 7-TW3(5-15) at a concentration of 1,700 ug/L. Benzene was reported above the AWQS in groundwater sample 7-TW4-70 at a concentration of 2.1 ug/L. Toluene was reported above the AWQS in groundwater sample 7-TW6-70 at a concentration of 6.5 ug/L. 1,2-Dichlorobenzene was reported above the AWQS in groundwater sample 7-TW4-70 at a concentration of 7.2 ug/L. Naphthalene was reported above the AWQGV in groundwater sample 7-TW6-55 at a concentration of 200 ug/L. SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the AWQGVs in groundwater samples 7-TW3(5-15) and MW-2. Metals iron and lead were reported above the AWQS in groundwater sample MW-2. No dissolved metals, PCBs, or pesticides were detected above the NYSDEC AWQS at this AOC. Seven PFAS compounds were detected above the AWQGVs in MW-2.

AOC-8 Groundwater Contamination

In June 2023, temporary wells 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW were installed in the vicinity of soil boring 8-B1. Temporary well point samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW were analyzed for total and dissolved metals.

Antimony was reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW. Arsenic was reported above the AWQS in groundwater samples 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, and 8B-1WW-GW. Barium was reported above the AWQS in groundwater sample 8B-

1NN-GW. Chromium was reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, and 8B-1SS-GW. Copper was reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1S-GW, and 8B-1SS-GW. Iron, lead, manganese, mercury, and sodium were reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW. Nickel was reported above the AWQS in groundwater sample 8B-1NN-GW. Thallium was reported above the AWQGVs in groundwater sample 8B-1NN-GW.

Dissolved antimony and sodium were reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1NN-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW. Dissolved arsenic was reported above the AWQS in groundwater samples 8B-1WW-GW. Dissolved iron was reported above the AWQS in groundwater samples 8B-1N-GW and 8B-1W-GW. Dissolved manganese was reported above the AWQS in groundwater samples 8B-1N-GW, 8B-1E-GW, 8B-1S-GW, 8B-1SS-GW, 8B-1W-GW, and 8B-1WW-GW.

AOC-9 Groundwater Contamination

Temporary well 9-TW1(5-15) and 9-TW1(20-30) was installed in the vicinity of MIP-I2. 9-TW1(5-15) was screened from 5 to 15 feet bgs and 9-TW1(20-30) was screened from 20 to 30 feet bgs. A groundwater sample was collected from 9-TW1(5-15) and analyzed for VOCs, SVOCs, PCBs, pesticides, filtered/non-filtered metals, and emerging contaminants. Temporary well point samples 9-TW1(20-30) was analyzed for VOCs and SVOCs.

PCE, TCE, c1,2-DCE, and vinyl chloride were reported above the AWQS in groundwater sample 9-TW1(20-30). No SVOCs PCBs, or pesticides were detected above the AWQSs or AWQGVs at AOC-9. 1,4-Dioxane was detected in groundwater sample 9-TW1(5-15) at a concentration of 17.1 ug/L. Metals antimony, iron, lead, manganese, mercury, and sodium were reported above the AWQSs in groundwater sample 9-TW1(5-15). Dissolved metals iron, manganese, and sodium were reported above the AWQS in groundwater sample 9-TW1(5-15).

AOC-10 Groundwater Contamination

Temporary wells 10-TW1(5-15) and 10-TW1(20-30) were installed west of MIP-15. 10-TW1(5-15) was screened from 5 to 15 feet bgs and 10-TW1(20-30) was screened from 20 to 30 feet bgs. Temporary wells 10-TW2(65-70) and 10-TW2(105-110) were installed in the vicinity of MIP-34. 10-TW2(65-70) was screened from 65 to 70 feet bgs and 10-TW2(105-110) was screened

from 105 to 110 feet bgs. Temporary well points 10-TW1(5-15) and 10-TW1(20-30) were analyzed for VOCs and SVOCs. Temporary well point samples 10-TW2(65-70) and 10-TW2(105-110) were analyzed for VOCs.

VOCs PCE, TCE, c1,2 DCE, and dichlorodifluoromethane were reported above the AWQS in groundwater sample 10-TW2(65-70). SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the AWQGVs in groundwater sample 10-TW1(5-15). Metals antimony, chromium, iron, lead, manganese, mercury, and sodium were reported above the AWQS in groundwater sample MW-3. Dissolved metals antimony, iron, lead, and sodium were reported above the AWQSs in groundwater sample MW-3. No pesticides were reported above the AWQS. The PCB, Aroclor 1254, was reported above the AWQS and eight PFAS compounds were detected above the AWQGVs in MW-3.

Off-site Groundwater Contamination

Temporary well points 0-TW1(65-70) and 0-TW1(105-110) were installed offsite, east of the site, in the sidewalk of Gardner Avenue. 0-TW1(65-70) was screened from 65 to 70 feet bgs and 0-TW1(105-110) was screened from 105 to 110 feet bgs. Temporary well point 0-TW2(65-70) was installed offsite, northeast of the site, in the sidewalk of Meserole Street. 0-TW2(65-70) was screened from 65 to 70 feet bgs. PSG made several attempts to advance 0-TW-2 deeper than 70 feet but encountered refusal due to heaving sands. A groundwater sample was collected from each temporary well point and analyzed for VOCs.

VOCs PCE, TCE, cis-1,2-DCE, and dichlorodifluoromethane were reported above the AWQSs in groundwater sample 0-TW1(65-70). SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were reported above the AWQGVs in groundwater sample MW-5. No groundwater samples were analyzed for metals, pesticides, PCBs, or emerging contaminants at offsite locations.

2.4.6 On-Site and Off-Site Soil Vapor Contamination

PSG collected soil vapor samples on the perimeter of the Site in an effort to assess soil vapor quality near the Site boundaries. Soil vapor samples were analyzed for VOCs and methane.

Benzene was identified in a soil vapor sample collected at the northwestern property boundary. In addition, cVOCs, including c1,2-DCE, PCE, and TCE, were identified in a soil vapor sample collected along the southern boundary in the vicinity of AOC-7. These findings are consistent with data identified during the previous AKRF, GCE, and PSG investigations.

Total petroleum related VOCs ranged from 12.7 µg/m^3 in SV-5 to 426.9 µg/m^3 in SV-2. Additional light end petroleum compounds were identified in multiple soil vapor samples. PCE was reported in five soil vapor samples at concentrations ranging from 23.2 µg/m^3 (SV-2) to 4,750 µg/m^3 (SV-5). TCE was reported in three soil vapor samples at concentrations ranging from 16.5 µg/m^3 (SV-6) to 763 µg/m^3 (SV-5). C1,2-DCE was reported in two soil vapor samples at concentrations ranging from 8.76 µg/m^3 (SV-6) to 324 µg/m^3 (SV-5). 111-TCA was reported in two soil vapor samples at concentrations ranging from 0.6 µg/m^3 (SV-2) to 43.2 µg/m^3 (SV-3). Methylene chloride was reported in one soil vapor sample (SV-6) at a concentration of 21.8 µg/m^3. 1,1-dichloroethene, carbon tetrachloride, and vinyl chloride were not identified in any of the collected soil vapor samples.

Methane was not detected in any of the soil vapor samples. Based on the results of the soil vapor sampling, methane vapor is not a significant concern at the Site.

2.4.7 Potential Sources of Contamination

Sources of contamination at the site primarily include contaminants related to historical commercial operations at the Site, and contaminants from documented historic urban fill material (brick fragments, gravel, and rock fragments) which was historically placed at the site to raise the grade for development.

The Site appears to have been undeveloped land in 1888 and developed with an iron and steel works building at 140 Stewart Avenue and a liquid bleach manufacturer by 1933. Available information indicates that several chemical companies, bleach manufacturers, previously occupied the 111 Gardner site from at least 1931 to 1995. No information is known on the use, storage or disposal of hazardous materials or the chlorine manufacturing operations prior to the 1980s. Sanborn maps depict a railroad spur running from the southern property boundary onto the Site between 1933 and 2007.

Before the Site was redeveloped to the current use, Filco Carting and Skoor Steel Co., Inc. occupied the Site. GRS Group identified one 275-gallon, diesel AST, one 275-gallon, waste oil AST, two approximate 275-gallon, hydraulic oil ASTs, and one approximate 275-gallon, antifreeze AST at the Site. Skorr Steel Company was a stainless steel supplier and Filco Carting operated as a rubbish removal service and rented roll-off containers.

2.4.8 Receptor Populations

The human receptors for current site conditions include employees, and visitors. Visitors may be comprised of adult customers and employees. During construction and remediation activities, receptors will include construction and remediation workers. Under future conditions, receptors will likely include employees and visitors.

2.5 ENVIRONMENTAL AND PUBLIC HEALTH ASSESSMENTS

2.5.1 Qualitative Human Health Exposure Assessment

The objective of the QHHEA is to identify potential receptors and pathways for human exposure to the constituents of concern that are present at, or migrating from, the Site. An identified pathway indicates that the potential for exposure exists.

The RI was sufficient to complete a QHHEA, which was performed to determine whether the Site poses an existing or future health hazard to the Site's occupants or surrounding population. The RI was evaluated to determine whether there is a potential health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. The QHHEA was prepared in accordance with Appendix 3B and Section 3.3 (b) 8 of the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation dated May 2010.

The Site is currently an entertainment/music venue, which is capped by two (2) one-story buildings, one on the northeast corner (111 Gardner Avenue) and one on the southwest corner (140 Stewart Avenue), with asphalt paved areas throughout most of the remaining areas of the Site. Site occupation is limited to public and staff occupancy during events, staff required for setup, ticket

and office areas, operation, and take-down immediately prior to, during and after the scheduled events.

Potential pathways to human receptors include direct contact (dermal absorption), ingestion, and inhalation of identified constituents of concern. An evaluation of potential exposure pathways is provided below.

The pathway for direct contact and ingestion with subsurface soils is incomplete in the current and future condition as contaminated subsurface soils are covered by impervious building structures, asphalt, and concrete, which were observed to be in good condition with minimal fractures, breaks, and open areas. There is no complete pathway for exposure to contaminated groundwater, as groundwater is not used for drinking water in New York City.

Vapor intrusion to indoor air presents a potential exposure pathway in the current and future condition. Active SSDS systems have been installed in the two-permanent on-site structures. The systems' electrical panels have lock-outs to ensure the systems are always active and running. Seasonal tents are generally erected in the Brooklyn Mirage area of the Site to hold public events during winter months. PSG collected indoor air samples within the tents in January 2020 and December 2021. No elevated concentrations of VOCs were identified during either indoor sampling event, which indicates that the vapor intrusion pathway is incomplete. Indoor Air Investigation Summary reports dated February 17, 2020, and December 31, 2021, respectively, were previously provided to the NYSDEC and NYSDOH.

According to the NYC Oasis Map, the Site and surrounding area are located in a Manufacturing District, which is currently zoned "Industrial and Manufacturing Buildings". North of the Site and across Meserole Street is Best Choice Trading Corporation and Alexander Supply, which operate in an industrial building. Oriental Lumber is located east of the Site and across Gardner Avenue. Another industrial building, D&M Lumber Products, is located west of the Site, across Stewart Ave. The southern Site border is an active railroad line, owned by the Long Island Railroad. South of the railroad are the following industrial buildings; Caesarstone Quartz Surfaces, United Rentals, and Montebello Food Corporation. No sensitive receptors were identified within

a 500-foot radius of the Site. Newtown Creek is approximately 1,400-ft northeast of the Site and 1,580-ft to the west. Residential buildings are located approximately 1,460-ft southeast of the Site.

Soil vapor samples collected by PSG at the northern, eastern, and western property boundaries indicated no elevated concentrations of VOCs except benzene in sample SV-2 located near the northwestern property boundary; however, as no significant source of benzene has been identified in soil or groundwater at the Site; the Site does not appear to be the source of the elevated benzene concentration.

The soil vapor along the southern boundary in the vicinity of AOC-7 indicated elevated cVOC concentrations. No sensitive receptors are present in close proximity to the elevated soil vapor concentrations identified at the Site, with the exception of potentially occupied commercial properties located 100 feet south of the site, across the unpaved railroad tracks. These properties appear to be fully developed with asphalt and concrete-paved parking lots and building structures, which would, combined with the presence of the unpaved ground adjacent to the southern property boundary cause the soil vapor intrusion pathway to be incomplete.

Offsite direct contact and ingestion with subsurface soils and groundwater is unlikely to occur since contaminated subsurface soils at the Site are covered by impervious building structures, asphalt, and concrete. In addition, groundwater beneath the Site and surrounding area are not used for drinking purposes and no private potable and non-potable wells exist within ½-mile of the Site.

Remedial excavations are proposed to address cVOC-impacted soils at the Site. Remediation workers engaged in the excavation of impacted and non-impacted historic fill/soil at the Site may be exposed to petroleum and cVOCs, SVOCs, metals, pesticides, and PCBs through inhalation, ingestion, and dermal contact. In addition, workers excavating soil may be exposed to cVOCs in soil vapor through inhalation.

Working in accordance with a HASP and a CAMP, as well as wearing proper personal protective equipment to prevent offsite migration of contaminations during construction, would make this potential migration pathway incomplete and minimized the potential hazards to on-site workers. PSG notes that no public events will take place during remediation activities.

Following remediation activities, occupants of the Site could potentially be exposed to vapor intrusion if remediation of the source area is not completed and if preventive measures are not incorporated to protect against contaminated soil vapor intrusion. However, the two active SSDS systems currently in place at the Site are effectively protecting the buildings from vapor intrusion and rendering the potential vapor intrusion pathway incomplete.

2.6 INTERIM REMEDIAL ACTION

No Interim Remedial Actions (IRMs) are proposed at the Site. Previous IRMs completed at the Site include the installation of the active SSDSs at 140 Stewart Avenue and 111 Gardner Avenue. The SSDS at 140 Stewart Avenue was installed by NYCO in May 2016 and consists of six SSDS gravel pits with a 3" diameter pipe and riser connected to three Model 105 fans located on the rooftop of the building. Following installation, vacuum readings were collected on May 18, 2017 and sub-slab soil gas samples were collected on May 19, 2021, which confirmed the operation effectiveness of the SSDS. The SSDS at 111 Gardner Avenue was installed by NYCO in June 2017 and consists of four SSDS gravel pits with a 3" diameter pipe and riser connected to two Model 106 fans located on the rooftop of the building. The Vapor Phase Carbon units attached to the discharge of the SSDS blowers at 111 Gardner Avenue were replaced on February 6, 2019 when the SSDS blower discharge points were relocated during building renovations. On February 20, 2019, the SSDS at 111 Gardner Avenue was re-tested and confirmed that the SSDS was functioning property and the building sub slab soil continued to be under negative pressure. Each SSDS was equipped with permanently separated circuits and a Bluetooth current sensing device which would alert the Volunteer if the blowers were turned off. The SSDS blower discharge points at both 140 Stewart Avenue and 111 Gardner Avenue are located at least 20 feet from the HVAC rooftop units and their respective fresh air intakes.

According to a SSDS Operation and Maintenance (O&M) Plan prepared by PSG and dated May 2019, the Vapor Phase Carbon units attached the SSDS discharge points were to be changed annually. In addition, the SSDS would be checked annually, and routine monitoring would occur every 12-18 months that that the system was operational. Routine monitoring would consist of visual inspections of the equipment and slab/joint sealing, recording the vacuum gauge reading on

control panels, recoding the sub slab vacuum via magnehelic differential pressure gauges, recording the rise vacuum for all systems, and inspection and testing of the system warning device.

Confirmation indoor air sampling at 140 Stewart Avenue was conducted on May 8, 2017, December 28, 2017, December 31, 2017, June 21, 2021, December 22, 2021, August 30, 2023, and August 26, 2024.

Confirmation indoor air sampling at 111 Gardner Avenue was conducted on December 22, 2021, August 30, 2023, and August 26, 2024.

Copies of the 2016 SSDS Letter Report, 2023 Annual Certifications, and 2024 Annual Certifications are included in **Appendix D**.

2.7 REMEDIAL ACTION OBJECTIVES

Based on the results of the Remedial Investigation, the following RAOs have been identified for this Site.

2.7.1 Soil

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

2.7.2 Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding the AWQS.

- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to regional background conditions.
- Remove the source of ground or surface water contamination.

2.7.3 Soil Vapor

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at the Site.

3.0 DESCRIPTION OF REMEDIAL ACTION PLAN

This section presents an analysis of remedial actions that are to achieve compliance with NYCRR Part 375 under a Track 4 cleanup using site-specific SCO. Contamination remaining at the Site following completion of the remedial actions outline in this RAWP will be managed under a Site Management Plan. The proposed Track 4 cleanup includes a combination of techniques to remove or treat chlorinated VOCs in soil, groundwater, and soil vapor, control the spread of contaminants, prevent contact with contaminants, restrict the use of the property, and provide for the proper management of the site into the future.

Track 4 SCOs proposed for the RA will be the PGWSCO for cVOCs and CUSCOs for all remaining contaminants. The remaining sitewide contaminants of concern above CUSCOs will be addresses via engineering and institutional controls including a site cover system, SSDS, EE, and SMP. Contaminants identified above the CUSCOs are summarized in **Table 3**.

3.1 EVALUATION OF REMEDIAL ALTERNATIVES

The following is a detailed description of the alternatives analyzed to address impacted medial at the Site:

Alternative 1 – Track 1 Cleanup:

- Selection of NYSDEC 6NYCRR Part 375 Unrestricted Use (Track 1) SCOs.
- Removal of all soil/fill exceeding Track 1 Unrestricted Use SCOs throughout the Site and confirmation that Track 1 Unrestricted Use SCOs have been achieved with post-excavation endpoint sampling.
    - Based on the results of the Remedial Investigation, it is expected that this alternative would be achieved by excavating the entire Site to 10 feet bgs, with localized excavation to 20 feet bgs at AOC-3, AOC-7, AOC-8, and AOC-10, removing approximately 30,000 cubic yards of contaminated soil.
- Off-site disposal of excavated soil in accordance with all applicable federal, state, and local rules and regulations.
- Import of clean backfill meeting the UUSCOs to replace the excavated soil.
- Treatment of impacted groundwater at the Site, including the injection of Provect-IR® into the subsurface at AOC-7 and the application of Provect-IR® in the open excavation pit at AOC-7 prior to backfilling. Up to nine monitoring wells would be installed at the Site and sampled pre- and post-injection. Groundwater monitoring would continue on a quarterly basis thereafter until NYSDEC AWQG levels are achieved.
- Maintenance of the two active SSDS systems previously installed at the Site.

Alternative 2 – Track 4 Cleanup:

- Selection of Track 4 Site-specific Commercial SCOs.
- Removal of all soil/fill exceeding Commercial SCOs in the upper 1 foot across the Site.
- Removal of soil/fill exceeding Protection of Groundwater SCOs for cVOCs for all depths above the water table.
    - Based on the results of the Remedial Investigation, it is expected that this alternative would be achieved by excavating uncapped areas which currently do not meet Commercial SCOs to 1-foot bgs and excavating AOC-7 to 10 feet bgs and AOC-10 to 8 feet bgs. No uncapped areas exist at the Site and the excavation will be limited to AOC-7 and AOC-10, removing approximately

350 cubic yards of contaminated soil.

- Off-site disposal of excavated soil in accordance with all applicable federal, state, and local rules and regulations.
- Import of clean backfill meeting the lower of PGSCOs and CUSCOs to replace the excavated soil.
- Treatment of impacted groundwater at AOC-7, including the injection of Provect-IR® into the subsurface and the application of Provect-IR® in the open excavation pit prior to backfilling. Up to nine monitoring wells would be installed at the Site and sampled pre- and post-injection. Groundwater monitoring would continue on a quarterly basis thereafter until NYSDEC AWQG levels are achieved.
- Maintenance of the site cover system.
- Maintenance of the two active SSDS systems previously installed at the Site.
- Development of a SMP to operate, monitor and maintain all engineering and institutional controls on the site.
- Establishment of institutional controls including an EE limiting the use of the Site to commercial/industrial activities, restrictions on unauthorized excavation or disturbance of the cover system, and the ensuring implementation of the SMP.

The remedial alternatives were compared to the following criteria:

- Protection of human health and the environment
    - Alternative 1 would be protective of human health and the environment by removing all soil/fill exceeding Track 1 Unrestricted Use SCOs, by treating groundwater, and by maintaining the two active SSDS systems previously installed at the Site, thus eliminating potential for direct contact with contaminated soil/fill and eliminating the risk of contaminants leaching into groundwater and vapor, and to enhance natural attenuation for further reduction of the residual concentrations accelerating the natural attenuation of

groundwater impacts in AOC 7 so they are more consistent with site-wide impacts.

  - Alternative 2 would be protective of human health and the environment by removing cVOC hot spots at the Site and by ensuring that remaining soil/fill meets Track 4 Site-Specific SCOs, by treating groundwater, and by establishing institutional and engineering controls, including a site cover system and SSDS. The site cover system would prevent direct contact with contaminated soil/fill, treating groundwater would enhance natural attenuation for further reduction of the residual concentrations accelerating the natural attenuation of groundwater impacts in AOC 7 so they are more consistent with site-wide impacts, and the institutional controls would ensure that the engineering controls remain intact and protective of public health.

- Compliance with standards, criteria, and guidelines (SCGs)
  - Alternative 1 would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil, groundwater, and vapor through removal of soil to achieve Track 1 Unrestricted Use SCOs, treatment of groundwater, and maintenance of the two existing active SSDS systems at the Site.
  - Alternative 2 would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil, groundwater, and vapor through removal of soil to meet Track 4 Site-specific SCOs, treatment of groundwater, and maintenance of the two active SSDS systems at the Site.
- Short-term effectiveness and impacts
  - Both Alternative 1 and 2 have similar short-term effectiveness as each requires excavation of contaminated soil and historic fill material. Additionally, both Alternative 1 and 2 have similar short-term effectiveness for protecting the surrounding communities by decreasing the risk of contact with on-Site contaminants. However, impacts related to excavation would include short-

term dust generation and increased truck traffic. Alternative 2 is estimated to require the removal of approximately 350 cubic yards of soil. In contrast, Alternative 1 would involve the removal of roughly 30,000 cubic yards of historic fill site-wide. Due to the substantially larger excavation required for Alternative 1, these short-term impacts would be significantly greater compared to Alternative 2.

- Long-term effectiveness and permanence
  - Alternative 1 would achieve long-term effectiveness and permanence related to on-Site contamination by permanently removing all impacted soil/fill above Track 1 Unrestricted Use SCOs, remediating groundwater, and maintaining the active SSDS systems. Removal of on-Site contaminant sources will also prevent future groundwater contamination.
  - Alternative 2 would achieve long-term effectiveness and permanence related to on-Site contamination by removing the cVOC source material, remediating groundwater, utilizing a site cover system across the Site, maintenance of the active SSDS systems, maintaining use restrictions, and placing an EE on the Site.
- Reduction of toxicity, mobility, or volume of contaminated material
  - Alternative 1 will permanently eliminate the toxicity, mobility, and volume of contaminants from on-Site soil, groundwater, and vapor by removing all soil in excess of Track 1 Unrestricted Use SCOs and treating groundwater at the Site. Alternative 1 would remove a greater total mass of contaminants from the Site.

    Exposure to soil would be eliminated through the maintenance of the existing site cover system and active SSDS systems.
  - Alternative 2 will remove the cVOC source material and treat groundwater at the Site. All soil/fill remaining at the Site would meet Track 4 Site-specific

SCOs and exposure to residual soil and vapor would be minimized through the site cover system and maintenance of the existing active SSDS systems.

- Implementability (technical and administrative feasibility):
    - The techniques, materials and equipment to implement both Alternatives 1 and 2 are readily available and have been proven to be effective in remediating the contaminants present on the Site. They use standard equipment and technologies that are well established in the industry. There are no special difficulties associated with any of the activities proposed.
- Cost Effectiveness
    - Historic fill at the site extends to approximately 10 feet below ground surface (bgs). Consequently, the costs associated with Alternative 1 and Alternative 2 are not comparable. The estimated cost for Alternative 2 is approximately $1,250,000, with $138,320 of the total costs directly related to soil removal. . However, to achieve Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs) across the site, the estimate cost for Alternative 1 is approximately $6,435,000, with $3,571,572 of the total costs directly related to soil removal, making it cost-prohibitive. Refer to **Appendix E** for remedial cost estimates for both Alternative 1 and Alternative 2.
    - Additional short-term costs for Alternative 1 would include installation of additional shoring/underpinning, disposal of additional soil, and import of clean soil for backfill.
    - Long-term costs for Alternative 2 would be higher than Alternative 1 based on the need for ongoing site management, and operation and maintenance of engineering controls at the Site.
- Community Acceptance

- This RAWP was subject to a public comment period to provide the community with an opportunity for public input on the remedial alternatives and selected remedy. No public comments were received.
- Under both alternatives, the overall goals of the remedial program (to protect public health and the environment and eliminate potential contaminant exposures) have historically been broadly supported by surrounding communities.

- Green and Sustainable Remediation (including climate resiliency)
  - Remedies for both alternatives would be implemented in a more energy-efficient manner, use cleaner and more energy-efficient equipment and construction techniques, and use more sustainable materials when possible.
  - The remedial plan for both alternatives will take into consideration the shortest trucking routes during off-Site disposal of historic fill and other soils.
  - As Alternative 1 would require significantly more excavation compared to Alternative 2, it would have a higher short-term impact on the climate due to the increased greenhouse gas generation from truck traffic.
- Land use
  - Following remediation, the Site will meet either Track 1 Unrestricted Use or Track 4 Site-Specific SCOs, both of which are protective of public health and the environment for its current and planned commercial use. The proposed use is compliant with the property's zoning and is consistent with recent development patterns.
  - The areas surrounding the Site are urban and consist of predominantly industrial buildings in zoning districts designated for industrial use.

- The Site is not located in an area impacted by comprehensive community master plans, local waterfront revitalization plans, or other applicable land use plans.
- The Site is located in a potential environmental justice area (PEJA); however, the proposed use of the Site will not cause or increase a disproportionate burden on the surrounding community.
- The Site is not in close proximity to important cultural resources, including federal or state historic or heritage sites or Native American religious sites, natural resources, waterways, wildlife refuges, wetlands, or critical habitats of endangered or threatened species.
- The Site does not lie in a Federal Emergency Management Agency (FEMA)-designated flood plain.
- Groundwater in the surrounding area is not used for potable uses and groundwater at the Site will not impact groundwater recharge areas or other areas identified by the NYSDEC groundwater remediation and protection program.

3.2 SUMMARY OF SELECTED REMEDIAL ACTIONS

The preferred remedial action alternative is Alternative 2. The preferred remedial action achieves protection of public health and the environment for the intended use of the property and will achieve all of the remedial action objectives and applicable SCGs established for the project. Further, the preferred remedial action is effective in both the short-term and long-term and reduces mobility, toxicity, and volume of contaminants. The preferred remedial action is cost-effective and implementable in terms of technical and administrative feasibility, will be accepted by the community, and include elements of green and sustainable remediation. Finally, the preferred remedial action is appropriate for the current and proposed land uses of the Site and surrounding area.

Chlorinated VOC source areas in AOC-7 and AOC-10 will be removed to prevent further

impacts to groundwater. A site cover system consisting of the existing concrete building slabs and asphalt pavement on exterior open areas of the Site will prevent exposure to remaining contaminated soils. Groundwater treatment utilizing Provect-IR® will remediate cVOCs in groundwater, while the SSDSs will prevent soil vapor contamination inside the buildings. Proposed institutional controls will include an EE limiting the use of the Site for commercial/industrial activities, restrictions on unauthorized excavation or disturbance of the cover system, and a Site Management Plan.

In addition, due to elevated concentrations of dissolved VOC and PAH constituents in groundwater sitewide, with localized cVOC hot spots to depths of 110 feet bgs, and additional impacts related to a commingled cVOC plume migrating on to the Site from an off-site source, remediation of groundwater to the AWQS/AWQSGVs would not be practical or feasible. The objective of the RA for groundwater will be to treat the cVOC groundwater hot spot in AOC-7, such that dissolved cVOC concentrations are more consistent with upgradient conditions, and residual groundwater impacts will continue to naturally attenuate. Proposed institutional controls include restricting the use of groundwater at the Site.

The RAOs for soil vapor include preventing soil vapor from entering Site buildings or migrating offsite.

The objective of this RAWP is to achieve a Track 4 remedy for commercial use consisting of cVOC soil and groundwater hot spot remediation, engineering controls, and institutional controls to prevent exposure to contaminated media. The components of the RA will include the following:

1. **cVOC Soil Hot Spot Excavation:** PSG will conduct remedial excavations at AOC-7 and AOC-10 to remove all cVOC-impacted soils with PGWSCO exceedances above the water table in order to prevent further impacts to Site groundwater. The proposed excavations will be 44’x15’x10’ at AOC-7 and 22’x15’x8’ at AOC-10. **Figure 10** depicts the estimated limits of the remedial excavations at each AOC. The remedial excavations will include the following tasks:

    - Decommission monitoring well MW-2 in accordance with the NYSDEC *CP-43: Groundwater Monitoring Well Decommissioning Policy*;

- Saw-cut, remove and dispose of asphalt in the areas to be excavated;
- Excavate an approximate 660 sf area at AOC-7 and an approximate 330 sf area at AOC-10 to the soil groundwater interface;
- Excavated soils will be inspected for organoleptic evidence of contamination and field-screened using a PID;
- Soils generated from the remedial excavation will be stockpiled or containerized into roll-off dumpsters for off-site disposal at a pre-approved soil disposal facility. All roll-off containers will be lined and covered at the end of each workday. Prior to conducting the excavations, PSG will complete waste characterization sampling for disposal facility acceptance of the waste. PSG obtained a Contained-In Determination from the NYSDEC on November 20, 2024 which clarified that soil excavated from AOC-10 and soils excavated from AOC-7 except the soil within the area delineated to the west by boring 7-B2; to the south by boring 7-1S; to the north by 7-B1N; and to the east by 7-B1E did not have to be managed as hazardous waste. The Contained-In Determination further stated that a contained-in request could be made for soils from borings 7-B1W, 7-B1WW, and 7B1 after the area was excavated and confirmatory samples were received; until that time, soils from these borings would be characterized as hazardous waste. An estimated 321 cubic yards of non-hazardous soil and up to 22 cubic yards of hazardous soil is expected to be excavated and removed from the Site. A copy of the Contained-In Determined is included as **Appendix F**.
- Confirmation samples will be collected during the remedial excavations for laboratory analysis by an ELAP-certified laboratory for TCL VOCs, to determine whether additional excavation is required. After the limits of the excavation are determined, final confirmation soil samples will be collected for TCL VOCs, TCL SVOCs, TAL metals, pesticides, PCBs, 1,4-dioxane, and PFAS;
- Once the limits of the remedial excavations have been determined, the excavation will be backfilled and compacted in 6-inch to 12-inch lifts, asphalt will be restored in kind with the surround surface. Imported material will consist of clean fill that meets the

UUSCOs or other acceptable fill material such as virgin stone from a quarry or recycled concrete aggregate (RCA). If RCA is imported to the Site, it will come from a NYSDEC-registered facility in compliance with 6 NYCRR Part 360 registration and permitting requirements for the period of RCA acquisition. RCA imported from compliant facilities will not require chemical testing, unless required by NYSDEC under its terms for operation of the facility. Imported RCA will be derived from recognizable and uncontaminated concrete (less than 10% by weight passing through a No. 80 sieve). All material proposed for import will be submitted to NYSDEC for review and approval utilizing the Request to Import/Reuse Fill form (**Appendix M**). No material will be imported to the site until approval is received from NYSDEC.

- Proposed locations of temporary soil stockpiles or roll off containers are depicted on **Figure 12**. Proposed truck routes are shown on **Figure 13**.

2. **In-Situ Chemical Reduction (ISCR):** PSG consulted with Provectus to develop an appropriate chemical injection plan to address the cVOC impacts in soil and groundwater at the Site. Provect-IR® is a unique mixture of reagents that optimizes the in situ reductive dechlorination of chemicals present in soil and groundwater. Following placement of Provect-IR® into the subsurface environment, a number of physical, chemical, and microbiological processes combine to create very strong reducing conditions that stimulate rapid and complete dechlorination of organic solvents and other recalcitrant compounds. Provectus product specifications and dosing calculations are included as **Appendix G**.

   Prior to backfilling the cVOC soil hot spot excavation at AOC-7, Provect-IR® will be applied in the open excavation at 2% of soil mass using a 3-foot vertical target interval at the water table. A total of 1,000 pounds of Provect-IR® is estimated for the excavation.

   In addition, the ISCR program will include injecting Provect-IR® into the subsurface to address the chlorinated solvent groundwater hot spot area at AOC-7. The injections will be performed using a direct push drill rig outfitted with steel injection rods. The ISCR injection activities will include a 3,000 square foot target area with a maximum 110 foot vertical target zone, which is the effective limit of the direct-push equipment at the Site. The Provect-IR® will be applied at an average of 0.30% of soil mass, which will ensure effective

reagent distribution while overcoming the reagent demand for contaminant destruction. The ISCR program also incorporate bioaugmentation with Dehalococcoides (DHC; 29 liters) to ensure efficient cVOC destruction.

The injections will include the application of approximately 34,800 pounds of Provect-IR® which will be mixed with approximately 1,728 gallons of water. Injections will be applied to 23 injection points across the Site. Six of these injection points, which cover a 400 square foot area, will be applied from 15 to 110 feet bgs, where the highest degree of cVOC impacts in groundwater are located. The residual plume target zone is from 15 to 40 feet bgs and will be addressed via seventeen other injection points. Refer to **Figure 11** for a depiction of proposed ISCR direct push injection points. A summary of proposed injection intervals and Provect-IR mass is given in **Table 8**.

With the exception of a cVOC groundwater hot spot in AOC-7, relatively consistent cVOC impacts are present in intermediate and deep groundwater samples across the Site, with similar concentrations identified in offsite, upgradient borings and monitoring wells. These results indicate that the deep and intermediate zones have also been impacted by an offsite regional plume, which has migrating onto the Site. Based on prior measurements, the aquifer exhibits reducing biogeochemical conditions including DO at less than 1 ppm and negative ORP, and neutral pH. The objective of the ISCR program is to reduce the cVOC groundwater concentrations at AOC-7 such that cVOC concentrations are more consistent with sitewide conditions and to enhance natural attenuation for further reduction of the residual concentrations.

For the injection plans, the cVOC areas have been divided into two sections which will be treated with different quantities of Provect-IR® based on the degree of cVOC impacts identified in the RI.

- 15-110 feet bgs: Located in the central area of the cVOC hot spot measuring 400 square feet where high degrees of cVOC impacts are present. This zone will receive approximately 14,400 pounds of Provect-IR®, which will be applied through 6 injection points.

- 15-40 feet bgs: Located in the area surrounding the cVOC hot spot measuring 400 square feet where residual impacts of cVOC impacts are present. This zone will receive approximately 20,400 pounds of Provect-IR®, which will be applied through 17 injection points.

3. **Monitoring Well Installations:** Monitoring wells will be installed at the Site to evaluate the effectiveness of remedial actions. PSG will install monitoring wells around the injection area to ensure that the treatment does not alter groundwater flow and to monitor for potential off-site migration to the south. Proposed monitoring well locations are depicted on **Figure 11**. Up to nine (9) monitoring wells will be installed at the following locations:

    - Four (4) monitoring well clusters at AOC-7, immediately west-northwest (downgradient) of the ISCR treatment area, screened at 5-20 feet bgs, 35-40bgs, 65-70 feet bgs, and 105-110 feet bgs;
    - Four (4) downgradient well clusters in the sidewalk or paved area immediately west-northwest AOC-3, screened at 5-20 feet bgs, 35-40 feet bgs, 65-70 feet bgs, and 105-110 feet bgs;
    - One monitoring well couplet with two monitoring wells, screened at 5-20 feet bgs and 35-40 feet bgs, immediately southeast of the ISCR treatment area in the vicinity of RIR boring 7-B1/7-TW3, where elevated concentrations of cVOC breakdown products cis 1,2-DCE and vinyl chloride were identified, to monitor for potential off-Site migration to the south.
    - The monitoring well borings will be advanced using direct push and/or air rotary drilling equipment. The monitoring wells will be constructed of two-inch diameter schedule 40 polyvinyl chloride (PVC) screen and riser casing to the depths indicated above. The wells will be equipped with 0.02 slotted screen, sand filter packs, cement seals, and flush-mount well covers.
    - Shallow monitoring wells will be constructed with 15 feet of screen, such that the screen interval intersects the water table. Approximately 5 feet of screening will be located above the water table and 10 feet of screening will be located beneath the water table. Deeper wells will be constructed with 5 feet of screen, below the water table.

- The monitoring wells will be developed within one week following installation, using a surging/pumping method with a submersible pump. All purge water and soil drill cuttings will initially be classified as hazardous waste and will be containerized in drums onsite for subsequent waste characterization sampling and disposal. The monitoring wells will be surveyed by a licensed surveyor to calculate groundwater flow direction and rates.

4. Groundwater Sampling:

PSG will conduct pre- and post-remediation groundwater sampling events to establish baseline conditions and monitor the effectiveness of the RA. Groundwater monitoring will include sampling the existing monitoring wells (MW-1, MW-3, MW-4, MW-5, and MW-6) and the newly installed cluster and couplet wells prior to and approximately 60-days after completing the ISCR injections, per the recommendation of the manufacturer and on a quarterly basis thereafter. PSG notes that existing monitoring well MW-2 will be demolished during cVOC hotspot excavation at AOC-7. The residence time of the ISCR injections is a minimum of five years. PSG will conduct the groundwater sampling events in accordance with the procedures presented in the NYSDEC-approved RIWP for the Site. All wells will be sampled in accordance with the EPA low-flow groundwater purging and sampling procedures (revised September 19, 2017). Groundwater samples will be collected from the monitoring wells using the following methodology:

- A headspace reading will be collected using a GEM2000 or similar total gas analyzer;
- Depth to water will be measured using a water level indicator;
- Field parameters including pH, ORP, turbidity, specific conductivity, dissolved oxygen, temperature, and depth to water will be collected for approximately 15 to 30 minutes or until field parameters stabilize;
- Upon stabilization of field parameters, dedicated tubing will be used to obtain each groundwater sample from the approximate middle of the saturated screen zone;

- Sample containers will be placed into a chilled cooler and maintained at low temperatures (below 4-degress Celsius) for transport to the laboratory.
- Samples will be analyzed for total and dissolved methods via EPA Method 6020B/7470A chloride, sulfate, nitrate, and nitrite via EPA Method 300, total organic carbon via EPA Method 9060A, and dissolved gases via EPA Method 3810, and TCL VOCs via EPA Method 8260B.

5. Engineering Controls – Site Cover System: The site currently has an existing cover system consisting of asphalt, concrete, and building slabs. This cover system will be restored following the completion of the excavation outlined in remedy element 1, above, and will be visually inspected to ensure that the engineering control is functioning to prevent direct exposure to remaining contaminated soil. **Figure** 12 depict the different cover systems at the Site.

6. Engineering Controls – Sub-Slab Depressurization Systems: There are two existing SSDSs (one installed beneath 140 Stewart Avenue and one beneath 111 Gardner Avenue buildings). These systems were installed in May 2016 and June 2017, respectively, and have been operating continuously since then to mitigate the potential for vapor intrusion from the subsurface into the Site buildings. The SSDSs will continue to operate until permission is granted from NYSDEC to shut them down.

7. Institutional Controls – Environmental Easement: Proposed institutional controls include the recording of an EE to prevent future exposure to any remaining contamination at the Site; publication of a SMP for long-term management of residual contamination as required by the EE; and use restrictions limiting the use of the Site for commercial/industrial activities, restricting the use of groundwater, and restricting unauthorized excavation or disturbance of the cover system.

8. Institutional Controls – Site Management Plan: An SMP will be developed which will include, but not be limited to: an Institutional and Engineering Control Plan; and Excavation Work Plan; a Monitoring Plan; and an Operation and Maintenance Plan.

3.3 ZONING

According to the New York City Planning Commission Zoning Map and Land Use Map, the Site is located within a M3-1 zoning area. The entire Site is also located in the Manufacturing District (M3). M3 districts are designated for areas with heavy industries that generate noise, traffic or pollutants. Typical uses include power plants, solid waste transfer facilities and recycling plants, and fuel supply depots.

3.3.1 Surrounding Property Uses

The surrounding land uses include commercial and industrial properties. The southern Site border is an active railroad line, owned by the Long Island Railroad.

The current, intended, and reasonably anticipated future land use of the Site and its surroundings are compatible with the selected remedy.

3.3.2 Citizen Participation

The Citizen Participation Plan (CPP) outlines how members of the affected and interested public are provided with information about how NYSDEC will inform and involve them during the investigation and remediation of the Site. Information such as project contacts, document repositories, site contact lists, and community participation activities are provided in the CPP.

3.3.3 Environmental Justice Concerns

The Site is located in an Environmental Justice area. NYSDEC's Office of Environmental Justice acts as an advocate on behalf of these areas, which are disproportionately affected by environmental burdens.

3.3.4 Land Use Designations

There are no federal or state land use designations.

3.3.5 Population Growth Patterns

The population growth patterns and projections support the proposed land use.

3.3.6 Accessibility to Existing Infrastructure

Water and sewer service will be provided by NYC water and sewer utilities, and electric and natural gas services will be supplied by Consolidated Edison and National Grid, respectively. The property is nearby New York City subway and bus routes.

3.3.7 Proximity to Cultural Resources

The only City Landmark located within 0.5 mile of the Site is the Adrian and Ann Wyckoff Onderdonk House, which is located approximately 1,300 feet to the east of the Site on Onderdonk Avenue. The Stockholm Street Historic District is also located approximately 0.58 miles to the southeast of the Site. No State or National Register listed Sites are located within ½-mile of the Site. The proposed remedy is not anticipated to adversely impact these cultural resources.

3.3.8 Proximity to Natural Resources

Potential wetlands on or near the Site were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands. Based on these documents no mapped wetlands are listed on the Site.

The Site is located within an industrial area of Brooklyn. The future Site use is commercial with the majority of the site covered by buildings and asphalt pavement, providing little or no wildlife habitat or food value. As such, no unacceptable ecological risks are anticipated under the current or reasonably anticipated future use scenario. The RI demonstrated that constituents of concern were released into the environment at the Site; therefore, the Site can be considered to have been affected by one or more discharges or spill events. The NYSDEC's decision key contained in Appendix 3C of DER-10 was utilized to evaluate whether or not performance of a Fish and Wildlife Resources Impact Analysis was needed. The Site currently contains no ecological resources. The NYSDEC's Environmental Resources Management Resource Mapper indicates that the Site and adjacent properties are not located in any state regulated freshwater

wetlands, water bodies, significant natural communities, rare plants and rare animal areas, or unique geological features areas. Evidence of onsite ecological resources was not observed during the RI. There is no evidence that contamination present at the Site has the potential to migrate to and impact any potential offsite ecological resources. Therefore, a Fish and Wildlife Resources Impact Analysis was not needed based on NYSDEC guidance.

3.3.9 Off-Site Groundwater Impacts

Municipal water supply wells are not present in this area of New York City; therefore, groundwater from the Site cannot affect municipal water supply wells or recharge areas.

3.3.10 Proximity to Floodplains

According to the National Flood Insurance Rate map for the City of New York published by the Federal Emergency Management (FEMA) (Community Panel No. 3604970208F, effective date September 5, 2007), the Site is located in Zone X, which is designated for areas determined to be outside the 0.2% annual chance of flood and in an area of minimal flood hazard.

3.3.11 Geography and Geology of the Site

The Site geography and geology is described in Section 2.2 of this RAWP.

3.3.12 Current Institutional Controls.

There are currently no institutional controls in place at the Site.

4.0 REMEDIAL ACTION PROGRAM

4.1 GOVERNING DOCUMENTS

The primary documents governing the remedial action are summarized in this section. Where referenced, copies of the full plan are provided in the appendices.

4.1.1 Standards, Criteria and Guidance Applicable to Remedial Actions

The following SCGs are applicable to the project and will be used to determine whether the RAOs have been met:

- Soil – 6 NYCRR Part 375 Soil Cleanup Objectives (December 2006); 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes; 6 NYCRR Part 376 - Land Disposal Restrictions; and 6 NYCRR Part 360 - Solid Waste Management Facilities.
- Groundwater – 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998), and TOGS 1.1.1 AWQSGV and Groundwater Effluent Limitations.

In addition, the following SCGs are applicable to the remedial program at the Site:

- NYSDEC DER-10 – Technical Guidance for Site Investigation and Remediation (May 2010);
- NYSDOH Generic Community Air Monitoring Plan (CAMP);
- NYSDEC DER-23 – Citizen Participation Handbook for Remedial Programs (January 2010);
- 6 NYCRR Part 372 – Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities (November 1998);
- 6 NYCRR Subpart 374-1 – Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities (November 1998);
- 6 NYCRR Subpart 374-3 – Standards for Universal Waste (November 1998);
- 6 NYCRR Part 375 – Environmental Remediation Programs (December 2006);
- 29 CFR Part 1910.120 – Hazardous Waste Operations and Emergency Response;
- 40 CFR Part 144 – Underground Injection Control Program;

- DAR-1 (formerly Air Guide 1) - Guidelines for the Control of Toxic Ambient Air Contaminants (1997);
- NYSDEC DER-31 – Green Remediation (2010); and
- CP-43 – Commissioner Policy on Groundwater Monitoring Well Decommissioning (December 2009)

4.1.1.1 Green and Sustainable Remediation and Climate Resiliency

PSG will design and implement green/sustainable elements to be included within the remedy to achieve BMPs which will reduce the environmental footprint of the remedy. The core elements of the BMPs of green remediation are related to energy, air & atmosphere, water, land & ecosystems, and materials & waste. The green/sustainable elements proposed by PSG will be less disruptive to the environment, generate less waste, increase reuse and recycling, and emit fewer pollutants to the atmosphere. A list of proposed green/sustainable elements is as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- The Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals;
- Integrating the remedy with the end use where possible and encouraging green and sustainable re-development; and
- Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this Site, any future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of

New York (or most recent edition) to improve energy efficiency as an element of construction.

In addition to the above, PSG will prepare a Green Remediation Implementation Plan to detail procedures and tracking of these items and complete a Climate Screening of the Site to identify potential changes in climate hazards. If the screening identifies potential exposure to climate hazards, a Climate Vulnerability Assessment (CVA) will need to be conducted and will identify adaptation measures to account for projected climate hazard exposures.

4.1.2 Site Specific Health & Safety Plan

All remedial work performed under this plan will be in compliance with governmental requirements, including Site and worker safety requirements mandated by the Federal Occupational Safety and Health Administration (OSHA).

The Volunteer and associated parties preparing the remedial documents submitted to the State and those performing the construction work, are completely responsible for the preparation of an appropriate Health and Safety Plan and for the appropriate performance of work according to that plan and applicable laws.

The HASP and requirements defined in this RAWP pertain to all remedial and invasive work performed at the Site until the issuance of a Certificate of Completion. The Site Safety Coordinator will be David Lent, P.G.

The Remedial Engineer (RE) prepared a Site-specific Construction Health and Safety Plan (CHASP), which is included as **Appendix H**. The CHASP will address Site-specific contaminants and will apply only to remedial and construction-related work on-Site. Contractors operating on the Site are required to adhere to their own plans that, at a minimum, meet the requirements of the CHASP. Remedial work performed under this plan will be in compliance with governmental requirements, including Site and worker safety requirements mandated by OSHA. The CHASP provides a mechanism for establishing on-Site safe working conditions, safety organization, procedures, and PPE requirements during implementation of the remedy. The CHASP meets the

requirements of 29 CFR 1910 and 29 CFR 1926 (which includes 29 CFR 1910.120 and 29 CFR 1926.65). The CHASP includes, but is not limited to, the following components:

- Organization and identification of key personnel
- Training requirements
- Medical surveillance requirements
- List of Site hazards
- Excavation safety
- Work zone descriptions
- Personal safety equipment and protective clothing requirements
- Decontamination requirements
- Standard operating procedures
- Protective measure plan
- CAMP
- Safety Data Sheets

The Volunteer and associated parties preparing the remedial documents submitted to the State and those performing the construction work are responsible for the preparation of an appropriate CHASP and for the appropriate performance of work according to that plan and applicable laws.

The CHASP and requirements defined in this RAWP pertain to all remedial and invasive work performed at the Site until the issuance of a Certificate of Completion. The PSG Site Safety Coordinator will be the onsite field technician. If required for Site workers, confined space entry will comply with all OSHA requirements to address the potential risk posed by combustible and toxic gasses. PSG personnel will not enter confined spaces.

4.1.3 Quality Assurance Project Plan (QAPP)

The RE has prepared a Quality Assurance Project Plan (QAPP) that describes the quality control components that will ensure that the proposed remedy accomplishes the remedial goals, remedial action objectives, and is completed in accordance with the design specifications. The NYSDEC-approved QAPP is provided as **Appendix I** and includes:

- Responsibilities of key personnel and their organizations for the proposed remedy;
- Qualifications of the quality assurance officer;
- Proposed sampling requirements including methodologies, quantity, volume, locations, frequency, acceptance, and rejection criteria and end-point sampling; and
- Description of the reporting requirements for quality assurance activities including weekly quality assurance review reports, periodic quality assurance and quality control audits, and other report and data submissions.

4.1.4 Soil/Materials Management Plan (SMMP)

The RE has prepared a Soil/Materials Management Plan (SMMP), which includes detailed plans for managing soil/materials that are disturbed at the Site, including excavation, handling, storage, transport, and disposal. It also includes controls that will be applied to these efforts to assure effective, nuisance-free performance in compliance with applicable federal, state, and local laws and regulations. The SMMP is further described in Section 5.4.

4.1.5 Community Air Monitoring Plan (CAMP)

A CAMP was prepared for the Site in accordance with the NYSDOH Generic CAMP (**Appendix J**) and is further discussed in Section 5.3.12. PSG notes that, if any ground intrusive or soil handling activities will be conducted within 20 feet of an occupied structure or receptors, then a Special Requirements CAMP will be required and provided to NYSDOH for review and approval.

4.1.6 Contractors Site Operations Plan (SOP)

The RE will review all plans and submittals for this remedial project, including contractor and sub-contractor document submittals, and confirms that they are in compliance with this RAWP. All remedial documents will be submitted to NYSDEC and NYSDOH in a timely manner.

4.1.7 Citizen Participation Plan

A certification of mailing will be sent by the Volunteer to the NYSDEC project manager following the distribution of all Fact Sheets and notices that includes: (1) certification that the Fact Sheets were mailed, (2) the date they were mailed; (3) a copy of the Fact Sheet, (4) a list of recipients (contact list); and (5) a statement that the repository was inspected, including the date of inspection, and that it contained all of applicable project documents.

No changes will be made to approved Fact Sheets authorized for release by NYSDEC without written consent of the NYSDEC. No other information, such as brochures and flyers, will be included with the Fact Sheet mailing.

The approved Citizen Participation Plan for this project is attached in **Appendix K**.

Document repositories have been established at the following locations and contain all applicable project documents:

Bushwick Library
340 Bushwick Avenue, Brooklyn, New York 11206
(718) 602-1348
10:00 AM to 6:00 PM

Brooklyn Community Board 1
435 Grana Avenue, Brooklyn, New York 11211
(718) 389-0009
9:00 AM to 5:00 PM

Additionally, an electronic repository is available through DECinfo Locator:

Index of /data/DecDocs/C224258

4.2 GENERAL REMEDIAL CONSTRUCTION INFORMATION

4.2.1 Project Organization

Key personnel involved in the remedial action will include the following:

- Project Engineer: Kristine McCarthy MacWilliams, P.E.
- Project Manager: David Lent, P.G.
- Environmental Health and Safety Officer and Field Operations Leader: Ally Hassler, Project Geologist
- Field Staff: Robert Hazard, Project Scientist; Peter Cerny, Project Scientist
- DUSR Preparer: Donald Anné, Senior Chemist, Alpha Geoscience

Resumes of key personnel involved in the remedial action are included in **Appendix L**.

4.2.2 Remedial Engineer

The RE for this project will be Kristine McCarthy MacWilliams. The RE is a registered professional engineer licensed by the State of New York. The RE will have primary direct responsibility for implementation of the remedial program for the Site. The RE will certify in the Final Engineering Report (FER) that the remedial activities were observed by qualified environmental professionals under her supervision and that the remediation requirements set forth in the RAWP and any other relevant provisions of ECL 27-1419 have been achieved in full conformance with RAWP.

The RE will coordinate the work of other contractors and subcontractors involved in all aspects of remedial construction, including soil excavation, stockpiling, characterization, removal and disposal, air monitoring, emergency spill response services, import of back fill material, and management of waste transport and disposal. The RE will be responsible for all appropriate communication with NYSDEC and NYSDOH.

The RE will review all pre-remedial plans submitted by contractors for compliance with this RAWP and will certify compliance in the FER.

4.2.3 Remedial Action Construction Schedule

A schedule for performance of the remedial work is provided as **Table 10**. The schedule is broken down into remedial action elements based on elapsed time from approval by NYSDEC. A revised schedule will follow with a submission to NYSDEC of actual dates after the approval has been provided.

4.2.4 Work Hours

The hours for operation of remedial construction will conform to the New York City Department of Buildings construction code requirements or according to specific variances issued by that agency. NYSDEC will be notified by the Volunteer of any variances issued by the Department of Buildings.

4.2.5 Site Security

Site security will be maintained by utilizing and maintaining the existing fence surrounding the property. The fence will be maintained throughout the project and access gates will be maintained during daily operations and closed and locked at other times. Remedial activities will begin when the venue is closed to the general public either before or after the summer entertainment/music season is completed.

4.2.6 Traffic Control

Drivers of trucks leaving the Site with soil/fill will be instructed to proceed without stopping in the vicinity of the Site to prevent neighborhood impacts.

4.2.7 Contingency Plan

If underground tanks or other previously unidentified contaminant sources are found during on-Site remedial excavation or development related construction, sampling will be performed on

product, sediment, and surrounding soils, etc. Chemical analytical work will be for full scan parameters (TAL metals; TCL volatiles and semi-volatiles, TCL pesticides and PCBs, 1,4-dioxane, and PFAS).

Identification of unknown or unexpected contaminated media identified by screening during invasive Site work will be promptly communicated by phone to NYSDEC's Project Manager. These findings will be also included in daily and periodic electronic media reports.

4.2.8 Worker Training and Monitoring

This should include HAZWOPER, site safety training and medical monitoring for Site workers.

4.2.9 Agency Approvals

No permits or governmental approvals, except this RAWP, will be required for remedy elements.

4.2.11 Pre-Construction Meeting with NYSDEC

This meeting must take place prior to the start of major construction activities and be attended by the Volunteer, RE, consultant, and applicable contractor(s).

4.2.12 Emergency Contact Information

An emergency contact sheet with names and phone numbers is included in **Table 9**. That document will define the specific project contacts for use by NYSDEC and NYSDOH in the case of a day or night emergency.

4.3 SITE PREPARATION

4.3.1 Mobilization

Mobilization will include the delivery of equipment and materials to the Site. Site workers will receive Site orientation and training in accordance with the Site-specific HASP, CAMP, and

established policies and procedures to be followed during the implementation of remedial activities. The remediation contractor and associated subcontractors will each receive a copy of the RAWP, HASP, and CAMP and will be briefed on their contents.

4.3.2 Erosion and Sedimentation Controls

Erosion and sediment controls will be implemented as necessary. Best Management Practices (BMP) for soil erosion will be selected to minimize erosion and sedimentation off Site from the start of the remediation to the completion of development. The existing site cover at the Site, which will be part of the final engineering control, will be protected from potential erosion and sediment via physical barriers, including temporary fencing and polyethylene sheeting. If impacted soils are released to the proposed cover, they will be swept off the cover and placed on a polyethylene sheeting for future characterization and disposal. The cover will then be power-washed and visually inspected to ensure no residual soils remain. Any on-site drains or drywells will be properly sealed and covered. A Stormwater Pollution Prevention Plan (SWPPP) is not necessary because the project will disturb less than one acre, and stormwater discharge, if required, will be to a combined sewer in accordance with the New York City generic sewer discharge permit.

4.3.3 Utility Marker and Easements Layout

The Volunteer and its contractors will be solely responsible for the identification of utilities that might be affected by work under the RAWP and implementation of all required, appropriate, or necessary health and safety measures during performance of work under this RAWP. The Volunteer and its contractors will be solely responsible for safe execution of all invasive and other work performed under this RAWP. The Volunteer and its contractors will obtain any local, State or Federal permits or approvals pertinent to such work that may be required to perform work under this RAWP. PSG understands that approval of this RAWP by NYSDEC does not constitute satisfaction of these requirements.

The presence of utilities and easements on the Site has been investigated by PSG. It has been determined that no risk or impediment to the planned work under this RAWP is posed by utilities or easements on the Site.

4.3.4 Stabilized Construction Entrance(s)

A stabilized construction entrance will be established between the truck wash and stone-based egress path to ensure that trucks do not get re-contaminated prior to departure from the Site.

4.3.5 Equipment and Material Staging

Equipment and materials staging areas will be designated during the remediation activities, in coordination with the facility manager to facilitate remediation work and prevent cross-contamination.

4.3.6 Decontamination Area

A temporary decontamination area lined with polyethylene sheeting will be constructed for steam- cleaning or washing excavation and drilling equipment, when appropriate. The location of the decontamination area will be coordinated with the facility manager. At a minimum, the decontamination pad will have a 30-mil low-permeability liner and be bermed and sloped to a collection sump to contain and collect fluids, and have side walls to mitigate, to the extent practicable, errant overspray, especially when decontaminating large equipment.

4.3.7 Site Fencing

Site security will be maintained by utilizing and maintaining the existing eight-foot-high plywood construction fence surrounding the property. The fence will be maintained throughout the project and the vehicle access gate will be kept closed during daily operations and closed and locked at other times. In addition, safety fencing will be installed around remedial work areas, as needed, to protect facility employees and visitors.

4.3.8 Demobilization

Following the completion of remedial activities at the Site, equipment and remedial structures will be decontaminated and dismantled and removed from the Site. Wastes generated during remedial activities (i.e., polyethylene sheeting and investigation derived waste (IDW)) will be properly disposed.

4.4 REPORTING

All daily and monthly Reports will be included in the Final Engineering Report.

4.4.1 Daily Reports

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers by the end of each day following the reporting period and will include:

- An update of progress made during the reporting day;
- Locations of work and quantities of material imported and exported from the Site;
- References to alpha-numeric map for Site activities;
- A summary of any and all complaints with relevant details (names, phone numbers);
- A summary of CAMP finding, including excursions; and
- An explanation of notable Site conditions.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RAWP or other sensitive or time critical information. However, such conditions will also be included in the daily reports. Emergency conditions and changes to the RAWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the Site that identifies work areas. These reports will include a summary of air sampling results, odor and dust problems and corrective actions, and all complaints received from the public.

A Site map that shows a predefined alpha-numeric grid for use in identifying locations described in reports submitted to NYSDEC will be included in the daily report.

The NYSDEC assigned project number will appear on all reports.

PSG notes that the NYSDEC and NYSDOH will be immediately notified of any CAMP exceedances, including measures on how the CAMP exceedances were addressed.

4.4.2 Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers within one week following the end of the month of the reporting period and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e., tons of material exported and imported, etc.);
- Description of approved activity modifications, including changes of work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and,
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

4.4.3 Other Reporting

Photographs will be taken of all remedial activities and submitted to NYSDEC in digital (JPEG) format. Photos will illustrate all remedial program elements and will be of acceptable quality. Representative photos of the Site prior to any remedial actions will be provided. Representative photos will be provided of each contaminant source, source area and Site structures before, during and after remediation. Photos will be included in the daily reports as needed, and a comprehensive collection of photos will be included in the Final Engineering Report.

Progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the FER, including a comparison to the goals established during the remedial program. Regular updates to the metrics used via the EPA SEFA, or other approved method will be included.

Job-site record keeping for all remedial work will be appropriately documented. These records will be maintained on-Site at all times during the project and be available for inspection by NYSDEC and NYSDOH staff.

4.4.4 Complaint Management Plan

Complaints from the public regarding nuisance or other Site conditions will be reported directly to the NYSDEC project manager and included in the daily reports.

4.4.5 Deviations from the Remedial Action Work Plan

PSG will notify the NYSDEC and NYSDOH project managers and request approval for deviations from the approved RAWP. This notification will be provided via email correspondence, and at a minimum, will include a description of RAWP deviation, reasons for deviating from the approved RAWP, and the effect of the deviations on the overall remedy.

5.0 REMEDIAL ACTION: MATERIAL REMOVED FROM THE SITE

PSG will conduct remedial excavations at AOCs 7 and AOC-10 to remove cVOC-impacted soils above the water table in order to prevent further impacts to Site groundwater. **Figure 10** depicts the estimated limits of the remedial excavations at each AOC.

The remedial excavations are expected to encompass an area approximately 660 sf at AOC-7 and 330 sf at AOC-10 and extend from the ground surface to the water table, unless the results of post-excavation soil sampling indicate cVOC concentrations in remaining soils are in compliance with the NYSDEC SCO for the protection of groundwater. The maximum anticipated depth of the remedial excavations is 8 to 10 ft bgs. Approximately 350 cubic yards of material will be removed from the Site.

Excavated soil will be staged on-Site in roll-offs, pending disposal to an approved off-site disposal facility. PSG obtained a Contained-In Determination from the NYSDEC on November 20, 2024 which clarified that soil excavated from AOC-10 and soils excavated from AOC-7 except the soil within the area delineated to the west by boring 7-B2; to the south by boring 7-1S; to the north by 7-B1N; and to the east by 7-B1E did not have to be managed as hazardous waste. The

Contained-In Determination further stated that a contained-in request could be made for soils from borings 7-B1W, 7-B1WW, and 7B1 after the area was excavated and confirmatory samples were received; until that time, soils from these borings would be characterized as hazardous waste. An estimated 321 cubic yards of non-hazardous soil and up to 22 cubic yards of hazardous soil is expected to be excavated and removed from the Site..

Soil and materials management on-Site and off-Site will be conducted in accordance with the Soil Management Plan as described below.

5.1 SOIL CLEANUP OBJECTIVES

The following SCOs are proposed for the Site:

- cVOC-impacted soils at AOCs 7 and 10 will be remediated to the PGWSCOs.
- For all other contaminants, the CUSCOs are applicable. A Track 4 remedy is proposed for soils using site-specific concentrations identified during the RI, which are listed in **Table 4**. Spider maps that depict the exceedances of CUSCOs detected during the RI are included as **Figures 7.1 to 7.4, Figure 8, and Figure 9.1**.

5.2 REMEDIAL PERFORMANCE EVALUATION – POST-EXCAVATION END-POINT SAMPLING

Post-excavation confirmation samples at AOCs 7 and 10 will be collected to confirm that the PWSCOs have been achieved. Post-excavation confirmation soil samples will be collected in accordance with the QAPP. Post-excavation bottom soil samples will be collected at frequency of one sample every 900 sq. ft. as per DER-10, and sidewall samples on each side for every 30 feet of sidewall.

5.2.1 End-Point Sampling Frequency

Hot spots: As hot spots are encountered during excavation, the following end-point sampling protocol will be followed:

- Hot-spot excavations will have a minimum of one bottom sample and, a sidewall sample collected for every 30 linear feet of sidewall from along applicable excavation boundaries, with a minimum of one sample collected from each sidewall.
- For sampling of volatile organics, bottom samples will be taken within 24 hours of excavation and will be taken from the three to six-inch interval below the excavation floor. Samples taken after 24 hours will be taken at six to twelve inches.
- For contaminated soil removal, post-remediation soil samples for laboratory analysis will be collected immediately after contaminated soil removal. If the excavation is enlarged horizontally, additional soil samples will be required.

Post-remediation sample locations and depth will be biased towards the areas and depths of highest contamination identified during previous sampling episodes unless field indicators such as field instrument measurements or visual contamination identified during the remedial action indicate that other locations and depths may be more heavily contaminated. Post-excavation confirmation samples will be biased toward locations and depths of the highest expected contamination. All endpoint sampling will consist of grab samples using EnCore samplers.

NYSDOH ELAP certified labs will be used for confirmation soil sample analyses. Lab results for confirmation soil sample analyses will be reported in the FER. The FER will provide a tabular and map summary of confirmation soil sample results. Confirmation soil samples will be analyzed for analytes utilizing the following methodology:

- TCL VOCs by EPA Method 8260.
- SVOCs by EPA Method 8270.
- TAL metals by EPA Method 6010A/7470A.
- PCBs and pesticides by EPA Method 8082.
- 1,4-dioxane by EPA Method 8270 SIM.
- PFAS by EPA Method 1633.

If either light non-aqueous phase liquid (LNAPL) and/or DNAPL are detected, appropriate samples will be collected for characterization and fingerprint analysis and required regulatory reporting (i.e., spills hotline) will be performed.

5.2.2 Methodology

All post-excavation confirmation soil samples will be collected at the identified locations when the limits of the remediation excavation have been reached. Confirmation soil samples will be collected from the zero to six-inch interval at the excavation floor. Samples taken after 24 hours will be taken at six to twelve inches.

- Samples will be collected utilizing a properly decontaminated stainless steel hand auger, trowel, or equivalent. Samples collected for VOC analysis will be conducted by collecting a grab sample of soil within 24 hours of excavation exposure and placing it into laboratory supplied glassware. Confirmation soil samples will be submitted for laboratory analyses under standard chain of custody protocol to an NYSDOH ELAP accredited laboratory to be determined. Samples will be analyzed for TCL VOCs via EPA Method 8260, SVOCs by EPA Method 8270, TAL metals by EPA Method 6010A/7470A, PCBs and pesticides by EPA Method 8082, 1,4-dioxane by EPA Method 8270 SIM, and PFAS by EPA Method 1633.

5.2.3 Reporting of Results

Data collected during the field investigation will be tabulated and reviewed. The criteria used to identify and quantify the analytes will be those specified for the applicable methods in the EPA SW-846 and subsequent updates. The data package provided by the laboratory will contain items specified in the USEPA SW-846 appropriate for the analyses to be performed and be reported in standard format. Data will also be submitted to NYSDEC's Environmental Information Management System in the standardized electronic data deliverable format. The FER will provide a tabular and map summary of post-excavation confirmation soil sampling results and exceedances of the PGWSCOs.

5.2.4 QA/QC

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. All site investigation activities will be conducted in compliance with the Technical Guidance for Site Investigation and Remediation, as per NYS DEC DER-10. A summary of the field and laboratory QA/QC procedures is provided below.

5.2.4.1 Direct Push Drilling

The following procedures will be implemented as QA/QC procedures for boring installation and sampling:

- Disposable PVC Macro Core liners, or similar, will be utilized for the entire length of all boring locations to prevent cross-contamination of soil.
- If drilling in loose or non-cohesive soils, a core catcher will be used to ensure the full soil section is recovered.
- If drilling is in tight soils, a spacer ring or extended shank cutting shoe will be used to ensure full soil recovery.

A disposal slotted PVC screen will be utilized to maintain the integrity of the boring and collect groundwater samples.

5.2.4.2 Field QA/QC

Field QA/QC included the following procedures:

- Calibration of field equipment, including PID, on a daily basis,

- Analysis of trip blank (VOCs only) and duplicate samples,
- Use of dedicated and/or disposal field sampling equipment,
- Proper sampling handling and preservation,
- Proper sample chain of custody documentation, and
- Completion of report logs.

The above procedures will be executed as follows:

- Duplicate samples will be collected at a rate of 1 duplicate per 20 samples to evaluate field sampling precision or reproducibility of measurements of the same parameter under the given set of conditions;
- Matrix Spike (MS)/Matrix Spike Duplicate (MSD) samples will be collected at a rate of 1 duplicate per 20 samples to evaluate the effect of the matrix on sample results;
- Disposable sampling equipment, including acetate sleeves, latex gloves, and disposable bailers (or sample tubing), were used to minimize cross-contamination between samples;
- For each of the parameters analyzed, a sufficient sample volume will be collected to adhere to the specific analytical protocol, and provide sufficient sample for reanalysis if necessary;
- Because plasticizers and other organic compounds inherent in plastic containers may contaminate samples requiring organic analysis, samples will be collected in glass containers, with the exception of the nitrate-preserved groundwater sample for metals analysis;
- Appropriate sample preservation techniques, including cold temperature storage at 4º C, will be utilized to ensure that the analytical parameters concentrations do not change between the time of sample collection and analysis; and
- Samples will be analyzed prior to the expiration of the respective holding time for each analytical parameter to ensure the integrity of the analytical result.

5.2.4.3 Sample Custody

Sample handling in the field will conform to appropriate sample custody procedures. Field custody procedures included proper sample identification, chain-of-custody forms, and packaging and shipping procedures. Sample labels will be attached to all sampling bottles before field activities began to ensure proper sample identification. Each label will identify the site and sample location. Styrofoam or bubble wrap will be used to absorb shock and prevent breakage of sample containers. Ice or ice packs will be placed in between the plastic bags for sample preservation purposes.

After each sample is collected and appropriately identified, the following information will be entered into the chain-of-custody form:

- Site name and address,
- Sampler(s)' name(s) and signature(s);
- Names and signatures of persons involved in the chain of possession of samples;
- Sample number;
- Number of containers;
- Sample location;
- Date and time of collection;
- Type of sample, sample matrix and analyses requested;
- Preservation used (if any); and
- Any pertinent field data collected (pH, temperature, conductivity, Dissolved Oxygen [DO]).

The sampler signed and dated the "Relinquished" blank space prior to removing one copy of the custody form and sealing the remaining copies of the form in a Ziploc plastic bag taped to the underside of the sample cooler lid. The sample cooler will be sealed with tape prior to delivery or shipment to the laboratory.

Each set of samples will be analyzed concurrently with calibration standards, method blanks, MS/MSD or laboratory duplicates, and QC check samples (if required by the protocol). MS/MSD

samples, as applicable, will be designated by the field personnel. QA/QC protocols are further detailed in the QAPP included as **Appendix I.**

5.2.4.4 Report Logs

Field logs and borings logs will be completed during the course of this investigation. A field log will be completed on a daily basis which described all field activities including:

- Project number, name, manager, and address;
- The date and time;
- The weather conditions;
- On-site personnel and associated affiliations;
- Description of field activities; and
- Pertinent sample collection information including sample identification numbers, description of samples, location of sampling points, number of samples taken, method of sample collection and any factors that may affect its quality, time of sample collection, name of collector, and field screening results.

A boring/monitoring well log will be completed for each boring/monitoring well and included the following information:

- Project number, name, manager, and location;
- The date and time;
- Drilling company and method used;
- Boring/Well number;
- Total boring/well depth and water table depths; and
- Pertinent soil sample information including sample number, interval, depth, amount recovered, color, composition, percent moisture, visual and olfactory observations of contamination, and PID readings.

5.2.4.5 Laboratory QA/QC

An ELAP-certified laboratory will be used for all sample analyses. The laboratory will follow the following QA/QC protocols. All samples will be delivered to the laboratory within 24 hours of sample collection. Samples will be received by laboratory personnel, who will inspect the sample cooler(s) to check the integrity of the custody seals. The cooler(s) will then be opened, the samples unpackaged, and the information on the chain-of-custody form examined. If the shipped samples match those described on the chain-of-custody form, the laboratory sample custodian will sign and dated the form on the next "Received" blank and assume responsibility for the samples. If problems were noted with the sample shipment, the laboratory custodian will sign the form and record problems in the "Remarks" box. The custodian will then immediately notify the Project Manager so appropriate follow-up steps can be implemented on a timely basis.

A record of the information detailing the handling of a particular sample through each stage of analysis will be maintained by the laboratory. The record will include:

- Job reference, sample matrix, sample number, and date sampled;
- Date and time received by laboratory, holding conditions, and analytical parameters;
- Extraction date, time, and extractor's initials (if applicable), analysis date, time, and analyst's initials; and
- QA batch number, date reviewed, and reviewer's initials.

5.2.5 Data Usability Summary Report

Per the requirements of section 2.2 of DER-10 a DUSR will be prepared by a qualified data validator who is independent of the laboratory providing the sample analysis. The DUSR will evaluate the data package provided by the laboratory to determine if they ae meet the project quality parameters and represent usable results.

As per requirement of the BCA, all data will be submitted in the NYS EQuiS database. Electronic Data Deliverables (EDDs) will be submitted for all post-excavation soil samples. All RI data were previously submitted in EQuiS. Data collected prior to the Site's enrollment in the BCP were not submitted in EQuis.

5.2.6 Reporting of End-Point Data in FER

Data collected during the field investigation will be tabulated and reviewed. The criteria used to identify and quantify the analytes will be those specified for the applicable methods in the USEPA SW-846 and subsequent updates. The data package provided by the laboratory will contain items specified in the USEPA SW-846 appropriate for the analyses to be performed and be reported in standard format. Data will also be submitted to NYSDEC's Environmental Information Management System in the standardized electronic data deliverable format. The FER will provide a tabular and map summary of post-excavation confirmation soil sampling results and exceedances of UUSCOs and CUSCOs.

Chemical labs used for all end-point sample results and contingency sampling will be NYSDOH ELAP certified.

End point sampling, including bottom and side-wall sampling, will be performed in accordance with DER-10 sample frequency requirements. The FER will provide a tabular and map summary of all end-point sample results and exceedances of SCOs.

5.3 Soil/Materials Management Plan

5.3.1 Soil Screening Methods

Visual, olfactory, and PID soil screening and assessment will be performed during the scope of work for the remedy. A PSG geologist/geotechnical engineer will supervise the site work under the supervision of the RE.

Visual, olfactory and PID soil screening and assessment will be performed by a QEP or experienced field geologist under the direction of the RE during all remedial and development excavations into known or potentially contaminated material. Soil screening will be performed regardless of when the invasive work is done and will include all excavation and invasive work performed during the remedy.

All primary contaminant sources (including but not limited to tanks and hot spots) identified during RI and remedial action will be surveyed by a surveyor licensed to practice in the State of New York. This information will be provided on maps in the Final Engineering Report.

Screening will be performed by QEPs. Resumes will be provided for all personnel responsible for field screening (i.e. those representing the RE) of invasive work for unknown contaminant sources during remediation and development work.

5.3.2 Stockpile Methods

Soil excavated during the hot-spot excavation activities will be segregated (unsaturated versus saturated). Excavated soils will be temporarily stockpiled on, at minimum, double layers of 6-mil minimum poly-sheeting, will be kept covered at all times (except when material is being added or removed) with appropriately anchored polyethylene sheeting surrounded by hay bales, and will be routinely inspected. Broken or ripped sheeting will be promptly replaced. Roll-off containers will be utilized for excavated materials. All roll-off containers will be lined and covered at the end of each workday. Stockpile activities will be compliant with applicable laws and regulations. Stockpiles of excavated soils and other materials will be stored in a secured location onsite.

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in the daily field logs and maintained at the Site and available for inspection by NYSDEC.

Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

Absorbent booms will be used as needed near catch basins, surface waters and other discharge points.

Water will be available on-site at suitable supply and pressure for use in dust control.

PSG notes that no stockpiles will be maintained at the Site while the venue is occupied for a public event.

5.3.3 Materials Excavation and Load Out

The Remedial Engineer or a qualified environmental professional under his/her supervision, overseeing the soil removal will:

- Oversee all soil excavation activities completed onsite;
- Oversee the load-out of excavated material, if required;
- Ensure that utilities and easements that may be present on the Site have been investigated and that any identified risks from work proposed under this plan are properly addressed by appropriate parties;
- Ensure that any loaded outbound trucks are inspected and cleaned, if necessary, before leaving the Site; and
- Ensure that all egress points for truck and equipment transport from the Site will be kept clean of Site-derived materials during Site work.

During the excavation and loading of soil, the following specific procedures shall be implemented:

- All trucks will be loaded in a manner to prevent significant dust generation and to prevent spillage of soil on and around the trucks and will be secured with tight-fitting covers. Loose-fitting canvas or mesh truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.
- Locations where vehicles exit the Site will be inspected daily for evidence of soil tracking off premises. If significant soil tracking off-Site is observed or if soil accumulation is observed during truck inspection after loading, pressure washing of the trucks prior to exiting the loading pad shall be conducted to remove residual soil to the extent practicable.

Street sweeping is not a viable option for cleaning contaminated soil tracking on asphalt surfaces as the dust generation is too significant and will cause unnecessary air monitoring detections.

The RE or a QEP under his/her supervision will oversee all invasive work and the excavation and load-out of all excavated material.

The Volunteer and its contractors are solely responsible for safe execution of all invasive and other work performed under this Plan.

The presence of utilities and easements on the Site has been investigated by the RE. It has been determined that no risk or impediment to the planned work under this RAWP is posed by utilities or easements on the Site.

Loaded vehicles leaving the Site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and NYSDOT requirements (and all other applicable transportation requirements).

Vehicles leaving the Site will not be overloaded. The RE's representative will make reasonable efforts to ensure that vehicles are not loaded beyond their NYSDOT weight rating and that all material is secured beneath the truck bed cover.

A truck wash will be operated on-Site. The RE will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the Site until the remedial action is complete.

Locations where vehicles enter or exit the Site shall be inspected daily for evidence of off-Site sediment tracking.

The RE will be responsible for ensuring that all egress points for truck and equipment transport from the Site will be clean of dirt and other materials derived from the Site during Site remediation and development. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site -derived materials.

The Volunteer and associated parties preparing the remedial documents submitted to the State, and parties performing this work, are completely responsible for the safe performance of all invasive work, the structural integrity of excavations, and for structures that may be affected by excavations (such as building foundations and bridge footings).

Each hot spot and structure to be remediated (USTs, vaults and associated piping, transformers, etc.) will be removed and end-point remedial performance sampling completed before excavations related to Site development commence proximal to the hot spot or structure.

Development-related grading cuts and fills will not be performed without NYSDEC approval and will not interfere with, or otherwise impair or compromise, the performance of remediation required by this plan.

5.3.4 Materials Transport Off-Site

Loaded vehicles leaving the Site will comply with all applicable materials transportation requirements (including appropriate covering, manifests, and placards) in accordance with applicable laws and regulations, including use of licensed haulers in accordance with local, state, and federal laws. If loads contain wet material capable of causing leakage from trucks, truck liners will be used. Queuing of trucks will be performed on-Site, when possible, in order to minimize off-Site disturbance. Off-Site queuing will be minimized; if needed, off-site queuing will be completed in a safe manner, utilizing police traffic control if needed/required.

Outbound truck transport routes will be planned before loading activities with a route that takes into account the following factors: (a) limiting transport through residential areas and past sensitive sites; (b) use of mapped truck routes; (c) minimizing off-Site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport. To the extent possible, all trucks loaded with Site materials will travel from the Site using these truck routes. Trucks will not stop or idle in local neighborhoods after leaving the project Site.

All transport of materials will be performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Trucks will be prohibited from stopping and idling in the neighborhood outside the project Site. Egress points for truck and equipment transport from the Site will be kept clean of dirt and other materials during Site remediation and development. Queuing of trucks will be performed on-Site in order to minimize off-Site disturbance.

Material transported by trucks exiting the Site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

All trucks will be washed prior to leaving the Site. Truck wash waters will be collected and disposed of off-Site in an appropriate manner.

5.3.5 Materials Disposal Off-Site

Disposal locations will be established at a later date. Prior to disposal location selection, the RE will oversee waste characterization activities to properly characterize all wastes at the Site. All disposal locations will be approved by the RE who will ensure all wastes generated during remediated are properly disposed of.

The total quantity of material expected to be disposed off-Site is approximately 321 cubic yards of non-hazardous soil and up to 22 cubic yards of hazardous soil. According to a Contained-In Determination issued by the NYSDEC on November 20, 2024, all soil excavated from AOC-10 and soils excavated from AOC-7 except the soil within the area delineated to the west by boring 7-B2; to the south by boring 7-1S; to the north by 7-B1N; and to the east by 7-B1E could be managed as non-hazardous waste. Soils from borings 7-B1W, 7-B1WW, and 7B1 will be managed as hazardous waste unless confirmatory samples are collected, and a second contained-in request is submitted to NYSDEC for approval.

All soil/fill/solid waste excavated and removed from the Site will be treated as contaminated and regulated material and will be disposed in accordance with all local, State (including 6NYCRR Part 360) and Federal regulations. If disposal of soil/fill from this Site is proposed for unregulated disposal (i.e., clean soil removed for development purposes), a formal request with an associated plan will be made to NYSDEC's Project Manager. Unregulated off-Site management of materials from this Site is prohibited without formal NYSDEC approval.

Material that does not meet Track 1 unrestricted SCOs is prohibited from being taken to a New York State recycling facility (6NYCRR Part 360.15 Registration Facility).

The following documentation will be obtained and reported by the RE for each disposal location used in this project to fully demonstrate and document that the disposal of material derived from the Site conforms with all applicable laws: (1) a letter from the RE or BCP Volunteer to the receiving facility describing the material to be disposed and requesting formal written acceptance of the material. This letter will state that material to be disposed is contaminated material generated at an environmental remediation Site in New York State. The letter will provide the project identity and the name and phone number of the RE. The letter will include as an attachment a summary of all chemical data for the material being transported (including RI data); and (2) a letter from all receiving facilities stating it is in receipt of the correspondence (above) and is approved to accept the material. These documents will be included in the FER.

Non-hazardous historic fill and contaminated soils taken off-Site will be handled, at minimum, as a Municipal Solid Waste per 6NYCRR Part 360.2.

Historic fill and contaminated soils from the Site are prohibited from being disposed at Part 360.15 Registration Facilities (also known as Soil Recycling Facilities).

Soils that are contaminated but non-hazardous and are being removed from the Site are considered by the Division of Materials Management (DMM) in NYSDEC to be Construction and Demolition (C/D) materials with contamination not typical of virgin soils. These soils may be sent to a permitted Part 360 landfill. They may be sent to a permitted C/D processing facility without permit modifications only upon prior notification of NYSDEC Region 2 DMM. This material is prohibited from being sent or redirected to a Part 360-15 Registration Facility. In this case, as dictated by DMM, special procedures will include, at a minimum, a letter to the C/D facility that provides a detailed explanation that the material is derived from a DER remediation Site, that the soil material is contaminated and that it must not be redirected to on-Site or off-Site Soil Recycling Facilities. The letter will provide the project identity and the name and phone number of the Remedial Engineer. The letter will include as an attachment a summary of all chemical data for the material being transported.

The FER will include an accounting of the destination of all material removed from the Site during this remedial action, including excavated soil, contaminated soil, historic fill, solid waste,

and hazardous waste, non-regulated material, and fluids. Documentation associated with disposal of all material must also include records and approvals for receipt of the material. This information will also be presented in a tabular form in the FER.

Bill of Lading system or equivalent will be used for off-Site movement of non-hazardous wastes and contaminated soils. This information will be reported in the FER. A manifest system for off-Site transportation of exported materials will be employed.

Hazardous wastes derived from on-Site will be stored, transported, and disposed of in full compliance with applicable local, State, and Federal regulations.

Appropriately licensed haulers will be used for material removed from this Site and will be in full compliance with all applicable local, State and Federal regulations.

Waste characterization will be performed for off-Site disposal in a manner suitable to the receiving facility and in conformance with applicable permits. Sampling and analytical methods, sampling frequency, analytical results and QA/QC will be reported in the FER. All data available for soil/material to be disposed at a given facility will be submitted to the disposal facility with suitable explanation prior to shipment and receipt.

Waste characterization data will be used solely for complying with requirements for off-site disposal. Waste Characterization sampling cannot be utilized for:

- Delineating the extent of contamination required for remediation at a Site.
- Replacing or substituting data collected as part of Site Characterization and/or Remedial Investigation.
- Replacing or substituting confirmation or documentation sampling as described in NYSDEC DER-10, Section 5.4.
- To modify remedial decisions as formalized in a NYSDEC approved Decision Document.

5.3.6 Materials Reuse On-Site

The proposed remedial actions do not anticipate materials reuse on-Site.

5.3.7 Fluids Management

Liquids (if any) to be removed from the Site, including dewatering fluids, will be handled, transported, and disposed in accordance with applicable local, State, and Federal regulations.

The dewatering fluid will be pretreated as necessary to meet the NYSDEC and local authority discharge criteria. All liquids to be removed from the Site, including dewatering fluids, will be handled, transported, and disposed in accordance with applicable local, State, and Federal regulations. Liquids discharged into the New York City sewer system will be addressed through approval by NYCDEP.

Dewatered fluids will not be recharged back to the land surface or subsurface of the Site. Dewatering fluids will be managed off-Site.

Discharge of water generated during remedial construction to surface waters (i.e. a local pond, stream, river and/or storm sewer) is prohibited without a SPDES permit. It is not anticipated that this project will require surface discharge of water or sewer discharge.

5.3.8 Demarcation

After the completion of soil removal and any other invasive remedial activities and prior to backfilling, a land survey will be performed by a New York State licensed surveyor. The survey will define the top elevation of residual contaminated soils. A physical demarcation layer, consisting of orange snow fencing material or equivalent material will be placed on this surface to provide a visual reference. This demarcation layer will constitute the top of the 'Residuals Management Zone', the zone that requires adherence to special conditions for disturbance of contaminated residual soils defined in the Site Management Plan. The survey will measure the grade covered by the demarcation layer before the placement of cover soils, pavement and sub-soils, structures, or other materials. This survey and the demarcation layer placed on this grade surface will constitute the physical and written record of the upper surface of the 'Residuals

Management Zone' in the Site Management Plan. A map showing the survey results will be included in the FER and the SMP.

5.3.9 Backfill from Off-Site Sources

This section presents the requirements for imported fill materials to be used below the cover layer and within the clean soil cover layer. All materials proposed for import onto the Site will be approved by the RE and by the NYSDEC project manager and will be in compliance with provisions in this RAWP prior to receipt at the Site. All imported soil/fill must meet the requirements of 6 NYCRR Part 375-6.7(d). The applicable SCOs for imported material is the lower of PGSCOs and CUSCOs.

A process will be established to evaluate sources of backfill and cover soil to be imported to the Site, and will include an examination of source location, current and historical use(s), and any applicable documentation. Material from industrial sites, spill sites, environmental remediation sites or other potentially contaminated sites shall not be imported to the Site.

The following potential sources may be used pending attainment of backfill and cover soil quality objectives:

- Clean soil from a licensed sand and gravel pit;
- Clean soil from construction projects at non-industrial sites in compliance with NYSDEC regulations;
- Clean soil from roadway or other transportation-related projects in compliance with applicable laws and regulations; and/or
- Clean recycled concrete aggregate (RCA) from facilities permitted or registered by the regulations of NYSDEC.

All materials received for import to the Site will be tested in accordance with NYSDEC DER-10, be approved by the RE and NYSDEC project manager and will be in compliance with provisions in this RAWP. A "Request to Import/Reuse Fill Material" form will be filed with the NYSDEC project manager for review and approval prior to import to the site. A copy of the form

is presented in **Appendix M**. Source Screening and Testing Inspection of imported fill material will include visual, olfactory and PID screening for evidence of contamination. Materials imported to the Site will be subject to inspection by the RE or a qualified environmental professional under his/her supervision, as follows:

- Trucks with imported fill material will be in compliance with NYSDEC and New York City Department of Transportation (NYCDOT) regulations and will enter the Site at designated locations;
- Every truck load of imported material will be inspected for evidence of contamination; and
- Fill material will be free of solid waste including pavement materials, debris, stumps, roots, and other organic matter, as well as ashes, oil, perishables or foreign matter.

, Following approval of the import request, the material will be loaded onto trucks for delivery to the Site.

RCA, if utilized, will be imported from facilities permitted or registered by NYSDEC. A Project Manager is responsible to ensure that the facility is compliant with NYSDEC registration and permitting requirements for the period of acquisition of RCA. RCA will be subject to sieve and/or chemical testing per DER-10. RCA imported to the Site must be derived from recognizable and uncontaminated concrete. RCA material is not acceptable for and will not be used as cover material.

All materials proposed for import onto the Site will be approved by the RE and will be in compliance with provisions in this RAWP prior to receipt at the Site.

Material from industrial sites, spill sites, other environmental remediation sites or other potentially contaminated sites will not be imported to the Site. Solid waste will not be imported onto the Site.

The FER will include the following certification by the RE: “I certify that all import of soils from off-Site, including source evaluation, approval and sampling, has been performed in a manner that is consistent with the methodology defined in the Remedial Action Work Plan”.

All imported soils will meet NYSDEC approved backfill or cover soil quality objectives for this Site. Non-compliant soils will not be imported onto the Site without prior approval by NYSDEC. Nothing in the approved RAWP or its approval by NYSDEC will be construed as an approval for this purpose.

Soils that meet 'general fill' requirements under 6 NYCRR Part 360.13, but do not meet backfill or cover soil objectives for this Site, will not be imported onto the Site without prior approval by NYSDEC. Nothing in this RAWP will be construed as an approval for this purpose.

5.3.10 Stormwater Pollution Prevention

Applicable laws and regulations pertaining to stormwater pollution prevention will be addressed during the excavation work. The need for erosion and sediment control measures are not anticipated during the remedial actions. However, if necessary, the following measures will be implemented:

Silt fences and barriers, and hay bale checks will be installed around the entire perimeter of the remedial action area and inspected once a week and after every storm event to ensure that they are operating appropriately. Discharge locations will be inspected to determine whether erosion control measures are effective in preventing significant impacts to receptors. Necessary repairs shall be made immediately. Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. Undercutting or erosion of the silt fence toe anchor will be repaired immediately with appropriate backfill materials. Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the RAWP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

5.3.11 Contingency Plan

If underground tanks or other previously unidentified contaminant sources are found during on-Site remedial excavation or development related construction, sampling will be performed on product, sediment and surrounding soils, etc. Chemical analytical work will be for full scan parameters (TAL metals; TCL volatiles and semi-volatiles, TCL pesticides, PCBs, and PFAS). Analyses will not be otherwise limited without NYSDEC approval.

Identification of unknown or unexpected contaminated media identified by screening during invasive Site work will be promptly communicated by phone to NYSDEC's Project Manager. These findings will be also included in daily and periodic electronic media reports.

5.3.11.1 Extreme Storm Preparedness and Response Contingency Plan

Damage from flooding or storm surge can include dislocation of soil and stockpiled materials, dislocation of site structures and construction materials and equipment, and dislocation of support of excavation structures. Damage from wind during an extreme storm event can create unsafe or unstable structures, damage safety structures and cause downed power lines creating dangerous site conditions and loss of power. In the event of emergency conditions caused by an extreme storm event, the Volunteer will undertake the following steps for site preparedness prior to the event and response after the event.

5.3.11.2 Storm Preparedness

Preparations in advance of an extreme storm event will include the following: containerized hazardous materials and fuels will be removed from the property; loose materials will be secured

to prevent dislocation and blowing by wind or water; heavy equipment such as excavators and generators will be removed from excavated areas, trenches and depressions on the property to high ground or removed from the property; an inventory of the property with photographs will be performed to establish conditions for the site and equipment prior to the event; stockpile covers for soil and fill will be secured by adding weights such as sandbags for added security and worn or ripped stockpile covers will be replaced with competent covers; stockpiled hazardous wastes will be removed from the property; stormwater management systems will be inspected and fortified, including, as necessary: clean and reposition silt fences, hay bales; clean storm sewer filters and traps; and secure and protect pumps and hosing.

5.3.11.3 Storm Response

At the conclusion of an extreme storm event, as soon as it is safe to access the property, a complete inspection of the property will be performed. A site inspection report will be submitted to NYSDEC at the completion of site inspection and after the site security is assessed. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. Damage from storm conditions that result in acute public safety threats, such as downed power lines or imminent collapse of buildings, structures or equipment will be reported to public safety authorities via appropriate means such as calling 911.

Petroleum spills will be reported to NYSDEC within 2 hours of identification and consistent with State regulations. Emergency and spill conditions will also be reported to OER. Public safety structures, such as construction security fences will be repaired promptly to eliminate public safety threats. Debris will be collected and removed.

Dewatering will be performed in compliance with existing laws and regulations and consistent with emergency notifications, if any, from proper authorities. Eroded areas of soil including unsafe slopes will be stabilized and fortified. Dislocated materials will be collected and appropriately managed. Support of excavation structure will be inspected and fortified as necessary. Impacted stockpiles will be contained and damaged stockpile covers will be replaced. Stormwater control systems and structures will be inspected and maintained as necessary.

If soil or fill materials are discharged off site to adjacent properties, property owners and the NYSDEC will be notified, and corrective measure plan designed to remove and clean dislocated material will be submitted to the NYSDEC and implemented following approval by NYSDEC and granting of site access by the property owner. Impacted offsite areas may require characterization based on site conditions, at the discretion of the NYSDEC.

If onsite petroleum spills are identified, a qualified environmental professional will determine the nature and extent of the spill and report to NYSDEC's spill hotline at DEC 800-457-7362 within statutory defined timelines. If the source of the spill is ongoing and can be identified, it should be stopped if this can be done safely. Potential hazards will be addressed immediately, consistent with guidance issued by NYSDEC.

5.3.11.4 Storm Response Reporting

A site inspection report will be submitted to NYSDEC at the completion of site inspection. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. The site inspection report will be sent to the NYSDEC project manager and will include the site name, address, tax block and lot, site primary and alternate contact name and phone number.

Damage and soil release assessment will include: whether the project had stockpiles; whether stockpiles were damaged; photographs of damage and notice of plan for repair; report of whether soil from the site was dislocated and whether any of the soil left the site; estimates of the volume of soil that left the site, nature of impact, and photographs; description of erosion damage; description of equipment damage; description of damage to the remedial program or the construction program, such as damage to the support of excavation; presence of onsite or offsite exposure pathways caused by the storm; presence of petroleum or other spills and status of spill reporting to NYS DEC; description of corrective actions; schedule for corrective actions.

This report should be completed and submitted to the NYSDEC project manager with photographs within 24 hours of the time of safe entry to the property after the storm event.

5.3.12 Community Air Monitoring Plan

PSG will provide one (1) OSHA 40-hour HAZWOPER trained field technician who will serve as the Environmental Health and Safety Officer on-site during the soil excavation and soil load out activities who will implement and document the CAMP. Ally Hassler will serve as the Environmental Health and Safety Officer for the remedial actions described in this Work Plan.

The Site-Specific CAMP is provided in **Appendix J**.

5.3.12.1 Air Monitoring Stations

PSG will maintain two (2) air monitoring stations daily at the Site to monitor air conditions during construction work hours. Monitoring will occur during soil excavation and soil loading activities on a standard 8-hour work shift allowing preparation and setup time prior to the work shift and breakdown time after the work shift.

The primary station will be equipped with a DustTrak Air Monitor designed to continuously evaluate dust particles in the air at a location downwind of the excavation area and will be set with a 15-minute high-level alarm; a weather monitoring station and will be equipped with a 5-gas meter with detectors for total VOCs, lower & upper explosive limits, oxygen, carbon dioxide and hydrogen sulfide concentrations.

One additional station will be equipped with a DustTrak Monitor only and will be placed in a location along the perimeter of the work area at an upwind location, which will be determined based on daily published prevailing wind directions provided NOAA (https://www.climate.gov/teaching/resources/wind-map).

On-site duties for the Environmental Health and Safety Officer will include:

- Setting up CAMP equipment daily before the excavation work shift;
- Monitoring CAMP equipment throughout the day to assure levels are within acceptable ranges;
- Monitoring the breathing zone air with a PID to assure levels are within acceptable ranges;

- Monitoring of excavation health and safety onsite to ensure proper procedures are being followed, including familiarizing all onsite subcontractors with environmental health and safety requirements, overseeing proper decontamination procedures as required, and enforcing best practices onsite; and

CAMP equipment break-down, data uploading, and daily report preparation.

5.3.12.2 Community Air Monitoring

Using a nationwide network of monitoring sites, the EPA has developed ambient air quality trends for particle pollution, also called Particulate Matter (PM). PM_{10} describes inhalable particles, with diameters that are generally 10 micrometers and smaller.

5.3.12.3 Community Air Monitoring (CAM) Dust Monitoring Outlier Corrective Action Triggers

The Contractor shall provide a written Emergency Response Plan which includes means and methods to address any elevated fugitive dust particles and CAMP dust monitoring results reported by PSG. All equipment will be calibrated at least daily and be capable of calculating 15-minute running average concentrations.

VOC action levels are specified below:

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 ppm above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion

zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

4. All 15-minute readings must be recorded and be available for State (DEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

Particulate action levels are summarized below:

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m3 above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m3 above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m3 of the upwind level and in preventing visible dust migration.

3. All readings must be recorded and be available for State (DEC and NYSDOH) and County Health personnel to review.

5.3.12.4 CAMP Reporting

All data from CAMP and an overall health and safety summary will be provided in a daily report to all applicable parties including construction staff, the Client, and PSG staff. Exceedances

observed in the CAMP will be reported to NYSDEC and NYSDOH Project Managers and included in the Daily Report.

5.3.13 Odor, Dust, and Nuisance Control Plan

The FER will include the following certification by the RE: "I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the RAWP."

5.3.13.1 Dust Control

A dust suppression plan that addresses dust management during invasive on-Site work, will include, at a minimum, the items listed below:

- If needed, dust suppression will be achieved using a dedicated on-Site water truck. The truck will be equipped with water cannon capable of spraying water directly onto off-road areas including excavations and stockpiles, and
- On-Site roads will be limited in total area to minimize the area required for water truck sprinkling.
- Use of properly anchored tarps to cover stockpiles; and
- Exercise extra care during dry and high-wind periods.

This dust control plan is capable of controlling emissions of dust. If nuisance dust emissions are identified, work will be halted, and the source of dust will be identified and remediated. Work will not resume until all nuisance dust emissions have been abated. Implementation of all dust controls, including halt of work, will be the responsibility of a combination of the construction contractor conducting the excavation and loading activities and PSG technicians and Project Manager.

5.3.13.2 Noise Control

Noise control will be exercised during the soil excavation work. Excavation work will conform, at a minimum, to local and state noise control standards.

5.3.13.3 Odor Control Plan

This odor control plan is capable of controlling emissions of nuisance odors off-Site. If nuisance odors are identified, work will be halted, and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. NYSDEC and NYSDOH will be notified of all odor events and of all other complaints about the project. Implementation of all odor controls, including the halt of work, will be the responsibility of the Volunteer's RE, who will be responsible for certifying the FER.

All necessary means will be employed to prevent on- and off-Site nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils; [add other elements as appropriate]. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-Site disposal; (e) use of chemical odorants in spray or misting systems; and (f) use of staff to monitor odors in surrounding neighborhoods.

Where odor nuisances have developed during remedial work and cannot be corrected, or where the release of nuisance odors cannot otherwise be avoided due to on-Site conditions or close proximity to sensitive receptors, odor control will be achieved by sheltering excavation and handling areas under tented containment structures equipped with appropriate air venting/filtering systems.

5.3.13.5 Other Nuisances

A plan will be developed and utilized by the contractor for all remedial work and will conform, at a minimum, to NYCDEP noise control standards.

5.4 SITE MANAGEMENT AND ENVIRONMENTAL EASEMENT

An EE will be recorded referencing Institutional Controls (ICs) and Engineering Controls (ECs) that are part of the selected remedy, which will be binding upon all subsequent owners and occupants of the property. The ICs would: 1) restrict the Site's use to commercial and industrial uses, although land use is subject to local zoning laws; 2) restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDEC or NYCDOHMH; 3) require implementation of an NYSDEC-approved SMP; 4) require the completion and submission to the NYSDEC a periodic certification of ICs and ECs in accordance with Part 375; and 5) include notice-of-use restrictions of the Site's soil. The ECs would be the composite cover system and the active vapor mitigation systems in this RAWP.

The SMP will identify all use restrictions and ECs and long-term monitoring and maintenance requirements to ensure the ICs and/or ECs remain in place and are effective. The SMP will include, but may not be limited to:

- An Excavation Work Plan which details the provisions for management of future excavations in areas of remaining contamination;
- Descriptions of the provisions of the EE including any land use, and/or groundwater use restrictions;
- Provision for evaluation of the potential for soil vapor intrusion for any buildings developed on the Site, including provision for data collection and implementing actions recommended to address exposures related to soil vapor intrusion;
- Provisions for the management and inspection of the identified ECs;
- Maintaining Site access controls and NYSDEC notification;
- The steps necessary for the periodic reviews and certification of the ICs and/or ECs; and
- A Monitoring Plan to assess the performance and effectiveness of the remedy. The Monitoring Plan includes, but may not be limited to:

- Monitoring for vapor intrusion for any buildings developed on the Site, as may be required by the Institutional and Engineering Control Plan discussed above, particularly if there are one or more exhaust fans on the ground floor of the building.

- The previously approved SSDS Operations, Maintenance, and Monitoring (OMM).

5.5 RA INVESTIGATION DERIVED WASTE

Soil samples will also be collected via direct-push technology; therefore, little to no IDW will be generated. As permitted in Section 3.3(e) of DER-10, the limited soil cuttings generated by sampling activities will be returned to the borehole to within 12-inches of the surface, followed by clean cohesive soil which will be compacted within the borehole, or bentonite, to allow for restoration of the pavement surface.

Soil cuttings from boreholes that will be converted to temporary monitoring wells, that have free product visible in it, have penetrated an aquitard, or extended into bedrock, will be containerized in DOT-approved shipping containers and stored onsite, within the fenced area, until transportation and disposal are arranged. IDW will not be disposed of within the same borehole if that borehole will be used for the installation of a permanent monitoring well. Soil cuttings will be containerized at the end of each day and will not be stored outside of a container or borehole overnight. Waste profiles, and hazardous waste determination, will be generated based on the site sampling results and the soil cuttings will be disposed of as hazardous or non-hazardous pending the onsite sampling results and the requirements of the disposal facility.

Drilling cuttings, development water, purge water, and other soil generated on-Site during an investigation from the installation of monitoring wells are presumed to be contaminated. These cuttings will be containerized in DOT-approved shipping containers and stored onsite, within the fenced area, until transportation and disposal are arranged.

Soils generated from excavations will be containerized in DOT-approved shipping containers and stored onsite, within the fenced area, until transportation and disposal are arranged. Excavated soils will be containerized at the end of each day and will not be stored outside of a container overnight. Waste profiles, and hazardous waste determination, will be generated based on the Site

sampling results and the soil will be disposed of as hazardous or non-hazardous pending the onsite sampling results and the requirements of the disposal facility.

Liquids derived from the purging of temporary well points and permanent monitoring well development will be containerized in DOT-approved shipping containers and stored onsite, within the fenced area, until laboratory results are received, and transportation and disposal are arranged. Waste profiles and hazardous waste determination will be generated based on the sample results derived from the wells and the requirements of the disposal facility. All waste will be managed per the requirements of 6 NYCRR Part 360, 364, and 370 as applicable. IDW shall be handled only by licensed waste haulers and will only be transported to permitted, authorized disposal facilities once a waste profile has been created and approved. PSG will provide the NYSDEC the disposal facility's information and the waste hauler's permits once they are secured and will provide copies of disposal manifests in subsequent reporting.

No public events will occur onsite when there are uncovered soil boring locations, excavated materials, staged soil, or containerized wastes on site. If any ground intrusive activities are to occur an onsite cover system as defined by DER-10 will be in place prior to occupancy or use by the public.

Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media were double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

6.0 RESIDUAL CONTAMINATION TO REMAIN ON-SITE

Since residual contaminated soil and groundwater/soil vapor will exist beneath the Site after the remedy is complete, ECs and ICs are required to protect human health and the environment. These ECs and ICs are described hereafter. Long-term management of EC/ICs and of residual contamination will be executed under a Site specific SMP that will be developed and included in the FER.

ECs will be implemented to protect public health and the environment by appropriately managing residual contamination. The Site will have EC systems. These are: the SSDSs in the two

buildings, and a composite cover system consisting of asphalt paved areas, concrete covered walkways, and concrete building slabs.

7.0 ENGINEERING CONTROLS: SITE COVER SYSTEM

Exposure to residual contaminated soils will be prevented by the existing site cover system on the Site. This site cover system is comprised of asphalt paved areas, concrete covered walkways, and concrete building slabs. Should Site redevelopment occur in the future, green remediation BMPs for designing and installing a conventional cover system will be considered. Green remediation BMPs for designing and installing a conventional cover system include:

- Design in ways that mimic rather than alter the site's natural setting, to improve the cover's long-term performance and protect ecosystem services;
- Design a cover accounting for potential effects of climate change, which could involve changes in onsite soil development or increased vulnerability to flooding;
- Use of uncontaminated soil or sediment from onsite excavation instead of imported soil/sediment for the cover's frost prevention and erosion control layers; similarly, uncontaminated sand, gravel, and rocks from onsite instead of offsite areas may be used for drainage;
- Application of low impact development strategies such as installing earthen berms to manage stormwater;
- Selection of geotextile fabric or drainage tubing composed of 100% recycled materials rather than virgin materials for lining, erosion control, and drainage;
- Selection of materials with biobased content for daily activities during cover construction;
- Use of clean fuel and emission control technologies for routine field vehicles and machinery such as backhoes and bulldozers to reduce fuel consumption and emission of air pollutants such as GHGs and particulate matter; and
- Consideration of onsite solar and wind resources to power equipment.

For alternative cover designs

- Consideration of asphalt rubber (containing recycled tires) where the cover system includes a layer of asphalt.

- Substitute concrete with high albedo pavement, which reflects sunlight and heat away from the cover surface and may aid growth of nearby vegetation; and
- Consideration of concrete containing a high percentage of industrial waste by-products as a substitute for cement, if tests show no contaminant leaching.

An Excavation Plan will be included in the SMP and will outline the procedures to be followed if the Site cover system and underlying residual contamination are disturbed after the remedial action is complete.

The components of the site cover system will be documented in the FER. Maintenance of this site cover system will be described in the SMP.

8.0 ENGINEERING CONTROLS: SSDS

Each building onsite is already equipped with an active SSDS. These SSDSs will continue to serve as engineering controls to mitigate the risk of soil vapor intrusion into the buildings on-Site.

9.0 CRITERIA FOR COMPLETION OF REMEDIATION/TERMINATION OF REMEDIAL SYSTEMS

9.1 Site Cover System

The site cover system is a permanent control, and the quality and integrity of this system will be inspected at defined, regular intervals in perpetuity.

The site cover system will consist of the two concrete buildings and concrete and asphalt hardscape throughout the Site. The cover system would serve for the protection of human health by preventing contact with residual contaminated Site soil.

9.2 Sub-Slab Depressurization System (SSDS)

The active SSDSs will not be discontinued without written approval by NYSDEC and NYSDOH. A proposal to discontinue the active SSDS may be submitted by the property owner based on confirmatory data that justifies such request. Systems will remain in place and operational until permission to discontinue use is granted in writing by NYSDEC and NYSDOH.

9.3 Groundwater Monitoring

Groundwater monitoring activities to assess the performance of the remedy, or natural attenuation following the removal of contaminant sources, will continue, as determined by NYSDOH and NYSDEC, until residual groundwater concentrations are found to be below NYSDEC standards or have become asymptotic over an extended period. Monitoring will continue until permission to discontinue is granted in writing by NYSDEC and NYSDOH. Monitoring activities will be outlined in the Monitoring Plan of the SMP. It is anticipated that, following remediation, a minimum of eight quarterly monitoring events will be performed.

10.0 INSTITUTIONAL CONTROLS

After the remedy is complete, the Site will have residual contamination remaining in place. ECs for the residual contamination have been incorporated into the remedy to render the overall Site remedy protective of public health and the environment. Two elements have been designed to ensure continual and proper management of residual contamination in perpetuity: an EE and a Site Management Plan.

All as-built drawings, diagrams, calculation and manufacturer documentation for treatment systems will be presented in the FER. A Site -specific EE will be recorded with Kings County to provide an enforceable means of ensuring the continual and proper management of residual contamination and protection of public health and the environment in perpetuity or until released in writing by NYSDEC. It requires that the grantor of the EE and the grantor's successors and assigns adhere to all ECs/ICs placed on this Site by this NYSDEC-approved remedy. ICs provide restrictions on Site usage and mandate operation, maintenance, monitoring and reporting measures for all ECs and ICs. The SMP describes appropriate methods and procedures to ensure compliance with all ECs and ICs that are required by the EE. Once the SMP has been approved by the NYSDEC, compliance with the SMP is required by the grantor of the EE and grantor's successors and assigns.

10.1 ENVIRONMENTAL EASEMENT

An EE, as defined in Article 71 Title 36 of the Environmental Conservation Law, is required when residual contamination is left on-Site after the remedial actions Action is complete. As part

of this remedy, an EE approved by NYSDEC will be filed and recorded with the Kings County Office of the City Register. The EE will be submitted as part of the FER.

The EE renders the Site a Controlled Property. The EE must be recorded with the Kings County Office of the City Register before the Certificate of Completion can be issued by NYSDEC. A series of ICs are required under this remedy to implement, maintain, and monitor these EC systems, prevent future exposure to residual contamination by controlling disturbances of the subsurface soil and restricting the use of the Site to commercial use only. These ICs are requirements or restrictions placed on the Site that are listed in, and required by, the EE. ICs can, generally, be subdivided between controls that support ECs, and those that place general restrictions on Site usage or other requirements. ICs in both of these groups are closely integrated with the SMP, which provides all of the methods and procedures to be followed to comply with this remedy.

Compliance with all elements of the Site Management Plan is required by the Grantor of the EE, and the Grantor's successors and assigns.

- Compliance with the EE by the Grantee and the Grantee's successors and adherence of all elements of the SMP is required;
- All ECs will be operated and maintained as specified in the SMP;
- A composite cover system consisting of asphalt covered roads, concrete covered sidewalks, and concrete building slabs will be inspected, certified and maintained as required in the SMP;
- A soil vapor mitigation system consisting of a SSDS under all building structures will be inspected, certified, operated and maintained as required by the SMP;
- All ECs on the Controlled Property will be inspected and certified at a frequency and in a manner defined in the SMP;
- Groundwater, soil vapor, and other environmental or public health monitoring will be performed as defined in the SMP;

- Data and information pertinent to site management for the Site will be reported at the frequency and in a manner defined in the SMP;
- On-Site environmental monitoring devices, including but not limited to, [groundwater monitor wells and soil vapor probes], will be protected and replaced as necessary to ensure proper functioning in the manner specified in the SMP; and
- ECs will not be discontinued without an amendment or extinguishment of the EE.

Note: Institutional Controls may be modified, added or deleted from this list as warranted by Site conditions and deemed necessary by NYSDEC.

Adherence to these ICs for the Site is mandated by the EE and will be implemented under the SMP (discussed in the next section). The Controlled Property (Site) will also have a series of ICs in the form of Site restrictions and requirements. The Site restrictions that apply to the Controlled Property are:

- Vegetable gardens and farming on the Controlled Property are prohibited;
- Use of groundwater underlying the Controlled Property is prohibited without treatment rendering it safe for intended purpose;
- All future activities on the Controlled Property that will disturb residual contaminated material are prohibited unless they are conducted in accordance with the soil management provisions in the SMP;
- The Controlled Property may be used for restricted commercial use only, provided the long-term ECs/ICs included in the SMP are employed;
- The Controlled Property may not be used for a higher level of use, such as restricted residential use without an amendment or extinguishment of the EE;
- Grantor agrees to submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health

and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow. This [time period] statement must be certified by an expert that the NYSDEC finds acceptable.

10.2 SITE MANAGEMENT PLAN

Site management is the last phase of remediation and begins with the approval of the FER and issuance of the Certificate of Completion for the remedial action. The SMP is submitted as part of the FER but will be written in a manner that allows its removal and use as a complete and independent document. Site management continues in perpetuity or until released in writing by NYSDEC. The property owner is responsible to ensure that all Site management responsibilities defined in the EE and the SMP are performed.

The SMP is intended to provide a detailed description of the procedures required to manage residual contamination left in place at the Site following completion of the remedial action in accordance with the BCA with the NYSDEC. This includes: (1) development, implementation, and management of all Engineering and Institutional Controls; (2) development and implementation of monitoring systems and a Monitoring Plan; (3) development of a plan to operate and maintain any treatment, collection, containment, or recovery systems (including, where appropriate, preparation of an Operation and Maintenance Manual); (4) submittal of Site Management Reports, performance of inspections and certification of results, and demonstration of proper communication of Site information to NYSDEC; and (5) defining criteria for termination of treatment system operation.

To address these needs, this SMP will include five plans: (1) an Engineering and Institutional Control Plan for implementation and management of EC/ICs; (2) a Monitoring Plan for implementation of Site Monitoring; (3) an Operation and Maintenance Plan for implementation of remedial collection, containment, treatment, and recovery systems; (4) a Site Management Reporting Plan for submittal of data, information, recommendations, and certifications to NYSDEC; and (5) Excavation Work Plan for requirements related to any future excavation at the

Site. The SMP will be prepared in accordance with the requirements in NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation and the guidelines provided by NYSDEC.

Site management activities, reporting, and EC/IC certification will be scheduled on a certification period basis. The certification period will be annually. The Site Management Plan will be based on the certifying period relative to the date of issuance of the Certificate of Completion. The first submission will be due 16 months after the issuance of the Certificate of Completion, and annually (or at another frequency as approved by NYSDEC) thereafter.

The SMP in the FER will include a monitoring plan for groundwater at the down-gradient Site perimeter to evaluate Site -wide performance of the remedy. Appropriately placed groundwater monitor wells will also be installed immediately down-gradient of all VOC remediation areas for the purpose of evaluation of the effectiveness of the remedy that is implemented.

No exclusions for handling of residual contaminated soils will be provided in the SMP. All handling of residual contaminated material will be subject to provisions contained in the SMP.

11.0 FINAL ENGINEERING REPORT

A FER will be submitted to NYSDEC following implementation of the RA defined in this RAWP. The FER provides the documentation that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. The FER will provide a comprehensive account of the locations and characteristics of all material removed from the Site including the surveyed map(s) of all sources. The FER will include as-built drawings for all constructed elements, calculation and manufacturer documentation for treatment systems, certifications, manifests, bills of lading as well as the complete SMP (formerly the Operation and Maintenance Plan). The FER will provide a description of the changes in the remedial action from the elements provided in the RAWP and associated design documents. The FER will provide a tabular summary of all performance evaluation sampling results and all material characterization results and other sampling, and chemical analysis performed as part of the remedial action. The FER will provide test results demonstrating that all mitigation and remedial systems are functioning properly. The FER will be prepared in conformance with DER-10.

Where determined to be necessary by NYSDEC, a Financial Assurance Plan will be required to ensure the sufficiency of revenue to perform long-term operations, maintenance and monitoring tasks defined in the SMP and EE. This determination will be made by NYSDEC in the context of the FER review.

The FER will include written and photographic documentation of all remedial work performed under this remedy.

The FER will include an itemized tabular description of actual costs incurred during all aspects of the Remedial Action.

The FER will provide a thorough summary of all residual contamination left on the Site after the remedy is complete. Residual contamination includes all contamination that exceeds the Track 1 Unrestricted Use SCO in 6NYCRR Part 375-6. A table that shows exceedances from Track 1 Unrestricted SCOs for all soil/fill remaining at the Site after the Remedial Action and a map that shows the location and summarizes exceedances from Track 1 Unrestricted SCOs for all soil/fill remaining at the Site after the remedial action will be included in the FER.

The FER will provide a thorough summary of all residual contamination that exceeds the SCOs defined for the Site in the RAWP and must provide an explanation for why the material was not removed as part of the remedial action. A table that shows residual contamination in excess of Site SCOs and a map that shows residual contamination in excess of Site SCOs will be included in the FER.

The FER will include an accounting of the destination of all material removed from the Site, including excavated contaminated soil, historic fill, solid waste, hazardous waste, non-regulated material, and fluids. Documentation associated with disposal of all material must also include records and approvals for receipt of the material. It will provide an accounting of the origin and chemical quality of all material imported onto the Site.

The FER will include a discussion of the green remediation practices/technologies employed throughout the remedial program. A final footprint analysis using a DER accepted model, and any tracking methods used through the construction including restoration activities will be included in the FER.

Before approval of a FER and issuance of a Certificate of Completion, all project reports will be submitted in digital form on electronic media (PDF).

11.1 CERTIFICATIONS

The following certification will appear in front of the Executive Summary of the FER. The certification will be signed by the RE Kristine McCarthy MacWilliams who is a Professional Engineer registered in New York State. This certification will be appropriately signed and stamped. The certification will include the following statements:

I, Kristine McCarthy MacWilliams, am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the Avant Gardner Site (NYSDEC BCA Index No. C224258-12-17 Site No. C224258). I certify that the Remedial Action Work Plan (RAWP) was implemented and that all construction activities were completed in substantial conformance with the NYSDEC-approved RAWP.

I certify that the Site description presented in this FER is identical to the Site descriptions presented in the EE, the Site Management Plan, and the Brownfield Cleanup Agreement for Avant Gardner and related amendments.

I certify that the data submitted to NYSDEC with this Final Engineering Report demonstrates that the remediation requirements set forth in the RAWP and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established for the remedy.

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an Environmental Easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site,

including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by the NYSDEC.

I certify that the export of all contaminated soil, fill, water or other material from the property was performed in accordance with the Remedial Action Work Plan and were taken to facilities licensed to accept this material in full compliance with all Federal, State and local laws.

I certify that all import of soils from off-Site, including source approval and sampling, has been performed in a manner that is consistent with the methodology defined in the Remedial Action Work Plan.

I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology and soil screening methodology defined in the Remedial Action Work Plan.

I certify that all data generated in support of this report have been submitted in accordance with NYSDEC's electronic data deliverable and have been accepted by NYSDEC.

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

12.0 SCHEDULE

The Remedial Action field work is anticipated to start in March 2025 and be completed in April 2025. Post-remediation groundwater monitoring is expected to continue through June 2026. **Table 10** depicts an estimated project schedule.

Legend:

mg/kg: milligrams per kilogram, ppm
NY-UNRES: New York Unrestricted Use Criteria
NY-COM: New York Commercial Criteria
NY-Protection of GW: New York Protection of Groundwater Criteria
J: Estimated Concentration
ND: Not Detected; but the laboratory MDL is above the standard
ND: Not Detected
NS: Not sampled
560 Concentration in excess of NY-UNRES
560 Concentration in excess of NY-COM
560 Concentration in excess of NY-Protection of GW
PCE: Tetrachloroethene
TCE: Trichloroethene

Legend:

mg/kg: milligrams per kilogram, ppm
NY-UNRES: New York Unrestricted Use Criteria
NY-COM: New York Commercial Criteria
NY-Protection of GW: New York Protection of Groundwater Criteria
J: Estimated Concentration
NS: Not sampled
ND: Not Detected
ND: Not Detected; but the laboratory MDL is above the standard
560 Concentration in excess of NY-UNRES
560 Concentration in excess of NY-COM
560 Concentration in excess of NY-Protection of GW
B(a)P: Benzo(a)pyrene
B(b)F: Benzo(b)fluoranthene
B(k)F: Benzo(k)fluoranthene
D(a,h)A: Dibenzo(a,h)anthracene
I(1,2,3-cd)P: Indeno(1,2,3-cd)pyrene
B(a)A: Benzo(a)anthracene

Legend:

mg/kg:	milligrams per kilogram, ppm
mg/L:	milligram per liter
NY-UNRES:	New York Unrestricted Use Criteria
NY-COM:	New York Commercial Criteria
NY-Protection of GW:	New York Protection of Groundwater Criteria
J:	Estimated Concentration
P:	The RPD between the results for the two columns exceeds the method-specified criteria.
ND:	Not Detected
NS:	Not sampled
560	Concentration in excess of NY-UNRES
560	Concentration in excess of NY-COM
560	Concentration in excess of NY-Protection of GW

Legend:

mg/kg:	milligrams per kilogram, ppm
NY-UNRES:	New York Unrestricted Use Criteria
NY-COM:	New York Commercial Criteria
NY-Protection of GW:	New York Protection of Groundwater Criteria
J:	Estimated Concentration
P:	The RPD between the results for the two columns exceeds the method-specified criteria.
ND:	Not Detected
NS:	Not sampled
560	Concentration in excess of NY-UNRES
560	Concentration in excess of NY-COM
560	Concentration in excess of NY-Protection of GW

Legend:

ug/kg: micrograms per kilogram, ppb
NY-UNRES: New York Unrestricted Use Criteria
NY-COM: New York Commercial Criteria
NY-Protection of GW: New York Protection of Groundwater Criteria
J: Estimated Concentration
F: The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
NS: Not sampled
ND: Not Detected
560 Concentration in excess of NY-UNRES
560 Concentration in excess of NY-COM
560 Concentration in excess of NY-Protection of GW

8:2FTS: 1H,1H,2H,2H-Perfluorodecanesulfonic Acid
6:2FTS: 1H,1H,2H,2H-Perfluorooctanesulfonic Acid
NEtFOSAA: N-Ethyl Perfluorooctanesulfonamidoacetic Acid
NMeFOSAA: N-Methyl Perfluorooctanesulfonamidoacetic Acid
PFBS: Perfluorobutanesulfonic Acid
PFBA: Perfluorobutanoic Acid
PFDS: Perfluorodecanesulfonic Acid
PFDA: Perfluorodecanoic Acid
PFDoA: Perfluorododecanoic Acid
PFHpS: Perfluoroheptanesulfonic Acid
PFHpA: Perfluoroheptanoic Acid
PFHxS: Perfluorohexanesulfonic Acid
PFHxA: Perfluorohexanoic Acid
PFNA: Perfluorononanoic Acid
FOSA: Perfluorooctanesulfonamide
PFOS: Perfluorooctanesulfonic Acid
PFOA: Perfluorooctanoic Acid
PFPeA: Perfluoropentanoic Acid
PFTA: Perfluorotetradecanoic Acid
PFTrDA: Perfluorotridecanoic Acid
PFUnA: Perfluoroundecanoic Acid

TABLE 10
Estimate Schedule
NYSDEC BCP Site C224258 - Avant Gardner
111 Gardner Avenue & 140 Stewart Avenue
Brooklyn, New York

ACTIVITY	PLANNED START DATE
Draft RAWP Submittal	1/4/2024
Initial NYSDEC Public Comment Period	2/29/2024 to 4/14/2024
Send Fact Sheet to Contact List	2/29/2024
Revised Draft Submittal	7/19/2024
NYSDEC RAWP Approval	8/31/2024
Second NYSDEC Public Comment Period	9/1/2024 to 10/16/2024
Third Draft Submittal	3/3/2025
NYSDEC Draft Approval	3/17/2025
Mobilization	4/1/2025
cVOC Soil Hot Spot Remediation	4/7/2025
Monitoring Well Installations	4/14/2025
Baseline Groundwater Sampling	4/21/2025
ISCR Injections	4/28/2025
Post-Injection Groundwater Sampling	6/28/2025
Draft FER/SMP/EE Submittal	9/30/2025
NYSDEC/NYSDOH Review	10/1/2025
Final FER/SMP/EE Submittal	11/1/2025
NYSDEC Approval, Establishment of EE, and Issuance of Certificate of Completion	12/31/2025
Completion of Post-Remediation Groundwater Monitoring	6/28/2026

APPENDIX A: GREEN AND SUSTAINABLE REMEDIATION ELEMENTS

PSG

Climate Screening Checklist

Background Information

- Project Manager: Mandy Yau
- Site Name: Avant Gardner
- Site Number: C224258
- Site Location: 111 Gardner Avenue and 140 Stewart Avenue, Brooklyn, New York
- Site Elevation (average above sea level):
- ClimAID Region (Responding Climate Change in New York State (ClimAID) - NYSERDA): Region 4
- Remedial Stage/site classification:
  Active
- Contamination - Media Impacted/ Contaminants of Concern:
  Soil, vapor intrusion, groundwater - COCs: chlorinated VOCs, SVOCs, metals, PFAS
- Proposed/Current Remedy:
  CVOC soil hotspot excavation, in-site chemical remediation, on-site groundwater monitoring, on-site SSDS (two), composite cover system, institutional controls (easement)
- What is the predicted timeframe of the remedy? Will components of the remedy still be in place in 10+ years?
  Remediation will reportedly start in November 2024 and be completed in February 2025, will groundwater monitoring continuing until February 2027. Components of the remedy will still be in place in 10+ years.
- Is the site in proximity to any sensitive receptors? (e.g. wetlands, waterbodies, residential properties, hospitals, schools, drinking water supplies, etc.)
  No

Is the site in a disadvantaged community (DAC) or potential environmental justice area (PEJA) (Use DECinfolocator: DECinfo Locator (ny.gov))?

☒ **Yes** ☐ **No**

If the site is in a DAC or PEJA, will climate impacts be magnified? If yes, list how and why.

☐ **Yes** ☒ **No**

Should thresholds of concern be lowered to account for magnification of impacts? If yes, indicate how lower thresholds will be used in the screening.

☐ **Yes** ☒ **No**

Climate Screening Table*

Potential Climate Hazards	**Relevant to the Site Location** (Y/N/NA)[1]	**Projected Change** (Reference data source/Model)[3]	**Potential to Impact Remedy** (Y/N)	**Is remedy/site already resilient?** (Y/N)[4]
Precipitation	Potentially	N	N/A	N/A
Temperature[2] (Extreme Heat or Cold Weather Impacts)	Y	N	Y	N
Sea Level Rise	N	N/A	N/A	N/A
Flooding	N	N/A	N/A	N/A
Storm Surge	N	N/A	N/A	N/A
Wildfire	N	N/A	N/A	N/A
Drought	N	N/A	N/A	N/A
Storm Severity	Y	Y	Y	N
Landslides	N	N/A	N/A	N/A
Other Hazards:	Seismic	N	Y	N

* Links to potential data sources can be found on the following page

[1] If the first column is N --> The rest of the columns will be N/A, the hazard is not applicable to the site.

[2] Extreme Heat: periods of three or more days above 90°F- Extreme Cold: Individual days with minimum temperatures at or below 0 degrees F (NYSERDA ClimAID report)

[3] List the projected change in specific terms or units e.g. inches of rain fall, feet of sea level rise, etc.

[4] If final column is Y, provide reasoning, if the final column is N --> Climate Vulnerability Assessment (CVA) required.

Required Next Steps (If no further action is required, provide justification):

A telemetry system should be included in the remedy to protect again seismic activity, storm severity, and any extreme temperature fluctuations.

1.0 INTRODUCTION

PSG Engineering & Geology, D.P.C. (PSG) has prepared this Environmental Footprint Analysis (EFA) on behalf of Stewart Purchaser, LLC and Gardner Purchaser, LLC, the Avant Gardner site (the "Site") located at 140 Stewart Avenue and 111 Gardner Avenue in Brooklyn, New York.

This EFA has been prepared in accordance with the New York State Department of Environmental Conservation (NYSDEC) DER-10 Green Remediation policy, dated August 2010. The EFA supports the Remedial Action Work Plan for the Site.

The primary objective of this EFA is to evaluate the environmental impacts associated with the selected remedies for the Site. This analysis provides critical understanding of the environmental consequences of the chosen remediation approach, facilitating informed decision-making, ensuring alignment with regulatory standards and sustainability goals, and enabling lifecycle tracking of environmental performance.

The subsequent sections provide more site-specific details, regulatory framework, baseline environmental conditions, impact assessment, mitigation strategies, and recommendations derived from the analysis. This structured approach enables a comprehensive understanding of the environmental implications of the remediation activities, supporting the pursuit of sustainable outcomes aligned with the objectives of the NYSDEC Brownfield Cleanup Program (BCP).

2.0 SITE DESCRIPTION

2.1 Location and History of Site

The site, situated in the Williamsburg section of Brooklyn, New York, is identified as Block 2977 and Lots 1, 14, 15, and 16 on the New York City Tax Map. Spanning approximately 1.3 acres, the Site bounded by Meserole Street to the north, railroad tracks to the south, Gardner Avenue to the east, and Stewart Avenue to the west.

2.2 Previous Uses and Current Occupation

The Site is in the Williamsburg area of Brooklyn, New York, specifically Block 2977 and Lots 1, 14, 15, and 16 on the New York City Tax Map. It covers about 1.3 acres and is bordered by Meserole Street to the north, railroad tracks to the south, Gardner Avenue to the east, and Stewart Avenue to the west. Two one-story buildings occupy the site, one on the northeast corner (111 Gardner Avenue) and one on the southwest corner (140 Stewart Avenue), with most of the remaining areas covered in asphalt pavement.

The Site is currently an entertainment/music venue, but previously housed steel fabrication operations and a rubbish removal service. Onsite operations consist of an entertainment/music venue, office areas, full-service bars, temporary food stands and a ticket office. The "Brooklyn Mirage" is located in the courtyard between the two buildings. This area includes scaffolding consisting of a two-story catwalk and a four-story observation tower. This structure includes open bars, VIP seating areas, observation decks, and a stage. There are no enclosed areas intended for human occupation within the scaffolding structure.

From 2000 to 2013, Filco Carting operated a truck maintenance garage in a section of the 111 Gardner Avenue building and the surrounding paved area. They used degreasers, lubricants, hydraulic oils, and antifreeze stored in tanks, 55-gallon drums, and other containers for routine truck maintenance and repair. Previous assessments of the Site indicated poor housekeeping practices, raising concerns about the potential environmental impact of using and disposing of these hazardous materials.

Furthermore, historical activities include the operation of a chemical company/liquid bleach manufacturer from at least 1933 to 1992. Sanborn Maps indicate that manufacturing operations were concentrated in the southeastern portion of the parcel. Although regulatory records mention the storage of chemicals in aboveground storage tanks (ASTs) and drums from the 1980s onwards, limited information is available regarding the use, storage, or disposal of hazardous materials associated with chlorine manufacturing operations predating this period.

3.0 REGULATORY FRAMEWORK

3.1 Relevant NYSDEC Guidelines and Standards

The NYSDEC sets forth comprehensive guidelines and standards governing BCP. Key regulations include:

- **DER-31 Green Remediation Policy:** DER-31 Green Remediation Policy outlines principles and practices for implementing green and sustainable remediation strategies. It encourages the use of environmentally friendly practices to minimize the environmental footprint of remediation activities.
- **Part 375 Environmental remediation Policy:** Part 375 of the New York State regulations provides the framework for environmental remediation programs, including the BCP. It delineates the requirements for investigation, remediation, and site closure procedures.
- **DER-10 Technical Requirements for Site Investigation and Remediation:** NYSDEC issues technical guidance documents to assist in the implementation of remediation activities. These documents provide detailed instructions on sampling protocols, risk assessment methodologies, and remediation technologies.

3.2 Compliance Requirements for the BCP

Participants in the BCP must adhere to stringent regulatory requirements to achieve successful site cleanup and redevelopment:

- **Site Characterization**: Comprehensive site investigations are required to assess the nature and extent of contamination. Soil, groundwater, and other environmental media must be sampled to determine contaminant presence and concentration.
- **Remedial Action Work Plan (RAWP):** Participants must develop a RAWP outlining the proposed remediation approach, including objectives, cleanup standards, and technologies. Submission to NYSDEC for review and approval is mandatory.
- **Remedial Activities:** Remediation must be conducted according to the approved RAWP and applicable regulation, including proper handling, treatment, and disposal of contaminated media.
- **Monitoring and Reporting:** Implementation of monitoring programs to track remediation effectiveness and ensure compliance is necessary. Regular reporting to NYSDEC is mandatory to document progress and address any issues.

3.3 Green and Sustainable Remediation Practices

In addition to regulatory compliance, NYSDEC advocates for the use of green and sustainable remediation practices:

- **Pollution Prevention**: Reducing or eliminating hazardous substances at the source through pollution prevention measures is encouraged.
- **Energy Efficiency:** Utilizing energy-efficient technologies and renewable energy sources to minimize greenhouse gas emissions and the carbon footprint of remediation activities is

promoted.

- **Resource Conservation:** Reusing and recycling materials, as well as restoring natural resources, minimizes waste generation and promotes sustainable land use practices.

Adhering to these regulatory guidelines and incorporating green and sustainable remediation practices allows participants in the BCP to achieve effective site cleanup while minimizing environmental impacts and promoting long-term environmental stewardship.

3.4 Regulatory Status of the Site

The Site was enrolled in the BCP on October 30, 2017, and was listed on the Brownfield Cleanup Agreement (BCA) under site name Avant Gardner, NYSDEC Site No. C224258.

The Site was investigated in accordance with the scope of work presented in the NYSDEC-approved Remedial Investigation Work Plan (RIWP) dated April 2, 2019. The Remedial Investigation (RI) was conducted between May 2021 and June 2021, with additional RI work in April 2022 and June 2023. The initial RI report was submitted to NYSDEC in November 2021. Following comments from NYSDEC and NYSDOH issued on January 18, 2022, the report was resubmitted in September 2022. It was resubmitted again in March 2023 to address further comments from NYSDEC and NYSDOH issued on February 3, 2023, and January 23, 2023, respectively. NYSDEC approved the RIR via correspondence dated May 2, 2023.

PSG submitted a draft Remedial Action Work Plan (RAWP) to the NYSDEC in January 2024, which is currently under review by the NYSDEC and the New York State Department of Health (NYSDOH). On February 29, 2024, the NYSDEC announced a public comment period for the proposed plan for brownfield site contamination. The public comment period extends for 45 days, ending on April 14, 2024.

4.0 BASELINE ENVIRONMENTAL CONDITIONS

The subsurface soils at the Site consist of non-native fill materials, including bricks, concrete, gravel, metal, and wood, extending up to 18 feet below ground surface (bgs). This fill is underlain by native silty sand, sand, and clay reaching depths of up to 35 feet bgs. A noncontinuous peat layer was found in several soil borings at depths ranging between approximately 13 and 25 feet.

Groundwater is present at a depth of about 5 to 10 feet bgs and generally flows from east to west. Newtown Creek is located approximately 1,190 feet west of the Site.

Sampling data indicate chlorinated volatile organic compound (cVOC) soil hotspots near borings 7-B1 and 10-B6, where PCE concentrations of 2,200 milligrams per kilogram (mg/Kg) and 200 mg/Kg, respectively, were identified. These areas may be potential sources contributing to additional groundwater impacts. However, the remaining VOC exceedances from this and previous investigations do not appear to have significantly impacted groundwater. Remedial action is necessary to address cVOC-impacted soils in Areas of Concern (AOC) 7 and 10.

Shallow soils across the Site show historic fill-related impacts, but these exceedances have not significantly affected groundwater quality. The site soils are currently capped by existing buildings and pavement.

Vertical groundwater profiling in April 2022 showed increasing cVOC concentrations with depth at temporary well point 7-TW4, warranting remedial action for cVOC-impacted groundwater in AOC-7.

Subsurface investigations from 2016 to 2021 detected semi-volatile organic compounds (SVOCs), metals, dissolved metals, polychlorinated biphenyls (PCBs), and perfluorooctanoic acid (PFOA), and perfluorooctane sulfonic acid (PFOS) in shallow groundwater samples at concentrations marginally above Ambient Water Quality Guidelines (AWQG). These exceedances are likely due to urban fill material at the Site.

A soil vapor sample from the northwestern property boundary identified benzene, while another sample from the southern boundary near AOC-7 detected cVOCs, including cis 1,2-dichloroethene (c1,2-DCE), tetrachloroethene (PCE), and trichloroethene (TCE). No sensitive receptors are in close proximity to the elevated soil vapor concentrations, except for potentially occupied commercial properties across the unpaved railroad tracks.

5.0 SELECTED REMEDIATION OPTION

The objective of this RAWP is to achieve a Track 4 remedy for commercial use consisting of cVOC soil and groundwater hot spot remediation, and engineering and institutional controls to prevent exposure to subsurface contaminated media.

The following remedy is proposed for the Site:

1. **cVOC Soil Hot Spot Excavation:** PSG will conduct remedial excavations at AOC-7 and AOC-10 to remove cVOC-impacted soils above the water table in order to prevent further impacts to Site groundwater. The remedial excavations are expected to encompass an area approximately 550 sf at AOC-7 and 330 sf at AOC-10 and extend from the ground surface to the water table (encountered between 5 to 10 feet bgs), unless the results of post-excavation soil sampling indicate cVOC concentrations in remaining soils are in compliance with the NYSDEC Soil Cleanup Objective (SCO) for the protection of groundwater. Excavated soil will be temporarily stockpiled or staged on-Site in roll-offs, pending disposal to an appropriate off-site disposal facility. The remedial excavations will be backfilled with clean soil in accordance with NYSDEC regulations and the asphalt and concrete pavement will be restored. Prior to conducting the excavations, PSG will complete waste characterization sampling to obtain acceptance of the waste by the selected disposal facility. PSG will additionally obtain a Contained-In Determination from the NYSDEC for proper classification of the waste.

2. **In-Situ Chemical Remediation (ISCR):** PSG consulted with Provectus Environmental Products, Inc. (Provectus) to develop an appropriate chemical injection plan to address the cVOC impacts in soil and groundwater at the Site. Provect-IR® is a unique mixture of reagents that optimizes the in situ reductive dechlorination of chemicals present in soil and groundwater. Following placement of Provect-IR® into the subsurface environment, a number of physical, chemical and microbiological processes combine to create very strong reducing conditions that stimulate rapid and complete dechlorination of organic solvents and other recalcitrant compounds.

   Prior to backfilling the cVOC soil hot spot excavation at AOC-7, Provect-IR® will be applied in the open excavation at 2.5% of soil mass using a 3-foot long vertical target interval at the water table. A total of 1,000 pounds of Provect-IR® is estimated for the excavation.

   The ISCR program will also include using a direct push-drill rig to inject Provect-IR® into the subsurface to address the chlorinated solvent target area. The ISCR injection activities will include a 3,000 square foot target area with a maximum 110-foot-long vertical target zone, which is the effective limit of the direct-push equipment at the Site. The Provect-IR® will be applied at an average of 0.30% of soil mass, which will ensure effective reagent distribution while overcoming the reagent demand for contaminant destruction. The ISCR program will also incorporate bioaugmentation with Dehalococcoides (DHC; 29 liters) to ensure efficient cVOC destruction.

   The injections will include the application of approximately 34,800 pounds of Provect-IR® which will be mixed with approximately 1,728 gallons of water. Injections will be applied to 23 injection points across the Site. Six of these injection points, which cover a 400 square foot area, will be applied from 15 to 110 feet below ground surface (bgs), where the highest degree of cVOC impacts in groundwater

are located. The residual plume target zone is from 15 to 40 feet bgs and will be addressed via seventeen other injection points.

With the exception of a cVOC hot spot in AOC-7, relatively consistent cVOC impacts are present in intermediate and deep groundwater samples across the Site, with similar concentrations identified in offsite, upgradient borings and monitoring wells. These results indicate that the deep and intermediate zones have also been impacted by an offsite regional plume, which has migrating onto the Site. Based on prior measurements, the aquifer exhibits reducing biogeochemical conditions including dissolved oxygen (DO) at less than 1 part per million (ppm) and negative oxidation-reduction potential (ORP), and neutral pH. The objective of the ISCR program is to reduce the cVOC groundwater concentrations at AOC-7 such that cVOC concentrations are more consistent with sitewide conditions and to enhance natural attenuation for further reduction of the residual concentrations.

3. Monitoring Well Installations: PSG will install two downgradient monitoring well clusters to monitor the effectiveness of the ISCR program at AOC-7. Each monitoring well cluster will include a shallow well screened at 5-20 feet bgs, two intermediate wells screened at 40-45 feet bgs and 65-70 feet bgs, respectively, and a deep well screened at 105-110 feet bgs. One monitoring well cluster will be installed immediately west-northwest of the ISCR treatment area at AOC-7, and a second downgradient monitoring well cluster will be installed in the sidewalk or edge of pavement along Stewart Avenue, immediately west-northwest of AOC-3. In addition, PSG will install a shallow monitoring well near the southern property boundary, in the vicinity of RI temporary well 7-TW3.

4. Groundwater Sampling: PSG will conduct pre- and post-remediation groundwater sampling events to establish baseline conditions and monitor the effectiveness of the Remedial Action (RA). Groundwater monitoring will include sampling the new and existing monitoring wells prior to and approximately 30-days after completing the ISCR injections, and on a quarterly basis thereafter. PSG will conduct the groundwater sampling events in accordance with the procedures presented in the NYSDEC-approved RIWP for the Site.

5. Engineering Controls: The asphalt, concrete, and building slabs at the Site will be visually inspected to determine they are complete, with no significant cracks or damage, and can act as an engineering control to prevent exposure to remaining site impacts. Once confirmed, the composite cover system consisting of the existing concrete building slabs and asphalt pavement on exterior open areas of the Site will prevent human exposure to contaminated soils. In addition, the two existing SSDSs for the 140 Stewart Avenue and 111 Gardner Avenue buildings prevent exposure to VOC vapors by mitigating the potential for vapor intrusion from the subsurface into the Site buildings.

6. Institutional Controls – Environmental Easement: Proposed institutional controls include the recording of an environmental easement (EE) to prevent future exposure to any remaining contamination at the Site; publication of a Site Management Plan (SMP) for long-term management of residual contamination as required by the EE; and deed restrictions limiting the use of the Site for commercial/industrial activities, restricting the use of groundwater, and restricting unauthorized excavation or disturbance of the cover system.

6.0 IMPACT ASESSMENT

6.1 Environmental Impacts of Selected Remedy

6.1.1 Excavation

- **Energy Consumption and Emissions**
    - **Fossil Fuel Use**: Excavation equipment such as backhoes, front loaders, and excavators typically run on diesel, leading to significant fossil fuel consumption.
    - **Greenhouse Gas (GHG) Emissions**: The operation of heavy machinery releases carbon dioxide (CO2) and other GHGs, contributing to climate change.
- **Pollutant Release**
    - **Volatilization:** Disturbing contaminated soil can release volatile organic compounds (VOCs) into the air, posing health risks to workers and nearby communities.
    - **Dust Generation:** Excavation can produce dust, which may contain hazardous substances, leading to air quality issues.

6.1.2 Soil Transportation

- **Energy Consumption and Emissions**
    - **Fuel Use:** Loading and transporting contaminated soil typically requires trucks, which consume significant amounts of fuel.
    - **GHG Emissions:** Transportation emits CO2, nitrogen oxides (NOx), and particulate matter (PM), contributing to air pollution and climate change.
- **Road Infrastructure Impact**
    - **Wear and Tear:** Heavy trucks can cause damage to roads, leading to increased maintenance and associated environmental impacts from repair activities.
    - **Traffic Congestion:** Increased traffic from transportation activities can lead to congestion, further exacerbating emissions and energy use.

6.1.2 Soil Disposal

- **Landfill Impact**
    - **Space Consumption:** Disposing of contaminated soil in landfills takes up valuable landfill space, which is a finite resource.
    - **Leachate Generation:** Contaminated soil can produce leachate, which, if not properly managed, can contaminate groundwater and surface water.
- **Long-Term Environmental Impacts**

- **Future Land Use Restrictions:** Disposal sites may be restricted in future use, impacting land availability for other purposes.
- **Potential for Remediation:** If disposal sites are not adequately managed, they may require future remediation efforts, leading to additional environmental impacts.

6.1.2 Groundwater Remediation

In-situ chemical remediation (ISCR) using Provect-IR® zero-valent iron (ZVI) formula for VOC-impacted groundwater offers several green and sustainable environmental impacts. This technology is designed to address groundwater contamination effectively while minimizing environmental harm. Green and sustainable impacts are summarized below.

- **Reduced Carbon Footprint**
  - **Minimized Excavation and Transportation:** ISCR using Provect-IR® treats contamination directly in the groundwater, reducing the need for extensive excavation and transportation of contaminated materials. This leads to lower fossil fuel consumption and greenhouse gas emissions.
  - **Energy Efficiency:** The chemical processes involved in Provect-IR's use of zero-valent Iron (ZVI) are typically less energy-intensive compared to traditional remediation methods like pump-and-treat, further reducing the carbon footprint.
- **Enhanced Environmental Safety**
  - **Targeted Contaminant Degradation:** Provect-IR® effectively targets and degrades VOCs in situ, minimizing the risk of releasing harmful substances into the environment during treatment. This targeted approach reduces potential air and water pollution.
  - **Reduction of VOCs:** The ZVI promotes the reductive dechlorination of VOCs, transforming them into less harmful compounds and thereby reducing the release of volatile organic compounds into the atmosphere.
- **Water Resource Protection**
  - **Groundwater Quality Improvement:** Provect-IR® promotes the breakdown of VOC contaminants in groundwater, leading to improved water quality and reduced risk to human health and the environment.
  - **Preservation of Aquifers:** By treating contaminants in place, the natural structure and integrity of aquifers are preserved, ensuring the long-term sustainability of groundwater resources.
- **Ecosystem Preservation**

- **Minimal Physical Disturbance:** The application of Provect-IR® involves minimal physical disruption to the site, preserving local ecosystems and reducing habitat disturbance.
- **Biodegradable Additives:** The ZVI used in Provect-IR® is environmentally benign and does not introduce harmful chemicals into the environment, aligning with sustainable remediation practices.

- **Long-Term Sustainability**
  - **Permanent Contaminant Removal:** Provect-IR® facilitates the permanent degradation of VOCs rather than merely transferring them to another medium, providing a long-lasting solution to contamination issues.
  - **Long-Term Liabilities:** Effective in-situ remediation reduces future environmental liabilities and the need for ongoing management, contributing to long-term sustainability.

6.1.2 Monitoring Well Installations

Monitoring well installations and the management and disposal of investigation-derived waste (IDW) have several green and sustainable environmental impacts, and proper mitigation strategies can further enhance their sustainability.

- **Environmental Protection**
  - **Groundwater Monitoring:** Monitoring wells provide critical data on groundwater quality and contamination levels, enabling timely detection of pollutants and ensuring effective protection of water resources.
  - **Informed Decision-Making:** Data from monitoring wells help in making informed decisions about remediation strategies, leading to more effective and efficient cleanup efforts.

- **Reduced Environmental Disturbance**
  - **Minimal Footprint:** The installation of monitoring wells typically involves minimal land disturbance compared to large-scale excavation projects, preserving local ecosystems and habitats.
  - **Non-Invasive Techniques:** Modern drilling techniques for monitoring wells are designed to be minimally invasive, reducing the impact on the surrounding environment.

- **Controlled Waste Management**
  - **Safe Handling:** Proper management of IDW, which includes contaminated soil, water, and other materials, prevents the spread of contaminants to unaffected areas, protecting the environment and public health.
  - **Regulated Disposal:** Adhering to regulatory guidelines ensures that IDW is

disposed of in a manner that minimizes environmental impact, such as through secure landfills or treatment facilities.

- **Waste Minimization:** Effective waste management strategies can minimize the volume of waste generated, reducing the burden on disposal facilities and the environment.

6.2 Analysis of Air Emissions, Water Use, Soil Impacts, and Waste Generation

Air Emissions

The proposed remedial actions will utilize a variety of equipment, including a Geoprobe 7822 and/or Geoprobe 3126GT, Progressive Gravity Pump (CG-550), Inverter Generator, Ford F550 Utility Truck, Ford F550 Stake Truck, and Kubota SVL75 track loader. The use of gasoline-powered equipment will contribute to air emissions, primarily in the form of carbon dioxide (CO2), nitrogen oxides (NOx), and particulate matter (PM). The excavation and injection processes are expected to generate fugitive dust emissions, which will be mitigated through dust control measures such as water spraying. Additionally, transportation of equipment and materials to and from the Site will contribute to emissions from diesel and gasoline engines.

Water Use

The in-situ chemical remediation (ISCR) process will utilize approximately 1,728 gallons of water for mixing with Provect-IR®. Water use is expected to be minimal in the excavation and monitoring well installation activities. The water used for ISCR will be sourced from the local municipal supply, and measures will be taken to prevent unnecessary wastage.

Soil Impacts

The cVOC soil hot spot excavation will involve the removal of impacted soils at AOC-7 and AOC-10, totaling approximately 880 square feet of area and extending to the water table. This will result in the generation of contaminated soil that will be temporarily stockpiled on-site in roll-offs before off-site disposal. The soil impacts will be mitigated by backfilling the excavated areas with clean soil in accordance with NYSDEC regulations and restoring the asphalt and concrete pavement. The ISCR program will involve the injection of 34,800 pounds of Provect-IR® into the subsurface, which will alter the soil chemistry and enhance the reductive dechlorination of cVOCs.

Waste Generation

The excavation process will generate contaminated soil that requires proper characterization, containment, and disposal. The exact volume of waste soil will depend on the extent of contamination identified during post-excavation sampling. Additionally, the ISCR process will generate waste materials associated with the mixing and injection of chemical reagents. All waste generated will be managed in accordance with state and federal regulations, ensuring safe and environmentally responsible disposal.

In summary, the proposed remedial actions are designed to address cVOC contamination in soil and groundwater effectively while managing the environmental footprint through controlled air emissions, minimal water use, mitigated soil impacts, and responsible waste generation practices. The project will

adhere to regulatory requirements and implement best practices to minimize the overall environmental impact.

6.3 Greenhouse Gas Emissions and Energy Consumption

This section provides an analysis of the greenhouse gas (GHG) emissions and energy consumption associated with the proposed remedial actions at the Site. The analysis is divided into two components: Component 1, Drilling and ISCR Injection Activities, and Component 2, Contaminated Soil Excavations and Disposal. Detailed assumptions and calculations supporting this analysis are provided in the EPA Spreadsheets for Environmental Footprint Analysis (SEFA), included as **Appendix A**.

Component 1: Drilling and ISCR Injection Activities

Equipment and Energy Consumption:

- **Geoprobe 7822 and/or Geoprobe 3126GT:** Used for temporary point installation and monitoring well installations.
- **Progressive Gravity Pump (CG-550), Gasoline:** Used for ISCR injections.
- **Inverter Generator, Gasoline, 1800 W:** Provides power for on-site activities.
- **Ford F550 Utility Truck and Ford F550 Stake Truck:** Used for transportation of equipment and materials to the Site.
- **Kubota SVL75 Track Loader (Skid Steer with Forks):** Used for material handling.

Operating Hours and Fuel Consumption:

- Operations conducted 8 hours a day, 5 days a week, over approximately 5 workdays.
- Fuel Consumption Estimates:
    - **Geoprobe 7822/3126GT:** Approximately 3.54 gallons per hour.
    - **Kubota SVL75 Track Loader:** Approximately 3.36 gallons per hour.
    - **CG-550 Pump:** Approximately 1.10 gallons per hour.
    - **Inverter Generator:** Approximately 0.00036 gallons per hour.
    - **Walk Behind Saw:** Approximately 0.32 gallons per hour.
    - **Utility Trucks:** Approximately 417.2 gallons total.
    - **Partner Staff**: Approximately 140.50 gallons total.

Component 2: Contaminated Soil Excavations and Disposal

Equipment and Energy Consumption:

- **Excavator, Skid Steer, and Rammax Soil Compactor:** Used for soil excavation and compaction.
- **Pick-Up Trucks (unleaded gasoline):** Used for transportation of personnel and small equipment.
- **Labor Crew:** Five-man crew commuting approximately 90 miles per workday per person.

- **Heavy Equipment:** Delivered to the site and remaining for the project duration.

Operating Hours and Fuel Consumption:

- Operations conducted 8 hours a day, 5 days a week, over approximately 9 workdays.
- Fuel Consumption Estimates:
    - **Excavator:** Approximately 5.83 gallons per hour.
    - **Skid Steer:** Approximately 4.47 gallons per hour.
    - **Rammax Soil Compactor:** Approximately 1.03 gallons per hour.
    - **Inverter Generator:** 0.00036 gallons per hour
    - **Pick-Up Trucks:** Estimated 20 miles per gallon, traveling approximately 90 miles per day per person.
    - **On-Site Staff:** Approximately 190.50 gallons total.
    - **PSG Employee:** Approximately 80.30 gallons total.

Greenhouse Gas Emissions:

PSG has estimated the total fuel consumption and associated greenhouse gas (GHG) emissions for each piece of equipment based on their operating hours and fuel consumption rates. The total GHG emissions were calculated using the EPA's SEFA. According to these calculations, the total greenhouse gas emissions are approximately 37.5 tons of carbon dioxide equivalents (CO2e) for Component 1 and 29.8 tons of CO2e for Component 2, for a total of 67.3 tons CO2e. For detailed information, please refer to **Appendix A** for the SEFA.

7.0 LIFECYCLE ASSESSMENT

This lifecycle assessment (LCA) evaluates the environmental impacts associated with the chosen remedial strategy, which includes the excavation, transportation, and disposal of VOC-contaminated soil, groundwater remediation using Provect-IR® in-situ chemical reduction (ISCR), and the installation and monitoring of wells. The LCA follows the stages of extraction, production, implementation, and end-of-life management.

7.1 Extraction and Production

- **Materials and Resources**
    - **Excavation:** Use of diesel-powered heavy machinery such as excavators, bulldozers, and loaders.
    - **Transportation:** Diesel-powered trucks for soil transportation to disposal sites.
    - **Disposal:** Construction and maintenance of secure landfill sites.
    - **Provect-IR® ISCR:** Manufacturing of zero-valent iron (ZVI) and other reagents used in ISCR.
    - **Monitoring Wells:** Production of PVC, stainless steel, and other materials for well construction.
- **Environmental Impacts**
    - **Resource Depletion:** Extraction of raw materials for machinery, trucks, and well components.
    - **Energy Consumption:** Significant energy use in the manufacturing of ZVI and well materials.
    - **Emissions:** GHG emissions from the production of materials and the operation of equipment.
    - **Water Use:** Water consumption in the production and manufacturing processes.

7.2 Implementation

- **Activities**
    - **Excavation:** Excavating and removing VOC-contaminated soil.
    - **Transportation:** Hauling contaminated soil to disposal sites.
    - **Disposal:** Securely disposing of contaminated soil in lined landfills.
    - **Groundwater Remediation:** Injecting Provect-IR® ISCR into contaminated groundwater zones.
    - **Monitoring Wells:** Drilling and installing monitoring wells, followed by periodic sampling and analysis.

- **Environmental Impacts**
    - **GHG Emissions:** Emissions from the operation of diesel-powered machinery and trucks.
    - **Soil Disruption:** Physical disturbance of soil structure and potential erosion.
    - **Air Quality:** Dust and VOC emissions during soil excavation and transport.
    - **Water Quality:** Potential leachate generation at disposal sites; ISCR reducing VOC contamination in groundwater.
    - **Waste Generation:** Production of investigation-derived waste (IDW) during well installation and maintenance.

7.3 Use and Maintenance

- **Ongoing Activities**
    - **Monitoring:** Regular sampling and analysis of groundwater via monitoring wells.
    - **Maintenance:** Upkeep of monitoring wells and remediation systems.
- **Environmental Impacts**
    - **Energy Use:** Energy consumption for periodic sampling and laboratory analysis.
    - **Waste:** Generation of IDW from periodic well sampling and maintenance activities.
    - **Operational Emissions:** Emissions from vehicles and equipment used in monitoring and maintenance.

7.4 End-of-Life-Management

- **Activities**
    - **Site Closure:** Decommissioning of monitoring wells and remediation systems once remediation goals are achieved.
    - **Waste Disposal:** Proper disposal of decommissioned well materials and any remaining IDW.
- **Environmental Impacts**
    - **Resource Recovery:** Potential recycling of well materials (e.g., metals).
    - **Waste Management:** Secure disposal of non-recyclable materials.
    - **Land Restoration:** Restoring the site to its natural state, which may involve re-vegetation and soil stabilization.

8.0 MITIGATION STRATEGIES

The environmental impacts of contaminated soil excavation, transportation, and disposal can be mitigated through sustainable practices. Implementing renewable energy, efficient transportation logistics, and innovative disposal methods are essential strategies for minimizing the environmental footprint of these activities.

8.1 Soil Excavation

- **Efficient Equipment Use**
    - **Limit Idling:** Minimize the idle time of excavation equipment to reduce unnecessary fuel consumption and emissions.
    - **Regular Maintenance:** Keep machinery well-maintained to ensure optimal performance and fuel efficiency. Regular servicing reduces emissions and enhances the lifespan of equipment.
- **Soil Management Practices**
    - **Erosion Control:** Implement measures such as silt fences, sediment barriers, and re-vegetation to control soil erosion.
    - **Minimize Disturbance:** Excavate only the necessary areas to limit soil disturbance and preserve the surrounding environment. Use precision excavation techniques to target contaminated areas more accurately.
- **Dust Suppression**
    - **Water Sprays:** Regularly spraying water over excavation sites can help suppress dust, preventing airborne contaminants from affecting air quality.
    - **Dust Barriers:** Erect barriers or windbreaks around the site to contain dust and prevent it from spreading to surrounding areas.
- **Operational Efficiency**
    - **Optimize Operations:** Plan excavation activities to maximize efficiency, such as scheduling tasks during favorable weather conditions to reduce delays and additional fuel consumption.
    - **Training Operators:** Ensure that equipment operators are trained in eco-friendly practices, such as smooth driving techniques and proper use of equipment, to minimize environmental impact.
- **Use of Eco-Friendly Materials**
    - **Biodegradable Lubricants:** Use biodegradable and environmentally friendly lubricants and hydraulic fluids in machinery to reduce the risk of soil and water contamination in case of leaks or spills.

- **Low-Emission Fuels:** When possible, use lower-emission fuels such as biodiesel, which can reduce the carbon footprint of excavation activities.

- **Community Air Monitoring Program (CAMP)**
  - **Air Quality Monitoring:** Regularly monitor air quality around the excavation site to detect and address any potential pollutant emissions promptly.

8.2 Soil Transportation

- **Efficient Routing:** Planning the most efficient routes can minimize fuel consumption and emissions.
- **Low-Emissions Vehicles:** Using vehicles with better fuel efficiency or alternative fuels can reduce environmental impact.
- **Load Optimization:** Maximizing the load capacity of each trip can reduce the number of trips required, thereby lowering overall emissions.

8.3 Soil Disposal

- **Waste Management**
  - **Proper Disposal:** Ensure that any waste generated during excavation, such as non-contaminated soil or debris, is disposed of in an environmentally responsible manner, following local regulations and guidelines.
  - **Recycling:** Where possible, recycle materials such as concrete or metals encountered during excavation, reducing the demand for new raw materials and conserving landfill space.

8.4 Groundwater Remediation

To maximize the green and sustainable impacts of using Provect-IR® for in-situ chemical remediation of VOC-impacted groundwater, the following mitigation strategies can be employed:

- **Optimize Treatment Processes**
  - **Site-Specific Assessments:** Thorough site assessments were conducted to tailor the application of Provect-IR® ensuring optimal distribution and contact with VOC contaminants. This increases the efficiency and effectiveness of the treatment.
  - **Controlled Injections:** Use controlled injection techniques to precisely deliver the ZVI formula, minimizing excess use of materials and reducing the potential for unintended environmental impacts.

- **Monitoring and Maintenance**
  - **Continuous Monitoring:** Implement comprehensive monitoring programs to track the progress of remediation and detect any potential adverse effects early. This includes monitoring groundwater quality to ensure contaminants are effectively degraded.

- **Adaptive Management:** Be prepared to adjust remediation strategies based on monitoring results to address any emerging issues and optimize treatment performance.

8.5 Monitoring Well Installations

- **Sustainable Drilling Practices:**
  - **Use of Eco-Friendly Drilling Fluids:** Utilize biodegradable and non-toxic drilling fluids to minimize environmental contamination.
  - **Low-Impact Equipment:** Employ low-impact drilling rigs and techniques to reduce soil disturbance and preserve local ecosystems.
- **Site Selection and Planning**
  - **Strategic Placement:** Carefully select well locations to maximize data quality while minimizing ecological disruption.
  - **Minimized Land Use:** Plan well installations to use the smallest footprint necessary, preserving as much natural land as possible.
- **Pollution Prevention**
  - **Containment Measures:** Implement measures to prevent spills and leaks during well installation, such as secondary containment for equipment and materials.
  - **Proper Sealing and Abandonment:** Ensure that monitoring wells are properly sealed and abandoned after use to prevent contamination pathways.
- **IDW Characterization and Segregation**
  - **Accurate Identification:** Characterize and segregate IDW based on contamination levels to ensure appropriate handling and disposal. Separate hazardous from non-hazardous waste.
  - **Documentation:** Maintain detailed records of waste types, quantities, and disposal methods to ensure compliance with environmental regulations.
  - **Containment and Storage:** Use secure, labeled containers for temporary storage of IDW to prevent leaks and spills. Employ secondary containment measures where necessary.
- **Sustainable Waste Disposal**
  - **Environmentally Safe Facilities:** Dispose of IDW in secure, environmentally safe landfills or disposal facilities designed to prevent leachate and gas emissions.
  - **Transportation:** Ensure safe transportation of IDW to disposal or treatment facilities using properly licensed and equipped vehicles to prevent accidents and spills.

	A-5	Total greenhouse gas emissions	Tons CO2e*	37.5	29.8	0.0	0.0	0.0	0.0	67.3
Land & Ecosystems		Qualitative Description								

** Total greenhouse gases emissions (in CO2e) include consideration of CO2, CH4, and N2O (Nitrous oxide) emissions.*
"MMBtu" = millions of Btus
"MG" = millions of gallons
"CO2e" = carbon dioxide equivalents of global warming potential

The above metrics are consistent with EPA's Methodology for Understanding and Reducing a Project's Environmental Footprint (EPA 542-R-12-002), February 2012

Notes:

"MWh" = megawatt hours (i.e., thousands of kilowatt-hours or millions of Watt-hours)
"Tons" = short tons (2,000 pounds)

APPENDIX B: DATA USABILITY SUMMARY REPORT

Re: Avant Gardner Site, Brooklyn, NY
Data Validation Report
June 2023 Soil and Ground Water Samples

Dear Mr. Lent:

The data usability summary report (DUSR) and data validation review for the Avant Gardner site, Brooklyn, NY, June 2023 soil and ground water sampling event are attached to this letter. The data are mostly acceptable for Alpha Analytical, SDG Number: L2335541 with some issues that are identified and discussed in the DUSR and validation summaries. There were data that were rejected (R) in the data pack. The reason for rejecting data is outlined in the DUSR and QA/QC review. The data is rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of common data validation acronyms is attached to this letter to assist your interpretation the validation summaries. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for the opportunity to assist Partner Engineering and Science, Inc.

Sincerely,
Alpha Geoscience

Donald Anné
Senior Chemist

ALPHA GEOSCIENCE

Geology
Hydrology
Remediation
Water Supply

Data Usability Summary Report
for Alpha Analytical Labs
SDG Number: L2335541

49 Soil Samples, 1 Soil Field duplicate,
and 7 Ground Water
Collected June 20, 2023

Prepared by: Donald Anné
August 16, 2023

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile analyses for 31 soil samples; the results of TAL metal analyses for 18 soil samples and 1 field duplicate; the results of TCLP metal analyses for 2 soil samples; and the results of total and dissolved TAL metal analyses for 7 ground water samples

The overall performances of the analyses are acceptable. Alpha Analytical Labs did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for 4 compounds were qualified as “estimated, biased high” (J+) for sample 7-B1W (1.5-2) because 1 of 4 surrogate recoveries was above control limits for the sample.

- The positive volatile results for 16 compounds were qualified as “estimated, biased high” (J+) for sample 7-B1W (1.5-2)RE2 because 2 of 4 surrogate recoveries were above control limits for the sample.

- The positive volatile results for 27 compounds were qualified as “estimated, biased high” (J+) for sample 7-B1E (5.5-6) because 1 of 4 surrogate recoveries was above control limits for the sample.

- The positive volatile results for 22 compounds were qualified as “estimated, biased high” (J+) for sample 7-B1S (5.5-6) because 1 of 4 surrogate recoveries was above control limits for the sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive volatile results for 23 compounds were qualified as "estimated, biased high" (J+) for sample 7-B1S (5.5-6)RE because 2 of 4 surrogate recoveries were above control limits for the sample.

- The "not detected" volatile results for 14 compounds were qualified as "estimated" (UJ) for sample 7-B1W (1.5-2) because the areas for the internal standard used to quantitate these compounds was below control limits, but not below 25%.

- The "not detected" volatile results for 26 compounds were qualified as "rejected, unusable" (R) for sample 7-B1W (1.5-2) because the area for the internal standard used to quantitate these compounds was below control limits and below 25%.

- The volatile results for tetrachloroethene and cis-1,2-dichloroethene for sample 7-B1W (1.5-2)RE were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "E" by the laboratory. The results for compounds marked "E" were qualified as estimated (J).

- The volatile results for tetrachloroethene for samples 7-B1W (4.5-5), 7-B1WW (1-1.5), 10-B6N (1.5-2), and 10-B6N (4.5-5) were quantitated using data that were extrapolated beyond the highest calibration standard and flagged "E" by the laboratory. The results for tetrachloroethene marked "E" were qualified as estimated (J).

- The "not detected" volatile results for 1,1,2,2-tetrachloroethane, naphthalene, and 1,2,4,5-tetramethylbenzene were qualified as "estimated" (UJ) for samples 7-B1W (1.5-2)RE2 and 7-B1W (4.5-5) because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile results for 1,1,2,2-tetrachloroethane and 1,2,4,5-tetramethylbenzene were qualified as "estimated" (UJ) for samples 7-B1W (6.5-7), 7-B1S (4-4.5), 10-B6W (4.5-5), and 10-B6W (7.5-8) because 1 of 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSDs.

- The "not detected" volatile results for 1,1,2,2-tetrachloroethane were qualified as "estimated" (UJ) for the following samples because 1 or 2 percent recoveries for 1,1,2,2-tetrachloroethane were below QC limits, but not below 10% in the associated soil LCS/LCSDs.

7-B1E (1.5-2)	7-B1E (5.5-6)	7-B1N (1.5-2)	7-B1S (1.5-2)
7-B1S (5.5-6)	7-B1S (5.5-6)RE	10-B6W (1.5-2)	

- The positive volatile results for 1,2,4,5-tetramethylbenzene were qualified as "estimated, biased low" (J-) for samples 7-B1E (1.5-2), 7-B1N (1.5-2), 7-B1S (1.5-2), and 10-B6W (1.5-2) because 1 of 2 percent recoveries for 1,2,4,5-tetramethylbenzene were below QC limits, but not below 10% in the associated soil LCS/LCSDs.

- The "not detected" volatile results for vinyl acetate were qualified as "estimated" (UJ) for samples 7-B1WW (4-4.5), 7-B1WW (4.5-5), 7-B1SS (5-5.5), 10-B6WW (4.5-5), and 10-B6EE (1.5-2) because 1 of 2 percent recoveries for vinyl acetate was below QC limits, but not below 10% in the associated soil LCS/LCSDs.

- The positive total metal results for arsenic were qualified as estimated, biased high (J+) for all 17 soil samples and the field duplicate because 2 of 2 percent recoveries for arsenic were above control limits in the associated soil MS/MSD sample.

- The positive metal results for antimony were qualified as estimated, biased high (J+) for all 17 soil samples and the field duplicate because 1 of 2 percent recoveries for antimony was above control limits in the associated soil MS/MSD sample.

- The positive metal results for barium and chromium were qualified as estimated, biased low (J-) for all 17 soil samples and the field duplicate because 1 of 2 percent recoveries for barium and chromium were below control limits, but not below 10% in the associated soil MS/MSD sample.

- The positive metal results for mercury were qualified as estimated, biased high (J+) for the following samples because the percent recovery for mercury was above the control limits in the associated soil spike sample.

8B-1NN (1.5-2.0)	8B-1NN (4.5-5.0)	8B-1NN (6.0-6.5)	8B-1SS (1.5-2.0)
8B-1SS (6.5-7.0)	8B-1WW (1.0-1.5)	8B-1WW (4.5-5.0)	8B-1WW (6.0-6.5)

- The positive metal results for 11 metals were qualified as estimated (J) in samples 8B-1W (6.5-7.0) and 8B-1W (6.5-7.0) DUP because the relative percent differences for these 11 metals were above the allowable maximum in the soil field duplicate pair 8B-1W (6.5-7.0)/8B-1W (6.5-7.0) DUP.

- The positive dissolved metal result for mercury was qualified as estimated (J) for sample 8B-1NN-GW because the relative percent difference for mercury was above the allowable maximum in the associated aqueous dissolved duplicate sample.

- The positive total metal results for magnesium were qualified as estimated, biased low (J-) for samples 8B-1NN-GW, 8B-1SS-GW, and 8B-1WW-GW because 1 of 2 percent recoveries for magnesium was below control limits, but not below 30% in the associated aqueous batch total MS/MSD sample.

- The positive total metal results for calcium, potassium, and sodium were qualified as estimated (J) for all 7 ground water samples because %Ds for calcium, potassium, and sodium were above the allowable maximum in the associated aqueous batch total serial dilution sample and results were above the RLs.

- The positive total metal results for magnesium were qualified as estimated (J) for samples 8B-1N-GW, 8B-1E-GW, 8B-1S-GW, and 8B-1W-GW because %D for magnesium was above the allowable maximum in the associated aqueous batch total serial dilution sample and results were above the RLs.

- The positive dissolved metal result for potassium was qualified as "estimated" (J) in sample 8B-1SS-GW because the dissolved concentration was greater than the total concentrations plus 10%.

- The positive dissolved metal result for sodium was qualified as "estimated" (J) in sample 8B-1E-GW because the dissolved concentration was greater than the total concentrations plus 10%.

All data that are not qualified rejected, unusable (R) are considered usable with estimated (J, J-, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260C Volatiles Data
for Alpha Analytical, SDG Number: L2335541

31 Soil Samples
Collected June 20, 2023

Prepared by: Donald Anné
August 16, 2023

Holding Times: The samples were analyzed within USEPA holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for acetone, 2-butanone, and 4-methyl-2-pentanone were below the method minimums, but not below 0.010 for VOA104 on 04-07-23. The average RRFs for acetone, 2-butanone, 4-methyl-2-pentanone, and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for VOA126 on 05-27-23. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 4-methyl-2-pentanone and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 on 06-24-23 (V31230624A01). The RRF for 2-butanone was below the method minimum, but not below 0.010 on 06-26-23 (V04230626A03). The RRFs for 4-methyl-2-pentanone and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 on 06-27-23 (V31230627N01). The RRFs for 2-butanone, 4-methyl-2-pentanone, and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 on 07-03-23 (V26230703A01). The RRFs for 4-methyl-2-pentanone and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 on 06-28-23 (V31230628A01). The %Ds for chloromethane, 1,1-dichloropene, 1,2-dibromomethane, 1,1,2,2-tetrachloroethane, and 1,2,3-trichloropropane were above the method maximum on 06-24-23 (V31230624A01). The %Ds for 10 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 06-26-23 (V04230626A03). The %Ds for dichlorodifluoromethane, 1,2-dibromomethane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and 1,2-dibromo-3-chloropropane were above the method maximum on 06-27-23 (V31230627N01). The %Ds for 12 compounds (highlighted yellow on attached Form 7) were above the method

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

maximum on 06-28-23 (V31230628A01). The %Ds for bromochloromethane, carbon tetrachloride, bromoform, and 1,2-dibromo-3-chloropropane were above the method maximum on 07-03-23 (V26230703A01). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for chloromethane, 1,1-dichloropene, 1,2-dibromomethane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, 1,2,4,5-tetramethylbenzene, and naphthalene were above the allowable maximum (20%) on 06-24-23 (V31230624A01). The %Ds for 10 compounds (highlighted yellow on attached Form 7) and acrylonitrile were above the allowable maximum (20%) on 06-26-23 (V04230626A03). The %Ds for dichlorodifluoromethane, 1,2-dibromomethane, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, 1,2,4,5-tetramethylbenzene, 1,2-dibromo-3-chloropropane, and naphthalene were above the allowable maximum (20%) on 06-24-23 (V31230627N01). The %Ds for 12 compounds (highlighted yellow on attached Form 7), 1,2,4,5-tetramethylbenzene, and naphthalene were above the allowable maximum (20%) on 06-28-23 (V31230628A01). The %Ds for trans-1,4-dichloro-2-butene and n-butylbenzene were above the allowable maximum (20%) on 07-01-23 (V10230701C01). The %Ds for 2,2-dichloropropane, bromochloromethane, carbon tetrachloride, bromoform, 1,2-dibromo-3-chloropropane, and 1,2,3-trichlorobenzene were above the allowable maximum (20%) on 07-03-23 (V26230703A01). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG1799615-5BLANK contained a trace of 1,2,3-trichlorobenzene (0.46 ug/kg). Method blank WG1799631-5BLANK contained a trace of bromomethane (2.0 ug/kg). Method blank WG1799762-5BLANK contained a trace of bromomethane (99 ug/kg). Positive results for these compounds that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: One of four surrogate recoveries for samples 7-B1W (1.5-2), 7-B1E (5.5-6), and 7-B1S (5.5-6) were above control limits. Two of four surrogate recoveries for samples 7-B1W (1.5-2)R2 and 7-B1S (5.5-6)R1 were above control limits. Positive results for these samples should be considered estimated, biased high (J+).

Internal Standard Area Summary: The internal standard retention times were within control limits. One of three internal standard area (chlorobenzene-d5) for sample 7-B1W (1.5-2) was below control limits, but not below 25%. Positive results for sample 7-B1W (1.5-2) should be considered estimated, biased high (J+) and “not detected” results estimated (UJ).

One of three internal standard area (1,4-dichlorobenzene-d4) for sample 7-B1W (1.5-2) was below control limits and below 25%. Positive results for sample 7-B1W (1.5-2) should be considered estimated, biased high (J+) and "not detected" results rejected, unusable (R).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum and the percent recoveries were within QC limits for soil samples WG1799631-3/4 and WG1799762-3/4.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for chloromethane were above QC limits for soil samples WG1797137-3/4 and WG1797141-3/4. The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for chloromethane, vinyl chloride, and dichlorodifluoromethane were above QC limits for soil samples WG1797314-3/4. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for 1,1,2,2-tetrachloroethane and 1,2,4,5-tetramethylbenzene and 1 of 2 %Rs for naphthalene were below QC limits, but not below 10% for soil samples WG1797169-3/4 and WG1797173-3/4. The RPDs for target compounds were below the allowable maximum, but 1 of 2 %Rs for 1,1,2,2-tetrachloroethane and 1,2,4,5-tetramethylbenzene were below QC limits, but not below 10% for soil samples WG1797202-3/4 and WG1797206-3/4. The RPDs for target compounds were below the allowable maximum, but 1 of 2 %Rs for vinyl acetate were below QC limits, but not below 10% for soil samples WG1799615-3/4 and WG1799618-3/4. Positive results for bromomethane should be considered estimated, biased low (J-) and "not detected' results estimated (UJ) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

The results for tetrachloroethene and cis-1,2-dichloroethene in sample 7-B1W (1.5-2) RE were quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The results for tetrachloroethene, trichloroethene, and cis-1,2-dichloroethene in sample 7-B1W (1.5-2) RE2 were quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The results for tetrachloroethene in samples 7-B1W (4.5-5), 7-B1WW (1-1.5), 10-B6N (1.5-2), and 10-B6N (4.5-5) were quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The results that are flagged as 'E' in the samples should be considered estimated (J).

QA/QC Review of TAL and TCLP Metals
Data for Alpha Analytical Labs
SDG Number: L2335541

18 Soil Samples and 1 Field Duplicate
Collected June 20, 2023

Prepared by: Donald Anné
August 16, 2023

Holding Times: The samples were prepared and analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: The percent recoveries (%Rs) for TCLP metals were within control limits (75-125%) for TCLP MS/MSD sample 8B-1W (6.5-7.0).

Two of two %Rs for arsenic and 1 of 2 %Rs for antimony were above control limits (75-125%) for soil MS/MSD sample 8B-1W (6.5-7.0). The %R for mercury was above control limits (75-125%) for soil spike sample 8B-1NN (1.5-2.0). Positive results for arsenic and antimony should be considered estimated, biased high (J+) in associated soil samples.

One of two %Rs for barium and chromium were below control limits (75-125%), but not below 10% for soil MS/MSD sample 8B-1W (6.5-7.0). Positive results for barium and chromium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicates: The relative percent differences (RPDs) for TCLP metals were below the allowable maximum (20%) for TCLP MS/MSD sample 8B-1W (6.5-7), as required. The RPDs for applicable metals were below the allowable maximum (35%) for soil MS/MSD sample 8B-1W (6.5-7), as required.

Field Duplicates: The relative percent differences for 14 metals were above the allowable maximum (35%) for soil field duplicate pair 8B-1W (6.5-7.0)/8B-1W (6.5-7.0) DUP (attached table). Positive results for these 14 metals should be considered estimated (J) in samples 8B-1W (6.5-7.0) and 8B-1W (6.5-7.0) DUP.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Control Sample: The percent recoveries (%Rs) for TCLP metals were within control limits (75-125%) for TCLP samples WG1801960-2, WG1803365-2, WG1801962-2, and WG1803360-2. The %Rs for target metals were within control limits for soil samples WG1796177-2, WG1800887-2, WG1796178-2, WG1800889-2, and WG1802651-2.

Serial Dilution: The %Ds for applicable metals were below the allowable maximum (15%) for soil serial dilution sample 8B-1W (6.5-7.0), as required.

Percent Solids: The percent solids for soil samples were above 50%.

QA/QC Review of TAL Metals Data
for Alpha Analytical Labs
SDG Number: L2335541

7 Ground Water Sample
Collected June 20, 2023

Prepared by: Donald Anné
August 16, 2023

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration and method blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: The percent recoveries (%Rs) for applicable metals were within control limits (75-125%) for aqueous batch dissolved samples L2333713-01, L2334118-13, and L2337659-11; dissolved spike sample 8B-1NN-GW; and batch total spike samples L2333903-05 and L2336316-01.

One of two %Rs for magnesium was below control limits, but not below 30% for aqueous batch total MS/MSD sample L2338623-01. Positive total results for magnesium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated total aqueous samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous batch dissolved samples WG1796573-4 and WG1801412-4, and batch total MS/MSD sample L2338623-01, as required.

The RPD for mercury was above the allowable maximum (20%) for aqueous dissolved duplicate sample 8B-1NN-GW. Positive dissolved results for mercury should be considered estimated (J) in associated dissolved aqueous samples.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for aqueous dissolved samples WG1796573-2, WG1801412-2, and WG1801416-2, and aqueous total samples WG1796303-2, WG1801296-2, WG1796309-2, WG1796579-2, and WG1801298-2.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Serial Dilution: The %Ds for calcium, magnesium, potassium, and sodium were above the allowable maximum (10%) for aqueous batch total serial dilution sample L2338633-01. Positive results for calcium, magnesium, potassium, and sodium that are above the RLs should be reported as estimated (J) in associated total aqueous samples.

Total vs Dissolved: The dissolved result for potassium was greater than the total result plus 10% for sample 8B-1SS-GW. Positive results for total and dissolved potassium should be considered estimated (J) in sample 8B-1SS-GW.

The dissolved result for sodium was greater than the total result plus 10% for sample 8B-1E-GW. Positive results for total and dissolved sodium should be considered estimated (J) in sample 8B-1E-GW.

** sample not analyzed

Results are in units of mg/Kg.

Bold numbers were values that are below the CRDL.
ND - Not detected.
NC - Not calculated, both results must be above the CRDL for valid RPDs to be calculated.

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

APPENDIX C: NOTICE OF NO SIGNIFICANT THREAT

PSG

FACT SHEET

Brownfield Cleanup Program

Avant Gardner
140 Stewart Avenue &
111 Gardner Avenue
Brooklyn, NY 11237

SITE No. C224258
NYSDEC REGION 2

February 2024

Remedy Proposed for Brownfield Site Contamination; Public Comment Period Announced

The public is invited to comment on a proposed remedy being reviewed by the New York State Department of Environmental Conservation (NYSDEC), in consultation with the New York State Department of Health (NYSDOH), to address contamination related to the Avant Gardner site ("site") located at 140 Stewart Avenue & 111 Gardner Avenue, Brooklyn, NY. Please see the map for the site location.

Based on the findings of the investigation, NYSDEC in consultation with NYSDOH has determined that the site does not pose a significant threat to public health or the environment.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a "Draft Remedial Action Work Plan (RAWP)" for 45 days, from **February 29, 2024 through April 14, 2024**.

- Access the RAWP and other project documents online through the DECinfo Locator: https://www.dec.ny.gov/data/DecDocs/C224258/.
- Documents also are available at the location(s) identified at left under "Where to Find Information."
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the "Who to Contact" area at left.

Draft Remedial Work Plan: The proposed remedy for this site is a Track 4 Commercial Use cleanup and consists of:

- Excavation and off-site disposal of soil exceeding the protection of groundwater soil cleanup objectives (SCOs) for chlorinated volatile organic compound (CVOC) in the unsaturated zone;
- Implementation of an in-situ (i.e. in place) chemical remediation to address CVOC impacts in saturated soil and groundwater at the site;
- Collection of post-remedial soil and groundwater samples to evaluate the effectiveness of the remedy;
- Importation of clean materials that meet the established SCOs for use a backfill;
- Maintenance of a site cover system consisting of the existing concrete building slabs and asphalt pavement on exterior open areas of the site to address remaining soil contamination;
- Continued operation, maintenance and monitoring of vapor mitigation systems which were previously installed on the two on-site buildings under an approved Interim Remedial Measures Work Plan;

For more information about New York's Brownfield Cleanup Program, visit:
www.dec.ny.gov/chemical/8450.html

BROWNFIELD CLEANUP PROGRAM

- Implementation of a Site Management Plan (SMP) for long term maintenance of the remedial systems; and
- Implementation of a Health and Safety Plan and Community Air Monitoring Plan during all ground intrusive activities
- Recording of an Environmental Easement to ensure proper use of the site.

The proposed remedy was developed by Stewart Purchaser LLC and Gardner Purchaser LLC ("applicants") after performing a detailed investigation of the site under New York's Brownfield Cleanup Program (BCP). A "Remedial Investigation Report", which describes the results of the site investigation is also available for review at the locations identified on Page 1.

Next Steps: NYSDEC will consider public comments, revise the cleanup plan as necessary, and issue a final Decision Document. NYSDOH must concur with the proposed remedy. After approval, the proposed remedy becomes the selected remedy. The applicants may then design and perform the cleanup action to address the site contamination, with oversight by NYSDEC and NYSDOH.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Site Description: The site is 1.85-acres and is bordered by Meserole Street to the north, Gardner Avenue to the east, the Long Island Railroad to the south, and Stewart Avenue to the west. The site previously housed steel fabrication operations and a rubbish removal service. From 2000 to 2013, Filco Carting utilized a portion of the 111 Gardner Avenue building and adjacent paved area as a truck maintenance garage for routine maintenance and repair of trucks. Historical activities included a chemical company/liquid bleach manufacturer that operated from at least 1933 to 1992. The site is currently operated as an entertainment/music venue. No change in the current use of the site is planned.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224258) at:
https://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=3

Summary of the Investigation: The primary contaminants of concern at the site are CVOCs and historic fill related impacts which are present site-wide in soil, groundwater and soil vapor.

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business, or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

RE: Sub-Slab Depressurization System Results
140 Stewart Avenue
Brooklyn, New York

Dear Mr. van Schaik:

NYCO Environmental & Dewatering Corp. (NYCO) activated the sub-slab depressurization system (SSDS) installed at the subject property on Monday, May 16, 2016. Subsequent to activation, NYCO collected air quality and vacuum data to confirm operational effectiveness of the system. The initial air quality data was collected on Tuesday, May 17th to confirm background air quality and to establish a baseline to which subsequent air quality data can be compared. A total of two background samples (samples Background 1 and 2) were collected. Additional air samples were collected on May 19th to confirm the effectiveness of the SSDS. These samples were taken from below the slab (samples Sub Slab 1 and 2), the indoor air (samples Inside 1 and 2), and the outdoor, ambient air (samples Outside 1 and 2). All air samples were collected via summa canisters equipped with eight-hour regulators. The summa canisters were then submitted to York Analytical Laboratories (York) of Stratford, Connecticut for analysis. The laboratory results of the samples collected are presented on **Table 1**. The laboratory analytical data packages for the two sampling events are included under **Attachments**. As indicated on Table 1, there were no exceedances of New York State Department of Health (NYSDOH) Guidance Values in the samples collected above the floor slab inside the building on May 17th and 19th.

In addition to the air sampling activities, NYCO collected vacuum readings from the SSDS on Wednesday, May 18th to confirm operational effectiveness and ensure a sufficient vacuum Radius of Influence (ROI) within the area of concern. In general, the vacuum readings of the north system ranged from 0.9 – 1.2 inches of water column (“wc), the vacuum readings of the middle system ranged from 0.5 – 2.0 “ wc, and the vacuum readings from the south system ranged from 0.5 to 1.7 “wc. Based on this information, the SSDS is operating efficiently and providing sufficient ROI to address the sub slab vapor.

Should you have any questions or require additional information, please do not hesitate to contact me at (631) 786-3323.

Sincerely,

Matt Durcan
Vice President

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 18, 2016 and listed below. The project was identified as your project: **140 Stewart Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

16E0730-02	Background 2	Indoor Ambient Air	05/17/2016	05/18/2016

General Notes for York Project (SDG) No.: 16E0730

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
CCV-A	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf). This applies to dectected analytes only.

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two.
For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Technical Report

prepared for:

NYCO Environmental & Dewatering Corp.
200 Blydenburg Road, Suite 19
Islandia NY, 11749
Attention: Marcello Iaboni

Report Date: 05/20/2016
Client Project ID: 140 Stewart Ave.
York Project (SDG) No.: 16E0796

Report Date: 05/20/2016
Client Project ID: 140 Stewart Ave.
York Project (SDG) No.: 16E0796

NYCO Environmental & Dewatering Corp.
200 Blydenburg Road, Suite 19
Islandia NY, 11749
Attention: Marcello Iaboni

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 19, 2016 and listed below. The project was identified as your project: **140 Stewart Ave.**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 16E0796

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
CCV-A	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf). This applies to dectected analytes only.

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two.
For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

RE: Sub-Slab Depressurization System Testing Results 8/30/2023
111 Gardner Avenue, Brooklyn, New York

Dear Ms. Mansur,

Yesterday, August 30, 2023, Durcan Engineering re-tested the sub-slab depressurization system (SSDS) following your request. The SSDS was previously installed at the subject property on June 20, 2017 and consists of 4 SSDS Gravel Pits. Each pit has a 3" diameter pipe and riser to above the roof where the 3" pipes from each pair of 2 pits are individually valved and combined into the intake of one blower. Each blower has a rated capacity of 300 CFM @ 6.97" WC and was manufactured by The New York Blower Company. Each of the 2 blowers provides vacuum, in this manner, to 2 pits.

To confirm continued operational effectiveness and demonstrate a sufficient vacuum Radius of Influence (ROI) within the footprint of the building, on August 30, 2023, Durcan Engineering tested 11 locations in the slab. At 5 locations, I drilled 3/8" holes into and through the floor slab and in the remaining 6 locations, I utilized brass test point locations installed by Partner Engineering. The locations of each point are shown on the attached drawing. Vacuum readings were collected at each of the holes and ranged from 0.07" WC to 2.5" WC. Based on this information, the SSDS is operating efficiently and providing sufficient ROI to address the sub slab vapors. Following the test, each of the drilled holes were sealed up with an epoxy concrete anchor adhesive manufactured by Sike Products.

Please refer to the site plan sketch showing the location of the building perimeter walls, SSDS pits and vacuum test locations and readings from yesterday's test. In addition, the current sensing devices for both blowers were tested and confirmed operational.

I hereby certify and confirm that during my visit and test for sub slab vacuum on August 30, 2023, the SSDS is functioning properly, and the building sub slab soil continues to be under negative pressure for the footprint of the building as evidenced by the areas tested for vacuum readings.

A review of the building slab, in all visible areas, has confirmed that all areas of construction that removed sections of the slab, have been repaired with concrete and there are no remaining slab openings.

In addition, it should be noted that the 2 SSDS blowers were observed to be operating properly and the discharge stacks are physically remote from the HVAC rooftop units.

Should you have any questions or require additional information, please do not hesitate to contact me at (631) 786-3323.

Sincerely,

Matt Durcan, P.E.
DURCAN ENGINEERING, P.C.

RE: Sub-Slab Depressurization System Testing Results 8/30/2023
140 Stewart Avenue, Brooklyn, New York

Dear Ms. Mansur,

Yesterday, August 30, 2023, Durcan Engineering, PC re-tested the sub-slab depressurization system (SSDS) following your request. The SSDS was previously installed at the subject property on May 18, 2016 and consists of 6 SSDS Gravel Pits. Each pit has a 3" diameter pipe and riser to above the roof where the 3" pipes from each pair of 2 pits are individually valved and combined into the intake of one blower. Each blower has a rated capacity of 300 CFM @ 6.97" WC manufactured by The New York Blower Company. Each of the three blowers provides vacuum, in this manner, to 2 pits.

To confirm continued operational effectiveness and demonstrate a sufficient vacuum Radius of Influence (ROI) within the footprint of the building, on August 30, 2023, Durcan Engineering drilled three (3) 3/8" holes into and through the floor slab and utilized 5 brass test plug point locations recently installed by Partner Engineering at 5 locations throughout the footprint of the building as shown on the attached drawing. Vacuum readings were collected at each of the holes and ranged from 0.05" WC to 1.3" WC. Based on this information, the SSDS is operating efficiently and providing sufficient ROI to address the sub slab vapors. Following the test, each of the drilled holes were sealed up with an epoxy anchor adhesive manufactured by Sika Products. The Brass plug test points were also screwed back into position.

Please refer to the site plan sketch showing the location of the building perimeter walls, SSDS pits and vacuum test locations and readings from yesterday's test. In addition, the electrical current sensing devices for the three blowers were tested and confirmed operational.

I hereby certify and confirm that during my visit and test for sub slab vacuum on August 30, 2023, the SSDS is functioning properly, and the building sub slab soil continues to be under negative pressure for the footprint of the building as evidenced by the areas tested for vacuum readings.

A review of the building slab, in all visible areas, has confirmed that all areas of construction that removed sections of the slab, have been repaired with concrete and there are no remaining slab openings.

In addition, it should be noted that the 3 SSDS blowers were observed to be operating properly and the discharge stacks are physically remote from the HVAC rooftop units.

Should you have any questions or require additional information, please do not hesitate to contact me at (631) 786-3323.

Sincerely,

Matt Durcan, P.E.

RE: Sub-Slab Depressurization System Testing Results 8/26/2024
111 Gardner Avenue, Brooklyn, New York

Dear Ms. Mansur,

Yesterday, August 26, 2024, Durcan Engineering re-tested the sub-slab depressurization system (SSDS) following your request. The SSDS was previously installed at the subject property on June 20, 2017 and consists of 4 SSDS Gravel Pits. Each pit has a 3" diameter pipe and riser to above the roof where the 3" pipes from each pair of 2 pits are individually valved and combined into the intake of one blower. Each blower has a rated capacity of 300 CFM @ 6.97" WC and was manufactured by The New York Blower Company. Each of the 2 blowers provides vacuum, in this manner, to 2 pits.

To confirm continued operational effectiveness and demonstrate a sufficient vacuum Radius of Influence (ROI) within the footprint of the building, on August 26, 2024, Durcan Engineering tested 11 locations in the slab. At 6 locations, I drilled 3/8" holes into and through the floor slab and in the remaining 5 locations, I utilized brass test point locations installed by Partner Engineering. The locations of each point are shown on the attached drawing. Vacuum readings were collected at each of the holes and ranged from 0.08" WC to 2.4" WC. Based on this information, the SSDS is operating efficiently and providing sufficient ROI to address the sub slab vapors. Following the test, each of the drilled holes were sealed up with an concrete sealant manufactured by Quickcrete Products.

Please refer to the site plan sketch showing the location of the building perimeter walls, SSDS pits and vacuum test locations and readings from the test. In addition, the current sensing devices for both blowers were tested and confirmed operational.

I hereby certify and confirm that during my visit and test for sub slab vacuum on August 26, 2024, the SSDS is functioning properly, and the building sub slab soil continues to be under negative pressure for the footprint of the building as evidenced by the areas tested for vacuum readings.

A review of the building slab, in all visible areas, has confirmed that all areas of construction that removed sections of the slab, have been repaired with concrete and there are no remaining slab openings.

In addition, it should be noted that the 2 SSDS blowers were observed to be operating properly and the discharge stacks are physically remote from the HVAC rooftop units.

Should you have any questions or require additional information, please do not hesitate to contact me at (631) 786-3323.

RE: Sub-Slab Depressurization System Testing Results 8/26/2024
140 Stewart Avenue, Brooklyn, New York

Dear Ms. Mansur,

On August 26, 2024, Durcan Engineering, PC re-tested the sub-slab depressurization system (SSDS) following your request. The SSDS was previously installed at the subject property on May 18, 2016 and consists of 6 SSDS Gravel Pits. Each pit has a 3" diameter pipe and riser to above the roof where the 3" pipes from each pair of 2 pits are individually valved and combined into the intake of one blower. Each blower has a rated capacity of 300 CFM @ 6.97" WC manufactured by The New York Blower Company. Each of the three blowers provides vacuum, in this manner, to 2 pits.

To confirm continued operational effectiveness and demonstrate a sufficient vacuum Radius of Influence (ROI) within the footprint of the building, on August 26, 2024, Durcan Engineering drilled three (3) 3/8" holes into and through the floor slab and utilized 5 brass test plug point locations recently installed by Partner Engineering at 5 locations throughout the footprint of the building as shown on the attached drawing. Vacuum readings were collected at each of the holes and ranged from 0.10" WC to 1.32" WC. Based on this information, the SSDS is operating efficiently and providing sufficient ROI to address the sub slab vapors. Following the test, each of the drilled holes were sealed up with a concrete sealant adhesive manufactured by Sacrete Products. The Brass plug test points were also screwed back into position.

Please refer to the site plan sketch showing the location of the building perimeter walls, SSDS pits and vacuum test locations and readings from yesterday's test. In addition, the electrical current sensing devices for the three blowers were tested and confirmed operational.

I hereby certify and confirm that during my visit and test for sub slab vacuum on August 26, 2024, the SSDS is functioning properly, and the building sub slab soil continues to be under negative pressure for the footprint of the building as evidenced by the areas tested for vacuum readings.

A review of the building slab, in all visible areas, has confirmed that all areas of construction that removed sections of the slab, have been repaired with concrete and there are no remaining slab openings.

In addition, the 3 SSDS blowers were observed to be operating properly and the discharge stacks are physically remote from the HVAC rooftop units.

Should you have any questions or require additional information, please do not hesitate to contact me at (631) 786-3323.

Sincerely,

Matt Durcan, P.E.

- Project Management (1 hr/day for Technical Director)	1	T&M	$185	$46,250
- Fixed Air Monitoring Stations (2 stations for 9 months)	18	/Station/mo	$1,500	$27,000
- Allowance for Import & Confirmatory Sampling (lab costs)	1	LS	$30,000	$30,000
- Final Engineering Report & Site Management Plan	1	LS	$30,000	$30,000
	Track 1 Remedial Costs			
	Quantity	**Units**	**Unit Rate**	**Cost**
Soil Removal During Construction [2,3]				
- Transport and Disposal of Fill > Track 1 SCOs (metals and PAHs)	49,600	Tons	$60	$2,976,000
- Transport and Disposal of cVOC Hotspots	1,368	Tons	$189	$258,552
- Transport and Disposal of Hazardous Waste Soil (PCE, TCE)	32	Tons	$385	$12,320
- Foundation Contractor Mark-up for Disposal	$3,246,872	% of total	10%	$324,700
- Backfill and Surface Restoration	700	Yards	$55	$38,500
- Remedial Additional Support of Excavation for cVOC Hotspots - ALLOWANCE	1	LS	$50,000	$50,000
Tank Removal				
- Remedial Contingency: Tank Removal Contractor	1	LS	$25,000	$25,000
cVOC Hotspot Remediation				
- In Situ Chemical Products for Excavation and Injection Programs	1	LS	$180,000	$180,000
- In Situ Chemical Oxidation Injections	1	LS	$112,500	$112,500
- Monitoring Well Installation	1	LS	$75,000	$75,000
- Groundwater Sampling (*includes immediate pre- and post-remediation)*	2	LS	$15,000	$30,000
SSDS [4]				
- SSDS Recertification	2	LS	$2,500	$5,000
General Conditions, Insurance, Misc.				
- General Conditions	$4,087,572	%	10%	$408,757
- Insurance	$4,087,572	%	10%	$408,757
Subtotal				**$5,596,000**
General Contingency (15%)				**$839,000**
Estimated Total				**$6,435,000**

Notes:
Costs described herein are based upon a proposed development with associated remediation scenario. Actual costs may vary significantly (higher or lower) dependent upon the finalized development program and remedial plan approved by NYSDEC under BCP.

Remediation costs do **not** include the following:
- Stormwater or other permitting
- Sewer site connection permit or sewer discharge fees
- Support of excavation (SOE), excavation & loading of soil required for foundation
- Import of clean fill (excluding contingency for petroleum hot spot)
- Site-wide dewatering during construction (if required)
- Building demolition or disposal of concrete, asphalt, or other debris
- Inflationary escalator - prices based upon estimated costs as of February 2025
- Excludes paving or building slabs for site cap
- Sales tax

Total cVOC Hotspot Removal	800	CY	1,400	tons

[3] **Soil Removal Notes:** Soil disposal costs based upon using non-union trucking.

[4] **SSDS Notes:** Assumes no additional SSDS design or modification work is required to the existing SSDS at the Site

Limitations

The above estimate contains conclusions that are based on the analysis of data collected at the time and locations noted in PSG's or others' reports through intrusive or non-intrusive sampling. However, further investigation (including soil/waste characterization) might reveal additional data or variations of the current data, which may differ from our understanding of the conditions and may require the enclosed recommendations to be reevaluated or modified. Due to the limited subsurface data, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, and lead-based paint was not investigated, unless specified in the reports.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The conclusions and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as no data has been collected to date.

This estimate is based solely on data collected, conducted, and provided by PSG and others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these data may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This estimate is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, PSG has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

RE: "Contained-In" Determination Request
NYSDEC Site No. C224258
Avant Gardner Site
140 Stewart Avenue & 111 Gardner Avenue
Brooklyn, Kings County, New York 11237
PSG Project Number 21405366

Dear Mr. Lent:

The New York State Department of Environmental Conservation (DEC) has reviewed the analytical data submitted with your email dated July 17, 2024, requesting a "contained-in" determination soils to be generated from AOC 7 and AOC 10 that was conducted at the Avant Gardner Brownfield Cleanup Program (BCP) Site C224258. (See Figure 4).

Evaluation

AOC 10

Concentrations (Lab Sample ID: L2126605-02, L2126605-03, L2126901-07, L2126901-08, L2126281-08, L2126281-11, L2126281-12, L2126281-05, L2125356-02, L2335541-45, L2335541-46, L2335541-47, L2335541-49, L2335541-50, L2335541-51, L2335541-52, L2335541-53, L2335541-54, L2335541-55, L2335541-56, L2335541-58, L2335541-59, L2335541-60, L2335541-61, L2335541-62) detected for individual VOCs, SVOCs, pesticides, PCBs and metals were all significantly less than their current "contained-in" soil action levels, "contained-in" soil action levels and Land Disposal Restriction concentrations. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations (Lab Sample ID: L2126605-02, L2126605-03, L2126901-07, L2126901-08, L2126281-08, L2126281-11, L2126281-12, L2126281-05, L2125356-02, L2335541-45, L2335541-46, L2335541-47, L2335541-49, L2335541-50, L2335541-51, L2335541-52, L2335541-53, L2335541-54, L2335541-55, L2335541-56, L2335541-58, L2335541-59, L2335541-60, L2335541-61, L2335541-62) for tetrachloroethene, trichloroethene, cis-1,2 dichloroethene and vinyl chloride were below the soil "contained-in" action level, "contained-in" groundwater action levels and the Land Disposal Restriction concentration. Therefore, soil excavated from AOC 10 does not have to be managed as hazardous waste and can be transported off-site to a permitted solid waste facility, for disposal as a solid waste. Please provide DEC the name and location of the facility.

AOC 7

All soils in AOC 7 except the soil within the area delineated to the west by boring 7-B2; to the south by boring 7-1S; to the north by 7-B1N; and to the east by 7-B1E is part of this contained-in approval. Samples at 7-B1W(1.5-2), 7-B1W(4.5-5) and 7-B1WW(1.5-2) showed concentrations of Tetrachloroethylene (PCE) above 60 mg/kg. Sample 7B1 (9-10) showed concentrations of Trichloroethylene (TCE) above 60 mg/kg. A contained-in request can be made for these soils when confirmatory samples are received.

Concentrations (Lab Sample ID: L2126605-07, L2126605-08, L2335541-26, L2335541-27, L2335541-28, L2335541-29, L2335541-30, L2335541-31, L2335541-32, L2335541-33, L2335541-34, L2335541-35, L2335541-36, L2335541-40, L2335541-41, L2335541-42, L2335541-44, L2126605-05, L2126605-06, L2126605-09, L2126281-07) detected for individual VOCs, SVOCs, pesticides, PCBs and metals were all significantly less than their current "contained-in" soil action levels, "contained-in" groundwater action levels and Land Disposal Restriction concentrations. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations (Lab Sample ID: L2126605-07, L2126605-08L2335541-28, L2335541-30, L2335541-31, L2335541-32,L2335541-33, L2335541-34, L2335541-35, L2335541-36, L2335541-40, L2335541-41, L2335541-42, L2335541-44, L2126605-05, L2126605-06, L2126605-09, L2126281-07) for tetrachloroethene, trichloroethene, cis-1,2 dichloroethene and vinyl chloride were below the soil "contained-in" action level, "contained-in" soil action levels and the Land Disposal Restriction concentration. Therefore, soil excavated from AOC 7 outside the delineated area does not have to be managed as hazardous waste and can be transported off-site to a permitted solid waste facility, for disposal as a solid waste. Please provide DEC the name and location of the facility.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9594 or email me at contained-inrequest@dec.ny.gov.

RE: "Contained-In" Determination Request
NYSDEC Site No. C224258
Avant Gardner Site
140 Stewart Avenue & 111 Gardner Avenue
Brooklyn, Kings County, New York 11237
PSG Project Number: ES22-387153

Dear Mr. Wilkie:

PSG Engineering and Geology, D.P.C. (PSG) submits this "Contained-In" Determination Request for the Avant Gardner Brownfield Cleanup Program (BCP) Site #C224258 (the "Site"). This letter seeks a determination regarding the management of chlorinated volatile organic compound (CVOC) contaminated soil and investigation-derived waste (IDW) that will be generated during the proposed remedial excavations and drilling/monitoring well installations at the Site.

The proposed remedy implementation for the Site will result in the generation of the following waste:

- Contaminated soil excavated from two Areas of Concern (AOC 7 and AOC 10);
- Drill spoils; and
- Monitoring well purge water.

Due to site logistics and ongoing business operations, it is essential to predetermine the waste classification prior to generation to facilitate timely waste removal during remedy implementation, minimizing the need to stage significant amounts of waste on-site.

Based on the information and data provided below from prior investigations, PSG request confirmation that these materials do not require management as hazardous waste.

Site Description:

The Site is located in the Williamsburg section of Brooklyn, New York and is identified as Block 2977 and Lots 1, 14, 15 and 16 on the New York City Tax Map. The Site is approximately 80,000-square feet and is bound by Meserole Street to the north, railroad tracks to the south, Gardner Avenue to the east, and Stewart Avenue to the west. A Site Boundary Map is attached as **Figure 1**. A United States Geological Survey (USGS) topographical quadrangle map (**Figure 2**) depicts the Site location.

The Site is currently an entertainment/music venue, but previously housed steel fabrication operations and a rubbish removal service. Onsite operations consist of an entertainment/music venue, office areas, full-service bars, temporary food stands and a ticket office. The Site is currently occupied by two (2) one-story buildings, one on the northeast corner (111 Gardner Avenue) and one on the southwest corner (140 Stewart Avenue), with asphalt paved areas throughout most of the remaining areas of the Site.

The "Brooklyn Mirage" is located in the courtyard between the two buildings. This area includes scaffolding consisting of a two-story catwalk and a four-story observation tower. This structure includes open bars, VIP seating areas, observation decks, and a stage. There are no enclosed areas intended for human occupation within the scaffolding structure.

Summary of Site Environmental Conditions:

Investigations conducted to date have identified CVOC soil impacts above New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives (UUSCOs) in the central and eastern portions of the Site, based on investigations conducted in 2016, 2017, 2020, and 2021. These impacts appear to be confined to AOC 7, between the 140 Stewart Avenue and 111 Gardner Avenue buildings, and AOC-10, immediately south of the 111 Gardner building, to depths of up to 14.5 feet below ground surface (bgs). No residual product or evidence of dense non-aqueous-phase liquid (DNAPL) was observed during the advancement of borings in prior investigations.

Additionally, sitewide historic urban fill-related impacts are present in shallow soils throughout the Site, with elevated concentrations of semi-volatile organic compounds (SVOCs), metals, pesticides, and polychlorinated biphenyls (PCBs) exceeding NYSDEC UUSCOs. Benzo(a)pyrene, benzo(b)fluoranthene, arsenic, copper, lead, and mercury were identified above NYSDEC Commercial Use Soil Cleanup Objectives (CUSCOs) and NYSDEC Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in multiple shallow soil samples within the historic urban fill layer during PSG's 2021 investigation.

Shallow CVOC groundwater impacts were also identified in the vicinity of the former liquid bleach manufacturing building (AOC-7) and at significantly lower concentrations across the remainder of the Site. During the 2021 remedial investigation conducted by PSG, CVOC concentrations were identified in the shallow groundwater zone in the vicinity of AOC-7 at concentrations up to 9,200 µg/L tetrachloroethene (PCE); 1,100 µg/L trichloroethene (TCE); 7,100 µg/L; cis-1,2 dichloroethene (c1,2-DCE); 1,700 µg/L vinyl chloride; 18 µg/L 1,1-dichloroethane (DCA); 1,1-DCE; and 25 µg/L trans 1,2-DCE.

Additionally, SVOCs, metals, dissolved metals, PCBs, perfluorooctanoic acid (PFOA), and perfluorooctanesulfonic acid (PFOS) were identified across the Site in shallow zone groundwater samples at relatively low concentrations, slightly above NYSDEC Ambient Water Quality Standards (AWQGs).

Pre-design Investigation (June 2023):

On June 20, 2023, Coastal Environmental Solutions, Inc. (Coastal), under the direction of PSG, advanced six borings near Remedial Investigation (RI) boring 7-B1 and six borings near RI boring 10-B6 using Geoprobe direct-push equipment. The borings were advanced to a depth of approximately 5 feet below the soil/groundwater interface, or to a maximum depth of 15 feet below ground surface (bgs). Continuous soil samples were collected from each boring at 5-foot intervals using a MacroCore sampler. Each soil sample was inspected for visual and olfactory evidence of contamination and field-screened for volatile organic

vapors using a photoionization detector (PID). Depending on soil recovery, up to three soil samples were collected from each boring: one near-surface soil sample from shallow soils (1-2 feet bgs), one sample from intermediate soils (4-6 feet bgs), and one sample from the 6-inch interval immediately above the soil/groundwater interface.

Soil samples collected were placed in a laboratory-supplied cooler on ice and delivered under proper chain of custody to an Environmental Laboratory Approval Program (ELAP)-certified laboratory for analysis for analysis of VOCs via EPA Method 8260.

The following VOCs were detected in soil samples above the regulatory criteria in AOC-7:

- PCE was identified in soil samples 7-B1W (4.5-5) and 7-B1WW (1-1.5) above the above the CUSCO. PCE was identified in soil samples 7-B1W (1.5-2), 7-B1WW (4-4.5), 7-B1E (4-4.5), 7-B1E (5.5-6), and 7-B1S (4-4.5) above the PGWSCO and UUSCO.
- TCE was identified in soil samples 7-B1W (4.5-5), 7-B1WW (1-1.5), 7-B1WW (4-4.5), 7-B1E (4-4.5), and 7-B1S (4-4.5) above the PGWSCO and UUSCO.
- Cis-1,2-dichloroethene was identified in soil samples 7-B1W (1.5-2), 7-B1W (4.5-5), 7-B1WW (1-1.5), 7-B1WW (4-4.5), 7-B1E (4-4.5), 7-B1E (5.5-6), 7-B1S (4-4.5), and 7-B1S (5.5-6) above the PGWSCO and UUSCO.
- Vinyl chloride was identified in soil samples 7-B1E (4-4.5), 7-B1E (5.5-6), and 7-B1S (5.5-6) above the PGWSCO and UUSCO.
- Trans-1,2-dichloroethene was identified in soil samples 7-B1W (1.5-2) and 7-B1WW (1-1.5) above the PGWSCO and UUSCO.
- 1,1,1-Trichloroethane (1,1,1-TCA) was identified in soil samples 7-B1W (4.5-5) and 7-B1WW (1-1.5) above the PGWSCO and UUSCO.
- 1,2-Dichlorobenzene was identified in soil sample 7-B1WW (4-4.5) above the PGWSCO and UUSCO.
- Benzene was identified in soil sample 7-B1E (5.5-6) above the PGWSCO and UUSCO.
- Acetone was identified in soil samples 7-B1W (6.5-7), 7-B1E (1.5-2), and 7-B1S (1.5-2) above the PGWSCO and UUSCO.
- Chloroform was identified in soil samples 7-B1W (4.5-5), 7-B1WW (1-1.5), and 7-B1E (4-4.5) above the PGWSCO and UUSCO.

The following VOCs were detected in soil samples above the regulatory criteria in AOC-10:

- PCE was identified in soil samples 10-B6W (4.5-5), 10-B6N (4.5-5), and 10-B6E (4.5-5) above the PGWSCO and UUSCO.
- TCE was identified in soil samples 10-B6W (4.5-5) and 10-B6N (4.5-5) above the PGWSCO and UUSCO.
- Cis-1,2-dichloroethene was identified in soil sample 10-B6W (4.5-5) above the PGWSCO and UUSCO.

- Vinyl chloride was identified in soil sample 10-B6W (7.5-8) above the PGWSCO and UUSCO.
- Acetone was identified in soil samples 10-B6W (1.5-2), 10-B6N (9.5-10), 10-B6E (9.5-10), and 10-B6S (9.5-10) above the PGWSCO and UUSCO.

Based on the soil analytical results for AOC-7 and AOC-10, the area of soil containing CVOCs above the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) is delineated to approximately 550 square feet (sf) around RI boring 7-B1 and 330 sf around boring 10-B6, extending to the north, south, and west. PSG has prepared a Remedial Action Work Plan (RAWP), which is currently under review by the NYSDEC. The proposed remedy for CVOC-impacted soil at AOCs 7 and 10 involves excavation and disposal at an appropriate permitted facility. Monitoring wells will be installed at AOC 7 to monitoring the effectiveness of the remedy.

In addition to the soil sampling described above, PSG collected a waste characterization soil sample, designated as WC-7/10, from AOCs 7 and 10 on July 3, 2023. This sample included one discrete soil sample for VOC analysis and one composite soil sample for the analysis of polycyclic aromatic hydrocarbons (PAH), Total RCRA metals, TCLP RCRA metals, PCBs, paint filter, and hazardous waste characteristics, including reactivity, corrosivity, and ignitability. The composite samples were created from representative soil borings advanced during the pre-design investigation.

A Sitewide Sample Location Map is provided as **Figure 3**. Boring locations and proposed excavation areas specific to AOCs 7 and 10 are depicted on **Figure 4**. Historical soil analytical data for AOCs 7 and 10 are provided in **Tables 1.** Historical groundwater analytical data are provided in **Tables 2 and 3**.

Please note that while additional sitewide analytical results are included in the full laboratory reports, this "Contained-In" Determination Request is limited to samples collected from AOC-7 and AOC-10.

Closing:

Based on the characterization results of the CVOC hotspots at AOC-7 and AOC-10, PSG requests approval to dispose of the CVOC-contaminated soil, drill spoils, and monitoring well purge water generated during the implementation of the proposed remedy as non-hazardous waste.

If you should have any questions regarding the information presented in this request, please feel free to contact me at (914) 222-8011, or via email at dlent@partneresi.com at your convenience.

Sincerely,

PSG Engineering and Geology, D.P.C.

Legend:

mg/kg: milligrams per kilogram, ppm
NY-UNRES: New York Unrestricted Use Criteria
NY-COM: New York Commercial Criteria
NY-Protection of GW: New York Protection of Groundwater Criteria
J: Estimated Concentration
ND: Not Detected; but the laboratory MDL is above the standard
ND: Not Detected
NS: Not sampled
560 Concentration in excess of NY-UNRES
560 Concentration in excess of NY-COM
560 Concentration in excess of NY-Protection of GW
PCE: Tetrachloroethene
TCE: Trichloroethene

Table 1
Soil Analytical Results

Legend:

ug/kg: micrograms per kilogram, ppb
NY-UNRES: New York Unrestricted Use Criteria
NY-COM: New York Commercial Criteria
NY-Protection of GW: New York Protection of Groundwater Criteria
J: Estimated Concentration
F: The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
NS: Not sampled
ND: Not Detected
560 Concentration in excess of NY-UNRES
560 Concentration in excess of NY-COM
560 Concentration in excess of NY-Protection of GW

8:2FTS: 1H,1H,2H,2H-Perfluorodecanesulfonic Acid
6:2FTS: 1H,1H,2H,2H-Perfluorooctanesulfonic Acid
NEtFOSAA: N-Ethyl Perfluorooctanesulfonamidoacetic Acid
NMeFOSAA: N-Methyl Perfluorooctanesulfonamidoacetic Acid
PFBS: Perfluorobutanesulfonic Acid
PFBA: Perfluorobutanoic Acid
PFDS: Perfluorodecanesulfonic Acid
PFDA: Perfluorodecanoic Acid
PFDoA: Perfluorododecanoic Acid
PFHpS: Perfluoroheptanesulfonic Acid
PFHpA: Perfluoroheptanoic Acid
PFHxS: Perfluorohexanesulfonic Acid
PFHxA: Perfluorohexanoic Acid
PFNA: Perfluorononanoic Acid
FOSA: Perfluorooctanesulfonamide
PFOS: Perfluorooctanesulfonic Acid
PFOA: Perfluorooctanoic Acid
PFPeA: Perfluoropentanoic Acid
PFTA: Perfluorotetradecanoic Acid
PFTrDA: Perfluorotridecanoic Acid
PFUnA: Perfluoroundecanoic Acid

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

June 11, 2021: The project number has been amended.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

The WG1501333-5 Method Blank, associated with L2125356-02D and -03, has a concentration above the reporting limit for bromomethane. Since the samples were non-detect to the RL for this target analyte, no further actions were taken. The results of the original analysis are reported.

Semivolatile Organics

L2125356-01: The surrogate recoveries were outside the acceptance criteria for 2-fluorophenol (21%) and 2,4,6-tribromophenol (9%) ; however, the recoveries were confirmed by the QC performed on this sample; therefore, re-extraction was not required.

The WG1503677-4 MS recoveries, performed on L2125356-01, are below the acceptance criteria for hexachlorocyclopentadiene (0%), 2,4,6-trichlorophenol (7%), 2-nitrophenol (9%), 4-nitrophenol (0%), 2,4-dinitrophenol (0%), 4,6-dinitro-o-cresol (0%), pentachlorophenol (7%), 2,4,5-trichlorophenol (18%) and benzoic acid (0%) due to the concentrations of these compounds in the MS/MSD falling below the reported detection limit.

The WG1503677-5 MSD recoveries, performed on L2125356-01, are below the acceptance criteria for fluoranthene (6%), hexachlorocyclopentadiene (0%), 2,4,6-trichlorophenol (5%), 2-nitrophenol (6%), 4-nitrophenol (0%), 2,4-dinitrophenol (0%), 4,6-dinitro-o-cresol (0%), pentachlorophenol (6%) and benzoic acid (0%) due to the concentrations of these compounds in the MS/MSD falling below the reported detection limit.

Perfluorinated Alkyl Acids by Isotope Dilution

Project Name: AVANT GARDNER
Project Number: 17244793
Lab Number: L2125356
Report Date: 06/11/21

Case Narrative (continued)

L2125356-01, -03 and WG1499476-4: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Pesticides

L2125356-01D and -03D: The sample has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L2125356-01 and -03: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1501425-3 MS recoveries for aluminum (342%), calcium (456%), iron (0%), lead (49%) and manganese (0%), performed on L2125356-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1501425-3 MS recovery, performed on L2125356-01, is outside the acceptance criteria for magnesium (159%). A post digestion spike was performed and was within acceptance criteria.

The WG1501425-4 MSD recoveries for aluminum (576%), calcium (1120%), iron (0%), lead (24%), manganese (0%) and zinc (8%), performed on L2125356-01, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1501425-4 MSD recovery, performed on L2125356-01, is outside the acceptance criteria for magnesium (146%) and sodium (126%). A post digestion spike was performed and was within acceptance criteria.

The WG1501425-3/-4 MS/MSD RPDs for calcium (26%) and vanadium (22%), performed on L2125356-01, are above the acceptance criteria.

Total Mercury

The WG1501428-3/-4 MS/MSD recoveries for mercury (0%/418%), performed on L2125356-01, do not apply because the sample concentration is greater than four times the spike amount added.

Project Name: AVANT GARDNER
Project Number: 17244793
Lab Number: L2125356
Report Date: 06/11/21

Case Narrative (continued)

The WG1501428-3/-4 MS/MSD RPD for mercury (44%), performed on L2125356-01, is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

SAMPLE RESULTS

Lab ID: L2125356-03 Date Collected: 05/13/21 08:30

Client ID: DUP Date Received: 05/14/21

Sample Location: 140 STEWART AVE., BROOKLYN, NY Field Prep: Not Specified

Sample Depth:

Parameter	Result	Qualifier	Units	RL	MDL	Dilution Factor

Perfluorinated Alkyl Acids by Isotope Dilution - Mansfield Lab

Surrogate (Extracted Internal Standard)	% Recovery	Qualifier	Acceptance Criteria
Perfluoro[13C4]Butanoic Acid (MPFBA)	**51**	Q	61-135
Perfluoro[13C5]Pentanoic Acid (M5PFPEA)	**55**	Q	58-150
Perfluoro[2,3,4-13C3]Butanesulfonic Acid (M3PFBS)	**70**	Q	74-139
Perfluoro[1,2,3,4,6-13C5]Hexanoic Acid (M5PFHxA)	**54**	Q	66-128
Perfluoro[1,2,3,4-13C4]Heptanoic Acid (M4PFHpA)	**54**	Q	71-129
Perfluoro[1,2,3-13C3]Hexanesulfonic Acid (M3PFHxS)	**65**	Q	78-139
Perfluoro[13C8]Octanoic Acid (M8PFOA)	**55**	Q	75-130
1H,1H,2H,2H-Perfluoro[1,2-13C2]Octanesulfonic Acid (M2-6:2FTS)	50		20-154
Perfluoro[13C9]Nonanoic Acid (M9PFNA)	**54**	Q	72-140
Perfluoro[13C8]Octanesulfonic Acid (M8PFOS)	**71**	Q	79-136
Perfluoro[1,2,3,4,5,6-13C6]Decanoic Acid (M6PFDA)	**52**	Q	75-130
1H,1H,2H,2H-Perfluoro[1,2-13C2]Decanesulfonic Acid (M2-8:2FTS)	51		19-175
N-Deuteriomethylperfluoro-1-octanesulfonamidoacetic Acid (d3-NMeFOSAA)	**16**	Q	31-134
Perfluoro[1,2,3,4,5,6,7-13C7]Undecanoic Acid (M7-PFUDA)	**57**	Q	61-155
Perfluoro[13C8]Octanesulfonamide (M8FOSA)	52		10-117
N-Deuterioethylperfluoro-1-octanesulfonamidoacetic Acid (d5-NEtFOSAA)	**21**	Q	34-137
Perfluoro[1,2-13C2]Dodecanoic Acid (MPFDOA)	54		54-150
Perfluoro[1,2-13C2]Tetradecanoic Acid (M2PFTEDA)	47		24-159

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Number:	17244793	**Report Date:**	06/11/21

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2125356
Project Number:	17244793	**Report Date:**	06/11/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. (Note: 'PFAS, Total (6)' is applicable to MassDEP DW compliance analysis only.). If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2125356
Project Number:	17244793	**Report Date:**	06/11/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Lab Number: L2126281
Report Date: 06/11/21

Case Narrative (continued)

Report Revision

June 11, 2021: The project number has been amended.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2126281-05: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported. Differences were noted between the results of the Volatile Organics by EPA Method 5035/8260 High and Low Level analyses which have been attributed to sample non-homogeneity.

L2126281-07: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

L2126281-07: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (135%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Semivolatile Organics

L2126281-10D: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix, and due to the analytical dilution required by the sample matrix.

L2126281 -11: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix.

Total Metals

The WG1504136-3 MS recoveries, performed on L2126281-10, are outside the acceptance criteria for barium

Project Name: AVANT GARDNER **Lab Number:** L2126281
Project Number: 17244793 **Report Date:** 06/11/21

Case Narrative (continued)

(47%) and thallium (42%). A post digestion spike was performed and was within acceptance criteria.
The WG1504136-3 MS recoveries for aluminum (69%), arsenic (0%), calcium (0%),copper (0%), iron (1380%), lead (0%), manganese (177%) and zinc (0%), performed on L2126281-10, do not apply because the sample concentrations are greater than four times the spike amounts added.
The WG1504136-3 MS recoveries, performed on L2126281-10, are outside the acceptance criteria for chromium (8%) and magnesium (42%). A post digestion spike was performed and yielded unacceptable recoveries for chromium (70%) and magnesium (69%). The serial dilution recovery was not applicable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.
The WG1504138-3 MS recovery for mercury (316%), performed on L2126281-10, does not apply because the sample concentration is greater than four times the spike amount added.
The WG1504136-4 Laboratory Duplicate RPDs for aluminum (28%), arsenic (60%), barium (44%), cadmium (38%), calcium (59%), chromium (79%), cobalt (47%), iron (28%), lead (28%), magnesium (49%), manganese (58%), nickel (75%), vanadium (54%) and zinc (42%), performed on L2126281-10, are outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.
The WG1504138-4 Laboratory Duplicate RPD for mercury (32%), performed on L2126281-10, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2126281
Project Number:	17244793	**Report Date:**	06/11/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. (Note: 'PFAS, Total (6)' is applicable to MassDEP DW compliance analysis only.). If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2126281
Project Number:	17244793	**Report Date:**	06/11/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**
EPA 624.1: Volatile Halocarbons & Aromatics,
EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603, SM9222D.**

Project Number:	17244793	**Report Date:**	06/11/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: AVANT GARDNER
Project Number: 17244793
Lab Number: L2126605
Report Date: 06/11/21

Case Narrative (continued)

Report Revision

June 11, 2021: The project number has been amended.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2126605-09: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to sample non-homogeneity.

Semivolatile Organics

The WG1505612-6/-7 MS/MSD recoveries, performed on L2126605-02, are below the acceptance criteria for hexachlorocyclopentadiene (MS 0%), 2,4-dinitrophenol (0%/0%), 4,6-dinitro-o-cresol (0%/0%), and benzoic acid (0%/0%) due to the concentrations of these compounds in the MS/MSD falling below the reported detection limits.

Perfluorinated Alkyl Acids by Isotope Dilution

L2126605-01: The analysis could not be performed due to laboratory error (the sample was not spiked with Extracted Internal Standards) and no sample remains for re-extraction.
L2126605-05 and -07: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

Pesticides

Project Name: AVANT GARDNER
Project Number: 17244793
Lab Number: L2126605
Report Date: 06/11/21

Case Narrative (continued)

L2126605-05: The internal standard (IS) response for 1-bromo-2-nitrobenzene (8277%) was above the acceptance criteria on column A/B; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (20%) and decachlorobiphenyl (0%) due to interference with the Internal Standard.
L2126605-07: The internal standard (IS) response for 1-bromo-2-nitrobenzene (2142%) was above the acceptance criteria on column A; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (13%) and decachlorobiphenyl (1%) due to interference with the Internal Standard.

Total Metals
L2126605-05, -07, and -10: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Cristin Walker

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Number:	17244793	**Report Date:**	06/11/21

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2126605
Project Number:	17244793	**Report Date:**	06/11/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. (Note: 'PFAS, Total (6)' is applicable to MassDEP DW compliance analysis only.). If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	AVANT GARDNER	**Lab Number:**	L2126605
Project Number:	17244793	**Report Date:**	06/11/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Project Name:	AVANT GARDNER	**Lab Number:**	L2126901
Project Number:	17244793	**Report Date:**	06/28/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

June 28, 2021: All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

June 07, 2021: The project number has been amended.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2126901-07: The sample identified as "10-B2" on the chain of custody was identified as "10-B2 (8.5-9)" on the container label. At the client's request, the sample is reported as "10-B2 (8.5-9)".

Volatile Organics

L2126901-04: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (35%) and the surrogate recovery for 4-bromofluorobenzene (132%) were outside the acceptance criteria; however, re-analysis achieved a similar result: 1,4-dichlorobenzene-d4 (42%). The results of both analyses are reported.

L2126901-06: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (29%) and the surrogate recovery for 4-bromofluorobenzene (132%) were outside the acceptance criteria; however, re-analysis achieved similar results: 1,4-dichlorobenzene-d4 (26%) and 4-bromofluorobenzene (139%). The results of both analyses are reported.

Perfluorinated Alkyl Acids by Isotope Dilution

L2126901-05 and WG1502698-2: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

L2126901-05: The MeOH fraction of the extraction is reported for Perfluorooctanesulfonamide (FOSA) due to better extraction efficiency of the M8FOSA Surrogate (Extracted Internal Standard).

Project Name: AVANT GARDNER
Project Number: 17244793
Lab Number: L2126901
Report Date: 06/28/21

Case Narrative (continued)

Total Metals

L2126901-03, -05, -07, and -09: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1504105-1 Method Blank, associated with L2126901-03, -05, -07, and -09, has concentrations above the reporting limits for calcium and iron. Since the associated sample concentrations are greater than 10x the blank concentrations for these analytes, no corrective action is required.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris
