RE: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
ROCKET FACTORY LOFTS
100 SOUTH 4TH STREET
BROOKLYN, NEW YORK 11249
NOVA PROJECT NO. JL18-0497

In accordance with our agreement, Nova Consulting Group, Inc. (Nova) has performed a Phase I Environmental Site Assessment (ESA) of the above referenced property in accordance with ASTM E 1527-2013 and Heitman Capital Management, LLC ESA scope of work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess the Property, as described herein. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR, Part 312.

Respectfully submitted,

NOVA CONSULTING GROUP, INC.

EXECUTIVE SUMMARY

Nova was authorized by Heitman Capital Management, LLC to conduct a Phase I Environmental Site Assessment (ESA) of Rocket Factory Lofts located at 100 South 4th Street, Brooklyn, New York ("the Property"). Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2013, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM E 1527-2013 standard practice and authorized Scope of Services, unless otherwise stated herein.

The Property consists of a rectangular-shaped parcel approximately 0.48 acres in size. The Property was originally designed for commercial and manufacturing purposes, but is now utilized for commercial and multi-family residential purposes. Currently, the Property is developed with three (3) structures that were constructed in 1910 (100 South 4th Street), the late 1940s (98 South 4th Street), and between 1924 and 1935 (104 South 4th Street). The structures at the Property are one (98 and 104 South 4th Street) and seven-stories in height (100 South 4th Street) and house a total of seventy-three (73) apartments and four (4) commercial spaces. The building footprints occupy almost the entire lot, with a narrow courtyard that is accessible by first floor apartment spaces located behind (south of) 100 South 4th Street. Access to the buildings is gained from along South 4th Street to the north. No other structures or significant surface features were noted on the Property at the time of the reconnaissance.

The Property is listed as a Voluntary Cleanup Site (El Puente at 98-116 South 4th Street) under Site ID V00094. Twenty-four (24) separate correspondence / letters were provided to Nova by Meadow Partners related to the VCP dated April of 1997 through December of 2003. The most-recent document, dated December 8, 2003 indicates that the NYSDEC terminated Voluntary Cleanup Agreement W2-0840-99-011 with El Puente de Williamsburg as El Puente de Williamsburg was not successful in acquiring title to the Property. The conditions of the agreement and implementation of an approved Work Plan were contingent upon, and would only commence once the Property was acquired by El Puente de Williamsburg. Based on the levels of contamination identified during the investigatory work completed as part of the VCP, this listing is considered a REC in connection with the Property. Additional information related to the VCP listing is provided in Section 3.3.3.

The Property (Block 2443, Lot 13) is also listed as an E-Designation Site with the New York City Office of Environmental Remediation (NYCOER) under E-138 / CEQR Number 04DCP003K that was promulgated on May 11, 2005 for possible Hazardous Materials Impacts. The listing of the Property as an E-Designation Site represents a REC, with any planned redevelopment of the Property requiring possible on-site investigatory and/or remedial actions and eventual sign-off by the NYCOER. This regulatory oversight has led to the issuance of a Notice of No Objection by the New York City Department of Environmental Protection (NYCDEP; former lead agency for E-Designation Sites in New York City) on November 29, 2006 for the seven-story residential building at 100 South 4th Street, as well as a Notice of No Objection by the NYCOER on June 26, 2013 for the one-story building at 104 South 4th Street. However, there does not appear to be any such decision on record for redevelopment of the multi-tenant commercial building at 98 South 4th Street. Additional

information related to the E-Designation and on-site environmental investigations is provided in Section 3.3.3.

The Property is situated within an urban area of the Williamsburg section of the borough of Brooklyn, New York. The buildings are bound to the north by South 4th Street and apartments (99-121 South 4th Street); to the east by mixed use buildings that include vacant commercial spaces and a stationary store on the first floor (118-120 South 4th Street / 364 Bedford Avenue, and 370 Bedford Avenue), followed by Bedford Avenue; to the south by a commercial / office building and building that is presently under construction (105 and 109 South 5th Street), followed by South 5th Street; and to the west by a parking lot (96 South 4th Street), followed by an apartment building (94 South 4th Street). Based upon topographic map interpretation and Property observations, groundwater flow beneath the Property is inferred to be in a westerly direction toward the East River.

CONCLUSIONS

Nova has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of 100 South 4th Street, Brooklyn, New York. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions (REC), Controlled Recognized Environmental Conditions (CREC) in connection with the Property, except for the following:

- The historical use of the Property for manufacturing purposes and a cleaner / dyer, with subsurface data confirming release impacts which have not been remediated, and its E-Designation listing.

Additionally, while not considered to be REC, CREC, or HREC by ASTM definition, the following environmental issues were noted and warrant mention:

- Non-friable suspect asbestos containing sheetrock and roofing materials were identified at the Property. The materials were observed to be in good condition.
- Due to the dates of construction, lead-based paint may be present. In general, the painted surfaces appeared in good condition, and based on the recent redevelopment of the Property, any possible remaining lead-based paint would likely have been covered up by additional layers of paint or other finishes.

RECOMMENDATIONS

Based on the findings of this ESA, Nova recommends the following:

- Suspect asbestos-containing materials should be managed in-place in good condition under an Asbestos Operations & Maintenance Program.
- Suspect lead-based paint should be managed in-place in good condition under a Lead-Based Paint Operations & Maintenance Program.

- A sub-slab depressurization system should be installed beneath the commercial building at 98 South 4th Street in accordance with State-issued guidance and generally accepted industry standards, which would include confirmation sampling after installation to assess the efficacy of the system. Furthermore, if documentation is not provided (specifically the Don Carlo Indoor Air Sampling Report dated November 2006) related to the residential building at 100 South 4th Street, Nova would recommend a similar engineering control at this location as well. In addition, any further redevelopment of the Property may require further investigatory and/or remedial activities as required by the NYCOER given that the E-Designation listing remains at the Property.

The following table summarizes the findings of the significant elements of this assessment.

ASSESSMENT COMPONENT	Acceptable	Routine Solution	Further Assessment	Estimated Cost	Reference Section
Historical Review			X		3.3
On-Property Operations	X				2.4
Hazardous Materials	X				4.2.1
Waste Generation	X				4.2.1

1.0 INTRODUCTION

Nova was authorized by Heitman Capital Management, LLC to conduct a Phase I Environmental Site Assessment (ESA) of Rocket Factory Lofts located at 100 South 4th Street, Brooklyn, New York ("the Property"). Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2013, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM E 1527-2013 standard practice and the authorized Scope of Services, unless otherwise stated herein.

On February 6, 2018, Michael Fiscina, representing Nova, conducted a Property reconnaissance to assess the possible presence of recognized environmental conditions (REC) and non-ASTM environmental issues, as prescribed by the scope of work, at the Property. Nova's assessment included review of ASTM-defined sources of historical information, reconnaissance of adjoining properties, background research, and review of available local, state, and federal regulatory records.

Nova contracted Environmental Risk Information Services (ERIS) to perform a computer database search for local, state, and federal regulatory records pertaining to environmental concerns for the Property and properties in the vicinity of the Property (see Section 3.0).

1.1 Purpose

The purpose of this Phase I ESA was to identify existing or potential recognized environmental conditions (as defined by ASTM Standard E-1527-13) in connection with the Property. Nova understands that the findings of this study will be used by Heitman Capital Management, LLC to assist in evaluating RECs in connection with the Property.

1.2 Scope of Services

Nova's Scope of Services for this Phase I ESA conforms with the American Society for Testing and Materials (ASTM) due diligence standards detailed in the ASTM document "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM designation E1527-2013) and Heitman Capital Management, LLC. Services provided for this project included:

- A review of readily available topographic, geologic, and hydrogeologic information pertaining to the Property and surrounding area;
- A review of readily available information regarding historical land use activities at the Property, and interviews with people that have knowledge regarding the past or present uses of the Property, and with present and past owners, operators, and occupants of the Property, where feasible;
- A reconnaissance of the Property to visually and physically observe the Property for evidence of potential recognized environmental conditions;

- A limited review of federal, state, and local regulatory information records for reported potential environmental hazards on or in the vicinity of the Property;
- Review of previous environmental reports, if available.

The potential for a vapor migration condition to exist in the subsurface at the Property was included in the Scope of this ESA. No sampling or analytical testing was conducted as part of this Phase I ESA.

This Phase I ESA does not constitute a regulatory compliance audit of the Property. Copies of resumes of Nova staff involved in the preparation of this report are included as Appendix G.

1.3 Assumptions

There is a possibility that even with the proper application of these methodologies there may exist on the Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Nova believes that the information obtained from the record review and the interviews concerning the Property is reliable. However, Nova cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete.

1.4 Limitations and Exceptions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM 1527-13. Specific limitations and exceptions to this ESA are more specifically set forth below:

- Nova was not able to document the historical use of the Property prior to 1887, since Sanborn Maps were not available prior to that date and other historical sources were not available for that time period. This data failure is not critical and does not alter the conclusions or recommendations of this assessment.
- Nova submitted a Tank Search Request to the NYCFD and Freedom of Information Letters (FOILs) to the NYC Department of Health, NYSDEC, NYCOER, and NYCDEP requesting information pertaining to the Property; however, as of the date of this report, responses have not yet been received. In addition, the completed Environmental Questionnaire has not been provided by the owner as of the date of this report.
- Nova was not provided access to any basement area that may exist / remain at 98 South 4th Street. According to Mr. Gregory Blake of Meadow Partners, “there has never been a basement during our ownership”. Nova was also not provided access to the Session Gym space at 98 South 4th Street.
- A 50-year chain of title report was requested by the client as part of this assessment, and as of the issuance of this report the chain of title is pending.

1.5 Special Terms and Conditions

Authorization to perform this work was given by a directive from Heitman Capital Management, LLC.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical analyses have been performed during the course of this ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

The content and conclusions provided by Nova in this report are based solely on the information collected during our investigation and activities at the Property, our present understanding of the Property conditions, and our professional judgment in light of such information at the time this report was prepared. Part of the findings in this investigation is based on data provided by others. This report presents Nova's professional opinion, and no warranty, expressed or implied, is made.

1.6 User Reliance

Heitman CREDIT Acquisition VII, LLC, its successors and assigns, and its affiliates (collectively, "Client") may use and rely upon this Report in connection with a planned financial transaction involving the Site. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of Nova. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Nova granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Nova, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with Nova's Proposal and General Conditions executed by Heitman Capital Management, LLC on January 30, 2018.

2.0 PROPERTY DESCRIPTION

2.1 User Provided Information

Pursuant to ASTM E 1527-13, Nova requested the following Property information from Heitman Capital Management, LLC (*User* of this report) and from the Property contact.

ITEM	Provided By User	Not Provided By User	Discussed Below	Does Not Apply/User not Aware of Item
2.1.1 Environmental Pre-survey Questionnaire		X		
2.1.2 Title Records			X	
2.1.3 Environmental Liens or Activity and Use Limitation				X
2.1.4 Specialized Knowledge	X			
2.1.5 Valuation Reduction for Environmental Issues		X		
2.1.6 Identification of Key Property Manager	X			
2.1.7 Reason for Performing Phase I ESA	X			
2.1.8 Prior Environmental Reports	X			
2.1.9 Other				X

Prior environmental reports provided by Meadow Partners are discussed in Section 3.3.3 of this report.

2.2 Location and Legal Description

The Property is located at 100 South 4th Street, Brooklyn, New York. The Property is located in an urban area of the Williamsburg section of the borough of Brooklyn. According to the city of New York, the assessor's parcel number of the Property is Block 2443, Lot 13. The legal description is provided as an appendix to this report.

According to the city of New York, the Property is currently owned by RLBK Property LLC, which has owned the Property since 2014.

2.3 Property and Vicinity General Characteristics

The Property is comprised of one rectangular-shaped parcel that is located in a densely-developed commercial and residential area that is characterized by in-line multi-family apartments and mixed-use buildings (some of which have been converted from former industrial / manufacturing buildings). The Property is zoned M1-2/R6 (industrial and residential) by the City of New York. The Property is developed with three structures that were constructed in 1910 (100 South 4th Street), the late 1940s (98 South 4th Street), and between 1924 and 1935 (104 South 4th Street).

The building footprints occupy almost the entire lot, with a narrow courtyard located behind (south of) 100 South 4th Street accessible by first floor apartment units.

2.4 Current Use of the Property

Based on the information reviewed during the preparation of this ESA, including the observations made during the reconnaissance of the Property, the tenant spaces are currently occupied by the tenants and activities identified in the table below:

Unit / Address	Tenant Name	Operations
98 South 4 th Street.	MIUSA Wine Bar Session Swords Smith	The MIUSA Wine Bar is presently vacant, with the Session space (a gym) in the process of being built-out. Swords Smith is a clothing store.
100 South 4 th Street	Rocket Factory Lofts	This building contains seventy-three (73) apartment units, with the eastern-most portion of the building planned to be converted into restaurant space.
104 South 4 th Street	Randolph Beer	Randolph Beer is a bar / restaurant that plans to expand into the eastern portion of 100 South 4 th Street.

2.5 Description of Property Improvements

98 South 4th Street is a one-story commercial building that apparently includes a partial basement beneath the eastern portion of the structure. At the time of Nova's reconnaissance, the basement was not observed and Property personnel stated that there was no basement. This concrete block and brick building has a flat roof. Interior finishes include concrete, wood, and ceramic tile flooring, with tile, sheetrock, and exposed brick walls. Natural-gas fired forced air systems heat and cool each of the three (3) commercial spaces at this building, with individual hot water heaters providing hot water to the tenant spaces.

100 South 4th Street is a seven-story converted multi-family loft building that includes a partially-below grade lower level / basement area in the eastern portion of the building. This concrete block and brick building also has a flat roof and is serviced by one cable-drawn elevator. Interior finishes include concrete, wood, and ceramic tile floors, with sheetrock and exposed concrete and brick walls and ceilings. This building is heated through the use of individual PTAC units located in each apartment space, with window AC units (if present) cooling the apartments. Hot water is provided to the apartments by individual electric hot water heaters that are also located in each apartment space. A narrow courtyard that is accessible from first floor apartments is located behind (south of) this structure.

104 South 4th Street is a one-story commercial building with no basement or sub-grade areas. This concrete block and brick building has a flat roof. Interior finishes include wood, concrete, and ceramic tile flooring, with sheetrock and exposed walls and ceilings. This building is heated and cooled by a natural-gas fired forced air system and has its own individual natural gas-fired hot water heater.

Significant renovations were reportedly completed in 2006 and 2016 at the buildings, with interior renovation work on-going at 98 South 4th Street.

The city of New York supplies drinking water to the Site from the municipal distribution system. Sanitary discharges on the Site are discharged into the municipal sanitary sewer system beneath Prince Street.

Electricity and natural gas are provided to the site by Con Edison and National Grid, respectively.

2.6 Current Use of Adjoining Properties

During the vicinity reconnaissance, Nova observed the following land use on properties in the immediate vicinity of the Property.

North:	Areas immediately adjoining to the north of the Property include apartments across South 4 th Street (99-121 South 4 th Street).
South:	Areas immediately adjoining to the south of the Property include a building that is present under construction as well as a commercial / office building (105 and 109 South 5 th Street), followed by South 5 th Street.
East:	Areas immediately adjoining to the east of the Property include mixed use buildings that include vacant commercial spaces and a stationary store on the first floors (118-120 South 4 th Street / 354 Bedford Avenue and 370 Bedford Avenue), followed by Bedford Avenue.
West:	Areas immediately adjoining to the west of the Property include a parking lot (96 South 4 th Street), followed by apartments (94 South 4 th Street).

3.0 RECORDS REVIEW

3.1 Physical Setting Sources

3.1.1 Topography

The United States Geological Survey (USGS), Brooklyn, NY Quadrangle 7.5 minute series topographic map was reviewed for this ESA. This map was published by the USGS in 1995. According to the contour lines on the topographic map, the Property is located approximately 50 feet above mean sea level (MSL). The contour lines in the area of the Property indicate the area is sloping gently to the west. The Property is depicted as urban land, a configuration that matches the current configuration. No surface waters are depicted as present on or adjacent to the Property, nor are production wells or other significant surface features depicted on the USGS map.

3.1.2 Soils/Geology

Published geologic information indicates the following:

Topographic Property Elevation	50 feet above mean sea level
Surficial Materials	Urban land
First Bedrock Beneath the Property, Physiographic Province / Geologic Age	Precambrian Bedrock over 100 feet below ground surface
Estimated depth to Bedrock beneath Property	20+ feet below the ground surface

Based on the soil survey maps published by the USDA Soil Conservation Service, specific soil data is not available for the area of the Property as it is mapped as Urban Land. This soil type is characterized by high degrees of precipitation runoff, due to the presence of impermeable surfaces such as asphalt or concrete.

Brooklyn is located in the western portion of Long Island, New York. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock. The thickness of these deposits range from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain groundwater that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines.

The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability.

3.1.3 Hydrology

Published hydrologic / hydrogeological maps indicate the following:

Depth to groundwater beneath Property	20+ feet below the ground surface
Regional groundwater flow direction	West, towards the East River, which is three-tenths mile west of the Property
Sole source aquifer (if present)	The Property overlies a sole source aquifer that is not utilized as a drinking source.

(Groundwater flow direction is estimated based on a review of published maps. Property specific groundwater flow conditions may be impacted by a variety of factors including, but not limited to, local topography, geologic anomalies, utilities, nearby wells or sumps, and local drainage patterns. Property specific groundwater information would require a groundwater investigation, which is beyond the scope of this ESA.)

The Upper Glacial Aquifer is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine, and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer, the water quality has been degraded in many areas due to industrial activities.

The Magothy Formation directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from poor to moderate or highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply, however the city of New York utilizes upstate reservoirs for its supply of potable water. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer, although the aquifer is not utilized as a source of drinking water for Brooklyn or Queens.

The Raritan Formation is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (Lloyd Aquifer) and a clay member (Raritan Clay). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member increases to the southeast and ranges in depth from 200 to 800 feet below sea level (from northwest to southeast). The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

The EPA defines a sole or principal source aquifer as an aquifer that supplies at least 50 percent of the drinking water consumed in the area overlying the aquifer. These areas may have no alternative drinking water source(s) that could physically, legally and economically supply all those who depend on the aquifer for drinking water. For convenience, all designated sole or principal source aquifers are referred to as "sole source aquifers" (SSA). This designation was made under Section 1424(e) of the Safe Drinking Water Act.

The Property is situated above the SSA Magothy Aquifer.

3.1.4 Flood Zone Information

A review of the Flood Insurance Rate Maps, published by the Federal Emergency Management Agency, was performed. According to Panel Number 3604970204F, dated September 5, 2007, the Property is located in Flood Zone X. Flood Zone X regions consist of areas outside both the 100 and 500-Year Floodplains. The distance to the nearest 100-year flood plain is approximately three-tenths mile northwest of the Property.

3.1.5 Oil and Gas Exploration

The on-site reconnaissance addressed oil and gas exploration at the Property. According to the New York State Department of Environmental Conservation, no operating or abandoned oil or gas wells are located in the area of the Property.

3.1.6 Records of Water Wells

There are no potable water wells in place at the Property. Public water is supplied by the city of New York, with water supplied from upstate aquifers.

3.2 Standard Environmental Record Sources

3.2.1 State and Federal Regulatory Review

Information from standard federal and state environmental record sources was provided through Environmental Risk Information Services (ERIS). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables section within the database report.

A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Property, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Property from the listed facilities. Please refer to Appendix C-1 for a complete listing.

The Property was identified as an E-Designation, VCP, Spills, FINDS, MANIFEST, and RCRA Non-Generator Site.

Former Camin Industries / Camin Labs at (104-114 South 4th Street) is listed as a Federal RCRA Non-Generator, MANIFEST, and FINDS Site, with no active violations found. This former facility was identified as a RCRA Large Quantity Generator in 1992 and a Non-Generator in both 1999 and 2006. These specific listings are not considered RECs in connection with the Property.

Spill Number 8602718 was reported at the Property (Unk. Material Leak, Brooklyn at 104 South 4th Street) on July 25, 1986 and closed the same day. Regulatory database information indicates a caller reported the presence of hazardous drums at this location. The NYCDEP investigated the report and found no leaking drums at the property, and as such, the case was closed. Nova submitted a Freedom of Information Request to the NYSDEC for information related to the case on February 1, 2018 and was informed that any information would be

made available on or about March 2, 2018. Regardless, based on the nature of the incident and status of the case, it represents a Historical Recognized Environmental Condition in connection with the Property.

Spill Number 9611887 was reported at the Property (98 South 4th Street) on December 19, 1996 and closed on March 12, 2013. Nova submitted a Freedom of Information Request to the NYSDEC for information related to the case on February 13, 2018 and was informed that any information would be made available on or about March 15, 2018. Information related to this Spill incident was not included on the attached ERIS Database Report, and no additional information was provided on the NYSDEC's Spill Incident website. However, a Phase II Subsurface Investigation and Tank Closure Report was apparently submitted to the NYSDEC by Don Carlo Environmental in April of 2006. The Don Carlo report documented the removal of two (2) 275-gallon "aboveground USTs" and two (2) 10,000-gallon "aboveground USTs" from the western-most building. Elevated levels of SVOCs and heavy metals were also identified by Don Carlo in on-site soils (presumably in the vicinity of the former tanks), with elevated levels of chlorinated solvents also identified in on-site groundwater. The soil impacts were not attributed to the tanks or any associated spills, and as such, the case was apparently closed. Therefore, this incident represents a Historical Recognized Environmental Condition in connection with the Property.

The Property is also listed as a Voluntary Cleanup Site (El Puente at 98-116 South 4th Street). Twenty-four (24) separate correspondence / letters were provided to Nova by Meadow Partners related to the VCP dated April of 1997 through December of 2003. The most-recent document, dated December 8, 2003 indicates that the NYSDEC terminated Voluntary Cleanup Agreement W2-0840-99-011 with El Puente de Williamsburg as El Puente de Williamsburg was not successful in acquiring title to the Property. The conditions of the agreement and implementation of an approved Work Plan were contingent upon, and would only commence once the Property was acquired by El Puente de Williamsburg. Based on the levels of contamination identified during the investigatory work completed as part of the VCP, this listing is considered a REC in connection with the Property. Additional information related to the VCP listing is provided in Section 3.3.3.

The Property (Block 2443, Lot 13) is also listed as an E-Designation Site with the NYCOER under E-138 / CEQR Number 04DCP003K that was promulgated on May 11, 2005 for possible Hazardous Materials Impacts. The listing of the Property as an E-Designation Site represents a REC, with any planned redevelopment of the Property requiring possible on-site investigatory and/or remedial actions and eventual sign-off by the NYCOER. This regulatory oversight has led to the issuance of a Notice of No Objection by the NYCDEP (former lead agency for E-Designation Sites in New York City) on November 29, 2006 for the seven-story residential building at 100 South 4th Street, as well as a Notice of No Objection by the NYCOER on June 26, 2013 for the one-story building at 104 South 4th Street. Additional information related to the E-Designation and on-site environmental investigations is provided in Section 3.3.3.

One (1) SEMS facility was identified within a one-half mile radius of the Property. FYN Paint & Lacquer Co. at 230 Kent Avenue is over three-tenths mile north-northwest and downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Two (2) SEMS ARCHIVE facilities were identified within a one-half mile radius of the Property. Both are located over four-tenths mile downgradient of the Property, and based on distance and gradient considerations, these facilities are not expected to impact subsurface conditions at the Property.

Two (2) CERCLIS facilities were identified within a one-half mile radius of the Property. Both are located over three-tenths mile downgradient of the Property, and based on distance and gradient considerations, these facilities are not expected to impact subsurface conditions at the Property.

One (1) CERCLIS NFRAP facility was identified within a one-half mile radius of the Property. All Plating Corp. at 154 North 7th Street is almost one-half mile northeast and downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Four (4) RCRA CORRACTS facilities were identified within a one mile radius of the Property. Each is located at least one-quarter mile downgradient of the Property, and based on distance and gradient considerations, these facilities are not expected to impact subsurface conditions at the Property.

Three (3) RCRA TSD facilities were identified within a one-half mile radius of the Property. Each is associated with a facility (Radiac Research Corp.) at 33 South 1st Street, which is approximately one-quarter mile north-northwest and downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Fourteen (14) RCRA Large Quantity Generator sites were identified within a one-quarter mile radius of the Property. None are adjoining the Property, and as such, none are expected to impact subsurface conditions at the Property.

One (1) RCRA Small Quantity Generator site was identified within a one-quarter mile radius of the Property. NYCT – Broadway & South 6th Street is approximately 600 feet west-southwest and downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Four (4) RCRA Conditionally-Exempt Small Quantity Generator sites were identified within a one-quarter mile radius of the Property. None are adjoining the Property, and as such, none are expected to impact subsurface conditions at the Property.

Seventy-seven (77) other RCRA Non-Generator sites were identified within a one-quarter mile radius of the Property. Seventy-six (76) of these locations are not adjoining the Property, and as such, none are expected to impact subsurface conditions at the Property. The remaining “site” is a Con Edison Service Box in front of 107 South 5th Street to the south that is also listed as a MANIFEST and FINDS Site. Given a lack of any documented spills, releases, or violations at this location, this structure is not expected to impact subsurface conditions at the Property.

Fifteen (15) SHWS and twelve (12) HSWDS sites were identified within a one mile radius of the Property. Each are located at least three-tenths mile downgradient of the Property, and

based on distance and gradient considerations, none are expected to impact subsurface conditions at the Property.

Nine (9) SWF Sites were identified within a one-half mile radius of the Property. Eight (8) of the nine (9) facilities are each located 700 feet downgradient of the Property, and based on distance and gradient considerations, none are expected to impact subsurface conditions at the Property. The remaining site (Local Transfer Station at 353 Berry Street) is almost 300 feet south-southwest and downgradient of the Property. Based on distance and gradient considerations, along with the nature of the former operation, this former transfer station is not expected to impact subsurface conditions at the Property.

Forty (40) LTANK sites were identified within a one-half mile radius of the Property. None are adjoining the Property and all are listed as closed. Based on distance, gradient, and/or current case status, none are expected to impact subsurface conditions at the Property.

Twenty-five (25) UST, sixty-five (65) AST, two (2) DELISTED TANKS, four (4) TANKS, and three (3) MOSF sites are listed within a one-quarter to one-half mile radius of the Property. Other than as indicated below, none are identified on adjoining properties, and most are associated with heating oil tanks for heating purposes. As such, these facilities are not expected to impact subsurface conditions at the Property.

- 117 South 4th Street across South 4th Street to the north is listed as a Registered AST facility with the NYSDEC under PBS Number 2-455067 for a 2,500-gallon heating oil tank that was installed in 1979. Given a lack of any identified leaks or spills associated with the tank, its presence is not expected to impact subsurface conditions at the Property.
- 370 Bedford Avenue to the east is listed as a Registered AST facility with the NYSDEC under PBS Number 2-259926 for a 2,000-gallon heating oil tank that was installed in 1990. Given a lack of any identified leaks or spills associated with the tank, its presence is not expected to impact subsurface conditions at the Property.
- 109 South 5th Street to the south is listed as a Registered AST facility with the NYSDEC under PBS Number 2-608255 for a 4,000-gallon heating oil tank that was installed in 1984. Given a lack of any identified leaks or spills associated with the tank, its presence is not expected to impact subsurface conditions at the Property.
- 364-368 Bedford Avenue to the east is listed as a Registered UST facility with the NYSDEC under PBS Number 2-610127 for 550-gallon gasoline USTs that were removed from this location in 2006. Given a lack of any active leaks or spills associated with the tanks, their former presence is not expected to impact subsurface conditions at the Property.
- 105 South 5th Street to the south is listed as a Registered UST facility with the NYSDEC under PBS Number 2-612611 for gasoline and heating oil tanks that were removed from this location in 2016. Given a lack of any identified leaks or spills associated with the tanks, their former presence is not expected to impact subsurface conditions at the Property.

Two (2) NY ENG and three (3) NY INST sites were identified within a one-half mile radius of the Property. Each are located over three-tenths mile downgradient of the Property, and based on distance and gradient considerations, none are expected to impact subsurface conditions at the Property.

Two (2) other VCP sites were identified within a one-half mile radius of the Property. Both are located over three-tenths mile downgradient of the Property, and based on distance and gradient considerations, neither are expected to impact subsurface conditions at the Property.

One (1) ERP site was identified within a one-half mile radius of the Property. Radiac Research at 33 South 1st Street is approximately one-quarter mile north-northwest and downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Nine (9) Brownfield sites were identified within a one-half mile radius of the Property. Eight of these locations are at least one-quarter mile downgradient of the Property, and based on distance and gradient considerations, none are expected to impact subsurface conditions at the Property. The remaining site (Williamsburg Bridgeview Apartments at 105 South 5th Street), abuts the Property to the south. An NYSDEC Fact Sheet regarding this location that was published in September of 2016 indicates this location (which extended to Berry Street to the west) was formerly occupied by a salvage warehouse and auto body shop. Elevated chlorinated solvent concentrations have been identified in soil, groundwater, and soil vapors at this location, with groundwater determined to flow toward the west across the site (away from the Property). No off-site migration of groundwater or soil-vapor impacts are expected, with notes indicating that “groundwater contamination appears to be emanating from site No. V00094” (i.e. the Property). However, impacts related to this location are not expected to impact subsurface conditions at the Property. Additionally, Nova reviewed available documentation from the NYCOER, and available remedial work plans do not identify the Property as the suspected source of impacts at this facility. Additionally, a Volunteer Statement dated January 26, 2016 was present in online NYCOER files which indicates that the owner of the 105 South 5th Street / 337 Berry Street facility, LPC Development Group LLC agreed to install a vapor barrier, sub-slab depressurization system, and soil vapor extraction system as part of the redevelopment plan. Additionally, a Volunteer Statement dated January 26, 2016 was present in online NYCOER files which indicates that the owner of the 105 South 5th Street / 337 Berry Street facility, LPC Development Group LLC agreed to install a vapor barrier, sub-slab depressurization system, and soil vapor extraction system as part of the redevelopment plan.

Two (2) Federal Drycleaner Sites were identified within a one-quarter mile radius of the Property. Both are associated with the same location at 905 Driggs Avenue, that is approximately one-quarter mile south-southeast and downgradient of the Property. Based on distance and gradient considerations, these facilities are not expected to impact subsurface conditions at the Property.

One (1) PCB Notifier site was identified within a one-half mile radius of the Property. Radiac Research at 33 South 1st Street is approximately one-quarter mile north-northwest and

downgradient of the Property. Based on distance and gradient considerations, this facility is not expected to impact subsurface conditions at the Property.

Twenty (20) other SPILL sites were identified within a one-eighth mile radius of the Property, two (2) of which are adjoining the Property, and all of which are listed as closed. Additional information on the adjoining incidents follows:

- Spill Number 0512374 was reported on January 25, 2006 following the discovery of soil contamination during construction activities at the abutting property to the east at 364-368 Bedford Avenue. Eight (8) orphaned 550-gallon gasoline USTs were subsequently removed from this location along with approximately 100 tons of impacted soil, with confirmatory post-excavation sampling indicating no soil contamination existed above regulatory standards. Groundwater was not encountered during the removal activities and based on the results of the endpoint sampling the case was closed on March 6, 2006. Therefore, this incident is not expected to impact subsurface conditions at the Property.
- Spill Number 9501027 was reported on April 25, 1995 following a report of illegal dumping of oil and gasoline into fire drains at 105 South 5th Street to the south. The incident was investigated by the NYSDEC with the case subsequently closed the same day. Therefore, this incident is not expected to impact subsurface conditions at the Property.

Based on distance, gradient, and/or current case status, none of the remaining sites are expected to impact subsurface conditions at the Property.

Two (2) Drycleaner Sites were identified within a one-quarter mile radius of the Property. Both are located at least 500 feet cross-gradient or downgradient of the Property, and based on distance and gradient considerations, these facilities are not expected to impact subsurface conditions at the Property.

Thirty-three (33) other MANIFEST sites were identified within a one-quarter mile radius of the Property. None are adjoining the Property, and as such, none are expected to impact subsurface conditions at the Property.

Eighteen (18) other E-Designation sites were identified within a one-eighth mile radius of the Property. Sixteen are not adjoining the Property, and as such, none are expected to impact subsurface conditions at the Property. Adjoining locations to the east at 364 Bedford Avenue and southwest at 337 Berry Street are also identified as E-Designation Sites. However, no impacts have been discovered at these locations that would be expected to impact subsurface conditions at the Property.

3.2.2 Local Regulatory Review

3.2.2.1 County Recorder/ Assessor

According to the City of New York, the Property is listed as an E-Designation Site under E-138 / CEQR Number 04DCP003K that was promulgated on May 11, 2005 for possible Hazardous Materials Impacts. The listing of the Property as an E-Designation Site represents a REC, with

any planned redevelopment of the Property requiring possible on-site investigatory and/or remedial actions and eventual sign-off by the NYCOER.

3.2.2.2 Fire Officials

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP) on February 1, 2018 for records related to the Property. As of the date of this report, the NYCBFP has not responded to our initial search request. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

3.2.2.3 Building Department

Records from New York Building Department were reviewed for evidence indicating the developmental history of the Property, and for the presence of documentation relative to underground storage tanks. The records indicate the address range of the Property is 98-116 South 4th Street, with the current structure at 100 South 4th Street constructed in 1910, with three buildings notes as located at the Property. Prior land use was not indicated. Certificates of Occupancy were issued in 1928 for the use of the Property as shops, and in 1949 for use as an adhesives manufacturer. A Final Certificate of Occupancy was issued on January 9, 2007 for the use of 98 South 4th Street as apartments, a warehouse, and contractor's storage and on December 29, 2009 for use of the first floor as an eating and drinking establishment. A Temporary Certificate of Occupancy was also issued at this location on February 1, 2018 for use of the building as apartments. It should be noted that these Certificates of Occupancy appear to be associated with the residential building at 100 South 4th Street, and not the commercial building at 98 South 4th.

The Little E / Environmental Restriction is listed as HAZMAT, with the Department of Finance Building Classification listed as D9-Elevator Apartment.

3.2.2.4 Office of Environmental Remediation

Records from the New York City Office of Environmental Remediation (NYCOER) were requested on February 2, 2018, and have not been received as of the issuance of this report. As noted in several sections of this report, the NYCOER and the NYCDEP have issued letters of No Objection for redevelopment of the buildings at 104 South 4th Street and 100 South 4th Street, respectively. No record of such a decision for redevelopment of the 98 South 4th Street building was identified in available records. Therefore, a sub-slab depressurization system should be installed beneath the commercial building at 98 South 4th Street to prevent migration of documented subsurface impacts beneath this building into indoor air. Additionally, it should be noted that the NYCDEP decision of No Objection to the redevelopment of the 100 South 4th Street building for the present residential use was made in 2006 and reportedly based on an indoor sampling report which was not provided for Nova's review. The New York State Department of Health (NYSDOH) has updated Ambient Air Guidelines for chlorinated solvents in 2013 and 2015, which would not have been relevant at the time of the 100 South 4th Street No Objection determination. Therefore, if documentation is not provided (specifically the Don Carlo Indoor Air Sampling Report dated November 2006) in the records returned by the NYCOER related to the residential building at 100 South 4th

Street, Nova would recommend consideration of installation of a sub-slab depressurization system or other engineering control at this location as well.

3.2.3 Activity Use Limitations and Environmental Liens

According to the City of New York, the Property is listed as an E-Designation Site under E-138 / CEQR Number 04DCP003K that was promulgated on May 11, 2005 for possible Hazardous Materials Impacts. The listing of the Property as an E-Designation Site represents a REC, with any planned redevelopment of the Property requiring possible on-site investigatory and/or remedial actions and eventual sign-off by the NYCOER.

3.3 Historical Use Information

The historical uses of the Property and adjoining/adjacent properties were reviewed utilizing fire insurance maps, aerial photographs, city directories, historic topographic maps available from ERIS or other sources, and municipal records available from the city of New York. Available historical information did not allow maintenance of five year intervals between all data sources.

The absence of earlier published historical information prior to 1887 constitutes historical data failure as defined by ASTM E 1527-13 as the Property was still developed at that time. Review of additional historical sources of information outlined in ASTM E 1527-13 would not likely provide additional useful information regarding the past use of the Property based on the established pattern of land use.

Nova encountered historical data gaps from 1897 through 1904, 1904 through 1918, 1918 through 1924, 1924 through 1935, and 1939 through 1945. For each interval, the Property was developed in the earlier source and was unchanged in the later source. As such, it is Nova's opinion that these intervals are insignificant based on the established pattern of residential, commercial, and industrial development throughout the entire period researched from 1887 through 2014.

3.3.1 Historical Property & Historical Adjoining/Adjacent Land Uses

A chronological listing of all available historical Property and adjoining/adjacent site data is described in the following table. Copies of pertinent sources reviewed, such that establish Property uses or changes in use, are included in the Appendix of the report.

YEAR	SOURCE	DESCRIPTION/USE
1887	Sanborn Map	Property: The Property is occupied by seven dwellings and S.L Hill & Son Spelling Block Factory.
		North: The area to the north across South 4 th Street is occupied by in-line dwellings.
		East: The area to the east is occupied by an outbuilding, with mixed use buildings along Bedford Avenue.
		South: The area to the south is occupied by dwellings and a large livery / boarding facility that includes lumber storage and a wagon shed.
		West: The area to the west is occupied by dwellings.

YEAR	SOURCE	DESCRIPTION/USE
1904	Sanborn Map	Property: The Property is now occupied by seven dwellings and the F. Gretch Musical Instrument factory.
		North: The area to the north across South 4 th Street is occupied by in-line dwellings.
		East: The area to the east is occupied by mixed use buildings.
		South: The area to the south is occupied by dwellings, the Brooklyn Athletic Club, Water Purveyors Bureau repair shop, a Department of City Works building, and wagon shed.
		West: The area to the west is occupied by in-line dwellings.
1918	Sanborn Map	Property: The existing building at 100 South 4 th Street is now in place and identified as occupied by the Gretsch Building No. 2 and utilized by Interstate Electric Novelty Co. The building was noted to have been constructed in 1910.
		North: North: The area to the north across South 4 th Street is occupied by in-line dwellings.
		East: The area to the east is occupied by mixed use buildings.
		South: The area to the south is now occupied by Water Purveyors Bureau repair shops, Gretsch Building No. 1, and a commercial / office building.
		West: The area to the west is occupied by in-line dwellings.
1924	Aerial Photograph	Property: The existing building at 100 South 4 th Street is in place, with three structures present to the west at what is now 98 South 4 th Street. The area now occupied by 104 South 4 th Street is undeveloped.
		North: The area to the north is depicted as densely developed urban land
		East: The area to the east is depicted as densely developed urban land
		South: The area to the south is depicted as densely developed urban land
		West: The area to the west is depicted as densely developed urban land
1935	Sanborn Map	Property: The buildings at 100 South 4 th and 104 South 4 th are now depicted, with the building at 104 South 4 th identified as utilized for dyeing. The area of 98 South 4 th Street is undeveloped (the dwellings have been removed).
		North: The area to the north across South 4 th Street is occupied by in-line dwellings.
		East: The area to the east is occupied by mixed use buildings.
		South: The area to the south is now occupied by Water Purveyors Bureau repair shops, Gretsch Building No. 1, and a commercial / office building.
		West: The area to the west is occupied by in-line dwellings.
1937	City Directory	Property: Bee Folding Box co, Brighton Folding / Paper Box Co, Durable Knit Corp, Gruman Candy Co, Jones Die Co, Poulos Christo & Co, Radio Picture Frames Co, Robinson Picture Frames, Max Saretsky Coats, Standard Record Co, Samuel Zuckerman Coats, Sam Hershkowitz Dye Works, Wonder Dye Works.

Based on the information reviewed above, the Property has been developed since the late 1800s and has had various commercial, industrial / manufacturing, and residential tenants over the years. The existing structures were built in 1910 (100 South 4th Street), the late 1940s (98 South 4th Street), and between 1924 and 1935 (104 South 4th Street). Historical manufacturing tenants (including an adhesive manufacturer), a cleaner/dyer, and lab companies appear to have resulted in impacts to the Property that were identified by others, and as such, represent Recognized Environmental Conditions at the Property. See Section 3.3.3 for further information.

Based on the information reviewed above, the immediate surrounding area has also been developed since the late 1800s, with residential uses historically in place to the north and west. The areas to the south and east have been utilized for commercial and mixed use purposes, with a gasoline station and auto repair shop also occupying the lot immediately to the east along South 4th Street prior to the recent redevelopment of this lot with a mixed use building. Although adjoining properties are identified in the regulatory databases reviewed for this ESA, none of the adjoining properties are expected to have resulted in recognized environmental conditions to the Property.

3.3.2 Chain of Title

A 50-year chain-of-title summary was requested by the Client and subsequently obtained by Nova from Environmental Data Resources, Inc. (EDR) and is included below. A copy of the providers report to Nova is included in Appendix B-4.

TYPE	DATE	RECEIVED FROM	RECEIVER

3.3.3 Additional Environmental Record Sources

Twenty-four (24) separate correspondence / letters were provided to Nova by Meadow Partners related to the VCP (Site ID V00094) dated April of 1997 through December of 2003. The most-recent document, dated December 8, 2003 indicates that the NYSDEC terminated Voluntary Cleanup Agreement W2-0840-99-011 with El Puente de Williamsburg as El Puente de Williamsburg was not successful in acquiring title to the Property. The conditions of the agreement and implementation of an approved Work Plan were contingent upon, and would only commence once the Property was acquired by El Puente de Williamsburg.

The following reports prepared by Ecosystems Strategies were provided to Nova for review:

- Environmental Audit Phase I dated December 2, 1996
- Summary of Phase II Environmental Services dated January 23, 1997
- Summary Report of Subsurface Investigation dated April 8, 1997
- A Chemtech Data Package for Volatile Organics dated August 6, 1997
- Portions of Work Plan dated August 13, 1997
- Workplan for Site Closure Activities dated April 11, 1997
- Final Workplan for Site Closure Activities dated May 2, 1997
- Revised Workplan for Site Closure Activities dated August 7, 1997
- Final Workplan for Site Closure Activities dated December 3, 1997
- Summary Report of Subsurface Investigative Services dated March 26, 1999

The reports indicate the Property was occupied by three structures at the time of the investigations – a main seven-story building at 100 South 4th Street (Building 2), a one-story structure to the east at 104 South 4th Street (Building 1), and a one-story structure to the west at 98 South 4th Street (Building 3). All structures were reportedly constructed in the early to mid-1900s, and were in varying stages of deterioration. Historical on-site uses included various manufacturing operations that included an electroplating laboratory and a glue/adhesives factory. Elevated levels of Volatile Organic Compounds (VOCs) and Polycyclic Aromatic Hydrocarbons (PAHs) were detected in shallow soils (within four feet of ground surface) beneath Building 3, with “particular concern for soils at the 0-2 foot depth” where elevated levels of trichloroethylene (TCE) and tetrachloroethylene (PCE) at 3,700 and 5,500 parts per billion (ppb), respectively were detected at Boring B-2 (advanced near the

northwest corner of the interior of Building 3). The elevated levels of PAHs in soils were concluded to not be the result of release(s) from two on-site tanks due to a lack of impact in soils collected from 15-17 feet below ground surface.

Given a lack of elevated levels of contamination in soils beneath Building 2, it was also concluded that the lateral extent of soil contamination was contained beneath Building 3, with the estimated amount of soils requiring remediation at 500 cubic yards. Three (3) monitoring wells were also advanced in the sidewalk along South 4th Street (MW-3 and MW-4), as well as at the northwest corner of Building 3 (MW-1), with groundwater encountered at depths ranging from 23-25 feet below ground surface, and was found to flow toward the northeast. A fourth well (MW-2) could not be installed as refusal was encountered prior to reaching the groundwater table. Although it was reported that low levels of VOCs were detected and that “levels do not indicate significant groundwater contamination and do not support the conclusion that on-site groundwater should be considered a source of off-site contamination at levels warranting remediation.” and “These data support the conclusion that remedial actions specifically directed to remediate groundwater and reduce concentrations of the compounds identified in these sampling rounds is not warranted”, levels of TCE and PCE were detected in groundwater samples collected in 1997 that ranged from 4.5 to 100 ug/l. Current regulatory standards for these constituents that were promulgated in 1998 are 5 ug/l. Two (2) 10,000-gallon vaulted tanks were noted to be located in a vaulted area beneath Building 3, with two (2) 275-gallon ASTs also present in Building 3. Planned remedial activities included the proper removal of all identified on-site wastes stored in drums and other containers throughout the buildings; the removal of contaminated soil beneath Building 3; the proper closure of the two (2) 10,000-gallon and two (2) 275-gallon tanks at Building 3; the installation of a vapor barrier beneath Building 3; the proper closure / abandonment of on-site monitoring wells; indoor air quality sampling following the completion of remedial activities, and the closure of an active NYSDEC Spill case.

Additional on-site investigations included the installation of six (6) additional soil borings within the footprint of the partially-below grade “basement” level of Building 2 at depths ranging from three (3) to twelve (12) feet below the building foundation. Only low levels of TCE were detected in each of the collected soil samples submitted for laboratory analysis, with no PAHs found. Based on these results it was concluded that on-site activities at Building 2 have not impacted on-site groundwater, and that “known on-site groundwater contamination (likely from off-site sources) has not impacted on-site soil integrity”. Therefore, it was recommended that the approved Work Plan be implemented without further modification. It should also be noted that groundwater impacts related to an abutting Brownfield site to the south and southwest (at 105 South 5th Street / 337 Berry Street) were identified in NYSDEC regulatory notes to have emanated “from Site No. V00094” – i.e. the Property. Nova reviewed available documentation from the NYCOER, and available remedial work plans do not identify the Property as the suspected source of impacts at this facility. Additionally, a Volunteer Statement dated January 26, 2016 was present in online NYCOER files which indicates that the owner of the 105 South 5th Street / 337 Berry Street facility, LPC Development Group LLC agreed to install a vapor barrier, sub-slab depressurization system, and soil vapor extraction system as part of the redevelopment plan.

Nova was also provided with a Phase I Environmental Site Assessment that was prepared for the Property by EBI Consulting dated July 19, 2012. The Property existed as a seven-story multi-family apartment building and two (2) one-story commercial buildings that were occupied by a restaurant / bar (eastern building), and was vacant (western building) at the time of EBI's investigation. The Property was historically utilized for commercial, industrial, and manufacturing purposes that included a musical instrument manufacturer, shoe manufacturer, laboratory, textile mill, tool & die facility, dyeing facility, and adhesives manufacturer. EBI's report discussed other prior investigations that included a Phase I ESA that was prepared by Nova Consulting Group in March of 2007, and Phase I ESAs prepared by EBI in April of 2009 and October of 2010. EBI identified an open NYSDEC Spill and the E-Designation listing of the Property as Recognized Environmental Conditions during their Phase I investigation, with additional information on the RECs provided below:

Open NYSDEC Spill Number 9611887 (erroneously identified as Spill Number 9611997 in the report). The Spill was apparently reported following the submittal of a Phase II Subsurface Investigation and Tank Closure Report by Don Carlo Environmental in April of 2006. The Don Carlo report documented the removal of two (2) 275-gallon "aboveground USTs" and two (2) 10,000-gallon "aboveground USTs" from the western-most building. Elevated levels of SVOCs and heavy metals were also identified by Don Carlo in on-site soils (presumably in the vicinity of the former tanks), with elevated levels of chlorinated solvents also identified in on-site groundwater. The soil impacts were not attributed to the tanks or any associated spills. The Don Carlo Report was not provided individually or attached as an appendix to the EBI Phase I Report, and as such, the exact locations of soil and groundwater sampling and levels of contamination found is not known at this time. Don Carlo apparently returned to the Property later in 2006 to collect indoor air samples and based on a review of a Don Carlo Indoor Air Sampling Report dated November 2006, the NYCDEP issued a Letter of No Objection on November 29, 2006 indicating that they found the Indoor Air Sampling Report acceptable for only the seven-story renovated building, and had no objections to the issuance of any permits by the city of New York related to the redevelopment of the seven-story building. The letter specifically states that the Letter of No Objection did **not** pertain to the one-story structures to the east and west of the seven-story structure, and that the E-Designation should remain in place for any future development, redevelopment or soil disturbance at the Property. Based on a review of the information provided in the EBI report and the Letter of No Objection, it appears that the NYCDEP reviewed only the Don Carlo Indoor Air Sampling Report prior to their issuance of the Letter of No Objection. It should be noted that E-Designations are placed on properties as part of a change in zoning that would allow additional development or a change of use at a particular site located within the re-zoned area. A site can be listed if it is or was utilized and/or is in close proximity to a gasoline station, storage tank facility, manufacturing facility, is located on or near a main roadway or railroad, and/or is otherwise located in an area of other environmental concern, and not as a result of an independent Phase II investigation (as was indicated in the provided report). It should also be noted that Spill Number 9611887 has since been closed by the NYSDEC (on March 12, 2013). Given that none of the Don Carlo reports were provided individually or attached as an appendix to the EBI Phase I, Nova submitted a Freedom of Information Request to the NYSDEC for information related to the Spill incident and was informed that any information related to the Spill would be made available on or about March 15, 2018.

EBI also identified the presence of debris (including construction and demolition debris), suspect ACM, suspect lead-based paint, and water intrusion (in the western-most building) as *de minimis* conditions and based on the findings of their investigation recommended the following:

- The submission of the Don Carlo Phase II Subsurface Investigation and Tank Closure Report to the NYSDEC so that Spill Number 9611887 could be closed.
- The proper removal and disposal of impacted soils during the planned redevelopment of the commercial portions of the building to satisfy the E-Designation listing in place at the Property. EBI recommended nothing further with respect to on-site groundwater other than the proper abandonment of on-site monitoring wells.
- The proper removal and disposal of demolition debris identified in the western building.
- The development and implementation of Asbestos and Lead-Based Paint O&M Plans for the Property.

The repair of moisture and water intrusion and removal of water and mold-impacted materials from the Property.

Based on the results of our investigation, Nova can conclude that it appears the Don Carlo Phase II Subsurface Investigation and Tank Closure Report was submitted to the NYSDEC for review (given that Spill Number 9611887 has since been closed); the groundwater wells have been abandoned (given that a cemented monitoring well cover was observed along the South 4th Street sidewalk, with no other monitoring wells observed); the demolition debris has been removed (given none was observed during Nova's site visit); and the moisture / water intrusion and mold issues have been addressed (given that no evidence of these conditions were observed by Nova during our site visit). It is not known if the O&M Plans have been developed and implemented. Also, no impacted soils appear to have been addressed beyond engineering controls that included the lining of all trenching, slab penetrations, and old drains with a 20 mil minimum vapor barrier / water proofing liner and the coating of the concrete floor slab with a Laticrete 9235 waterproofing membrane in the eastern building at 104 South 4th Street. The NYCOER issued a Letter of No Objection for use of this building as an eating and drinking establishment on June 26, 2013 and indicated the E-Designation listing would remain in place.

While soil, groundwater, and/or soil-gas impacts may remain / exist at the Property, it appears that these conditions have been addressed in the eastern building at 104 South 4th Street through the installation of a vapor barrier (an engineering control), with the NYCDEP satisfied that indoor air quality at the residential building at 100 South 4th Street is acceptable. Given a lack of regulatory oversight at the western building at 98 South 4th Street other than the closure of Spill Number 9611887, the installation of a sub-slab depressurization system under this building is recommended in accordance with State-issued guidance and generally accepted industry standards, which would include confirmation sampling after installation to assess the efficacy of the system. Furthermore, if documentation is not provided (specifically the Don Carlo Indoor Air Sampling Report dated November 2006) related to the residential building at 100 South 4th Street, Nova would recommend a similar engineering control at this location as well. In addition, any further redevelopment of the Property may require further

investigatory and/or remedial activities as required by the NYCOER given that the E-Designation listing remains at the Property.

Although requested, no other previously prepared environmental reports such as lead-based paint surveys, lead-in-water surveys, asbestos surveys or geotechnical reports were provided for Nova’s review.

3.3.4 Historical Use Information on Adjoining Properties

During Nova’s review of the standard historical sources referenced above, the historical uses of the adjoining properties are summarized below:

North:	The area to the north has been developed with in-line dwellings / apartments since at least the late 1900s
South:	The area to the south was occupied by a large livery facility, city buildings, and the Gretsck Building No. 1.
East:	The area to the east has been occupied by dwellings, mixed use buildings, and a synagogue, with a gasoline station and auto repair shop also occupying the lot along South 4 th Street to the east.
West:	The area to the west has been developed with in-line dwellings and a parking lot.

4.0 PROPERTY RECONNAISSANCE

4.1 General Property Characteristics

Nova conducted a reconnaissance visit to the Property on February 6, 2018. The visit was performed by Michael Fiscina, Nova Field Associate. Nova was escorted during the Property visit by Mr. Gregory Blake of Meadow Partners, the ASTM-defined Key Property Manager, as well as the building superintendent, Wilmer Lopez.

The Property consists of a rectangular-shaped parcel approximately 0.48 acres in size. The Property was originally designed for commercial and manufacturing purposes, but is now utilized for commercial and multi-family residential purposes. Currently, the Property is developed with three (3) structures that were constructed in 1910 (100 South 4th Street), the late 1940s (98 South 4th Street), and between 1924 and 1935 (104 South 4th Street). The structures at the Property are one (98 and 104 South 4th Street) and seven-stories in height (100 South 4th Street) and house a total of seventy-three (73) apartments and four (4) commercial spaces. The building footprints occupy almost the entire lot, with a narrow courtyard that is accessible by first floor apartment spaces located behind (south of) 100 South 4th Street. Access to the buildings is gained from along South 4th Street to the north. No other structures or significant surface features were noted on the Property at the time of the reconnaissance.

The Property is situated within an urban area of the Williamsburg section of the borough of Brooklyn, New York. The buildings are bound to the north by South 4th Street and apartments (99-121 South 4th Street); to the east by mixed use buildings that include vacant commercial spaces and a stationary store on the first floor (118-120 South 4th Street / 364 Bedford Avenue, and 370 Bedford Avenue), followed by Bedford Avenue; to the south by a commercial / office building and building that is presently under construction (105 and 109 South 5th Street) followed by South 5th Street; and to the west by a parking lot (96 South 4th Street), followed by an apartment building (94 South 4th Street). Based upon topographic map interpretation and Property observations, groundwater flow beneath the Property is inferred to be in a westerly direction toward the East River.

4.1.1 *Solid Waste Disposal*

Solid waste on the Property is collected in containers that are transferred to the curb for pickup by the city of New York. The commercial tenants utilize private sanitation for the removal of their solid waste. No indication of potentially hazardous material disposal was noted during Nova's reconnaissance.

4.1.2 *Surface Water Drainage*

Surface water drainage from the Property is limited as almost the entire property is occupied by the footprint of the existing buildings. Rear courtyard drains divert rain water to the municipal sewers.

Floor drains were also observed in the buildings that are connected to the municipal sewer system. No evidence of petroleum or chemical storage, leaks, or spills were observed in the vicinity of the floor drains.

4.1.3 Wells and Cisterns

No visible evidence of production wells or collection cisterns was observed during the Property reconnaissance or reported to Nova. An abandoned monitoring well was observed in the sidewalk along South 4th Street to the north of 100 South 4th Street.

4.1.4 Wastewater

No indication of industrial wastewater disposal or treatment systems were observed during the Property reconnaissance or reported to Nova.

4.1.5 Additional Property Observations

No additional relevant general Property characteristics were observed.

4.2 Potential Environmental Conditions

4.2.1 Hazardous Materials / Wastes

4.2.1.1 Hazardous Materials

No evidence of the use of hazardous materials, petroleum products or hazardous wastes was observed on the Property.

4.2.1.2 Hazardous Waste

No obvious indications of hazardous waste generation, storage or disposal were observed on the Property or were indicated during interviews.

4.2.1.3 Unlabeled Containers and Drums

No unlabeled containers or drums were observed during the Property reconnaissance.

4.2.2 Evidence of Releases

No obvious indication of hazardous material or petroleum product or hazardous waste releases, such as stained areas or stressed vegetation, was observed during the Property reconnaissance or reported to Nova during interviews.

4.2.3 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain polychlorinated biphenyls (PCBs) at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment

are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified:

- Less than 50 parts per million (ppm) of PCBs – *“Non-PCB” unit*
- 50 ppm-500 ppm – *“PCB-Contaminated” unit*
- Greater than 500 ppm – *“PCB” unit*

No transformers were observed at the subject property. Electric service enters the property underground from South 4th Street to the north.

No other potential PCB-containing equipment (oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) expected to contain PCBs was observed on the Property during Nova’s reconnaissance. The elevator that service the building at 100 South 4th Street is cable-drawn, with a first floor compactor installed in the early 2000s. No evidence of leaks or spills were observed in the vicinity of the compactor and based on its age, it is not expected to contain PCBs.

4.2.4 Landfills

No evidence of landfilling was observed on the Property or reported during the Property reconnaissance.

4.2.5 Pits, Ponds, Lagoons, Sumps, and Catch Basins

No evidence of on-Property pits, ponds, lagoons, sumps, or retention/catch basins was observed or reported during the Property reconnaissance.

4.2.6 On-Property ASTs and USTs

No evidence of aboveground or underground storage tanks was observed during the Property reconnaissance or reported during interviews. However, as noted in Section 3.2.1, a total of four “aboveground USTs” were removed from the basement of the 98 South 4th Street building in 2006. Although subsurface impacts were noted at the time of removal, the impacts do not appear to have originated from the USTs.

4.2.7 Radiological Hazards

No radiological substances or equipment was observed or reported stored on the Property.

4.2.8 Additional Hazard Observations

No additional hazards were observed on the Property.

4.2.9 Lead in Drinking Water / Overall Drinking Water Quality

The Property is connected to the municipal potable water supply provided by the city of New York. According to the city’s 2016 annual drinking water quality report, the drinking water

supplied to the Property is compliant with state and federal standards, including those for lead and copper

Nova did not conduct sampling of drinking water at the Property for the presence of total lead content.

4.2.10 Asbestos-Containing Materials (ACM)

No sampling was performed during the preparation of this ESA. However, suspect materials observed by Nova are listed in the table below:

SUSPECT ACM OBSERVED				
Material / Location	Estimated Quantity of ACM (SF/LF)	Friable Yes/No	PACM?	Physical Condition
Drywall / joint compound	Not quantified (throughout buildings)	No	No	Good
Roofing Materials	11,00 SF	No	No	Good

The objective of this visual survey was to note the presence and condition of suspect ACM observed. Although recently renovated, based on the years of construction there is a potential that ACM was used in construction materials. In addition, the Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101, requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are presumed asbestos containing material (PACM).

Notwithstanding, non-friable materials may contain asbestos, since they were not covered by the phase-out. These materials include floor tile, wallboard systems, and some roofing components. These materials were observed to be in good condition, and represent no hazard unless cut, sawn, or broken. Accordingly, no samples were obtained. Prior to conducting demolition, renovations, or building repairs that may damage the suspect materials, a comprehensive survey should be conducted to verify the presence or absence of asbestos. Additionally, an asbestos operations and maintenance plan should be developed for the Property.

4.2.11 Radon

The U.S. EPA has prepared a map to assist national, state, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per liter of air (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends Property-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Review of the EPA Map of Radon Zones places the Property in Zone 3, where average predicted radon levels are less than 2.0 pCi/L.

4.2.12 Lead-Based Paint

In accordance with the scope of services, Nova has conducted a limited, visual evaluation to note the condition of painted surfaces at the Property. Due to the dates of construction, lead-based paint may be present. The objective of this limited visual survey was to note the presence and condition various painted surfaces. In general, the painted surfaces appeared in good condition.

The Property falls under the definition of *Target Housing*, and is regulated under Title X. The seller or renter of the Property will need to make available a federally approved lead hazard information pamphlet and must disclose known lead-based paint and/or lead-based paint hazards to purchasers and renters of the Property pursuant to the requirements of 24 CFR 35.92 and 40 CFR 745.113.

4.2.13 Mold

As part of this assessment, Nova performed a limited visual inspection for the significant presence of mold. A class of fungi, molds have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments, and produce tiny spores to reproduce, just as plants produce seeds. When mold spores land on a damp spot indoors, they may begin growing and digesting whatever they are growing on in order to survive. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

Nova observed interior areas of the Property for the presence of significant presence of mold. Nova did not note obvious visual or olfactory indications of the presence of mold, nor did Nova observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment.

This activity was not designed to discover all areas which may be affected by mold growth on the Property. Rather, it is intended to give the Client an indication if significant (based on observed areas) mold growth is present at the Property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the Property.

5.0 INTERVIEWS

Interviews were conducted with the following individuals. Findings from these interviews are discussed in the appropriate sections in this report.

NAME	AFFILIATION	TEL. NO.	DATE INTERVIEWED	COMMENTS
Mr. Gregory Blake	Meadow Partners	646-666-3114	February 6, 2018	Mr. Blake indicated that prior environmental reports would be forwarded to Nova for review and that he had no knowledge of any basement space at 98 South 4 th Street.

Mr. Fawzy Abdelsadek	NYSDEC	718-482-4992	February 1, 2018	Record Search Initiated
FOIA Officer	NYCOER	NA	February 1, 2018	Record Search initiated

6.0 FINDINGS AND CONCLUSIONS

6.1 Findings

6.1.1 *On-Property Environmental Conditions and Concerns*

This assessment has revealed no evidence of Recognized Environmental Conditions (REC) or Controlled Recognized Environmental Conditions (CREC), or other environmental issues in connection with the Property, except for the following:

- The historical use of the Property for manufacturing purposes and a cleaner / dyer, with subsurface data confirming release impacts which have not been remediated, and its E-Designation listing.

While not considered to be REC by ASTM definition, the following environmental issues were noted and warrant mention:

- Non-friable suspect asbestos containing sheetrock and roofing materials were identified at the Property. The materials were observed to be in good condition.
- Due to the dates of construction, lead-based paint may be present. In general, the painted surfaces appeared in good condition, and based on the recent redevelopment of the Property, any possible remaining lead-based paint would likely have been covered up by additional layers of paint or other finishes.

6.1.2 *Off-Site Environmental Issues*

No off-Property environmental conditions were identified that were considered likely to have affected conditions at the Property.

6.1.3 *Historic Recognized Environmental Conditions*

No historical recognized environmental conditions (HREC) were identified on the Property during the course of this assessment, except for the following:

- Closed Spill Numbers 8602718 and 9611887 are considered HRECs in connection with the Property. Nova submitted Freedom of Information Request to the NYSDEC for information related to these case on February 1, 2018 and February 13, 2018 and was informed that any information related to the incidents would be made available on or about March 2, 2018 and March 15, 2018, respectively.

6.1.4 *De Minimis Environmental Conditions*

No *de minimis* environmental conditions were identified in connection with the Property during the course of this assessment.

6.2 Conclusions

Nova has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of 100 South 4th Street, Brooklyn, New York. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions (REC), Controlled Recognized Environmental Conditions (CREC) in connection with the Property, except for the following:

- The historical use of the Property for manufacturing purposes and a cleaner / dyer, with subsurface data confirming release impacts which have not been remediated, and its E-Designation listing.

Additionally, while not considered to be REC, CREC, or HREC by ASTM definition, the following environmental issues were noted and warrant mention:

- Non-friable suspect asbestos containing sheetrock and roofing materials were identified at the Property. The materials were observed to be in good condition.
- Due to the dates of construction, lead-based paint may be present. In general, the painted surfaces appeared in good condition, and based on the recent redevelopment of the Property, any possible remaining lead-based paint would likely have been covered up by additional layers of paint or other finishes.

6.3 Recommendations

Based on the findings of this ESA, Nova recommends the following:

- Suspect asbestos-containing materials should be managed in-place in good condition under an Asbestos Operations & Maintenance Program.
- Suspect lead-based paint should be managed in-place in good condition under a Lead-Based Paint Operations & Maintenance Program.
- A sub-slab depressurization system should be installed beneath the commercial building at 98 South 4th Street in accordance with State-issued guidance and generally accepted industry standards, which would include confirmation sampling after installation to assess the efficacy of the system. Furthermore, if documentation is not provided (specifically the Don Carlo Indoor Air Sampling Report dated November 2006) related to the residential building at 100 South 4th Street, Nova would recommend a similar engineering control at this location as well. In addition, any further redevelopment of the Property may require further investigatory and/or remedial activities as required by the NYCOER given that the E-Designation listing remains at the Property.

6.4 Deviations

This Phase I ESA substantially complies with the scope of services and ASTM 1527-13, as amended, except for exceptions and/or limiting conditions as discussed in Section 1.4.

RE: CITY DIRECTORY RESEARCH
Rocket Factory Lofts
100 S 4Th St Brooklyn, NY

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

80-130 of S 4th St

74 SOUTH FOUR PROPERTIES LLC...Real Estat
 82 CARINO RESTAURANT & CANTINA...Cafes
 82 P & P LAUNDROMAT...Plating [mfrs]

EDR Chain of Title

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

- Historical Chain of Title research
- Leases and Miscellaneous

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

PARTIES

GRANTOR/SELLER:

SOUTH SIDE HOUSE LLC
C/O GOLENBOCK EISENMAN ASSOR BELL &
PESKOE LLP, 437 MADISON AVENUE
NEW YORK, NY 10022

THIS INDENTURE, made the 7th day of August, 2014

BETWEEN Jonathan L. Flaxer solely in his capacity as Chapter 11 Trustee for the Bankruptcy Estate of South Side House LLC, party of the first part, and

RLBK Property LLC, a Delaware limited liability company, with an address c/o Meadow Partners LLC, 130 East 59th Street, Suite 1300, New York, New York 10022, party of the second part

WITNESSETH, that the party of the first part, in consideration of ten and 00/100 (\$10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL of the party of the first part's right, title and interest in and to that certain plot, piece or parcel of land, situate lying and being in the Borough of Kings, City and State of New York, bounded and described as set forth on Schedule A annexed hereto and made a part hereof;

BEING the same premises conveyed to the party of the first part by deed made by Aaron Muschel, Ruben Muschel and Mordechai Muschel, as co-executors of the Estate of William Muschell dated 8/24/2006 and recorded 9/7/2006 in CRFN 2006000504583.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof;

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises;

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

THE word "party" shall be construed as if it reads "parties whenever the sense of the indenture so requires.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

GRANTOR/SELLER:

SOUTH SIDE HOUSE LLC

C/O GOLENBOCK EISENMAN ASSOR BELL &

PESKOE LLP, 437 MADISON AVENUE

NEW YORK, NY 10022

THIS INDENTURE, made the 7th day of August, 2014

BETWEEN Jonathan L. Flaxer solely in his capacity as Chapter 11 Trustee for the Bankruptcy Estate of South Side House LLC, party of the first part, and

RLBK Property LLC, a Delaware limited liability company, with an address c/o Meadow Partners LLC, 130 East 59th Street, Suite 1300, New York, New York 10022, party of the second part

WITNESSETH, that the party of the first part, in consideration of ten and 00/100 (\$10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL of the party of the first part's right, title and interest in and to that certain plot, piece or parcel of land, situate lying and being in the Borough of Kings, City and State of New York, bounded and described as set forth on Schedule A annexed hereto and made a part hereof;

BEING the same premises conveyed to the party of the first part by deed made by Aaron Muschel, Ruben Muschel and Mordechai Muschel, as co-executors of the Estate of William Muschell dated 8/24/2006 and recorded 9/7/2006 in CRFN 2006000504583.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof;

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises;

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

THE word "party" shall be construed as if it reads "parties whenever the sense of the indenture so requires.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Site Name (GIS):	98-116 South 4th Street (El Puente)		
Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:		

- the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
 - a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
 - a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
 - an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
- Site Class Desc:** No Further Action at this Time: Sites are given a classification of "N" when:

- the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

Assess DOH:

Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Assessment:

In 1998, the following removals were recommended: Various wastes from the buildings, PBS tanks, contaminated soil with VOCs and SVOCs in excess of recommended soil cleanup objectives in TAGM 4046. Air sampling was also recommended. The building was renovated without of DEC knowledge and/or oversight.

Description:

The site is located in an urban area in Brooklyn. The site is a rectangular shaped parcel along the southern side of South 4th St, between Berry St. and Bedford Ave. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center flanked by two smaller 1 story structures. All three buildings were constructed in the early to mid 1900's and are in varying stages of deterioration. The Site previously had a variety of uses, including an adhesives factory and an electrofoaming laboratory, but always manufacturing. The eastern building has been listed as a warehouse since the 1970s, but also was used as a factory, including a dye factory. The Volunteer was not the property owner and withdrew from the VCP. The owner of the property did an independent renovation of the buildings.

"FOUND CONTAMINATION IN SOIL;"

DEC Remark:

"01/25/06-Hiralkumar Patel. Spoke with Mr. Ted Yen at Don Carlo Environmental. Don Carlo is doing soil test of this property, which was gas station back in 1940-50. Using PID, they found soil contamination (possibly gasoline) in about 5 cubic yard of area. at about 5ft BG, they found odor during investigation in contaminated area. As per Ted there are no tanks on location and this property is recorded as E in DEP records. SYC Realty has bought this property recently. Person at SYC Realty is Pearo. (Cell: 917-468-6871) 01/26/06-Hiralkumar Patel. Spoke with Mr. Danny sing at Don Carlo. the alternate number for Danny is 718-857-9800 and FAX 718-857-2100. As per Danny, they going out on site for clean up process. they going to excavate soil and will take end point samples for analysis. once they get report from lab, they will submit us. The owner of this property: Bedford Loft LLC (main company is SYC Realty) 80 Clay Street, Brooklyn, NY 11222 Person at Bedford Loft LLC: Sam Pearo / Max Stark (718) 349-8067 Left message for Sam at Bedford LLC at 10:25AM 01/27/06-Hiralkumar Patel. the alternate phone number for Sam is (718) 302-5555. left message for Sam. 01/31/06-Hiralkumar Patel. Talked with Mr. Hiloy Porges (FAX: 718-504-4963) at Bedford Loft LLC. Max Stark is property manager. Sent out CSL to Max at Bedford. also faxed to Max, D. sing at Don Carlo (Fax 718-857-2100) and D. Cabbagestalk (NYCDEP, Fax: 718-595-4479) 02/24/06-Hiralkumar Patel. Spoke with Danny at Don Carlo. He has report ready and we will get it by monday 27th Feb 2006. End point samples came out clean. 03/03/06-Hiralkumar Patel. Spoke with Danny and as we haven't got any report he will hand delivered copy of report today/tomorrow. Received report from Don Carlo. Need to review. 03/06/06-Hiralkumar Patel. Abstracts of report: - removed eight 550 gal gasoline USTs from location. - a total of 100.81 tons of contaminated soil was removed from the site, transported to Soil Safe Inc., Bridgeport, NJ - no holes were observed on the tank walls. - removed five 55 gal DOT drums containing tank bottom material. - based on visual and olfactory evidence, there was some contamination localized in the area located on the north perimeter of the tank grave in the vicinity of the fill pipes. - remaining sections of the excavated pit showed no visible staining or smell of petroleum product. - a composite soil sample was taken from the stockpiled of contaminated soil. - five end point soil samples (EP-1, EP-2, EP-3, EP-4 & BS-1) taken from the four side walls and bottom of the grave. - no VOCs found in any samples. - no SVOCs found exceeding TGAM limit in any samples. - groundwater flow is assumed to be in a westerly direction. no groundwater was observed in the pit. - potable water is supplied by the municipality and there are no private wells in the vicinity of the tanks. - Eastmond pumped approx. 4400 gal of water out from the eight USTs. based on the analytical reports of endpoint samples, case is closed. NFA letter sent out to Max STark at Bedford. Faxed to D. Sing at Don Carlo and to Mr. D. Cabbagestalk at NYCDEP (E designated site)."

DEC Remark:

"05/13/14-Hiralkumar Patel. as per NYC DOB record, a permit was approved on 08/19/13 to combine two lots 1 and 42 into one lot (# 1). alternate address: 95-97 South 5th Street, 347 Berry Street no PBS or other spills found. 95 South 5th LLC. **property owner** 10 Glenville Street, 1st Floor Greenwich, CT 06831 Chris Horrigan Horrigan Development LLC. 20 West 36th Street, 4th Floor New York, NY 10018 Ph. (917) 922-2415 email: chris@horrigancompanies.com Matthew Horrigan email: matthew@horrigancompanies.com 9:53 AM:- spoke with Frank. he mentioned that the property is being redeveloped as residential building with basement. during excavation for basement, they found three (3) 550 gal gasoline USTs, full of water. about 2-3 ft of soil contamination was found above the tanks. found dispenser lines, but no other piping. based on dispenser piping location, Frank suspects that the dispensers were right above the tanks and contamination found at the site might have originated from the dispensers. Brookside Environmental has removed tanks and associated contamination and collected endpoint samples. sample results will be available next week. 08/19/14-Hiralkumar Patel. received closure report from Merritt Environmental (at 4:59 PM on 08/12/14). three 550 gal gasoline USTs were removed. all three tanks were filled with water. final excavation was 24 ft long, 20 ft wide and 8 ft deep. total of eleven (11) endpoint samples (2 from bottom and 9 from sidewalls) were collected and analyzed. no contamination noted in endpoint samples. based on submitted report, case closed."

Site Name:	Williamsburg Bridgeview Apartments		
Site Name (GIS):	Williamsburg Bridgeview Apartments		
Site Class Desc (GIS):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.		
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.		
Program:	BCP		
Program Desc:	Brownfield Cleanup Program		
Assess DOH:	The site is completely fenced, which restricts public access. However persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via soil vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Actions are needed to address soil vapor intrusion off-site.		
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.		
Description:	Location: The site is located at 99-101 South 5th Street aka 337 Berry Street (Block 2443; Lot 6 - formerly known as Lots 6, 37 and 41), Williamsburg, Brooklyn; an urban area within New York City and Brooklyn Community Board 1. The site is approximately 15,870 square feet. It is bordered on the south by the Williamsburg Bridge, and on the north, east, and west by apartment buildings and commercial spaces. Site Features: The site's current feature is a foundation excavation. This property is specifically located at 337 Berry Street (the former lot 6). Lots 37 and 41 are vacant. Current Zoning and Land Use: This site is currently under development and is zoned M1-2/R6, Special Mixed Use District (MX-8). The surrounding parcels are currently used as residential condominiums and/or apartment buildings and light ground floor commercial spaces. Past Use of the Site: The main site feature was an abandoned warehouse that was owned by the City of New York's Landmark Preservation Commission ("LPC") and used as a Salvage Warehouse - demolished as of August 2016. An architectural salvage program was started at the warehouse on the site in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally housed with two story residential buildings from ca. 1868. All three former lots (6, 37 & 41) were listed as an E Designation Site in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) where an auto body shop was suspected to exist at some point, specifically on Lot 41. For information on NYC's E-Designation program, please visit: http://www.nyc.gov/html/oer/html/e-designation/e-designation.shtml . Site Geology and Hydrogeology: Fill material exists at depths between 0-5 feet below ground surface (bgs). Soils consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River.		

Assessment:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil Vapor was analyzed for volatile organic compounds. Soil - Mercury, benzo(a)anthracene and related poly

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

aromatic hydrocarbons (PAHs), and indeno(1,2,3-cd)pyrene are found in shallow soil (0-2 ft below ground surface [bgs]). Xylene is found in deeper soil, at a petroleum spill location. Concentrations of benzo(a)anthracene found on-site (ranging from ND to 1.39ppm) slightly exceed the restricted residential soil cleanup objective (SCO) (1 ppm). Concentrations of mercury found on-site (ND to 0.97 ppm) slightly exceed the restricted residential soil cleanup objectives (0.81 ppm). This contamination is related to the presence of historic fill on the Site. Data does not indicate any off-site impacts in soil related to this site. The presence of xylene in deeper soil is due to a spill during a tank closure with a concentration of 1.92ppm which exceeds the unrestricted SCO (0.26ppm), but not the restricted residential SCO (100ppm). Groundwater - PCE and TCE are found in groundwater throughout the site, moderately exceeding groundwater standards with a maximum concentration of 71.4 ppb PCE and 27.2 ppb TCE (compared to the groundwater standard of 5 ppb for PCE and TCE). Groundwater contamination appears to be emanating from site no. V00094 a former glue factory with documented PCE soil contamination located approximately 50 ft to the east. Data does not indicate any off-site impacts in groundwater of which this Site is the source. Soil Vapor - PCE, TCE, and TCA, were detected in soil vapor at elevated concentrations, up to 3510 ug/m3 of TCE. Data does not indicate any off-site impacts in soil vapor related to this site. Sub-slab vapor and indoor air - These media were tested in two immediately adjacent off-site properties. Results showed that the PCE and TCE were both elevated in the sub-slab vapor of both properties, but only one was recommended for mitigation due to the concentrations of TCE in the sub-slab vapor. The indoor air was non-detect for both properties for TCE and relatively low for both properties for PCE.

"tank removal, c/u pending"

DEC Remark:

8/9/16 : Mahat On 8/3/16, DEC Mahat talked to the BCP PM Ms. Sweet and she notified that the spill was called in due to finding of contaminated soil during the tanks removal. Soil samples (GW if they encountered any) will be taken as per CP 51 Guidance. Nick Pressley *****
Environmental Consultant/Contractor Pressley Associates, LLC 607.435.9589 Mellissa Sweet ***** NYSDEC BCP PM
518.402.9614 melissa.sweet@dec.ny.gov NYS BCP SITE: C224233 As per Mr. Pressley, a complete report will be submitted to the Department for a review. Further investigation/work or the closure of the case will be decided once the report is furnished. DEC is waiting for Tank Removal report.
8/11/16: Mahat DEC Mahat left voice message to Mr. Pressley to call back with the progress on the report. Spill case has been assigned to DEC Zhune as Day Time Runner. 8/19/16- Nick sent the UST Removal/Spill Report dated August 19,2016. 8/22/16-Zhune reviewed the report. As per the report eight the tanks (Tank #1 and Tank #2) were removed and eight end-point soil samples were collected from bottom and sidewalks of tank #1. As per Nick the samples from sidewalk (North, South, East, T1W) were sent to the lab. but they were not analyzed for VOCs based on not evidence of spill. The soil analytical result for the bottom samples indicate ND VOCs or SVOCs. Four endpoint samples were collected from tank #2. The analytical result indicated m,p xylene 0.914 PPM, o-xylene 1.01 ppm and total xylene 1,92 PPM at 9 feet bgs in sample Base -1 exceeding the acceptable limit.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

8/23/16-Zhune sent the following email] Based on the xylene concentration in endpoint sample UST-2 . WE need to know What is the future use of the site. 8/23/16 Nick sent the following email Intended Use - Mixed Use (Residential with Retail on Ground floor - also there will be section dedicated to Community Space) I requested closure based on the relatively low Xylene concentration at only one end of the tank 2 excavation and the engineering constraints for the location which is 9 feet deep and on the edge of the property next to the sidewalk. 8/23/16-Zhune sent the following email to Nick. What vapor mitigation efforts are going to be use in the development such us a vapor/moisture barrier or SSDS?. 8/23/16-Nick email to Veronica. I did ask about that and they don't believe the DEC has made a decision on that. I can ask Melissa Sweet who is the DEC project mgr under the BCP. 8/23/16- Nick email to Veronica. I just spoke with Melissa and it is a Site that would typically be required to have vapor mitigation but the project is still in the early stages and an RAWP has not yet been completed. Please contact her if you wish to discuss 9/14/16- Melissa Sweet sent the following email. The owner intends to install a vapor/moisture barrier under the building. Would they need to install something in the parking lot as well? Both tanks that were removed were within the footprint of the parking lot. Xylene exceeded the unrestricted soil cleanup objective (SCO), however it is still well below the restricted residential SCO, which is what the site is remediating to. 9/14/16-Veronica email to Melissa Do you have any objection if I close this spill. Please email your contact #. 9/14/16-Melissa email to Veronica I have no problem with closing the spill. My contact information is below. Based on Melissa email and as per J. Vought this spill is closed."

Caller Remark:						

"WRONG DELIVERY; CLEAN UP IN PROGRESS;"

DEC Remark:

"dec pIPER RECIEVED CALL OFF HOURS. Caller reported 4 gallons and stated he has a crew onsite. A MISDELIVERY OF 100 gal led to a 4 gallon overflow from vent at sidewalk and gauge of tank in basement. Piper determined that a visit was necessary due to the misdelivery and a crew is not needed to clean 4 gallons. Piper arrived on site and observed 4 techs cleaning sidewalk. Basement was cleaned. It is estimated that approx 15-20 gallons was spilled. Piper spole w/ Metro the next day. Cleanup has been completed. Closed."

"no release, tank test failure"

DEC Remark:

"10/10/17-Zhune spoke to Victoria from Protest Environmental. Victoria said the tank failed the test with a dry leak. It's a wrapped tank on concrete with Manhole issue. Protest gave a proposal to the management company to fix the manhole. 10/10/17-TFT letter sent to: Mr.Richard Herbst 315 Berry Street Corporation 5014 16 Avenue Suit 268 Brooklyn NY 11204 11/22/17 TJD File review. ProTest Environmental has submitted a closure report for this spill. On 10/9/17 a 5K #2 FO AST failed tightness test. On October 26th, contractor returned to site and isolated tank and lines - Technicians first replaced and re-bolted the manway cover. Further testing revealed a small wet leak previously masked by the loader dry leak. Technician inspected a lines and tightened a compression fitting on petrometer line. Upon completion above described repairs the tank system was retested with passing test results. Contractor reports no visible contamination was observed. Based upon the information provided there is no further action required. All documentation uploaded to DECDOCS. Spill closed."

<i>Caller Remark:</i>						

"1121 The caller advised dispatch no water ways affected. The oil tank is above ground inside the home. Unknown amount of spill at this time."

DEC Remark:

"12/06/2008-Zhune spoke to Joyce Agulan (818)434-4823. She is a tenant. She occupies the basement at 107 south 3rd St. She said the oil company overfilled oil. oil went to my windows to the plants. There is a very strong smell in my apartment. We are out from the apartment since last wednesday when this happened. She said they are staying with friends. Zhune spoke to Eddie(Super)347- 341-3676. He gave me the oil company phone # 718-626-7000 877-262-4570. I spoke to Joseph Lombardi 718-932-9075 from the oil company. He said he will send a crew to do the clean up. 12/07/08-Zhune responded to this site. Oil spill was cover with speedi-dry and there are a strong oil smell outside Joyce's apartment. Inside her apartment there are vapors. A tenant from 1st floor was also complaining vapors. 12/07/08-Zhune called to confirm clean up. Joyce said the oil company did not come. 12/08/08-Zhune called oil company. They said spill was cleaned up. 12/08/08 As per Eddie(Super) the oil company cleaned the spill. They cleaned the floor, the basement and removed the plants. Everything is cleaned. 12/09/08- Joyce called Zhune saying therrre is still oil smell in my apartment. I told her that I need to go and check her apartment. She said 6:30pm is going to be fine. 12/09/08-Zhune visited the site there are still vapors outside and slight vapors inside the apartment 12/10/08- Zhune called Joe Lombardi from the oil company. He said he will send back his men to clean up. 12/15/08- Joyce called and said vapors in my apartment are almost gone. there is still some smell but is going away. Last night I went to the basement because the light shut down. I noticed that there is still oil smell in the basement. 12/16/08-Zhune called Joe Lombardi and tell him that Joyce is still complaining smell in the basement where the oil tank is. He said that he will send his men to check. 12/22/08-Zhune called Joe Lombardi asked if they checked the basement. He said I called Eddie the super he went to check the basement and said everything is OK. 01/02/09-Zhune called Joyce to set up a date to inspect her apartment. She said there are still oil odor in my apartment and the basement. 01/02/08-Zhune inspected the apartment. Outside the apartment by the overfill line where the spill happended there is still oil smell. Inside the apartment and the basement there are no observable smell. Richard one of the roommate told me odors are more preceptible in Joyce's bedroom and the livingroom. He is staying with friends. 01/12/09- Joe Lombardi from Anker Tank Line and Zhune instected the site. AS per Joe the smell is maintenance problem. The vent line is just on joyce's bedroom window this line need to be cover(the mushroom). The fill line is dripping on the AST oil tank. Zhune called Libi (718)599-8300 x 210(Mangement) She said they will fix it. 01/21/09- Libi called. She said the tank is going to be removed. 01/30/09- Libi called and said the tank was removed. 04/10/09-Zhune called Tony Cancio he lives in the basement at this site to confirm if tank was removed. Tony said the tank is still in the same location in the basement. It had no been removed. The fill line is still in the same location. He said the apartments are using electric heater now. As per Tony there is no oil odors in the apartment. Spill Closed "

Caller Remark:			

"Historical spill. Tank removal with impacted soil. Cleanup will be done following removal of second tank."

DEC Remark:

"Impacted soil found during tank pull. Cleanup, endpoints etc. required. 02/14/13 Brookside Environmental removed one 2,500 gallon and another 3,000 gallon fuel oil USTs. The excavation was 18 x 25 x 12 ft. End point sample was taken. Soil in the excavation was screened with PID. No visual or olfactory evidence of contamination observed by JRH. There was no exceedances of VOCs in end point samples compared to CP-51. Report in edcos. Case closed.(sr)"

Program Type:	Petroleum Bulk Storage Program	Site Type:	Apartment Building/Office Building

Tank Information

Tank ID:	266268
Tank No:	001
Tank Model:	
Pipe Model:	
Tank Location:	5
Tank Location Desc:	Underground
Tank Status:	3
Tank Status Desc:	Closed - Removed
Install Date:	
Capacity (gal):	3000
Tank Type:	01
Tank Type Desc:	Steel/Carbon Steel/Iron
Test Method:	-
Date Tested:	
Next Test:	
Close Date:	2016-11-04 00:00:00
Registered:	True
Modified By:	DMPOKRZY
Last Modified:	2017-04-14 14:30:47.863000000
Program No:	2-612653

Material Information

Material Code:	0002
Material Name:	#4 fuel oil (on-site consumption)
Percent:	100.00

Equipment Information

Equipment:	A00
Code Name:	None
Type:	Tank Internal Protection
Equipment:	B01
Code Name:	Painted/Asphalt Coating

Program Type Code: PBS
 Program Type: Petroleum Bulk Storage Program

Tank Information

Tank ID: 16698
 Tank No: 001
 Tank Model:
 Pipe Model:
 Tank Location: 1
 Tank Location Desc: Aboveground-contact w/ soil
 Tank Status: 1
 Tank Status Desc: In Service
 Install Date: 1965-09-01 00:00:00
 Capacity (Gal): 2000
 Tank Type: 01
 Tank Type Desc: Steel/Carbon Steel/Iron
 Test Method: NN
 Date Tested:
 Next Test:
 Close Date:
 Registered: True
 Modified By: KAKYER
 Last Modified: 2017-04-14 14:30:47.863000000
 Prog No: 2-318477

Material Information

Material Code: 0003
 Material Name: #6 fuel oil (on-site consumption)
 Percent: 100.00

Equipment Information

Equipment: K00
 Code Name: None
 Type: Spill Prevention

Equipment: F00
 Code Name: None
 Type: Pipe External Protection

Equipment: G03
 Code Name: Vault (w/o access)
 Type: Tank Secondary Containment

Equipment: D01
 Code Name: Steel/Carbon Steel/Iron
 Type: Pipe Type

Equipment: C00
 Code Name: No Piping
 Type: Pipe Location

Equipment: A00
 Code Name: None
 Type: Tank Internal Protection

Equipment: I04
 Code Name: Product Level Gauge (A/G)
 Type: Overfill

Equipment: E00
 Code Name: None
 Type: Piping Secondary Containment

Site Class Desc (GIS):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.		

Site Class Desc: Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Program: BCP
Program Desc: Brownfield Cleanup Program
Assess DOH: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north, Kent Avenue to the east, what would be an extension of South 8th Street to the south followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000 square feet (1.056 acres) and is occupied by an asphalt-paved parking lot. There are no buildings on the site. Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property is currently used as an accessory parking and staging lot for the film studio businesses on the adjacent property to the south. Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012). Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs) in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs. Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River.

Assessment:

Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds(VOCs), semi-volatile organic compounds(SVOCs), metals, and PCB/pesticides. Soil: Twenty-five soil samples were collected from ten soil borings locations at depths ranging from 0 to 16 feet below ground surface (bgs). Semi-volatile organic compounds (SVOCs), primarily polyaromatic hydrocarbons (PAHs) were detected at concentrations exceeding 6NYCRR Part 375 unrestricted use soil cleanup objectives (UUSCOs) at 7 of 10 locations and above restricted residential soil cleanup objectives (RRSCO) at 4 of 10 locations. The maximum concentration of benzo(b)flouranthene, a representative PAH at the site, was 13 ppm in

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

SB10 at 0-2 feet bgs. A range of metals were detected above both the UUSCO and the RRSCO. Lead was detected at a maximum concentration of 1,000 ppm, which exceeds the RRSCO of 400 ppm within the top 8 feet bgs. Also, a Toxicity Characteristics Leaching Procedure(TCLP) lead concentration of 13 ppm was detected in a sample at 8 - 10 feet bgs, exceeding the characteristic hazardous waste threshold concentration of 5 ppm. Mercury was detected up to 5.8 ppm at 18 to 20 feet bgs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Seven groundwater samples were collected at depth ranges from 15-22 feet bgs. VOCs, SVOCs, dissolved and total metals concentrations were detected above NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards or Guidance Value (AWQSGV). The dissolved metals detected were not contaminants of concern. Tetrachloroethylene (PCE) was detected in groundwater from 5 parts per billion (ppb) to 38 ppb in 6 of 7 wells. The groundwater standard is 5 ppb. The representative SVOC benzo(b)fluoranthene was detected at 0.84 ppb (AWQSGV of 0.002 ppb.) Off-site impacts from groundwater are not expected because CVOCs were not detected in soil and there was no specific concern related to solvents. Soil Vapor and Ambient Air: Nine soil vapor samples, including one duplicate sample and one ambient air sample were collected and analyzed for VOCs. Petroleum VOCs and/or chlorinated solvents were detected in all of the 9 samples locations. PCE was detected in 6 of 9 samples at a maximum concentration of 65.7 ug/m3. Trichloroethylene (TCE) was also detected at a maximum of 5.08ug/m3. Data does not indicate any off-site soil vapor impacts related to this site.

Assess DOH:

Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The Radiac Research Site is an approximately 0.28 acre site located in an urban area. Site Features: The Radiac Research Corporation (Radiac) facility occupies several adjoining buildings which front on South First Street and Kent Avenue in the Williamsburg section of Brooklyn, New York. Kent Avenue is a heavily traveled street which parallels the East River less than one block west. The site is relatively flat and surrounded by adjacent buildings. The Radiac hazardous waste storage facility fronts at 33 South First Street, and is used as a 10 day transfer facility. It extends into the block northward where it adjoins through two doors, a low-level radioactive waste storage facility also operated by Radiac which fronts at 261 Kent Avenue. The 259 Kent Avenue property is used for office and equipment storage. Current Zoning and Land Use: The site is currently active, and is zoned M3-1. Surrounding parcels are currently used for manufacturing and residential use. Past Use of Site: Radiac transports containers (e.g., drums) of hazardous waste from off-site generators to its hazardous waste facility for short term storage prior to subsequent shipment to authorized recycling, treatment and disposal facilities. Hazardous waste is not generated (except wastes created while sampling and characterizing the wastes received for storage at the facility), treated or disposed at the Radiac facility. The majority of the wastes stored at the facility are in lab-packed containers (smaller inner containers packed with vermiculite in larger 55 gallon steel outer container). The company provides transportation and waste management services to generators many of which are located in the New York metropolitan area, including schools, laboratories, medical facilities and industrial companies. No explosives, military munitions or infectious wastes are stored at the facility. The facility has been in continuous operation as a hazardous waste storage facility since 1977. The facility previously operated under a Part 373 Permit. The Permit was subsequently modified on September 28, 1993. The facility submitted an application for permit renewal and was going through the permit renewal process when it decided to withdraw its application in 2005. A RCRA Facility Assessment was completed in December 2000. The facility went through the RCRA closure process in 2005. Closure was approved in by DEC in December 2005 with no further action required. The facility now operates mostly in the same manner it did as a permitted facility with exception that it may now only store hazardous wastes for 10 days or less as regulated by Federal Department of Transportation. Site Geology and Hydrogeology: Detailed environmental data for geology and hydrogeology have not been collected for this site. However, investigation from nearby sites indicate that the site could have historic fill up to a depth of approximately 15 feet, underlain by surficial glacial deposits. USGS reports indicate the depth of the bedrock is expected to be approximately 100 feet below ground surface (fbgs). Based on the local topography and surrounding sites, groundwater occurs at depths approximately 5 to 10fbgs, and flow would be to the W-NW towards the East River.

Assessment:

Environmental Assessment: Review of work conducted in accordance with the facility's previous hazardous waste management permit concluded that there were no releases from Solid Waste Management units (SWMUs) or Areas Of Concern (AOC) that require RCRA corrective action investigation or corrective measures. No releases to groundwater or soil were indicated.

Site Name (GIS):	420 Kent Avenue					
Site Class Desc (GIS):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Program:	BCP					
Program Desc:	Brownfield Cleanup Program					
Assess DOH:	Direct contact with contaminants in the soil is unlikely because the majority of the site is covered by a building or pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:	<p>Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north, Kent Avenue to the east, what would be an extension of South 9th Street followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. A vacant two-story approximate 31,800 square ft building occupies the northern portion of the property. The southeastern portion of the property is occupied by an approximately 22,732 square-foot two- to three-story vacant building. The southwestern portion of the property is occupied by an approximately 13,200-square foot one-story vacant warehouse. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site is currently not occupied. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravely sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appeared to flow to the west-northwest toward the East River.</p>					
Assessment:	<p>Soil and groundwater samples were analyzed for volatile organic compounds(VOCs),semi-volatile organic compounds(SVOCs), metals, and PCB/pesticides. Soil: A total of thirty-one soil borings were installed to depths ranging from 4 feet to 30 feet bgs. A total of 67 grab soil samples were collected. Several volatile organic compounds (VOCs) were detected at concentrations exceeding NYSDEC Part 375 unrestricted use soil cleanup objectives(UUSCOs) and/or restricted residential use soil cleanup objectives(RRUSCOs) in four soil borings. The petroleum-related compound benzene was detected in soil at a maximum concentration of 12 parts per million(ppm),which exceeds the RRUSCO of 4.8 ppm. No PCE and TCE were detected in soil samples. Semi-volatile organic compounds (SVOCs) primarily polyaromatic hydrocarbons (PAHs) were detected at concentrations exceeding Part 375 UUSCOs and/ or RRUSCOs in three locations. The maximum concentration of benzo(b)flouranthene, a representative PAH at the site , was 110 ppm in a sample at 3-4 feet bgs. Several metals were detected above the concentrations of both the UUSCOs and the RRUSCOs. Lead was detected in SB-02 at a maximum concentration of 700 ppm, which exceeds the RRUSCO of 400 ppm within the top 3 to 4 feet of depth bgs. Mercury was detected up to 3.2 ppm in SB-01 at 9 to 10 feet bgs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Six monitoring well were installed during the RI and eight groundwater samples, six from the new wells, one from an existing well and one duplicate samples were collected. Tetrachloroethene (PCE) was detected in two wells on the eastern side of the site with a high of 9 parts per billion(ppb)which is above the NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards, or Guidance Values (AWQSGV) of 5 ppb. Naphthalene was detected from 14 ppb to 450 ppb (AWQSGV of 10 ppb). Benzene was detected above the AWQSGV of 1 ppb ranging from 6.1 ppb to a maximum of 2,900 ppb in MW02. Both dissolved and total metals were found in groundwater and exceeds their Class GA AWQSGVs. The dissolved metals detected were not contaminants of concern. Off-site impacts from groundwater are not expected. Soil Vapor, Sub-slab vapor and Ambient Air: One ambient air, five soil vapor samples and eight sub-slab samples were collected during the RI. Eight sub-slab soil vapor points were installed just below the building slabs to a depth of 1 foot bgs, while 5 soil vapor points were installed in the parking lot area to a depth of 5 feet bgs. Multiple VOCs, including petroleum related compounds were detected.</p>					

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

The VOC compound benzene was detected in soil vapor samples ranged from a concentration of 6.26 ug/m3 to a maximum concentration of 212,000 ug/m3, which was located closer to the former underground storage tank(UST). PCE was detected in one soil vapor sample at concentration 1.91 ug/m3. No TCE was detected in soil vapor samples. No chlorinated volatile organic compounds(CVOCs)or benzene were detected in the sub-slab samples. Benzene was detected in the ambient air sample at 2.83 ug/m3. No CVOCs were detected in the ambient air sample. Off-site impacts from soil vapor are not expected since the levels detected decrease substantially as the distance from the UST area in the middle of the site increases.

Program:	BCP					
Program Desc:	Brownfield Cleanup Program					
Assess DOH:	All contaminated soil has been removed from the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates that soil vapor intrusion is not occurring in the on-site occupied building. Sampling identified the potential for soil vapor intrusion to occur in buildings constructed at the site. Therefore, all on-site buildings have been built with mitigation technologies minimizing the potential for soil vapor intrusion to occur. Sampling indicates that this site is not a source of off-site soil vapor contamination.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:						

Location: The site is known as the Former Domsey Fiber Corp. Site, and was comprised of a single tax parcel identified as Block 2135, Lot 1. It has

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

since been subdivided into lots 1-9 with the construction of the initial redevelopment which consists of eight buildings in the northern section (lots 2-9). The site was previously occupied by Domsey Fiber Corp., is located in the Williamsburg section of Brooklyn (Kings County) and is currently comprised of two sections, north and south, which are divided by a public road, South 10th Street, totaling 111,465 square feet (2.56 acres). The site has 237 feet of frontage on South 11th Street, 490 feet on Wythe Avenue, and 498 feet on Kent Avenue. The north sector designated "A" totals 60,448.96 sf (1.38 acres) and is bounded by S. 9th Street to the north, Wythe Avenue to the east, Kent Avenue to the west and a planned road, identified as S. 10th Street, to the south. The south sector designated "B" totals 51,015.63 sf (1.17 acres) and is bounded by a planned road, S. 10th Street, to the north, Wythe Avenue to the east, Kent Avenue to the west and S. 11th Street to the south. Site Features: The subject site was previously developed with three buildings which were demolished prior to remediation. As the initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section. Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A-Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above) and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west.

Assessment:

Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system, and this is being managed under a Site Management Plan.

Site Name: Former Domsey Fiber Corp Site
Site Name (GIS): Former Domsey Fiber Corp Site

Address 2 (GIS):

Site Class Desc: Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc (GIS): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Assess DOH: All contaminated soil has been removed from the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates that soil vapor intrusion is not occurring in the on-site

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

occupied building. Sampling identified the potential for soil vapor intrusion to occur in buildings constructed at the site. Therefore, all on-site buildings have been built with mitigation technologies minimizing the potential for soil vapor intrusion to occur. Sampling indicates that this site is not a source of off-site soil vapor contamination.

Description:

Location: The site is known as the Former Domsey Fiber Corp. Site, and was comprised of a single tax parcel identified as Block 2135, Lot 1. It has since been subdivided into lots 1-9 with the construction of the initial redevelopment which consists of eight buildings in the northern section (lots 2-9). The site was previously occupied by Domsey Fiber Corp., is located in the Williamsburg section of Brooklyn (Kings County) and is currently comprised of two sections, north and south, which are divided by a public road, South 10th Street, totaling 111,465 square feet (2.56 acres). The site has 237 feet of frontage on South 11th Street, 490 feet on Wythe Avenue, and 498 feet on Kent Avenue. The north sector designated "A" totals 60,448.96 sf (1.38 acres) and is bounded by S. 9th Street to the north, Wythe Avenue to the east, Kent Avenue to the west and a planned road, identified as S. 10th Street, to the south. The south sector designated "B" totals 51,015.63 sf (1.17 acres) and is bounded by a planned road, S. 10th Street, to the north, Wythe Avenue to the east, Kent Avenue to the west and S. 11th Street to the south. Site Features: The subject site was previously developed with three buildings which were demolished prior to remediation. As the initial part of the redevelopment, eight seven-story buildings for residential occupancy have been constructed in the north section of the site. Similar redevelopment is planned for the southern section. Properties located north and northwest of the subject property have recently been developed as residential and mixed residential/commercial properties. Properties to the east and west along Wythe Avenue and Kent Avenue are mixed with commercial and residential properties. Properties to the south consist of older commercial/industrial buildings. Current Zoning: In 2002 the subject Site and two additional parcels were rezoned from M3-1 heavy industrial to R7A-Residential as part of the Domsey Rezoning Conditional Negative Declaration (CEQR No. 00DCP008K). Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above) and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west.

Assessment:

Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system, and this is being managed under a Site Management Plan.

Historic Uses: The subject site was utilized primarily for a variety of commercial and industrial uses from the late 1800s to the 1940s. Former on-site commercial/industrial operations included the following; machine shops, a pump works, leather goods manufacturing, pen manufacturing, coffin manufacturing, confectioners, paint and varnish manufacturing companies, a gas appliance manufacturing company, truck and auto repair shops, laboratories, and construction companies. All of the buildings within the footprint were demolished sometime before 1959 (except the two-story and four-story buildings mentioned in the Site Features section, above) and then redeveloped with the warehouse building that currently occupies the site for use by the F and M Schaefer Brewing Co. for warehousing and shipping of beer. The last tenant was Domsey International Trading Co. (used clothing factory), which was reported to have moved in sometime between 1975 and 1986 and left by 2002. Site Geology and Hydrogeology: Subsurface soils at the Site consisted of a silty, non-native fill with bricks, wood and other rubble which ranges in thickness from 2 feet in the eastern part to 12 feet in the western section of the building. Most of this fill was excavated and removed as part of the remedial action. Native fine brown silty-sand is present immediately below the fill material to a depth of approximately 14 feet below grade. The fine silty-sand layer is underlain by a fine to coarse sand and gravel layer to the water table approximately 22 feet below grade. The elevation of the property is approximately 16-25 feet above the National Geodetic Vertical Datum (NGVD). The topography in the immediate area of the property generally slopes downward from east to the west. The depth to groundwater beneath the site is approximately 17 to 23 feet below grade within the native silty-sand. Groundwater flow is generally from the northeast to the southwest with some mounding exhibited in the northwest portion of the Site. The nearest body of water to the subject site is Wallabout Channel (a portion of the East River) located approximately 400 feet to the west.

Assessment:

Nature and Extent of Contamination: Prior to remediation: Soil - Soil and groundwater at the site were impacted by a release(s) of petroleum, PCE and possibly TCE particularly in the northwest corner of the Site. These contaminants were found to be limited to the top 13 to 15 feet of soil within an approximate radius of 35 feet. The release scenario is unknown but likely caused by a spill from waste fuel stored in a drum or above ground tank. Waste PCE was likely discharged to the same container resulting in PCE contaminated waste oil being spilled. The released fluid was of insufficient quantity to migrate through the 20 foot soil column to the water table, terminating at a depth of 13 to 15 feet below ground surface. Groundwater - Groundwater in the location mentioned above also exhibited high SVOC concentrations. This would indicate that this area is not the source of site wide CVOC contamination in groundwater; this was further evaluated as stated in the Elements of the Proposed Remedy section, below. The wide distribution of CVOCs in groundwater may be a function of the limited slope in the water table. Based on the groundwater flow direction and distribution of CVOCs across the Site, a low level CVOC plume appears to be migrating onto the Site from the northeast (upgradient) direction. The results of the subsequent off-site groundwater sampling confirmed that the aforementioned contaminant plume is from an upgradient source. Soil Vapor - CVOCs are present in soil vapor at elevated concentrations in many areas of the Site. CVOCs are either off-gassing from impacted groundwater and soil on-site or are migrating onto the Site from off-site sources. The highest concentration of PCE and TCE in soil vapor occurred in locations along the western and eastern property line in the southern section of the Site. However, this does not correspond with the highest concentrations of these contaminants in groundwater or soil which were encountered in the northeast and northwest corner of the Site respectively. In general, CVOC concentrations in soil vapor were higher in perimeter locations than those within the footprint of the former building. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum related VOCs, CVOCs and metals such as chromium in soil. Remedial action has successfully achieved soil cleanup objectives for a contingent Track 1 unrestricted use. On-site soil vapor contamination will be mitigated by the sub-slab depressurization system, and this is being managed under a Site Management Plan.

Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:					

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Source of Data:

BCP
Brownfield Cleanup Program

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903.

Assessment:

A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination.

"Tank test failure."

DEC Remark:

"04/07/06-Hiralkumar Patel. Spoke with Jim at Protest and he found that tank was leaking. this is 4000 gal AST vaulted in Concrete. haven't heard after tank test. Left message for Chuck Merritt at Merritt Engineering. 04/17/06-Hiralkumar Patel. Left message for Ms. Marian at Merritt Engineering. Received call from Maryann Wagh from Merritt Engineering. she gave me following information about owner of property: Super REalty LLC Mr. Abe Lasker (917) 753-8996. Left message for Chuck at Merritt as Maryann doesn't have latest information on case. Spoke with Abe Lasker at Super Realty. as per Mr. Lasker, somebody did work at site on Thursday to find out leakage. he doesn't know who did it. He is the Manager of property and his address is: Abe Lasker Super Realty LLC PO Box 110525 Brooklyn, NY 11211 Ph. (917) 753-8996 FAX (718) 336-8983 Received call from Chuck (FAX: 718-767-7996) from Merritt Engineering. as per him, Protest did isolation test and found leakage in pipings. Spoke with John at Pro Test. these are two different buildings and as per him, he found leakage in Vent pipe and remote fill. one building has vent pipe only leakage and another has vent pipe and remote fill. he doesn't know which one has what problem, so he will fax me that information with copies of test results. he still waiting to get approval for repair work. 05/11/06-Hiralkumar Patel. Left message for Jim at Protest. Received message from Jim. they haven't heard from owner yet. left message for Mr. Merritt. 06/01/06-Hiralkumar Patel. Spoke at Protest. Jim is out of office and will be back tomorrow. 06/02/06-Hiralkumar Patel. Spoke to John at Protest. He will call back with more information. 07/06/06-Hiralkumar Patel. spoke to Mr. Lasker and asked to send work invoice and test result. Mr. Lasker will call back. spoke to Maria at Protest. she will call back with updates. 08/01/06-Hiralkumar Patel. left message for Mr. Lasker. received call from Mr. Lasker. he will call protest and will call back with updates. 08/29/06-Hiralkumar Patel. spoke with John. they will be going onsite for repair work in next two weeks. if find any contamination, will remove it and if necessary will take endpoint samples. will send lab analyticals by first week of Oct. 2006. 09/25/06-Hiralkumar Patel. spoke with Bob at Protest. he will check and call back. received call from Bob. he found that Protest has done some piping replacement work and he couldn't find test results. he will ask John to call the Department. 11/08/06-Hiralkumar Patel. left message for John at Protest. 11/17/06-Hiralkumar Patel. received letter and tank test result from Ted from Protest. as per Ted, leak was at remote fill above grade. they have relocate the remote fill and replaced some aboveground pipings. no PBS record. spoke with Mr. Lasker. this building has been sold out in Aug. 06 and has new management. Mr. Lasker has new management company's information in office and will fax this information. sent fax to Mr. Lasker requesting new management's information and asked him to contact DEC Falvey. sent email to DEC Falvey with Mr. Lasker's contact number and detail about tank and site. Mr. Falvey will contact new management about tank registration. based on available documents, case closed. 11/20/06-Hiralkumar Patel. received fax from Mr. Lasker. as per Mr. Lasker, tank is registered. new management is: Mag Realty Corp 475 Washington AVenue Brooklyn, NY 11238 Ph. (718) 622-6157 Fax (718) 789-3500 Contact: Mitch Asher spoke with Mr. Asher. he doesn't know about registration. he will check and will do registration if not registered. Mr. Asher asked to send application form."

"04/07/06-Hiralkumar Patel. Spoke with Jim at Protest and he found that tank was leaking. this is 4000 gal AST vaulted in Concrete. haven't heard after tank test. Left message for Chuck Merritt at Merritt Engineering. 04/17/06-Hiralkumar Patel. Left message for Ms. Marian at Merritt Engineering. Received call from Maryann Wagh from Merritt Engineering. she gave me following information about owner of property: Super REAlty LLC Mr. Abe Lasker (917) 753-8996. Left message for Chuck at Merritt as Maryann doesn't have latest information on case. Spoke with Abe Lasker at Super Realty. as per Mr. Lasker, somebody did work at site on Thursday to find out leakage. he doesn't know who did it. He is the Manager of property and his address is: Abe Lasker Super Realty LLC PO Box 110525 Brooklyn, NY 11211 Ph. (917) 753-8996 FAX (718) 336-8983 Received call from Chuck (FAX: 718-767-7996) from Merritt Engineering. as per him, Protest did isolation test and found leakage in pipings. Spoke with John at Pro Test. these are two different buildings and as per him, he found leakage in Vent pipe and remote fill. one building has vent pipe only leakage and another has vent pipe and remote fill. he doesn't know which one has what problem, so he will fax me that information with copies of test results. he still waiting to get approval for repair work. 05/11/06-Hiralkumar Patel. Left message for Jim at Protest. Received message from Jim. they haven't heard from owner yet. left message from Mr. Merritt. 06/02/06-Hiralkumar Patel. Spoke to John at Protest. He will call back with more information. 07/06/06-Hiralkumar Patel. spoke to Mr. Lasker and asked to send work invoice and test result. Mr. Lasker will call back. spoke to Maria at Protest. she will call back with updates. 08/01/06-Hiralkumar Patel. left message for Mr. Lasker. received call from Mr. Lasker. he will call protest and will call back with updates. 08/29/06-Hiralkumar Patel. spoke with John at protest. they will be going onsite for repair work in next two weeks. if find any contamination, will remove it and if necessary will take endpoint samples. will send lab analyticals by first week of Oct. 2006. 09/25/06-Hiralkumar Patel. spoke with Bob at Protest. he will check and call back. received call from Bob. he found that Protest has done some piping replacement work and he couldn't find test results. he will ask John to call the Department. 11/08/06-Hiralkumar Patel. left message for John at Protest. 11/17/06-Hiralkumar Patel. received letter and tank test result from Ted from Protest. as per Ted, leak was at vent pipe. they have replaced leaking vent pipe portion. no PBS record. spoke with Mr. Lasker. this building has been sold out in Aug. 06 and has new management. Mr. Lasker has new management company's information in office and will fax this information. sent fax to Mr. Lasker requesting new management's information and asked him to contact DEC Falvey. sent email to DEC Falvey with Mr. Lasker's contact number and detail about tank and site. Mr. Falvey will contact new management about tank registration. based on available documents, case closed. 11/20/06-Hiralkumar Patel. received fax from Mr. Lasker. as per Mr. Lasker, tank is registered. new management is: Mag Realty Corp 475 Washington AVenue Brooklyn, NY 11238 Ph. (718) 622-6157 Fax (718) 789-3500 Contact: Mitch Asher spoke with Mr. Asher. he doesn't know about registration. he will check and will do registration if not registered. Mr. Asher asked to send application form."

Caller Remark:

Site Class Desc (GIS):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Program:	BCP					
Program Desc:	Brownfield Cleanup Program					
Assess DOH:	People may contact contaminated soils or groundwater if they dig below the surface. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The

Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The Fyn Paint and Lacquer Co., Inc. site is located in an urban area at 230 Kent Avenue in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Alternate addresses for the property are: 230-232 Kent Avenue; 76-80 River Street; and 29-37 North First Street. Site Features: The site consists of a 0.135-acre lot improved with an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contains the heating oil tank, furnace and controls for the sprinkler system. Current Zoning and Land Use: The site land use is currently recorded as Industrial and Manufacturing. Zoning for the property is M3-1, which is designated for areas with heavy industries that generate noise, traffic or pollutants. The on-site building is currently vacant. Past Use of the Site: Past land uses associated with the site include a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbs. The East River is approximate 500 feet to the west of the site boundary.

Assessment:

Nature and Extent of Contamination: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved-phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub-slab vapor - Sub-slab vapor samples were collected beneath the on-site building's basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub-slab vapor extend to the property boundaries.

This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Program:	BCP					
Program Desc:	Brownfield Cleanup Program					
Assess DOH:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:	<p>The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site.</p>					
Assessment:	<p>Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells.</p>

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Assess DOH:

It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Description:

Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Assessment:

Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
Site Name:		Fyn Paint and Lacquer Co., Inc.				
Site Name (GIS):		Fyn Paint and Lacquer Co., Inc.				
Site Class Desc (GIS):		No Further Action at this Time: Sites are given a classification of "N" when: <ul style="list-style-type: none"> a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site. 				
Site Class Desc:		Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.				
Program:		HW				
Program Desc:		State Superfund Program				
Assess DOH:		As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.				
Source of Data:		Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.				
Description:		<p>Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).</p>				
Assessment:		<p>Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). Site Class Desc:

Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Program:

VCP

Program Desc:

Voluntary Cleanup Program

Assess DOH:

It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Assessment:

Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Site Name:			470 Kent Avenue			
Site Name (GIS):			470 Kent Avenue			
Site Class Desc (GIS):			Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.			
Site Class Desc:			Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.			
Program:			BCP			
Program Desc:			Brownfield Cleanup Program			
Assess DOH:						
Source of Data:			Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.			

Description:

Location: The BCP site is located in Brooklyn, Queens County and is at the northwest corner of Kent Avenue and Division Street in the South Williamsburg area of Brooklyn. The western boundary of the site is the Wallabout Channel. Site Features: The site consists of two buildings with a covered area between them and is approximately 3.8 acres in size. The buildings are two and four stories respectively. Current Zoning and Land Use: The site has an approved zoning amendment with Special Permit modifications for residential (R7-3) zoning designation from the current manufacturing designation (M3-1) with a 100 foot commercial (C2-4) overlay. There is currently a lumbeyard in operation on the site. Past Use of the Site: A manufactured gas plant (MGP) operated on the site prior to 1868 and ceased operations between 1893 and 1896. Other past uses include a stove yard, molasses storage, sugar refining, warehouse storage, and a brewing company. Site Geology and Hydrogeology: The surface topography slopes down to the west towards the Wallabout Channel. Based on the U.S. geological Survey (Brooklyn Quadrangle) topographic map, the property lies at an elevation of approximately ten to twenty feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The approximate depth to bedrock is 100 feet from grade surface. Groundwater has been measured at depths ranging from approximately five to fifteen feet below grade and flows in a westerly direction toward Wallabout Channel. Groundwater is likely tidally influenced.

Assessment:

Nature and Extent of Contamination: Based upon investigations from 2004-2014, the primary contaminants of concern for the site are VOCs, SVOCs, metals in soil and groundwater. Some VOCs were also detected in soil vapor as noted below. Soil - VOCs exceeded the unrestricted use SCO (UUSCO) for BTEX and naphthalene. Only xylene and naphthalene exceeded restricted residential SCOs (RRSCOs). Several SVOCs (PAHs) exceeded UUSCOs and RRSCOs, including acenenaphthalene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)and benzo(k) fluoranthene, chrysene, debenz(a,h)anthracene, and ideno(1,2,3-cd)pyrene. Several metals exceeded the UUSCOs, including arsenic, barium, copper, chromium, lead, mercury, nickel and selenium. These metals also exceeded restricted residential SCOs with the exception of copper, chromium nickel and selenium. PCBs were noted in soil up to 49 ppm. The pesticides 4,4' DDE and 4,4'DDT exceeded UUSCOs, but did not exceed RRSCOs. Most of the soil impacts have been attributed to historic fill. Groundwater - Several petroleum-related VOCs were noted to exceed groundwater standards with benzene at 5,700 ug/L, toluene at 300 ug/L, ethylbenzene at 1,300 ug/L, xylenes at 6,000 ug/L, amongst others. Chlorinated solvents were also noted at low levels in groundwater (tetrachloroethene [PCE] at 28 ug/L, trichloroethene at 26 ug/L and vinyl chloide at 14 ug/L). Several of the above-noted PAHs were also noted in groundwater at less than 1 ug/L, but still exceeding groundwater standards. Some SVOCs (2,4 dimethylphenol, 2-methylphenol, phenol, naphthalene, etc) were also noted in groundwater, in some cases at estimated concentrations, marginally exceeding standards and may be related to historic MGP operations on-site (e.g., naphthalene estimated at 47 ug/L vs. a standard of 10 ug/L), phenol up to 15 ug/l vs a standard of 1 ug/L). Most metals exceeded groundwater standards, including mercury at a maximum of 2.9 vs. a standard of 0.7 ug/L. Lead was also found at a concentration of 2,630 ug/L vs. a standard of 25 ug/L. PCBs exceeded standards at a maximum of 0.39 ug/L vs a standard of 0.09 ug/L. The pesticide heptachlor epoxide marginally exceeded exceeded the standard of 0.03 ug/L at a concentration of 0.086 ug/L. Soil Vapor: Methylene chloride (MC) was noted in indoor air over NYSDOH guidance values with concentrations of 114-141 ug/m3 vs. a guidance value of 60 ug/m3. These detections were attributed to stored products Sub-slab MC values ranged from 14,5 to 102 ug/m3. Other chlorinated solvent soil gas detections were not significant (i.e., TCE max. of 20.3 ug/m3, PCE max of 1.58 ug/m3, 1,1,1-TCA at 1.62 ug/m3. Petroleum compounds were also noted in soil gas, but not at significant concentration (e.g., benzene at 1.58 ug/m3).

Site Class Desc: No Further Action at this Time: Sites are given a classification of "N" when:

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
- b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
- c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
- d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc: No Further Action at this Time: Sites are given a classification of "N" when:

Program: HW

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Program Desc: State Superfund Program

Assess DOH:

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.

Assessment:

The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroleum compounds in sediments/ sludge contained in a large concrete structure (known as "the ash pit"); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.

Site Name:	Kent Avenue Station Site		
Site Name (GIS):	Kent Avenue Station Site		
Site Class Desc (GIS):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc: Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Program: VCP
Program Desc: Voluntary Cleanup Program
Assess DOH: The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:
Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site is a currently vacant with no above grade structures. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use, but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site's proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.

Assessment:
Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs in soil, VOCs in groundwater and PCBs in the ash pit sediments. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan

Caller Remark:			

"1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank."

DEC Remark:

"TTF sent to property manager: Mr. Martin Gurshon 233 Broadway - Suite 2704 New York, NY 10279 11/20/09. J.Krimgold reviewed the letter report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed."

Site Name: 149 Kent Avenue
Site Name (GIS): 149 Kent Avenue
Site Class Desc (GIS):

Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc: Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Program: BCP
Program Desc: Brownfield Cleanup Program
Assess DOH: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.
Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Assessment:

Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-

Response action that requires expeditious attention to reduce imminent and substantial dangers to human health, welfare, or the environment or an emergency response required within hours or days to address acute situations involving actual or potential threat to human health, the environment, or real or personal property due to the release of a hazardous substance. Characterization of a removal action as removal, not immediate removal or planned removal, started at the beginning of FY 1987. This code now takes the place of immediate removal (IR) and planned removal (PR).

Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:					

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

 State Superfund Program
 Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.

Assessment:

Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400ug/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.

Site Name (GIS):	Brooklyn Navy Yard 13 Acre Parcel					
Site Class Desc (GIS):	This classification is assigned to a site at which:					

a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or
b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

Site Class Desc: This classification is assigned to a site at which:

a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or
b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

Program: HW

Program Desc: State Superfund Program

Assess DOH: Exposure to site-related contaminants in surface soil has been minimized by an interim remedial measure (IRM) to remove hot spot soil contamination. Since some contaminated soils remain at the site below concrete or backfill, people will not come in to contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due soil vapor intrusion for any future on-site development. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Assessment:

Nature and Extent of Contamination: Soils are contaminated with lead and polycyclic aromatic hydrocarbons (PAHs) throughout the site, though more so at the railroad siding and drum storage areas, where concentrations of lead have been observed to sometimes exceed the Toxicity Characteristic Leaching Procedure (TCLP) limit for characteristically hazardous waste. The lead and PAHs are believed to be due primarily to historic fill having been placed throughout the area in order to render the land usable. Polychlorinated biphenyls (PCBs) have been detected in site soils, primarily near the Building 419 transformer substation, but also at the railroad siding area. The level of PCBs detected outside of the Building 419 area are relatively low, with only a few exceedances of the 1 part per million (PPM) commercial cleanup level. PCBs nearer Building 419 have been found well in excess of the

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

1 PPM commercial cleanup level in near surface soils, and above the 10 PPM level often used for cleanups in deeper soil. The highest concentration detected in soil within this area was 210 PPM. In general, observed concentrations of contaminants in groundwater at the site do not indicate a significant source of groundwater contamination due to waste management at the site. However, there are minor excesses of groundwater standards found sporadically on the parcel, presumably due to historic operations at the site, as well as the presence of historic fill. No source area of contamination relative to these minor groundwater impacts was found during the investigation. Special Resources Impacted/Threatened: The site is largely paved and is not considered an area of significant habitat. Contaminant concentrations found in barge basin sediments are generally consistent with those found throughout the region, and no clear contribution of sediment contamination from the site was determined. Significant Threat: The site was determined to be a significant threat due to the presence and release of hazardous substances.

Description:

Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is operated by the NYC Department of Sanitation. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes a barge basin, the Building 419 transformer substation, two former drum storage areas, and a railroad siding area. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychlorinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.

Program:	HW					
Program Desc:	State Superfund Program					
Assess DOH:						
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					

Description:

Location: The Nassau Gas Works site is located in an urban area in Brooklyn. It is located at the northwest corner of Kent Avenue and Washington Avenue. The original site footprint ran from Kent Avenue, south and west, under the current Wallabout Channel. Site Features: The main site features are a salt storage barn on one side of the site. The rest of the site is flat and used as vehicle parking for the NYC Department of Sanitation. Current Zoning/Use: The site is zoned commercial and is currently used by the NYC Department of Sanitation to park vehicles and store road salt. The surrounding parcels are used for a combination of commercial and multi-unit residential. Past Use of the Site: The site was originally a manufactured gas plant on the far Eastern edge of the Navy Yard. The site is contaminated with MGP tar which is acting as a source of VOCs and SVOCs. This site was originally the second operable unit of the Brooklyn Navy Yard class 2 site (224019A). Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill. Under that are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. Groundwater at the site is roughly 8' below grade and flows radially out from the north corner of the site to the southwest, south, and southeast.

Assessment:

Nature and Extent of Contamination: The main contaminant is MGP tar that has been found at depths exceeding 80 feet below grade and has migrated under the adjacent Wallabout Channel Barge Basin and the eastern end of the Brooklyn Navy Yard. The tar is the source of soil and groundwater contaminants which include VOCs and SVOCs. The soil contamination is found in the same areas as the tar contamination. Contaminants exceed the commercial use SCOs, e.g., benzene was found at a maximum concentration of 1,500 ppm and naphthalene was found at a maximum concentration of 7,600 ppm. The groundwater is contaminated with VOCs. The shallow groundwater contamination extends to the Wallabout Channel. However, the deep groundwater contamination extends almost another 500 feet southwest of the site limit, with toluene found at 37 ppb. There is no evidence of sediment impacts to the Wallabout Channel Barge Basin or the adjacent basins of the Brooklyn Navy Yard. Special Resources Impacted/Threatened: A Fish and Wildlife Resources Impact Analysis was performed and it was determined that no special resources were being threatened or impacted by site related contamination.

Program:	HW		
Program Desc:	State Superfund Program		
Assess DOH:	Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.		
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.		
Description:			

Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the L train subway tunnel underneath North 7th Street.)

Assessment:

Nature and Extent of Contamination: - Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. - Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Describe the Site:		This was formerly the site of a coal-gasification plant, purchased by Brooklyn Union at the turn of the century. One of the by-products produced was a hydrocarbon tar which was temporarily stored on-site. Ownership and use of the property since 1936 is unknown.				
Describe the Threat:						

The soil was possibly contaminated with trace amounts of hydrocarbon tar; impact probably reduced by time and excavation of soils.

Site Class Desc (GIS):	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.					
Program:	HW					
Program Desc:	State Superfund Program					
Assess DOH:	Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in the current building and any future on-site building development and occupancy.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:						

Location: The Peoples Works Manufactured Gas Plant (MGP) site is located on three parcels and is comprised of 2 acres of land located between South 10th and South 11th Streets on the west side of Kent Avenue in Brooklyn, NY, Kings County. Site Features: The site is located along the Wallabout Channel, near the East River. The site slopes gently towards the river. The site is entirely covered by paved areas and buildings with concrete slab

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

floors. The site is enclosed by lockable chain-link fencing and is monitored by security personel. Multi-unit residential housing (condominiums) are present north of the Site; Kent Avenue, multi-unit residential housing, and commercial properties are located east; commercial properties are located south; and the East River and Wallabout Channel are located west of the Site. Current Zoning/Uses: The site is zoned for commercial and industrial use. The current land use onsite is commercial. It is located in a mixed industrial, commercial, and residential area. Past Use of the Site: An 1887 Sanborn map shows a manufactured gas plant (MGP) known as the Peoples Gas Light Company operating on the site. By 1904 the MGP was no longer operating at the site. MGPs such as this converted coal and/or petroleum products to a flammable gas which was used in the surrounding community in much the same way that natural gas is used today. In 1999, LILCO and Brooklyn Union Gas merged to form KeySpan. National Grid acquired KeySpan in 2008 and currently maintains ownership of the site. Site Geology and Hydrogeology: Site is covered with up to 5 feet of fill. This material is typical urban fill, characterized by bricks and gravel. Below the fill materials are sands and silts. Near the river, a wedge of silts and clays was noted, underlain by a peat layer. This lithology reflects palustrine deposits along the East River channel, likely overlain by glacial sands and fill during development of the East River waterfront. Bedrock beneath the Site is the Ravenswood Formation gneiss, and is estimated to be approximately 100 feet bgs.

Assessment:

The primary contaminant of concern for the site is coal tar. Materials such as coal tar are commonly referred to as Non-Aqueous Phase Liquids (NAPL). Coal tar contains both volatile and semi-volatile organic compounds. Specific volatile organic compounds (VOCs) of concern are benzene, toluene, ethylbenzene and xylenes (BTEX). Specific semi-volatile organic compounds of concern are the polycyclic aromatic hydrocarbons (PAHs).

Materials Information

Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:					
	a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;					
	b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;					
	c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or					
	d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.		
Site Class Desc:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.		
Program:	HW		
Program Desc:	State Superfund Program		
Assess DOH:	Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered with pavement and buildings. Volatile organic compounds in the contaminated soil or contamination groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying structures and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for any future on-site redevelopment (OU-2). Environmental sampling indicates that soil vapor intrusion is not a concern for off-site buildings.		
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.		
Description:			

Location: The former Wythe Avenue Station is located in the Williamsburg neighborhood of Brooklyn, New York, Kings County. The site occupies nine parcels, and is bounded by North 13th Street to the north, North 12th Street to the south, Berry Street to the east and Wythe Avenue to the west. These nine parcels are identified as Block 2283, Lots 1, 25, 28, 31, 33, 35, 38, 41 and 43, and comprise approximately 2.3 acres. Site Features: The site is comprised of commercial and industrial properties, and site topography is nearly flat. Lot 1 contains a newly constructed twenty-one story hotel and retail stores, the remaining eight lots comprise several one-story warehouse buildings on the east half of the site which are currently occupied by various commercial and industrial tenants. Current Zoning and Land Use: The area is zoned M1-1 and M1-2, which allow for light industrial and commercial uses. The site is surrounded by mixed use parcels, including light industrial, commercial and residential. The nearest residential area is within 100 feet to the southwest. Past Use of the Site: The site was operated as a Manufactured Gas Plant (MGP) holder station by Brooklyn Union Gas Co. from approximately 1903 to 1965. The station operated solely for gas distribution, and no gas production facilities were present at the site. Over the life of facility, manufactured gas, and possibly natural gas, based on the years of operation, was stored at the facility. In 1965 the holders and all associated MGP buildings were dismantled when the property was sold. Subsequent development of the site included two one-story buildings on the western two parcels, used for manufacturing and warehousing, in 1968. The eastern portion of the site was redeveloped with several warehouse buildings between 1985 and 1991. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of a release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU1) consists of the parcel (Lot 1) owned by Wythe Berry LLC on the western half of the site. Operable unit 2 (OU2) consists of the remaining eight parcels owned by Mihata Corporation on the eastern half of the site. Geology and Hydrogeology: The site is underlain by up to 12 feet of urban fill material, then various layers of gravelly sands, silts and clays. Bedrock is approximately 100 feet below the ground surface. Groundwater is encountered at depths of 7 to 10 feet beneath the site, and generally flows to the north in the western portion of the site, and to the east in the eastern portion of the site.

Assessment:

Prior to Completion of Remediation For OU 1: Lot 1 Parcel Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted, the primary contaminants of concern for OU 1 were BTEX and naphthalene (VOCs), and polycyclic aromatic hydrocarbons (PAHs) (SVOCs). Prior to the IRM, the subsurface soil showed exceedances of the unrestricted soil cleanup objectives (SCOs) for benzene, toluene, ethylbenzene and xylene (BTEX), various PAH constituents, and several metals. Benzene was found as high as 70 parts per million (ppm), compared to an SCO of 0.06 ppm. Toluene was found as high as 550 ppm (0.7 SCO), ethylbenzene as high as 270 ppm (1 ppm SCO), and total xylenes as high as 610 ppm (0.26 ppm SCO). Naphthalene was detected as high as 9,400 ppm, compared to an SCO of 12 ppm. Several PAH compounds were detected as high as 96 ppm, with most having an SCO of 1 ppm. The metal constituents that exceeded the unrestricted SCOs were as follows: lead as high as 1400 ppm (63 ppm SCO); mercury as high as 18 ppm (0.18 ppm SCO); and arsenic as high as 40 ppm (13 ppm SCO). Subsurface soil offsite had minor exceedances of only the unrestricted SCOs. Groundwater - Groundwater was only sampled at one on-site location during the investigation due to existing buildings, and was found to be impacted by SVOCs and lead. Lead was detected at a concentration of 254 ppb (25 ppb standard); and the four PAHs detected (benz(a)anthracene, benz(a)pyrene, benzo(b)fluoranthene, and chrysene) had a maximum concentration of 0.08 ppb, with a standard of 0.002 ppb. Groundwater sampled at two offsite locations was found to be impacted by VOCs and SVOCs. Soil Vapor - There were no soil vapor samples collected at OU-1. Post-remediation (OU1 only): An IRM was performed at OU1 in 2014 that removed approximately 68,000 tons of impacted material to depths ranging from 15 to 30 feet below ground surface. Prior to remediation, the primary contaminants of concern were BTEX and naphthalene (VOCs), and PAHs (SVOCs). Of the 28 confirmatory samples taken, 25 met the site remedial action SCOs for restricted residential use. The three samples which did not meet the SCOs, and which exceeded only for metals and PAHs, were found at depths greater than 15 feet below ground surface. Groundwater samples collected post-IRM indicated a decrease in concentrations of detected constituents.

Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					

Description:

Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue . Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue . Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential property is located approximately 1 block to the south. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River.

Assessment:

The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath a document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.

Describe the Site:		This was formerly the site of a coal-gasification plant, purchased by Brooklyn Union at the turn of the century. One of the by-products produced was a hydrocarbon tar which was temporarily stored on-site. Ownership and use of the property since 1936 is unknown.				
Describe the Threat:						

The soil was possibly contaminated with trace amounts of hydrocarbon tar; impact was probably reduced by time and excavation of soils.

Site Name:	Naval Station-Brooklyn, Transformer Area					
Site Name (GIS):	Naval Station-Brooklyn, Transformer Area					
Site Class Desc (GIS):	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).					
Site Class Desc:	Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).					
Program:	HW					
Program Desc:	State Superfund Program					
Assess DOH:	Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:	<p>Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.</p>					
Assessment:	<p>Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None</p>

Nominated by:						
Describe the Site:		This is a potential site. This site was the location of major US Navy activity for over 180 years. Major functions at the site included shop building and repair, research and development, housing, motion picture services, a naval hospital, a foundry, and administrative offices. All major functions have been moved to Naval Station New York at Staten Island. The property is now abandoned, except for a guard post and several storage areas. The property is to be investigated as part of an Environmental Baseline Survey Phase II to be conducted at a later date. In the future, the property is to be conveyed to the City of New York for use as a homeless shelter.				
Describe the Threat:		Heavy industry took place at this site for almost 200 years. There is the potential for contamination of soils and groundwater with solvents and metals. Onsite buildings are in badly deteriorated condition, with lead and asbestos contamination as the main problem. A Phase II investigation set to begin sometime in the Fall of 1994 will determine if there is onsite groundwater and soil contamination, and further delineate the lead paint and asbestos problem.

Site Class Desc (GIS):	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.

Program:	HW					
Program Desc:	State Superfund Program					
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.					
Source of Data:	Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.					
Description:	At this time, no other site-specific information is available. The project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. More information will be provided as it becomes available.					
Assessment:	To date, only one groundwater sample has been collected as part of the environmental investigation. A site characterization will be conducted in 2017. Groundwater: The site is contaminated with chlorinated volatile organic compounds (VOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). Soil, groundwater and soil vapor samples will be collected as part of the site characterization.

Site Name: K - Skillman St. Station
Site Name (GIS): K - Skillman St. Station
Site Class Desc (GIS): Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Site Class Desc: Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.

Program: HW
Program Desc: State Superfund Program

Assess DOH: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied.

Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7 Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest.

Assessment:

Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals. Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil. Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and naphthalene also indicate the possible presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium,

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations. Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m3; toluene at 96 ug/m3; ethylbenzene at 12 ug/m3; xylenes at 40 ug/m3; 1,2,4-trimethylbenzene at 12 ug/m3; and nonane at 8.4 ug/m3. The non-MGP constituents included PCE at 12,000 ug/m3, TCE at 1,200 ug/m3, and cis-1,2-dichloroethene at 1,500 ug/m3. Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m3. PCE was detected at a concentration of 0.66 ug/m3; TCE at 0.21 ug/m3; and ethanol at 450 ug/m3. The ethanol concentrations in indoor air were approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required.

<p>Site Code: 529340 HW Code: 224239 Site Class: P Site Address: 8 Walworth Street City: Brooklyn ZIP: 11205 County: Kings SWIS: 2401 Region: 2 Town: New York City Acres: 0.090 Record Added: 2016-06-23 12:04:00 Record Update: 2017-02-27 15:14:00 Updated by: MJKOMORO Latitude: 40.698750000 Longitude: -73.955333333 Site Name: Former Techtronics Ecological Corp. Site Name (GIS): Former Techtronics Ecological Corp. Site Class Desc (GIS): Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.</p> <p>Site Class Desc: Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:

Location: The site is located on the west side of Walworth Street in Brooklyn between Flushing Avenue and Park Avenue. The site is bounded to the north, south and west by single story commercial buildings, and to the east by Walworth Street. Site Features: Currently, the site has one-story vacant warehouse building in a commercial and residential setting. The nearest residential uses are located approximately 70 feet away from the site to the northwest along Flushing Avenue. Current Zoning/Use(s): The site is located in an M1-2 (light manufacturing) zoning district and is currently vacant. The current property owner has filed an application with the NYC Department of Buildings proposing to convert the existing one-story building into a four-story mixed use building including a community space. Historical Use(s): The site was utilized in the past by a paint and lacquer manufacturing company (Techtronics Ecological Corporation) from 1962 to the 1990s. During the period from 1981 to 1993 the site was a large quantity generator of hazardous waste under EPA ID no. NYD000824334. Waste codes included ignitable waste, corrosive waste, lead, tetrachloroethylene, xylene, ethylbenzene, and toluene. Site Geology and Hydrogeology: Fill material was identified to a depth of five to seven feet below grade, and native soil thereafter. Groundwater was found at 10 feet below grade. Regional groundwater flow direction in the vicinity of the site is to the west towards the East River.

Assessment:

Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil - Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE (0.87 ppm). Groundwater - Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion of a site characterization.

Site Name:	K - Wythe Ave Station		
Site Name (GIS):	K - Wythe Ave Station		
Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:		

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc: No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

Program Desc: Brownfield Cleanup Program

Assess DOH:
Source of Data:

Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on

the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Nominated by:

Describe the Site: A former coal-gasification plant was purchased by BUG Co. During the operations as a CG plant, a hydrocarbon tar was produced and stored on site until sold for use in roofing or road surfacing. The plant was decommissioned in 1895, all remaining tars were reportedly removed and the facility was razed. Ownership and use of the property since 1895 is unknown.

Describe the Threat:

The soil is possibly contaminated with trace amounts of hydrocarbon tar. (impact probably reduced due to time and excavation of soils) Leachate into groundwater is not a major concern because area groundwater is not a potable supply.

Nominated by:
Describe the Site: In 1989, this site was a vacant lot awaiting construction of low income housing by the New York City Housing Authority(NYCHA). The lot was previously occupied by various apartment houses and light industry such as assembly and fabrication, scrap metal storage, and auto maintenance. According to Brooklyn Buildings Department records, a cleaning fluid mixing and storage facility(Lightning Cleaner Company) utilized a 2500 gallon underground storage tank to store Solvasol #5, a xylene based solvent. The NYCHA attempted to excavate the tank in 1989, but could not locate it. However, during excavation, soil contaminated with xylene and ethylbenzene was found, indicating that Solvasol #5 was either dumped or spilled on the ground in this location.

Describe the Threat:

Leakage of a cleaning solvent from an underground storage tank has caused the surrounding soil to become contaminated with xylene and ethylbenzene (the primary ingredients in Solvasol #5). The extent of contamination in the soil is unknown. It is also unknown whether the contaminants have leached to the groundwater, which is located within a sole source aquifer.

Describe the Site:

NYS Rte. 9A (AKA the West Side Highway in Manhattan) from Battery Place to 59th Street. Most of the corridor has been a roadway for more than 50 years; however hazardous materials from nearby industrial uses may have made their way into the corridor. Areas of concern included noxious odors; discolored soil, water or foundations; leaking pipes, transformers, tanks, or barrels; dead vegetation; apparent industries; and likely locations of underground gasoline tanks. Currently, NYS Dept. of Transportation is performing reconstruction of Route 9A. During the reconstruction, the soil exhibiting hazardous characteristics is intended to be removed by NYSDOT from the site, replaced with clean fill and disposed of in the hazardous waste disposal facility. Contaminated non-hazardous soil will remain in place (except for the park area) based on NYSDOT's demonstration that waste will not cause contravention of water quality standards in Hudson River and all necessary measures will be provided to prevent human exposure at the locations where contamination is in the surface (0-2 ft.) soil.

Describe the Threat:

No impact from the groundwater is expected.

Caller Remark:			

"CALLER STATES THAT THERE WAS A TANK ABANDONMENT 03/19/2004. CALLER HAS TEST RESULTS INDICATING SOIL CONTAMINATION."

DEC Remark:

"Sangesland spoke to Steve Saltzman. A tank was pulled at the site 4 years ago and the report from the consultant said the owner should call into the DEC for a spill number. The owner never read the report and didn't call in a spill. Now the building is being refinanced and the bank read the report and is now asking for a copy of a closure letter. Owner needs to submit the report they have and DEC will determine if additional work is required. 12/3/08-Vought-Left message for Ken Saltzman to return call to DEC with more info. Vought received callback from Steve Saltzman and tank was abandoned in 2004 (possibly fuel oil UST) and SVOCs detected in sample analyticals. Saltzman will return call to Vought with fax number. Consultant that performed work was Hydro Tech. As per Saltzman, CSL sent to: Mr. Jay Weitzman False Alarm Limited 816 Avenue I Brooklyn, NY 11230 Fax: (732) 382-2270 12/3/08-Vought-Received email copy of Hydro Tech report dated 4/8/04. Report entitled Tank Abandonment . Tank was a 3000-gallon #2 fuel oil UST located in the western interior portion of the onsite building. Tank was abandoned in place via inert foam. GPR survey performed and four soil probes were performed. Soil borings samples at 2 foot intervals down to groundwater at 13'bg. No visual or olfactory evidence of petroleum contamination. Four soil samples analyzed via 8260/8270 show no TAGM 4046 Required Soil Cleanup Objective exceedences other than PAH exceedences attributable to fill material. Vought called and left message for Saltzman to return call to DEC with future use of property including possible redevelopment and requirement of installation of vapor barrier and SSDS. 12/4/08-Vought-Received phone message from Steve Saltzman that property is not being sold but is rather being refinanced and as such property use and foundation will not change and hence vapor barrier and SSDS not required. Spill closed and NFA sent to above address. "

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
 - b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
 - c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
 - d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
- Site Class Desc:** No Further Action at this Time: Sites are given a classification of "N" when:

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
- b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Site Name:	Wythe Ave (Berry St.) Station		
Site Name (GIS):	Wythe Ave (Berry St.) Station		
Site Class Desc (GIS):	No Further Action at this Time: Sites are given a classification of "N" when:		

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
 - b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
 - c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
 - d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
- Site Class Desc:** No Further Action at this Time: Sites are given a classification of "N" when:

- a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;
- b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;
- c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or
- d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Assess DOH:
Source of Data: Remedial Sites Data set: This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e. , State Superfund, Brownfield Cleanp, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are include in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State". Remedial GIS Data set: This dataset includes a single point location for a subset of sites which are currently included in one of the Remedial Programs being overseen by the Division of Environmental Remediation.

Description:
 See Site 224069
Assessment:

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Sep 13, 2017

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Sep 13, 2017

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Sep 13, 2017

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Oct 17, 2017

SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Oct 17, 2017

Comprehensive Environmental Response, Compensation and Liability Information System -

CERCLIS

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Oct 17, 2017

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Oct 17, 2017

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Oct 17, 2017

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Oct 17, 2017

RCRA Conditionally Exempt Small Quantity Generators List:

[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Oct 17, 2017

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Oct 17, 2017

Federal Engineering Controls-ECs:

FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs:

FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 8, 2017

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 16, 2017

FEMA Underground Storage Tank Listing:

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: May 31, 2017

LIEN on Property:

SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Dec 11, 2017

State

Registry of Inactive Hazardous Waste Disposal Sites in New York State:

SHWS

State-and tribal- equivalent CERCLIS. State Superfund Program (Inactive Hazardous Waste Disposal Site Remedial Program) (IHWDS) - Oversees the identification, investigation and cleanup of sites where consequential amounts of hazardous waste exist. These sites go through a process of investigation, evaluation, cleanup and monitoring that has several distinct stages. This list is made available by New York State Department of Environmental Conservation's State Superfund Program.

Government Publication Date: Nov 13, 2017

Delisted Registry of Inactive Hazardous Waste Disposal Sites in New York:

DSHW

This database contains a Registry of Inactive Hazardous Waste Disposal sites which have been removed from New York Department of Environmental Conservation's Environmental Site Remediation database.

Government Publication Date: Nov 13, 2017

Vapor Intrusion Legacy Site List:

VAPOR

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion. This list is made available by Department of Environmental Conservation's Vapor Intrusion Legacy Site List. This database is state equivalent CERCLIS.

Government Publication Date: Dec 29, 2017

Solid Waste Facilities and Landfills:

SWF/LF

Solid Waste Information Management System (SWIMS) is an inventory containing active and inactive facilities throughout the state. This list is made available by Department of Environmental Conservation's Solid Waste Information Management System (SWIMS).

Government Publication Date: Dec 08, 2017

Leaking Storage Tanks:

LST

This database contains records of chemical and petroleum spill incidents. They include leaking aboveground storage tanks or leaking underground storage tanks, with incidents of tank test failures, tank failures and tank overflow. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jan 10, 2018

Delisted Leaking Storage Tanks:

DELISTED LST

List of Leaking Storage Tank sites which has been removed from New York Department of Environmental Conservation's Spill Response Program

Government Publication Date: Jan 10, 2018

Underground Storage Tanks- UST-Petroleum Bulk Storage (PBS):

UST

Facilities within the Petroleum Bulk Storage (PBS) that have underground storage tanks. Underground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York Department of Environmental Conservation's Environmental Site Database Search.

Government Publication Date: Oct 25, 2017

The Bulk Storage Program Database - AST:

AST

Facilities within the Petroleum Bulk Storage (PBS) that have aboveground storage tanks. Aboveground petroleum storage facilities with a combined storage capacity over eleven hundred (1,100) gallons. This list is made available by New York State Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Oct 25, 2017

Delisted Storage Tanks:

DELISTED TANKS

List of Storage Tank sites which has been removed from New York Department of Environmental Conservation's Environmental Site Database.

Government Publication Date: Oct 25, 2017

Petroleum Bulk Storage:

TANKS

The Bulk Storage Program Database maintains the registrations of active and inactive bulk storage sites statewide. This database includes Petroleum Bulk Storage (PBS) tanks where no information is available on whether they are ASTs or USTs. This list is made available by Department of Environmental Conservation's Petroleum Bulk Storage (PBS) program.

Government Publication Date: Oct 25, 2017

Chemical Bulk Storage (CBS):

CBS

Facilities that store regulated hazardous substances in underground tanks. "Hazardous substance" means any substance listed as hazardous or acutely hazardous in 6 NYCRR Part 597 or a mixture thereof. This list is made available by Department of Environmental Conservation's Chemical Bulk Storage (CBS) Program.

Government Publication Date: Oct 25, 2017

Major Oil Storage Facilities (MOSF):

MOSF

In 1977, the New York State Legislature passed the "Oil Spill Prevention, Control and Compensation Act" (Article 12 of the Navigation Law). This law regulates all oil terminals and transport vessels operating in the waters of the State which have a storage capacity of 400,000 gallons or more. (Terminals and vessels with a capacity of 400,000 gallons or more are commonly referred to as major oil storage facilities or MOSFs). This list is made available by Department of Environmental Conservation's Major Oil Storage Facility (MOSF) Program.

Government Publication Date: Oct 25, 2017

Registry of Engineering Controls in New York State:

NY ENG

Registry of Engineering Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Nov 13, 2017

Registry of Institutional Controls in New York State:

NY INST

Registry of Institutional Controls in New York State taken from the Environmental Site Remediation Database.

Government Publication Date: Nov 13, 2017

Voluntary Cleanup Agreements:

VCP

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. This list is made available by Department of Environmental Conservation's Voluntary Cleanup Program.

Government Publication Date: Nov 13, 2017

Environmental Restoration Program Listing:

ERP

Environmental Restoration Program - Provides municipalities with financial assistance for site investigation and remediation at eligible brownfield sites. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (Bond Act). Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. This list is made available by Department of Environmental Conservation's Environmental Restoration Program.

Government Publication Date: Nov 13, 2017

Brownfields Site List (Subset of Site Remediation):

BROWNFIELDS

Brownfield Cleanup Program was developed to enhance private-sector cleanups of brownfields and to reduce development pressure on "Greenfields". A Brownfield site is real property, the redevelopment or reuse of which may be complicated by the presence or potential presence of a contaminant. Contaminants include hazardous waste and/or petroleum. This list is made available by Department of Environmental Conservation's Brownfield Cleanup Program.

Government Publication Date: Nov 13, 2017

Tribal

Leaking Underground Storage Tanks (LUSTs) on Tribal/Indian Lands:

INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 2, which includes New York and New Jersey. There are no LUST records in New York at this time.

Government Publication Date: Jan 28, 2016

Underground Storage Tanks (USTs) on Indian Lands:

INDIAN UST

USTs on Tribal/Indian Lands in Region 2, which includes New York and New Jersey.

Government Publication Date: Apr 04, 2016

Delisted Tribal Leaking Storage Tanks:

DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Aug 3, 2017

Delisted Tribal Underground Storage Tanks:

DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Aug 3, 2017

County

Cortland County Storage Tanks:

[CORTLAND TANKS](#)

Listing of aboveground and underground storage tanks in Cortland County. *NYSDEC does not maintain the PBS registration records for this county.

Government Publication Date: Jan 2, 2018

Nassau County Storage Tanks:

[NASSAU TANKS](#)

Listing of aboveground and underground storage tanks in Nassau County. This database does not include tanks of gasoline, diesel and kerosene.

*NYSDEC does not maintain the PBS registration records for this county.

Government Publication Date: Apr 30, 2017

Rockland Storage Tanks:

[ROCKLAND TANKS](#)

Listing of aboveground and underground storage tanks in Rockland County. *NYSDEC does not maintain the PBS registration records for this county.

Government Publication Date: Feb 2, 2017

Suffolk Storage Tanks:

[SUFFOLK TANKS](#)

Listing of aboveground and underground storage tanks in Suffolk County. *NYSDEC does not maintain the PBS registration records for this county.

Government Publication Date: Mar 3, 2015

Westchester Storage Tanks:

[WSTCHST TANKS](#)

Listing of aboveground and underground storage tanks in Westchester County.

*NYSDEC does not maintain the PBS registration records for this county.

Government Publication Date: Oct 19, 2017

Delisted County Records:

[DELISTED COUNTY](#)

Records removed from county databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jan 02, 2018

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Government Publication Date: Sep 06, 2017

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2016

Hazardous Materials Information Reporting System:

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 11, 2017

National Clandestine Drug Labs:

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA of the Act) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands:

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Oct 10, 2017

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Sep 14, 2016

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Sep 14, 2016

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Nov 22, 2016

Material Licensing Tracking System (MLTS):

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Sep 13, 2016

Historic Material Licensing Tracking System (MLTS) sites:

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

[MINES](#)

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jul 31, 2017

Alternative Fueling Stations:

[ALT FUELS](#)

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Nov 07, 2017

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Oct 13, 2017

Registered Pesticide Establishments:

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Polychlorinated Biphenyl (PCB) Notifiers:

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Jul 18, 2017

State

Hazardous Substance Waste Disposal Sites:

[HSWDS](#)

A list of sites included in Hazardous Substance Waste Disposal Site Study reports made available by the New York Department of Environmental Conservation Division of Hazardous Waste Remediation. Provides information regarding the evolving status of hazardous substance waste disposal sites in New York.

Government Publication Date: Oct 24, 2003

Spill Incidents Database:

[NY SPILLS](#)

Spill Incidents Database has records dating back to 1978. This database contains records of chemical and petroleum spill incidents. The DEC Spill Response program receives and compiles reports of hazardous material spills occurring anywhere in New York State. These reports are submitted through the Spill Hotline and other mechanisms, and entered by DEC spill response staff into the state's official data base of Spill Incidents Reports. This list is made available by New York State Department of Environmental Conservation's Spill Response Program.

Government Publication Date: Jan 10, 2018

Registered Dry Cleaner Facilities:

[DRYCLEANERS](#)

The Division of Air Resources of the Department of Environmental Conservation (DEC) tracks all registered dry cleaner facilities.

Government Publication Date: Dec 06, 2017

Hazardous Waste Manifest:

[NY MANIFEST](#)

This data has been compiled from hazardous waste manifest shipments to, from or within New York State. The Bureau of Program Management in the Division of Environmental Remediation is responsible for maintaining hazardous waste manifest records.

Government Publication Date: Apr 30, 2017

Tribal

No Tribal additional environmental record sources available for this State.

County

New York City E-Designated Sites:

[E DESIGNATION](#)

List of sites with an E-Designation - a NYC zoning map designation that indicates the presence of an environmental requirement pertaining to potential hazardous materials contamination, window/wall noise attenuation, or air quality impacts on a particular tax lot. The New York City Office of Environmental Remediation administers the E-Designation Environmental Review Program to avoid significant adverse impacts to human health or the environment through exposure to these hazards.

Government Publication Date: Sep 19, 2017

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: Freedom of Information Act Request

I am conducting Phase I Environmental Site Assessment Research at the following location(s):

Address: 100 South 4th Street
Brooklyn, New York

County: Kings

Please consider this a Freedom of Information Act request, for any information that you may have pertaining to the release of petroleum products and/or hazardous materials, or any other environmental concerns for this location.

I appreciate your time and assistance with regard to this matter. Please feel free to contact me should you have any questions or require any additional information, and if multiple requests are included in this envelope, please provide separate response letters to each one if possible.

Sincerely,

Michael J. Fiscina Jr.
mfiscina@optonline.net

PR3 (July-08)

Dear Sir or Madam

We hereby acknowledge receipt of your Freedom of Information Law (“FOIL”) request. Your request is important to us and will be handled as expeditiously as possible. Please be advised however, that because of the large volume of pending complex FOIL requests handled by the Department of Environmental Protection (“DEP”), and the available staffing, **your response is anticipated to take between 120-150 days from the date of this acknowledgement.**

Please also be advised that for requests that appear to be submitted in connection with a Phase I site assessment of a property, DEP’s response will exclude records relating to asbestos, and discharges into the sewers, as non-scope items, unless the FOIL request explicitly asks for those records. To the extent you require this information, please specify so in the FOIL request. In addition, any information on boiler permits filed with DEP is already publicly available at the following website <https://a826-web01.nyc.gov/DEP.BoilerInformationExt/>. Accordingly, DEP’s response assumes you have directly obtained any relevant records from that website, and will exclude those records, as well.

Sincerely,
Deborah S. Fremder
Records Access Officer

Contact E-Mail: mfiscina@optonline.net

Dear Mike:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 2/1/2018 and given the reference number FOIL #**W031982-020118** for tracking purposes. You may expect the Department's response to your request no later than **3/2/2018**.

Record Requested: **Investigatory, remedial activities, and correspondence related to Spill Number 8602718 (Unk. Mat. Leak, Brooklyn) at 104 South 4th Street, Brooklyn.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

RE:
Rocket Factory Lofts
100 South 4th Street
Borough: Brooklyn Block: 2443 Lot: 13

Per search of the City of NYC Fire Department records, there is an open fire code violation notice on file for this property under Notice of Violation numbers:

11017498Y

11503335N

11564321L

11564633K

11627112K

City of NYC Fire Department considers these violations open and active. The Fire Department does not consider the Notice of Violation to be closed, based on subsequent annual inspections that do not list or note the prior Notice of Violations items on the subsequent inspections and requires a follow up inspection to be requested and re-inspection fees to be paid to address the items listed in the Notice of Violation and close out the notice.

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class	
Class 1 - Immediately Hazardous	HAZ - Hazardous - 1968 Building Code
Class 2 - Major	NON-HAZ - Non-hazardous - 1968 Building Code
Class 3 - Lesser	

Violation Status Descriptions

OPEN - No Compliance Recorded
OPEN - Certificate Pending (Certificate of Correction submitted and under review)
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)
RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)
RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)
RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)
RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)

ECB Hearing Status

CURED/IN-VIO - In Violation/no hearing required
STIPULATION/IN-VIO - No hearing required/in violation
IN VIOLATION - Hearing decision completed
DISMISSED - Hearing decision completed
DEFAULT - Respondent failed to appear at hearing
PUBLICLY-OWNED - No hearing required
PENDING - Awaiting ECB hearing or decision
ADMIT/IN-VIO - In Violation/no hearing required
WRITTEN OFF - Imposed penalty legally uncollectable

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class

Class 1 - Immediately Hazardous
 Class 2 - Major
 Class 3 - Lesser

HAZ - Hazardous - 1968 Building Code
 NON-HAZ - Non-hazardous - 1968 Building Code

Violation Status Descriptions

OPEN - No Compliance Recorded
 OPEN - Certificate Pending (Certificate of Correction submitted and under review)
 OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)
 RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)
 RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)
 RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)
 RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)

ECB Hearing Status

CURED/IN-VIO - In Violation/no hearing required
 STIPULATION/IN-VIO - No hearing required/in violation
 IN VIOLATION - Hearing decision completed
 DISMISSED - Hearing decision completed
 DEFAULT - Respondent failed to appear at hearing
 PUBLICLY-OWNED - No hearing required
 PENDING - Awaiting ECB hearing or decision
 ADMIT/IN-VIO - In Violation/no hearing required
 WRITTEN OFF - Imposed penalty legally uncollectable

Re: **104 South 4th Street – Hazardous Materials “E” Designation**
E-138: Block 2443, Lot 13, Queens CD 1
Greenpoint/Williamsburg Rezoning - CEQR # 04 DCP 003K
OER Project # 13EHAZ489K

Dear Commissioner Gluckman:

The New York City Office of Environmental Remediation (OER) has reviewed the June 2013, Salvati Architects – R.A. certified project description and plans for the above referenced site. These documents were submitted to support the work proposed under the above referenced DOB Job No.: application filed to provide new certificate of occupancy to change 2222.6 sf space use group 16b to use group 6 eating & drinking establishment. As per the applicant, trenching, slab penetrations and old drains in the existing building will be lined with a 20 mil minimum vapor barrier/water proofing liner and sealed with an industry standard commercial grade 50-year rated caulking. In addition, the concrete floor slab will be coated with Laticrete 9235 waterproofing membrane.

Based on review of the submitted documentation, OER has no objection to the applicant completing the work associated with the above-referenced DOB number. **No further review or approval is required by OER.** As the “E” designation requirements remain in place, OER would continue to review any future action(s) at this site.

If you have any questions or comments, please contact me at 212-788-3922.

Sincerely,

Maurizio Bertini, Ph.D.
Section Chief

Municipal Building - 8th Floor
Brooklyn, New York 11201

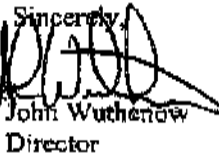

Re: **98-114 South 4th Street - Hazardous Materials "E" Designation**
E-138: Block 2443, Lot 13
DEP No. 06DEPTECH197K

Dear Mr. Mossad:

The New York City Department of Environmental Protection, Bureau of Environmental Planning and Assessment (DEP) has reviewed the November 2006 Indoor Sampling Report conducted by Don Carlo Environmental Services, Inc., on behalf of Southside Associates, LLC for the above-referenced project. Southside Associates, LLC has renovated a seven-story residential building on Block 2443, Lot 13, located between Bedford Avenue and Berry Street, in Greenpoint-Williamsburg section of Brooklyn. The proposal has facilitated the renovation of an approximately 69,720 square feet building consisting of 75 dwelling units. The site is currently occupied by a one-story vacant garage building, a seven-story residential building and a one-story industrial building with a partial cellar. There are no proposals for the development of the one-story vacant garage building and the one-story industrial building with a partial cellar at the site. This review and Notice of no Objection pertained to the seven-story renovated building (Building 100) and not the one-story vacant garage building and the one-story industrial building with a partial cellar located at the site. An "E" designation for hazardous materials (E-138) was placed on the subject parcel as part of the Greenpoint-Williamsburg Rezoning (CEQR # 04DCP003K).

DEP find the Indoor Sampling Report acceptable for the seven-story renovated building. Therefore, DEP has no objection to the issuance of any permits by the New York City Department of Buildings that relate to this development action. However, the 'B' designation requirements should remain in place for any future development or redevelopment that would include soil disturbance.

Future correspondence and submittal should include the following tracking number 06DEPTECH197K. If you have any questions or comments, please contact Maurice Winter at (718) 595-4514.

Sincerely,

John Wuthenow
Director
Site Assessment

Interim Remedial Measure Proposed; Public Comment Period Announced

The New York State Department of Environmental Conservation (NYSDEC) is proposing an expedited cleanup for the Williamsburg Bridgeview Apartments site ("site") located at 105 S. 5th Street, Brooklyn, Kings County. Please see the map for the site location. Documents related to the cleanup of this site can be found at the location(s) identified below under "Where to Find Information." NYSDEC is conducting a public comment period because this Interim Remedial Measure (IRM) is likely to represent a significant part of the cleanup for this site.

How to Comment

NYSDEC is accepting written comments about the proposed IRM work plan for 30 days, from September 20, 2016 through October 20, 2016. The proposed plan is available for review at the location(s) identified below under "Where to Find Information." Please submit comments to the NYSDEC project manager listed under Project Related Questions in the "Who to Contact" area below.

Draft Interim Remedial Measure Work Plan

An IRM is a cleanup activity that may be performed when a source of contamination or exposure pathway (the way in which a person may contact contamination) can be effectively addressed without extensive investigation and evaluation.

The draft IRM work plan describes the proposed cleanup activities that include:

The proposed Interim Remedial Measure for the site is the excavation of soils from the site to remove historic fill materials from the surficial soils. Only the top two feet of soil need to be removed to meet the Restricted Residential Soil Cleanup Objectives (RRSCO) for the site. The Volunteer will remove the required amount of soil for cleanup of the site plus additional soil to prepare for construction of the building.

Summary of the Investigation

The investigation of the site included sampling soils at multiple depths and groundwater for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), metals, and Polychlorinated Biphenyl (PCBs)/Pesticides. In addition soil vapor was also collected and analyzed for VOCs.

The groundwater investigation showed exceedances of the standard (5 parts per billion (ppb)) for the VOCs - Tetrachloroethene (up to 64.7 ppb) and Trichloroethene (up to 9.2 ppb), and the metals, iron, manganese, selenium, and sodium. Iron and sodium are naturally occurring metals. The exceedance of selenium (12ppb) is only slightly above the standard (10ppb). The exceedances of manganese (maximum 952 ppb) moderately exceed the standard (300 ppb).

The soil investigation showed exceedances of the restricted residential SCO only in the top two feet of soil. Exceedances were for the SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene only slightly exceeding their respective standards.

Soil vapor has no standards or guidance values to compare by. However, elevated levels of Tetrachloroethene and Trichloroethene were observed and could be an indication of the potential for soil vapor intrusion in buildings built on the site or in the area.

Next Steps

NYSDEC will consider public comments, revise the plan as necessary, and approve the IRM work plan in consultation with New York State Department of Health (NYSDOH). The approved work plan will be made available to the public (see “Where to Find Information” below). After the work plan is approved, the activities detailed in the work plan will be implemented. Upon completion of the work, a Construction Completion Report will be prepared that documents the activities that were performed.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Background

Location:

The project site is located at 99-101 South 5th Street aka 337 Berry Street (Block 2443; Lot 6 – formerly known as Lots 6, 37 & 41), Williamsburg, Brooklyn; an urban area within New York City and within Brooklyn Community Board 1. The site is approximately 15,870 square feet.

Site Features:

The main site feature was an abandoned warehouse that was owned by the City of New York’s Landmark Preservation Commission (“LPC”) and used as a Salvage Warehouse - demolished as of August 2016. This property is specifically located at 337 Berry Street (the former lot 6). Lots 37 and 41 are vacant.

Current Zoning and Land Use:

This site is currently inactive and is zoned M1-2/R6, Special Mixed Use District (MX-8). The surrounding parcels are currently used as residential condominiums and/or apartment buildings and light ground floor commercial spaces.

Past Use of the Site:

An architectural salvage program was started at the warehouse on the site in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally housed with two story residential buildings from ca. 1868. All three former lots (6, 37 & 41) were listed as an E Designation Site in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) where

an auto body shop was suspected to exist at some point, specifically on Lot 41. For information on NYC's E-Designation program, please visit:

<http://www.nyc.gov/html/oer/html/e-designation/e-designation.shtml> .

Site Geology and Hydrogeology:

Fill material exists at depths between 0-5 feet below ground surface (bgs). Soils consist of well-graded sand (ranging from fine to coarse)with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's website at:

<http://www.dec.ny.gov/cfm/external/derexternal/haz/details.cfm?pageid=3&progno=C224233>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses include recreation, housing, business or other uses.

A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit: <http://www.dec.ny.gov/chemical/8450.html>

Site Geology and Hydrogeology: Fill material exists at depths between 0-5 feet below ground surface (bgs). Soils consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type

tetrachloroethene (PCE)

trichloroethene (TCE)

indeno(1,2,3-CD)pyrene

benzo(a)anthracene

xylene (mixed)

mercury

Site Environmental Assessment

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil Vapor was analyzed for volatile organic compounds. Soil - Mercury, benzo(a)anthracene and related poly aromatic hydrocarbons (PAHs), and indeno(1,2,3-cd)pyrene are found in shallow soil (0-2 ft below ground surface [bgs]). Xylene is found in deeper soil, at a petroleum spill location. Concentrations of benzo(a)anthracene found on-site (ranging from ND to 1.39ppm) slightly exceed the restricted residential soil cleanup objective (SCO) (1 ppm). Concentrations of mercury found on-site (ND to 0.97 ppm) slightly exceed the restricted residential soil cleanup objectives (0.81 ppm). This contamination

is related to the presence of historic fill on the Site. Data does not indicate any off-site impacts in soil related to this site. The presence of xylene in deeper soil is due to a spill during a tank closure with a concentration of 1.92ppm which exceeds the unrestricted SCO (0.26ppm), but not the restricted residential SCO (100ppm). Groundwater - PCE and TCE are found in groundwater throughout the site, moderately exceeding groundwater standards with a maximum concentration of 71.4 ppb PCE and 27.2 ppb TCE (compared to the groundwater standard of 5 ppb for PCE and TCE). **Groundwater contamination appears to be emanating from site no. V00094 a former glue factory with documented PCE soil contamination located approximately 50 ft to the east.** Data does not indicate any off-site impacts in groundwater of which this Site is the source. Soil Vapor - PCE, TCE, and TCA, were detected in soil vapor at elevated concentrations, up to 3510 ug/m³ of TCE. Data does not indicate any off-site impacts in soil vapor related to this site. Sub-slab vapor and indoor air - These media were tested in two immediately adjacent off-site properties. Results showed that the PCE and TCE were both elevated in the sub-slab vapor of both properties, but only one was recommended for mitigation due to the concentrations of TCE in the sub-slab vapor. The indoor air was non-detect for both properties for TCE and relatively low for both properties for PCE.

Site Health Assessment

The site is completely fenced, which restricts public access. However persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via soil vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Actions are needed to address soil vapor intrusion off-site.

Date Spill Closed: 03/12/2013

"Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the [Regional Office](#) where the incident occurred.

1.0 INTRODUCTION

1.1 Purpose

This Final Workplan incorporates recommendations made by the New York State Department of Environmental Conservation's (NYSDEC) letters dated April 25, 1997 and August 22, 1997 and a telephone conversation with the NYSDEC on May 7, 1997 and supersedes the previous August 5, 1997 Revised Workplan. The purpose of this Final Workplan is to provide guidance on the manner in which site closure services are provided to address known environmental conditions (see Section 1.4, below) on the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York (hereafter referred to as the "Site"). It is the expressed intent of this Final Workplan to provide specific actions which will adequately address each identified environmental condition such that, upon completion of all activities, no adverse health impacts will result from future site reuse (see Section 1.3, below).

This Workplan will be considered FINAL when written approval is received from the NYSDEC.

1.2 Site Location and Description

The subject property as defined in this Final Workplan is the rectangularly shaped property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York (see the Site Location Map, Page 2). The subject property is comprised of a single tax lot (Tax Identification Number: Block 2443, Lot 13).

Occupying almost the entirety of the subject property are three structures: a central seven-story structure (herein referred to as Building #2) flanked by a one-story structure to the east (herein referred to as Building #1) and a one-story structure to the west (herein referred to as Building #3).

All three buildings were constructed in the early to mid 1900s and are currently in varying stages of deterioration. The on-site structures were formerly occupied with various manufacturing uses including an electroplating laboratory and a former glue/adhesives factory. Immediately south of the multi-story structure is a small paved courtyard area. All buildings are shown on the Field Work Map on Page 8 of this Final Workplan.

Based on available information all three of the on-site structures (the seven-story and the two one-story structures) are connected to the Borough of Brooklyn central water and sewer systems.

1.3 Proposed Future Site Re-Use

The Site is proposed for re-use as an educational facility. It is anticipated that Building #2 will be renovated while Buildings #1 and #3 will be demolished. Current plans show a structure being constructed in the footprint of Building #3.

1.4 Known Environmental Conditions of Concern

The Site has been the subject of several environmental investigations which have accurately and comprehensively documented on-site environmental conditions. A summary of the environmental conditions known to exist on the Site are provided below:

1. Laboratory analyses documented the presence of volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons (PAHs) in shallow soils below building #3 at levels exceeding NYSDEC guidance values (see summary data Tables 1 and 2 on the following pages). Soil sample data confirm the need for remedial action of soils beneath building #3, with particular concern for soils at the 0-2 foot depth.

Based on the non-detectable levels of PAHs documented in soils from between 15 and 17 feet below grade in boring B-1 extended within Building #3 (likely to be either at or below the invert of the two on-site USTs), it is unlikely that the elevated levels of PAHs identified in the soils are the result of a release of product from either of the two on-site USTs.

Laboratory data generated to date support the conclusion that the vertical extent of significant contamination at levels warranting remediation does not exceed 4 feet below surface grade under Building #3. The lateral extent of contamination appears to be limited to surface soils present within Building #3 as the data obtained from borings extended beneath the concrete floor of the basement of Building #2 suggest that the subgrade soils have not been adversely impacted.

The estimated maximum volume of on-site contaminated soil that requires remediation is 500 cubic yards.

The documented levels of contaminants indicate that remediation and special handling of subsurface soils, other than the surface soils directly beneath the floor of Building #3 (6" to approximately 3' 6" below grade), is not warranted. No significant contamination is present under Building #2.

Table 2: Laboratory Analyses of Soil Samples in Basement of Building #2
 (Results in bold exceed designated action levels. All results measured in µg/kg-ppb.)

Compound	Action Level ^{1,2}	B-6 6"-2'6"	B-7 6"-2'6"	B-8 6"-2'6"	B-9 4'-6'

 4. J = Estimated value based on achievable detection limits

2. Three groundwater monitoring wells have been installed on the site; a fourth well, identified as MW-2, has been determined not to be an adequate well for groundwater quality or groundwater elevation monitoring purposes as refusal occurred at approximately 16 feet below grade (a depth above the likely groundwater elevation). Groundwater quality sampling was conducted in June and July 1997 for the purpose of documenting groundwater quality on and near the Site, consistent with requirements set forth by the NYSDEC. Samples collected in June 1997 were for initial screening purposes only and were not collected in accordance with NYSDEC protocols; however, the samples were submitted to a NYS Department of Health ELAP laboratory (Hampton-Clarke, Inc. Veritech Laboratory, ELAP #11408) for analysis. In July 1997, the three wells (MW-1, MW-3 and MW-4) were properly developed and purged of standing water, groundwater elevation measurements were taken, field screening data and observations were recorded, and groundwater samples were collected and shipped to a NYS Department of Health ELAP laboratory (Chemtech, ELAP #10624). These samples were analyzed in accordance with NYSDEC ASP protocols.

Laboratory data for the initial round of groundwater sampling is provided in Attachment A-2 of this Final Workplan and laboratory data for the second round of groundwater sampling performed in accordance with ASP protocols is provided in Attachment A-3 of this Final Workplan. All groundwater results are summarized in Table 3, below. Data document the presence of low levels of a wide array of volatile organic compounds, including compounds previously identified in on-site soils. Levels do not indicate significant groundwater contamination and do not support the conclusion that on-site groundwater should be considered a source of off-site contamination at levels warranting remediation. These data support the conclusion that remedial actions specifically directed to remediate groundwater and reduce concentrations of the compounds identified in these sampling rounds is not warranted.

Groundwater has been determined from surveyed well elevation data and depth-to-water measurement, to be moving in a northeasterly direction. Groundwater is present between 23 and 25 feet below surface elevation at the site; groundwater elevations vary between 26.69 feet at MW-4, 26.85 feet at MW-1, and 27.07 feet at MW-3 (see the Field Work Map, Page 8, for well locations). The slight variation in groundwater elevations is indicative of areas of low groundwater flow rates.

3. Building #3 contains multiple open drums and containers of unknown products and materials that may require special handling prior to their disposal. Present on the second floor of Building #2 are less than ten chemical containers of varying capacities containing unknown products; no drums are present in the basement of Building #2.

FINAL WORKPLAN FOR SITE CLOSURE ACTIVITIES
PB96146.40

DECEMBER 3, 1997
PAGE 7 OF 22

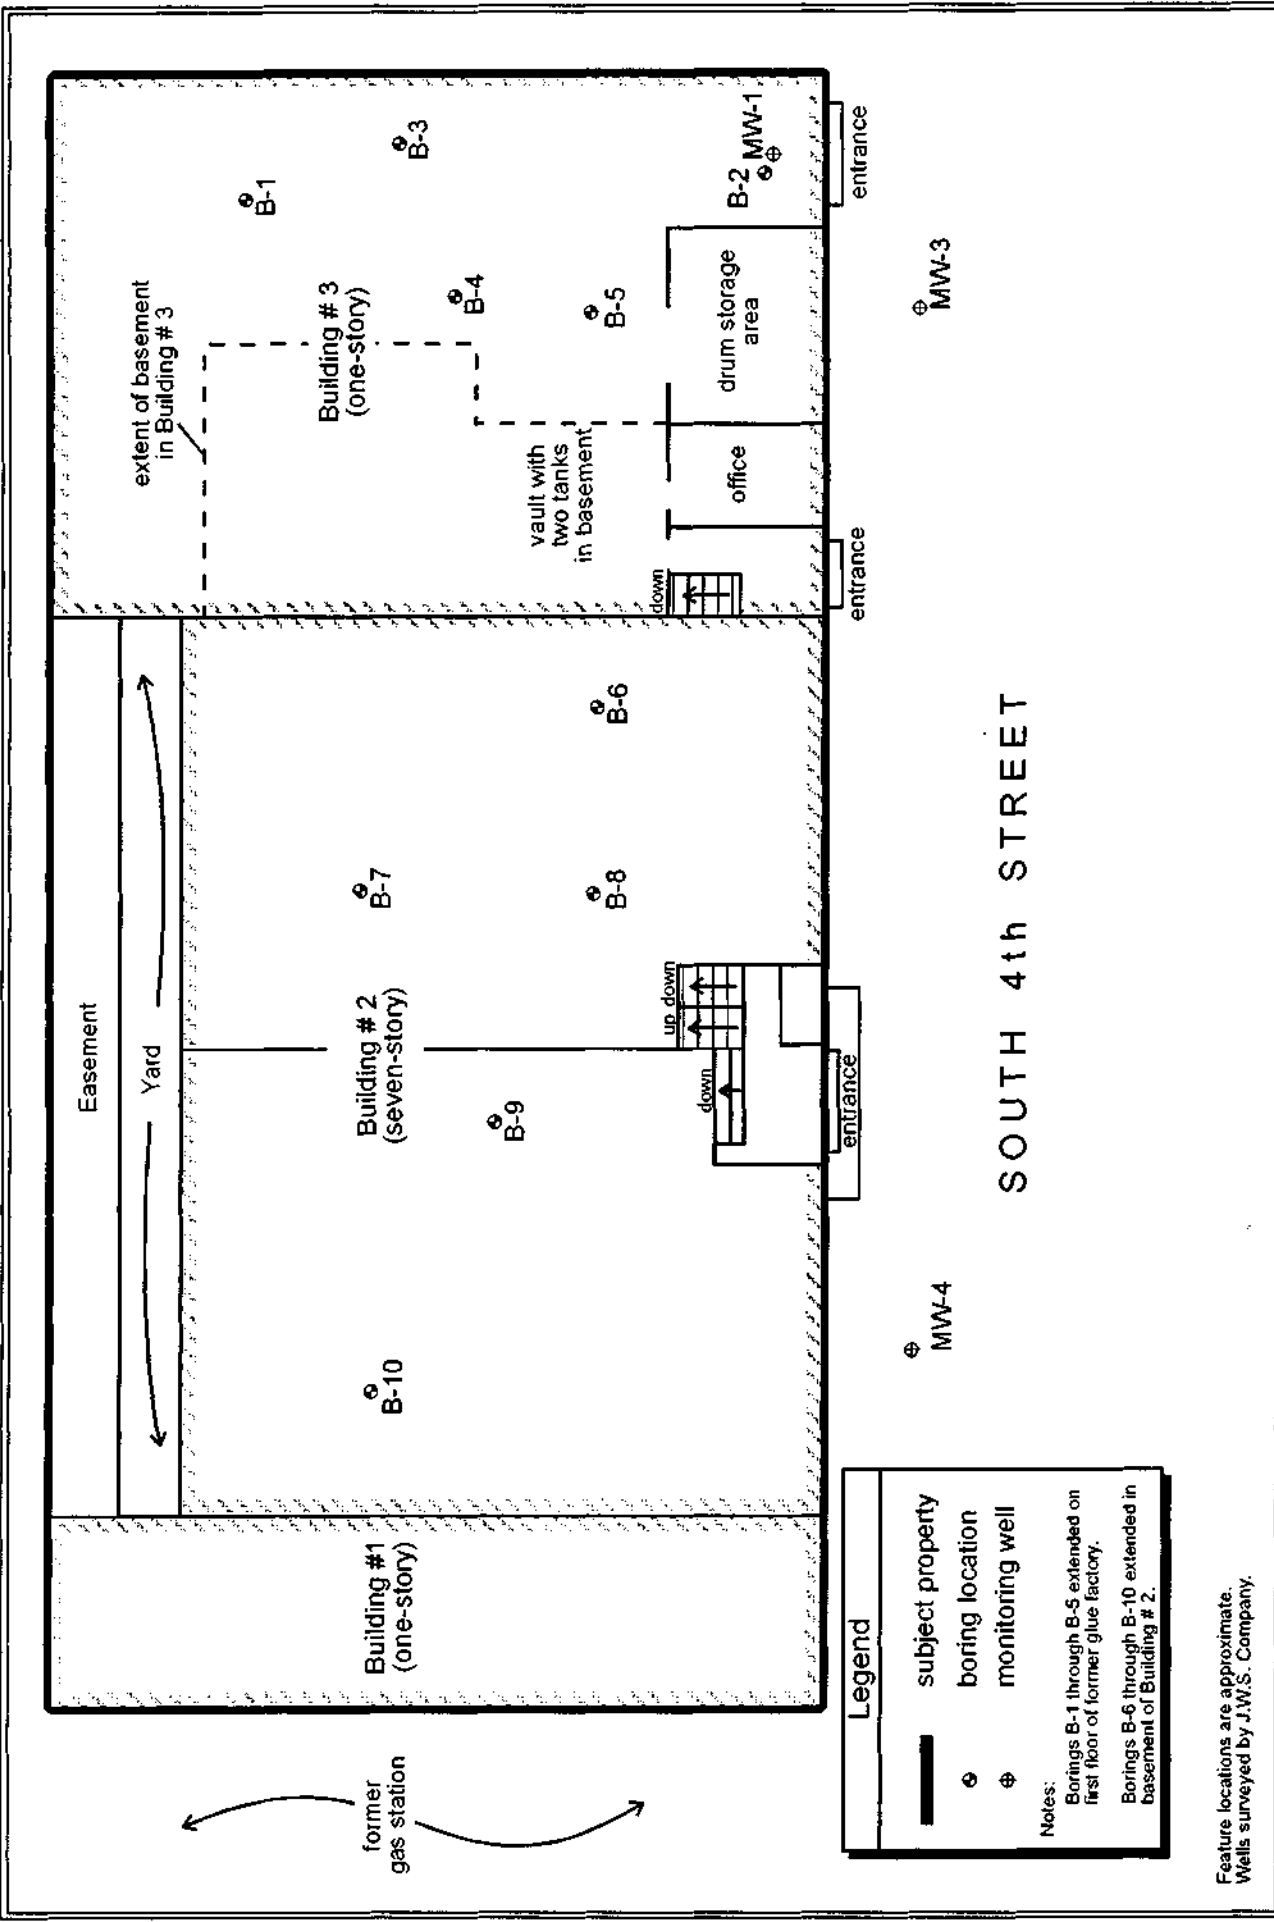

A preliminary estimate of containers in Building #3 and the second floor of Building #2 is between 35 and 40 drums; a more comprehensive assessment was not conducted at this time. A majority of the floor in Building #3 is covered with a variety of products associated with the operation of the building as a glue factory; these products may require special handling.

4. Two (2) 10,000-gallon vaulted tanks are located within a vaulted area beneath Building #3 and two (2) 275-gallon aboveground storage tanks (ASTs) are located in Building #3. Observations indicate that the two 10,000-gallon tanks are no longer in use and may have been previously closed; the two 275-gallon ASTs are also not in use. Borings conducted on the Site do not document any evidence of petroleum release from the two vaulted tanks.
5. Observations made during the site inspections indicate the presence of large quantities of debris within all three on-site structures. Among the materials noted by this office were building materials, wood, metal items, automotive parts, laboratory equipment (second floor of Building #2), mechanical equipment, office equipment and storage containers.

Table 3: Laboratory Analyses of Groundwater Samples
All results measured in micrograms per liter ($\mu\text{g/l}$)

Compound		Sample Location ¹					
		MW-1		MW-3		MW-4	
		Date of Collection

2.0 PROPOSED SITE CLOSURE SERVICES

This section of the Final Workplan details activities which are proposed to be conducted to address the known environmental conditions on the Site, as identified in Section 1.4, above. All work proposed herein will be conducted according to a Health and Safety Plan, to be prepared prior to the initiation of fieldwork. All proposed work will be performed in "Level D" personal protective equipment; however, field personnel (including subcontractors) will be prepared to continue services wearing more protective levels of equipment, should field conditions warrant.

For the purpose of the work detailed in these specifications, a qualified environmental consultant will be retained to oversee the provision of these specified services; this individual or firm is hereafter referred to as the On-Site Coordinator ("OSC"). For the purpose of the work detailed in these specifications, the "Client" is defined as El Puente which will contract with the environmental consultant to provide the services detailed below.

2.1 Site Preparation Services

2.1.1 Qualifications of On-site Remedial Personnel

Prior to the initiation of work, the identities and qualifications of the project managers and associated staff will be supplied to the NYSDEC. All on-site staff will be appropriately trained in accordance with Occupational Safety and Health Administration (OSHA) practices (29 CFR, Part 1910). The NYSDEC will also be notified of any changes in the senior on-site personnel.

Prior to the initiation of field work, a Site Health and Safety Officer will be designated by the Client and a complete Health and Safety Plan will be prepared. Resumes of specific professionals to be used by the Client will be provided to the NYSDEC. At this time, it is anticipated that Project Management and Site Safety will be provided by Paul H. Ciminello, Ronald Bielinski, P.E., Katherine J. Beinkafner, Ph.D., and Catherine L. Monian. Żywia Wojnar will serve as the Quality Assurance Officer for this project. Resumes of Project Management and Site Safety personnel are included in Attachment B.

2.1.2 Health and Safety Plan

A site-specific Health and Safety Plan is included in the Final Workplan as Attachment C. This Health and Safety Plan will be reviewed with the appropriate subcontractors prior to the initiation of field work.

2.1.3 Quality Assurance / Quality Control

EQUIPMENT

Prior to the initiation of field work, all field equipment to be used during the work will be properly decontaminated in accordance with NYSDEC guidelines and all field instruments will be properly calibrated in accordance with procedures set forth by the equipment manufacturer(s). Unless otherwise specified, a Thermal Instruments 580B photo-ionization detector (PID) will be used for site-screening of organic vapors. The 580B PID is calibrated to read parts per million calibration gas equivalents (ppm-cge) of isobutylene. Instrument calibration will be performed no more than 72 hours prior to the commencement of field work and a written record of calibration results will be provided in the project files.

COMMUNITY AIR MONITORING PLAN

A Community Air Monitoring Plan will be initiated during the field work outlined below, consistent with the Community Air Monitoring Plan included as Attachment D to this Final Workplan. The implementation of this Air Monitoring Plan will document the presence or absence of specific compounds in the air surrounding the work zone and will provide guidance on the need for implementing more stringent dust and emission controls based on air quality data.

QUALITY ASSURANCE PROJECT PLAN

A site specific Quality Assurance Project Plan ("QAPP") will be utilized during the course of the field work specified in this Final Workplan. The QAPP presents the procedures for completing the specific tasks detailed in Section 2.2, below. The QAPP incorporates appropriate field and laboratory methods to be utilized during the duration of the work. A copy of this QAPP is provided in Attachment E of this Final Workplan.

2.1.4 Laboratory Quality Control

All soil samples will be collected in accordance with applicable NYSDEC guidelines and all samples will be analyzed by a New York State Department of Health (NYSDOH) ELAP CLP certified laboratory using applicable NYSDEC Analytical Services Protocol (ASP) Methods. The reporting level for all analyzed soil and groundwater samples will be NYSDEC ASP Category B deliverables. All data will be evaluated in accordance with protocols outlined in the attached Division of Environmental Remediation Data Usability Summary Report ("DUSR"). This DUSR is provided as Attachment F to this Final Workplan.

Dedicated, sterile glassware for sample collection will be provided by the laboratory for this project. One trip blank and one field blank will be supplied for the laboratory for each day of field work involving sample collection. Chain of custody forms will be completed by field personnel involved in sample collection and completed custody forms will be provided in the final project Report (see Section 2.2.7).

Summarized below in Table 4 is the number of samples that are anticipated to be collected during this project, categorized by sample location and by analyte group. The number of samples are, at this time, estimates; field conditions may necessitate a greater or fewer number of samples being collected. A final sample chart will be included in all future reports issued to the NYSDEC.

Table 4: Summary of Anticipated Soil Samples

Sample Location		Number of Samples to be Collected (Anticipated)			
		VOCs (ASP 95-1)	SVOCs (ASP 95-2)	Metals (CLP-M)	Other
Building #3	Waste Characterization	2-4	2-4	2-4	PCBs, Pesticides, Cn, pH, Flashpoint, TCLP
	Shallow (0-0.5')	6	6	0	Depends on screening results
	Deep (3'-3.5')	6	6	0	Depends on screening results
Building #1	Shallow (0-0.5')	5	5	5	Depends on screening results
	Deep (3'-3.5')	5	5	5	Depends on screening results
	Stockpiled Soil	2-4	2-4	2-4	Depends on volume of soil
Tank Removal	Sidewalls	0	4-8	0	Depends on screening results
	Base	2	2	0	Depends on screening results
	Stockpiled Soil	2-4	2-4	2-4	Depends on screening results
Total # of Samples		30-36	34-44	16-22	
Notes: 1. All soil samples will be analyzed using NYSDEC ASP Methods 95-1 and 95-2. 2. The reporting level for all samples will be NYSDEC ASP Category B deliverables.					

All debris that is generated during demolition activities for off-site disposal will also be analyzed via the full TCLP (Method 1311) TC list. The sampling of this demolition debris will be performed in accordance with methods established in Appendix 19 of 6 NYCRR Part 371. The number of samples that will be collected as part of the disposal of the demolition debris will be sufficient to accurately characterize the materials for deposition purposes.

2.1.5 Notifications

The NYSDEC will be notified in writing at least two weeks prior to the initiation of any of the on-site work and during the course of the field work if deemed necessary by on-site personnel. Changes to field work scheduling will be provided via facsimile transmission. All applicable local agencies will also be notified prior to the initiation of site work.

2.1.6 Pre-Demolition Environmental Services

Asbestos-containing materials (ACMs) in the form of floor tile, pipe insulation, roofing materials, and flashing have been documented to be present within Building #3. ACMs in the form of tank insulation, boiler insulation, exhaust breaching, and contaminated debris have been documented to be present in the basement of Building #3. Prior to demolition, all on-site ACMs will be removed from the on-site structure by a New York City licensed asbestos abatement contractor in accordance with applicable New York State Department of Labor and New York City Building Department guidelines. Appropriate precautions will be taken to control the generation of any fugitive dust during asbestos removal activities. Proper notifications to applicable agencies will be made prior to the abatement of any on-site ACMs.

A lead-based paint survey was performed on the on-site structures that identified an estimated 8,000 square feet of surface area within the buildings to be covered with lead-based paint. All surfaces currently covered with lead-based paint will be abated in one of two ways: wet process removal of paint and/or complete encapsulation, consistent with USHUD guidelines; or removal as demolition debris after proper testing, consistent with NYSDEC waste disposal regulations. Removal as demolition debris requires that a sufficient number of samples of building materials slated for demolition be collected and analyzed for leachable lead (TCLP) in accordance with Appendix 19 of 6 NYCRR Part 371. Data documenting leachable levels of lead below 5.0 mg/l will be considered satisfactory documentation that the debris can be managed as a non-hazardous solid waste.

At this time it is anticipated that lead-based paint located within Building #2 will be abated using wet process removal procedures and lead-based paint located within Buildings #1 and #3 will be removed as demolition debris subsequent to appropriate testing.

As part of the Community Air Monitoring Plan (see Attachment D of this Workplan), air quality monitoring for total dust will occur during demolition activities. Dust suppressant strategies including the use of misting and/or plastic covering of the demolition area will be implemented to ensure that migration of dust off-site is prevented during the course of site demolition.

2.2 Proposed Closure Services

This section of the Final Workplan provides detailed information on six specific tasks to be conducted at the subject property:

1. Proper removal of on-site wastes currently stored in drums and other receptacles on the Site (Section 2.2.1).
2. Removal of previously documented contaminated soil under the slab of Building #3 (Section 2.2.2).
3. Closure of the on-site 10,000-gallon fuel tanks and the 275-gallon fuel tanks currently located in Building #3 (Section 2.2.3).
4. Installation of a vapor barrier under, as proposed, construction within the footprint of Building #3 (Section 2.2.4)
5. Construction monitoring for possible contaminated soil under Building #1 (Section 2.2.5)
6. Groundwater monitoring well closure (Section 2.2.6)
7. Indoor air quality sampling after the completion of all site remediation services and the construction of the new building within the footprint of current Building #3 (Section 2.2.7)
8. Preparation and submission of appropriate documentation (including groundwater sample results, if warranted) to provide resolution to the outstanding "Active" NYSDEC spill file.

2.2.1 Removal of On-Site Wastes

Prior to any demolition services, all drums and liquid chemical storage containers present in Building #3 and on the second floor of Building #2 as well as any liquids not currently in containers will be inventoried to determine if any of the stored material can be returned to manufacturers and for waste

disposal compatibility assessment purposes. Upon completion of the inventory, a determination will be made regarding final disposition of all stored liquids. The sampling of any drummed or non-containerized wastes will be performed in accordance with methods established in Appendix 19 of 6 NYCRR Part 371. Any wastes that are determined to meet the definition of a D003 hazardous waste will be managed and disposed of in accordance with the "Land Disposal Restrictions" specified in 40 CFR Part 268.48.

All drums and containers determined to be unstable or in containers of questionable structural integrity will be overpacked. Similarly, wastes determined to be unstable will be chemically stabilized consistent with applicable procedures. All wastes, whether liquid or not, will be properly labeled and removed from the site by a licensed hauler. Manifests will be maintained by the OSC for inclusion in the Final Report (see Section 2.2.8, below).

Subsequent to the removal of all debris in the basement area of Building #2 (no drums containing hazardous materials are present in the basement of Building #2), a thorough search of the floor area will be conducted for the presence of any floor drains. In the event that drains are located, these drains will be opened and any accumulated material inside will be sampled for characterization purposes. The direction of the drain will be determined through physical probing and, if appropriate, video documentation. The floor of the basement will be breached along the extent of the drain and discharge lines and soil samples will be collected, with particular concern for volatile organic compounds (VOCs) and reactive compounds. Analytical results will determine the need for and extent of subsurface remediation. Current data (see laboratory results of B-8 and B-9) do not indicate the need for remedial actions of the soils under Building #2.

At a minimum, any identified floor drains will be cleaned of residue and foreign material and will be properly sealed.

2.2.2 Removal of Contaminated Soil under the Slab of Building #3

The following activities will be conducted to properly remove known VOC- and PAH-contaminated soils directly under the concrete slab of Building #3. Activities described herein will be initiated immediately upon removal of the overlying building and the slab.

Prior to soil excavation, the entire area beneath the removed slab in Building #3 will be monitored by a qualified environmental professional (herein referred to as the On-Site Coordinator or "OSC") using a Thermal Instruments 580B photoionization detector (PID) calibrated to read parts per million calibration gas equivalents (ppm-cge) of isobutylene. Olfactory and visual indications of chemical/petroleum contamination will be noted in field logs. The OSC will be responsible for

identifying any soils which, in the opinion of the OSC, may contain elevated concentrations of contaminants and should therefore require special handling.

Those soils identified by the OSC will be removed to the management area for testing and off-site disposal. The OSC will also be on-site to ensure that unforeseen environmental conditions are managed in accordance with applicable federal and state environmental regulations.

Prior to excavation, discrete soil samples will be collected for waste characterization purposes (the number of samples will depend on the volume of soil). Analyses will be conducted consistent with the requirements of the waste repository. Analyses will be used to determine if the encountered soil will be handled as a hazardous or non-hazardous waste.

Soils that are either visibly stained or were identified in previous investigations as contaminated will be excavated in the course of the remediation project. Based on prior analyses, the initial 3 to 3.5 feet of encountered soils will be excavated for off-site disposal. Soils will be excavated and immediately placed into receptacles double-lined with plastic to prevent leakage. Prior to off-site transport, all receptacles will be brushed down or washed off to remove exterior dirt and the receptacle will be fully covered to prevent dirt from flying out during transport. The receptacles will be transported from the site by a licensed hauler who will be responsible for exiting the site and traveling on a pre-determined truck route. All manifests and supporting documentation of waste disposal will be maintained by the OSC for inclusion in the final report.

Confirmatory soil samples will be collected from each area where soil was removed including those areas found to be highly contaminated (if warranted), in a manner consistent with NYSDEC guidelines. After excavation of contaminated soils is performed, six (6) sample locations will be randomly selected over an established grid covering the footprint of the existing building and the area of soil excavation (these locations will be sited to evaluate the effectiveness of the soil removal). Samples will be collected from two discrete depths subsequent to the removal of the initial 3 to 3.5 feet layer of soil (i.e., sampling will begin at 3 to 3.5 feet below current surface grade level); these depths are designated as 0 - 0.5 feet and 3 - 3.5 feet (a total of 12 samples will be collected). If appropriate, samples will also be collected from areas found to be highly contaminated (e.g., beneath drum storage area).

Confirmatory samples will be analyzed for volatile organic compounds and semi-volatile organic compounds consistent with the NYSDEC's ASP Methods 95-1 and 95-2. All laboratory analyses will be performed by a NYSDOH ELAP-CLP certified laboratory. Appropriate chain of custody documentation will be maintained. Data from these analyses will determine the need for additional soil removal.

During the soil excavation procedures beneath the slab of Building #3, the OSC will field check the area beneath the slab for the presence of any wastewater discharge lines or any other discharge points. If lines or discharge points are encountered, the OSC will collect a sufficient number of soil samples from beneath the lines so as to properly characterize the presence of any contamination. All soil samples collected from beneath lines or discharge points will be collected and analyzed for VOCs and SVOCs in accordance with ASP Methods 95-1 and 95-2.

The OSC will monitor the removal of all contaminated soil including monitoring the trucks and establishing designated truck routes. All excavated soil will immediately be deposited into lined thirty cubic yard receptacles and covered with plastic sheeting prior to transport to a licensed facility. Licensed vehicles will be used to transport the excavated soil to the designated licensed facility and all soil receptacles will be covered during storage and transport. Appropriate measures will be taken to control the generation of fugitive dust from the trucks during transport. Transport of this soil will be performed by a licensed hauler and all manifests and supporting documentation of waste disposal will be maintained by the OSC for inclusion in the Final Report (see Section 2.2.8, below).

2.2.3 Closure of Two 10,000-gallon USTs and Two 275-gallon ASTs (Building #3)

Specifications for Tank Closure Services proposed for use in closing the two 10,000-gallon USTs are provided in Attachment G of this Final Workplan. These Specifications are consistent with NYSDEC Petroleum Bulk Storage Regulations (6 NYCRR, Part 612-614) and relevant NYSDEC guidance documents.

The two 275-gallon ASTs will be closed in a manner consistent with 6 NYCRR, Part 613.

2.2.4 Installation of a Vapor Barrier

A vapor barrier will be installed under the proposed foundation for the building in the footprint of former Building #3. The specific drawings and specifications for this barrier will be prepared and submitted to the NYSDEC for review. No installation will occur without prior written approval from the NYSDEC.

2.2.5 On-Site Construction Monitoring in the Vicinity of Building #1

Activities in the vicinity of Building #1 which may reasonably involve encountering regulated materials/wastes will be monitored by the OSC to ensure that unforeseen environmental conditions are managed in accordance with applicable federal and state environmental regulations. Activities which will be subject to monitoring include, but are not limited to:

- demolition of Building #1, including the removal of interior materials;
- closure of drains, pipes and other collection systems as well as the proper removal of encountered underground storage tanks in the footprint of Building #1; and
- post excavation soil quality testing to confirm the absence of contamination within the former footprint of Building #1.

RELATIONSHIP OF THE ON-SITE COORDINATOR TO OTHER SITE PERSONNEL

The specific responsibilities of the OSC are as follows:

- to conduct all technical environmental monitoring and remedial services outlined in this Workplan;
- to direct and manage site remediation services in conjunction with the Client and/or Client's development team;
- to provide recommendations to the Client and/or Client's development team on matters relating to site development and other environmental matters not addressed in this Workplan;
- to provide written and oral communication, as determined appropriate by the NYSDEC and/or Client, to the public regarding on site remediation progress.

PROCEDURES FOR MANAGING ENCOUNTERED CONTAMINATED SOILS

Documentation of on-site conditions indicates that petroleum contaminated soils may be encountered during the course of excavation activities. The OSC will be present during the initial stages of Site development to observe excavation activities. Specific activities which will be conducted by the OSC are the following:

1. The OSC will work with the excavator to locate a secure area on the Site for the management (e.g., loading, stockpiling, sampling, etc.) of suspect waste streams, including contaminated soils. The management area will be located in a place that will be the least disruptive to site activities and within an area that will prohibit community contact with any stockpiled materials (as discussed below, stockpiled soil will be appropriately covered).
2. The OSC will screen soils encountered after the demolition of Building #1 with a PID or comparable equipment. Olfactory and visual indications of chemical/petroleum contamination will be noted in field logs. The OSC will be responsible for identifying any soils which, in the opinion of the OSC, may contain elevated concentrations of contaminants and should therefore require special handling. Those soils identified by the OSC will be removed to the management area for testing and off-site disposal.
3. The OSC will ensure that all soil present on the site which may contain elevated levels of contaminants will be underlain and covered daily with 6 mil plastic sheeting; the overlaying plastic cover will be sufficiently weighted to prevent the cover from shifting.
4. The OSC will collect a sufficient number of samples from the stockpiled soil to provide documentation for proper soil transport and disposal. The specific analytes will be determined based on the requirements of the final repository. The determination of soil disposal procedures (e.g., disposal as a hazardous or non-hazardous petroleum waste) will be based on the laboratory results.
5. The OSC will identify waste haulers who hold appropriate licenses for waste transport and will provide the Client with all necessary services to facilitate the proper transport and disposal of stockpiled soils. The truck routes used during transport will be designated prior to transport to ensure appropriate tracking of all material. Waste transport and disposal manifests will be maintained by the OSC for inclusion in reports to the NYSDEC. It will be the express intent of the OSC to minimize the length of time that the soil remains on the site. To the extent practical, the OSC will work to have all stockpiled soil removed from the site within ten (10) business days.

6. Upon completion of all proposed excavation activities, the OSC will collect and have analyzed five (5) surface soil (0.5 - 1.0 foot depth) samples and five (5) mid-grade level (3.0 - 3.5 foot depth) samples from an established grid within the footprint of Building #1. The specific sample collection locations will be as follows: one sample will be collected from each corner, approximately five feet from the former walls (4 samples in all) and the fifth sample will be collected in the approximate center of the building footprint. These samples will be analyzed for VOCs and SVOCs in accordance with ASP Methods 95-1 and 95-2. In addition, the samples will also be analyzed for CLP-M metals; additional analytes may be warranted, given field observations.
7. During the course of monitoring activities in Building #1, the OSC will field check the area beneath the slab for the presence of any wastewater discharge lines or any other discharge points. If lines or discharge points are encountered, a sufficient number of soil samples from beneath the lines so as to properly characterize the presence of any contamination. All soil samples will be collected and analyzed in accordance with NYSDEC ASP Methods 95-1 and 95-2.

CONTINGENCY PLAN FOR OTHER ENCOUNTERED USTs

In the event that other underground storage tanks are encountered in the course of excavation work, the following course of action will be taken:

- a determination as to the size, type and integrity of each encountered tank will be made;
- a determination as to whether there is evidence of leakage and subsequent soil contamination in the vicinity of the encountered tank will be made;
- if contaminated soil is encountered, samples of the soil surrounding the tank and the pit walls will be collected and analyzed for those components the on-site OSC deems appropriate. The OSC will also determine whether the release is reportable to the NYSDEC; and
- upon receipt of all analytical results, a written report will be prepared detailing the types and extent of contamination, and remedial options available based upon the analytical results and field observations.

In the event that a significant quantity of contaminated soil remains in the excavation area so as to make continued removal and stockpiling of soil not a cost-effective remedial method, the OSC will submit a recommendation to the Client to terminate the excavation; alternate remedial options will then be discussed with the Client concerning the remediation of the remaining contaminated soil.

2.2.6 Groundwater Monitoring Well Closure

The two wells currently located within the footprint of Building 3 will be closed in accordance with the procedure outlined below. The two groundwater monitoring wells located on the South 4th Street sidewalk will be maintained for use by the NYSDEC in any future multi-site groundwater quality assessment.

The following procedure will be eventuated with respect to the closure of the on-site groundwater monitoring wells:

1. NOTICE

All appropriate agencies will be notified in writing of the proposed closure of groundwater monitoring wells.

2. PRE-CLOSURE ACTIVITIES

Any obstructions that could interfere with the sealing process will be removed. All pump bowls, columns, and other debris shall be removed from the well. The upper portion of the casing will be removed to a sufficient depth below proposed finish grade to ensure that the abandoned well will not present an obstruction to any future use of the site.

3. CASING/RISER REMOVAL

The well casing/riser in each well will be removed to a depth of 5 feet below grade.

4. CASINGS

The entire remaining casing, including the riser pipes and annular spaces between casings will be filled with a cement/bentonite mixture in the following ratio: one 94 pound bag Type I Portland cement, 3.9 pounds of powdered bentonite, and 7.8 gallons of potable water. The mixture, if appropriate, shall be placed under pressure through tremie pipes to the bottom of the space to be filled in order to prevent dilution of the mixture. The tremie pipe may be raised slowly as mixture is introduced to the casing or hole.

5. CASING SEAL

After the mixture has consolidated, as confirmed by visual inspection, the upper 5 feet of the well column will be filled with a material appropriate with the future use of the site or the area will be restored to the condition of the surrounding materials.

2.2.7 Post Construction Indoor Air Sampling

The proposed development of the subject property involves the demolition of Building #3 and construction of a new building within the footprint of Building #3; and the rehabilitation of Building #2. The classrooms will be within Building #2 with gymnasium and cafeteria in the new building that is to be built on top of the footprint of the former Building #3.

Subsequent to construction of the proposed building and prior to any occupancy, an indoor air sampling plan will be initiated to confirm the absence of organic vapors entering the building and affecting air quality. Sampling of indoor air quality will be performed in accordance with established New York State Department of Health protocols and will include analyses for the VOCs that have been detected in the on-site soil (by this time impacted soils have been removed from the site) and groundwater (see Tables 1, 2 and 3 of this Final Workplan for the specific compounds that have been detected).

Prior to the construction of the new building over the footprint of the former Building #3, contaminated soils will be removed. If necessary, certified clean soil will be placed within the excavated area and a vapor barrier will be installed. These measures are designed to remove the potential source of VOC's, and provide a supplemental barrier to prevent vapor migration into the new building. Air quality sampling will then be performed to confirm that the indoor air quality is clean.

Building #2 will be totally rehabilitated and all potential sources of any contaminants, as set forth in this workplan, will be eliminated. These activities will include removal of contaminants in the building, as well as capping all potential migration from the soil into the building basement (e.g. drain pipes). Once these actions have been completed, air quality sampling will be performed to verify the absence of contaminants in the indoor air.

2.2.7 Documentation of Site Remediation and/or Closure

At the completion of all site closure services, a Final Report summarizing all services performed on the subject property will be prepared. This Final Report will document the proper handling, removal and off-site disposal of any wastes requiring special handling and will include results of any laboratory analyses generated during activities described in this Final Workplan.

3.0 Time Schedule

The schedule outlined below will be maintained, unless revised by mutual consent of the NYSDEC and the Client.

Within one year of execution of Voluntary Clean-up Agreement:

- All drums/liquid chemical storage containers will be inventoried, labeled and properly disposed of off-site;
- ASTs located within Building #3 will be properly removed; and
- An interim report of project remediation will be submitted to the NYSDEC.

Within eighteen (18) months of execution of Voluntary Clean-up Agreement:

- Buildings #1 and #3 will be demolished (ACMs to be removed prior to demolition) and subgrade soils will be removed and properly disposed of in accordance with applicable regulations;
- Integrity of soils underlying Building #1 will be documented;
- USTs located under Building #3 will be removed/closed; and
- A written Final Report summarizing the completion of said tasks will be provided to the NYSDEC, inclusive of supporting laboratory data sheets, manifests and other documents.

Within two years of execution of Voluntary Clean-up Agreement:

- Installation of the vapor barrier and soil vapor extraction system will be completed (if warranted); and
- A written Final Report summarizing the completion of said task will be provided to the NYSDEC, inclusive of supporting laboratory data sheets, manifests and other documents.

Chlorobenzene	102	Percent				
1,1-Dichloroethene	93	Percent				
Toluene	98	Percent				
Trichloroethene	100	Percent				

METHOD SUMMARIES

Acid/Base Neutral analysis is performed using H/P 5970 GC/MS systems with autosampler. Analysis is performed with J&W megabore column. Tuning is based on DFTPP criteria. Procedural guidelines described in SW846 are used for all analysis. Data reduction is accomplished using H/P RTE 1000 computer systems.

NOTE: Analytical results have been corrected and are reported on a dry weight basis. If required, detection limits can also be corrected to dry weight using the percent moisture data included in this report.

Volatile organic analysis is performed using H/P 5995 or 5970 GC/MS, Tekmar purge and trap, and ALS autosampler. Chromatography incorporates packed and megabore columns. Data reduction is performed on RTE 1000 and ChemStation systems. Tuning is based on BFB standards. Procedural guidelines follow EPA or SW846 for all analyses.

DATA REPORTING QUALIFIERS

- U - Indicates the compound was analyzed for but not detected.
- J - Indicates an estimated value used when a compound is detected at less than the specified detection limit.
- B - Indicates the analyte was found in the blank as well as in the sample.
- E - Indicates the analyte concentration exceeds the calibration range of the GC/MS instrument for that specific analyte.

DATA REPORTING QUALIFIERS

- U - Indicates the compound was analyzed for but not detected.
- J - Indicates an estimated value used when a compound is detected at less than the specified detection limit.
- B - Indicates the analyte was found in the blank as well as in the sample.
- E - Indicates the analyte concentration exceeds the calibration range of the GC/MS instrument for that specific analyte.

DATA REPORTING QUALIFIERS

- U - Indicates the compound was analyzed for but not detected.
- J - Indicates an estimated value used when a compound is detected at less than the specified detection limit.
- B - Indicates the analyte was found in the blank as well as in the sample.
- E - Indicates the analyte concentration exceeds the calibration range of the GC/MS instrument for that specific analyte.

Total Target Concentration 230

U - Indicates the compound was analyzed but not detected.
 J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
 B - Indicates the analyte was found in the blank as well as in the sample.
 E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 0

U - Indicates the compound was analyzed but not detected.
 J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
 B - Indicates the analyte was found in the blank as well as in the sample.
 E - Indicates the analyte concentration exceeds the calibration range of the instrument.

ATTACHMENT B

ESI STAFF RESUMES

PAUL H. CIMINELLO
PRESIDENT

EDUCATION

- Master of Environmental Management, 1986
School of the Environment, Duke University, Durham, North Carolina
- Master of Arts in Public Policy Sciences, 1986
Institute of Policy Sciences and Public Affairs, Duke University, Durham, North Carolina
- Bachelor of Arts, 1980
Tufts University, Medford, Massachusetts

CERTIFICATIONS AND TRAINING

- NJ Dept. of Environmental Protection Licensed Subsurface Evaluator (License Number: 0014686)
NYS Dept. of Labor Certified Asbestos Building Inspector (Cert. Number: AH92-14884)
Connecticut Department of Environmental Protection Interim Environmental Professional
NYS Department of State, Division of Licensing Services, Real Estate Instructor
In compliance with OSHA Hazardous Materials Safety (29 CFR 1910) requirements.

PROFESSIONAL EXPERIENCE

President, Ecosystems Strategies, Inc., Poughkeepsie, New York 1992 to present

Coordinates corporate strategic planning, financial management and marketing activities. Oversees corporate work on state and federal superfund sites and manages education/training services. Responsible for technical services in areas of pollution prevention, contaminant delineation and site remediation. Major recent projects of relevance include:

- Pollution prevention assessments of two regional hospitals in New York (including medical, radiological and toxicological laboratories), proposing management and structural changes which are anticipated to result in net annual savings exceeding \$50,000 per site.
- Facility compliance and pollution prevention assessment of all activities at a public school district in New York, including waste oil handling and chemical disposal.
- Environmental compliance Audit of major (one million + square feet) medical complex in New York City, including assessment of laboratory discharges, radioactive/medical waste storage/disposal practices and chemical handling procedures.
- Preparation of medical waste handling procedures (including staff training) for moderate size nursing home in New York City.
- Preparation of environmental policies for regional lending institution. Designed all required Bank forms and conducted seminars to train Bank personnel. Provide on-going environmental assessment and guidance for Bank ORE and loan applications.
- Investigation, contamination delineation and remediation of PCB contaminated soil at former electronics manufacturing site. Coordinated remediation with site reuse.
- Contaminant delineation and soil remediation of commercial property contaminated with PCE. Coordinated site closure activities, including communication with involved regulatory agencies. Successfully prevented site's inclusion onto NYS "Superfund" registry.
- Integration of site remediation services at Former Major Oil Storage Facility (MOSF) with site redevelopment in Dutchess County, New York. Installation of groundwater remediation system concurrent with site construction activities.

PAUL H. CIMINELLO

PAGE 2 OF 4

Senior Hazardous Waste Specialist, U.S. Hydrogeologic, Inc., Poughkeepsie, New York 1986 to 1992

Supervisor for corporate hazardous and solid waste investigatory and remedial services. Major projects included:

- Coordination of subsurface investigations at a New York State Superfund site (former industrial facility); project manager in charge of site reclassification (delisted as of January, 1991).
- Coordination of petroleum storage tank management plan for Dutchess County (NY) Department of Public Works, including an assessment of regulatory compliance, product utilization and physical conditions of more than 100 tanks at over 20 facilities.
- Environmental compliance Audit of 42,000-square foot printing facility with specific remediations for solvent handling/disposal, inks storage and metal recovery processes.

Adjunct Professor, Dutchess (NY) Community College, Poughkeepsie, New York 1991 to 1992

Courses: Macroeconomics, Environmental Economics

Policy Intern, Southern Growth Policies Board, North Carolina 1985

Prepared several in-depth and short analyses of environmental and economic issues, with specific concern for their impact on Southern state policies. Analyses included: hazardous waste facility siting policies and environmental impacts of "high tech" industries on host communities.

Research Assistant, University of Oregon, Eugene, Oregon 1983

Analyzed (with Dr. John Baldwin, Chairman of the Department of Planning, Public Policy and Management, U. of Oregon) the "Oregon Riparian Tax Incentive Program". Designed survey, conducted interviews and analyzed data. Summary paper with programmatic recommendations, was presented at the Annual Conference of the National Association of Environmental Educators.

RELATED EXPERIENCE

Research Assistant, School of the Environment, Duke University, North Carolina 1986

Assisted in the design and evaluation of risk assessment models to estimate the impact of landfill leachate on human health. Monte Carlo simulation and pollutant transport models used in the analyses.

Research Assistant, USDA Forest Service, Duke University, North Carolina 1985

Collected economic data and assisted in statistical analyses for a study isolating research as a variable in timber production functions.

Research Assistant, School of the Environment, Duke University, North Carolina 1984

Preliminary research on the use of mathematical models by water resource administrators.

Teacher, Eugene, Oregon 1980-1983

PRESENTATIONS

- "Environmental Risks in Lending" Training Session for Pawling Savings Bank employees, December 18 and 19, 1989; and July 1, 1993.
- "Identifying Environmental Concerns in Appraisals", Workshops for Lakewood Appraisal Corporation.

PAUL H. CIMINELLO

PAGE 3 OF 4

- October, and November, 1989 and April, 1990.
- "State and Local Groundwater Protection Strategies", Annual meeting of the New York State Association of Towns, February, 1990.
- "Environmental Audits on Orchards and Agricultural Properties", Resource Education Institute, Inc., Real Estate Site Assessment and Environmental Audits Conference, December 4, 1990.
- "Environmental Audits on Orchards and Agricultural Properties", National Water Well Association Annual Conference, July 29-31, 1991.
- "Principles of Environmental Economics for Ground Water Professionals", National Groundwater Association Outdoor Action Conference, May 27, 1993.
- "Impact of Environmental Liabilities on Real Estate Transactions", a NYS Department of Education approved course for licensed real estate professionals, March 1995; April 1995; May 1995; October 1995.
- "Brownfields Redevelopment in New York: A Discussion of Two Case Studies", New England Environmental Conference 1996, March, 1996.
- "Quantifying Environmental Liabilities", a NYS Department of Education approved course for licensed real estate professionals, March 1997 (scheduled).

 Hazardous Materials Control Research Institute

ADDITIONAL INFORMATION

Member, Dutchess County (NY) Youth Board (1987-1992); Chairman, 1992
 Member, City of Poughkeepsie (NY) School District Ad Hoc Committee on Teen Parents and Pregnancy Prevention (1991)

PAUL H. CIMINELLO

PAGE 4 OF 4

Member, City of Poughkeepsie School District Budget Advisory Committee (1994 to present)
Member, City of Poughkeepsie PTA and Middle School Building Level Team

RONALD EDWARD BIELINSKI, P.E.

PROJECT MANAGER, SENIOR ENGINEER

EDUCATION

Bachelor of Science in Chemical Engineering
Polytechnic Institute of New York, Brooklyn, New York

EXPERIENCE

Project Manager/Senior Engineer 1983 to present

Responsible for building inspections; fire safety inspections; code compliance (state education department safety inspections); industrial hygiene; environmental assessment/impact statement investigations; air pollution control systems; indoor air quality investigations and remediation; interior design of corporate offices, laboratories and manufacturing facilities including specialized lighting; noise control and air quality requirements; asbestos/lead investigation and abatement design; ventilation systems testing and design.

Environmental Engineer/Industrial Hygienist, Versar, Inc. Springfield, VA 1982 to 1983

Chief Engineer at the Binghamton State Office Building decontamination project. Designed wastewater treatment system to remove PCBs, Dioxins and Furans from the cleanup.
Chief Engineer at the EPA's Dioxin Combustion Research Facility in Pine Bluff, AK. Designed the effluent sampling systems to determine emission compliance.

Environmental Engineer, Penick Corporation, Unit of CPC International, Lyndhurst, NJ 1979 to 1981

Responsible for environmental monitoring, industrial hygiene monitoring, hazardous waste management, closure plans and regulatory compliance. Designed self-contained hazardous material production facilities including ventilation system, air pollution control system and interior furnishings.

Technical Services Engineer/Process Engineer,

Monsanto Company, Industrial Chemicals Division, Kearny, NJ 1978 to 1979
Enviro-Chem Systems, St. Louis, MO 1977 to 1978

Air Pollution Control Systems Design & Testing, Environmental Monitoring, Stack Testing.

LICENSES AND CERTIFICATIONS

Licensed Professional Engineer	New York, New Jersey, Pennsylvania, Connecticut
Licensed Interior Designer	Washington, D.C.
Diplomate Environmental Engineer in Industrial Hygiene	American Academy of Environmental Engineers
Certified Industrial Hygienist in Comprehensive Practice	American Board of Industrial Hygiene
Registered Occupational Hygienist	Canadian Registration Board of Occupational Hygienists
Certified Safety Professional in Comprehensive Practice	Board of Certified Safety Professionals

LICENSES AND CERTIFICATIONS (cont.)

NCIDQ-Certified Interior Designer
Asbestos Safety Technician
Certified Asbestos Inspector
Certified Asbestos Project Designer
Certified Asbestos Investigator
National Radon Contractor Proficiency List

National Council of Interior Design Qualification
New Jersey Department of Community Affairs
New York State Department of Labor
New York State Department of Labor
New York City
Environmental Protection Agency

MEMBERSHIPS

Society of Fire Protection Engineers
American Industrial Hygiene Association
American Institute of Chemical Engineers
American Society of Interior Designers

ŻYWIA WOJNAR, CHMM
PROJECT MANAGER, SUBSURFACE INVESTIGATIONS

EDUCATION

B.S./M.S. in Biology, 1970-1975
Jagiellonian University, Kraków, Poland:

Swarthmore College, Swarthmore, PA , 1969-1970

CERTIFICATIONS AND TRAINING

Certified Hazardous Materials Manager at the Master Level, 1994.

Certified by the NJDEPE UST Program for Subsurface Evaluation, 1995.

OSHA Hazardous Waste Site Operations and Emergency Response Training, 1990-1995; includes 8-hour Supervisor Health and Safety Training, (1992) and Refresher Training consistent with OSHA Appendix E ruling, (1995)

PROFESSIONAL EXPERIENCE

Project Manager, Ecosystems Strategies, Inc., Poughkeepsie, N.Y. 1995 - Present

Project Manager for technical environmental investigations and remedial projects. Current projects include assessment of remedial options to reduce methane levels in a commercial building, closure of several petroleum spills (including groundwater), assessment of waste stream characteristics for a potentially responsible party at a municipal landfill, and NYSDEC permitting for a solid waste management facility.

Senior Staff Scientist, U.S. Hydrogeologic, Inc., Poughkeepsie, N.Y. 1990 - 1995

As Senior Staff Scientist, project and fiscal management included proposal and workplan preparation; contract negotiations with clients from private (banking, legal, commercial, and industrial) and public (county and municipal) sectors; staff supervision and training during field investigations and in office responsibilities; preparation and implementation of health and safety programs; data evaluation and report preparation; extensive client, subcontractor and regulatory agency interface and negotiation.

Senior Environmental Technician, CDI Corporation, Hopewell Junction, N.Y. 1989 - 1990

As Senior Environmental Technician, responsible for tracking air emissions compliance in assigned buildings within IBM Semiconductor Facility in East Fishkill, N.Y. Regular inspections of the facility were conducted, and communication maintained with managers, technicians, and tool operators. Information relating to supply, consumption and discharge of chemicals was compiled, and necessary calculations performed to complete air permit forms for submission to the New York State Department of Environmental Conservation.

Research Technician, Vassar College Biology Department, Poughkeepsie, N.Y. 1987 - 1989

As Research Technician, coordinated and conducted biomedical research on small rodents which included feeding studies, ¹²⁵I radio-immunoassay runs and management of radio-nuclide wastes, animal surgery, statistical analysis, and graphical presentation of data.

Research Assistant, Rockefeller University, Millbrook, N.Y. 1986 - 1987

As Research Assistant conducted extensive computer analysis of endangered Bowhead Whale migration data for populations studies.

INTERNATIONAL EXPERIENCE

- Team member of program co-sponsored by the United States Information Agency and Rutgers University in April 1992: "Advancing the Understanding of Local Government for Polish and Central and Eastern European Leaders." Responsibility within this program was to provide technical assistance and guidance relating to environmental protection, and to conduct local and regional needs assessment for government officials in Poland. Project included a 2-week stay in Poland to become familiarized with local conditions, followed by development in the U.S.A. of videotapes (in Polish) for future use in regional training centers throughout Poland.
- Participant in 1993 workshop sponsored by Rutgers University exchange program for Polish local government, environmental agency officials, and scientists. Panel discussion addressed academic, private and public sector perspectives.
- Prepared technical translations from Polish to English language for Jagiellonian University publications in Poland and for Greenpeace international program.

PROFESSIONAL AFFILIATION

Academy of Certified Hazardous Materials Managers
American Institute of Chemical Engineers - Treasurer, Tappan Zee, N.Y. Section - 1996
National Ground Water Association/Association of Ground Water Scientists and Engineers

SELECTED PROJECT EXPERIENCE

- Project Manager for assessment of RCRA closure and interim status investigations of 75-acre manufacturing and TSD facility located in Dutchess County, NY. Scope of work involved review of closure and corrective actions performed over 9-year period, and implementation of field investigation to assess current environmental conditions associated with chromium, lead and chlorinated hydrocarbons present in on-site soils and groundwater.
- Managed, supervised and conducted numerous Phase I, Phase II, and Phase III Environmental Site Assessments throughout the eastern United States. Sites included industrial, commercial and institutional properties.
- Project Manager for environmental site assessment of RCRA manufacturing facility and NYSDEC potential Inactive Hazardous Waste Disposal site in Dutchess County, NY. Compilation of historical data and additional groundwater monitoring supplemented findings of previous studies that served as basis to delist this CERCLA site from the NYSDEC Registry.
- Project Coordinator for inventory, assessment, and compliance of petroleum bulk storage facilities operated by Dutchess County, NY. Conducted more than 20 site inspections and prepared final report which included recommendations for improved efficiency and compliance of facilities.
- Project Manager for UST closure at an elderly care facility in New York City. Supervised petroleum-contaminated soil removal and replacement of two 20,000-gallon fuel oil USTs and one 550-gallon diesel UST. Remediation was performed concurrent with on-going \$57 million construction project and included coordination of all activities with site owner, architects, engineers, lawyers, construction managers, subcontractors, and NYSDEC.
- Project Coordinator, field team leader, and QA/QC Officer in Preliminary Site Assessment on former chemical manufacturing site/construction facility which is classified as a NYSDEC potential Inactive Hazardous Waste Disposal Site. Elevated levels of chromium, cadmium and lead, as well as chlorinated hydrocarbons were identified in on-site soils.
- Project Manager for phased subsurface investigation at former gasoline station in Orange County, NY. Study included soil borings, groundwater monitoring, passive soil-gas survey, site remediation, and a risk-based study (including aquifer testing) to determine impacts and need for continued remediation of dissolved petroleum hydrocarbons in the groundwater.
- Litigation support for industrial PRP. Responsibilities included comparative analysis of waste stream chemistry to on-site contaminant profiles and determination of cause for remediation at solid waste municipal landfill, a Class 2 NYSDEC Inactive Hazardous Waste Disposal Site.
- Project Manager for residual pesticide analysis on former apple orchard in Dutchess County, NY. The study included design and implementation of NYS Department of Health approved sampling plan on 100-acre property. Results were interpreted from a comprehensive set of organic pesticide and metals analyses. Final report identified potential problem areas, and provided recommendations for this proposed residential development.

KATHERINE J. BEINKAFNER

PAGE 2 OF 5

SELECTED PROJECT EXPERIENCE

LANDFILLS

- Youmans Flats Landfill, Bear Mountain State Park: Conducted hydrogeological investigation and prepared Closure Investigation Report. Field work involved installation of monitoring wells, aquifer testing, explosive gas survey, gas vent sampling, vector investigation, and sampling of monitoring wells, leachate seeps, and surface waters.
- Prepared maps and cross sections showing groundwater quality contravening New York State Groundwater standards.
- Hydrogeologic Investigations for Town of New Paltz and Lumberland Landfills: Conducted similar investigations for compliance with Part 360 regulations.
- Town of New Windsor Landfill: Based on hydrogeologic data, prepared load calculations for leachate collection system for Part 360 closure of landfill with hazardous waste.

HAZARDOUS WASTE

- Senior review for Remedial Investigation of a chemical plant (Superfund Site) in Skaneateles Falls, New York. Hydrogeologic setting is carbonate bedrock with contaminants migrating offsite from a chemical waste landfill. Designed and reviewed seismic refraction survey to define buried valleys in bedrock surface. Researched literature for Feasibility Study and alternate remedial actions.
- Several NYS Superfund Sites including IBM, East Fishkill; Fair Rite Products, Wallkill; and InterCeram/Ceramic near Middletown: Supervising Field Geologist, drilling and installation of 40 monitoring wells at a manufacturing plant with volatile organics in the overburden and bedrock, C and D levels of protection. Aquifer testing and analysis.
- Preparation of Remedial Investigation Reports.

PETROLEUM SPILLS

- Expert witness, preparation of testimony for lawsuits involving oil spills and groundwater contamination, remediation of Superfund sites, and environmental reviews for construction projects.
- Senior review of remedial design of a combination air sparging and vacuum extraction system for removal of hydrocarbon contaminants at a large petroleum terminal in Brooklyn. Site is a demonstration project for EPA.
- For one gas station in a cluster of stations in proximity to MTBE contamination of public water supply wells in Liberty, NY; conducted hydrogeologic investigation and prepared testimony for public hearings and potential legal proceedings.

KATHERINE J. BEINKAFNER

PAGE 3 OF 5

RADIOACTIVE WASTE

- West Valley Demonstration Project, DOE & NYS Radioactive Waste Storage Facilities: Sr. Project Geologist, development of groundwater monitoring plan for ten solid waste management units and three water-bearing stratigraphic units for RCRA and DOE compliance. Also preparation of bid specification documents for monitoring well installation.
- For Martinsville, Illinois Proposed Site: Task Manager, preparation of site characterization chapters of license application for Low Level Radioactive Waste Disposal Facility encompassing topics of geomorphology, stratigraphy, structural geology, seismicity, groundwater, hydrology, and geotechnical evaluation.

COMPUTER MAPPING & GROUNDWATER FLOW MODELS

- Groundwater modeler, development of computer model of three dimensional groundwater flow system at Sharkey Landfill, New Jersey, a Superfund Site, for remedial design.
- Task Manager, groundwater modeling of radionuclide transport in support of pathway analysis and dose calculations for a Low Level Radioactive Waste Disposal Facility, proposed Martinsville, Illinois site.
- IBM, East Fishkill: Project Manager, aquifer characterization and contaminant flow at a Research and Facility involving collection and compilation of stratigraphic, structural geology, water level, and water quality data (from borings, monitoring wells, supply wells, outcrops, and water samples) using dBASE 3. software to allow input of database into AutoCAD for mapping, cross sections, and flow model development. Interpretation of flow systems in imbricate thrust sheets with fracture zones and incorporation into a 3-D model of contaminant flow.
- Naval Petroleum Reserve #3 (Teapot Dome) Wyoming: Development of 3-D numerical computer models for petroleum production in sandstone and fractured reservoirs.
- Integrated geophysical well log analysis and mapping packages with custom software to generate data arrays for porosity, permeability, net pay, geologic structures, fluids, and phases. Taught inhouse courses in use of computer programs for interpretation and analysis of geophysical borehole logs and three dimensional mapping of petroleum-trapping geologic structures.
- New York State Geological Survey, Staff Geologist: Responsible for petroleum exploration well data. Conducted subsurface stratigraphic studies using well logs and computer mapping.

TEACHING

- Adjunct Professor, taught groundwater hydrology course at Rutgers University at Newark, for undergraduate and graduate students.
- Naval Petroleum Reserve #3: Taught inhouse courses in use of computer programs for interpretation and analysis of geophysical borehole logs and three dimensional mapping of petroleum-trapping geologic structures.
- Development of geologic software for computer processing and graphic interpretation of dipmeter well logs for exploratory wells. Training course development and presentation to groups of petroleum engineers and geologists (one and two week classes). Dipmeter allows the interpretation of three dimensional structures by extrapolating changes in bedding orientation detected in microresistivity logging of boreholes.

KATHERINE J. BEINKAFNER

PAGE 4 OF 5

- At EA Engineering, senior hydrogeologist in Waste Management Division. Taught inhouse courses in slug testing, use of simple computer flow models, sampling at hazardous waste sites.
- Conducted seminars on landfill siting and closure requirements for local governments.

WATER RESOURCE DEVELOPMENT

- Town of Wallkill: Senior review for geophysical investigation of potential municipal water supply along the Wallkill River in Orange County, NY. Supervised field installation, pump testing, and sampling of 12 inch diameter wells. Provided senior review for final report recommending usage of a one million gallon per day well with backup well.
- Field supervision, testing, reporting, quality assurance review for numerous water supply projects in Ulster, Dutchess, and Orange County. Familiar with several computer programs and analog techniques for aquifer analysis of pumping tests in confined and unconfined aquifers.

BOREHOLE GEOPHYSICS

- For two PCB contaminated sites at Fort Edward and Hudson Falls, NY: Dr. Beinkafner provided borehole geophysics logging services in monitoring wells and production wells.
- Log interpretation indicated the presence of several imbricate thrust sheets and hydraulic conductive fracture zones.

CATHERINE L. MONIAN*PROJECT MANAGER, MEDICAL FACILITIES INVESTIGATIONS*

EDUCATION

Bachelor of Arts, May 1991
Vassar College, Poughkeepsie, New York

EXPERIENCE

Project Manager, Ecosystems Strategies, Inc., Poughkeepsie, N.Y. 1992 - present

Coordinate and conduct Phase I and Phase II environmental investigations to provide information on a designated area's environmental status. Responsibilities include the preparation of preliminary environmental assessments, the analysis of facility compliance with respect to applicable local, state and federal regulations, the collection of soil, air, and water samples, and the coordination and management of site remediation activities. Major projects have included:

- Prepared Phase I Environmental Audit for a 1,200,000 square foot medical campus, including the review of medical, hazardous and solid waste storage and disposal practices, air quality compliance, and compliance with petroleum storage regulations; prepared Spill Prevention, Control and Countermeasure Plan for hospital and oversaw the removal of underground petroleum bulk storage tanks.
- Conducted preliminary environmental assessment of 250-acre estate; coordinated and oversaw removal of petroleum bulk storage tank and provided professional guidance with respect to future site remediation of petroleum contaminated soil.
- Conducted City of New York Environmental Quality Review of city-owned, 300,000 square foot property located in lower Manhattan.
- Conducted preliminary investigation of a 350-acre agricultural site; coordinated and oversaw the delineation and remediation of an illegal dump, including the removal of three petroleum bulk storage tanks; supervised the remediation of soil contaminated with petroleum hydrocarbons.

Research Technician, Vassar College, Poughkeepsie, New York 1991-1993

Investigated the effects of estrogen and antiestrogens on food intake and body weight gain in rats, and the expression of *c-fos* in rat hypothalamus. Responsibilities included animal surgery, designing and conducting immunocytochemical and cytosol binding assays, histological procedures as well as managing daily laboratory operations.

Pew Fellow, MDI Biological Laboratory, Salsbury Cove, ME 1991

Investigated the role of catechol oxidase in the formation of skate egg capsules and helped develop an affinity chromatography system for proteolytic enzymes. Techniques performed included SDS and activity gel electrophoresis, spectrophotometric enzyme and protein assay, gel filtration, affinity chromatography, preparation of cell lysates, and handling of marine organisms.

CATHERINE L. MONIAN
PAGE 2 OF 2

Research Assistant, Vassar College, Poughkeepsie, New York 1990

Aided in the investigation of the effect of methyl capseisin on food intake in rats. Responsibilities included monitoring food intake and animal weights.

URSI Research Fellow, Vassar College, Poughkeepsie, N.Y. 1990

Investigated the targeting of viral membrane proteins in MDCK cells. Techniques performed included cell culture, pulse-chase radioisotope labeling, gel electrophoresis, autoradiography, protein assay, preparation of buffers and solutions, and sterile technique.

HEALTHY & SAFETY PLAN
PB96146.40OCTOBER 13, 1997
PAGE 1 OF 9

1.0 INTRODUCTION

This Health and Safety Plan (HASP) has been developed to provide the requirements and general procedures to be followed by Ecosystems Strategies, Inc. (ESI) personnel and authorized subcontractors while performing environmental remediation services at the El Puente Site located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York. This HASP describes the responsibilities, training requirements, protective equipment, and standard operating procedures to be utilized by ESI personnel and all subcontractors while on the site. This HASP incorporates by reference the applicable Occupational Safety and Health Administration requirements in 29 CFR 1910 and 29 CFR 1926.

The requirements and guidelines in this HASP are based on a review of available information and evaluation of potential on-site hazards. This HASP will be discussed with site personnel and will be available on-site for review while work is underway. On-site ESI personnel report to the ESI Site Safety and Health Officer (SSHO) in matters of health and safety. The on-site ESI project supervisor(s) are responsible for enforcement and implementation of the ESI HASP.

This HASP is specifically intended for the conduct of activities within the defined scope of work in specified areas of the site. Changes in site conditions and future actions that may be conducted at this site may necessitate the modification of the requirements of the HASP. Although this HASP can be made available to interested persons for informational purposes, ESI has no responsibility over the interpretations or activities of any other persons or entities other than employees of Ecosystems Strategies, Inc.

1.1 Work Activities

The purpose of the subsurface investigation is outlined in the Final Workplan dated December 3, 1997.

2.0 ECOSYSTEMS PROJECT PERSONNEL

Project Managers:	Paul H. Ciminello Ronald Bielinski, P.E.
Site Safety and Health Officer:	Paul H. Ciminello
Field Team:	
Senior Professionals:	Paul H. Ciminello Ronald Bielinski, P.E. Catherine L. Monian Katherine J. Beinkafner, PhD.

Quality Assurance Officer: Żywia Wojnar
Technician(s): Catherine L. Monian
Jerald A. Kaplan
Subcontractors: To be determined

3.0 Health and Safety Hazards

Previous site investigations on this site have identified conditions which have led to contamination of surface soils and groundwater on the El Puente Site. Investigations have also documented the presence of contaminated subsurface soil on specified portions of this site.

Based on the above information, it is likely that site workers will come into contact with soils containing petroleum hydrocarbons and/or chlorinated hydrocarbons during site remediation activities. These contaminants may cause adverse health impacts through inhalation or ingestion but will not penetrate intact skin. Skin contact with concentrated solutions of these contaminants may present a dermatitis problem. Inhalation of these petroleum hydrocarbons is a likely route of exposure during the subsurface investigation because of the way that the soil material will be handled.

A limited potential for accidents exists as the project site will not be operational during the proposed field work. Other safety hazards, such as tripping and loose debris that are associated with on-site sampling and investigations within an abandoned site have been identified. Increased awareness of these hazards will be communicated to the personnel involved.

Measures within this HASP have been selected to protect workers from dust entering the eyes and contacting the skin. Protection from exposure of the respiratory system to respirable dusts generated during the subsurface investigation has also been considered.

Use of the existing ESI standard operating procedures and the engineering controls, work practices and personal protective equipment specified in this HASP is intended to minimize the risks of potential overexposure to hazardous or regulated materials and conditions. If field measurements or observations indicate that a potential exposure is greater than the protection offered by the equipment or procedures specified below, work is to be stopped and ESI personnel are to leave the site until the potential exposure has been reduced to specified limits and/or the level of protection provided has been increased.

4.0 PERSONAL PROTECTIVE EQUIPMENT

Personnel will be provided with personal safety equipment and protective clothing selected for the work tasks. Each individual will be trained in the use of this safety equipment before the initiation of field activities. Cleaning and maintenance of equipment and clothing in accordance with the manufacturer's specifications is the responsibility of project personnel. The SSHO will monitor the protective equipment maintenance procedures.

The level of protective clothing and equipment selected for this project is EPA Level D. Safety equipment and protective clothing will be used as directed by this HASP. Personal protective equipment will be worn at times designated by this HASP.

If any equipment fails and/or any employee experiences a failure or other alteration of their protective equipment that may affect its protective ability, that person will immediately leave the work area. The Project Manager and the SSHO will be notified and, after reviewing the situation, determine the effect of the failure on the continuation of on-going operations. If the failure affects the safety of personnel, the work site or the surrounding environment, personnel will be evacuated until appropriate corrective actions have been taken.

5.0 SITE ACTIVITIES AND PERSONAL PROTECTIVE REQUIREMENTS

The levels of protection assigned to each activity below represent a best estimate of exposure potential and protective equipment needed for that exposure. Determination of levels was based on data provided by previous studies of the work site and information reviewed on current and past site usage. The SSHO may recommend revisions of these levels based on on-site assessment of actual exposures.

The work activity governed by this HASP is the completion of the tasks specified in the Final Workplan prepared by this office and dated December 3, 1997.

6.0 MONITORING AND ACTION LEVELS

Concentrations of VOCs and SVOCs in the air are expected to be below the OSHA PELs. Monitoring of subsurface material samples with a photoionization detector (PID) for volatile hydrocarbon content will be performed as part of the sample screening. These measurements will be used as an indication of the need to initiate personnel monitoring and/or increase worker protective measures. Sustained PID readings greater than 5 ppm will be considered justification for halting remedial services or upgrading personal protective equipment to Level C.

7.0 SITE ACCESS AND CONTROL

Site control procedures will be established to reduce the possibility of worker contact with compounds present in the soil and/or groundwater, to protect the public in the area surrounding the site by preventing the movement of chemicals from the site, and to limit access to the site to those personnel required to be on it. ESI will prevent the complete access to the site by unauthorized personnel through the placement of traffic cones and warning tape.

8.0 PERSONNEL TRAINING

Work zones that will accomplish the general objective stated above will be established by the Project Manager and the SSHO. Site access will be monitored by the SSHO, who will maintain a log-in sheet for personnel that will include, at the minimum, personnel on the site, their arrival and departure times and their destination on the site.

Personnel exiting the work zone(s) will be decontaminated prior to exit. The SSHO will establish a decontamination system and decontamination procedures appropriate to the site and the work that will prevent potentially hazardous materials from leaving the site (see Section 9.0).

Personnel hygiene facilities meeting at least the minimum requirements of 29 CFR 1910.120 will be provided on the site.

Site specific training will be provided to each employee. Personnel will be briefed by the SSHO as to the potential hazards to be encountered. Topics will include:

- Availability of this HASP.
- General site hazards and specific hazards in the work areas including those attributable to the chemicals present.
- Selection, use, testing and care of the body, eye, hand and foot protection being worn, with the limitations of each.
- Decontamination procedures for personnel, their personal protective equipment and other equipment used on the site.
- Emergency response procedures and requirements.
- Emergency alarm systems and other forms of notification, and evacuation routes to be followed.
- Methods to obtain emergency assistance and medical attention.

9.0 DECONTAMINATION

Garments will be washed with soap and clean potable water upon leaving the work zone and will be air dried prior to storage. Dirt, oil, grease or other materials that are visible will be removed from surfaces. Scrubbing with a brush may be required to remove materials that adhere to the surfaces.

Sampling equipment will be segregated and, after decontamination, stored separately from splash protection equipment. Decontaminated or clean sampling equipment not in use will be covered with plastic and stored in a designated storage area in the work zone.

Water used for decontaminating personnel and equipment will be contained and stored until proper disposal methods can be determined.

10.0 EMERGENCY RESPONSE

10.1 Notification of Site Emergencies

In the event of an emergency, the SSHO will be immediately notified of the nature and extent of the emergency.

Table 1 on Page 9 of this HASP contains Emergency Response Telephone Numbers. Figure 1 contains directions to the supporting hospital. This table and the directions to the nearest hospital will be maintained at the work site by the SSHO. The nearest telephone is located along the northern side of South 4th Street, approximately 100 feet northeast of the site.

10.2 Responsibilities

The SSHO will be responsible for responding to emergencies and prior to the initiation of on-site work activities will:

1. Notify individuals, authorities, and/or health care facilities of the potentially hazardous activities and potential wastes that may develop as a result of the investigation;
2. Confirm that the following safety equipment is available: first aid supplies, and a fire extinguisher;
3. Have a working knowledge of safety equipment available; and
4. Confirm that a map detailing the most direct route to the Hospital is prominently posted with the emergency telephone numbers.

The SSHO will be responsible for directing notification, response and follow-up actions and for contacting outside response personnel (ambulance, fire department or others). In the case of an evacuation, the SSHO will account for personnel. A log of individuals entering and leaving the site will be kept so that everyone can be accounted for in an emergency.

Upon notification of an exposure incident, the SSHO will contact the appropriate emergency response personnel for recommended medical diagnosis and, if necessary, treatment. The SSHO will determine whether and at what levels exposure actually occurred, the cause of such exposure, and the means to prevent similar incidents from occurring.

10.3 Accidents and Injuries

In the event of an accident or injury, measures will be taken to assist those who have been injured or exposed and to protect others from hazards. If an individual is transported to a hospital or doctor, a copy of the HASP will accompany the individual.

The SSHO will be notified and will respond according to the seriousness of the incident. The SSHO will perform an investigation of the incident and prepare a signed and dated report documenting the investigation. An exposure-incident report will also be completed by the SSHO and the exposed individual. The form will be filed with the employee's medical and safety records to serve as documentation of the incident and the actions taken.

10.4 Communication

No special hand signals will be utilized within the work zone. Excavation equipment operators will utilize standard hand signals during the operation of the equipment.

10.5 Safe Refuge

Vehicles and area structures will serve as the immediate place of refuge in the event of an emergency. If evacuation from the area is necessary, project vehicles will be used to transport on-site personnel to safety.

10.6 Site Security and Control

Site security and control during emergencies, accidents and incidents will be monitored by the SSHO. The SSHO is responsible for limiting access to the site to authorized personnel and for oversight of reaction activities.

10.7 Emergency Evacuation

In case of an emergency, personnel will evacuate to the safe refuge identified by the SSHO, both for their personal safety and to prevent the hampering of response/rescue efforts.

10.8 Resuming Work

Before on-site work is resumed following an emergency, necessary emergency equipment will be recharged, refilled, or replaced. Government agencies will be notified as appropriate.

10.9 Fire Fighting Procedures

A fire extinguisher will be available in the work zone during on-site activities. This extinguisher is intended for small fires. When a fire cannot be controlled with the extinguisher, the area will be evacuated immediately. The SSHO will be responsible for directing notification, response and follow-up actions and for contacting ambulance and fire department personnel.

10.10 Emergency Decontamination Procedure

The extent of emergency decontamination depends on the severity of the injury or illness and the nature of the contamination. Whenever possible, minimum decontamination will consist of washing, rinsing and/or removal of contaminated outer clothing and equipment. If time does not permit decontamination, the person will be given first aid treatment, and then wrapped in plastic or a blanket prior to transport to medical care.

10.11 Emergency Equipment

The following on-site equipment for safety and emergency response will be maintained in the on-site vehicle of the SSHO:

1. fire extinguisher;
2. first aid kit; and
3. extra copy of this Health and Safety Plan.

11.0 SPECIAL PRECAUTIONS AND PROCEDURES

The activities associated with this investigation may involve potential risks of exposure to both chemical and physical hazards. The potential for chemical exposure to hazardous or regulated substances will be significantly reduced through the use of monitoring, personal protective clothing, engineering controls, and implementation of safe work practices.

Other potential hazards that are associated with the tasks outlined in the Final Workplan will include working around heavy equipment. Precautionary measures have been established to reduce these risks to a minimum during work activities.

11.1 Site Refuse

Site refuse will be contained in appropriate areas or facilities. Personnel will make certain that trash is not scattered throughout the area of activity and that trash and scrap materials are immediately and properly disposed.

11.2 Additional Safety Practices

The following are important safety precautions which will be enforced during this investigation:

1. Medicine and alcohol can potentiate the effect of exposure to certain compounds. Controlled substances and alcoholic beverages will not be consumed during investigation activities. Consumption of prescribed drugs will only be at the discretion of a physician familiar with the person's work.
2. Eating, drinking, chewing gum or tobacco, smoking or other practices that increase the probability of hand-to-mouth transfer and ingestion of material is prohibited except in areas designated by the SSHO.
3. Contact with potentially contaminated surfaces will be avoided whenever possible. Workers will not unnecessarily walk through puddles, mud, or other discolored surfaces; kneel on the ground; or lean, sit or place equipment on drums, containers, vehicles or the ground.
4. Personnel and equipment in the work areas will be minimized, consistent with effective site operations.
5. Unsafe equipment left unattended will be identified by a "DANGER, DO NOT OPERATE" tag.

6. Work areas for various operational activities will be established.

11.3 Daily Log Contents

The SSHO will establish a system appropriate to the site, the work and the work zones that will record, at a minimum, the following information:

1. Personnel on the site, their arrival and departure times and their destination on the site.
2. Incidents and unusual activities that occur on the site such as, but not limited to, accidents, spills, breaches of security, injuries, equipment failures, and weather-related problems.
3. Changes to the HASP.
4. Daily information generated such as: changes to work and health and safety plans; work accomplished and the current site status; and monitoring results.

ATTACHMENT D

COMMUNITY AIR MONITORING PLAN

Community Air Monitoring Plan

Real-time air monitoring, for volatile compounds and particulate levels at the perimeter of the work area is necessary. The plan must include the following:

- Volatile organic compounds must be monitored at the downwind perimeter of the work area on a continuous basis. If total organic vapor levels exceed 5 ppm above background, work activities must be halted and monitoring continued under the provisions of a Vapor Emission Response Plan. All readings must be recorded and be available for State (DEC & DOH) personnel to review.
- Particulates should be continuously monitored upwind, downwind and within the work area at temporary particulate monitoring stations. If the downwind particulate level is $150 \mu\text{g}/\text{m}^3$ greater than the upwind particulate level, then dust suppression techniques must be employed. All readings must be recorded and be available for State (DEC & DOH) personnel to review.

Vapor Emission Response Plan

If the ambient air concentration of organic vapors exceeds 5 ppm above background at the perimeter of the work area, activities will be halted and monitoring continued. If the organic vapor level decreases below 5 ppm above background, work activities can resume. If the organic vapor levels are greater than 5 ppm over background but less than 25 ppm over background at the perimeter of the work area, activities can resume provided:

- the organic vapor level 200 ft. downwind of the work area or half the distance to the nearest residential or commercial structure, whichever is less, is below 5 ppm over background.

If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown. When work shutdown occurs, downwind air monitoring as directed by the Safety Officer will be implemented to ensure that vapor emission does not impact the nearest residential or commercial structure at levels exceeding those specified in the Major Vapor Emission section.

Community Air Monitoring Plan
(Ground Intrusive Activities)

Major Vapor Emission

If any organic levels greater than 5 ppm over background are identified 200 feet downwind from the work area or half the distance to the nearest residential or commercial property, whichever is less, all work activities must be halted.

If, following the cessation of the work activities, or as the result of an emergency, organic levels persist above 5 ppm above background 200 feet downwind or half the distance to the nearest residential or commercial property from the work area, then the air quality must be monitored within 20 feet of the perimeter of the nearest residential or commercial structure (20 Foot Zone).

If efforts to abate the emission source are unsuccessful and if the following levels persist for more than 30 minutes in the 20 Foot Zone, then the Major Vapor Emission Response Plan shall automatically be placed into effect;

- if organic vapor levels are approaching 5 ppm above background.

However, the Major Vapor Emission Response Plan shall be immediately placed into effect if organic vapor levels are greater than 10 ppm above background.

Major Vapor Emission Response Plan

Upon activation, the following activities will be undertaken:

1. All Emergency Response Contacts as listed in the Health and Safety Plan of the Work Plan will go into effect.
2. The local police authorities will immediately be contacted by the Safety Officer and advised of the situation.
3. Frequent air monitoring will be conducted at 30 minutes intervals within the 20 Foot Zone. If two successive readings below action levels are measured, air monitoring may be halted or modified by the Safety Officer.

1.0 PURPOSE

The purpose of this Quality Assurance Project Plan ("QAPP") is to ensure that field sampling activities, laboratory analyses and data documentation are conducted consistent with state and federal regulations, and in a manner so as to accurately fulfill the project objectives for site closure activities on the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York ("Site").

The tasks described in the Final Workplan for Site Closure Activities ("Final Workplan") are proposed in order to remove petroleum-contaminated soil currently present under the slab of Building #3; close the two on-site 10,000-gallon fuel tanks and two 275-gallon fuel tanks; monitor the demolition of Building #1 for the presence of contaminated soil; close the on-site monitoring wells; and remove all on-site wastes currently stored in drums and other receptacles.

The Site as defined in this QAPP is the rectangularly shaped property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York. Occupying almost the entirety of the Site are three structures: a central seven-story structure (herein referred to as Building #2) flanked by a one-story structure to the east (herein referred to as Building #1) and a one-story structure to the west (herein referred to as Building #3).

All three buildings were constructed in the early to mid 1900s and are currently in varying stages of deterioration. The on-site structures were formerly occupied with various manufacturing uses including an electroplating laboratory and a former glue/adhesives factory. Based on available information, all three of the on-site structures are connected to the municipal water and sewer systems.

2.0 PROJECT MANAGEMENT

2.1 Client's Consultant

The Client's Consultant will be responsible for overall project coordination and implementation. Prior to the initiation of work, the identities and qualifications of the project manager and associated staff will be supplied to the NYSDEC. All on-site staff will be appropriately trained in accordance with Occupational Safety and Health Administration (OSHA) practices (29 CFR, Part 1910). The NYSDEC will also be notified of any changes in the senior on-site personnel. The office phone number for the Client's Consultant is (914) 452-1658.

Prior to the initiation of field work, a Site Health and Safety Officer will be designated by the Client and a complete Health and Safety Plan will be prepared. Resumes of specific professionals to be used by the Client will be provided to the NYSDEC. At this time, it is anticipated that Project Management and Site Safety will be provided by Paul H. Ciminello, Ronald Bielinski, P.E., Katherine J. Beinkafner, Ph.D., and Bradley E. Fisher. The Quality Assurance Officer (QAO) for this project will be Żywia Wojnar.

2.2 Notifications

The NYSDEC will be notified in writing at least two weeks prior to the initiation of any of the on-site work and during the course of the field work if deemed necessary by on-site personnel. Changes to field work scheduling will be provided via facsimile transmission. All applicable local agencies will also be notified prior to the initiation of site work.

2.3 Subcontractors

SOIL EXCAVATION SERVICES

Soil excavation services will be performed by a licenced contractor using a standard backhoe and the stockpiled soil will be transferred to designated licenced facilities by properly certified transporters using standard equipment. All transported soil will be appropriately covered during transport. Appropriate testing of stockpiled soil will be performed prior to disposal to determine appropriate waste characteristics. Appropriate manifests of removal will be maintained by ESI.

TANK REMOVAL SERVICES

Tank removal services will be performed by a licenced contractor using a standard backhoe. Any encountered contaminated soil will be transferred to designated licenced facilities by properly certified transporters using standard equipment. Appropriate testing of stockpiled soil will be performed prior to disposal to determine appropriate waste characteristics. Appropriate manifests of removal will be maintained by ESI.

DRUM REMOVAL SERVICES

All previously identified drums and materials (e.g., glues, resins) will be removed by a properly licenced contractor in accordance with applicable state and federal regulations. All other encountered products and/or materials requiring special handling will be removed and disposed of in accordance with applicable regulations. Appropriate testing of unknown materials and/or products will be performed prior to disposal to determine appropriate waste characteristics (if warranted). This testing will be performed in accordance with Appendix 19 of 6 NYCRR Part 371 (Representative Sampling Methods). All drums/materials will be transferred to designated licenced facilities by properly certified transporters. Appropriate manifests of removal will be maintained by ESI.

ANALYTICAL SERVICES

A New York State Department of Health ELAP CLP approved laboratory will perform environmental laboratory analyses. All work will be conducted in accordance with USEPA and NYSDEC analytical protocols. NYSDEC Analytical Services Protocol (ASP) Category B deliverables will be provided with the data package.

2.4 Utility Markout

A complete utility markout will be requested prior to any subsurface investigation activities. The Underground Utilities Hotline will be called two weeks prior to any work to be performed at the Site. Those utilities notified by the Underground Utilities Center will be contacted for confirmation of the markout prior to any on-site excavation. A field check of marked utilities in the vicinity of the property will be conducted. In addition, available site plans will also be reviewed for underground structures not included in the utility survey.

2.5 Health and Safety Plan

A site-specific Health and Safety Plan (HSP) will be prepared prior to the initiation of field work and the HSP will be reviewed with the appropriate subcontractors prior to the initiation of field work.

2.6 Community Air Monitoring Plan

A Community Air Monitoring Plan will be initiated during the field work outlined below, consistent with the Community Air Monitoring Plan as provided by the NYSDEC.

3.0 SAMPLING SUMMARY

Summarized below in Table 1 is the number of samples that are anticipated to be collected during this project, categorized by sample location and by analyte group. The number of samples are, at this time, estimates; field conditions may necessitate a greater or fewer number of samples being collected. A final sample chart will be included in all future reports issued to the NYSDEC.

Table 1: Summary of Anticipated Soil Samples

Sample Location		Number of Samples to be Collected (Anticipated)			
		VOCs (ASP 95-1)	SVOCs (ASP 95-2)	Metals (CLP-M)	Other
Building #3	Waste Characterization	2-4	2-4	2-4	PCBs, Pesticides, Cn, pH, Flashpoint, TCLP
	Shallow (0-0.5')	6	6	0	Depends on screening results
	Deep (3'-3.5')	6	6	0	Depends on screening results
Building #1	Shallow (0-0.5')	5	5	5	Depends on screening results
	Deep (3'-3.5')	5	5	5	Depends on screening results
	Stockpiled Soil	2-4	2-4	2-4	Depends on volume of soil
Tank Removal	Sidewalls	0	4-8	0	Depends on screening results
	Base	2	2	0	Depends on screening results
	Stockpiled Soil	2-4	2-4	2-4	Depends on screening results
Total # of Samples		30-36	34-44	16-22	
Notes: 1. All soil samples will be analyzed using NYSDEC ASP Methods 95-1 and 95-2. 2. The reporting level for all samples will be NYSDEC ASP Category B deliverables.					

All debris that is generated during demolition activities will also be analyzed via the full TCLP (Method 1311) TC list prior to off-site disposal. All demolition debris will be sampled in accordance with methods established in Appendix 19 of 6 NYCRR Part 371. The number of samples that will be collected as part of the disposal of the demolition debris will be sufficient to accurately characterize the material for deposition purposes.

3.1 Removal of Contaminated Soil Under the Slab of Building #3

The soil beneath the concrete slab in Building #3 is scheduled to be removed in accordance with site closure activities outlined in the Final Workplan. All samples will be collected with a decontaminated stainless steel trowel. The soil samples will be placed in a laboratory-sterilized jar and stored on ice in a cooler prior to overnight shipment to the laboratory. Proper chain of custody documentation will accompany each sample shipment. All soil samples will be analyzed for the parameters listed in Table 1, above.

Field personnel will visually examine the sample and note the following physical characteristics in a field notebook, including color, evidence of staining or free product, odor, and PID readings, as recorded at designated intervals.

Prior to soil excavation, the entire area beneath the removed slab in Building #3 will be monitored by a qualified environmental professional (herein referred to as the On-Site Coordinator or "OSC") using a Thermal Instruments 580B photoionization detector (PID) calibrated to read parts per million gas equivalents (ppm-cge) of isobutylene. Olfactory and visual indications of chemical/petroleum contamination will be noted in field logs. The OSC will be responsible for identifying any soils which, in the opinion of the OSC, may contain elevated concentrations of contaminants and should therefore require special handling.

Soils that are either visibly stained or were identified in previous investigations as contaminated will be excavated during the course of the remediation project. Based on prior analyses, the initial 3 to 3.5 feet of encountered soils will be excavated for off-site disposal.

Those soils identified by the OSC will be removed to the management area for testing and off-site disposal. The OSC will also be on-site to ensure that unforeseen environmental conditions are managed in accordance with applicable federal and state environmental regulations.

Prior to excavation, discrete soil samples will be collected for waste characterization purposes (the number of samples will depend on the volume of soil). Analyses will be conducted consistent with the requirements of the waste repository. Analyses will be used to determine if the encountered soil will be handled as a hazardous or non-hazardous waste.

Soils will be excavated and immediately deposited into lined thirty cubic yard receptacles for transport to a facility permitted to handle VOC-contaminated soils. Any encountered soils which indicate the presence of "significantly elevated concentrations" will be handled independent of other excavated soils from beneath the slab. All manifests and supporting documentation of waste disposal will be maintained by the OSC for inclusion in the final report.

Confirmatory soil samples will be collected from each area where soil was removed including those areas found to be highly contaminated (if warranted), in a manner consistent with NYSDEC guidelines. Six (6) sample locations will be randomly selected over an established grid covering the footprint of the existing building and the area of soil excavation (these locations will be sited to evaluate the effectiveness of the soil removal). Samples will be collected from two discrete depths subsequent to the removal of the initial 3 to 3.5 feet layer of soil (i.e., sampling will begin at 3 to 3.5 feet below current surface grade level); these depths are designated as 0 - 0.5 feet and 3 - 3.5 feet (a total of 12 samples will be collected). If appropriate, samples will also be collected from areas found to be highly contaminated (e.g., beneath drum storage area).

Confirmatory samples will be analyzed for volatile organic compounds and semi-volatile organic compounds consistent with the NYSDEC's ASP Methods 95-1 and 95-2. All laboratory analyses will be performed by a NYSDOH ELAP-CLP certified laboratory. Appropriate chain of custody documentation will be maintained. Data from these analyses will determine the need for additional soil removal.

During the soil excavation procedures beneath the slab of Building #3, the OSC will field check the area beneath the slab for the presence of any wastewater discharge lines or any other discharge points. If lines or discharge points are encountered, the OSC will collect a sufficient number of soil samples from beneath the lines so as to properly characterize the presence of any contamination. All soil samples will be collected and analyzed for VOCs and SVOCs in accordance with ASP Methods 95-1 and 95-2.

3.2 Closure of On-site USTs and ASTs

Specifications for Tank Closure Services proposed for use in closing the two 10,000-gallon USTs are provided as an attachment to the Final Workplan. These Specifications are consistent with NYSDEC Petroleum Bulk Storage Regulations (6 NYCRR, Part 612-614) and relevant NYSDEC guidance documents. The two 275-gallon ASTs will be closed in a manner consistent with 6 NYCRR, Part 613.

3.3 Monitoring the Demolition of Building #1

Documentation of on-site conditions indicates that petroleum contaminated soils may be encountered during the course of the demolition of Building #1. The OSC will be present during the initial stages of site development to observe excavation activities. Specific activities which will be conducted by the OSC are the following:

1. The OSC will work with the excavator to locate a secure area on the Site for the management (e.g., loading, stockpiling, sampling, etc.) of suspect waste streams, including contaminated soils. The management area will be located in a place that will be the least disruptive to site activities.
2. The OSC will screen soils encountered after the demolition of Building #1 with a PID or comparable equipment. Olfactory and visual indications of chemical/petroleum contamination will be noted in field logs. The OSC will be responsible for identifying any soils which, in the opinion of the OSC, may contain elevated concentrations of contaminants and should therefore require special handling. Those soils identified by the OSC will be removed to the management area for testing and off-site disposal.
3. The OSC will ensure that all soil present on the site which may contain elevated levels of contaminants is covered daily with 6 mil plastic, weighted with rocks or other materials to prevent the cover from shifting.
4. The OSC will collect a sufficient number of samples from the stockpiled soil to provide documentation for proper soil transport and disposal. The specific analytes will be determined based on the requirements of the final repository. The determination of soil disposal procedures (e.g., disposal as a hazardous or non-hazardous petroleum waste) will be based on the laboratory results.
5. The OSC will identify waste haulers who hold appropriate licenses for waste transport and will provide the Client with all necessary services to facilitate the proper transport and disposal of stockpiled soils. Waste transport and disposal manifests will be maintained by the OSC for inclusion in reports to the NYSDEC.

6. Upon completion of all proposed excavation activities, the OSC will collect and have analyzed five (5) surface soil (0.5 - 1.0 foot depth) samples and five (5) mid-grade level (3.0 - 3.5 foot depth) samples. These samples will be analyzed for VOCs and PAHs in accordance with ASP Methods 95-1 and 95-2. In addition, the samples will also be analyzed for CLP-M metals; observations may warrant additional analytes.
7. During the course of monitoring activities in Building #1, the OSC will field check the area beneath the slab for the presence of any wastewater discharge lines or any other discharge points. If lines or discharge points are encountered, a sufficient number of soil samples from beneath the lines so as to properly characterize the presence of any contamination. All soil samples will be collected and analyzed in accordance with NYSDEC ASP Methods 95-1 and 95-2.

3.4 Removal of On-site Wastes

Prior to any demolition services, all drums and liquid chemical storage containers as well as any liquids not currently in containers will be inventoried to determine if any of the stored material can be returned to manufacturers and for waste disposal compatibility assessment purposes. All drummed or non-containerized wastes will be sampled in accordance with methods established in Appendix 19 of 6 NYCRR Part 371. Upon completion of the inventory, a determination will be made regarding final disposition of all liquids.

All drums and containers determined to be unstable or in containers of questionable structural integrity will be overpacked. Similarly, wastes determined to be unstable will be chemically stabilized consistent with applicable procedures. All wastes, whether liquid or not, will be properly labeled and removed from the site by a licensed hauler. Manifests will be maintained by the OSC for inclusion in the Final Report.

Subsequent to the removal of all debris in the basement area of Building #2, a thorough search of the floor area will be conducted for the presence of any floor drains. In the event that drains are located, these drains will be opened and any accumulated material inside will be sampled for characterization purposes. The direction of the drain will be determined through physical probing and, if appropriate, video documentation. The floor of the basement will be breached along the extent of the drain and discharge lines and soil samples will be collected, with particular concern for volatile organic compounds (VOCs) and reactive compounds. Analytical results will determine the need for and extent of subsurface remediation. Current data (see laboratory results of B-8 and B-9) do not indicate the need for remedial actions for the soils under Building #2.

At a minimum, any identified floor drains will be cleaned of residue and foreign material and will be properly sealed.

3.5 Closure of On-site Monitoring Wells

The following procedure will be eventuated with respect to the closure of the on-site groundwater monitoring wells:

1. NOTICE

All appropriate agencies will be notified in writing of the proposed closure of groundwater monitoring wells.

2. EVACUATION

Any obstructions that could interfere with the sealing process will be removed. All pump bowls, columns, and other debris shall be removed from the well. The upper portion of the casing will be removed to a sufficient depth below proposed finish grade to ensure that the abandoned well will not present an obstruction to any future use of the site.

3. CASING REMOVAL

The well casing/riser in each well will be removed to a depth of 5 feet below grade.

4. CASINGS

The entire remaining casing, including the riser pipes and annular spaces between casings will be filled with a cement/bentonite mixture in the following ratio: one 94 pound bag Type I Portland cement, 3.9 pounds of powdered bentonite, and 7.8 gallons of potable water. The mixture, if appropriate, shall be placed under pressure through tremie pipes to the bottom of the space to be filled in order to prevent dilution of the mixture. The tremie pipe may be raised slowly as mixture is introduced to the casing or hole.

5. CASING SEAL

After the mixture has consolidated, as confirmed by visual inspection, the upper 5 feet of the well column will be filled with a material appropriate with the future use of the site or the area will be restored to the condition of the surrounding materials.

4.0 QUALITY CONTROL PROCEDURES

4.1 Laboratory

All soil samples will be collected in accordance with applicable NYSDEC guidelines. All samples will be analyzed by a New York State Department of Health (NYSDOH) ELAP CLP certified laboratory using applicable NYSDEC Analytical Services Protocol (ASP) Methods. The reporting level for all analyzed soil and groundwater samples will be NYSDEC ASP Category B deliverables. All data will be evaluated in accordance with protocols outlined in the attached Division of Environmental Remediation Data Usability Summary Report ("DUSR"). This DUSR is provided as Attachment F in this Final Workplan.

4.2 Field Instrumentation

A field equipment checklist will be used for mobilization and documentation of the quantity of field equipment and materials used each day. All field equipment will be calibrated daily immediately prior to use in the field. Calibration procedures will follow standard manufacturers' instructions to ensure that the equipment is functioning within tolerance ranges established by the manufacturer and required by the project. A record of the instrument calibration will be stored with each instrument

Each field instrument that comes into contact with any sampled media will be properly decontaminated prior to use at each sampling location in order to prevent cross contamination. Decontamination procedures are outlined in Section 3.3 of this QAPP.

PHOTOIONIZATION DETECTOR

A Thermal Instruments 580B photoionization detector (PID) calibrated to read parts per million calibrated gas equivalents (ppm-cge) of isobutylene will be used to screen soils, and to perform air monitoring in the work areas. The PID will be manually calibrated in the field at the beginning of each field day. Calibration procedures are as follows:

	<u>PRESS THIS</u>	<u>OBSERVE THIS</u>
1.	ON / OFF + sampling pump on	Current ppm reading
2.	MODE / STORE	LOG THIS VALUE?
3.	-/CRSR 4 TIMES	"RESET" TO CALIBRATE
4	RESET	RESTORE BACKUP
5.	-/CRSR	ZERO GAS RESET WHEN READY
6.	Make sure you are in a clean area (or hook up zero air supply)	
7.	RESET	MODEL 580 ZEROING then SPAN PPM = 100
8.	VALUE FOLLOWING "SPAN PPM" MUST EQUAL PPM VALUE OF CALIBRATION GAS	
9.	+/INC	SPAN GAS RESET WHEN READY
10	ATTACH CALIBRATION GAS AND OPEN FLOW REGULATOR	
11.	RESET "RESET" to CALIBRATE	MODEL 580 CALIBRATING then
12.	MODE /STORE	CURRENT PPM OF GAS

4.3 Sampling Equipment

Prior to the initiation of field work, all field equipment to be used during the work will be properly decontaminated in accordance with NYSDEC guidelines. All samples will be collected using dedicated disposable equipment or properly decontaminated equipment. Reusable sampling equipment will be decontaminated in the following manner:

1. Pressure wash with deionized water and a designated brush to remove any visible dirt.
2. Wash and scrub in a mild detergent (e.g. Alconox) and deionized water using a designated brush.
3. Rinse the equipment with deionized water.
4. Rinse the equipment with a 10% Nitric Acid solution (if warranted).
5. Rinse with deionized water.
6. Rinse with methanol.
7. Rinse with deionized water.
8. Allow to air dry and use immediately or wrap in aluminum foil (shiny side out).

4.4 Quality Control Samples

4.4.1 Field Blanks/Equipment Blanks

One field/equipment blank per day will be collected for soil samples and analyzed for the parameters being tested. Field/equipment blanks will be collected in the following manner: field blank water (provided by the laboratory) will be poured over the sampling device and into the appropriate containers (dependent upon the type of laboratory analysis requested). The sampling container will be labeled as a field blank, stored on ice with other samples collected during the day, and shipped to the laboratory via overnight delivery service.

4.4.2 Trip Blanks

Trip blanks will be included on days only when volatile organic compounds are a parameter to be analyzed. One trip blank per sample shipment (not to exceed two consecutive field days) will be submitted. The trip blank will be analyzed for volatile organics only. The trip blank vial will be labeled by the laboratory and will not be opened in the field.

4.4.3 MS/MSD

Matrix spike/matrix spike duplicate samples will be collected in soil samples. These samples will be collected at the rate of one MS/MSD sample for every 20 field samples, or every batch of samples, whichever is more frequent.

4.5 Sample Handling

Dedicated, sterile glassware for sample collection will be provided by the laboratory for this project. Sampling personnel will wear disposable latex gloves during collection, field screening or other contact with sampled media. A new pair of gloves will be worn at each sample location. All samples will be placed in appropriate containers supplied by the laboratory. Preservation of samples, when required, will be performed in accordance with laboratory directives. Samples will be stored on ice immediately following sample collection and until samples are delivered to the laboratory.

Table 2: Sample Handling Procedures

Analytical Parameter	Type of Container	Preservative	Maximum Holding Time
<i>Soils</i>			
CLP-M Metals	8-oz wide-mouth glass jar	Cool to 4°C	6 months
Volatiles 95-1	4-oz. wide-mouth glass jar w/Teflon-lined cap	Cool to 4°C	5 days
Semivolatiles 95-2	same as above	Cool to 4°C	5 days
Notes: 1. All samples will be delivered to the laboratory within 48 hours of sample collection 2. NYSDEC ASP Level B Deliverables are required for all sample analyses 3. Holding times for VOCs and SVOCs are measured from verified time of receipt at the laboratory			

4.5.1 Chain of Custody

Proper chain of custody documentation will be maintained at all times and will accompany samples during shipment to the laboratory. Neither samples nor associated blanks will be kept on-site for longer than two days. Shipment to the laboratory will be via overnight delivery service or via laboratory courier service. A signed copy of the chain of custody form will be kept by the Client's Consultant.

4.5.2 Sample Labels

All sample containers will be labeled with indelible ink immediately following sample collection. The following information will be included on each label:

- Date and time of collection
- Project number
- Sample identification number
- Required analysis
- Preservative, if required
- Sampler's name
- Company name

4.5.3 Field documentation

A bound logbook will be maintained by the Client's Consultant staff to provide a daily record of field activities, observations, and measurements. The page number, date and project number will be written in indelible ink at the top of each page. The following entries will follow:

- Weather conditions
- Names of field personnel/Arrival and departure times
- Daily activities
- Relevant observations
- Record of photographs
- Record of sample collection identifiers and locations
- Equipment usage
- Site visitors (Agency, Client, etc.)
- Signature of field investigator responsible for recording observations (at end of daily entry)

5.0 DATA VALIDATION AND DATA USABILITY

The data package received from the New York State Department of Health approved laboratory will be reviewed by an independent data validation firm. Data validation activities will be performed in accordance with USEPA and NYS Department of Environmental Conservation protocols. Data validation will be performed for 100% of the data generated at the Site.

A comprehensive Data Validation Summary Report detailing the acceptability of the data, including deviations noted, will be generated. Provided in addition to the validation summary are the following: Analytical Data Summary Tables including appropriate qualifiers; Precision Tables for field duplicate samples; and copies of the corresponding Case Narratives, Chain-of-Custody Forms and NYSDEC Summary Sheets.

A Data Usability Report will be prepared based upon the laboratory reports and the Data Validation report. The Data Usability Report will assess the quality of the data collected during the site investigation. Analytical results and data points will be evaluated for consistency with site history and previous sampling rounds, potential field or laboratory contamination, and compliance with protocol requirements. Based on assessment of data usability, recommendations may be made for resampling or selection of different/additional data points, and for expansion/deletion of analytical parameter lists. The data usability report will be included in the Site Investigation/Remedial Alternatives Report.

QUALITY ASSURANCE PROJECT PLAN - REVISED
SOUTH 4TH STREET, BROOKLYN, NEW YORK

OCTOBER 13, 1997
PAGE 15 OF 15

6.0 QUALITY ASSURANCE OFFICER

Ms. Żywia Wojnar has been designated Quality Assurance Officer ("QAO") for this project. The QAO will review all work relating to the site closure activities in order to ensure compliance with the QAPP protocol and project objectives. Included in this review will be field and sampling audits, and the review of analytical data. The QAO will generate a data usability report as described in Section 5.0 of this QAPP. Ms. Wojnar's resume is included in the Final Workplan.

ATTACHMENT F

NYSDEC DIVISION OF ENVIRONMENTAL REMEDIATION

DATA USABILITY SUMMARY REPORT

Data Usability Summary Report (DUSR)

Background:

The purpose of the DUSR is to provide a thorough data evaluation by an experienced environmental scientist and/or the project Quality Assurance Officer.

Since it is recommended that Data Validation Reports be prepared by an independent third party (i.e., independent of the project management consulting firm and the analysis laboratory), the DUSR is an appropriate alternative when data quality and usability are not expected to be a significant issue. In these cases, the DUSR is an appropriate alternative since it is more cost effective and time efficient than data validation.

The DUSR and data deliverables will be reviewed by the NYSDEC Quality Assurance Unit. In most cases, we expect this review will result in agreement or minor differences which should be easily reconciled. If data validation is found to be necessary (e.g., pending litigation), it can be done at a later date by an independent third party on the data deliverable package.

Preparation of a DUSR on a NYSDEC ASP Category B or CLP Deliverables Package

The Environmental Scientist preparing the DUSR should submit a resume to the NYSDEC Quality Assurance Unit documenting relevant experience in environmental sampling and analysis methods and data review and statement of Bachelors Degree in Natural Science or Engineering.

The DUSR is prepared by reviewing and evaluating the analytical data. The parameters to be evaluated in reference to compliance with the analytical method protocols include all sample chain-of-custody forms, holding times, raw data (instrument print out data and chromatograms), calibrations, blanks, spikes, controls, surrogate recoveries, duplicates and sample data. If available, the Field Sampling Notes should also be reviewed and any quality control problems should be evaluated as to their effect on the usability of the sample data.

The DUSR describes the samples and analysis parameters reviewed. Data deficiencies, analytical method protocol deviations and quality control problems are described and their effect on the data is discussed.

Resampling/reanalysis recommendations are made. Data qualifications are documented for each sample analyte following the NYSDEC Analytical Services Protocol '91 Rev. guidelines.

Contact Christine McGrath, NYSDEC, Division of Hazardous Waste Remediation, Quality Assurance Unit, at (518) 457-3252, with any questions on preparing a DUSR.

Revised 11/95

ATTACHMENT G

TANK REMOVAL SPECIFICATIONS

1.0 Summary of Proposed Work

1.1 Site Location

The project site ("site") is defined in these Tank Removal Specifications ("Specifications") as that portion of the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York City, New York where tank removal activities will occur. These tanks are located within a vault in the basement of the on-site building (Building #3).

1.2 Tank Identification and Description

Two 10,000-gallon petroleum bulk storage (PBS) tanks used to store fuel oil are present on the site. Available information indicates that these tanks were installed when the building was constructed and were used to store heating oil for the on-site structure's furnace. These two PBS tanks are estimated to be approximately 30 feet long and approximately 8 feet wide in diameter. They are located within a vault area but are only partially aboveground (approximately 30%); for management purposes these tanks are considered to be underground storage tanks.

1.3 General Description of Project

The proposed action involves the removal of the two on-site PBS tanks described above in conjunction with site redevelopment and will be initiated after demolition of the building's first floor. This tank removal work will include the removal and proper disposal of any petroleum products located within the tanks and their associated piping networks; the disconnection and removal of the tanks and associated piping networks; the proper sampling of the tank excavation area and any encountered petroleum contaminated soils; the removal of the tank's surrounding concrete vault; and the restoration of the area as designated by the Client.

1.4 Unforeseen Conditions

To the extent practical, these Specifications will be followed for the removal of each tank. The removal of a PBS tank, however, is a dynamic process, with the continuing development of site conditions after each completed step dictating the proper procedural approach for the next step. Field conditions and unforeseen events may, therefore, render portions of these Specifications inappropriate and/or unnecessary. Unless rendered impractical due to emergency conditions, any substantive alterations to these Specifications will be reviewed with the Client and the NYSDEC prior to their implementation.

1.5 References

These Specifications were prepared based on available information regarding the tanks which was obtained from the Client, local agencies, state agencies, and a visual inspection of the tanks conducted by this office. These Specifications were prepared in accordance with the requirements of the NYSDEC's Petroleum Bulk Storage Regulations 6 NYCRR Parts 612-614 and the NYSDEC's SPOTS Memo # 14 Site Assessments at Bulk Storage Facilities.

2.0 Definitions

The following definitions and terms are defined for the purpose of these Specifications.

- NYSDEC: New York State Department of Environmental Conservation
- NYSDOH: New York State Department of Health
- NYSDOL: New York State Department of Labor
- NYCFD: New York City Fire Department
- Client: The individual designated as the entity for whom the tank removal services are being performed.
- Contractor: The individual or firm retained by the Client for the purpose of removing the two on-site USTs in accordance with the requirements of the NYSDEC as well as the procedures outlined in these Specifications.
- H&SO: Health and Safety Officer; the individual designated by the contractor to be responsible for implementing the Health and Safety Plan.
- OSC: On-Site Coordinator; the individual designated by the contractor to be responsible for the coordination of all tank removal activities.
- ELAP: Environmental Laboratory Approval Program
- PID: Photoionization detector calibrated to read parts per million calibration gas equivalents (ppm-cge) of isobutylene; provides estimates of the presence or absence of volatile organic compounds.
- VOCs: Volatile Organic Compounds
- SVOCs: Semi-Volatile Organic Compounds

3.0 Site Preparation Work

3.1 Project Meetings

In order to ensure that the tank removal work is performed in a cost-efficient and timely manner, a series of meeting will be held. These meetings will consist of a "Kick-Off" Meeting and additional project meetings to be scheduled by the Contractor and/or the Client, as warranted by project status or changes in services; unless determined appropriate by the Contractor and/or Client, no Project Closure Meeting will occur.

The "Kick-Off" Meeting will be attended by all involved personnel (or at a minimum by a representative of each firm) and will include the coordination and scheduling of the tank removal activities as well as the review of the Health and Safety Plan (see Section 3.2, below). At or before this Meeting, the Contractor will provide to the Client the name and qualifications of the OSC.

3.2 Health and Safety Plan

- a. A site-specific Health and Safety Plan will be prepared by the contractor, and will, at a minimum, identify procedures to be adhered to in the event of an accident on the site during tank removal activities.
- b. The Health and Safety Plan will be submitted to the Client for review prior to the initiation of any tank removal work.
- c. The Health and Safety Plan will be reviewed with all subcontractors and involved personnel prior to the initiation of field work (See Section 3.1, above).
- d. The Contractor will provide to the Client the name and qualifications of the project's H&SO, who will be responsible for implementing the Health and Safety Plan. At the discretion of the Contractor, the OSC may serve as the H&SO.

3.3 Utility Markout

A request for a complete utility markout of the project site will be submitted as required by NYSDOL regulations. Confirmation of underground utility locations will be secured and a field check of the mark-out will be conducted prior to the initiation of field work.

3.4 Site Control/Area Designation

The Site will be properly secured by the Contractor to prevent unauthorized individuals from entering the work zone. The Site will be inspected by the Contractor and, at a minimum, equipment staging and contaminated soil stockpiling areas will be located and secured.

3.5 State Agency Notifications

The NYSDEC will be contacted in writing to notify them of the projected tank removal, as required by 6 NYCRR, Part 613.9. Notification will occur no later than ten (10) business days prior to the actual field work.

3.6 Local Approvals

The New York City Building Department and Fire Department will be contacted by the Contractor and any approvals or permits required by these agencies will be secured prior to the initiation of tank removal work; all costs will be the responsibility of the Contractor.

3.7 Record-Keeping

- a. All record-keeping is the responsibility of the Contractor. All field work activities, observations made during the tank removal process, indications of contamination will be monitored and logged in the field notes maintained by the OSC.
- b. All manifests documenting proper removal of petroleum products and the tanks and associated piping networks will be maintained by the Contractor. The Contractor will obtain authorization from the Client to sign manifests and bills of lading as the Client's representative in the event that the Client cannot be present during field work.
- c. A copy of all manifests and bills of lading will be provided to the Client and will be included in the Tank Closure Report prepared for the property (see Section 6.0 below).

3.8 Subcontractors

- a. Qualifications of subcontractors may be reviewed by the Client prior to a subcontractor being considered acceptable for this project.

TANK REMOVAL SPECIFICATIONS
PB96146.40

OCTOBER 13, 1997
PAGE 5 OF 7

- b. At a minimum, any laboratory proposed for use on this project will be a NYSDOH ELAP certified laboratory for all analyses which are specified herein.
- c. All subcontractors will be notified in a timely manner to ensure that the tank removal activities proceed on schedule and without delays.

4.0 Tank and Piping Network Removal Procedures

4.1 Liquid and Sludge Removal

Prior to the initiation of tank removal, the tank and associated piping will be drained of all remaining product for off-site disposal/reuse. Any residual product and/or sludge in the tank and connecting lines encountered subsequent to the removal of the tank will be drained into 55-gallon drums and transported off-site for disposal in accordance with applicable state and federal regulations. Proper documentation of product disposition will be maintained by the Contractor.

4.2 Cutting of Asphalt

All asphalt present in the area designated by the Contractor as being within the tank excavation area will be cut and removed.

4.3 Vault Demolition

The concrete vault surrounding the two tanks will be broken into pieces and removed subsequent to the removal of all possible product from the tanks and their associated lines.

4.4 Tank and Piping Removal, Inspection and Disposition

- a. Excavation activities will commence to expose the top and sides of each UST. Encountered soil will be screened by the OSC using a PID for evidence of gross petroleum contamination. If encountered, contaminated soil will be segregated stockpiled for subsequent testing and removal.
- b. All connecting lines will be disconnected and removed from the site.
- c. The tank will be removed from the ground and visually inspected by the OSC for evidence of damage and/or corrosion.

- d. The tank will then be rendered free of vapors (provisions must be made for natural breathing of the tank to ensure that the tank remains vapor free) and transported off-site for disposal as scrap metal along with the associated piping network. Documentation of proper tank destruction will be maintained by the Contractor.

5.0 Evaluation and Documentation of Subsurface Conditions

5.1 Inspection of Soils

The remaining soils in the excavation pit and those already removed from the pit will be visually examined and screened with a PID to document the presence or absence of any indications of petroleum contamination. All field indications of contamination will be noted in the field logs by the OSC.

5.2 Soil Analysis of Non-contaminated Soils

In the event that no evidence of contamination is encountered, confirmatory samples from the floor (two samples) and four walls (one from each wall) of the excavation area will be collected for laboratory analysis of semi-volatile organic hydrocarbons (SVOCs) using ASP Method 95-2. The floor samples will also be analyzed for VOCs using ASP Method 95-1. Prior to the collection of each sample, field sampling equipment will be decontaminated as follows: soapy water rinse, de-ionized water rinse, methanol rinse, air drying, de-ionized water rinse.

All samples collected for laboratory analysis will be placed in sample jars sterilized at the laboratory. Sterile gloves will be used to place the material into jars, and the jars will be placed in a cool, dry place prior to their transport to a New York State Department of Health (NYSDOH) ELAP certified laboratory for analysis following proper chain of custody procedures.

5.3 Encountered Contaminated Soil

Previous soil sampling indicates that significant volumes of contaminated soil is not likely to be encountered. Procedures outlined below are considered precautionary.

- a. In the event that petroleum contaminated soil is identified, all suspect material will be excavated and stockpiled on plastic sheeting (6 mil gauge). Representative samples of the contaminated stockpiled soil (composite soil sample) as well as soil from the "clean floor" (two samples) and "clean walls" (one sample from each wall) will be collected and sent to a NYSDOH ELAP certified laboratory for analysis of SVOCs using ASP Method 95-2 and VOCs using ASP Method 95-1. Proper chain of custody procedures will be followed.
- b. The NYSDEC will be notified immediately of the occurrence of a petroleum spill as required by 6 NYCRR, Part 613.8.
- c. If laboratory analyses reveal that portions or all of the stockpiled soil is unfit for use as backfill, representative samples of the spoil pile confirmed to be contaminated will be analyzed for all of the parameters specified by the designated repository location. This soil will then be disposed of in accordance with all applicable state requirements (6 NYCRR Part 360 if laboratory analyses reveal the soil to be a non-hazardous waste and 6 NYCRR Part 370 if analyses reveal it to be a hazardous waste).

5.4 Restoration of Area

Restoration of the former tank area will proceed consistent with site development plans.

6.0 Preparation of Final Report

A final Tank Closure Report will be prepared, documenting all tank removal activities, including the presence or absence of field and laboratory indications of contamination, the extent of contamination, the presence or absence of groundwater contamination, and remedial options based upon the analytical results and field observations.

1.0 INTRODUCTION

1.1 Purpose

This Summary Report of Supplemental Subsurface Investigative Services ("Report") summarizes all field work performed by Ecosystems Strategies, Inc. ("ESI") and authorized subcontractors on the portion of the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York designated as the eastern portion of Building #2. The work conducted on March 19, 1999 and summarized in this Report was performed in accordance with discussions between ESI and the New York City Board of Education.

The specific purpose of this Report is to provide documentation regarding the presence or absence of subsurface soil contamination on the subject property within the footprint of Building #2. Samples from a previous sampling round indicated no evidence of significant contamination at this Site. The data were considered by the Board of Education insufficient to fully characterize the entirety of Building #2, and, as a result, additional borings and soil sampling were requested.

This Report describes all soil borings, field work methodology and soil sampling procedures, includes discussions of the resulting analytical data from collected soil samples, and provides conclusions and recommendations drawn from the field work and analytical data.

1.2 Limitations

This written analysis is an assessment of the site characterization activities conducted on a specified portion of the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York and is not relevant to other portions of this property or any other property. It is a representation of those portions of the property analyzed as of the respective dates of field work. This Report cannot be held accountable for activities or events resulting in contamination after the dates of field work.

Services summarized in this Report were performed in accordance with generally accepted practices and established NYSDEC protocols. Unless specifically noted, the findings and conclusions contained herein must be considered not as scientific certainties, but as probabilities based on professional judgement.

1.3 Site Location and Description

The subject property as defined in this Report is a portion of the rectangularly shaped property located at 98-116 South 4th Street, Borough of Brooklyn, Kings County, New York referred to as Building #2. Field work documented in this Report specifically investigated the eastern portion of Building #2. A map illustrating the location of the subject property is provided in Appendix A of this Report.

The site is occupied almost entirely by three adjacent structures: a central seven-story structure which is the focus of this Report (Building #2); a one-story structure to the east (Building #1); and a one-story structure to the west (Building #3). All buildings are shown on the Selected Site Features Map, Appendix A.

The building was constructed in the early to mid 1900s. The condition of the structure is fair with marked deterioration. According to information provided to this office by Pratt Institute for Community and Environmental Development ("Pratt Institute"), the one-story structure located on the western portion of the subject property (98-102 South 4th Street) was most recently occupied by a glue and adhesives factory (Van-Man Adhesives) and the seven-story structure located on the central portion of the property (104-114 South 4th Street) was partially occupied by a former electroplating laboratory (Camin Laboratories, Inc.). No information regarding the most recent occupant of 116 South 4th Street was available.

According to available information this structure is connected to the Borough of Brooklyn central water and sewer systems.

1.4 Previous Environmental Reports

Three (3) environmental investigations have been conducted on the subject property by Ecosystems Strategies, Inc.; a Phase I Environmental Audit prepared on the subject property in 1996; a Summary Report of Phase II Environmental Services prepared regarding investigation in the interior of the former glue/adhesives factory; and a Summary Report of Subsurface Investigation prepared in 1997. Provided below is information obtained from these documents relevant to this investigation of Building #2.

Phase I Environmental Audit

On November 26, 1996 Ecosystems Strategies, Inc. conducted an environmental investigation on the subject property as part of the preparation of a Phase I Environmental Audit ("Audit") dated December 2, 1996.

The visual inspection of the interior of Building #2 identified large quantities of debris materials in the basement and first floor of the building including materials and liquids which potentially required special handling, abandoned laboratory equipment including open drums, vats and containers of unknown liquids that potentially required special handling and the likely presence of asbestos containing materials and surfaces covered with lead-based paint. A faint sulphur odor in the abandoned laboratory on the second floor and the presence of two (2) vaulted fuel oil tanks estimated to be 10,000 gallons in capacity located in the basement were noted.

Summary Report of Phase II Environmental Services

On December 11, 1996 Ecosystems Strategies, Inc. conducted a limited subsurface investigation within Building #3 to document the presence or absence of contaminants in the subsurface soils beneath the building. Additionally as part of this investigation, an asbestos survey and a lead-based paint survey were conducted on in Buildings #2 that identified the presence of asbestos-containing materials and lead-based paint in conditions that warranted remediation. The areas of standing water present within the former glue factory and in the vats present on the second floor of Building #2 were sampled and determined not to require any special handling.

Summary Report of Subsurface Investigation

This Report summarized field work performed by Ecosystems Strategies, Inc. and designated subcontractors on December 11, 1996, March 31, 1997 and April 1, 1997. This investigation involved the extension of five (5) borings extended within the former glue factory (Building #3) and four (4) borings within the basement of Building #2. Field observations did not indicate overt

subsurface contamination; however, laboratory analysis identified low levels of chlorinated solvents above NYSDEC-designated action levels in soil from approximately 6-10 feet below grade in Building #3. Borings extended beneath the concrete floor of the Building #2 basement indicated that the subgrade soils had not been adversely impacted.

No soil remediation or further monitoring was advised for Building #2. Laboratory data substantiated that no compounds were found above their detection limits with the exception of Trichloroethene (also known as Trichloroethylene). The one detected compound, Trichloroethene narrowly exceeded the detection limit but was significantly below New York State guidance values for required action. No further monitoring of soils in Buildings #2 or #1 was advised. As Building #2 was presumed downgradient from Building #3, migration of contamination if present would have been indicated by the presence of contaminants in soil samples obtained from Building #2. The lack of contaminant presence in samples from Building #2 indicated that the contamination was likely contained within the area of Building #2 and #3 and that the other buildings are not likely to be contaminated from this source. The location of Building #1 at a presumed downgradient location to Building #2 makes that building even more removed from this source of contamination.

Groundwater Monitoring

Groundwater sampling was conducted by ESI in June and July of 1997. Three wells (MW-1, MW-3, and MW-4) installed on the site in June were developed and sampled in July. Groundwater was determined from surveyed well elevation data depth-to-water measurement to be moving in a northeasterly direction. Groundwater was present between 23 and 25 feet below surface elevation at the site; groundwater elevations vary between 26.69 feet at MW-4, 26.85 feet at MW-1, and 27.07 feet at MW-3. The variation in groundwater elevation is indicative of low groundwater rates.

Analysis of groundwater samples taken from the monitoring wells did not indicate significant groundwater contamination and did not support the conclusion that on-site groundwater should be considered a source of off-site contamination. Data obtained from the sample taken from monitoring well MW-4, the monitoring well in the vicinity of Building #2, supported the conclusion that remedial actions directed to reduce concentrations of the compounds identified (Trichloroethene and Tetrachloroethene) were not warranted at detected levels.

2.0 SUBSURFACE INVESTIGATION

2.1 Subsurface Investigation Objectives

ESI conducted a subsurface investigation on selected portions of the subject property as a confirmatory investigation to verify and identify the presence or absence of subsurface petroleum contamination as a result of the above mentioned adjoining contamination. The field work summarized in this Report was performed by ESI and Zebra Environmental personnel ("Zebra") on March 19, 1999. The specified objectives of the environmental services summarized in this Report were to:

- Document the presence or absence of soil contamination within the footprint of Building #2 and the lateral and vertical extent of contamination if detected;
- Document the presence or absence of contamination at or near the water table in borings downgradient of Building #1;
- Suggest, if appropriate, further investigative and/or remedial options regarding identified subsurface or surface contamination; and
- Prepare a Final Report documenting all field work activities, resulting analytical data and conclusions and recommendations pertaining to the subsurface investigation.

This Report is divided into individual sections that describe the field work conducted by ESI on the subject property, including the field work observations during extension of soil borings (Section 2.4), laboratory analysis of soil samples (Section 2.5), and conclusions and recommendations (Section 3.0). Each referenced Section, where applicable, includes discussions on field observations, field screening results, sample collection procedures, analytical data and conclusions drawn from the field work and analytical results.

2.2 Field Work Preparation Activities

Prior to initiation of field work, a request for a complete utility markout of the subject property was submitted by ESI as required by New York State Department of Labor regulations. Confirmation of underground utility locations was secured and a field check of the utility markout was conducted prior to the extension of soil borings.

A Thermal Instruments 580B photoionization detector (PID) was calibrated to read parts per million gas equivalents of isobutylene (ppm-cge). This instrument was utilized by ESI personnel to screen all encountered material for the presence of any volatile organic vapors.

A site specific Health and Safety Plan was developed for this location and was reviewed prior to the initialization of this field work.

2.3 Field Work Methodology

All drilling operations were performed by Zebra using a truck-mounted Geoprobe unit equipped with a 2-inch inside diameter hollow-stem auger with disposable polyurethane sample sleeves. Soil sampling was conducted at each boring location at depths ranging from 1 to 8 - 12 feet below surface grade (or the soil-groundwater interface).

An assessment of subsurface soil characteristics, including soil type, the presence of foreign materials, field indications of contamination (e.g., unusual coloration patterns or odors), and instrument indications of contamination (i.e., PID readings) was made by ESI personnel during the extension of each soil boring. ESI personnel maintained field logs documenting the physical characteristics of the encountered soil, PID readings and any field indications of contamination for all encountered material at each soil boring location. Relevant information from Ecosystems Strategies, Inc. logs for each boring is summarized in Section 2.4, below.

A Field Work Map indicating the boring locations and associated selected site features is provided in Appendix A of this Report.

All soil samples were collected in a manner consistent with NYSDEC sample collection protocols. Disposable gloves and stainless steel trowels were used at each sample location to place samples into jars pre-cleaned at the laboratory. Soil samples were transported via courier to York Analytical Laboratories, Inc., a New York State Department of Health certified laboratory (ELAP Certification Number 10854) for chemical analyses. Appropriate chain of custody procedures were followed. All sample collection equipment was properly decontaminated prior to the initiation of sampling and between sample locations to avoid cross-contamination.

2.4 Soil Sampling and Observations

On March 19, 1999, ESI personnel supervised the extension of six (6) soil borings within the eastern portion of the basement level of Building #2 to determine the presence or absence of on-site subgrade soil contamination. All six borings extended on the subject property are described below. A Field Work Map included in Appendix A of this Report illustrates the approximate locations of the borings. The respective locations of these borings were determined from discussion with a representative of the Board of Education and ESI.

2.4.1 General Site Soil Characteristics

Subsurface soils were encountered below approximately four inches of basement concrete surface. The soils encountered during the extension of borings consisted primarily of medium grained sands with no foreign material present. No visible staining or other evidence of contamination was noted on the basement surface. No subgrade structures were encountered.

2.4.2 Soil Borings

Boring B-11

Soil boring B-11 was extended in the northwestern corner of the basement of Building #2. The boring was extended to a total depth of twelve feet below grade.

No material exhibiting any field indications of contamination was encountered during the extension of soil boring B-11, and no instrument indications of contamination using the PID were encountered in this boring. Samples of material from the one foot and twelve foot depths were collected and submitted to the laboratory for analysis.

Boring B-12

Soil boring B-12 was extended in the southwestern portion of the subject property. The soil boring was extended eight feet below grade.

SUMMARY REPORT
PB96146.40

PAGE 6 OF 10
MARCH 26, 1999

No material exhibiting any field indications of contamination was encountered during the extension of this boring, and no instrument indications of contamination using the PID were encountered in this boring. Samples of material from the one foot and eight foot depths were submitted to the laboratory for analysis.

Boring B-13

Soil boring B-13 was extended in the southeastern portion of the building basement. The boring was extended to approximately three feet below grade. At that depth, fill rock and concrete were encountered and the boring was ended.

No material exhibiting any field indications of contamination was encountered during the extension of this soil boring. Refusal was reached at the three foot depth and no sample was obtained or submitted.

Boring B-14

Soil boring B-14 was extended in the northeastern portion of the Building #2 basement. The boring was extended to a total depth of twelve feet below grade.

No material exhibiting any field indications of contamination was encountered during the extension of this boring. No instrument indications of contamination using the PID were encountered. Samples of material from the one and twelve foot depths were submitted to the laboratory for analysis.

Boring B-15

Soil boring B-15 was extended in the north central portion of the subject property. Boring B-15 was extended to a total depth of eight feet below grade.

No material exhibiting any field indications of contamination was encountered during the extension of the boring, and no instrument indications of contamination using the PID were encountered. Samples of material were collected from the one and eight foot depths. These samples were submitted to the laboratory for analysis.

Boring B-16

Soil boring B-16 was extended in the south central portion of the subject property. The boring was extended to a total depth of eight feet below grade.

No material exhibiting any field indications of contamination was encountered during the extension of soil boring B-16, and no instrument indications of contamination using the PID were encountered in this boring. Samples of material were collected from the one and eight foot depths. These samples were submitted to the laboratory for analysis.

2.5 Analytical Results

2.5.1 Action Levels

The term "action level," as defined in this Report, refers to the concentration of a particular contaminant above which remedial actions are considered more likely. The overall objective of setting action levels is to assess the integrity of on-site soils and groundwater relative to

conditions which are likely to present a threat to public health, given the existing and probable future uses of the site. On-site soils and groundwater with contaminant levels exceeding these action levels are considered more likely to warrant remediation. No independent risk assessment was performed as part of this investigation.

The action levels identified in this Report for petroleum hydrocarbons in soils are determined based on the NYSDEC's Spill Technology and Remediation Series (STARS) Memo #1: Petroleum-Contaminated Soil Guidance Policy (July 1993) and the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) dated January 24, 1994.

2.5.2 Analyses and results of soil boring samples

During the course of the field work described in Section 3.2, above, subsurface soil samples were collected from five of the six borings. Two samples collected from each boring with the exception of B-13 were submitted to the laboratory for chemical analysis.

Soil samples were collected from each two-inch diameter split spoon where sufficient sampling material was present. All samples were properly identified by the particular boring ID number and the sample depth, as well as the date and time of collection. One sample was collected from surface depth (one foot) and one sample was collected from a deeper sampling depth contingent upon the overall boring depth achieved.

All soil samples were collected in a manner consistent with USEPA and NYSDEC sample collection protocols. The soil samples were transported to York Analytical Laboratories, Inc., a New York State Department of Health approved laboratory (ELAP certification Number: 10854) for analysis to determine the presence or absence of volatile organic compounds (VOCs) with MTBE using USEPA Method 8260 or poly-nuclear aromatic hydrocarbons (PAHs) a class of semi-volatile organic hydrocarbons (SVOCs) using USEPA Method 8270A.

Laboratory Results

Summarized laboratory data and observations based upon laboratory results are outlined below. Data are grouped according to the soil boring in which each sample was collected. Specific characteristics or trends in results are noted where applicable. Further discussion of the laboratory results may be found in the Conclusions and Recommendations section of this Report. Complete laboratory results are included as Appendix B of this Report. A summary of the laboratory data is located in Table 1: Laboratory Analyses of Soil Samples in Building #2, below.

Laboratory analysis of soil samples B-12 (0-2'), B-15 (0-2') and B-16 (0-2') analyzed for the presence of VOCs using USEPA Method 8260 identified levels of Trichloroethene above the detection limit for this compound. Sample B-9 (4-6') included in Table 1, below is from a prior round of sampling and is included to illustrate the full range of sampling noting any contaminants in Building #2. All detected limits of Trichloroethene identified are extremely low and well below the NYSDEC designated action level of 700 $\mu\text{g}/\text{kg}$.

Laboratory analysis for all other compounds and all other samples analyzed for the presence of PAHs using USEPA Method 8270 did not identify any detectable concentrations of these compounds. Laboratory detection limits are below action levels established in the NYSDEC Spill Technology and Remediation Series (STARS) Memo #1: Petroleum-Contaminated Soil Guidance Policy (July 1993) and the NYSDEC Division Technical and Administrative Guidance Memorandum (TAGM) dated January 24, 1994.

SUMMARY REPORT
PB96146.40

PAGE 8 OF 10
MARCH 26, 1999

No soil samples at secondary depths (i.e., 8 feet or 12 feet) contained detectable concentrations of either chlorinated or petroleum hydrocarbons. The absence of detected contaminants at this depth supports the conclusion that subgrade soil contamination on-site is limited to the upper stratum. Further, the absence of detected contaminants at the 12-foot depth (at or slightly above the current groundwater level) supports the conclusion that known contaminants in the groundwater (e.g., toluene and trichloorethene) have not impacted subgrade soils.

Table 1: Laboratory Analyses of Soil Samples in Building #2
 (Results in bold exceed designated action levels. All results measured in $\mu\text{g}/\text{kg}\text{-ppb}$).

3.0 CONCLUSIONS AND RECOMMENDATIONS

This Report summarizes investigative services performed on March 19, 1999 by this office for a specified portion of the property located at 98-116 South 4th Street in the Borough of Brooklyn, Kings County, New York, New York. The purpose of the investigation was to determine the presence or absence of soil contaminants in the basement area of Building #2.

Based on services provided and data generated, the following conclusions and recommendations (in **bold**) are made regarding the subject property.

1. Soil borings extended on the subject property identified very low levels of Trichloroethene (TCE), located in the basement area of Building #2. The levels detected are significantly below established action levels and no other contaminants were detected above laboratory detection limits. These findings are consistent with previous data documenting low-levels of TCE in on-site subgrade soils.

No further investigation is recommended.

2. Laboratory analyses indicate the minimal presence of a single chlorinated solvent (Trichloroethene) exclusively at the shallow (surface) soil depth. No evidence of Trichloroethene or other compounds at deeper depths or impact to the upper stratum of the soil column was supported by laboratory data. The lack of contamination in the soil column is indicative that on-site activities at Building #2 have not impacted on-site groundwater. The lack of detected compounds in on-site soils at the approximate depth of the water table supports the conclusion that known on-site groundwater contamination (likely from off-site sources) has not impacted on-site soil integrity.

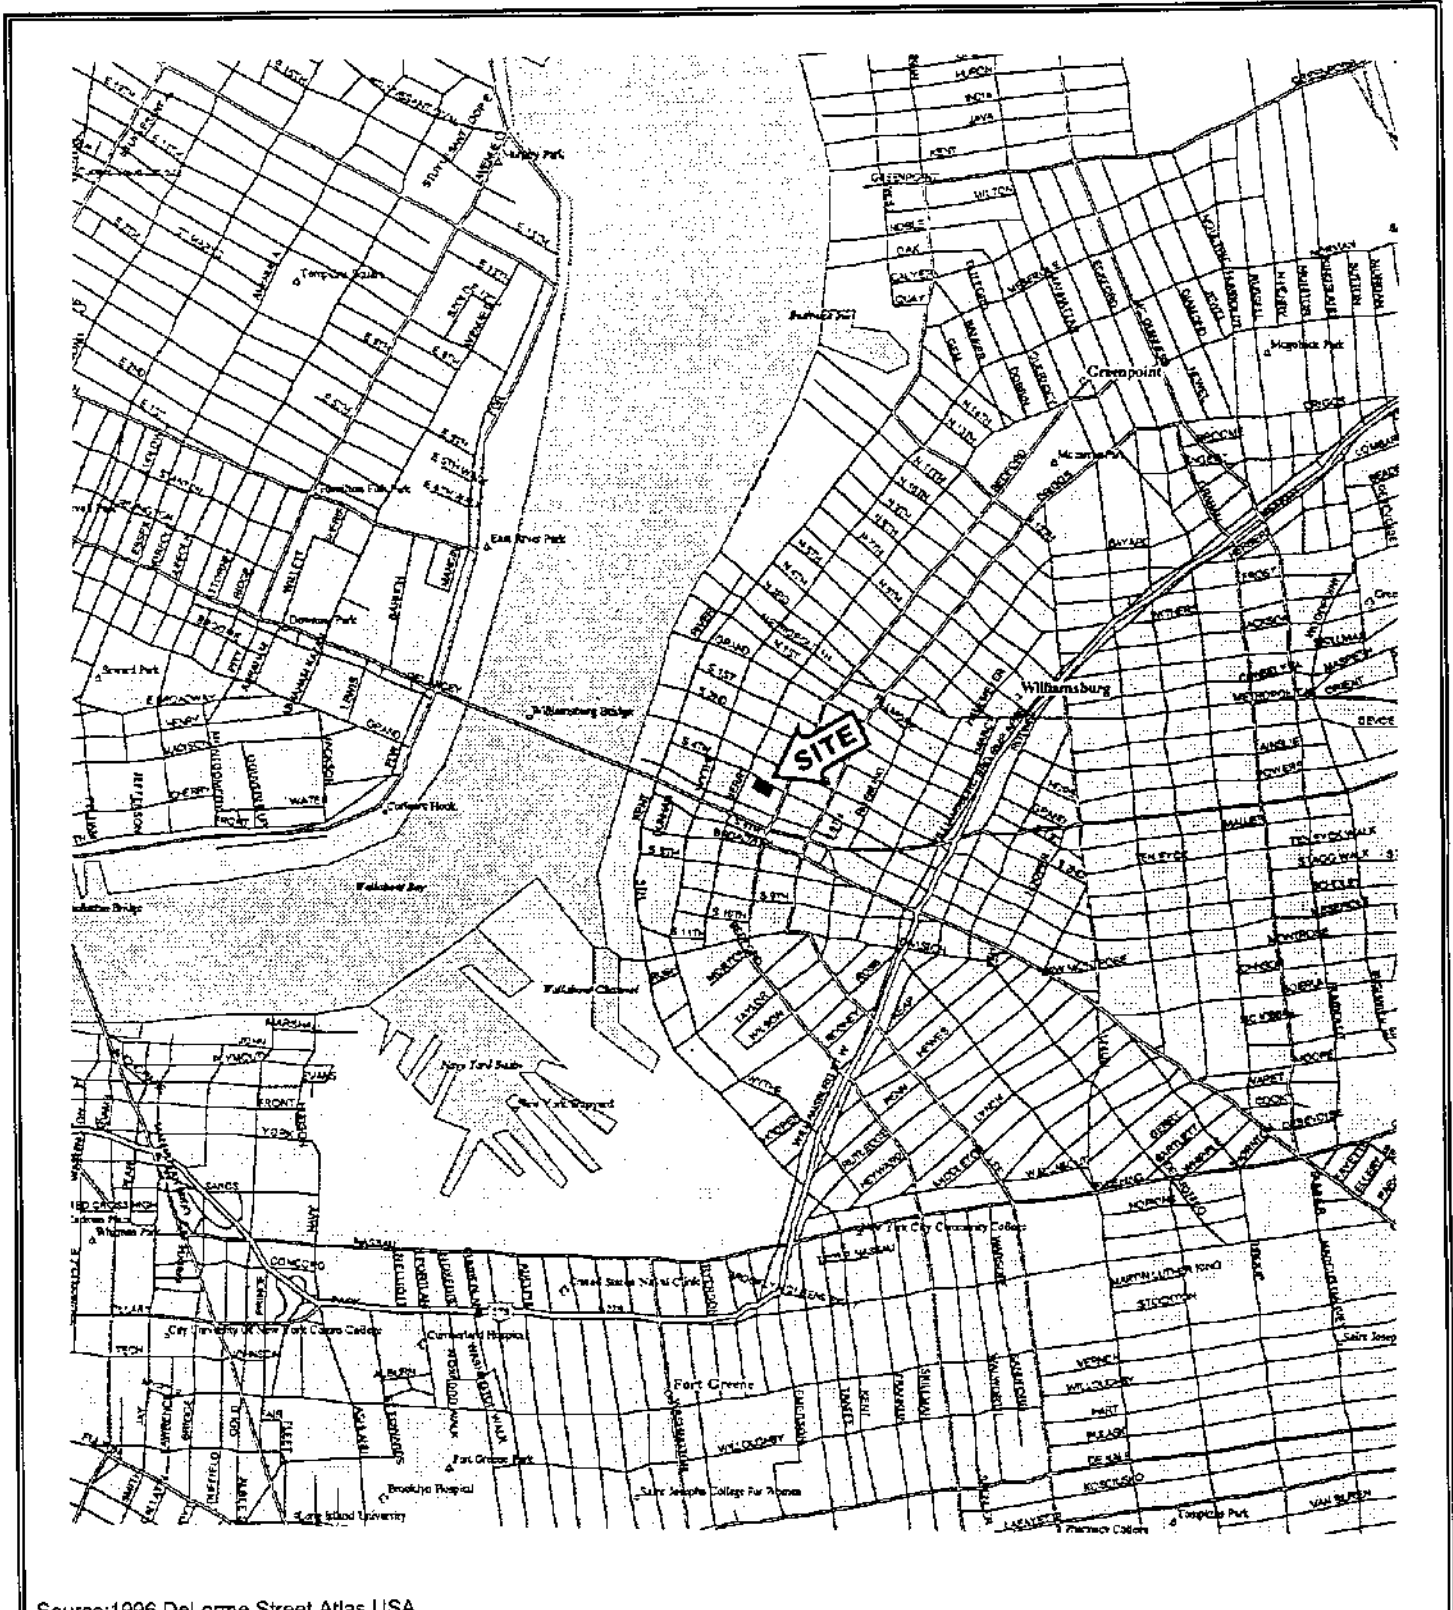

No further investigation is recommended.

3. Analyses of this round of soil sampling does not materially affect the proposed corrective actions outlined in the Workplan dated December 1998 prepared by this office. The findings documented in this Report do not alter any of the recommendations previously stated in the Workplan.

It is recommended that the course of action outlined in the December 1998 Workplan accepted by the NYSDEC be implemented as presented.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 03/22/99. The project was identified as your project "PB96146.40".

The analysis was conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

The results of the analysis are summarized in the following table(s).

Units Key:

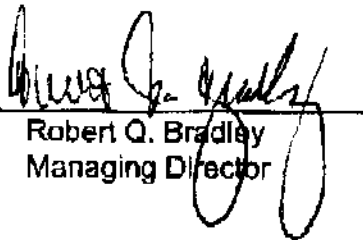

For Waters/Liquids: mg/L = ppm ; ug/L = ppb

For Soils/Solids: mg/kg = ppm ; ug/kg = ppb

Notes:

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. If dilution factor is reported at the end of the compound list, the MDL is determined by multiplying the MDL times the listed dilution factor.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.

Brooklyn, NY 11211

Re: Voluntary Cleanup Program
Volunteer: El Puente de Williamsburg
Site: 98-116 South 4th Street, Borough of Brooklyn, County of Kings, New York
Index #: W2-0840-99-01

Dear Mr. Flemming:

The New York State Department of Environmental Conservation (the "Department") acknowledges receipt of your November 12, 2003 letter (the "letter"), written on behalf of El Puente de Williamsburg ("El Puente"), regarding termination of the fully executed Voluntary Cleanup Agreement, Index No. W2-0840-99-011, (the "Agreement"). In the letter, you confirmed that El Puente is electing to terminate the Agreement because its strategies for acquiring title to the Site were unsuccessful, and for the same reason El Puente has also requested that the Department waive its costs associated with the Agreement.

The Department approved El Puente's remedial work plan for the Site (the "work plan"), with the understanding that implementation of the work plan, including revisions thereto, would only begin after the Volunteer acquired title to the Site (Subparagraph 1.A. of the Agreement). Accordingly, the Department considers that the Volunteer's inability to proceed under the VCP was not within the Volunteer's control, and will waive its costs associated with the fully executed VCA.

Sincerely,

Alali M. Tamuno
Senior Attorney

APPENDIX G

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

MICHAEL FISCINA, EP
NOVA ASSOCIATE

PROFESSIONAL EDUCATION

B.S. Environmental Studies, State University of New York at Buffalo, 1992

CERTIFICATIONS/QUALIFICATIONS

- Environmental Professional (EP) in Accordance with ASTM E1527-13
- Certified Asbestos Building Inspector in the State of New York
- Environmental Site Assessment (ESA) Experience, 26+ years
- Multifamily ESA Experience, 11+ years

SELECTED EXPERIENCE

Mr. Fiscina has been working in the environmental field since 1988 and has conducted more than 2,000 Phase I and Phase II Environmental Site Assessments (ESAs) since 1990 including properties such as restaurant, retail, warehouse, office, factory, and industrial properties across the United States. He has provided Phase I ESAs in accordance with ASTM E1527-13, the USEPA All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, and Freddie Mac guidelines.

Mr. Fiscina started as an analyst for Environmental Management Group during summers while attending the University of Buffalo and became Director of Operations upon graduation. He was directly responsible for the coordination and implementation of Phase I and Phase II Environmental Site Assessments throughout the country, including personally conducting over 200 Phase I and Phase II ESAs in 28 states. His duties involved direct contact with all clients, planning, implementing, and supervising projects and employees. He also handled company operational and financial records and databases and the creation and implementation of training, office, and field guidelines, policies, and procedures.

Mr. Fiscina is well-versed in conducting site visits, municipal research, interview, and regulatory reviews. He also has experience managing field operations, as well as the coordination, preparation, review, and ultimate submittal of Focused Subsurface Investigations, Remedial Action Plans, and Contamination Assessment Reports. Quarterly Monitoring Reports and other reports/documents related to the direct testing, monitoring, and/or remediation of soil, groundwater, and air has proved invaluable to the understanding of providing cradle to grave environmental services at environmentally-challenged properties.

TIMOTHY BADGER

SENIOR PROJECT MANAGER

PROFESSIONAL EDUCATION

M.S. Geology, University of Illinois at Chicago, Chicago, IL, Thesis pending

B.S. Geology, University of Illinois at Chicago, Chicago, IL, 2009

CERTIFICATIONS/QUALIFICATIONS

- OSHA 40 Hour Hazardous Waste Operations Certification (29CFR 1910.120)
- Termite and Wood Destroying Pests Training, Nova Training Center
- AHERA-Accredited Asbestos Building Inspector, Cert. #ABI1404161190
- Illinois Asbestos Inspector License #100-19307
- Indiana Asbestos Inspector License #19A006505
- Industrial Hygiene Exposure Monitoring
- Illinois Radon Measurement Professional License #RNI2016228
- AARST National Radon Proficiency Program Measurement Provider #109086RT

SELECTED EXPERIENCE

Mr. Badger has a background in sedimentary geology, industrial hygiene sampling, database management, and data analysis. Mr. Badger has been performing Phase I Environmental Site Assessments (ESAs) over the past five years for a variety of properties including multi-family residential, retail, manufacturing, automotive retail and repair, petroleum product sales, and dry-cleaning facilities. Mr. Badger has performed Phase II subsurface investigations over the last two years. In addition to his experience in environmental services, Mr. Badger has conducted industrial hygiene projects that included employee exposure monitoring for hazardous air contaminants and noise. He has conducted numerous exposure assessments to evaluate client workplace operations for potential industrial hygiene exposures. In addition to his industrial hygiene Phase I and Phase II projects, he has performed several detailed building surveys to sample and identify suspect asbestos-containing materials and conducted radon monitoring.

In the last two years, he has conducted numerous air and noise sampling projects at industrial and commercial operations to evaluate employee exposures to hazardous particulates, gases, and high noise levels. Mr. Badger has and continues to gain experience in OSHA and environmental rules and regulations pertaining to Nova's industrial and environmental clients.

JUSTIN M. LIA, PE, LEED AP EQUITY GROUP MANAGER

PROFESSIONAL EDUCATION

Bachelor of Science, Civil Engineering, State University of New York at Buffalo, Buffalo, NY, 1999

CERTIFICATIONS/QUALIFICATIONS

- Professional Engineer (PE) in the State of New York
- OSHA 10-hour Occupational Safety and Health Training Course in Construction Safety and Health
- Construction/Building Industry Experience 30+ years
- Engineering Experience, 20+ years
- Building Due Diligence Experience, 15+ years
- ASTM Symposia Paper “Potential Application of ASTM C1701 for Evaluating Surface Infiltration of Permeable Interlocking Concrete Pavements”, available at http://www.astm.org/DIGITAL_LIBRARY/STP/PAGES/STP104560.htm 2012
- Continuing Education Seminar Presenter – Using Permeable Pavement on Long Island 2011
- LEED Accredited Professional Building Construction & Design 2011
- NYSERDA / BPI Multifamily Building Analyst Training Program 2009
- LEED Accredited Professional 2005
- STAAD Certified Engineer 2004

SELECTED EXPERIENCE

Mr. Lia has over thirty years of experience in the building and commercial real estate industry. He grew up in the building industry, as part of a family of contractors and engineers. Mr. Lia has worked as a contractor, an estimator, a project manager, a construction inspector, a design engineer, a forensic engineer, and ultimately a real estate due diligence advisor. He is a licensed Professional Engineer in the State of New York, and a subject matter expert in the fields of site, civil, and geotechnical engineering.

Having worked with a variety of due diligence clients ranging from private equity investors, to REITs, insurance companies, Fortune 500 companies, developers, banks, religious organizations, government/military, hospital/healthcare, educational, and unique end users, he has experience with a wide variety of clients. Projects ranged in size from standalone, single tenant NNN users, to single property trophy assets, to \$3.5B portfolios. Project types include acquisition, disposition, pre/mid/post lease evaluation, sale/lease back, forensic evaluation, capital planning, Computerized Maintenance Management Systems (CMMS), and code compliance.

As the Equity Group Manager, Mr. Lia is responsible for overseeing the Equity Level Building Due Diligence projects. This includes customized scopes of work, projects that require “deep dive” technical expertise, and those projects which require a team approach broader than a traditional due diligence consultant can offer. Having participated as a team member on large projects, he has successfully worked to achieve client goals across multiple disciplines. Having personally performed modelling of geotechnical, structural, energy, capital needs, and real estate finance he has analyzed commercial real estate projects from many points of view.

Additionally, Mr. Lia provides forensic level due diligence for special projects such as: foundation remediation, geotechnical due diligence support, landslides, slope stabilization, drainage systems, retaining walls, and waterfront structures.
