Project Manager

QEP Certification:

I, Patrick Montuori, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31) and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Patrick Montuori, P.G. - Project Manager

1.0 INTRODUCTION

This report presents the results of the 702 Nostrand Avenue Off-Site Site Characterization (Site No. C224270A) completed by HRP Associates, Inc. (HRP) in February 2023-January 2025. The Site Characterization (SC) was conducted to investigate potential off-site soil vapor intrusion (SVI) impacts related to chlorinated volatile organic compound (CVOC) contamination which was identified at the 702 Nostrand Avenue Site, located at 702 Nostrand Avenue in Brooklyn, New York and referred to herein as "the Site." The Site location is depicted on **Figure 1**. The SC was completed for the New York State Department of Environmental Conservation (NYSDEC).

Interpretations presented within this report are based primarily on the investigations described herein. Site history and background information were compiled by HRP based on a review of documents obtained from the NYSDEC and local, state, and federal regulatory databases. Applicable data from available documents and Site environmental investigations have been included in sections of this report.

This report has been redacted to remove addresses and other information that would identify private properties associated with the SC investigation activities which are not in NYSDEC remediation programs.

1.1 Report Organization

The text of this report is divided into six sections. Immediately following the text are the figures, tables, and appendices. A summary of each report section is provided below:

Section 1.0 **Introduction:** Includes the purpose and objectives of the SC, a description of the Site and study area, industrial/commercial history of the Site and study area, a summary of previous environmental investigations and records, and a description of the areas of concern (AOCs).

Section 2.0 **Physical Characteristics of the Study Area:** Includes results of field activities to describe physical characteristics, including site topography, soils, geology, and hydrogeology.

Section 3.0 **Study Area Investigations:** Summarizes field activities associated with the SC, deviations from the work plan, and green, sustainable best management practices (BMP) implemented during this investigation.

Section 4.0 **Observations, Laboratory Analytical Results, and Findings:** Presents field observations and analytical results of environmental sampling completed for the SC in relation to relevant standards, criteria and guidance values (SCGs). Data validation and usability is also discussed.

Section 5.0 **Conclusions:** Presents conclusions of the SC investigation and a discussion of data gaps.

Section 6.0 **References:** Provides a list of references used throughout this report.

1.2 Purposes and Objectives

The purpose of the SC was to investigate potential off-site SVI impacts related to CVOC contamination which was identified at the Site, and to determine whether the Site poses a significant threat to the public health and the environment, and whether that threat requires further investigation, or if significant information exists to make a decision regarding Site remediation. In accordance with DER-10 *Technical Guidance for Site-Investigation and Remediation (May 2010),* the primary objectives of the SC are to:

- Investigate the identified AOCs associated with the Site and evaluate the extent of SVI impacts.
- Delineate the extent of potential SVI impacts to off-site receptors related to CVOCs which have been identified at the Site.
- Determine if applicable SCGs contained in NYSDEC DER-10 and set forth for the Site are contravened.
- Determine if the Site represents a threat to public health or the environment.

1.3 Site and Study Area Description

The 702 Nostrand Avenue Site (#C224270), is located at 702 Nostrand Avenue, Brooklyn, NY and is identified as Brooklyn Block 1226, Lot 45 on the Brooklyn borough tax maps. The Site location is depicted on **Figure 1**. The 1,650 square foot Site currently consists of a two-story mixed-use building with a pediatrics practice and residential apartments. The Site and off-site SC study area are depicted on **Figure 2**.

The property is zoned C2-4 – commercial overlay for mixed use development, according to city zoning designations. Properties surrounding the Site are primarily residential. At present the areas surrounding the property include:

North: A two-story mixed-use commercial and residential property (0 ft), commercial and residential properties and Saint Marks Avenue (100 ft).
South: A two-story mixed used commercial and residential property (0 ft), followed by other commercial, residential properties and Prospect place (60 ft).
East: Nostrand Avenue (0 ft), followed by two single-story commercial and office buildings occupied by a grocery store and other various commercial uses (95 ft).
West: Residential properties with rear yards abutting the Site property to the west, northwest, and southwest (100 ft).

Property use surrounding the Site as mapped by the New York City Department of City Planning is depicted on **Figure 3**.

1.4 Historical Records Review

Available local, state, and federal environmental regulatory database records, aerial photographs, historical topographic maps, Sanborn Fire Insurance Company maps, and city directories were obtained via Environmental Database Resources, Inc. (EDR) on August 4, 2022. These records were

reviewed to understand the commercial and industrial history of the Site and surrounding area. Historical records were reviewed for properties in the study area to identify potential secondary sources of SVI. Off-site "properties of interest" which may have historically used chlorinated solvents are presented on **Table 1**. Historical records obtained through EDR are included in **Appendix A**.

1.4.1 On-Site Industrial/Commercial History

Historically the Site was utilized for residential and commercial purposes. The Site has been developed since at least 1888 with a residential dwelling. Between 1908 and 1932 it was improved with one 1,237 square foot two-story mixed-use commercial and residential building with a basement. From at least 1960 to 2005 the Site was occupied by a dry-cleaning facility. The basement is currently used for storage, and the ground floor is occupied by a pediatric practitioner. The second floor is currently a private residence. The Site is depicted on **Figure 2**.

1.4.2 Off-Site Industrial/Commercial History

The study area historically has been primarily residential with some mixed-use residential/commercial properties. Several properties within the area have been identified as dry cleaners based on their labels on Sanborn maps and entries in city directories. Whether chlorinated solvents were used at these properties and specific industrial/commercial processes in which they were used are unknown. Off-site properties of interest and their historic uses are presented on **Table 1**. The addresses and locations of the properties of interest have been redacted from the table.

1.5 Previous Environmental Investigations

In preparation of this SC, HRP reviewed the following previous investigation reports and associated documents:

- Phase I Environmental Site Assessment (ESA), prepared by CBRE Inc. (CBRE), dated August 28, 2017.
- Phase II Limited ESA, prepared by CBRE, dated October 4, 2017.
- Remedial Investigation Report (RIR), prepared by Langan, November 8, 2018.
- Final Engineering Report (FER), prepared by Langan, dated July 17, 2020.

Multiple environmental investigations have been completed at the Site. In August of 2017, a Phase I ESA completed by CBRE, Inc. (CBRE) identified the historical use of the Site as a dry cleaning facility as a recognized environmental condition (REC). To investigate this REC, CBRE conducted a Limited Phase II ESA in October of 2017 which identified CVOCs, in soil, soil vapor, and groundwater at concentrations exceeding the NYSDEC SCGs. Based on results of the Phase II ESA, a ventilation system was installed in the building cellar. Following the installation of the ventilation system, in October 2017, Velmartin Associates was retained to collect one indoor air sample on the ground floor of the building, which was analyzed for CVOCs by EPA Method TO-15. Although CVOCs were

not detected in the indoor air sample, ground floor commercial office operations were temporarily ceased in November of 2017 based on the soil vapor results.

The Site entered a Brownfield Cleanup Agreement (BCA) with the NYSDEC in May 2018. An RI was conducted by Langan in August 2018 to further investigate impacts to soil, groundwater, and soil vapor. Findings of the RI are summarized below:

- Historic fill materials were identified from 0-4 ft bg in the rear yard, 0-4 inches below cellar grade (bcg) beneath the cellar slab, and in the above ground planter in the rear yard. Fill material was found to contain SVOCs, metals, and pesticides exceeding Unrestricted Use (UU) and Restricted Residential Use (RRU) Soil Cleanup Objectives (SCOs). The semi-volatile organic compound (SVOC), metals, and pesticide impacts were attributed to poor quality fill.

- Tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE), impacts were identified in soil at concentrations exceeding UUSCOs in one on-site boring, located on the eastern portion of the Site, at a depth of 0-1 ft bcg. PCE and other CVOCs in soil samples collected from on-site borings to the west of SB-1 were observed to be below UUSCOs. SVOC impacts in soil at concentrations exceeding UUSCOs were observed in SB-4. Based on field observations and analytical data, the on-site point of CVOC release appears to be on the east side of the Site.

- Groundwater was observed in the eastern portion of the Site at 14 ft bcg, presumed to be perched groundwater above a confining layer. Regional groundwater (estimated at 74 ft bg) was not studied during the RI. CVOC impacts were identified in perched groundwater in the sample collected from SB-01/MW-01 located on the eastern portion of the Site. PCE, TCE, cis-1,2-DCE, and vinyl chloride were detected at concentrations exceeding NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1 Class GA Groundwater criteria.

- CVOC impacts to perched groundwater may be attributed to the historic use of the Site and surrounding properties as dry cleaners. Petroleum impacts to groundwater may be related to historic spills in the surrounding area. No petroleum impacts were identified in Site soils and no records of on-site petroleum storage were identified.

- Laboratory analysis of sub-slab soil vapor samples collected from the Site cellar during the RI and Limited Phase II ESA identified PCE, TCE, cis-1,2-DCE, and vinyl chloride at concentrations exceeding New York Stated Department of Health (NYSDOH) Soil Vapor/Indoor Air Decision Matrices recommended mitigation levels. PCE was detected in sub-slab soil vapor at a maximum concentration of 30,000 micrograms per cubic meter ($\mu g/m^3$).

Based on the findings of the RI, the following remedial actions were completed as part of a Track 4 cleanup (documented in the July 2020 FER prepared by Langan):

- Inspection and repair of existing Site cover comprised of concrete slabs.
- Installation of a 4-inch concrete cap above exposed soil in the vegetated area of the rear-yard.

- Installation of a soil vapor extraction (SVE) system in the building cellar to address VOC concentrations in soil vapor and mitigate SVI into the building.

In December 2019, six months after SVE system start-up, the SVE was temporarily shut down to complete soil vapor sampling at four soil vapor monitoring points in the building cellar. Results from the sampling event indicated that total VOC concentrations ranged from 459 µg/m^3 to 501 µg/m^3 and PCE concentrations ranged from non-detect to 34.7 µg/m^3 in the four monitoring points. Compared to maximum total VOC and PCE concentrations observed during the RI, concentrations observed during December 2019 decreased by 93.6% and 96.3% respectively.

Following completion of remedial action and submission of the FER, and the Site was issued a Certificates of Completion (CoC) in August 2020. Operation and maintenance of Site engineering controls (the Site cover and SVE) and Site institutional controls are enforced by a Site Management Plan (SMP) and an environmental easement.

1.6 Areas of Concern (AOCs)

Based on the findings of previous investigations, and discussions with the NYSDEC and NYSDOH, off-site SVI exposure pathways to PCE and other CVOC contamination from the Site was identified as the sole AOC for the SC.

2.0 PHYSICAL CHARACTERISTICS OF THE STUDY AREA

The following section discusses the physical characteristics and setting of the Site.

Soil and groundwater investigations were not completed as part of this SC. Descriptions of physical characteristics included in this report primarily rely on previous investigations conducted on the Site, as well as published resources.

2.1 Site Topography

The Site and study area lie at an elevation of approximately 87 feet above mean sea level (amsl). Topography of the Site and study area is relatively flat with a regional gentle slope from south to north. Site topography is depicted on **Figure 1**.

2.2 Soils

Based on soil borings installed during previous investigations conducted on the Site, soils consist of historic fill composed of fine to medium grained sand mixed with brick, gravel, and silt. Native soil consists of fine to medium grained sand and varying quantities of gravel and silt. A lower-permeability layer was encountered at depths ranging from approximately 22 to 30 ft bg. This was evidenced by observations of fine material, high soil density, and perched water from 22 to 30 ft bg, followed by unsaturated soil below 30 ft bg. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey classifies the Site area as Urban Land.

2.3 Geology

Bedrock was not encountered during the installation of off-site SC soil borings (10 ft bg completion depth) or during the installation of soil borings for any of the on-site investigations reviewed by HRP (51 ft bg completion depth). USGS bedrock geology maps indicate the bedrock underlying the Site is part of the Hartland Formation, a mica-schist and quartz feldspar granulite (Bakersville, 1994). Based on logs from USGS observation wells, depth to bedrock in the area of the Site is estimated to be approximately 250 ft bg (DeMott, Stumm, and Finkelstein, 2023).

2.4 Hydrogeology

2.4.1 Surface Water and Wetlands

No surface water bodies are present on-site or adjoining the Site. The East River is located approximately 2.25 miles northwest of the Site. No state regulated or National Wetland Inventory wetland areas are identified in the vicinity of the Site.

2.4.2 Groundwater

Groundwater was not encountered during this SC. According to the November 2018 RIR (Langan), USGS data indicates that the groundwater is approximately 74 ft bg. Based on regional topography, groundwater flow is inferred to be towards the northwest, towards the East River.

Based on a review of DEC Info Locator and state and federal well records obtained through EDR, no potable wells were identified in the study area. The nearest well identified on DEC Info Locator is located approximately 0.30 miles east of the Site and is a geothermal diffusion well owned by the Brooklyn Children's Museum. Potable water is provided to the Site and surrounding area by the City of New York (sourced from a mix of the Catskill, Croton, and Delaware System reservoirs).

3.0 STUDY AREA INVESTIGATIONS

In order to investigate the AOCs described in **Section 1.6**, HRP conducted field activities in the study area. Investigation locations are depicted on **Figure 2**.

The work was completed in accordance with the *Region 2 SVI Off-Site Work Plan* (SC Work Plan) dated October 7, 2022, the *Site Characterization Work Plan Addendum for 702 Nostrand Off-Site* (Work Plan Addendum), prepared by HRP dated November 3, 2022, *HRP's Generic Field Activities Plan* (FAP), *Health and Safety Plan* (HASP), *Quality Assurance Project Plan* (QAPP) on-file with the NYSDEC, and *DER-10 Technical Guidance for Site Investigation and Remediation* (May 2010).

Deviations based on field conditions are noted in **Section 3.4**.

Field work for this SC was conducted between February 2023 and January 2025 and included the following tasks:

- A ground penetrating radar (GPR) survey conducted to identify subsurface utilities and obstructions to clear a 5-foot radius for exterior soil vapor points (February 22, 2023).
- Installation of four exterior soil vapor points on the west sidewalk of Nostrand Avenue and in the backyards of two off-site properties (February 22-23, 2022).
- Solicitation of off-site properties for SVI structure sampling. HRP conducted door to door solicitations of properties which had not responded to letters sent by NYSDEC by certified mail during the 2023-2024 heating season.
- SVI structure sampling and resampling at eight off-site properties conducted between December 19, 2022 and January 30, 2025.

3.1 Underground Utility Clearance Survey

On February 22, 2023, GPR surveys were conducted by Gound Penetrating Radar Systems with HRP oversight. The objective of the survey was to clear exterior soil vapor point locations. A 5-foot radius was scanned around each of the proposed soil vapor points and any underground utilities were marked out with paint.

GPR surveying is a nonintrusive, subsurface geophysical investigation technique that detects subsurface structures by transmitting electromagnetic waves from an antenna into the ground. The antenna then monitors the strength and time delay of the return signal. The return signal is then evaluated for any anomalies, which by their size, shape and orientation can be interpreted as voids, USTs, utility pipelines, soil-bedrock interface, or areas of different sediment compaction. A radio frequency (RF) line locator was also used to identify subsurface utility lines based on the presence of 120 hertz signal (electric) and transmitted signals from the RF transmitter. The GPR report, including a map of findings, is included in **Appendix B**.

3.2 Community Air Monitoring Program (CAMP)

A Community Air Monitoring Program (CAMP) was included in the scope of work as presented and approved in the SC Work Plan. Real-time monitoring was conducted for VOCs and dust particulates

at the upwind and downwind perimeters of each designated work area when ground intrusive activities were being conducted (exterior soil vapor point installation).

VOC monitoring was performed using Mini RAE 3000 photoionization detectors (PIDs) equipped with 10.6 eV bulbs. The PID was routinely calibrated and placed in a weather-proof box that sat on a tripod approximately 4 feet off the ground. The rolling 15-minute average of downwind PID readings did not exceed the 5 ppm action level during the field investigations.

The particulate monitoring was performed using a TSI Dust Trak II, a real-time monitor capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The Dust Trak was routinely zero-checked and was placed in a weatherproof box that sat on a tripod approximately 4 feet off the ground. The rolling 15-minute average of downwind particulate readings did not exceed 100 µg/m^3 action level for a 15-minute period during the field investigations.

Visible dust was not observed on-site during SC field work. VOC and particulate concentration readings are included in **Appendix C**.

3.3 Soil Vapor Investigations

3.3.1 Exterior Soil Vapor Point Installation and Sampling

On February 22, 2023, Island Pump and Tank (IP&T) with HRP oversight installed four exterior soil vapor points (SV-1 through SV-4). Two exterior soil vapor points (SV-2 and SV-4) were installed on the right-of-way along the west sidewalk of Nostrand Avenue using a Geoprobe 7822DT track-mounted drill rig with a 2.25-inch macro-core sampler which was advanced using the direct-push method. SV-2 and SV-4 were each installed to depths of 10 ft bg to be representative of standard depth to basement slab. Temporary soil vapor points SV-1 and SV-3 were installed on off-site properties to the north and southwest of the Site respectively. SV-1 and SV-3 were installed to depths of 5 and 4 ft bg respectively, due to refusal. During soil vapor point installation, soil was continuously sampled with a macrocore sampler and screened with a 11.7 eV PID. A total of four exterior soil vapor point samples were collected with 6-liter summa canisters fitted with 2-hour regulators not exceeding flow rates of 0.2 L/min. Each sample was submitted under chain of custody to Pace Analytical (Pace), an ELAP certified laboratory to be analyzed for VOCs by EPA Method TO-15. Soil vapor point construction logs, and soil vapor sampling forms, (which include helium tracer gas test results, sample start and stop times, and canister pressures) are presented in **Appendix D**. Justifications for exterior soil vapor locations are presented on **Table 2**. Soil vapor point locations are depicted on **Figure 2**.

3.3.2 Soil Vapor Intrusion (SVI) Solicitation

HRP solicited a total of 18 properties for SVI structure sampling within the study area surrounding the Site. The first round of solicitations began in November 2022 with the solicitation of two properties north and south of the Site. During the same heating season, an additional two properties were solicited for SVI sampling and to gain access for exterior soil vapor points. Based on the results of exterior soil vapor point sampling and the initial round of SVI structure sampling, HRP solicited

additional properties to north, south, and east to further delineate impacts to soil vapor. During the 2022-2023, 2023-2024, and 2024-2025 heating seasons, NYSDEC letters were sent to property owners requesting access for SVI structure sampling via certified mail on: November 28, 2022, January 24, 2023, October 18, 2024, October 30, 2024, January 12, 2024. In addition, HRP solicited property owners via telephone and email using available contact information obtained through on-line directories. HRP conducted door-to-door solicitations on February 7, 2023 properties which had not yet responded to solicitations. The properties solicited are presented on **Table 3**. Off-site property locations and addresses have been redacted from this report.

3.3.3 Soil Vapor Intrusion (SVI) Structure Sampling

SVI structure sampling investigations were performed at eight off-site properties selected in consultation with the NYSDEC and NYSDOH based on responses to access requests. The SVI structure sampling investigation locations are summarized in **Table 4**. Off-site property locations and addresses have been redacted from this report.

HRP conducted SVI structure sampling during the 2022-2023, 2023-2024 and 2024-2025 heating seasons. At each location, SVI structure sampling was conducted in general accordance with the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* dated October 2006 and all updates, the SC Work Plan, and the SVI SOW.

Sub-slab soil vapor points were installed using a handheld hammer drill and a half-inch drill bit. Prior to sub-slab soil vapor sampling, a leak test was performed on each vapor point using a helium tracer gas and a minimum of three tubing volumes of air were purged from each vapor point. All sub-slab soil vapor and air samples were collected using 6-liter summa canisters outfitted with 24-hour regulators. Each sample was submitted under chain of custody to Pace to be analyzed for VOCs by EPA Method TO-15. SVI structure sampling forms (including helium tracer gas test results, sample start and stop times, and canister pressures) and NYSDOH Indoor Air Quality Questionnaire and Building Inventory forms completed for each property. These forms were redacted from the report as they contain property addresses.

3.3.4 Soil Vapor Quality Assurance/Quality Control (QA/QC) Sampling

A total of six duplicate soil vapor samples were collected for QA/QC purposes, in addition to the standard soil vapor/air samples collected from the study area. All QA/QC samples were analyzed for VOCs by EPA Method TO-15. QA/QC samples included the following:

- DUP1-11/19/24, a duplicate sub-slab soil vapor sample of P3-B-SS, collected at Property 3 on November 19, 2024.
- 1266-143-B-SS-DUP, a duplicate sub-slab soil vapor sample of 1266-143-B-SS, collected at Property 5 on February 22, 2023.
- P5-B-SS-DUP, a duplicate sub-slab soil vapor sample of P5-B-SS, collected at Property 5 on January 30, 2024.
- P5-DUP-032724, a duplicate sub-slab soil vapor sample of P5-B-SS, collected at Property 5 on March 27, 2024.

- P10B-B-SS-DUP, a duplicate sub-slab soil vapor sample of P10B-B-SS, collected at Property 10 on January 20, 2024.
- P10-B-SS-DUP, a duplicate sub-slab soil vapor sample of P10B-B-SS, collected at Property 10 on January 14, 2025.

3.4 Interim Remedial Measure (IRM)

Based on SVI structure sampling results, NYSDEC offered to design and install an SVI mitigation system at the property located at Property 10 as an Interim Remedial Measure (IRM). Additional SVI structure sampling will be conducted at Properties 11 and 12 which have basements that connect to Property 10.

3.5 Deviations from Work Plan

During the SC, deviations from the SC Work Plan and Work Plan Addendum were as follows:

- The Work Plan Addendum proposed indoor air samples would be analyzed for PCE, TCE, cis-1,2-DCE, and vinyl chloride via EPA TO-15 Selective Ion Monitoring (SIM) analysis. The laboratory reporting limits achieved for the contaminants using standard TO-15 analysis were below the lowest applicable guidance values in the NYSDOH Decision Matrices and therefore it was determined SIM analysis was not necessary.
- The Work Plan Addendum stated that up to two properties to the north and two properties to the south would be solicited for SVI sampling. Based on results of initial exterior soil vapor point sampling and rejections to access agreements, solicitations were increased to a total of 18 properties.
- The Work Plan stated that all properties would be sampled for one basement sub-slab soil vapor sample, one basement indoor air sample, one first floor indoor air sample, and one outdoor sample. Sample sets varied due to variations in structure size or accessibility.

3.6 Green and Sustainable Remediation Best Management Practices (BMPs)

Through the course of the SC, HRP implemented Green and Sustainable Best Management Practices (BMPs) to reduce negative impacts to air, water, solid waste, etc. The Site Investigation Green and Sustainable Remediation Calculation Sheet included as **Appendix E**, summarizes BMPs implemented as part of the SC and environmental impact reductions versus traditional field activity approaches.

In consultation with NYSDEC, quantifiable impact reductions achieved by green and sustainable remediation BMPs implemented during the SC investigations (e.g., tons of carbon reduced, gallons of fuel saved, pounds of waste reduced) may be included in Site fact sheets to promote public awareness of NYSDEC green and sustainable BMPs.

BMPs implemented as part of the SC and environmental impact reductions versus traditional field activity approaches are summarized below.

BMP 1) Efforts were made to schedule Site visits and field work to reduce energy consumption and air emissions associated with mobilizations to and from the Site. Specifically, property access

was coordinated at eight off-site properties with two additional remobilizations for each of four off-site properties to conduct SVI structure sampling in seven mobilizations from HRP's office (as opposed to 16 separate mobilizations) and GPR utility clearance was coordinated to be conducted at the same time as off-site SVI structure sampling (as opposed to a separate mobilization). This BMP saved nine round trips to the Site from HRP's Clifton Park office reducing gasoline consumption by 249 gallons and reducing carbon dioxide (CO_2) emissions by 2.41 tons.

BMP 2) HRP personnel "car-pooled" by sharing a vehicle, reducing energy consumption and emissions associated with taking multiple vehicles to the Site for SVI sampling events. This BMP saved seven round trips to the Site from HRP's Clifton Park office reducing gasoline consumption by 194 gallons and reducing carbon dioxide (CO_2) emissions by 1.87 tons.

BMP 3) Direct push method was utilized to install soil borings and soil vapor points instead of the hollow stem auger method of advancing borings, reducing the amount of drill cuttings generation. This BMP reduced the amount of soil generated by soil borings by 0.16 tons.

BMP 4) When not in use, vehicles, trucks, drill rigs, and other equipment were shut off to reduce energy consumption and emissions related to engine idling. This BMP reduced the amount of time a drill rig would be operational by 60 minutes which reduced the amount of diesel consumed by 0.5 gallons and the CO_2 emissions by 0.0056 tons.

BMP 5) To reduce waste, cardboard generated from labware (summa cannisters) was reused for return shipments to the laboratory. A total of 74 summa cannisters were used and each box contains four cannisters per box. This BMP reduced waste cardboard by 2 pounds.

4.0 OBSERVATIONS, LABORATORY ANALYTICAL RESULTS, AND FINDINGS

The following sections present the findings from the SC related to field activities conducted within the study area. All laboratory analytical reports are included in **Appendix F**.

4.1 Standards, Criteria, and Guidance

Compounds detected in the various media tested during this SC were compared to the following New York State SCGs:

- NYSDOH Soil Vapor/Indoor Air Matrices A, B, C (May 2017) and D, E, F (February 2024), collectively referred to as the "Decision Matrices." The guidance values on Matrix A correspond to carbon tetrachloride, 1,1-dichloroethene, cis-1,2-DCE, and TCE. The guidance values on Matrix B correspond to methylene chloride, PCE and 1,1,1-trichloroethane (1,1,1-TCA). The guidance values on Matrix C correspond to vinyl chloride. The guidance values on Matrix D correspond to benzene, ethylbenzene, naphthalene, cyclohexane, isooctane (2,2,4-trimethylpentane), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene and o xylene. The guidance values on Matrix E correspond to m-xylene, p-xylene, heptane and hexane. The guidance values on Matrix F correspond to toluene. The decision matrices provide recommended actions based on the concertation of certain chemicals in the indoor air in conjunction with the concentrations found in the sub slab samples. Recommended actions include "No Further Action," "Identify Source(s) and Resample or Mitigate," " Monitor" and "Mitigate."
- Air Guidance Values (AGVs) and Immediate Action Levels identified in NYSDOH's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, *October 2006,* and subsequent updates. NYSDOH provides AGVs for the CVOCs PCE, TCE, and methylene chloride, and Immediate Action Levels for PCE and TCE.

4.2 Soil Vapor

4.2.1 Exterior Soil Vapor Point Analytical Results

A total of four soil vapor samples were collected from the four exterior soil vapor points (SV-1 through SV-4) located on the sidewalk along Nostrand Avenue, and on off-site properties to the north and southwest of the Site. VOCs, including PCE were detected at concentrations exceeding laboratory reporting limits in all four soil vapor samples collected. The highest concentration of PCE (530 µg/m^3) was found in SV-2, located northeast of the Site. VOC detections from the exterior soil vapor points are presented on **Table 5** and results from NYSDOH Decision Matrix compounds are depicted on a site plan on **Figure 4**. Laboratory analytical reports are included in **Appendix F**.

4.2.2 Soil Vapor Intrusion (SVI) Investigation Analytical Results

SVI structure sampling was conducted at eight properties as a part of this investigation. VOCs were detected at concentrations at which the Decision Matrices recommend "Mitigate" at one property, "Identify Source(s) and Resample or Mitigate" at two properties, and as "No Further Action" at the

remaining five properties. At Property 5, the initial round of sample results were categorized as "Monitor." Results from follow up rounds of sampling were categorized as "No Further Action." PCE was detected at a concentration exceeding the NYSDOH AGV but below the Immediate Action Level in one basement indoor air sample collected from Property 10. PCE was not detected at concentrations exceeding the AGV or Immediate Action Level in the two follow up sampling events conducted at the property. VOCs were not detected at concentrations exceeding AGVs or Immediate Action Levels in any other indoor air samples collected.

A summary of the Decision Matrices recommendations is presented on **Table 6**. All analytical results are presented on **Table 7** and laboratory analytical reports are included in **Appendix F**. SVI structure sampling locations and field forms have been redacted from this report.

Structure sampling at properties which did not result in a Decision Matrices recommendation of "No Further Action" is discussed in detail below. Property 5 is included to discuss the "Monitor" recommendation from the initial sampling event, which preceded two sampling events that resulted in "No Further Action" recommendations.

Property 5 – "No Further Action"

The property was initially sampled on February 23, 2023 and the Decision Matrices recommended "Monitor." The property was resampled on January 30, 2024 and was recategorized as "No Further Action." In consultation with the NYSDOH to confirm the second round of sampling results, a third sampling event was conducted on March 27, 2024 and resulted in a "No Further Action" recommendation.

Observations

The property consists of a two-story structure with a basement. The first floor is utilized as a bar/restaurant, and the second floor is utilized as an apartment. The basement is utilized as storage space for the restaurant and the concrete slab was observed to be in good condition.

During the initial sampling event, the chemical inventory found cleaners, insecticides, hand soap, degreaser, paint and primer, and concrete sealer.

During the second and third sampling events the inventory found joint compound, paint and primer, polyurethane, rust-oleum, adhesive and ground, all-purpose putty, wood stain, epoxy floor coating, degreaser, bleach, and detergent.

Analytical Results

During the initial sampling event, on February 23, 2023, PCE was detected in the basement sub-slab soil vapor at a concentration of 320 µg/m³ and in the basement and first floor indoor air samples at 5.1 µg/m³ and 3.5 µg/m³ respectively, triggering the "Monitor" recommendation. Sample results from the January 30, 2024 resample event, indicated that PCE was detected in the sub-slab soil vapor at a concentration of 7.1 µg/m³ and in the basement and first floor indoor air samples at

concentrations of 0.42 µg/m³ and 0.28 µg/m³ respectively, resulting in the "No Further Action" recommendation. During the third round of sampling conducted on March 27, 2024, PCE was detected in the sub-slab soil vapor at a concentration of 790 µg/m³ and detected in the basement and first floor indoor air samples at concentrations of 0.65 µg/m³ and 0.64 µg/m³ respectively, resulting in the "No Further Action" recommendation. None of the VOC concentrations detected in indoor air samples exceeded AGVs or Immediate Action Levels. A summary of NYSDOH Decision Matrices recommendations is presented on **Table 6**. SVI structure sampling analytical results are presented on **Table 7**. The laboratory analytical reports are included in **Appendix F**.

Property 10 – "Mitigate"

The property was initially sampled on January 30, 2024, and the Decision Matrices recommended "Identify Source(s) and Resample or Mitigate." The property was resampled on April 4, 2024, and the Decision Matrices recommended "Mitigate." A third round of sampling was conducted on January 14, 2025 also resulted in a "Mitigate" recommendation.

Observations

The property consists of a one-story supermarket with a basement used for storage and as a break room. The basement is shared with Properties 11 and 12.

During the initial sampling event, the chemical inventory found cleaners, ceiling flat, joint compound, gasoline, detergent, paint, and solvent cement. There were no changes observed to the chemical inventory during the second sampling event. No chemicals were observed during the third sampling event.

Analytical Results

During the initial sampling event on January 30, 2024, PCE, TCE and vinyl chloride were detected in basement indoor air samples at concentrations of 84 µg/m³, 1.1 µg/m³, and 0.37 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation. The basement indoor air PCE concentration exceeded the AGV, but was below the Immediate Action Level.

The second sampling event was conducted on April 4, 2024. PCE was detected in the basement sub-slab soil vapor at a concentration of 100 µg/m³ and in the basement indoor air at concentration of 24 µg/m³ resulting in the "Mitigate" recommendation. TCE, vinyl chloride, and carbon tetrachloride were all detected in the basement and/or first floor indoor air samples at concentrations resulting in the "Identify Source(s) and Resample or Mitigate" recommendation. Methylene chloride was also detected in the basement sub-slab soil vapor and basement indoor air sample at concentrations resulting in the "Monitor" recommendation.

Results from the third sampling event conducted on January 14, 2025 indicated that TCE was detected in the basement sub-slab soil vapor at a concentration of 118 µg/m³, and in basement indoor air samples at concentrations of 1.02 µg/m³ and 1.04 µg/m³, resulting in the "Mitigate" recommendation. PCE was detected in basement indoor air at concentrations resulting in the

"Identify Source(s) and Resample or Mitigate" recommendation. Cis-1,2-DCE was detected in the basement sub-slab soil vapor and the basement indoor air at concentrations resulting in the "Monitor" recommendation. Based on the results of the SVI structure sampling, NYSDEC has offered to design and install an SVI mitigation system at the property as an IRM.

Additional VOCs were detected in the sub-slab soil vapor, indoor air, and outdoor air samples collected at the properties, but at concentrations at which the Decision Matrices recommend "No Further Action." VOCs were not detected at concentrations exceeding AGVs or Immediate Action Levels in any of the indoor air samples collected at the property, with the exception of the one basement indoor air sample collected in January 2024, discussed above. A summary of NYSDOH Decision Matrices recommendations is presented on **Table 6**. SVI structure sampling analytical results are presented on **Table 7**. The laboratory analytical reports are included in **Appendix F**.

Property 11 – "Identify Source(s) and Resample or Mitigate"

The property was initially sampled on January 30, 2024, and the Decision Matrices recommended "Identify Source(s) and Resample or Mitigate." The property was resampled on April 4, 2024, and the Decision Matrices recommended "Identify Source(s) and Resample or Mitigate". A third round of sampling was conducted on January 14, 2025, and resulted in an "Identify Source(s) and Resample or Mitigate" recommendation.

Observations

The property consists of a three-story structure with a supermarket on the first floor, vacant apartments on the second and third floors, and a basement used for storage. The basement is shared with Properties 10 and 12.

During the initial sampling event the chemical inventory found cleaners, ceiling flat, joint compound, gasoline, detergent, paint, and cement. No changes were observed during the second sampling event. No chemicals were observed during the third sampling event.

Analytical Results

During the initial sampling event on January 30, 2024, TCE and vinyl chloride were detected in the basement indoor air sample at concentrations of 1 µg/m³ and 0.29 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation.

During the second sampling event on April 4, 2024, PCE, TCE, and vinyl chloride, were detected in the basement indoor air sample at concentrations of 28 µg/m³, 1.5 µg/m³, and 0.23 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation. Additionally, carbon tetrachloride was detected in the basement indoor and first floor indoor air samples at concentrations of 1.2 µg/m³ and 1 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation.

During the third sampling event on January 14, 2025, PCE was detected in the basement indoor air samples at 21 µg/m³ and 15.6 µg/m³, and in the first floor indoor at 12.3 µg/m³ resulting in the

"Identify Source(s) and Resample or Mitigate" recommendation. Additionally, TCE was detected in a basement indoor air sample at a concentration of 1.14 µg/m³ also resulting in the "Identify Source(s) and Resample or Mitigate" recommendation. Based on the results of the SVI structure sampling, NYSDEC has offered to conduct additional sampling at the property, as part of the IRM at 651 Nostrand Avenue.

Additional VOCs were detected in the sub-slab soil vapor, indoor air, and outdoor air samples collected at the properties, but at concentrations at which the Decision Matrices recommend "No Further Action." VOCs were not detected at concentrations exceeding AGVs or Immediate Action Levels in any of the indoor air samples collected at the property. A summary of NYSDOH Decision Matrices recommendations is presented on **Table 6**. SVI structure sampling analytical results are presented on **Table 7** and depicted on **Figure 6-3**. The laboratory analytical reports are included in **Appendix F**.

Property 12 – "Identify Source(s) and Resample or Mitigate"

The property was initially sampled on January 30, 2024, and the Decision Matrices recommended "Identify Source(s) and Resample or Mitigate." The property was resampled on April 4, 2024, and the Decision Matrices recommended "Identify Source(s) and Resample or Mitigate." A third round of sampling was conducted on January 14, 2025, in consultation with the NYSDOH to confirm the second round results due to the sampling occurring outside of the heating season.

Observations

The property consists of a three-story structure with a supermarket on the first floor, vacant apartments on the second and third floors, and a basement used for storage. The basement is shared with Properties 10 and 11.

The chemical inventory found no chemicals during any of the three sampling events.

Analytical Results

During the initial sampling event on January 30, 2024, vinyl chloride was detected in the basement indoor air and first floor indoor air samples at a concentration of 0.3 µg/m³ resulting in the "Identify Source(s) and Resample or Mitigate" recommendation.

During the second sampling event on April 4, 2025, PCE and carbon tetrachloride were detected in the basement indoor air samples at concentrations of 10 µg/m³ and 1.6 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation.

During the third sampling event on January 14, 2025, PCE and TCE were detected in the basement indoor air sample at concentrations of 20.9 µg/m³ and 1.02 µg/m³ respectively, resulting in the "Identify Source(s) and Resample or Mitigate" recommendation. Based on the results of the SVI structure sampling, NYSDEC has offered to conduct additional sampling at the property, as part of the IRM at Property 10.

Additional VOCs were detected in the sub-slab soil vapor, indoor air, and outdoor air samples collected at the properties, but at concentrations at which the Decision Matrices recommend "No Further Action." VOCs were not detected at concentrations exceeding AGVs or Immediate Action Levels in any of the indoor air samples collected at the property. A summary of NYSDOH recommendations is presented on **Table 6**. SVI structure sampling analytical results are presented on **Table 7**. The laboratory analytical reports are included in **Appendix F**.

4.2.3 Findings of Soil Vapor Investigation

PCE impacts are present in off-site soil vapor. PCE was present at concentrations at which the Decision Matrices recommended "Mitigate" at Property 10 and "Monitor" at Property 5. Successive rounds of SVI sampling at Property 5 resulted in a recommendation of "No Further Action." Three rounds of sampling at Properties 11 and 12 resulted in recommendations of "Identify Source(s) and Resample or Mitigate" for each event at each property. SVI structure sampling completed at the remaining four properties resulted in recommendations of "No Further Action." The NYSDEC has offered to design and install an SVI mitigation system as an IRM and to conduct additional monitoring at the impacted properties.

The source of the CVOC soil vapor and indoor air impacts at off-site Properties 10-12 is unknown. Based on results from exterior soil vapor points, PCE impacts may be migrating off-site in soil vapor, and contributing to impacts observed in the off-site properties. Utilities and other subsurface infrastructure may act as preferential pathways for transport of impacted soil vapor and perched groundwater between the Site and the off-site properties. Other potential sources of the off-site soil vapor and indoor air impacts include potential releases from historic dry cleaners (**Table 1**).

4.3 Data Validation and Usability

Analytical data obtained during the SC were validated to evaluate the usability of the data. The Data Usability Summary Reports (DUSRs) indicate which data are subject to limitations and identify certain data that are flagged as rejected and should not be used. All data were determined to be acceptable with no rejections. DUSRs are included in **Appendix G**.

5.0 CONCLUSIONS

The purpose of the SC was to investigate potential off-site SVI impacts related to CVOC contamination which was identified at the Site, and to determine whether the Site poses a significant threat to the public health and the environment, and whether that threat requires further investigation, or if significant information exists to make a decision regarding Site remediation.

The information collected during this investigation leads HRP to draw the following conclusion:

- PCE impacts are present in off-site soil vapor. The NYSDOH Decision Matrices recommend "Mitigate" at one property, "Identify Source(s) and Resample or Mitigate" at two properties, and "No Further Action" at the remaining five properties sampled. At the property where "Mitigate" was recommended, an IRM to mitigate SVI is being completed in accordance with a NYSDEC approved work plan dated August 15, 2025. The NYSDEC will conduct additional SVI structure sampling to monitor conditions at the properties where "Identify Source(s) and Resample or Mitigate" was recommended.

5.1 Data Gaps

- SVI structure sampling could not be completed at all the properties solicited during the SC, primarily due to lack of access granted by property owners. SVI impacts may exist in properties which could not be sampled within the off-site study area.

- The source of CVOC impacts to soil vapor and indoor air at the three properties where NYSDOH Decision Matrices recommended to "Mitigate" and "Identify Source(s) and Resample or Mitigate" is unknown. Impacts may be related to the Site or off-site sources.

Table 4
Soil Vapor Intrusion (SVI) Structure Sampling Locations and Justifications
702 Nostrand Avenue Off-Site
NYSDEC Site # C224299A
702 Nostrand Avenue
Brooklyn, New York

Off-Site Property #	Date Sampled	Location Description	Sub-Slab Soil Vapor/Air Samples	Justification
3	11/19/24	Residence (Multiple Use) (1 building, 4 floors, 5 units). The lowest level is a finished basement used for storage.	• One basement sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	Investigate potential SVI impacts at a property north of the Site, based on impacts observed at Property 5
5	2/23/23	Store Buildings – Predominant Retail w/ other Uses (1 building, 2 floors, 2 units) with an unfinished basement. The basement is the lowest level and used for storage.	• One sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	Investigate potential SVI impacts at a property north of the Site.

NYSDEC Site # C224299A
702 Nostrand Avenue
Brooklyn, New York

Off-Site Property #	Date Sampled	Location Description	Sub-Slab Soil Vapor/Air Samples	Justification
5	1/31/24		• One sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	The first sampling event on 2/23/23 resulted in a "Monitor" recommendation from the NYSDOH Decision Matrices due to PCE concentrations in the soil vapor and indoor air samples.
	3/27/24		• One sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	The second sampling event on 1/31/24 resulted in a "No Further Action" recommendation from the NYSDOH Decision Matrices. In consultation with the NYSDOH. This third round of sampling was completed to confirm the results of the second round of sampling.

NYSDEC Site # C224299A
702 Nostrand Avenue
Brooklyn, New York

Off-Site Property #	Date Sampled	Location Description	Sub-Slab Soil Vapor/Air Samples	Justification
6	3/8/23	2 floor building with a basement, first floor commercial, second floor residential. The lowest level is the basement and was under renovation, planned to be used as a kitchen area at the time of sampling.	• One sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	Investigate impacts to indoor air at a property north of the Site.
7	2/23/23	2 floor building with a basement, first floor commercial, second floor residential. The lowest level is the basement and is used as a restaurant, kitchen, and a staff locker room.	• One sub-slab soil vapor sample • One basement indoor air sample • One first floor indoor air sample • One outdoor air sample	Investigate potential SVI impacts to at a property south of the Site.

Legend:

50	Decision Matrices recommend a specific action based on parameter concentrations
25	Parameter was detected at concentrations exceeding the NYSDOH Immediate Action Levels
5.0	Parameter was detected at concentrations exceeding the NYSDOH Air Guidance Values
1.0	Parameter was detected at concentrations exceeding the laboratory reporting limit
< 1.0	Parameter was not detected at concentrations exceeding the laboratory reporting limit

Notes:

All concentrations in micrograms per cubic meter (µg/m^3)
Recommendations based on NYSDOH Soil Vapor/Indoor Air Matrices (May 2017 & February 2024)
J = Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration
E = Reported result is estimated; value reported over verified calibration range
--- = Standard Not Promulgated

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/09/2022 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/29/2022 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ATLANTIC AUTO SALES	1120 ATLANTIC AVE	NW 1/4 - 1/2 (0.432 mi.)	BC397	986

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 46 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Site ID: 218433
Spill Date: 1989-04-07

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 8 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following:

EXECUTIVE SUMMARY

Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/09/2022 has revealed that there are 32 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 116 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Updated By:	SNBOLLER
Site Description:	"Location: The site is located within the densely populated, mixed-use, urban neighborhood of Crown Heights, specifically at 702 Nostrand Avenue, Brooklyn, 11216. The site is bounded by Nostrand Avenue to the east, mixed-use commercial/residential structures followed by St. Mark s Avenue to the north, residential structures followed by Rogers Avenue to the west, and mixed commercial/residential structures followed by Prospect Place to the south. Site Features: The site is comprised of a 0.04-acre parcel that is improved with a two-story mixed-use building with a basement, ground-floor commercial office space, and a second-floor residential tenant space. There is a small yard in the rear of the building. Current Zoning and Land Use: The ground-floor commercial office space is occupied by a pediatric health clinic, and the second-floor residential space is also occupied. The current use is consistent with the zoning designation (R6A residential with a C2-4 commercial overlay), allowing for mixed-use development. Past Use of the Site: According to historical Sanborn maps and regulatory database files for the site, the ground floor and basement of the site were utilized as a dry cleaner from the early 1960s to about 2005. During renovations and improvements to the ground-floor commercial office space and basement, the Applicant observed odors within the basement. The Applicant conducted a Phase I ESA and a Limited Phase II ESA, which revealed impacts in soil and soil vapor likely caused by the historic dry-cleaning operations. As a result, and as a temporary mitigative measure, the Applicant installed a venting/exhaust system in the basement consisting of a false floor and ductwork that vents the space to the exterior of the building via two separate exhaust fans. The Applicant subsequently conducted indoor air sampling. Although no chlorinated solvents were detected in the indoor air sample, the ground-floor commercial office operations were indefinitely ceased on November 2, 2017. Subsequently the first floor was re-occupied by the pediatric health clinic in December 2018 following the installation of SVE wells and associated piping, and restoration of the cellar concrete slab and ventilation/exhaust system. This work was done under the air monitoring and sampling requirements for re-occupation approved by NYSDOH and NYSDEC. An interim Site Management Plan (SMP) has been approved to monitor the existing ventilation system until the final remedial actions are completed. Site Geology and Hydrogeology: Historic fill material, predominantly consisting of brown fine- to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

located on the western portion of the site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be approximately 42 feet bcs. The topography of the land surface suggests that groundwater flow across the site is in a northeasterly direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and breakdown products TCE and cis-DCE in soil, groundwater and sub-slab vapor. Remedial actions have successfully achieved the remedial action objectives to achieve restricted residential use. Residual contamination in the soil, groundwater, and sub-slab vapor is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Based on investigations conducted, the primary contaminants of concern were chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE)in soil, groundwater and sub-slab vapor. Soil - Sampling from four soil borings revealed PCE at a maximum concentration of 94 parts per million (ppm), compared to the applicable restricted residential soil cleanup objective (RRUSCO) of 19 ppm and the protection of groundwater (PGW) SCO of 1.3 ppm. Breakdown products namely TCE and Cis-1,2-DCE exhibited similar exceedances. Several SVOCs were detected at concentrations above the RRUSCOs, with benzo(b)fluoranthene being the highest at 3.2 ppm compared to the RRUSCO of 1ppm. No metals, pesticides or PCBs were detected at concentrations exceeding their respective RRUSCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - The VOCs detected at concentrations exceeding ambient water quality standards (AWQS) included PCE at 64 parts per billion (ppb), TCE at 9.3 ppb and cis-1,2-DCE at 22 ppb. Each of these compounds has an individual AWQS of 5 ppb. Petroleum related VOCs were also detected in groundwater at elevated concentrations. Emerging contaminants were detected at concentrations below the existing screening level. Sampling data from the perched groundwater does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air - Two sub-slab soil vapor samples revealed elevated concentrations of PCE (maximum concentration 30,000 micrograms per cubic meter, or ug/m3), TCE (8,120 ug/m3) and cis-DCE (5,750 ug/m3). Air samples collected from within the first floor of the on-site building did not detect PCE or its breakdown products. Data indicates that additional investigation is needed to further evaluate soil vapor intrusion off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with residual subsurface soil, groundwater, and soil vapor contamination on the site. Environmental sampling indicates soil vapor intrusion may be a concern for offsite properties."

Site Description:	"Location: The site is located within the densely populated, mixed-use, urban neighborhood of Crown Heights, specifically at 702 Nostrand Avenue, Brooklyn, 11216. The site is bounded by Nostrand Avenue to the east, mixed-use commercial/residential structures followed by St. Mark s Avenue to the north, residential structures followed by Rogers Avenue to the west, and mixed commercial/residential structures followed by Prospect Place to the south. Site Features: The site is comprised of a 0.04-acre parcel that is improved with a two-story mixed-use building with a basement, ground-floor commercial office space, and a second-floor residential tenant space. There is a small yard in the rear of the building. Current Zoning and Land Use: The ground-floor commercial office space is occupied by a pediatric health clinic, and the second-floor residential space is also occupied. The current use is consistent with the zoning designation (R6A residential with a C2-4 commercial overlay), allowing for mixed-use development. Past Use of the Site: According to historical Sanborn maps and regulatory database files for the site, the ground floor and basement of the site were utilized as a dry cleaner from the early 1960s to about 2005. During renovations and improvements to the ground-floor commercial office space and basement, the Applicant observed odors within the basement. The Applicant conducted a Phase I ESA and a Limited Phase II ESA, which revealed impacts in soil and soil vapor likely caused by the historic dry-cleaning operations. As a result, and as a temporary mitigative measure, the Applicant installed a venting/exhaust system in the basement consisting of a false floor and ductwork that vents the space to the exterior of the building via two separate exhaust fans. The Applicant subsequently conducted indoor air sampling. Although no chlorinated solvents were detected in the indoor air

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

sample, the ground-floor commercial office operations were indefinitely ceased on November 2, 2017. Subsequently the first floor was re-occupied by the pediatric health clinic in December 2018 following the installation of SVE wells and associated piping, and restoration of the cellar concrete slab and ventilation/exhaust system. This work was done under the air monitoring and sampling requirements for re-occupation approved by NYSDOH and NYSDEC. An interim Site Management Plan (SMP) has been approved to monitor the existing ventilation system until the final remedial actions are completed. Site Geology and Hydrogeology: Historic fill material, predominantly consisting of brown fine- to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard located on the western portion of the site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be approximately 42 feet bcs. The topography of the land surface suggests that groundwater flow across the site is in a northeasterly direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and breakdown products TCE and cis-DCE in soil, groundwater and sub-slab vapor. Remedial actions have successfully achieved the remedial action objectives to achieve restricted residential use. Residual contamination in the soil, groundwater, and sub-slab vapor is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Based on investigations conducted, the primary contaminants of concern were chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE)in soil, groundwater and sub-slab vapor. Soil - Sampling from four soil borings revealed PCE at a maximum concentration of 94 parts per million (ppm), compared to the applicable restricted residential soil cleanup objective (RRUSCO) of 19 ppm and the protection of groundwater (PGW) SCO of 1.3 ppm. Breakdown products namely TCE and Cis-1,2-DCE exhibited similar exceedances. Several SVOCs were detected at concentrations above the RRUSCOs, with benzo(b)fluoranthene being the highest at 3.2 ppm compared to the RRUSCO of 1ppm. No metals, pesticides or PCBs were detected at concentrations exceeding their respective RRUSCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - The VOCs detected at concentrations exceeding ambient water quality standards (AWQS) included PCE at 64 parts per billion (ppb), TCE at 9.3 ppb and cis-1,2-DCE at 22 ppb. Each of these compounds has an individual AWQS of 5 ppb. Petroleum related VOCs were also detected in groundwater at elevated concentrations. Emerging contaminants were detected at concentrations below the existing screening level. Sampling data from the perched groundwater does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air - Two sub-slab soil vapor samples revealed elevated concentrations of PCE (maximum concentration 30,000 micrograms per cubic meter, or ug/m3), TCE (8,120 ug/m3) and cis-DCE (5,750 ug/m3). Air samples collected from within the first floor of

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

	the on-site building did not detect PCE or its breakdown products. Data indicates that additional investigation is needed to further evaluate soil vapor intrusion off-site. "
Health Problem:	"Measures are in place to control the potential for coming in contact with residual subsurface soil, groundwater, and soil vapor contamination on the site. Environmental sampling indicates soil vapor intrusion may be a concern for offsite properties."

Site Geology and Hydrogeology: Historic fill material, predominantly consisting of brown fine- to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

located on the western portion of the site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be approximately 42 feet bcs. The topography of the land surface suggests that groundwater flow across the site is in a northeasterly direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and breakdown products TCE and cis-DCE in soil, groundwater and sub-slab vapor. Remedial actions have successfully achieved the remedial action objectives to achieve restricted residential use. Residual contamination in the soil, groundwater, and sub-slab vapor is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Based on investigations conducted, the primary contaminants of concern were chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE)in soil, groundwater and sub-slab vapor. Soil - Sampling from four soil borings revealed PCE at a maximum concentration of 94 parts per million (ppm), compared to the applicable restricted residential soil cleanup objective (RRUSCO) of 19 ppm and the protection of groundwater (PGW) SCO of 1.3 ppm. Breakdown products namely TCE and Cis-1,2-DCE exhibited similar exceedances. Several SVOCs were detected at concentrations above the RRUSCOs, with benzo(b)fluoranthene being the highest at 3.2 ppm compared to the RRUSCO of 1ppm. No metals, pesticides or PCBs were detected at concentrations exceeding their respective RRUSCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - The VOCs detected at concentrations exceeding ambient water quality standards (AWQS) included PCE at 64 parts per billion (ppb), TCE at 9.3 ppb and cis-1,2-DCE at 22 ppb. Each of these compounds has an individual AWQS of 5 ppb. Petroleum related VOCs were also detected in groundwater at elevated concentrations. Emerging contaminants were detected at concentrations below the existing screening level. Sampling data from the perched groundwater does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air - Two sub-slab soil vapor samples revealed elevated concentrations of PCE (maximum concentration 30,000 micrograms per cubic meter, or ug/m3), TCE (8,120 ug/m3) and cis-DCE (5,750 ug/m3). Air samples collected from within the first floor of the on-site building did not detect PCE or its breakdown products. Data indicates that additional investigation is needed to further evaluate soil vapor intrusion off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with residual subsurface soil, groundwater, and soil vapor contamination on the site. Environmental sampling indicates soil vapor intrusion may be a concern for offsite properties."

Site Code: 565005
Site Description: "Location: The site is located within the densely populated, mixed-use, urban neighborhood of Crown Heights, specifically at 702 Nostrand Avenue, Brooklyn, 11216. The site is bounded by Nostrand Avenue to the east, mixed-use commercial/residential structures followed by St. Mark s Avenue to the north, residential structures followed by Rogers Avenue to the west, and mixed commercial/residential structures followed by Prospect Place to the south. Site Features: The site is comprised of a 0.04-acre parcel that is improved with a two-story mixed-use building with a basement, ground-floor commercial office space, and a second-floor residential tenant space. There is a small yard in the rear of the building. Current Zoning and Land Use: The ground-floor commercial office space is occupied by a pediatric health clinic, and the second-floor residential space is also occupied. The current use is consistent with the zoning designation (R6A residential with a C2-4 commercial overlay), allowing for mixed-use development. Past Use of the Site: According to historical Sanborn maps and regulatory database files for the site, the ground floor and basement of the site were utilized as a dry cleaner from the early 1960s to about 2005. During renovations and improvements to the ground-floor commercial office space and basement, the Applicant observed odors within the basement. The Applicant conducted a Phase I ESA and a Limited Phase II ESA, which revealed impacts in soil and soil vapor likely caused by the historic dry-cleaning operations. As a result, and as a temporary mitigative measure, the Applicant installed a venting/exhaust system in the basement consisting of a false floor and ductwork that vents the space to the exterior of the building via two separate exhaust

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

fans. The Applicant subsequently conducted indoor air sampling. Although no chlorinated solvents were detected in the indoor air sample, the ground-floor commercial office operations were indefinitely ceased on November 2, 2017. Subsequently the first floor was re-occupied by the pediatric health clinic in December 2018 following the installation of SVE wells and associated piping, and restoration of the cellar concrete slab and ventilation/exhaust system. This work was done under the air monitoring and sampling requirements for re-occupation approved by NYSDOH and NYSDEC. An interim Site Management Plan (SMP) has been approved to monitor the existing ventilation system until the final remedial actions are completed. Site Geology and Hydrogeology: Historic fill material, predominantly consisting of brown fine- to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard located on the western portion of the site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be approximately 42 feet bcs. Site Code: 565005
Site Description: "Location: The site is located within the densely populated, mixed-use, urban neighborhood of Crown Heights, specifically at 702 Nostrand Avenue, Brooklyn, 11216. The site is bounded by Nostrand Avenue to the east, mixed-use commercial/residential structures followed by St. Mark s Avenue to the north, residential structures followed by Rogers Avenue to the west, and mixed commercial/residential structures followed by Prospect Place to the south. Site Features: The site is comprised of a 0.04-acre parcel that is improved with a two-story mixed-use building with a basement, ground-floor commercial office space, and a second-floor residential tenant space. There is a small yard in the rear of the building. Current Zoning and Land Use: The ground-floor commercial office space is occupied by a pediatric health clinic, and the second-floor residential space is also occupied. The current use is consistent with the zoning designation (R6A residential with a C2-4 commercial overlay), allowing for mixed-use development. Past Use of the Site: According to historical Sanborn maps and regulatory database files for the site, the ground floor and basement of the site were utilized as a dry cleaner from the early 1960s to about 2005. During renovations and improvements to the ground-floor commercial office space and basement, the Applicant observed odors within the basement. The Applicant conducted a Phase I ESA and a Limited Phase II ESA, which revealed impacts in soil and soil vapor likely caused by the historic dry-cleaning operations. As a result, and as a temporary mitigative measure, the Applicant installed a venting/exhaust system in the basement consisting of a false floor and ductwork that vents the space to the exterior of the building via two separate exhaust fans. The Applicant subsequently conducted indoor air sampling. Although no chlorinated solvents were detected in the indoor air sample, the ground-floor commercial office operations were indefinitely ceased on November 2, 2017. Subsequently the first floor was re-occupied by the pediatric health clinic in December 2018 following the installation of SVE wells and associated piping, and restoration of the cellar concrete slab and ventilation/exhaust system. This work was done under the air monitoring and sampling requirements for re-occupation approved by NYSDOH and NYSDEC. An interim Site Management Plan (SMP) has been approved to monitor the existing ventilation system until the final remedial actions are completed. Site Geology and Hydrogeology: Historic fill material,

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

predominantly consisting of brown fine- to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard located on the western portion of the site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be approximately 42 feet bcs. The topography of the land surface suggests that groundwater flow across the site is in a northeasterly direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and breakdown products TCE and cis-DCE in soil, groundwater and sub-slab vapor. Remedial actions have successfully achieved the remedial action objectives to achieve restricted residential use. Residual contamination in the soil, groundwater, and sub-slab vapor is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Based on investigations conducted, the primary contaminants of concern were chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE)in soil, groundwater and sub-slab vapor. Soil - Sampling from four soil borings revealed PCE at a maximum concentration of 94 parts per million (ppm), compared to the applicable restricted residential soil cleanup objective (RRUSCO) of 19 ppm and the protection of groundwater (PGW) SCO of 1.3 ppm. Breakdown products namely TCE and Cis-1,2-DCE exhibited similar exceedances. Several SVOCs were detected at concentrations above the RRUSCOs, with benzo(b)fluoranthene being the highest at 3.2 ppm compared to the RRUSCO of 1ppm. No metals, pesticides or PCBs were detected at concentrations exceeding their respective RRUSCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - The VOCs detected at concentrations exceeding ambient water quality standards (AWQS) included PCE at 64 parts per billion (ppb), TCE at 9.3 ppb and cis-1,2-DCE at 22 ppb. Each of these compounds has an individual AWQS of 5 ppb. Petroleum related VOCs were also detected in groundwater at elevated concentrations. Emerging contaminants were detected at concentrations below the existing screening level. Sampling data from the perched groundwater does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air - Two sub-slab soil vapor samples revealed elevated concentrations of PCE (maximum concentration 30,000 micrograms per cubic meter, or ug/m3), TCE (8,120 ug/m3) and cis-DCE (5,750 ug/m3). Air samples collected from within the first floor of the on-site building did not detect PCE or its breakdown products. Data indicates that additional investigation is needed to further evaluate soil vapor intrusion off-site. "

Health Problem: "Measures are in place to control the potential for coming in contact with residual subsurface soil, groundwater, and soil vapor contamination on the site. Environmental sampling indicates soil vapor intrusion may be a concern for offsite properties."

Record Updated Date: 06/07/2021
Update By: JHOCONNE
Site Description: "Location: The area of concern subject to the site is considered off site from BCP site C224270 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224270 for further information regarding the status of the site in the BCP. Site Features: The site is comprised of a 0.04-acre parcel that is improved with a two-story mixed-use building with a basement,

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

ground-floor commercial office space, and a second-floor residential tenant space. There is a small yard in the rear of the building. Current Zoning and Land Use: The BCP site and the off-site area are located in a commercial and residential section of Brooklyn with the zoning designation (R6A residential with a C2-4 commercial overlay), allowing for mixed-use development. Past Use of the Site: According to historical Sanborn maps and regulatory database files for the site, the ground floor and basement of the BCP site were utilized as a dry cleaner from the early 1960s to about 2005. During renovations and improvements to the ground-floor commercial office space and basement, the Applicant observed odors within the basement. The Applicant conducted a Phase I ESA and a Limited Phase II ESA, which revealed impacts in soil and soil vapor likely caused by the historic dry-cleaning operations. As a result, and as a temporary mitigative measure, the Applicant installed a venting/exhaust system in the basement consisting of a false floor and ductwork that vents the space to the exterior of the building via two separate exhaust fans. The Applicant subsequently conducted indoor air sampling. Although no chlorinated solvents were detected in the indoor air sample, the ground-floor commercial office operations were indefinitely ceased on November 2, 2017. The Applicant was adjudged to be a Volunteer on successfully applying to the BCP. The BCP site was subsequently re-occupied by the commercial office operations which consisted of a pediatric health clinic on December 3, 2018 following the installation of SVE wells and associated piping, and restoration of the cellar concrete slab and ventilation/exhaust system. Site Geology and Hydrogeology: Based on the RI and prior investigations conducted on the BCP site, historic fill material, predominately consisting of brown fine-to medium-grained sand with varying amounts of brick, gravel and silt, was encountered from the ground surface to about 4 feet below surface grade in the rear yard located on the western portion of the BCP site. Historic fill material was also observed in the eastern portion of the site to about 4 inches below the cellar slab (bcs). Native soil was encountered below the historic fill material layer and the cellar slab, and generally consisted of brown and gray, fine- to medium-grained sand with varying amounts of silt and gravel. Perched water was observed from 13 to 23 feet bcs. The actual water table is estimated to be some 42 feet bcs. "

Env Problem: "Based on investigation conducted to date at the BCP site, the anticipated primary contaminants of concern are chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE) in soil, perched groundwater and soil vapor. Because contaminants of concern were detected near the BCP site perimeter, it is predicted that CVOCs in sub slab vapor may migrate off site under current, remediation, or future conditions. Off site receptor populations may be affected by impacted sub slab vapor via inhalation. Therefore, the BCP site is considered to pose a significant threat to public health and/or the environment. "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Prior to remediation, the primary contaminants of concern were PCE and breakdown products TCE and cis-DCE in soil, groundwater and sub-slab vapor. Remedial actions have successfully achieved the remedial action objectives to achieve restricted residential use. Residual contamination in the soil, groundwater, and sub-slab vapor is being managed under a Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: Based on investigations conducted, the primary contaminants of concern were chlorinated solvents, specifically tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE)in soil, groundwater and sub-slab vapor. Soil - Sampling from four soil borings revealed PCE at a maximum concentration of 94 parts per million (ppm), compared to the applicable restricted residential soil cleanup objective (RRUSCO) of 19 ppm and the protection of groundwater (PGW) SCO of 1.3 ppm. Breakdown products namely TCE and Cis-1,2-DCE exhibited similar exceedances. Several SVOCs were detected at concentrations above the RRUSCOs, with benzo(b)fluoranthene being the highest at 3.2 ppm compared to the RRUSCO of 1ppm. No metals, pesticides or PCBs were detected at concentrations exceeding their respective RRUSCOs. Data does not indicate any off-site impacts in soil related to this site.
Groundwater - The VOCs detected at concentrations exceeding ambient water quality standards (AWQS) included PCE at 64 parts per billion

702 NOSTRAND AVENUE - OFF-SITE (Continued) **S121933790**

	(ppb), TCE at 9.3 ppb and cis-1,2-DCE at 22 ppb. Each of these compounds has an individual AWQS of 5 ppb. Petroleum related VOCs were also detected in groundwater at elevated concentrations. Emerging contaminants were detected at concentrations below the existing screening level. Sampling data from the perched groundwater does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air - Two sub-slab soil vapor samples revealed elevated concentrations of PCE (maximum concentration 30,000 micrograms per cubic meter, or ug/m3), TCE (8,120 ug/m3) and cis-DCE (5,750 ug/m3). Air samples collected from within the first floor of the on-site building did not detect PCE or its breakdown products. Data indicates that additional investigation is needed to further evaluate soil vapor intrusion off-site. "
Health Problem:	"Measures are in place to control the potential for coming in contact with residual subsurface soil, groundwater, and soil vapor contamination on the site. Environmental sampling indicates soil vapor intrusion may be a concern for offsite properties."

DEC Memo:	"2/4/2014 - Feng - Talked with Mark Salamack (917-559-5519, mlsalamack@aol.com). The owner suspected the tank leaked as stains were found on the concrete pad. The tank is empty now, and tested and failed the test. It could have been a wet leak. They will send the proposal of removing the tank to the owner. There is a temporary tank onsite. TTF letter sent to PBS owner Rabel Realty Co., LLC (PBS No. 2-318507). Rpt to be submitted by 3/4/2014. 03-18-2015 - V. Brevdo This TTF Spill Case is re-assigned to Remediation Section B as per discussion with Chief of Spill Response on 3/17/2015. Case is further assigned to Mr. Jonathan Kolleeny as Project Manager. - VB 05/21/15: I contacted Mr. Edward Rabin (site contact on PBS Facility Info Rpt), he said tank has been cut up and bldg has switched to gas heat. Tank was above-ground, within concrete containment resembling a sarcophagus. I asked if there were any indications that leaked oil may have reached environment, i.e., soil beneath concrete floor, Mr. Rabin said no. I asked that he either send rpt alluded to above prepared by Mark Salamack of Petroleum Tank Cleaners, or send an email with photos showing tank location and condition of concrete

UNKNOWN RESIDENCE (Continued) **S116156846**

floor, along with statement that tank has been removed and there are no indications of a release to environment. Mr. Rabin said he will work on this and get back to me. - J. Kolleeny 06/11/15: Received email from Mr. Edward Rabin (site contact, emrabin@rabinmanagement.com). Email states: Mr. Kolleeny, We spoke by telephone during past several weeks regarding closing captioned matter. Towards that end, I recently conferred with Mr. Mark Salamack, who is duly licensed by New York governmental agency having jurisdiction for oil spills. He was present and inspected site at time spill was reported to Petroleum Tank Cleaners, Company that performed remedial work to remove oil from tank, such as it existed, and also cleaned premises. Mr. Salamack has credentials to close out spill. Prior to doing so, he requested that he make an inspection early next week to determine existing condition at premises. This writing is to serve to confirm that this matter is being attended to. Would you kindly provide a telephone number so that either of us may contact you. I sent email reply, with cc to Mark Salamack (mlsalamack@aol.com): Mr. Rabin, Thank you for getting back to me regarding this spill case. My direct phone number is 718-482-6388. I look forward to hearing from you and/or Mr. Salamack to resolve this case. - J. Kolleeny 07/29/15: Received email from Mark Salamack of Mercury Pump & Tank Service, Inc.: I know it has been some time since I communicated with you regarding this open spill...at this point I have had affected area pressure washed and just waiting for water to dry to get some photos of it to send...floor is solid and crack-free so I don't believe any soil sample from underneath are necessary...staining was minimal to begin with. I expect to go back to site tomorrow and obtain the photos, and have a report to you within a few days. - J. Kolleeny 08/04/14: On 7/30/15, received letter rpt from Mark Salamack of Mercury Pump & Tank Service, Inc. Letter rpt states that in Feb. 2014, bldg. mgmt. detected oil odor after fuel delivery and had Petroleum Tank Cleaners test tank (a 2,000-gal no. 2 fuel oil AST in basement; tank failed test and was taken out of service, and spill was reported to DEC. Temporary tanks were set up and old tank was removed [PBS Facility Info Rpt confirms this], and several months later, temporary tanks were removed and bldg. switched to gas heat. According to letter rpt, tank was on solid concrete floor with some old staining that appeared unrelated to recent problem (no wet oil was observed by Salamack); affected area was ~ 15 ft by 5 ft, and showed no cracks or voids thru which oil could have reached soil below. Rpt states that floor was pressure washed on July 28, 2015; rpt is accompanied by Waste Disposal Manifest for 150 gals of wash water. Also attached are photos showing concrete floor, free of any petroleum stains. Letter requests spill closure. Although text of letter rpt states that concrete floor was pressure washed on 7/28/15, disposal manifest is dated 7/27/15. I sent email to Mark Salamack pointing out this discrepancy. On 7/31/15, received revised rpt stating that floor was pressure washed on 7/27/15 (in DecDocs). On 8/4/15, I closed spill, sent closure letter (in DecDocs) to RP Edward Rabin, cc to Mark Salamack. - J. Kolleeny"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 1/11/00: Spoke to Mark at ABC Tank. There are two 275 gallon ASTs in the basement, one of which was previously taken out of service and oil was left in the tank. This oil leaked out, cause unknown at this point. They are currently pumping out the oil/water mixture. They will then use speedy dry. When they determine the cause and if any drains are located in the basement, they will call me back. John Hoovert is the owner. 6/05: Reassigned to Maloney 6/3/05: Attempted to call owner, number is no longer valid. Called ABC Tank and spoke with Robert (Mark no longer works for the company). Robert will check files and get back to me. - Maloney 10/05: Adiministatively closed"
Remarks:	"hoovert found oil on floor of basement. clean up has just begun."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"12/13/11-Hiralkumar Patel. 9:29 AM:- spoke with Jeremy at DEP. they received odor complaint from one of the tenant. as per tenant, spill occurred last thursday. Jeremy responded and found basement flooded with water and an unknown oil. he noticed black layer on top of water. when he reached to the site, water was being pumped out onto street. Jeremy put hose back into basement, but sump pump is still on. some oil noticed on sidewalk and DEP has applied speedy dry. Industrial Waste Unit in DEP has been notified to check catch basins. Moussa Ovedraogo **property owner** Roy Douglas **property manager** Ph. (718) 852-1616 (O) (917) 440-9213 (C) 9:39 AM:- spoke with Mr. Douglas, property manager. he doesn't know about oil spill. informed him that DEC inspector will be on-site for inspection in an about 45 minutes. DEC Veronica will visit site. 12/13/11- Zhune visited the site. basement is flooded with water and #2 fuel oil. There are oil stain on the sidewalk and the crub. As per tenant Ebony Martin 347-770-8844 the day before he saw people reparing the boiler. There is no odors in first, second and third floor. As per DEP-Hazmat the owner was pumping the water from the basement out to the street. Catch basin has been impacted. DEP-Hazmat will notified DEP-Industrial Waste. Fire Department and OEM was on the scene, OEM notified DEC. A CSL sent to: Royce Douglas Management Corporation 80 Livisnton Street Brooklyn, NY 11201 HPD-Mr. Jhonson 212-863-8797 08/08/12- Zhune spoke to Mr. Oscar Bhagwan from HPD 212-863-8711, He said he will call back with the information regarding the spill cleanup. Bhagwano@hpd.nyc.gov 08/31/12- Zhune spoke to Oscar Bhagwan. He said the Building Department put a vacate to this building. Royce Douglas is responsible for the building. he is managing agent appointed by the supreme court of New York State. The HPD is suing the building becouse the field correct violation. 04/22/13- Spoke to Royce Douglas he said that they don't manage this building anymore, That honbestly he doesn't know who i have to call. "

DEC Memo:	"7/13/15 TJD File review. Spill reassigned from AH Primary (Ahmed) to AH Secondary (Patel). 08/12/15-Hiralkumar Patel. alternate address: none no PBS or other spills found. went to site for inspection, but no access available. found a fill port by the front fence and vent by the building wall. noted concrete patch along the fill line run. 10/23/15-Hiralkumar Patel. 9:36 AM:- went to site for inspection, but no access. 9:42 AM:- left message for Ms. Linyard. 10:35 AM:-

RESIDENCE (Continued) **S116155246**

received call from Ms. Linyard. informed her about open spill case. she requested re-inspection. 11:20 AM:- reinspected site. met Ms. Linyard. site has 275 gal AST on legs in southeast corner of the basement. all active lines connected to the tank are aboveground. a sump is located in area close to the tank. petroleum product or sheen were not found on water in the sump. no petroleum odors detected in the basement. no signs of an active leak noted in the basement. found an old supply line along the building's eastern wall, covered in concrete. Ms. Linyard mentioned that a new supply line was installed during installation of a new boiler in 2013. she confirmed that there was no issue with the old supply line. she also mentioned that spill in 2013 occurred in basement and was cleaned up immediately. she claimed that a concrete patch noted along the fill line run is actually a part of concrete slab crack filling project conducted in area. found same concrete patches in other areas also. case closed based on available information and observations during the site visit."

Remarks: "Fill line was disconnected. Contained on slab."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Mr. Lee provided email address for himself and Samantha Stephens (another member on co-op board). Samantha Stephens email: samanthastephens@yahoo.com Charles Lee Ph. (718) 774-1925 email: clee2514@yahoo.com herculesleader30@outlook.com 1:18 PM:- sent email to Ms. Stephens and asked her to contact DEC Zhune to schedule an inspection. email copied to Mr. Lee and DEC Zhune. case assigned to DEC Zhune (AH secondary). 2/24/16-Zhune responded to this spill. Zhune spoke to Mr. Maurice Jones Manager of the building). Maurice said last week S&J (oil company)changed the filter from the boiler. During my inspection I noticed no visual or olfactory evidence of petroleum contamination in the boiler/tank room. Based on my observations during the inspection this spill is closed."
Remarks:	"Caller states there has been an odor of fuel oil for months at times and the maintenance has advised tenants of boiler issues in the past. Caller believes there is an oil leak in the system which is causing fumes to generate throughout the building."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Sangesland spoke with Clarinda at Milro. As of 4:10PM The vac truck is on it's way already, the spill guys are loading up now 11/3/05-Vought-Recieved case from DEC Sangesland. Insurance coverage covers house only and not soil contamination remaining in drywell in basement. As per Milro approximately 3'x3' area of oil impacted soil. Neighbors property also affected through foundation. Vought called and spoke with Gadi Weinreich (646-642-6044) and two tanks were onsite (275-gallon manifolded tanks). One tank was leaking and was emptied by Milro. Site visit scheduled by Vought for 11/5 to inspect drywell and neighbors property. Vought called Milro and tanks were

WEINREICH RESIDENCE (Continued) **S107416915**

cleaned out by Milro. Floor was cleaned with speedy dry. In 653 Saint Marks (Mr. Bernard Jones) floor was pressure washed, contaminated debris was removed. Received call from David Oloke that he will be performing site visit tomorrow to inspect site. Vought faxed him copy of spill report. 11/7/05-Vought-Site visit by Vought on 11/5/05 due to unavailability of owner during week. Onsite were two 275-gallon manifolded USTs in brand new condition. As per owner of property (Gadi), the former 275-gallon #2 fuel oil UST was leaking from the bottom and he placed to service calls to Petrol to have tank repaired. No spill out of vent or fill was visible. As per Gadi, Petro performed site visit in response to his calls on 7/13/05 due to fuel odors. On 10/7/05, a delivery was performed by Petro and during the delivery the tank failed causing the contents of to fall onto the basement floor. Basement floor is mostly concrete however some of the spill ran into the boiler room and into an approximate 2'x3' soil patch. Gadi contacted Travelers insurance who is filing a case against Petro. Contact info for Travelers is George Coch (631-577-7293 Claim #LOA7455). No odors present in living quarters of 651 and 653 St. Marks Avenue. A site visit was performed in 653 St. Marks Avenue (owner: Bernard Jones 347-643-3951) and no odors were present. Mortar in schist block walls however smelled of petroleum upon very close inpspection and Mr. Jones indicated that puddles of oil were on floor at his time of spill (oil had saturated walls between two residences). 653 St. Marks Avenue is on natural gas heating. Vought sent soil contamination letter to Weinreich requiring: 1)excavation of soil from pit and collection of endpoint samples 2)sealing of basement floors and walls of both residences 3)possible soil boring under 653 St Marks Place to investigate possibility of contamination under foundation. Vought called Coch (Travelers) and left message to return call. 11/14/05-Vought-DEC Sangesland received call from Milro regarding site. Vought returned call and insurance is not paying bills. Vought faxed copy of 11/7/05 letter to Basso. 11/18/05-Vought-Called George Coch and left message to return call. Vought recevied call from Gadi on 11/17/05 regarding status of spill. Vought called Gadi (212-840-6977) and left message to return call. Vought received message from Gadi and returned call. Vought spoke to Gadi and informed him of message left with Coch and advised him to call Travelers for update. Gadi provided number of Judy Helm (Travelers 800-624-6007x4736). Vought called Helm and left message to return call. Vought received message from Judy and returned call. Vought received third message from Judy and returned call and left message to return call. Vought received call and spoke to Judy. Letter sent to Petro by Travelers stating that Petro was responsible. Liability claim being handled by Andrew Follo (Claim# LOA7698 877-828-4110x48653) who is also reviewing claim by Milro. Vought called Follo and left message to return call. Vought spoke to Follo who is only handling third party claim. Letter sent to Petro to pay for bill by Milro. Possible third party coverage of soil under 651 due to third party impact. DEC will ask for two soil borings on adjacent property. Follo will return call to DEC. Vought called Gadi and delivery was 150-gallons and tank was filled (275-gallons). Approximately 175 gallons was lost. 11/22/05-Vought-Spoke to Gadi and Milro contacted Wienreich and insurance company did not pay Milro. Vought advised that Gadi contact insurance company with respect to suit against Petro and possible coverage under third party claim. 11/29/05-Vought-Spoke with Gadi and his insurance company approved work at both 651 and 653 St. Marks Place. Insurance company will be

WEINREICH RESIDENCE (Continued) **S107416915**

hiring a contractor to perform work. 1/3/06-Vought-Received call and spoke to Gadi and contractor will be starting work tomorrow to inspect 651 St. Marks and take pictures/samples. 1/23/06-Vought-Received call from Gadi that soil borings are scheduled to be performed by insurancce company on 1/19/06. 1/25/06-Vought-Received call from and spoke to Gadi. Gadi spoke to Travelers and as per Gadi, sample analyticals will be returned in one to two weeks. 2/27/06-Vought-Received call and spoke to Gadi and borings were performed and samples were collected by Liberty Mutual. 3/9/06-Vought-Reviewed AST Spill Investigation Report dated 2/10/06 and received on 3/2/06 from Madison Environmental and Tank Services (Joe Tomasulo 914-276-8690). Four soil borings performed. Soil borings performed to a maximum depth of 3.7 feet below grade. Soil analyticals show: 12000ppb xylene(GB2 2'bg), 7400ppb xylene(GB3 2'bg). Madison proposes minor hand excavation of soil be completed in the vicinity of GB-2 and GB-3 and the basement be treated with a bioremediation application. . Also reviewed AST Spill Investigation report dated 2/23/06 and received on 2/27/06. Vought sent letter approving of report recommendations with requirements: 1)collection of soil endpoint samples. Vought called Tomasulo and left message of approval and cc'd above letter. 3/23/06-Vought-Received call from Gadi and letter was sent to Travelers by Weinreich. As per Weinreich, Milro will be doing work. 03/28/06-Vought-Received call and spoke to Follo and DEC requires excavation as opposed to more borings. 05/10/06-Vought-Received call and spoke to Gadi and excavation has not started yet and Gadi expecting to receieve call today with start date by Milro. Gadi had received proposal from contractor and proposal was agreed to by Follo. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/22/06 - Raphael Ketani. I spoke to Mr. Gadi Weinrich (212) 840-6977. He said that the insurance company and MILRO had been going back and forth on the prices for the digging. However, they came to an agreement and MILRO is supposed to start digging next week. 7/20/06 - Raphael Ketani. Mr. Weinrich [(212) 840-6977/(212) 840-6500] left a message that Madison Environmental (914) 276-8690 finished the digging of the contaminated soil and took soil samples. He said that Joey of Madison will contact me soon. 7/21/06 - Raphael Ketani. Mr. Weinrich said that Madison dug and sampled 2 weeks ago. They will send the results and report. 7/27/06 - Raphael Ketani. Mr. Weinrich called to ask whether Madison had sent the spill closure report to me. I told him I hadn't received anything yet and to call Madison to get them to send it to me very soon. Joe of Madison Environmental (914) 276-8690 called to say that the closure report is being mailed out today, but it is addressed to Jeff Vought. He said to keep an eye out for it. 8/3/06 - Raphael Ketani. I received the spill cleanup report dated 7/24/06 from HyrdoEnvironmental Solutions. I am reviewing the report. 8/7/06 - Raphael Ketani. I reviewed the 7/24/06 cleanup report and there were no exceedences of TAGM 4046 standards for any of the soil samples from the site. In fact, the results were very low (i.e. in the hundreds of ppb at most). 8/8/06 - Raphael Ketani. I reviewed the entire case file for the site. Based upon the analytical results in the 7/24/06 cleanup report, the pictures in the report showing that the bottom of the wall was sealed to prevent any future oil spills from traveling to 653 St. Marks Avenue, the cleaning of the neighbor's floor on 11/3, and the inspection by the former case manager, Jeff Vought, on 11/7 whereby it was seen that the oil at 653 St. Marks Avenue was cleaned up and there were no odors, I am closing

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DER Facility ID:	531929
DEC Memo:	"11/7/18 - Obligado - DEsk Duty - Gross dry leak. They are putting together a proposal to isolate repair and retest. Underground 1000 gallon tank. Multifamily home. EBI consulting - Kenneth Lukas, 631 456 3972. 12/03/18 - Lakhani Spoke to Chris, 347-723-3298, who informed that the site is being refinanced. The building is currently undergoing conversion from oil to gas. The 1000 gallon will be abandoned in-place. The tank has not passed a tightness test yet. DEC Lakhani suggested that the oil be removed from the UST and put in a temporary tank for use during the conversion. Deadline extended to 12/17/18. 12/18/18 - Lakhani Chris emailed to inform that a new boiler was installed on 12/17/18, converting from oil to gas. As for the underground tank, Boro Waste Oil will complete the job today discarding the remaining oil and taking the tank out of service. 12/24/18 - Lakhani Chris submitted the tank affidavit for the removed tank. 12/28/18 - Lakhani Chris submitted the disposal manifest for the oil pumped from the 1080 gallon UST. Spill is closed."
Remarks:	"dry leak - repair and retest"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	17569
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

ST MARKS AVE 751 LLC (Continued) **A100514902**

Equipment Records:

C03 - Pipe Location - Aboveground/Underground Combination
F06 - Pipe External Protection - Wrapped
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
K99 - Spill Prevention - Other
A01 - Tank Internal Protection - Epoxy Liner
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1912
Capacity Gallons:	7000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	ACDANIEL

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	220473
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
H00 - Tank Leak Detection - None
E00 - Piping Secondary Containment - None
K00 - Spill Prevention - None
L08 - Piping Leak Detection - Tank Top Sump
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I05 - Overfill - Vent Whistle
F00 - Pipe External Protection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	4000

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	52133
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
H04 - Tank Leak Detection - Groundwater Well
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
K00 - Spill Prevention - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 001
Tank Id: 180672
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G00 - Tank Secondary Containment - None
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
J03 - Dispenser - Gravity
L00 - Piping Leak Detection - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel Tank in Concrete
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: KXTANG
Last Modified: 04/14/2017
Material Name: #2 fuel oil (on-site consumption)

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date Last Modified: 2020-09-04

Tank Info:

Tank Number: 001
Tank Id: 8690
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
G00 - Tank Secondary Containment - None
D00 - Pipe Type - No Piping
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
J00 - Dispenser - None

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1905
Capacity Gallons: 3000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: NTFREEMA
Last Modified: 04/14/2017
Material Name: #2 fuel oil (on-site consumption)

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 10/13/10 - Austin - Spill being transfered from Tang to Region 2 Spills staff - end 10/22/10 - Raphael Ketani. The spill took place on 1/16/98. It was not described what the nature of the spill was. However, when the cleanup company, PTC, arrived, they found the spill to be bigger than anticipated. I made an unannounced site visit and met the super., Jerry Seunath. He showed me the boiler room (see E-docs). The boiler room contained a working boiler and an older, larger, condemned boiler that had been completely disconnected. The floor of the boiler room did not have any cracks. Given that the oil that had been released in 1998 was #6 oil, it was unlikely that any of it had penetrated the floor. I saw a large dark stain on the northern wall of the boiler room just under a sealed window. This appeared to be where the oil had entered the boiler room during the original spill. Other than this stain, there were no signs that the spill had occurred, nor any oil odors. I went outside and looked in front of the air ventilation shaft. The soil looked disturbed, but cleaned. At the front of the building there was a long pipe which connected to a vent pipe. Both pieces looked like they had been installed fairly recently. As the spill had been cleaned up, and as the spill was #6 oil with seepage through the boiler room floor being unlikely, and as there were no oil odors, I determined that there was no threat to the public or the environment. Therefore, I closed the spill case."
Remarks:	"oil company was called to clean a small area but upon investigation found the spill to be larger than expected - caller unsure on cause of spill "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
