DER Facility ID:	158293
DEC Memo:	"8/1/95 Northland Marketing Corp. (Joseph Macchia) submitted corrective action plan. 8/7/95 Macchia informed DEC that borings were performed and to contact Walter Berninger at (516) 588-2251. Walter received info for Fenley & Nichol borings. Will mail 4 boring logs and associated lab analysis. No map indicating locations. Investigation most probably performed in conjuction with tank test failure and in vicinity of tanks & piping. 8/11/95 Received boring logs from F&N 1/2/89 completed due to TTF. 8/15/95 J. Rommel and K. O'Dowd conducted PBS inspection. Unregistered tanks in leased portion of property (minimum 3). Product in stick manhole for Regular U/L. Apparent antifreeze and transmission fluid surface spills. Apparent recurring spill by diesel pump island. 6 vent lines and 4 tanks. Concrete in very poor condition-increased possibility for surface spills to leach into subsurface. Could not ID location of F&N 12/89 borings. Leasing portion of property since 8/7/95. 8/21/95 DEC approved CAP. CAP to be implemented within 10 days of receipt. An investigation plan will be submitted within 15 days. 9/29/95 DEC sent Northland comments on Investigation Plan. 12/4/95 As per W. Berninger. BEI on site today with air rotary rig. Down 35' and did not encounter GW. Maybe caused by hot air injected (maybe within water table but can't tell). Rethinking approach. 12/6/95 Down hole hammer got stuck, formation caved in. Propose to case top 20' and drill deeper. Air rotary to break rubble and then switch to hollow-stem auger(small diameter). 1/30/96 S. Muller, BEI, called to report 2 wells were installed last week. DTW 68'bgs. Boring near Atlantic clean. He determined that groundwater flow direction probably NNW. He wants to gain access into fenced area. 2 more wells are planned for installation. 1/31/96 On site during installation. 4/15/96 MW-1 Pet. Odor 70', 5.5ppm HNU soil, 3392ppb gw MW-2 Clean, 1.8ppm HNU soil, 1134ppb gw MW-3 27.4ppm HNU soil, 25,436ppb gw BEI recommends additional MWs to define plume and confirm its origin. As per C. Nalbone, flying Citgo flag. Singh (Citygas) operating/testing. Spill 9614595 reported 3/13/97 for product in wells and odor complaints. J. Rommel/K. O'Dowd Notes: 3/20/97 Spoke to Manager of Wendy's, Rommel Smith. Vapor problem during deliveries, especially in women's bathroom. Floor drain in office did not show readings with Crocon. Stated there's usually a delay between delivery and when vapors start. Singh and L. Macchia on site. Checked 3 wells with bailer. S. Muller's sonic tap - 3.875 product detected in MW-3. Required that weekly monitoring and bailing visits start immediately and that DEC be present during first visit. Continue delineation as previously required. Schedule to take readings at Wendy's during next delivery. (Appears to be same situation as Cooper Ave. Singh's delivery trucks not properly using stage II vapor recovery.) Wendy's manager says theres a delay of about 2 weeks but deliveries every week?? 3/31/97 Site visit with S. Muller, BEI, and Singh, Citygas. Macchia did not show. Checked 3 MWs. No product in any. MW-3 strong

EXXONMOBIL (Continued) **S102560459**

gas odor. No vapor complaints from Wendy's since last visit. Northland must perform investigation of entire site. Singh states Northland owns carwash, Wendy's and Citgo property. 3/31/97 DEC sent requirements of Northland. Investigation Plan due 4/15/97. 4/2/97 Site visit, K. O'Dowd & J. Rommel. Witnessed delivery of 2400gal regular and 400gal premium. Checked Wendy's electrical circuit board bathroom and office drain/house trap. No vapors detected. Wendy's at 1125 Atlantic Ave (718-622-1381). Savoy car wash at 1119 Atlantic Ave (718-622-7429). Thieved 3 MWs. No product. Need to sample wells for dissolved. Odor in all wells is of a new release. Strongest downgradient. Wendy's has an unusually large Brooklyn Union Gas meter in back. Vapors possibly travelling through electrical conduits. Located upsidedown J sanitary vent in back of Wendy's. Where does sewer leave Wendy's? Savoy car wash has a GW pump in front of bay area to supplement city water supply when very busy. Supposedly, they have a LI Well permit, but were unable to present it. He did not know pumping rate. Overflow from wash area discharges to sewer. 4/24/96 Received Subsurface Investigation Report(BEI, 4/15/96) for spill #8808500. MW-1 and MW-2 were installed to 78'bgs and MW-3 to 76'bgs. Total BTEX 3392ppb, 1134ppb and 25,436 respectively. 7/23/96 DEC requires additional delineation. 11/6/97 Berninger requested weekly groundwater monitoring stop. Reply sent 11/25/97 denying request. 8/26/98 DEC approves Investigation Plan (Impact, 8/12/98). 9/24/98 Spill #9807751 reported as UST line failure. 12/98-1/99 Three additional monitoring wells(MW-4, MW-5, MW-6) installed. 2gal water/product was bailed from MW-4 (5.3 LNAPL). 3/10/99 Impact Environmental reports MW-3 and MW-4 observed with 0.13' and 0.74' LNAPL respectively. An automated free product recovery system being considered. 8/19/99 Impact reports a new Mobil station being constructed and all USTs and system components removed. 10/22/99 UST Closure Report submitted (Impact, 10/20/99). 21 USTs removed. 3 X 4000gal gasoline tanks removed from the north area(concrete encased). 9 X 750gal tanks were removed from the south area(concrete encased). 2 X 3000gal, 1 X 1000gal gas USTs in south area were observed to be abandoned and filled with concrete. 5 X 100gal empty tanks removed from the south area. 1 X 1000gal fuel oil tank removed from area 3. Endpoint samples show VOC/SVOC concentrations above soil cleanup guidance in all three excavations. Removed 3200 tons of contaminated soil. All wells destroyed and replaced. Report recommends remediation. Quarterly monitoring reports received 7/24/01, 12/5/01, 8/27/02, 1/15/04 prepared by Impact. 6/13/01, 7/18/01 EFR events for MW-3, MW-4, MW-5. 30gal LNAPL was recovered during each event. The recovery system is a compact skimming system used in conjuction with the SVES. Wells were on monthly product recovery schedule. The remediation system that was installed on the property consists of two soil vapor extraction well clusters(SVE-1/MW-5, SVE-2/MW-3), one monitoring well (MW-4) and two blowers. Screens of SVE wells are set at different levels through vadose and saturated zones. The SVES is manifolded to operate each well cluster independent of the other. (Startup date unknown). 3/10/04 Received 1Q04 monitoring report. MW-3, MW-4 and MW-5 are hottest. MW-6, across Bedford Ave is the edge of the plume. Upgradient wells Mw-1 and MW-2 are clean. May need to install well downgradient/north of MW-4 but appears plume migration is minimal. GW direction varies. Monthly monitoring for LNAPL. SVE effluent is below benzene emission limit(250cfm, 20' stack). 6/18/04 Received 2Q2004 monitoring report. BTEX ranged from ND(MW-1, MW-2, MW-6) to 22526ppb(MW-4). MTBE ranged from ND(MW-1, MW-2, MW6) to

EXXONMOBIL (Continued) **S102560459**

95ppb(MW-5). 6/21/04 Received addendum to approved RAP. Three air sparge wells will be installed to approx 78'bgs, with 2' of screen, connected to 1 pipe. A 3HP compressor is expected to provide approx 8-10CFM at 10psi to each sparge well. Air sparge pilot testing will be conducted to verify pressure, flow and equipment size assumptions. The existing SVE system consists of two SVE well clusters, one well MW-4 that is connected to the SVE system and two blower units. Each blower is capable of inducing airflow of 125cfm at approx 60 of water for a total flow of 250cfm. Startup testing will be done upon completion of upgrade activities. SVES & Sparge vacuums, pressures and radii of influence will be measured to ensure vapor capture and sparge system efficacy. Following startup, the system will be monitored weekly for one month to assure proper system operation. 6/30/04 Meeting with Spartan Petroleum and Impact Environmental. Previously an Exxon. Impact plans on system modification. Asked them to confirm the well screen was above the water table and water is where it was last year. Proposing to sparge. March 2003 was the last time free product was detected. Dissolved now. 200tons of contaminated soil was removed. 9/15/04 Received 3Q2004 monitoring report. BTEX ranged from ND(MW-1,2,6) to 8180ppb(MW-4). MTBE ranged from ND(MW-1,2,6) to 644ppb(MW-4). 2/8/05 Received 4Q04 monitoring report. BTEX ranged from ND(MW-1,2) to 7527ppb(MW-4). MTBE ranged from ND(MW-1,2,3) to less than 100ppb(MW-5, diluted). 7/7/05 Received 1Q05 monitoring report. BTEX ranged from ND(MW-1,2) to 5650ppb(MW-5). MTBE was ND in all wells. Estimated 454lbs of hydrocarbons recovered. 8/9/05 STIP effective. 9/28/05 Received 2Q05 and 3Q05 monitoring reports. 2Q05- results from 5/23/05 - BTEX ranged from ND(MW-1,2) to 6448ppb(MW-5/SVE-1). Max MTBE at 3ppb in MW-1. As of 8/2/05, estimated 594lbs of hydrocarbons recovered. 3Q05- results from 8/2/05- BTEX ranged from ND(MW-1,2,6) to 5290ppb(MW-5/SVE-1). 4Q05 - results from 11/14/05 - BTEX ranged from ND(MW-1,2) to 4953ppb(MW-5/SVE-1). 3/30/06 1Q06 - results from 2/15/06 - BTEX from 70ppb(MW-6) to 3590ppb(SVE-1/MW-5). 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 11/14/06 Reviewed Quarterly Monitoring Report for 2nd Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 6760 ug/L in well MW-5. The system is operating in compliance. Reviewed Quarterly Monitoring Report for 3rd Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 6630 ug/L in well MW-3. The system is operating in compliance. - JAM 3/21/07 Reviewed Quarterly Monitoring Report for 4th Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 4683 ug/L in well MW-5. The system is operating in compliance. - JAM 6/14/07 Reviewed Quarterly Monitoring Report for 1st Qtr 2007, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 4799 ug/L in well MW-5. The system is operating in compliance. - JAM 11/26/07 Reviewed Quarterly Monitoring Rpt for 2nd Qtr 2007, submitted by Impact Envt'l. Total VOCs in GW ranged from ND to 3833 ug/L in well MW-3. System is operating in compliance. Reviewed Quarterly Monitoring Rpt for 3rd Qtr 2007, submitted by Impact Envt'l. Total VOCs in GW ranged from ND to 3279 ug/L in well MW-5. System is operating in compliance. I called Hal Benjamin at Impact Envt'l and requested that influent and effluent air streams be sampled and analyzed for VOCs. He said he will discuss with RP and get back to me. - JAM 02/09/11: This spill case transferred from J. Maisonave to J. Kolleeny. - JK 01/09/12: Reviewed 2nd Quarter 2011 monitoring rpt by Impact Envt'l (in eDocs), dated 8/10/11 (CD submitted 10/10/11). Results of 5/27/11 GW sampling event

EXXONMOBIL (Continued) **S102560459**

show MW-8 had 6,444 ug/L total VOCs (up from ND in Feb. 2011). Rpt says PID screening of AS/SVE system vapor discharge shows discharge in compliance with benzene limit. - J. Kolleeny 02/24/12: Reviewed 3rd Quarter 2011 mon rpt by Impact Envt'l (in eDocs), dated 12/30/11. GW samples collected on 9/12/11 showed low to moderate levels of dissolved-phase contam in wells MW-4 & MW-6; however, MW-5 and MW-8 were dry and could not be sampled. Rpt says PID screening of AS/SVE system vapor discharge shows discharge in compliance with benzene limit. - JK 03/09/12: I closed spill case 0912321 for waste oil UST at this site. Sent spill closure letter via email to Mr. Harvinder Singh of Bolla EM Realty LLC, stating: Dear Mr. Singh: Please see attached spill closure letter regarding spill case 0912321. A hard copy of this letter will not be forwarded. As noted in letter, spill no. 8808500, for gasoline-related contamination at site, remains open. All monitoring, vapor extraction and air sparging wells at site should remain open for ongoing monitoring and remediation of contamination related to that spill. Feel free to contact me if you have any questions. - J. Kolleeny 02/13/13: On 2/12/13, I sent email to Hal Benjamin of Impact Envt'l, cc's to Kevin Kleaka and Michael Bluight also of Impact: Hal, I haven't received any monitoring rpts for this site since 3rd quarter 2011 rpt; I think I had some discussions with either you or Kevin Keaka regarding work done at site by Exxon-Mobil's consultant (Kleinfelder), and fact that their site plans differed considerably from Impact Envt'l's site plans. But I never heard back from Impact after that. Can you please provide an update on this spill site, and/or let me know who is now project manager for Impact? After sending email, received phone call from Michael Bluight of Impact, who said he is now PM and that they are finishing up monitoring rpts for 4th qtr 2011 and all 4 qtrs of 2012, with sampling of wells installed by Impact and also wells installed by Kleinfelder. He sent follow-up email: Jon, I will be taking over as project manager for this site. I am currently finalizing QMR rpts for Site. Said final rpts will include sampling results from: 4th qtr 2011 (sampled 12/13/11) 1st qtr 2012 (sampled 2/14/12) 2nd qtr 2012 (sampled 6/27/12) 3rd qtr 2012 (sampled 10/5/12) 4th qtr 2012 (sampled 12/28/12) As per our conversation, GW samples were collected during 2nd, 3rd and 4th quarters of 2012, from wells in current monitoring network, and from on-site monitoring wells installed by Kleinfelder East, Inc. during its 2010 Phase II Envt'l Site Assessment work. An annual GW monitoring rpt for 2012, consolidating data obtained from all four quarters in 2012, can be constructed and submitted to NYSDEC in lieu of four separate rpts, if preferred. Please call me if you have any questions and/or concerns. On 2/13/13, I sent email reply: Michael, Thanks for your response, it was nice speaking with you yesterday. Please send a separate rpt for 4th Quarter of 2011, but I like your suggestion of sending one annual rpt for 2012 consolidating data for four quarters of 2012. However, let's return to quarterly monitoring rpts for 2013. Most importantly, rpt for 2012 should include evaluation of remedial progress and recommendations for further actions to move this spill case toward closure. - J. Kolleeny 03/27/13: On 3/25/13, received Quarterly Monitoring Rpt for 4th Quarter 2011 and GW Mon Rpt - 2012 Annual Rpt by Impact Envt'l, both dated 3/21/13 (both in eDocs). On 3/27/13, received email from Michael Bluight of Impact: Jon, we are having a few problems with our UPS overnight service as of late& just wanted to make sure you received hard copy (with electronic copy on CD) of rpts for this site? 1st quarter [2013] GW monitoring / sampling event

EXXONMOBIL (Continued) **S102560459**

is scheduled to be performed within next 5 to 7 business days. I sent email reply if rpt(s) include any recommendations that require DEC response. Michael sent reply: For Atlantic Avenue, we will still continue monitoring and operating remedial system as before. Only revision was incorporation of certain monitoring wells installed by Kleinfelder during a phase II investigation a few years back and deletion of existing wells in profile, located on western side of Site. Majority of detections in GW samples and identified location of dissolved phase in GW, is located on eastern side of Site. I listed our proposed revised monitoring network in conclusions section of 2012 annual rpt. Please call me if you have any questions and or concerns with rpt information and thank again for your assistance. - JK 04/03/13: Received email from Michael Bluight of Impact Envt'l: Jon, just a follow-up for 1143 Atlantic Avenue, Brooklyn, NY. We were planning to conduct next quarterly sampling round tomorrow at site. As per your below correspondence, we recommended revising GW monitoring network to consist of wells: MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H. We will gauge ALL site wells (helps tighten up GW contour map). Is this recommended revision OK?Thanks as always for your assistance with this project and please call me if you have any questions and/or concerns. I sent email reply: Michael, I've quickly looked over 4th quarter 2011 monitoring rpt and 2012 annual monitoring rpt for this site, and wells you've listed are approved for sampling, but in addition to those wells, I'd like you to also include well MW-6. Well MW-6 helps provide off-site delineation, and had 196 ug/L total BTEX when last sampled in December 2012. Not a very high result, but evidence of an off-site impact that should continue to be monitored. I also want to reserve right to request that other wells be added back into monitoring program, if there are reasons to do so. Please let me know if you have any questions or comments. - J. Kolleeny 04/03/13: Completed review of QMR for 4th Quarter 2011 by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt states that SVE/AS system is operating, recovering hydrocarbons, and that PID screening of vapor effluent indicates benzene is in compliance with discharge limit. GW sampling in Dec. 2011 shows significant impact in well MW-3, with 2,677 ug/L total BTEX (was reportedly ND for BTEX when sampled in May and Sept. 2011, but had 2,940 ug/L tBTEX in Sept. 2009); off-site well MW-6 had 123 ug/L tBTEX (down from 415 ug/L in Sept. 2011). Several important wells were not sampled, e.g., MW-5 and MW-8, nor were any of wells installed by Kleinfelder as part of Phase II Assmt sampled. Rpt states that Impact will attempt to recondition wells MW-5 and MW-8 so they can be sampled in future monitoring events. - JK 04/04/13: Reviewed GW Mon Rpt 2012 Annual Rpt by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt presents data for all four quarters of 2012. On-site AS/SVE system operated throughout period; PID screening indicates effluent was in compliance with benzene discharge limit. GW samples were collected from usual wells in Feb. 2012, and from most of those wells plus wells installed by Kleinfelder in June, October and December 2012. Overall, data show significant GW impacts in wells MW-3, which had 2,730 ug/L total BTEX in Feb. 2012, up from 2,677 ug/L in Dec. 2011 (not sampled in 2nd, 3rd & 4th quarters of 2012); well MW-G, which had 920 ug/L tBTEX in June 2012, 1,190 ug/L in Oct. 2012 and 3,100 ug/L in Dec. 2012 (had 4,794 ug/L tBTEX when sampled in June 2010); and well MW-H, which had 6,050 ug/L tBTEX in June 2012, 3,110 ug/L in Oct. 2012 and 910 ug/L in Dec. 2012. Off-site well MW-6 had 196 ug/L tBTEX in Dec. 2012. Wells MW-5 and MW-8 were not sampled during 2012. Rpt proposes

EXXONMOBIL (Continued) **S102560459**

revised well network for quarterly monitoring, comprising wells MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H (Impact will attempt to recondition wells MW-5 and MW-8 for sampling). As noted above, I sent email on 4/3/13 approving these wells for sampling but adding well MW-6 to monitor off-site impacts and stating that DEC reserves right to add back other wells as needed. Operation and monitoring of SVE/AS system and quarterly GW monitoring will continue, with 1st quarter 2013 GW sampling event expected to occur in late March 2013. - J. Kolleeny 03/18/14: Reviewed 2013 Semi-Annual GW Monitoring Rpt dated 11/20/13, by Impact Envt'l, received by email from Julianna de la Fuente of Impact on 12/2/13 (in eDocs). Results of GW sampling in April & June 2013 (i.e., 1st & 2nd quarters 2013) showed well MW-4 had 171 ug/L total BTEX in April 2013 (up from 1 ug/L in Dec. 2012), and had 20 ug/L tBTEX in June 2013; well MW-6 had 546 ug/L tBTEX in April 2013 (up from 196 ug/L in Dec. 2013) and 475 ug/L tBTEX in June 2013; well MW-G had 2,190 ug/L tBTEX in April 2013 (down from 3,100 ug/L in Dec. 2012) and 560 ug/L tBTEX in June 2013; well MW-H had 1,799 ug/L tBTEX in April 2013 (up from 910 ug/L in Dec. 2013) and 2,840 ug/L in June 2013. Well MW-3 has been damaged and could not be accessed for sampling in April/June 2013, but well MW-H is very close by; wells MW-5 and MW-8 were dry and could not be sampled in April/June 2013. Based on data, Impacts recommends continuing with quarterly GW monitoring/sampling from agreed-upon well network. - J. Kolleeny 08/15/14: Reviewed Semi-Annual GW Mon Rpt for 3rd & 4th Quarters 2013 by Impact Envt'l, dated 4/11/14 (in DecDocs). Results of GW sampling in Sept. & Dec. 2013 showed only significant GW impacts in well MW-G, which had 1,499 ug/L total BTEX in Sept. 2013 (up from 560 ug/L in June 2013) and increased to 1,910 ug/L tBTEX in Dec. 2013; and well MW-H, which had 2,594 ug/L tBTEX in Sept. 2013 (down from 2,840 ug/L in June 2013), and decreased to 761 ug/L tBTEX in Dec. 2013. Wells MW-5 and MW-9 were dry and could not be sampled. I sent email to Juliana de la Fuente of Impact, cc to Kevin Keaka of Impact, asking if Impact ever tried to recondition wells MW-5 & MW-8 as stated in an earlier rpt, noting that it's important to sample these wells, which have had high VOC levels in past, and that if wells cannot be reconditioned, they may have to be reinstalled to greater depth to hit GW. I also asked that GW data tables in future rpts include line for total VOCs in addition to total BTEX. - J. Kolleeny 01/22/15: Received phone call from Kevin Kleaka of Impact Envt'l, asking if he could meet with me on 1/28/15 to discuss improvements in GW quality and possibility of shutting down SVE system at site. I agreed to meet on 1/28/15; Kevin sent site map and GW data table with recent sampling data. I asked if he had any SVE system vapor recovery data, he sent table with data from PID screening of system's vapor recovery. Site plan and data tables in DecDocs as brief. - J. Kolleeny 01/28/15: Met with Kevin Kleaka of Impact Envt'l to discuss site. GW data for 4 quarters of 2014 show all wells being sampled below 1,000 ug/L total BTEX, except for well MW-H which had 1,386 ug/L tBTEX on 9/16/14 (but decreased to 798 ug/L tBTEX in Dec. 2014). These wells also show fairly consistent decreasing trends over time. However, well well MW-5 had 1,093 ug/L tBTEX when last sampled in Sept. 2009 and well MW-8 had 3,427 ug/L tBTEX when last sampled in May 2011, but sampling of these wells was discontinued because they have gone dry. According to Kevin, depth to water at site is ~80 ft. PID screening of SVE system vapor recovery shows mainly low PID readings for past several yrs, with temporary increases in first half of 2014 - went from 3 ppm in Dec. 2013 to 127

EXXONMOBIL (Continued) **S102560459**

ppm in Jan. 2014, 21.5 ppm in Feb. 2014, 59.6 ppm in March 2014, 25.8 ppm in May 2014, 16.0 ppm in June 2014, then settled back to single digitsin July 2014 and was only 0.5 ppm in Dec. 2014. Based on decreasing GW contam levels & trends and low hydrocarbon vapor recovery of system, Impact is proposing shutting down system and considering site for spill closure. I asked that system be pulsed, that a vapor influent sample be collected for lab analysis, and that another round of GW sampling of selected wells be performed to confirm levels and trends, and that if data support closure in their view, they include risk assessment/sensitive receptor evaluation for residual impacts in report requesting closure. They agreed to these requests. Afterward, Kevin sent follow-up email to summarize discussion at meeting: Jonathan - Thank you again for meeting with me today regarding this site. As discussed, below is a brief summary of tasks we agreed to complete for 1st quarter [2015] pursuant toward closure of spill. 1. A system influent sample will be collected and analyzed for VOCs by TO-14 during next site visit. 2. Remedial system will be pulsed during first quarter. Pulsing will include effluent readings with a PID for possible rebound . 3. Next quarterly GW sampling event for 1st Qtr (likely in March) will only include wells MW-H, MW-4, MW-E and MW-G. DTW readings will be recorded from all on-site wells during above GW sampling event for purpose of providing current GW flow direction. If system shutdown/pulsing doesn t show any significant recovery of residual contamination and next GW sampling data is consistent with and/or lower than existing data set, we will be requesting closure of spill inclusive of a risk assessment. Thank you, please advise if you have any comments based on above points. I wrote back: Kevin, It was nice meeting with you today. My only comment on your summary of today s discussion is that I was thinking that system influent sample for TO-14 analysis should be taken when pulsing system, i.e., after system has been down for a while and then re-started, which would presumably be maximum hydrocarbon recovery one is likely to see from system at this point. If you think this doesn t make sense, please let me know. Another option (though more expensive) would be to collect a vapor sample for lab analysis during next site visit, as you ve stated below, and then collect one more TO-14 sample after pulsing system off and back on (as I suggested above), which would allow a direct comparison of pre-pulsing and post-pulsing hydrocarbon recovery. Kevin replied: Thanks Jonathan - We will collect an influent sample both before system is shut down for pulsing and at end of 1st qtr (likely when we collect GW samples) after a few cycles of pulsing. I agree this will be useful for comparison purposes. - JK 10/20/15: Reviewed Closure Request Rpt by Impact Envt'l dated 9/21/15 (in DecDocs). Rpt summarizes past investigative and remedial actions at site, presents recent & historical GW sample data and system operational data, plus includes risk assessment/sensitive receptor survey in support of spill closure request. Rpt states that total of 21 USTs were removed from site in 1999, and ~3,200 tons of petroleum-impacted soil were excavated and removed. An SVE system was installed in 2000; VEFR events were performed on several wells in 2001-2002, recovering ~325 gals of LNAPL; no LNAPL has been observed in site wells since 2003. In 2004, system was upgraded to include air sparging. As requested by DEC, remedial system was pulsed by alternately being shut down & restarted in Feb. and March 2015; vapor influent samples collected before shutdown and after re-start showed no significant increase in hydrocarbon recovery (in fact, neither sample had significant VOCs),

EXXONMOBIL (Continued) **S102560459**

suggesting system has reached limit of effectiveness. GW data for March and June 2015 showed well MW-4 had 23 ug/L total VOCs in March 2015 (down from 909 ug/L in Dec. 2014; had 11 ug/L tVOCs in Sept. 2014) and had 56 ug/L tVOCs in June 2015; well MW-E had 782 ug/L tVOCs in March 2015 (up from 69 ug/L in Dec. 2014) and had 225 ug/L tVOCs in June 2015; well MW-G had 709 ug/L tVOCs in March 2015 (down from 1,552 ug/L in Dec. 2014) and had 1,627 ug/L tVOCs in June 2015; well MW-H had 3,940 ug/L tVOCs in March 2014 (up from 1,065 ug/L in Dec. 2014) and had 1,713 ug/L tVOCs in June 2015. Well MW-3 was found to be damaged and was replaced by well MW-H; wells MW-5 and MW-8 have been dry since 2013, and other wells were dropped from monitoring program due to low or ND levels of VOCs. Impact Envt'l concludes that altho VOC levels remain somewhat elevated in wells MW-G and MW-h, both wells show decreasing trends over time. Depth to water at site is more than 60 ft, and GW flow, altho it has varied over time, has been to N or NW since 2013 and wells down-gradient from MW-G and MW-H show impacts in those wells are limited in extent and not migrating. Rpt states that site is likely to remain a gas station. Receptor analysis concludes that altho some residual soil & GW impacts remain at site, considering that bulk of contaminated soil was excavated, AS/SVE system operated on-site for years and had virtually no hydrocarbon recovery towards end of operation, and depth to GW is more than 60 ft, residual impacts are not likely to pose a threat to public health or environment. Based on remedial actions performed and data presented, I closed spill case and sent closure letter (in DecDocs) by email to Mr. Hank Alpert of Spartan Petroleum, Inc. (hank@spartanpetro.com), with cc's to Julianna de la Fuente and Kevin Kleaka of Impact Envt'l. - J. Kolleeny"

EXXONMOBIL (Continued) **S102560459**

Spill assigned to DEC Rahman as site is part of ExxonMobil portfolio review and possible closure or transfer to Albany if necessary. 09/14/10-Farrell-CD File review requested by S. Rahman. Spill closure request for Spill #09-12321 & 09-12250 by (Kleinfelder East, Inc.-Joel Adrian/Alex Wirth-(845)-567-6530) July 8, 2010 SAR prepared by (Kleinfelder East, Inc.-Lisa Messinger/Laurie Smith-(631)-218-0612) May 25, 2010 for ExxonMobil Environmental Services Company, Fairfax, VA. Location of interest: ExxonMobil Station No.12141 (17-TJ8) 1143 Atlantic Avenue Brooklyn, NY KEI (listed above) evaluated recognized environmental conditions (REC) conducted in 12/08 by KEI. Active retail petroleum fuel station with convenience store. A grassy area, a car wash driveway, & further a church (north), Bedford Avenue followed by Quizit Motor Sports, Inc. and an inactive gas station (Gaseteria) (east), Atlantic Avenue and a US Army Armory beyond (south), & a car wash (west). Ground surface elevation is about 75 above sea level, groundwater found at depths of 11.67-67.92 bgs, north and east flow determined. Two tank field observation wells are monitoring points, located at the corners of the tank field. KEI (above) reported ten (10) Federal water-supply wells within 1 mile of the property, one (1) private non-potable well within 300 ft of the property, & one (1) private water well within 1000 ft of the property. REC s include 2 current 12,000-gal gasoline USTs with piping and dispensing units, one (1) current 8,000-gal diesel UST, ten (10) current dry wells utilized for surface storm water drainage, a historical record of gasoline sales and automobile service since the 1930s, and potential impact from several surrounding off-site properties. The property has been indicated to have had 21 USTs removed from site in 1999. Seven (7) previous spill cases have been noted: #8808500 assigned to CITGO/Spartan Petroleum (Follow-up indication of contaminated soil and groundwater from determined air pressure test fail on 4,000 gal UST in 1989. This case remains open and active.). Case #8903335, #9614595, #0111876, #0507954, and #0800461 have all been closed (no description listed), #0513211 (discharge of 20 gal of gasoline from motor vehicle striking MPD) opened 2/16/06 closed 3/20/06, & the Spill numbers listed above are open currently due to elevated PID measurements & discovery of a UST in the northeastern portion of the property (included water and several inches of petroleum; also sampled 3/20/10). ERI began Phase II ESA on 1/13/10 with site-wide GPR survey. Five of twelve (5) soil borings were advanced, (5) monitoring wells were installed, and (1) combined soil boring/monitoring well was established beginning on 2/15/10. Results of soil sample analysis included: VOC detect above NYSDEC RSCO in MW-H: Xylenes(63.5ppmppm), Naph(46.3ppm), 1,2,4-TMB(294ppm), & 1,3,5-TMB(92.3ppm) SVOC detect above NYDEC RSCO: MW-A Benz(a)anth(1.65ppm), Benz(a)pyr(1.7ppm), Benz(b)fluor(1.47ppm), Benz(k)fluor(0.85ppm), Chrysene(1.61ppm), & Dibenz(a,h)anth(.528ppm) MW-F - Benz(a)anth(1.11ppm), Benz(a)pyr(1.06ppm), Benz(b)fluor(.753ppm), Benz(k)fluor(0.74ppm), Chrysene(1.06ppm), & Dibenz(a,h)anth(.314ppm) High levels of Barium & Lead also detected On 4/8/2010 groundwater samples were collected and analyzed. The two (2) tank field observation wells & one monitoring well (TF1, TF2, & MW-2) were gauged on 4/8/2010 as well. They were all dry with no presence of LPH. Free-phase product was found in the abandoned UST (above). Results of groundwater sample analysis included (existing wells MW-1 MW-4 were also sampled): VOC detect above NYSDEC cleanup level in MW-1, MW-E, MW-G, & MW-H: MW-1: Toluene(9.9ppb), EthBenz(442ppb), Xylenes(1850ppb), IPB(33.3ppb), Naph(170ppb),

EXXONMOBIL (Continued) **S102560459**

n-PB(111ppb), 1,2,4TMB(1210ppb), 1,3,5TMB(173ppb) MW-E: Toluene(143ppb), EthBenz(85.6ppb), Xylenes(2030ppb), IPB(16.8ppb), Naph(100ppb), n-PB(111ppb), 1,2,4TMB(710ppb), 1,3,5TMB(239ppb) MW-G: Toluene(39.6ppb), EthBenz(669ppb), Xylenes(4090ppb), IPB(91.5ppb), Naph(596ppb), n-PB(249ppb), 1,2,4TMB(3030ppb), 1,3,5TMB(796ppb) MW-H: Toluene(55.4ppb), EthBenz(239ppb), Xylenes(2940ppb), IPB(48.4ppb), Naph(338ppb), n-PB(122ppb), 1,2,4TMB(2530ppb), 1,3,5TMB(725ppb) PID MW-B at 68-69 bgs (1,740ppm) PID MW-H at 67 bgs (940ppm) PID MW-K at 67 bgs (940ppm) PID SB-C/MW-E at 68-69 bgs (1,740ppm) Reviewer Recommendations: 1) Further remediation is need at the four locations directly above due to the PID readings and their downgradient position 2) The abandoned UST will have to be purged and removed to confirm that it isn t a source of the contamination at the surrounding borings/wells. If a different process is warranted at this time, then that procedure should be undertaken 3) Surrounding groundwater flow needs to be determined to indicate if off-site sources are contributing environmental factors 10/26/2010: Site transferred from Region 2 to Central Office (Remedial Bureau B, Section C) for management. 11/9/2010: Based on document review and conversations with Region 2 personnel familiar with the case (Kolleeny and Maisonave), the abandoned UST noted under this spill is related to an earlier spill number (88-08500, assigned to CITGO/Spartan Petroleum). This historic spill is currently being addressed under a STIP, and is being managed in Region 2. Therefore, it is recommended that this spill be transferred back to Region 2 for management. (Harrington) 08/17/11: This spill case transferred from J. Maisonave to J. Kolleeny. I was contacted by Jessica Kruczek of ARCADIS regarding plans to close this UST (which is suspected to have been a waste oil or heating oil UST based on small size). She forwarded an email she had sent to Joseph Maisonave of DEC (currently on extended leave): Mr. Maisonave, After identifying locations of utilities at site in advance of UST removal, we are requesting to abandon UST in place rather than remove it. Please see attached Figures (2 & 3) [in eDocs as drawing] for locations of utilities relative to UST location (marked as abandoned; we were already preparing for rpt). Please note that there is an unidentified utility within 1 ft of tank, an active water line and AS/SVE components within 2.75 ft, and active sewer and gas lines less than 9 ft from UST. In addition, there is a retaining wall within 3 ft. This makes for a very difficult and potentially dangerous removal. Please advise. After getting Joe M’s auto reply, Jessica contacted me, stating that, altho they wanted to remove UST, due to proximity of tank to utilities, components of AS/SVE system, and retaining wall, they prefer to close UST in place. I said that’s ok, but they should advance 3 or 4 borings as close as possible to tank, down to 15 ft or so, to collect soil samples and evaluate any possible release from tank. I mentioned that site is being remediated under sp8808500, consultant Impact Envt’l, and Jessica said she would contact Impact and coordinate closure activities with them. She will send email confirming closure sampling plan and schedule. - J. Kolleeny 10/17/11: Sent email to Jessica Kruczek of ARCADIS requesting site update. She called back and said UST was abandoned in place during Sept. 2011, two closure borings were drilled, but in trying to drill 3rd boring, they hit an unmarked gas line and stopped. She said results of soil samples from two borings showed only traces of one VOC (toluene) and several PAHs. They will forward rpt with request for spill closure in several weeks. - J. Kolleeny 10/25/11: On

EXXONMOBIL (Continued) **S102560459**

10/24/11, received UST Abandonment Rpt by ARCADIS (in eDocs). Will review. - JK 12/23/11: Completed review of 10/24/11 UST Abandonment Rpt by ARCADIS. Rpt summarizes UST abandonment activities in Sept. 2011. Top of former waste oil tank was exposed; tank contained mixture of product/water (suggesting tank was tight). Tank was vacuumed out, cut open and cleaned. Three borings were attempted, but only two were successfully advanced to target depth (3rd boring hit an unmarked gas line). Soil data showed no significant soil contam. No boring logs included in rpt; I contacted Jessica Kruczik of ARCADIS and requested boring logs. - J. Kolleeny 01/05/12: Received soil boring logs from ARCADIS via email from Jessica Kruczik on 12/29/11 (in eDocs). Logs show two borings extended to 15 ft bgs, no PID readings detected. - JK 03/09/12: In February 2012, I contacted Hal Benjamin and Kevin Klaeka of Impact Envt'l, they are addressing spill no. 8808500 at this site, using AS/SVE to remediate gasoline-related soil and GW contam. I told them I intended to close this spill; Kevin brought to my attention a Kleinfelder Phase II rpt done for site (in eDocs for closed spill no. 0912250). That rpt shows wells not shown in Impacts monitoring rpts; one such well, MW-G, has significant GW contam and is located not far from closed-in-place waste oil UST. I contacted Jessical Kruczik of ARCADIS to discuss whether contam in this well could be related to waste oil UST. She noted that tank had been tight, with no sign of pipes going in/out that could have leaked, and that GW data show high levels of gasoline-related compounds, unlikely to have been generated by release from a waste oil UST. In any case, she noted that Impact is contracted to perform remediation of site, ARCADIS was only responsible for tank closure and soil delineation. Based on available data, I agree that waste oil UST is not likely source of GW contam at site. Closed spill and issued closure letter (in eDocs) to RP, Harvinder Singh of Bolla EM Realty LLC, cc's to Paul Pingile of Bolla, Jessica Kruczik of ARCADIS. - JK"

Remarks: "Caller reporting improprly abondoned tank. About 1 inch of product inside. Clean up pending."

DEC Memo:	"Sangesland spoke to Kleinfelder about this spill. They will contact Veeder Root and get back to the DEC with the results. 9/30/2008 Sangesland reviewed a report from Kleinfelder dated June 9, 2008. Apparently there were 2 bolts missing from the spill bucket encasement which prevented the line tightness test from happening. Once these bolts were replaced, the system passed. Based on this information and a telephone conversation with rep from Kleinfelder, this case is closed out. See attached report in eDocs to review repairs made to the spill bucket encasement at the site."
Remarks:	"annual inspection failure for spill bucket;"

Updated By:	LSZINOMA
Site Description:	"Location: The 1525 Bedford Avenue site is located in an urban area in the Crown Heights neighborhood of Brooklyn, NY. The site is bound by Bedford Avenue to the west, Lincoln Place to the north, multiple-story residential buildings to the east, and Eastern Parkway and the Metropolitan Transit Authority tunnels to the south. Site Features: The site occupies an area of approximately 29,076-square-feet, and has been developed into a multi-story residential and commercial structure. Prior to development, the site was occupied by a gasoline filling station, a service garage with a cellar level, a two-story retail store/office space and a car wash. Current Zoning/Use: The site is currently zoned as R7D residential with a C2-4 commercial overlay. Historic Use: The site has been occupied by auto-related facilities (auto garages/repair, filling stations, car washes) since at least 1924. Site Geology and Hydrogeology: The site and surrounding area slope to the north and is at an elevation of 135 feet above mean sea level. Regional groundwater flow is relatively flat with a slight gradient towards the north east. Perched groundwater was encountered at depths ranging from 20 to 50 feet below grade surface. The Upper Glacial Aquifer was encountered at 126 to 136 below grade surface. Soil beneath the site consists of fill material underlain by glacial till. The site is underlain by bedrock which consists of fine-grained quartz-feldspar granulite."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included the petroleum volatile organic compounds (VOCs) benzene, toluene, ethylbenzene, and xylene (BTEX) in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code:	503333
Site Description:	"Location: The 1525 Bedford Avenue site is located in an urban area in the Crown Heights neighborhood of Brooklyn, NY. The site is bound by Bedford Avenue to the west, Lincoln Place to the north, multiple-story residential buildings to the east, and Eastern Parkway and the Metropolitan Transit Authority tunnels to the south. Site Features: The site occupies an area of approximately 29,076-square-feet, and has been developed into a multi-story residential and commercial structure. Prior to development, the site was occupied by a gasoline filling station, a service garage with a cellar level, a two-story retail store/office space and a car wash. Current Zoning/Use: The site is currently zoned as R7D residential with a C2-4 commercial overlay. Historic Use: The site has been occupied by auto-related facilities (auto garages/repair, filling stations, car washes) since at least 1924. Site Geology and Hydrogeology: The site and surrounding area slope to the north and is at an elevation of 135 feet above mean sea level. Regional groundwater flow is relatively flat with a slight gradient towards the north east. Perched groundwater was encountered at depths ranging from 20 to 50 feet below grade surface. The Upper Glacial Aquifer was encountered at 126 to 136 below grade surface. Soil beneath the site consists of fill material underlain by glacial till. The site is underlain by bedrock which consists of fine-grained quartz-feldspar granulite."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included the petroleum volatile organic compounds (VOCs) benzene, toluene, ethylbenzene, and xylene (BTEX) in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 503333
Site Description: "Location: The 1525 Bedford Avenue site is located in an urban area in the Crown Heights neighborhood of Brooklyn, NY. The site is bound by Bedford Avenue to the west, Lincoln Place to the north, multiple-story residential buildings to the east, and Eastern Parkway and the Metropolitan Transit Authority tunnels to the south. Site Features: The site occupies an area of approximately 29,076-square-feet, and has been developed into a multi-story residential and commercial structure. Prior to development, the site was occupied by a gasoline filling station, a service garage with a cellar level, a two-story retail store/office space and a car wash. Current Zoning/Use: The site is currently zoned as R7D residential with a C2-4 commercial overlay. Historic Use: The site has been occupied by auto-related facilities (auto garages/repair, filling stations, car washes) since at least 1924. Site Geology and Hydrogeology: The site and surrounding area slope to the north and is at an elevation of 135 feet above mean sea level. Regional groundwater flow is relatively flat with a slight gradient towards the north east. Perched groundwater was encountered at depths ranging from 20 to 50 feet below grade surface. The Upper Glacial Aquifer was encountered at 126 to 136 below grade surface. Soil beneath the site consists of fill material underlain by glacial till. The site is underlain by bedrock which consists of fine-grained quartz-feldspar granulite."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included the petroleum volatile organic compounds (VOCs) benzene, toluene, ethylbenzene, and xylene (BTEX) in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Region: 2
DER Facility ID: 468191
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/14/2003 TIPPLE UPDATING/ REQUEST FOR DOCUMENTATION SENT 4/12/04 TIPPLE SENT CERTIFIED MAILING TO OWNER REQUESTING DOCUMENTATION. 6/4/04/// sale of property to: 555 Prospect Association 2818 31st street Long Island City NY 11102-1716 sent letter to new owners 1/4/05 Tipple recieved a call from the new owners requesting guidance in resolving this matter. Faxed a list of 10 environmental consultants in the Metro area and suggested to also use the phone book for additional possible choices. New owners also recieved a Ben Conlin order. Suggested that they retain a consultant, locate the tanks, investigate subsurface, find out what/if there has been a release/ properly register existing tanks/ remediate if necessary. 12/05 - Follow up needed with new owners to confirm additional investigation underway. 3/18/13- Zhune spoke to Bob Urban from Protest Enterprise. He said he will check the file and call back with the information regarding the Two tanks that failed the test. 3/19/13- Bob Urban from Protest called. He said on July 24, 2000 they tested two tanks at the hospital one 2000-gallons and one 3000-gallons both failed the test. the 3000-gallons failed the test with a gross dry leak and the 2000-gallons show no indication. He said we were hired for another company (Coastal Combustion) 516-352-5156. PBS # 2-347647 9/14/15-Donna Vieni from ABC Tank sent the following email On August 11, 2000 ABC Tank disconnected the union on the manhole cover and installed gasket, nuts & bolts on (1) 2000 gallon fuel storage tank,. August 14, 2000- A tightness test was performed on (1) 3000 gallon & (1) 2000 gallon fuel oil storage tank. According to our records, both tanks has been deemed Pass . There is no hard copies of the tank test results on file at the office of ABC Tank. Based on the above information there is minimum possibility for subsurface release for both tanks (2000-gallon AST and 3000-gallon AST. As per the above notes the 3000-gallon failed the test with a gross dry leak due to the manhole which was repair. If no further documentation or orvet evidence exits regarding the TTF being bonafide indication of a petroleum release to administratively close the spill. Spill Close."
Remarks: "tank 2 also failed (2000 gals) -- hospital notified."

426 EASTERN PARKWAY (Continued) **U000404805**

Remarks: Sent ttf letter to: Steven Fox 426 Realty LLC 1110 Flatbush Avenue Brooklyn, NY 11226 10/30/07 Spoke with S. Fox yesterday. He said the technician did not seal the second fill line and therefore could not get a vacuum on the tank. Technician was unaware of the second fill line. Tanknolgy will return tomorrow to retest. I confimed S. Fox's address and told him I will be sending a letter and testing contractor will have to respond. bf 11/1/07 Received message from Camilla of Tanknology (413)572-1900. She told me that the tank was retseted and passed. As Mr. Fox tolfd me yesterday, there was a remote fill that was not found during first test. I told her I need a ttf response and a copy of the passing tank test. She will get it out to me today. bf 11/13/07 Received letter and passing tank test report from Geoff Brock of Tanknology. Letter explains that a vehicle was parked over a remote fill which cqause the ullage ingress. NFA. bf" "ULIDGE ABOVE PRODUCT: ISOLATE AND RETEST"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. This spill investigation site has been consolidated under Spill No. 8706242. 08/11/93: REMOVED TWO ABANDONED SUCTION LINES RETESTED AND PASSED ON 11/16/87. 2/5/04 Current PBS owner Cumberland Farms. 6/14/05: This spill case transferred from Rommel to J. Kolleeny. - JK 03/05/07: Spoke with Bill Simmons about this site, he said GSC had submitted an investigation plan to DEC in 2003 that did not get a response. I looked for plan in file but could not find it. Sent email to Bill Simmons asking for copy of GSC plan, and asking if I should review and respond to that plan, or if ECS will prepare an up-to-date plan for my review. - J. Kolleeny 04/23/07: Received hard copy and e-copy of On-Site Subsurface Investigation Work Plan by ECS, dated 4/16/07 (in eDocs). Will review. - J. Kolleeny 05/08/07: Received On-site Subsurface Investigation Work Plan dated 4/16/07, on 4/23/07, prepared by ECS (in eDocs). Plan calls for five soil borings, with up to 3 to be finished as wells if perched water is encountered; borings will be advanced to 42 feet, if last interval is contaminated, will continue until 10 feet of clean soil observed. However, no boring is planned beneath former gasoline UST area Excavation Event #3, where greatest residual soil contamination was found in past investigations, as this area is beneath canopy among active dispensers. Discussed plan with Bill Simmons of ECS on 4/25/07, and agreed that they would either get a geoprobe under the canopy to advance a boring through former tank pit, or they would do angled-drilling from just south of canopy to reach soil beneath former tank pit, and if contamination is found exceeding 30 feet, they will come back later and install a well as close as possible, down to regional water table (suspected at about 120 ft. bg). I also suggested relocating one boring to be near active fill ports where high PID readings (up to 639 ppm) were found during spill bucket installation work. Bill said he would submit a revised work plan to reflect these changes. On 5/7/07, received On-site Subsurface Investigation Work Plan Addendum dated 4/30/07 by ECS (in eDocs), which incorporated changes we had discussed. I emailed and mailed an approval letter to Chris Johnson of Cumberland Farms (cc'd Bill Simmons) on 5/8/07 (in eDocs). - J. Kolleeny 08/07/2007: This spill case was transferred to A. Doronova. -AD 10/03/2007: Received On-Site Subsurface Investigation Report. Will review. AD 11/01/2007: Reviewed the investigation report. During the period June-August 2007, ECS performed six soil borings with three of them completed as groundwater monitoring wells. A total of 15 soil samples and two

EXXONMOBIL (Continued) **S103824118**

groundwater samples (well MW-3 was dry) were collected and analyzed for VOCs and SVOCs. Soil analytical data indicate that significant concentrations of BTEX and MTBE remain in the area of the former USTs. Total BTEX in that area ranges from 203,528 ppb(MW-3)to 289,557 ppb(B-4). Groundwater analytical results show some elevated concentrations of BTEX and MTBE. 53.7 ppb for MW-1 and 49 ppb for MW-2. Based on the data consultant proposes installation of two additional soil borings and one monitoring well down to the regional aquifer, to determine if soil contamination impacting the regional groundwater and better delineate boundaries of contamination. Will prepare a letter. AD 11/06/2007: Wrote a letter, addressed to C. Johnson (cc: J. Kolleeny and B. Simmons). Approved additional subsurface investigation with the following modification: If impacts to the regional aquifer are confirmed during this investigation, further groundwater delineation will be necessary via installation of at least two additional wells. AD 03/13/2008: Received an email from Bill Simmons of ECS with a request to issue a sidewalk permission letter for off-site boring/well installation. Sent requested letter the same day. AD 04/30/2008: Received a message from B. Simmons. They were performing investigation work at the site and encountered refusal at 102 feet bgs with no groundwater appearance during a monitoring well installation. They got a permission to discontinue the well installation, to summarize investigation data, and to submit a report with conclusion and recommendations for further actions. AD 07/18/2008: Received a Subsurface Investigation Report Addendum. Will review. AD 09/2008: Reviewed the report. It states that the scope of work during the March 28, 2008 investigation included the advancement of two soil borings (SB-6 and SB-7), followed by collection of four soil samples. In April 29, 2008 ECS made an attempt to install one deep monitoring well into regional groundwater aquifer, but it was unsuccessful due to refusal encountered at 102.5 fbg. No groundwater was encountered at this depth and the boring was abondoned. The results for the soil samples collected indicated elevated levels of VOCs in sample from SB-7 at the depth of 19-20'. Groundwater analytical data from July 9, 2008 indicated some elevated levels of BTEX in well MW-1 (43 ppb), MW-2 was ND. MW-3 was dry. ECS concludes that there is presence of historical petroleum-impacted soils in the vicinity of the former UST grave, located beneath the canopy to at least 22fbg interval. Groundwater samples collected from the perched water table on the southwestern portion of the site have been impacted with low levels of VOCs. Based on the geology of the site that consists of a dense till layer from approximately 35-75 fbg, sand and gravel - from 75-80 fbg, a clay layer from 80-90 fbg and a very dense rock layer from 90-102 fbg, ECS believes that no further attempts to reach regional GW is necessary. Based on the soil impact identified less than 30 fbg during 2007-2008 soil investigation, it is not likely that the release migrated into regional aquifer. AD 07/22/2011: Received a Groundwater Update Report and Remedial Action Plan. Will Review. To request pdf copy of the report. AD 08/09/2011: Reviewed the report. It states that groundwater samples were collected from the two site wells MW-1 and MW-2 on February 15, 2010; from MW-1 and MW-2 on April 14, 2011; and only from well MW-1 on July 7, 2011 due to LNAPL encountered in well MW-2. During these three sampling events TVOCs in MW-1 ranged from 32.5ppb to 145.7ppb to 88.3ppb respectively. TVOCs in well MW-2 renged from 24.8ppb to 18.5ppb. Depth to water in well MW-2 in six gauging events performed since 2007, ranged from 15.8 fbg in July 2011 to 22.17 fbg in July

EXXONMOBIL (Continued) **S103824118**

2008 and February 2010. Thickness of the LNAPL ranged from 0.13' on July 7, 2011 to 0.08' on July 13, 2011 after re-gauging the well. Based on the recent occurrence of weathered LNAPL in the vicinity of the former 1,000-gallon fuel oil UST, that was removed in August 1992, ECS proposes performing a bi-monthly gauging and hand bailing program of well MW-2 for a quarter to determine LNAPL recharge rate and evaluate data for appropriate remedial actions. New address: Christopher Johnson Project Manager Cumberland Gulf Group of Companies Business Support Campus 100 Crossing Blvd Framingham, MA 01702 AD 08/12/2011: Issued and sent an approval letter to Chris Johnson of CFI. DL pdf copy of the letter to eDocs. AD 04/25/2012: Called and left a message to B. Simmons of ECS with a request for site status update. AD 05/01/2012: Received hard copy of a Groundwater Update Report and RAP Status Report, dated April 24, 2012. No PDF copy was submitted. To request its submission. Will review. AD 05/02/2012: Sent an e-mail to B. Simmons with a request for pdf copy of the report submission. AD 05/03/2012: Received ecopy of the report via e-mail. DL the report to eDocs. AD 05/29/2012: Reviewed the report. It states that ECS collected groundwater samples from on-site monitoring well MW-1 on November 10, 2011 and February 6, 2012 and from well MW-2 on February 6, 2012, and the samples were analyzed for VOCs. The samples collected from wells MW-1 and MW-2 on February 15, 2012 were also submitted for SVOC due to the presence of LNAPL discovered in well MW-2. Well MW-1: - July 2008 groundwater data collected from well MW-1, indicates the highest concentrations of total BTEX were detected at 43.07 ug/L. The highest concentrations of other VOCs were detected at 32 ug/L; - The November 10, 2011 data indicated concentrations of total BTEX at 10.44 ug/L, and TVOCs at 94.55 ug/L; - The February 6, 2012 data indicated concentrations of TBTEX at 20.92 ug/L and TVOCs at 116.55 ug/L. Analysis for SVOC concentrations indicated six various SVOCs below their respective TOGS GWQS. According to the most recent GW data, slight increase in TVOCs in well MW-1 is noted. Well MW-2: - July 2008 groundwater data collected from well MW-2, indicated only concentrations of MtBE at 33.3 ug/L in the initial July 2007 sampling event, and at 35.7 ug/L in the October 31, 2007 sampling events above the TOGS GWQS. No other VOC concentrations exceeded the TOGS GWQS; - on November 10, 2011 no samples were collected from well MW-2 due to the presence of approximately 0.10 feet of LNAPL. - on February 16, 2012 gauging of well MW-2 indicated no LNAPL so the groundwater was sampled. Results indicated only a concentration of MtBE at 20.9 ug/L above the TOGS GWQS of 10 ug/L. No other VOC concentrations were detected above the minimum laboratory reporting limits. Analysis for SVOCs indicated no concentrations above the minimum laboratory RDLs LNAPL Evaluation Status in Well MW-2 August 2011 through March 2012: Gauging of well MW-2 in August and September 2011 indicated no LNAPL in well MW-2 when depth to groundwater ranged from approximately 14.88-15.54' bsg. Gauging on November 10, 2011 indicated an approximate 0.10 thickness when groundwater was at approximately 15.37' bsg. No LNAPL was able to be recovered via hand bailing due to the viscous and weathered nature of the LNAPL. On November 23, 2011, LNAPL was present at an approximate 0.06 thickness when groundwater was at approximately 15.48' bsg. Since the hand bailing program was determined to be unsuccessful in recovering the small thickness of LNAPL, ECS installed two 1-inch diameter LNAPL sorbent socks in well MW-2 on November 23, 2011. Gauging of well MW-2 in December 2011 and in January, February and March 2012 indicated no LNAPL. Depth to water

EXXONMOBIL (Continued) **S103824118**

in well MW-2 as measured from approximate surface grade of the well on July 7, 2011 was at 15.92' bsg, increased to a historic high elevation of 14.88' bsg on September 19, 2011, and since has continued to decrease to 17.39' bsg on February 6, 2012, to 20.33' bsg on February 21, 2012, to a historic low elevation of 22.54' bsg on March 26, 2012. This data indicates an approximate 7.66 foot groundwater elevation fluctuation decrease between September 2011 and March 2012. Evaluation of this groundwater elevation data indicates that LNAPL has only been present when the groundwater elevation was between approximately 15-16' bsg. Based on this information, ECS recommends leaving the LNAPL sorbent socks in well MW-2 and continued monthly gauging of well MW-2. ECS will continue to perform quarterly groundwater monitoring that will consist of depth to groundwater gauging, field analysis for groundwater geochemical parameters (i.e. dissolved oxygen, redox potential, specific conductivity, temperature, and pH levels), and the collection of groundwater samples from wells MW-1 and MW-2 if LNAPL is not present, for the presence of VOCs and SVOCs. A semi-annual Groundwater Update and a RAP Status Report summarizing the quarterly monitoring and proposed RAP activities will be submitted. AD 04/02/2013: Received the following email from B. Simmons: Hi Ainura, Please find attached an electronic pdf copy of the report for Spill No. 8706242 for the Cumberland Farms, Inc. Facility # 70219, at 1550 Bedford Avenue, Brooklyn NY. A hard copy and a CD will be put in the mail. Thank you. Bill William Simmons Senior Project Manager/Geologis DL the report to eDocs. Will review. AD 05/09/2013: Reviewed the report. It states that ECS personnel collected groundwater samples from on-site monitoring well MW-1 on May 1, 2012 and from wells MW-1 and MW-2 on August 16 and November 29, 2012. Well MW-1 - Historical groundwater data collected from well MW-1 (installed in July 2007) indicates the highest concentrations of total benzene, toluene, ethylbenzene and total xylenes (total BTEX) were detected at 43.07 ug/L in July 2008 with the concentrations of benzene at 18.6 ug/L and total xylenes at 19.8 ug/L above the TOGS GWQS. The highest concentrations of total other various gasoline-related VOCs were detected at 32 ug/L in the July 2008 sampling event (the first time these additional gasoline-related VOCs were first analyzed for). - The May 1, 2012 data indicated concentrations of benzene at 6.49 ug/L, total xylenes at 10.4 ug/L, MtBE at 25.5 ug/L, and five other various VOCs totaling 90.2 ug/L, with three above the TOGS GWQS. Analysis for SVOCs indicated five various SVOCs totaling 48.5 ug/L with only the concentration of acenaphthen at 21.6 ug/L above the TOGS GWQS of 20 ug/L. - The August 16, 2012 data indicated concentrations of benzene at 1.4 ug/L, total xylenes at 10.3 ug/L, MtBE at 43.6 ug/L, and five other various VOCs totaling 98.6 ug/L, with three above the TOGS GWQS (Table 1). Analysis for SVOCs indicated six various SVOCs totaling 66.95 ug/L with only the concentration of acenaphthen at 22.1 ug/L above the TOGS GWQS of 20 ug/L. - The November 29, 2012 data indicated concentrations of benzene at 1.4 ug/L, total xylenes at 11 ug/L, and four other various VOCs totaling 41.5 ug/L, with two above the TOGS GWQS. Analysis for SVOCs indicated five various SVOCs totaling 28.3 ug/L with no concentration above the TOGS GWQS of 20 ug/L. A comparison of this data to the historical data indicates overall relatively stable total VOCs during the period 2007 through 2012 and SVOCs during the period February 2012 through November 2012. Well MW-2 - Historical groundwater data collected from well MW-2 (installed in July 2007) indicated only concentrations of MtBE at

EXXONMOBIL (Continued) **S103824118**

33.3 ug/L in the initial July 2007 sampling event, and at 35.7 ug/L in the October 31, 2007 sampling events above the TOGS GWQS. No other VOC concentrations exceeded the TOGS GWQS. o No samples were collected on May 1, 2012 since no water was present in the well to approximately 24.1 feet below grade (fbg). o The August 16, 2012 data indicated only an MtBE concentration at 18.5 ug/L above the TOGS GWQS, and no other VOCs above the minimum RDLs. Analysis for SVOCs indicated no concentrations above the minimum laboratory RDLs. o The November 29, 2012 data indicated only an MtBE concentration at 11 ug/L above the TOGS GWQS, and no other VOCs above the minimum laboratory RDLs. Analysis for SVOCs indicated no concentrations above the minimum laboratory RDLs. A comparison of this data to the historical data indicates overall relatively stable levels of MtBE during the period 2007 through 2012 and the continued absence of SVOCs during the period February 2012 through November 2012. Based on the intermittent presence of LNAPL in well MW-2 last observed in November 2011 when ECS installed LNAPL sorbent socks, and the observed fluctuating groundwater table (presumed to be perched) in the area of well MW-2 on the southwestern portion of the Site, ECS proposes leaving the LNAPL sorbent socks in well MW-2 and replacing them as necessary. ECS will continue to perform quarterly groundwater monitoring that will consist of depth to groundwater and/or LNAPL gauging, field analysis for groundwater geochemical parameters (i.e. dissolved oxygen, redox potential, specific conductivity, temperature, and pH levels), and the collection of groundwater samples from monitoring wells MW-1 and MW-2 if LNAPL is not present, for the presence of VOCs according to NYSDEC STARS List per USEPA Method 8260 for gasoline-related compounds, and from well MW-1 only for SVOCs according to USEPA Method 8270. The data will continue to be documented in semi-annual Groundwater Update and a RAP Status Reports. AD 11/01/2013: Received Semi-Annual Groundwater Monitoring Report for the period January - June 2013. DL the report to eDocs. Will review. AD 12/06/2013: Reviewed the report. It states that ECS personnel collected groundwater samples from on-site monitoring wells MW-1 and MW-2 on February 15 and May 29, 2013 for analysis of VOCs. The samples collected from well MW-1 were also analyzed for SVOCs according to USEPA Method 8270C. Well MW-1: Historical groundwater data collected from well MW-1 (installed in July 2007) indicated the highest concentrations of total BTEX detected at 43.07 ug/L in July 2008. The highest concentrations of total other VOCs were detected at 32 ug/L in the July 2008. - The February 15, 2013 data indicated concentrations of benzene at 3.3 ug/L, total xylenes at 8.3 ug/L, MtBE at 17.7 ug/L, and five other various VOCs totaling 39.3 ug/L, with three above the TOGS GWQS. Analysis for SVOCs indicated six various SVOCs totaling 47.4 ug/L with no concentrations exceeding their respective TOGS GWQS. - The May 29, 2013 data indicated concentrations of benzene at 3.4 ug/L, total xylenes at 7.0 ug/L, MtBE at 34 ug/L, and five other various VOCs totaling 56.5 ug/L, with three above the TOGS GWQS. Analysis for SVOCs indicated ten various SVOCs totaling 86.7 ug/L with five above the TOGS GWQS. A comparison of the current 2013 data to historical data indicates relatively stable total VOCs during the period 2007 through 2013 and SVOCs during the period February 2012 through May 2013. Well MW-2: Historical groundwater data collected from well MW-2 (installed in July 2007) indicated only concentrations of MtBE at 33.3 ug/L in the initial July 2007 sampling event, and at 35.7 ug/L in the October 31, 2007 sampling events above the TOGS GWQS. No other VOC concentrations

EXXONMOBIL (Continued) **S103824118**

exceeded the TOGS GWQS. - The February 15, 2013 data indicated only an MtBE concentration at 4.6 ug/L below the TOGS GWQS (Table 1), and no other VOCs above the minimum laboratory RDLs. - The May 29, 2013 data indicated only an MtBE concentration at 16.5 ug/L above the TOGS GWQS (Table 1), and no other VOCs above the minimum laboratory RDLs. A comparison of this data to the historical data indicates continued low level concentrations of MtBE during the period 2007 through 2013. No SVOCs were indicated during the period February 2012 through November 2012. LNAPL has not been measured in well MW-2 since the sorbent socks were installed in November 2011. The sorbent socks were replaced in June 2012 and May 2013. Based on the intermittent presence of LNAPL in well MW-2 last observed in November 2011, ECS proposes leaving the LNAPL sorbent socks in well MW-2 and replacing them as necessary. ECS will continue to perform quarterly groundwater monitoring that will consist of depth to groundwater and/or LNAPL gauging, field analysis for groundwater geochemical parameters (i.e. dissolved oxygen, redox potential, specific conductivity, temperature, and pH levels), and the collection of groundwater samples from monitoring wells MW-1 and MW-2 if LNAPL is not present, for the presence of VOCs according to NYSDEC STARS List per USEPA Method 8260 for gasoline-related compounds, and from well MW-1 only for SVOCs according to USEPA Method 8270. Based on the data, the spill case should be evaluated for closure. Spoke with B. Simmons regarding this spill. Suggested to analyze the historical data and evaluate the case for closure if applicable. AD 01/16/2014: Received a phone call from W. Simmons of ECS. He informed me that CFI selling the property and is planning to remove all USTs with associated piping. Requested to send me a summary e-mail and to notify DEC on soil sampling date. AD 01/17/2014: Received the following e-mail from B. Simmons: Hi Ainura, As discussed, this is notice to inform you that Cumberland Farms Inc. will be removing the entire underground storage tank system including all 5 double-wall steel fiberglass coated gasoline USTs, the 6 dispenser island pumps, and all product and vent lines. The USTs are scheduled to begin to be removed on Tuesday January 21, 2014 and they should all be out of the ground on Wednesday January 22. ECS will be on-site during the entire construction process to document all work and will also collect soil samples for field screening, collect end-point soil samples for lab analysis, and to oversee the excavation of all accessible contaminated soil for off-site disposal. A UST Closure Summary Report will be submitted that will document all data and work. Please let me know if you plan to be on-site at any point in time and I will keep you updated on the schedules. Thank you! Bill 01/20/2013: Received the following e-mail from B. Simmons: Hi Ainura, Status Update: All the USTs should be out of the ground on Tuesday January 21 by end of the day. Please let me know if you plan to be on-site at any point in time and I will keep you updated. Thank you! Bill AD 01/22/2014: Received the following update from ECS: Hi Ainura, Status Update: All the USTs have been removed and all were in good condition. Post-excavation soil samples collected from around the entire perimeter from the sidewalls only at 8-10 indicated a maximum field screening concentration of 6.7 ppm. These will all be submitted for lab analysis. Once the bottom concrete tank pad is removed in the next few days, we will evaluate soil quality in the bottom samples. Then we will excavate if necessary, and then commence impacted soil excavation on the other areas of the Site where there is known impact. Please let me know if you plan to be on-site at any point in

EXXONMOBIL (Continued) **S103824118**

time and I will keep you updated. Thank you. Bill AD 02/26/2014: Received Semi-Annual Groundwater Monitoring Report for the period July - December 2013. DL the report to eDocs. Will review. AD 03/27/2014: Reviewed the report. It states that ECS personnel collected groundwater samples from on-site monitoring wells MW-1 and MW-2 on August 26, 2013, and from well MW-1 on November 12, 2013. GW results: Well MW-1: Historical groundwater data collected from well MW-1 (installed in July 2007) indicated the highest concentrations of total BTEX detected at 43.07 ug/L in July 2008. The highest concentrations of total other VOCs were detected at 32 ug/L in the July 2008. - The August 26, 2013 data indicated concentrations of benzene at 1.12 ug/L, total xylenes at 8.374ug/L, MtBE at 32 ug/L, and five other various VOCs totaling 56 ug/L, with three above the TOGS GWQS. Analysis for SVOCs indicated two various SVOCs totaling 5.4 ug/L with no concentrations exceeding their respective TOGS GWQS. The GW analytical results for thihs well indicate slight increase in TVOCs levels comparing to the data from the previous sampling period. - The November 12, 2013 data indicated concentrations of benzene at 1.28 ug/L, total xylenes at 8.6 ug/L, MtBE at 24.9 ug/L, and five other various VOCs totaling 51.2 ug/L, with three compounds above the TOGS GWQS. Analysis for SVOCs indicated six various SVOCs totaling 66ug/L with five above the TOGS GWQS. A comparison of the current 2013 data to historical data indicates relatively stable total VOCs during the period 2007 through 2013 and SVOCs during the period February 2012 through May 2013. Well MW-2: Historical groundwater data collected from well MW-2 (installed in July 2007) indicated only concentrations of MtBE at 33.3 ug/L in the initial July 2007 sampling event, and at 35.7 ug/L in the October 31, 2007 sampling events above the TOGS GWQS. No other VOC concentrations exceeded the TOGS GWQS. - The August 26, 2013 data indicated only an MtBE concentration at 18.8 ug/L which is above the TOGS GWQS, and no other VOCs above the minimum laboratory RDLs. - The well was dry on November 12, 2013 and no samples were collected. A comparison of this data to the historical data indicates continued low level concentrations of MtBE during the period 2007 through 2013. No SVOCs were indicated during the period February 2012 through November 2012. The report also states that CFI sold the property in December 2013, and commenced removal of the entire UST system in January 2014. During the construction activities, areas of the Site where petroleum-impacted soil has been documented and/or is discovered, will be excavated to the extents feasible for off-site recyling/disposal. ECS will submit a UST Closure Summary Report that will document all of the UST system removal activities, and include the results of post-excavation soil samples and an evaluation of the data with recommendations for additional monitoring and/or remedial actions, if necessary, in order to obtain closure of Spill# 8706242. AD 04/30/2014: Received a UST Closure Summary Report. DL to eDocs. Will review. AD 05/20/2014: Reviewed the report. It states that during the period from January 21 through March 6, 2014, CFI contracted with Tyree Service Corp. (Tyree) of Brookfield, Connecticut, to remove the entire UST system that consisted of the following: five (5) 4,000-gallon double-wall fiberglass gasoline USTs; all associated piping; vent lines; product dispensers; dispenser islands; a concrete tank pad mat; and canopy footings. In addition, four (4) abandoned USTs discovered during petroleum-impacted soil excavation were also removed. Subsurface materials encountered during excavation activities consisted of a range of fill material from just below surface grade to approximately

EXXONMOBIL (Continued) **S103824118**

8 feet below grade (fbg) that was comprised of medium to coarse sand with areas of brick, concrete, glass and metal pieces. Material from approximately 8 to 20 fbg consisted of silty-clay with coarse sand and cobbles. Groundwater was not encountered at the maximum excavation depth of 20 fbg. End-point soil sampling: A total of fifty-three (53) post-excavation samples collected from varying depths along the sidewalls limits and base areas of the final excavation. Analyticsl results indicated that twenty-three (23) of these samples indicated one or more VOCs above their respective NYSDEC CP-51 Supplemental Soil Cleanup Objectives (SSCOs). The results also indicated five samples with concentrations below the SSCOs and twenty-five samples with no VOC concentrations detected above the laboratory minimum reporting detection limits. All excavated areas were either backfilled with native soil that was segregated as clean during excavation activities or with certified virgin blasted quarry rock stone supplied by New York Sand & Stone, LLC, of Brooklyn, New York. During February 18 through March 6, 2014, a total of 2,049.98 tons of petroleum-impacted soil generated from the on-site excavations were transported off-site to Clean Earth of Carteret, New Jersey, for recycling. On March 3, 2014 Tyree evacuated approximately 600 gallons of water from the excavation area of the broken water line in the southwestern portion of the Site. Conclusions and recommendations: According to the consultant, evaluation of fifty-three post-excavation end-point soil samples collected from the lateral and vertical limits of the completed excavation areas indicated twenty-three samples with one or more VOCs above the NYSDEC SSCOs. The results also indicated five samples with various VOC concentrations below the NYSDEC SSCOs. Further excavation of the remaining impacted areas were not feasible due to the presence of the sidewalk along Bedford Avenue on eastern boundary of the Site, the presence of a live underground electrical line north of the former northeastern dispenser island excavation area, and a retaining wall along the southwestern boundary of the Site. Further excavation greater than 18-20 fbg in the former UST excavation area on the southern and southeastern portion of the Site was not feasible due to the excavator reach capacity and the risk of collapse to the sidewalls adjacent to the sidewalk. The proposed future development plans for the Site includes new construction of a storage building. When Site development plans do evolve, CFI and the new Site owner will develop an environmental monitoring and management plan for the excavation and off-site recycling/disposal of any impacted soil encountered. ECS will notify the NYSDEC of the construction schedule when available. Once the soil excavation for Site development is complete, ECS will prepare a UST Closure Addendum Report that will summarize the additional post-excavation soil quality data, with recommendations for additional remedial actions, if necessary, in order to obtain closure of Spill No. 87-06242. AD 07/09/2014: Received the following e-mail from B. Simmons: Hi Ainura, Please find the attached Remedial Action Plan Report for the former Cumberland Farms, Inc. property located at 1550 Bedford Ave., Brooklyn, NY Spill# 87-06242, as a follow-up to the UST Closure Summary Report dated April 30, 2014 also submitted to your attention. Please let me know if you also require a hard copy and/or a copy on a CD. Thank you. Bill Will review. AD 08/13/2014: Reviewed the report. It states that the purpose of the RAP is to satisfy the necessary remediation requirements of the NYSDEC and obtain closure of Spill No. 87-06242. The April 2014 UST Closure Report submitted to the NYSDEC summarized

EXXONMOBIL (Continued) **S103824118**

the activities performed during the period January 21 through March 6, 2014 associated with the removal of the entire UST system and four abandoned USTs and the excavation and off-site disposal of approximately 2,050 tons of petroleum-impacted soil, and provided an evaluation of post-excavation soil samples. Evaluation of fifty-three (53) post-excavation end-point soil samples collected from the completed excavation areas indicated twenty-three (23) samples with one (1) or more volatile organic compounds (VOCs) above the NYSDEC CP-51 SSCOs. The results also indicated five (5) samples with various VOC concentrations below the SSCOs and twenty-five (25) samples with no VOCs detected above the laboratory minimum reporting detection limits. Further soil excavation of the remaining impacted areas were not feasible due to the presence of the sidewalk along Bedford Avenue on eastern boundary of the Site, the presence of a live underground electrical line north of the former northeastern dispenser island excavation area, and a retaining wall along the southwestern boundary of the Site. Excavation greater than 18-20 fbg in the former UST excavation area on the southern and southeastern portion of the Site was not feasible due to the excavator reach capacity and the risk of collapse to the sidewalls adjacent to the sidewalk. The proposed future development plans for the Site includes new construction of a storage building. When Site development plans do evolve, CFI and the new Site owner will develop an environmental monitoring and management plan for the excavation and off-site recycling/disposal of any impacted soil encountered. ECS will notify the NYSDEC of the construction schedule when available. Once the soil excavation for Site development is complete, ECS will prepare a UST Closure Addendum & RAP Report that will summarize the additional post-excavation soil quality data, with recommendations for additional remedial actions, if necessary, in order to obtain closure of Spill No. 87-06242. AD 05/2015: called and left a message to Bill. AD 08/2016: called and spoke with B. Simmons. According to Mr. Simmons, no construction work was done at the site yet. AD 02/22/2017: Called and spoke with Bill. He said that his technician goes and checks on the site every few weeks. The building was demolished, but no excavation started yet. The new site owner, according to the contract, should contact AST upon start of the re-development of the property, so AST could oversee remediation activities. Bill will update DEC. AD 04/24/2018: Received a message from Bill. He informed that the redevelopment started at the site. Called and spoke with Bill. He said that 4 550-gallon USTs filled with water were discovered on the site. The new owner is planning to build a hotel. ECS will oversee the remediation of the site during redevelopment. Mr. Simmons will submit a summary e-mail for a site status update. AD 04/25/2018: Received the following e-mail from Bill Simmons: Good Afternoon Ainura, As we discussed, here is a summary of some facts on the redevelopment work on this Site. " The property is being developed as a hotel. " Work has commenced involving shoring installations along the sidewalks and minor grading excavations. " The northern-half of the Site is being excavated to 20 for the planned basement of the new building. " The southern-half of the Site is being excavated to 12 . " A vapor barrier will be installed. " OER is not involved as this is not an e-Designation site. " As we find contaminated soil we load it off-site to Clean Earth of Carteret NJ for recycling. " We will collect post-excavation end-point samples for field screening and lab analysis. " See attached Site Plans that depict the hotel footprint and planned areas of excavation between 12 and 20 and the Site Plan

EXXONMOBIL (Continued) **S103824118**

presented in the 2014 UST Closure Summary Report with post-ex sample locations. As per the April 30, 2014 UST Closure Summary Report and the RAP dated July 9, 2014, remaining petroleum-impacted soil above CP-51 SSCO s was present in various depths (greater than 18 -20) in certain portions of the Site. At that time, the property was to be developed as a warehouse now it will be a hotel. Per the RAP, contaminated soil would be excavated for off-site recycling and end-point samples would be collected and summarized in a report with recommendations for additional remedial actions if necessary to obtain closure of Spill No. 87-06242. For discussion: " Soil data is provided in the September 2007 SIR, the September 17, 2008 SIR Addendum, and the April 30, 2014 UST Closure Summary Report. " Soil quality at certain deeper depths are present above CP-51 SSCO s in the following locations: o Former Gasoline USTs (removed January 2014) on southern portion of Site (See Site Plan with corresponding Table on the right side with sample locations and PID readings and ID s, and separate VOC 8260 STARS lab summary table). Soil was removed from 18 -20 . Post-Ex samples No. s 17, 18, 19, 20, 21, 22, and 23 indicated elevated total VOCs with Total BTEX ranging from 7,066 ug/Kg to 746,100 ug/Kg. o Former Southeastern Dispenser, northeast of former USTs Sample #31 - soil at 18 had PID of 2,100 ppm with Total BTEX of 1,368,000 ug/Kg. o Former well Boring MW-3 located between former Gas USTs and Southeastern Dispenser Island has soil from 20 -22 with 424 ppm and Total BTEX of 203,528 ug/Kg. o Former Northeastern Dispenser Island samples 44, 45, 46 and 47 10 -12 and 16 PID readings ranging from 524 ppm to 1,138 ppm Total BTEX ranging from 32,320 ug/Kg to 315,480 ug/Kg. Most of this soil will be able to be excavated likely to 20 . For these above locations specifically on the southern portion of the Site where soil is only planned to be excavated to 12 for redevelopment, it is likely that contaminated soil in certain areas greater than 18 -20 will not be able to be excavated. A vapor barrier will be installed during the development. Please let us know your comments so we can discuss further and perform what is necessary to achieve Spill No. closure. Thank you, Bill William A. Simmons - SENIOR PROJECT MANAGER / GEOLOGIST - ATC Group Services LLC +1 413 519 0769 mobile - +1 413 789 3530 AD 06/13/2018: Received the following e-mail from Mr. Simmons: Good Morning Ainura, I would like to provide you an update on the site construction progress and request comments from you and/or have a discussion: " Site Photos attached taken June 12, 2018. " A total of approximately greater than 3,600 tons of impacted soil has gone off-site for recycling/disposal so far during April 23-June 8, 2018. " Construction Development crew is still excavating the site final grade in areas and we are field screening, segregating soil, and collecting post-ex (end-point) base samples once they complete those areas. " Week of June 4 we submitted a group of 13 samples collected at 25 feet below sidewalk grade (the deepest we will excavate anywhere) in the eastern and northeastern-central portions of the Site (beneath the former mid-eastern and northeastern dispenser islands areas removed in 2014). The field screening of these 13 post-excavation samples collected at 25 ranged from 6.0 ppm to 618 ppm. The field screening of soil above this depth from 20 -24 before it was excavated ranged greater than 2,000 ppm. Deeper excavation greater than 25 could not be safely advanced due to risk of sidewalk sidewall shoring undermining and integrity collapse (the excavation got within 7 of the sidewalk wall). " We also collected samples at 21 from the northern and northeastern portions on June 11 and all field

EXXONMOBIL (Continued) **S103824118**

screened at 0 ppm. " A vapor barrier will be installed by the contractor. " As previously indicated, it is likely that impacted soil above standards will remain at deeper depths beyond excavation capabilities. All the data will be documented in a report with the purpose of obtaining Spill No. 87-06242 Closure. " Everyone is inquiring whether the NYSDEC has any comment on this work progress, and whether this current 2018 site impacted soil excavation work (3,600+tons), the 2014 impacted soil excavation and disposal of 2,050 tons, vapor barrier installation, along with all the previous historical subsurface data collected from investigations documented in previous reports will be adequate enough to close out Spill No. 87-06242. " The concrete footings and slabs will be poured very soon. Please let me know. Thank you, Bill William A. Simmons - SENIOR PROJECT MANAGER / GEOLOGIST - ATC Group Services LLC +1 413 519 0769 mobile - +1 413 789 3530 main number Called and spoke with Mr. Simmons regarding progress at the site. Asked if the basement is planned for the hotel building and for what it will be used. Bill will find out info on that. Mentioned that based on the labdata, a SSDS might be required for the building. Requested to submit a site plan with locations of the collected soil samples. The update will be submitted to DEC after soil results will be received by the consultant from the lab. AD 06/27/2019: Received the following e-mail from Mr. Simmons: Good Afternoon, I hope all is well. Please find attached the Remedial Action & Spill No. 8706242 Closure Request for the former Cumberland Farms, Inc. Gasoline Station Facility located at 1550 Bedford Avenue, Brooklyn, New York. Please let me know if you received this report and also if you require it be sent via mail in a different format. Thank you, Bill William A. Simmons - SENIOR PROJECT MANAGER / GEOLOGIST - ATC Group Services LLC +1 413 519 0769 mobile - +1 413 504 1908 direct number Will review. AD 07/19/2019: Reviewed the Remedial Action Report & Spill Closure Request. It states that the site development occurred in 2018 that including construction of a hotel building, and the work that occurred during this development provides a basis for closure. As indicated in a RAP submitted to the NYSDEC dated July 9, 2014, and as concluded in the UST Closure Report, when future Site development commences, CFI and the new Site owner will develop an environmental monitoring and management plan for the excavation and off-site recycling/disposal of any impacted soil encountered. A RAP Report would be prepared that would summarize the additional post-excavation soil quality data, with recommendations for additional remedial actions, if necessary, in order to obtain closure of Spill No. 87-06242. During the period April 23 through October 29, 2018, site development occurred that involved soil excavation across the entire property footprint at depths ranging from a minimum of 12 fbg to a maximum of 25 fbg, all of which was removed from the site for construction of a hotel building. Prior to development, the former one-story building was removed. During the construction activities, shoring was installed along the entire property perimeter (approximate footprint of 192 by 100) that extended up to approximately 2 feet into the sidewalks to the east along Bedford Avenue and to the south along Union Street as the soil excavations advanced vertically. The excavation did not encroach into the sidewalk to the north along Eastern Parkway. During development, ATC was on-site when soil was exposed and excavated in order to field screen the soil and segregate it. Soil was screened with PID with results reported in ppm with a range from 0.1 ppm to 15,000 ppm. Soil that indicated TOV concentrations greater than 10

EXXONMOBIL (Continued) **S103824118**

ppm were considered petroleum impacted and were segregated for off-site disposal. A total of 7,505.82 tons of petroleum-impacted soil was generated for off-site recycling. Approximately 13,500 tons of clean soil generated from the Site was managed by the contractor for off-site disposal. During the development, four (4) abandoned single-wall steel USTs discovered to be full of water on the northeastern portion of the Site were removed. Due to the extensive soil excavation, numerous soil samples were collected for field screening analysis. As indicated in the April 2014 UST Closure Summary Report, of the 53 post-excavation soil samples identified as ID s # s 1-47, 23 were above NYSDEC CP-51 SSCO s at that time. After the 2018 excavations were completed, only four (4) of these original samples ID # s 24, 32, 36 and 39, all of which were not above standards are still considered post-excavation as the areas where these samples were collected were not excavated. All post-excavation soil samples collected during April through October 2018, were analyzed for VOCs according to the NYSDEC Spills Technology and Remediation Series (STARS) List per United States Environmental Protection Agency (USEPA) Method 8260B for gasoline-related compounds. Laboratory certificates of analysis are included as Attachment VI. ABANDONED USTS REMOVAL APRIL 2018 On April 18, 2018, 4 abandoned single-wall steel USTs were discovered on the northeastern portion of the Site. The tops of the tanks were at approximately 6 fbg and all of these tanks were full of water. On April 19, 2019, Lorco Petroleum Services (Lorco) of New Jersey evacuated approximately 1,343 gallons of water from the tanks. On April 24, 2018, Lorco cleaned the tanks and generated approximately 241 gallons of waste. The tanks were subsequently disposed of as scrap metal by the contractor. The base of the tanks were set at approximately 10-11 fbg. Soil surrounding the tanks indicated TOV concentrations ranging up to 169 ppm. All soil in this portion of the Site were subsequently excavated to a depth of 21 fbg. Soil Data: Evaluation of the sixty (60) post-excavation soil samples collected during the 2014 and 2018 excavations indicates three (3) areas of the site where soil remains above the SSCOs for various VOCs beyond the final depths of the completed excavations. - Eastern-central portion of the Site: Post-excavation sample # s 60, 61, 63, 65, 66, 67 and 68 were all collected at the final depth of 25 fbg with TOV concentrations that ranged from 254-618 ppm. These samples were all collected in the area of the former northeastern-most and eastern-central dispenser islands that were removed in February 2014, and also immediately north of a former tank grave that consisted of six (6) 550-gallon USTs, four (4) of which were removed in September 1992 and two (2) that were removed in February 2014. Total BTEX in these samples ranged from 731 ug/Kg to 169,458 ug/Kg. Total other various VOCs in these samples ranged from 7,973 ug/Kg 188,090 ug/Kg. - Western-Southwestern portion of the Site: Post-excavation sample # s 96 and 97 were collected at the final depths of 10 fbg and 15 fbg, respectively, with TOVs of 5.0 ppm and 3.0 ppm, and 837 ppm, respectively. These samples were collected in the area of the two (2) abandoned waste oil USTs that were removed on March 4, 2014. Samples #96 and #97 were collected along the western sidewalls of the 20 fbg final excavation depth of the former USTs, and the data indicated only benzene concentrations above the SSCOs of 429 ug/Kg and 106 ug/Kg, respectively, and no total other various VOCs. - South-southeastern portion of the Site: Post-excavation sample # s 109 and 113 were collected at the final depths of 24 fbg and 25 fbg, respectively, with TOVs of 1,284 ppm and

EXXONMOBIL (Continued) **S103824118**

233 ppm, respectively. Sample #109 was collected in the area of the former gasoline USTs removed in February 2014 and sample #113 was collected to the south of these former USTs (Figure 3). Sample #109 indicated only total xylenes at 1,170 ug/Kg which is above the SSCO, and total various other VOCs of 7,190 ug/K, none of which were above their respective SSCOs. Sample #113 indicated total BTEX of 156,484 ug/Kg and total other various VOCs of 101,828 ug/Kg. - Of the sixty (60) post-excavation samples, forty-seven (47) indicated no VOCs above the laboratory minimum reporting detection limits (RDLs), and two (2) had low level VOCs below their respective SSCOs. Waste Management Summary: The following is a summary of the waste management for the Site generated in 2014. During February 18 through March 6, 2014, a total of 2,049.98 tons of petroleum-impacted soil generated from the on-site excavations were transported off-site to Clean Earth of Carteret, New Jersey, for recycling. On March 4, 2014 Lorco Petroleum Services (Lorco) of New Jersey, evacuated approximately 1,025 gallons of water from two (2) abandoned tanks and an abandoned drywell. The following is a summary of the waste management for the Site generated in 2018: On April 19, 2018, Lorco evacuated approximately 1,343 gallons of water from the abandoned 550-gallon USTs discovered on the northeastern portion of the Site. On April 24, 2018, Lorco cleaned the tanks and generated approximately 241 gallons of waste fluids. The tanks were disposed of as scrap metal by the construction contractor. During the period April 23 through October 29, 2018, 7,505.82 tons of petroleum-impacted soil generated from the on-site excavations were transported off-site to Clean Earth for recycling. The extensive soil excavations that occurred in 2014 and 2018, generated a total of 9,555.80 tons of petroleum-impacted soil that was disposed of off-site for recycling. An additional approximately 13,500 tons of Site soil was removed from the Site during development by the construction contractor. The final excavations that occurred during development in 2018 ranged from a minimum of 12 fbg to 25 fbg. Vapor barrier: In November 2018, a 20-Mil. vapor barrier was installed below the concrete slab for the entire building. Based on the data presented in this report, ATC does not recommend any additional response or remedial actions at the Site, and requests closure of Spill No. 87-06242. AD 07/30/2019: Discussed the closure request with J. Kolleeny of DER. The following remediation was performed at the site: - In 2014, entire UST system that consisted of the following: five (5) 4,000-gallon double-wall fiberglass gasoline USTs; all associated piping; vent lines; product dispensers; dispenser islands; a concrete tank pad mat; and canopy footings was removed off-site. In addition, four (4) abandoned USTs discovered during petroleum-impacted soil excavation were also removed. A total of 2,049.98 tons of petroleum-impacted soil generated from the on-site excavations were transported off-site to Clean Earth of Carteret, New Jersey, for recycling. - In 2018, a total of 7,505.82 tons of petroleum-impacted soil was generated for off-site recycling. Approximately 13,500 tons of clean soil generated from the Site was managed by the contractor for off-site disposal. During the development, four (4) abandoned single-wall steel USTs discovered to be full of water on the northeastern portion of the Site were removed. - The extensive soil excavations that occurred in 2014 and 2018, generated a total of 9,555.80 tons of petroleum-impacted soil that was disposed of off-site for recycling. An additional approximately 13,500 tons of Site soil was removed from the Site

EXXONMOBIL (Continued) **S103824118**

during development by the construction contractor. The final excavations that occurred during development in 2018 ranged from a minimum of 12 fbg to 25 fbg. - Vapor barrier was installed under entire building. - Soil Data: Evaluation of the sixty (60) post-excavation soil samples collected during the 2014 and 2018 excavations indicates that only two post-excavation soil samples collected at depth of 25' bgs showed BTEX around 150,000 ppb mostly Xylenes and Trimethylbenzene. - Groundwater Data: The depth to regional GW is more than 115' bds. Attempts to install deep well were unsuccessful. Two site wells MW-1 and MW-2 installed at the site were perched GW wells at 16' bgs and they never indicated significant levels of TVOCs. The latest data from these wells on 2013 indicated concentrations of benzene at 1.28 ug/L, total xylenes at 8.6 ug/L, MtBE at 24.9 ug/L, and five other various VOCs totaling 51.2 ug/L, with three compounds above the TOGS GWQS in well MW-1, and only MtBE at 18.8 ug/L in MW-2; Based on the extensive site cleanup and most recent soil and groundwater data, it was decided to approve the spill closure request. AD "

Town:	New York City
Record Added Date:	12/04/2019
Record Updated Date:	06/30/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located in an urban, mixed use (commercial/residential) area in Brooklyn, NY. The property is bounded by residential properties to the north, commercial properties to the west, south, and east, an elevated railroad to the east, and Atlantic Avenue to the south. Site Features: The Site improvements are as follows: Lot 68 one two-story building occupying the entirety of the lot with an auto garage on the first floor and office space, storage, and an artist s loft on the second floor. Lot 70 a vacant building that takes up the entirety of the lot. The property appears to have been most recently used as a restaurant and trucking / shipping business. The building was primarily empty except for some kitchen equipment in the restaurant. Lot 73 a concrete paved lot. Lot 74 a one-story building measuring 3,209 square feet with two commercial units and a small paved rear yard behind the western unit that contains a walk-in freezer and storage. Lot 77 - two one-story buildings measuring 12,066 square feet. The main building is located on the south portion of the lot and is utilized for storage of plumbing supplies and offices. The rear building, located on the northeast portion of the lot, is utilized for storage. The remainder of the site is concrete paved. Current Zoning and Land Use: The site is currently active and is zoned M1-1 and is surrounded by similarly zoned properties to the east, west, and south. Properties north are zoned R6B with a C2-4 overlay; the majority of the properties appear to be single family residences. Past Use of the Site: Lot 68 The lot was first developed between 1888 and 1908 and used for commercial/industrial purposes, including a wagon house in 1908 and an auto repair shop with battery service by 1932 to present. Lot 70 The was first developed sometime prior to 1888. Historical uses included an auto repair and brake shop, office space, a church, and a variety of commercial usages. Lot 73 The lot was already developed in 1888 with a building for beer bottling. Between 1908 and 1932, it was redeveloped into an auto repair shop. The building was demolished between 1965 and 1976 and has been vacant since. Lot 74 The lot was already developed by 1888 with a candy factory and a stable. Between 1908 and 1932, it was redeveloped into a used car depot and an auto repair shop with a shed behind the buildings up to at least 2007. The 2019 inspection revealed that the lot was used as a commissary and a bar. Lot 77 The lot was sparsely developed in 1888 with residential dwellings along the northern and western lot boundaries. By 1908, a furniture repair shop was added along the western portion of the site

ATLANTIC BROOKLYN PROJECT (Continued) **S127750690**

and an unknown structure along the eastern portion of the site. By 1924, the previously described structures were replaced with a parking garage (capacity of 100 cars) and a building utilized for auto sales and service that appeared to occupy the entirety of the property. Two gasoline tanks were located outside of the northeast and northwest corners of the building. By 1951, the property was now utilized by metal manufacturers (U.S. Metal Products Co. Inc. and Blue Fox Industries Inc) that included assembly and painting activities. Around 1982, either the rear portion of the previous building was demolished, leaving the present day buildings and parking lot in place, or the previous building was fully demolished and replaced with the current day buildings the property was utilized by petroleum delivery companies; however, there did not appear to be significant petroleum storage onsite. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of historic urban fill from grade ranging down to 2 to 7 feet below grade. The historic urban fill was underlain by native soils which primarily consisted of poorly graded medium to coarse grained sand and clayey sands up to at least 20 feet below grade. Groundwater was encountered at approximately 75 feet below grade and regional groundwater flow is anticipated to flow towards the northeast. Bedrock was not encountered."

Env Problem:

"Based on investigations performed at the site to date, the primary contaminants of concern for the site are chlorinated VOCs, SVOCs, and metals. Soil VOCs, SVOCs, and metals exceeding Protection of Groundwater Soil Cleanup Objectives (PGSCOs) or Restricted Residential (RRSCOs) were detected in soils throughout the site. VOC contaminants of concern (COCs) include tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (DCE) these concentrations were detected in multiple samples between grade and 12 feet below grade, and exceeded the PGSCOs (maximum concentrations observed for PCE and TCE were 4.7 parts per million, or ppm and 19 ppm, respectively). SVOCs appear to largely be related to the presence of historic fill material with total SVOCs ranging between less than detection limits in the deeper samples up to 2,897 ppm in shallower samples. The primary metals included chromium (maximum of 7,960 ppm, RRSCO of 180 ppm), mercury (maximum 1.27 ppm, RRSCO of 0.81 ppm), lead (maximum of 439 ppm, RRSCO of 180 ppm), and cadmium (maximum of 210 ppm, RRSCO of 4.3 mg/kg). Mercury, lead, and chromium impacts appear to be distributed across the Site at concentrations typical of historic fill material with one high concentration of chromium located near the eastern portion of the Site. Cadmium is not typically observed in historic fill material at these concentrations. The presence of cadmium and the high concentration of chromium may be attributable to historic uses of the Site. The majority of the investigation conducted was in the northern section of the Site in the parking lot area; drilling access inside the building was limited. Groundwater Groundwater sampling was limited to chlorinated VOCs based upon the presence of these compounds in soil and soil vapor. Two samples were collected near the suspected up-gradient and downgradient sides of the property. Two compounds were detected that exceeded Ambient Water Quality Standards: TCE (maximum of 42 parts per billion, or ppb) and Chloroform (maximum of 19 ppb). Soil Vapor Sub-slab soil vapor sampling was conducted across the Site. TCE was the main contaminant of concern encountered at a maximum concentration of 774 micrograms per cubic meter (g/m3). Each of the sub-slab samples contained TCE concentrations greater than 60 g/m3,

ATLANTIC BROOKLYN PROJECT (Continued) **S127750690**

	which indicates that mitigation is required. "

BROWNFIELDS:

Name:	BEDFORD UNION ARMORY
Address:	1555 BEDFORD AVENUE
City,State,Zip:	BROOKLYN, NY 11225
Program:	BCP
Site Code:	540934
Acres:	2.805
HW Code:	C224252
SWIS:	2401
Town:	New York City
Record Added Date:	02/07/2017
Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	"Location: The site is located at 1555 Bedford Avenue in an urban area of the Crown Heights neighborhood of Brooklyn. It is identified on New York City tax maps as Block 1274, Lot 1. The site is bordered by Union Street to the north, multistory residential and mixed-use buildings followed by Rogers Avenue to the east, President Street to

BEDFORD UNION ARMORY (Continued) **S120706204**

the south, and Bedford Avenue to the west. Site Features: The site is approximately 2.80 acres in size and is currently developed with a vacant three-story building, which contains a single story open drill hall; the head house, which previously contained sleeping quarters, showers, artillery ranges, stables, and kitchen and laundry areas; and the parking facility, which previously contained a vehicle maintenance shop and a battery charging room. The footprint of the building covers the entire site. Current Zoning and Land Use: The site is located in a R6 residential zone, and is currently vacant. The adjoining parcels are used for residential purposes, with the surrounding area generally consisting of residential, commercial, and institutional (schools and churches) use. Past Uses of the Site: The site was undeveloped before 1903. The original armory structure was built in 1903 with an expansion into the eastern portion of the parcel in the 1930s, which was converted to a parking facility in the 1960s. From about 1904 until 2013 the site was used as a military armory, including storage and maintenance of military vehicles and equipment, vehicle refueling, and artillery ranges located in the basement. Portions of the building had also been used for various film productions between 1991 and 2012. Site Geology and Hydrogeology: The site elevation is about 130 feet above sea level. The site is located in a developed area of Brooklyn that is generally covered with paved roads, walkways and buildings. The building is generally underlain by fill material used for construction and development since the 1800s. The subsurface strata beneath the site consists of historic fill material generally characterized by loose medium-to-coarse brown sand with varying amounts of silt, gravel, ash, and metal extending to depths of about 1 to 21 feet below grade surface (bgs). The historic fill material is underlain by native soil generally consisting of fine-to-coarse reddish brown sands with varying amounts of gravel and clay. Bedrock is anticipated to be at a depth of greater than 150 feet. Groundwater is present at a depth of approximately 130 feet below grade (about elevation 9.5 feet) and flows towards the northwest. "

Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals including lead, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo[k]fluoranthene, chrysene, indeno(1,2,3-CD)pyrene, and tetrachloroethene (PCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination on the site."

DEC Memo:	"12/27/17-Zhune spoke to Barbara from WCC Tank. Barbara said the tank was a 1080 gallons tank. It was tested and it failed the test with a dry leak. 12/28/17-A TTF letter was sent to: Mr. Gregory Tetirello Cassena Cara Nursing Home 727 Classon Ave. Brooklyn NY 11238 Gregory Tetirello 718-636-1000 2/1/18-James Wlson from East Coast emailed the report dated January 31, 2018. The report stated that on December 27, 2017, one (1) underground storage tank UST failed to pass a precision tightness test. On January 25, 2018 East Coast Environmental Sevices of New York (ECES) was on site to perform a retest of the UST and discovered the failed tank test due a damaged sounding line. ECES replaced the damaged sounding line; the tank system was retesting and passed on January 25, 2018. The result of the passing tank test are enclosed. No petroleum impacted soil or staining was observed during tank repair activities. Spill Closed. "

DEC Memo:	"5/19/06 - Raphael Ketani. I called up Joe Ostrowski cell (646) 772-6313 of PTC (718) 624-4842 to find out the status of the cleanup. He said his guys were at the site and they reported back that there

GOODY DRY CLEANERS (Continued) **S107789427**

was only a small puddle of oil, despite the burst tank. They told him that there was nothing in the burst tank. Mr. Ostrowski said that, from what his crew was saying, there was less than 10 gals. of oil on the floor. He said his guys are cleaning up with Speedi Dri. He told them to look around and see where the oil went. He also said that there are no drains, only 2 small cracks, and a wet rug. Mr. Ostrowski said that the rug is dry underneath and that there is nothing else to be seen. I asked him to do some soil borings monday, 5/22. He said he will do it. 5/22/06 - Raphael Ketani. I arrived at the site after the soil borings had been taken. I met Marlon of PTC (718) 624-4842. He showed me the 2 samples he had collected below the concrete floor. They both had strong oil odors. One sample had been taken at the left end of the tank and one sample had been taken from in front of the middle of the tank. The room where the tank was had a floor with only 2 fine cracks. However, it was apparent that the oil had flowed across the floor and away from the tank. Vapor concentrations were 3000 ppb in the room. I checked the temporary tank, suction line, and boiler in the other room and everything looked alright, though the suction line looked a little oxidized over its length. I spoke to Sung Soo Kim, the manager for Goody Cleaners (718) 467-6620. He said the superintendant is near and that the management company is MRM Management. Mr. Kim said that the oil company came friday, 5/19, and filled up his tank, but the oil overflowed out the vent pipe (I looked at the vent pipe and the oil spill had been cleaned up). He said that later that day he smelled oil and found the oil dripping out the bottom of the tank through small holes in the bottom. Mr. Kim told me that Blue Diamond Oil had hired PTC. I told him to contact them and have them pay for the cleanup. I told Mr. Kim that, at the very least, the oil tank will have to be replaced, the floor will have to be broken up and the contaminated soil removed, and maybe bioremediation used to clean up the soil that can't be taken out (there are 5 large columns near the oil tank which support the floor above). He said he will call them. 6/15/06 - Raphael Ketani. I called Mr. Kim. He said that he received a bill for the soil sampling done by PTC, but nothing else. I asked him whether MRM Management was involved. He said he didn't know, but gave me their number (516) 869-1240. Next, I called Mr. Ostrowski of PTC and I asked him what the analytical results for the soil samples were. He said he didn't know, but that he would call me back later with an answer. Lastly, I called up MRM Management. I got Millbrook Properties (of which MRM is a subsidiary) and the owner of the site, Charles Hirsch. He is at 42 Bayview Avenue, Manhassett, NY, 11030. I asked Mr. Hirsch whether he was aware of the oil spill. He said this is the first he heard of it. I told him that, as the owner of the property, he is responsible for the oil spill. I told him I needed the information that PTC had regarding the soil sampling and whether additional work needed to be performed. He said he will look into the situation and get back to me. I will send a contaminated soil letter to Mr. Hirsch. 6/19/06 - Raphael Ketani. Mr. Kim called me to say that PTC (718) 624-4842 had lost the original soil samples and that they came today to take 3 more samples. They told Mr. Kim that it will take 2 to 3 weeks until they get the results back. 7/14/06 - Raphael Ketani. I left messages for Mr. Kim (718) 467-6620 and Mr. Hirsch. I spoke to Mr. Ostrowski and he said he just got the analytical results for the soil samples. He said there are hot spots. However, he can't release the documents as Mr. Kim hasn't paid his company for the work that was done. 7/18/06 - Raphael Ketani. I tried

GOODY DRY CLEANERS (Continued) **S107789427**

to call Mr. Kim, but could only leave a message. I also left a message for Mr. Hirsch. Mr. Kim called me back later and said that he just sent PTC a check for the balance of the work. He said that once he gets the report, then he will send me a copy. I told him that I was told by PTC that one boring indicated that there was contamination below the concrete floor and that the soil will have to be dug up. He said he was aware of this. 7/19/06 - Raphael Ketani. Mr. Hirsch left a message and said that they are working on getting the bill for PTC paid so that the information can be released. 8/8/06 - Raphael Ketani. I tried calling Mr. Kim, but could only leave a message. I called Mr. Ostrowski of PTC and he said that the soil samples came back hot - so there is soil to dig out, they have been paid - so they can release a report to me, and they sent a remediation plan to MRM Management. I called up MRM (516) 869-1240 and got Mr. Katz, who works with Mr. Hirsch. Mr. Katz said that he was aware of the dirty soil samples and that he paid PTC. He went on to say that PTC never sent him a plan of action. I told him the soil has to get removed very soon as this has been dragging on too long. He said he was aware of this and will try a different company if PTC doesn't act soon. I said that would be fine. 8/9/06 - Raphael Ketani. I received an e-mail from John Jeun (718) 279-9001 with an attachment of 5 soil analytical results. The samples were N, S, E, W, and C. Samples N had hits, but below TAGM. Samples S and E had an exceedence for 1,3,5-trimethylbenzene. Samples W and C had many exceedences of TAGM. I e-mailed Mr. Jeun back and told him in a letter that the soil needed to be removed. I sent the following letter: Dear Mr. Jeun: I have reviewed the analytical results that you provided me from South Mall Analytical Labs, Inc. There is significant contamination under the basement floor at Goody Dry Cleaners and the soil needs to be removed. Samples C and W were particularly contaminated. Samples E and S also show exceedences for 1,3,5-trimethylbenzene. The New York State Department of Environmental Conservation is ordering Goody Dry Cleaners and Millbrook Properties to immediately begin removal of all contaminated soil. The Department holds Millbrook Properties and Goody Dry Cleaners, the Responsible Parties, liable for addressing any on and off site contamination associated with this spill. Under Section 192 of the Navigation Law, any person who discharges petroleum and fails to promptly clean up such prohibiited discharge may be subject to a penalty of up to $25,000 per day per violation and possibly to legal action. If you have any questions regarding this matter, you may reach me at (718) 482-4634 between 8:30AM to 4:30PM. Thank you, Raphael Ketani Engineering Geologist II I left a message for Mr. Hirsch that I had received the analytical results from Mr. Jeun (pronounced Jon). John Kurth (917) 412-4946 of ALC Environmental called and left a voice mail. He said he is the consultant for Goody Dry Cleaners. I tried to reach him, but could only leave a voice mail. At 3:40PM Mr. Kurth called me back. He said he was hired by Millbrook Properties and had received the analytical results. I told him that there is significant contamination on site. I added that the soil has to be removed, clean end point samples taken, and the tank and piping removed and replaced. I told him to send me a report with manifests for the soil, analytical results, and other pertinent cleanup documentation. He said he will have this done. He added that he didn't know who Mr. Jeun was or who hired him. 8/14/06 - Raphael Ketani. Today, I received the following e-mail from John Jeun: Hi Mr. Katani, We are appreciated your concerned opinion and reminding our duty/obligation for this subject. Currently, we are

GOODY DRY CLEANERS (Continued) **S107789427**

in contact with two potential companies in coordination with our landlord, Milbrook Properties, Ltd., to perform soil removal and soil sampling at the above captioned site. We already received one proposal and waiting the second one. We will pick one most capable company and conduct the earliest possible time. We will keep you posted for its progress. Have any question for this regards, please advice. John Jeun 8/22/06 - Raphael Ketani. I tried calling Mr. Kurtz, but could only leave a voice mail. 9/6/06 - Raphael Ketani. I spoke to Mr. John Kurtz of ALC Environmental (917) 412-4946. He said they were going to start digging out the contaminated soil today. He said that Safety Clean will take away the drums of soil. 11/7/06 - Raphael Ketani. I tried to call Mr. Kurtz, but could only leave a voice mail. Mr. Kurtz called me back. He said that back in mid-October he had e-mailed me the final investigation and cleanup report. I told him I never received it. He told me the e-mail address he had used to try and send me the report and it was wrong. He told me he will resend it. 11/8/06 - Raphael Ketani. Today I received the October 5, 2006 Soil Removal and Sampling Report for the site from ALC Environmental. Less than 1 drum of soil was removed from the site. They dug two soil borings and took 2 soil end point samples. With the exception of very low levels (below TAGM RSCO) of bis(2-ethylhexyl)phthalate, acetone, and tetrachloroethylene, there were no hits. The report states the total volume of oil lost must have been about 1 gal. and that the oil contamination is limited to surface staining. Based upon the October 5, 2006 Soil Removal and Sampling Report, I am closing the spill case. "

Remarks: "CLEAN UP IN PROCESS."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

UTM Y (Meters):	4502965.5
Elevation:	87 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

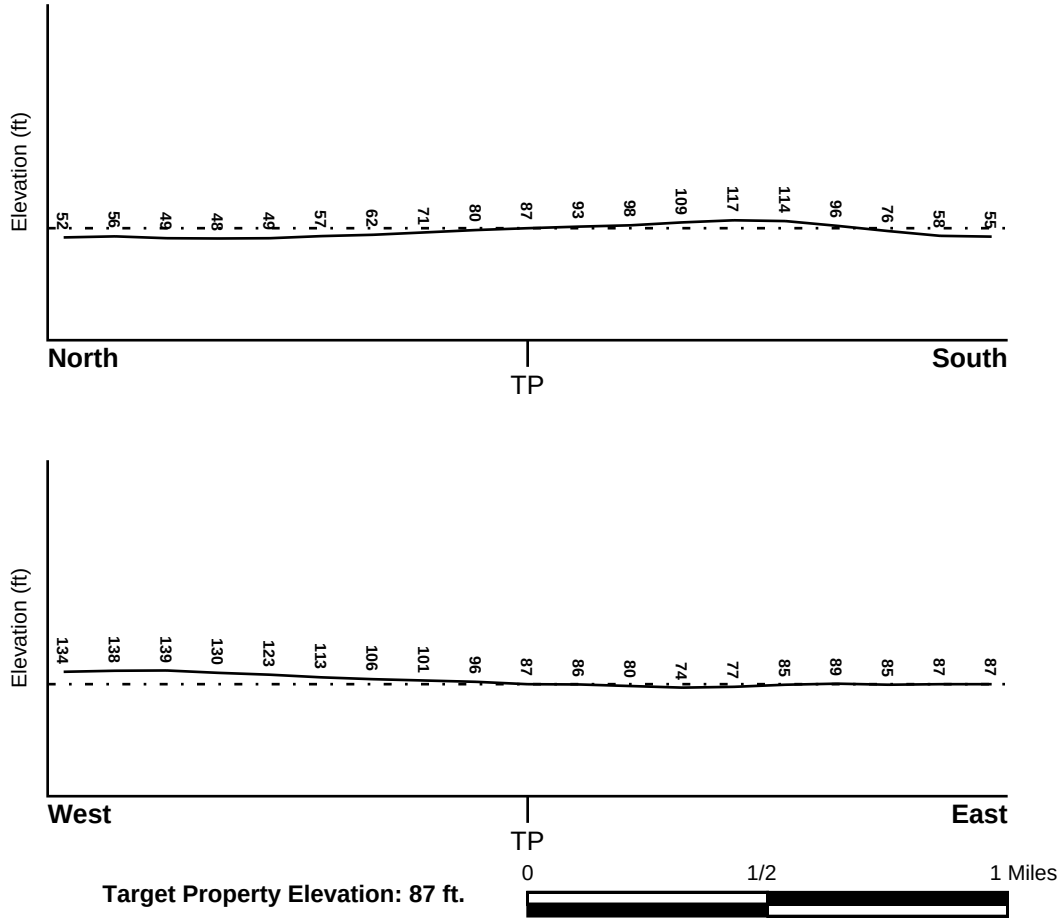
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 87 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970064B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
3604970204F	FEMA FIRM Flood data
3604970211F	FEMA FIRM Flood data
3604970063B	FEMA Q3 Flood data
3604970073B	FEMA Q3 Flood data
3604970074B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Organization ID:	USGS-NY	Organization Name:	USGS New York Water Science Center
Monitor Location:	K 921. 1	Type:	Well
Description:	Not Reported	HUC:	02030201
Drainage Area:	Not Reported	Drainage Area Units:	Not Reported
Contrib Drainage Area:	Not Reported	Contrib Drainage Area Unts:	Not Reported
Aquifer:	Not Reported	Formation Type:	Not Reported
Aquifer Type:	Not Reported	Construction Date:	Not Reported
Well Depth:	264	Well Depth Units:	ft
Well Hole Depth:	331	Well Hole Depth Units:	ft

Ground water levels,Number of Measurements:	248	Level reading date:	1942-12-26
Feet below surface:	Not Reported	Feet to sea level:	-25.79
Note:	Not Reported		

Level reading date:	1942-12-19	Feet below surface:	Not Reported
