OBSERVATIONS, DISCUSSIONS, ETC.
Roux was onsite to document field work activities and conduct CAMP in accordance with the NYSDEC-approved RAWP.
GENERAL COMMENTS:
<p>Description of contractor work activities performed:</p> <ul style="list-style-type: none"> CCJV continued with caisson drilling within the south area of grid cell SC-4 and removed accumulated sediments and grouting in installed caissons in the north area of grid cell SC-4. Highlite continued with electrical installations on the northwest corner of grid cell SC-1. Trevcon continued with sheet pile driving within grid cell SC-2. Ferrara Bros and CCJV poured concrete in installed soldier piles within the north area of grid cell SC-4. Simpson & Brown broke down the previous load test in grid cell SC-11 and started to assemble a new tension test located in the northwest area of grid cell SC-7. <p>CAMP Implementation:</p> <ul style="list-style-type: none"> Three CAMP stations (one upwind station, one downwind station, and one ferry terminal station) were implemented from 7:16am to 2:53pm during work activities (see figure below for station locations). CAMP stations consisted of a photoionization detector (PID) and a particulate meter. No exceedances nor odors were detected during the day. <p>Sampling performed:</p> <ul style="list-style-type: none"> None <p>Material Delivered to Site:</p> <ul style="list-style-type: none"> Mixed concrete <p>Material Removed from Site:</p> <ul style="list-style-type: none"> Approximately 6,750 gallons of effluent water (generated by caisson flushing activities and contained in a settling tank) were discharged from the tank to the sewer.

OBSERVATIONS, DISCUSSIONS, ETC.
Roux was onsite to document field work activities and conduct CAMP in accordance with the NYSDEC-approved RAWP.
GENERAL COMMENTS:
<p>Description of contractor work activities performed:</p> <ul style="list-style-type: none"> CCJV continued with caisson drilling within the south center area of grid cell SC-4 and removed accumulated sediments in installed caissons for upcoming video inspections in the north area of grid cell SC-4. CCJV excavated test pits in multiple locations for delineation soil sampling as part of soil waste characterization throughout the north area of grid SC-4. Six test pits in SC-4 were advanced to a depth of approximately eight feet below land surface (ft bls) to facilitate soil sample collection. All test pits were backfilled with the same soil after samples were collected. MW Geo resumed with geothermal drilling activities in the north corner of grid cell SC-14. <p>CAMP Implementation:</p> <ul style="list-style-type: none"> Three CAMP stations (one upwind station, one downwind station, and one ferry terminal station) were implemented from 1:21pm to 2:56pm (delayed setup due to rain) during work activities (see figure below for station locations). Material Delivered to Site:

- Soldier Piles
- Mixed concrete

Material Removed from Site:

- Approximately 10,000 gallons of effluent water (generated by caisson flushing activities and contained in a settling tank) were discharged from the tank to the sewer.
- Eight loads (approx. 160 cubic yards) of hazardous lead-impacted soil from grid cell SC-5 was removed from Site and transported to Clean Earth of North Jersey in Kearny, NJ under hazardous waste manifesting procedures.
- Two loads of concrete debris (approximately 25 yd³ each) was removed from Site and transported to Impact Environmental located in Lyndhurst, NJ.

NYSDEC or Other Inspections:

- None

Upcoming work activities anticipated:

- MW Geo will resume geothermal drilling
- Caisson drilling
- Sheet pile driving along the shoreline
- Pile driving on the west area of the site
- Soil sampling

OBSERVATIONS, DISCUSSIONS, ETC.
Roux was onsite to document field work activities and conduct CAMP in accordance with the NYSDEC-approved RAWP.
GENERAL COMMENTS:
<p>Description of contractor work activities performed:</p> <ul style="list-style-type: none"> CCJV continued with caisson drilling within the center area of grid cell SC-4 and removed accumulated sediments in installed caissons for upcoming video inspections east of the caisson drilling location in grid cell SC-4. CCJV excavated test pits in multiple locations for soil sampling as part of soil waste characterization throughout the north area of grid SC-4. Seven test pits in SC-4 were advanced to a depth of approximately eight feet below land surface (ft bls) and one test pit up to twelve feet below land surface (ft bls) to facilitate soil sample collection. All test pits were backfilled with the same soil after samples were collected. MW Geo ended geothermal drilling activities in grid cell SC-14 and started grouting in grid cell SC-13 Trevcon continued sheet pile driving within grid cell SC-2. Simpson & Brown resumed pile driving in grid cells SC-2 and SC-3. <p>CAMP Implementation:</p> <ul style="list-style-type: none"> Three CAMP stations (one upwind station, one downwind station, and one ferry terminal station) were implemented from 7:15am to 4:08pm during work activities (see figure below for station locations). CAMP stations consisted of a photoionization detector (PID) and a particulate meter. No exceedances nor odors were detected during the day. <p>Sampling performed:</p> <ul style="list-style-type: none"> One composite waste characterization soil sample was collected within the north area of grid cell SC-4 to analyze total lead, TCLP lead, Target Compound List (TCL) VOCs/Total Solids, TCL SVOCs, Target Analyte List (TAL) Metals including mercury and cyanide, Hexavalent Chromium, Trivalent Chromium, TCL Polychlorinated Biphenyls (PCBs), TCL Pesticides, Herbicides, RCRA Hazardous Waste Characterization (Ignitability, Reactivity and Corrosivity), Paint Filter Test and Toxicity Characteristic Leaching Procedure (TCLP) Metals.

- An additional eight composite soil samples were collected within the north area of grid cell SC-4 to analyze total lead and TCLP Lead only.

Material Delivered to Site:

- Soldier piles

Material Removed from Site:

- Approximately 9,000 gallons of effluent water (generated by caisson flushing activities and contained in a settling tank) were discharged from the tank to the sewer.

NYSDEC or Other Inspections:

- None

Upcoming work activities anticipated:

- Caisson drilling in grid cell SC-4
- Sheet pile driving near the shoreline
- Pile driving within grid cells SC-1 and SC-2
- Rebar installations in caissons within grid cell SC-4

LOCATION:	1 Java Street (18 India Street), Brooklyn, New York		TIME:	7:00 AM – 3:00 PM

Material Removed from Site:

- Approximately 2,700 gallons of effluent water (generated by caisson flushing activities and contained in a settling tank) were discharged from the tank to the sewer.
- One truck with approximately 25 yd³ of broken concrete previously stockpiled in grid cell SC-13 was loaded for offsite disposal. The concrete debris was transported to Impact Environmental in Lyndhurst, NJ.

NYSDEC or Other Inspections:

- None

Upcoming work activities anticipated:

- Caisson drilling in grid cell SC-4
- Sheet pile driving near the shoreline
- Pile driving within grid cells
- Rebar installations in caissons within grid cell SC-4
