Executive Summary

Simon Baron Development LLC contracted with AECOM to perform a Phase I Environmental Site Assessment (ESA) of a multi-occupant commercial property located at 12 Franklin Street, Brooklyn, Kings County, New York (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM Standard Practice Designation E 1527-13 for ESAs. Exceptions to, or deletions from, this practice are described in this report.

The 0.64-acre subject property is occupied by three commercial buildings containing five occupied commercial spaces: 12 Franklin Street / 2-6 Meserole Avenue (1.5 stories referred to herein as 12 Franklin Street), which is occupied by Northern Territory and Eastern Metal Plumbing and Hardware; 8 Meserole Avenue / 37 Gem Street (1-story, referred to herein as 8 Meserole Avenue), which is occupied by Scientific Laboratory Music Company; and 27-33 Gem Street/3-7 North 15th Street (1.5 stories, referred to herein as 7 North 15th Street), which is occupied by Dicrk the Norseman and Bacik Sausage Company. Each of the three adjoining buildings are constructed as slab-on-grade. Scientific Laboratory Music Company located at 8 Meserole Avenue contains a small partial basement on the northern portion of the property along Meserole Avenue.

The subject property is located in a mixed use area of Brooklyn consisting of commercial and industrial properties. The subject property is bordered to the north by Meserole Avenue, beyond which are unidentified one-story warehouses / industrial facilities. The subject property is bordered to the east beyond Gem Street by a smoke fish processing facility (Acme Smoked Fish), as well as other unlabeled one-story warehouses and industrial operations. The subject property is bordered to the south-southeast by adjoining, unmarked one-story warehouses / industrial facilities, and North 15th Street to the south-southwest, beyond which is a paved parking area with a fuel pump and the New York City Department of Environmental Protection (NYCDEP) Brooklyn maintenance department building. The subject property is bordered to the west, beyond Franklin Street, by a one-story warehouse and undeveloped land, beyond which is the Bushwick Inlet. AECOM did not observe any current gasoline service stations in the immediate vicinity (500 feet) of the subject property. However, a fuel pump island located on the southern side of North 15th Street is owned by the maintenance department for the NYCDEP and appears to have been the same location of a historical gasoline service station. In addition, W.H. Christian & Sons at 22-28 Franklin Street is a laundry and dry cleaner located approximately 130 feet north-northwest of the subject property that appears to have been in operation since 1924. Based on AECOM's site reconnaissance of the surrounding neighborhood, the fuel pump island owned by the NYCDEP and the nearby dry cleaner are considered potential off-site sources of concern..

Available records from the New York City Department of Finance's and Department of Building's website, the three buildings that comprise the subject property were constructed sometime after 1916 and prior to 1941. The 1887 Sanborn Fire Insurance Maps indicate that the subject property was undeveloped. By 1905 the northern portion of the subject property (currently occupied by 12 Franklin Street and 8 Meserole Avenue) was occupied by the Bulmer Lumber Company. The remaining portion of the subject property consisted of undeveloped land. In 1916 the lumber company has been replaced by the Warner & Stell Wagon Trucking operations. A 1930's Certificate of Occupancy states that 12 Franklin Street was owned by the Sterling Horse Feed Company for the storage of horse feed. By 1942 the three buildings at the subject property are present. The following summarizes the businesses which occupied each of the buildings:

12 FRANKLIN STREET

This parcel in 1942 was identified as the Warner Dog Food Company, Inc and is also identified in 1965 as Dri Food Products Inc. The operations of this company remain at this parcel until sometime after 1965. By 1970 the operations at this site were identified as Ace Cellophane & Polyethylene Corporation, though a 1968 Certificate of Occupancy states that the parcel was used for the printing and converting polyethylene and cellophane bags. Sometime between 1973 and 1997 the parcel began operating as Polycraft, Inc. which appears to have ceased operation in 2013. Eastern Metal Plumbing Supply began operating sometime between 2012 and 2013 based upon imaging from Google Maps. In 2013 construction was ongoing for the Northern Territory bar / restaurant and began operating by 2014.

8 MESEROLE AVENUE

This parcel in 1942 is identified as plywood storage. In 1945 the parcel is identified on a Certificate of Occupancy form as conducting chipping, blasting and finishing of magnesium castings. By 1951 the parcel is identified as the Superior Bearing Bronze Company for magnesium casting cleaning. The operations of this company remain at this parcel until sometime prior to 1965. From 1965 to 1985 the parcel is identified as Hardchrome Electro Processing Corporation, Universal Electro Chemical Company, and Universal Electric Sign Company, Inc. In 2000 the parcel is identified as RPM Auto Service. Google Map images from 2007 indicate that the exterior of the parcel is relatively well maintained but does not identify the type of operations. The current operations, Scientific Laboratories Music Studios appear to have occupied the parcel sometime prior to 2010. Building records indicate that renovations to the parcel were ongoing in 2007.

NORTH 15TH STREET

This parcel in 1942 is identified as a garage that has three gasoline tanks. It is unknown whether these tanks were aboveground or underground. By 1951 the parcel is identified as a garage (with three gasoline tanks) for the City of New York Division of School Lunches. From 1965 through 2007 the available documentation does not indicate the use of the parcel but appears to have been used as a garage. The 1965 Sanborn Map shows evidence of the three gasoline tanks. Google Map images from 2007 indicate that the parcel was part of the operations of Poly Craft Company. In 2013 the parcel appears to have under renovation for its current use as an eating establishment, brewery, and warehouse space.

The subject property is identified on several different databases under following facility names and addresses:

- Polycraft Industries Corporation located at 12 Franklin Street is identified on the Aerometric Information Retrieval Systems (US AIRS) and the Facility Index System (FINDS) databases. These databases are non-contamination-related listings.
- Poly Converters of America Inc. located at 2 Meserole Avenue (which also appears to be 12 Franklin Street) is identified on the Resource Conservation and Recovery Act Non Generator / No Longer Regulated (RCRA Non Gen / NLR ()), FINDS, and NY MANIFEST (Facility and Manifest Data) databases. The RCRA Non Gen / NLR and FINDS databases are non-contamination-related listings. According to the RCRA Non Gen / NLR and/or NY Manifest database listings, this former occupant was historically a large quantity generator (LQG) of ignitable hazardous waste with one violation in which compliance was achieved.

The NY MANIFEST database lists and tracks hazardous waste from the generator through transporters to a transfer, storage, and disposal (TSD) facility. This database indicates that several thousands of pounds and gallons of non-listed ignitable wastes were generated between 1992 and 1994.

- Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue is identified on the RCRA- Small Quantity Generator (SQG), US AIR, FINDS, and NY MANIFEST databases. The US AIR and FINDS databases are non-contamination-related listings. The RCRA-SQG and NY MANIFEST databases identify the site as generating wastes consisting of spent cyanide plating bath solutions, spent stripping and cleaning bath solutions, and non-listed corrosive wastes between 2005 and 2012. This facility was historically identified as a LQG as early as 1980. No RCRA violations were identified. However, the known historical operations of similar electro plating operations were often associated with uncontrolled discharges and sloppy housekeeping.
- VE2 Plating Company located at 7 – 11 North 15th Street is identified under the NY UST, NY Historical (HIST) UST, RCRA Non Gen / NLR and NY MANIFEST databases. The NY UST and NY HISTUST databases identify the abandonment of a 2,000-gallon No. 2 fuel oil UST. The fill port of this UST was identified during AECOM's site reconnaissance. The RCRA-SQG and NY MANIFEST databases identify the site as generating corrosive wastes, chromium, lead, spent cyanide, plating bath solutions, spent stripping and cleaning bath solutions from electro plating operations between 1989 and 1995. Some of these wastes are identified as being generated from Presto Electro Plating Corporation. Multiple RCRA violations are reported for this facility between 1992 and 1994; however, compliance is listed as being achieved in 1995. As previously stated, the known historical operations of similar electroplating operations were often associated with uncontrolled discharges and sloppy housekeeping.

According to the environmental database report, 102 database listings for 45 sites were identified within 1/8 mile of the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient) except for the NYCDEP B-9 Facility located at 22 North 15th Street. The USTs associated with a fueling station for the NYCDEP maintenance vehicles is located approximately 100 feet southwest of the subject property across North 15th Street. This site is listed on the NY HIST UST database.

According to the site-specific environmental database report, this site had three 1,000 gallon gasoline USTs removed in 1984 and currently has three active 1,000 gallon gasoline USTs. The NYSDEC closed the files on the removed USTs in 1998. However, due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, as well as the proximity of this site, it is AECOM's opinion that a VEC cannot be ruled out, and therefore, the former and current USTs at this site are considered a REC. In addition, though none of the database listings for W.H. Christian & Sons at 22-28 Franklin Street are considered a REC, a uniform rental, laundry and dry cleaning has operated at this site sometime after 1939 and prior to 1994. Due to the lack of available information regarding the historical dry cleaning operations, it is AECOM's opinion that a VEC cannot be ruled out, and is therefore considered a REC..

The following RECs were identified during this assessment:

- There is no documentation for the removal of the 2,000 gallon No. 2 Fuel Oil UST located at the 7 North 15th Street parcel. The location of the former UST is located below the bar and

dining area for Dirck the Norseman. The potential exists for residual contamination to exist below the parcel.

- The 1942 and 1951 Sanborn Maps indicate the presence of three gasoline tanks located at the 7 North 15th Street parcel. Two of these tanks appear to be located in the parcel which is bar and brewery area for Dirck the Norseman and one tank appears to be located along the sidewalk of the parcel. The geophysical survey did not detect any evidence of the former UST in the sidewalk and the survey could not be performed within the interior of Dirck the Norseman. The potential exists that the two former gasoline tanks are USTs that are still beneath the floor of Dirck the Norseman.
- Visual evidence identified the presence of a UST vent pipe within the sidewalk at 8 Meserole Avenue. Records provided by the Fire Department of the City of New York (FDNY) indicate that a 1,080 gallon UST formerly used to store No. 2 fuel oil currently exists at 8 Meserole Avenue. Since fuel oil is no longer used at this parcel, the tank is out-of-service. As such, it needs to be closed in accordance with the appropriate requirements of Chapter 34 of the New York City Fire Code as identified in the Rules of the City of New York (RCNY).
- As for the remaining RECs, the current operations at the subject property make it highly unlikely for employees and/or patrons to come into contact with potential contaminants typically associated with these type of RECs. However, these RECs will need to be further evaluated upon any future redevelopment or intrusive work at the subject property. This suggests that a UST may still be present and that it was abandoned in-place. Since there is no documentation associated with this potential UST, the potential exists for a UST to be present and that residual contamination may exist in the area.
- The former operations of Superior Bearing Bronze Company and Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue and VE2 Plating Company located at 7-11 North 15th Street generated a variety of wastes associated with electro-plating. These wastes generally consisting of spent cyanide plating bath solutions, spent stripping, corrosive wastes, cleaning bath solutions, and non-listed corrosive wastes between 2005 and 2012. The known historical operations of similar electro plating operations were often associated with uncontrolled discharges and sloppy housekeeping. Therefore, the potential exists for these two former operations to have impacted the surrounding environment.
- Information pertaining to the NYCDEP B-9 Facility at 22 North 15th Street indicates that a maintenance fueling station is located approximately 150 feet south of the subject property across North 15th Street. According to the site-specific environmental database report, this site had three USTs removed in 1984 and currently has three active 1,000 gallon gasoline USTs. Due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, it is AECOM's opinion that residual contamination cannot be ruled out.
- W.H. Christian & Sons at 22-28 Franklin Street is a uniform rental, laundry and dry cleaning operations located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going sometime after 1939 and prior to 1992. Due to the information pertaining to the disposal of halogenated solvents and still bottoms, and the knowledge that the historical operations of dry cleaners have the potential to impact the environment, and the lack of available information regarding the dry cleaning operations, it is AECOM's opinion that potential contamination to the surrounding environment cannot be ruled out.

As for the RECs identified above, the current operations at the subject property make it highly unlikely for employees and/or patrons to come into contact with potential contaminants typically associated

with these types of RECs. Impacts from potential contaminants are not a significant concern at this time. However, these RECs will need to be further evaluated upon any future redevelopment or intrusive work at the subject property.

This assessment revealed no evidence of HRECs or CRECs in connection with the property.

The following de minimis conditions (DMCs) were identified during this assessment:

- Pipe cutting and threading equipment was located at two locations within Eastern Metal Plumbing Supply. Cutting oil stains were located on the floor and wall for the equipment located in the rear of the facility while oil staining on the floor was present in the equipment located near the garage door for the facility. Each of the stains on the floor measured approximately three feet wide by three feet long while the staining on the wall measured approximately two feet wide by three feet long. The concrete floor appeared to be in good condition and there were no floor drains visible at these two locations. Given the localized nature of this staining, AECOM considers this a DMC.
- AECOM noted some staining in partial basement located at 8 Meserole Avenue. The staining is less than four square feet on one of the basement walls and was likely associated with the former aboveground heating oil tank reported by the site contact for Scientific Laboratory Music. No other information was available on this reported former AST such as removal date, size, or age. Though a sump is located in the corner of the basement to discharge rainwater that enters the basement, the visible staining was isolated and not near the sump. Given the localized nature of this staining, AECOM considers this a DMC.

1.0 Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was performed pursuant to AECOM's written proposal, dated September 15, 2015. This assessment was performed in advance of the potential sale and redevelopment of the subject property. The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property.

Per the ASTM standard, potential findings can include RECs, including historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions. A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. De minimis conditions (DMCs) are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

This assessment is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property. In addition, a geophysical survey of the sidewalks located adjacent to the subject property was performed to assess the potential for underground storage tanks (USTs).

This project was performed in general accordance with ASTM Standard Practice Designation E 1527-13 and AECOM's proposal, dated September 15, 2015. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of contamination-related liabilities materially affecting the subject facility and/or property. In the conduct of this assessment, AECOM assessed the presence of such problems within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in the ASTM standard (referred to below as "this practice"), it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of the ASTM standard)
- Not Exhaustive - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of the ASTM Standard)
- Comparison with Subsequent Inquiry - ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of the ASTM Standard)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when the ASTM E1527-13 standard is employed. According to the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No vapor encroachment screen (VES) can wholly eliminate uncertainty regarding the identifications of vapor encroachment conditions (VECs) in connection with the target property (Section 4.5.1).
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. . One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors (Section 4.5.4)

This report was prepared pursuant to an agreement between Simon Baron Development LLC (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- It was not feasible to evaluate every individual room or space within the building during the site visit. AECOM's evaluation of these buildings focused on areas where hazardous substances are handled. Based on the use of the subject property this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- The roof was assessable only at the restaurant / pub operations at Northern Territory. However, AECOM was able to visible scan the roofs of all of the other businesses identified in this report. Based on the use of the subject property this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- AECOM was not allowed to inspect all of the rehearsal rooms located in the music studio known as Scientific Laboratory. The owner of the studio stated that each of these rooms are privately owned and he does not have keys to access these rooms. The owner did show AECOM a typical rehearsal room that is currently owned by a friend. However, based upon current use of the portion of the subject property, this data gap is not expected to impact the results of this assessment

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this ESA. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment. In addition, the user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property.
- Per ASTM, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- AECOM has yet to receive responses from the Fire Department of the City of New York and the New York City Department of Health and Mental Hygiene. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- As of the date of this report, the client had not provided AECOM with a completed ASTM 1527-13 User Questionnaire which summarized their knowledge of title records, environmental liens, specialized knowledge, and/or real estate value reduction issues associated with the subject property. However, this data gap is not expected to impact the results of this assessment.

2.0 Site Description

2.1 Site Location and Parcel Description

The subject property is located at 12 Franklin Street, Brooklyn, Kings County, New York. The businesses located at this address are also identified as 7 North 15th Street and 8 Meserole Avenue. The subject property is situated along Franklin Street between North 15th Street and Meserole Avenue. Five businesses currently occupy the subject property. These businesses are:

- Eastern Metal Plumbing and Hardware – 12 Franklin Street
- Northern Territory (Bar / Restaurant) – 12 Franklin Street
- Dirck the Norseman (Bar / Restaurant / Brewery) – 7 North 15th Street
- Bacik Sausage Company (Warehouse) – 7 North 15th Street
- Scientific Laboratory Music Company – 8 Meserole Avenue

The businesses located at the subject property are accessed from Franklin Street to the west, North 15th Avenue to the southwest, Meserole Avenue to the north, and Gem Street to the east .

According to the New York City Department of Finance (NYCDOF), the subject property is designated as Block 2614, Lots 1, 3, and 8. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the NYCDOF, the subject property is owned by 12 Franklin Street Realty Corporation.

2.3 Site Visit

Mr. Nelson J. Abrams with AECOM's 125 Broad Street, New York, New York office visited the subject property on September 21, 2015. During the site visit, Mr. Abrams was accompanied by the following individuals at each of the businesses identified above:

- Mr. Scott Beiber - Eastern Metal Plumbing and Hardware
- Mr. John Marchisio / Ms. Gabby Ponce - Northern Territory
- Mr. Jeff Lyons - Dirck the Norseman
- Mr. Miet Gidel - Bacik Sausage Company
- Mr. Richard Kelly - Scientific Laboratory Music Company

In addition, Mr. Abrams spoke with Mr. Mark Lively, Associate Director for Cushman and Wakefield who is associated with the sale and redevelopment of the subject property.

Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4.

The site visit methodology at each of the businesses identified above consisted of walking over accessible areas of the subject property, including the building interior and exterior, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The 0.64-acre subject property is occupied by five commercial businesses within three buildings: 12 Franklin Street / 2-6 Meserole Avenue (1.5 stories referred to herein as 12 Franklin Street), which is occupied by Northern Territory and Eastern Metal Plumbing and Hardware; 8 Meserole Avenue / 37 Gem Street (1-story, referred to herein as 8 Meserole Avenue), which is occupied by Scientific Laboratory Music Company; and 27-33 Gem Street/3-7 North 15th Street (1.5 stories, referred to herein as 7 North 15th Street), which is occupied by Dirck the Norseman and Bacik Sausage Company. Each of the three buildings are constructed as slab-on-grade. Scientific Laboratory Music Company located at 8 Meserole Avenue contains a small partial basement on the northern portion of the property along Meserole Avenue.

The exterior walls of the buildings are of brick masonry and concrete masonry unit (CMU) construction with a wood roof decking. The roofing system consists of the main roof areas, each of which are flat, and are surfaced with a smooth-surface bitumen membrane with an aluminum oxide coating. The Northern Territory business constructed a roof deck as part of their restaurant operations and is surfaced with concrete pavers.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was observed on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was observed during the site visit. In addition, no visual evidence of significant corrosion was observed on the floors or walls of the subject property building or on the exterior of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in a mixed use area of Brooklyn consisting of commercial and industrial properties. The subject property is bordered to the north by Meserole Avenue, beyond which are unidentified one-story warehouses / industrial facilities. The subject property is bordered to the east beyond Gem Street by a smoke fish processing facility (Acme Smoked Fish), as well as other unlabeled one-story warehouses and industrial operations. The subject property is bordered to the south-southeast by adjoining, unmarked one-story warehouses / industrial facilities, and North 15th Street to the south-southwest, beyond which is a paved parking area with a fuel pump and the New York City Department of Environmental Protection (NYCDEP) Brooklyn maintenance department building. The subject property is bordered to the west, beyond Franklin Street, by a one-story warehouse and undeveloped land, beyond which is the Bushwick Inlet.

AECOM did not observe any current gasoline service stations in the immediate vicinity (500 feet) of the subject property. However, a fuel pump island is located on the southern side of North 15th Street is owned by the maintenance department for the NYCDEP and appears to have been the same location of a historical gasoline service station. In addition, W.H. Christian & Sons at 22-28 Franklin Street is a laundry and dry cleaner located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going since 1924. No sensitive receptors (i.e. day care centers, schools, hospitals, water bodies) are adjacent to the subject property, though the Bushwick Inlet is located approximately 200 feet west of the subject property on the opposite side of Franklin Street. Based on AECOM's site reconnaissance of the surrounding neighborhood, the fuel pump island owned by the NYCDEP and the nearby dry cleaner are considered potential off-site sources of concern.

2.3.3 Petroleum Products and Hazardous Materials

Two areas within the supply storage area of Eastern Metal Plumbing and Hardware where pipe cutting equipment is located were heavily stained with petroleum cutting oils. Additionally, evidence of underground storage tanks were located at two of the businesses at the subject property. A vent pipe was located within the sidewalk adjacent to Scientific Laboratory Music Company and a fill cap labelled "fuel oil" was located adjacent to the bar within Dirck the Norseman.

Besides these items, other than normal commercial cleaning supplies, hazardous materials or petroleum products were not observed at the subject property, or were reported by any of the individuals interviewed to be located at the subject property. Staining or visual evidence of a hazardous materials release other than what was observed at Eastern Metal Plumbing and Hardware was not observed at the time of the site visit.

2.3.4 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCBs to be present on-site.

No hydraulic equipment (transformers, trash compactors, lifts) was observed on the subject property.

2.3.5 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not observed during the site visit. Each of the individuals interviewed were not aware of any ASTs located on the subject property. Mr. Kelly of Scientific Laboratory Music indicated that he was informed that a former AST was located in the partial basement located at 8 Meserole Avenue. The inspection of this space presented evidence that an AST was located in this area as some old petroleum staining was visible on one of the basement walls. The concrete floor of the basement was in poor condition and a sump used to remove rainwater was located in the corner of the basement. It was unclear whether a vent pipe observed approximately 20 feet from the partial basement was associated with the former AST. No ASTs were listed in the site-specific environmental database report reviewed by AECOM, or otherwise identified during AECOM's review of historical aerial photographs.

2.3.6 Underground Storage Tanks

Visual evidence of underground storage tanks (USTs) were observed during the site visit. As previously stated, a vent pipe typically associated with USTs was present in front of Scientific Laboratory along Meserole Avenue. While the current owner indicated that the vent pipe was associated with the former AST located in the partial basement, the distance from the vent pipe to the former AST is uncharacteristic for an AST piping system. A brass fill cap labeled fuel oil was located within the bar of the Dirck the Norseman restaurant. This is likely associated with a 2,000 gallon No. 2 Fuel Oil UST that was backfilled in 1996 as indicated by documentation provided by the New York State Department of Environmental Conservation (NYSDEC).

As part of this Phase I ESA, AECOM performed a geophysical survey within accessible areas along North 15th Street, Franklin Street, and Meserole Avenue to evaluate that the presence of potential USTs under the sidewalks adjacent to the subject property (Appendix C). The survey was also

conducted in the area of the fuel oil cap identified within Dirck the Norseman. The results of the geophysical survey did not indicate presence of any USTs within the survey area. However, it should be noted that documentation provided by the NYSDEC indicated that the UST located within Dirck the Norseman was closed in place, yet the geophysical survey did not identify the presence of a filled UST. This may be due to the concrete and fill material located in the area of the former UST. No UST closure/removal documentation was available for the 2,000-gallon fuel oil tank located beneath the subject property in the bar and dining area of Dirck the Norseman. Therefore, this UST is considered a REC. Additionally, it is unconfirmed whether the vent pipe observed in front of Scientific Laboratory along Meserole Avenue is associated with a former AST or a UST. Therefore, there is a potential that an orphaned UST may be present in this location, which is considered a REC.

No USTs were listed in the site-specific environmental database report for the subject property.

2.3.7 Solid Waste

A solid waste dumpster and /or garbage cans were located at each of the businesses at the subject property. According to each of the individuals interviewed, the dumpster and garbage cans are used for the disposal of discarded food, shipping packaging, paper, and general office trash. No evidence of inappropriate disposal activities and no significant staining were observed in the vicinity of the dumpster and garbage cans at any of the businesses.

2.3.8 Hazardous Waste

No evidence of hazardous waste generation was observed at any of the businesses at the subject property, and the individuals interviewed at each business reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.9 Water

Each of the businesses at the subject property receives its potable water supply from the NYCDEP. No potable water wells were observed at the subject property or reported by the site contacts.

2.3.10 Wastewater

Wastewater discharges from each of the businesses at the subject property include effluent from human consumptive use and floor drains located in the restrooms at the two restaurants, which, according to site contacts, discharge directly to the municipal sanitary sewer system. Staining or visual evidence of a hazardous materials release was not observed in the vicinity of the floor drains. Wastewater is ultimately discharged to the NYCDEP's Owls Head wastewater treatment plant.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the numerous stormwater drains located throughout the paved streets adjacent to the subject property. No staining was observed in the vicinity of the storm drains.

2.3.12 Heating and Cooling

There is no central heating or air conditioning for the businesses at the subject property. Heat for the businesses are provided via individual natural gas-fired, ceiling mounted forced air heating units. Natural gas is supplied by National Grid. Limited roof mounted and window air conditioning units were observed and are responsible by each of the tenants at the subject property.

3.0 Environmental Setting

3.1 Topography

According to the United States Geological Survey (USGS) topographic map of the subject property area (Brooklyn, NY Quadrangle) and a review of the Google Earth website, the elevation of the subject property is approximately eight feet above mean sea level (msl). Based on a review of these technical resources and AECOM's site visit, the subject property appears to be generally flat with a slight downward slope toward the west towards Bushwick Inlet.

3.2 Soil/Geology

The subject property is located in the Cretaceous-age Atlantic Coastal Plain physiographic province. The geology of this province is unique, in that it is not made up of rock, but consists of unconsolidated sediments. Bedrock is not exposed anywhere at the ground surface within the Coastal Plain; however, it is exposed immediately to the west and northwest on Staten Island and in the Bronx.

Based upon previous investigation conducted by AECOM at nearby properties, two major stratigraphic units, in the order of increasing depth, were identified. These units consist of fill and native soil. The subsurface consists of a layer of fill material ranging from a depth of 11 to 19 feet below grade. The fill generally consists of sand and silty sand with crushed stone, wood, concrete, ash, cinders, and brick. The fill is underlain by black organic silt ranging in thickness from two (2) to ten (10) feet. Silt with alternating strata of fine sandy silts and silty clays is present beneath the layer of black organic silt to depths of approximately 50 to 70 feet below grade, after which point a gray to reddish brown stiff silty clay occurs. Bedrock was not encountered during any of these investigations.

3.3 Groundwater/Hydrology

Physiographically, Kings County is part of the Long Island Hydrogeologic System. In a roughly north-south cross section, the geology can be characterized as a wedge shaped layer of Cretaceous and Pleistocene age unconsolidated sediments, thickening to the south-southeast. Several impermeable clay layers are found within this sediment package, generally creating three distinct aquifers. Potable water is primarily withdrawn from the deepest of the aquifers in southeastern Kings County; groundwater is the sole source of drinking water in Nassau and Suffolk Counties and is protected as such in Kings County. Consolidated bedrock is of Precambrian and Paleozoic age. The thickness of the unconsolidated sequence ranges from zero to approximately 1,300 feet below ground surface from north to south. The uppermost unconsolidated unit consists of Pleistocene glacial till and moraine deposits in the northern portion of Kings County and glaciofluvial sediments derived from melt-water of the retreating glacier to the south. These deposits constitute the Upper Glacial Aquifer.

Based upon AECOM's previous investigations in the area, groundwater was encountered between depths ranging from 2 to 8 feet below grade. Based upon the groundwater elevations obtained from existing and installed monitoring wells in the area, groundwater flows towards Bushwick Inlet and the East River located to the west of the subject property.

4.0 Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Sanborn® Fire Insurance Maps (Sanborn maps) dated 1887, 1905, 1916, 1928, 1942, 1951, 1965, 1978, 1979, 1980 to 1983, 1986 to 1989, 1991, 1993, 1995, 1996, and 2001 to 2007;
- Aerial photographs dated 1941, 1944, 1951, 1954, 1961, 1974, 1976, 1980, 1991, 1994, 2006, 2009, and 2011;
- Topographic maps dated 1900, 1924, 1947, 1956, 1967, 1979, and 1995;
- City directories for the years 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1997, 2000, 2005, 2008, and 2013;
- Building Department records reviewed via the New York City Department of Building's (NYCDOB's) website; and
- Tax Assessment records reviewed via the NYCDOF's website.

4.1 Subject Property

Based on a review of available records from the NYCDOF's and NYCDOB's websites and Sanborn maps, the three buildings that comprise the subject property were constructed sometime after 1916 and prior to 1941. The 1887 Sanborn maps indicate that the subject property was undeveloped. By 1905 the northern portion of the subject property (currently occupied by 12 Franklin Street and 8 Meserole Avenue) was occupied by the Bulmer Lumber Company. The remaining portion of the subject property consisted of undeveloped land. In 1916, the lumber company was replaced by Warner & Stell Wagon Trucking. A 1930's Certificate of Occupancy states that 12 Franklin Street was owned by the Sterling Horse Feed Company for the storage of horse feed. By 1942 the three buildings at the subject property are present. The following summarizes the businesses which occupied each of the buildings:

12 FRANKLIN STREET

This parcel in 1942 was identified as the Warner Dog Food Company, Inc and is also identified in 1965 as Dri Food Products Inc. The operations of this company remained at this parcel until sometime after 1965. By 1970, the operations at this portion of the subject property were identified as Ace Cellophane & Polyethylene Corporation, though a 1968 Certificate of Occupancy states that the parcel was used for printing and converting polyethylene and cellophane bags. Sometime between 1973 and 1997 the parcel began operating as Polycraft, Inc. which appears to have ceased operation in 2013. Eastern Metal Plumbing Supply began operating sometime between 2012 and 2013 based upon imaging from Google Maps. In 2013, construction was ongoing for the Northern Territory bar / restaurant and began operating by 2014.

8 MESEROLE AVENUE

This parcel in 1942 is identified as plywood storage. In 1945 the parcel is identified on a Certificate of Occupancy form as conducting chipping, blasting and finishing of magnesium castings. By 1951, the parcel is identified as the Superior Bearing Bronze Company for magnesium casting cleaning. The operations of this company remained at this parcel until sometime prior to 1965. From 1965 to 1985 the parcel is identified as Hardchrome Electro Processing Corporation, Universal Electro Chemical Company, and Universal Electric Sign Company, Inc. In 2000, the parcel is identified as RPM Auto Service. Google Map images from 2007 indicate that the exterior of the parcel is relatively well maintained but does not identify the type of operations. The current operations, Scientific Laboratories Music Studios appear to have occupied the parcel sometime prior to 2010. Building records indicate that renovations to the parcel were ongoing in 2007.

NORTH 15TH STREET

This parcel in 1942 is identified as a garage that has three gasoline tanks. It is unknown whether these tanks were aboveground or underground. By 1951, the parcel is identified as a garage (with three gasoline tanks) for the City of New York Division of School Lunches. From 1965 through 2007 the available documentation does not indicate the use of the parcel but appears to have been used as a garage. The 1965 Sanborn Map no longer shows evidence of the three gasoline tanks. Google Map images from 2007 indicate that the parcel was part of the operations of Poly Craft Company. In 2013 the parcel appears to have under renovation for its current use as an eating establishment, brewery, and warehouse space.

4.2 Off-site Properties

The majority of the surrounding properties appear to have been vacant prior to 1887. The development of commercial and residential buildings appears to have begun between 1905 and 1916.

NORTH

Properties located north of the subject property in 1887 were mostly vacant with a few small commercial and industrial operations, including a boiler shop located to the northwest. By 1905 the majority of the northern properties were the same as those in 1887. By 1916 operations located to the north consisted of primarily iron, pipe, and boiler works consisting of George J. Brown Iron Works, Meadon's Blower & Pipe, Ball & Jewell (iron works), and Franklin Machine & Steam Boiler Works. The majority of businesses identified in 1916 were still present in 1942 and 1951. The only differences were the George J. Brown Iron Works was no longer present and the Franklin Machine & Steam Boiler Works was now the location of Paper Box Warehouse. By 1965 the Paper Box Warehouse was identified as only a warehouse, while all other properties remained relatively the same as those in 1942. From 1978 through 2007 the northern properties were listed as unidentified manufacturing buildings, storage buildings, and vacant buildings. The only change was that the warehouse identified in 1965 was identified in 1991 as an auto repair facility/ warehouse. A uniform rental, dry cleaning and laundry facility known as W.H. Christian & Sons is currently located at 22-28 Franklin Street. A review of available historical documents could only determine that the facility had been operating at its current location sometime after 1939 and prior to 1992.

EAST

Properties located east of the subject property in 1887, 1905, and 1916 were undeveloped. By 1942 the majority of the properties to the east were still undeveloped, with the exception of a garage which contained a gasoline tank and fish smokehouse located to the southeast. The use of these properties remained the same in 1951. By 1965 the property directly to the east of the subject property was identified as the Williamsburg Steel Products Company. From 1978 through 2007 the properties to the east remained relatively unchanged, with the exception that in 1978 the Williamsburg Steel Products Company was identified as New York Builders Corporation.

SOUTH

Properties located east of the subject property in 1887 and 1905 were undeveloped. By 1916 the properties were identified as a Contractor's Yard containing various buildings. By 1942 the properties adjacent to the subject property were identified as private garages and welding operations with properties across from North 7th Street identified as a gasoline service station and an auto wrecking yard. The use of these properties remained relatively the same in 1951 and 1965 with the exception that the auto wrecking yard was identified as a steel drum storage yard in 1951 and the private garages were identified as storage in 1965. From 1978 through 2007 the southern properties were identified as storage buildings and an unidentified manufacturing facility. The service station is no longer identified by 1978, but the location of this service station is in the same location as a fueling island currently being used by the NYCDEP's Brooklyn Maintenance Facility, which also occupies the building listed as an unidentified manufacturing facility.

WEST

Properties located west of the subject property in 1887, 1905, and 1916 were undeveloped. By 1916 the properties were identified as a Contractor's Yard containing various buildings. By 1941 aerial photographs identify the properties as being used as a shipping yard and dry dock, which in the 1942 Sanborn map identifies the property as D. Costegliola & Company, Inc. Ship Yard & Dry Dock. This company is present in 1951 and operations appear to be ongoing in a 1961 aerial photograph. By 1965 they are no longer identified west of the subject property and the property appears to be vacant in a 1966 aerial photograph. The current condition of this property is vacant and overgrown, but is identified by the City of New York Department of Parks and Recreation as Bushwick Inlet Park.

4.3 Previously Prepared Environmental Reports

Phase I Environmental Site Assessment, 12 Franklin Street Realty Corp./8 Meserole Ave LLC, 12 Franklin Street, Brooklyn, NY 11222, dated August 19, 2013. Prepared by Nova Consulting Group, Inc. for 12 Franklin Street Realty Corporation

Nova Consulting Group performed a Phase I ESA at the subject property. In 2013, the occupants of the subject property were:

- Eastern Metal Plumbing Supply – 12 Franklin Street (1st Floor)
- Knot Holding LTD (Restaurant under construction) – 12 Franklin Street (1st Floor, partial 2nd Floor, upper roof area)
- Poly Craft Company (owner's office) – 12 Franklin Street (2nd Floor)
- The Beer Guy (Restaurant/Bar/Brewery under construction) – 7 North 15th Street
- Bacik Polish Sausage – 7 North 15th Street (warehouse access on Gem Street)

- Scientific Laboratory Music Company – 8 Meserole Avenue

The RECs identified by Nova Consulting at the subject property were as follows:

- The Sanborn Maps indicated that the existing building is in place by 1942 on the portion of the subject property known as Lot 1 / 7 North 15th Street. The building is depicted as being a garage with three gasoline tanks located in the western third of the building, presumably buried beneath the building's floor. The garage and three tanks are also present in the 1951 Sanborn Map. During the course of the Nova Consulting assessment, no other information regarding these USTs was identified that would indicate removal and/or the condition of these tanks. Also, the property manager, Mr. Ralph Heidings, was not aware of the historical presence of gasoline tanks on the Property and, therefore, was not able to provide information regarding the tanks. Based on the historical presence of these tanks, as indicated by the referenced Sanborn Maps, and the fact that no information is available regarding the existence of these tanks, it is possible they remain in place as orphaned USTs. Considering the unknowns in association with potential orphaned USTs, this represents a REC with the Property that requires additional investigation.

In consideration of ASTM non-scope items of environmental concern, Nova Consulting noted the following as warranting mention:

- Approximately one square foot of friable suspect asbestos containing materials (ACM) pipe wrap was identified in the 8 Meserole Avenue partial basement in fair condition. In addition, an unquantified amount of friable and non-friable suspect ACM, including 12"x12" vinyl floor tile and mastic, gypsum board and joint compound, and roofing materials were observed on-site. These materials were generally observed to be in good to average condition. It is noted that an evaluation of possible asbestos containing materials was not a part of the current AECOM Phase I ESA scope of work.

5.0 Database and Records Review

5.1 User Provided Information

As of the date of this report, the Client had not provided AECOM with a completed ASTM 1527-13 User Questionnaire which summarized their knowledge of title records, environmental liens, specialized knowledge, and/or real estate value reduction issues associated with the subject property. This is considered a data gap for this report.

5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a chain-of-title and an environmental lien search were not performed as part of this assessment.

5.3 Database Information

In accordance with the scope of work and ASTM Standard E-1527-13, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from an on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Additional sites were identified within the database report; however EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with any of the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix B.

Based on AECOM's research, the subject property is not located on or within a one-mile radius of tribal lands.

5.3.1 Subject Property

The subject property is identified on several different databases under following facility names and addresses:

- Polycraft Industries Corporation located at 12 Franklin Street is identified on the Aerometric Information Retrieval Systems (US AIRS) and the Facility Index System (FINDS) databases. These databases are non-contamination-related listings.
- Poly Converters of America Inc. located at 2 Meserole Avenue (which also appears to be 12 Franklin Street) is identified on the Resource Conservation and Recovery Act Non Generator / No Longer Regulated (RCRA Non Gen / NLR ()), FINDS, and NY MANIFEST (Facility and Manifest Data) databases. The RCRA Non Gen / NLR and FINDS databases are non-contamination-related listings. According to the RCRA Non Gen / NLR and/or NY Manifest database listings, this former occupant was historically a large quantity generator

(LQG) of ignitable hazardous waste with one violation in which compliance was achieved. The NY MANIFEST database lists and tracks hazardous waste from the generator through transporters to a transfer, storage, and disposal (TSD) facility. This database indicates that several thousands of pounds and gallons of non-listed ignitable wastes were generated between 1992 and 1994.

- Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue is identified on the RCRA- Small Quantity Generator (SQG), US AIR, FINDS, and NY MANIFEST databases. The US AIR and FINDS databases are non-contamination-related listings. The RCRA-SQG and NY MANIFEST databases identify the site as generating wastes consisting of spent cyanide plating bath solutions, spent stripping and cleaning bath solutions, and non-listed corrosive wastes between 2005 and 2012. This facility was historically identified as a LQG as early as 1980. No RCRA violations were identified. However, the known historical operations of similar electro plating operations were often associated with uncontrolled discharges and sloppy housekeeping. Therefore, this site is considered a HREC.
- VE2 Plating Company located at 7 – 11 North 15th Street is identified under the NY UST, NY Historical (HIST) UST, RCRA Non Gen / NLR and NY MANIFEST databases. The NY UST and NY HISTUST databases identify the abandonment of a 2,000-gallon No. 2 fuel oil UST. The fill port of this UST was identified during AECOM's site reconnaissance. The RCRA-SQG and NY MANIFEST databases identify the site as generating corrosive wastes, chromium, lead, spent cyanide, plating bath solutions, spent stripping and cleaning bath solutions from electro plating operations between 1989 and 1995. Some of these wastes are identified as being generated from Presto Electro Plating Corporation. Multiple RCRA violations are reported for this facility between 1992 and 1994; however, compliance is listed as being achieved in 1995. As previously stated, the known historical operations of similar electroplating operations were often associated with uncontrolled discharges and sloppy housekeeping. Therefore, this site is considered a HREC.

5.3.2 Surrounding Sites

According to the environmental database report, 102 database listings for 45 sites were identified within 1/8 mile of the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). Due its proximity to the subject property, the following sites is discussed in additional detail.

- NYCDEP B-9 Facility located at 22 North 15th Street : The USTs associated with a fueling station for the NYCDEP maintenance vehicles is located approximately 100 feet southwest of the subject property across North 15th Street. This site is listed on the NY HIST UST database. According to the site-specific environmental database report, this site had three 1,000-gallon gasoline USTs removed in 1984 and currently has three active 1,000-gallon gasoline USTs. The NYSDEC closed the files on the removed USTs in 1998. However, due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, as well as the proximity of this site, it is AECOM's opinion that the former and current USTs at this site are considered a REC.

- W.H. Christian & Sons, located at 22-28 Franklin Street is a laundry and dry cleaning operations located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going sometime after 1939 and prior to 1992. This site is listed on the NY HIST UST, NY UST, New York Leaking Tank (NY LTANK), RCRA NonGen/NLR, Integrated Compliance Information System (ICIS), FINDS, New York Aboveground Storage Tank (NY AST), and NY Manifest databases. According to the site-specific environmental database reports, this site has a 1,080 gallon fuel oil UST, and a 1,500 gallon No. 2 fuel oil AST. A UST of unknown size containing gasoline was closed in 1997 due to a leaking in the vent line and a 2,000 gallon fuel oil UST was closed in place in 2005. The database records show that halogenated solvents and still bottoms from the recovery of solvents were generated from the site between 1995 and 1997. The site appears to be a non-generator of solvents and still bottoms since 1999. Due to the lack of available information regarding past operations and waste disposal method, as well as the proximity of this site, it is AECOM's opinion that the former and current USTs at this site are considered a REC.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 vapor encroachment screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E2600 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated June 2010. The objective of the VES was to evaluate the following:

1. A vapor encroachment condition (VEC) exists, or
2. Is likely to exist, or
3. Cannot be ruled out, or
4. Can be ruled out because it does not exist or is not likely to exist.

Since the status of the three former gasoline tanks at the 7 North 15th Street parcel is unknown, including whether they were ASTs or USTs, the subject property is a potential source of vapor encroachment.

AECOM reviewed the site-specific environmental database report with particular focus on the following two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (VOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraphs summarize the results of AECOM's VES of the subject property.

A review of the site-specific environmental database indicates that two chlorinated VOC/SVOC and 45 petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, one of the two chlorinated VOC-impacted, and 44 of the 45 petroleum hydrocarbon-impacted sites can be ruled out due to their regulatory status (i.e. regulatory closure has been issued), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). The following two bullets discuss the remaining two sites:

- NYCDEP B-9 Facility at 22 North 15th Street has a maintenance fueling station located approximately 150 feet south of the subject property across North 15th Street. According to the site-specific environmental database report, this site had three USTs removed in 1984 and currently has three active 1,000 gallon gasoline USTs. Due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, it is AECOM's opinion that a VEC cannot be ruled out, and therefore, the former and current USTs at this site are considered a REC.
- W.H. Christian & Sons at 22-28 Franklin Street is a uniform rental, laundry and dry cleaning operations located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going sometime after 1939 and prior to 1992. Due to the lack of available information regarding the dry cleaning operations, it is AECOM's opinion that a VEC cannot be ruled out, and is therefore considered a REC.

5.5 Agency File Review

AECOM submitted Freedom of Information Act (FOIA) requests to the NYSDEC, Fire Department of New York (FDNY), and the New York State Department of Health (NYSDOH) for information related to spills/releases of oil or hazardous materials and other significant incidents.

AECOM received limited information from the NYSDEC pertaining to the parcel located at 7 North 15th Street. Documents provided by the NYSDEC indicate that a 2,000-gallon No. 2 fuel oil steel UST was closed in-place in 1996. There is no information pertaining to any contamination associated with the closure of the UST or anything related to the gasoline tanks identified on the Sanborn Maps. We are currently waiting for additional responses from the NYSDEC to the other parcels as well as response from the other agencies regarding all three parcels.

Documentation received from the FDNY indicate that a 1,080 gallon UST formerly used to store No. 2 fuel oil currently exists at 8 Meserole Avenue. Since fuel oil is no longer used at this parcel, the tank is out-of-service. As such, it needs to be closed in accordance with the appropriate requirements of Chapter 34 of the New York City Fire Code as identified in the Rules of the City of New York (RCNY).

As for the remaining RECs, the current operations at the subject property make it highly unlikely for employees and/or patrons to come into contact with potential contaminants typically associated with these types of RECs. However, these RECs will need to be further evaluated upon any future redevelopment or intrusive work at the subject property.

AECOM also reviewed the following databases, in addition to those identified in Section 5.3.2:

- New York State Department of Environmental Conservation, Bulk Storage Database Search. The subject property was not identified in the database.
- USEPA Enforcement and Compliance History Online (ECHO): The ECHO database consists of USEPA compliance history at a site. The ECHO database identified the Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue. The data indicates that the site was inspected in 2011 and that no violations were found. The ECHO database indicates that the site (which is no longer operating) was a SQG and had a minor air emissions permit for electroplating operations. No other database files were identified for the subject property.
- Envirofacts database: Envirofacts is a database search of USEPA databases, including the Comprehensive Environmental Response, Comprehensive and Liability Information System

(CERCLIS) database, which consists of sites being assessed under the Superfund program (NPL sites), hazardous waste sites, and potential hazardous waste sites. The Envirofacts database did not identify the subject property on any of its databases.

Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the NYSDEC, and NYSDOH to our FOIA requests will significantly alter the conclusions or recommendations of this report. However, if information is received from these FOIA requests which significantly impacts the conclusions or recommendations of this report, this information will be forwarded upon receipt.

6.0 Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM Practice E 1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the subject property.

6.1 Recognized Environmental Conditions

The following RECs were identified during this assessment:

- There is no documentation for the removal of the 2,000 gallon No. 2 Fuel Oil UST located at the 7 North 15th Street parcel. The location of the former UST is located below the bar and dining area for Dirck the Norseman. The potential exists for residual contamination to exist below the parcel.
- The 1942 and 1951 Sanborn Maps indicate the presence of three gasoline tanks located at the 7 North 15th Street parcel. Two of these tanks appear to be located in the parcel which is bar and brewery area for Dirck the Norseman and one tank appears to be located along the sidewalk of the parcel. The geophysical survey did not detect any evidence of the former UST in the sidewalk and the survey could not be performed within the interior of Dirck the Norseman. The potential exists that the two former gasoline tanks are USTs that are still beneath the floor of Dirck the Norseman.
- Visual evidence identified the presence of a UST vent pipe within the sidewalk at 8 Meserole Avenue. The geophysical survey performed along 8 Meserole Avenue did not detect any evidence of the former UST in the sidewalk, yet it should be noted that the geophysical survey did not detect the abandoned UST at 7 North 15th Street which is documented to have been closed in place. In addition, the concrete sidewalk in the area of the vent pipe appears to be newer than the surrounding concrete. This suggests that a UST may still be present and that it was abandoned in-place. Since there is no documentation associated with this potential UST, the potential exists for a UST to be present and that residual contamination may exist in the area.
- The former operations of Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue and VE2 Plating Company located at 7-11 North 15th Street generated a variety of wastes associated with electro-plating. These wastes generally consisting of spent cyanide plating bath solutions, spent stripping, corrosive wastes, cleaning bath solutions, and non-listed corrosive wastes between 2005 and 2012. The known historical operations of similar electro plating operations were often associated with uncontrolled discharges and sloppy housekeeping. Therefore, the potential exists for these two former operations to have impacted the surrounding environment.

- Information pertaining to the NYCDEP B-9 Facility at 22 North 15th Street indicates that a maintenance fueling station is located approximately 150 feet south of the subject property across North 15th Street. According to the site-specific environmental database report, this site had three USTs removed in 1984 and currently has three active 1,000 gallon gasoline USTs. Due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, it is AECOM's opinion that residual contamination cannot be ruled out.
- W.H. Christian & Sons at 22-28 Franklin Street is a uniform rental, laundry and dry cleaning operations located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going sometime after 1939 and prior to 1992. Due to the information pertaining to the disposal of halogenated solvents and still bottoms, and the knowledge that the historical operations of dry cleaners have the potential to impact the environment, and the lack of available information regarding the dry cleaning operations, it is AECOM's opinion that potential contamination to the surrounding environment cannot be ruled out.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 De Minimis Conditions

The following DMCs were identified during this assessment:

- Pipe cutting and threading equipment was located at two locations within Eastern Metal Plumbing Supply. Cutting oil stains were located on the floor and wall for the equipment located in the rear of the facility while oil staining on the floor was present in the equipment located near the garage door for the facility. Each of the stains on the floor measured approximately three feet wide by three feet long while the staining on the wall measured approximately two feet wide by three feet long. The concrete floor appeared to be in good condition and there were no floor drains visible at these two locations. Given the localized nature of this staining, AECOM considers this a DMC.
- AECOM noted some staining in partial basement located at 8 Meserole Avenue. The staining is less than four square feet on one of the basement walls and was likely associated with the former aboveground heating oil tank reported by the site contact for Scientific Laboratory Music. No other information was available on this reported former AST such as removal date, size, or age. Though a sump is located in the corner of the basement to discharge rainwater that enters the basement, the visible staining was isolated and not near the sump. Given the localized nature of this staining, AECOM considers this a DMC.

7.0 Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of the 12 Franklin Street property located in Brooklyn, New York. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed the following evidence of RECs and HRECs in connection with the property:

- There is no documentation for the removal of the 2,000 gallon No. 2 Fuel Oil UST located at the 7 North 15th Street parcel. The location of the former UST is located below the bar and dining area for Dirck the Norseman. The potential exists for residual contamination to exist below the parcel.
- The 1942 and 1951 Sanborn Maps indicate the presence of three gasoline tanks located at the 7 North 15th Street parcel. Two of these tanks appear to be located in the parcel which is bar and brewery area for Dirck the Norseman and one tank appears to be located along the sidewalk of the parcel. The geophysical survey did not detect any evidence of the former UST in the sidewalk and the survey could not be performed within the interior of Dirck the Norseman. The potential exists that the two former gasoline tanks are USTs that are still beneath the floor of Dirck the Norseman.
- Visual evidence identified the presence of a UST vent pipe within the sidewalk at 8 Meserole Avenue. Records provided by the Fire Department of the City of New York (FDNY) indicate that a 1,080 gallon UST formerly used to store No. 2 fuel oil currently exists at 8 Meserole Avenue. Since fuel oil is no longer used at this parcel, the tank is out-of-service. As such, it needs to be closed in accordance with the appropriate requirements of Chapter 34 of the New York City Fire Code as identified in the Rules of the City of New York (RCNY).
- The former operations of Superior Bearing Bronze Company and Hard Chrome Electro Processing Corporation located at 8 Meserole Avenue and VE2 Plating Company located at 7-11 North 15th Street generated a variety of wastes associated with electro-plating. These wastes generally consisting of spent cyanide plating bath solutions, spent stripping, corrosive wastes, cleaning bath solutions, and non-listed corrosive wastes between 2005 and 2012. The known historical operations of similar electro plating operations were often associated with uncontrolled discharges and sloppy housekeeping. Therefore, the potential exists for these two former operations to have impacted the surrounding environment.
- Information pertaining to the NYCDEP B-9 Facility at 22 North 15th Street indicates that a maintenance fueling station is located approximately 150 feet south of the subject property across North 15th Street. According to the site-specific environmental database report, this site had three USTs removed in 1984 and currently has three active 1,000 gallon gasoline USTs. Due to the lack of available information regarding the removal of the USTs or the current operations of the active USTs, it is AECOM's opinion that residual contamination cannot be ruled out.
- W.H. Christian & Sons at 22-28 Franklin Street is a uniform rental, laundry and dry cleaning operations located approximately 130 feet north-northwest of the subject property. The operations at this location have been on-going sometime after 1939 and prior to 1992. Due to the information pertaining to the disposal of halogenated solvents and still bottoms, and the knowledge that the historical operations of dry cleaners have the potential to impact the

environment, and the lack of available information regarding the dry cleaning operations, it is AECOM's opinion that potential contamination to the surrounding environment cannot be ruled out.

As for the RECs identified above, the current operations at the subject property make it highly unlikely for employees and/or patrons to come into contact with potential contaminants typically associated with these types of RECs. Impacts from potential contaminants are not a significant concern at this time. However, these RECs will need to be further evaluated upon any future redevelopment or intrusive work at the subject property.

This assessment did not reveal any evidence of a HRECs or CREC in connection with the subject property.

8.0 Quality Control/Quality Assurance

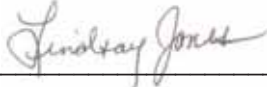

8.1 Site Visit, Research, and Report Preparation

The site visit, research, and report preparation were conducted by Nelson J. Abrams, in AECOM's 125 Broad Street, New York, New York office.

Signature:  _____

8.2 Quality Control Review

A first level review of this report was conducted by Lindsay Jones in AECOM's Conshohocken, Pennsylvania office.

Signature:  _____

A second level review of this report was conducted by Rebecca Kelly, of AECOM's Arlington, Virginia office.

Signature:  _____

8.3 Environmental Professional Statement

Mr. Abrams was the Environmental Professional (EP) for this project. Mr. Abrams' EP statement is below and his resume is provided in Appendix C:

I declare that, to the best of our professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Removed and Archived Sites

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed

EXECUTIVE SUMMARY

and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 06/26/2015 has revealed that there are 16 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Leaking Storage Tank Incidents

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/21/2015 has revealed that there are 28 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY MOSF UST sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY MOSF AST sites within approximately 0.5 miles of the target property.

Voluntary Cleanup Agreements (VCP) sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 06/26/2015 has revealed that there are 3 NY VCP sites within approximately 0.5 miles of the target property.

Errors of Agency Release Errors

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/21/2015 has revealed that there are 32 NY Spills sites within approximately 0.125 miles of the target property.

Other ascertainable errors

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 36 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2

EDR HIGH RISK HISTORICAL RECORDS

□□□ □□□ *usage* □ *records*

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 7 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 2 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: Sangesland spoke to Melissa Whitley at DEP. she said the pump meter was re-calibrated and a tank test is scheduled for the next few days. Inventory reconciliation is using a new system. Temperature compensation calculations from the Veeter Root system does not add up. The old system was to match delivery quantity from the vendor (this system does add up). After the tank is tested, they will try to work out the new Veeter Root based measuring system. 2/14/2011 - DEP forwarded a 25 page packet of information showing that the problem was human error (forgot to deduct some product manually pumped off). Docs will not allow the .pdf to be loaded despite several tries.
Remarks: ten day inventory reconciliation

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"06/11/08: At direction of my supervisor, Vadim Brevdo, I closed spill no. 9515580 to consolidate with this spill case (9801521), under which remediation of subsurface petroleum contamination at this site will be tracked. Closed spill 9515580 was for diesel tanks; unknown if diesel tanks were at same location as gasoline tanks. - J. Kolleny08/04/11: Reviewed Site-Specific Investigation Plan by LiRo, dated April 2011 (in eDocs). Plan states that, based on 1996 aerial photo, old USTs (removed in 1998) were likely located in same area as new USTs. Plan proposes install'n of 4

monitoring wells around existing UST system, with soil sampling during well install'n and GW sampling following well development. If GW is found to be impacted, slug tests may be performed to obtain hydraulic conductivity data. Investigation results will be presented in an ISRP, which will discuss findings and recommend a remedial strategy, if warranted by data. I sent letter (in eDocs) approving SSIP to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK04/09/13: Reviewed Investigation Summary and Remediation Plan and Spill Closure Request rpt by LiRo, dated 4/5/13 (in eDocs). Rpt summarizes install'n of 4 wells in Sept. 2012 and sampling of wells in Dec. 2012 and Jan. 2013. Results of soil samples showed no VOCs or SVOCs above CP-51 SCLs. GW results for Dec. 2012 showed several low-level exceedances: well LMW-01 had 57 ug/L of MTBE, well LMW-03 had 30 ug/L of naphthalene, well LMW-04 had 160 ug/L MTBE. GW results for Jan. 2013 were similar: LMW-01 again had 57 ug/L of MTBE and LMW-04 had 110 ug/L of MTBE. LiRo concludes that there are no soil impacts ad GW impacts are minimal, therefore they recommend/request spill closure. I closed spill, sent closure letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - JK

Remarks: TANK REPLACEMENT BEING PERFORMED WHEN CONTAMINATED SOIL WAS ENCOUNTERED-ASSESSMETN WILL BE DONE AFTER TANKS ARE RE-INSTALLED.06/11/08: These are Caller Remarks [sic] from spill no. 9515580, closed on 6/11/08 to consolidate with this spill case: "Piping leaked into the soil of a underground tank. The tanksare 2 1000 gallon diesel tanks. They are still in the ground.piping has been replaced. This occurred in august 1995."

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & SONS1/7/04-Vought-Spill transferred from Vought to Austin.1/27/04 - Sawyer - Spill transferred from Austin to Sawyer.10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attempts made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation.03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site On 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed.5/26/05 - Sawyer - Received

endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required.

Closed.

Remarks: tank failure, possible bad vent line

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"DEC responder notes:4/12/99- 2:15PM. ROBERT LEUNG SPOKE TO C. ENGELHARDT AND GAVE HIM THE INFO.No. 6 oil spilled during pigging of No. 7 line. On location John Mitchell (White Hat for Con Ed), Barry Korman, Sal Bocuzzi. Barry Korman syas occurred while pigging, had recovery vac truck @ Noble Street. First truck = 4221 gallons, second truck = 1400 gallons when stopped (noticed oil on street). Notified by NYC Sanitation inpector at 12:00. They then shut down the compressor.Contractor Clean Venture was @ Noble Street - responded by 12:15. They were vac'ing line from North 1st Street to valve 10 (North 11th / Kent) - removed 12,000 gallons.FDNY came in fire boat -

did not get off boat. No NYCDEP or USCG response. No oil in water (Bushwick Inlet approx. 50 feet west). Thus far only 1 subsurface structure (Con Ed vault) is impacted. There is a sewer near 15th Street - oil did not reach it. Equipment on location: 3600 gallon vac truck (AllState Power Vac); 3150 and 5040 gallon vac trucks (Clean Venture). (CAE)5/25/99: call from John Mitchell. They have not been monitoring the well. They will start every week for 5 weeks, then go to every 2 weeks if no product. Will be going tomorrow and next Tuesday. (CAE)~~~~~e2mis no. 124-172: On April 12, 1999, working on Fuel Line #7 in Brooklyn. J. O'Connell and M. Doblér was working Noble Street end and J. Daly was working at North 11th Street end of Fuel Line #7. A Sanitation Department employee informed D. Daly that oil was coming out on the street. J. Daly informed J. O'Connell and they meet at the location (Kent Ave) where the oil was coming on the street. They took action by putting pads down, put drain plug on the catch basin and putting oil absorbent down around the catch basin. Clean Ventures is at the location. They are in the process of taking oil out of the line. Approx. 30 gallons of oil spilled. UPDATE - April 13, 1999, from manhole 4348, 1800 gallons of oil has been pumped. At present leak has not been found, still looking. UPDATE - April 14, 1999, leak was found at 11:00 am, leak clamped 14:00 Tuesday. LARGE OIL SPILL CLEANUP CHECKLIST-Location of spill: N.14TH STREET AND FRANKLIN STREET, BROOKLYN.-Source/cause of spill: PIGGING OPERATION TO REMOVE # FUEL OIL FROM PIPELINE #7; A 20 INCH DIA PIPELINE.-Description of area affected by spill: 50' X 10' X 12' (EXCAVATION - APPROX.). Excavated contaminated soil, bluestone.-Name of contractor: ALL STATE POWER VAC, CLEAN HARBORS AND RCI.-Recovered oil 1,800 GALLONS; Recovered fluids/solids 200 CUBIC YARDS; Recovered oil/water 3,000+ GALLONS .-8 SOIL SAMPLES WERE COLLECTED FROM THE EXCAVATION.-1 WELL INSTALLED; OIL SHEEN ON WATER.~~~~~DEC Responder notes (cont'd.):Results of well gauging/bailing/vacuuming:5/26/99: Well depth - 140" (11.7'); Top of product - 40.5"; Top of water - 29"; product thickness - 11.5". Well was vacuumed, approx. 400 gallons oil/water removed.6/4/99: Oil thickness 1', Depth to water 9'6". Approx. 500 gallons oil/water removed.6/9/99: Oil thickness 1'2", Depth to water 9'8". Approx. 500 gallons oil/water removed.6/16/99: Oil thickness (pre-vacuum) 1', Depth to water 9'3". No notation on how much oil/water removed. Post-vacuum oil thickness 1.5".6/25/99: Oil thickness 8", Depth to water 9'4". No notation on how much oil/water removed.7/28/99: Oil thickness 4", Depth to water 8'9". Approx. 350 gallons oil/water removed. Additional vacuum enhanced fluid recovery (VEFR) events occurred 7/11/00 (16 gallons); 10/27/00 (100 gallons); 1/24/01 (16 gallons); 4/17/01 (30 gallons); 10/4/01 (17 gallons); 4/4/02 (32 gallons); 10/24/02 (110 gallons). THIS IS PART OF APPENDIX B SITE 25/45. (JHO)Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA)

Remarks:

CALLER STATES THAT UPON EVACUATING A FUEL LINE THERE WAS AIR IN THE LINE AND OIL Poured ONTO THE STREET. CLEAN UP IS UNDERWAY AND EXCAVATION WILL BE DONE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Env Problem:

located on West street in the Greepoint neighborhood of Brooklyn, Kings County. The site is approximately 4.88 acres in size. Site Features: The site has three buildings: a 90 x 530 ft single story raised platform, two-sided loading dock and storage building, a 50 x 70 ft two story building formerly used for truck maintenance and a 25 x 50 ft building formerly used for truck maintenance. The remainder of the property is an open lot for staging trucks and equipment. Current Use: The current use of the site is Commercial. Historical Use: The site was developed prior to 1887 as a shipyard and iron works. The company built iron water pipes, boilers, iron ferryboats/steamboats and ironclad warships for the US Navy during the Civil War. Following the decline of shipbuilding following the war, the company focused on building marine boilers and iron components for gas works. The site continued to be occupied by the Continental Iron Works through 1916. The property was vacated sometime between 1916 and 1922 and remained vacant until 1942 when the southeast corner was used by a lumber yard. Sometime between 1942 and 1951 the lumber yard was replaced by a machine shop and welding company which occupied a greater portion of the property. By 1965 the existing buildings were constructed and occupied by Associated Transport. Auto repair shops are identified in the east and west end of the building with a fueling station shown on the north side of the building. Associated Trucking was replaced by Consolidated Freightways in 1978 and continued until the company filed for bankruptcy in 2002. Site Geology and Hydrogeology: Subsurface soils at the site consists of a mixture of a fill materials consisting of bricks and other rubble in a silty-soil matrix. The thickness of the fill ranges from 5 to more than 10 feet. Below the fill material is a silty-sand. Groundwater is present under water table conditions at a depth of approximately 5-8 feet below the surface and is expected to flow west though flow will likely reverse up to 400 feet inland during periods of high tide. The elevations of the site varies from 9 feet to 1 foot above the National Geodetic Vertical Datum. The area topography gradually slopes to the west toward the East River. Nature and Extent of Contamination: Currently, data has only been collected for soil and groundwater. A full Remedial Investigation will be performed under the Brownfield Cleanup Program. Based on investigations conducted to date, the primary contaminants of concern are petroleum, metals and semi-volatile organic compounds (SVOCs). Contaminants are likely associated with historic use of the Site for ship building and foundry operations as well as later use for auto repair and fueling operations. Soil The primary contaminants of concern detected in soil are SVOCs and metals. SVOCs were detected at concentrations exceeding the Restricted Residential Soil Cleanup Objective (RRSCO) in a few samples, including: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene and fluoranthene detected at a maximum concentration of 63 parts per million (ppm), 54 ppm, 77 ppm and 120 ppm, respectively, compared to the RRSCO of 1 ppm; and chrysene detected at a maximum concentration of 59 ppm compared to the RRSCO of 3.9 ppm. Metals that have been identified in soil include: lead detected as high as 2,320 ppm (compared to the RRSCO of 400 ppm); arsenic detected as high as 30.8 ppm (RRSCO is 16 ppm); barium detected as high as 1,230 ppm (RRSCO is 400 ppm); copper detected as high as 572 ppm (RRSCO is 270 ppm); and mercury detected as high as 1.4 ppm (RRSCO is 0.81 ppm). Groundwater Groundwater was encountered at a depth of approximately 5-10 feet below grade. Of nine groundwater samples, n-propylbenzene and isopropylbenzene were

Health Problem:

detected at concentrations slightly above the Class GA Groundwater Quality Standards (GWQS) of 5 parts per billion (ppb). N-propylbenzene and isopropylbenzene were present within the former fueling station at a maximum concentration of 21 ppb and 14 ppb, respectively. Significant threat: A significant threat determination will be made upon completion of the Remedial Investigation. Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"4/19/99: On scene Dan Shah (ERT), Bernard Hennelly (Eng. Specialist), Ray Turkin, Barry Korman, John Mitchell. Crews were pulling manholes as precursor to re-starting pigging operation in No. 7 pipeline. Found unknown quantity of unknown oil in manhole marked "FDNY" Looks like aged #6 oil. All service boxes and manholes in area were checked and are clean. Con Ed contacted FDNY maintenance communications. Manhole had been paved over - Con Ed crew had to break up asphalt on top of manhole to open it. In addition to No. 7 pipeline, Bayside Fuel terminal located across the street (on west side of Kent Ave). Chem Lab on-site to take samples for oil ID and PCBs. Con Ed was to resume pigging operation today, but will wait until clean up is complete. FDNY on-site @ 1215 hrs, off site at 1220 hrs. NYCDEP (Keith Williams) on-site at 1220 hrs. (JHO)1410 hrs: John Mitchell, Con Ed, spoke with FDNY Bob Shields. Manhole is for fire alarm conduits. Con Ed checked other FDNY manholes in every direction from this one - all clean. All State power vac is cleaning the manhole. They will check for sources once manhole is cleaned (seepage through manhole walls, oil in conduits, etc.). Oil ID is due back

Remarks: this afternoon. (JHO)5/5/99: Manhole is to be monitored for additional oil accumulation. (JHO)~~~~~e2mis no. 124-322:On April 19, 1999, C. Sabatasso of Transmission Operations reported approx.2.5 gallons of a oily substance between the outer cover and inner pan of a Fire Department Manhole. This is part of the job at Fuel Oil Line #7 pulling manhole covers before start pigging operations. Chem Lab has been notified to come take samples. UPDATE: spoke with C. Sabatasso via phone and was informed that manhole cover had been pull and the amount of the substance had to be changed from 2.5 gallons to 250 gallons of an oily substance.LARGE OIL SPILL CLEANUP CHECKLIST- Material spilled/discovered: Oil FUEL OIL #6.- Sample submitted for analysis? Yes Sample ID No.99-03967 & 03965.- Amount spilled/discovered: 100 GALLONS.- Removed/recovered liquid/solids.- Removed visible traces of oil.- Washed stained areas.- Name of contractor: ALL STATE POWER VAC.- Cleanup completed on Date: 4/19/99 Time: 20:15.Update 6/9/06Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) fire dept manhole - pipeline leaked. clean up in progress. con ed # 124322

DEC Memo: 05/17/10- Zhune spoke FF reder from Hazmat 1 (347)-203-6886. He said a storage gasoline tank from a repair shop was leaking. Approximately 20 -25 gallons of a mixture of oil and water went to the street and to the sewer. Fire Department cleaned spill on the street. Fire Department notified DEP. Incident # 185034.Repair Shop owner: Ili Argi 718-266-8360, 732 616-6898Worker Rodney Lochansingh06/08/10- Zhune spoke Alex Castro from DEP. Alex responded to this site. Alex spoke to Rodney Lochansingh a worker of the shop. Mr. Lochansingh said he was repairing a truck accidentally he punched one of the two gasoline tanks located on the driver side. Approximately 25 gallons of gasoline leaked from the tank. He tried to cleaned the spill but due to the vapors they called the Fire Departement. The F. Department used foam and water to clean the spill. This mixture went to the street and then to the sewer.
09/15/10- Saddle tank spill to street. Fire Department cleaned it. Caller reporting a spill of approx 20 gallons of gasoline/ water mixture. Clean up is in progress.

Program: BCP
 Site Code: 503484
 Acres: 1.830
 HW Code: C224207
 SWIS: 2401
 Town: New York City
 Update By: GWCROSS
 Site Description:

Actual:
10 ft.

Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the southeast, N 13th Street to the northeast, Kent Avenue to the northwest, and N 12th Street to the southwest. Site Features: The Site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses though offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned MOSF; however, both of these sites are slated for redevelopment as riverside parks. Historical Use: The site was most recently used by a construction equipment rental company for storage and maintenance of heavy equipment. Prior uses include paint manufacturing, lumber storage, scrap metal yard and the Standard Oil Pratt Works petroleum refinery. Sanborne maps from 1887 and 1916 show numerous tanks related to both the Pratt Works and the paint manufacturing facilities on the site. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in relation to UST removal. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: The bedrock is an igneous intrusive classified as the Ravenswood gneiss-diorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill materials to a depth of approximately 8 to 12 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it

is highly likely that overall flow is westward towards the East River.
 Not reported

Env Problem: Based on investigations conducted to approximately 15 feet below ground surface, the data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern for OU1 include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic, lead, copper and mercury. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 ppm. Soils throughout the site contain VOCs above unrestricted use SCOs and SVOCs including Benzo(a)anthracene, Benzo(a)pyrene and Benzo(b)fluorethene above unrestricted and/or restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Groundwater: Groundwater on the site exceeds standards for VOCs, SVOCs and pesticides. Soil Vapor: PCE, TCE and TCA were detected in soil vapor at concentrations that require future monitoring based on NYSDOH decision guidance Matrix 1.

Health Problem: Since the site is fenced and covered with asphalt, concrete or building foundations, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil, which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has indicated that soil vapor at the site is contaminated as a result of an off-site source. Because the site is vacant, the inhalation of contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of contaminants due to soil vapor intrusion from an off-site source for any future onsite redevelopment and occupancy. Sampling indicates that site-related contaminants do not represent a concern for soil vapor intrusion off-site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:
 BCP Denial Letter signed by DER Div Director on 2/19/14. Site Location: The proposed 94 N. 13th Street BCP site is located in the Williamsburg section of Brooklyn, Kings County. The site is made up of two tax parcels and is bordered by Wythe Avenue, N. 12th Street, and N. 13th Street. Site Features: The site is developed with two-one story commercial/industrial buildings which were built in the 1960's and are occupied. There is a small parking area and buildings cover most of the site area, which is approximately 1.147 acres in size. Current Zoning and Land Use: The site is zoned M1-2 which includes light industrial uses and is currently used by a manufacturer of clear plastic bags, and a manufacturer of wooden pallets. Past Uses of the Site: Previous uses were manufacturing and include the storage of manufactured gas and also as a plating facility. Site Geology and Hydrogeology: The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock in this area is igneous intrusive classified as the ravenwood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments

overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to raise and improve the drainage of low lying areas. Subsurface soils consist of a mixture of a silty non-native fill, to a depth of approximately 12 feet below grade followed by sand and gravel. The elevation of the site is 15 feet above National Geodetic Vertical Datum (NGVD) and the area topography gradually slopes to the northwest. Groundwater is present at a depth of approximately 7 feet below the surface and is expected to flow north.

Env Problem: Nature of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include benzene, toluene, ethylbenzene and xylene (BTEX), naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene; various SVOCs (PAHs), including benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene; and several metals (lead, mercury, barium, nickel, zinc and copper). Soil- Subsurface soil contains maximum concentrations of BTEX (944 ppm), naphthalene (280 ppm), total PAHs (218 ppm), lead (920 ppm), mercury (18 ppm). The metals concentrations were 920 ppm for lead, 18 ppm for mercury, 160 ppm for copper, 52 ppm for nickel, 2,300 ppm for zinc, and 2,400 ppm for barium. Groundwater- On-site groundwater contained low levels of PAHs, with a maximum concentration of total PAHs of 7 ug/L. Lead was detected at a maximum concentration of 254 ug/L. Off-site groundwater contained BTEX concentrations as high as 6,480 ug/L, 1,600 ug/L of naphthalene, total PAHs of 1,670 ug/L, 600 ug/L of 1,2,4-trimethylbenzene, and 160 ug/L of 1,3,5-trimethylbenzene.

Health Problem: Not reported

DEC Memo: 06/27/14-Hiralkumar Patel.alternate addresses: 94-102 North 13th Street, 45-59 Wythe Ave, 103-109 North 12th Street3:51 PM:- DEC Vought sent copy of email he received from DEC Rivera. DEC Rivera received inquiry from Lisa Bloodgood. Ms. Bloodgood visited site on 06/26/14 and noted "awful" odors at the site.4:30 PM:- visited site. noted very strong odors in and around the subject site. at the time of inspection, site construction activities were not happening, but a groundwater treatment system was running. site soil has been disturbed and some areas have been excavated to groundwater which is about 10-15 ft bg.met with Terrance, person who is monitoring groundwater treatment system. he mentioned that system will operate 24/7. noted white smoke from pump on the treatment system.spoke with Raphael Rivera (973-417-4467), person who has rented the treatment system. he mentioned that the system uses biodegradable oil and smoke from the system is not hazardous.spoke with Mordy Steinfeld (on-site) and Charles Sosik (over the phone). they are working to get contractor to resolve odor issue. also spoke with John Brooks (over the phone), attorney representing the site owner/developer. he will discuss with National Grid.Mordy Steinfeld **site developer**Level HotelPh. (718) 599-1145 (o) (432) 363-5377 (c)Email: mordy@levelhotel.com John Brook **attorney for site owner/developer**PH. (516) 455-0215received call from Mr. Brook. he mentioned that developer's crew will cover site excavation area with tarp to control any odors from open excavation.while waiting for response from property owner/developer's crew, met with Mr. Morang from GEI, around 7 PM. at this time, the site was locked and no access provided to GEI. GEI represents National Grid. Mr. Morang mentioned that GEI has four air monitoring stations within the property, along the perimeter. he noted that there were no PID readings during work hours today. but after site work was completed, the groundwater treatment system was turned on. he also mentioned that the treatment system was installed recently. Mr. Morang suspects odors due to improper installation of the treatment system, but it can not be confirmed as no site access available.alongwith Mr. Morang, we checked air quality near corner of Wythe Ave and N 13th Street (where the treatment system is located) and found PID readings around 0.4 ppm. at this time, air quality was improved, but there were still some pockets of strong odors. Mr. Morang mentioned that from next week, GEI will use foam to abate any odors from the site.Russell MorangGEI Consultants, Inc.Ph. (860) 368-5416 (O) (860) 608-1438 (C)Email: rmorang@geiconsultants.comDonald CampbellNational GridPh. (718) 963-5453 (O) (347) 452-5983 (C)06/30/14-Hiralkumar Patel.9:40 AM:- visited site. noted tarp in deeper excavation areas where groundwater was visible during earlier site visit. also noted a tarp on the entire frac tank. some odors noted near the intersection of Wythe Ave and N 13th St.DEC Scott Deyette (BCP # C224186) is managing this former MGP site.after discussing with DEC Austin, case closed. refer to BCP # C224186.07/01/14-Hiralkumar Patel.2:37 PM:- spoke with DEC Scott. informed him that as per Mr. Morang, GEI was planning to use foam to abate odors. Scott has discussed with

Site Description: Location: Transition from V00704 and C224055. The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn New York in Kings County. The site is approximately six acres in size and is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and a large document storage warehouse on the west side of Kent Avenue and a two-story commercial building on the east side of Kent Avenue. Current zoning and land use: The area is zoned Industrial/Commercial. The document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015. It is currently being demolished. The vacant lot is owned by the NYC Parks and Recreation Department and used as an outdoor music venue. The two-story commercial building on the east side of Kent Avenue is in active use. The nearest residential property is located approximately 1 block to the south. Past use of the site: A manufactured gas plant operated on the site from at least 1887 to 1916. Following the decommissioning of the MGP, the now vacant lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. The City of NY has identified this site for construction of a proposed waterfront park, which would extend far beyond site boundaries to the north and south. Site Geology and Hydrogeology: The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 7 feet below ground surface. Groundwater flows to the west, toward the East River.

Env Problem: The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath a document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land.Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible.Envir. firm will submit such a report "soon"2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99Report should include:1) Delineate the site2) Outline what is on the property now and what will be built3) Identify how the product will be remediated. ALSO SEE SPILL # 00033904/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel.1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a candidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luckI am requesting a site visitAlternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North

13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. Site is rented to "Nations Rent" - Oscar Parker salesman - 718-387-4872. Posted sign showed two different property managers: Segal Realty Group LLC 718-388-9000. M.C. O'Brien Inc. 718-252-9191. Albany review (above) - jcgrathw1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/09/07 - Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site. 03/14/07 - Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call. received message from Mr. Prigozen (Cell: 917-750-4112), property owner. 03/16/07 - Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these papers once he comes to NY in June 07. Elliot Prigozen 3400 Pen American Drive Miami, Florida 33133 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: elliotp@bobcatzone.com 06/14/07 - Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son. 06/15/07 - Hiralkumar Patel. left message for Elliot's son. 06/18/07 - Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time. PBS #: 2-091030. as per PBS record, site had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000. 2. one 1,500 gal gasoline UST, closed and removed in July 2000. 3. four 550 gal diesel USTs, closed and removed in Dec. 1998. 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002. 5. one 550 gal gasoline UST, closed-in-place in June 1989. 6. one 550 gal diesel UST, closed-in-place. 7. one 1,100 gal gasoline UST, closed-in-place. total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07 - Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07 - Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs. 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue). 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract:- report prepared on Oct. 7, 1998- four borings were installed (one on each side of excavation area of previous 550 gal UST location)- three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation)- all three samples were analyzed for SVOCs only (as didn't find VOCs in previous sampling)- few SVOC contamination found in sample S-3 (which is along Kent ave) abstract of tank closure report for 1500 gal tanks:- removed four 1500 gal single wall, concrete-encased USTs.- from regional water table maps, groundwater occurs approx. 15 ft bg

S104621824

and flows in a northwesterly direction- tanks were located approx. 4 ft bg- tanks were in good condition with no corrosion. no visible holes or leaks were noted- sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg- groundwater was not encountered at the site during excavation- approx. 79.16 tons of contaminated soil were removed- highest PID observed in west side wall sample (PID: 398.3 ppm)- due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390)- minor contamination found in soil endpoint sample spoke with Mr. Prigozen. explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations.07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination, found in 1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Department, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report.07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler.07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract:- an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the sourthern portion of the site- two soil borings and nine monitoring wells were installed- highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg less than ----- groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area less than ----- based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest- free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) less than ----- minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3)- MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank)- highest contamination found in soil sample at BK-6 (near old sediment trap)-----Xylene----BenzeneBK-6 (1-3 ft)-----8,730----2,025BK-6 (3-5 ft)-----3,320-----327//during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found

S104621824

following:- no groundwater depth information- free product in wells MW-7 and MW-10 along Kent Avenue, but no groundwater flow direction- MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location- benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following:- soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation)- soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw)- complete groundwater delineation (with at least three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if not then he needs to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18, 2007. 07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiring soil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locations where the Department requires further investigation. 09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote. 09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will finalize next week. he will send company's name next week with scheduling and estimated date for report submission. 09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron Grim Hart & Hickman, PCPh. (704) 586-0007 Mr. Prigozen will call once get dates finalized for investigation work. 09/28/07-Hiralkumar Patel. received email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007. 10/23/07-Hiralkumar Patel. received call from Mr. Grim. he just received analytical data from lab and they found contamination and free product in groundwater. Mr. Grim will submit report within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map with sampling locations for review. he will send these tomorrow. 10/26/07-Hiralkumar Patel. received analytical data for few samples and site map. found soil and groundwater contamination in area of former sediment trap. waiting for full report. 11/06/07-Hiralkumar Patel. spoke with Mat Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr. Prigozen to review and approval and once gets approval, he will forward report. Mat Ingalls Ph. (704) 887-4617 email: mingalls@harthickman.com 11/15/07-Hiralkumar Patel. received report from Mr. Ingalls. abstract:- installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was advanced to depth of 12 ft bg (later converted to temporary well)- installed one temporary well (BK-6A)- found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth)- sampled recently installed temporary well and two existing wells (BK-3 and BK-7)- depth to

S104621824

basin- confirmed site groundwater flow direction to the southeast-
absence of floating product in BK-7 installed in the immediate
vicinity of former UST basinsummary:found free product in two wells:
BK-4 and BK-10. BK-4 is located in area of previous 1500 gal USTs and
BK-10 is located close to corner of Kent ave and N. 13th st. oil in
BK-4 could be from previously removed tanks on-site, but oil in BK-10
could be coming from off-site.spoke with Matt. he mentioned that they
did not found well BK-4 during Phase II investigation, but found
during recent well survey. found free product in well and took sample
and it is on hold, in lab. asked Matt to analyze sample from BK-4.
also asked him to monitor and remove product from existing wells
on-site.discussed with DEC Austin. as owner suspecting off-site spill
that impacting well BK-10 at his property, Austin asked to pump out
product, weekly for a month to see if any more product comes to the
site and then based on product recovery data, may require futher work
by site owner.sent email to Matt and Mr. Prigozen requiring analysis
of sample from BK-4 and monitoring and product removal from existing
wells on weekly basis.12/24/07-Hiralkumar Patel. spoke with DEC
Leszek, who is handling project at Bayside Oil. he confirmed that
there was no product found in two monitoring wells (MW-4 & MW-12)
located along Kent ave, near 91 N 12th street
site.01/08/08-Hiralkumar Patel. spoke with Matt. he submitted
proposal for product removal but haven't heard back.spoke with Mr.
Prigozen. he hasn't hire anyone to remove product. asked Mr. Prigozen
to remove product from wells on his property and also explained him
to install well upgradient from well # 10, on sidewalk, to prove any
off-site migration.01/15/08-Hiralkumar Patel. spoke with Mr.
Prigozen. he has authorized Matt to pump product out. asked him to
schedule upgradient well installation on sidewalk along kent ave. he
is waiting for proposal from Matt.left message for Matt to submit
analyticals for sample taken from well # 4. also asked to submit
schedule for product removal and to plan for upgradient (from well #
10) well installation.01/17/08-Hiralkumar Patel. received message
from Matt. left message for Matt.received analyticals for sample from
well BK-4. during fingerprint analysis, found product from well BK-4
in range from degraded gasoline or similar material to diesel or fuel
oil. well BK-4 is installed in area of previous 1500 gal
USTs.01/24/08-Hiralkumar Patel. received call from Matt. they are
removing product from BK-4 and BK-10. asked them to continue removing
product from these wells for about a month and then based on
remaining product, the department may require downgradient well from
BK-4 and upgradient well from BK-10. Matt will send
report.03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to
submit product recovery data. sent email to Mr. Ingalls and Mr.
Prigozen to submit product recovery data by end of
03/28/08.03/24/08-Hiralkumar Patel. received message from Mr.
Ingalls. they finished field work and will submit report, once get
Mr. Prigozen reviews it.03/27/08-Hiralkumar Patel. received report
from Mr. Ingalls. abstract:- fingerprint result indicate that the
product observed in BK-4 is a mix of low boiling material such as
petroleum solvent or degraded gasoline, and a middle distillate such
as diesel fuel or fuel oil that has undergone extensive biological
degradationapparent product thickness (in feet) in BK-4 and
BK-10:-----01/21/08-----02/06/08-----02/14/

S104621824

Ingalls to continue product recovery from both wells until finds clean groundwater. based on recent product recovery report, product thickness in wells BK-04 and BK-10 has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and next downgradient well from BK-10 is BK-06A which is 250 ft away and has groundwater contaminated. also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner regarding continuous recovery of product and about further groundwater investigation work. spoke with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells coming from off-site. sent letter to Mr. Prigozen requiring removal of product from existing wells and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls. 04/30/08-Hiralkumar Patel. received call from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are planning to install well on sidewalk to see any off-site migration. Mr. Ingalls asked for number of wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete delineation which may require multiple wells on-site as well as off-site. asked him to install one permanent well at previous boring location BK-06 as found contaminated groundwater in previous investigation and BK-06 is cross gradient from BK-04. 06/04/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install required well in two weeks. 07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing oil from wells on weekly basis but haven't heard from owner regarding further well installation. spoke with Mr. Prigozen. he was out for work and just came back. he will talk to Mr. Ingalls regarding further well installation and will submit schedule by end of 07/18/08. 08/25/08-Hiralkumar Patel. left message for Mr. Prigozen. 09/19/08-Hiralkumar Patel. spoke with Mr. Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for Mr. Prigozen. 09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will ask Mr. Ingalls to call with work schedules. 12/01/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. he will call back as was busy. 12/02/08-Hiralkumar Patel. received message from Mr. Prigozen. left message for Mr. Prigozen. 12/03/08-Hiralkumar Patel. received call from Mr. Ingalls. they are still waiting for authorization for required work. received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work schedule. received call from Mr. Ingalls. he spoke with Mr. Prigozen and Mr. Prigozen asked him to start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and will call back. 12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr. Prigozen for

S104621824

additional work. he spoke with drilling company and can start work from 12/22/08. approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well locations. sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08, including locations of previous borings and wells. email copied to Mr. Prigozen. 12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location. they are proposing to install three wells: one upgradient from BK-10 (along property boundry along Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous boring BK-06 (across sediment trap which might be route for groundwater contamination.) Edward H. Stephens Hart & Hickman, PCPh. (704) 586-0007 (704) 887-4609 Fax (704) 586-0373 email: EStephens@harthickman.com sent email to Ed and Mr. Prigozen approving proposed well locations. email copied to Mr. Ingalls. required investigation report submission by the end of Jan. 26, 2009 and weekly submission of well monitoring/product recovery data. 12/09/08-Hiralkumar Patel. received call from Ed from Hart & Hickman. he asked about location of well BK-14. he proposed to install well downgradient from sediment trap instead of at BK-14. mentioned to Ed that the Department wants well at (suspect) source location (which is sediment trap) to capture mostly contaminated material and based on findings, more wells needs to be installed. 12/15/08-Hiralkumar Patel. spoke with Ed at Hart & Hickman. they have scheduled well installation on 12/29/08. 01/06/09-Hiralkumar Patel. received email from Ed. they installed four monitoring wells on 12/30/08 and will submit report once gets sample analyticals. 02/04/09-Hiralkumar Patel. received email from Ed with site map including results of recent groundwater investigation. four more wells (or borings) were installed. well/boring BK-12 installed upgradient from BK-10. no contamination found in BK-12. well/boring BK-14 installed near previous sediment trap and found contaminated groundwater. well/boring BK-13 installed on southwest side of BK-14, where no contamination found. well/boring BK-15 was installed on northwest of BK-4 and found contaminated groundwater. groundwater analyticals:
-----BK-14-----BK-15 Benzene-----1,
060 Ethylbenzene-----468 Xylene-----204 Naphthalene--
-----738-----1,04002/11/09-Hiralkumar Patel. received call from Ed. he mentioned that during recent survey, they found groundwater flowing in southeast towards northwest portion of the site (near intersection of Kent ave and N. 13th street) and groundwater flowing in south direction towards southeast portion of the site (near intersection of N. 12th street and Wythe ave). according to recent groundwater flow direction, BK-13 is downgradient from BK-14, but cross gradient from BK-4. asked Ed for off-site investigation, downgradient from wells BK-15 and BK-4. also asked for weekly monitoring and recovery of free product. Ed will speak with Mr. Prigozen and will submit complete investigation report. 02/12/09-Hiralkumar Patel. received additional Phase II report (analyticals recorded earlier). abstract:- four borings were advanced to depth of 15 ft bg- one soil sample, with highest PID, from each boring was sent for analysis- groundwater flows to the southeast in the western portion and to the south in eastern portion of the site- found 1.78 ft of free product in BK-10A- strong odor found during installation of wells BK-12 and BK-13- high PID readings were found during installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at

6 ft)conclusions from Ed:- "free product was not observed in BK-12 (which is upgradient from BK-10) during the recent assessment, it is not common to observe a delay in free product recharge into newly installed monitoring well. BK-12 should be observed over time to confirm occurrence of free product."- "based on local groundwater flow direction and the absence of a potential on-site source in the vicinity of the observed free product at BK-10A, H&H believes the observed free product has migrated on-site from the upgradient Bayside Oil Depot."- "based upon the result of the receptor survey, soil and groundwater assessment, existing poor groundwater quality in the vicinity of the subject property, and a documented upgradient source of groundwater impacts including free product, soil and groundwater impacts at the site can be most effectively managed through LAND USE RESTRICTIONS AND STANDARD ENGINEERING CONTROLS."02/20/09-Hiralkumar Patel. spoke with Ed regarding conclusions in submitted report. mentioned to Ed that clean groundwater was found in upgradient well BK-12 which indicates no off-site source. Ed mentioned that they will go back to site to check well again as suspecting that newly installed well could recharge slowly.spoke with Mr. Prigozen. based on results of investigations till date, asked him to start weekly monitoring of all wells, and removal of any product, immediately. also asked him for off-site investigation downgradient from wells BK-4 and BK-15. told him that product must be removed from wells by next week (end of 02/28/09) and weekly there after.02/23/09-Hiralkumar Patel. spoke with Mr. Prigozen. will do product removal on 02/25/09.alternate addresses: 58 Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13 Stfound two old closed spill reports:1. 0003390:- consolidated with this spill2. 0207277:- surface spill reported02/25/09-Hiralkumar Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail out product from wells. he mentioned that he got directions from Ed how to remove product and got some forms for recording. he also mentioned that they have waste oil tank on-site and they will collect product into this on-site tank and will pump out tank once get full. asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address:Sylvan Holdings LLC. **property owner**c/o Sage Prigozen **Elliot's son**58-64A Maurice AvenueMaspeth, NY 11378Ph. (917) 750-4112 (C)Fax (305) 860-6699email: sagep@bobcatzone.com02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly.02/27/09-Hiralkumar Patel. received call from Mr. Prigozen. he is planning to hire some local investigation team for further investigation. will call back with company's name who will do further investigations.sent STIP to Mr. Prigozen (7005 1820 0007 9827 6066). STIP emailed to Mr. Prigozen.03/13/09-Hiralkumar Patel. received call from Paul from Ecosystems. they have been hired by Mr. Prigozen. will submit work plan for additional investigation.Paul CiminelloEcosystems Strategies Inc.Ph. (845) 452-1658 (O) (914) 475-4208 (C)Email: paul@ecosystemsstrategies.com03/16/09-Hiralkumar Patel. received STIP delivery confirmation (letter delivered on 03/11/09).03/25/09-Hiralkumar Patel. received email from Ecosystems with work plan for further investigation. abstract:- will put absorbent pads in wells BK-4 and BK-10 as an interim remedial measure; pads will be changed, as needed, on a weekly basis- will verify groundwater flow direction- propose to install six to ten

S104621824

borings on site- borings will be extended (at a minimum) to the soil/groundwater interface or until refusal- at least two soil samples will be collected: one with highest PID and one at groundwater interface; if no PIDs found then only one soil sample will be collected at groundwater interface- convert one to two borings into a monitoring well- wells will be installed with a ten ft of screen; minimum of 2 ft of screening will extend above water table according to submitted site plan in proposed work plan, Ecosystems is planning to install all borings around BK-10, but no investigation proposed to delineate soil/groundwater contamination around BK-04. less than -----spoke with Mr. Prigozen. told him that without having signed Stipulation agreement, i can't approve any work plan. Mr. Prigozen mentioned that his attorney asked him not to sign STIP as he might lose right to get fund from brownfield program. Mr. Prigozen will ask his attorney to call. Mr. Prigozen has chosen to proceed with proposed plan without having approval from the department. spoke with Paul at Ecosystems. they are at the site today and are surveying all wells to confirm groundwater flow direction. they have put absorbent pads in wells and recovering free product. asked Paul about investigation around BK-04. he is currently concentrating on finding source for BK-10 and will eventually include investigation around BK-04. mentioned to him that the department requires investigation around BK-04 also and will only approve the work plan if it includes soil/gw investigation around BK-04 along with investigation around BK-10. 03/26/09-Hiralkumar Patel. received email from Larry Schnapf, environmental attorney representing Mr. Prigozen. Larry claims that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to sign STIP which results in a waiver of rights to seek reimbursement from the spill fund. he mentioned that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement. Larry Schnapf email: Lawrence.Schnapf@srz.com 04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystems. groundwater flow direction found almost in same direction as found earlier. no product found in well upgradient from BK-10. 04/02/09-Hiralkumar Patel. received email from Paul with report. abstract:- groundwater flow measurements are broadly consistent with the findings of previous consultant- groundwater flowing towards the south- review of sanborn maps indicates that the western portion was associated with oil refining activities predominantly performed on the adjoining property to the west (towards bayside oil depot)- numerous tanks are shown on the site between 1887 and 1916- between 1905 and 1965 a tunnel, that appears to have contained pipes connecting both sites, extended beneath Kent ave less than ----- according to sanborn maps from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining company and site had multiple tanks on western portion- adjoining to the southwest was MGP site from 1887 to 1916- 1942 sanborn map showing a tunnel beneath kent ave between the subject site and western property (currently bayside oil depot) spoke with Mr. Schnapf. Mr. Schnapf mentioned that they are suspecting that old tunnel between two properties (current bayside oil depot and subject site) might be bringing contamination on his client's property. he is planning for more soil and groundwater investigation and investigation about a tunnel before signing STIP. discussed with DEC legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule.

will submit RAWP by 07/17/091:45 PM:- spoke with Mr. Prigozen. based on results of further investigation, informed him that the department requires stipulation agreement signed before reviewing or approving any remediation action work plan. also asked him to schedule a site visit. he agreed to meet at the site at 10 AM on 07/01/09.2:03 PM:- received call from Paul. he spoke with Mr. Prigozen and will meet at 10 AM on 07/01/09.07/01/09-Hiralkumar Patel.10:00 AM:- visited site. met Mr. Prigozen and Paul. repair shop nearby entrance along N. 12th street consists three 275 gal ASTs: two for fresh oil and one for waste oil. waste oil tank is not registered. asked Mr. Prigozen to register waste oil tank. inspected areas around sediment trap/repair shop, BK-10, old abandoned tunnel and previously abandoned gasoline UST. Paul mentioned that abandoned tunnel extends towards BK-10. Paul will submit RAP by 07/17/09. proposes to excavate area by repair shop entrance as found heavily impacted soil in boring B7. asked Mr. Prigozen to excavate all following areas:- around BK-10 (as it could be localized problem)- entire abandoned tunnel running towards BK-10 (to investigate any more product in tunnel)- in front of repair shop

SPILL NUMBER 0207277 (Continued)

S104621824

in area of B-7- around B-9/MW-2 as found free product in itsuggest to remove old abandoned gasoline UST as found 236 ppb MTBE in well BK-3 nearby tank location. Paul suggest to sample BK-3 again before any excavation in this area. mentioned to Mr. Prigozen that based on gw analytical results from BK-3, the department doesn't require removal of the tank, but as they will do excavation in other part of site, it will be easy to use on-site equipments to dug this suspected area. Mr. Prigozen will discuss with Paul regarding gasoline UST removal.found self-contained parts cleaning machine with small tank (probably 15-20 gal). no stains/odors found around parts cleaning machine.found well cap missing for BK-10. asked Paul to replace it. asked Mr. Prigozen to send his tenant's contact info.12:46 PM:- received email from Mr. Prigozen with tenant's contact info.David WilliamsDirector of Real Estate and ConstructionSunbelt Rentals800 Hartford TurnpikeShrewsbury, MA 01545-4107Ph. (508) 925-1611 (O) (508) 245-1107 (C)email: David.williams@sunbeltrentals.com 1:40 PM:- left message for Mr. Williams.3:51 PM:- sent revised STIP to Mr. Prigozen. asked him to submit signed STIP by end of 07/13/09.07/06/09-Hiralkumar Patel.1:45 PM:- received message from Mr. Williams.07/24/09-Hiralkumar Patel.10:41 AM:- received work plan from Ecosystems. proposes to monitoring/recover product from wells, excavate contaminated soils from areas of B-7 and BK-10.07/27/09-Hiralkumar Patel.10:40 AM:- spoke with Paul about work schedule. today he will send cost estimates to Mr. Prigozen and expect to start work by Aug. 3, 2009. asked him to send confirmed work schedule.10:43 AM:- sent email to Mr. Prigozen approving proposed plan and asked to submit work schedule. email copied to Paul.08/06/09-Hiralkumar Patel.11:53 AM:- left message for Paul about work schedule.12:18 PM:- received message from Paul. he met property owner and tenant yesterday to coordinate excavation and planning to start work on 08/14/09. will send email with confirmed schedule.08/12/09-Hiralkumar Patel.10:39 AM:- received email from Paul. they will start soil excavation on 08/21/09 and expect to finish by 08/22/09.2:10 PM:- sent email to Paul. asked him to call me once excavation starts as planning to visit site during endpoint sample collection.08/21/09-Hiralkumar Patel.8:48 AM:- spoke with Richard (845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated sand, construction debris and clay layer. thick clay layer found right below water table.11:20 AM:- received call from Richard. while digging area around BK-10, well was destroyed and found brick structure in ground and heavily contaminated soil.2:00 PM:- visited site. area around BK-10 was excavated and patially backfilled after collecting endpoint samples. found water in excavation, but no product. Richrd mentioned that brick walls found on both side of BK-10 running parallel to N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product which was appearing in BK-10.crew was excavating area around B-7 (in front of garage entrance) at the time of site visit. found sticky black material from excavation with strange odors. Richard believes that this black material could be source of heavy contamination in B-7. will excavate to depth of 8 ft where contamination found during soil investigation.crew was also working inside garage where B-2 was installed and product found in MW-2. will collect appropriate endpoint samples.left site around 3 PM.3:47 PM:- received call from Mr. Prigozen. while working inside garage around MW-2, they found abandoned tank in ground. will investigate more.08/22/09-Hiralkumar Patel.9:25 AM:- received call from Mr.

S104621824

to 2,350 ppm with max at water table at 7 ft depth)- no excavation conducted in area of sediment trap/spoke with Richard about excavation around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample from excavation in front of repair shop area, they didn't excavated area around sediment trap.11/03/09-Hiralkumar Patel.9:35 AM:- spoke with Mr. Prigozen and informed him that the department requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination above water table and high PID readings during installation of boring BK-6A). also mentioned that the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem.9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2. they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work.10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr. Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul.11/20/09-Hiralkumar Patel.3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap. he spoke with Paul and waiting for his response. will call back.11/24/09-Hiralkumar Patel.10:39 AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next week.12/04/09-Hiralkumar Patel.2:43 PM:- left message for Mr. Prigozen.2:47 PM:- spoke with Richard. they are currently discussing and will call back by end of 12/07/09.3:45 PM:- received call from Mr. Prigozen. he spoke with Richard and will call back once gets answer from Ecosystem next week.12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09) including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample results in Oct. 2009.2:15 PM:- spoke with Mr. Prigozen. based on level of soil contamination and depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do excavation, if any, in his presence. he is out of NY during winter and will be back in summer. he requested to postpone soil excavation, if any, till summer.based on spill history and soil/gw sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but required monthly monitoring and quarterly sampling from existing wells.2:31 PM:- spoke with Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is some change in it and will send revised one. Richard requested to hold requirement of gw monitoring and sampling until they submit revised response.12/15/09-Hiralkumar Patel.11:38 AM:- spoke with Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's attorney is currently reviewing it and will submit soon.12/21/09-Hiralkumar Patel.2:02 PM:- spoke with Richard and asked to send document by end of tomorrow.12/22/09-Hiralkumar Patel. received email from Richard (at 4:29 PM on 12/21/09) including response regarding excavation in area of BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from existing wells and continued monitoring of the booms in BK-4 prior to decision regarding implementation of any

MAP FINDINGS

S104621824

groundwater interface (at 7 ft depth) and bottom soil sample was collected at 15 ft depth. as per Richard, groundwater was seeping into excavation at very low rate, so groundwater was not present in excavation for sampling. asked Richard to submit revised report including info about sidewall sampling depth and sample results comparison with TAGM 4046 instead of Part 375.10:31 AM:- left message for Mr. Prigozen. informed him that based on results of endpoint samples, the department requires further investigation/remediation.10:40 AM:- sent email to Richard asking to submit revised report. email copied to Mr. Prigozen.11:38 AM:- received call from Mr. Prigozen. he mentioned that he doesn't remember discussing about excavation around BK-4 and based on groundwater sampling results, he does not want to dig in area of BK-4. informed Mr. Prigozen that based on quarterly groundwater sampling results from BK-4, the department does not require excavation, but based on endpoint sample results from recent excavation, the department requires further investigation/remediation.11/30/10-Hiralkumar Patel.9:32 AM:- spoke with Rich. he will submit revised report. they are proposing for groundwater monitoring at this time and based on monitoring results, may propose additional investigation in former sediment trap area.12/02/10-Hiralkumar Patel.2:13 PM:- received revised report from Ecosystems.- excavated area around former sediment trap and well BK-14- no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg- during excavation, petroleum odors and PID readings between 300 and 600 were recorded- five endpoint samples (four sidewalls and one bottom) were collected from excavation- sampled groundwater in wells BK-4, BK-13, BK-15 and MW-1- petroleum contaminated soils remain at depths greater than 15 ft below the former sediment trap and below static water level- found heavy contamination in bottom endpoint soil sample- very minor VOC contamination found in groundwater samples (max 43 ppb MTBE in BK-4)-----bottom 15 ft
bgBenzene-----3,
400Toluene-----2,
900Ethylbenzene-----31,
000Xylene-----5,4001,2,
4-Trimethylbenzene-----210,000Naphthalene-----29,
000Isopropylbenzene-----19,
000n-Butylbenzene-----33,
000n-Propylbenzene-----37,000due to heavy soil contamination in endpoint bottom sample and heavy contamination in groundwater sample from well BK-14, which was installed in the vicinity of the sediment trap, the department requires further complete delineation of soil and groundwater investigation including installation of one well at the location of endpoint bottom sample with deeper screen.12/07/10-Hiralkumar Patel. discussed with DEC Austin regarding soil contamination below water table. he asked to contact MGP project manager in Albany as MGP site was in neighbourhood.11:10 AM:- spoke with DEC William Ottaway in Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site (V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some VOCs.reviewed recent report. no SVOCs found in any endpoint sample.1:38 PM:- sent letter to Mr. Prigozen requiring additional soil and groundwater investigation in former sediment trap area.

letter emailed to Mr. Prigozen and Paul.12/20/10-Hiralkumar Patel.2:22 PM:- received message from Paul from Ecosystems.12/21/10-Hiralkumar Patel.2:31 PM:- left message for Paul.12/29/10-Hiralkumar Patel.1:35 PM:- received email from Rich. a well at the former sediment trap will be installed on 01/06/11.01/04/11-Hiralkumar Patel.3:21 PM:- spoke with Rich. they will start well installation work around 8 AM. he also mentioned that a new drain structure has been installed in the previous sediment trap area. so they have to relocate the new well. Rich will decide well location once visit the site.01/06/11-Hiralkumar Patel.10:01 AM:- received call from Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface (groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was found at groundwater interface in backfill material. a well will be installed in boring with 15 ft of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and as no recovery in 15-20 ft depth, asked Rich to install another boring in area.11:15 AM:- visited site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only. minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former sediment trap area, next week.02/17/11-Hiralkumar Patel.1:13 PM:- received supplemental investigation report from Rich. abstract:- two soil borings (2B-1 and 2B-2) installed in former sediment trap area- collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at 15 and 20 ft at 2B-2- installed 2 inch well (BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5 to 15 ft bg)- sampled water from wells BK-4, BK-13, BK-14(R) and BK-15- no contamination found in any soil sample (not even in sample at 15 ft bg in 2B-1 which was collected in same area as endpoint bottom sample after excavation around former sediment trap)- very minor contamination found in water samples except sample from BK-14(R)groundwater analyticals:-----BK-14(R) Benzene-----190Ethylbenzene-----280Xylene-----1201,2,4-Trimethylbenzene-----1,300Naphthalene-----210- recommended sampling of wells MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months03/17/11-Hiralkumar Patel. discussed with DEC Austin. based on consistent data in well BK-14, Austin asked for remediation.3:16 PM:- sent letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich.05/20/11-Hiralkumar Patel.10:40 AM:- received call from Paul. he mentioned that as groundwater contamination found in only by former sediment trap area, he propose to monitor groundwater for some time before any active remediation. he will send work plan by 06/03/11.07/20/11-Hiralkumar Patel.1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11, groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found contamination in samples from BK-14R.groundwater analyticals:-----BK-14(R)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

Property is being sold. Purchaser hired a firm to do a phase 2 and found contaminated soil under a crack in the cement floor. This location used to have an oil tank standing above it. Eastern Environmental has been hired by the current owner. They have opened the floor and will have a "guzzler" truck suck out contaminated soil. In the next few days they "HOPE" to hit clean endpoints and send samples in to confirm cleanup is complete. If they do not get clean endpoints they will call Sharif Rahman directly for further instructions. 10/08/10 Stopped by the site. The area in question was dug and contaminated soil was removed and excavation backfilled, cemented. Report will be sent to DEC. (sr)12/14/10 Rec'd analytical report for soil sample. VOCs/SVOCs exceedances are minor. Report in edocs. Case closed. (sr)05/12/11 Doug from Eastern Environmental (631-727-2700) called me to say that his company was not

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 20058
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"TRANSFERRED FROM Y.KRIMGOLD.Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II
Remarks: also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167.

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 272130
DEC Memo: Tipple was at the site at 6:40 AM and discovered the spill. Detailed work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street. 08/10/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called Pat at (718) 372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA 09/22/06: On September 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr. Cirino the spill was on concrete. No water and no land were contaminated by the spill. The spill is cleaned. Also talk to Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718) 388-1515 he said yard is asphalt and asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product. so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA

DEC Memo: 07/02/08 - LZARCADIS submitted a report dated June 26, 2008, documenting wells' decommissioning. 01/23/08 - LZAs advised by the Regional Spill Engineer, the spill case is closed and the presence of MGP contamination at the site referred to Gardiner Cross, Central Office, Remedial Bureau C, for further investigation. An NFA letter was sent out (eDods). 11/23/07 - Zielinski ARCADIS BBL submitted a report, dated November 13, 2007, containing groundwater analytical results of sampling conducted on October 17, 2007. A sheen was detected in MW-18 (an off-site well). Benzene was detected above groundwater standards limit (0.7 ppb) in twelve wells. The highest concentration was noticed in MW-14R (390 ppb), MW-11 (180 ppb), B-2 (110 ppb), MW-15 (34 ppb), MW-19 (35 ppb). Toluene was detected above the limit (5 ppb) in MW-11 (17 ppb), MW-14R (21 ppb), B-1 (16 ppb), and B-2 (11 ppb). Ethylbenzene was detected above the limit (5 ppb) in the following wells: MW-9 (5.7 ppb), MW-11 (9.2 ppb), MW-14R (35 ppb), MW-19 (29 ppb), B-1 (13 ppb), and B-2 (12 ppb). Total xylenes were detected above the limit (5 ppb) in MW-9 (20 ppb), MW-11 (6.4 ppb), MW-14R (130 ppb), MW-15 (8.4 ppb), B-1 (46 ppb), and B-2 (100 ppb). MTBE was detected above the limit (10 ppb) at MW-5 (11 ppb), MW-6 (48 ppb), MW-12 (79 ppb), and MW-14R (21 ppb). Acenaphthalene, naphthalene, benzo(a)anthracene, benzo(b)fluoranthene, and benzo(k)fluoranthene were detected above groundwater limits at MW-19 (an off-site well). Acenaphthene was detected in MW-9 (20 ppb). 09/19/07 - Zielinski A letter requesting a one round groundwater sampling for the presence

of SOVs, SVOCs, and MTBE was sent to ARCADIS BBL. 09/06/07 -ZielinskiHistorical information on spill # 9804544, 1 North 12th Street, Brooklyn, NY August 28, 1997: well gauging, conducted for Star Enterprise, reveals 0.81 feet of free product in MW-10. October 30, 1997: in its letter to NYSDEC, Star Enterprise declares that it "will retain responsibility for cleanup of hydrocarbons existing at the facility, prior to the sale of the facility, " and will prepare a site investigation and remediation plan. November 1, 1997: Bayside Fuel Oil Depot Corp. purchases Texaco NY Terminal. November 1997: the removal of USTs at the site. January 16, 1998: sampling by Handex reveals the presence of free product in MW-10 (0.16 feet) , and contamination in MW- 6 MTBE (6,370 ppb) and naphthalene (21 ppb). May 1998: the Technical Analyses and Proposed Remedial Actions for Texaco Facility No. 58079, Brooklyn, NY, is prepared for Star Enterprise by Environmental Systems and Technologies, Inc. Findings: unsaturated zone thickness ranges from 2 to 12 feet; groundwater flows north-northeast toward the East River and the Bushwick Inlet; MW-10 (1.17 feet of LPH); MW-7 (0.04 feet of LPH); MW-6 MTBE (13,000 ppb), benzene (494 ppb); soil contamination below NYSDEC guidance values. Conclusions: the primary focus of remediation should be on removal of LPH and installation of additional wells at vicinity of MW-10. July 10, 1998: Star Enterprise notifies about a spill of an unknown cause, dated February 23, 1996; the spill receives No. 9804544. July 27, 1998: a Stipulation Agreement (SA), signed by Region 2 Regional Spill Engineer, provides that Texaco Refining and Marketing, Inc., is responsible for cleanup of the spill. The cover letter, however, indicates Star Enterprise as the respondent of the SA. The SA requires Texaco Refining and Marketing, Inc. submit a corrective action plan and quarterly progress reports. October 1998: an Investigation Report, prepared by Handex for Star Enterprise, shows results of sampling conducted on July 29, 1998; soil contamination was found near MW-13 (BTEX 754,700 ppb), no MTBE detected, TPH-DRO (Total Petroleum Hydrocarbons-Diesel Range) (2,800 ppm), THP-GRO (9,800 ppm); near MW-14 (BTEX 343,900 ppb), no MTBE, detected TPH-DRO (5,560 ppm), TPH-GRO (18,400 ppm). Groundwater contamination: MW- 10 (0.58 feet of LPH); MW-13 (0.09 feet of LPH); MW-6 BTEX (3,410 ppb). Depth to water: MW-11 (1.94 feet below grade); EPA-3 (7.51 feet below grade). November 1998: Handex prepares a report of behalf of Texaco Refining and Marketing, Inc., which reveals free product at MW-10 (0.40 feet) on September 22, 1008; and at MW-13 (0.67 feet) on September 28, 1998. The results of soil sampling; MTBE not detected, BTEX detected only near MW-16 (1.7 ppb) . January 19, 1999: since the results of investigation by Handex, submitted on November 4, 1998, indicate free product in the vicinity of MW-10 and dissolved phased petroleum in the vicinity of MW-16, NYSDEC requests that Star Enterprise submit a proposed CAP in accordance with the SA. April 5, 1999: on behalf of Motiva Enterprise, LLC, Handex submits a remediation plan for the former Star Enterprises facility. The plan includes the use of enhanced fluid recovery (EFR) system, soil-vapor extraction , and removal of free product from MW-6, MW-10, and MW-13. The EFR events will be conducted once a month for six consecutive months. Groundwater samples will be collected twice a year from all wells where free product is not present. November 24, 1999: Handex is submitting, on behalf of Motiva Enterprise, a site status report. Groundwater sampling was conducted in May 1999 and EFR events conducted in May and June 1999. The EFR program was terminated because of the presence of LPH in MW-14 and MW-16. February 17, 2000:

NYSDEC, reviewing the November 4, 1999, report determines that the CAP was not successful in the remediation at the site, as required by the SA. NYSDEC states that Motiva Enterprise has failed to submit a proposed plan to complete the cleanup. NYSDEC requests that Motiva Enterprise submit a progress report July 27, 2000: on behalf of Motiva Enterprise, LLC, Handex submits a quarterly progress report which asserts that additional monitoring proposed in the investigation plan were not installed because of the presence of the underground utilities. Soil contamination shows exceedances of SVOCs near MW-17, MW-18, and MW-19 and the presence of free product in MW-10, MW-13, MW-14, and MW-16. August 20, 2001: a letter from Sclaro, Shulman, Cohen, P.C., reveals that NYSDEC agreed to the discontinuance of enhanced fluid recovery in June of 1999 after LPH appeared in MW-14 and MW-16. The letter informs that on April 22, 1999, NYSDEC approved the CAP submitted on July 16, 1998. December 17, 2001: Handex, on behalf of Motiva Enterprise, submits a semiannual monitoring report that reveals the presence of LPH in MW-6, 7, 10, 13, 14, 15, 18, and 19 (from traces to 0.60 feet-MW-10). Groundwater contamination was detected in MW-13 BTEX (7,706 ppb); B-2 MTBE (1,280 ppb). April 1, 2002: Anthony Sigona of NYSDEC in his memo informs that the current owner of the site (Bayside Fuel Oil Depot) has not been directly involved in the cleanup; the cleanup continues under direction of Equiva Services, LLC, which acquired Texaco Refining & Marketing; LPH have dropped to levels no greater than 0.1 feet; dissolved BTEX and MTBE are present. May 30, 2002: TransGas Energy applies for a Voluntary Cleanup Program assistance. The cover letter says that the site is adjacent to a former coal gasification or manufactured gas plant located on the south side of North 12th Street. August 20, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits results of June 25, 2002, groundwater sampling; LPH was observed in MW-7, 10, 15, and 16 with the highest number of 0.13 feet at MW-16. Detected groundwater contamination; MW-13 xylenes 93,040 ppb, benzene (2,120 ppb). August 22, 2002: a letter from Joseph Lentol, Assemblyman, Kings Country District, asserts that Texaco merged with Motiva (most likely between July 1998 and August 2002); the DEC files do not reveal Motiva as the company responsible for the cleanup. September 25, 2002: Anthony Sigona of NYSDEC in his letter to Chevron Product Company indicates that since Chevron has merged with Texaco Refining & Marketing, Inc., NYSDEC will determine whether Chevron is authorized to implement the remediation project on behalf of Texaco. If so, Chevron is required--under the CA--submit a feasibility study and estimated cleanup schedule for approval. November 25, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits a corrective action plan. The plan evaluates remediation options: natural attenuation, soil vapor extraction or bioventing (installation of wells to pump air out or into the soil), and excavation and a number of remediation methods for excavated soil (disposal and treatment at an asphalt plant, thin spreading, on-site or off-site thermal desorption, bioremediation/biopile remediation, and disposal in a landfill). BBL proposes the excavation (area 25'x50' extending about 2' into the water table, next to MW-10, 13, 14, and 16) and off-site disposal as the remediation method. December 27, 2002: NYSDEC approves a BBL corrective action plan of November 25, 2002, and its implementation schedule. January 8, 2003: a letter from Chevron Product Company informs that Chevron/Texaco Corporation assumes environmental responsibilities associated with

Texaco Refining and Marketing, Inc., as a result of the merger on October 9, 2001. Attached to it a certificate reveals that Chevron Corp. has changed the name to ChevronTexaco Corporation. March 5, 2003: Randall Austin in his e-mail informs that during excavation of an UST-discovered recently at the site--strong odors were generated and entered an adjacent property, occupied by City Storage. As a result, 3 people were sick and 25 people were evacuated. The contractor covered the excavated area with plastic sheeting and overfilled it with clean sand. March 10, 2003: NYSDEC sends a letter to Chevron Products Co. requesting that because of excessive vapors present on March 5, the CAP must be modified and submitted for DEC approval. The modification must address containment of vapors from contaminated soil. March 11, 2003: Blasland, Bouck & Lee, Inc. (BBL), on behalf of Chevron Environmental Management Company submits November 2002 groundwater sampling and bimonthly gauging results. LPH were detected in MW-10 (0.02 feet); MW-16 (0.12 feet). Benzene was detected at B-1 (120 ppb); B-2 (45.3 ppb); MW-6 (72.4 ppb); MW-11 (70.6 ppb); MW-13 (1,800ppb); MW-14 (155 ppb). Toluene was discovered in B-1 (18.7 ppb); MW-13 (597 ppb). Ethylbenzene, total xylene, and MTBE were detected in B-1, MW-6, and MW-13. March 14, 2003: Windels, Marx, Lane & Mitterdorf, LLP, representing TransGas Energy Systems (TGES), LLC, sends to City Storage/ Citi Postal a Notice of Intent to Sue as a result of TGES's position that the Bayside property was polluted by significant amounts of waste from a former Manufactured Gas Plant (MGP)-a parcel that City Storage occupies. March 2003?: a drafted and undated letter by DEC Deputy Commissioner James Ferreira to Windels Marx, Lane & Mitterdorf, LLP, responds to their March 14, 2003, letter. Ferreira states that TransGas Energy Systems entered into a voluntary cleanup agreement with DEC to investigate and remediate the Bayside property. The property is also on DEC's "Addendum to Hazardous Substance Waste Disposal Site Study" of December 1998, and is listed as B.U.G./Williamsburg Works site, presently owned by Keyspan. In response to a Notice of Intent to Sue, Ferreira addresses also alleged contamination of the Bayside property from MGP property, located on two parcels between North 11th and 12th Streets, and subsequent discharge into the Bushwick Inlet. He writes that the CWA allows for the initiation of citizen suits only for point-source discharges to the surface waters. Year 2003: a draft of an Order on Consent, R2-20030401-90(CO), indicates that Chevron Product Company, was the Respondent of this proposed CO. There is no proof that this order has been executed: a signed CO exists neither in the Regional Enforcement Coordination database nor in the DER's files. April 1, 2003: in its letter to NYSDEC, Chevron Environmental Management Company (CEMS) summarizes results of a meeting between these entities: NYSDEC will prepare a drafted consent order; April 7 is a deadline of a revised CAP, which include a method of sampling C&D debris stockpiled at the site; BBL will submit a review comments on a report prepared for TransGas Energy Systems to Shaminder Chawla of NYSDEC. April 2, 2003: on behalf of CEMS, BBL submits a revised corrective action plan. The plan provides that C&D debris will be disposed after analytical results are available; the UST will be left in place and abandoned. The excavation area will be capped and covered with cleanfill. Odors will be monitored by a PID meter in accordance with a Community Air Monitoring Plan. A summary report will be prepared. April 3, 2003: BBL reviews a TRC Environmental Corporation's (TRC) Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil site (former Chevron facility). BBL agrees

1000351174

to TRC's conclusions that a significant amount of coal tar and petroleum contamination migrated on the Bayside Property and impacted soil and groundwater. The depth of contaminated soil is limited to 13 feet or less. Shallow petroleum contamination is commingled with MGP contamination from the Williamsburg Works site. Deeper soil and groundwater are almost exclusively affected by MGP contamination. April 4, 2003: Anthony Sigona comments on the revised CAP and the Community Air Monitoring Plan (CAMP), prepared by BBL, dated April 2, 2003. Sigona writes that the CAMP must address vapor and dust suppression techniques; PID must be calibrated to 10 ppm for isobutylene, air monitoring must be recorded every 15 minutes at a number of locations. The revised CAP should include a schedule for submission of a site investigation plan in order to address any contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil Site. April 25, 2003: BBL concurs with NYSDEC comments of April 4. May 2, 2003: a letter from Chevron Product Company, commenting on a drafted CO, denies its responsibilities for the spill and identifies Star Enterprise as the respondent. Also, Chevron doubts the bona fides of the Stipulation. According to Chevron, Star is responsible for surface contamination; deeper soil layers have been affected by the MGP. May 6, 2003: David Rubinton of NYSDEC responses to Chevron's letter of May 2, 2003. He rebuts a Chevron's claim that Texaco Refining and Marketing, Inc., was not the responder of the stipulation. Rubinton writes that the current Stipulation will have to be replaced and a Consent Order will be necessary. May 20, 2003: Anthony Sigona, in his letter to Chevron Products Company, approves a revised CAMP, dated May 13, 2003, upon inclusion of stringent levels of detectable hydrocarbons and monitoring of indoor air quality. May 22, 2003: BBL submits a CAMP, revised according to the May 6 NYSDEC comments. May 23, 2003: BBL sends to NYSDEC results of waste characterization sampling of the excavated C&D debris. None of the constituents analyzed were detected except for lead. May 23, 2003: Anthony Sigona requests that the CAP and the CAMP be implemented within seven business days. June 17, 2003: Deputy Commissioner, James Ferreira, responds to a citizen suit notice concerning alleged contamination from the Williamsburg MGP property affecting the Bayside site. The property is owned by Citi Storage/Citi Postal and Steinhardt Management /Fifty Kent Avenue Associates LLP. NYSDEC has plans to pursue Keyspan (the former owner) for the remediation of the property, located on two parcels between North 11th and 12th Streets. July 2, 2003: BBL submits a corrective action report, as required by NYSDEC in its letter of May 20, 2003. The report indicates that C&D debris had no excessive concentrations of SVOCs, VOCs. Only lead was detected at 0.91 ppm (TCLP limit is 5.0 ppm). C&D debris was disposed at CWM Chemical Services, Model City. The UST was left in place and filled with concrete slurry. The existing sheeting and sand cover remain in place. July 23, 2003: Chevron sends a letter to Sigona in response to his letter of July 14 (not in the DEC files). Chevron indicates that the corrective CAP has been approved by NYSDEC. Chevron also responds to Sigona's request concerning the submission of a site investigation plan (to address petroleum contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report, dated December 2002). Chevron, before the submission of such a plan, needs to receive DEC's final comments concerning the TRC report. July 23, 2003: Sigona sends a commentary letter in response to Chevron today's letter. He says that

BAYSIDE FUEL OIL DEPOT CORP (Continued)

1000351174

while NYSDEC recognizes that there is evidence that coal gasification waste might have migrated onto CPC 's former site; there is also evidence that CPC or its predecessors have discharged petroleum at this site. By August 1, 2003, CPC must submit a proposal for additional borings and well installations as well as Remedial Investigation Work Plan in accordance with DER-11. Section 3, Paragraph 3.3. August 29, 2003: BBL submits a Site Investigation Plan for the former Star Enterprise facility, in accordance with DEC Stipulation Agreement, dated July 27, 1998. The investigation will be conducted according to DER-10 and a site-specific Health and Safety Plan/Community Air Monitoring Plan(approved by NYSDEC on April 2, 2003). The plan includes test borings, soil analyses, well installations, and groundwater samplings. September 10, 2003: Sigona sends comments to Chevron Product Company concerning BBL's Proposed Site Investigation Work Plan, dated August 29. NYSDEC requires that the results of the proposed BBL Work Plan be implemented in accordance with an approved schedule referenced in an executed Order on Consent (not in DEC files). April 14(?), 2004: commenting on the CAP, dated April 15, 2004, Sigona requests that Chevron submits a revised CAP by June 30, 2004, including a justification for a manual gauging and bailing instead of selecting of other remedial strategies. Earlier, NYSDEC decided to cease temporarily high-vacuum extraction events in order to investigate alterative remedial strategies. August 12, 2004: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Product Company sends a revised Corrective Action Plan. Anthony Sigona approves the PSH Recovery Plan. A final remediation report must comply with DER #10; quarterly groundwater monitoring must contain petroleum constituents, dissolved oxygen, pH, alkalinity and hardness. September 16, 2004: Chevron Environmental Management Company sends a letter to NYSDEC summarizing the results of agreement between NYSDEC and Chevron on future environmental response actions at the site. BBL, the Chevron consultant, will perform bimonthly bailing and recovery of PSH; BBL will prepare an Exposure Assessment, focused on shallow zone impacts associated with the site (less than 20 feet below a land surface) by the end of year 2004. A one round of groundwater samples, including BTEX and MTBE ,will be included in the Exposure Assessment. December 27, 2004: BBL submits results of the September 2004 groundwater sampling conducted at 20 monitoring wells. Benzene was detected in B-1 (100 ppb); MW-1 (6 ppb); MW-5 (2 ppb); MW-6 (41ppb); MW-8 (61 ppb); MW-9 (9 ppb); MW-12 (3 ppb); MW-14R (380 ppb); MW-15 (120 ppb); MW-18 (31 ppb); MW-19 (59ppb). Toluene was detected in B-1 (15 ppb); MW-9 (16 ppb); MW-14R (57 ppb). Ethylbenzene was detected in B-1 (16 ppb); MW-9 (45 ppb); MW-14R (110 ppb); MW-18 (140 ppb); MW-19 (63 ppb). Total xylenes were detected in B-1 (64 ppb); MW-9 (45 ppb); MW-14R (280 ppb); MW-15 (11 ppb); MW-19 (10 ppb). MTBE was detected in MW-6 (67 ppb). PSHs were observed in EPA-3 (sheen); MW-9 (0.01 feet); MW-11 (film); MW-12 (film). Conclusions; four wells contained detectable PSH; the plume is stable and has been delineation to the central portion of the site; natural attenuation is occurring on the site. December 27, 2004: the Human Health Exposure Assessment, prepared by BBL, concludes that BTEX and MTBE are present in groundwater at concentrations exceeding NYSWQS. However, the groundwater at this site is not potable, and potential exposures would most likely be limited to direct contact with groundwater and inhalation of indoor air vapors. Potential exposure encountered during excavation could be mitigated through the use of properly

trained personnel and protective equipment. Since available soil and soil vapor data is limited, they have not been evaluated. September 2, 2005: BBL submits a report on the second quarter 2005 bimonthly gauging as specified in the DEC-approved CAP. No SPH was detected in any of 21 monitoring wells during any of 8 gauging events. January 31, 2006: BBL submits a report on the bimonthly gauging as specified in the DEC-approved CAP, from August 2005 through December 2005. PSH was detected in MW-18 on December 8, 2005 (0.01 feet); 21 wells were gauged during 9 events. August 7, 2006: BBL submits a report on the twice-a-month gauging from January 2006 through March 2006; 21 wells were gauged on 5 occasions; no PSH was detected. October 6, 2006: BBL sends a report concerning gauging from April 2006 to July 2006; 21 wells were gauged, and no PSH was detected on any of 8 events. Chevron Environmental Management company proposes quarterly gauging and twice-a-year reporting. November 7, 2006: BBL, an ARCADIS Company, submits a report on the twice-a-month gauging as specified in the DEC-approved CAP, from August 2006 through September 2006; 21 wells were gauged on 4 occasions; no SPH was detected. December 14, 2006: Leszek Zielinski of NYSDEC approves the semiannual gauging and groundwater elevation measurements. The absence of PSH had been observed since December 8, 2005, when 0.01 foot of free product in Well MW-18 was found. The data sufficiently demonstrates that asymptotic conditions have been reached. The department approves BBL's request to perform quarterly gauging of the monitoring wells for the presence of PSH. Similarly, the department approved a request concerning the semiannual reporting on a groundwater elevation and a PSH thickness at these wells. January 4, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from October 2006 through December 2006. PSH (0.09 feet) was detected in MW-18 on December 11, 2006. 21 wells were gauged during 5 events. August 22, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from January 2007 through May 2007. PSH was observed in MW-06 (0.01 feet) in February 2007; MW-18 (0.01 feet) on February 8, 2007, and (0.01 feet) on May 15, 2007. Wells were gauged 4 times in this period. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO" This site cleanup has been consolidated under Spill No. 9804544. On July 16, 1998, DEC SIGONA RECEIVED PROPOSED site investigation plan. Letter sent to STar Enterprise on 7/17/98 approving plan. Stipulation Agreement sent to Star for signature on 7/10/98. In response to a complaint over elevated vapors on March 5th, 2003, filed under Spill Investigation No. 0211984, the DEC issued a verbal Order to Cease and Desist all remedial activity at the site pursuant to the Blasland, Bouck & Lee, Inc. (BBL) corrective action plan (CAP), dated November 25, 2002. The DEC confirmed that the excessive vapors generated by the excavation of petroleum contaminated soils at the site under the November 25th CAP, were shown to impact worker health and safety at the affected site at CitiStorage. As a direct result of these vapor problems associated with the implementation of the November 25th, 2002 CAP, the DEC has determined that it has become necessary to modify of the CAP conditionally approved by DEC in a letter to CPC, dated December 27, 2002. The CAP must now be modified to continue to satisfy paragraph III of the DEC's Stipulation Agreement with Texaco Refining & Marketing, Inc., dated July 27, 1998. DEC's comments regarding Blasland, Bouck & Lee, Inc. (BBL) revised Community Air Monitoring Plan (CAMP), dated May 22, 2003, to address emission of odors, vapors and dust during the remedial work proposed in the revised CAP. The DEC accepts the proposed CAMP which has addressed

Remarks: the comments in our May 20, 2003 letter to CPC. CPC must now implement the Blasland, Bouck & Lee, Inc. (BBL) revised corrective action plan (CAP), dated April 2, 2003, and revised CAMP, dated May 22, 2003.4/22/2004 - Spill case is reassigned to Zhao.
Ground water monitoring revealed the presents of petroleum in groundwater star enterprise is developing a remediation plan with DEC (Sigona).

Site Description: The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department's Voluntary Cleanup Program (VCP) in December 2002. The current owner of the Site is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going. The VCP Agreement was terminated in 2009 for lack of progress. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and contaminated-groundwater. See also site no. 224055 (Williamsburg Works MGP) for further information.

Env Problem:

Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE's consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb. Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks: with conclusions and recommendations of the report. However, requested closure of waste oil tank and submittal of appropriate Bulk Storage Application.02/17/11 - LZThe waste oil tank was permanently closed in place (edocs), which meets DEC requirements. An application was submitted to change the status of the tank. However, it has been returned to the applicant since the tightness test for another tank at the facility is overdue.The spill case is closed.

DEC Memo: 3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact: Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang.

-----7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda)7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Gueterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents be submitted to the DEC for review by 9/4/07.1. An explanation of the cause of the tank system failure;2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank;3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system;4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation.10/29/07: Chanda called Mr. Drew Pardus(NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly.12/6/07: Chanda received an email (see edocs) from Ms. Lee Guterman, NYCSCA. She stated that "The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07." 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007.2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments:-Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. - About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler.- The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil.- The groundwater table has been measured between 10 and 11 feet bgs.- Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp.3/3/08: Chanda discussed with Joe Sun (supervisor),and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Guterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08.3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education).3/31/08: Chanda sent a fully executed STIP to the RP and required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval.4/3/08: Chanda received a Subsurface Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:-TRC will advance ten (10) soil borings across the Site as part of monitoring well installation. Soil samples will be analyzed for the STARS volatile organic compounds

U000409472

(VOCs) and STARS SVOCs.-TRC will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant (TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by June 2, 2008 for review and approval.4/17/08: Chanda received the following email from Mr. Drew Pardus, NYCSCA:"TRC is scheduled to start performing the field work for the investigation on April 24, 2008. We will provide the investigation report as soon as it is available. Please feel free to contact me if you have any questions or comments. Sincerely, Drew Pardus"6/2/08: Chanda received an email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman, NYCSCA. The Deadline is extended to 6/9/08.6/9/08: Chanda received a Site Investigation Report from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs)7/3/08: Chanda has reviewed the site investigation report and has the followings:-The site consists of a three-story public school building with basement, and asphalt-paved parking and landscaped areas.-The results of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs.- Permanent flush mounted ten (10)GW monitoring wells were installed at the site.-The depth to groundwater measured at the Site is approximately 8 to 10 feet bgs.-No SVOCs detected in GW at concentrations exceeding Class GA Values.-Several VOCs were detected in GW samples.-NAPL was not encountered in any of the GW monitoring wells during gauging with an oil /water interface probe.-Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant inward flow direction, exists beneath the site.Based on the results of site investigation, and considering the result of previous investigation, TRC concluded that there is a potential damage of school building that could result from attempting to remove the 20,000-gallon UST from the site. TRC recommended the following:* Permanently close-in-place the 20,000-gallon UST;* In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations;* Close or take out of service the concrete vault in accordance with applicable regulations;* Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present;* Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil;7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site.7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP) be submitted to DEC by 9/11/08 for review and approval.8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting's consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval.9/11/08: A follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

findings of the recent inspection of the school building basement for this site. As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site: Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time. Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in operation or needs to be. Clean the oil strains inside the basement areas and tank vault area to see if they return. Advance several monitoring wells in the vicinity of the 20,000-gallon UST. Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule. 9/11/08: Chanda sent a letter to Ms. Lee Guterman requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval. 10/10/08: Chanda received a Site Investigation and Interim Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed the work plan. The work plan has the following: * Investigation of Concrete Vault * Removal and Monitoring of "Seeps" * UST and Vault Cleaning and Inspection * Geophysical Survey * Four groundwater Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST 10/31/08: A meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the investigation be submitted to the Department by December 30, 2008. 05/13/2009: This spill case was transferred to A. Doronova. - AD Reviewed the file. The investigation summary report requested by Kartik Chanda of DEC was not submitted yet. AD 12/04/2009: Received a RAP. Will review. PDF copy is missing. To request its submission. AD 12/08/2009: Received a pdf copy. DL to eDocs. AD 12/30/2009: Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not found; free product is present in soil and GW in the vicinity of UST, and is apparently being conveyed to the concrete vault via subsurface drainage system beneath the building basement; dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP with J. Kolleeny. AD 01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC. Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC. Discussed the proposed RAP. It was agreed that two additional soil borings will be advanced in the vicinity of the concrete vault, and based in the field observation of the soil samples, one boring will be finished as a permanent monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to DEC for review and approval. AD 04/30/2010: Called and spoke with D. Pardus regarding submission of the addendum to the RAP. He said that it was prepared and is now under review for budgetary approval. AD 06/20/2011: Received an e-mail

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

from Drew Pardus saying: "Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC's observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus" DL the attached document to eDocs. AD03/27/2012: Received an e-mail from S. Kline of SCA saying: "Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with any questions or comments. Regards-Stephen Kline, P.E. NYC School Construction Authority | EHD Division 30-30 Thomson Avenue Long Island City, NY 11101 | Cell (347) 242-7109 | Stephen.kline@gza.com" DL the attached report and letter to eDocs. Will review. AD04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRC-MW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterly monitoring event. If LNAPL is present in a well, groundwater will not be analyzed from that monitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW-6, TRC-MW-8, and TRC-MW-10 (upgradient wells) from the first quarterly sampling round are below Class GA Values, these wells will not be sampled during subsequent quarterly events. However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal: TRC will perform the following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

the first quarter, TRC anticipates performing 6 events (three during the first month, two during the second month, and one during the third month). Inspections/product removal events will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will be contacted to determine the appropriate course of action. - Waste generated will be properly transported off-Site for disposal in accordance with applicable laws and regulations. - The information collected during the vault inspections/product removal will be submitted with the quarterly monitoring reports.

AD04/24/2012: Discussed the work plan with J. Kolleeny of DEC.
AD04/25/2012: issued and sent an approval letter to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD12/21/2012: Received a Project Progress Report #1 from TRC. DL the report to eDocs. Will review. AD02/01/2013: Reviewed the report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: In-place closure of the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school's boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to the boring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-2. Soil boring location

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW-5, TRC-MW6, TRC-MW7, TRC-MW8, TRCMW9, and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRCMW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012 using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ?g/L for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the concentration of MTBE in the well is likely attributable to an off-site source and not to an on-site release. No other VOCs were detected in any of the groundwater samples at concentrations exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2, August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, based on observations noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in the boiler room pump pit. LNAPL Product Recovery Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 201. During the recovery events, the thickness of the LNAPL could not be accurately determined due to the high viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the bottom of the concrete vault were removed below the elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter. Quarterly inspections and product removal of the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013. The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round of groundwater sampling, which was performed in October 2012. AD03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed: Two rounds of quarterly groundwater sampling (October 2012 and January 2013); Concrete vault and boiler room pump pit inspection (January 2013); Monitoring well gauging (January 2013); and LNAPL recovery event (January 2013). Quarterly Groundwater Sampling: Groundwater samples were collected from 8 permanent monitoring wells: TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW15 on October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells: TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE) was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the October 2012 and January 2013 sampling events in well TRC-MW8: MTBE - 12ppb in October 2012 - 5.1ppb in January 2012. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the LNAPL cannot be accurately determined due to the high viscosity of the oil identified in the

U000409472

concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD05/24/2013: Received the following e-mail from TRC: "Ainura, Attached is Progress Report #3 for Spill Case No. 0413160 (Automotive Trade High School). Please review and contact me with any questions or comments. Thank you, Charles Guder Senior Project Manager" DL the report to eDocs. Will review. AD08/30/2013: Reviewed the report. It states that TRC performed field activities at the Site between April 9 and April 19, 2013. During this period, the following activities were completed: - Quarterly groundwater sampling; - Concrete vault and boiler room pump pit inspection; - Removal of ancillary tank gauges and piping from the boiler room; - Monitoring well gauging;

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

and- LNAPL recovery. Quarterly Groundwater Sampling: Groundwater samples were collected from monitoring wells TRC-MW1, TRC-MW2, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, TRC-MW11, TRC-MW14, and TRC-MW15 on April 18 and 19, 2013. TRC did not collect a groundwater sample from monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during previous sampling events (October 2012 and January 2013) due to the presence of LNAPL in the monitoring wells. LNAPL was not present in these wells during this sampling event. In accordance with procedures detailed in the NYSDEC-approved RAP and RAP Addendum, sampling of upgradient monitoring wells TRC-MW6 and TRC-MW10 were discontinued after the initial quarterly groundwater sampling event. In addition, LNAPL was present in monitoring wells TRC-MW12 and TRC-MW13, therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: - The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on April 9, 2013 by TRC. Also on April 9, 2013, remnant gauges and piping associated with the closed-in-place 20,000-gallon UST were removed and wall pipe openings were sealed with cement. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. As indicated previously, LNAPL was previously measured in monitoring wells TRC-MW2, TRC-MW11 and TRC-MW14 during the previous gauging events (October 2012 and January 2013). The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12 (0.07') and TRC-MW13 (0.1') on April 9, 2013. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on April 9, 2013. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. Approximately 3,600 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on April 9, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,550 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, three wells which previously contained LNAPL do not currently contain LNAPL and observations made during bailing and the extraction events indicate that LNAPL thicknesses in the wells are decreasing. TRC is planning the following activities for the fourth quarterly LNAPL removal and groundwater sampling event: - Quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. An additional vacuum truck will be used during the next LNAPL removal event to ensure LNAPL present in the building underdrain pipe will flow out of the pipe and be removed from the vault. - Progress

Report #4 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2013.- The monitoring well network will be gauged during the 4th quarterly event. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will be performed during this event. No response needed. AD09/06/2013: Received a Progress Report # 4 for the site. DL the report to eDocs. Will review. AD10/15/2013: Reviewed the report. It states that between July 19 and July 24, 2013 TRC conducted at the site following field activities:-Quarterly groundwater sampling;-Concrete vault and boiler room pump pit inspection;-Monitoring well gauging; -LNAPL recovery.Groundwater samples were collected from permanent monitoring wells TRC-MW1 through TRC-MW5,TRC-MW7 through TRC-MW9, and TRC-MW11 through TRC-MW15 from July 22 through July 24,2013. Monitoring wells TRC-MW12 and TRC-MW13 contained LNAPL at minimal thicknesses (approximately 0.03 feet) when gauged on July 19, 2013; however, following vacuum extraction, measurable LNAPL was not detected, and these wells were sampled. The results of the analysis of groundwater sampling indicate that there were no VOCs or SVOCs detected at concentrations exceeding their corresponding Class GA Values. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging:The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 19, 2013 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13.LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15.The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW12(0.03') and TRC-MW13(0.03) on July 19, 2013 with an oil/water interface probe.LNAPL Product Recovery:Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on July 19, 2013 using a vacuum truck.The procedure for removal of LNAPL at the Site consisted of the following:The contents of the concrete vault were removed below the elevation of the building underdrainpipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13). The oil absorbent sock present in TRC-MW11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well.Approximately 5,626 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on July 19, 2013. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,576 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water waste was transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 28,480 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to

U000409472

July 2013. In accordance with the NYSDEC-approved RAP and RAP Addendum, quarterly groundwater monitoring, inspections, and product recovery have been completed for a period of one year. The source of LNAPL at the site - the former 20,000-gallon UST, has been closed-in-place in accordance with 6 NYCRR Part 614. Approximately 28,480 gallons of groundwater/LNAPL mixture have been removed from the concrete vault and monitoring wells. At the initiation of the LNAPL removal program, measurable LNAPL was present in five monitoring wells (TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14). As of July 2013, there is measurable LNAPL in only two (2) monitoring wells (TRC-MW12 and TRC-MW13), at minimal thicknesses (approximately 0.03 feet). According to TRC, the results of groundwater sampling conducted to date show that, with the exception of the concentration of MTBE detected in well TRC-MW-8 during one sampling round, VOCs and SVOCs have not been detected at concentrations above Class GA Values. Therefore, the remaining residual LNAPL in the area of the closed-in-place UST and in the building under drain system is not impacting groundwater at the Site. TRC recommends the following:- Based on the analytical results, sampling of the monitoring well network is no longer required.- Bi-annual inspection and gauging of the monitoring well network should be performed. Absorbent socks should be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL.- Bi-annual (twice yearly) inspection and LNAPL removal from the concrete vault should continue until LNAPL is no longer observed for two consecutive six month periods. AD03/17/2014: Received Received a Progress Report #5 for the site. DL the report to eDocs. Will review. AD04/24/2014: Reviewed the report. It states that field activities were conducted at the site on January 20, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 20, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.03' of free product; TRC-MW-13 - 0.09' of free product. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on January 20, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells

containing LNAPL (TRC-MW-12 and TRC-MW-13). The oil absorbent sock present in TRC-MW-11 was removed and was placed in a 55-gallon steel drum on-site. A new oil absorbent sock was replaced in this well. Approximately 3,703 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on January 20, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,633 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 32,183 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to January 20, 2014. **PLANNED ACTIVITIES:** The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. Project progress Report #6 will be submitted to the DEC following the next inspection and product removal event, which will be performed in July 2014. **AD10/20/2014:** Received a Progress Report #6 for the site. Will review. **AD12/10/2014:** Reviewed the report. It states that field activities were conducted at the site on July 28, 2014 and consisted of the following: Concrete vault and boiler room pump pit inspection; Monitoring well gauging; and LNAPL recovery. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 28, 2014 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW-12 and TRC-MW-13, which is consistent with historic data. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW-1 through TRC-MW-11, TRC-MW-14, and TRC-MW-15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, an oil/water interface probe was used to approximate the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. According to the data: TRC-MW-12 - 0.02' of free product; TRC-MW-13 - 0.05' of free product. **LNAPL Product Recovery:** Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW-12 and TRC-MW-13 on July 28, 2014. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the site consisted of the following: The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13). New oil absorbent socks were replaced in these wells. Approximately 3,119 gallons of water mixed with LNAPL was

removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-12 and TRC-MW-13) on July 28, 2014. A total of approximately 35 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 3,049 gallons of water mixed with LNAPL were removed from the concrete vault for off-site disposal. The LNAPL and water removal was performed by Brookside Environmental, Inc. under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 35,302 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW-2, TRC-MW-12, TRC-MW-13, and TRC-MW-14) from July 2012 to July 28, 2014. PLANNED ACTIVITIES: The following activities are planned for the next bi-annual inspection and LNAPL removal event: The monitoring well network will be gauged. Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing measurable LNAPL. Project progress Report #7 will be submitted to the DEC following the next inspection and product removal event, which will be performed in January 2015. NRN. AD02/12/2015: Received the following e-mail from C. Guder: "Ainura - Attached is Progress Report #7 for Spill Case No. 0413160 associated with Automotive Trades High School, Brooklyn, NY. Please review and contact us with any questions or comments. Thank you, Charles Guder Senior Project Manager" Will review. AD03/24/2015: Reviewed the report. It states that field activities were conducted at the Site on January 19, 2015 and consisted of the following: - Concrete vault and boiler room ejector pit inspection; - Monitoring well gauging; and - LNAPL recovery. Concrete Vault/Boiler Room Ejector Pit Inspections and Monitoring Well Gauging: The concrete vault, located north of the school building, the boiler room ejector pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 19, 2015 by TRC. LNAPL was present in the concrete vault and monitoring wells TRC-MW12 and TRC-MW13, which is consistent with historic data. LNAPL was not present in the boiler room ejector pit or in monitoring wells TRC-MW1 through TRC-MW11, TRC-MW14, and TRC-MW15. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. LNAPL has only been measured in monitoring wells TRC-MW12 and TRC-MW13 since April 2013. The LNAPL thickness measured in wells TRC-MW12 and TRC-MW13 have also decreased since April 2013. The LNAPL thickness measurements (feet) recorded in monitoring wells TRC-MW12 and TRC-MW13 in April 2013 were 0.07 and 0.10, respectively. LNAPL Product Recovery: Periodic recovery of LNAPL has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW12 and TRC-MW13 on January 19, 2015 using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing measurable LNAPL (TRC-MW12 and TRC-MW13). - The oil absorbent socks present in the monitoring wells around the closed-in-place UST (i.e., TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW-13, TRC-MW14) were found to be saturated with oil. With the exception of

monitoring wells TRC-MW12 and TRC-MW13, measurable LNAPL was not identified in the monitoring wells after removal of the oil absorbent socks. The oil absorbent socks present in the monitoring wells were removed and replaced with new ones. Approximately 5,724 gallons of water mixed with LNAPL was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW12 and TRC-MW13) on January 19, 2015. A total of approximately 25 gallons of water mixed with LNAPL were removed from each of monitoring wells and approximately 5,674 gallons of water mixed with LNAPL were removed from the concrete vault for offsite disposal. Approximately 41,026 gallons of water mixed with LNAPL have been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2015. PLANNED ACTIVITIES: In connection with the NYSDEC approval letter dated October 15, 2013, the following activities are planned for the next bi-annual inspection and LNAPL removal event: - The monitoring well network will be gauged. - Inspection and LNAPL removal from the concrete vault and monitoring wells will continue. Absorbent socks will be placed (and replaced, as necessary) in monitoring wells containing LNAPL. - Project Progress Report #8 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in July 2015. Update By:

JHOCONNE

Site Description:

Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story warehouse covering the entire site. The site is surrounded by mixed commercial and residential uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Based on local topography, groundwater beneath the site most likely flows in a west-southwest direction toward the East River.

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern include trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the Site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected concentrations of up to 88 parts per million (ppm), above the Restricted-Residential SCO of 21 mg/kg. With the exception of 2 samples, TCE was detected in all other samples above the Unrestricted Use SCO of 0.47 mg/kg. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m³ and cis-1,2-DCE at concentrations of up to 15,000 ug/m³.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor

intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. The potential for soil vapor intrusion to impact off-site structures has not been determined.

Site Description: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street

and Java Street, on the west side of West Street. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site was predominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigation work plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial work was completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.

Env Problem: The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs) and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Phase I and Phase II Environmental Site Assessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had exceedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm, Dibenzofuran 12ppm. Some of the heavy metal exceedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm, Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminants levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.

Health Problem: Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building, thereby minimizing the potential for direct contact exposures. Groundwater has not been impacted, therefore there is no potential for ingestion exposures. Volatile organic compounds were not detected at this site therefore, inhalation via soil vapor intrusion is not a potential exposure pathway.

Contact Phone: (917) 769-0484
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/14/2001 - Store front building with 3-4 apartments above.2-275 gallon #2 oil tanks in the basement service the building.Scaggs & Walsh Oil Company made a delivery (no sign of overfill) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain.NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner.3/16/2001 - Sangesland called Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were "Non-Detect") TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - "Non-Detect"Spill closed 4/5/2001

 DEC Region: 2
 DER Facility ID: 4291
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He has no info on followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersible pumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. 8/17/12 Spill re-assigned to T. Demeo as per RSE. bf10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo.alternate address: 190 McGuinness Blvd. PBS #: 2-146994, 2-610594 PBS # 2-146994 for 176 McGuinness Blvd. as per PBS record, site has/had following tanks:- twelve (12) 550 gal gasoline USTs, closed-in-place in Feb. 1999- one (1) 4,000 gal gasoline UST, closed-in-place in Feb. 1999- two (2) 4,000 gal gasoline UST, in-service, installed in Feb. 1999- one (1) 4,000 gal diesel UST, in-service, installed in Feb. 1999 PBS #: 2-610594 for 190 McGuinness Blvd. as per PBS record, the site has on 250 gal waste oil AST on

legs, installed in Apr. 2007. other spill # 0204172 was reported on 07/22/2002 due to gasoline odors during delivery to the station. case closed. found tank test report dated 06/25/1997 on PBC edoc. as per the document, twelve (12) 550 gal gasoline tanks and one (1) 4,000 gal diesel tanks were found tight. there is no document available to confirm source of tank test failure in 1991 (subject spill) and any petroleum release associated with it. Helf Enterprises LLC. **property owner**10/27/14 TJDFile review - determinations are based upon research into historical case file by Patel. Current owner took possession of property 1997, followed by the closure of (12) UST's in 1999 and a (4K) UST's also closed in place in 1999. In February 1999 a total of (2) new 4K UST's were installed on site and remain in operation. All (12) 550's and (1) 4K gasoline UST's passed a tightness test in 1997 - no record of repair or remedial action in file. Passing tank tightness reports for all tanks performed in 1997 have been uploaded to DECDOCS. Due to the lack of available history at this property and the fact the tightness test failure was reported in excess of 20 years ago, the suspect tanks were abandoned in place in 1999, the site has new owner's and no additional information is currently available - no further action is required at this time - spill is administratively closed.

DEC Memo: DEC Piper reviewed test results. Though it shows a passing line afterwards, there is no indication what repairs were made to which line and evidence of product. DEC Piper spoke w/ Hess Mike Matri. As per him flex line failed, line was replaced and retested. Passed. Small amount of product drained into secondary containment and was tested as well. Containment was tight. Closed. E-Docs if Warranted.

Remarks: PBS No: 2-297550 Contractor tested line... line failed. Small amount of gasoline is in contained STP sump. Clean up is completed, line repair is completed.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"12/23/05- Andersen - Reviewed quarterly report dated 11/7/05. Eight MW sampled on September 23, 2005. Max BTEX 729ppb (MW5), max MTBE 352ppb (MW3). SVE system shut down May 5, 2005 due because low influent vapors. RAP required for remaining contamination.12/29/05:

RAP required letter sent. RAP due 2/9/06. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and ET. A sensitive receptor survey and soil vapor survey will be performed, and then site closure will be considered. A kiosk vapor abatement system is in place. 2/2/06: Reviewed the fourth 2005 quarterly report. Max BTEX 497 ppb (MW5), max MTBE 351 ppb (MW6). A sensitive receptor survey will be prepared. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. Will submit request for closure. Sub slab vapor sampling conducted. 7/25/06: Received the results of sub-slab sampling and a sensitive receptor survey. Two sub slab samples were collected from beneath the kiosk on site. MTBE and BTEX were not detected above method detection limits. The sensitive receptor survey revealed that residential houses with basements are located within 1,000 ft of the site. Closure was requested. 10/6/06: Emailed Dawn Coughlin to followup on quarterly report. Received email from Ed Russo: "the site was sampled on August 15, 2006. Results indicated concentrations that we feel warrant closure, especially due to the positive results of the soil-gas sampling and sensitive receptor survey. The report was just finalized yesterday, so you should be receiving it by the middle of next week." 11/1/06: Received closure request. Max benzene 158 ppb in MW3, MTBE 338 in MW3. Continued groundwater sampling required. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. 1/23/07: Received update report. Wells samples on 11/8/06. Max BTEX 63 (MW3), max MTBE 222 (MW6). 4/20/07: Reviewed update report. Max BTEX 12.3 ppb (MW1). As reported in the sensitive receptor survey, soil vapor sampling showed soil gas MTBE and BTEX concentrations ND. ND concentrations in downgradient wells. NFA issued. SOIL FOUND IN TANK PULL - SOIL BEING STORED PILED.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 DEC Memo: 05/10/07-Vought-Off hours responder. Vought called Winters and left message to return call to cell phone. Vought called Vijax and spoke to Anthony Rotello and cause of spill was bad gauge. Spill came out of gauge and onto concrete floor. No sewers or drains affected. Rotello confirmed that spill amount less than five gallons. Gauge will be replaced. No spill out of vent pipe. Vought received call from resident (Ms Winter) is satisfied with cleanup and confirmed that spill on concrete and no sewers or drains affected. Vought provided contact info in case additional issues arise. Spill closed by Vought.

Site Description:

Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank). Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

CLEANER SALES & EQUIPMENT CORP. (Continued)

S103942699

west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.

Env Problem: Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.

Health Problem: Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

BROWNFIELDS:

Program: BCP
Site Code: 484026
Acres: .290
HW Code: C224177
SWIS: 2401
Town: New York City
Update By: JHOCONNE
Site Description:

Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the east by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units. Current Zoning/Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Historical Use: Former Cleaner Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to October, 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximately 100 feet below ground surface (fbsg). Based on the local topography, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg.

Env Problem:

Nature and Extent of Contamination Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177).a) Contaminants: The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor. b) Area/depth extent: The extent of the contamination has not been determined yet. c) Concentrations: Soil:

EDR ID Number
EPA ID Number

CLEANERS SALES & EQUIPMENT (Continued)

1006810542

Health Problem:

PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with UUSCO of 0.02 ppm). Groundwater: PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb). Soil vapor: PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. Significant Threat: The site presents a significant human health threat due to the high concentrations of PCE, TCE, and DCE in soil vapor and the potential for exposures to site-related contaminants via soil vapor intrusion. Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings.

DEC Memo: Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an "e-designation" on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' designation for Hazmat -----alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due

to bad vent line. lines were changed and system passed. no contamination found. case closed.spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open.2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports.2:39 PM:- received email from William Wong from NYC OER including link to reports.William H. WongPh. (212) 341-0659Fax (212) 788-1482email: WiWong@dep.nyc.gov reviewed available

information:*****

*****1) 07/30/2012: Phase I Environmental Site Assessment Report:- Block: 2698 / Lot: 11- subject property is approx. 7,400 sq.ft. in area and consits of 2-story commercial building that is approx. 8,460 sq.ft. in area- subject property is being used as welding shop and office- the building has no basement- building is heated by an oil-fired boiler- no stains or spills were identified in the vicinity of the boiler- elevation of the site is approx. 15 ft above mean sea level- one 5,000 gal #2 oil UST is located in the southwestern of the building- no evidence of ASTs, former ASTs or former USTs were observed- no subsurface drainage structures, such as drains, leaching pools, cesspools, or drywells were observed at the site- it appears that the subject property was developed prior to early 1900s with one 3-story and two 1-story buildings and stable. more buildings were developed in the following years at the subject property. these buildings were demolished prior to 1978. the subject property was then redeveloped with one 2-story commercial building- sanborn map 1942-1965 shows one 2-story and seven 1-story building used for carpet dyeing and cleaning. a gasoline tank is located on the southwestern portion of the site

-----2) 08/17/2012: Phase II Environmental Site Assessment:- UST found in southwestern of the property and is approx. 12 ft long and 6 ft wide- installed four borings (SP-1 through SP-4) in vicinity of the existing UST- borings were installed to 12 ft bg- general soil type consists of fill material- one soil sample was collected from each boring- found VOC contamination in soil samples- found high PID readings in all boringsPID values (in ppm)depth

basement- the building was purchased in 1979 and turned into a steel manufacturing company, but this is not indicated on the map
-----5) 06/24/2013: Remedial Investigation Report:- Phase II conducted by Hydrotech in Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in soil samples collected from 10-12 ft bg- in Oct. 2012, Hydrotech installed 13 wells on the site and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft ----- stratigraphy of the site from surface down consists of a layer of historic fill material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16 ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of highly compressible organic peat, clay and silt from 16-28 ft bg and highly compressible layer of clay/silt at approx. 28-34 ft bg- schools within 0.2 miles to the south ----- in Feb. 2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding the UST in the southwest portion of the site and only "visual inspection" of the borings were performed (no samples were collected) ----- in Apr. 2013, GRANT installed seven soil borings (SB-06 to SB-12) across the entire site and collected 19 soil samples; 7 of 19 soil samples were analyzed for finger printing- borings SB-01 through SB-12 exhibited visual evidence of a petroleum discoloration layer from approx. 4 to 30 ft bg and free product observed from approx. 10 to 12 ft bg- free product noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and SB-05, these borings were located around the UST ----- elevated PID readings were observed ranging from 455 ppm to 895 ppm in borings SB-7 through SB-12- in Apr. 2013, GRANT installed 3 temporary wells (TWP-01 to TWP-03) towards the northwestern, northeastern and southeastern portions of the site, respectively- temporary wells were installed to a depth of 20 ft bg, with 10 ft of screen (means there were no screen above water table) ----- in Apr. 2013, GRANT installed 3 soil vapor probes (SVP-01 to SVP-03) and collected 3 samples- depth to groundwater was present at approx. 10 ft bg ----- groundwater flow direction is generally from the south towards the north ----- found mostly sec/n/tert-Butylbenzene in soil samples- high metals found in samples*****
-*****:3:45 PM:- spoke with Mr. Chawla. he mentioned that results of soil and groundwater samples have already discussed with DEC Cozzy and got approval. Mr. Chawla mentioned that current developer has applied to enroll in city's VCP cleanup. due to findings of high metal concentration, OER asked for excavation to 12 ft bg. informed him that based on submitted environmental data, the proposed excavation to 12 ft bg looks ok. informed him that the department may require groundwater monitoring via wells around property. he will send complete report for work done in 2013.12/04/13-Hiralkumar Patel.10:30 PM:- spoke with Mr. Chawla. he mentioned that building developer has changed plan and now they are planning to excavation to one foot above water table, instead of 12-13 ft (at water table) as proposed earlier. due to change in proposed excavation depth, NYC OER will meet with property owner/developer to discuss remedial method to address remaining contamination underneath the proposed excavation depth. Mr. Chawla mentioned that DEC Cozzy has reviewed and approved plans to address metals in subsurface.Mr. Chawla mentioned that based on new proposed

S108076226

excavation depth, OER requires endpoint soil sampling and installation of vapor/moisture barrier and SSDS. they will review soil-vapor data to determine if active or passive SSDS needed. Mr. Chawla will send further details after meeting with property owner. 12/06/13-Hiralkumar Patel. 10:46 AM:- spoke with Mr. Chawla. discussed about free product in groundwater. Mr. Chawla will submit a RAWP which discuss about installation of wells. asked him to submit property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property owner**1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email: jactinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his environmental contractor. found RAWP on NYC OER website. abstract of RAWP:- proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar- the proposed building is planned to be constructed starting from the property line along the length of Leonard St and extending east- depth to groundwater was present at approx. 10 ft bg- HydroTech installed thirteen (13) monitoring wells- wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft- groundwater flow direction is generally from the south towards the north- soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site- will collect endpoint samples- will install a vapor barrier and an active SSDS beneath the proposed building 11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him about spill remediation work plan, that he mentioned as attachment F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla. 12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18 PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant Engineering inquiring about what

BRUMAR SHEET METAL INC (Continued)

S108076226

work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email: arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches. 01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr. Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr. Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List. abstract of RAWP Stipulation List to NYC OER:- entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed- collection and analysis of 22 endpoint samples from the bottom of excavation will be collected- a minimum of 20-millimeter vapor barrier will be installed beneath the structure's slab and along foundation wall- dewatering will be performed- excavation of the impacted soil will be performed following the removal of existing tanks abstract of site-specific groundwater treatment and monitoring plan dated 01/21/14:- remaining product from 5,000 gal tank was pumped from the tank on 12/27/13- proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary- prior to construction, the

assessment of groundwater quality will include the collection of groundwater samples from the existing wells 01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required submission of tank removal report. also informed him that the department may require additional investigation, after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering. 02/20/14-Hiralkumar Patel. 1:06 PM:- received email from Andrew. he mentioned that while drilling borings for geotechnical investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13. they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report. between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09 PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not be conducted this week due to the building currently undergoing asbestos abatement activities. he also mentioned that the existing building will be immediately demolished once the abatement work is completed. Steve mentioned that well gauging will resume, if demolition does not occur. 04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL. 08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn. 11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21 PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement. 01/07/15-Hiralkumar Patel. 11:52

S108076226

AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was found. free phase product was noted on groundwater and product recovered using absorbent pads. asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned about chemical treatment of contamination. informed him that the department does not approve chemical treatment at this time and requires submission of endpoint soil and groundwater sample results prior to finalizing a remedial method.01/21/15-Hiralkumar Patel.9:08 AM:- received email from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1 which is located east of the tank farm. product is being collected using absorbent pads. on 01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up can be conducted.9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with existing well, tank and test pit locations. email copied to Mr. Chawla.01/23/15-Hiralkumar Patel. received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that the stop work order was removed and the shoring contractor is driving the beams into the ground in the west and north side of the site.01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at 2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water.01/29/15-Hiralkumar Patel.9:58 AM:- received call from Mr. Kahn. today they pumped out and removed two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn mentioned that contaminated soils will be removed once underpinning for adjoining building is done (possibly within two weeks depends on weather).02/05/15-Hiralkumar Patel.2:14 PM:- received email from Mr. Chawla. William Wong of OER visited site and noted petroleum odors while tank piping being removed.02/06/15-Hiralkumar Patel.10:30 AM:- visited site. met with on-site supervisor. crew was underpinning adjacent building in area where the USTs were located. no petroleum odors noted in work zone.02/11/15-Hiralkumar Patel.1:32 PM:- received message from Mr. Kahn.02/12/15-Hiralkumar Patel.10:03 AM:- received call from Mr. Kahn. during underpinning operation, crew found set of ten (10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan. also asked him to submit results of liquid samples from the tank, once available.03/03/15-Hiralkumar Patel.10:38 AM:- received email from Mr. Kahn including link to UST removal report. abstract:- previously known USTs # 1 & 2 were removed on 01/29/15- during underpinning of the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were discovered approx. 3 ft bg on 02/09/15, which were removed- during further work, an additional eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were buried vertically approx. 2.5 ft bg- USTs # 5-12 were identified on 1942-1965 Sanborn Maps- USTs # 5-12 were encased in concrete- based on site history and shape of tanks # 5-12

S108076226

and interior structure, it was concluded that the tanks could have been used for mixing operation which is consistent with the site history of a carpet dying operation during 1940's and 1960's- dimensions of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal)- additional soil excavation will continue. Mr. Kahn included copy of PBS application form (signed on 02/11/15) to register previously unknown tanks, but no records found in PBS record. 03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and south sidewall of the excavations are concrete underpinning under adjacent buildings and there is a shoring along the west sidewall to protect the sidewalk. asked Mr. Kahn to collect endpoint soil samples from east sidewall, water sample from excavation pool and groundwater samples from monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed Mr. Kahn that the department does not approve application of any chemical prior to reviewing soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg. 04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked through opening in construction fence. the entire excavation was filled with water. no petroleum sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn including status report. abstract:- composite soil sample was collected from east sidewall- groundwater samples were collected from excavation pool and wells MW-5 and MW-6- no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.** tank is in place, soil samples confirm contamination

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

Tank test failure. PBS file shows tank in service, but next tank test due prior to the date of this spill. PBS registration expired in 2000. Need to follow up.9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf4/30/08 Sent Old TTF letter to:Jerry LebedowiczWilliamsburg Square LLC52-47 Browvale LaneLittle Neck, NY 11362Address obtained from tank closure application. bf5/2/08 Received message from J. Lebedowicz to call him back. bf5/5/089 Received call from J. Lebedowicz tank was closed. Athena Environmental sampled after tank was removed. bf6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf 3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH.

Program: BCP
 Site Code: 463657
 Acres: .920
 HW Code: C224159
 SWIS: 2401
 Town: New York City
 Update By: JHOCONNE
 Site Description:

**Actual:
 16 ft.**

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: An existing warehouse covers the property, and the building is currently vacant. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and is currently demolished and vacant. Contamination is mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consists of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem:

Nature and Extent of Contamination: a) Contaminants - Based upon investigations conducted to date, the primary contaminants of concerns at the site include the volatile organic compounds tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapors. In addition, semi-volatile organic compounds (SVOCs), pesticides, and metals (including lead, hexavalent chromium and mercury) were detected in soil. b) Areal/depth extent - Two areas of PCE contamination in soil

MAP FINDINGS

149 KENT AVENUE (Continued)

1011923119

Health Problem:

and groundwater exist on the site. One hot spot is located in the vicinity of the former loading dock, in the northwestern portion of the site. The other hot spot is centered around boring location RA-7 in the southwestern portion of the site. Approximately six feet of historic fill material containing elevated concentrations of SVOCs, metals, and pesticides was encountered throughout the site. c) Concentrations - In soil: PCE was detected at a maximum concentration of 1,090 ppm compared to Part 375 Unrestricted Use SCO (SCO) of 1.3 ppm; TCE ranged from non-detect to 1.6 ppm, compared to SCO of 0.47 ppm; 1,2-DCE was detected at a maximum concentration of 2.6 ppm compared to se SCO of 0.25 ppm. Individual pesticides, SVOCs and metals were also detected exceeding their respective unrestricted use SCOs. In groundwater: PCE was detected at a maximum concentration of 94,000 ppb compared to the groundwater standard of 5 ppb; TCE was detected at a maximum concentration of 234 ppb compared to the groundwater standard of 5 ppb; 1,2-DCE was detected at a maximum concentration of 280 ppb compared to the groundwater standard of 5 ppb. Lead, chromium and nickel were detected in groundwater in at least one sample at concentrations exceeding their respective groundwater standards. there were no pesticides or SVOCs detected in groundwater above standards. In sub-slab soil vapor PCE was detected at a maximum concentration of 440,000 micrograms per cubic meter (ug/m3) on site. Off-site soil vapor samples collected under the sidewalk adjacent to the site on Kent Avenue yielded a maximum concentration of 4,790 ug/m3. Significant Threat: The site presents a significant environmental threat due to the potential for soil vapor intrusion if the current building is reoccupied. Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to breath site contaminants in indoor air due to soil vapor intrusion if the current building is reoccupied or if any future buildings are developed and occupied on-site. The potential for soil vapor intrusion to occur in buildings adjacent to the site needs to be evaluated.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Acres: .400
HW Code: C224203
SWIS: 2401
Town: New York City
Update By: SRHEIGEL
Site Description:

Location: The site is located in the Williamsburg section of the borough of Brooklyn, Kings County. The site has approximately 175ft of frontage along Driggs Avenue and 100 ft of frontage along N. 8th Street. Site Features: The property is currently developed with an asphalt-paved parking lot, with a small attendant's booth. Portions of the lot are also utilized as a Zip-Car rental/parking facility. Current Use: The property is currently a vacant lot. Historical Use: The property was developed as early as 1887 with the three single-family residential homes. Between 1905 and 1916, the northern portion of the site was developed with a commercial storage building. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: According to USGS geologic maps of the area, the bedrock in the Brooklyn area is an igneous intrusive classified as Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Soil at the site is described as historic fill materials to a depth of approximately 15 feet below the surface followed by native brown fine sand with silt and some clay.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110004334872

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The

groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).

Env Problem: Nature and Extent of Contamination:a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and ConEd parking lot. c) concentrations: Groundwater monitoring conducted at the site revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in few of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In July 2011, the RCRA closure work plan was approved and in November 2011, EPA started the RCRA site investigation as a response to the Department's request for emergency action. RCRA closure activities continued through 2012.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and coarse sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and coarse sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene,

Map ID

EPA ID Number

FYN PAINT AND LACQUER CO., INC. (Continued)

S108524789

and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem:

It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Description:	The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.-Off-Site is located in an urban area Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site.

Update By: JHOCONNE
Site Description: Location: The Fyn Paint and Lacquer Co., Inc. site (the former VCP site no. V00380) is located in an urban area at 230 Kent Avenue in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Alternate addresses for the Property are: 230-232 Kent Avenue; 76-80 River Street; and, 29-37 North First Street.Site Features: The site consists of a 0.135-acre lot improved with a partial two-story industrial/warehouse building with a gross floor area of approximately 5,862 ft2. A small basement is used for the heating oil tank, furnace and controls for the sprinkler system.Current Zoning and Land Use: The site land use is currently recorded as Industrial and Manufacturing. Zoning for the Property is M3-1, which is designated for areas with heavy industries that generate noise, traffic or pollutants. The on-site building is currently vacant.Past Use of the Site: Past land uses associated with the site include a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow sediments beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is approximate 500 feet away from the site boundary.

Env Problem: Nature and Extent of Contamination: The remedial investigation for the former V00380 site revealed:a) contamination: in the soil, soil vapor and groundwater, which are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer,

extends across the footprint of the Fyn Paint building into the adjacent sidewalks, ConEdison's parking lot and the former MOSF 2-1480. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated under the VCA. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP) was approved for off site (OU-2/ actual C224154A) contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed and started to operate. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer under the VCA ceased operation of the DPES. As a result, the VC Agreement was terminated. In 2015, the prospective purchaser of the site applied and was accepted as Volunteer in the BCP. In March 2015, the DPES was restarted. Significant Threat: The site presents a significant threat to public health due to the potential for on-site and off-site soil vapor intrusion, and to the environment for on-site and off-site soil and groundwater contamination.

Health Problem:

People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur on-site and off-site needs to be evaluated.

Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories- 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900's the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast. Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:

The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Site Description:

Location: The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The approximately 1 acre site is described on the county tax map as Block No. 2487, Lots No. 1, 10, 12, 72 and 78. Site Features: The dimensions of the site are approximately 240 feet by 200 feet. The building consists of a number of smaller buildings that have been joined together. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. Current Zoning/Use: The Site zoned M1-2/R6 which designates the site as manufacturing with a residential overlay. It is currently owned by 49 Dupont Realty Corporation and is used for storage of plastic wrapping and resin pellets. Historic Use: The site has been in existence since 1887. It has been used for manufacturing, as an office, for storage, and for shipping and receiving. Prior to the late 1940s, the site and the surrounding lots were used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. The subject property was developed for plastic manufacturing purposes in the late 1940s to early 1950s, and has remained relatively unchanged since that time. From 1983 to 2004, NuHart and Company made vinyl siding and sheeting at the site. After 2004, NuHart removed all of their equipment and offices. There are 12 underground storage tanks (USTs) located on the Site. According to records, these tanks were emptied and closed as part of an Interim Remedial Measure (IRM). There are also two large aboveground silos on site. The Petroleum Bulk Storage (PBS) number is 2-608875, and the Chemical Bulk Storage (CBS) number is 2-000444. Liquid plasticizers stored included bis(2-ethylhexyl)phthalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. Site Geology and Hydrogeology: Measurements of the groundwater elevation indicated groundwater flow is generally to west towards the East River.

Env Problem:

Nature and Extent of Contamination: The plasticizers bis(2-ethylhexyl)phthalate, Di-n-Octyl phthalate, as well as high boiling, paraffinic, petroleum oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. TCE was also detected in soil vapor, shallow soil and groundwater in central portion of the site. From 1983 to 2004 NuHart and Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and

1009232006

petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000 ppm of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. According to the Interim Investigation Report dated April 2010, a large plume of plasticizer NAPL mixture consisting of phthalates and paraffinic petroleum was identified under the western end of the factory where the plasticizer USTs were located. A small plume of NAPL consisting primarily of phthalate was identified beneath Lot 12 near one of the plasticizer tanks. The large plume has migrated off-site in a northwesterly direction under the sidewalk. Previous interim remedial measures (IRMs) implemented under the spill program involved cleaning the floors of the factory, cleaning out the USTs, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and recovery equipment. NAPL recovery has been ongoing since 2007. The IRM activity includes the use of an automated recovery unit at one recovery well and manual bailing from other wells. Typically about 70 to 80 gallons of product/water mixture are recovered each month. It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil since it is under the ground surface, however, if the site is redeveloped, construction workers or future site occupants may come in contact with site-related contamination in soil if it is not handled properly. Also, the potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby structures via soil vapor intrusion needs to be evaluated.

Town: New York City
Update By: YYWONG
Site Description:

The site is located in the Greenpoint section of Brooklyn in a mixed industrial/commercial/ residential area. The building consists of a number of smaller buildings that have been joined together. The dimensions of the footprint of the one large building are approximately 400 feet by 200 feet. A line of row houses is situated across the street to the south. Commercial buildings are situated directly across the street to the north. To the west is a park and to the northwest is a paved lot which is used for truck storage. The site has been in existence since 1887. It has been used for manufacturing, as an office, as storage, and for shipping and receiving. Prior to 1950, the site was used as a boiler shop for Logan Ironworks, two stables, a gas and light fixture factory, a sheet metal works, a soap factory, a waterproofing factory, and a scrap metal facility. From 1983 to 2004, NuHart & Company made vinyl siding and sheeting at the site. After 2004, NuHart & Company removed all of their equipment and offices. The site is now used for the storage of plastic wrapping and many large (36 cu. ft.) fabric bags containing pellets of resin. There are 17 underground storage tanks located on the site and two large silos above ground at the west end of the building. The Petroleum Bulk Storage (PBS) number is 2-608875 (for 13 registered tanks). The site is a former Chemical Bulk Storage (CBS) facility #2-000444 with 5 plasticizer tanks. Liquid plasticizers stored included bis(2-ethylhexyl)terphtalate, bis(2-ethylhexyl)adipate, and palatinol 711P phthalate. The requestor withdrew the application, and the site was listed on the Registry of Inactive Hazardous Waste disposal site as of June 2010 (see site no.

Env Problem: 224136).
The plasticizers bis(2-ethylhexyl)phthalate and di-n-octylphthalate, as well as #4 fuel oil have been found in groundwater (both as non-aqueous phase liquid and in the dissolved phase) and in soil. From 1983 to 2004 NuHart & Company (the tenant) manufactured vinyl siding and sheeting at the factory. After manufacturing ceased in 2004, environmental investigations were performed. The investigations identified soil and groundwater contamination consisting of liquid plasticizers and petroleum. The amount of each material that was released is unknown. Soil concentrations as high as 20,000,000 ppb of bis(2-ethylhexyl)phthalate were detected in soil boring SB-44. Non-aqueous phase liquid (NAPL) was found at thicknesses of up to 5 feet in one well. A large plume of plasticizer NAPL was identified under the western end of the factory where the plasticizer USTs were located. This plume had migrated off-site in a northwesterly direction. A small plume of mostly #4 oil NAPL was identified under the northeast corner of the factory and had migrated a short distance off site. The environmental remediation which followed involved cleaning the floors of the factory, cleaning out the underground storage tanks, cleaning all sumps and pipe gallery wells, installing monitoring wells, and installing NAPL collection wells and equipment. The NAPL plumes have now been reduced in size and consist of three separate plumes. All of the plumes are contained under the sidewalks bounding the factory and under the footprint of the building. The smallest plume is under the northeast corner of the site. The former large plume under the western end of the factory is now two separate plumes (according to the November 26, 2008 gauging event) and consist solely of plasticizers. The thickness of the NAPL ranges from 0.16 feet to 1.38 feet. Product collection from these two plumes is continuing and, as of December 2008, has recovered a total of 8,356 gallons of NAPL.

Health Problem: Not reported

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as a disposal site. Investigation by the NYSDEC Regional offices indicate that this is an industrial operation to recycle, recover and refurbish drums and that no apparent disposal of hazardous or toxic waste have occurred here.

Env Problem: None known. No apparent disposal of significant quantities of any hazardous waste.

 Updated By: JAAVERSA

Site Description: This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYS DOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Not reported

Env Problem: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Health Problem: Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

Site Description: Location: The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is ~1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination:- Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000

ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each).- SoilPCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm).-Soil Vapor and Indoor AirConcentrations of PCE in soil vapor have been found up to 8,200,000 ug/m^3, and in indoor air up to 170 ug/m^3. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m^3, and in indoor air up to 12 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

DEC Memo: 6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington)6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him.6/16/2014: URS personnel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14" below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4" thick, and approximately 4' in diameter. There appears to be ~6" of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington)6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington)11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington)12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done

inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized.

(Harrington)1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15.

(Harrington)3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington)5/18/2015: The Department sent a "WA Issuance/Notice to Proceed" letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington)

Remarks: Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground.

Owner/Operator Type: Operator
Owner/Op start date: 06/04/1986
Owner/Op end date: Not reported

Owner/operator name: SAM & ETHEL LOEFFLER
Owner/operator address: ALTON PKWY
SILVER SPRINGS, MD 20910

Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: 01/05/1974
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Corrective Action Summary:

- Event date: 11/29/1985
- Event: RFA Completed

- Event date: 02/10/1993
- Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

- Event date: 12/28/2000
- Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

- Event date: 12/28/2000
- Event: RFA Completed

- Event date: 09/24/2009
- Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

- Event date: 09/24/2009
- Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited

groundwater contamination, but did not identify any significant soil contamination.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N";

Site Description: The Site is located at 460 Kingsland Avenue in the northernmost section of Brooklyn within a commercial/industrial area and is approximately 3.5 acres in size. It is bordered by Newtown Creek to the east, Kingsland Avenue to the west, Greenpoint Avenue to the north (adjacent to Newtown Creek WPCP), and the Former ExxonMobil Brooklyn Terminal (Mobil Brooklyn Refinery) to the south. Topographic elevations at the Site are approximately 7 feet above mean sea level (amsl) within the southeastern portion of the Site and gradually rise

to approximately 11 ft amsl within the northwestern portion of the Site. The Site is currently vacant but was most recently used as a trucking distribution hub. The site has two abutting one-story buildings divided into storage and office space. Exterior areas are paved and used for delivery and shipping purposes, as well as the staging of delivery vehicles. The Site was historically operated as part of the former Mobil Brooklyn Refinery (SOCONY), which itself was a continuation of petroleum refining and storage operations that were prevalent in Greenpoint since the mid-Nineteenth Century. As part of the earlier petroleum refining and storage operations, the southern region of the Site was used for petroleum bulk storage purposes whereas improvements in the northern region of the Site included a distillery and a boiler works storage yard. Under former operations, the Site also served as a petroleum bulk storage yard that included three petroleum bulk storage tanks, two chemical bulk storage tanks containing acids, and an API-type oil/water separator along the southern Site boundary. The site was reportedly used by Mobil's Technical Services Division (TSD) for study of petroleum product uses. After refinery operations at the former Mobil Brooklyn Refinery ceased in 1966, the Site was sold in 1967 and redeveloped with the existing commercial building in 1968 and occupied by miscellaneous trucking operations. In addition, fifteen underground storage tanks containing diesel fuel, heating oil, and waste oil were maintained during the operation of the commercial/transfer facilities and were removed in 1994. A spill (#9402812) reported during the tank removal initiated site investigation and characterization activities. In addition, ExxonMobil has performed some investigation of the site as part of the remediation of the former Mobil Brooklyn Refinery. The initial investigation activities indicated petroleum-impacted soils existed within the shallow subsurface beneath the Site and that free-phase petroleum product was also located within the shallow subsurface. More recent sampling seeking to close the open spill identified PCB contamination in shallow soil under the asphalt pavement and indicated limited groundwater contamination from PCBs exists.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL" ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747.10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL.03/29/04Related to Mobil Greenpoint spillTransferred from Miller to Rommel.10/12/04Received call from John Harrison, EcoSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimetr of the property in order to compare background contamination with the site contamination. AZ1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?) (they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner) 516-965-7766. He will ask him to contact me ASAP. AZ4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.) 516-965-7766. He will file for FOIL and have his consultant contact me. AZ6/13/2006 I left a message for John Urda (DEC Legal) requesting his assistance with this case. AZ6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company (212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information: borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, mointoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of actin in a week. AZ8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New

U003074537

York 10022(212) 421-2150 confirming the additional items that should be submitted to DEC:1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that "we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly." AZ4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the shallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a "clean fill" recycling operation. As part of the demo, they intend to dig out around the

building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC (Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hempston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Ofiice has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Site Description: Location: The site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is

MAP FINDINGS

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued)

1000190383

mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used by a furniture manufacturing company. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of \$28,000 for numerous violations. In February 2003 a limited subsurface investigation was performed at the site; a total of nine soil borings were installed with soil samples collected from all nine borings and groundwater samples collected at four locations. The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site, and appears to be a perched unit. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem:

Nature and Extent of Contamination:- Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE) and its daughter compounds (trichloroethene, cis-1,2 dichloroethene and vinyl chloride); 1,1,1, trichloroethane (1,1,1 TCA); BTEX compounds (benzene, toluene, ethylbenzene, and xylene); and PCBs. These compounds have been found well above their respective Part 703.5 Class GA standards (shown in parenthesis). PCE has been found up to 30,000 ppb (5 ppb); trichloroethene (TCE) up to 2,800 ppb (5 ppb); cis-1,2 dichloroethene (DCE) up to 140,000 ppb (5 ppb); vinyl chloride up to 2,300 ppb (2 ppb); 1,1,1-TCA up to 15,000 ppb (5 ppb); benzene up to 2,400 ppb (1 ppb); toluene up to 54,000 ppb (5 ppb); ethylbenzene up to 2,400 ppb (5 ppb); total xylenes up to 12,100 ppb (5 ppb); and PCBs (Arochlor-1260) up to 940 ppb (0.09 ppb). All the contaminants listed above (except PCBs) have migrated off-site.- Soil Numerous compounds have been found in excess of their unrestricted use soil cleanup objective (shown in parenthesis). PCE has been found up to 260 ppm (1.3 ppm); TCE up to 140 ppm (0.47 ppm); DCE up to 70 ppm (0.25 ppm); 1,1,1-TCA up to 22 ppm (0.68 ppm); benzene up to 13 ppm (0.06 ppm); toluene up to 520 ppm (0.7 ppm); ethylbenzene up to 88 ppm (1 ppm); total xylenes up to 368 ppm (0.26 ppm); PCBs up to 80 ppm (0.1 ppm); lead up to 1,300 ppm (63 ppm); and mercury up to 240 ppm (0.18 ppm). Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil and groundwater.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is

served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015	Source: EPA

	Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 07/10/2015
Number of Days to Update: 64	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2015

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015
Date Data Arrived at EDR: 06/26/2015
Date Made Active in Reports: 09/16/2015
Number of Days to Update: 82

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015	Source: Department of the Navy
Date Data Arrived at EDR: 05/29/2015	Telephone: 843-820-7326
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 08/12/2015
Number of Days to Update: 13	Next Scheduled EDR Contact: 11/30/2015
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 06/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2015	Telephone: 703-603-0695
Date Made Active in Reports: 09/02/2015	Last EDR Contact: 08/31/2015
Number of Days to Update: 68	Next Scheduled EDR Contact: 12/14/2015
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 06/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2015	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 06/26/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 06/30/2015	Telephone: 518-402-9622
Date Made Active in Reports: 07/22/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 22	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 11/01/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/19/2014	Telephone: 518-402-9814
Date Made Active in Reports: 01/12/2015	Last EDR Contact: 05/22/2015
Number of Days to Update: 54	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Varies

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 06/24/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2015	Telephone: 518-457-2051
Date Made Active in Reports: 07/22/2015	Last EDR Contact: 07/06/2015
Number of Days to Update: 14	Next Scheduled EDR Contact: 10/19/2015

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Records of Emergency Release Reports

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 06/24/2015	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 06/26/2015	Telephone: 202-366-4555
Date Made Active in Reports: 09/02/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 68	Next Scheduled EDR Contact: 10/12/2015
	Data Release Frequency: Annually

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

	Data Release Frequency: Varies

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Ordovician
Code: Oe (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Mr. Nelson J. Abrams, PG
AECOM Environmental
125 Broad Street, 16th Floor
New York, New York 10004

Subject: Geophysical Investigation Report
UST Location Survey
12 Franklin Street
Brooklyn, New York

Mr. Abrams,

Advanced Geological Services (AGS) presents this letter report to AECOM Environmental (AECOM) detailing the methods and findings of the geophysical investigation conducted at 12 Franklin Street, Brooklyn, New York. The objective of the investigation was to locate and identify potential underground storage tanks (UST). The area of investigation was along the sidewalk around a large commercial building and a restaurant designated by the onsite AECOM representative. All field work was completed by AGS on September 21, 2015.

Methods

To achieve the investigation objectives AGS utilized a combination of the ground penetrating radar (GPR), the hand held electromagnetic (HHEM) and the radio frequency (RF) methods. AGS did not perform an EM61 survey as proposed due to the large amount of interference caused by the close proximity to the building, parked cars, and areas of reinforced concrete.

AGS collected GPR profiles in a grid-like pattern with an approximate grid spacing of 5 feet over the survey area. The HHEM method was utilized in search mode, across areas of the survey area that did not have reinforced concrete, to identify potential metal anomalies associated with USTs. A direct traceable signal was placed onto the exposed fill ports with the RF instrument to locate potential USTs associated with these features.

Ground-Penetrating Radar (GPR) Method

The ground-penetrating radar (GPR) method was used for this investigation. The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on

the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent change in the GPR responses. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 3000 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Hand-Held Electromagnetic (HHEM) Metal Detection (MD)

The hand-held electromagnetic method uses the principle of electromagnetic induction to detect shallowly-buried metal objects such as underground storage tanks (USTs), metal utility conduits, reinforced concrete slabs, manhole covers, and miscellaneous metal debris. To complete this task, the operator carries the hand-held radio transmitter-receiver unit above the ground and continually scans the surface. A primary coil broadcasts a radio signal from the transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents, in turn, produce a magnetic field which is detected by the receiver. The HHEM instrument we typically use for shallow investigations is a Fisher TW-6 pipe and cable locator by Radiodetection, Inc. This instrument operates by generating both a unitless meter reading and an audible signal response when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Radio Frequency (RF) Utility Location Methods

The RadioDetection RD4000 multi-frequency utility locating system was used for this project. This instrument consists of a receiver/tracer and a remote transmitter, which operates at frequencies between 8 kHz and 200 kHz. The unit provides audio and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hookup. The receiver output provides measured field strength of the received signal and varies an audible pitch that is dependent upon the distance to the utility. By carefully adjusting the gain of the receiver, it is possible to determine the location of the utility and to separate it from possible adjacent utilities. In addition, the receiver can be used in 60 Hz passive mode to identify active electrical lines or lines that possess an induced current.

Results and Discussion

A sketch map of the survey area and two identified potential fill ports is shown on Figure 1.

AGS did not identify any USTs within the survey area. AGS did not identify any EM anomalies with the HHEM instrument that appeared to be associated with potential USTs. Nor did AGS identify any potential USTs on the GPR profiles collected within the survey area.

The two fill ports were further investigated utilizing a combination of GPR, HHEM and RF methods. Fill Port 1 is located in the north side of the building and fill Port 2 is located in the restaurant close to the exterior doors and the bathroom wall (Figure 1). AGS did not identify any USTs within the sidewalk around these two fill ports. To further investigate the area around fill port 2, AGS collected GPR data in the accessible areas of the restaurant. The bathroom wall and fixed tables prevented the collection of GPR profiles across these features. AGS did not identify any USTs in the restaurant.

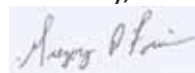

Summary and Closing

AGS investigated the survey area with a combination of the GPR and HHEM methods. The two fill ports were investigated with the GPR, HHEM, and RF methods. No USTs were identified in the sidewalk or in the areas of the fill ports. Results were discussed with the onsite AECOM representative at the completion of the field investigation.

The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on past results of similar surveys, although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional USTs, beyond those identified.

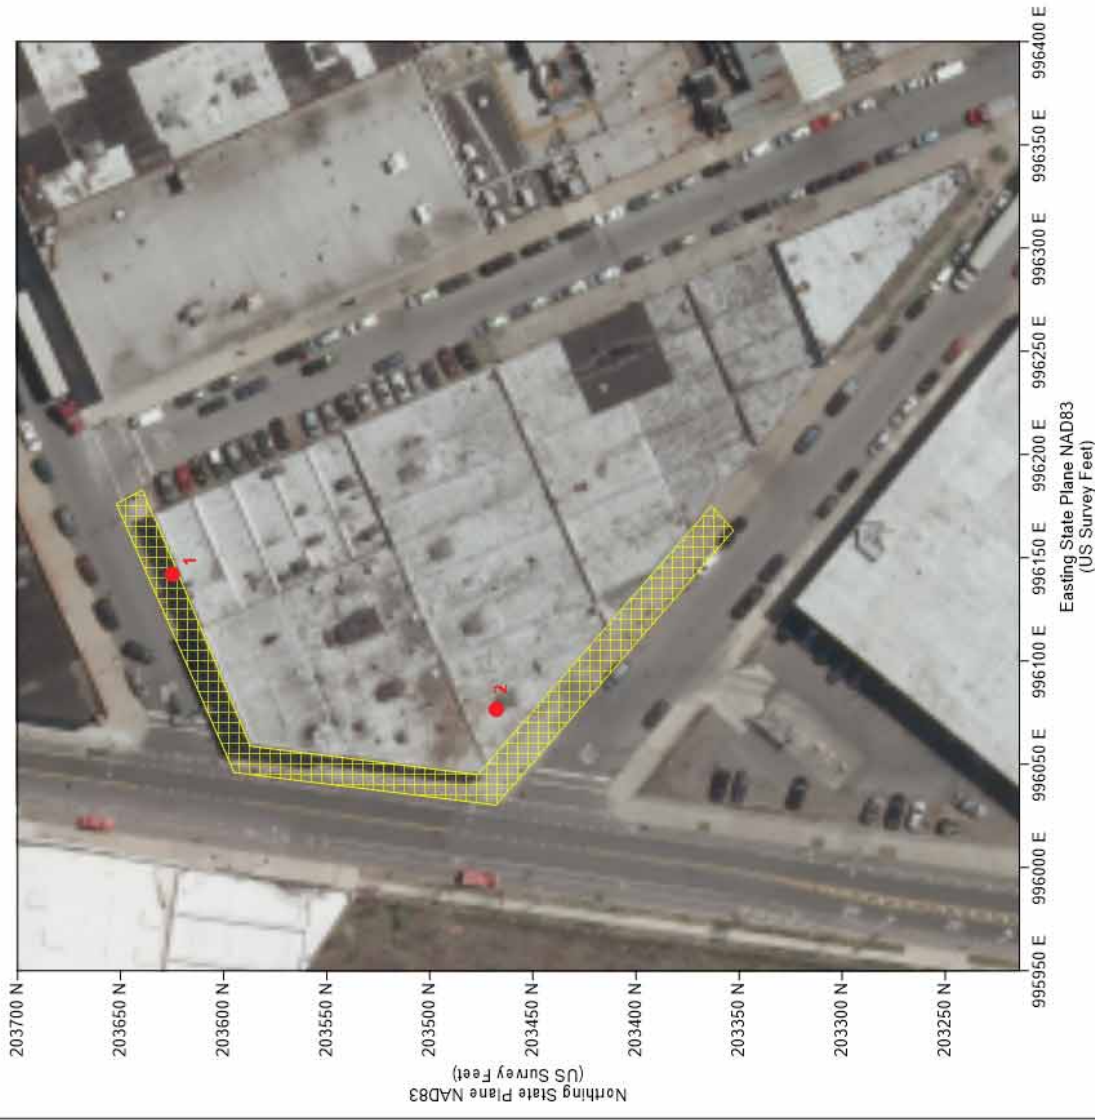

If you have any questions, please contact me by phone 610-722-5500 or via email. It was a pleasure working with you on this project, and we look forward to conducting geophysical investigations for you in the future.

Sincerely,

Greg Fournier
Project Geophysicist

Eastings State Plane NAD83
(US Survey Feet)

LEGEND

-  Area investigated by AGS with GPR and HHEM
-  Approximate Fill Port location

Notes:

- 1) AGS did not identify any USTs within the survey area.
- 2) Due to the proximity to the building and parked cars along the street AGS did not perform an EM61 survey as proposed.
- 3) AGS utilized a combination of the GPR and the HHEM methods to identify potential USTs. The HHEM method was used in search mode to identify metal anomalies. GPR profiles were collected over across the sidewalk area.
- 4) GPR profiles were collected as a grid pattern with an approximate spacing of five feet.
- 5) AGS used the RF method to place a traceable signal onto the potential UST. AGS performed multiple GPR scans in the areas of the fill ports. AGS scanned the areas with the HHEM method to identify metal targets.
- 6) The base map is being used with permission from earthexplorer.usgs.gov. The orthophotograph was collected March 30 through June 30 2012.

Mr. Abrams has 30 years of management and hands-on experience with environmental assessments, compliance investigations, remedial investigations, underground storage tank removals and closures, site remediation and interfacing with local, state and federal regulatory agencies. His background includes work at former manufactured gas plants, nuclear and fossil fuel power generating stations, pharmaceutical operations, bulk petroleum and gasoline storage facilities, oil refineries, military installations and waterfront properties.

Project Experience

Phase I and II Investigations, New York City Economic Development Corporation (EDC), New York, New York. Managed Phase I and Phase II investigations over a four year period for the EDC. The Phase I and Phase II activities were designed to identify potential environmental concerns on Brownfield properties being redeveloped for the City of New York. The activities included a wide variety of investigation activities for soil and groundwater contamination concerns, asbestos and lead surveys, and air monitoring activities. Tasks include maintaining a constant line of communications with the EDC's Vice President of Environmental Planning and following the detailed administrative procedures to meet the scope of services required by the EDC and the City of New York.

Environmental Assessment and Investigation, City of New York Department of Design & Construction (DDC), New York, New York. Managed environmental assessment and investigation activities over a nine year period for the DDC. The work included a wide variety of investigation activities focused on soil and groundwater contamination, asbestos and lead surveys and air monitoring activities. Tasks include maintaining a constant line of communications with the various representatives at the DDC and following the detailed administrative procedures to meet the scope of services required by the DDC and the City of New York.

Phase I Environmental Site Assessment (ESA), Mariner's Marsh Park, Staten Island, New York. Managed a Phase I ESA and submittal of a SAMP, HASP, and QAPP to the U.S.EPA for site investigation activities proposed at the Mariner's Marsh Park located in Staten Island. A U.S.EPA Brownfield grant was awarded to the City of New York to conduct a preliminary investigation of the 107-acre park that was used as a former manufacturing and ship building facility at the turn of the twentieth century. Historic activities at the site included the operation of a small MGP. Since the operations at the site had been non-existent for over 90 years, wildlife and vegetation had reclaimed the area.

The scope of the proposed investigation was to identify potential areas of environmental concern, especially in the area of the former MGP where coal tar deposits were encountered in the surface soils, in order to facilitate remediation for the site to become a wildlife preserve within the City.

Phase II Site Investigation, Proposed Bushwick Inlet Park, Brooklyn, New York. Managed the Phase II site investigation for the City of New York Department of Parks and Recreation (DPR) and the City of New York Department of Design and Construction (DDC) to identify environmental concerns at the proposed 28-acre Bushwick Creek Inlet Park located along the East River in the Williamsburg section of Brooklyn. The \$1.2 million investigation on four individual parcels consisted of the review of historical information regarding operations at each of the parcels, development of the sampling, quality assurance, and safety plans, initial characterization of the area's hydrogeology and environmental setting, development of four site investigation reports, and the development of four cost to cure reports presenting estimated remedial costs at each of the sites.

The areas investigated included an active bulk petroleum storage facility (Bayside Oil), a former petroleum refinery, and the former Williamsburg Gas Works. Activities conducted during the investigation activities included the collection of subsurface soil samples, installation of monitoring wells for the collection of groundwater samples, and the collection of sediment samples from the Bushwick Creek Inlet and the East River. The evaluation of contamination associated with the former MGP was complicated by the historic discharge of diesel fuel and fuel oil from operations subsequent to the MGP. In addition, investigation activities were limited by the presence of two warehouses that comprise almost two full city blocks. The results of

the investigation in and around the former MGP indicated the presence of coal tar and free product in the areas of the former gas holders as well as impacts to the sediment within the East River.

The information provided to the City of New York will allow them to allocate funding for additional investigation activities and for the implementation of remedial measures.

Environmental Assessment, Schering-Plough Corporation, Worldwide. Managed environmental assessments associated with the purchase of a veterinary pharmaceutical manufacturer by Schering-Plough Corporation. The project involved environmental audits and Phase II site investigations of 53 facilities in 21 countries throughout North America, South America, Europe, Southeast Asia and the Southern Pacific. Managed review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with local regulatory agencies, site reconnaissance and all Phase II site investigations, and coordinated activities with environmental and engineering firms located in each country. Identified areas of both regulatory noncompliance within each country and areas where the client's internal environmental practices were not being followed.

Phase I Environmental Assessments of Power Generating Stations, RG&E, Fillmore and Rochester, New York. Managed environmental assessments on behalf of RG&E at three generating facilities. The facilities consisted of a gas-fired generating station in Fillmore, N.Y. and two peaking stations in Rochester, N.Y. The assessments were conducted to identify potential environmental risks as part of RG&E possible divestiture of these sites. The assessments were conducted in general accordance with ASTM 1527-05 guidelines

Pre-sale Environmental Screening for Water Bottling Facilities, Anjou International, Nationwide. Managed the pre-sale environmental screening associated with the divestiture of 56 Hinckley & Schmitt water bottling facilities. Represented Anjou International, the seller, in reviewing environmental action items raised by the purchaser's consultant. Coordinated the management of data and compliance activities from facilities located throughout the United States. Provided technical guidance to the program director regarding information obtained to address identified action items. Completed over 97% of the 230 action items within 90 days to allow for the completion of the property transaction.

Subsurface Investigation, Queensbridge Park, Queens, New York. Managing a subsurface investigation program at the Queensbridge Park to evaluate potential soil and groundwater contamination along with evaluating potential underground storage tanks. The investigation consisted of the advancement of soil borings, the installation of monitoring wells, the collection of soil and groundwater samples and performing a limited geophysical survey. The work was conducted on behalf of the City of New York Department of Parks and Recreation (DPR) through the City of New York Office of Management and Budget. The field and analytical results obtained from the investigation will be used to assist the DPR in evaluating methods to address potentially impacted soil and groundwater during proposed construction activities.

Regulatory Compliance Investigation, NRG Energy, Connecticut. Managed regulatory compliance investigation on behalf of NRG Energy, Inc. at four fossil fuel generating stations. Activities were conducted in accordance with the Connecticut Transfer Act regulations. Activities include conducting a risk assessment of known coal ash disposal areas, evaluation of potential impacts on adjacent surface water bodies, development of a groundwater reclassification application for one of the facilities and evaluation of potential soil and groundwater impacts.

Environmental Assessment of Nuclear Power Station, Northeast Energy Company (NNECO), Waterford, Connecticut. Assistant Project Manager of an environmental assessment of the Millstone Point Nuclear Power Station in Waterford, Connecticut on behalf of Northeast Nuclear Energy Company (NNECO). Activities consisted of conducting a Phase I and Phase II environmental assessment as part of the divestiture of the station. The Phase I activities included review of historical and current site operations, evaluation of previous environmental reports and regulatory compliance notices, interviews with key facility personnel, interviews with local and state regulatory agencies, review of available files at NNECO headquarters and at the Connecticut Department of Environmental Protection (CTDEP), and a comprehensive site reconnaissance. Phase II investigation activities were performed on an expedited basis and consisted of the collection and analysis of soil, groundwater, and sediment samples in areas of potential concerns identified during the Phase I assessment. The final Phase

I and Phase II reports were provided to potential buyers of the station as part of NNECO's divestiture activities.

Environmental Assessment of Decommissioned Coal Fired Power Station, Rochester Gas & Electric Corporation (RG&E), Greece, New York. Managed the environmental investigation and compliance review activities on behalf of Rochester Gas and Electric Corporation (RG&E) associated with the decommissioning and demolition of Russell Station, a 257 megawatt coal fired generating station in Greece, New York. The facility was constructed in 1948, and was listed as the nation's the 12th worst polluter of sulfur dioxide and New York State's 7th worst mercury polluter. In addition, several fuel oil spills in the 1980s along with the on-site storage of coal ash had impacted the site and an adjacent water body. Due to cost constraints to retrofit this facility, RG&E's parent company, Energy East, concluded that the station should be closed with the option of constructing a new natural gas fired generating station.

The services provided to RG&E included a detailed evaluation of historical operations, and an investigation of soil and groundwater within areas of potential environmental concern. The investigation was conducted in accordance with New York State Department of Environmental Conservation (NYSDEC) requirements. Additional assessment services included conducting asbestos, lead-based paint, and PCB surveys. The data collected from the assessment activities was used to develop demolition costs for the current on-site structures, develop alternative remediation scenarios, identify long term monitoring options, and costs associated with remediating and/or monitoring the environmental impacts to the surrounding area.

Environmental and Geotechnical Investigations, Southwest Waterfront Redevelopment Project, District of Columbia. Managed environmental and geotechnical investigations on behalf of the partnership of Hoffman-Struever Waterfront, LLC (HSW) for the Southwest Waterfront Redevelopment Project located along the Anacostia River in Washington, D.C. This project, which was a joint effort between the District of Columbia and HSW, is aimed to develop an active, mixed-use, urban riverfront that showcases distinctive cultural destinations, and build upon the existing, strong waterfront community.

The scope of services consisted of the evaluation of historic and current operations within and adjacent to the project area to identify potential environmental impacts. The evaluations were aimed to provide HSW and the District of Columbia with some initial information regarding potential environmental concerns that could affect the overall scope of the redevelopment efforts. The services conducted at the site consisted of the performance of three Phase I environmental site assessments (ESAs), the performance of three Phase II site assessments based upon the findings of the ESAs, the preliminary evaluation of potential historical impacts to the sediments within the Anacostia River, and conducting a preliminary geotechnical evaluation in areas identified as potential underground parking structures.

The coordination between the District Department of the Environment, the Office of Deputy Mayor for Planning and Economic Development, HSW, and the various businesses leasing property from the District of Columbia for obtaining access, permits, and other logistic concerns was vital in completing the project within HSW's project schedule.
