Re: *Block 2487, Lots 1, 10, 12, 17, 18, 20, 21, 57, 72 and 78, Brooklyn, NY*
 Subsurface Investigation Report

Dear Mr. Karpen:

Environmental Business Consultants (EBC) has prepared the following summary report to document the results of the Phase II Investigation performed at the above referenced property on August 16 and 17, 2007. The investigation consisted of the collection and analysis of 27 soil samples from 14 borings located on 8 of the 10 lots.

The scope of work, as originally developed for the due diligence to complete the purchase of the properties, also included the installation and sampling of 8 on-site and 6 off-site monitoring wells and 7 on-site and 5 off-site soil vapor implants. Although the on-site wells and vapor implants were installed in August at the time of the soil borings, installation of off-site sampling points (monitoring wells, soil vapor implants) has been delayed by the process of obtaining permits from the NYCDOT to drill in the sidewalk. Collection of on-site groundwater and soil gas samples has been postponed pending the installation of the off-site sampling points, so that on and off-site samples would represent the same “snapshot” of time.

The purpose of the due diligence sampling was to supplement the Phase II Investigation performed at the site by Advanced Site Restoration, LLC (ASR) as presented in a March, 2007 Phase II Report. Although ASR performed a comprehensive investigation to define the extent of free phase, residual and dissolved phase components of the spilled plasticizer compound and fuel oil, there was little information on general soil quality in the eastern two-thirds of the property and no information on potential on and off-site vapor impacts. In addition there were significant gaps in the off-site extent of free and dissolved phase plumes.

Ideally this report would be postponed until the remainder of the planned work is complete. However, as the due diligence period has expired, rather than agree to an extension in the due diligence period both parties have requested a summary of the data collected thus far.

BACKGROUND

The general environmental condition of the property as previously established by ASR includes a spill of liquid plasticizer compound and No. 4 fuel oil.

ENVIRONMENTAL BUSINESS CONSULTANTS

Plasticizer Spill

A liquid spill of plasticizers, used in the former manufacturing process at the site, is present beneath lots 1, 10, 78 and a small portion of lot 12. Groundwater is present beneath the site at a depth of 9-11 feet below the surface.

Heating Oil Spill

There is also a petroleum spill (No. 4 heating oil) associated with the boilers and former heating oil tanks on Lots 18 and 20. The area affected by the spill on these two lots is approximately 30 ft x 60 ft.

General Soil Quality

Prior to the supplemental investigation performed by EBC, there was very little information on general soil quality beneath the site aside from data on semi-volatile and volatile compounds. ASR submitted a total of seven soil samples (SB1-SB7) for analysis of metals and pesticides / PCBs. The results were not included in the Phase II Report, however, laboratory reports of these samples were provided in the Tank Closure Report. It is believed that the samples represent 0 to 5 foot composite from the first seven borings, though there is no confirmation of this in either report. The results show all parameters from the first three borings to be within the unrestricted soil cleanup objectives under the Brownfields Cleanup Program (BCP). This criteria was used since it was understood by both parties that it was intended that cleanup of the site would be performed under the BCP. These borings were considered to be representative of general soil quality in the eastern half of the property. The results from borings SB4 through SB7 contained several metals above the unrestricted criteria including one or more of the following arsenic, barium, copper, chromium, lead, zinc and mercury. Based on the drill logs, which do not report fill materials deeper in the soil column, elevated metals were expected to be limited to the upper 5 feet of soil.

FIELD ACTIVITIES

As shown in Figure 1, EBC installed 14 additional borings during the due diligence period. Samples were collected using a Geoprobe direct-push drill rig, with a four-foot macro-core sampler and disposable acetate liners. At each location, samples were collected continuously from grade to a depth of 12 feet 1 to 3 feet below the water table.

Samples were field screened for the presence of volatile organic compounds (VOCs) with a photo-ionization detector (PID) and visually inspected for evidence of contamination. Subsurface soils at all fourteen locations generally consisted of fine sand throughout the soil column. No obvious indicators of historic fill material such as wood, asphalt, slag, ash, bricks or other rubble were observed at any depth in any of the locations.

Based upon the lack of PID response and lack of visual evidence of contamination, a shallow (0-4 feet below grade) and deep (8-12 feet below grade) sample were retained from each boring for laboratory analysis.

All samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and shipped via overnight courier to Chemtech Laboratories, Inc. of Mountainside, NJ,

a New York State ELAP certified environmental laboratory. All soil and groundwater samples were analyzed for the presence of VOCs by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and target analyte list (TAL) metals. The deep sample from B7, which arrived at the laboratory in a broken container, was not analyzed:

LABORATORY RESULTS

Soil sample results were compared to the Recommended Soil Cleanup Objectives (RSCOs) specified in NYSDEC Technical and Administrative Guidance Memorandum (TAGM) #4046, *Determination of Soil Cleanup Objectives and Cleanup Levels*, January 1994 and the Unrestricted Soil Cleanup Objectives as presented in 6 NYCRR Part 375-6. Analytical data is summarized in **Tables 1** through **4** and a copy of the laboratory analytical report is included in **Appendix A**.

VOCs

A single VOC, acetone, was detected above both the TAGM 40406 Recommended Cleanup Objective (RSCO) and the unrestricted use cleanup objective in both the shallow and deep samples from the E11 location.. No other VOCs were reported above guidance levels in any of the other samples.

SVOCs

One or more of the following SVOC parameters were reported above the TAGM RSCOs in samples from E7 (0-4 ft), E8 (0-4 ft), E9 (0-4 ft), and E12 (0-4 ft):

benzo(a)anthracene
benzo(a)pyrene,
benzo(b)fluoranthene
Chrysene

In addition, naphthalene in E8 (8-12 ft) and bis(2-ethylhexyl)phthalate in E11 (8-12 ft) were reported above the unrestricted use objective.

Pesticides / PCBs

No pesticides were reported above TAGM RSCOs or the unrestricted use objectives in any of the samples. A single PCB was detected above the unrestricted objective in the E11 (8-12 ft) sample.

Metals

15 samples revealed contamination with one or more metals exceeding the unrestricted soil criteria. Using the recommended soil cleanup objectives listed in TAGM 4046, elevated metals were reported in 24 of 27 samples. Exceedances, were present in both shallow and deep samples.

CONCLUSIONS

The presence of metals above the unrestricted soil criteria has important implications for this project. The site falls under the oversight of two regulatory programs (NYS BCP, NYC E-

ENVIRONMENTAL BUSINESS CONSULTANTS

Site); therefore proper management and disposal of all excavated and disturbed soil will be required. To meet the unrestricted use criteria, it is very likely that the entire site will require excavation to a depth of at least 10 feet. The only way to avoid the additional cost will be to limit sub-grade development of the site as much as possible by reducing basement level depth and / or area, and by pursuing a Track 4 cleanup under the BCP. If a Track 1 cleanup is not achieved (unrestricted use) under the BCP, it will be necessary to record an environmental easement on the property which must be disclosed to future purchasers under a condominium or townhouse development scenario.

Off-Site

The extent of off-site impact and the magnitude of off-site remediation required has not yet been determined. Based on our review of utility conduits along Dupont Street and Commercial Street and the shallow depth to water in the area, it is highly probable that liquid phase plasticizer and fuel oil are migrating along the utility conduits in the street and/or sidewalk. This will be very difficult to assess since it is not possible to collect samples in close proximity to the conduits. Given the amount of liquid phase plasticizer and fuel oil presently identified in the sidewalk, there may be considerable cost in further investigation and remediation of off-site contamination.

Please be advised that we have not completed our supplemental sampling program and may identify additional issues regarding the extent of contamination both on the property and off-site. Please call if you have any questions or if anything requires further explanation.

Very truly yours,

Environmental Business Consultants

Qualifiers

- U - The compound was not detected at the indicated concentration.
- J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than zero. The concentration given is an approximate value.
- B - The analyte was found in the laboratory blank as well as the sample. This indicates possible laboratory contamination of the environmental sample.
- P - For dual column analysis, the percent difference between the quantitated concentrations on the two columns is greater than 40%.
- * - For dual column analysis, the lowest quantitated concentration is being reported due to coeluting interference.
- NR - Not analyzed

Qualifiers

- U - The compound was not detected at the indicated concentration.
- J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than zero. The concentration given is an approximate value.
- B - The analyte was found in the laboratory blank as well as the sample. This indicates possible laboratory contamination of the environmental sample.
- P - For dual column analysis, the percent difference between the quantitated concentrations on the two columns is greater than 40%.
- * - For dual column analysis, the lowest quantitated concentration is being reported due to coeluting interference.
- NR - Not analyzed

Qualifiers
U - The compound was not detected at the indicated concentration.
J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than zero. The concentration given is an approximate value.
B - The analyte was found in the laboratory blank as well as the sample. This indicates possible laboratory contamination of the environmental sample.
P - For dual column analysis, the percent difference between the quantitated concentrations on the two columns is greater than 40%.
* - For dual column analysis, the lowest quantitated concentration is being reported due to coeluting interference.
NR - Not analyzed

Qualifiers

U - The compound was not detected at the indicated concentration.

J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than zero.
The concentration given is an approximate value.

B - The analyte was found in the laboratory blank as well as the sample. This indicates possible laboratory contamination of the environmental sample.

P - For dual column analysis, the percent difference between the quantitated concentrations on the two columns is greater than 40%.

* - For dual column analysis, the lowest quantitated concentration is being reported due to coeluting interference.

NR - Not analyzed

B = Analyte Found In Associated Method Blank

N = Spiked sample recovery not within control limits

284 Sheffield Street, Mountainside, NJ 07092 Phone: 908-789-8900 Fax: 908-789-8922

Report of Analysis

Client: Environmental Business Consultants

Date Collected: 8/17/2007

Project: 49 Dupont Street

Date Received: 8/21/2007

Client Sample ID: E8 (8-12)

SDG No.: Y4129

Lab Sample ID: Y4129-08

Matrix: SOIL

% Solids: 85.90

CAS No.	Analyte	Conc.	Qualifier	Units	DL	Dilution	Date Prep	Date Anal.	Method
7429-90-5	Aluminum	7710		mg/Kg	0.691	1	8/23/2007	8/28/2007	EPA SW-846 6010

Comments:

U = Not Detected
DL = Method Detection Limit or Instrument Detection Limit

J = Estimated Value
B = Analyte Found In Associated Method Blank
N = Spiked sample recovery not within control limits
