FACT SHEET

Brownfield Cleanup Program

**295 Wallabout Street
295-297 Wallabout Street
Brooklyn, NY 11206**

**SITE No. C224299
NYSDEC REGION 2**

January 2025

NYSDEC Certifies Cleanup Requirements Achieved at Brownfield Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to the 295 Wallabout Street site ("site") located at 295-297 Wallabout Street, Brooklyn, NY, under New York State's Brownfield Cleanup Program (BCP) have been met. Please see the map for the site location.

The cleanup activities were performed by 295 W Holdings LLC ("applicant") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). NYSDEC has approved a Final Engineering Report (FER) and issued a Certificate of Completion (COC) for the site.

- Access the FER, Notice of COC and other project documents online through the DECinfo Locator:
<https://extapps.dec.ny.gov/data/DecDocs/C224299/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Completion of the Project: The following activities have been completed to achieve the remedial action objectives:

- Excavation - Excavation and off-site disposal of about 2,900 cubic yards of soil impacted with chlorinated solvents petroleum-impacted soil. Clean fill was brought in to replace the excavated soil and to establish the design grades at the site.
- Removal and disposal of one underground storage tank (UST).
- An in situ ("In-place") chemical reductant was mixed with backfill to treat shallow groundwater impacted with contaminants.
- Development of a Site Management Plan (SMP) for long-term management of remaining contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting.
- Recording of an Environmental Easement to control land use and prevent future exposure to any contamination remaining at the site.

BROWNFIELD CLEANUP PROGRAM

Final Engineering Report Approved: NYSDEC has approved the FER, which:

- 1) Describes the cleanup activities completed.
- 2) Certifies that cleanup requirements have been achieved for the site.
- 3) Describes any institutional/engineering controls to be used. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.
- 4) Certifies that a site management plan for any engineering controls used at the site has been approved by NYSDEC.

The following institutional controls have been put in place on the site:

- Site Management Plan
- Groundwater Use Restriction
- Land Use Restriction
- Environmental Easement

The following engineering controls have been put in place on the site:

- Quarterly groundwater sampling of volatile organic compounds (VOCs) for at least one year
- Soil vapor intrusion evaluation and collection of analysis of indoor air samples

Next Steps: With its receipt of a COC, the applicant(s) is eligible to redevelop the site. In addition, the applicant(s) is eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site. A COC may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Site Description: The 0.15-acre site is located in Williamsburg, Brooklyn. It is bounded to the south and west by warehouses, to the north by an apartment building, and to the east by Wallabout Street followed by The neighborhood has been historically used for residential and industrial buildings. zoned for residential use.

commercial, residential, and industrial purposes. Historic operations conducted at the site resulted in metals contamination in soil and VOCs in groundwater and soil vapor. These contaminants have been addressed through on-site remedial activities. The site has been improved with a multi-story residential building.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224299) at:

<https://extapps.dec.ny.gov/cfm/extapps/derexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business, or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives (SCOs) or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.
