PHASE I ENVIRONMENTAL SITE ASSESSMENT

1041-1051 ATLANTIC AVENUE BROOKLYN, NEW YORK 11238

GCI Project No. 2014124

Prepared For:

Slaw Realty Co. 1041-1051 Atlantic Avenue Brooklyn, New York 11238

Inspection Date: August 18, 2014

Report Date: August 20, 2014

Prepared by:

General Consolidated Industries, Inc. (GCI) Environmental & Engineering Consultants 1092 Motor Parkway Hauppauge, New York 11788-5228 1-800-842-5073

EXECUTIVE SUMMARY 1041-1051 Atlantic Avenue, Brooklyn, New York 11238

Property Type: Two (2) - one (1) story industrial buildings, one (1) of which has a partial

basement.

Size of Property:

26,758 square feet, or 0.61 acres.

Number of Buildings:

Two (2).

Size of Building(s):

Main Building - Approximately 21,240 square feet. Storage Building - Approximately 1,000 square feet.

Construction Date(s):

Sometime between 1908 and 1932.

Inspection Accessibility:

The roofs were inaccessible at the time of the site inspection.

Environmental Issue	Acceptable (Y / N)	Routine Resolution (Y/N)	Additional Action *	Report Page
Site History / Prior Use	No	Yes	Abandon Oil Water Separator.	10 / 13
Adjacent Properties	Yes			19
Federal & State Database Review	Yes			30
Local Records Review	No	Yes	Rectify Open NYC FD Violations.	33 / 34
Hazardous Materials & Waste	No	Yes	Provide Waste Manifests.	20
			Steam Clean / Pressure Wash Stained Areas.	
Storage Tanks	No	Yes	Register ASTs with NYS DEC.	21
			Permit ASTs with NYC FD.	
			Properly Store ASTs.	
			Forward Prior 2004 Phase II Report to NYS DEC.	
PCBs	Yes			23
Solid Waste	Yes			24
Asbestos	No	Yes	Opt. I - Asbestos Inspection. Opt. II - Asbestos O & M Program.	26
Radon	Yes			27
Lead-Based Paint (LBP)	Yes			27
Wetlands	Yes			27
Vapor Intrusion	Yes			28

REPORT SPECIFICATIONS

Copies and circulation of this report are as follows:

- Two (2) Original bound reports to Mr. Donald Barkin, Slaw Realty Co.
- One (1) Original report in the confidential client file at General Consolidated Industries, Inc.
- One (1) Original report on security protected computer disk at General Consolidated Industries, Inc.

This report is prepared for the exclusive use of parties noted above and is considered private and strictly confidential. General Consolidated Industries, Inc. shall not release this report or any of the findings of this report to any person or agency except with the authorization of the principal parties noted above.

1.0 INTRODUCTION

General Consolidated Industries, Inc. (GCI) has been retained to prepare a Phase I Environmental Site Assessment for the property located at 1041-1051 Atlantic Avenue, Borough of Brooklyn, City of New York, New York, identified on the tax map as Block 2020, Lot 77.

GCI has prepared this assessment in accordance with good commercial and customary practices for conducting an environmental site assessment with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. The assessment is intended to satisfy one of the requirements to qualify for the "innocent landowner defense" to CERCLA liability. The assessment has been completed by a qualified professional in accordance with the specific requirements established by the American Society for Testing and Materials (ASTM) E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and the standards for conducting "All Appropriate Inquiry" (AAI), as set forth by the United States Environmental Protection Agency (US EPA) at 40 Code of Federal Regulations (CFR) Part 312. In addition, several non-scope considerations have been assessed, including asbestos containing materials (ACM), radon, lead-based paint (LBP), lead-in drinking (potable) water and wetlands.

1.1 Objectives / Scope of Work

The objective of this Phase I Environmental Site Assessment is to identify any existing or potential "recognized environmental conditions". The term "recognized environmental conditions" is defined by the ASTM as "...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property."

The objective of the Phase I Environmental Site Assessment (ESA) is as follows:

- To identify the presence, release, or threat of release, of any hazardous substance or petroleum products affecting the subject property.
- To gather preliminary information regarding the level of compliance with current environmental standards, laws, regulations, and permits with respect to the subject property.
- To establish a baseline of environmental conditions for historic and comparative purposes.
- To identify whether any hazardous substances have been stored, released or disposed of on the subject property.
- To reduce uncertainty regarding Recognized Environmental Conditions (RECs).
- To identify the need for additional testing to evaluate the scope, location, source, and nature of any releases or threat of releases of hazardous substances affecting the subject property.
- Constitute an all appropriate inquiry suitable for establishing innocent landowner status, pursuant to 42 U.S.C. 9601 (35) (B) and the Brownfields Revitalization and Environmental Restoration Act of 2001 (Brownfields Act).

1.5 Special Terms and Conditions

The Scope of Services performed is in accordance with the contract between the client and GCI. The format and content of the Phase I ESA Report are in general accordance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process E-1527-13.

It is the responsibility of the User of this report to provide certain information to the Environmental Professional, including reporting any environmental liens or activity and use limitations which are recorded against the subject site. The User is also required to provide the Environmental Professional with any specialized knowledge or experience that is material to recognized environmental conditions at the site, the relationship of the purchase price of the property to the fair market value of the site, and any commonly known or reasonably ascertainable information within the local community about the site that is material to recognized environmental conditions at the site.

1.6 Previous Environmental Assessments

A review was conducted in order to determine the existence of any and all previous reports pertaining to the subject property, including, but not limited to, Phase I Environmental Site Assessments, Phase II Subsurface Investigations, Asbestos Inspections, Lead-Based Paint (LBP) Screenings, etc.

As part of this Phase I ESA report, GCI reviewed a copy of the following reports:

- Phase I Environmental Site Assessment, dated May 24, 2004, prepared by GCI
- Phase II Subsurface Investigation, dated in 2004, prepared by GCI
- Tank Abandonment Report, dated January 24, 2005, prepared by GCI

The reports are summarized as follows:

Phase I Environmental Site Assessment, dated May 24, 2004, prepared by GCI

The site existed in 2004 as it does today. The report recommended the following:

• The interior and exterior discharge points should be dye tested. Specifics regarding the oil water separator should be provided for review. The former repair pit should be inspected in order to confirm that there are no discharges associated with this structure. The area of the repair pit should be assessed via soil borings.

- The oil water separator, as well as the drains which discharge to it should be properly sealed and abandoned.
- The most recent waste manifests should be provided for the waste oil produced at the site.
- The exterior storage drums should be either moved to an indoor location or properly carted off site.
- The stained areas at the exterior diesel storage tank should be cleaned via steam cleaning and/or pressure washed in order to remove any potential contaminants from the site.
- A Geophysical investigation should be conducted at the site.
- A Phase II Subsurface Investigation should be conducted within the vicinity of the gasoline tanks as depicted on the Sanborn maps.
- The ASTs should be stored in compliance with the Rules of the City of New York (RCNY) 21-21 Aboveground Motor Fuel Storage and Dispensing System." In addition, the ASTs should be properly permitted with the NYC FD.
- Any asbestos materials should be abated and an Operations and Maintenance Program should be implemented.
- The open violations should be rectified.

Phase II Subsurface Investigation, dated in 2004, prepared by GCI

The interior discharge points were dye tested and confirmed to discharge to the municipal sewer system.

A Geophysical Investigation was conducted throughout the site using a magnetometer. There were no anomalies detected at the northeast side of the site. There was one (1) magnetic anomaly detected along the northwest side of the building which was indicative of a UST. The area was further investigated and a fill port was found. The UST appeared to be 1,000 gallons. It was determined that the northeast gasoline tank depicted on the Sanborn maps was either removed or was situated aboveground.

Two (2) soil borings were installed in the area of the former repair pit. The borings were installed to a depth of four (4) feet. Two (2) samples were submitted for laboratory analysis. The analytical data indicated that there were no elevated VOCs, SVOCs or metals above their NYS DEC Recommended Soil Cleanup Objectives.

Three (3) soil borings were installed in the area of the UST and two (2) soil borings were installed at the northeast side of the building where Sanborn maps depicted a gasoline tank. Two (2) soil samples from the northeast location and three (3) soil samples from the area of the UST were

submitted for laboratory analysis. The analytical data indicated that there were no elevated VOCs, SVOCs or metals detected within the samples around the UST. SB-5, a boring where the Sanborn maps depicted a gasoline tank had one (1) slightly elevated SVOC. The report concluded that the concentration was most likely due to site background conditions and was not considered a significant threat. The low levels will naturally attenuate over time.

The report recommended that the 1,000 gallon UST be either abandoned or excavated and removed. It was additionally recommended that the Phase II report be forwarded to the NYS DEC in order to confirm that they would not require any further work regarding the elevated SVOC.

Tank Abandonment Report, dated January 24, 2005, prepared by GCI

On December 22, 2004, tank abandonment activities were initiated at the subject property. There was 795 gallons of gasoline / diesel fuel remaining in the UST. A total of 795 gallons of gasoline / diesel fuel was pumped from the UST. The liquid was transported by Enviro Waste, Inc., United States Environmental Protection Agency (US EPA) identification No. NYR000090142 and NYS DEC non-hazardous waste transporter permit No. 3A-562. The liquids were disposed of at Industrial Oil Tank Service, US EPA identification No. NYR000005298.

All piping for the UST was removed. The UST was then filled with Trypolmer Fire Guard Foam Insulation. The direct fill port was sealed at grade with cement. The vent line has been cut and removed. The required New York City Fire Department affidavit, dated January 10, 2005, has been submitted to Mr. Mike Reardon of the NYC FD.

The 1,000 gallon UST has been abandoned in-place in accordance with the guidelines specified in Section © and (D) of Title 3, RCNY Chapter 21-02. There is no further work recommended with regard to the 1,000 gallon UST. The abandonment activities satisfy Recommendation No. 1 as noted in the Phase II Subsurface Investigation report dated August 10, 2004, prepared by GCI.

The client did not have any previous environmental reports pertaining to the subject site. There were no other environmental reports for the subject site made available at the time of this assessment.

1.7 Personnel

Inspection and Interviews

The inspection of the subject site and the primary interviews were conducted with the assistance of David, an employee of "Gaffney Plumbing and Heating Supply", the owner of the subject site. The site inspection and interviews were conducted by GCI Senior Environmental Technician, Ms. Diane J. Hawran on August 18, 2014. The report has been written by Ms. Hawran and reviewed by GCI President, Mr. Tom P. Smyth, both qualified Environmental Professionals as defined by the ASTM E 1527-13 Standard and the AAI Regulation. A copy of Ms. Hawran's and Mr. Smyth's resumes are included in Appendix C.

2.0 SITE CHARACTERISTICS

The subject site was surveyed by inspecting the building interior on a room by room basis; areas of particular note were the sources of building heat, the structure's thermal and pipe insulation and areas where there was storage of chemicals or hazardous materials. The exterior was inspected by walking the grounds with special attention given to the perimeter of the site, point sources of discharge or emission, injection wells, drywells, above-ground storage facilities, storage drums, and above-ground connections to underground storage tanks (USTs). The activities conducted in every part of the property were identified for the purpose of determining potential environmental threats, of interest were the waste handling procedures, storage of hazardous materials and neighboring activities. Photographs were also taken of the subject site, please see Appendix H - Site Photographs.

2.1 Site Location and Legal Description		
Street Address	1041-1051 Atlantic Avenue	
Cross Streets	Classon Avenue and Franklin Avenue	
Municipality	Borough of Brooklyn, City of New York	
State	New York	
Owner	Slaw Realty Co.	
Tax ID Number	Block 2020, Lot 77	
Site Size	26,758 square feet, or 0.61 acres	
Building Size	Main building - approximately 21,240 square feet Storage building - approximately 1,000 square feet	
References	Area Map - Figure 1.0 and Tax Map - Figure 2.0	

2.2 Site Description	
Accessibility	The roofs were inaccessible at the time of the site inspection.
Property Type	Two (2) - one (1) story industrial buildings, one (1) of which has a partial basement.
Date of Construction	Sometime between 1908 and 1932
Number of Buildings	Two (2)
Number of Apartment Units	None
Exterior Construction	Concrete block
Interior Improvements	Main Building The interior of the building is divided into a front office area, with three (3) bathrooms, a computer room / electric main room, a kitchen, a stock room, a conference room, a mail room and a warehouse. The office areas are finished with carpet or resilient tiled floors, sheetrock walls and acoustic tiled ceilings. The kitchen and bathrooms are finished with resilient or ceramic tiled floors, sheetrock or ceramic tiled walls and sheetrock ceilings. The warehouse is finished with resilient tiled floors, concrete block walls and sheetrock ceilings. Storage Building The interior of the building is used as a warehouse. The interior of the building is finished with poured concrete floors, brick walls and an aluminum ceiling.
Basement Improvements	There is a partial basement located on the east side of the building. The basement is divided into the boiler room/mechanical areas and a tank room. The basement is finished with poured concrete floors, concrete block or poured in place concrete walls and a concrete ceiling.
Heating System	The two (2) buildings share a heating system. There is one (1) oil fired boiler located within the basement of the main building.
Surrounding Properties	Commercial / industrial buildings and multiple story residential apartment buildings.

Utilities		
Electric	Consolidated Edison	
Gas	Consolidated Edison	
Water	City of New York Bureau of Water	
Sanitary / Sewer	New York City sewer system (reported)	

Note: The information obtained by GCI and provided in this report regarding utilities is provided for informational purposes only. GCI obtains the information regarding the use of utilities at the subject site from the respective utilities and reports the information. GCI can not guarantee the accuracy of the information provided by the respective agencies. The user of the report should independently confirm all utility connections.

Sewer / Storm Water Discharge and Drywells		
Sanitary / Sewer	The sanitary and storm discharges from the subject site are reportedly directed to the New York City sewer system. There is one (1) septic vent located at the south side of the main building.	
Storm Water Drainage	The roof drainage discharges to the ground or to the sewer. The storm water runoff at the sidewalks is directed to the municipal storm water collection system located along Atlantic Avenue.	
	There are six (6) open grate storm water drains located at the north side of the main building. Since a majority of the exterior of the site is used for storage, there may be more drains present. According to Mr. Barkin, the drains were used in conjunction with an oil-water separator system located a the northwest side of the building. An approximately four (4) foot diameter solid steel manhole cover was located within this northwest area. It was reported that the former tenant, "Vanguard Oil" would park their trucks at the rear of the site and conduct oil changes. The oil would be discharged to the drains, which discharged to the oil-water separator. It was reported that this system has not been used in many years, although it was never abandoned.	

Interior Discharge Points	There are typical sinks located within the bathrooms of the building. There is one (1) slop sink located within the warehouse of the main building. There is
	one (1) floor drain and one (1) sump pump located within the basement of the main building. There is one (1) water testing bench located within the warehouse which was observed to be dismantled. It was reported by Mr. Barkin that this was historically used to measure the capacities and accuracies of water meters for gallons and cubic feet. There were no other materials used within the test except for water. The water was placed into two (2) water testing tanks and then discharged to the municipal sewer system.
	There are two (2) floor drains located within the storage building. Based on the fact that a majority of this building is used as storage, there may be additional floor drains located within this building. There was one (1) approximately 15' x 4' steel grated located at the rear of the storage building. According to Mr. Barkin this building was previously used as a repair shop and the pit was used to conduct repairs under automobiles.
Evidence of Staining / Spills	There were a significant amount of oil stains observed at the exterior diesel storage tank area. The stains are a result of sloppy dispensing.
Historical Environmental Reports	According to a Phase II Subsurface Investigation, dated in 2004, prepared by GCI, the interior discharge points were dye tested and confirmed to discharge to the municipal sewer system. Two (2) soil borings were installed in the area of the former repair pit. The borings were installed to a depth of four (4) feet. Two (2) samples were submitted for laboratory analysis. The analytical data indicated that there were no elevated VOCs, SVOCs or metals above their NYS DEC Recommended Soil Cleanup Objectives.

2.3 Site History and Operations

The subject site is improved by a one (1) story commercial building, with a partial basement and a one (1) story storage building. The building has reportedly been occupied by "Gaffney Plumbing and Heating" since 1999. Prior to 1999, the building was reportedly vacant for one (1) year and prior to that time, the building was reportedly occupied by a nightclub. Mr. Barkin reported that the building was originally constructed circa 1989 or 1987 for "Bayside Oil". It was reported that this company owned the building, although they never occupied it. Operations presently entail sales, off-site service/repairs and installations of water and heating equipment. In addition, the company attempted to mix and sell paints, although since this operation never took off, it is no longer conducted on-site. The storage building was reportedly previously used as a repair shop for automobiles.

The subject site is listed with the US EPA as a RCRIS Generator of hazardous waste, and specifically a transporter of hazardous waste under the name "Vanco Environmental Inc." - US EPA ID No. NYD980759435. Mr. Barkin did not know what the listing pertained to and it was unknown if Vanco was a former tenant.

According to Sanborn Fire Insurance maps, the subject buildings were constructed sometime between 1908 and 1932.

According to a historical title search, Vanguard Oil & Service Co. owned the subject site from 1978 until 1988 when Bayside Fuel Oil Corp. bought the property.

The Department of Buildings reported that Job No. 301051019, dated July 24, 2000 was issued for the open storage of combustible gas cylinders including propane, oxygen and acetylene.

Sanborn Historical Map Search

Fire Insurance Maps are produced by private fire insurance map companies and indicate the uses of properties and immediately surrounding properties at specific dates. These fire insurance maps are typically updated, so as to provide the fire insurance company with the historical view of development for a given area.

A Fire Insurance Map Search was conducted for the subject site, and the private agency contacted was Sanborn Mapping and Geographic Information Service. A full search for any existing fire insurance maps was conducted.

The Sanborn Fire Insurance Map Search revealed the following historical use of the property:

SANBORN MAP SEARCH

YEAR	HISTORICAL USE
1888	The subject site exits as vacant undeveloped land.
1908	The west side of the subject site is improved by a one (1) story residential dwelling and a one (1) story commercial building, which appears to be used for "furniture repairing". The east side of the site is improved by a small unidentified building. The remainder of the site is undeveloped.
1932	The previous buildings have all been demolished. The subject site is improved by a one (1) story auto sales and service building and a one (1) story repair shop/locker room building. The rear of the site is occupied by a garage for one hundred (100) cars. A gasoline tank is located at the northeast side of the sales and service building, as well as at the northwest side of the auto sales and service building.
1951	The subject site is now occupied by "U.S. Metal Products Co., Inc. Manufacturing". The former auto sales and service building is now divided into a tool room, offices, lockers and an assembly area. The northeast building, formerly occupied by a repair shop/locker room is now divided into a spray room and a storage room. The gasoline tanks are no longer depicted on the map.
1962	There are no significant changes noted in the subject site.
1965	There are no significant changes noted in the subject site.
1976	The subject site is now occupied by "Blue Fox Industries, Inc." There are no other significant changes noted in the subject site since 1965.
1978	There are no significant changes noted in the subject site.
1979	There are no significant changes noted in the subject site.
1980	There are no significant changes noted in the subject site.
1982	"Blue Fox Industries, Inc." no longer occupied the site. The rear of the site is used for parking. The interior of the main (south) building appears to be only occupied by offices. A small addition has been made to the north side of the building. There are no other significant changes noted at the subject site since 1980.
1987	There are no significant changes noted in the subject site.
1988	There are no significant changes noted in the subject site.
1991	There are no significant changes noted in the subject site.

YEAR	HISTORICAL USE
1992	There are no significant changes noted in the subject site.
1993	There are no significant changes noted in the subject site.
1995	There are no significant changes noted in the subject site.

Please refer to Figure 8.0 located within Appendix E of this report.

2.4 <u>User Provided Information</u>

GCI sent a pre-survey questionnaire and an AAI User Questionnaire to the site contact. The purpose of the questionnaires was to satisfy the user requirements for all appropriate inquiry and to have the user disclose any environmental conditions which may not have been apparent at the time of GCI's site reconnaissance.

2.4.1 Title Records

As of the date of this report, a recent title report has not yet been provided.

2.4.2 Environmental Liens or Activity or Land Use Restrictions

As of the date of this report, the user questionnaire has not yet been completed and returned to GCI.

2.4.3 Specialized Knowledge

As of the date of this report, the user questionnaire has not yet been completed and returned to GCI.

2.4.4 Commonly Known or Reasonably Ascertainable Information

As of the date of this report, the user questionnaire has not yet been completed and returned to GCI.

2.4.5 Valuation Reduction for Environmental Issues

Not applicable.

2.4.6 Reason for Performing Phase I ESA

The Phase I ESA is being conducted by the owner of the subject site in order to conduct due diligence and All Appropriate Inquiry prior to a refinance.

2.5 Interviews

Owner/Key Site Manager

According to Mr. Donald Barkin, owner of the site, the building has been occupied by "Gaffney Plumbing and Heating" since 1999. Prior to 1999, the building was reportedly vacant for one (1) year and prior to that time, the building was reportedly occupied by a nightclub. Mr. Barkin reported that the building was originally constructed circa 1989 or 1987 for "Bayside Oil". It was reported that this company owned the building, although they never occupied it. Operations presently entail sales, off-site service/repairs and installations of water and heating equipment. In addition, the company attempted to mix and sell paints, although since this operation never took off, it is no longer conducted on-site. The storage building was reportedly previously used as a repair shop for automobiles.

Occupant(s)

The site is owner occupied. Please see above.

Past Owners, Operators, and Occupants

The past owner, operator and/or occupant was not available for an interview at the time of the site inspection. There was no contact information obtained for the former owner, operator and/or occupant.

2.6 Site Hydrology and Geology

2.6.1 Surface Water Characteristics

The subject site is improved by the subject buildings, paved storage areas and pedestrian sidewalks. The surface topography at the subject site is nearly level throughout. Storm water runoff is directed to the curb side municipal storm water collection system or the on-site drains. The up-gradient drainage area within 1,000 feet of the subject site is improved with commercial buildings.

2.6.2 Groundwater Characteristics

The Borough of Brooklyn is characterized by Alton stony loam (As) and Miami stony loam (Ms) and bedrock. According to groundwater contour maps provided by the United States Geologic Survey (USGS), the depth to groundwater at the subject site is estimated to be less than fifty (50) feet below ground surface. Groundwater generally flows east, southeast. Please note that actual groundwater flow can be affected by many variables including underground utilities and other subsurface openings or obstructions such as basements, underground parking garages and subway lines, bedrock geology, etc.

Groundwater is not used as a drinking water supply in the Borough of Brooklyn. Potable (drinking) water is supplied to the subject site by the New York City Bureau of Water. The Bureau obtains potable water from the Croton Reservoir located in Westchester County and other fresh water reservoirs in upstate New York.

2.6.3 Geological Characteristics

According to the United States Department of Agriculture, Soil Conservation Service - Soil Survey, New York is located in the Atlantic Coastal Plain physiographic province which is characterized by low hills of unconsolidated sands, gravel and silt. The subsurface deposits consist of the Upper Glacial deposits that are characterized by southward sloping deposits of sand, gravel and silt. The Upper Glacial deposits have a maximum thickness of 600 feet.

They are underlain by the Magothy, Raritan and Lloyd Formations. The Gardiners clay and the Jameco gravel separate the Upper Glacial deposits and the Magothy Formation along the south west portion of Long Island. The Borough of Brooklyn is underlain by bedrock, although the majority of it is at several hundred feet below land surface.

2.7 Groundwater Use

The use of local groundwater as a potable drinking water source can compound a property owner's potential financial exposure and associated liabilities from subsurface contamination. GCI therefore evaluated the extent of the local groundwater usage in the area of the subject site.

Groundwater is not used as a drinking water supply in the Borough of Brooklyn. Potable (drinking) water is supplied to the subject site by the New York City Bureau of Water. The New York City Bureau of Water obtains potable water from the Croton Reservoir located in Westchester County and other fresh water reservoirs in upstate New York.

2.8 <u>Current Uses of Adjoining Properties</u>

Direction	Directly Adjacent	Further Beyond
North	Multiple story residential apartment buildings	Lefferts Place
South	Atlantic Avenue.	"Zap Lube" and "Excellence Auto Trade LLC."
East	"Tarmac Auto Body".	Multiple story commercial/industrial business.
West	"Atlantic Restaurant Equipment".	Multiple story commercial/industrial business.

3.0 <u>SITE INSPECTION / RECONNAISSANCE</u>

3.1 Solid / Hazardous Materials and Waste

The subject property was inspected to determine the presence (generation, use and/or disposal) of hazardous materials.

The present operations at the subject site entail the generation of waste oil as a result of the off-site servicing of fuel oil burners. It was reported that the waste oil is carted off site approximately once a year. There were no waste manifests provided for review. The operations entail the use of diesel fuel for the hi lo machines. In addition, compressed oxygen and acetylene are stored at the exterior north side of the site.

Storage Drums

There were no storage drums observed at the subject site at the time of the site inspection.

Chemical Staining and Stressed Vegetation

A surface spill of petroleum hydrocarbon products or other chemicals may be adsorbed onto the soil particles and retained in the near-surface sediments. Plant life near a spill will often be killed or will suffer stress from the contamination of the soil with these products. The condition of vegetative growth can be an indicator of near-surface soil conditions.

There were a significant amount of oil stains observed at the exterior diesel storage tank area. The stains are a result of sloppy dispensing.

3.2 <u>Underground and Aboveground Storage Tanks (USTs and ASTs)</u>

Site Inspection

There is one (1) - 3,000 gallon fuel oil AST located within a tank room within the basement of the building. The fill port and vent line for the AST are located at the northeast side of the building.

There is one (1) - 275 gallon AST of dyed diesel, which is used to fuel the hi-lo machine and one (1) - 275 gallon waste oil AST located at the exterior northeast side of the site. The waste oil is generated during the servicing of oil burners located off-site.

At the time of the site inspection, Mr. Barkin provided GCI with a copy of a site plan, with an unknown date. The site plan indicates that a "curb fill box" was located at the southeast side of the subject building, along the sidewalk. The curb fill box was not observed at the time of the site inspection. It is not known which tank the fill box was associated with.

There was no other evidence of storage tanks observed, such as fill ports, vent lines, etc. observed at the time of the site inspection.

Historical Environmental Reports

Phase II Subsurface Investigation, dated in 2004, prepared by GCI

A Geophysical Investigation was conducted throughout the site using a magnetometer. There was one (1) magnetic anomaly detected along the northwest side of the building which was indicative of a UST. The area was further investigated and a fill port was found. The UST appeared to be 1,000 gallons. It was determined that the northeast gasoline tank depicted on the Sanborn maps was either removed or was situated aboveground.

Three (3) soil borings were installed in the area of the UST and two (2) soil borings were installed at the northeast side of the building where Sanborn maps depicted a gasoline tank. Two (2) soil samples from the northeast location and three (3) soil samples from the area of the UST were submitted for laboratory analysis. The analytical data indicated that there were no elevated VOCs, SVOCs or metals detected within the samples around the UST. SB-5, a boring where the Sanborn maps depicted a gasoline tank had one (1) slightly elevated SVOC. The report concluded that the concentration was most likely due to site background conditions and was not considered a significant threat. The low levels will naturally attenuate over time.

The report recommended that the 1,000 gallon UST be either abandoned or excavated and removed. It was additionally recommended that the Phase II report be forwarded to the NYS DEC in order to confirm that they would not require any further work regarding the elevated SVOC.

Tank Abandonment Report, dated January 24, 2005, prepared by GCI

December 22, 2004, the 1,000 gallon UST was abandoned in place at the north side of the building. All piping for the UST was removed. The UST was then filled with Trypolmer Fire Guard Foam Insulation. The direct fill port was sealed at grade with cement. The vent line was cut and removed. The 1,000 gallon UST has been abandoned in-place in accordance with the guidelines specified in Section © and (D) of Title 3, RCNY Chapter 21-02.

CONTRACTOR OF THE PROPERTY OF THE PARTY OF T	
Historical Sanborn Fire Insurance Maps	According to Sanborn fire insurance maps, one (1) gasoline tank was located at the northeast side of the main building and one (1) gasoline tank was located at the northwest side of the main building in 1932. The tanks are no longer depicted on the next most recent 1952 Sanborn map.
NYS DEC PBS	The New York State Department of Environmental Conservation (NYS DEC) Petroleum Bulk Storage (PBS) reported that there is one (1) - 3,000 gallon No 2 fuel oil aboveground storage tank (AST) registered at 1045 Atlantic Avenue under Facility ID No. 2-603436.
NYC FD	The City of New York Fire (NYC FD) records indicated that there is one (1) - 3,000 gallon enclosed tank registered at 1045 Atlantic Avenue under Account No. 93084101.
NYC DOB	The New York City Department of Buildings (NYC DOB) records included Job No. 300712566, dated March 27, 1988 which was issued for the replacement of a fuel oil tank.
Conclusions	Issue A - Register ASTs with NYS DEC The NYS DEC requires that all sites with a total on-site capacity of greater than 1,100 gallons must have all tanks registered. The two (2) - 275 gallon ASTs should be properly registered with the NYS DEC.
	Issue B - Permit ASTs with NYC FD According to Section 27-4027 of the NYC FD Fire Prevention Code, all fuel oil tanks (used to store or sell) larger than 55 gallons must be permitted with the NYC FD. The two (2) 275 gallon ASTs should be properly permitted with the NYC FD.
	Issue C - Properly Store ASTs The ASTs located at the site should be stored in compliance with the Rules of the City of New York (RCNY) 21-21 "Aboveground motor Fuel Storage and Dispensing System".
	Issue D - Provide Prior 2004 Phase II Report to NYS DEC The Phase II report from 2004 should be provided to the NYS DEC in order to confirm that they would not require any further work regarding the elevated SVOC.

3.3 Poly-Chlorinated Biphenyls (PCBs)

Transformers

There are three (3) types of transformers defined in the PCB regulations:

- **a. PCB Transformer:** Any transformer containing 500 parts per million (ppm) PCBs or greater.
- b. Non-PCB Transformer: Any transformer containing less than 50 ppm PCBs.
- c. PCB-Contaminated Transformer: Any transformer containing 50-499 ppm PCBs. These transformers are not subject to parts of the regulations such as marking requirements or, if drained of liquid, to the disposal requirements. Any liquid drained from these transformers must be stored and disposed of in accordance with the regulations.

Transformers often contain dielectric liquid for the primary purpose of increasing resistance of the unit to arcing and acting as a heat transfer media, helping to cool the coils. The majority of transformers are filled with mineral oil, but a small percentage of these liquid-filled transformers contain PCB Askarel coolant liquid. The term "Askarel" is a generic term used for a group of nonflammable synthetic chlorinated hydrocarbons. All types of Askarels sold prior to 1960, 1969 and 1971 contained 60 to 100 percent PCBs. Askarel transformers were manufactured in a variety of sizes, i.e. 3 to 3,000 gallons of PCB liquid, and are generally used in hazardous locations where flammability is of concern. PCB transformers are no longer produced because of EPA's ban on the manufacture of new equipment containing PCBs.

Inspection

There were no transformers observed at the subject site at the time of the site inspection.

3.4 Asbestos

GCI personnel performed a visual scan of accessible common areas for suspected asbestos containing material (ACM). Where a suspected asbestos material was observed, GCI determined the condition of the material and estimated the amount of suspect material.

The US EPA designated material with more than 1% asbestos as an Asbestos Containing Material (ACM). Where asbestos material is determined to be "Friable" (capable of being crushed by hand pressure and having a high potential to release airborne fibers), it is the recommendation of EPA that strong response action be taken. Such actions may take the form of removal, encapsulating, repair, enclosure and the implementation of an operations and maintenance (O & M) program. The response action is determined depending on the severity and nature of the individual situation.

Inspection

A limited visual inspection of the property was conducted for suspect asbestos containing material (ACM), such as friable pipe insulation, friable surface material, and non-friable floor tile. There was no asbestos observed throughout the common / accessible / visible areas of the subject site at the time of the site inspection.

Based on the construction date of the subject buildings (sometime between 1908 and 1932), the presence of asbestos would be suspected in non-accessible areas, such as behind walls or within roofing materials. Please note that this inspection was limited to areas capable of being accessed and visible at the time of the site inspection. There was no destructive testing performed as part of the inspection.

In addition, according to Title 29 of the Code of Federal Regulations Part 1910.1001 (29 CFR 1910.1001), any thermal system insulation and surfacing material found in buildings constructed no later than 1980 is said to be "presumed asbestos containing material."

Asbestos Operations & Maintenance Program (O & M)

The operations and maintenance instructions should include a statement that in the event of repair, improvement, replacement or disturbance of the asbestos containing material those persons making the repair or disturbance should be cautioned and handle the material in accordance with EPA and industry standard for disturbing asbestos containing material. Building occupants, maintenance staff, custodial works, contract workers and miscellaneous persons should be informed about the location of the asbestos containing material (ACM) and cautioned them against disturbing or damaging the asbestos containing material.

An Operation and Maintenance Program should include the following:

- (1) A program for informing persons that may come in contact with the asbestos material.
- (2) Work practices for cleaning the building and minimizing ACM disturbance during maintenance and renovation.
- (3) Procedures for cleaning up asbestos fibers after a fiber release episode.
- (4) Respiratory protection and medical surveillance programs.
- (5) A training program for maintenance and service workers and requirements for outside contractors.
- (6) Regular surveillance of the ACM (assessing changes in ACM characteristics).
- (7) Record keeping.

3.5 Radon

Radon is a heavy colorless, odorless, radioactive gas formed by the radioactive decay of radium. Radon is associated with specific geologic formations which contain granite, uranium minerals, certain shales and phosphate related minerals. Radon, being a gas, can migrate to and accumulate in confined spaces such as building basements. Continued exposure of radon gas has been associated with increased lung cancer risk and possible genetic damage.

The US EPA and the Centers for Disease Control have used a continuous exposure level of 4.0 picocuries per liter (PCI/L) or a 0.02 working level as a guidance level at which the US EPA recommends further testing and/or remedial action to lower the concentrations.

The New York State Department of Health (NYS DOH), Bureau of Radiation Protection monitors radon levels throughout the state. There were 51 recorded test points located in Kings County. The average radon level in a living area was 0.750 pCi/L and 0% of these test points were 4 pCi/L or more. The average radon level in a basement area was 1.370 pCi/L and 10% of these test points were 4 pCi/L or more. The chart below details the full findings of the radon tests of the NYS DOH.

NYS DOH RADON INFORMATION - KINGS COUNTY

AREA	AVERAGE ACTIVITY	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area	0.750 pCi/L 1.370 pCi/L	100%	0% 10%	0% 2%
Basement		88%		

Conclusion

Given this information, radon is not considered an environmental concern for the subject site.

3.6 Lead-Based Paint (LBP)

The subject site is presently improved by two (2) - one (1) story commercial buildings, which were originally constructed sometime between 1908 and 1932. In view of the fact that the subject buildings were constructed prior to 1978, the site has been deemed to be a "pre-1978 property." For this reason, the subject property would be suspected of having lead-based paint (LBP) present. The painted surfaces within the buildings were noted to be in average condition, with no areas of chipping or peeling observed.

Being that the subject site is not residential in nature, the potential for lead-based paint (LBP) was not required to be scrutinized. Therefore, an on-site testing of painted surfaces for the presence of lead-based paint (LBP) was not performed.

As per the American Society for Testing and Materials (ASTM) Designation E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Section 12.1.4.3, lead-based paint (LBP) is considered a non-scope consideration. Lead-based paint (LBP) is not considered to be included in CERCLA's definition of hazardous substances (42 USC Sec. 9601(14)), and does not present potential CERCLA liability. Therefore the inspection for lead-based paint (LBP) is beyond the scope of this practice.

3.7 Wetlands

There are no designated wetlands located at the subject site, or within the immediate vicinity of the subject site, as indicated by the National Wetlands Inventory. The subject property is located in a highly developed commercial and residential neighborhood.

3.8 Other Potential Environmental Concerns

There were no pertinent site features, such as industrial process water, underground injection, groundwater monitoring wells, sensitive environmental receptors, etc. located at the subject site at the time of the site inspection.

3.9 Vapor Intrusion

Based on the site inspection, as well as historical research, a Vapor Encroachment Condition (VEC) is not likely to exist at the site.

4.0 FEDERAL, STATE, TRIBAL AND LOCAL REGULATORY AGENCY RECORDS

In order to determine if the subject site is listed, known, or suspected of being a listed hazardous waste site, federal and state listing databases were reviewed. The United States Environmental Protection Agency (US EPA), the New York State Department of Environmental Conservation (NYS DEC) and the tribal database records were researched and reviewed. The database search was conducted as per the radii specified by the American Society for Testing and Materials (ASTM) E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The City of New York Fire Department (NYC FD) and the New York City Department of Buildings (NYC DOB) files were reviewed for any records which may have been maintained concerning the subject site.

4.1 US EPA, NYS DEC and Tribal Database Review

US EPA, NYS DEC and Tribal Database Review							
Database	Search Distance *	Subject Property Listed	Surrounding Properties Listed	Sites Potentially Impacting Subject Site			
US EPA NPL	1.0 Mile	No	None	None			
US EPA Delisted NPL	0.5 Mile	No	None	None			
US EPA CERCLIS	0.5 Mile	No	None	None			
US EPA CERCLIS-NFRAP	0.5 Mile	No	None	None			
US EPA CORRACTS	1.0 Mile	No	None	None			
US EPA RCRIS-TSD	0.5 Mile	No	None	None			
US EPA RCRIS Generators	SP and APs	Yes	42	None			
US EPA Institutional & Engineering Controls	SP	No	N/A	None			
US EPA ERNS	SP	No	N/A	None

NYS DEC & Tribal Brownfield Sites	0.5 Mile	No	None	None			

Please see the enclosed US EPA, NYS DEC and tribal database for more detailed information of the above search.

SP = Subject Property

AP = Adjacent Properties

US EPA RCRIS Generators of Hazardous Waste Sites

The subject site is listed as a RCRIS Generator of hazardous waste, listed as follows:

Site:

Vanco Environmental

Address:

1045 Atlantic Avenue

Brooklyn, NY 11238

US EPA ID No.:

NYD980759435

Generator Size:

Historical Large Quantity Generator

Record Date:

August 2, 1983

Violation Status:

Site reported by US EPA. No hazardous waste activity reported by

NYS.

There are forty-two (42) US EPA RCRIS generators of hazardous waste located within a one-eighth (1/8) mile radius of the subject site.

NYS DEC Solid Waste Facility/Landfill (SWF/LF) Sites

There are three (3) SWF/LF sites located within a one-half (½) mile radius of the subject site. Based on the hydraulically cross-gradient locations of these sites, it would be unlikely for contamination from these sources to impact the subject site.

NYS DEC Leaking Underground Storage Tank (LUST) Sites

There are fifty-eight (58) LUST sites located within a one-half (½) mile radius of the subject site. Of these LUST sites, all have been remediated to the satisfaction of the NYS DEC, with the exception of ten (10) active LUST sites. Based on the hydraulically cross-gradient or down-gradient locations of these active sites, and/or the small release quantities associated with these active sites, it would be unlikely for contamination from these sources to impact the subject site.

NYS DEC Petroleum Bulk Storage (PBS) Sites

There is one (1) AST registered at the subject site, listed as follows:

Site:

Slaw Realty

Address:

1045 Atlantic Avenue

Brooklyn, NY 11238

NYS DEC Facility ID No.: 2-603436

Tank Type:

3,000 gallon No. 2 fuel oil

Tank Location:

Aboveground - in contact with soil

Secondary Containment:

Vault (without access)

Tank Status:

In Service

Installation Date:

January 1, 1950

There are sixteen (16) PBS sites located within a one-eighth (1/8) mile radius of the subject site.

Orphan Sites

There are orphan sites, which due to poor or inadequate address information cannot be mapped. By cross-referencing the street names of these sites with the street names surrounding the subject site, it was determined that none of the orphan sites are located within their ASTM-specified search distances in relation to the subject site.

US EPA, NYS DEC and Tribal Database Review Conclusion

Based on the review of the US EPA, NYS DEC and tribal regulatory agency databases mentioned above, as well as a review of the surrounding properties, there do not appear to be any off-site sources posing an apparent environmental threat to the subject site at this time.

4.2 New York City Department of Buildings

Research was conducted in the New York City Department of Buildings to trace the history of all past applications to the City for modification of the subject property, such as permits, new buildings - NB, certificates of occupancy - CO, alterations - ALT, or any other changes at the site, and to search for any past or existing violations.

Violations

Research was conducted with the New York City Department of Buildings based on the property address, as well as tax block and lot numbers. Research revealed that there are no New York City Department of Buildings violations and no Environmental Control Board violations that are currently considered open or "non-cured".

Permits

The New York City Department of Buildings reported that the following permits are listed for the subject site:

1. Alteration Type 2 Permit No. 300712566-01-EW-FB-OIL, dated April 15, 1998 was issued to replace the fuel oil tank (boiler / burner).

Certificates of Occupancy

According to the New York City Department of Buildings "PROPERTY PROFILE OVERVIEW", there are no Certificate of Occupancy numbers on file for the subject site.

Zoning

The Department of Finance classifies the subject building as a "F4-Factory/Industrial" building, with no Landmark Status.

Little "E" Restricted

The subject site is not listed as a Little "E" Restricted site.

A copy of the records obtained from the New York City Department of Buildings is enclosed in Appendix B - Historical Agency Records.

4.3 City of New York Fire Department

Violations

A search was made through the New York City Fire Department Bureau of Fire Prevention for any open or pending violations of the subject site. As of July 16, 2014, the Fire Department records indicated that there are five (5) fire safety violations on file for the subject site listed as follows:

- 1. Violation No. 12026664L, dated September 16, 2013
- Violation No. 10243623P, dated December 5, 2013
- 3. Violation No. 10243623N, dated October 5, 1993
- 4. Violation No. 10243624P, dated October 5, 1993
- 5. Violation No. 10267199J, dated June 21, 1996

Please note that the violations are not considered an environmental concern, although all violations are noted as part of this report. Please refer to the enclosed Fire Department records for a complete listing of these violations.

Storage Tanks

A search was made through the City of New York Fire Department (NYC FD) for all records regarding any storage tanks located at the subject site. As of June 16, 2014, the City of New York Fire Department records indicated that there is one (1) - 3,000 gallon tank permitted at 1041-1051 Atlantic Avenue under the name "Donald Barkin", Account No. 93084101. The permit expires in July 2014

A copy of the records obtained from the City of New York Fire Department is included in Appendix B - Historical Agency Records.

5.0 OPINION OF THE ENVIRONMENTAL PROFESSIONAL

Based on the completion of the Phase I Environmental Site Assessment (ESA), the Environmental Professional has identified conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject site. This opinion is based on the conditions observed at the time of the site inspection, the records reviewed as part of this ESA report, as well as the present and historical uses of the subject site.

5.1 Data Gap

There do not appear to be any data gaps for the site at this time.

6.0 EVALUATION, CONCLUSIONS AND RECOMMENDATIONS

6.1 Recognized Environmental Conditions

The term "recognized environmental conditions" is defined by the ASTM as "the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

GCI has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM E 1527-13 of the subject site. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) in connection with the subject site at this time, with the exception of the following:

1. Steam Clean / Pressure Wash Stained Areas

There were a significant amount of oil stains observed at the exterior diesel storage tank area. The stains appear to be the result of sloppy dispensing. The stained areas at the exterior diesel storage tank should be cleaned via steam cleaning and/or pressure washed in order to remove any potential contaminants from the subject site.

6.2 <u>Historical Recognized Environmental Conditions</u>

The term "historic recognized environmental condition" is defined by the ASTM as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority; without subjecting the property to any required controls.

Based on the completion of the Phase I ESA for the subject site, there do not appear to be any HRECs which pertain to the subject site at this time.

6.3 Controlled Recognized Environmental Conditions

The term "controlled recognized environmental condition" is defined by the ASTM as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Based on the completion of the Phase I ESA for the subject site, there do not appear to be any CRECs which pertain to the subject site at this time.

6.4 Non-Scope Considerations

Non-scope considerations are outside the scope of a Phase I ESA report, as defined by the American Society for Testing and Materials (ASTM) E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Non-scope considerations are conditions that may lead to contamination of the subject site or of nearby properties but are not included in CERCLA's definition of *hazardous substances* (42U.S.C. 9601(14)) or do not otherwise present potential CERCLA liability.

Based on the completion of the Phase I ESA for the subject site, the following non-scope considerations pertain to the subject site at this time:

1. Asbestos

A limited visual inspection of the property was conducted for suspect asbestos containing material (ACM), such as friable pipe insulation, friable surface material, and non-friable floor tile. There was no asbestos observed throughout the common / accessible / visible areas of the subject site at the time of the site inspection.

Based on the construction date of the subject buildings (sometime between 1908 and 1932), the presence of asbestos would be suspected in non-accessible areas, such as behind walls or within roofing materials. Please note that this inspection was limited to areas capable of being accessed and visible at the time of the site inspection. There was no destructive testing performed as part of the inspection.

In addition, according to Title 29 of the Code of Federal Regulations Part 1910.1001 (29 CFR 1910.1001), any thermal system insulation and surfacing material found in buildings constructed no later than 1980 is said to be "presumed asbestos containing material."

The removal / abatement of asbestos is not required by law for the subject building; therefore any asbestos found can remain in place, or it can be removed / abated. An asbestos inspection would be necessary in order to identify any ACM in the subject building. If asbestos remains in place, it is recommended that an ACM Operations and Maintenance (O & M) Program be implemented by the property owner. A general format for a suggested ACM O & M Program is included in Section 3.4 of this report.

6.5 **De Minimus Conditions**

De minimus conditions are defined as conditions which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimus are not considered Recognized Environmental Conditions (RECs), although they do warrant discussion within a Phase I ESA report.

Based on the completion of the Phase I ESA for the subject site, the following de minimus conditions pertain to the subject site at this time:

1. Abandon Oil Water Separator

There is one (1) approximately four (4) foot diameter solid steel manhole cover located at the northwest side of the main building which reportedly accesses an oil water separator. It was reported that the former tenant, "Vanguard Oil" would park their trucks at the rear of the site and conduct oil changes. The oil would be discharged to the drains, which discharged to the oil-water separator. It was reported that this system has not been used in many years, although it was never abandoned.

Based on the fact that the oil water separator has not been used in many years, it represents an on-site storage liability. The oil water separator should be properly abandoned and all documentation of the same provided for review.

2. Provide Waste Manifests

The present operations at the subject site entail the generation of waste oil as a result of the off-site servicing of fuel oil burners. It was reported that the waste oil is carted off site approximately once a year. There were no waste manifests provided for review. The most recent waste manifests should be provided in order to confirm the proper disposal of the waste produced at the subject site.

3. Storage Tanks

There is one (1) - 275 gallon AST of dyed diesel, which is used to fuel the hi-lo machine and one (1) - 275 gallon waste oil AST located at the exterior northeast side of the site. The waste oil is generated during the servicing of oil burners located off-site.

According to a Subsurface Investigation, dated in 2004, prepared by GCI, three (3) soil borings were installed in the area of the UST and two (2) soil borings were installed at the northeast side of the building where Sanborn maps depicted a gasoline tank. Two (2) soil samples from the northeast location and three (3) soil samples from the area of the UST were submitted for laboratory analysis. The analytical data indicated that there were no elevated VOCs, SVOCs or metals detected within the samples around the UST. SB-5, a boring where the Sanborn maps depicted a gasoline tank had one (1) slightly elevated SVOC. The report concluded that the concentration was most likely due to site background conditions and was not considered a significant threat. The low levels will naturally attenuate over time. It was recommended that the Phase II report be forwarded to the NYS DEC in order to confirm that they would not require any further work regarding the elevated SVOC.

The New York State Department of Environmental Conservation (NYS DEC) Petroleum Bulk Storage (PBS) reported that there is one (1) - 3,000 gallon No 2 fuel oil aboveground storage tank (AST) registered at 1045 Atlantic Avenue under Facility ID No. 2-603436.

The City of New York Fire (NYC FD) records indicated that there is one (1) - 3,000 gallon enclosed tank registered at 1045 Atlantic Avenue under Account No. 93084101.

Issue A - Register ASTs with NYS DEC

The NYS DEC requires that all sites with a total on-site capacity of greater than 1,100 gallons must have all tanks registered. The two (2) - 275 gallon ASTs should be properly registered with the NYS DEC. Documentation of the same should be provided for review.

Issue B - Permit ASTs with NYC FD

According to Section 27-4027 of the NYC FD Fire Prevention Code, all fuel oil tanks (used to store or sell) larger than 55 gallons must be permitted with the NYC FD. The two (2) - 275 gallon ASTs should be properly permitted with the NYC FD. Documentation of the same should be provided for review.

Issue C - Properly Store ASTs

The ASTs located at the subject site should be stored in compliance with the Rules of the City of New York (RCNY) 21-21 "Aboveground Motor Fuel Storage and Dispensing System". Documentation of the same should be provided for review.

Issue D - Provide Phase II Report to NYS DEC

The Phase II report from 2004 should be provided to the NYS DEC in order to confirm that they would not require any further work regarding the elevated SVOC.

4. Rectify Open Violations

The City of New York Fire Department reported that there are five (5) open fire safety violations on file for the subject site. Please note that the violations are not considered a significant environmental concern, although all violations are noted as part of this report. The open violations should be rectified and all documentation provided for review.

Limiting Conditions

The purpose of this investigation was to identify potential sources of contamination at the property, and to satisfy the all appropriate inquiry standard set forth in Section 9601 (35)(b) of CERCLA. The findings and conclusions set forth in this report are based upon information that was available to GCI during its inspection of the property and after review of selected records and documents. If new information becomes available concerning the property after this date, or if the property is used in a manner other than that which is in this report, the findings and conclusions contained herein may have to be modified. Additionally, while this investigation was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry, GCI cannot guarantee that the property is completely free of hazardous substances or other materials or conditions that could subject the client to potential liability. The presence or absence of any such condition can only be confirmed through the collection and analysis of air, soil and/or groundwater samples, which was beyond the scope of this investigation.

Future events and/or investigation could change the findings stated herein. Should additional investigations encounter differing conditions, sections of this report may require modification.

The preceding Environmental Assessment is subject to the following conditions and to such other conditions and limiting conditions as are set forth in the report.

- 1. GCI assumes no responsibility for hidden or latent conditions or misrepresentation by the property owner, his representatives, public information officials or any authority consulted in connection with the compilation of this report.
- 2. This report is prepared for the sole and explicit purpose for assessing the potential liability with respect to the suspected presence of hazardous materials that may pose a potential health or environmental threat and for evaluating collateral risk associated with the same. This report is not intended to have any direct bearing on the value of the property.
- 3. The Environmental Assessment Report is for the sole use of the principal parties. No disclosure or reproduction shall be made of the preceding report without the prior written consent of GCI.
- 4. GCI or any representative of GCI is not required to give testimony with reference to the opinions expressed herein without prior written arrangement.

Disclaimer

This report is for the use of the client as a guide in determining the possible presence of toxic materials on the subject property at the time of the inspection. This report is based on the review of historic records, relating to past occupants, and upon a visual inspection of the surrounding properties at the time of inspection. The records researched may be incomplete, and this report makes no determinations with respect to portions of the surrounding properties which were not inspected. This Phase I report is not a definitive determination of the presence of absence of toxic substances.

Any and all liability on the part of GCI shall be limited solely to the cost of this environmental assessment. GCI shall have no liability for any damages, whether consequential, compensatory, punitive, or special, arising out of, incidental to, or as a result of, this assessment and report. GCI shall have no liability for any cleanup and/or response costs, or any other incidental, or consequential, punitive, or special costs arising out of, incidental to, or as a result of any action against the client brought by any federal, state, or local government agency. GCI assumes no liability for the use of this assessment and report by any person or entity other than the client for whom it has been prepared.

APPENDIX B

SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

The findings, conclusions and recommendations of this Phase I Environmental Site Assessment have been prepared in accordance with generally accepted standards and practices. This report is limited to accessible areas of the subject site and information available at the time of the preparation. GCI certifies that, to the best of our knowledge, the information presented is accurate and reliable with regard to apparent indications of existing or potential "recognized environmental conditions" observed at the time of the site inspection.

The above mentioned parties interest in issues presented herein is unknown to GCI. GCI expressly reserves its common law copyright and other property rights in this report. This report is not to be reproduced, changed or copied in any form or manner whatsoever, nor is it to be assigned to any third party, without first obtaining the express written permission and consent of GCI.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Diane J. Hawran, Environmental Frofessional

APPENDIX C

RESUMES

The following are the qualifications of the Environmental Professionals involved in the preparation of this Phase I ESA report.

Diane J. Hawran Senior Environmental Technician, Environmental Professional

Education: Master of Science (M.S.), Environmental Management

Long Island University, C.W. Post Campus, Upper Brookville, New York

Bachelor of Science, Environmental Science

State University of New York, College At Oneonta, Oneonta, New York

Business Administration, Geographic Planning State University of New York, College At Oneonta, Oneonta, New York

Experience:

1997 - Present General Consolidated Industries, Inc., Hauppauge, New York

Senior Environmental Technician

Oversee and perform all aspects of Phase I Environmental Site Assessments including: asbestos, LBP, lead in water, and radon testing, and all related lab documentation and report writing. Compose/evaluate Phase I and environmental reports.

Certifications:

Certified Environmental Inspector.

40 Hour OSHA (29 CFR 1910.120) Certification.

New York State Department of Labor Asbestos Inspector certificate.

American Society For Testing and Materials, Phase I ASTM Environmental Site Assessment Process.

American Society For Testing and Materials, Phase II Environmental Site Assessment Process.

The State University of New Jersey, Rutgers Cook College, continuing Professional Education certificate, "How to Deal with Moldy Buildings".

The State University of New Jersey, Rutgers Cook College, continuing Professional Education certificate, "Site Remediation Basics".

The State University of New Jersey, Rutgers Cook College, continuing Professional Education certificate, "Industrial Site Recovery Act".

The State University of New Jersey, Rutgers Cook College, continuing Professional Education certificate, "Regulatory Training in Underground Storage Tanks."

Introduction to ArcView GIS certificate - Bowne Management Systems, Inc., ESRI. AutoCADD.

Tom P. Smyth President

Education:

Master of Science (M.S.), Environmental Science, Long Island University,

C.W. Post Campus

Bachelor of Science (B.S.), St. Johns University

Specialized Experience:

Assessment of real property and buildings, consulting related to commercial lending and construction, environmental liability surrounding property transactions, and regulatory compliance for real estate.

Experience:

1996 - Present General Consolidated Industries, Inc. (GCI), Hauppauge, New York

President

As President, Mr. Smyth is responsible for all business and technical operations of the company. Since joining the company, Mr. Smyth has worked on every type of project which the company provides services. Mr. Smyth has become respected by both outside clients and other environmental consulting firms. Mr. Smyth's experience varies from real estate consulting to remediation and waste transportation and disposal. Mr. Smyth has worked on thousands of projects with GCI, giving him the broad knowledge to serve a varied client base.

Under the direction of Mr. Smyth, GCI has expanded its abilities to municipal agencies, federally regulated banking institutions, private lending institutions, major oil companies, commercial and industrial property owners, and residential property owners. Mr. Smyth's expertise continues to expand, and so in turn the services of GCI also expands.

1991 - 1996 General Consolidated Industries, Inc. (GCI), Hauppauge, New York Director of Environmental Services

As Director of Environmental Services, Mr. Smyth is responsible for management of the environmental projects of the company. Mr. Smyth oversees client relations, project management, bidding and proposals, and quality control. Mr. Smyth works closely with regulators and government agencies in order to keep our clients informed of any updated laws affecting given properties. Mr. Smyth is often called upon to act as an expert witness for a given subject matter. Mr. Smyth has been requested to write informative articles on the current issues in the environmental industry for major publications.

1991 - 1996 General Consolidated Industries, Inc. (GCI), Hauppauge, New York

Director of Environmental Services

As Director of Environmental Services, Mr. Smyth is responsible for management of the environmental projects of the company. Mr. Smyth oversees client relations, project management, bidding and proposals, and quality control. Mr. Smyth works closely with regulators and government agencies in order to keep our clients informed of any updated laws affecting given properties. Mr. Smyth is often called upon to act as an expert witness for a given subject matter. Mr. Smyth's has been requested to write informative articles on the current issues in the environmental industry for major publications.

1989 - 1991 Shearson Lehman Hutton Bros.

New York, New York 11050

Legal Research Associate

As a legal research assistant, Mr. Smyth carried out research and assessment of liability for clients of Shearson Lehman Hutton Bros. Mr. Smyth worked individually with major shareholders and officers of the firm in carrying out the due diligence of the researching all investment transactions. In this position, Mr. Smyth gained the knowledge of investment liability for private clients.

1988 - 1989 Nassau County Supreme Court

Justice Patricia D. Collins

Mineola New York 17654

Legal Assistant

As a legal intern for Justice Collins, Mr. Smyth prepared motions for cases before the court, involving statute and case law legal research. Mr. Smyth worked directly under Justice Collins in the day to day workings of the court. Mr. Smyth drafted short form orders, memorandum decisions, and conducted legal research utilized in forming future decisions on matters before the court.

Working with Justice Collins, Mr. Smyth extended his experience in all aspects of litigation and legal research. The knowledge gained through working in the Nassau County Supreme Court provided Mr. Smyth with the framework to apply the legal skills to environmental research and consulting.

Certifications:

Transaction Screen and Phase I Site Assessment "Environmental Professional Course"

American Society for Testing and Materials

New York State Department of Labor Asbestos Handling Certificate

Society Memberships:

Water Environment Federation

National Groundwater Association

Long Island Association (LIA), Environmental Committee

Hauppauge Industrial Association (HIA), Environmental Committee

Advancement for Commerce, Industry and Technology (ACIT), Board Member
