Subject: Phase I Environmental Site Assessment
Surf Avenue Project Site (Two Un-numbered Lots on Surf Avenue - Block 7063, Lots 32 and 33; 2933 West 16th St - Block 7063, Lot 38; 2929 West 16th St - Block 7063, Lot 39; 2927 West 16th St - Block 7063, Lot 40 2925 West 16th St - Block 7063, Lot 41; 2910 West 15th St - Block 7063, Lot 12)
Brooklyn, New York 11224
Partner Project No. 19-253446.1

Dear Mr. Casillo:

Partner Assessment Corporation (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (201) 984-3651 or via e-mail at mdahl@partneresi.com.

Sincerely,

Melissa Dahl

Melissa Dahl
Relationship Manager

EXECUTIVE SUMMARY

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by LCOR for the property located at two un-numbered lots on Surf Avenue - Block 7063, Lots 32 and 33; 2933 West 16th St - Block 7063, Lot 38; 2929 West 16th St - Block 7063, Lot 39; 2927 West 16th St - Block 7063, Lot 40 2925 West 16th St - Block 7063, Lot 41; 2910 West 15th St - Block 7063, Lot 12 () in the Borough of Brooklyn, New York City, Kings County, New York (the "Surf Avenue Project Site" or "subject property"). The Phase I Environmental Site Assessment is designed to provide prospective volunteer Surf Avenue L/CAL LLC c/o LCOR with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the south side of Mermaid Avenue, the west side of West 15th Street, north side of Surf Avenue and the east side of West 16th Street within a mixed commercial and residential area of Kings County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	Two un-numbered lots on Surf Avenue - Block 7063, Lots 32 and 33; 2933 West 16th St - Block 7063, Lot 38; 2929 West 16th St - Block 7063, Lot 39; 2927 West 16th St - Block 7063, Lot 40; 2925 West 16th St - Block 7063, Lot 41; 2910 West 15th St - Block 7063, Lot 12, Brooklyn, New York 2910 West 15th Street, 2925-2933 West 16th Street and 1527 Surf Avenue
Historical Addresses:	201-202, 1501-1515, 1519 Surf Avenue, 2912-2948 West 15th Street, 2911-2933 West 16th Street,
Property Use:	Parking Lot
Land Acreage (Ac):	1.8
Number of Buildings:	1 small parking attendant shed
Block/Lot:	Block 7063, Lots 12, 32, 33, 38, 39, 40, and 41
Current Tenants:	Site owner rents parking lot out to tenants
Site Assessment Performed By:	Taylor Rodenberg of Partner
Site Assessment Conducted On:	August 9, 2019

The subject property is currently developed with a single small shed structure for a parking attendant and a paved parking lot. Onsite operations consist of parking and associated property maintenance. In addition to the parking use, the subject property is also improved with public sidewalks.

According to available historical sources, the subject property was formerly developed with several small dwellings and stores, intersected by a railroad between 1895 and 1930. Between 1950 and 1961, the subject property was additionally developed with parking areas and an auto track on the southeastern portion of the property. A commercial structure was developed on the southeastern portion of the property between 1976 and 1982 with one commercial structure on the eastern portion and one larger commercial structure on the southeastern portion of the subject property between 1983 and 1984.

Tenants on the subject property appear to have included various commercial retailers (1928-Present); residential (1934-Present); S & S Towel Service, Schaffer M Towel Service, Goushewitz & Nyman Tinsmiths & Roofers (1928); Molinari Frank Tailor, Fong Lee Laundry, Tufelski Hans Painter R, Govschewitz Abr Tinsmith, Botte Anthony A Clothing Cleaner, Gleisher Benj Manager Gas & Service Corp R (1934); Mermaid Tailor Shop, Utility Sheet Metal Works (1940); and The Empire Publishing & Printing Corp. (1973-1976).

The immediately surrounding properties consist of S&M Deli and Grocery store on the corner of Mermaid and 16th Street, the Golden Krust supermarket on the corner of Mermaid and 15th Street, Gold Finger, Sanna Grocery, H & R Block and Classie Sounds Entertainment; various commercial retailers and a liquor store to the north across Mermaid Avenue; Footprints Café; Williams Candy Shop, a roller coaster, a vacant lot and MCU Park to the south across Surf Avenue; Rita's Italian Ice, various commercial retailers and parking to the east across West 15th Street; and D & J Laundromat and parking to the west across West 16th Street.

According to the United States Geological Service Nation Water Information System (USGS NWIS), the depth to groundwater in the vicinity of the subject property is inferred to be approximately 4 to 6 feet below ground surface (bgs) and groundwater flow is inferred to be toward the south.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- According to a review of historical documentation, Fong Lee Laundry operated on the subject property (2914 West 15th Street) in 1934, a possible dry cleaner (2912 West 15th Street) operated on the subject property from at least 1934 to 1940, and Anthony Botte, clothing cleaners (2911 West 16th Street) operated from at least 1928 to 1934; a tinsmith/sheet metal works (2928 West 15th Street) operated on the subject property from at least 1928 to 1940; and The Empire Publishing and Printing Corp operated on the subject property (2914 West 15th Street) from at least 1973 to 1976. No information regarding onsite operations was identified during the course of this assessment. These operations may have used, stored, and/or disposed of hazardous substances as part of daily operations, and they operated at a time of little to no regulatory oversight. Based on the potential nature of operations, lack of information regarding usage and disposal practices, and lack of regulatory oversight, these former operations are considered a REC.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been

addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following were identified during the course of this assessment:

- According to our research, on July 29, 2009, an "E" designation was declared for the subject property. An "E" designation is a zoning map designation that provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination. "E" designations are established by the City Planning Commission and City Council as part of a change in zoning that would allow additional development to occur on the subject property or would permit uses not currently allowed. Based on our review of the New York City Department of Buildings (NYCDOB) Buildings Information System (BIS) and New York City Zoning Maps, an E-229 designation related to the Coney Island Rezoning project, of which the subject property is a part of, has been placed on the subject property. The specific description of this designation is "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation" (for the subject property's Block 7063, Lots 12, 32, 35, 38, 39, 40 and 41) and "Air Quality" (for Lot 12). Under these designations, certain protocols need to be followed to determine if hazardous materials are present onsite; to avoid any potential impacts associated with noise for future residential use, alternate means of ventilation including central air conditioning or air conditioning sleeves containing air conditioners or HUD-approved fans; and to ensure that any new residential and/or commercial use No. 2 fuel oil or natural gas is for the heating, ventilation, and air conditioning systems.

  In order to satisfy the requirements for the hazardous materials (E)-designation, the fee owner is required to: (1) prepare and implement a New York City Office of Environmental Remediation (OER)-approved site investigation to determine the extent of contamination, if any, at the site; (2) submit the findings of its investigation and, if necessary, a management plan, to the OER for its review and approval; and (3) implement the OER-approved management plan. The (E) Designation requires that these measures be implemented in order to proceed with site development at any of those sites.

  An OER-approved construction-related health and safety plan (CHASP) would be required to be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This Plan would be submitted to the OER for review and approval prior to implementation.

  These NYC Hazardous Materials (E) Designation requirements must be followed in order to obtain permits including excavation from the New York City Department of Buildings (DOB). The results of existing studies and any additional testing required by OER would then be used to prepare a Remedial Action Plan (RAP) for implementation during construction. OER approval of the RAP will

be required prior to their issuing a Notice to Proceed (NTP), allowing DOB to issue construction permits. Following construction (with implementation of the RAP), submission and approval of a Remedial Closure Report (RCR) is required for OER to issue a Notice of Satisfaction (NOS), allowing DOB to issue occupancy permits. The RCR is intended to document that activities were conducted in accordance with the RAP.

Based on the proposed redevelopment of the subject property, the (E) Designation requirements must be met.

- Partner observed two 275-gallon aboveground storage tanks (ASTs) for the storage of fuel oil on the adjacent property to the northwest at 1530 Mermaid Avenue. The ASTs were not equipped with secondary containment; however, no staining, leaks or spills were noted in the vicinity of the ASTs, and no releases have been reported to the NYSDEC. Based on the overall good condition and aboveground nature of the tanks, these ASTs are not expected to represent a significant environmental concern to the subject property at this time; however, historical leaks cannot be ruled out.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1517 Surf Avenue in the Borough of Manhattan, New York City, Kings County, New York (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A subsurface investigation should be conducted to evaluate subsurface conditions associated with the historical uses of the subject property.
- Due to the subject property's proposed redevelopment intentions, Partner recommends that the requirements of the "E" designation be satisfied, as discussed above, to determine if site remediation is required and if so, to remediate the subject property prior to redevelopment. Additionally, care should be taken during any excavation/redevelopment activities and any encountered petroleum bulk storage tanks and/or any impacted soils associated with any encountered petroleum storage tanks or historical on-site operations, should be removed in accordance with governmental regulations.
- A CHASP and Soils Management Plan should be implemented at the subject property prior to redevelopment activities in order to safely manage onsite soils in the event that impacted soils are encountered during construction activities.

1.0 INTRODUCTION

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at the Surf Avenue Project Site (Surf Avenue Lots Block 7063, Lots 32 and 33; 2933 West 16th St - Block 7063, Lot 38; 2929 West 16th St - Block 7063, Lot 39; 2927 West 16th St - Block 7063, Lot 40 2925 West 16th St - Block 7063, Lot 41; 2910 West 15th St - Block 7063, Lot 12)Kings County, New York (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical

restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the landowner liability protections. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Surf Avenue L/CAL LLC c/o LCOR engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Surf Avenue L/CAL LLC c/o LCOR. Either verbally or in writing, third parties may come into possession of this report or all or

part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- The former presence of underground storage tanks (USTs) cannot be ruled out. Partner did not identify evidence of the former usage of USTs on the subject property during the site reconnaissance or during review of regulatory database and agency documentation, however the potential presence of USTs on site cannot be ruled out.
- Partner submitted Freedom of Information Act (FOIA) requests to the New York City Department of Environmental Protection (NYCDEP), New York City Department of Health (NYCDOH) and the Fire Department of New York (FDNY) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, these agencies have not responded to Partner's requests. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment. The Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property is located at Surf Avenue Lots Block 7063, Lots 32 and 33; 2933 West 16th St - Block 7063, Lot 38; 2929 West 16th St - Block 7063, Lot 39; 2927 West 16th St - Block 7063, Lot 40 2925 West 16th St - Block 7063, Lot 41; 2910 West 15th St - Block 7063, Lot 12) in Brooklyn, Kings County, New York on the south side of Mermaid Avenue, the west side of West 15th Street, the north side of Surf Avenue and the east side of West 16th Street. According to the New York City Assessor, the subject property is legally described as Block 7063, Lots 12, 32, 33, 38, 39, 40 and 41.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently developed with only one small parking attendant shed and an asphalt parking lot for commercial and residential use. Onsite parking operations are surrounded by typical residential activities, general retail, food preparation and service facilities. The subject property is also improved with public sidewalks.

The subject property is present within the Coney Island District with a R7 designation and C2-4 for residential and commercial development by the City of New York.

The subject property was identified as a NY E Designation site in the regulatory database report, as further discussed in Section 4.2, associated with the Coney Island area rezoning.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of Kings County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Golden Krust (1516 Mermaid Avenue), Golden Finger (1528 Mermaid Avenue), Sanna Grocery (1526 Mermaid Avenue), S&M Mini Market (1530 Mermaid Avenue), H & R Block (1512 Mermaid Avenue) and Classie Sounds Entertainment (2906 West 15th Street); Mermaid Avenue beyond which are various commercial retailers (1509-1527) and a liquor store (1601 Mermaid Avenue)

South: Footprints Café (1521 Surf Avenue); Surf Avenue beyond which is MCU Park (1904 Surf Avenue), a vacant lot (1508-1528 Surf Avenue), a roller coaster; which is part of Coney Island Amusement Park (1501 Boardwalk West) and Williams Candy Shop (1318 Surf Avenue)

East: West 15th Street beyond which are various commercial retailers and parking (142 Mermaid Avenue and 2911-2937 Wes 15th Street) and Rita's Italian Ice (1329 Surf Avenue)

West: West 16th Street beyond which is D & J Laundromat (1602 Mermaid Avenue) and parking (1601 Surf Avenue)

The adjacent property to the northwest at the intersection of 16th Street and Mermaid Avenue was identified as a NY Spills site in the regulatory database report of Section 4.2.

The adjacent property to the east at 2905 West 15th Street was identified as a NY Aboveground Storage Tank (AST) site in the regulatory database report of Section 4.2.

In addition, several adjacent properties were identified as NY E Designation sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Coney Island, New York* Quadrangle 7.5-minute series 2013 topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 25 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the south. The subject property is depicted on the 2013 map as situated within a developed area in which only structures typically associated with institutional, religious, and large commercial/industrial facilities are portrayed.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the south toward Coney Island Channel. The nearest surface water in the vicinity of the subject property is the Lower New York Bay, which is located approximately 0.30-miles south of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the New York City Department of Environmental Protection (NYCDEP) serves the subject property vicinity. According to a representative of the NYCDEP, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of New York are surface water from the Catskill/Delaware supply, located in Delaware, Greene, Schoharie, Sullivan, and Ulster Counties; the Croton supply, New York City's original upstate supply, in Putnam, Westchester, and Dutchess Counties; and a groundwater supply in southeastern Queens.

Based on the urban development of the area, groundwater depth and flow below New York City can vary from the surface topography and is often erratic. However, according to information obtained from the United States Geological Survey and topographic map interpretation, groundwater in the vicinity of the subject property is present at approximately 4 to 5 feet bgs.

2.4.3 Geology/Soils

According to the New York State Geological Survey website, the bedrock at the subject property is Precambrian in age, approximately one billion years old, and consists of gneiss and schists that are a part of the Manhattan Prong, a portion of the Appalachian Piedmont. The older of the Manhattan Prong sequence found in central Manhattan is the Manhattan Schist, which is overlain by the Hartland Formation, a granulite. Both units are of very high metamorphic grade having been metamorphosed at a great depth in the earth's crust and later thrust to the surface during the Appalachian mountain building episode, about 350 million years ago.

During the last glacial period, ending about 12,000 to 15,000 years ago and termed the Wisconsin, a mantling of glacial drift was deposited over the older bedrock. In places the glacial deposits are unsorted till characterized by boulder to pebble-sized rocks erratically intermixed with a clay matrix, but elsewhere the deposits are sorted and stratified sand and gravel, the result of glacial outwash.

Soils in the vicinity of the subject property are classified as Urban Land. Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable. Urban soils consist of nearly level to moderately steep areas where the soils have been altered or obscured by urban works and structures. Buildings and pavement cover more than 85 percent of the surface. The soil properties and characteristics of this unit vary. Onsite investigation is needed to determine the suitability for specific uses and the limitations affecting those uses.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 3604970353F, dated September 5, 2007, the subject property appears to be located in Zone AE, defined as areas subject to inundation by the 1-percent-annual-chance flood event determined year flood plains.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1895-Present	Sanborn Maps, Aerial Photographs, City Directories, Building Department Records, Interviews, On-Site Observations, Topographic Maps	Commercial/Residential

According to available historical sources, the subject property was formerly developed with several small dwellings and stores, intersected by a railroad between 1895 and 1924. By 1930, the subject property was developed with numerous dwellings and commercial operations; additionally, a trestle was situation over buildings through the central portion of the subject property and tracked in an east-west orientation over the site. Between 1950 and 1961, the subject property was additionally developed with parking areas on the southeastern portion of the property. A commercial structure was developed on the southeastern portion of the property between 1976 and 1977. The remainder of the site included primarily parking lots, with the exception of the existing improvements and the commercial building in the southeastern portion of the subject property between 1983 and 1989. By 1991, the commercial building in the southeastern portion of the site was demolished.

Tenants on the subject property appear to have included the following commercial tenants: S & S Towel Service, Schaffer M Towel Service, Goushewitz & Nyman Tinsmiths & Roofers (1928); Molinari Frank Tailor, Fong Lee Laundry, Tufelski Hans Painter R, Govschewitz Abr Tinsmith, Botte Anthony A Clothing Cleaner, Gleisher Benj Manager Gas & Service Corp R (1934); Mermaid Tailor Shop, Utility Sheet Metal Works (1940); and The Empire Publishing & Printing Corp. (1973-1976).

Please refer to Section 3.3 for further discussion regarding the subject property's historical tenants.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on July 29, 2019. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date: 1924	*Scale: 1"=500'*
Subject Property:	Appears to be developed with several small structures and is intersected by railroad tracks
North:	Appears to be developed with several small structures; Mermaid Avenue beyond which are several small structures
South:	Appears to be developed with one small structure; Surf Avenue beyond which are several small structures and a large developed appear apparently developed with a race tracks and carnival rides
East:	Appears to be developed with West 16th Street beyond which are several small structures intersected by railroad tracks
West:	Appears to be developed with West 15th Street beyond which are two larger commercial-like structures and one small structure intersected by railroad tracks

Date: 1951, 1954, 1961	***Scale: 1"=500'***
Subject Property:	Appears to be developed with several small structures with carnival rides on the southeastern portion of the property and parking and is intersected by railroad tracks
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	Appears to be developed with West 15th Street beyond which are several large commercial-like structures and parking and is intersected by railroad tracks

Date: 1966	***Scale: 1"=500'***
Subject Property:	Appears to be developed with several small structures with a vacant lot on the southeastern portion of the property and parking and is intersected by railroad tracks
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 1976	***Scale: 1"=500'***
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	Appears to be developed with one small structure; Surf Avenue beyond which are several small structures and a large lot with carnival rides
East:	No significant changes visible
West:	Appears to be developed with West 15th Street beyond which are several small structures and a vacant lot

Date: 1984	***Scale: 1"=500'***
Subject Property:	Appears to be developed with two small structures with a large parking area in the center of the property and a commercial-like structure on the southeastern portion of the property
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 1994, 1995	***Scale: 1"=500'***
Subject Property:	Appears to be developed with several small structures with a large parking area in the center of the property
North:	No significant changes visible
South:	Appears to be developed with one small structure; Surf Avenue beyond which are several commercial-like structures and a park-like area with one large commercial-like structure with parking
East:	No significant changes visible
West:	No significant changes visible

Date: 2006, 2009, 2013, 2017	***Scale: 1"=500'***
Subject Property:	No significant changes visible

Date:	*2006, 2009, 2013, 2017*	*Scale:*	*1"=500'*
North:	No significant changes visible		
South:	Appears to be developed with one small structure; Surf Avenue beyond which are several commercial-like structures and a baseball field with one large commercial-like structure with parking		
East:	No significant changes visible		
West:	Appears to be developed with West 15th Street beyond which is a vacant lot and one commercial-like structure		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from EDR on July 29, 2019. The following was observed on the subject property and adjacent properties during the fire insurance map review:

Date:	*1895*
Subject Property:	Depicted as developed with several small dwellings and stores, intersected by the Long Island Rail Road (addressed as 201-202 Surf Avenue)
North:	Depicted as developed with dwellings, a hotel, and several small stores
South:	Depicted as developed with a store; Surf Avenue beyond which are several small stores and dwellings and a hotel intersected by Ocean Avenue and Bowery Street
East:	Depicted as developed with West 15th Street beyond which are several small dwellings
West:	Depicted as developed with a store and West 16th Street beyond which are two small dwellings

Date:	*1905*
Subject Property:	Not depicted
North:	Depicted as developed with Mermaid Avenue beyond which are several small stores and dwellings
South:	Not depicted
East:	Not depicted
West:	Not depicted

Date:	*1906*
Subject Property:	Depicted as developed with several small stores, dwellings and sheds intersected by the Long Island Railroad (addressed as 2910-2948 West 15th Street, 1501-1519 Surf Avenue and 2929-2933 West 16th Street)
North:	Depicted as developed with stores and dwellings
South:	Depicted as developed with a store; Surf Avenue beyond which are several small stores, a ball room, a park and a hotel
East:	Depicted as developed with West 15th Street beyond which are several small stores and dwellings and a fire department engine house
West:	Depicted as developed with stores and West 16th Street beyond which are several small stores and an auditorium

Date:	*1930*
Subject Property:	Depicted as developed with [several small stores, dwellings and sheds (addressed as

Date: 1930	
	2910-2948 West 15th Street, 1501-1519 Surf Avenue and 2911-2937 West 16th Street)
North:	Depicted as developed with stores, furnished rooms and a Chinese restaurant
South:	Depicted as developed with stores; Surf Avenue beyond which are several small stores and a large park with carousels
East:	No significant changes depicted
West:	Depicted as developed with West 16th Street beyond which are several small stores, an **auto repair facility** (2930 West 16th Street) and a theatre intersected by Railroad Avenue.

Date: 1950	
Subject Property:	Depicted as developed with several stores and dwellings, a carousel, a ride sheds and clubs with parking (addressed as 2910-2948 West 15th Street, 1501-1519 Surf Avenue and 2911-2947 West 16th Street)
North:	No significant changes depicted
South:	Depicted as developed with stores; Surf Avenue beyond which are several small stores and an arcade and a large park with carousels
East:	Depicted as developed with West 15th Street beyond which are several small stores and dwellings, a hotel and a fire department engine house
West:	Depicted as developed with West 16th Street beyond which are several small stores, a **machine shop** (2930 West 16th Street) and a theatre intersected by Railroad Avenue

Date: 1966, 1968	
Subject Property:	Depicted as developed with stores and dwellings, clubs with parking, and an auto track (addressed as 2910-2948 West 15th Street, 1501-1519 Surf Avenue and 2911-2947 West 16th Street)
North:	Depicted as developed with several stores, a parking lot, and a club
South:	No significant changes depicted
East:	No significant changes depicted
West:	Depicted as developed with West 16th Street beyond which are several small stores, a produce warehouse, parking and a theatre

Date: 1977, 1979, 1980, 1981	
Subject Property:	Depicted as developed with several small stores and dwellings with parking, and a commercial structure on the southeastern portion of the property (addressed as 2910-2948 West 15th Street, 1501-1519 Surf Avenue and 2911-2933 West 16th Street)
North:	No significant changes depicted
South:	Depicted as developed with a vacant office and stores; Surf Avenue beyond which are several small stores and an arcade and a large park with several rides, go-go karts and electric scooters
East:	No significant changes depicted
West:	Depicted as developed with West 16th Street beyond which are several small stores

Date: 1977, 1979, 1980, 1981

and dwellings, a produce warehouse with a garage and parking

Date: 1982, 1983

Subject Property: No significant changes depicted except the majority of the dwellings have been razed

North: No significant changes depicted

South: No significant changes depicted

East: Depicted as developed with West 15th Street beyond which are several small stores and dwellings, and a warehouse with parking

West: Depicted as developed with a vacant structure, an undeveloped lot, and West 16th Street followed by two stores and a parking lot

Date: 1986, 1987, 1989

Subject Property: Depicted as developed with a commercial structure on the southeastern portion of the property and a parking lot

North: No significant changes depicted

South: Depicted as developed with a vacant office; Surf Avenue beyond which are several small stores, an arcade and a go-kart track

East: No significant changes depicted

West: No significant changes depicted

Date: 1991, 1992, 1993, 1994, 1995, 1996, 2001

Subject Property: Depicted as developed with a parking lot

North: No significant changes depicted

South: No significant changes depicted

East: No significant changes depicted

West: No significant changes depicted

Date: 2002, 2003, 2004, 2005, 2006, 2007

Subject Property: No significant changes depicted

North: No significant changes depicted

South: Depicted as developed with a vacant office; Surf Avenue beyond which are several small stores, an arcade, bleachers and a go-kart track

East: No significant changes depicted

West: No significant changes depicted

The western adjacent property at 2930 West 16th Street was identified as an auto repair facility in 1930 and a machine shop by 1950. It should be noted that this address is not identified on any regulatory databases indicative of an adverse environmental condition such as a spill or release. As such, these former adjacent site operations are not expected to represent a significant environmental concern. However, in the event that a release is identified, financial liability for any remediation likely would be the

responsibility of the adjacent property owner and not the subject property owner. Notwithstanding, if a future release is identified in connection with the former auto repair/machine shop site, a determination regarding the potential for vapor intrusion on site likely will be warranted.

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on July 31, 2019 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for West 15th Street, West 16th Street, and Surf Avenue addresses (Subject Property)

Year(s)	Occupant Listed
1928	Various commercial retailers including S & S Towel Service, Schaffer M Towel Service (2916 West 15th Street); **Goushewitz & Nyman Tinsmiths & Roofers** (2928, 2930 West 15th Street), Terminal Annex Restaurant (1519 Surf Avenue), **Botte Anthony** tailor (2911 W 16th)
1934	Residential; Various commercial retailers including **Molinari Frank Tailor** (2912 West 15th Street); **Fong Lee Lndry**, (2914 West 15th Street); Tufelski Hans Pntr R (2922 West 15th Street); Govschewitz Abr Tinsmith (2928 West 15th Street); **Botte Anthony A Clo Clnr** (2911 West 16th Street); **Gleisher Benj Mgr Gas & Service Corp** R (2927 West 16th Street), Frank Stern High Grade Butter & Egg Co Inc (1511 Surf Avenue)
1940	Residential; Various commercial retailers including **Mermaid Tailor Shop** (2912 West 15th Street); **Utility Sheet Metal Wks** (2928 West 15th Street), Clam Bar Restaurant (1517 Surf Avenue)
1945	Clam Bar Restaurant (1517 Surf Avenue), Maranese Restaurant (2911 W 16th),
1949	Residential (2914, 2922 W 15th and 2925, 2929, 2933 W 16th), Elena Restaurant (2920 W 15th), Clam Bar Restaurant (1517 Surf Avenue), McCullough Bros amusements (1501 Surf Avenue)
1960	Clam Bar Restaurant (1517 Surf Avenue), McCullough Bros amusements (1501 Surf Avenue), Sephardic Club of Coney Island (2911 W 16th),
1965	Residential (2914, 2922 W 15th and 2917, 2921, 2923, 2925, 2927, 2929, 2933 W 16th), Sephardic Club of Coney Island (2911 W 16th), Clam Bar Restaurant (1517 Surf Avenue), McCullough Bros amusements (1501 Surf Avenue).
1970	Residential (2912, 2914, 2922 W 15th and 2917, 2923, 2925, 2927, 2929, 2933 W 16th); Ben Kallman Inc food distributors (2920 W 15th)
1973	Residential (2928 W 15th and 2923, 2925, 2929, 2933 W 16th), Ben Kallman Inc (2920 W 15th), Goody's Coney Island Inc. (1501 Surf Avenue) The Empire Publshg & Prntng Corp, Coney Island Times. (2914 West 15th Street);
1976	Kosher King (1501 Surf Avenue), The Empire Publshg & Prntng Corp. (2914 West 15th Street);
1980	
1985, 1992, 1997, 2000, 2005, 2010, 2014	No listings

According to a review of historical documentation, Fong Lee Laundry operated on the subject property (2914 West 15th Street) in 1934, a possible dry cleaner (2912 West 15th Street) operated on the subject property from at least 1934 to 1940, and Anthony Botte, clothing cleaners (2911 West 16th Street) operated from at least 1928 to 1934; a tinsmith/sheet metal works (2928 West 15th Street) operated on the subject property from at least 1928 to 1940; and The Empire Publishing and Printing Corp operated on the subject property (2914 West 15th Street) from at least 1973 to 1976. No information regarding onsite operations was identified during the course of this assessment. These operations may have used, stored, and/or disposed of hazardous substances as part of daily operations, and they operated at a time of little to no regulatory oversight. Based on the potential nature of operations, lack of information regarding usage and disposal practices, and lack of regulatory oversight, these former operations are considered a REC.

City Directory Search for Adjacent Properties

Year(s)	Occupant Listed
1928	Residential; Various Commercial Retailers including **Ronbera J W Machinist** (2930 W 16th Street)
1934	Residential; Various Commercial Retailers including **Ronnberg J W Machinist** (2930 W 16th Street)
1940	Residential; Various Commercial Retailers including **Ronnberg J W Machinist** (2930 W 16th Street)
1945	Residential; Various Commercial Retailers. No Tenants of Concern.
1949	Residential; Various Commercial Retailers including **Accarino Iron & Machine Works** (2930 W 16th Street)
1960	Residential; Various Commercial Retailers including **B & G Cleaners** (1519 Mermaid Avenue)
1965	Residential; Various Commercial Retailers. No Tenants of Concern.
1970	Residential; Various Commercial Retailers including **Jiffy Cleanrs** (1519 Mermaid Avenue)
1973	Residential; Various Commercial Retailers including **Jiffy Cleanrs** (1519 Mermaid Avenue)
1976	Residential; Various Commercial Retailers including **Jiffy Cleanrs** (1519 Mermaid Avenue)
1980	Residential; Various Commercial Retailers. No Tenants of Concern.
1985	Various Commercial Retailers including **Golden Bell Cleaners** (1506 Mermaid Avenue)
1992	Residential; Various Commercial Retailers including D & J Laundromat (1602 Mermaid Avenue); Golden Bell Cleaners (1506 Mermaid Avenue)
1997	Residential; Various Commercial Retailers including D & J Laundromat (1602 Mermaid Avenue); Golden Bell Cleaners (1506 Mermaid Avenue)
2000	Residential; Various Commercial Retailers including D & J Laundromat (1602 Mermaid Avenue); Golden Bell Cleaners (1506 Mermaid Avenue)
2005	Residential; Various Commercial Retailers including D & J Laundromat (1602 Mermaid Avenue); Golden Bell Cleaners (1506 Mermaid Avenue)
2010	Various Commercial Retailers including Golden Bell Cleaners (1506 Mermaid Avenue)
2014	Various Commercial Retailers including D & J Laundromat (1602 Mermaid Avenue); Golden Bell Cleaners (1506 Mermaid Avenue)

According to the city directory review, the adjacent property to the north at 1519 Mermaid Avenue operated as a dry cleaner between 1960 and 1976. In addition, the adjacent property to the west at 1602 Mermaid Avenue has operated as laundromat between 1992 and 2014. No spills, leaks or violations or use of halogenated solvents have been reported to the NYSDEC. It should be noted that these sites are not identified on any regulatory databases indicative of former dry-cleaning operations or a spill or release.

However, in the event that a release is identified, financial liability for any remediation likely would be the responsibility of the adjacent property owner and not the subject property owner. Notwithstanding, if a future release is identified in connection with the former dry cleaner, a determination regarding the potential for vapor intrusion on site may be warranted.

Additionally, the adjacent property to the west at 2930 West 16th Street is listed as occupied by a machine shop between 1928 and 1949. However, this site is not identified on any regulatory databases indicative of an adverse environmental condition such as a spill or release. As such, these listings are not expected to represent a significant environmental concern to the subject property at this time. However, in the event that a release is identified, financial liability for any remediation likely would be the responsibility of the adjacent property owner and not the subject property owner. Notwithstanding, if a future release is identified in connection with the former machinist site, a determination regarding the potential for vapor intrusion on site may be warranted.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on July 29, 2019. The following was observed on the subject property and adjacent properties during the topographic map review:

Date: 1897, 1898, 1900	
Subject Property:	Depicted as developed with several small structures intersected by railroad tracks
North:	Depicted as undeveloped
South:	Depicted as developed with a road beyond which are several small structures
East:	Depicted as developed with several small structures intersected by railroad tracks
West:	Depicted as developed with several small structures intersected by railroad tracks

Date: 1947	
Subject Property:	Depicted as densely developed and intersected by a road
North:	Depicted as developed with a road beyond which is densely developed
South:	Depicted as developed with a road beyond which is densely developed
East:	Depicted as developed with a road beyond which is densely developed and intersected by a road
West:	Depicted as developed with a road beyond which is densely developed and intersected by a road

Date: 1955	
Subject Property:	Depicted as shaded red indicating dense urban development
North:	Depicted as developed with Mermaid Avenue beyond which is shaded red indicating dense urban development
South:	Depicted as developed with Surf Avenue beyond which is shaded red indicating dense urban development with two swimming pools
East:	Depicted as developed with West 15th Street beyond which is shaded red indicating dense urban development and is developed with a firehouse
West:	Depicted as developed with West 16th Street beyond which is shaded red indicating dense urban development

Date:	***1966, 1979, 1995***
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	Depicted as developed with Surf Avenue beyond which is shaded red indicating dense urban development
East:	No significant changes depicted
West:	No significant changes depicted

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	New York State Department of Environmental Conservation (NYSDEC)
Point of Contact:	Fawzy I. Abdelsadek, Ph.D., P.E. – Regional Enforcement Coordinator
Agency Address:	625 Broadway, Albany, New York 12233
Agency Phone Number:	(718) 482-4507
Date of Contact:	July 29, 2019
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the NYSDEC.

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	New York City Department of Health (NYCDOH)
Point of Contact:	Mr. Ben Del Percio
Agency Address:	42-09 28th Street, Long Island City, New York 11101
Agency Phone Number:	(347) 396-6078
Date of Contact:	July 29, 2019
Method of Communication:	Email
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYCDOH for inclusion in this report.

4.1.3 Fire Department

Regulatory Agency Data	
Name of Agency:	New York City Fire Department (FDNY)
Point of Contact:	Records Access Officer
Agency Address:	9 MetroTech Center, Brooklyn, New York 11201
Agency Phone Number:	(718) 999-2441
Date of Contact:	July 29, 2019
Method of Communication:	Mail
Summary of Communication:	As of the date of this report, Partner has not received a response from the FDNY for inclusion in this report.

4.1.4 Building Department

Regulatory Agency Data	
Name of Agency:	New York City Department of Buildings (NYCDOB)

Regulatory Agency Data	
Point of Contact:	Online Database
Date of Contact:	July 29, 2019
Method of Communication:	Online Database
Summary of Communication:	According to our review of the NYCDOB property profile overviews for the subject property, Lots 12, 32, 33, 38, 39, 40, and 41 are identified as E-designated sites. Please refer to Section 4.2.2. for further discussion. Additionally, records were available for review, as further discussed in the following table.

Building Records Reviewed for 1517 Surf Avenue (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1941	1517/1519 Surf Avenue (Lots 22-32)	Certificate of Occupancy for a restaurant and cabaret on the first floor and the second and third floors to remain vacant
1971	1501/1515 Surf Avenue	Certificate of Occupancy for an eating and drinking place on the first floor and parking for 53 cars
1988	2933 West 16th Street (Lot 38, 39 and 40)	Certificate of occupancy for an accessory parking lot for eating and drinking establishments off site (Gargiulo's Restaurant at 2911 West 15th Street) and employees accessory off site parking for 9 cars on the ground
1988	1513 Surf Avenue AKA 2920 West 15th Street (Lot 12,)	Certificate of Occupancy for an accessory parking lot for eating and drinking establishment and banquet hall and accessory off-site parking for 115 cars

Copies of pertinent documents are included in Appendix B of this report.

4.1.5 Planning Department

Regulatory Agency Data	
Name of Agency:	New York City Department of City Planning (NYCDCP)
Point of Contact:	Online Database
Date of Contact:	July 29, 2019
Method of Communication:	Online Database
Summary of Communication:	According to records reviewed, the subject property is zoned R7X C2-4 for residential and commercial development by the City of New York.

4.1.6 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	National Pipeline Mapping System (NPMS)
Point of Contact:	Online Database
Date of Contact:	July 29, 2019
Method of Communication:	Online Database
Summary of Communication:	According to NPMS, no oil or gas pipelines are located on or adjacent to the subject property.

4.1.7 Assessor's Office

Regulatory Agency Data	
Name of Agency:	New York City Department of Finance (NYCDOF)
Point of Contact:	Online Database
Date of Contact:	July 29, 2019
Method of Communication:	Online Database
Summary of Communication:	According to records reviewed, the subject property is identified by Block 7063, Lots 12, 32, 33, 38, 39, 40 and 41 and is currently owned by Sirena Realty Corp. since 1982.

Copies of pertinent documents are included in Appendix B of this report.

4.1.8 New York City Department of Environmental Protection

Regulatory Agency Data	
Name of Agency:	New York City Department of Environmental Protection (NYCDEP)
Point of Contact:	Records Access Officer
Agency Address:	59-17 Junction Boulevard, Flushing, New York 11373
Agency Phone Number:	(718) 595-6543
Date of Contact:	July 29, 2019
Method of Communication:	Online
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYCDEP for inclusion in this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as a NY E Designation site in the regulatory database report, as discussed below:

- The subject property at 2925, 2927, 2929, 2933 West 16th Street, Surf Avenue and 2910 West 15th Street, and 1527 Surf Avenue, identified as Tax Block 7063, Lots 12, 32, 33, 38, 39, 40 and 41, were identified as NY E Designation sites. According to records reviewed, an "E" designation was declared for the subject property on July 29, 2009. An "E" designation is a zoning map designation that provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination. "E" designations are established by the City Planning Commission and City Council as part of a change in zoning that would allow additional development to occur on the subject property or would permit uses not currently allowed. Based on our review of the New York City Department of Buildings (NYCDOB) Buildings Information System (BIS) and New York City Zoning Maps, an E-229 designation related to the Coney Island Rezoning project, of which the subject property is a part of, has been placed on the subject property. The specific description of this designation is "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation" (Block 7063, Lots 12, 32, 33, 38, 39, 40 and 41) and "Air Quality" (Lot 12). Under these designations, certain protocols need to be followed to determine if hazardous materials are present onsite; to avoid any potential

impacts associated with noise for future residential use, alternate means of ventilation including central air conditioning or air conditioning sleeves containing air conditioners or HUD-approved fans; and to ensure that any new residential and/or commercial use No. 2 fuel oil or natural gas is for the heating, ventilation, and air conditioning systems.

In order to satisfy the requirements for the hazardous materials (E)-designation, the fee owner would be required to: (1) prepare and implement a New York City Office of Environmental Remediation (OER)-approved site investigation to determine the extent of contamination, if any, at the site; (2) submit the findings of its investigation and, if necessary, a management plan, to the OER for its review and approval; and (3) implement the OER-approved management plan. The (E) Designation requires that these measures be implemented in order to proceed with site development at any of those sites. To determine if contamination exists and perform an appropriate management, the following tasks must be undertaken by the fee owners(s) of the lot restricted by the (E) Designation prior to any demolition or disturbance of soil on the lot.

Task 1: The fee owner(s) of the lot(s) restricted by an (E) Designation will be required to prepare a scope of work for any soil, soil gas, or groundwater sampling and testing needed to determine if contamination exists, the extent of the contamination, and to what extent management could be required. The scope of work will include all relevant supporting documentation, including site plans and sampling locations. This scope of work will be submitted to the OER for review and approval prior to implementation. It will be reviewed to ensure that an adequate number of samples will be collected and that appropriate parameters are selected for laboratory analysis. No sampling program may begin until written approval of a work plan and sampling protocol is received from the OER. The number and location of sample sites should be selected to adequately characterize the type and extent of the contamination, and the condition of the remainder of the site. The characterization should be sufficiently complete to determine the necessary management strategy (if any) after review of the sampling data.

Task 2: A written report with findings and a summary of the data must be presented to the OER after completion of the testing phase and laboratory analysis for review and approval. After receiving such test results, a determination will be provided by the OER if the results indicate that management is necessary. If the OER determines that no management is necessary, written notice shall be given by the OER. If management is necessary according to test results, a proposed management plan must be submitted to the OER for review and approval. The fee owner(s) of the lot(s) restricted by this (E) Designation must perform such management as determined necessary by the OER. After completing the management, the fee owner(s) of the lot restricted by this (E) Designation should provide proof that the work has been satisfactorily completed.

An OER-approved construction-related health and safety plan (CHASP) would be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This Plan would be submitted to the OER for review and approval prior to implementation. With

the implementation of the (E) Designation, no significant adverse impacts related to hazardous materials would occur.

These NYC Hazardous Materials (E) Designation requirements must be followed in order to obtain permits including excavation from the New York City Department of Buildings (DOB). The results of existing studies and any additional testing required by OER would then be used to prepare a Remedial Action Plan (RAP) for implementation during construction. OER approval of the RAP will be required prior to their issuing a Notice to Proceed (NTP), allowing DOB to issue construction permits. Following construction (with implementation of the RAP), submission and approval of a Remedial Closure Report (RCR) is required for OER to issue a Notice of Satisfaction (NOS), allowing DOB to issue occupancy permits. The RCR is intended to document that activities were conducted in accordance with the RAP.

4.2.3 Adjacent Property Listings

The adjacent property to the north is identified as a NY Spills site in the regulatory database report, as discussed below:

- 16th Street and Mermaid Avenue is located adjacent to the north of the subject property (hydrologically up-gradient). This facility has reported a release on November 16, 2012 (Spill Number 1212243) associated with Hurricane Sandy. According to the database, the spill was closed on November 17, 2013; no further information was provided. Based on the regulatory status, this listing is not expected to represent a significant environmental concern to the subject property at this time.

The adjacent property to the east is identified as a NY AST site in the regulatory database report, as discussed below:

- 2905 West 15th Street is located adjacent to the east of the subject property (hydrologically up-gradient). This facility is reportedly equipped with one 3,000-gallon #2 fuel oil AST that was installed on June 1, 1965 and is currently in service (Facility ID: 2-608203). No spills, leaks or violations have been reported to the NYSDEC. Based on the lack of a documented release and aboveground nature of the tank, this listing is not expected to represent a significant environmental concern to the subject property at this time.

Several adjacent properties have been identified as NY E Designations under various descriptions, similar to the subject property's and under the same rezoning designation, as discussed above. As these designations are site specific and since the subject property is subject to the same testing protocols, these listings are not expected to represent a significant environmental concern to the subject property at this time.

Partner notes that there are multiple closed Spill listings and associated Manifest and RCRA documents in the vicinity of the subject property. These listings pertain to utility vaults situated in the public right of way. The responsible party is identified as Con Edison. Based on the closed regulatory status, identification of a responsible party, and location of vaults, these listings are not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

The property to the north is identified as an EDR Historic Cleaner, Resource Conservation and Recovery Act (RCRA), US Aerometric Information Retrieval System (AIRS), FINDS, ECHO, Manifest and a NY DRYCLEANERS site in the regulatory database report, as discussed below:

- Golden Bell Cleaners at 1506 Mermaid Avenue is located to the north of the subject property (hydrologically up-gradient), approximately 50 feet from the subject property boundary. This facility has operated as a dry-cleaning facility since 1991, with various hazardous wastes generated, consistent with the onsite dry-cleaning operations. It should be noted that no violations, spills or releases have been reported in connection with this facility; however, based on the length of time that this facility has operated as a dry-cleaning facility, the inferred direction of groundwater flow and proximity to the subject property, in the event that a release is identified, financial liability for any remediation likely would be the responsibility of the adjacent property owner and not the subject property owner. Notwithstanding, if a future release is identified in connection with the Golden Bell Cleaners site, a determination regarding migration of groundwater impacts onto the subject property and the potential for vapor intrusion on site likely will be warranted.

Based on the findings, vapor migration is a possible environmental concern.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from LCOR (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**

5.1 Interviews

5.1.1 Interview with Owner

Mr. Mike Russo, the subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum

products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to Mr. Russo, the subject property parking lot was developed in 1983. Prior to that, the parking lot area of the subject property was developed with several small residential structures, which were demolished prior to construction of the current parking lot. Mr. Russo further stated that there are no USTs, ASTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of his knowledge. However, Mr. Russo stated the single-family residential structures formerly located on the subject property may have been equipped with heating oil tanks.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Mr. Russo also acted as the Key Site Manager. Please refer to Section 5.1.1.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Taylor Rodenberg
Site Assessment Conducted On:	August 9, 2019

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for Surf Avenue Project Site (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mr. Mike Russo	Key Site Manager	(917) 887-2100	No
Alex	Maintenance Supervisor	N/A	Yes

** Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property*

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed in residential-style solid waste receptacles located throughout the subject property. The New York City Department of Sanitation removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters. Solid waste generated at the subject property includes waste cooking oil, which is collected in aboveground grease traps and is disposed of off-site by an independent contractor. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of New York services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to the public right of way, and to on-site storm water drains. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface

impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

The subject property is currently undeveloped, with the exception of a guard shack; heating and cooling systems are not present on site.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner did not identify hazardous substances or petroleum products on site during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No current or former ASTs or USTs were observed on the subject property.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No indication of any leaks or staining was observed in the parking lot drains in the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. Construction materials including, but not limited to, thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building and that have not been appropriately tested may be considered "presumed asbestos-containing material" (PACM).

The subject property currently is undeveloped with the exception of a guard shack; therefore, an ACM survey was not within the scope of this assessment.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property currently is undeveloped with the exception of a guard shack; therefore, an LBP survey was not within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and

local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the New York City Department of Environmental Protection (NYCDEP) serves the subject property vicinity. According to a representative of the NYCDEP, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of New York are surface water from the Catskill/Delaware supply, located in Delaware, Greene, Schoharie, Sullivan, and Ulster Counties; the Croton supply, New York City's original upstate supply, in Putnam, Westchester, and Dutchess Counties; and a groundwater supply in southeastern Queens. According to the New York and the 2018 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

The subject property currently is undeveloped with the exception of a guard shack; therefore, a mold survey was not within the scope of this assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Golden Bell Cleaners at 1506 Mermaid Avenue is located directly north of the subject property. This northern adjacent property is currently operating as Best Choice Cleaners. This address, under the name Golden Bell Cleaners, is further discussed in Section 4.2.3.

6.4.2 ASTs/USTs for Hazardous Substances or Petroleum Products

Partner observed two 275-gallon ASTs for the storage of fuel oil on the northwest adjacent property at 1530 Mermaid Avenue. The ASTs were not equipped with secondary containment. No staining, leaks or spills were noted in the vicinity of the ASTs, and no releases have been reported to the NYSDEC.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- According to a review of historical documentation, Fong Lee Laundry operated on the subject property (2914 West 15th Street) in 1934, a possible dry cleaner (2912 West 15th Street) operated on the subject property from at least 1934 to 1940, and Anthony Botte, clothing cleaners (2911 West 16th Street) operated from at least 1928 to 1934; a tinsmith/sheet metal works (2928 West 15th Street) operated on the subject property from at least 1928 to 1940; and The Empire Publishing and Printing Corp operated on the subject property (2914 West 15th Street) from at least 1973 to 1976. No information regarding onsite operations was identified during the course of this assessment. These operations may have used, stored, and/or disposed of hazardous substances as part of daily operations, and they operated at a time of little to no regulatory oversight. Based on the potential nature of operations, lack of information regarding usage and disposal practices, and lack of regulatory oversight, these former operations are considered a REC.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any CRECs during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify any HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following were identified during the course of this assessment:

- According to our research, on July 29, 2009, an "E" designation was declared for the subject property. An "E" designation is a zoning map designation that provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination. "E" designations are established by the City Planning Commission and City Council as part of a change in zoning that would allow additional development to occur on the subject property or would permit uses not currently allowed. Based on our review of the New York City Department of Buildings (NYCDOB) Buildings Information System (BIS) and New York City Zoning Maps, an E-

229 designation related to the Coney Island Rezoning project, of which the subject property is a part of, has been placed on the subject property. The specific description of this designation is "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation" (for the subject property's Block 7063, Lots 12, 32, 35, 38, 39, 40 and 41) and "Air Quality" (for Lot 12). Under these designations, certain protocols need to be followed to determine if hazardous materials are present onsite; to avoid any potential impacts associated with noise for future residential use, alternate means of ventilation including central air conditioning or air conditioning sleeves containing air conditioners or HUD-approved fans; and to ensure that any new residential and/or commercial use No. 2 fuel oil or natural gas is for the heating, ventilation, and air conditioning systems.

In order to satisfy the requirements for the hazardous materials (E)-designation, the fee owner is required to: (1) prepare and implement a New York City Office of Environmental Remediation (OER)-approved site investigation to determine the extent of contamination, if any, at the site; (2) submit the findings of its investigation and, if necessary, a management plan, to the OER for its review and approval; and (3) implement the OER-approved management plan. The (E) Designation requires that these measures be implemented in order to proceed with site development at any of those sites.

An OER-approved construction-related health and safety plan (CHASP) would be required to be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil and/or groundwater. This Plan would be submitted to the OER for review and approval prior to implementation.

These NYC Hazardous Materials (E) Designation requirements must be followed in order to obtain permits including excavation from the New York City Department of Buildings (DOB). The results of existing studies and any additional testing required by OER would then be used to prepare a Remedial Action Plan (RAP) for implementation during construction. OER approval of the RAP will be required prior to their issuing a Notice to Proceed (NTP), allowing DOB to issue construction permits. Following construction (with implementation of the RAP), submission and approval of a Remedial Closure Report (RCR) is required for OER to issue a Notice of Satisfaction (NOS), allowing DOB to issue occupancy permits. The RCR is intended to document that activities were conducted in accordance with the RAP.

Based on the proposed redevelopment of the subject property, the (E) Designation requirements must be met.

- Partner observed two 275-gallon aboveground storage tanks (ASTs) for the storage of fuel oil on the adjacent property to the northwest at 1530 Mermaid Avenue. The ASTs were not equipped with secondary containment; however, no staining, leaks or spills were noted in the vicinity of the ASTs, and no releases have been reported to the NYSDEC. Based on the overall good condition and aboveground nature of the tanks, these ASTs are not expected to represent a significant environmental concern to the subject property at this time; however, historical leaks cannot be ruled out.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1517 Surf Avenue in the Borough of Manhattan, New York City, Kings County, New York (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A subsurface investigation should be conducted to evaluate subsurface conditions associated with the historical uses of the subject property.
- Due to the subject property's proposed redevelopment intentions, Partner recommends that the requirements of the "E" designation be satisfied, as discussed above, to determine if site remediation is required and if so, to remediate the subject property prior to redevelopment. Additionally, care should be taken during any excavation/redevelopment activities and any encountered petroleum bulk storage tanks and/or any impacted soils associated with any encountered petroleum storage tanks or historical on-site operations, should be removed in accordance with governmental regulations.
- A CHASP and Soils Management Plan should be implemented at the subject property prior to redevelopment activities in order to safely manage onsite soils in the event that impacted soils are encountered during construction activities.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 1517 Surf Avenue in New York, Kings County, New York in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDIX A: SITE PHOTOGRAPHS

1. View of the parking lot area of the subject property.

2. View of the parking lot area of the subject property.

3. View of the parking lot area of the subject property.

4. View of the parking lot area of the subject property.

5. View of the parking lot area of the subject property.

6. View of a storm drain in the parking lot area of the subject property.

7. View of the parking lot area of the subject property.

8. View of the vacant lot area of the southern portion of the subject property.

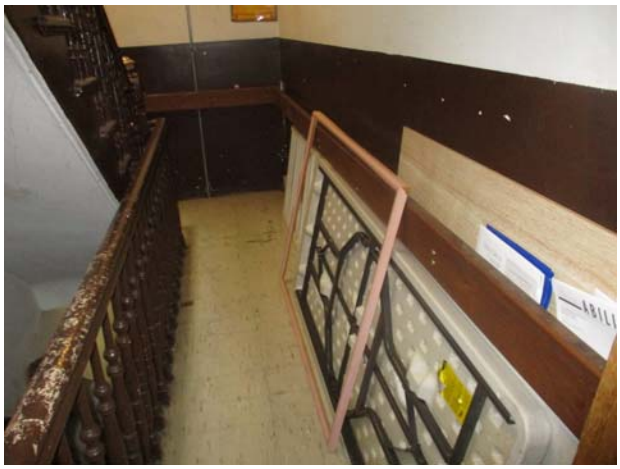
9. View of the front (northern) exterior of the subject property at 1516 Mermaid Avenue.

10. View of the side (easterrn) exterior of the subject property at 1516 Mermaid Avenue.

11. View of the side (western) exterior of the subject property at 1516 Mermaid Avenue.

12. View of the rear (southern) exterior of the subject property at 1516 Mermaid Avenue.

13. View of cooking oil drums in the rear of the subject property at 1516 Mermaid Avenue.

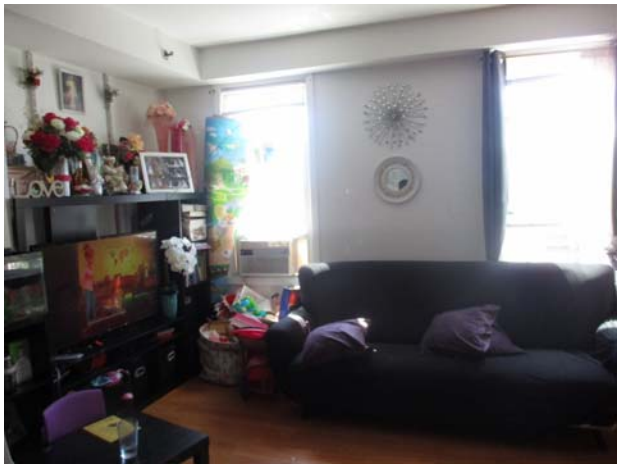


14. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.

15. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.

16. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.

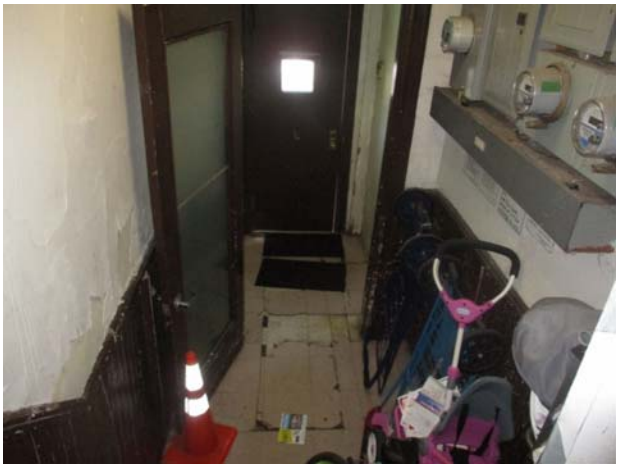
17. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.



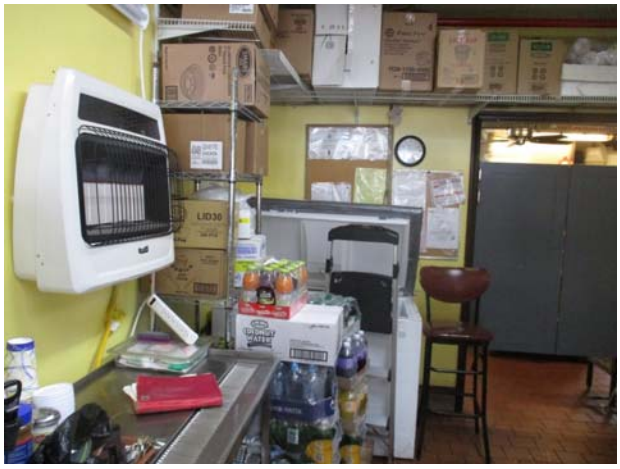
18. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.

19. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.

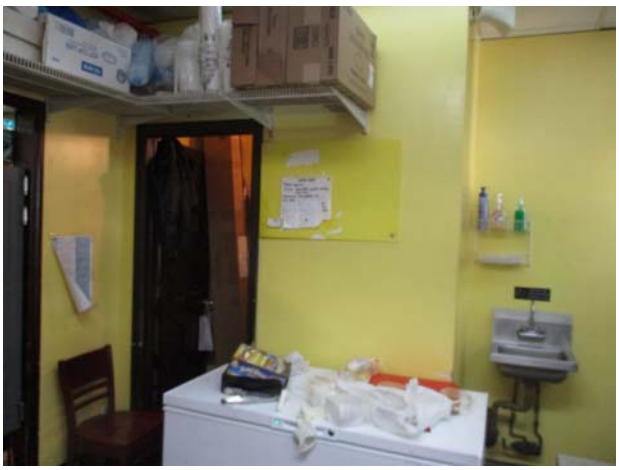
20. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.



21. View of the interior of the residential portion of the subject property at 1516 Mermaid Avenue.



22. View of the interior of Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.



23. View of the interior of Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.

24. View of the kitchen of Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.

25. View of a grease trap in Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.

26. View of the kitchen of Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.

27. View of a restroom in Golden Krust, a tenant of the subject property at 1516 Mermaid Avenue.

28. View of the front (northern) exterior of the subject property at 1530 Mermaid Avenue.

29. View of the side (western) exterior of the subject property at 1530 Mermaid Avenue.

30. View of a fill/vent on the western side of the subject property at 1530 Mermaid Avenue.

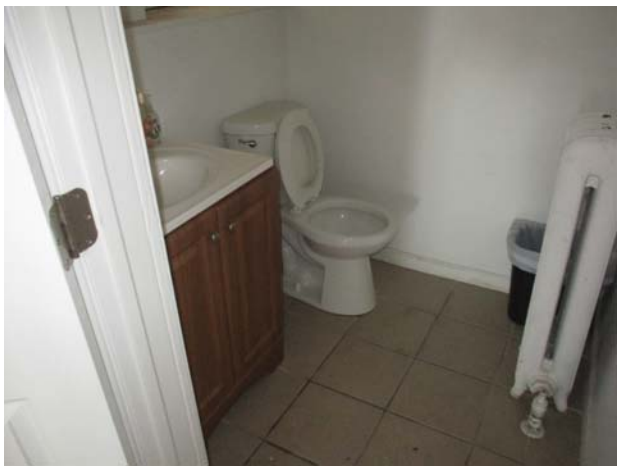
31. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.

32. View of water damage in residential portion of the subject property at 1530 Mermaid Avenue.

33. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.

34. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.

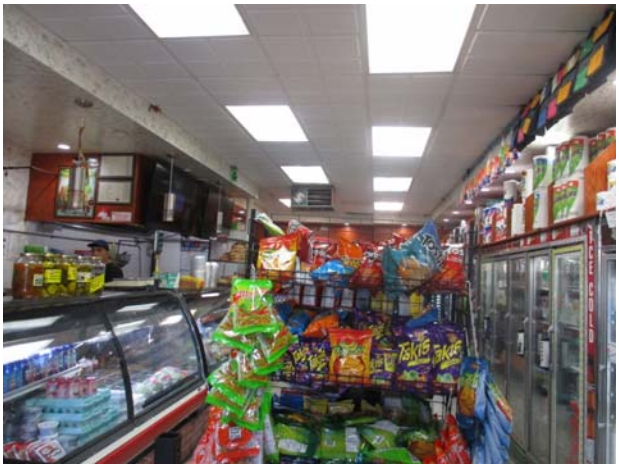
35. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.



36. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.

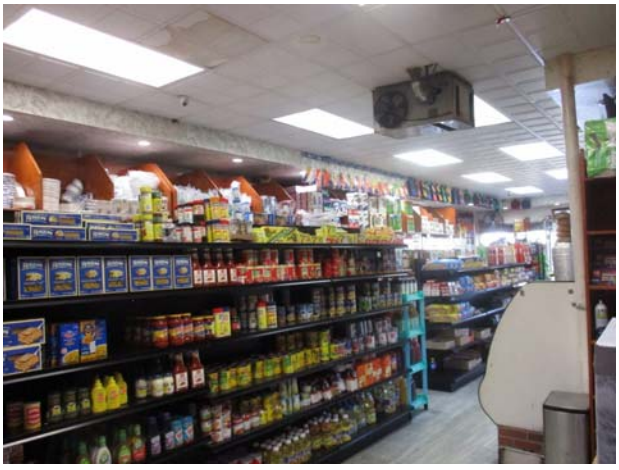
37. View of a water heater in residential portion of the subject property at 1530 Mermaid Avenue.

38. View of the interior of the residential portion of the subject property at 1530 Mermaid Avenue.



39. View of the interior of the grocery tenant of the subject property at 1530 Mermaid Avenue.

40. View of the interior of the grocery tenant of the subject property at 1530 Mermaid Avenue.



41. View of the interior of the grocery tenant of the subject property at 1530 Mermaid Avenue.

42. View of ASTs in the basement of the subject property at 1530 Mermaid Avenue.

43. View of a hot water heater in the basement of the subject property at 1530 Mermaid Avenue.

44. View of a boiler in the basement of the subject property at 1530 Mermaid Avenue.

45. View of a grease trap in the basement of the subject property at 1530 Mermaid Avenue.

46. View of the adjacent property to the east (1420 Mermaid Avenue).

47. View of the adjacent property to the east (1420 Mermaid Avenue).

48. View of the adjacent property to the east (2911 -2937 West 15th Street).

49. View of the adjacent property to the north (1512 Mermaid Avenue).

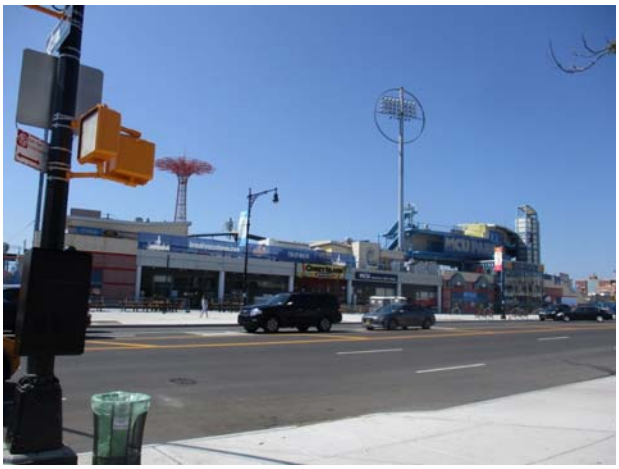
50. View of the adjacent property to the north (1526-1528 Mermaid Avenue).

51. View of the adjacent property to the west (1602 Mermaid Avenue).

52. View of the adjacent property to the north (1601 Mermaid Avenue).

53. View of the adjacent properties to the north (1509-1527 Mermaid Avenue).

54. View of the adjacent property to the west (1601 Surf Avenue).



55. View of the adjacent property to the south (1904 Surf Avenue).

56. View of the adjacent property to the south (1508-1528 Surf Avenue).

57. View of the adjacent property to the south (1521 Surf Avenue).

58. View of the adjacent property to the east (1329 Surf Avenue).

59. View of the adjacent property to the south (1318 Surf Avenue).

60. View of the adjacent property to the south (1501 Boardwalk West).

61. View of the adjacent property to the east (2911 -2937 West 15th Street).

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

NOTE SURVEY INCLUDES LOT 11 - LOT 11 IS OMITTED FROM THE OFFERING

Unauthorized alteration or addition to this survey is a violation of section 7209-2 of the New York State Education law. Only copies from the original of this survey marked with an original of the land surveyor's inked seal or his embossed seal shall be considered to be valid true copies. Certifications indicated hereon shall run only to the person or persons for whom the survey is prepared and on his behalf to the title company, government agency and lending institution listed hereon and to the assignees of the lending institution. Certifications are not transferable to additional institutions or subsequent owners.

All grades and elevations refer to NAVD88 Datum

This is to certify that there are no streams or natural water courses presently in the property, as shown on this survey.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 8/13/2019 at 8:36:40 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 5 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/02/2019 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/13/2019 has revealed that there are 22 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 4 NY SPILLS 90 sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 52 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 73 NY MANIFEST sites within approximately 0.25 miles of the target property.

NJ MANIFEST: Hazardous waste manifest information.

A review of the NJ MANIFEST list, as provided by EDR, and dated 12/31/2018 has revealed that there are 23 NJ MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BROOKLYN BOROUGH GAS	NEPTUNE AVENUE, CONE	NNE 1/4 - 1/2 (0.376 mi.)	AI257	572
BU-DANGMAN PARK MGP	SHEEPSHEAD BAY RD. A	ENE 1/2 - 1 (0.537 mi.)	AQ282	714

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

ZIYAR SERVICE STATIO	1715 SURF AVENUE	WSW 0 - 1/8 (0.069 mi.)	F93	108
GOPI INC	1709 SURF AVE	WSW 0 - 1/8 (0.096 mi.)	F118	162

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis notes: 50 gallons transformer oil on approx 100 gallons water in TM-2713. Transformer tested defective. Awaitinbg network crew to pressure test. Sample taken from structure. **Historical PCB count 12 ppm, transformer installed 1/1/91. Print shows sump but no sewer connection. 2000 hrs: Oil capacity of transformer is 340 gallons, and it was found to be 4 inches below minimum. 2 samples were taken, one from structure (went to Chem Lab first) and one from the unit. 2132 hrs: Tanker drained oil and water in manhole (450 gallons) also drained 345 gallons from transformer. There was about 35 gallons of oil in manhole. 2245 hrs: sample from manhole 12 ppm PCB. 8/10/00 0102 hrs: found cement sump in manhole. 0335 hrs: lab result from unit 1 ppm PCB. 1230 hrs: Transformer replaced, structure cleaned by double washing. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"This spill report was created for tracking purposes related to the Department's Hurricane Sandy emergency response efforts. DEC contractor JRG pumped out 150 gallons of fuel oil on 11/16/2012 1/16/12-Vought-DEC Sangesland received call from homeowner (Rene Handwerker Ph:718-558-4635) who noted that pumpout was performed previously by DEC and there was no further water in basement or oil for two months. She then noted that the water reappeared in her basement and DEC Sangesland asked her repeatedly and then rephrased question that if there was any oil smell or visual evidence of oil and she specifically said no . DEC Sangesland informed here that we only respond to oil spills and she noted that there may be some oil in basement. Vought received call and spoke to Rene and pumpout was performed on 11/16 and she lives in three story residential apartment building and there were two ASTs in her basement and basement flooded and one tank tilted and there was oil in water in basement. Water came above level of the tanks. DEC pumped out the tanks and removed 150-gallons of oil. Passageway pumped out oil and water out of basement passageway and did NOT affect any other basement. Passageway is approximately 35' feet long. Passageway is concrete and walls

LOT 4,TAXBLOCK 7062 (Continued) **S109942550**

concrete and cinderblock and is NOT wood or drywall. She noted that she has NO materials that are capable of absorbing oil. Oil was pumped out and was dry for a month and a half as per Rene and recently water in the passageway. Water is not sewage and is not clear water. Vought requested that Rapid Repairs contact call Vought and verbally confirm there is oil and Rene agreed to have them call Vought."

Remarks: "basement needs pump out, no access to basement w/out homeowner"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110004502912

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Not a generator, verified

Date form received by agency: 12/27/1994
Site name: DUMAIN FRENCH CLEANERS
Classification: Not a generator, verified

Date form received by agency: 07/22/1985
Site name: DUMAIN FRENCH CLEANERS
Classification: Large Quantity Generator

Hazardous Waste Summary:

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND

DUMAIN FRENCH CLEANERS (Continued) **1000146728**

F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: NONE
. Waste name: None

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 12/27/1994
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA Contractor/Grantee

FINDS:

Registry ID: 110004397867

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"05/29/07-Vought-Off hours repsonder. Vought called and spoke to Edwin Cosme and as per Edwin water has been infiltrating basement during heavy rains and water has had some oil on it for past two years. Adjacent to Cosme residence if old gas station. Impacted site is one family residence with commercial space on first floor. Water infilrates into basement through quarter size hole in basement floor. During times of water infiltration sump will turn on and pump water into sewer. Unsure if black material on water is oil or black soot . Odors sometimes present in store in morning but Cosme vents prior to opening and no further issues after ventilation. Cosme will return call to DEC with address of adjacent gas station so that Vought can investigate former spills and/or PBS and perform site visit. 8/27/10 - Raphael Ketani. The spill was reported on 5/26/07 as gasoline odors in the basement. The site sits near a former abandoned gas station site. The site is block and lot 7061 and 8. It was sold by Louis Powsneron 8/4/94 to Edwin and Isabel Cosme. Mr. Cosme's phone is (917) 710-1004. There are no E-docs, nor a paper file. I spoke to Mr. Cosme today. He said that he hasn't sensed any odors in years, but he hasn't been down to the basement in years. He said that the gas station is a vacant lot. I set up an appointment with him for monday, 8/30/10, at 10 AM so that I can inspect the site myself. 8/30/10 - Raphael Ketani. I arrived at the site and waited for Mr. Cosme to show up. The site is a beauty salon store on the ground floor with an apartment on the second floor (see E-docs). There wasn't a fill port, nor a vent pipe. So I assumed that the heating fuel was natural gas. There was a fairly new building to the left (east) with a placard on one of the front columns that suggested that the building was constructed in 1990. There was an alleyway to the right which separates the site from buildings further west. The site is about one and a half blocks north of the boardwalk and about 6 feet above high tide. It is the only place I saw with basement cellar doors. If it is a full basement, then the ceiling inside is only 6 feet 8 inches above the floor. This would put the floor maybe just a little above mean high tide. I entered the beauty salon and sensed very faint odors. The store manager had just opened the store for business. The PID meter registered between 20 and 50 ppb of vapors. However, none of the odors were that of gasoline. I walked the area around the site and came to a large, gravel covered lot which fronted on Surf Avenue, the next street south of the site. Cars were parked on part of the lot. According to a scale on the Google Earth satellite photo, the lot is 250 feet wide from east to west and 350 feet long from north to south. I checked Property Shark before visiting the site, and the only structure that was on this lot at one time was an old building called the Ocean Crest Apartments. Mr. Cosme had stated that the gas station used to occupy the vacant lot, but this was now unclear. There was another large, vacant lot to the east of the first one, but there were no signs that this was ever a gas station location. I

COSME PROPERTY (Continued) **S108637568**

didn't have a Sanborn map for this general area. So, I could not pin point where the gas station had been. In any event, the ground beneath these two lots and the site at 1712 Mermaid Avenue had been affected by the diurnal tide cycles over the past three years since the vapors were reported. I waited for Mr. Cosme to show up, but he never did. Then I asked the store manager whether he had called. The manager said that he had and that he had cancelled the appointment. After this, I returned to my office and called Mr. Cosme to try to arrange another appointment. He told me to call him back later. I tried calling him back several times using his cell number (917) 710-1004 (the only number that I had), but I kept getting his voice mail. I later checked the PBS registration database. I found a gas station listing for PBS #2-350486. The site used to be called Coney Island Gas & Wash, 1709-1729 Surf Avenue. There used to be 20 tanks under the site. All were closed and removed on 6/1/03. Sixteen of the tanks were empty 550 gal. USTs. Four of the tanks were 4,000 gal. USTs and used to contain gasoline. The owner was Coney Island Development, LLC, 160 Broadway, 15th Floor, NY, 10038. The contact used to be Jay Schecter. When I called up the phone number for him, I reached the operator for Kaufman Studios. She said that she used to work for him. However, he did not work here anymore. She had no idea where he was. I looked up Coney Island Development, LLC in the New York State Corporate database and found: C/O NEW YORK CITY ECONOMIC DEVELOPMENT CORPORATION ATTN: GENERAL CNSL 110 WILLIAM ST. NEW YORK, NEW YORK, 10038 I contacted the NYC EDC (212) 619-5000, but could only leave a message. Next, I tried to contact Krista Halpin, Assistant Vice President for Compliance, of the NYC IDA (212) 312-3828, but I could only leave a message. Nathan Bliss at the NYC IDA called to say that the property was owned by a private party, Taconic Investment Partners Co. The contact there is Chris Balestra (212) 704-3844. I contacted Mr. Balestra and he told me that the DEC has been monitoring the site for a couple of years. He said that there are wells on the site (though I didn't see them). He said that Fleming Lee Shue is the environmental company and the contact there is Mary Manto (212) 675-3225. 8/31/10 - Raphael Ketani. I contacted Ms. Manto. I told her that my spill involves Mr. Cosme's basement, which has had gasoline vapors in the recent past. I told her that the 1709-1729 Surf Avenue site is fairly close to Mr. Cosme's site - about 200 feet away (it constitutes only the southwest part of the large vacant lot). She asked where Mr. Cosme's site was in relation to hers. I told her that it's at 1712 Mermaid Avenue, which is the next street north of Surf Avenue. She said that's upgradient. I said that it is and that the diurnal tides may have pushed through some gasoline contaminated soil and may have pushed some gasoline around under the subsurface. This would account for the vapors Mr. Cosme had sensed. Ms. Manto said that they have been monitoring downgradient and haven't found any contamination. I told her that the 1709 site is the most likely source since it is the closest and since tidal action tends to push things around in the subsurface. She said that she is not going to tell her client to expand the monitoring as the contamination could be coming from upgradient sources. I told her, again, that her site is the closest, and that the DEC is asking Fleming Leshue to expand the investigation. I told her to talk to her client and, in the mean time, I will talk to Ainura Doronova of DER Unit B who is the DEC case manager for the open 1709 Surf Avenue spill case (#0302857). She said that she had sent Ms. Doronova a work plan back in 2009 and hadn't heard from her since. I told Ms. Manto

COSME PROPERTY (Continued) **S108637568**

that I will speak to Ms. Doronova and have her request an expansion of the investigation. I spoke to Ms. Doronova and she said that the consultants owed DEC a work plan. She will talk to either Ms. Manto or Mr. Balestra regarding the vapor incident at 1712 Mermaid Avenue and the 1709 Surf Avenue site. Jonathan Kolleeny, her supervisor, joined the conversation and said that he didn't think any contamination could travel so far underground to the 1712 Mermaid Avenue site. I argued that there is diurnal tidal action under the entire area since both locations are near the sea. Mr. Kolleeny said that he believes that there is tidal action, but he doubted anything would migrate up gradient as much as 200 feet. He added that the tidal influence could be coming from the north side of the Coney Island, also. I told him that is true, but we will have to see what Fleming Leshue finds. Ms. Doronova met with me later and showed me a new site plan for 1709-1729 Surf Avenue. She pointed out two locations along the north edge of the property where Fleming Leshue will install two geoprobe points and sample the groundwater. I told Ms. Doronova that the locations looked alright. Ms. Doronova said that she will let me know whether they find anything. I made one last attempt to contact Mr. Cosme (917) 710-1004. I reached Mr. Cosme and asked him whether he had been in his basement recently and whether there still were gasoline odors. He said that he had been there several months ago and had sensed natural gas. He had called the gas company and they sealed a pipe connection. Since then, he said, he hasn't sensed any gas or gasoline odors. I told Mr. Cosme that I was closing the spill case and that he should call me if he senses gasoline odors again. I asked him whether he had my number, he said that he did. As the gasoline odors had abated, I determined that there was no threat to the public or the environment at the 1712 Mermaid Avenue site. Therefore, I am closing the spill case. 9/2/10 - Raphael Ketani. Ms. Doronova forwarded me a copy of a letter she was sending to Mr. Balestra informing him that soil and groundwater investigation work needed to take place along the northern limit of the former gas station property (see E-docs). 10/1/10 - Raphael Ketani. Ms. Doronova sent out a letter to Mr. Balestra approving the Work Plan. Later, Mr. Balestra e-mailed back that Taconic Investments Partners will have 3 wells installed on 10/7/10 along the north side of the former gas station property."

Remarks: "CASno: Odor of gasoline in basement. Possibly from tanks at abandoned gas station next door."

Letter sent to RP/Consultant requiring work plan to further delineate and remediate remaining contamination. 12/9/03 TJD Site reassigned Demeo >>> Rommel 04/03/2007: This spill case was transferred to A. Doronova. - AD. Reviewed the file: Underground tank closure report submitted on August 2003 by Gannet Fleming Engineers (GFE)on behalf of Coney Island Development (CID)states that: During the excavation and removal of 17 UST, staining and petroleum-like odor in the soil, and sheen on the water table were observed adjacent to the tanks. DEC was notified and Spill No 0302857 was assigned to the site on June 17, 2003. The impacted soil and free product were removed during excavation. UST closure report did not indicate quantity of the removed soil and free product. Gannet Fleming collected end-point samples in two excavation areas and also took groundwater samples from the bottom of the excavations. Four soil samples were collected from Excavation area I and one groundwater sample. Groundwater analytical results from Excavation area I indicated 520ug/L of MTBE and 25ug/L - total xylenes. VOCs were not detected in soil samples, SVOCs were detected: 250ug/kg (benzo(b)fluoranthene) - in sample W-1-1; 550ug/kg (benzo(a)anthracene, 730ug/kg (chrysene), 530ug/kg (benzo(b)fluoranthene) and 600ug/kg (benzo(a)pyrene) - in sample W-1-3. Six end-point soil samples and one groundwater sample were collected from excavation area II. Analytical results for soil samples did not indicate any exceedance of VOCs and SVOCs above required limits. Groundwater sampling results indicated significant concentrations of VOCs and SVOCs: benzene- 52ug/L; toluene- 710ug/L; ethylbenzene- 260mg/L; total xylenes - 2,800ug/L; 1,3,5

FORMER GAS STATION (Continued) **S106015133**

-trimethylbenzene - 260ug/L; 1,2,4-trimethylbenzene- 940ug/L; naphthalene- 200ug/L and MTBE-550ug/L. Based on their data GFE recommended NFA for the site and requested closure of the spill case. On October 30, 2003 Timothy DeMeo (case manager) issued a letter where he disapproved GFE recommendation and requested to prepare and submit RAP to address the residual soil and groundwater contamination existing at the site. No further reports or correspondence for this site were found. AD 04/30/2007: Spoke to John Urda (DEC attorney) regarding this spill. Previous owner (HCIR) sold the site to Coney Island Development (CID)in 2003 and then filed bankruptcy. In 2005 CID resold the property. Tried to find new owner, but he is not listed in Property Shark. Spoke with Greg Ernst of Gannett Fleming (former consultant), he gave phone number (212-346-7960) for Jey Schector of CID (previous owner). Name of the main company is Tri-State for which J. Schector works now. Left him a message. AD 05/09/2007: J. Shector never called back. Found on ACRIS name of the new owner of the site - Robert Cassera. Business name - 1709 Surf Avenue Associates, LLC. Home phone number - (212) 935-9320. Company's address is: 111 Eighth Avenue, Suite 1500, New York, NY, 10038. Left him a message. AD 05/24/2007: Robert Cassera and Jey Shector never called back. I sent an email to Mr. Shector and did not recieve any answer. Robert Leung of DER brought today FOIL Request from Fleming Lee Shue consulting company, where among other sites this site was listed. I spoke with Mr. Mohammed Ahmed of Fleming Lee Shue about this FOIL request to find out who contracted them to do investigation for this site. Mr. Ahmed told me that they were contracted by potential buyer to implement Phase I. I asked him to verify the name of the current site owner. He promised to get back to us with the name. AD 06/07/2007: M. Ahmed of FLS called and told me that this property was sold to the potential buyer, for whom they were making the investigation. The name of the new owner: Taconic Investments Partners; contact person: Christopher Balestra Phone: (212)220-9945 company's address is: 111 Eighth Avenue, Suite 1500, New York, NY, 10011. It is the same address where previous owner (1709 Surf Avenue Associates) was listed. Prepared letter for Mr. Balestra regarding additional investigation at the site. AD 06/08/2007: Sent a letter to Taconic Investments Partners, addressed to Mr. Balestra (cc; to J. Kolleeny; M. Ahmed; file). AD 07/06/2007: Received a letter from Fleming Lee Shue in which they request a 30-day extension to review the existing information and prepare work plan for additional investigation at the site. AD 08/06/2007: Received an email from Mary Manto of FLS with a request to extend deadline for work plan submittal. She wrote, that they will submit it due August 17, 2007. Approved it. AD Called and spoke to M. Manto of FLS regarding WP submission. AD 09/12/2007: Received an email from M. Manto saying that their client just started to review proposed SSIWP. As soon as an owner will approve the plan, it will be submitted to us. AD 10/05/2007: Received a Phase II ESIWP from FLS. It proposes to install three permanent monitoring wells around former excavation area II (EA-II). No well was proposed in the excavation area I (EA-I). Spoke to Mary Manto of FLS regarding installation of two more permanent wells in the centers of the excavation areas. She said that they have to get owner's approval for these changes. Promised to get back to us after they will receive approval. AD 01/25/2008: Received revised e-copy of Phase II ESIWP. Reviewed it. FLS added two temporary well points instead of requested permanent wells. Called and left a message to M. Manto. AD 02/04/2008: Spoke to M. Manto

FORMER GAS STATION (Continued) **S106015133**

regarding finishing temporary well points as a permanent wells if there will be field indications of significant contamination during soil borings. She argued that installation of more permanent wells is not necessary due to coming site re-development. In the end the agreement was made to install one permanent well in the center of the former EA-I, two permanent wells and two temporary well points in the vicinity of EA-II. Ms. Manto will submit the revised site diagram till the end of this week. AD 02/05/2008: Received the revised diagram with new locations for the proposed wells. Issued a letter approving revised Phase II ESIWP with revised site diagram. (cc: J. Kolleeny - DEC; M. Manto - FLS and file) AD 05/06/2008: Spoke with M. Manto of FLS. They installed monitoring wells and sampled groundwater. Report will be submitted in the end of May, 2008. AD 07/28/2008: Called and left a message to M. Manto regarding report submission. AD 08/06/2008: Called and left a message to M. Manto. AD 08/14/2008: Received a message from M. Manto. FLS completed the report and submitted it to the site owner for review. The report will be submitted to us next week. AD 08/26/2008: Received a PDF copy of the report. Downloaded to eDocs. AD 08/27/2008: Received a hard copy of the report. Will review. AD 10/2008: Reviewed the report. It states that two temporary well points and three monitoring wells were installed at the site in April 2008. Soil and GW samples were collected. VOCs were detected in all soil samples collected. All VOCs were below TAGM 4046 with the exception of total xylene in TWP-2 (4-6') at concentration of 2,140 ppb (TAGM - 1,200 ppb). TWP-2 was installed in the center of former UST excavation #2, and xylene appears to be related to the historical release. SVOCs were also detected in all soil samples. The SVOCs exceedances were detected in samples collected from MW-1 (5-7') and TWP-2 (4-6'). Groundwater sampling indicated exceedances of BTEX, MTBE and Naphthalene in wells MW-1, TWP-1 and TWP-2. No exceedances for soil and GW were identified in the two downgradient wells MW-2 and MW-3. According to the consultant, petroleum impacts appear to be limited to the site. Conclusions Section of the report states that RAP will be submitted to DEC. AD 11/12/2008: Spoke with Mary Manto of FLS. Requested to submit a remedial proposal for the site. AD 01/05/2009: Called and left a message to M. Manto regarding RAP. AD 03/16/2009: Called and spoke with M. Manto of FLS. She promised to submit a proposal letter till the end of this week. AD 03/23/2009: Received an email from M. Manto of FLS saying: Ainura - the above letter is still being reviewed, but I'd promised you something this week, so am summarizing our recommendation. With the exception of xylene at TWP-2, soil sampling did not indicate the presence of VOCs at concentrations above regulatory levels. While VOCs were detected in groundwater above the Class GA standards in samples from all on site locations, no VOCs were detected at concentrations above regulatory levels in either soil or groundwater samples from MW-2 and MW-3, along the downgradient property boundary. Based on the sampling, it appears that most of the contaminated source material was addressed during removal of the former underground storage tanks. Based on these results, and given that the site is slated for eventual redevelopment, we're proposing that groundwater samples be collected from MW-2 and MW-3 on a quarterly basis prior to site redevelopment in order to monitor any potential migration of contaminants from the site. We'll get you the formal letter on Monday. Regards, Mary Mary S. Manto Project Director Fleming-Lee Shue, Inc. 158 West 29th Street, 9th Floor New York, NY 10001 212-675-3225 (telephone)

FORMER GAS STATION (Continued) **S106015133**

212-675-3224 (fax) AD 03/30/2009: received an email from M. Manto saying: Ainura - attached please find a letter describing the proposed remedial action for the above site. As we have discussed, we are proposing quarterly monitoring of the two downgradient wells, MW-2 and MW-3. Please review and contact me with any comments or questions. Thank you. Regards, Mary Mary S. Manto Project Director Fleming-Lee Shue, Inc. 158 West 29th Street, 9th Floor New York, NY 10001 Will review. AD 04/28/2009: Reviewed the Proposed Remedial Action Work Plan dated March 30, 2009 submitted by Fleming-Lee Shue, Inc. The report states that elevated levels of dissolved petroleum contamination remain in the site three groundwater monitoring wells (MW-1, MTBE-22ppb); (TWP-1, Xylene-937ppb); TWP-2, Xylene-3730ppb). Impacts appear to be limited to the site because no elevated levels of VOCs were detected in either soil or groundwater samples from wells MW-2 and MW-3, which located along the downgradient property boundary. Based on this data, and given that the site is slated for redevelopment, the work plan proposes quarterly groundwater sampling of two downgradient wells to monitor any potential contaminants migration from the site. Monitoring reports will be submitted to DEC on a quarterly basis. Discussed the site with J. Kolleeny of DER. AD 07/28/2010: called and left a message to M. Manto of FLS. AD 08/06/2010: Spoke with M. Manto of FLS. She informed me that FLS was not contacted by RP since RAP submission. Will contact Mr. Balestra. AD 08/31/2010: I was informed by R. Ketani of DEC about a spill case at neighboring property to the north of the site. Address of this property is 1712 Mermaid Avenue, Brooklyn, NY, NYSDEC Spill No. 0702363. This spill was reported in May 26, 2007 because of gasoline odors in the basement. Discussed this site with J. Kolleeny of DEC. Called and spoke with Mr. Balestra Of Taconic and Mary Manto of FLS. Recent GW data should be collected and supplemental site investigation along the northern line of the property should be performed. AD 09/02/2010: Issued and sent a letter with a request for supplemental subsurface investigation along the northern boundary of the property. A work plan for such investigation is due by September 17, 2010. DL the pdf copy of the letter to eDocs. AD 09/17/2010: Received an e-mail from Jesse Mausner of FLS: Dear Ainura, In response to your letter dated September 2, please find the attached work plan for 1709 Surf Avenue requested in your letter. A site/well location plan is included in the work plan. If you have any questions or comments about the plan, do not hesitate to contact us. We look forward to hearing back from you soon. Thank you very much. Best Regards, Jesse Mausner, P.G. Geologist Fleming-Lee Shue, Inc. 158 West 29th St. 9th Flr. New York, NY 10001 T (212)675-3225 ext. 319 F (212)675-3324 DL the work plan to eDocs. Will review. AD 09/20/2010: Reviewed the work plan for supplemental site investigation. It proposes to install two soil borings/monitoring wells upgradient of the site just south of the buildings fronting Mermaid Avenue. Soil samples will be collected from the soil borings. After newly installed wells will be properly developed, all site wells will be sampled and an investigation summary report with conclusions and recommendations for further actions will be submitted to DEC. The location of the proposed wells are to far away from the sourse of the contamination. One more well is needed. AD. 09/23/2010: Discussed the work plan with J. Kolleeny of DEC. To request one more well installation next to the former service building. Called and spoke with M. Ahmed of FLS. Requested to submit a revised WP. AD 09/27/2010: Received an e-mail from FLS: Ainura, Attached is the

FORMER GAS STATION (Continued) **S106015133**

revised work plan for 1709 Surf Avenue, Spill #03-02857, including the additional well you requested. We look forward to hearing back from you soon. In the meantime, let us know if you have any additional questions or comments. Thank you. Best Regards, -- Jesse Mausner, P.G. Geologist Fleming-Lee Shue, Inc. 158 West 29th St. 9th Flr. New York, NY 10001 T (212)675-3225 ext. 319 F (212)675-3324 Reviewed the work plan. One additional wells was added as per DEC request. To send an approval letter. AD 09/28/2010: An approval letter was sent. Dl pdf copy to eDocs. AD 11/24/2010: Received a Supplemental Subsurface Site Investigation Report dated November 17, 2010. PDF copy is attached. DL to eDocs. Will review. AD 01/07/2011: Reviewed the report. It states that investigation was implemented between 10/6/10 and 10/20/10 and included the installation of three (3) soil borings, conversion of the borings into permanent monitoring wells, and soil and groundwater sampling and analysis. Two (2) upgradient monitoring wells were installed north of the Site (south of the building fronting Mermaid Avenue) and one monitoring well was installed on-Site north of the tank excavation area in the former on-Site gasoline station. The work plan also included sampling of the three existing monitoring wells on the Site. Groundwater was encountered at approximately 4 to 5 feet below site grade (ft-bsg). However, based on the Site s proximity to the Atlantic Ocean, it is assumed that the water table on Site is tidally influenced. The local groundwater flow is assumed to be south/southwest toward the Atlantic Ocean. Four (4) soil samples, one (1) field blank and one (1) trip blank, and six (6) groundwater samples, one each from the three existing wells (MW-1, MW-2 and MW-3) and three newly installed wells (MW-4, MW-5, MW-6) and one field blank and one trip blank were collected for analysis. Elevated PID readings were detected in all three borings; however no petroleum odors were observed. No staining was observed in any of the soil borings. PID readings detected in boring MW-4 ranged from 351 parts per million (ppm) to 1,905 ppm (0-6 ft bsg). PID readings detected in boring MW-5 ranged from 63.2 ppm to 2,409 ppm (0-6 ft bsg) and PID readings detected in boring MW-6 ranged from ND to 9,999+ ppm (0-6 ft bsg). Evidence of historic fill material was present in all borings from 0 to 2 ft bsg. VOCs were not detected in the soil samples at concentrations that exceed the UUSCOs. SVOCs were not detected in the soil sample MW-6 (3-5 feet) at concentrations that exceed the UUSCOs. SVOC s related to historic urban fill (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3 cd)pyrene) were detected above their respective UUSCOs in soil samples MW-4 (0-2 feet) and MW-5 (0-2 feet) at concentrations ranging from 1.33 to 13.1 ppm. Groundwater was encountered at a depth ranging from 4 to 5 ft bgs. The depth to groundwater was measured on October 6, 2010 during soil boring installation. A review of the field parameters indicates that no elevated PID readings or visual evidence of contamination (abnormally low dissolved oxygen, Eh, pH below 5.5 or greater than 9, discoloration, free product, orange precipitate, etc.) were observed. Tetrachloroethylene, a chlorinated solvent commonly used in dry cleaning, was detected in groundwater sample MW-6 at a concentration of 85.6 ug/L, exceeding its Class GA Standard of 5.0 ug/L. VOCs were not detected above the Class GA Standards in any other groundwater sample. With the exception of benzo(a)anthracene and chrysene, which were detected at concentrations exceeding the Class GA standards in groundwater sample MW-1, SVOCs were not detected in any other groundwater sample at

FORMER GAS STATION (Continued) **S106015133**

concentrations exceeding the Class GA Standards. Based on the findings of this SSI and the 2008 ESI, FLS recommends monitoring and sampling of the two downgradient monitoring wells (MW-2 and MW-3) for two quarters. If petroleum constituents in the downgradient wells remain below the regulatory standards during the two quarters, FLS will prepare a spill closure report for the NYSDEC review and will request closure of spill 03-02857. Changed site priority to P2. AD 04/27/2011: Called and spoke with M. Manto Of FLS regarding submission of the QMR. AD 09/21/2011: Called to FLS to speake with Mary Manto and was told that she is no longer works for this company. Spoke with Jesse Mausner of FLS regarding the site and quarterly monitoring. He will find out the status of the site and will get back to DEC. AD 09/22/2011: Received a call from Jesse Mausner of FLS regarding groundwater sampling at the site. FLS will write a proposal to the RP for performing two rounds of groundwater sampling. FLS will inform DEC on the outcome of this proposal and the date of the sampling. Summary report will be submitted to DEC. AD 10/12/2011: Received a phone call from M. Manto. She told me that she is with Tenen Environmental, LLC and that they were contacted by the site owner - Christopher Balestra of Taconic Investments Partners to conduct groundwater sampling at the site. Asked her to sample all site wells and propose further action baced on the results. AD 10/13/2011: Received an e-mail from M. Manto saying: Good afternoon Ainura - it was nice speaking with you yesterday. Based on our discussion, we will collect one round of samples from onsite wells (MW-1, MW-2, MW-3 and MW-6) and have samples analyzed for the 28 fuel-oil related compounds included in CP-51, Table 3. Assuming the results are similar to the previous sampling event, we'll incorporate the results into a spill closure report to be submitted to NYSDEC. Please confirm and we will contact you when we have scheduled the sampling. My new contact information is below. Regards, Mary Mary S. Manto Principal/Project Director Tenen Environmental, LLC (Office) 646-504-3685 (Cell) 914-473-4297 AD 10/14/2011: Sent the following e-mail to M. Manto: Hi, Mary: Yes, you can go ahead with the sitewide groundwater sampling. If the groundwater sampling results are not suitable for spill closure recommendation, groundwater monitoring program should continue at the site on quarterly or semi-annual basis depending on data. Sincerely, Ainura Doronova AD 12/08/2011: Received an e-mail from Matthew Carroll of Tenen Environmental saying: Ainura, Attached please find Tenen Environmental's recent groundwater water sampling report for the 1709 Surf Avenue property (Spill #0302857). Samples were collected from all on-site wells for analysis of petroleum-related compounds. No compounds were detected above NYSDEC's Class GA levels. This is consistent with recent sampling results and, therefore, we are requesting that the Spill be closed. Please contact us if you need any additional information or if you will require a hard copy or cd with the report. Sincerely, Matthew Carroll Environmental Engineer Tenen Environmental 121 West 27th Street, Suite 1004; NY, NY 10001 o: 646.606.2332 - c: 646.827.1061 - f: 646.606.2379 DL the report to eDocs. Will review. AD 12/14/2011: Reviewed the report. It states that on November 3, 2011, four shallow groundwater monitoring wells (MW-1, MW-2, MW-3 and MW-6) on the site were sampled for analysis of STARS-list VOCs and SVOCs. In samples collected from monitoring wells MW3 and MW6, no compounds were detected in the STARS-list VOC and SVOC scans. In the sample collected from monitoring well MW-1, only two compounds, the VOCs isopropylbenzene and MTBE, were detected, both at estimated values.

FORMER GAS STATION (Continued) **S106015133**

The concentration of isopropylbenzene was estimated to be 0.34 ppb, below the Class GA Standard of 5 ppb. The concentration of MTBE was estimated to be 0.95 ppb, below the Class GA Standard of 10 ppb. No SVOCs were detected in monitoring well MW-1. In the sample collected from monitoring well MW-2, four compounds, the VOCs nbutylbenzene, sec-butylbenzene, p-isopropyltoluene and 1,3,5-trimethylbenzene, were detected, all at estimated values. The Class GA Standard for each compound is 5 ppb. The concentrations of n-butylbenzene (0.53 ppb), sec-butylbenzene (0.38 ppb), isopropyltoluene (0.78 ppb) and 1,3,5-trimethylbenzene (1.7 ppb) are all below the Class GA Standard. No SVOCs were detected in monitoring well M-2. Tenen Env. states that groundwater analytical samples from the on-site wells collected in October 2010 and September 2011 indicate that petroleum-related VOCs and SVOCs are not present above NYSDEC s Division of Water TOGS 1.1.1 Class Class GA Standards. Based on the findings of the groundwater sampling, Tenen concludes the following: " Groundwater below the Site is located at depths between four and six feet; " Petroleum-impacted soil and several USTs were removed from the Site in June 2003; " During the most recent GW sampling event, evidence of petroleum impacts (PID readings in the headspace and odor in the purge water) were noted in M-2; " Analysis of groundwater samples collected in August 2008 from two temporary wells and monitoring well MW-1, indicated that petroleum-related compounds were present at the Site above the Class GA Standards. However, subsequent samples collected in October 2010 and November 2011 from well MW-1 indicated that levels of petroleum-related compounds are below the Class GA Standards. " Analysis of groundwater samples collected in August 2008, October 2010 and November 2011 from downgradient monitoring wells MW-2 and MW-3 indicated that petroleum-related compounds are not present above the Class GA Standards. " Analysis of groundwater samples collected in October 2010 and November 2011 from on-site monitoring well MW-6 indicated that petroleum-related compounds are not present above the Class GA Standards. Based on these results, Tenen concludes that the petroleum release associated with Spill #0302857 is not impacting the groundwater at the Site and recommends that the spill case be closed. To discuss spill closure with J. kolleeny of DEC. AD 12/19/2011: Discussed the closure request with J. Kolleeny. Based on the data, it was decided to approve spill closure and to issue a closure letter. AD 12/20/2011: Issued and sent an approval letter to Mr. Balestra od Taconic Investment Partners. DL pdf copy to eDocs. Case closed. AD "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"12/31/14 TJD Teleconference with Ralph @Action Environmental - he states that the spill location is Coney Island Hospital which is currently undergoing construction work. The general contractor at the hospital is Access Construction, a subcontractor (Agustowitz Excavation) struck a previously unknown 550 UST while excavating. The tank was filled with oily water and was punctured causing a discharge of approximately 10 gallons to surrounding soils. During remmoval of the tank a second 550 UST was discovered. Both tanks have been removed from the excavation as they were not connected to any fuel burning equipment. Ralph reports that Action was retained as a subcontractor to Agustowitz Excavation and removed an estimated 6 cu yds of petroleum impacted soils to a clean endpoint. Action still has personnel onsite - DeMeo has requested endpont samples (base/sidewalls) be collected and analyzed for EPA methods 8260/8270, a site map, brief narrative summary and disposal documentation be provided in support of spill closure. Ralph inquired if the PBS registration needs to be updated - DeMeo has informed him that these tanks will need to be added and removed from the facilities PBS registration in accordance with applicable regulations. Ralph did not have the contact information for the above referenced contractors at the time of phone conversation and states he will e-mail DeMeo with this information. No letter sent as the project is substantially complete. 6/19/17 TJD File review. Contractor has not submitted a closure report for this site. A review of available documentation reveals a sample map with corresponding laboratory data has been received. Concentrations of target analytes are within acceptable concentrations. As the documentation indicates, the reported spill is associated with the discovery and removal of previously unknown 550 gallon UST's during a capital project at the Coney Island Hospital. One 550 UST was punctured during removal by the contractor causing an estimated 10 gallons of oily water to discharge onto surrounding soils. Due to the nature of the reported event and the remedial activities taken by the involved contractor this spill is

DEC Memo:	"01/24/06. Feroze. TTF is sent to: Owner representative David Heimlich City one Realestate. 236 Green Point Ave, Brooklyn, NY 11222. & Rick Weaver. Contech Services 23 Front Street media. PA 19063 THIS SPILL TIE WITH 0511959 ********** 1/18/06. Feroze talked with Rick Weaver(215-431-0566). He gave me the name and address of owner re-presentative. He is Mr. David Heimlich. PH: 718-349-0050. TTF is sent to: Davi Heimlich, CITY ONE REALESTATE,236 Green point Ave. Brooklyn. NY 11222 and to the spill location. THIS SPILL TIE WITH 0512262. so this spill is closed. All information is transferred to spill # 0512262 ********** 03/15/06. Spill is transferred from Feroze to Kumer Patel. 04/24/06-Hiralkumar Patel. Spoke with Rick (FAX: 609-953-4883), who is the environmetal consultant, hired by potential buyer of property. they filled out tank with sand, cut out all pipings without doing any isolation test as it is UST. as per Rick they have taken two soil samples across the bottom of tank and as per him they haven't found any contamination. but the other soil samples from site, they found some contamination and as per Rick, groundwater is so close. they have proposed monitoring well installation. asked Rick to send me lab results with site plan in email or fax. and asked to forward current owner and potential buyer's information. this is commercial property and currently in use and will be vacant once be sold out. From the records for Spill # 0511959, Left message for Mr. David Heimlich (718-349-0050) at City One Real Estate. 04/25/06-Hiralkumar Patel. Received lab results in email from Rick. they took three soil samples, two from under UST and one from under fuel line connection.

----
Spoke with Rick and as per him, they are planning to install monitoring wells and will find out if groundwater is contaminated or not. as per Rick, buyer is also trying to buy next door property. once this property be sold out, they will demolish the existing building and as part of the tank is under building, they can remove tank and associated contaminated soil after building get demilished. Rick is not sure, what kind of building will be built on site. they have removed contaminated soil from the fuel line connection location. Left message for Nick, who is a lawyer of current owner. Left message for Sam, who is a potential buyer. 04/26/06-Hiralkumar Patel. left message for Nick. spoke with operator at Nick's office and operator told me that owner is out of country, so we can send letter on Nick's name. CSL sent out to Nick and to Sam requesting soil and groundwater delineation. faxed to Rick, Nick and Sam. 05/25/06-Hiralkumar Patel. Received message from Rick. spoke to Rick. he will send report with old results and work plan for further investigation. he is planning to go onsite on Jun 2, 2006. 05/26/06-Hiralkumar Patel. Received tank closure and remedial invesitgation work plan from Rick. Rick Weaver Project Manager ConTech Services, Inc. 484-621-7950 (O) 215-431-0566 (C) 484-621-7956 fax abstract of tank closure report: - two points, along supply and return line path, were selected for assessment: at the point where lines enters the building and at the point midway between the tank and the building. - soil under the tubing midway point appeared clean - tubing connection found on lines at point just outside of building - soil contamination observed under this connection area - contaminated soil excavated and removed and took soil sample at three

COMMERCIAL (Continued) **S107523406**

ft bg. - tank was cut opened and cleaned - two holes were cut in bottom for sampling - found groundwater about foot below the tank bottom see sample analyticals above. all three soil samples (one under fuel line connection and two under tank bottom) shows contamination. abstract of remedial investigation plan: - soil around UST will be evaluated through a series of six borings - borings depths will extends to groundwater - after sampling the holes will be filled and repaired with asphalt patching material - at least one of the boring around the tank will be advanced 6 to 8 ft into groundwater - if groundwater is determined to be impacted, a series of three monitoring wells will be installed. as per investigation plan, they are proposing groundwater sample from one of the soil boring. sent email to Rick asking to take groundwater at downgredient position. Received email from Rick. they will take groundwater sample on downgradient. 08/01/06-Hiralkumar Patel. Left message for Rick. received call from Rick. they did sampling around tank and found contamination in groundwater. asked Rick to send lab analyticals with site plan including sampling locations. 08/07/06-Hiralkumar Patel. received soil and groundwater analyticals in email from Rick. abstarct of letter: - soil and groundwater investigation done on June 2, 2006. - six soil samples taken around tank at approx. depth of 6 ft bg. - one groundwater sample taken from soil boring SB1 at about 10 ft bg.

1,2,4-Trimethylbenzene---180.0 Napthalene----------99.0 - will remove contamianted soil in next two weeks. - soil removal on north side may be restricted by the proximity of foundations and soil supporting the steel fire escape tower at rear of building - will install monitoring wells Discuss with DEC Austin. as per him, spill unit will work on this case till get final report.
08/10/06-Hiralkumar Patel. left message for Rick. received call from Rick. he is in process of hiring contractor to remove contaminated soil by excavation and he will install one monitoring well at upgradient side and two at downgradient locations.
08/29/06-Hiralkumar Patel. left message for Rick. 08/30/06-Hiralkumar Patel. received call from Rick. they are removing tank and contaminated soil and might finish this work today and will take endpoint sample. they are planning to install monitoring well on Friday Sep. 1, 2006. will send lab analyticals once he gets it.
09/25/06-Hiralkumar Patel. left message for Rick. 09/26/06-Hiralkumar Patel. received call from Rick. they have installed monitoring wells and are waiting for lab analyticals for samples they took. he will send documents as soon as he gets it. 11/08/06-Hiralkumar Patel. left message for Rick (Cell: 215-431-0566). 11/10/06-Hiralkumar Patel. spoke with Rick. he doesn't know whether he took endpoint samples or not. he never took groundwater sample from one monitoring well they have installed in area where tank was. they tried installing monitoring wells on upgradient and downgradient side of tank but

COMMERCIAL (Continued) **S107523406**

could not install due to either refusal or underground utility lines. Rick mentioned that there are three monitoring wells on site and he found groundwater flow in southeast direction. 11/13/06-Hiralkumar Patel. visited site on 11/10/06. found four monitoring wells at location. found partially covered soil pile close to previous tank location. no odor from soil pile. spoke with Rick today. asked him to sample monitoring wells and to submit letter with details about depth of excavation, observation at end of excavation and disposal manifest for soil pile. 11/28/06-Hiralkumar Patel. received email from Rick (rweaver@contechservices.net). he took groundwater samples from all four wells on 11/24/06. will submit lab results by 12/18/06. 12/20/06-Hiralkumar Patel. spoke with Rick. he got sample analyticals and will fax. Rick will send full report in first or second week of jan. 07. received sample analyticals in email. unclear copy of lab analyticals. waiting for final report. 01/02/07-Hiralkumar Patel. sent email to Rick requesting updates on report. 01/09/07-Hiralkumar Patel. left message for Rick about closure report. 01/10/07-Hiralkumar Patel. received message from Rick. he is waiting for documents from his geologist regarding groundwater depth, flow direction etc. once he gets these informations, Rick will send report. 03/01/07-Hiralkumar Patel. spoke with Rick. he hasn't got groundwater data from his geologist. asked Rick to send report with other information. left message for Mr. Sabin at Thor Equities. 03/22/07-Hiralkumar Patel. received site investigation report from Rick. abstract: - source of petroleum release was stopped in mar. 06 when the UST was removed from service (not from ground) and cleaned out - found leaking connection in fuel line during tank closing activities - direction of groundwater flow at the subject site was found to be south-southeast towards the ocean (site plan shows towards south-southwest ?????) - at the point just outside the boiler room, the supply and return lines had been spliced and some fuel had been released at the joint - inspection of tank walls revealed corrosion, but no obvious holes or breaches - tank removed and soil was excavated from the area under and around the tank to the water level - oil staining was observed on the sidewalls of the excavation, just above the apparent water level - extent of soil removal was limited to the north by proximity to the rear building walls, load-bearing footings for the rear fire escape; to the south, space limitations in the alley for turning, stockpilling and site access limited the excavation - removal of additional soil will be feasible during site demolition activities - soil at the perimeter of the excavation contained visual staining and obvious product impact, so NO CONFIRMATORY CLEAN SOIL SAMPLES were analyzed. two sets of groundwater sampling done at site (09/14/06 and 11/24/06). contamination level decreased over a period of time. spoke with Rick. he doesn't know whether his client baught this property or not. but he recommended regular monitoring of site through water sample until building gets demolished and at that time they will remove remaining contamination. Rick asked to call Cory Elbaum (212-529-5544) at Thor equities. left message for Mr. Elbaum. 06/14/07-Hiralkumar Patel. left message for Mr. Elbaum. 06/19/07-Hiralkumar Patel. received call from Mr. Elbaum from Thor Equities. Mr. Elbaum works for property owner. they recently baught this property and taking responsiblity of any remediation on-site. asked Mr. Elbaum to submit monitoring data, for existing wells on-site, till date. Cory Elbaum Ph. (212) 529-5544 email: celbaum@thorequities.com as per Mr. Elbaum, existing building will be demolished in couple of months and at that time they will

COMMERCIAL (Continued) **S107523406**

remove all contaminated soil and treat any leftover. 10/11/07-Hiraklumar Patel. spoke with Mr. Elbaum. they haven't demolished building yet and not sure when will it happen. asked Mr. Elbaum to contact the department once they decide dates for demolition. property owner: Ramin Coney LLC c/o Thor Equities Att. Peter Lockhart 25 West 39th street New York, NY 10018 Ph. (212) 529-5055 01/08/08-Hiralkumar Patel. received report from Rick with results of groundwater sampling. all four wells were sampled in July 2007. found minor contamination in groundwater. left message for Mr. Elbaum to provide demolition schedule and removal of remaining contamination in soil, around tank. 07/17/08-Hiralkumar Patel. went to site. site is currently closed (except stores in front) and no demolition happened. left message for Sam Steven at Thor Equities. 07/18/08-Hiralkumar Patel. received call from Mr. Byrne, property manager. as per him, Thor equities baught this property about four years ago. he mentioned that property owner is planning to demolish current building and will redevelope it, but doesn't know when this will happen and what will be on-site. Chuk Byrne **property manager** GVA Williams **management company** 380 Madison Avenue New York, NY 10019 Ph. (212) 716-3713 (347) 668-6400 (C) Fax (212) 716-3800 email: cbyrne@gvawilliams.com spoke with Jim Holloway (212-432-3031) at Thor equities. he mentioned that they have plan for new building, but doesn't know much. he asked to contact Mr. Leclair, property owner, after 07/21/08. Eric Leclair **property owner** Thor Equities PH. (212) 529-8750 (O) (646) 831-1240 (C) 09/19/08-Hiralkumar Patel. spoke with Eric. he asked to contact Mr. Sabim. Sam Sabim Thor Equities PH. (212) 529-5055 Ext. 7413 left message for Mr. Sabim. 10/02/08-Hiralkumar Patel. received call from Mr. Byrne from GVA Williams. 11/06/08-Hiralkumar Patel. sent email to Mr. Byrne to call back. 07/06/09-Hiralkumar Patel. 1:35 PM:- left message for Mr. Byrne 1:39 PM:- left message for Mr. Sabim. 1:40 PM:- spoke with Eric. he is out of office and will call back once reach to office. 2:56 PM:- received message from Kevin (917-865-1206) from Thor Equities. 2:57 PM:- received message from Mr. Byrne. 07/07/09-Hiralkumar Patel. 12:34 PM:- left message for Kevin. 12:37 PM:- spoke with Mr. Byrne. he asked to send email/letter with requirements for further investigation. 2:15 PM:- received call from Dan Jennings from Thor equities and John from Langan. John requested copies of previous report and will submit work plan for future investigation/remediation. Dan Jennings Thor Equities email: DJennings@thorequities.com John M. Gavras Langan Engineering & Environmental Services Ph. (212) 479-5406 (917) 968-6779 email: jgavras@langan.com 2:55 PM:- sent email to John with copy of available reports. email copied to Mr. Jennings. asked John to send work plan for soil/groundwater investigation along fill/supply/return lines, re-survey of existing wells and sampling of existing wells. 07/29/09-Hiralkumar Patel. 1:57 PM:- sent email to Mr. Gavras and Mr. Jennings requiring submission of work plan. 2:25 PM:- received email from Mr. Gavras. will submit work plan by 08/07/09. 08/04/09-Hiralkumar Patel. 4:17 PM:- received message from Mr. Gavras. 08/05/09-Hiralkumar Patel. 9:46 AM:- spoke with Mr. Gavras. he is proposing for soil investigation along underground supply/return and fill lines and groundwater sampling. he will submit work plan by end of 08/07/09. 09/25/09-Hiralkumar Patel. 10:31 AM:- left message for (and sent email to) Mr. Gavras inquiring about work plan. 10/06/09-Hiralkumar Patel. 10:28 AM:- received call from Mr. Senh from Roux associates. Roux associates has been hired by owner

COMMERCIAL (Continued) **S107523406**

for required work. Mr. Senh inquire about what work needs to be done. explain Mr. Senh that heavy soil contamination left in tank excavation sidewall which could not be removed as it is close to foundation wall. as this site will be redeveloped in future and based on groundwater sampling data, asked Mr. Senh for quarterly groundwater sampling/gauging (including flow direction) until development occurs. Sin Senh Roux Associates Ph. (631) 232-2600 (O) (516) 523-0291 (C) Fax (631) 232-9898 email: ssenh@rouxinc.com 4:00 PM:- received email from Mr. Senh confirming earlier discussion and will submit work plan for quarterly groundwater sampling. 10/26/09-Hiralkumar Patel. 12:16 PM:- received email from Mr. Senh. Roux associates will submit a workplan for quarterly monitoring this month for approval. they are currently planning on having the groundwater samples from the four monitoring wells analyzed for STARS VOCs (including MTBE) and STARS SVOCs. Mr. Senh inquired whether any QA/QC samples are required. 10/27/09-Hiralkumar Patel. 10:25 AM:- sent email to Mr. Senh and asked to collect QA/QC samples. 11/02/09-Hiralkumar Patel. 3:16 PM:- received email from Frank from Roux associates with quarterly groundwater sampling work plan. Frank Cherena Roux Associates, Inc. Ph. (631) 232-2600 (O) (631) 445-0357 (C) Fax (631) 232-9898 email: fcherena@rouxinc.com 11/12/09-Hiralkumar Patel. 3:45 PM:- sent email to Frank approving proposed work plan. asked him to submit work schedule. email copied to Mr. Senh and Ms. Park (at Thor Properties). Regina Park Thor Properties, LLC. email: rpark@thorequities.com 01/19/10-Hiralkumar Patel. 2:39 PM:- received call from Frank. they collected groundwater samples in Dec. 2009 and currently reviewing groundwater results. will submit report by 02/15/10. 04/02/10-Hiralkumar Patel. 11:42 AM:- spoke with Frank about report. he mentioned that report is with owner for review and will submit by end of 04/09/10. 04/07/10-Hiralkumar Patel. received email from Frank (at 5:06 PM on 04/06/10) with report. Roux associates gauged and sampled three wells (MW-1 to MW-3). well MW-4 was destroyed due to site regrading. no contamination found in groundwater samples. groundwater flows to the south. no product found in any well. Frank also mentioned that they have collected groundwater samples from wells at the end of Mar. 2010, for first quarter of 2010 and waiting for results. 06/29/10-Hiralkumar Patel. 4:22 PM:- spoke with Frank regarding quarterly groundwater monitoring report. he has sent report to his client for review and waiting for response. 07/27/10-Hiralkumar Patel. received email from Frank including quarterly groundwater sampling report and remedial action plan. abstract of quarterly gw sampling report: - period: Feb. to Apr. 2010 - free-phase product was not observed in any wells - found VOC contamination in well MW-2, which is downgradient from the former tank location groundwater analyticals: ----------MW-2 Ethylbenzene----------36 Xylene----------67 1,2,4-Trimethylbenzene---------440 1,3,5-Trimethylbenzene----------75 Naphthalene----------290 abstract of remedial action plan: - demolition of the building at the site will be conducted in Fall 2010 - will remove remaining contaminated soils - depth of excavation is anticipated to be approx. 6 ft below land surface and/or no more than one foot into a water table - additional excavation will be conducted based on results of endpoint samples - plan does not intend to address any groundwater contamination at the site due to the negligible concentrations of compounds detected to date Frank mentioned that they have collected water samples for second quarter

COMMERCIAL (Continued) **S107523406**

of 2010 and waiting for results. 07/28/10-Hiralkumar Patel. 11:09 AM:- sent email to Frank. informed him that the proposed RAP looks fine, but the department may require additional soil and groundwater investigation/remediation based on results of endpoint soil samples and observations during the work. asked him to notify the department prior to backfilling the excavation. asked him to submit work schedule for building demolition and beginning of soil excavation. 09/10/10-Hiralkumar Patel. 3:08 PM:- spoke with Frank. Frank mentioned that building demolition might have done and soil excavation could start in Oct./Nov. 2010. asked Frank send updates after confirming schedule with owner. 10/15/10-Hiralkumar Patel. 1:30 PM:- received email from Frank including results of 2nd quarter groundwater monitoring. Frank mentioned that building demolition is scheduled to start shortly and will be completed in November. RAP activities will start shortly after demolition. Frank will send schedule. sampling for third quarter has been completed and waiting for lab results. abstract of quarterly gw sampling report: - period: May to Jul. 2010 - free-phase product was not observed in any wells - found VOC contamination in well MW-2, which is downgradient from the former tank location groundwater analyticals: ----------MW-2 Ethylbenzene----------24 Xylene----------43 1,2,4-Trimethylbenzene---------180 1,3,5-Trimethylbenzene----------20 Naphthalene----------140 02/07/11-Hiralkumar Patel. 4:04 PM:- received email from Frank with results of third quarter groundwater sampling. Frank mentioned that on-site building has been demolished and further cleanup of any soil contamination will begin on 02/16/11. abstract of quarterly report: - period: Jul. 2010 to Sep. 2010 - free-phase product was not observed in any wells - found VOC contamination in well MW-2, which is downgradient from the former tank location groundwater analyticals: ----------MW-2 Ethylbenzene----------16 Xylene----------43 1,2,4-Trimethylbenzene---------160 1,3,5-Trimethylbenzene----------15 Naphthalene----------110 02/15/11-Hiralkumar Patel. 10:41 AM:- received message from Frank. they will be on-site tomorrow for some test pits to collect soil samples for waste disposal. 02/16/11-Hiralkumar Patel. 1:16 PM:- left message for Frank. 3:37 PM:- received call from Frank. he mentioned that they collected some soil samples for waste characterization. once get results back, they will start excavation probably next week. Frank will call by next week with schedule. 03/02/11-Hiralkumar Patel. 2:50 PM:- received call from Frank. they are still waiting for NYC DOB permit for soil excavation. Frank will call back once permit is issued. 03/23/11-Hiralkumar Patel. 12:57 PM:- spoke with Frank. they are still waiting for DOB permit. 04/27/11-Hiralkumar Patel. 2:38 PM:- received call from Frank. they will start excavation tomorrow and hoping to finish in one day. scheduled a site visit at 9:30 AM on 04/29/11. 04/29/11-Hiralkumar Patel. 9:30 AM:- visited site. met Frank. inspected excavation area where former tank was located. found clean soil in excavation sidewalls. found water in bottom of excavation. no sheen found on water. Frank collected total of five endpoint sidewall samples and one endpoint bottom sample (before excavation filled with water). asked Frank to collect water sample from excavation and from existing three wells. Frank mentioned that he will forward result of groundwater samples from last quarter of 2010. based on observation during the site visit, approved backfilling of excavation. 05/12/11-Hiralkumar Patel. received 2010 fourth quarter sampling report from Frank (at 5:16 PM on 05/11/11).

COMMERCIAL (Continued) **S107523406**

abstract of quarterly report: - period: Oct. 2010 to Dec. 2010 - free-phase product was not observed in any wells - found VOC contamination in well MW-2, which is downgradient from the former tank location groundwater analyticals: ----------MW-2 Ethylbenzene----------5 Xylene----------13 1,2,4-Trimethylbenzene----------60 1,3,5-Trimethylbenzene----------4 Naphthalene----------30 06/29/11-Hiralkumar Patel. received spill closure report from Frank (at 7:13 PM on 06/28/11). 07/06/11-Hiralkumar Patel. reviewed spill closure report. a 16 ft wide by 18 ft long and 5 ft deep area was excavated and total of 179.31 tons of petroleum-impacted soil was transported off-site. collected five endpoint sidewall soil samples (two from southern sidewall due to irregular shape). no contamination found in endpoint soil sample except some SVOCs in one sample. also collected water sample from excavation bottom and existing three wells (MW-1, MW-2 and MW-3). minor VOC contamination found in groundwater sample from MW-2 only. based on all available information, case closed. 10:27 AM:- sent SCL to Mr. Yachmetz at Thor properties. letter emailed to Mr. Yachmetz, Frank and Sin. Jeffrey Yachmetz Thor Properties,LLC. 25 W 39th Street, 10th Floor New York, NY 10018 email: jyachmetz@thorequities.com"

Hazardous Waste Summary:

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Violation Status: No violations found

FINDS:

Registry ID: 110056505884

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"4/21/2005 Sangesland called the office of NY Plumbing - Spill is contained and under control. Greg Quattlander will return the call ASAP. - Need to send Contaminated Soil Letter. 4/28/2005 Sangesland made followup call to NY Plumbing. Project is getting large Two large #6 oil tanks have been pumped out and are being cleaned. They will be tested soon . NY Plumbing is excavating contaminated soil and has designed an Oil/water separater for the site. DEP is reviewing oil/water separator planss to give a permit to pump waste water into

CON EDISON MANHOLE 1538 (Continued) **S106868322**

the sewer. Working on the site daily 6AM -3PM 12/20/05 Sharif// Case was transferred to Koon Tang for reassignment. 05/16/06: This spill is transferred from Koon Tang to Q.Abidi. Contacted to Mr. Gregory Quattlander (718)441-6800. He will send the package of the spill to me by mail. -Qa 05/31/06: Contacted to Gregory Quatlander and asked about Grab sample. He said that they took Grab sample from the bottom of the tank (bottom of excavation) that is end point sample. He will find out about analytical report and he will call me back. -QA 06/02/06: Mr. Gregory Quatlander sent me a analytical report of Grab samples. They have collected four end point samples 01A, 02A, 03A & 04A at 8ft deep. The analytical report showed VOCs and SVOCs are under the excedances of NYSDEC limit. Soil samples are clean. but there should be five samples one soil sample should be at the center. So it is asked to mr. Gregory to send a diagram. -QA 06/09/06: Reviewed the following reports and sent e-mail to Mr. Gregory Quattlander (PHCC, New York). 1. Subsurface Investigation and Petroleum Contamination Delineation by EEA, Inc. 2. Soil Samples Analytical Report by American Analytical Laboratories, LLC 3. Remediation and Closure Report by Gregory Quattlander, PHCC , New York The following steps are necessary for closing this spill: (1) Submit a diagram showing the excavated area and the locations of grab samples. (2) Perform another round of groundwater sampling. The monitoring wells should be surveyed and depth to water gauged to determine the groundwater flow direction. (3) Provide the waste manifests for off-site disposal of soil from the area 126 feet long by 65 feet wide which was excavated to a depth of 14 feet as mentioned in the Remediation and Closure Report. (4) The report mentioned removal of free product by an oil / water separator. Where is the oil water separator located? How it is recovering product, and how much product has it recovered ? The NY Plumbers report does not provide this information.After completing the above work, submit a report for my review. Please feel free to contact me if you have any questions.-QA 04/10/07: Mr. Phillip Faicco (718)441-6800 Extn. Ext 140 from New York Plumbing Heating Cooling Corporation called me and said that he will take one week to work on the spill of Luna Park. After completing work he will send a report for my review. -QA 07/07/06: Recieved Report with diagram from Mr. Gregory Quattlander by mail. -QA 07/10/06: Reviewed report and sent e-mail to Mr. Gregory Quattlander. The following steps are very important to close the spill: 1. Provide a scaled diagram indicating North, showing the excavated area, the location of the oil / water separator and showing the groundwater monitoring wells. 2. The wells should be surveyed to determine groundwater flow direction. 3. You mentioned in your previous report that an area 126 feet long by 65 feet wide was excavated to a depth of 14 feet. According to these dimensions it should be 4,247 cubic yards excavated. But manifests show 665.34 tons. This is too little, please clarify or verify the dimensions of the excavated area. After completing the above work, submit a report for my review. -QA 03/16/07: Called Mr. Gregory Quatlander at(718)441-6800 he was not there. Left message to call me back. -QA 03/19/07: Called Mr. Gregory Quatlander he was not available, left message to call me back regarding information of the spill. -QA 04/10/07: Mr. Phillip Faicco (718)441-6800 Extn. 140 from New york Plumbing Heating Cooling Corporation called me and said that he will take one week to work on the spill of Luna Park. After completing work, he will send report for my review. -QA 04/16/07: Mr. Phil Faicco sent me a letter regarding spill (Luna Park Housing

CON EDISON MANHOLE 1538 (Continued) **S106868322**

Corporation)with a scaled diagram showing groundwater wells and notes, he mentioned although a groundwater flow direction was not established, it is assumed that the groundwater flow direction on site is towards the nearest source of water. Which is Coney Creek, Based on the USGS published water-Table altitude map for Kings and Queens counties. Oil Seperator was used during Excavation and no longer on the Job Site. Although the excavation was 14ft below grade, the top 4ft was clean soil. The actual excavated soil was 80ft x 40ft x 10ft deep, which totals 1185 cubic yards. End point soil samples are clean and groundwater samples are also clean. On the basis of discussion with Jon Kolleeny (Supervisor)regarding the spill and the information provided by Mr.Gregory Quatlander and Mr. Phil Faicco I closed this spill. -QA "

Remarks: "CLEAN UP IS IN PROCESS. LEAK IN THE RETURN LINE ON THE TANK."

Oxygen releasing compound (ORC) socks were installed in MW-1 and MW-4 on 12/10/2003. The depths to groundwater ranged from 4.44 to 7.44 feet below grade. Groundwater flow direction was towards the east. No free product was detected in any of the monitoring wells. Based on the groundwater sampliny data of this report and based on overall downward trend of chemical concentrations of compounds over the last three sampling events, and no sensitive receptor is located up and down-gradient of MW-1, this spill is closed."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	1
Tank Id:	242812
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

	H00 - Tank Leak Detection - None
	J02 - Dispenser - Suction Dispenser
	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	G01 - Tank Secondary Containment - Diking (Aboveground)
	L00 - Piping Leak Detection - None
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	F01 - Pipe External Protection - Painted/Asphalt Coating
	K00 - Spill Prevention - None
	E01 - Piping Secondary Containment - Diking (AG only)
	D11 - Pipe Type - Flexible Piping
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/15/2008
Capacity Gallons:	250

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Material Name: #2 fuel oil (on-site consumption)

Tank Number: 1
Tank Id: 258070

Equipment Records:

H02 - Tank Leak Detection - Interstitial - Manual Monitoring
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
J02 - Dispenser - Suction Dispenser
G12 - Tank Secondary Containment - Double-Walled (AG only)
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Investigative Work Plan submitted on June 10, 2009. 6/09/10: J.kann - comments on the work plan were emailed to NYCHA (edoced). revised plan due July 10. 08/02/2010: J.Kann - revised work plan submitted July 27, 2010. Plan reviewed approved in an email of 8/2/2010. 2/4/11: J.Kann - SAR received on 1/28/11 and edoced. 10/20/11: J.Kann - comments sent to NYCHA on the SAR. One additional sample must be collected north of the tank. 10/27/11: J.Kann - observed collection of sample north of the tank. NO odor or visible contamination noted. NYCHA sent soil and groundwater grab samples to laboratory for analysis. 11/10/11:J.Kann - results of 10/27 sampling submitted. Noted that samples were only analysed for VOCs. Instructed NYCHA that SVOC analysis must also be done. 12/1/11: J.Kann - received results of SVOC sampling and a letter requesting closure of the spill. Reviewed data. Minor SVOCs detected, no VOCs detected. Sample was collected from the fill port area. No further action necessary. Spill closed. "

Spiller Name:	NORMAN ZABUSKY
Spiller Company:	CAREY GARDENS
Spiller Address:	2007 SURF AVENUE
Spiller Company:	001
Contact Name:	NORMAN ZABUSKY
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 10/28/03 ROSSAN, DDO: Called Norman who confirmed that spill is contained. DEP was informed of the 20 gallons of oil which went into the sewer. The rest of the oil is on concrete pavement and contained. The Mobile Boiler company on site is about to start the clean-up. No soil was impacted. Norman will call back with Up-date. Copy of spill report was given to Jon. Ed. 11/02/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/17/06: Reviewed NYCHA spill report along with invoice and manifest documents from Clean Venture, contractor hired to clean up spill. But according to report A.L. Eastmond cleaned up the spill. The dates on the invoice and manifest do not match the spill date. Cannot close out until the correct documents are submitted. - SK 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 09/27/06: Discrepencies in documentation noted above suggest possible confusion in NYCHA documents between this spill and spill 0400233. - JK 06/14/07: This site, based on address listed - 2007 Surf Avenue is actually Coney Island 1 (Site B) NOT Cary GArdens. This is likely the source of the confusion. Spill 0400233 was actually Carey Gardens. A.L. Eastmond did the cleanup at this site, according to NYCHA. The catch basin was vacuumed and affected areas cleaned. For this reason, the spill was closed. - J. Kann"

Hazardous Waste Summary:

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D011
. Waste name: SILVER

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Address:	180 E. RAILWAY AVENUE
Spiller Company:	001
Contact Name:	Not reported
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 10/21/03. J. Krimgold called Stanley Coven (owner) and left a message. 10/23/03. J. Krimgold spoke to Stanley. According to Stanly the spill was due to the flood in the area. He cannot recall how many gallons of oil was spilled, but stated that most of spillage was a mix of oil and flood water. Tyree was contracted to cleanup.

MICHAIN AUTO SHOP (Continued) **1001460244**

Stanley faxed an invoice and a canceled check from Tyree to support his findings. The invoice stated that Tyree indeed cleaned up this site by utilizing a vacuum truck and applying sorbent pads and a speedy-dri. Agreed that J. Krimgold will visit the site for an inspection on 10/28/03. 10/23/03. Also see spill # 8702382. YK. 10/28/03. J. Krimgold at site. Find no evidence of the old spillage. However, 3x 275 gal waste oil ASTs at this site are not registered with PBS. J. Krimgold requested owners of tanks to submit registration application to the Department. NFA letter regarding spill cleanup has been sent to Mr. Coven. "

Remarks: "WASTE OIL TANK OVERFLOWED DUE TO FLOODING-OIL LEAKED TO BASEMENT OUT BACK DOOR TO SOIL AREA-OWNER CONTRACTED-WILL CHECK AND START CLEAN-UP TOMORROW 12-15-92"

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: MICHAIN AUTO SHOP
Classification: Not a generator, verified

Date form received by agency: 02/18/1999
Site name: MICHAIN AUTO SHOP
Classification: Small Quantity Generator

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND

MICHAIN AUTO SHOP (Continued) **1001460244**

F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110055454057

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"December 23, 2005 A Contaminated Soil Letter was sent to: (Verizon Environmental Affairs Verizon New York 221 East 37th St,- 4th Flr New York, NY 10016) 12/29/05 - Raphael Ketani. I left a message for John Quatrale of Verizon ((516) 292-8166; cell (917) 846-4423) to call me regarding the spill site. 1/5/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that this was a tank removal project. He said the tanks have been removed and a revised PBS application was submitted to Nick Lombardo of PBS. He said that 300 cu. yds. of soil (375 tons)has been dug out and is presently stockpiled awaiting containerization and carting. The work was completed on 12/14. He added that groundwater is impacted and that they will put in wells. Mr. Quatrale said that Joe Sun of DEC Region 2 is the case manager for a number of Verizon sites. A report will be sent to Spills and to Mr. Sun once the analytical is received and all other work regarding the site is completed. 1/26/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that he was putting many Verizon site reports together. He said that this site's report was partially done. He said he was waiting for the soil and water analyticals. 2/16/06 - Raphael Ketani. I presented the Spill Report to Randall Austin, Chief Spills Engineer of Region 2, and explained that this case was dealing with groundwater contamination and that Mr. Sun of Region 2 Remediation was already dealing with this case. Mr. Austin transfered the case to Koon Tang of Remediation. 3/16/06 - reviewed the closure report from Verizon. Verizon hired ENvirotrac to remove a 4000-gallon diesel UST and found some contaminated soil. 375 tons of petroleum impacted soil was excavated and disposed of properly. End-point soil samples have no VOCs detected, only SVOCs were detected above the TAGM 4046, but consistent with urban backfill. GW sample taken at the bottom of the tank excavation shows all ND, except for a hit of MTBE at about 50 ppb. No sign of significant environmental impact. Spill closed. - KST "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	213353
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

C01 - Pipe Location - Aboveground
J00 - Dispenser - None

1956 LLC DBA TOMAT FLEET SERVICE (Continued) **A100298753**

E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
F06 - Pipe External Protection - Wrapped
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I01 - Overfill - Float Vent Valve
L00 - Piping Leak Detection - None
G07 - Tank Secondary Containment - Excavation Liner

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 04/19/1995
Capacity Gallons: 250
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 02/01/2013

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY. AFTER TANK WAS PULLED, HOLES DISCOVERED IN TANK BOTTOM, PRODUCT POOLED IN EXCAVATION PIT. VAC TRUCK PUMPED ABOUT 300 GALLONS OF PRODUCT FROM PIT, BACKHOE EXCAVATED A LOT OF GROSSLY CONTAMINATED SOIL, BUT THERE'S STILL A LOT OF CONTAMINATED SOIL, PROBABLY WITH PRODUCT ON WATER TABLE, LEFT BEHIND. EXCAVATION STOPPED BECAUSE THREATENED TO UNDERMINE ACTIVE DRIVEWAY. JK ALLOWED BACKFILLING OF EXCAVATION WITH UNDERSTANDING THAT RESIDUAL CONTAM. SOIL AND FREE PRODUCT WILL BE ADDRESSED AT SOME POINT IN THE NEAR FUTURE. END-POINT SAMPLES WERE COLLECTED FOR LAB ANALYSIS. SEE ALSO SPILL #9805012 (TANK TEST FAILURE) AND #9711638 (SOIL CONTAMINATED BY #2 FUEL OIL ENCOUNTERED DURING MONITORING WELL INSTALLATION). See also spill #9401508 (gasoline tank failure). Site is under remediation by LiRo Engineers under the NYCDDC Consent Order. - JK, 1/6/05. LiRo has installed and is operating a multi-phase extraction system at the site. Dissolved-phase groundwater contamination has decreased considerably, though free product continues to appear in several wells. System has been adjusted to focus on remaining hot spots, turning off extraction wells in relatively clean areas of the site. 3/01/05: DEC gave email approval of proposed soil boring locations for upcoming round of semi-annual soil monitoring to evaluate current soil conditions at the site. - JK 7/6/05: DEC reviewed Quarterly Monitoring Report for Dec. '04 through Feb. '05, with recommendation to shut down all extraction wells except EW-12, EW-13 and W-15, and to modify EW-15 to operate as an SVE well, in order to focus on remaining contamination. DEC issued letter approving these recommendations on 7/6/05. - J. Kolleeny 9/26/05: DEC reviewed Quarterly Monitoring Report for June through August 2005, presenting 3 proposed boring locations for upcoming round of soil sampling and recommending installation of ORC socks in wells MW-3 and MW-7. JK of DEC sent approval email on 9/26/05, but also asked that wells MW-10 and MW-13 (MTBE above stds. in April '05 but not sampled in July '05) be sampled in next groundwater monitoring event. - J. Kolleeny 12/07/06: Reviewed LiRo's last quarterly monitoring report for site, for Sept.-Dec. '05, dated Jan. 20, 2006. MPE system is shut down due to problem with liquid ring pump. Groundwater results show low levels of MTBE in wells MW-3, MW-7 & MW-13, and persistent inch or so of free product in MW-12 (product in MW-4, MW-11R comes and goes). LiRo recommended not replacing LRP, installing ORC socks in wells with MTBE, and bi-monthly vac truck visits to address free product in MW-12. Site transferred to Greyhawk/Roux. Reviewed Roux's first quarterly report, for April-June 2006, dated June 30, 2006. Free product present in MW-4 (0.06 ft. in 5/06, 0.09 ft. in 6/06) and MW-12 (0.19 ft. in 5/06, 0.39 ft. in 6/06); sheen in MW-11R in June '06. MTBE detected in MW-3 (110 ppb) and MW-7 (11 ppb), naphthalene

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

detected in MW-11R (11 ppb). Roux plans to use a bailer or Spill Buddy to recover product from MW-4 and MW-12; they recommend maintaining system shutdown status, evaluating alternative remedial options for remaining contamination, continuing quarterly groundwater sampling and monthly well gauging, and dropping wells MW-1, MW-2, MW-5, MW-6, MW-8, MW-9, MW-14 and MW-15 from groundwater monitoring program. Sent email to Brian Morrissey of Roux (copied Andy Ledins, Ed Looney of Greyhawk) asking that this site be added to agenda for upcoming meeting with DDC on Dec. 12, 2006. Will discuss site at meeting. - J. Kolleeny 02/08/07: Reviewed Roux's Quarterly report for July-Aug. '06, and received/reviewed email from Brian Morrissey of Roux on 2/7/07 stating: Here is an update regarding NYCDOS Brooklyn East 13; Spill #9808560: Product Levels/Groundwater Gauging: Monthly groundwater gauging and quarterly sampling are conducted. Although several site wells have historically exhibited free phase product, there are currently only 3 wells that routinely require replacement of absorbent socks for sheen control. As you may note from attached PDF file of groundwater gauging tables [in eDocs], only trace amounts of product have been detected sporadically in one well (MW-12) over past six months (0.01 ft in Aug. and 0.01 ft in Jan., no detectable product other months). Wells MW-04 and MW-11R have not exhibited any measurable free product, but do exhibit a sheen. Groundwater Results: As reported in Dec. 15, '06 quarterly report, groundwater results show that NYSDEC AWQSGVs were only exceeded in 4 monitoring wells (MW-01, MW-03, MW-04, and MW-14) with highest total VOCs being 88 ppb (MW-03). Also note that total VOCs of 51 ppb in MW-04 represent only minor exceedances for Isopropylbenzene, Naphthalene and tert-Butylbenzene. Monitoring well MW-11R exhibits only 10 ppb of MTBE, equal to its AWQSGV. No SVOCs were detected, with exception of MW-11R (5.4 ppb, Fluorene), far below its AWQSGV of 50 ppb. Based on these fairly clean analytical results, Roux Associates will attempt to take fingerprint samples of detected product in MW-04, MW-11R and MW-12 during next gauging round to determine if interface being detected by equipment is, in fact, petroleum product. Recommendations: Roux Associates would like to respectfully reiterate recommendations set forth at December 12, 2006 meeting and in Dec. 15, '06 Quarterly Monitoring: 1) Maintain remedial system shutdown status and secure system (to remain onsite). 2) Reduce groundwater sampling frequency from quarterly to semi-annual. 3) Remove SVOCs from sampling program, since SVOCs were detected in only one well and below NYSDEC AWQSGVs. 4) Remove monitoring wells MW-02, MW-05, MW-06, MW-07, MW-08, MW-09, MW-10 and MW-15 from sampling schedule since no compound, either VOC or SVOC, has been detected above NYSDEC AWQSGVs for more than two consecutive monitoring periods. 5) Reduce gauging frequency from monthly to quarterly, as sporadic, trace amounts of product are only detectable in one monitoring well (MW-12), and appear to be effectively controlled by use of petroleum absorbent socks. 6) Remove absorbent socks from MW-04 and MW-11R. If product reappears during the next subsequent gauging round, absorbent socks will be re-installed. 7) Obtain a sample for petroleum fingerprint analysis from MW-04, MW-11R and MW-12. I sent email approving these recommendations on 2/8/07. - J. Kolleeny 03/01/2007: This spill case was transferred to A. Doronova. - AD 03/12/2007: Reviewed site file. This site is in semi-annual monitoring stage. AD 04/24/2007: Received quarterly monitoring report dated April 11, 2007 by Roux. Report covers period October through December 2006. It states that, low-level residual VOC groundwater contamination remains in only four

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

MW on the site. During November 8 and 9 gauging events, odor was detected in wells MW-01, MW-07, MW-08, MW-13 and MW-14. On November 9, 2006, free-phase product appear in wells MW-04 and MW-12 and these two wells could not be sampled. But in the Product Thickness evaluation it states that no free-phase product was detected during the reporting period. (Statements conflict?)In total 14 groundwater samples were conducted on November 8 and 9, 2006. VOC were detected in only five of the 14 MW sampled. The NYSDEC AWQSGVs were exceeded only in four of the five MW. (MTBE - 97ug/L at MW-03). No SVOCs were detected in any of the MW. Based on the data Roux recommends to reduce the frequency of groundwater monitoring from quarterly to annual due low-level residual contamination remains only in four site MW. Spoke to J. Kolleeny regarding free-phase product statements conflict. Sent an email to B. Morrissey of Roux, where asked to clarify this issue; and also, as J. Kolleeny suggested, asked him to keep MW-07, which was previously approved to be removed from sampling program, and suggested to remove MW-01 instead. AD 04/26/2007: Received an email from B. Morrissey. He will clarify free-product statements conflict in the next QMR (1st quarter of 2007). In this report Roux will also comply with the recommendations approved by J. Kolleeny. AD 10/17/2007: Received semi-annual monitoring report. Will review. AD 11/14/2007: During the reporting period Roux performed two rounds of gauging (January and June 2007) and one round of groundwater sampling (January 2007). On the January gauging round, 0.01 feet of free-product was detected in well MW-12 and product sheen was detected in wells MW-04 and MW-11R. Absorbent socks were replaced in all these wells. Although MW-04 and MW-11R exhibited an apparent sheen, no VOCs were detected in MW-11R and naphthalene (9ug/L) was only detected VOC in MW-04. Therefore, Roux conclusion is that the product sheen detected in these two wells may not be petroleum related. But according to data from July 2005 sampling round a fingerprint analysis for a sample of free product from well MW-04 indicated it as a weathered No. 2 fuel oil. Groundwater analytical results: VOCs were detected only in four (MW-03, MW-04, MW-14 and MW-18) of the 15 wells sampled and at relatively low levels. MTBE (14ug/L) in MW-03; benzine (2ug/L) in MW-14 and MW-18; naphthalene (9ug/L) in MW-04. Based on the data Roux states that very low-level residual VOC groundwater contamination remain at the site. Roux recommends to conduct additional soil investigation to determine the current soil quality conditions. An additional site investigation work plan proposes to advance ten soil borings in the historically most impacted soil locations. After evaluation of the results of investigation Roux will determine whether the site should be considered for closure. AD 11/20/2007: Spoke with Jon Kolleeny regarding this site. He suggested to use vacuum truck for wells exhibiting free product and sheen. Spoke with B. Morrissey of Roux, asked him if they gauged the wells since June round. Roux gauged them in July and free product re-appeared in the wells MW-12 and MW-04. Product from MW-12 was identified as No. 2 fuel oil. Asked him if they can apply vacuum truck to these wells. Brian said that the amount of the free product is too small for such measure and that they will try to do bailing. Roux going to perform next gauging event in a week. Asked him to collect free product sample for fingerprint analysis. Later sent an email to Afsar Samani approving ASIWP with a suggestion to apply vacuum truck to wells historically exhibiting sheen and free product. AD 08/08/2008: Received a Semi-Annual Monitoring report. Will review. AD 10/22/2008: Reviewed the report.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Roux performed additional site investigation from January 14 to 15, 2008. The scope of work included advancing if 9 soil borings, followed by collection of soil samples. According to the report: Soil quality: No VOCs were detected above RSCOs in any of the 18 soil samples collected from 9 soil borings. Three SVOCs were detected in only one soil boring (RXSB-10) slightly above their RSCOs. Groundwater quality: In April 2008 only Naphthalene was detected in MW-04 (12ppb) No VOCs were detected in the remaining six wells sampled (MW-03, -07, -13, -14, -17 and -18). Based on the historical GW quality data, the majority of the site wells stabilized at non-detect conditions. Free-phase product was detected in two wells during the monitoring period: MW-04 (0.01' in July 2007; and MW-12 (0.01' in July 2007, and 0.03' in November 2007 and April 2008). Based on this data, Roux concludes that: resuming operation of the MPE system would not be efficient of cost effective due to high level of achieved cleaup; low-level residual VOC GW contamination remains in one onsite well near the source area, in which free-phase product intermittently appears; residual SVOC soil contamination slightly above NYSDEC RSCOs remains in a localized area; natural attenuation is apparently taking place at the site. Roux recommends: remove wells MW-03, MW-13 and MW-18 from the GW sampling program due to non-detect VOCs in these wells for two consecutive events; remove SVOCs from the GW sampling program; reduce the frequency of the gauging program; decommission and dismantle the MPE; use petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis. Will prepare a letter. AD 11/10/2008: Sent an email to Afsar Samani. Approved the recommendations with some comments. AD 04/28/2009: Received a Semi-Annual Monitoring report for July 2008 - February 2009 period. DL pdf copy to eDocs. Will review. AD 05/21/2009: Reviewed the report. During the reporting period, on July 23 and October 10, 2008, Roux Associates performed gauging of site monitoring wells. Monitoring wells MW-01 and MW-16 have been paved over and MW-11R was found to have an irretrievable metallic obstruction at 3.91 feet bls; thus, they can no longer be gauged. In addition, MW-06 was not accessible during the July and October 2008 gauging events due to NYCDOS equipment. On July 23, 2008, a petroleum absorbent sock was installed in monitoring well MW-04 and one was replaced in MW-12. Due to the presence of free product on October 10, 2008 the socks were replaced. Groundwater Sampling: Following the October 2008 gauging event, Roux Associates performed groundwater sampling of site monitoring wells. Groundwater flow at the site is in a general north-northwesterly direction on the south side of the site and in a southerly direction beneath the site, under these possibly tidally-influenced conditions. Product Thickness: Free-phase product was detected in two wells during the monitoring period in October 2008: MW-04 (0.01 foot); and MW-12 (0.02 foot). Groundwater Quality: In October 2008, one VOC (MTBE) was detected in monitoring wells MW-03 and MW-07, at concentrations of 9 and 7 micrograms per liter (?g/L), respectively. Neither concentration exceeds the NYSDEC AWQSGV for MTBE of 10 ?g/L. No additional VOCs were detected in the remaining four wells sampled (MW-13, MW-14, MW-17, and MW-18). Based on the historical groundwater quality data presented in the report, the majority of the site wells appear to have stabilized at non-detect conditions. Residual low-level VOC contamination was detected in two onsite monitoring wells (MW-03 and MW-07), which have been fluctuating at low levels since at least April 2005. Based on the conclusions cited above, Roux Associates recommends the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

following: 1. Replace petroleum absorbent socks in monitoring wells MW-04 and MW-12 on an as-needed basis. 2. Decommission and dismantle the MPE system pending NYSDEC approval. 3. Continue semi-annual groundwater monitoring (gauging and sampling) until free-phase product is no longer detected in MW-04 and MW-12 and confirmation site-wide VOC groundwater sampling is conducted in support of a request for NFA. Some of these recommendations, such as decommission and dismantling of the MPE; usage of petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis, were approved by DEC in November of 2008. AD 02/24/2011: Received a Semi-Annual Monitoring report (July to December 2010). DL the report to eDocs. Will review. AD 03/24/2011: Reviewed the report. In February 2010, NYCDDC replaced Greyhawk/Roux with LiRo Engineers, Inc. (LiRo) to serve as construction manager (CM) for the Brooklyn East 13 site. On March 17, 2010, LiRo conducted a site reconnaissance, completed well inspections and gauged accessible site monitoring wells. During the gauging event, MW-04 was noted as not destroyed and an absorbent sock was observed in the well. On August 4, 2010, LiRo conducted quarterly groundwater gauging of fourteen of fifteen active Site monitoring wells. GW flow indicate radial flow outward from a hydraulic high centered in the southwest portion of the site in the vicinity of MW-02, MW-04, MW-06 and MW-15, with an underlying generally westward gradient. On September 23, 2010, LiRo conducted semi-annual groundwater sampling and collected samples from five of six wells: MW-03, MW-04, MW-07, MW-14 and MW-17. Approximately 0.10 feet of free product was measured in MW-12 and GW sample was not collected from this well. The oil was identified as a weathered #2 fuel oil by fingerprint analysis. On January 7, 2011 EFR was conducted at monitoring wells MW-04 and MW-12. Approximately 105 and 109 gallons of total fluids were removed by EFR from MW-04 and MW-12. Prior to EFR, some visible indications of free product were observed on the water level probe at MW-04 and MW-12, but no measurable product thickness was observed in either well. After the completion of EFR, there were no visible indications of free product observed at either well. Groundwater gauging was conducted on 11 of 15 monitoring wells on January 7, 2011. Groundwater samples were collected from 5 of 6 wells and analyzed of STARS list VOCs, MTBE and Naphthalene. A sample was not collected from MW-12 due to the presence of approximately 0.10 feet of a LNAPL. The MPE system, which is currently inactive, consists of a network of 17 extraction wells (EW-01 through EW-17) from which free phase product, contaminated groundwater and soil vapors were extracted using a liquid ring vacuum pump. Dismantling and removal of the system will be deferred until confirmation of the absence of free product in Site monitoring wells. The most recent soil investigation was completed in January 2008. A total of 18 soil samples were collected from 9 soil borings and submitted for STARS list VOCs and SVOCs. No VOCs were detected above their NYSDEC TAGM guidance values for soils in any of the 18 soil samples. Three SVOCs were detected in only one soil boring (RXSB-10) at concentrations slightly above their respective guidance values. The highest TVOCs and TSVOCs were measured in the sample from RXSB-05 (6 to 8 feet bgs) at 7,830 ppb and 47,800 ppb. There were, however, no TAGM 4046 exceedences in the sample from RXSB-05. One or more VOC were detected in 2 of 5 monitoring wells sampled at concentrations above their respective TOGS guidance value. Monitoring well MW-04 exhibited the highest TVOCs at 124.53 ppb and MW-03 of 13.88 ppb ith only one elevated compound - MTBE. Based on the data, LiRo concludes the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

following: " Moderate levels of TSVOCs were observed in soil samples collected in January 2008 from RXSB-05 and RXSB-10, however only three SVOCs were found above their NYSDEC standards in RXSB-10 soil samples. " Recent and historic groundwater sampling results show de-minimums VOC concentrations in MW-4 and MW-12. " Indications of a very thin free-phase product (i.e. sheen to 0.10 feet) have been historically observed in MW-04 and MW-12 with decreasing thicknesses and volumes over time. The recent observation of free-phase product in MW-12 was a weathered #2 fuel oil. LiRo recommends the following: " Prepare and submit a 6-month Summary Monitoring Report and an Annual Monitoring Report with recommendations for changes (as necessary) to the remedial program. Proposals " Conduct monthly enhanced fluid recovery (EFR) on MW-04 and MW-12, for the next six months. " Revise the current Site Monitoring Program (SMP) to semi-annual gauging of all wells, and semiannual sampling of only MW-4 and MW-12 for VOCs, MTBE and Naphthalene. " Petition for Spill Closure if supported by EFR program and sampling results. AD 09/30/2011: Received a Semi-Annual Monitoring report (January to June 2011). DL the report to eDocs. Will review. AD 10/11/2011: Reviewed the report. It states that between January 7, 2011 and July 13, 2011, LiRo conducted five EFR events at site wells MW-04 and MW-12 in an effort to induce mobilization of small volumes of free-phase product presumed to remain in the vicinity of these wells. An event was not conducted in February 2011, due to weather conditions and access restrictions. Trace amounts of free-phase product (i.e. visible sheen or beads on probe) were observed diring January 2011 EFR event in both wells, and during April EFR event in well MW-12, but no measurable thicknesses or quantifiable volumes were recorded. During the following May and July EFR events no free product was detected in these wells. The EFR efforts at the site was discontinued after the last event conducted on July 13, 2011. On April 22, 2011, LiRo conducted semi-annual groundwater sampling and collected samples from six wells: MW-03, MW-04, MW-07, MW-12, MW-14 and MW-17. Samples were submitted for analysis of STARS list VOCs, MTBE and Naphthalene. One or more VOCs were detected in 3 of 6 monitoring wells sampled at concentrations above their respective NYSDEC AWQSGVs. Monitoring well MW-04 exhibited the highest TVOCs at 45.12 ug/L. Excluding Naphthalene, monitoring well MW-07 exhibited a TVOC concentration of 13 ug/L with only one compound (MTBE) above its AWQSGV. Groundwater elevation contour maps, generated from both the January and April 2011 water level measurements indicate variable flow directions at the site, likely due to tidal influences, with an underlying generally westward flow direction. Typical hydraulic gradients observed at the site - range between approximately 0.023 feet per feet between MW-7 and MW-10 on January 7, 2011) and 0.004 ft/ft (as measured between MW-4 and MW-6 on April 22, 2011). Based on the information presented in this monitoring report, LiRo concludes the following: " The MPE system and post MPE remedial measures have successfully removed soil and groundwater petroleum contamination at the Site. " No VOCs were detected above guidance values in any of the 18 soil samples collected in 2008. " Dissolved phase VOC concentrations are near or below AWQSVGs with TVOC concentrations consistently below 130 ug/L. " No measurable thicknesses or volume of product was observed during routine water level measurements or during the 5 EFR events conducted at MW-04 and MW-12 throughout this monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the closure of Spill No. 9808560. Following

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

spill closure approval, Site monitoring wells will be decommissioned in accordance with NYSDEC CP-43, Groundwater Monitoring Well Decommissioning Policy. To discuss the spill closure request with J. Kolleeny of DEC. AD 11/21/2011: Discussed the spill closure with J. Kolleeny of DEC. Based on the soil and GW data provided it was decided to approve case closure. Issued and sent an approval letter to A. Samani of DDC. DL pdf copy of the letter to eDocs. Case closed. AD "

Remarks: "during an underground tank pull they encountered contaminated soil & its all been excavated - they have also backfilled - dec was on site [ACTUALLY, IT HASN'T ALL BEEN EXCAVATED - SEE DEC NOTES]"

DEC Memo: "A LiRo Engineers field geologist was preparing to abandon wells at the DOS Brooklyn East 13 facility located at 2012 Neptune Avenue, Brooklyn, NY, as part of our contract with the New York City Department of Design and Construction NYCDDC. This work was initiated in response to the recent closure of Spill No. 9808560. During pre-abandonment activities at former extraction well (EW-02), the geologist discovered approximately 1-foot of free product in the well casing. EW-02 is a 2-inch diameter extraction well for the former Multi-Phase Extraction (MPE) system shut-down in January 2004. See spill 9808560 01/06/2012: This spill case was transferred to A. Doronova. - AD Put site priority as P1. Sent an e-mail to S. Frank of LiRo requesting to submit all available data for the case to my attention. AD 01/13/2012: Received an e-mail from S. Frank of LiRo with an attached report detailing the status of spill #1109339. Report also includes IRM for the site. A hard copy of the report forwarded to DEC as well. DL the pdf copy of the report to eDocs. Will review. AD 01/17/2012: Reviewed the report. It states that in a letter dated October 21, 2011, the NYSDEC approved spill No. 9808560 closure and subsequently, LiRo initiated the abandonment of monitoring wells and 17 remnant extraction wells at the site on October 25, 2011 and abandonment proceeded from north to south, with the successful abandonment of monitoring wells MW-03, MW-07, MW-09, MW-10 and extraction wells EW-04 and EW-06. During the abandonment of extraction well EW-02 approximately 0.5 feet of free-product was observed. The product was described as used oil, opaque and black in color. Upon discovery, LiRo reported the new spill and Spill No. 1109339 was assigned. Further investigation exposed more residual free-product in other extraction wells (EW-02, EW-05, EW-08, EW-09 and EW-13). As reported in the field, the product appeared to have two different consistencies (i.e. originating from two different sources) one discolored black with a thick and viscous consistency (EW-02 and EW-05) and one with a light brown color, translucent appearance and a less weathered and less viscous consistency (EW-08, EW-09 and EW-13). Two product samples of the two different consistencies, were collected from two extraction wells (EW-02 and EW-09) on October 25, 2011, and submitted for petroleum finger-print analysis. Laboratory analytical results reported Lubricating Oil for the EW-02 sample and Weathered Diesel for the EW-09 sample. EFR events were conducted at the site on October 27, November 2 and December 19, 2011 and supplemental groundwater monitoring was conducted on October 27th, 31st and December 19th. Product thickness measurements were conducted in site wells and vacuum induced EFR was applied to extraction wells EW-02, EW-09, EW-11 and EW-13. It is suspected that the source of product observed in EW-02 is from improper handling and storage of waste oil at the site and the source of product observed in EW-09 is remnant contamination from the former remedial system or from Spill No. 9808560. LiRo states that the observations of product from either source represent small volumes and may be effectively remediated by the application of EFR as IRM. The proposed IRM includes monthly EFR with groundwater level and product thickness monitoring at the site between February 2012 and July 2012 to provide information and field data on the nature and volume of product at the site. A vacuum truck will be used to conduct EFR extraction on site monitoring and extraction wells that have measurable thicknesses of free-product during each event or as

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

indicated by monthly groundwater and product monitoring. At the end of the IRM period LiRo will make recommendations for further actions based on the results of the IRM. LiRo recommends re-opening the closed spill number (Spill No. 9808560) and maintaining the new spill (Spill No. 1109339) as separate spill numbers for the purpose of tracking the observations of two separate types of free-product at the site. Diccussed the WP with J. Kolleeny of DEC. The closed spill 9808560 will not be reopend. The site will have new spill number - 1109339. GW samples should be collected at the end of the proposed 6-month period. To issue an IRM WP approval letter. AD 01/18/2012: issued and sent an approval letter to A. Samani of DDC with the following remark: At the end of IRM period, groundwater samples should be collected from all wells from which LNAPL has been successfully removed, and from a selection of nearby monitoring wells, and submitted for laboratory analysis. The groundwater analytical data should be included in the summary report. AD 08/08/2012: Had a quarterly meeting with DDC and LiRo. Discussed the site. Monthly EFR events are conducted at the site. Evaluation of this IRM will be presented in 2nd quarter 2012 monitoring report. AD 11/16/2012: Received IRM report for the period January - September 2012. Will review. AD 12/21/2012: Reviewed the report. It states that the IRM performed thus far in 2012 (January through September) included monthly EFR with groundwater level and product thickness monitoring at the Site. EFR events during this monitoring period were completed in February through May, August and September 2012. A vacuum truck was used to conduct EFR extraction on Site monitoring wells and extraction wells that have measurable thicknesses of free-product during each event or as indicated by monthly groundwater and product monitoring. Hydraulic Monitoring During this monitoring period, groundwater gauging events were conducted on February 8, March 13, April 26, May 31, August 23 and September 10, 2012. Water levels were collected from non-abandoned, accessible monitoring and extraction wells. Groundwater elevation contour maps, were generated from both the February 2012 and September 2012 water level measurements. Contours indicate variable flow directions at the Site, likely due to tidal influences. Typical hydraulic gradients observed at the Site range between approximately 0.01 feet per foot (ft/ft) (as measured between MW-18 and MW-12 on February 8, 2012) and 0.003 ft/ft (as measured between MW-5 and MW-6 on September 10, 2012). Between January and September 2012 six EFR events were conducted in an effort to induce mobilization and remove small volumes of residual free-phase product remaining in the wells mentioned above. Varying amounts of free-phase product were observed, but no quantifiable removal volumes were recorded. The suspected source of product observed in EW-02 (and surrounding wells) is from improper handling and storage of waste oil at the Site (Spill No 1109339). The source of product observed in EW-09 (and surrounding wells) is remnant contamination from the former remedial system or from Spill No. 9808560. In general, there was measurable free-phase product observed at Site in monitoring and extraction wells EW-02, EW-05, EW-08, EW-09, EW-13 and MW-12. However, there is no distinct trend in measured product thicknesses for this monitoring period. On October 29, 2012, flooding occurred at the Site from Hurricane Sandy. On November 1, 2012, at the request of NYCDDC, LiRo attempted a Site visit to determine what impacts (if any) the hurricane had at the Site. DOS representatives refused access to the Site. NYCDDC is currently coordinating access with DOS to evaluate current Site

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

conditions. Groundwater samples will be collected, analyzed and submitted for the NYSDEC CP-51 list of VOCs, MTBE, Naphthalene and SVOCs (where applicable) when monitoring and extraction wells are free of petroleum product for six months. AD 12/10/2013: Received semi-annual IRM report for the periods: November 2012 to April 2013, and May 2013 to November 2013. DL the report to eDocs. Will review. AD 01/09/2014: Reviewed the report. It states that the scheduled EFR events for October 2012 through December 2012 were not conducted due to severe damage and flooding inflicted at the Site by Hurricane Sandy. During a November 1, 2012, Site walkover, conducted immediately after the storm, it was noted that a puddle of free-phase product (oil) of an unknown origin was in the road curb outside the Site. It was reported by the DSNY Site contact that the Site was closed and had been flooded by up to 7-feet of water and that the interior of the Site was contaminated by motor oil, waste oil and raw sewage. Access to the Site was not provided. During a November 30, 2012, follow-up Site visit to assess interior conditions, the DSNY Site contact stated that DSNY had not yet assessed the Site USTs or ASTs for damage or leakage. The DSNY Site contact noted that one (1) of the five (5) interior ASTs (the 275-gallon used oil AST) had become dislodged from its saddle and had been found floating on the other side of facility. The IRM EFR events and water level measurements resumed on January 9, 2013, and were conducted on a twice a month frequency between January 2013 and May 2013 and between September 2013 and November 2013. In June and July 2013 EFR events were performed on a monthly frequency and none were completed in August 2013 due to sub-contract issues. Between June 17 and 27, 2013, LiRo conducted a tidal influence study utilizing three (3) Site monitoring wells (MW-05, MW-08 and MW-17) and one extraction well (EW-14). On September 5, 2013, a new Spill was listed on the NYSDEC Database for the Site (Spill No. 1305932) with an unknown material and a reported cause of vandalism. The spill was called in during a floor drain/catch basin excavation when oil stained soil was observed. A separate Site Investigation Plan (SIP) for Spill Mo. 1305932 will be prepared and submitted to the NYSDEC after LiRo reviews proposed catch-basin excavation soil sample results. On November 26, 2013, LiRo collected supplemental fingerprint samples from EW-02, EW-05, EW-09 and EW-11. Conclusions: Between December 2012 and September 2013 fourteen EFR events were conducted in an effort to induce mobilization and remove residual free-phase product remaining in the wells with measurable product. Approximately 22,102 gallons of total fluids were removed from Site wells for the monitoring period (November 2012 to November 2013) for the IRM. Spill No. 1109339: For the monitoring period, there was measurable free-phase product (Waste Oil) observed at extraction wells EW-02 and EW-05. However, there was no distinct trend in measured product thicknesses due to the increase in thicknesses observed in EW-05 between June 2013 and September 2013 and subsequent decline. Spill No. 1305932: In general for the monitoring period, there was measurable free-phase product (Weathered Diesel) observed at Site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12. There was a distinct decreasing trend in measured product thicknesses from the December 2012 high to the end of this monitoring period. The suspected source of waste oil product observed in EW-02 and EW-05 is from improper handling and storage of waste oil at the Site (Spill No 1109339). The suspected source of product observed in EW-09, EW-08, EW-13 and MW-12 is remnant contamination from the former remedial

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

system from Spill No. 9808560 and is also associated with the oily soil reported for Spill No. 1305932. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect groundwater samples from all accessible Site wells and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. - Coordinate with the on-site DSNY representative to collect soil samples from the final catch basin excavation and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. Prepare a SIP after review of planned Site-wide groundwater sample results and catch basin soil sample results. There are no proposals that require NYSDEC approval. AD 07/24/2014: received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13 Garage, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 23, 2014. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a recommendation to reduce the groundwater sampling frequency from semi-annual to annual. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Craig T. Taylor Project Hydrogeologist LiRo Engineers, Inc. Will review. AD 08/05/2014: Reviewed the report. It states that the Site monitoring program (SMP) for the period of December 1, 2013 to May 31, 2014, included water level gauging from accessible Site wells, semi-annual sampling from nine (9) wells (MW-04, MW-05, MW-06, MW-08, MW-12, MW-13, MW-14, MW-17 and MW-18) and an EFR IRM at nine (9) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-04 and MW-12). All groundwater samples are submitted for analysis of CP-51 list VOCs and results are compared to the NYSDEC Division of TOGS (1.1.1). On October 25, 2011, abandonment of MPE system wells was initiated at the Site from north to south, however, the abandonment of extraction well EW-02 revealed approximately 0.5 feet of free-product within the well. The product was described as used oil, opaque and black in color. The completion of dismantling and removal of the system was deferred until freephase product is absent in remaining monitoring and extraction wells at the Site. Free product data: For the current monitoring period there was an overall decrease, albeit sporadic, in thicknesses in EW-08, EW-09, EW-13 and MW-12 from the December 2012/January 2013 highs to December 2013/May 2014 lows. The product thicknesses measured at EW-11 exhibited an anomalous rise, up to 3.12 feet, between January 2014 and April 2014. The thicknesses in EW-11 have remained below 0.10 feet for the last three EFR events of the monitoring period. GW data: For the reporting period, routine semi-annual groundwater gauging and sampling was completed by LiRo on April 17, 2014. LiRo conducted semi-annual water level gauging at accessible Site monitoring wells and collected nine (9) semi-annual groundwater samples from Site wells April 2014 groundwater analytical results were compared to NYSDEC AWQSGVs. One VOC (Benzene) was reported at a concentration above its respective NYSDEC AWQSGV at one well location (MW-17). Groundwater total VOC concentrations ranged from non-detect (ND) in five (5) locations

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

(MW-05, MW-06, MW-08, MW-12, and MW-13) to 10 micrograms per liter (?g/L) in monitoring well MW-17. A comparison of total VOC concentration trends between April 2011 and April 2014 shows low (i.e. less than 10 mg/L) concentrations of dissolved phase VOCs in site groundwater, with 8 of 9 sampled locations reporting all VOCs below their respective AMQSGVs in April 2014. All monitoring wells report a decreasing trend in VOC concentrations or no change with the exception of MW-18 which reported a slight increase in TVOC concentrations. EFR: Between December 2013 and May 2014 eleven (11) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 13,364 gallons of total fluids were removed from Site wells for the monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. These actions will be conducted as part of the routine monitoring program until proposals beloware approved by the NYSDEC: The following proposals require NYSDEC approval: 1) Reduce the frequency of groundwater sampling from semi-annual to annual. AD 03/13/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on March 13, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval for consolidation of Spill Number 1305932 into Spill Number 1109339. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 04/03/2015: Reviewed the report. It states that: EFR: For the monitoring period (June 2014 to December 2015) approximately 4,041 gallons of total fluids were removed from site wells by EFR. For the current monitoring period ten (10) EFR events were conducted. A 2nd event for July 2014 was not conducted due to site inaccessibility and after the 1st event for November 2014 due to NYCDDC budgetary constraints. Starting in January 2015, product removals will be completed by hand-bailing (i.e. wells with 2-inch or greater inner diameters) and/or eristaltic pumps (i.e. wells with less than 2-inch inner diameters) until the resumption of removal by EFR. Soil conditions: Oily soil was observed during the excavation of a Site catch-basin in September 2013 and subsequently Spill No. 1305932, was assigned to the site. LiRo coordinated with DSNY to collect soil samples from the final excavation. During this monitoring period five (5) soil samples (i.e. W1 through W4 and Bottom) were collected from a DSNY managed catch-basin excavation. All December 2013 soil samples were submitted for analysis of the NYSDEC s October 21, 2010, Final

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. One or more CP-51 list VOCs were reported at concentrations above SCLs in three (3) of five (5) December 2013 soil samples: W1, 5.5 to 6.0 feet bgs; W2, 5.5 to 6.0 feet bgs and W4, 5.5 to 6.0 feet bgs. Reported total VOCs ranged between ND in W3 sample to 27,000 ug/kg in the W2 sample. One or more CP-51 list SVOCs were reported at concentrations above SCLs in four (4) of five December 2013 soil samples: W2, 5.5 to 6.0 feet bgs; W3, 5.5 to 6.0 feet bgs; W4, 5.5 to 6.0 feet bgs and Bottom, 6.5 to 7.0 feet bgs. Reported total SVOC concentrations ranged between 15,560 ug/kg in the Bottom sample to 116,500 ug/kg in the W2 sample. Summary: On December 17, 2014, LiRo conducted groundwater gauging at accessible Site wells. The performance of field activities has been impacted at the site due to NYCDDC delays in funding for the new PW348-64 contract. As a result of these delays, groundwater sampling and November/December 2014 EFR events were not completed during this monitoring period. EFR Between June 2014 and December 2014 ten (10) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 4,041 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were typically below in EW-02 and EW-05 with an overall monitoring period average of 0.06 feet, when compared to the previous monitoring periods. The distinct decreasing trend in measured product thicknesses, from the December 2012 high to the end of this monitoring period at the site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12, has been maintained. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals: The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). As it was discussed and agreed at the quarterly meeting with DDC and LiRo, consolidation of the spills will be postponed till groundwater samples from the new spill will be collected. AD 12/21/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 21, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval for consolidation of Spill Number 1305932 into Spill Number 1109339. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on May 14, 2015, and September 23 to 24, 2015. A supplemental groundwater sampling event was also completed on January 23, 2015, in lieu of the 2nd 2014 sampling round not completed due to NYCDDC delays in funding for the new PW348-64 contract. For each of the three sampling rounds, LiRo conducted water level gauging at accessible Site wells. For the January 2015 and May 2015 sampling rounds LiRo collected eight (8) groundwater samples. For the September 2015 sampling round LiRo collected nine (9) groundwater samples. During the September 23, 2015, groundwater gauging event groundwater was observed between 3.44 and 5.41 feet bgs. Groundwater elevations ranged between -0.37 and 0.41 feet AMSL. Free phase product was detected in two (2) gauging locations: EW-09 and MW-02R, with thickness ranging between 0.17 feet (EW-09) and 0.19 feet (MW-02R). Groundwater Total VOC Trends: A review of total VOCs trends in the January 2015, May 2015 and September 2015 shows very low (i.e. less than 10 ug/L) concentrations of dissolved phase VOCs in Site groundwater, with all sampled locations reporting all VOCs below their respective AWQSGVs in all three sampling rounds. During the August 6, 2015, quarterly meeting with NYCDDC, NYSDEC and LiRo, the NYSDEC expressed concern that VOCs observed in the December 2013 catch-basin soil samples may be impacting groundwater and requested the completion of site-wide groundwater sampling. On September 11, 2015, two (2) replacement monitoring wells (MW-02R and MW-04R) were installed at the Site and both wells were developed on September 14, 2015. EFR: The performance of field activities had been impacted at the Site due to NYCDDC delays in funding for the new PW348-64 contract and as a result of these delays, EFR events were not completed between January 2015 and March 22, 2015. On March 2, 2015, March 9, 2015 and March 16, 2015, LiRo conducted hand-bailing and product removal using a peristaltic pump. However, due to the relatively small volumes removed (i.e. typically less than 5 gallons), the March 2015 removals via peristaltic pump are not included in EFR total fluid volume estimates. EFR events resumed at the Site on March 23, 2015. For the monitoring period approximately 16,685 gallons of total fluids were removed from Site wells by EFR. For the current monitoring period fifteen (15) EFR events were conducted. Overall, product thicknesses were within historic averages and with an overall monitoring period average of 0.03 feet, when compared to the previous monitoring periods. A June 2015 spike in the thickness measured in MW-12 warrants continued monitoring and EFR. September 2015 Replacement Well Soil Samples: A total of six (6) soil samples were collected from two (2) monitoring well soil borings (MW-02R and MW-04R) for analysis of the NYSDEC s October 21, 2010, Final Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. Two (2) VOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 7.0 to 8.0 feet bgs). Total VOC concentrations ranged between below the laboratory reporting limit (i.e. nondetect [ND]) in the MW-04R sample from 14.0 to 15.0 feet bgs and 39,020 mg/kg in the MW-02R, 7.0 to 8.0 feet bgs sample. Seven (7) SVOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 6.0 to 7.0 feet bgs). Total SVOC concentrations ranged between ND in 2 samples (MW-02R, 14.0 to 15.0 feet bgs and MW-04R, 14.0 to 15.0 feet bgs) and 102,470 ?g/kg in the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

MW-02R, 6.0 to 7.0 feet bgs sample. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Summary: With few exceptions, recent (September 2013/2015) and historic (January 2008) soil sample results report CP-51 list VOCs and SVOCs at generally low (i.e. less than 25,000 ug/kg TVOCs and less than 50,000 ug/kg TSVOCs) concentrations. These SVOC concentrations are typical for urban fill. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not appear to significantly affect groundwater dissolved phase concentrations. Based on the analysis and conclusions presented above, LiRo recommends the following: The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: -Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). -Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. -Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). AD 02/22/2016: In the recent report LiRo states that: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ?g/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ?g/kg total SVOCs) which is within the typical concentration range for urban soils. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not contribute to groundwater dissolved phase contamination. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Taking into consideration most recent results of soil and groundwater investigation, DEC decided to consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). Spill No. 1305932 closed. AD 06/07/2016: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 7, 2016. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/20/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 8, 2016. LiRo conducted groundwater gauging at accessible Site wells and collected Site-wide groundwater samples from ten (10) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

analytical results were compared to the NYSDEC AWQSGVs. The Site monitoring program (SMP) completed for the period of October 1, 2015 to March 31, 2016, included water level gauging from accessible Site wells and an EFR IRM at ten (10) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-02R, MW-04R and MW-12). During the March 8, 2016, groundwater gauging event groundwater was observed between 3.51 and 5.17 feet bgs. Groundwater elevations ranged between -0.07 and 0.67 feet above mean sea level (AMSL). Free phase product was not observed during gauging. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). Groundwater Sampling March 2016: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (1) (i.e. MW-02R) of ten (10) samples. The reported total VOCs ranged from non-detect [ND] in seven (7) locations (MW-04R, MW-05, MW-06, MW-08, MW-13, MW-17 and MW-18) to 46 micrograms per liter (?g/L) in monitoring well MW-02R. A review of total VOC concentration trends shows generally very low (i.e. less than 10 ?g/L) concentrations of dissolved phase VOCs in Site groundwater, with only one location (MW-02R) reporting VOCs at concentrations above their respective AWQSGVs. EFR: Between October 2015 and March 2016 twelve (12) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 10,875 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of 0.01 feet. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Reduce the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting of the EFR IRM and Site monitoring at semi-annual. 08/02/2016: Received the following e-mail from Steve Frank: Hi Ainura, Please see the attached letter requesting a reduction in EFR frequency at Brooklyn East 13 and let us know if our proposal is OK with you. Thanks, Steve Frank Will review. AD 08/16/2016: Looked at the request. It states that recent groundwater gauging measurements have indicated a Site-wide reduction in the distribution, incidence and thickness of measurable product in Site wells. Based on this data, LiRo requests reducing the frequency of EFR at the New York City Department of Sanitation (DSNY) Brooklyn East 13 garage from bi-monthly (i.e. twice a month) to monthly. AD 08/17/2016: Sent an e-mail to S. Frank, approving the request. AD 12/30/2016: Received the following e-mail from LiRo; Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 30, 2016. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2017: Reviewed the report. This report presents the results of free-phase product removal and monitoring at the site for the period of April to September 2016. On September 15, 2016, LiRo conducted groundwater gauging at accessible Site wells and collected sitewide groundwater samples from nine (9) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. September 15, 2016, groundwater elevation measurements indicated that the interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, since the site is tidally influenced and flow directions have been variable. Tidal Influence Study: Between June 17, 2013, and June 27, 2013, LiRo conducted a tidal influence study at the Site. The study confirmed that Site monitoring wells are directly influenced by tidal fluctuations in direct proportion to the distance from Coney Island Creek (i.e. higher tidal efficiency in wells closer to the creek). Observed tidal influences ranged between 20.1% (MW-05) and 5.3% (MW-17). The Site monitoring program (SMP) completed for the period of April 1, 2016 to September 30, 2016, included water level gauging from accessible Site wells and an EFR IRM at nine (9) locations (EW-02,EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). MW-04R was reported destroyed during the September 15, 2016, groundwater sampling event. Due to the absence of reported product in MW-04/MW-04R between January 2014 and September 2016 and the absence of reportable VOCs in the March 2016 MW-04R groundwater sample, a replacement for MW-04R will not be proposed. GW data: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in three (3) (i.e. MW-02R, MW-12 and MW-17) of nine (9) samples. The reported total VOCs ranged from ND in three wells (MW-08, MW-13 and MW-18) to 24 ug/L in well MW-12. A review of total VOCs trends show a continuation of generally very low (i.e. less than 25 ?g/L) concentrations of dissolved phase VOCs in site groundwater. Free-product observed in site wells is producing minimal impacts to the site groundwater. EFR: Between April 2016 and September 2016 ten EFR events were conducted at the site. Approximately 9,127 gallons of total fluids were removed from the wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of less than 0.01 feet. Recent EFR events conducted after the end of this reporting period (i.e. October and November 2016) reported a spike in product thickness in MW-02R from a maximum of 0.22 feet and an average of 0.04 between September 2015 and September 2016 to a maximum of 1.65 feet on November 28, 2016, and an average of 1.07 feet between November 2016 and December 2016. Consequently, the frequency of EFR has been increased to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 07/18/2017: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 18, 2017. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 08/02/2017: Reviewed the October 2016-March 2017 monitoring report. The Site monitoring program (SMP) completed for the period of October 1, 2016 to March 31, 2017, included water level gauging from accessible wells and an EFR IRM at nine locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). During the March 9, 2017, groundwater gauging event groundwater was observed between 5.70 and 8.51 feet bgs. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, likely due to the Site being tidally influenced. For the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 9, 2017. One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (MW-06) of five (5) samples. The reported total VOCs ranged from ND in three (3) locations (MW-08, MW-17 and MW-18) to 45 ug/L in well MW-06. Groundwater Total VOC Trends A review of total VOC concentration trends show a continuation of generally very low (i.e. less than 50 ug/L) concentrations of dissolved phase VOCs in Site groundwater . Free-product observed in site wells is producing impacts to site groundwater. EFR: Between October 2016 and March 2017, 15 EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 9,058 gallons of total fluids were removed from site wells for the monitoring period and a total of approximately 106,650 gallon removed since the inception of EFR. Overall, a product thicknesses showed increases above historic averages with an overall monitoring period average of approximately 0.22 feet. EFR conducted during this reporting period reported multiple product thickness measurements in MW-02R with a maximum of 2.07 feet and a six month average of 1.09 feet. Consequently, the frequency of EFR has been changed from monthly to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 04/06/2018: Received The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for April 2017 to September 2017. Will review. AD 05/04/2018: Reviewed the report. It states that between April 2017 and September 2017, eleven (11) gauging and/or EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 495 gallons of total fluids were removed from Site wells for the monitoring period and a total of approx. 107,145 gallons removed since the inception of EFR. Overall, product thicknesses showed a decrease above historic averages with an overall monitoring period average of approximately 0.06 feet. No free product was measured in any of the accessible monitoring wells since May 5, 2017. The last EFR event was April 28, 2017. Accessible monitoring wells are gauged on a monthly basis. If measureable free product thickness returns then EFR will be performed on a twice-monthly basis. Soil: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ug/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ug/kg total SVOCs) which is within the typical concentration range for urban soils. Based on October 2016 to March 2017 groundwater sample results, reported CP-51 list VOCs and SVOCs in site soils do not contribute to groundwater dissolved phase contamination. Groundwater: The September 2017 sampling event reported generally low (less than 50 ug/L) to ND concentrations of TVOCs in all groundwater samples and a maximum TVOC concentrations of 41 ug/L, at monitoring well MW-18. The TVOC concentration was due to one VOC, Naphthalene is the highest TVOC concentration reported for this monitoring well. Additional sampling events are required to determine if this is an anomalous elevated reading or part of an increasing trend. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 08/22/2018: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on August 22, 2018. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself

if you need additional information. Sincerely, Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/26/2018: Reviewed the semi-annual report for the period of October 2017 - March 2018. It states that LiRo performed EFR events on wells with LNAPL on December 12, 2017; January 3, 2018; January 26 2018; February 7, 2018 and March 14, 2018. Between January 2018 and February 2018, LiRo installed, surveyed and developed replacement well MW-12R. On March 7, 2018, LiRo sampled 8 site wells. The reported TVOCs in the wells ranged from ND to 72 ppb in well MW-02R. Free product thickness in the wells ranged from ND to 0.36' in well MW-14 and 0.95' in MW-02R. Free product observed in the site wells is producing low impacts on the GW quality. EFR: Seven gauging and/or EFR events were conducted for the reported period. Approximately 1,145 gallons of total fluids were removed from site wells during reported period. LiRo states that based on the GW data, site soils do not contribute to the GW dissolved contamination. Based on the analysis LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 01/04/2019: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 4, 2019. A link to the website is included:
https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=
8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office.
Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/11/2019: Reviewed the report. It states that for the monitoring period: (April 2018 to September 2018) the Site monitoring program (SMP) included water level gauging from accessible wells and EFR at six (6) locations (MW-12R, MW-14, EW-05, EW-04, EW-11, and MW-02R) if product was present. GW sampling: For the reporting period, LiRo completed routine semi-annual groundwater gauging and Site-wide sampling on August 29, 2018. During the August 29, 2018, groundwater gauging event groundwater was observed between 6.22 and 7.70 feet bgs. Groundwater elevations ranged between -0.92 and -2.83 feet above mean sea level (AMSL). GW data: Groundwater The August 2018 sampling event reported no CP-51 VOCs above AWQSGVs. The maximum TVOC concentration of 13 ?g/L, was reported at monitoring well MW-02R. Well MW-02R typically contains free-product. EFR: Between April 2018 and September 2018, 10 gauging/EFR events were conducted

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

on the wells. Approximately 1,312-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 109,602-gallons removed since the inception of EFR. Averall, product thicknesses lowered since the previous monitoring period with an overall monitoring period average of approximately 0.0084 feet. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement well (MW-13R) for the destroyed monitoring well MW-13 (Proposed for the April 2018 to September 2018 monitoring period but was unable to be installed due to construction work in the vicinity of the replacement well location).:\\- Maintain schedule of bi-monthly (i.e. twice a month) to monthly Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD"

DEC Memo:	"9/8/03 Transfered from O'Dowd to Vought. 12/3/03 Reassigned from Vought to Foley. Wolf Petroleum site. See also spill #8710636. 2/24/04 File review: Enhanced Fluid Recovery Pilot Test report(Baltec, 8/28/98). DTW approx 7'bgs, flowing west. Based on results of the pilot, it appeared that 16-19 in Hg applied to the extraction well may yield 83cfm (air flow rate). This flow rate was observed to be sufficient for inducing a vacuum of 0.1 waste column (ROI) at a distance of up to 25' from the extraction well. EFR appeared to be an effective technology. Third Quarter 1998 report (Baltec, 2/16/99) Fourth Quarter 1998 report (Baltec, 5/6/99) First Quarter 1999 report (Baltec, 7/9/99) LNAPL was detected in MW-3, MW-5, and TMW-2. 2/25/04 Met with B. Beck, National Environmental. Expressed concern over this site since it is very close to Graves End

SHELL SERV STA (Continued) **S106703198**

Bay (corrected AO - 7/20/11) and there has been LNAPL on site. Beck not sure how to address the problem since groundwater is very shallow with boggy conditions. Not currently monitoring groundwater. 9/21/04 Sent letter requiring gauging and sampling. First report due 11/1/04. 9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(consultant, National Env.) with J. Rommel and L. Oliva. Report is due 11/1/04. 11/1/04 Extention granted until 11/10/04. 11/10/04 Received quarterly report. No LNAPL detected. BTEX ranged from ND(MW-4) to 2487ppb(MW-5). MTBE ranged from ND(MW-7,6,4,1) to 284ppb(MW-5). 1/31/06: Case reassigned to Andersen. No correspondence since quarterly report dated 11/9/04. Sent quarterly reports required letter. 3/13/06: Received a letter from Bruce Beck of National Environmental stating that he will send a monitoring report. 5/19/06: Consent order meeting with Wolf scheduled for June 2 at 11am. 6/8/06: Meeting with NYSDEC, Barry Cohen (Wolf's attorney's) and Bruce Beck (Wolf's consultant) regarding the consent order. Bruce Beck indicated that the quarterly report dated November 2004 included a remedial action plan that was never approved by the Department. 7/5/06: Reviewed the report dated 11/2004 - MNA proposed. Updated report due 7/7/06, then RAP will be requested by the Department. 7/10/06: Emailed Bruce Beck to set up a meeting to discuss deliverables required for consent order. 2/21/07: Bruce Beck will call in a spill (06-12645) for the concrete plant on the adjacent property (3024 Cropsey Avenue). Hydraulic oil was spilled and flowed into the dry well on Wolf's property. Wells were sampled. Product was present. May VEFR wells. Will submit a report with sampling data and intent to VEFR wells. 5/16/07: Received report. Wells sampled in 2/2007. DTW 5 - 7 ft. Trace LNAPL in MW6 and TMW2. MW 5 not sampled because it was inaccessible. Max BTEX 1,530 ppb (TMW1), max MTBE 263 ppb (TMW1). Although DTW was measured, the groundwater flow direction was not determined. It was mentioned that recovery would occur in March, April, and May, but there was no mention of what was recovered. Tightness testing not completed. RAP not submitted. 5/17/07: Sent letter indicating that groundwater flow direction determination, recovery, tank tightness testing, and a RAP are overdue. 8/6/07: Wolf consent order effective 7/27/07. RAP due 9/25/07. 10/12/07: Spoke to Tracy Wall. She will check on site status and get back to me. 10/15/07: Received RAP. 10/17/07: RAP proposed VEFR from monitoring wells MW-3, MW-5, MW-6, with additional events in TMW-1 and TMW-2 when product is evident. VEFR events are proposed twice monthly until no product is seen in the well for a period of at least 6 months. A chemical injection plan will then be evaluated. The Department conditionally approves this Remedial Action Plan, with the following conditions: 1.VEFR events shall be conducted in MW-7 in addition to monitoring wells MW-3, MW-5, MW-6, TMW-1 and TMW-2. 2.Quarterly monitoring reports must include the volume of liquid recovered during VEFR events and documentation of proper disposal. Groundwater gauging and determination of groundwater flow direction must be included in quarterly reports. 3.Following two quarters of groundwater monitoring data where LNAPL is not present, a Remedial Action Report will be submitted with an evaluation of the effectiveness of VEFR, and proposed further action. RAP implementation required in 90 days. The latest groundwater monitoring data is overdue for this site. 2/27/08: Reviewed quarterly monitoring report dated December 19, 2007. Wells sampled on 9/5/07. Max BTEX 7,209 ppb (MW5), max MTBE 340 ppb (MW5), sheen in MW5. VEFR recovery conducted in September, October, and November 2007. 70 gallons, 525 gallons, and 50 gallons recovered,

SHELL SERV STA (Continued) **S106703198**

respectively. 3/20/08 - Carlson: Meeting with Bruce Beck. December 2007 - February 2008 Quarterly Monitoring Report dated March 5, 2008, and letter regarding Final Report on Remedial Action dated March 18, 2008 were submitted during the meeting. 3/25/08 - Carlson: Reviewed the December 2007 - February 2008 Quarterly Monitoring Report, dated March 5, 2008 and the Final Report on Remedial Action, dated march 18, 2008, both submitted by National Environmental Management Associates, for NYSDEC Spill 92-01799, located at 3072 Cropsey Avenue in Brooklyn, NY. The report indicates trace LNAPL is present in MW3. A benzene concentration of 2,450 ppb was present in MW-7, the downgradient well, during the February 2008 groundwater sampling event. The approved remedial action plan for this site required conducting twice monthly VEFR events from MW-7, MW-3, MW-5, and MW-6. However, VEFR was only conducted once in February, and not at all in January. MW-3 was the only well in which VEFR was conducted. This is a violation of the Wolf Order on Consent, DEC File No. R2-20060224-65, execution date July 27, 2007. The Department requires the following action: 1.Groundwater delineation: Installation of a downgradient monitoring well to the north of MW-7. Please submit a brief workplan with proposed well locations to the Department prior to well installation. 2.Perform semi-monthly VEFR events from MW-7, MW-3, MW-5, and MW-6, as noted in the approved remedial action plan. 3.Submission of an additional Remedial Action Plan to treat off-site contamination in MW-7. This Remedial Action Plan is due within 60 days. 3/26/08: Received email from Bruce Beck. He will send a revised report with corrections. 4/8/08: Received revised December 2007 - February 2008 report. The corrections in the report show that vacuum enhanced fluid recovery events were performed at wells MW-3, MW-5, MW-6, MW-7, TMW-1, and TMW-2 on a bi-monthly basis during December, January, and February. 7/7/08 - Carlson: The Department reviewed a report dated June 30, 3008. A null IP was proposed. The report states it is not likely that the private property owner would allow a monitoring well to be installed on their property... The report also proposes continued use of VEFR. A sheen is present in two sidewalk wells at this site, which are located approximately 170 ft from Gravensend Bay. Sent email requiring that Wolf request access from the property owner to install a delineation well on their property, and requiring a more aggressive Remedial Action Plan be submitted. 7/9/08 - Carlson: Received email from Bruce Beck. They will request access to install downgradient well and will submit a revised RAP. Will discuss at meeting planned for August. 7/10/08 - Carlson: Letter sent by DEC Urda requiring off-site delineation and off-site RAP within 30 days. DEC Carlson performed site visit. 7/14/08 - Carlson. Reviewed March 2008 - May 2008 Update report. Sheen present in off-site wells MW6 and MW7. VEFR occurring bimonthly. Additional delineation and off-site RAP required as noted in abovementioned correspondence. 8/19/08 - Carlson: Meeting with Bruce Beck and Tracy Wall of NEMA. NEMA indicated that a letter was sent to the adjacent property owner for access, the Department does not have a copy of this letter in our file. 10/30/08 - Carlson: Reviewed June 2008 - August 2008 Quarterly Monitoring Report. Sheen present in 5 wells. Bimonthly VEFR ongoing. Wells sampled on 8/13/08. Maximum BTEX concentration 2,640 ppb (MW3). Maximum MTBE concentration 845 ppb (MW7). 11/19/08 - Carlson: Meeting with Bruce Beck and Tracy Wall of NEMA. They are having trouble getting access to downgradient property owner. A site inspection is required before they can prepare a workplan. The NYSDEC was not cc'd on correspondence with the

SHELL SERV STA (Continued) **S106703198**

downgradient property owner. 11/24/08 - Carlson: Received copies of three letter sent to Quadrozzi Realty, owner of 1705 Hart Place. Forwarded to NYSDEC Attorney Urda. 2/20/09: Reviewed update report dated January 13, 2008. Bimonthly VEFR and gauging ongoing. Sheen every well at some point during quarter. Action: call tracy wall to check on status of access for site visit to develop IP. Spoke to Bruce Beck - he has not been in contact with DEC Urda or the property owner. Emailed DEC Urda to help with off-site access. 2/23/09 - Carlson: John Urda issued the following email to Barry Cohen: Bill Wolf Petroleum has been unable to gain access to 1705 Hart Place, Brooklyn -- a site adjacent to 3072 Cropsey Avenue -- in order to place a required monitoring well. Bruce Beck has sent several letters on behalf of Wolf to Quadrozzi Realty Corp. seeking an access agreement, that apparently have gone unanswered. I believe he has the wrong entity. According to ACRIS, the property owner is FAE Holdings 390783R, LLC. Quadrozzi Realty has an interest in the property regarding the leases, but is not the owner. Please contact the property owner or other appropriate party immediately to resolve this issue, and keep me informed of your efforts. 4/16/09 - Carlson: Reviewed December 2008 - February 2009 Quarterly Monitoring Report. Bimonthly VEFR is ongoing. Groundwater sampling conducted on March 5th. LNAPL sheen in 6 wells. Evaluate VEFR effectiveness and discuss at upcoming meeting. 4/29/09 - Carlson: Met with Bruce Beck. He indicated that an access agreement is in progress to develop a delineation workplan. 6/25/09 - Carlson: Received email from Bruce Beck with copy of letter from Quadrozzi (property owner to the north). They are requesting a letter from the NYSDEC stating well installation on their property is required. Replied - letters were issued on March 25, 2008 and July 10, 2008. 7/2/09 - Carlson: Received email from Bruce Beck: The attorneys finalized everything and the final access agreement was forwarded to the adjoining property owner and should be signed soon and we will have access to install that well. Once we have access we will contact you to see if you would like to attend an on-site meeting to determine the well location. 7/8/09 - Carlson: Reviewed update report. Sheen in every well throughout quarter. Twice monthly VEFR ongoing. 10/7/09 - Carlson: Reviewed June 2009 - August 2009 Update Report. Wells sampled on 8/20/2009. LNAPL in MW-3,4,5, and TMW-2. Twice monthly VEFR ongoing. Access agreement for off-site delineation is still in negotiation. 11/18/09 - Carlson: Meeting with Bruce Beck and Barry Cohen. They need help gaining off-site access. Mark requested a tidal study. 1/13/10 - Carlson: Reviewed update report. Emailed John Urda - reminder to help with access. Emailed Bruce Beck - submit work plan immediately. The Department understands that implementation will depend on gaining access. 1/26/10 - Carlson: Received investigation work plan and tidal study proposal. Sent email - revised work plan due in 30 days. 2/7/2010 - Carlson: Received revised work plan. 2/12/2010 - Carlson: Approved revised off-site delineation and tidal study work plan. Three off-site wells will be installed. Tidal study will be conducted in two monitoring wells. Investigation Report due 5/12/2010. Implementation dependent on off-site access. 2/17/2010 - Carlson: Meeting with Bruce Beck. They still don't have access for off-site delineation. 2/24/2010 - Carlson: Emailed John Urda to followup on access for off-site delineation. 4/22/2010 - Carlson: Reviewed update report. Change in GW flow direction. No LNAPL this quarter - should bimonthly VEFR be reduced? 4/30/2010 - Carlson: Emailed Bruce Beck - is LNAPL present so far this quarter? 5/4/2010 -

SHELL SERV STA (Continued) **S106703198**

Carlson: Received email from Tracy Wall - LNAPL not present so far this quarter. Approved stopping VEFR if LNAPL is not present during the next site visit. VEFR to resume if LNAPL returns. 5/21/2010 - Carlson: Received email from Bruce Beck - has John Urda been able to contact the adjacent property owner?. Emailed John Urda to followup. 7/14/2010 - Carlson: Received email on 6/10/2010 notifying DEC that VEFR have been stopped because LNAPL is no longer present. 7/16/2010 - Carlson: Reviewed March 2010 - May 2010 Quarterly Monitoring Report. 11/21/11 - Carlson: Issued letter requiring confirmatory investigation work plan by 12/21/11. 1/31/2012 - Carlson: Meeting held on 1/30/2012 with Christine Camardella and Kevin Kleaka of Impact Environmental, Barry Cohen of Certilman Balin, and Carlson, Kolleeny and Urda of NYSDEC. An additional point will be added to the confirmatory investigation work plan. Revised workplan to be submitted in 30 days. 3/6/2012 - Carlson: Reviewed update report dated 1/19/2012. Groundwater sampled on 12/14/11. VOCs above standard in several wells. 3/12/2012 - Carlson: Approved revised investigation work plan dated 2/2/12. Four borings to be installed. Subsurface investigation report due by 5/11/2012. 4/3/12 - Carlson: Received email notification - investigation scheduled for 4/9 - 4/10. 4/6/2012 - Carlson: Received notification - drilling rescheduled for 4/25/12. 5/11/12 - Carlson: Reviewed 1st quarter 2012 update report. Wells sampled 3/1/12. Confirmatory soil investigation to be performed as per approved workplan. 7/16/12 - Carlson: Reviewed Subsurface Investigation Report. Four soil borings performed. High concentrations of soil VOCs and sVOCs present in all borings. Issued letter requiring an submittal of an RAWP in 30 days. 8/17/12 - Carlson: Meeting held with Christine Camardella of Impact Env. RAWP deadline extended to September 15, 2012. 11/9/12 - Carlson: Reviewed RAP dated 9/26/12 for VEFR. Was this site affected by hurricane Sandy? Issue RAP response letter after evaluation of next gauging and sampling event. VEFR not useful because it was already performed from 2007 - 2010. 11/14/12 - Carlson: Received email from Christine Camardella. This site was affected by Sandy. Sampling to be conducted in mid-December. 07/15/13 - Spill Case is transferred from Sarah Carlson (Section C) to Brevdo (Section B) as per DER Region 2 decision. VB. 07/30/2013 - Spill Case is re-assigned to Alex Zhitomirsky. Re-assignment of Wolf cases to Alex Zhitomirsky discussed between Alex Zhitormirsky and Vadim Brevdo on 7/29/2013 and via Brevdo's e-mails of 7/17/2013 and 7/29/2013. VB 11/17/13 TJD Site inspection (spill #1212990) as part of Hurricane Sandy follow-up. Station is not in operation - appears vacant. Sandy related spill is cross referenced (Spill #9210799) and closed. Any required follow-up to be managed under oldest open spill file. 2-18-2014 Reviewed quarterly monitoring report dated July 29, 2013 and received on Aug.16, 2013. Concentrations of total VOCs in groundwater ranged from 4.33 ppb to 670 ppb. A remedial Work Plan as requested by DEC will be submitted under separate cover. AZ 6-26-2014 Reviewed 3rd Quarter 2013 Monitoring Report. The date of the report has a typo (2012). Monitoring TMW-2 had LNAPL in 08/2009 but the last sampling event was in 08/2010. The highest total VOCs concentration is 670 ppb in MW-7. Soil is grossly contaminated (up to 535,160 ppb). Apparently, no remediation was performed at the site. Left a message for Ms. Camardella. AZ 7-01-2014 Discussed the site with Christine Camardella. Impact will sample wells TMW-1 and TMW-2. EFR was performed at the site. Currently EFR is not used. Impact will correct statement regarding soil contamination. AZ 10-22-2014 Reviewed 4th

SHELL SERV STA (Continued) **S106703198**

Quarter 2013 Monitoring Report dated January 2014. Monitoring well TMW-2 had LNAPL in 08/2009 but the last sampling event was in 08/2010.Impact should sample wells TMW-1 and TMW-2. EFR is currently not performed at the site. The highest total VOCs concentration is 156 ppb in MW-7. Soil is grossly contaminated (up to 535,160 ppb of total VOC). Apparently, no remediation was performed at the site. Groundwater flow was northwesterly in March 2013, southeasterly in July 2013 and northwesterly in September 2013, indicating tidal conditions. AZ 11-12-2014 Reviewed 1st Quarter 2014 Monitoring Report, dated May 8, 2014. Monitoring well TMW-2 had LNAPL in 08/2009 but the last sampling event was in 08/2010.Impact should sample wells TMW-1 and TMW-2. EFR is currently not performed at the site. The highest total VOCs concentration is 156 ppb in MW-7. Soil is grossly contaminated (up to 535,160 ppb of total VOC). Apparently, no remediation was performed at the site. Groundwater flow was northwesterly in March 2013, southeasterly in July 2013 and northwesterly in September 2013, indicating tidal conditions. No free phase product was detected. Impact is evaluating current soil and groundwater conditions and will be making recommendations for remedial options under separate cover. AZ 3-27-2015 Reviewed 2nd Quarter 2014 Monitoring Report, dated July 25, 2014. Monitoring well TMW-2 had LNAPL in 08/2009 but the last sampling event was in 08/2010.Impact should sample wells TMW-1 and TMW-2. EFR is currently not performed at the site. The highest total VOCs concentration is 167 ppb in MW-7. Soil is grossly contaminated (up to 535,160 ppb of total VOC). As per telephone conversation with NYSDEC on July 9, 2014, tank field wells TWW-1 and TMW-2 have been included in the quarterly sampling and monitoring event. AZ 6-8-2015 Reviewed a 3rd Quarter Monitoring Report dated October 28, 2014. Impact proposed injection of magnesium sulfate heptahydrate commonly known as Epsom Salt. This solution will be applied directly into monitoring wells. Left a message for C. Camardella. The following e-mail was sent to C. Camardella and V. Brevdo: Dear Christine, I have reviewed a remediation work plan submitted by Impact. The plan proposed injection of magnesium sulfate heptahydrate in existing monitoring wells. While proposed anaerobic biological oxidation remedy seems appropriate, this injection should be performed in designated injection points. Existing monitoring wells should be utilized for groundwater monitoring. Please resubmit a modified remedial plan for this site within thirty days. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov AZ 7-2-2015 The following e-mail was sent to Christine Camardella and V. Brevdo: Christine, I have reviewed the modified remedial plan for this site. This plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky 8-26-2015

SHELL SERV STA (Continued) **S106703198**

Reviewed 4th quarterly report dated Feb. 4, 2015. Approved modified magnesium sulfate heptahydrate injection (Epson Salt) will be implemented. Concentrations of total VOCs ranged from below reporting limits to 1,082 ppb in MW-3.Contaminatn levels in soil are up to 995,000 ppb in saturated and smear zones. AZ 9-2-2015 Contaminated soil was found in 1992 during UST removal at this gas station. Free phase product was first detected in July 1999. The site was investigated in 1998 and 2012. Vapor extraction fluid recovery events were conducted periodically at the site until 2010. Free phase product has not been present at the site since 2009. In February 2014, DEC requested that a remedial strategy be evaluated to reduce petroleum contamination encountered in saturated soil. In June 2015, DEC approved the proposed anaerobic biological oxidation remedy but requested that a modified remedial plan be submitted which included designated injection points rather than utilizing the existing groundwater monitoring wells. A modified plan which proposed the installation of five permanent injection points was submitted to DEC in 2015 and approved by DEC in July 2015. On August 31, 2015, DEC reviewed a report for this site dated July 15, 2015. According to this report the installation of five injection points is expected in the third quarter of 2015. AZ 10-9-2015 Reviewed a report dated April 29, 2015. Impact proposed to implement in-situ remedial approach utilizing injection of magnesium sulfate heptahydrate, commonly known as Epsom salt. Three soil borings will be advanced in the locations of the previously installed soil probes SP-1, SP-2 and SP-3.Soil samples will be collected. Based on the gw and soil results additional magnesium sulfate injections might be needed. Soil samples will be analyzed for geochemical parameters. 11-12-2015 I have contacted C. Camardella. Magnesium sulfate injection wells will be tentatively installed in November 2015. 8-16-2016 Reviewed a report dated February 7, 2016. On December 3, 2015. 1,111 gallons of a solution consisting of twenty percent magnesium sulfate heptahydrate, commonly known as Epsom Salt, was injected into five injection wells. Geochemical data will be collected. The highest dissolved VOC concentration was recorded in MW-2 (830.3 ppb). AZ 1-23-2017 Reviewed a report dated April 11, 2016, for the first Quarter of 2016, received on May 13, 2016. The highest dissolved VOC concentration was recorded in MW-3 (2,213 ppb). No free-phase product was detected. Monitoring wells TMW-1, TMW-2 and injection points IP-1 through IP-5 were inadvertently removed from the sampling program during the 1st quarter 2016 monitoring event. In order to determine the effectiveness of the Epson Salt injection, all monitoring wells and the injection points will be sampled. AZ 3-20-2018 I have contacted D. Peters over the phone to discuss a quarterly monitoring report for the 4th quarter 2017, issued on February 27, 2018, and received on March 19, 2018. Since this site still has LNAPL present, no closure request will be considered for this site. AZ 4-24-2017 Reviewed a report dated August 10, 2016, for the second Quarter of 2016. The highest dissolved VOC concentration was recorded in MW-3 (407 ppb). No free-phase product was detected. In order to determine the effectiveness of the Epson Salt injection, all monitoring wells and the injection points will be sampled. Geochemical data will be collected from all monitoring wells. AZ 4-27-2018 Reviewed a report dated December 19, 2017, for the first Quarter of 2017. The highest dissolved VOC concentration was recorded in MW-3 (603 ppb). No free-phase product was detected. Based on soil and groundwater results to date, IEC will make recommendations for additional

SHELL SERV STA (Continued) **S106703198**

remediation. AZ 5-29-2018 Reviewed a report dated December 22, 2017, for the 2nd Quarter of 2017, received on January 11, 2018. The highest dissolved VOC concentration was recorded in IP-3 (192 ppb). MW-3 wasn't sampled for dissolved petroleum compounds due to the presence of free-phase product. Free-phase product was detected in monitoring well MW-3 at thickness of 0.05'. Based on soil and groundwater results to date, IEC will make recommendations for additional remediation. AZ 6-19-2018 Reviewed a report dated December 29, 2017, for the 3rd Quarter of 2017, received on January 22, 2018. The highest dissolved VOC concentration was recorded in MW-3 (21,709 ppb). The following e-mail was sent to Donald Peters and V. Brevdo: Dear Donald, I have reviewed a quarterly monitoring report for this site. The report stated that LNAPL was detected in MW-3 on August 10, 2017. The total dissolved VOC concentrations in MW-03 were 21,709 ppb in September 2017. Impact Environmental proposed a case closure for this spill. Based on the above information, this spill can t be closed at this time. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 6-28-2018 The following e-mail was sent to D. Peters and V. Brevdo: Dear Donald, I have reviewed modified proposals for a pilot test submitted for the above site. The pilot test will utilize existing Point IP-2 to test bioaugmentation on the elevated BTEX concentrations in groundwater. A new injection well will be utilized to treat residual LNAPL and VOCs. These proposals are approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 8-27-2018 Reviewed a report dated May 24, 2018, for the 1st Quarter of 2018, received on May 30, 2018. The highest dissolved VOC concentration was recorded in IP-2 (6,667 ppb). Free-phase product was detected in MW-3 on 12/6/17 at 0.02'. AZ 11-15-2018 Reviewed a report dated July 18, 2018, for the 2nd Quarter of 2018. Free-phase product was detected during the current monitoring period in MW-3 at a thickness of 0.02'. DEC approved in-Situ bioaugmentation pilot test in June 2018. IEC scheduled drilling of the proposed injection points and filled the necessary permits for the pilot test. AZ 12-7-208 Reviewed a report dated July 18, 2018. In-Situ bioaugmentation pilot test was performed in August - September 2018. The thickness of LNAPL couldn't be determined due to fouling of the interface probe. AZ"

Remarks: "DISCOVERED CONTAMINATED SOIL DURING EXCAVATION. STOCKPILED SOIL. WILL TEST AND REMOVE SOIL."

60 PRECINCT NYPD -DDC (Continued) **S102239142**

Free Product Recovery/GW Monitoring Report received on June 8, 2005. Due to the presence of a free product sheen, well MW-06 exhibited elevated concentrations of VOCs and SVOCs. Monthly IRM visits will be contnued.AZ 1-13-2005 Reviwed Free Product Recovery/Groundwater Monitoring Data Report received in October 2005. MW-03 was inaccessible. Total VOCs concentration is 2,752 ppb. AZ 8/7/2006 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX received in July 2006. Product sheen has been observed in MW-6 and an absorbent sock is used in this well. In MW-06 VOCs were detected at a total concentration of 2,233 ppb. Total SVOcs in MW-06 is 98.4. Recommended quarterly gw monitoring, replace absorbent sock in MW-6. Evaluate alternative remedial technologies and reduce gauging well frequency to quarterly. AZ 2-7-2007 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX dated November 10, 2006 and received on November 20, 2006. Roux recommended reducing gauging frequency to semi-annual at this site. Also, Roux proposed removing SVOCs from the analyte list and including naphthalene in the VOC target compound list. DEC concurred with these proposals. Groundwater sampling should be performed quarterly due to the significant VOC concentrations remaining in groundwater. MW-3 had total VOCs concentration of 1,014 ppb. E-mail was sent to Roux and DDC. AZ 5-29-2007 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX dated March 15, 2007 and received on March 23, 2007. The remediation system has been shut down since September 2003 with approval from DEC. The soil remediation has been completed. Free phase product was measured in MW-06 on October 10, 2006, at a thickness of 0.01 foot. VOCs were not detected in MW-03 during the last three quarters. Only SVOC, acenaphtalene was detected in MW-03, however its concentration is below NYSDEC/AWQSGV. The presence of free product in MW-06 on October 10, 2006, precluded the sampling of the well. No free was encountered in MW-06 on December 5, 2006. The sock was removed on December 5, 2006. Roux listed as upcoming tasks evaluation of alternative technologies for cleaning up groundwater contamination and installation of petroleum absorbent sock in MW-06. Roux recommended removing MW-03 from sampling program and reducing frequency of groundwater sampling to semi-annual since the hydraulic gradient is flat. MW-06 was last sampled in August 2006 (1014 ppb of total VOC). MW-03 could be removed from the sampling program but a well located downgradient from MW-06 should be sampled instead. This site will be discussed at the meeting with DEC on 5/30/2007. AZ 5/30/2007 The site was discussed at the meeting with DDC/Greyhawk. An e-mail was sent to DDC/Roux:I have reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/Roux received on March 23, 2007. The remediation system has been shut down since September 2003. Free phase product was measured in MW-06 on October 10, 2006, at a thickness of 0.01 foot. VOCs were not detected in MW-03 during the last three quarters. Only SVOC, acenaphtalene was detected in MW-03, however its concentration is below NYSDEC/AWQSGV. The presence of free product in MW-06 on October 10, 2006, precluded the sampling of the well. No free phase was encountered in MW-06 on December 5, 2006. The sock was removed on December 5, 2006. Roux listed as upcoming tasks evaluation of alternative technologies for cleaning up groundwater contamination and installation of petroleum absorbent sock in MW-06. Roux recommended removing MW-03 from sampling program and reducing frequency of groundwater sampling to semi-annual. DEC concurs that MW-03 could be removed from the sampling program but a well located down-gradient from MW-06 should be sampled instead. No

60 PRECINCT NYPD -DDC (Continued) **S102239142**

down-gradient well is currently included in the monitoring program. MW-06 was last sampled in August 2006 and exhibited 1,014 ppb of total VOC. DEC will review groundwater sampling frequency for this site after monitoring well MW-6 and a down-gradient well are sampled. AZ 8-30-2007 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX for January through April 2007 dated July 25, 2007 and received on August 1, 2007. According to the report, during April 2007 sampling VOCs were detected in MW-06 at concentration of 930 ppb. MW-05 could not be located and and MW-03 could not be accessed. Roux recommended installation of two additional monitoring wells to assess groundwater quality conditions downgradient of monitoring well MW-06. DEC approved well installation via e-mail. AZ 7-16-2008 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX for April through December 2007, dated March 28, 2008. According to the report, on July 2, and on November 26 and December 3, 2007, groundwater sampling was performed. VOCs were detected in MW-06 at concentration of 707 ppb and in RXMW-02 - 107 ppb. The groundwater beneath the site is tidally influenced. The water table beneath the site is very flat and gw flows relatively slow under the existing low hydraulic gradient. Roux recommended reducing the frequency of the groundwater sampling program to semi-annual because only relatively low concentrations were detected and the low hydraulic gradient. DEC concurred. An email was sent to Roux/DDC/Greyhawk/V.B. AZ 1-15-2009 Reviewed Semi-Annual Groundwater Monitoring Data Report by Greyhawk/Roux for January through June 2008, dated November 5, 2008. Relatively low (27 ppb -298 ppb of the total VOC) groundwater contamination remains in two site monitoring wells. The groundwater is tidally influenced. Roux recommended continuing semi-annual sampling. AZ 7-19-2010 Reviewed UST closure report submitted by LiRo. 4,000 gal gasoline and 4,000 diesel USTs were closed and removed in March 2010. Closure samples were taken. One soil sample and one gw sample were collected. PID reading of 86.4 and a petro odor were detected in the soil sample. VOCs in gw were above NYSDEC TOGS standards. No e-file is submitted. Only one post excavation sample is taken. Total VOCs should be indicated. Left a message for S. Frank. AZ 3-24-2011 An e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a Site Turn-Over Status Report and Semi-Annual Monitoring Report for the above site. The report indicated that there is some discrepancy between CM documents and NYSDEC PBS registry regarding the number of closed USTs and the type of stored product. The City should submit a corrected tank inventory including removed tanks to the PBS Unit. Visible product (weathered #2 oil) was observed during several monitoring events in monitoring well MW-6. Free phase product should be monitored and removed. 4,000 gal gasoline and 4,000 diesel USTs near well MW-6 were closed and removed in March 2010. Only one soil sample was collected. PID reading of 86.4 ppm and petro odor were detected in the soil sample. It’s possible that free phase product in monitoring well MW-6 is a result of soil contamination in this area. I suggest installing soil borings in the vicinity of the former USTs and MW-6, if feasible. Also, in order to expedite the site remediation, hot spot soil excavation could be performed in the area of monitoring well MW-06, if feasible. MW-5 could be properly decommissioned. AZ 9-22-2011 An e-mail was sent to LiRo/DDC/V. Brevdo: I have reviewed Additional Site Investigation Plan for this site. dated July 28, 2011. This plan is approved. DPE system enclosure could be decommissioned and removed, as per LiRo request. The Responsible

60 PRECINCT NYPD -DDC (Continued) **S102239142**

Party and Contractors are responsible for the safe execution of the Work Plan. AZ 3-28-2012 Reviewed semi-annual monitoring report dated December 28, 2011, for the period of May-October 2011. Field visit confirmed that 1,000 gal #2 fuel oil tank was closed in place and contained diesel fuel. Eight tanks were removed. LiRo submitted to NYPD a corrected PBS application to reflect the change in status of 1,000 gal tank and product stored. Upon NYPD approval, application will be forwarded to PBS Unit. Work plan approved by DEC (Sept.2011) will be performed. Possible hot spot excavation will be evaluated after the additional investigation is performed. AZ 2-1-2014 A Work Plan approved by DEC in September 2011(installation of two borings and one monitoring well) has not been completed. The current spill is associated during closure of the eight 550 gallon USTs. Implementation of the approved investigation is scheduled for fourth quarter of 2012. Decommission and removal of the DPE remediation system enclosure is pending. Repairs to well MW-05 will be completed in the fourth quarter 2012. Petroleum absorbent socks will be utilized in MW-06 if product is present. AZ 8-15-2013 Reviewed semi-annual monitoring report dated January 18-2013. Implementation of the approved additional investigation was completed in December 2012 and will be discussed in the next monitoring report. Total VOC concentration increased in MW-06, compared to the March 2012 data. ORC sock will be installed in well MW-06. AZ 9-6-2013 Reviewed semi-annual report dated June 25, 2013. Soil data collected collected during this monitoring report indicates shallow soil petroleum impacts remain at depths of 5 to 8 ft. bgs which represents vadose/groundwater interface and saturated soils below the groundwater table. LSB-07 exhibited 880600 ppb of TVOC. Free phase product is present in well MW-06. A construction trailer is currently parked over wells MW-06, therefore the well was not gaged in February 2013 or April 2013.AZ 6-13-2014 Reviewed semi-annual report dated Dec. 23, 2013. Soil data collected indicates shallow soil petroleum impacts remain at depths of 5 to 8 ft. bgs which represents vadose/groundwater interface and saturated soils below the groundwater table. LSB-07 exhibited 880600 ppb of TVOC. Free phase product has historically been present in well MW-06. A construction trailer is currently parked over wells MW-06, therefore the well was not gaged No product was noted either in May 2013 or in Sept. 2013. VOCs were reported above AWQSGV in MW-06. AZ 2-2-2015 I reviewed a Semi-Annual Monitoring Report (November 2013- May 2014) dated July 10-2014. Based on the current site conditions and absence of free phase product in well MW-06, LiRo recommended closure of this spill. However, a sample taken in 2012 from LSB-07 (7' to 7.5' bgs)exhibited 880,600 ppb of total VOC. The sample had PID reading of 1,789 ppm, odor and staining. Also, it should be noted that in 2010 LiRo removed two USTs near this boring but only one end point sample was taken. MW-6 exhibited 217 ppb of total VOC in groundwater (dissolved). I have discussed this site with S. Frank. We agreed that LiRo will perform a site visit and see if this area of residual soil contamination could be remediated. AZ 2-4-2015 I have received a tank closure report dated June 2010. The report stated that one gasoline tank and one diesel tank were removed from the site. Only one sample (side sample) was taken during the tank closure. The bottom slab has not been removed and the excavation had metal sheeting on the sides. Groundwater sample taken from the excavation contained VOC contaminants. During the field investigation, a PID reading of 86.4 ppm and a slight petroleum odor was detected in the soil sample. Oil

60 PRECINCT NYPD -DDC (Continued) **S102239142**

sheen was observed in the excavation. The tanks were double wall fiberglass tanks. The tanks and piping looked intact. I have discussed the tank removal with S. Frank. I explained him that end point sampling while removing motor oil tanks is a federal requirement. End point sampling could also be done using borings. AZ 6-9-2015 Reviwed an excavation work plan dated March 13, 2015. The plan proposed an excavation approximately 12'x13' in the area of MW-06 and LSB-07. The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Work Plan dated March 13, 2015. The plan proposed removing impacted soil from an area approximately 12' long x 13' wide near monitoring well MW-06 and LSB-07. This plan is approved. Four post excavation sidewall soil samples and two bottom soil samples should be collected. If groundwater is encountered, one groundwater sample should be collected. After completion of the excavation all destroyed wells should be re-installed. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site. Alex Zhitomirsky - Engineering Geologist 2 6-7-2016 Reviewed semi-annual monitoring report for February 2015 through July 2015 and dated November 11, 2015. On September 9, 2015, the NYCDDC requested LiRo evaluate remedial alternative options due to proximity of tank piping an subsurface utilities in the excavation area. LiRo has identified two possible remedial alternatives: enhanced bio-injection plan and Monitored Natural Attenuation. Free phase product was measured in well MW-06 in February 2015. EFR was performed on March 23, 2015. LiRo will collect samples to test them for various biological parameters to determine if the conditions are conductive for a bio-injection program. AZ 1-24-2017 Reviewed semi-annual monitoring report for February 2015 through January 2016 and dated June 7, 2016. LiRo will advance additional soil borings east of LMW-10 and LMW-09 (if feasible). No free product in MW-06, However, absorbent socks were installed/changed on multiple occasions during this monitoring period. Total VOCs in LMW-11 is 3,224 ppb. AZ 4-18-2017 Reviewed semi-annual monitoring report for February 2016 through July 2016 and dated September 19, 2016. LiRo will advance additional soil borings east of LMW-10 and LMW-09 (if feasible). No free product in MW-06, However, absorbent socks were installed/changed on multiple occasions during this monitoring period. Total VOCs concentrations in the five wells ranged from 204 ppb to 2,771 ppb in LMW-11. On April 4, 2016, EFR was conducted in an effort to address dissolved-phase VOC concentration levels reported from the January 2016 sampling. AZ 10-16-2017 Reviewed semi-annual monitoring report for the period of August 2016 through January 2017 and dated April 19, 2017. LiRo advanced six additional soil borings east of LMW-10 and LMW-09 in 2016. Soil contamination was mainly identified in the area west and south of the former diesel and gasoline fueling area. Free-phase product was last observed in well MW-06 in February 2015. However, petroleum absorbent socks were installed/changed on multiple occasions during this monitoring period. Total VOCs concentrations was up to 1468 ppb in LMW-11. During this period EFR was conducted on three different occasions in an effort to address dissolved-phase VOC concentration levels. AZ 2-12-2018 Reviewed semi-annual monitoring report for the period of Feb. 2017 through July 2017 and dated Aug. 31, 2017. Free-phase product in LMW -11 ranged from 0.05' (July 2017) to 0.25' (May 2017).EFR was performed on six separate occasions during this monitoring period. The product was identified as mixture of #2 fuel

60 PRECINCT NYPD -DDC (Continued) **S102239142**

	and weathered gasoline. AZ 12-5-2018 Reviewed semi-annual monitoring report for the period of Aug. 2017 through Feb. 2018 and dated Apr. 10, 2018 . Sheen was observed in well MW-06 during the February 2018 EFR event. Free-phase product in LMW -11 ranged from 0.05' (Sept. 2017) to 0.03' (Dec. 2017). The product was identified as mixture of #2 fuel and weathered gasoline. AZ"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY SEE ALSO SPILL NO. 0109738, WHICH WAS CLOSED TO CONSOLIDATE. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: ISRP from 1997 reveals 9 borings and 5 MWs were installed. Thin fimls of product and olfactory contamination was present. Six volatile compound detected in three of the borings. All exceeded STARS levels; TPH ranged from 28ppm to 3.0% in impacted soils. Three wells contained ten volatile compounds, and seven of them met or exceeded GW quality standards. Recommended product removal vai vaccum or pump, monitor GW for six months and removal of impacted soils when tanks are excavated. Notes from hotline report indicate contractor noticed odor and sheen. Says that test results from stockpile came back contaminated. No paperwork on report is available nor is there any site assessment. - SK 09/27/06: Spill no. 0400233 at this site (April 7, 2004), occurred during tank overfill when oil came out vent pipe and fill pipe. Spill was closed because NYCHA spill report indicated cleanup was done and contaminated soil removed. However, my field notes indicate that not all contaminated soil was dug out; PID readings after soil was excavated were up to 90 ppm and no end-point samples were collected. Site near the beach and groundwater is shallow, possibly impacted by this spill. Potential groundwater impacts must be investigated. This spill should be tracked under this spill number. - J. Kolleeny 6/11/09: JKann - Meeting held on 5/28

CAREY GARDENS -NYCHA (Continued) **S106384656**

with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 12/30/13: J.kann - approved IWP. SIR due 6/30/14. 01/07/14: Site included in multi-site stip 6/4/15: J.Kann - Phase II submitted on 12/16/14. REport reviewed. Some slightly elevated SVOCs detected in soils and some in groundwater. A second round of groudnwater sampling from the 4 on site wells was requested from NYCHA on 6/4/15. Results are due by 6/30/15. 8/3/15: J.Kann - Results of gw sampling submitted on 7/7/15. 10/5/15: J.Kann - Samples collected in the 2nd round of groundwater sampling were below TOGS 1.1.1. Closure was requested by NYCHA. Based on review of the Phase II and the second round of groundwater sampling, no further action is necessary. Spill closed."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/01/2001: TOM HALL TELCON WITH NORMAN SEBOWSKI-NYCHA (718-707-5725) AT 1050 HRS. SEBOWSKI WILL HAVE MARIO MANDALONE UPDATE DEPARTMENT AS TO PROGRESS OF WORK. 11/01/2001: TOM HALL TELCON WITH MARIO MANDALONE AT 1510 HRS. 15K BEING REMOVED AND REPLACED WITH ANOTHER 15K. MODERATE CONTAMINATION ENCOUNTERED IN EXCAVATION. HORIZONTAL EXTENT OF CONTAMINATION SEEMS MINIMAL. VERTICAL EXTENT WILL BE DETERMINED. HOUSING AUTHORITY WILL SUBMIT CLOSURE DOCUMENTATION. 02/14/02 Reassigned from Hall (Region 7) to Kolleeny. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 6/11/09: JKann - Spill transfered to J.Kann. Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 10/15/13: J.Kann - after reviewing the file, minimal impacts have been noted at this site. The 1996 investigation yielded not impacts to soil or grounwater. During tank removal (as stated above) some impacts to soil were noted. I requested any informaiton on the tank removal from NYCHA today via an email. After receiving a response from them, I will likely request that the two remaining wells be gauged and sampled so the site can be reviewed for closure. 6/13/14: J.kann - received a response from NYCHA. Some lab data was submitted for soil disposal during tank removal work on 10/16/13. In addition, NYCHA responded that a mobile boiler is in place at the site and much sand was washed up into the area as a result of Hurricane Sandy. Therefore, the two older wells are not accessible. I am considering site for closure. 7/16/14: J.Kann - received the RIR for the site on 6/25/14. 3 borings were advanced and 2 monitoring wells installed. Soil analysis was below CP-51 RSCOs. On constituent, naphthalene was detected in groundwater at 12ppb (TOGS guidance of 10ppb), otherwise all gw analysis was below TOGS 1.1.1. Reviewed report. Spill closed."
Remarks:	"contaminated soil discovered from tank removal"

Site Description:	The site consists of a warehouse and a parking lot in Coney Island, Brooklyn, NY. The site is adjacent to Coney Island Creek, which borders the site to the north. Hart Place borders the site to the south. The neighborhood is mainly residential even though the zoning is M3 manufacturing. A former MGP site (Coney Island Works) is located to the north of the site on the other side of Coney Island Creek. The current use of the site is commercial. The former Volunteer, Tops Appliance City, has submitted a Phase I Environmental Investigation Report, which showed contaminants common to the fill material in the area. The area is covered with 11-13 feet of mixed urban fill material. The contaminants of concern were metals and Semi Volatile Organic Compounds (SVOCs) above the NYSDEC TAGM 4046 RSCO. The investigation has not been completed. The negotiations for the Voluntary Cleanup Program Agreement were terminated because the Volunteer has not been responsive to the program requirements.
Env Problem:	The Phase I Environmental Assessment has revealed contaminants specific to the urban fill material. The entire area is covered by 11-13 feet of fill material. Contaminants of concern were metals (copper, zinc, lead) and semi-volatile organic compounds (SVOCs) which have been found at levels above the NYSDEC TAGM 4046 RSCO.

Update By:	MOBARRIE
Site Description:	The site is located at 1525-1535 Hart Place in Brooklyn, NY 11224, Kings County. The site consists of two adjoining lots totaling 2.4 acres in the Coney Island section of Brooklyn, NY. The eastern portion of the property was formerly designated as Lot 136 and the western lot was formerly designated as Lot 117. The two lots are now combined in Lot 117. The site is bordered by Coney Island Creek to the north, by Hart Place to the south, by Cropsey Avenue to the west, and by a residential building to the east. According to the Flood Insurance Map (1983), the site is in zone A-5 of the 100 year flood zone. The site is zoned for manufacturing use. The surrounding uses are manufacturing, commercial with residential areas to the east and south. The site is occupied by a retail building (currently Linen-N-Things, formerly Topps Appliance store), a building under construction (Starbucks), and a paved parking lot. After careful review, the Department determined that this site was not eligible for the BCP. The site had already been developed including soil excavation and remediation prior to submittal of the application.
Env Problem:	Information submitted with the BCP Application regarding the environmental conditions at the site include a Phase I (1995), Phase II (1996), Letter Report of Asbestos Screening, Floor Drain Tracing, and Collection of Soil and Groundwater (1999), Remedial Action Report

1525-1535 HART PLACE (Continued) **S113916470**

(2000), and Tank Closure Report (2004). These reports describe soil contaminated with semi-volatile organic compounds (SVOCs) and metals. The soil contamination is located within the urban fill layer which covers the site from 5 to 12 feet below grade. SVOCs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h.i)perylene, benzo(k)fluoranthene, chryseneb, and indenol(1,2,3-cd)pyrene. Metals include arsenic, lead and mercury. These contaminants are at marginal exceedances above the NYSDEC Recommended Soil Cleanup Objectives (RSCOs) and are likely related to the urban fill material in this area. Groundwater sampling results revealed 4,4 DDT and metals above groundwater standards. After careful review, the Department determined that this site was not eligible for the BCP. The site had already been developed including soil excavation and remediation prior to submittal of the application.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 6/4/2003-Rommel received call from James Deriu (201-529-5151x7205 a consultant working for a NYC Agency interested in buying the site and fowarded the message to Vought. 6/6/2003-Vought-Called Fanning, Phillips and Molnar (enviromental consultant in 1997) and they gave a current site contact of Robert Bednarz (Keyspan-718-403-2727). Vought called Robert and he gave site contact of Steven Yagos (Real Estate-718-403-2134). Vought called Yagos and left him a message to return call to NYSDEC. Vought called Deriu and told him to call in two days for updates. Deriu again called and said that no further correspondance is needed. File review by Vought: UST Closure Report: March 1997, Fanning, Phillips and Molnar, 718-767-3337. Site was fomerly maintenance and fueling facility for Brooklyn Union Gas fleet vehicles. Fueling facility was closed in 9/96. One 4000-gallon gasoline, one 550-gallon diesel UST (both active as of 1996) and two 550-gallon diesel UST's (abanodoned in 1988) were removed. Seven soil borings were performed for soil disposal characteristics to the water table using a Geoprobe. Anayticals and disposal manifests provided in report. Analyticals show up to 590ppb MTBE in B5 soil, 12,000ppb benzene in B7 soil and 250000ppb napthalene in B7 soil (indicating both gasoline and diesel impacts to subsurface). A peat layer at 7' was encountered in all bo rings. Tanks removed by the Tyree Organization. Soil was excavated down to peat layer. Groundwater assumed to flow south towards Atlantic Ocean. Five endpoint samples were taken at excavation limits. A total of 269 tons of soil were removed from the Site. Endpoint analyticals show benzene up to 40,000ppb soil in S2, 2400ppb

817 NEPTUNE AVE/B U G (Continued) **1000871254**

MTBE soil in S-4 and 87000ppb napthalene in soil. Groundwater sample taken downgradient of tank field shows up to 22ppb MTBE. Report concludes that contaminants are immobile because they did not show up in assumed downgradient location and requests NFA closure. Vought-gradient NEVER determined. Three monitoring wells and tidal study must be performed to determine groundwater flow followed by groundwater analyticals and removal of remaining soil contamination (indicated by endpoint samples). 5/20/04-Vought-Spoke to Bart Polizzotti (516-545-5511) who is working for Keyspan who will be sending in recent tank closure report and letter from DEC Tibbe. 9/2/05 - Spill transferred from Vought to Obligado 2/16/06 - Obligado - phone call from Bart Polizzoti - (516)-545-5511 - Inquiring about status of open spill number. Tell him I will review the file. Review Follow-up UST report, dated May 1998. Documents installation of 8 piezometers to determine ground water flow direction. 3 of 8 piezometer readings eliminated due to building influence. Remaining 5 piezometers show ground water flow to south-southeast. Three wells installed south of GW-1. All wells show non detect, however no wells installed in source zone. DEC requires: Ground water samples to be collected in the source area and not 40 ft away in downgradient direction. Monitoring wells should be installed at impacted soil endpoint sampling locations S2,S3, and S4. 2/24/06 - Obligado - Spoke to Bart to inform of DEC requirements, sent email with DEC letter attachment with requirments. Due date 5/26/06. 6/20/06 - Obligado - Called Mr. Polizzoti about overdue report. Left Message to call DEC. Sent Email reminder as well. 6/23/06 - Obligado - Spoke with Mr. Polizzoti. He said that no work was done. 6/26/06 - Obligado - Sent another letter. Due date of 8/26/06 or referal to legal. 7/18/06 - Obligado - PHone call from Phil Schade from H2M (631) 756-8000. He said he plans to install the wells on thursday, 7/20/06. 7/27/06 - Obligado - Spoke to Phil Schade, H2M. Wells were installed on 7/20/06. Wells will be sampled on 7/31/06. 8/30/06 - Obligado - Received investigation summary report. 3 4 diameter wells installed at required locations. S3 soils still heavily impacted - 20,000 ppb benzene, 750,000 ethlybenzene, 970,000 xylene, 1,741,300 total VOCS. SVOCs show high PAH's in all locations and 75,000 napthalene in S3. GW sampling show only benzene impacts at MW4, MW5, and MW6 at 4 ppb, 4 ppb, and 56 ppb, respectively. Report recomends investigaiton of PAH source and installation of cross gradient and upgradient borings to delienate gw and soil contamination. 9/5/06- Obligado - phone call from Paul Lagerman 631-756-8000. He is installing additional borings on 8/7/06. 1/16/07 - Obligado - Review Supplemental Soil and Groundwater Investigation report dated 12/30/06, submitted by H2M group. 5 additional soil borings advanced. 3 converted to gw monitoring wells (MW7 and MW8) in between the site and coney island creek, 1 cross gradient of excavtion to east (MW9). 2 of the borings (SB1 and SB2)were done in the vicinity of MW5 for disposal characterization. VOCs detected in soil samples B1 and B2 as expected (max VOCs 208,000 ppb). No VOCs in soil samples MW7,MW8, and MW9. Elevated lead concentrations in soil sample B1 (10,100 mg/kg lead). TCLP for b1 was 27.7 mg/L, above 5.0 mg/L limit so these soils are considered a hazardous waste. Forensics on the soil sample suggest likely due to leaded gasoline release (contains tetraethyl lead). Elevated SVOCS in most soil samples probably due to historic fill, except for elevated napthalene and 2-methylnapthalene found in former UST area. Ground water sampling show elevated BTEX in MW5 (1000 ppb benzene, 36 toluene, 600 ethlybenzene, 190 xylene) and elevated

817 NEPTUNE AVE/B U G (Continued) **1000871254**

benezene in MW6 - 200 ppb. H2M hill recommends soil excavation around MW5 via vacuum due to builidng structural concerns. Soils in vicinity of B1 should be segregated and disposed of as hazardous waste. All other soils should be temporarily stockpiled or containerized separately. 1/18/07 - Obligado - Called Paul Lagermaen. Left message. 2/20/07 - Obligado - Spoke with Paul Lagerman. Excavation is on going at the site. So far 3 roll-offs have been filled with excavated soil, and 300 tons are stockpiled. Excavated area consits of a horeshoe shaped excavation north, east, and south of the former UST excavation. Also they did test borings inside the building and plan to excavated a 12 X 31 ft area inside the building. A 5x5' area west of MW5 was excavated and stored separately and will be disposed of as hazardous waste due to high led. Excavation will continue through this week. Field contact is Chris Anastasio - 516-818-9441. 2/27/07 - Obligado - Site meeting with Paul Lagerman. Excavation is completed outside. Endpoint samples were below TAGM for VOCs. They still need to excavated in side the building. I told authorized them to backfill the excavation outside. I informed Paul they would nee to do post remedial ground water monitoring due to very high benzene concentrations in ground water (1000 ppb). Paul said they would reinstall MW5, which was destroyed during the excavation. 5/4/07 - Obligado - Phone call from Paul Lagerman. They plan to backfill the excavation and then reinstall any wells that were destroyed. They will also be doing additional excavation inside the building. 8/28/07 - Obligado - Received phone message from Paul Lagerman. 12/12/07 - Obligado - Review Soil and Groundwater Remediation Report, dated October 26, 2007. The report documents additional soil removal activities. The 1997 excavation was over-excavated between January 2007 and July 2007. A total of 1363 tons of non-hazardous petroleum impacted soil were excavated and disposed of off-site. Excavation of the courtyard area and inside the building, and under building foundation. Additionally, 1 20 cubic yard roll off of lead contaminated soil was disposed of as hazardous waste. During excavation, dewatering was necessary, and a total of approximately 111,000 gallons of ground water was removed and disposed of off-site. Waste manifests for petroleum contaminated soil, lead contaminated soil, and petroleum impacted ground water were included in the report. Initial endpoint results had soil exceedences in 2 samples, sample sp4 and sp7, however these were eventually over excavated until non-impacted soil was reached. All endpoints of final excavation were below SCOs for BTEX. Subsequent to soil removal, montioring wells MW5 and MW6 were reinstalled and all wells were sampled in July. BTEX found only in 2 of 9 wells, MW5 adn MW6. Wells were resampled again in October. GW results showed 4 ppb benzene in MW5 and in MW6 - 54 ppb benzene, 8.7 ppb toluene, 40 ppb ethlybenzene, and 5.2 xylene. All other surrounding wells were ND. Requests closure based on clean endpoints, decreased gw concentrations compared with pre-remediation (previously 1000 ppb benzene in MW5), the future use of the site will be deed restricted for light industrial use, and ground water at the site is not used as potable source as it is saline. After discussion with DEC Sun, agree to close spill based on 1) very low VOCs concentrations found in only 2 of 9 wells, max total VOCs less than 100 ppb, 2)plume completely delineated, ND in all perimeter wells, in particular, ND in 2 wells bordering the coney island creek, and ND in the well between source area and nearby apartment buildings, 2) residual gw contaminated area is small 3) very comprehensive source removal (1136 tons of soil

817 NEPTUNE AVE/B U G (Continued) **1000871254**

removed) in courtyard area, under building, and even under foundations, and all endpoint soil samples were ND for BTEX 4) bulk reduction in ground water concentrations 5) over 100,000 gallons of ground water removed and properly disposed of 6) the zoning of site will remain light industrial due to deed restriction. This spill is closed, NFA letter sent to Keyspan, cc to Paul Lageraan 4/4/08 - Obligado - Received Monitoring Well Abandonment letter. "

Remarks: "tanks to be removed next week soil in area is contaimanated "

Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658124**

on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem:	Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658124**

Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658124**

high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658124**

sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658124**

Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways

(MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Code: 55916
Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Code: 55916
Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

(MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Code: 55916
Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

Site Code: 55916
Site Description: Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean.

Env Problem: Prior to remediation: Nature and Extent of Contamination: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. Post-Remediation: Remediation at the site is complete. All remedial elements, except for the

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S123658142**

on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan.

Health Problem: Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

DEC Memo:	"Obligado - Desk Duty - According to the tank tester, the tank was emptied approximately 2 weeks ago. His test on the emptied tank detected an air leak. He thinks the building is converting to gas. He gave me the number for the company which did the tank pump out. I spoke with Rob Hill, who works for the company that emptied the tanks. He confirmed that they did a pump and clean on both tanks, and transferred 3000 gallons to a temporary storage tank on-site. According to Rob, they are not switching to gas and they plan to refill the tanks. He is waiting on a proposal to do more tankwork. I sent out TTF letter to: Brightwater Towers 501-601 Surf Avenue Brooklyn, NY 11224 03-18-2015 - V. Brevdo This TTF Spill Case is re-assigned to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Mr. Jonathan Kolleeny as Project Manager. - VB 07/28/15: J. Kolleeny - I was copied on email from DEC Spill Responder Santosh Mahat to David Chan of Riteway Tank Maintenance Corp.; Santosh's email explained to David that I am DEC case manager for this spill. Email had several attachments sent by Mr. Chan. I sent email to Mr. Chan: Mr. Chan, As

APT BUILDING (Continued) **S114561829**

Santosh noted, I m DEC case manager for this spill, but I m not fully up to speed on what has happened at site. Notes in our database indicate that tank at site was emptied and then tested, and an air leak was detected. Do you know if location of that leak was ever determined, and if so, were repairs made? Were any of soil borings drilled near location of leak? Our notes also suggest that property owner wants to put tank back into service; is this true? It would be very helpful if you could combine pdf files you sent to Santosh (site plan, boring logs, lab data, Chain of Custody Forms) together in a brief rpt with a summary of spill history and investigative work performed, and a recommendation for further action as appropriate. Feel free to give me a call to discuss. Mr. Chan sent reply: Jon - Thank you for your quick response. I will compile everything into 1 file and get answers you are looking for. - J. Kolleeny 07/29/15: Received email from David Chan of Riteway Tank with attached letter summarizing spill event, boring logs for 12 borings with lab results of samples, and site plan showing tank and boring locations. Letter states that top of tank is 5 ft bgs, GW is at 6 ft bgs, states that tank has been empty for a year and when they checked it, it was dry, suggesting any leak in tank was a dry leak. Letter says owners intend to abandon tank. I sent email to David: David, Thanks for putting this together. I have a couple of addt'l questions. Spill rpt lists no. 6 fuel oil as material spilled, but PBS registration for this site indicates tanks contain no. 2 fuel oil. Can you confirm type of product involved in spill and stored in tank(s)? Also, site plan appears to show that borings 1, 2 & 3 were drilled right down to tank, and boring logs for those borings indicate refusal at 6 ft. Were those borings drilled down to top of tank, and if so, why was that strategy for those borings, rather than drilling alongside tank? Can you please incorporate your answers to these questions into DEC Status Letter you sent me, and re-send revised letter? David sent reply: Jon, Absolutely, let me confirm information first and I will revise and re-send. - J. Kolleeny 07/30/15: Received email from David Chan of Riteway Tank Maintenance Corp.: Jon, Please find status letter updated. It should be #2 oil, and Samples 1, 2 & 3 were miscalculated. They were trying to get end of tank, which is sample 9 and water sample A. I combined revised letter with boring logs, site plan and lab data sent earlier, uploaded to DecDocs as Spill Closure Rpt. Soil & GW data show no VOCs detected; some soil samples had SVOCs, but not very high and not clear if related to petroleum or possibly fill materials in soil. Boring logs show most PID readings were ND, highest were 0.5 ppm, no odors or staining noted. I sent email back to David: David, Thanks for your clarifications. This is very helpful. I will likely close spill soon. Can you provide name, title, mailing address, and email address of property owner or representative of property owner, to whom I can address letter? My only remaining concern is that tank that failed test must not be put back into service, unless leak is identified & repaired (and documentation should be submitted to our PBS Unit). If they plan to abandon tank, they should notify our PBS Unit within 30 days of permanently closing tank, and closure should be done according to PBS regulations. David replied: Jon, Not a problem, I will get all info requested and find out owners' intentions with regards to tank moving forward. I m pretty sure they want to abandon, I will confirm. - J. Kolleeny 08/04/15: On 8/3/15, received email from David Chan of Riteway Tank: Jon, contact info is: Contact: Bright Water Towers ATTN: Nicholas Dubovici Address: 601 Surf Avenue Management Office,

APT BUILDING (Continued) **S114561829**

Brooklyn, NY 11224 Phone: 212-324-9028 Email: nicholas.dubovici@fsresidential.com Please see recently signed proposal for abandonment from client [attached to email]. Tank will not be put back into service. It will be abandoned in accordance with NYSDEC PBS regulations. I will also send you FDNY affidavit of abandonment upon completion of project. Also, please find PBS notification of abandonment attached for your records [attached to email]. We are planning to abandon it within next month and should have it done by end of August. I closed spill case, sent closure letter (in DecDocs) to Nicholas Dubovici, cc to David Chan. - J. Kolleeny "

DEC Memo:	"Transferred from Krimgold to Kolleeny on 3/24/05. - JK 11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski. 02/02/06: This spill transferred from S.Kraszewski to Q.Abidi. 04/04/06: This spill transferred from Q. Abidi to Koon Tang. 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 5/14/15: J.Kann - IWP approved. One soil sample per boring for analysis and min 3 groundwater samples. SIR due 11/14/15. 10/14/15: J.Kann -site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. 1/5/16: J.Kann - spoke with Tyler Goodnough of Ecosystem Strategies (845-452-1658) on 12/7 regarding this spill. Originally he did not collect groundwater samples at the site, however some minor contamination was in the laboratory data. I informed him that groundwater samples were to be taken regardless of field observations as per my email to NYCHA on 5/14/15. Tyler agreed to go out and collect groundwater samples from the two locations

HABER HOUSES (CAREY GARDENS) (Continued) **U001840667**

where minor exceedences were noted. The Summary Report of Subsurface Investigation was submitted to the Department on 1/4/16 and is under review. Sent an email to the consultant to revise the tables in the report to reflect the correct sampling date. Four borings were advanced and two temporary wells installed. Minor PAH exceedences were present in the soil borings, but groundwater did not have any exceedences of TOGS 1.1.1. NFA once revised tables are received. 1/6/16: J.Kann - revised tables were received and report decdoced. Tank/primary source removal occurred in 1999 and no impact to groundwater from current investigation as mentioned above. In addition, no field screening indicated petroleum contamination (no PID readings, odors or sheen on soils). 1/26/16: J.Kann - spill closed. 1/26/16: J.Kann "

Remarks: "contaminated soil discovered during tank pull"

Record Add: 03/29/2007
Record Upd: 04/06/2018
Updated By: GWCROSS
Site Description: Location: The Dangman Park MGP site is located in an urban area, in Coney Island, Brooklyn. The site totals approximately 1 acre of land bounded by Neptune Ave to the north, W. 5th St. to the east, a residential parcel to the south, and a commercial parcel to the west. The site is contained within Lots 1R and 25 of Block 7273. Site Features: Currently, a large part of the shopping center has been demolished, making way for remediation and new development. The site is approximately 1,300 feet southeast of Coney Island Creek and approximately 2,400 feet north of New York Bay. Current Zoning and Land Use: The site is currently under development and is zoned for residential and commercial uses. The surrounding parcels are currently used for a combination of commercial and residential. The site is located within a special purpose zoning district designated as the "Special Ocean Parkway District." Past Use of the Site: An MGP operated on-site from approximately 1895 until sometime between 1906 and 1930. As a result of the MGP operations, coal tar has impacted the subsurface soil and groundwater on parts of the site. The above-grade MGP structures were removed sometime between 1906 and 1930. The below grade portions of the former gas holders, tar tank, and cistern are all likely sources of the tar releases from the former MGP. By 1930, the site was occupied by a club house. By 1966, the Trump Village Shopping Center occupied the northern and central portions of the site. During the winter of 2016-2017, a substantial part of the Trump Village Shopping Center was demolished to make way for new development, making the underlying contamination available for cleanup. Site Geology and Hydrogeology: The subsurface soils under the site consist of approximately 5 to 15 feet of fill material overlying glacial sand deposits. The groundwater table is approximately 6.5 to 7.5 feet below ground surface and ground water flows northwest, toward Coney Island Creek.
Env Problem: Nature and Extent of Contamination: Prior to Remediation Based upon investigations conducted to date, the primary contaminant of concern is coal tar. Soil - Coal tar impacts were observed primarily in borings drilled in the central and eastern portions of the Site and generally correspond with the footprint of the former MGP operations and areas slightly upgradient and downgradient of the former MGP operations. The highest BTEX and PAH concentrations in soil generally correspond with the observed coal tar and petroleum hydrocarbon impacts. The deepest tar-saturated soil was encountered in SB-9, 70 to 75 ft bgs. The deepest tar-impacted (tar blebs) soil was

BROOKLYN UNION GAS DANGMAN PARK MGP (Continued) **S109416397**

encountered in SB-4 to a depth of 80 to 90 ft bgs. The boring across Neptune Ave. (MW-20) confirms that the downgradient extent (north) of tar migration is delineated by the Lot 1 northern property boundary. SB-23 and SB-24 represents the upgradient extent (south) that tar migrated from the source area region. Impacts to the east are delineated by SB-12 and SB-10, and west are delineated by SB-11 and SB-8. Groundwater - Observed coal tar and petroleum hydrocarbon impacts are a continuing source of groundwater impacts. The highest BTEX and PAH concentrations in groundwater were detected in MW-5 and MW-11, screened from 30 to 40 ft bgs. Both are located in the source area region, near the former gas holders and tar tank. Concentrations of BTEX and light-end PAHs at the Lot 1 northern boundary persist only at depth and are associated with the deeper tar-related impacts encountered upgradient, the SB-9 area. The well across Neptune Ave. (MW-20) confirms that the northern extent of groundwater contamination does not go beyond Neptune Ave. MW-13 and MW-14 bound the impacts to the west. MW-18 bounds the impacts to the east. Groundwater impacts were generally not detected south (upgradient) of former MGP operations, indicated by MW-12 and MW-7. Soil Vapor & Indoor Air - Indoor air samples taken within the strip mall show no elevated concentrations of MGP-related contaminants. However, non MGP contaminants including (2-butanone (methyl ethyl ketone), Freon 12, MBK and PCE were detected above background indoor air concentrations in 2 of the strip mall stores.

Health Problem:	Persons who dig below the ground surface may come into contact with contaminants in subsurface soil and groundwater. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling has indicated that the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion and actions have been recommended to address this potential. Sampling indicates that soil vapor intrusion is not a concern for off-site properties.

Site Description: The site is a small portion of the parcel located at 3325 Neptune Avenue, Brooklyn, New York which was operated as dry cleaner from about 1986 to 1995 based on hazardous waste manifest records. The property was identified as Block 6979 Lot 100 in Kings County, New York. The former dry cleaner portion of the property was renovated for commercial usage after the dry cleaner terminated its operation at this location. The site is currently occupied by Neptune Dental and Medical. The size of the proposed site is about 0.04 acres. The site entered the Brownfield Cleanup Program ? see site no. C224151.
Env Problem: Preliminary investigations conducted at the site indicated that the contaminant of concern is Tetrachloroethylene (PCE). PCE was found in sub-slab soil vapor on site with concentration up to 25,000 ug/m3. PCE was detected in 4 of the 10 temporary groundwater monitoring wells, and one well had a concentration marginally above groundwater standards at 5.8ug/l. Additional investigation is needed to identify the source of the PCE.

Site Description:	Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Updated By:	JJTEETER
Site Code:	468402
Site Description:	Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Description: Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast.
Env Problem: Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 468402
Site Description: Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast.
Env Problem: Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	5939335 THE NARROWS, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

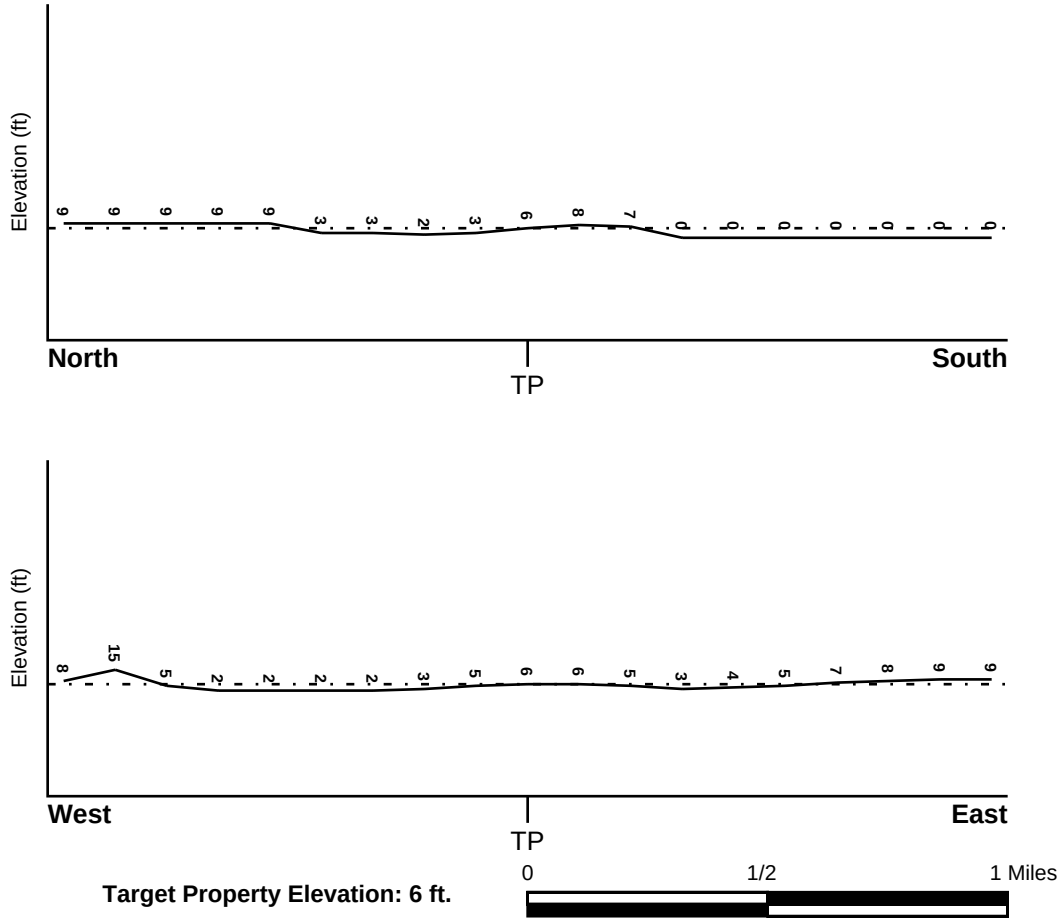
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970353F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

NO PANEL ID	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CONEY ISLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic

Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sand
mucky-peat

Surficial Soil Types: sand
mucky-peat

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: coarse sand
sand
loamy sand
sapric material

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS/INSURANCE

Taylor Rodenberg
Staff Assessor

Education

B.S., Marine and Environmental Biology and Science, Monmouth University
M.S., Land Resources and Environmental Science, Montana State University at Bozeman (Online)

Training

Phase I ESA training at Partner ESI headquarters in Torrance, CA., September 2015. Refresher May 2016

Highlights

2 years in the Environmental and Due Diligence Field
2 years performing Phase I Environmental Site Assessments (ESA), Environmental Desktop Records Reviews and Transaction Screen Assessments (TSA)
2 years of performing Records Research and Regulatory File Reviews
1 year experience with multifamily, office and retail properties

Experience Summary

Ms. Rodenberg currently holds the role of Staff Assessor I in the east region. Responsibilities include completing Environmental Desktop Reports and Phase I Environmental Site Assessments for a variety of clients during the commercial real estate transaction process. Ms. Rodenberg is familiar with the guidelines of the ASTM Standards and US Environmental Protection Agency's All Appropriate Inquiry (AAI), as well as customized formats, in order to exceed expectations in providing accurate and thorough site assessments for clients.

Ms. Rodenberg has generated Phase I ESA and TSA reports for a variety of commercial properties including multi-family apartment building and complexes, warehouses, retail spaces, institutions such as schools, small as well as high-rise office buildings and vacant land in the states of New Jersey, New York, Pennsylvania, Connecticut, Maryland and Delaware. Ms. Rodenberg works closely with state and local regulatory agencies to obtain environmentally significant documents regarding LUST incidents, tank removal and subsurface investigations performed on-site or on adjacent properties. Ms. Rodenberg has approximately one years' experience conducting Phase I Environmental Assessments and Transaction Screen Assessments.

Project Experience

Ms. Rodenberg has one and a half years' experience with a variety of project types including multifamily, offices, commercial retailers, institutional and warehouses in both rural, suurban and highly developed areas. Below are some notable projects Ms. Rodenberg has performed.

Institutional, Middlebury, Connecticut. Phase I Environmental Site Assessment of a 13 building all girl's boarding school campus, totaling approximately 81.26 Acres. Buildings included classrooms, athletic halls and residential facilities.

Mixed Use Commercial and Office, Brooklyn, New York. Phase I Environmental Site Assessment of a 551,143 square foot mixed use commercial and office building, occupied with 137 office tenants and 6 retail tenants.

Apartment Complex, White Plains, New York. Phase I Environmental Site Assessment of a 300,000 square foot, seven building garden-style apartment complex.

Auto Repair, Philadelphia, Pennsylvania. Phase I Environmental Site Assessment of an auto repair facility in which the previous use of the property as an auto repair facility and machine shop was identified as a Recognized Environmental Condition (REC) and was followed up by a Phase II subsurface investigation.

Assisted Living Facility, Frederick and Walkerville, Maryland. Phase I Environmental Site Assessment of two assisted living facilities as part of a 45 site portfolio.

Speaking

Carbon Sequestration of Native and Invaded Dunes, Ecological Society of America (ESA), Elizabethtown College, PA. April 2015. Poster presentation of Honors Thesis project.

Carbon Sequestration of Native and Invaded Dunes, Monmouth University School of Science Research Symposium, Monmouth University, NJ. May 2015. Poster presentation of Honors Thesis project.

Education

B.S. Environmental Science, Minor Biology, Sacred Heart University, Fairfield, CT.

Registrations

New York State Department of Labor Asbestos Inspector

Training

New York State Department of Labor Asbestos Inspector (Initial and yearly refresher).

Highlights

Qualified Environmental Professional (EP)
8 years of experience performing environmental due diligence conducting work on residential/commercial/industrial sites
Performed nearly 800 Phase I Environmental Site Assessments and Transaction Screen Assessments

Experience Summary

Ms. Heymann serves as a Project Manager for Partner Engineering and Science, Inc. (Partner) managing environmental due diligence projects such as Phase I Environmental Site Assessments, Transaction Screen Assessments, and Property Condition Reports in accordance with ASTM E1527 standards and EPA's All Appropriate Inquiry (AAI) requirements, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines and other client-specific scopes of work. She is a qualified Environmental Professional under ASTM E 1527-13.

Ms. Heymann's expertise includes site assessments and investigation for various asset types and clients. Asset types assessed have included multifamily properties, office properties, retail shopping centers, gas stations, dry cleaners, hotels, auto dealership and service facilities, and various manufacturing operations across the country. Clients served have included residential and commercial developers, mortgage brokers, individual property owners and purchasers, local governmental entities, real estate investment trusts (REITs), private equity groups, and financial institutions such as Fannie Mae, and Freddie Mac lenders, insurance companies, and investment and regional banks.

Ms. Heymann's environmental background includes a detailed understanding of the risks associated with hazardous and regulated materials storage, use generation and disposal, aboveground and underground storage tanks, polychlorinated biphenyls (PCBs), asbestos-containing materials (ACM), lead-based paint (LBP), mold, and radon. She is skilled in the research requirements necessary for the preparation of Phase I Environmental Site Assessments (ESAs) including historical land use, regulatory, physical, and geological sources, and governmental research.

Project Experience

Palisades Center, West Nyack, New York. Completed a Phase I Environmental Site Assessment of the 3,075,547 SF regional shopping mall with an attached parking garage, which sits on top of two former landfills and is surrounded by properties with known off-site impacts.

East Coast 4, Long Island City, New York. Completed a Phase I Environmental Site Assessment of the former petroleum processing facility (Standard Oil Company) and Pepsi-Cola bottling plant. Property is currently residential, but identified as a Voluntary Cleanup Program and Brownfields site due to historical impacts with ongoing remedial activities.

On-Site Dry-cleaning Plant, 5 Holmes Street, Norwalk, Connecticut. Completed a Phase I Environmental Site Assessment of the warehouse building occupied by an on-site dry-cleaning plant with the on-site utilization of perchloroethylene (PCE) since 2002.

Liberty Rock Shopping Center, Milford, Connecticut. Completed a Phase I Environmental Site Assessment of the 175,875 SFG shopping center occupied by an on-site dry-cleaning facility and a former auto repair center with historical underground storage tanks identified.

Office Complex, 52 Washington Street, Rensselaer, New York. Completed a Phase I Environmental Site Assessment of the 14-acre office complex, which formerly operated as a manufactured gas plant from the *circa* 1870 through 1920 and a paper making mill from the early 1900s through the 1980s.

Melissa Dahl
National Client Manager
Principal

Education

A.S in Mathematics
B.S in Environmental Science, Rutgers University

Registrations

NJDEP-UST Subsurface Evaluation, Tank Testing
Installation & Closure Certification

Training

OSHA 40-Hour Hazwoper
OSHA 8-Hour Hazwoper Refreshers
ASTM Technical and Professional Training

Highlights

Over 15 years of experience in the environmental consulting industry
Over 15 years of experience in management, marketing, and regulatory compliance

Experience Summary

Ms. Dahl is a Principal and National Client Manager focusing on due diligence products for commercial real estate transactions. She services private and institutional equity investors, developers, financial institutions, Fannie Mae Lenders, and Freddie Mac Lenders with environmental site assessments, property condition assessments, seismic studies, construction monitoring, and remedial design/implementation. She has managed over 15,000 studies to support pooled collateral property undergoing securitization. She works closely with property managers, legal counsel, regulatory agencies, and special asset groups at banks providing insight into the risks and liabilities associated with properties and assistance in structuring various transactions. Ms. Dahl delivers exceptional service and adds value to businesses by assessing risks and exposures while formulating appropriate solutions. Her knowledge of environmental and engineering policy and ability to clearly convey issues to her clients allows them to accurately measure the risk associated with each deal, enhancing their overall portfolio.

Ms. Dahl formerly performed as a Project Manager for a Fortune 500 real estate firm, where her primary responsibilities were to manage field operations, remain apprised of latest state and federal regulatory mandates, and review Phase I Assessment reports to insure client scope of work was properly executed and deadlines were met. Ms. Dahl's field experience includes the successful completion of over 1,000 Phase I Environmental Site Assessments on various retail, office, industrial, hospitality, and multifamily properties.

Earlier in her career, Ms. Dahl assisted with the design of a contaminated groundwater treatment plant for a highly publicized Superfund site located in New Jersey, which is continually scrutinized and monitored by the media. She assisted with the writing of a feasibility study submitted to the EPA for the Superfund site and coordinated/ran daily public meetings with the citizens of the township providing constant interaction with public relations media.

Project Experience

Shopping Center Portfolio. A $3.5 billion dollar acquisition project consisting of 467 retail shopping centers operating across 38 states. Phase I Environmental Site Assessments and Property Condition Assessments

with special inspections were performed on each of the shopping centers. Multiple inspectors were coordinated and dispatched to each site within a three-week report completion timeline. Report deliverables also included inspection summaries which were incorporated into Environmental and Engineering spreadsheets for client/lender review. The acquisition was successful and highlighted Ms. Dahl's ability to thrive in a challenging fast-paced environment. Her valuable depth of experience, negotiation skills, and coordination of hundreds of engineering professionals as well as her responsiveness and expertise of client/lender's expedited timeline showed her ability to leverage strategic business partnerships and optimize customer experience.

Retail Bank Branch Portfolio. A $1.9 billion dollar acquisition project consisting of 418 retail bank branches operating in 15 states. Environmental studies were performed on each asset including review of city directories, aerial photographs, Federal Regulatory Databases, and historic Fire Insurance Sanborn Maps within a three-week project completion timeframe. Research findings were incorporated into spreadsheets for client/lender review. The acquisition was successful and exemplified Ms. Dahl's ability to capture and meticulously execute high profile projects under a tight timeframe. Her valuable depth of experience, negotiation skills, and her ability to communicate, interpret, and present findings to client/lender in an expedited timeline highlighted her impressive capabilities.

Train Station. A multi-million dollar refinance project consisting of a historic passenger train terminal including over 1 Million SF of retail, office, and rail use. Phase I Environmental Site Assessments, Property Condition Assessments, and Zoning Assessments were performed on this trophy asset. Multiple inspectors were dispatched to each site to complete the reports within a two-week timeline. The transaction was successful and exemplified the professional acumen of Ms. Dahl and Partner's Engineering Team.

Superfund Site. Ms. Dahl assisted with the remediation of a highly publicized 1,350-acre Superfund site located in New Jersey. The facility manufactured dyes, pigments, resins and epoxy and disposed of over 47,055 drums of waste in an unlined landfill on site. Ms. Dahl assisted with the writing of a feasibility study submitted to the EPA, and coordinated and ran daily public meetings with the citizens of the town providing constant interaction with public relations media.

Distinctions

Ms. Dahl has been named one of Tomorrow's Real Estate Leaders in New York Real Estate Form Magazine in February/March 2013 issue for her role in the number of real estate transactions in NY.
