FACT SHEET

Brownfield Cleanup Program

**1100 Myrtle Avenue
Brooklyn, NY 11206**

November 2022

**SITE No. C224312
NYSDEC REGION 2**

Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the 1100 Myrtle Avenue site ("site") located at 1100 Myrtle Avenue, Brooklyn, NY 11206 under New York State's Brownfield Cleanup Program (BCP). Please see the map for the site location.

Cleanup activities were performed by Spenceran, Inc. ("applicant") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicant has submitted a draft Final Engineering Report (FER) for NYSDEC review which states that cleanup requirements have been or will be achieved to fully protect public health and the environment for the proposed site use.

- Access project documents online through the DECinfo Locator:
<https://www.dec.ny.gov/data/DecDocs/C224312/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Highlights of the Site Cleanup: The following activities have been completed to achieve the remedial action objectives:

- Excavation and off-site disposal of soil exceeding the restricted residential use soil cleanup objectives to depths ranging from 3 to 16 feet below grade across the site.
- Excavation and offsite disposal of soil to a depth of approximately 20 to 23 feet below grade in the northern portion of the site to remove a petroleum hotspot.
- Removal and off-site disposal of eight underground storage tanks (USTs).
- Installation of an active sub-slab depressurization system (SSDS) beneath the new building to prevent vapor intrusion.
- Installation of a soil vapor extraction (SVE) system to remediate remaining petroleum-contaminated soil located immediately off-site under the sidewalk adjacent to the on-site petroleum hotspot.
- Development of a Site Management Plan (SMP) for long-term management of residual contamination and operation of the SSDS and SVE system.
- An Environmental Easement was recorded to prevent future exposure to any contamination remaining at the site and to ensure implementation of the SMP.

BROWNFIELD CLEANUP PROGRAM

Next Steps: When NYSDEC approves the FER, it will be made available to the public (see "Where to Find Information"). NYSDEC then will issue a Certificate of Completion (COC) that will be announced in a fact sheet. The applicant(s) would be able to redevelop the site after receiving a COC. In addition, the applicant(s) will be eligible for tax credits to offset a portion of the costs of performing cleanup activities and for redevelopment of the site.

Site Description: The site is approximately 1.1 acres and is located in the Bedford Stuyvesant section of Brooklyn. The site is bounded to the north by Myrtle Avenue and an overhead NYC Metropolitan Transit Authority (MTA) structure; to the east by an MTA support building followed by commercial buildings and elevated train tracks; to the south by Vernon Avenue followed by residential buildings; and to the west by a hotel and commercial buildings. Historically, the site was used for commercial and light industrial activities, including auto repair and furniture manufacturing. The site is being redeveloped with a residential apartment building, grocery store, and parking garage. Thirty percent (30%) of the residential units will be designated as affordable. The site achieved a Track 2 – restricted residential cleanup standard.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224312) at:

<https://www.dec.ny.gov/cfm/external/derexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they

can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:

<https://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
