1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Interim Site Management Plan (ISMP) on behalf of Gowanus Owner President LLC (the Volunteer) for the property at 514 Union Street, Brooklyn, New York (the site). The Volunteer was accepted into the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) to investigate and remediate the site pursuant to the NYSDEC Brownfield Cleanup Agreement (BCA) executed on 21 October 2021. A BCA Amendment to add the volunteer, Gowanus President Owner LLC, was executed on February 1, 2023, and a BCA Amendment to add the west-adjoining property, 305 Nevins Street, to the BCP site was executed on July 19, 2023. The site was assigned BCP Site No. C224318.

This ISMP was prepared to document operation maintenance and monitoring (OM&M) requirements associated with the soil vapor intrusion (SVI) mitigation system installed at the 514 Union Street property in September 2022, and subsequent updates. The SVI mitigation system is comprised of four ventilation points that manifold to a roof-mounted blower. The SVI mitigation system installation, startup, and post-installation indoor air sampling are documented in the 9 March 2023 Construction Completion Report (CCR) No. 1. A second round of indoor air samples were collected on 17 March 2023 and is documented in the 28 March Indoor Air Sample Results Technical Memorandum.

During routine inspections performed on December 26, 2023 and November 26, 2024, trichloroethene (TCE) was detected in indoor air samples at concentrations exceeding the New York State Department of Health (NYSDOH) Air Guideline Value (AGV) as set forth in the NYSDOH Guidance[1] for TCE of 2 micrograms per cubic meter ($\mu g/m^3$). As a result, corrective measures were implemented and documented in two Corrective Measures Work Plans (CMWP), submitted in March 2024 and August 2025. The March 2024 CMWP included addition of continuous energy recovery ventilator (ERV) operation and monitoring as a component of the SVI mitigation strategy. The June 2025 CMWP included installation of floor drain covers, SVI mitigation system void space communication extension, heating ventilation and air conditioning (HVAC) modifications that extended ERV fresh air delivery to the extremities of the building, and addition of ERV operation as an engineering control (EC) and component of the SVI mitigation system. The Indoor Air Sample Results Technical Memorandum and CMWPs are included as Appendix A. Record drawings documenting the as-built condition of the SVI mitigation system and are included as Appendix B. A site location map is included as Figure 1 and a site plan is included as Figure 2.

[1] NYSDOH Guidance refers to the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2013, 2015, 2017, and 2024).

Remediation at the 514 Union Street property is in progress. This ISMP will govern the operation and maintenance of the SVI mitigation system until the remediation phase is complete. Following completion of the remediation phase and NYSDEC approval of a Final Engineering Report (FER) and a Site Management Plan (SMP), the ISMP will be superseded by the SMP. The SVI mitigation system will be operated until permission in writing is received from NYSDEC to terminate operation of the system and remove the equipment. This ISMP may only be modified with the approval of NYSDEC.

2.0 OM&M

2.1 Routine System Operation

The SVI mitigation system will operate continuously in accordance with appropriate design specifications and parameters, and the manufacturer's operation manual, which is included in Appendix C. The SVI mitigation system is equipped with a remote alarm to indicate if the system is not operating properly.

The building's HVAC system, including two ERVs that deliver fresh air into the building, will operate continuously as a component of the SVI mitigation strategy. The ERVs are connected to a remote alarm which sends notifications if ERV operation stops. The mechanical drawings for the building and the as-built HVAC modification drawing are included as Appendix D.

The SVI mitigation system will be routinely inspected and adjusted so that the intended operation specifications are met. Any required maintenance, adjustments, or repairs to the system will be conducted as per manufacturer's recommendations and this ISMP.

2.2 Routine System Inspection

The Volunteer is responsible for performing semi-annual routine inspection and maintenance of the SVI mitigation system until NYSDEC approval of a FER and SMP, or until permission in writing is received from NYSDEC to alter the inspection frequency. Routine inspection/equipment maintenance may include, but is not limited to, lubricating motor bearings, replacing pressure gauges or sample ports, cleaning or replacing the blower inlet filter, collecting differential pressure readings from sample ports located at each riser pipe near the manifold connection, checking blower and ERV filters, measuring flow of fresh air being delivered by the ERVs, and testing the remote alarm systems, as needed. A blank system inspection form is provided in Appendix E.

Routine equipment maintenance, repairs, and/or adjustments will be determined based on the life expectancy and warranty for the specific part as well as visual observations over time. The need for repairs and/or adjustments will depend upon operating parameters compared to the initial system parameters.

If technical difficulties or non-optimal operating conditions are encountered with the SVI mitigation system, the Volunteer will complete necessary modifications or repairs to the system to bring the system into compliance with appropriate design specifications and parameters (to be coordinated with the NYSDEC).

In addition to inspection of the SVI mitigation system, each inspection visit will include confirmation of current site uses. The inspection will confirm if the building continues to be occupied by the Royal Palms Shuffleboard Club. If the current site use changes between inspections, the Volunteer will notify NYSDEC and the New York State Department of Health (NYSDOH). If a change of use occurs, an assessment will be completed to determine if any additional measures (i.e., indoor air sampling) will need to be implemented for the proposed use. The assessment will be subject to review and approval by NYSDEC and NYSDOH.

2.3 Non-Routine Maintenance

Non-routine maintenance may also be required during the operation of the SVI mitigation system, including the following situations:

- The remote alarms are triggered indicating that the SVI mitigation system is not operating properly
- The SVI mitigation system becomes damaged
- The SVI mitigation system is shut down for repairs or maintenance
- The building has undergone renovations that may reduce the effectiveness of the SVI mitigation system

Activities conducted during non-routine maintenance visits will vary. NYSDEC will be informed of SVI mitigation system failure, malfunction, or planned repairs, within 24 hours. Repairs or adjustments should be made to the system as appropriate and as per manufacturer guidelines within 10 days of the equipment failure or whenever possible (i.e., pending availability of parts). If necessary, the system will be redesigned and/or restarted. Differential pressure readings will be collected from the system sample ports following maintenance, repairs, or system shutdowns of any kind.

Inspections will also be performed in the event of an emergency. If an emergency, such as a natural disaster or an unforeseen failure of the system that reduces or has the potential to reduce the effectiveness of the system in place at the site, verbal notice to the NYSDEC must be given the following day. In addition, an inspection of the system will be conducted by a qualified environmental professional within 5 days of the event to verify the effectiveness of the system in place at the site. Written confirmation must be provided to the NYSDEC within 7 days of the event that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.

In the event of a planned or unexpected shut down of the SVI mitigation system, additional indoor air samples may be collected to confirm the effectiveness of the system, if required by NYSDEC and NYSDOH.

2.4 Performance Monitoring

Performance monitoring will be conducted by the Remedial Engineer (RE) or environmental personnel under the supervision of the RE to determine whether the SVI mitigation system is operating as designed. A post-construction inspection of the SVI mitigation system was conducted on 18 October 2022 and serves as a baseline for future performance monitoring. Additionally, indoor air samples will be collected on an annual basis.

Unscheduled inspections may take place when a suspected failure of the SVI mitigation system has been reported, after severe storms, or after the occurrence of an emergency that is deemed likely to affect the operation of the system. Performance monitoring will include the same procedures listed for the system start-up inspection, including the collection of differential pressure readings from system sample ports to confirm that the system meets design criteria, except for smoke testing. The design target is established at less than or equal to -0.01 inches of water column (IWC).

Four indoor air samples will be collected from the same locations as the Indoor Air Sample Results Technical Memorandum (Appendix A) on an annual basis. An outdoor ambient air sample will also be collected for quality assurance/quality control (QA/QC) purposes in accordance with the Quality Assurance Project Plan (QAPP) included as Appendix H of the July 2022 Interim Remedial Measures Work Plan (IRMWP). The air samples will be collected and analyzed for chlorinated volatile organic compounds (CVOCs) via United States Environmental Protection Agency (USEPA) method TO-15. A NYSDOH Indoor Air Quality Questionnaire and Product Inventory Form will be completed during the sampling event to document potential indoor air sources of CVOCs, including methylene chloride.

The Category B data deliverable from the laboratory will be validated in accordance with the IRMWP QAPP and a Data Usability Summary Report (DUSR) will be prepared. The DUSR will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain-of-custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. Following data validation, Electronic Data Deliverables (EDDs) will be uploaded to the NYSDEC's EQuIS environmental information management system.

2.5 System Monitoring Devices and Alarms

The SVI mitigation system and ERVs are equipped with separate remote alarms to indicate if the system is not operating properly. The remote alarm is connected to a cellular network and notifies Langan and the project team via email and text message if the system stops operating.

If the remote alarm is triggered, applicable maintenance and repairs will be conducted as specified in this ISMP and the SVI mitigation system will be restarted. Operational problems will be noted in the inspection form and communicated to the NYSDEC within 48 hours.

2.6 System Performance Monitoring Schedule

The Volunteer is responsible for performing semi-annual routine inspection, annual indoor air sampling, and maintenance of the SVI mitigation system until NYSDEC approval of a FER and SMP, or until permission in writing is received from NYSDEC to alter the inspection frequency. Unscheduled inspections may be necessary when a suspected failure of the SVI mitigation system has been reported or an emergency occurs that is deemed likely to affect the operation of the system.

A summary of the system performance monitoring schedule is included in the table below.

Year	Performance Monitoring Type	Month
2023	Indoor Air Sampling (completed)	March
	Routine System Inspection (completed)	June
	Routine System Inspection and Annual Indoor Air Sampling (completed)	December
2024	Non-Routine System Inspection and Indoor Air Sampling (completed)	January
	Non-Routine System Inspection and Indoor Air Sampling (completed)	February
	Non-Routine System Inspection and Indoor Air Sampling (completed)	March
	Routine System Inspection and Non-Routine Sampling (completed)	May
	Routine System Inspection and Annual Indoor Air Sampling (completed)	November
	Non-Routine System Inspection and Indoor Air Sampling (completed)	December
	Non-Routine System Inspection and Indoor Air Sampling (completed)	March
2025	Routine System Inspection	June
	Routine System Inspection and Annual Indoor Air Sampling	December

Annual indoor air sampling will be conducted during the heating season, concurrently with the December semi-annual routine system inspection.

2.7 DER AEV Compliance

To determine if the SVI mitigation system effluent air requires treatment before discharge to the atmosphere, an effluent air sample was collected and contaminant mass flow rates were compared to hourly and annual emission rate limits listed in 6 NYCRR Part 212-2.2 Table 2

included in the Guidance on Air Emissions of VOCs at DER Remediation Sites (DER AEVs). Effluent air contaminant mass flow rates did not exceed the DER AEVs. No treatment is required.

2.8 Criteria for System Termination

The SVI mitigation system and continuous operation of the HVAC system will not be discontinued unless prior written approval is granted by NYSDEC and NYSDOH. If monitoring data indicates that the SVI mitigation system may no longer be required, a proposal to discontinue the SVI mitigation system will be submitted by the remedial party to NYSDEC and NYSDOH.

3.0 CONTACT LIST

The following contact list will be used, as needed, to coordinate ISMP activities:

Name	Project Role	Phone Number	Email Address
Steven Hirschberg (Volunteer/Owner)	Volunteer/Property Owner Representative	212-896-5565	shirschberg@brodsky.com
Jason Hayes (Langan)	Remediation Engineer	212-479-5427	jahayes@langan.com
Michael Burke (Langan)	Qualified Environmental Professional	212-479-5413	mburke@langan.com
Paul McMahon (Langan)	Project Manager	212-479-5400	pmcmahon@langan.com
Tony Moffa (Langan)	Corporate Health & Safety Manager	212-479-5400	tmoffa@langan.com
Sean Tuthill (AARCO)	Environmental Contractor	631-586-5900	stuthill@aarcoenvironmental.com
Martin Foody (Centrifugal)	Electrical Contractor	212-798-3150	martin.f@centrifugalgroup.com
Nick Shields (Royal Palms Shuffleboard Club)	Building Tenant	917-831-8250	nick@royalpalmsshuffle.com

4.0 REPORTING

Activities conducted to maintain compliance with the ISMP, such as routine and non-routine inspections, and indoor air sampling, will be documented in the BCP monthly progress reports until a FER and a SMP are issued. The monthly progress report will include a description of completed site activities, a system inspection form, any encountered system deficiencies and implemented or proposed corrective actions.

Re: Indoor Air Sample Results
514 Union Street, Brooklyn, NY
Langan Project No.: 170361307

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this technical memorandum on behalf of Gowanus President Owner LLC (the Volunteer) to document results of indoor air samples collected at 514 Union Street, Brooklyn, New York (the site) on 17 March 2023. Indoor air samples were collected to confirm that the active soil vapor intrusion (SVI) mitigation system that was installed in September 2022 continues to operate as designed and is protective of human health. The Volunteer was accepted into the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) to investigate and remediate the site pursuant to the NYSDEC Brownfield Cleanup Agreement (BCA) executed on 21 October 2021 and amended on 1 February 2023. The site was assigned BCP Site No. C224318.

The approximately 17,000-square-foot site, identified as Brooklyn Borough Tax Block 440, Lot 12, is improved with a one-story brick building occupied by the Royal Palms Shuffleboard Club. A site location map is presented as Figure 1.

As documented in the 9 March 2023 Construction Completion Report (CCR) No. 1, an active SVI mitigation system was installed at the site in September 2022 (i.e., prior to the heating season) and has been in continuous operation since 22 September 2022. As required by the October 2006 New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York and in compliance with the NYSDEC-approved July 2022 Interim Remedial Measures Work Plan (IRMWP), indoor air samples were collected in overnight between 20 and 21 November 2022 during the heating season and at least 30 days following start of system operation. The results of the November 2022 sampling event confirmed that SVI mitigation system is effectively mitigating SVI.

Indoor Air Sampling

Methodology

The 17 March 2023 indoor air sampling event was conducted in accordance with the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York (including subsequent updates) and the NYSDEC approved July 2022 IRMWP. A photograph log documenting the sampling event is included as Appendix A.

Four indoor air samples (IA01 through IA04) were collected at the same locations that were previously approved by the NYSDEC and NYSDOH for the November 2022 sampling event. An ambient air sample (AA01) was collected on the Union Street sidewalk for quality assurance/quality control (QA/QC) purposes. Sample locations are shown on Figure 2.

The air samples were collected at a height of about 3 to 4 feet above grade surface using laboratory-provided, individually-certified, 6-liter Summa air canisters equipped with 8-hour sample interval flow controllers. The indoor air samples were sealed, labeled, and transported via courier service to the laboratory for chlorinate volatile organic compounds (CVOC) analysis via United States Environmental Protection Agency (USEPA) Method TO-15. The air samples were submitted to York Analytical Laboratories, Inc. of Stratford, Connecticut, an NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Sampling logs are included as Appendix B.

An NYSDOH Indoor Air Quality Questionnaire and Building Inventory form was completed during the sampling event to document site characteristics that may influence sample results, including background levels of volatile organic compounds (VOC) by screening with a ppbRAE 3000 photoionization detector (PID), the ventilation system, and the chemical inventory. The completed NYSDOH questionnaire is included as Appendix C.

Field Observations and Sample Results

The site was screened with a ppbRAE and detected levels of non-specific VOCs ranged between 0 and 2 parts per billion (ppb) in the main space, and up to 77 ppb in a utility closet located in the southwestern part of the site. The chemical inventory identified the storage of several cleaning products at the site. Chlorinated solvents were not identified as ingredients for the documented cleaning products.

Sample results, including results from the November 2022 sampling event, are shown on Figure 2 and Table 1. With the exception of methylene chloride, CVOCs (including trichloroethene [TCE] and tetrachloroethene [PCE]) were not detected in the indoor air samples. Methylene chloride was detected in the indoor air samples and the outdoor ambient air sample at concentrations ranging between 0.970 and 1.19 micrograms per cubic meter ($\mu g/m^3$), about one to two orders of magnitude below the NYSDOH Air Guideline Value (AGV)[1].

[1] Promulgated in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (2013, 2015, and 2017).

Data Validation

Langan validated the sample analytical data in accordance with the Quality Assurance Project Plan (QAPP) included in the NYSDEC approved July 2022 IRMWP. A Data Usability Summary Report (DUSR) was predated and is included as Appendix D. All data are considered usable, as qualified. Completeness, defined as the percentage of analytical results that are judged to be valid, is 100%. The ASP Category B laboratory analytical data report is included as Appendix E.

Conclusion

As documented in the 9 March 2023 CCR No. 1, the results of the November 2022 sampling event documented that SVI mitigation system is effectively mitigating SVI. The results of the March 2023 sampling event confirmed that SVI mitigation system is effectively mitigating SVI and operating as designed.

Indoor Air and Ambient Air Sample Results

514 Union Street
Brooklyn, New York
BCP Site No.: C224318
Langan Project No.: 170361305

Notes:

AA - Ambient Air
IA - Indoor Air
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Indoor air sample analytical results are compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (2013, 2015, 2017).
Ambient air sample analytical results are shown for reference only.

Qualifiers:

D - The concentration reported is a result of a diluted sample.
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds NYSDOH AGVs

APPENDIX A

APPENDIX B

SAMPLING LOGS

AIR SAMPLING LOG SHEET

Sample Number: IA01_031723

PROJECT: 514 Union Street		**PROJECT NO.:** 170361307	
LOCATION: Brooklyn, New York		**SURFACE ELEVATION AND DATUM:** N/A	
SAMPLER: TJ Malgieri		**SAMPLE DATE STARTED:** 3/17/2023	**DATE FINISHED:** 3/17/2023
INSPECTOR: TJ Malgieri		**TYPE OF SAMPLING DEVICE:** 6-Liter Summa Canister	
POTENTIAL SAMPLE INTERFERENCES: None		**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):**	
		Temp:	41° - 45° F
		Wind:	S - SW 5-8 mph
		Precipitation:	None
		Pressure:	29.81 - 29.92 inHg

METHOD OF INSTALLATION AND SAMPLING:

Langan field screened the sample location with a ppbRAE 3000 photoionization detector prior to sampling. Sample consisted of 6L Summa canister fitted with an 8-hour flow control valve. The flow controller was zeroed and valve opened to initiate the 8-hour sample collection. The sample and flow controller were checked each hour during sampling to ensure proper operation.

SAMPLE DETAILS

HEIGHT ABOVE GROUND (FT):	4
PID BEFORE SAMPLE (PPB):	0.0
SAMPLE START TIME:	0:25
SAMPLE STOP TIME:	8:25
TOTAL SAMPLE TIME (MIN):	480
REGULATOR FLOW RATE (mL/MIN):	9.79
VOLUME OF SAMPLE (LITERS):	4.70
PID AFTER SAMPLE (PPB):	0.0
SAMPLE MOISTURE CONTENT:	None
CAN SERIAL NUMBER:	42992
REGULATOR SERIAL NUMBER:	17899
CAN START VACUUM PRESS. (" HG):	-30
CAN STOP VACUUM PRESS. (" HG):	-11

APPENDIX C

NYSDOH INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name TJ Malgieri Date/Time Prepared 03/17/2023 02:00

Preparer's Affiliation Langan Engineering Phone No. 212-479-5400

Purpose of Investigation Indoor Air Sampling

1. OCCUPANT:

Interviewed: (Y)/ N

Last Name: Shields First Name: Nick

Address: 514 Union Street, Brooklyn, New York

County: Kings

Home Phone: _____ Office Phone: 347-223-4410

Number of Occupants/persons at this location 5-500 Age of Occupants 21+

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial/Multi-use)
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Royal Palms Shuffleboard Club

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1919

Is the building insulated? Y / (N) How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

N/A

Airflow near source

20 Overhead Fans, Overhead exposed HVAC System (off)

Outdoor air infiltration

Front Doors, attached non-insulated garage doors

Infiltration into air ducts

Overhead exposed HVAC system

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete	stone	(brick)
b. Basement type:	full	crawlspace	slab	other N/A
c. Basement floor:	concrete	dirt	stone	other N/A
d. Basement floor:	uncovered	covered	covered with N/A	
e. Concrete floor:	unsealed	(sealed)	sealed with woof flooring, and/or paint in parts	
f. Foundation walls:	poured	block	stone	other Brick
g. Foundation walls:	unsealed	(sealed)	sealed with Paint	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / (N)			
k. Water in sump?	Y / N / (not applicable)			

Basement/Lowest level depth below grade: N/A (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Bathroom floor drains, utility vaults

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

(Hot air circulation)	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

(Natural Gas)	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: _____

Boiler/furnace located in: Basement Outdoors (Main Floor) Other_____

Air conditioning: (Central Air) Window units Open Windows None

Are there air distribution ducts present? (Y) / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Visible cold air supply and return ductwork visible and connected to building ceiling. Duct joints appeared to be in good condition. Ductwork connects to roof-mounted HVAC unit (which was off).

7. OCCUPANCY

Is basement/lowest level occupied? (Full-time) Occasionally Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	None
1st Floor	Royal Palms Shuffleboard Club
2nd Floor	
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? Y / (N) / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA Please specify Food Truck (when operational)

d. Has the building ever had a fire? Y / (N) When? _____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? (Y) / N When & Type? Yes; glass cleaners.

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? (Y) / N If yes, where vented? Roof

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? Y / (N)
If yes, please describe: N/A

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? N/A

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? (Y) / N Date of Installation: September 2022
Is the system active or passive? (Active)/Passive

SVI Mitigation System installed

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: N/A

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

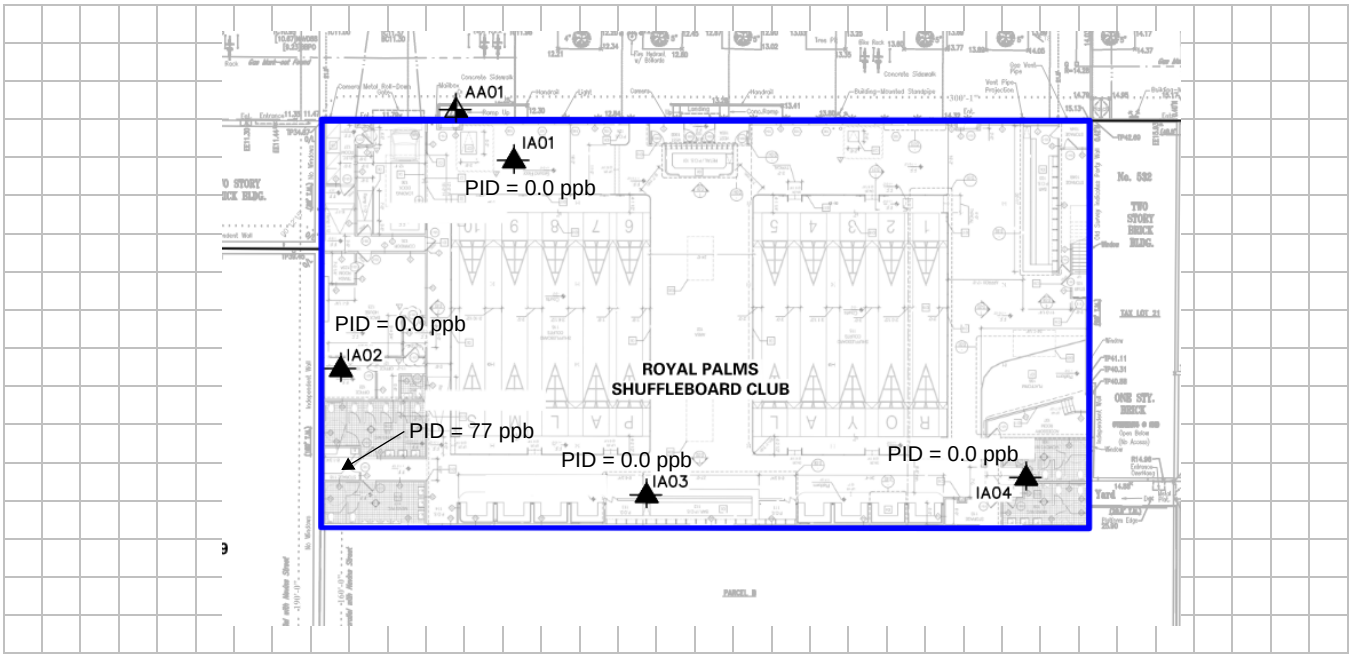

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement: No Basement

First Floor:

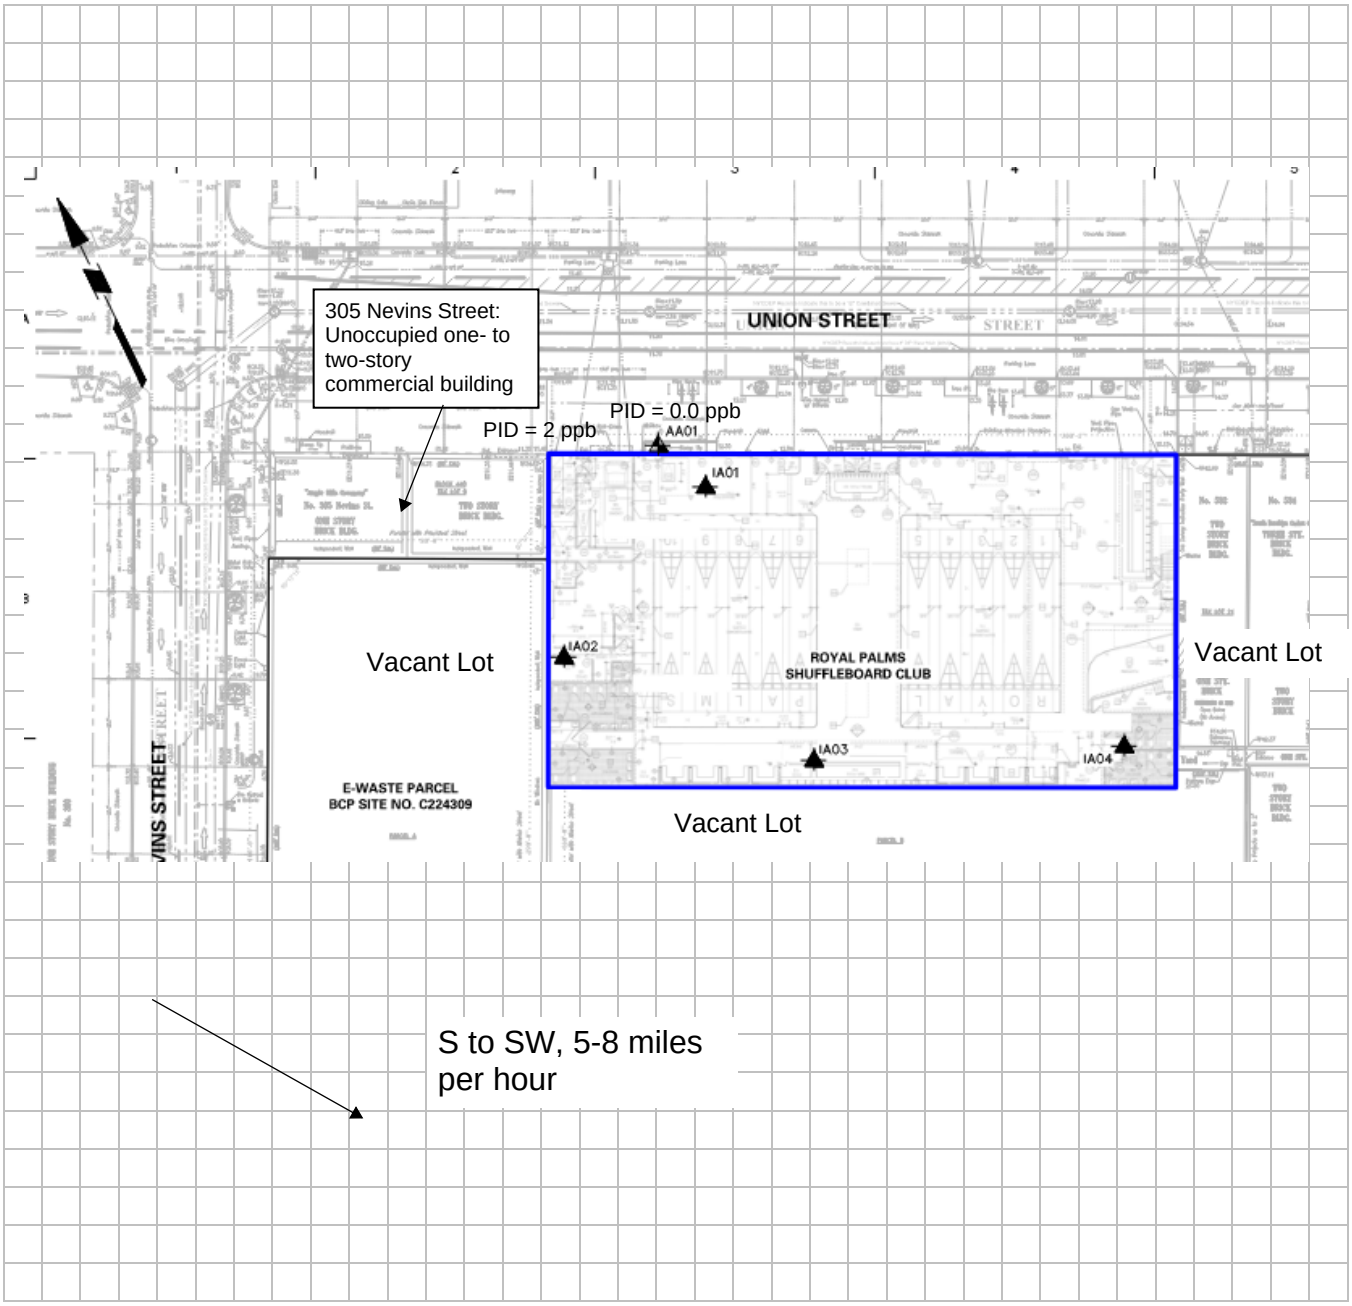

PID = photoionization detector
ppb = parts per billion

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

PID = photoionization detector

ppb = parts per billion

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: ppbRAE 3000

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
Supply Closet	Keystone Lavender Multi-Surface Cleaner	(9)1-Gal	Good, opened U	poly(oxy-1,2-ethanediyl, alpha-undecyl-omega-hydroxy-dodecylbenzesulfonic acid, sodium salt	0.0 (ppb)	Y
Supply Closet	Sysco Germicidal Bleach	(7) 1-Gal	Good, opened U	Sodium hypochlorite, sodium hydroxide	0.0 (ppb)	Y
Supply Closet	Sysco Reliance Handsoap	(1) 1-Gal	Good, opened U	Chloroxylenol, potassium cocoate, hexylene glycol, sodium sulfate, tetrasodium EDTA, sodium lauryl sulfate, glycerin, citric acid, coco-glucoside, glyceryl oleate, fragrance, methylisothiazolinone	0.0 (ppb)	Y
Supply Closet	Clean Slate Lotion Hand Soap	(3) 1-Gal	Good, opened U	Unknown	0.0 (ppb)	Y
Supply Closet	Keystone Heavy Duty Degreaser	(4) 1-Gal	Good, opened U	Sodium dodecylbenzene sulfonate, sodium poly(oxyethylene) dodecyl ether sulfate, di-propyleneglycol	0.0 (ppb)	Y
Supply Closet	Sysco Reliance Glass Cleaner	(3) 1-Gal	Good, opened U	water, nonionic surfactant, aliphatic alocol, polycarobxylate salt, nonionic surfactant, colorant	0.0 (ppb)	Y
Supply Closet	Ecolab Glass Cleaner	(1) 2.5-Gal	Good, opened U	water, d-glucopyranose, oligomeric, decyl octyl glycosides, Polyol , Polycarobxylate salt, oxydipropanol, Organic acid, Coumarin , 1,6-Octadien-3-ol, 3,7-dimethyl-, 3-acetate, Colorant, Isothiazolinones Silicone, Cellulose ether	0.0 (ppb)	Y
Supply Closet	Xpress Detergent Disinfectant	(2) 1 Qt.	Good, opened U	n-Alkyl, dimenthyl benzyl ammonium chlorides, n-Alkyl dimenthyl, ethylbenzyl ammonium chlorides	0.0 (ppb)	Y
Supply Closet	Krud Cutter Caulk Remover	(1) 24 oz.	Good, opened U	Acetone, monoethanolamine, 1,3-dioxane benzyl alcohol	0.0 (ppb)	Y
Supply Closet	Dawn Professional Manual Pot & Pan Detergent	(10) 1.18 Qt	Good, opened U	water, sodium lauryl sulfate, sodium laureth sulfate, lauramine oxide, sodium chloride, phenoxyethanol, PEI-14 PEG-10/PPG-7 copolymer, methylisothiazolinone, fragrance, yellow 5	0.0 (ppb)	Y
Supply Closet	Pine Kleen	(2) 1-Gal	Good, opened U	Water, isopropyl alcohol, sodium metasilicate	0.0 (ppb)	Y
Supply Closet	Machine Detergent 3x	(4) 2.5-Gal	Good, opened U	Water, Sodium Hydroxide, Sodium Nitrilo-triacetate, monohydrate, polyacrylic acid, amino tris, dye	0.0 (ppb)	Y
Supply Closet	Fabuloso Lavender Multi-Surface Cleaner	(8) 1-Gal	Good, opened U	Water, sodium dodecyl benzene, sulfonate (linear), sodium sulfate	0.0 (ppb)	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Re: Data Usability Summary Report
For 514 Union Street
March 2023 Indoor and Ambient Air Samples
Langan Project No.: 170361301

This memorandum presents the findings of an analytical data validation of the data generated from the analysis of air samples collected in March 2023 by Langan Engineering and Environmental Services at the 514 Union Street site. The samples were analyzed by York Analytical Laboratories, Inc. (NYSDOH NELAP registration # 1854 and 12058) for volatile organic compounds (VOCs) by the methods specified below.

- VOCs by USEPA Method TO-15

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs

values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. All SDGs underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA's guidelines and best professional judgment:

- **R –** The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- **J –** The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- **UJ –** The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- **U –** The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- **NJ –** The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified due to minor data quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by USEPA Method TO-15:

L23C0979

The sample IA01_031723 exhibited a laboratory-measured receipt pressure below -10 in. Hg (-10.54 in. Hg"). The associated results in sample IA01_031723 are qualified as J or UJ because of potential indeterminate bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. No other deficiencies that were identified.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Signed:

Joe Conboy
Senior Staff Chemist

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 15, 2023 and listed below. The project was identified as your project: **170361307**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 23C0823

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

CASE NARRATIVE

York Project/SDG No.: 23C0823
Client: Langan Engineering & Environmental Services (NYC)
Client Project ID: 170361307
Prepared for: Vinicius DePaula

Introduction

This Case Narrative applies only to the following samples submitted to our laboratory on **03/15/2023 15:28** as detailed on the chain-of-custody form.

The 6 sample(s) were received intact, unless otherwise noted.

Chain-of-custody was maintained from receipt through analysis in the laboratory.

Methodology

All preparation and analyses were conducted according to EPA Compendium Method TO-15 guidance.

Client Sample Information and Non-Conformances

Laboratory ID	Sample Name	Matrix
23C0823-01	CAN 23991 / FC 17904	Air
23C0823-02	CAN 28845 / FC 17903	Air
23C0823-03	CAN 42992 / FC 17899	Air
23C0823-04	CAN 19529 / FC 17898	Air
23C0823-05	CAN 37794 / FC 17897	Air
23C0823-06	CAN 43005 / FC 17900	Air

Any additional Client Sample Non-conformances are detailed in the proceeding Case Narrative Non-Conformance Summary tables.

No other problems were encountered during analysis.

QC Sample Non-Conformances

Any QC Sample Non-conformances (SCV, CCV, BS, MS, DUP) are detailed in the proceeding Case Narrative Non-Conformance Summary tables.

No other problems were encountered during analysis.

York Project/SDG no.: 23C0823 Statement

We certify that these data are in compliance with SOP requirements both technically and for completeness for other than the conditions stated above. Release of the data contained in the hard copy report and any electronic data deliverables has been authorized by the Laboratory Manager as verified by the signature on this laboratory report.

Approved by: *Krys Trafalski*
Technical Director

Date: 03/21/2023

York Analytical Laboratories, Inc.

Formulae Used for Sample Calculations

1. Volatiles in Air (ppbv)

Cx (ppbv) = Compound concentration, ppbv (parts per billion by volume)

$$Cx = \frac{(Ax)(Cis)(DF)}{(Ais)(RRF)}$$

2. Volatiles in Air (ug/m³)

Cx (ug/m³) = Compound concentration in ug/m³

$$Cx\ (ug/m^3) = \frac{(ppbv \times Molecular\ wt.)}{(24.45)}$$

WHERE:

Cx = concentration of analyte as ug/L or ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF = Mean relative response factor from the initial calibration.
DF = Dilution factor calculated as described in section 2. If no dilution is performed, DF = 1
Cis = Concentration of the internal standard spiking mixture, ppbv

No Sample Nonconformances Found

Notes: Other nonconformances, if any, are detailed in the Data Quality Assessment worksheets.

For multiple surrogate analyses such as semi-volatiles, volatiles, etc, single surrogate excursions do not necessarily indicate a bias in the sample. Samples with multiple surrogate excursions may exhibit a bias in the results.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Laboratory Chain-of-Custody Record

York Project (SDG) No.: 23C0979

Samples Received: 03/15/2023 15:28 **By:** Kristina M. Blocker **Logged In:** 03/15/2023 15:28 **By:** Kristina M. Blocker

Sample Conditions:

- ☐ Custody Seals
- ☐ Containers Intact
- ☐ COC/Labels Agree
- ☐ Preservation Confirmed
- ☐ Cooler Temperature Confirmed
- ☐ COC Complete
- ☐ Chain of Custody Form Received
- ☐ Appropriate Sample Volumes Received
- ☐ Appropriate Sample Containers Submitted
- ☐ Samples Submitted within Holding Times
- ☐ Corrective Action Form Required

Quant Title : TO15 VOC Analysis
QLast Update : Mon Jan 30 09:33:24 2023
Response via : Initial Calibration

Compound	R.T.	QIon	Response	Conc	Units		Dev(Min)
Internal Standards							
1) Methane, bromochloro-	12.225	49	338417	10.00	ppbv		0.00
37) 1,4-Difluorobenzene	13.804	114	764565	10.00	ppbv		0.00
53) d5-Chlorobenzene	19.053	117	676354	10.00	ppbv		0.00
System Monitoring Compounds							
64) p-Bromofluorobenzene	21.224	95	346448	9.89	ppbv		0.00
Spiked Amount 10.000	Range 70 - 130		Recovery = 98.90%				
Target Compounds							Qvalue
2) Propylene	4.940	42	173292	7.92	ppbv		95
3) Dichlorodifluoromethane	5.020	85	492180	8.78	ppbv	#	95
4) 1,2-Dichlorotetrafluor...	5.324	85	599939	8.06	ppbv		95
5) Chloromethane	5.544	50	262849	8.59	ppbv		98
6) Vinyl Chloride	5.830	62	274130	8.00	ppbv		100
7) 1,3-Butadiene	5.916	54	216163	8.72	ppbv		94
8) Bromomethane	6.745	94	215226	8.30	ppbv		99
9) Chloroethane	6.934	64	122082	8.37	ppbv		94
10) Vinyl Bromide	7.403	106	200627	9.68	ppbv		100
11) Trichlorofluoromethane	7.531	101	447671	9.37	ppbv		99
12) Isopropanol	8.086	45	547208	8.81	ppbv		100
13) Acrolein	8.184	56	115680	9.19	ppbv	#	1
14) Acetone	8.299	43	439696	8.22	ppbv		98
15) Freon-113	8.440	101	447302	9.52	ppbv		96
16) 1,1-Dichloroethylene	8.659	61	364054	8.48	ppbv		97
17) 3-Chloropropene	9.281	41	337977	9.17	ppbv		86
18) Methylene Chloride	9.427	49	356993	9.91	ppbv		82
19) Acrylonitrile	9.531	53	211096	9.43	ppbv	#	62
20) Carbon disulfide	9.549	76	638631	9.97	ppbv	#	88
21) Methyl-tert-Butyl Ethe...	9.848	73	519997	9.70	ppbv	#	84
22) trans-1,2-Dichloroethy...	10.043	61	318241	9.15	ppbv		97
23) Hexane	10.342	57	415252	9.92	ppbv		92
24) Vinyl Acetate	10.677	43	664507	10.06	ppbv	#	98
25) 1,1-Dichloroethane	10.714	63	449068	9.49	ppbv		97
26) 2-Butanone	11.341	43	628629	9.06	ppbv		89
27) Ethyl Acetate	11.646	43	702549	9.41	ppbv	#	40
28) cis-1,2-Dichloroethylene	11.719	61	338178	8.56	ppbv		88
29) Chloroform	11.994	83	434488	9.83	ppbv	#	94
30) Tetrahydrofuran	12.329	42	373292	9.41	ppbv		89
31) 1,1,1-Trichlorethane	12.731	97	384607	9.90	ppbv		93
32) Cyclohexane	12.902	56	433143	9.57	ppbv		88
33) Carbon Tetrachloride	13.201	117	274635	10.13	ppbv	#	58
34) 1,2-Dichloroethane	13.274	62	281872	9.74	ppbv		99
35) Benzene	13.408	78	740612	9.36	ppbv	#	85
36) n-Heptane	13.426	43	551469	9.64	ppbv	#	97
38) Trichloroethylene	14.445	95	296309	8.79	ppbv		99
39) 1,2-Dichloropropane	14.670	63	299950	8.93	ppbv		96
40) Methyl Methacrylate	14.688	69	257068	9.71	ppbv	#	41
41) 1,4-Dioxane	14.981	88	156344	9.44	ppbv	#	100
42) Bromodichloromethane	15.030	83	432788	10.16	ppbv	#	93
43) Methyl Isobutyl Ketone	15.566	43	758264	9.22	ppbv		91
44) cis-1,3-Dichloropropene	15.914	75	358389	10.30	ppbv	#	95
45) Toluene	16.572	91	932428	9.77	ppbv		97

BUTTERFLY VALVE, VACUUM GAUGE AND SAMPLE PORT ON ROOF-MOUNTED PIPE

ROOF-MOUNTED 8-INCH-DIAMETER HEADER PIPE (BLOWER MANIFOLD) TO BLOWER SKID

GENERAL NOTES:

1. BASE MAP ADAPTED FROM DRAWING NO. A-001.00, TITLED "PROPOSED GROUND FLOOR PLAN" BY ANDRE TCHELISTCHEFF ARCHITECTS, DATED 13 AUGUST 2013 AND SURVEY BY NEW YORK CITY LAND SURVEYORS, PC, DATED 14 JUNE 2019.
2. DRAWING SHALL NOT BE USED FOR STRUCTURAL, ARCHITECTURAL, UTILITY, OR OTHER REFERENCE EXCEPT FOR THE SOIL VAPOR INTRUSION (SVI) MITIGATION SYSTEM.
3. VAULTS, HATCHES, CRACKS, VOIDS, AND PENETRATIONS IDENTIFIED BY THE ENGINEER ON THE GROUND FLOOR WERE SEALED WITH POLYURETHANE-BASED CAULKING, CEMENT, OR FOAM AND RUBBER WEATHER PROOFING STRIPS.

VENTILATION POINT AND RISER PIPE NOTES:

1. LOCATION OF VENTILATION POINTS WERE MOVED BASED ON SITE CONDITIONS WITH APPROVAL OF THE ENGINEER.
2. AN ELBOW WAS INSTALLED AT VP-03 TO DIRECT AIR FLOW. SEE DETAIL 8.
3. ALL FITTINGS AND CONNECTIONS FOR THE VAPOR COLLECTION AND RISER PIPES ARE 4-INCH-DIAMETER METAL FITTINGS EXCEPT 8-INCH-DIAMETER MANIFOLD.
4. RISER PIPE PENETRATIONS THROUGH THE FINISHED FLOOR PLATFORM ARE SEALED WITH A POLYURETHANE-BASED CAULK.
5. RISER PIPE IS CLEARLY LABELED "CAUTION: DO NOT ALTER SUB-FLOOR VAPOR VENT PIPE" IN EACH ACCESSIBLE AREA AT A MINIMUM OF EVERY 10 LINEAR FEET OF RISER PIPE RUN.
6. SYSTEM INSTALLATION ADHERES TO OCTOBER 2006 FINAL GUIDANCE FOR EVALUATING SOIL VAPOR INTRUSION IN THE STATE OF NEW YORK PREPARED BY THE NEW YORK STATE DEPARTMENT OF HEALTH (NYSDOH) AND SUBSEQUENT UPDATES, AND 2014 NEW YORK CITY MECHANICAL CODE, CHAPTER 5, SECTION MC 512-SUBSLAB SOIL EXHAUST SYSTEMS.
7. POINT OF EXHAUST IS:
   - A. ABOVE THE EAVE OF THE ROOF AND AT LEAST 24-INCHES ABOVE THE SURFACE OF THE ROOF;
   - B. AT LEAST 10 FEET ABOVE GROUND LEVEL;
   - C. AT LEAST 10 FEET AWAY FROM ANY OPERABLE AIR INTAKE THAT IS LESS THAN 2 FEET BELOW THE DISCHARGE POINT; AND
   - D. 10 FEET FROM ANY ADJOINING OR ADJACENT BUILDINGS, HVAC INTAKES, OR HVAC SUPPLY REGISTERS.
12. INSTALLED VENT CAP IS SMITH® NO. 1748 SERIES LOW TYPE VANDAL PROOF VENT CAP.

SCALE: 1 INCH = 8 FEET

AIRTECH® VACUUM

3BA1400

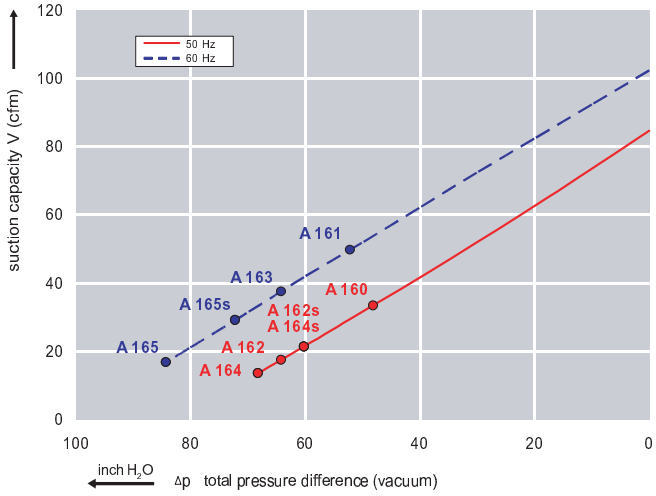

Vacuum/Pressure Regenerative Blower

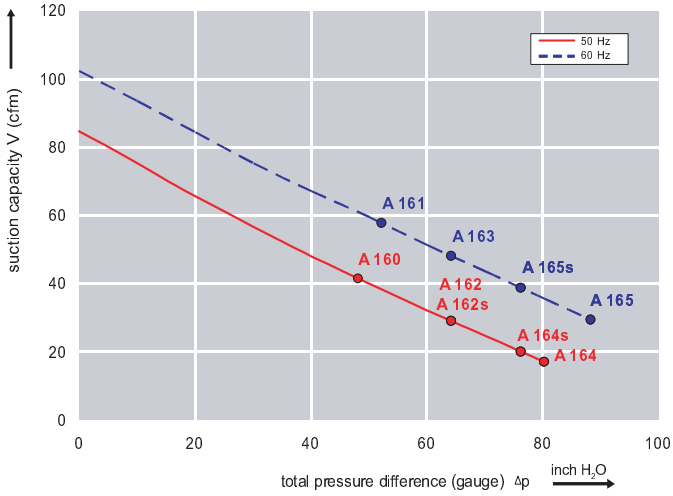

Features:

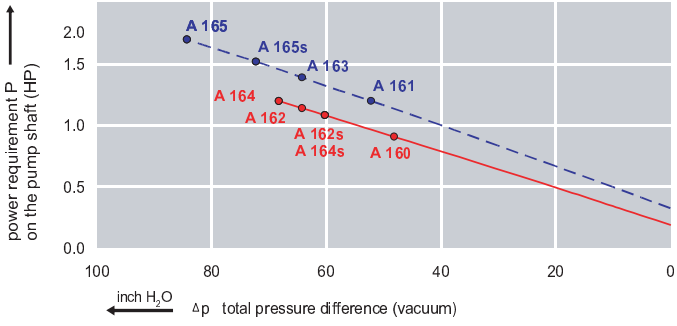

- Cooler running, outboard bearing provides maintenance-free operation
- Environmentally friendly oil-free technology
- Extremely quiet operation
- All motors are standard TEFC with Class F insulation, UL recognized, CE Compliant
  Explosion-Proof motors available
- Custom construction blowers are available
- Rugged die cast aluminum construction

Suitable for 208 Volt Operation

All curves are rated at 14.7 psia and 68° F ambient conditions and are reported in SCFM referenced to 68° F and 14.696 psia sea level conditions. Curve values are nominal, actual performance may vary by up to 10% of the values indicated. For inlet temperatures above approximately 80 °F or for handling gases other than air, please contact your Airtech sales representative for assistance.

TECHNICAL SPECS

- Dual Input Alarm Channels: (1) 12VAC/VDC to 120VAC/VDC, opto-isolation. (1) Dry Contact input
- Backup Battery: External 6DVC Sealed Lead, 1.3 AH Re-chargeable
- Operating Temperature: -20 to 150 F
- Operating Humidity: 0-90% RH, non-condensing
- Alarm Light Bulb: Super bright LED cluster long-life
- Alarm Light Annunciator: 2.8kHz, 85dB, selectable for inputs #1 and #2
- Alarm Light State: Pulses LEDs at 3Hz, selectable for inputs #1 and #2
- Cellular Radio: 4G LTE CAT-1
- Certifications: FCC Parts 15, 22, 24; RoHS compliant; IC: RSS-132 & 133
- Antenna: Integrated, on board
- Input Power: 120VAC +/-20% @ 0.5A max, 12 VDC or Solar options
- Enclosure: NEMA 4 equivalent rating for direct mounting indoors or outdoors. Includes security cage.
- Dimensions: 5"W round base x 5" H
- Weight: 1lb
- Protection: US Patent #7,228,129 and #7,778,633

SMARTPHONE APPLICATIONS IPHONE™ & ANDROID

View the status with your web enabled smartphone. Check the status of your alarms and analyze your equipment at any time and anywhere!

OmniBeacon™ costs no more than an ordinary visual alarm light, but does so much more!

You focus on what you do best and let OmniSite deliver the alarms.

We have thousands of installations, and over 15 years of cellular and web based experience.

Visit us Online at **www.OmniSite.com**

HOW OMNIBEACON™ WORKS

OmniSite relies on a combination of cellular telephone and web-based technology.

The OmniBeacon™ is installed at your equipment and sends a wireless signal to the local cellular tower. That signal is bounced to OmniSite's web interface, where customers can log on – any day, any time, from any computer, tablet or smartphone and see how the equipment is operating.

Because OmniSite engineers recognize today's fast-paced world and the need to be connected 24/7, our system was designed to notify via text message, email, or phone call. A "call out" list is setup online, so that when an alarm is triggered at your equipment, all necessary contacts are notified immediately.

OPTIONAL FEATURES

- Solar panel

1. Safety

1.1 General Safety Precautions

WARNING: Improper operation of 3BA units can result in serious or even fatal injuries. Please make sure all personnel have read and understood this manual before operating the unit.

All personnel should familiarize themselves with the units' specifications and be careful not to exceed the unit's capacity.

Transport, installation, operation, shut-down, maintenance and disposal of 3BA units should be carried out by qualified professionals.

Do not attempt to start or run the unit unless it has been completely assembled. Particular attention should be paid to: the vacuum pump/compressor cover, the muffler on the inlet and discharge connections, and the fan guard.

The standard 3BA unit must never come into contact with flammable substances.

1.2 Clothing and Protective Gear

It is recommended that all personnel wear proper protective gear while operating the unit. This may include eye protection, gloves and helmets.

Please be aware that it is possible for hair and clothing to be pulled into the unit. Avoid wearing loose-fitting clothing near the unit while it is operating and wear a hairnet if necessary.

1.3 Electrical Safety

Electrical installation should only be done by qualified electricians. Before doing any electrical work on a 3BA unit, please ensure that **power to the unit has been disconnected.** Do not attempt to open the unit's terminal box until you have made certain that the unit is not connected to a power source.

The terminal box must be kept free of dirt and moisture at all times. Make sure the terminal box cover and cable entries are tightly sealed so they remain dustproof and waterproof. Check the terminal box regularly to make sure it is sealed and free of debris and moisture.

1.4 Vacuum and Gauge Pressure Safety

In order to avoid dangerous situations associated with vacuum and gauge pressure, please utilize secure mounting elements, connections, lines, fittings, and containers. Pipes/hoses must be securely connected to the inlet and discharge connections. The inlet and discharge connections and the pipes/hoses connected to them must not be closed, clogged, or soiled. Check regularly to ensure that these connections and mountings are not becoming unseated. If necessary, support pipes and hoses to ensure that there is no tension on the connections. **Failure to observe these precautions can lead to sudden evacuation of hazardous fluids or dangerous suction that can pull hair or clothing into the unit.**

1.5 Installation/Start-up

The unit and any lines connected to it must be securely installed. In particular, the feed pipes must be securely routed, e.g. in cable ducts, in the floor, etc.

If a separate control panel or other such interface will be used to start and stop the unit, it should be installed in an area with an unobstructed view of the unit to ensure that it is not switched on while being serviced.

Excess vibration can cause damage to the unit and/or unsafe conditions. Install the unit on a solid foundation or a solid mounting surface. Check screw glands/unions for strength and firm seating.

Cables and pipes should be installed in a recess in the floor or duct so they do not present a tripping hazard.

To ensure sufficient cooling of the unit, ventilation screens and openings must remain clear. Ensure that discharge air from other units cannot be pulled into the unit.

Make sure that the inlet and pressure lines are clearly marked to avoid confusion. **Interchanged inlet and pressure lines can lead to damage to the unit and/or serious injury.**

Install a filter in the inlet pipe and replace it regularly. If particulates or debris enter the unit, the blades of the impellers can be damaged and blades could potentially break off, potentially creating a hazardous situation.

If re-starting the unit after it has been idle for a long period of time, measure the insulation resistance of the motor. If values are less than 1 k Ω per volt of nominal voltage, the winding may be too dry.

If the unit is installed or stored in an environment with a temperature of over 104°F (40°C) be aware that the winding may be damaged and the grease might need to be changed more often.

1.6 Maintenance Procedures

Before beginning work on the pump-motor unit, please take the following precautions:

- Make sure power has been completely disconnected
- Wait for the unit to come to a complete stop.
- Allow the unit time to cool.
- Shut off lines and release pressure
- Make certain that no vacuum or gauge pressure is present in the lines/tanks to be opened.
- Make sure that no fluids can escape

Please note that the rotating impeller is accessible when the inlet and discharge connections are open. Do not reach into the unit through open connections or insert objects into the unit through any openings. Serious injury could occur. If the unit is running without piping or tubing, provide the inlet and discharge of the unit with either additional mufflers or piping of a sufficient length to prevent access to the impeller.

Check regularly to ensure the terminal box is free of any dirt or foreign substances and there is no moisture or humidity present. Make certain the terminal box cover and cable entries are tightly closed.

1.7 Hot Surfaces

During operation, the surface of the unit can reach temperatures of 320° F (160° C). It is advisable to cover the unit with suitable touch protection (e.g. a perforated plate or wire cover). Do not touch the unit during operation, and allow time to cool after shut-down. Temperature-sensitive parts such as lines or electronic components should not come into contact with the surface of the unit.

1.8 Hearing Protection

Make certain any missing or defective silencers are replaced. Noise emitted by the unit can cause serious hearing damage. Conduct a noise measurement test while the unit is running. If the unit operates over 90 dB(A), please place a warning sign in the area where the unit has been installed and make certain that

any personnel working in the vicinity wear ear protection at all times while the unit is running.

1.9 Safety Guidelines for Transport of the unit:

Prior to transport and handling, please make sure that all components are properly assembled and secure. Any machinery used to transport these units must have the proper lifting capacity. Please consult the table on page 27 to find the weight of the unit being handled. Do not stand or walk under suspended loads.

If a 3BA unit has come in contact with any dangerous substances, it must be decontaminated before being sent to Airtech for repair evaluation.

2 Technical Data

These operating instructions cover the Airtech 3BA side channel vacuum pumps and compressors supplied with standard TEFC motors. Other configurations are available including V-belt driven units, units with explosion proof motors, mechanical seals, magnetic drives, coatings and modifications for high pressure service. Airtech can provide any combination of modifications to meet your application requirements. Such blowers, however, are outside the scope of this manual.

Description

All regenerative blowers are dynamic compression devices and utilize a non-contacting impeller to accelerate the gas and a specially designed housing to compress the gas. Cooling is accomplished by using the motor fan to blow air over the housing. In larger models, the housing is specially designed with cooling fins to allow a wider range of operation. Both the inlet and outlet ports have built-in silencers and mesh screens. Both the inlet and outlet have an inside connection thread corresponding to DIN ISO 228. On larger units, multiple suction and discharge connection configurations may be available.

The wetted parts are constructed of Aluminum on all models. The blower shares a bearing with the motor. The seal between the bearing and the motor is not gas tight in most models, therefore these blowers are not recommended for handling of toxic or explosive gases. (Contact Airtech Vacuum, Inc. for additional options if explosive or toxic gases will be handled.)

A full range of accessory items are available, including vacuum or pressure relief valves, check valves, suction filters, motor starters, vacuum/pressure cross-over valves, and in-line filters.

Application/Installation Environment

CAUTION! These blowers are designed for use in general industry. Suitable personnel protection according to OSHA requirements is provided, but the equipment should not be operated in residential settings.

Airtech blowers can be operated as either vacuum pumps or compressors. They are suitable for use with air having a relative humidity up to 90 percent, but not generally suitable for handling corrosive or erosive gases. Special versions for toxic or aggressive gases may be available. Use of the standard blower in aggressive environments may cause damage to the blower or exposure to gases being handled in the local environment.

CAUTION! Dangerous (flammable or explosive) or aggressive (corrosive) gases should not be handled by the standard blower.

Handling of flammable or aggressive gases and vapors may be possible by using a specially configured or modified blower. Contact factory for additional information. The standard blower is not suitable for operation in explosive environments as defined by NFPA 70. Contact factory for assistance.

CAUTION! The ambient and suction temperatures should be between 40 and 105 F. For temperatures outside this region, please contact the factory.

The maximum permissible pressure difference for vacuum or pressure is dependent on the motor rating (See Tables 1 to 4 for detailed information by model number.) and power supply frequency. The figures in Tables 1 to 4 are computed assuming an ambient temperature of 77 F (25 C) and a local barometric pressure of 1013 mbar (sea level). Operation at an ambient temperature of 104 F (40C) is the maximum permissible, and will result in a reduction of 10 percent on maximum vacuum or pressure attainable by the unit. For temperatures between 77 F and 104 F, reduce the maximum pressure reduction is a linear function of temperature.

Table 1. Three-phase, Single Stage, 50 Hertz

Model	Rated Power HP/kW	Voltage	Motor Current (Amps)	Open Flow Capacity CFM/m3/hr	Maximum Pressure (mbar)	Sound Pressure Level (dBA)

When operating at altitudes above 3280 feet (1000 m) above mean sea level, contact Airtech Inc.

CAUTION! Operation of the unit outside the recommended range of pressures and ambient conditions will result in shorted operating life.

Operation of any blower is possible at 87 Hertz without modification in most cases. When using a VFD to operate the blower at this frequency, refer to the nameplate for limits on vacuum and pressure, current draw and motor performance.

If your specific model number is not listed above, please consult the nameplate on the unit for electrical data. If the model you are installing is listed above, please confirm the data on the nameplate. Data in Tables 1 through 4 is subject to change and is approximate. Be sure to confirm necessary operating data what that on the nameplate before commissioning the unit.

CAUTION! Do not operate any 3BA blower above 87 Hz without consultation with the factory. Failure of the blower motor is possible when operating out of range. Consult with the factory for assistance.

Expected temperature rise of the handled gas at maximum allowable pressure differential and when operating at sea level is indicated below:

Table 7: Single Stage – Approximate Temperature Rise

Blower Model	Maximum Rise at 50 Hz speed		Maximum Rise at 60 Hz speed

M12x1.5	1.5 to 2.6	2 to 3.5
M16x1.5	2.2 to 3	3 to 4
M20x1.5	3 to 3.7	4 to 5
M32x1.5	3.7 to 5.2	5 to 7
M40x1.5	3.7 to 5.2	5 to 7

Operating above the indicated maximum pressure or vacuum would overload the motor and/or overheat the unit. In addition to the maximum allowable pressure difference, careful consideration should be given to matching the motor protection devices (provided by others) to the expected current draw. In no case should the blower be operated with inadequate motor overload protection.

Since regenerative blowers are dynamic compression devices, the performance limits shown in Tables 1 to 4 are applicable only for a gas with the same specific gravity, dynamic viscosity and chemical characteristics as air. For gases with different physical properties than air, the limits will be different from those shown in the tables. Please contact Airtech for assistance in determining the proper blower size and configuration if handling gases other than air.

A vacuum relief valve or pressure relief valve should always be installed at the suction or discharge of the regenerative blower. This will prevent operation outside the applicable ranges shown in Tables 1 to 4. If the relief valves were not specified in the ordering process, please contact Airtech for details, price and availability of the needed valves before commissioning the unit. Failure to use the proper relief valve may result in failure of the blower due to operation outside the applicable limits; any such failure is outside the scope of Airtech's standard warranty.

WARNING! Be sure to install the necessary personnel protection devices if unexpected shut-down of the unit presents danger of death or injury.

3. Installation

As illustrated in Figure 1, the Airtech 3BA blower can be installed in any physical configuration.

CAUTION! Regenerative blowers can have surface temperatures in excess of 320° F. To avoid burns or other physical injury, take care to avoid contact with the surfaces of the blower during and immediately after operation.

To ensure adequate cooling of the blower during operation, install the blower with the minimum clearance as indicated in the table below.

Minimum installation clearances, 3BA blowers

Range	Distance from fan guard to closest obstruction. (inches/mm)	Distance from cover (opposite of fan) to closest obstruction. (inches/mm)
3BA11 through 3BA14	1.4/34	0.79/20
3BA15 through 3BA19	2.1/53	1.57/40
3BA72 and 3BA73	1.3/34	1.18/30
3BA74 through 3BA76	2.1/54	1.18/30

Please note that it may be desirable, where possible, to allow for larger clearances to allow access for maintenance or repair personnel. The noted clearances are to ensure adequate air flow for cooling only and are a minimum requirement.

Failure to allow for the noted clearances may result in premature failure of the blower due to lack of cooling, even if all other precautions are taken as recommended. For specific advice about installations requiring closer clearances, please contact Airtech, Inc. for recommendations.

Airtech regenerative blowers can be mounted in any configuration, either horizontally or vertically mounted. It is not usually necessary to bolt the smaller blowers to a rigid surface during operation, though this may be desirable to reduce pipe vibration, movement and noise. Larger models should be bolted in place, especially when installed vertically, to prevent possible rotation, damage or injury due to start-up torque.

CAUTION! For installations at altitudes greater than 3250 Feet above sea level there will be a loss in capacity. Please contact your factory representative for assistance in determining the extent of the loss of capacity likely at your specific location.

WARNING! Be sure to follow all local codes and regulations with respect to installation and operation of the blower. The blower motor should be wired to a branch circuit disconnect and all other safety devices recommended by the relevant sections of NFPA 70, National Electrical Code, and in accordance with all applicable state and local regulations and requirements.

3.1 Installation Procedure

Perform the installation exactly in accordance with the following steps:

1. For vacuum operation, connect the suction pipe to connection A, and for pressure operation connect the pressure pipe to connection B (See Figure 1). Install startup screens before startup to protect pump from debris.

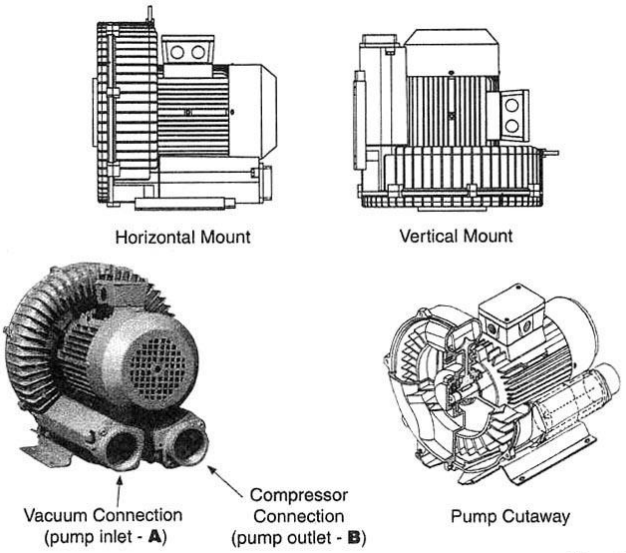

Figure 1

CAUTION! Design your piping system to avoid unnecessary pressure loss, which may significantly affect the operation of any regenerative blower. Contact your Airtech representative for assistance in designing and configuring an appropriate piping system for your application.

For alternation between vacuum and pressure in any application, changeover valves are available. Use of the changeover valve allows the same connection to be used for both vacuum and pressure.

2. The electrical data shown in Tables 1 to 4 (pages 10-14) should be confirmed by examination of the motor data plate on your 3BA blower. The standard motor features Class F insulation as a standard and are UL recognized for applications in both Canada and the United States (CUL). Motors are IEC design IP55, equal to a NEMA TEFC motor design. The connection diagram for the motors can be found in the inside of the terminal box cover. Be sure to confirm that your electrical supply has sufficient capacity to operate the blower according to the nameplate requirements.

3. A magnetic motor starter should always be used to connect the motor to the power supply. It is advisable to use thermal overload motor starters to provide maximum protection for the motor and wiring. All cabling used on starters should be secured with good quality cable clamps.

We recommend that the motor starters used feature a time delay trip on high amperage to avoid nuisance trips on start-up. When the unit is started cold, over amperage may be experienced for a short time due to the higher resistance of the windings at lower temperatures.

If using a change over or solenoid valve, ensure that the voltage connected to the valve matches that shown on the valve instructions or nameplate. Most valves are rated for 110 Volts 60Hz or 220 Volts 50 Hz. Connection of these valves to higher voltages may result in immediate valve failure.

WARNING! The electrical installation should be made by a qualified electrician and in complete compliance with all NFPA 70 (National Electrical Code) requirements along with all state and local code requirements. The main disconnect and motors starters are assumed to be provided by others.

4. Install the necessary relief valves and confirm their proper operation.

4. Start-up

CAUTION! Do not start the blower motor more than 10 times in one hour. If multiple and frequent start-ups are required by your application, install a minimum run timer in the motor control circuit to avoid decreased motor life and possible fire due to over-starting of the motor.

1.1 Start-up Procedure

1. Before operation, confirm the correct direction of rotation by jogging (switching rapidly on and off) the motor and observing the motor fan rotation in the same direction as the arrow. If the direction of rotation is incorrect, lock out the power and switch two leads (three phase) or rewire (single phase) to effect the opposite rotation direction. Recheck the direction of rotation before proceeding.

2. Do not operate the blower at pressure or vacuum ranges that exceed those shown in Tables one through four for the model being installed. This can be achieved by use of the recommended relief valve shown in Table 5.

Note: Relief valves that have been factory pre-set have a label indicating the set pressure and an arrow indicating the direction of flow. The arrow will point into the pipe when installed in vacuum applications and out of the pipe when installed in pressure applications. Do not re-set the relief valve if it has been pre-set from the factory.

In the event the relief valve setting needs to be reset, adjust the set screw to increase or decrease the tension on the spring. Place the blower in operation and note the current draw of the motor. When the current draw of the motor is near the maximum noted on the motor nameplate, tighten the locking nut on the valve and proceed.

3. When checking the current draw of the motor with an ammeter, be sure to confirm the voltage at the motor junction box. Low voltage conditions may result in difficulty starting or in unexpected motor failure or motor starter trips.

1.2 Potential Risks For Operators

Noise emission: Free field noise limits are indicated in Tables 1-4 (pages 10-14). Hearing protection is not normally required at the expected noise generation levels in the table; however, local conditions may result in higher ambient noise. If this is the case and local noise exceeds OSHA recommended levels for expected exposure time (typically 85 dBA for eight hours), hearing protection should be used.

5. Maintenance and Servicing

WARNING! Be sure the power supply is disconnected and locked out before attempting to do any maintenance on the unit. It is critical that the unit be locked out from starting during maintenance as severe injury or death could result from exposure to high voltage or rotating parts.

CAUTION! Allow the blower to cool to a surface temperature of less than 100 F before attempting maintenance. Prolonged exposure to temperatures above 120F can cause severe burns.

Clean the blower surfaces periodically to avoid build up of dust or other debris. Build up of debris can cause overheating and premature failure of the blower.

If an inlet filter is being use, ensure that it remains clean during operation by examining the filter cartridge for debris build up. Replace dirty or clogged filter cartridges.

On pressure units, periodically clean the inlet mesh screen to avoid loss of capacity. If an external inlet filter is used, the filter element should be cleaned monthly or as frequently as required by local conditions. Excessive pressure drop will develop from use of clogged or dirty filters. This pressure drop will degrade blower performance and increase operating temperatures, leading possibly to premature pump failure.

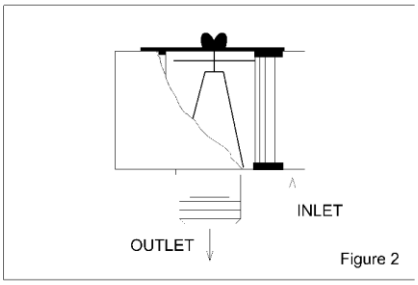

Figure 2

To replace the filter, remove the wing nut and cover. Remove the element and either clean with compressed air or replace. Reassemble in reverse order.

For vacuum applications, the optional in-line vacuum filter must be cleaned regularly, depending on local conditions. Cleaning can be achieved by blowing out with compressed air. If cleaning is not possible, replace the cartridge. Access the cartridge by unhooking the relevant clips and removing the cover.

CAUTION! Do not attempt to check the filter cartridge during operation of the blower. Only check the cartridge after disconnecting the power from the blower and locking out the power to prevent an unexpected start.

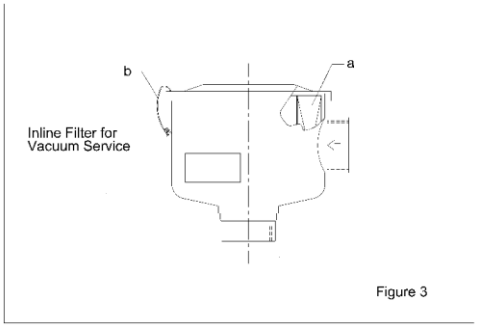

Figure 3

Bearings are grease-packed for life.

5.1 Troubleshooting Chart

Fault	Cause	Remedy	Responsible Party
Motor does not start, no noise.	Two or more power legs interrupted	Check fuses, terminals, etc.. for source of interruption and correct.	Electrician
Motor does not start, humming noise.	One power supply lead interrupted	Check fuses, terminals, etc.. for source of interruption and correct.	Electrician
	Impeller is jammed.	Open blower cover, remove debris, clean.	Service Technician
		Check impeller clearance and reset if necessary.	
	Defective Impeller	Replace impeller.	Service Technician
	Defective Bearing	Replace defective bearing.	Service Technician
Trip of motor starter at start-up	Incorrect starter setting	Ensure starter setting is correct (check current on nameplate)	Electrician
	Winding short-circuit	Megger motor	Electrician
	Motor overloaded due to operation of pump at excessive differential pressures.	Inspect filters, mufflers and connection pipes and clean as required. Check relief valve operation. Reset or replace as necessary.	Operator
	Impeller Jammed	See above fault Motor does not start, humming noise, cause jammed impeller.	Operator
Excessive Power Consumption	Lime or other deposits	Decalcify or clean unit as required (see Maintenance Chart)	Operator
No Vacuum or Pressure.	Severe leak in system	Close off pump and run deadheaded to confirm pump is operating properly. If so, find and fix leak in the system.	Operator
	Wrong direction of rotation	Check air flow direction and change direction of rotation if necessary.	Operator Electrician

Fault	Cause	Remedy	Responsible Party
Insufficient Vacuum	System too small	Use larger system	Operator
	Inlet piping too long or too small.	Increase pipe diameter to reduce pressure loss in inlet piping. Contact Airtech for assistance in determining correct pipe size.	Operator
	Leak at connection to vacuum system.	Check for leaks and repair if necessary.	Operator
	Density of gas handles different from air.	Consider increased limits on operation due to density differences. Consult Airtech, Inc. for assistance.	Airtech Engineering
	Change in impeller geometry due to erosion	Clean impeller and examine for wear. Replace if necessary.	Service Technician
	Inlet filter clogged.	Change filter element; remove clog.	Operator
	Vacuum relief valve incorrectly set.	Reset or replace vacuum relief valve. Contact Airtech for assistance.	Operator
	Seal defective.	Replace seal.	Service Technician
Abnormal flow noises.	Flow speed too high.	Clean pipes or use larger pipes to connect unit to process.	Operator
	Muffler soiled.	Clean muffler inserts, replace if necessary.	Operator
Abnormal running noise	Ball bearing defective or insufficient lubrication on bearing.	Replace bearing if required.	Service Technician
Compressor leaky	Seals on muffler defective.	Tighten muffler connection. Replace gasket if necessary.	Operator
	Seals in motor area defective	Replace as necessary.	Service Technician

WARNING! Before attempting an on-site repair, ensure that a qualified electrician has disconnected the motor from the power supply so that accidental starting of the motor is impossible.

After repairing the unit, be sure to follow the instructions noted in this manual in the **Installation** section (page 20).

5.2 Lifting

For smaller units (less than 65 lbs/ 30 kgs), it may be possible to lift the units manually. When doing so, be sure to understand the weight of the unit being lifted and to follow good lifting safety procedures.

Model	Weight Lbs/kgs	Model	Weight Lbs/kgs

		3BA7630-0AT668	207/94

When lifting 3BA15 through 3BA19 (but not 3BA1943 units) or the 3BA75 through the 3BA76, use the eye bolt provided (eye bolts are not included on smaller units). One attachment point should be sufficient. Ensure that the crane is rated for the weight being lifted.

For the 3BA1943, use the eye bolt and the holes in the feet of the blower to lift and maintain a balanced load.

5.3 Storage

The 3BA units should be stored in a clean, dry environment. If stored in an area with a humidity of greater than 80 percent, store in a closed container with desiccant drying agents to avoid damage.

5.4 Disposal

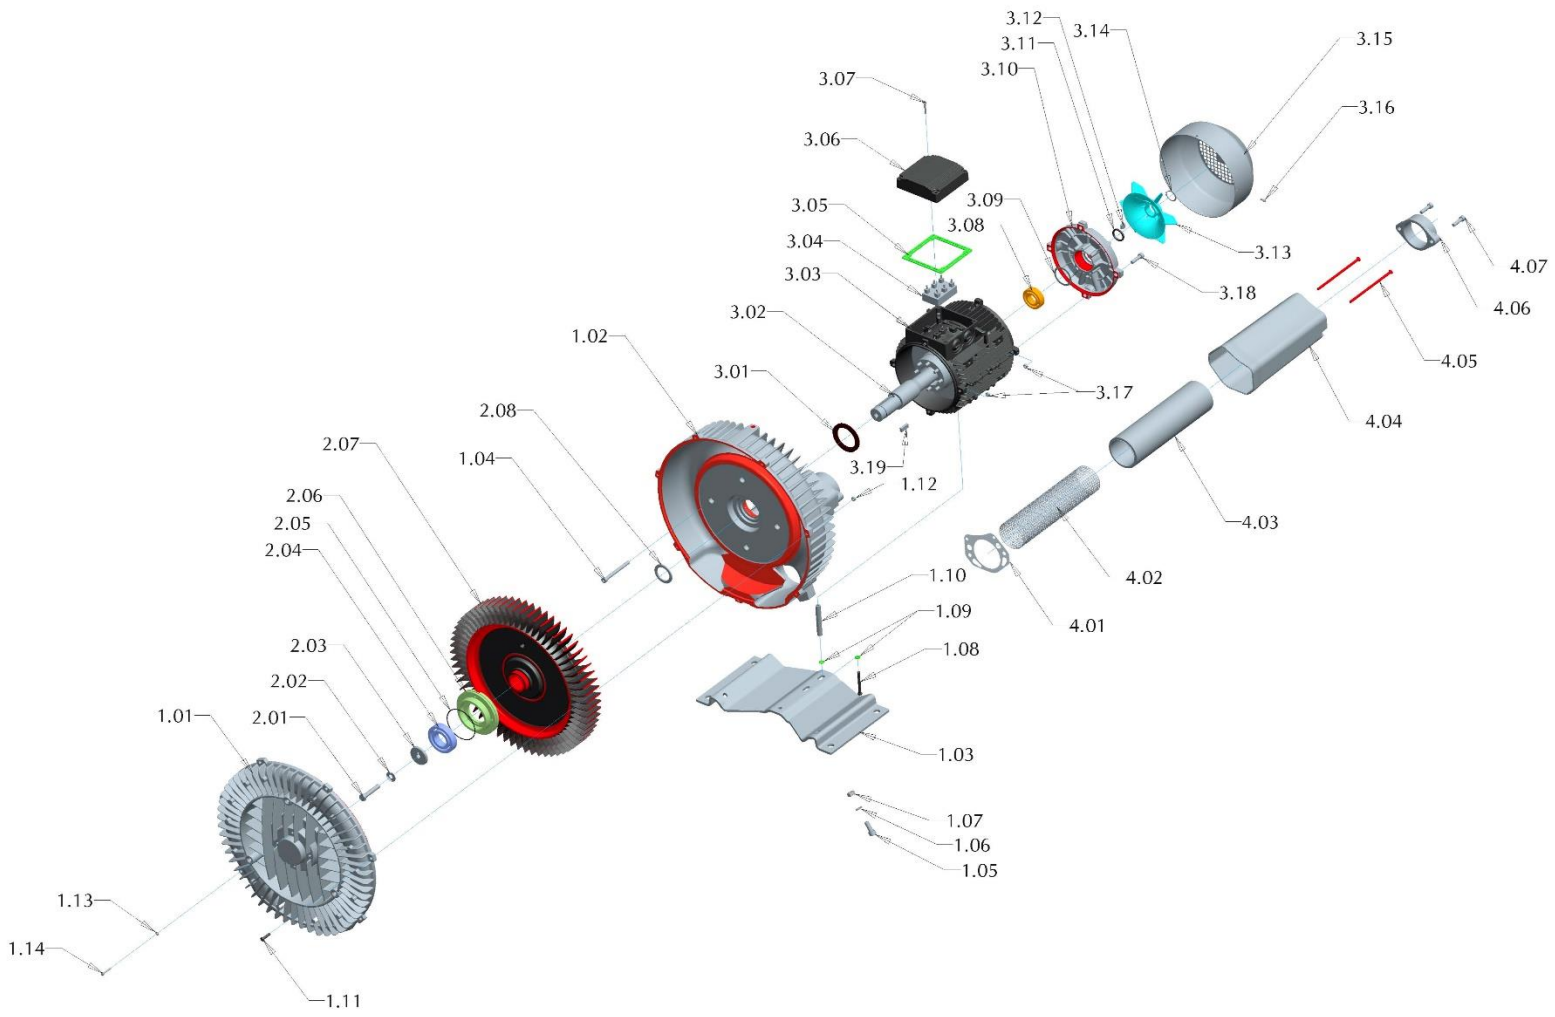

Dispose in accordance with all local health and safety regulations.

Spare parts list are available from your local Airtech service center. Please contact your local Airtech representative for assistance.

Airtech, Inc. ("Company") Warranty Statement

Company warrants that on the date of shipment to Purchaser the goods will be of the kind and quality described herein, merchantable, and free of all defects in workmanship and materials.

If within one year from the date of initial operation, but not more than eighteen months from date of shipment by the Company, of any item of the goods, Purchaser discovers that such item was not as warranted above and promptly notifies Company in writing thereof, Company shall remedy such defect by, at the Company's option, adjustment, repair or replacement of the item and any affected part of the good. Purchaser shall assume all responsibility and expense for removal, reinstallation and freight in connection with the foregoing remedy. The same obligations and conditions shall extend to replacement items furnished by the Company hereunder. Company shall have the right of disposal of items replaced by it. Purchaser shall grant Company access to the goods at all reasonable times in order for Company to determine any defect in the goods. In the event that adjustment, repair or replacement does not remedy the defect, the Company and Purchaser shall negotiate in good faith an equitable adjustment in the contract price.

The Company's responsibility does not extend to any item of the goods which has not been manufactured and sold by the Company. Such item shall be covered only by the express warranty, if any, by the manufacturer thereof. The Company and its suppliers shall also have no responsibility if the goods have been improperly stored, handled or installed, or if the goods have not been operated or maintained according to their ratings or according to the instructions in Company or supplier furnished manuals, or if unauthorized repairs or modifications have been made to the goods.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES (EXCEPT TITLE) INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, AND CONSTITUTES THE ONLY WARRANTY OF COMPANY WITH RESPECT TO THE GOODS.

The forgoing states Purchaser's exclusive remedy against Company and its suppliers for any defect in the good or for failure of the goods to be as warranted, whether Purchaser's remedy is based on contract, warranty, failure of such remedy to achieve its essential purpose, tort (including negligence), strict liability, indemnity, or any other legal theory, and whether arising out of warranties, representations, instructions, installations, or defects from any cause.

Neither Company nor its suppliers shall be liable, whether in contract, warranty, failure of a remedy to meet its essential purpose, tort (including negligence), strict liability, indemnity or any other legal theory, for loss of use, revenue or profit or for cost of capital or of substitute use or performance or for indirect, liquidated, incidental or consequential damages or for any other loss or cost of a similar type, or for claims by Purchaser for damages of Purchaser's customers.

WARNING: Not to be used as a visual public mode alarm notification appliance

WHAT DOES THIS MEAN?

To prevent misapplication of a visual signal appliance, it is the manufacturer's responsibility to warn the installer in the field and Authority Having Jurisdiction (AHJ) of what would be an inappropriate use of the product.

"Public Operating Mode" and "Notification Appliance" as defined in the National Fire Alarm Code, NFPA 72 is as follows:

Public Operating Mode - Audible or visible signaling to occupants or inhabitants of the area protected by the fire alarm system.

Notification Appliance - A fire alarm system component such as a bell, horn, speaker, light, or text display that provides audible, tactile, or visible outputs, or any combination thereof. In other words, this device should not be used as a component of a commercial fire alarm system.

Technical Specifications

- Dual Input Alarm Channels: (1) 12VAC/VDC to 120VAC/VDC, Opto-isolated to 1500VAC input and (1) Dry Contact input
- Backup Battery: External 6VDC Sealed Lead Acid, 1.3 AH, Re-chargeable, .187" Faston spades
- Operating Temperature: -20° to 150° F
- Operating Humidity: 0-90% RH, non-condensing
- Alarm Light Bulb: Super bright LEDs, long-life
- Alarm Light Annunciator: 2.8kHz, 85dB
- Alarm Light State: Pulses LEDs and Annunciator at 3Hz when input #1 is in alarm
- Cellular Radio: 4G LTE CAT-1
- Certifications: FCC Parts 15, 22, 24; RoHS compliant; IC: RSS-132 & 133
- Antenna: Integrated, on board
- Input Power: 120VAC +/-20% @ 0.5A max

  12VDC Version: 12VDC +/-15% @ 1.5A max
- Enclosure: NEMA 4 equivalent rating for direct mounting indoors or outdoors.
- Dimensions: 5"W round base x 5"H
- Weight: 1 lb.
- Protection: US Patent #7,228,129 and #7,778,633

Introduction

World's Best Alarm Beacon!

You've just purchased the best! The OmniSite OmniBeacon™ combines a wireless cellular transmitter, LED light source, and alarm siren into one convenient weather protected package. No matter your location, receive alerts from your equipment when you need it most.

How does the OmniBeacon™ Work?

The OmniBeacon™ can be configured to work for you in two different modes:

(1) Powered by our GuardDog Intelligent Website

(2) Independent text messaging mode

Operating Modes

OPTION 1 | GuardDog Intelligent Website

When configured in this way, the OmniBeacon™ will report events to the GuardDog website. GuardDog can be told to redistribute alarm events to any number of users via text messaging, email, or computer simulated voice message. You can also login to see your device on a Google map and GuardDog will keep a 2 year history of all events. For more information on how to setup and use this mode see page 37.

Operating Modes (Cont'd)

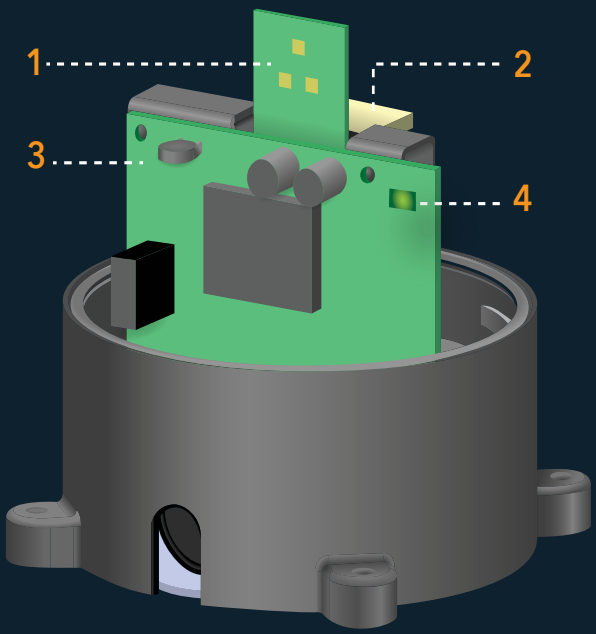

OPTION 2 | Text Messaging Backup

If the OmniBeacon™ CANNOT CONNECT to the GuardDog website for any reason, then it can be configured to directly send text messages to (3) phone numbers, and then bypass the GuardDog website.

In this mode, the OmniBeacon sends the text messages and does not rely on the GuardDog website to relay alarm information.

This is an "industry first" feature brought to you by OmniSite providing peace of mind that you always receive critical alarms. For more information on how to setup and use this mode, see page 42.

Internal components

(1) LED Multicluster Light Stick

(2) 12VDC Power Supply

(3) Cellular Transmitter & Battery Charger

(4) Status LED Indicator Light

In field service is not required for OmniBeacon™ internal components.

Unpacking

After unpacking your OmniBeacon™, examine it for damage that may have occurred in transit. If the device has been damaged, do not attempt to install or operate it.

File a claim immediately with the carrier stating the extent of the damage. Carefully check all bags, shipping labels, and tags before discarding them.

External components

(1) OmniBeacon™

(2) Control Panel Gasket (x1)

(3) Quick-Connect Field Wiring Connector

(4) Backup Battery (with Mounting Pocket)

(5) Impact Guard Cage

(6) Conduit Nut 3/4" (x1)

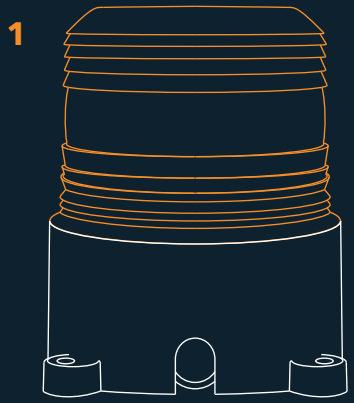

(7) #10 Self Drilling/Tapping Screws (x2)

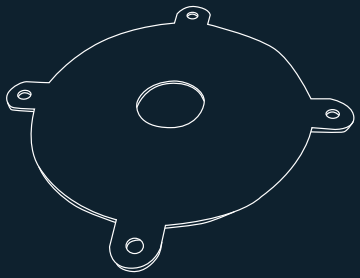

(8) Quick Connect Terminals (x2)

(9) Stainless 8-32 Screw and Nut (x4)

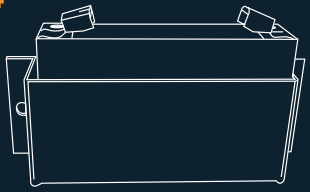

(10) #8 Neoprene Sealing Washers (x4)

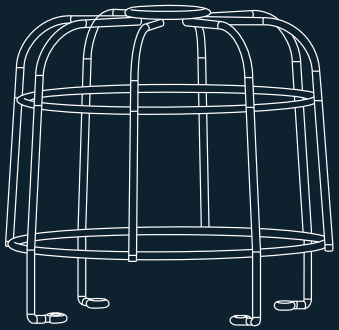

(A) Large Hole Sealing Kit used to fill/cover large hole in electrical panel (Optional)

Installation

SAFETY MESSAGE TO INSTALLERS, USERS, AND MAINTENANCE PERSONNEL

It is important to follow all instructions shipped with this product. This device is to be installed by a trained electrician who is thoroughly familiar with the National Electrical Code/ Canadian Electrical Code and will follow the NEC/CEC Guidelines as well as local codes.

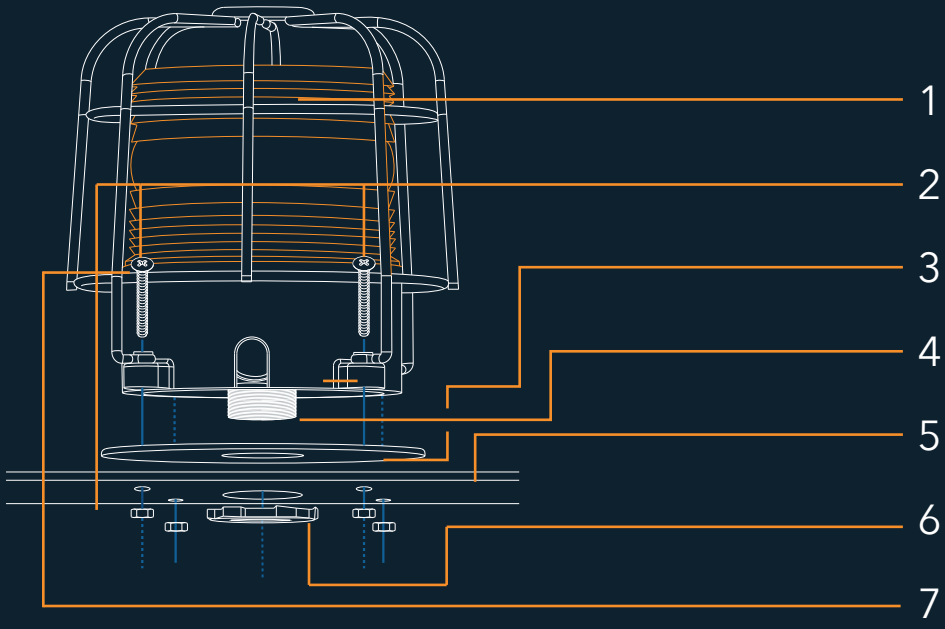

Installation of this device should be lead by the direction of the facilities engineer and the safety engineer. In addition, listed on the next page are some important safety precautions.

Failure to follow all safety precautions and instructions may result in property damage, serious injury, or death.

Safety Precautions

- Read and understand all instructions before installing or operating the OmniBeacon™.
- Disconnect the OmniBeacon™ from the power supply before any installation or maintenance is performed.
- After installation, test the OmniBeacon™ to ensure that it is operating properly.
- After testing is complete, provide a copy of this instruction sheet to all operating personnel.
- Establish a procedure to routinely check the OmniBeacon™ installation for integrity and proper operation.
- The product nameplate should not be obscured in any way.

Panel Mounting Overview

(1) OmniBeacon™

(2) Stainless Steel 8-32 Screw & Nut (x4)

(3) Control Panel Gasket

(4) Chase Nipple

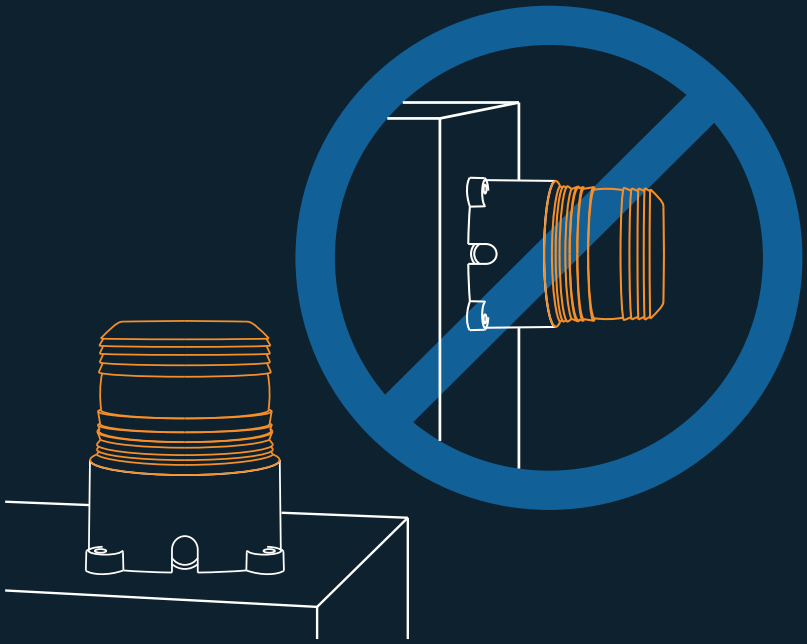

(5) Control Panel Surface

(6) Conduit Nut 3/4" (x1)

(7) #8 Neoprene Sealing Washers (x4)

Panel Mounting Instructions

DO NOT SIDE MOUNT OMNIBEACON™.
Mount the OmniBeacon™ in the vertical orientation only.

(1) Using the base foam gasket as a drilling template, mark hole locations in 5 places. Drill or punch four 3/16" holes and one 3/4" hole.

(2) Place the gasket on a mounting surface and line up four 3/16" holes for the #8 machine screws.

(3) Remove the ¾" conduit nut from the chase nipple. It will be secured in step (7).

(4) Pass the OmniBeacon wires and chase nipple through the ¾" hole. Line up four 3/16" holes with the mounting feet.

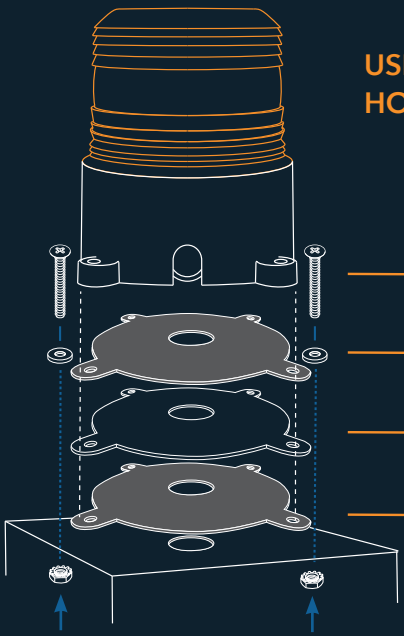

(5) Locate the four 8-32 Stainless Steel machine screws and four #8 Neoprene Sealing Washers.

(6) Insert the 8-32 Stainless Steel machine screws into the #8 Neoprene Sealing Washers, and then insert this into the four base feet. Attach the four 8-32 Stainless Steel nuts from the underside. Tighten the nuts snuggly.

(7) Feed wires through the ¾" conduit nut and tighten to chase nipple.

(8) Refer to Electrical Connections section for wiring details.

OmniBeacon™ Large Hole Sealing Kit (Optional)

USED TO FILL/COVER LARGE HOLE IN ELECTRICAL PANEL

Use these (4) Feet to Mount OmniBeacon™ when using adaptor plate, using supplied screws

Top Rubber Gasket supplied with OmniBeacon™

Metal Hole Cover Plate

Bottom Rubber Gasket supplied with Metal Cover Plate

Figure #1 – Correct installation shows sandwiching metal plate between (2) rubber gaskets to cover a large hole in the electrical control panel.

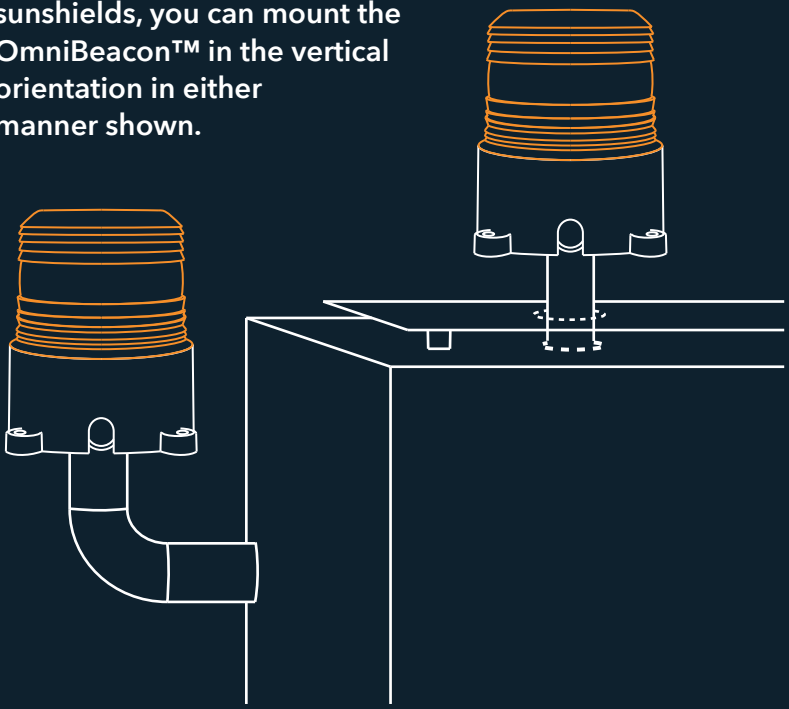

The standard OmniBeacon™ is intended to be mounted using the 3/4" conduit fitting which extends out of the bottom of the device. If you are replacing an existing alarm light with the OmniBeacon™, and you have a large hole to cover, the OmniBeacon™ accessory plate can be used to cover the hole as shown in Figure #1.

The metal plate should be sandwiched between (2) rubber gaskets to provide a complete seal.

NOTE: Do not attempt to cover a large hole without this plate. The siren on the bottom of the OmniBeacon™ is not weathertight and will allow water to leak into your control panel without the adaptor plate.

Pole Mounting OmniBeacon™

For panels with external sunshields, you can mount the OmniBeacon™ in the vertical orientation in either manner shown.

(1) Using ¾" EMT conduit adapters, connect the ¾" chase nipple on the OmniBeacon™ base to the ¾" EMT conduit.

(2) Feed the field harness through the conduit.

(3) Attach the conduit to the control housing.

(4) Refer to Electrical Connections section for wiring details.

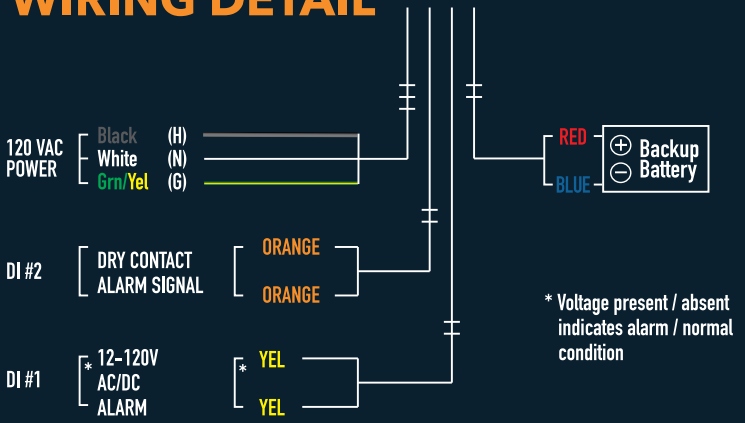

Electrical Connection - 110 - 120VAC

WARNING

To avoid electrical shock hazards, do not connect to supply circuit when power is applied.

The OmniBeacon™ is supplied with a 6' field harness for easy electrical connection.

WIRING DETAIL

(1) Connect the field harness to the OmniBeacon™.

(2) Route the wires to the desired location in the control panel and cut to length.

(3) Locate two - ¼" Quick connectors and crimp to the Blue and Red wires.

(4) Connect the Red wire to the positive battery terminal.

(5) Connect the Blue wire to the negative battery terminal.

(6) Connect the Yellow wires to desired alarm power source (12v – 120v AC or DC).

(7) Connect the Mains power. Green/Yellow connects to earth ground, Black to Line Hot, White to Neutral.

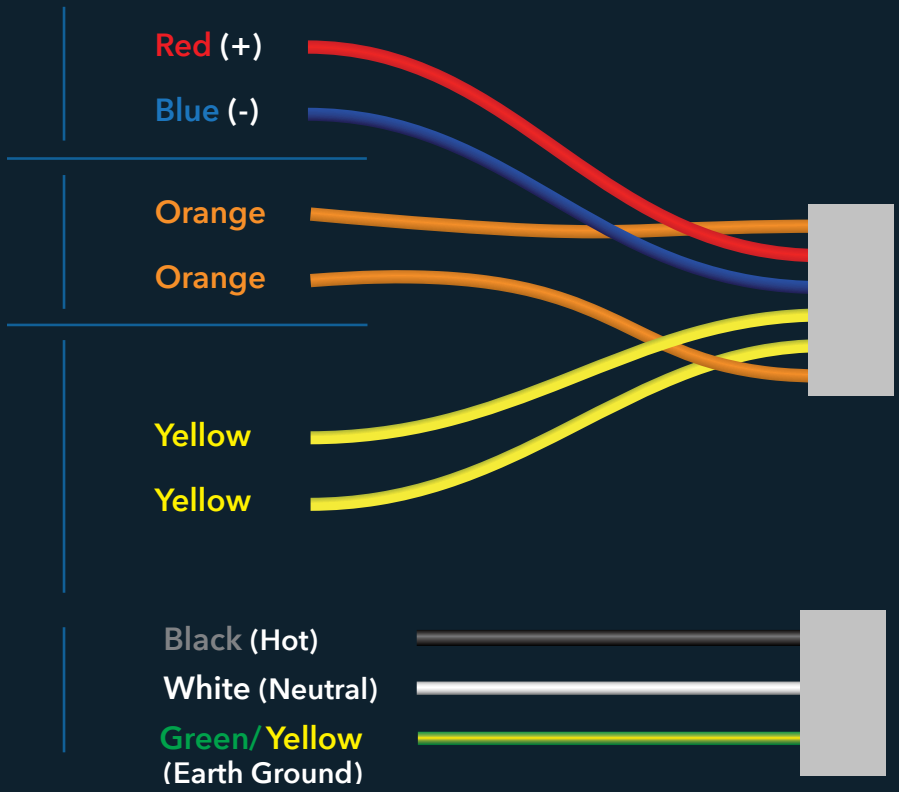

Six Position Wiring Diagram - 110 - 120VAC

Backup battery connection.
Quick connects included.

Non-powered, dry contact, input. Does not trigger siren or light beacon, sends alarms only.

Universal Voltage Alarm Channel.
Connect to 12VAC/VDC to 120VAC/VDC alarm signal.
(No polarity required)
Voltage present = alarm condition
No Voltage = non-alarm condition

Connect to user supplied 120VAC circuit capable of supplying 0.5 Amps minimum. 14-18 AWG recommended

Mounting Backup Battery

The OmniBeacon™ is supplied with a 6 volt backup battery and mounting bracket.

(1) Find suitable location for attaching the battery bracket inside the weather proof control panel.

(2) Using the bracket as a template, mark and drill two 3/16" holes.

(3) Locate two 10-16x1/2" self tapping screws.

(4) Pilot drill holes for self tapping screws if control panel is heavy gage metal. Drive self tapping screws through battery pocket, mounting holes to complete pocket installation.

(5) Place the battery in the bracket.

(6) Refer to Electrical Connections section for wiring details.

(7) The OmniBeacon™ will automatically charge this battery using a high quality, temperature compensated battery charger. This charger works anytime primary power is present. If battery will not charge, or becomes disconnected, a low battery alarm is issued. The backup battery allows OmniBeacon™ to continue to monitor up to 12 hours after a primary power loss.

Device Activation

The OmniBeacon™ is a cellular device just like your portable cell phone, as such... all OmniSite devices require activation before they will transmit alarms. Please follow the instructions below to activate your device.

(1) Navigate to www.omnisite.com/activate to launch the Activation Wizard

(2) Select an appropriate account type

- If you are a new customer, select "New Customer" to create a new account
- If you are an existing customer, select "Existing Customer" to log into your account
- If you are an OmniSite representative, select "OmniSite Representative" to log into your account

(3) Take note of the device's Unit ID, which can be found on a label on the device. Enter this Unit ID when prompted by the Activation Wizard.

(4) Please read and follow the instructions carefully as you progress through the Activation Wizard.

(5) Once you finish the Activation Wizard, OmniSite will be notified and will begin processing your activation request. Please allow up to one business day to process your request.

(6) You will receive an email from OmniSite when device activation is complete.

(7) The notification email you receive from OmniSite will include your user name and password to access your secure historical website, and also the units telephone number for configuration of text message backup messages.

Connecting to Cellular Network

The OmniBeacon™ is now ready to be powered on. Once powered on, it will attempt to connect to the cellular network.

(1) As soon as OmniBeacon™ is connected to power, it will turn on and attempt to connect with the cellular network.

(2) While OmniBeacon™ is attempting to connect the status light will blink green and will also beep.

(3) Wait for the status light to turn solid green; this can take up to 1 minute.

The status light may briefly turn red. If the status light stays red for more than 1 minute, refer to the troubleshooting section of this manual.

NOTE: The status light is the tiny LED light on the main circuit board. It is NOT the large alarm light cluster. The tiny status LED is located under the OmniBeacon™ orange protective lens, and can be faintly seen through the lens. Don't worry, this small LED is only used during startup to troubleshoot weak cellular signals, and is not used after startup is complete.

GuardDog Website Setup

GuardDog is used to view device status, see current alarms, configure devices, and setup notifications. GuardDog must be configured to send notifications and alarms regarding your OmniSite devices.

There are two main steps required to configure GuardDog:

(1) Create Callout List

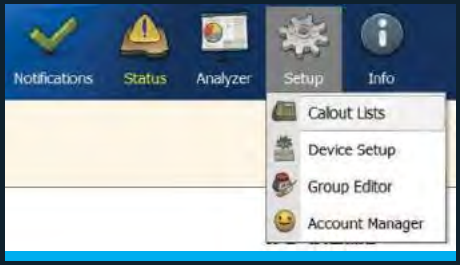

(2) Configure Alarms

Create Callout List

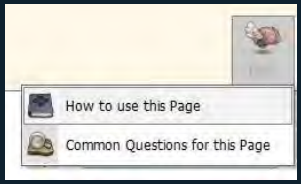

The first step is to create a callout list. Callout lists define who will be notified, in what order, and how. Please follow these steps:

Navigate to https://guarddog.omnisite.com and enter your username and password to log in. If you are a new customer, your username and password will be provided when activation of your device is complete.

(2) Using the navigation buttons at the top of the screen, click "Setup" and then click "Callout List."

(3) Detailed instructions on how to create a recipient library and callout list can be found within GuardDog's help pages. Near the top right side of the screen, you'll see a "Help" icon. Hover over this icon and select "How to use this Page." Please read and follow the instructions.

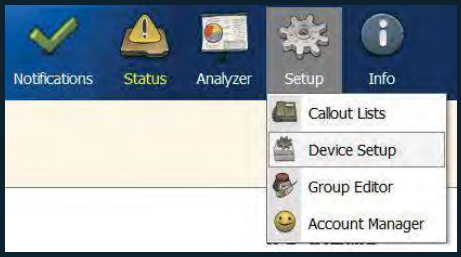

Configure Alarms

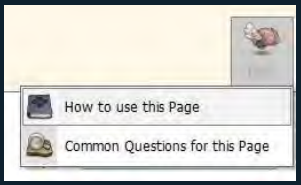

Once a callout list has been created, you can configure your device to use that callout list when an alarm condition occurs. Please follow these steps:

(1) If not already logged in, navigate to https://guarddog.omnisite.com and enter your username and password to log in.

(2) Using the navigation buttons at the top of the screen, click "Setup" and then click "Device Setup."

(3) Detailed instructions on how to configure your device can be found within GuardDog's help pages. Near the top right side of the screen, you'll see a "Help" icon. Hover over this icon and select "How to use this Page." Please read and follow the instructions.

Advanced SMS Features

The OmniBeacon™ features advanced SMS messaging capabilities that allows users to interact with the device from any cellular phone with SMS messages, also known as text messages. The OmniBeacon™ has a unique phone number, just like cellular phones have. Users can send SMS commands directly to the device's phone number from their cell phone.

The OmniBeacon™ supports "SMS fallback" when the primary method of alarm delivery via GuardDog fails. If the device loses contact with OmniSite's GuardDog server for over 30 minutes, it enters "SMS fallback" mode. In this mode, the unit will send SMS notifications of any alarm conditions (input alarms, power loss, low battery, etc.) to all phone numbers configured in the device. Upon entering this mode, all phone numbers programmed in the unit will receive a message indicating data communications was lost, along with a status message which includes information such as input alarm status. When the OmniBeacon™ re-establishes contact with the OmniSite servers, it sends a messaging indicating that it restored data communications.

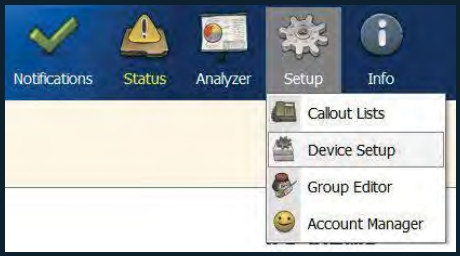

When the device first starts up, it enters “configuration mode”, which allows it to process SMS commands from any phone number. It will stay in “configuration mode” for 15 minutes and then it enters “normal mode”. In “normal mode”, the device will only respond to commands that it receives from phone numbers that have been configured in the device. If there are no phone number configured in the unit, or if the phone number that you are sending commands from is not configured in the device, the device will not process the commands. This is a security measure to prevent unauthorized access to the device via SMS messages.

SMS Configuration

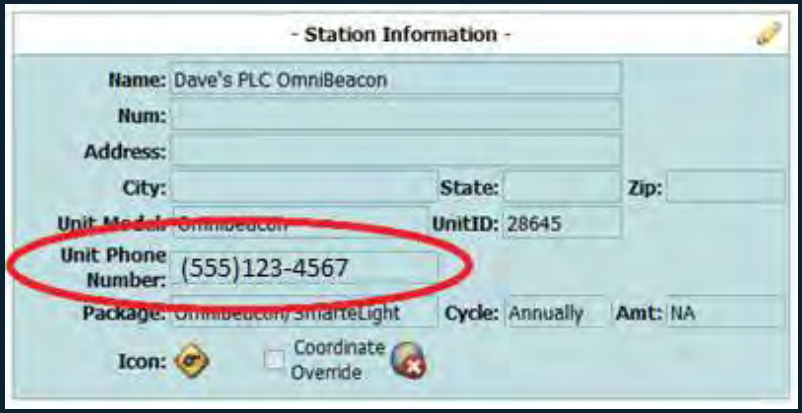

Please follow the steps below to enable the OmniBeacon's™ SMS features:

(1) Navigate to https://guarddog.omnisite.com and enter your username and password to log in.

(2) Using the navigation buttons at the top of the screen, click "Setup" and then click "Device Setup."

(3) Take note of the OmniBeacon's phone number. The device's phone number can be found in GuardDog under the "Device Setup" page (see screenshot below).

(4) Save the device's phone number as a contact in your mobile device with an appropriate name, such as "Cherry Hill Lift Station."

Phone #: (555) 123-4567 ⇨

(5) Power cycle the OmniBeacon so the device enters "configuration" mode. The unit will stay in configuration mode for 15 minutes.

NOTE: You will have to unplug the battery to power cycle the OmniBeacon. Plug the battery in once power cycled.

(6) Wait for the status LED to turn solid green. This could take a couple of minutes.

(7) Create and send a text message to the unit phone number that you saved in step 4 and include the following in the body of the message:

phone1 5557654321

(8) Where 5557654321 is replaced by your 10-digit phone number. This phone number is saved to position #1, and will receive text messages from the OmniBeacon™ in SMS fallback mode

Programming phone1

EXAMPLE MESSAGE

(9) If successful, the unit will chirp twice and you will receive a Settings and Help text message to the phone number you just entered. If you want notifications to additional phones, you can repeat this process with up to two additional phones, using the phone2, phone3 commands. If programming phone1 was successful, then you will receive the message below.

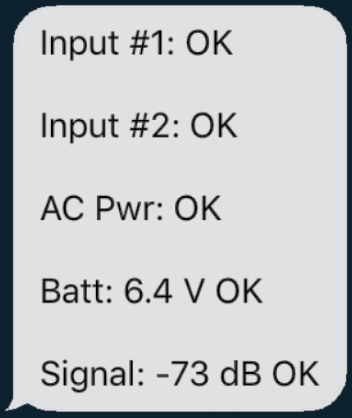

Unit Settings

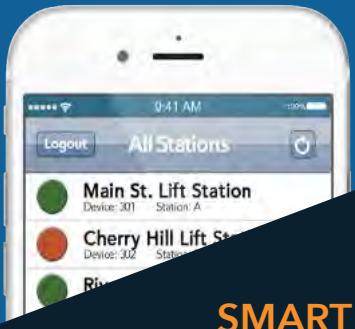

(10) Create and send a text message to the unit phone number that you saved in step 4 and include the following in the body of the message:

status

The unit will respond with the current status of the device.

DID YOU KNOW?

SMARTPHONE APPLICATIONS iPHONE™, ANDROID & WINDOWS

View the status with ANY web enabled smartphone. Check the status of your alarms and analyze your equipment at any time and anywhere!

Simply search for OmniSite GuardDog from Iphone, Android or Windows App Store and use your GuardDog username and password to log in from your phone!

SMS Command Summary

Settings	Returns the current settings of the module in three separate messages
Status	Returns the current status of the module
Help	Requests a help message with a list of commands
Setup	Requests a series of three messages that have the most used setup commands
PhoneX [Phone number]	Configures phone numbers in the unit, where X is 1, 2, or 3
PhoneX none	Clears phone numbers in the unit, where X is 1, 2, or 3
Name [Device Name]	Names the device up to 20 characters. This setting does not change GuardDog's device configuration. If you change this setting, it is recommended to change the device's GuardDog configuration to match it.

SMS Command Summary (Cont'd)

InputX [Input Name]	Names the input, up to 20 characters, where X is 1 or 2. This setting does not change GuardDog's device configuration. If you change this setting, it is recommended to change the device's GuardDog configuration to match it.
CtypeX* [NO/NC]	Configures the contact type for the input (NC = normally closed, NO = normally open), where X is 1 or 2. Default state is NO. This setting does not change GuardDog's device configuration. If you change this setting, it is recommended to change the device's GuardDog configuration to match it.
DelayX [Seconds]	Sets input delay time in seconds up to 9999. Default delay is 5 seconds for each input.

** NOTE: Not recommended to change Input #1 contact type because the LED Stick's alarm status will be reversed.*

PwrDelay [Seconds]	Sets power loss delay time in seconds up to 9999. Default power delay is 60 seconds.
Test	Sends a test message to all phone numbers configured in the unit
Contractor* [Contractor Name]	Sets the contractor name to append to end of alarm messages, up to 20 characters
Contact [Phone Number]	Sets the contractor phone number to append to end of alarm messages, up to 14 characters
Sponsor [Sponsor Name]	Sets the sponsor name to append to end of alarm messages, up to 25 characters. Contractor settings override sponsor messages.

**Installing contractor - use the "contractor," "contact," and "sponsor" text commands to advertise your company name and phone number during an alarm event. This way the customer knows who to call for service during an emergency.*

SMS Message Summary

The OmniBeacon™ sends numerous messages to indicate alarm and system status. The list below is a summary of the SMS messages the OmniBeacon™ sends.

Input Alarm Messages:

[Device Name] has detected an alarm condition for [Input Name] at 00:00AM on MM/DD/YY.

[Device Name] has detected a normal condition for [Input Name] at 00:00AM on MM/DD/YY.

Power Loss Messages:

[Device Name] has detected that electrical power was lost at 00:00AM on MM/DD/YY.

[Device Name] has detected that electrical power was reestablished at 00:00AM on MM/DD/YY.

Battery Messages:

[Device Name] has a low battery at 00:00AM on MM/DD/YY.

[Device Name] has a critically low battery at 00:00AM on MM/DD/YY.

Test Messages:

[Device Name] is operating correctly at 00:00AM on MM/DD/YY.

SMS Fallback Messages:

[Device Name] has lost data communications and SMS fallback has been enabled at 00:00AM on MM/DD/YY.

[Device Name] has restored data communications and SMS fallback has been disabled at 00:00AM on MM/DD/YY.

Settings Messages:

Name: [Device Name]
Phone1: [Phone #1]
Phone2: [Phone #2]
Phone3: [Phone #3]

Input1 12-120VAC/DC: [Input Name], NC, 5sec
Input2 Non-Powered: [Input Name], NC, 5sec
PwrDelay: 60sec

Contractor: [Contractor Name]
Contact: [Contact Information]
Sponsor: [Sponsor Name]

Status Message:

Input #1: [OK/ALERT!]
Input #2: [OK/ALERT!]
AC Pwr: [OK/NONE]
Batt: #.# V [OK/LOW/CRITICAL]
Signal: -### dB [OK/WEAK]

Status Indicators

The OmniBeacon uses a red and green LED, along with a beeper, to indicate the status of the device. The table below describes the various status and the corresponding blink/beep patterns.

Status	Blink Pattern	Sounder
Error (Dead radio, radio error, could not send SMS, or could not send Guard-Dog report)	Red rapid blinks	With Sounder
Not Ready (Starting up, bad signal strength or bad network registration)	Red 2 blinks	With Sounder
Disabled	Red 1 blink	No Sounder
Input Alarm	Red solid	No Sounder
Ready	Green solid	No sounder
Config mode	Green 1 blink	No sounder
Transmitting	Green 2 blinks	No sounder

NOTE: The red/green LED indicators are the tiny LED on the main circuit board and are NOT the primary Alarm light LED cluster (see page 10)

System Power

This device utilizes a 6V sealed lead acid battery to keep the system powered during primary power loss. The default alarm delay for power loss is 60 seconds. When primary power is lost for 60 seconds, the device will transmit an alarm condition. Once primary power has been restored for 60 seconds, the device will transmit a return to normal condition.

The battery will supply power for at least 12 hours with a full charge. The system takes about 24 hours to recharge a fully discharged battery. The battery is considered charged when the voltage is 6V or higher; low at 5.75V and critically low at 5.55V and lower. The system automatically shuts down when running from the battery if the voltage drops to 5.25V.

The power loss alarm delay time can be reconfigured by sending the "PwrDelay" SMS command to the device. For example, to configure a 30 second power loss delay time, send the command "PwrDelay 30". See section "Advanced SMS Features" for information on how to use SMS features.

Alarm Input Time Delays

The OmniBeacon™ has two alarm inputs, each with different operation.

Input #1 | Powered input and can accept 12V to 120V AC or DC. Input #1 is also connected to the primary annunciator (LED bulb) and will trigger the flashing light and sounder.

Input #2 | Non-powered, dry-contact input – do not apply voltage to this input or it will be damaged. This input is designed to read a contact closure only. Input #2 is NOT connected to the primary annunciator – it will NOT trigger the flashing light and sounder.

The default alarm delay for both inputs is 5 seconds. If an input is in alarm for 5 seconds, the device will transmit an alarm condition. When the input returns to normal for 5 seconds, the device will transmit a return to normal condition.

The input delay times can be reconfigured by sending the "DelayX" SMS command to the device. For example, to configure a 15 second delay time for input 2, send the command "Delay2 15". See section "Advanced SMS Features" for information on how to use SMS features.

Troubleshooting

Problem	Cause
The status light is solid red	Bad cellular signal strength
The status light is flashing red quickly	Some type of error has occured
Text messages arrive out of order and/or text messages arrive late	Poor signal strength

Move the device to an area with better cellular reception, away from metal objects or to a higher elevation.

Power your device off for 10 seconds and power it back on.

Move your device to an area with better cell reception. Or, the network may be temporarily congested, there is no remedy for network congestion.

Product Safety, Use & Limited Warranty

The following safety and use information and Limited Warranty applies to products sold by OmniSite ("OmniSite") to you the end-user ("You") on OmniSite namely an alarm with text notification capability, related accessories such as sensors (collectively "Products"), and cellular service, which is required in order for the alarm to send notification text messages ("Services" collectively with Products "Products and Services").

Product Safety and Use Information

IMPORTANT: Use only supplied battery and with your Products. Routinely check the battery in Products; failure to routinely check the battery may result in the failure of Products to function during a loss of power. Routinely check the strength of the cellular signal to Products and/or perform tests to check the text notification capability of the Products.

WARNING: Products use electricity in the presence of water, therefore your safety and the safety of others depends upon you thoroughly reading and understanding the Installation Guide. If you have questions or do not understand the information presented in the Installation Guide, please call 1-317-885-6330. Be sure that electrical cords used are not frayed or placed in a located where they can pose a danger. To reduce the risk of fire, electric shock, injury or death, always disconnect all sources of electrical power before servicing or cleaning; do not touch the electrical terminals or controls with wet hands; and do not tilt, jolt or tip Products while powered-on.
Never disassemble Products. Never allow children to use Products.

CAUTION: Products are cellular devices and must be activated before use. Please visit Omnisite.com/activate to activate your Products. You must have a cellular device in which to communicate with Products. OmniSite utilizes automatic bill pay as a convenience to its customers and to ensure continuity of cellular service. OmniSite will notify you before cellular service is to be renewed and before the credit card you provided during activation is charged. If OmniSite is not able to successfully bill for the cellular service, OmniSite has the right to immediately disconnect cellular service to your Products and your Products will no longer send text notifications.

NOTE: *Upon delivery inspect contents immediately and file claim with delivery carrier for any damage. OmniSite recommends saving the original box and packing material. You are responsible for damage to Products if returned to OmniSite improperly packed.*

NOTE: *OmniSite's primary method for contacting you is via email. Please add us as a contact to ensure delivery of these emails. Please promptly update your email address with us if it changes.*

LIMITED WARRANTY: OmniSite ("OmniSite") warrants to You that Products will be free from defects in materials and workmanship under normal use and service for two (2) years from the purchase date. A claim under this Limited Warranty must be presented during the Limited Warranty period and within thirty (30) days after any covered condition has occurred. A claim under this Limited Warranty shall be satisfied by either, in OmniSite's sole discretion, repairing or replacing the Products and/or part. Replacement Products may be new or reconditioned.

To make a claim under this Limited Warranty, OmniSite must first issue You a Returned Material Authorization (RMA) number. This number can be obtained by contacting OmniSite and a copy will be provided by email. A copy of the RMA must be included with any materials shipped to OmniSite.

The entirety of Products must be sent back to OmniSite (unless specifically listed otherwise on the RMA form) and properly packaged to ensure against damage during shipping. If OmniSite determines that the claim is covered by this Limited Warranty, OmniSite will either, in its sole discretion, repair or replace the Products and/or part. Any damages not covered under this Limited Warranty will not be repaired until a written purchase order is received.

The Limited Warranty period shall not be extended by the replacement or repair of Products or parts under this Limited Warranty but the remaining Limited Warranty period shall continue in effect and be applicable to the replaced or repaired Products or parts under conditions of the Limited Warranty. Payment for cellular service covers only cellular transmission fees and in no way extends any portion of this Limited Warranty. This fee does not include out-of-warranty service or repair.

The cellular service provided in conjunction with the purchase and use of Products and Services is not guaranteed, and OmniSite cannot and does not guarantee or represent that cellular service will be available in Your area nor that cellular service will be continuous and uninterrupted in Your area. It is Your responsibility to determine if cellular coverage is available in your area and to monitor the warning light on Products and Services to determine the cellular signal strength to Products and Services.

You should contact OmniSite for assistance if needed. If cellular service is not available in your area, then your sole remedy is to return Products and Services as provided for in OmniSite's Return Policy as found at www.omnisite.com. As such, OmniSite is not liable for any causes of action, losses or damages of any kind whatsoever arising out of mistakes, omissions, interruptions, errors, or defects in the provision of cellular service and failures or defects in the cellular network.

Upon expiration of the Limited Warranty period, all liability of OmniSite shall be terminated. This Limited Warranty does not apply in the following cases: failure to follow installation and operating instructions, misuse, alteration, abuse, accident or tampering, and repair by anyone other than OmniSite.

THIS LIMITED WARRANTY IS EXCLUSIVE AND EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, OBLIGATIONS OR LIABILITIES, WHETHER WRITTEN, ORAL, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR OTHERWISE. IN NO CASE SHALL OMNISITE BE LIABLE TO ANYONE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES FOR BREACH OF THIS WARRANTY OR ANY OTHER WARRANTIES WHATSOEVER.

This Limited Warranty gives specific legal rights. You may have other rights, which vary from state to state. Some states do not allow the exclusion or limitation of incidental or consequential damages, so that the above limitation of exclusion may not apply to you. You, the individual user, should take care to determine prior to use whether Products and Services are suitable, adequate or safe for the use intended. Since individual applications are subject to great variation, OmniSite makes no representation or warranty as to suitability or fitness of Products and Services for any specific application.

OmniSite makes no representation that Products and Services will reduce any risk of property loss or personal injury or prolong the life of any equipment or other property; or that Products and Services will in all cases provide adequate warning and protection. You understand that Products and Services if properly installed and maintained may only reduce the risk of property loss or other loss but Products and Services are not an insurance or a guarantee that there will be no property loss or other loss as a result.

CONSEQUENTLY, OMNISITE SHALL HAVE NO LIABILITY FOR ANY PROPERTY DAMAGE, PERSONAL INJURY OR OTHER LOSS BASED ON A CLAIM THE PRODUCTS AND SERVICES FAILED TO GIVE WARNING.

However, if OmniSite is held liable, whether directly or indirectly, for any loss or damage arising under this Limited warranty or otherwise, OmniSite's liability shall be limited to the purchase price of Products and Services purchased and paid for by You, which shall be the complete and exclusive remedy against OmniSite.

www.OmniSite.com

APPENDIX D

BUILDING MECHANICAL DRAWINGS

GENERAL NOTES

1. WORK SHALL CONFORM TO THE REQUIREMENTS OF APPLICABLE GOVERNMENTAL REGULATIONS AND SHALL BEAR APPROVAL CERTIFICATES AS APPLICABLE.

2. INVESTIGATE EACH SPACE THROUGH WHICH EQUIPMENT MUST BE MOVED. WHEN NECESSARY, EQUIPMENT SHALL BE SHIPPED FROM MANUFACTURER IN CRATED SECTIONS OF SIZE SUITABLE FOR MOVING THROUGH RESTRICTED SPACES AVAILABLE.

3. INSTALL WORK SO AS TO BE READILY ACCESSIBLE FOR OPERATING, MAINTENANCE AND REPAIR. MINOR DEVIATIONS FROM DRAWINGS MAY BE MADE TO ACCOMPLISH THIS, BUT CHANGES OF MAGNITUDE WHICH INVOLVE EXTRA COST SHALL NOT BE MADE WITHOUT APPROVAL.

4. THE DRAWINGS ARE DIAGRAMMATIC AND SHOW THE GENERAL ARRANGEMENT OF THE VENTILATION AND AIR CONDITIONING SYSTEMS. DETAILS OF CONSTRUCTION AND OF WORKMANSHIP WHERE NOT SPECIFICALLY DESCRIBED HEREIN OR INDICATED ON THE DRAWINGS SHALL BE SUBJECT TO THE ENGINEER'S APPROVAL. IT IS THE INTENT OF THESE DRAWINGS AND SPECIFICATIONS TO PROVIDE COMPLETE SYSTEMS, LEFT IN GOOD WORKING ORDER, READY FOR OPERATION, INCLUDING NECESSARY LABOR AND MATERIALS, WHETHER OR NOT SPECIFICALLY SHOWN ON THE DRAWINGS OR MENTIONED HEREIN. IT IS NOT THE INTENTION OF THESE DRAWINGS TO SHOW ALL NECESSARY OFFSETS, OBSTRUCTIONS OR STRUCTURAL CONDITIONS. IT SHALL BE THE RESPONSIBILITY OF THIS CONTRACTOR TO INSTALL HIS WORK IN SUCH A MANNER TO AVOID OBSTRUCTIONS, PRESERVE HEADROOM AND KEEP OPENINGS AND PASSAGEWAYS CLEAR WITHOUT FURTHER COST OR INSTRUCTIONS.

5. BEFORE SUBMITTING PROPOSAL BIDDERS SHALL CAREFULLY EXAMINE CONTRACT DRAWINGS OF ALL TRADES. SUBMISSION OF PROPOSAL WILL BE CONSTRUED AS EVIDENCE THAT REQUIRED EXAMINATION HAS BEEN MADE. LATER CLAIMS FOR EXTRA LABOR, EQUIPMENT AND MATERIALS REQUIRED DUE TO DIFFICULTIES WHICH COULD HAVE BEEN FORESEEN, WILL NOT BE RECOGNIZED. VERIFICATION SHALL BE MADE AS TO THE ACTUAL LOCATIONS WHERE NEW DUCT AND PIPE LINE RUNS WILL BE INSTALLED, AS WELL AS CLEARANCES BETWEEN NEW AND EXISTING DUCTWORK, PIPING AND STRUCTURAL MEMBERS. SHOULD THE CONTRACTOR FIND ANY EQUIPMENT OR CONDITION THAT IS NOT IN AGREEMENT WITH THE PLANS, HE SHALL REFER THE MATTER TO THE ENGINEER'S ATTENTION BEFORE PROCEEDING WITH THE CONSTRUCTION.

6. CONTRACTOR SHALL BRING TO THE IMMEDIATE ATTENTION OF THE OWNER ANY CHANGES IN THE SIZE OR LOCATION OF THE MATERIAL OR EQUIPMENT WHICH MAY BE NECESSARY IN ORDER TO MEET FIELD CONDITIONS, OR IN ORDER TO AVOID CONFLICT WITH THE EQUIPMENT OF OTHER SECTIONS. OBTAIN THE OWNER'S APPROVAL BEFORE SUCH DEVIATIONS ARE MADE.

7. SUPPORT ALL DUCTWORK AND PIPING FROM BUILDING STRUCTURE AND/OR FRAMING IN AN APPROVED MANNER. WHERE OVERHEAD CONSTRUCTION DOES NOT PERMIT FASTENING OF SUPPORTS FOR EQUIPMENT, FURNISH ADDITIONAL FRAMING.

8. THE MECHANICAL CONTRACTOR SHALL FURNISH ELECTRIC, AUTOMATIC CONTROLS, MOTORS AND MOTOR CONTROLLERS. THE MECHANICAL CONTRACTOR SHALL GIVE THE MOTOR CONTROLLERS AND CONTROLS TO THE ELECTRICAL CONTRACTOR FOR INSTALLATION, TOGETHER WITH ALL NECESSARY WIRING DIAGRAMS AND INSTRUCTIONS FOR INSTALLATION.

9. ALL EQUIPMENT HAVING MOVING PARTS SHALL BE ISOLATED FROM THE BUILDING STRUCTURE BY MEANS OF SPRING VIBRATION ISOLATORS. ISOLATION SHALL BE OF THE SAME BRAND AND EQUIPMENT MANUFACTURER'S RECOMMENDATIONS SHALL BE FOLLOWED IN THE ISOLATION OF THE EQUIPMENT.

10. DAILY DURING CONSTRUCTION, THE MECHANICAL CONTRACTOR SHALL REMOVE ALL RUBBISH AND EXCESS MATERIAL ACCUMULATED AS A RESULT OF HIS OPERATIONS. ALL EQUIPMENT INSTALLED UNDER THIS CONTRACT SHALL BE WIPED CLEAN OF DUST AND DEBRIS BEFORE FINAL ACCEPTANCE BY THE OWNER.

11. BEFORE COMPLETION OF THIS PROJECT, THE MECHANICAL CONTRACTOR SHALL TEST ALL EQUIPMENT. ALL EQUIPMENT SHALL BE OPERATED SUFFICIENTLY LONG TO PROVE TO THE OWNER THAT EACH UNIT PERFORMS SATISFACTORILY AND MEETS THE REQUIREMENTS SPECIFIED.

12. THE MECHANICAL CONTRACTOR SHALL INCLUDE WITH HIS BASE BID AN ADDED ALTERNATE TO PROVIDE COMPLETE SERVICING OF THE MECHANICAL EQUIPMENT WHICH HE HAS INSTALLED FROM THE PERIOD STARTING WITH THE WRITTEN ACCEPTANCE OF THE COMPLETE INSTALLATION FOR THE ONE (1) YEAR WARRANTY UP TO ITS CONCLUSION DATE. SERVICING SHALL CONSIST OF, BUT NOT BE LIMITED TO, LUBRICATION OF UNITS, ADJUSTMENTS, CLEANING, FILTER CHANGES AND REPLACEMENT OF CEILING TILES.

13. FOR EXACT LOCATION OF CEILING DIFFUSERS, GRILLES AND REGISTERS REFER TO ARCHITECTURAL PLANS AND DETAILS.

14. OBTAIN FROM THE ENGINEER THE LOCATION OF ANY APPARATUS NOT DEFINITELY LOCATED ON THE DRAWINGS. LOCATE EQUIPMENT AND ACCESSORIES IN SUCH A MANNER AS TO PROVIDE EASY ACCESS FOR PROPER SERVICE AND MAINTENANCE OF ALL EQUIPMENT AND ITEMS REQUIRING MAINTENANCE.

15. REVIEW WITH THE ENGINEER ANY CONDITION WHICH PREVENTS ADEQUATE ACCESSIBILITY FOR MAINTENANCE PRIOR TO INSTALLATION OF THE WORK. ALL EQUIPMENT AND/OR ACCESSORIES THAT ARE INSTALLED WITHOUT PROPER ACCESS, AND INSTALLED WITHOUT THE APPROVAL, SHALL BE REMOVED AND REVISED AS DIRECTED BY THE BUILDING OWNER AND/OR ENGINEER AT NO ADDITIONAL COST TO THE OWNER.

16. THE CONTRACTOR'S WORK SHALL INCLUDE THE COST OF BREAKING DOWN AND REASSEMBLY OF THE NEW EQUIPMENT AS NECESSARY TO FIT THE EQUIPMENT INTO THE BUILDING.

17. THE CONTRACTOR'S WORK SHALL INCLUDE THE HOISTING OF ALL MATERIALS AND EQUIPMENT, AND HE SHALL ASSUME ALL RESPONSIBILITY FOR SUCH HOISTING AND WORK.

18. THIS CONTRACTOR SHALL REPAIR AND RESTORE TO ORIGINAL CONDITIONS ANY EQUIPMENT OR MATERIALS DAMAGED IN THE PROCESS OF INSTALLATION, TO THE SATISFACTION OF THE OWNER'S REPRESENTATIVES.

19. PENETRATIONS THROUGH STRUCTURAL SHEAR WALLS MUST BE NOT LESS THAT 48" FROM EITHER END OF THE SHEAR WALL. PROVIDE SHOP DRAWINGS INDICATING SLEEVE LAYOUT OF PROPOSED SHEAR WALL PENETRATIONS FOR REVIEW BY THE STRUCTURAL ENGINEER.

20. CONTRACTOR TO PROVIDE 1/8" PER FT. CONDENSATE PITCH.

SYMBOL LIST AND ABBREVIATIONS

———	NEW WORK
═══	NEW DUCTWORK WITH ACOUSTIC LINING
⊠	CEILING DIFFUSER
⊘	CEILING REGISTER/GRILLE
TG/TR	TOP GRILLE/TOP REGISTER
(000)	CUBIC FEET/MINUTE (AIR FLOW)
①	THERMOSTAT
VD	VOLUME DAMPER
M	MOTORIZED DAMPER
ERV–R–#	HEAT/ENERGY RECOVERY UNIT
TX–#	TOILET EXHAUST FAN
FD/AD	FIRE DAMPER/ACCESS DOOR
WMS	WIRE MESH SCREEN
FC	FLEXIBLE CONNECTION
HWH	HOT WATER HEATER
OA	OUTDOOR AIR
SA	SUPPLY AIR
RA	RETURN AIR
PPM	PARTS PER MILLION
CO	CARBON MONOXIDE DETECTOR

CEILING DIFFUSER AND RETURN GRILLE SCHEDULE

BASED ON MODELS AS MANUFACTURED BY TITUS PRODUCTS WITH OPPOSED BLADE DAMPER. DIFFUSERS SHALL BE ADJUSTED TO 30% VERTICAL PROJECTION.

SUPPLY CFM	NECK SIZE
0–100	ø6
101–275	ø8
276–450	ø10

SUPPLY REGISTER SHALL BE TITUS DOUBLE DEFLECTION MODEL 272FL. REGISTERS SHALL BE WITH OPPOSED BLADE VOLUME DAMPERS. VERTICAL DEFLECTION BLADES TO BE ADJUSTED TO 35°.

SUPPLY CFM	SIZE
0–100	6x6
101–275	14x8
276–384	16x8

SEQUENCE OF OPERATION

TOILET EXHAUST FAN AND HEAT RECOVERY UNIT

FANS AND HEAT RECOVERY UNIT TO OPERATE CONTINUOUSLY DURING OCCUPIED HOURS.

GARAGE EXHAUST

FANS TO OPERATE AT HALF SPEED CONTINUOUSLY. AS CARBON MONOXIDE SENSOR DETECTS PPM ABOVE THE SET POINT, MOTORIZED DAMPER TO OPEN FROM HALF TO FULL OPEN AND FAN TO INCREASE TO FULL SPEED. WHEN PPM FALLS BELOW SET POINT, MOTORIZED DAMPER TO CLOSE TO HALF OPEN AND FAN TO RAMP DOWN TO HALF SPEED.

ROOFTOP AIR CONDITIONING (COOLING/HEATING)

CONTROL SYSTEM TO BE COMPLETELY SOLID STATE. UNITS SHALL BE STARTED AND STOPPED BY THE WALL MOUNTED THERMOSTAT WHEN IN OCCUPIED MODE. FAN SHALL RUN CONTINUOUSLY WHEN AIR CONDITIONING UNIT IS ACTIVATED. COMPRESSOR SHALL CYCLE TO MAINTAIN THERMOSTAT SET POINT. THERMOSTAT SUB BASE SHALL BE INSULATED WHEN MOUNTED ON AN EXTERIOR WALL OR A SURFACE ADJACENT TO UNCONDITIONED SPACES. PROVIDE AND INSTALL ALL INTERCONNECTING CONTROL WIRING. WHEN SPACE TEMPERATURE IS MET, UNIT TO MODULATE ONCE AGAIN TO MAINTAIN SPACE TEMPERATURE.

EXHAUST FAN SCHEDULE (GREENHECK)

TAG NO.	MANUFACTURER	MODEL	CFM	E.S.P.	HP	RPM	V/PH/HZ	REMARKS

① PROVIDE UNIT WITH TIMED EXHAUST FROST CONTROL, DISCONNECT SWITCH, GPI 12" ROOF CURB, MOTORIZED LOW LEAKAGE DAMPERS (S/E), HINGED ACCESS DOOR, DIRTY FILTER ALARM AND WEATHER HOODS FOR OUTDOOR INSTALLATION.

NEW YORK CITY BUILDING DEPARTMENT NOTES

1. GENERAL:
   a. ALL WORK SHALL COMPLY WITH THE APPLICABLE SECTIONS OF THE BUILDING CODE, CITY OF NEW YORK, EFFECTIVE JULY 2008 AND ALL AMENDMENTS AND RULES AND REGULATIONS OF THE DEPARTMENT OF BUILDINGS TO DATE.
   b. MATERIALS AND EQUIPMENT SUBJECT TO CONTROLLED INSPECTION:
      i. MECHANICAL VENTILATION, AIR CONDITIONING AND REFRIGERATION.
      ii. INSPECTION AND TESTS OF THE REQUIRED VENTILATION SYSTEMS AS PER BC 1704–15
      iii. INSPECTION AND TESTS OF THE REFRIGERATION SYSTEMS AS PER [C26–BC 1704–15 AND MC CHAPTER 11
   c. THE FOLLOWING WORK ITEMS, COMPONENTS, MATERIALS, CAPACITIES, ETC. SHALL COMPLY WITH THE REFERENCED CODE CHAPTER OR SECTION BC 1207
      I. NOISE CONTROL – BC 1207
      II. DUCT CONSTRUCTION, SUPPORT, AIR INTAKES, EXHAUSTS AND RELIEFS MC CHAPTER 6
      III. SEGREGATION OF AIR SUPPLY FOR CORRIDORS AND MEANS OF EGRESS AND DIFFERENT OCCUPANCY GROUPS – [C26–1300.8] 27–777.01 & RS 13–1.
      IV. ELECTRIC WIRING AND EQUIPMENT NEC 2005 AND NYC AMENDMENTS
   d. FIRE PROTECTION SYSTEMS BC CHAPTER 9 AND MC CHAPTER 5 TEMPERATURE AND HUMIDITY CONTROL BC 1204

2. VENTILATION REQUIREMENTS:
   a. THE VENTILATION INDEX FOR ALL AREAS COMPLIES WITH THE MINIMUM CODE REQUIREMENTS PER MC 403 AND BC 1203
   b. ALL TOILET ROOMS TO BE VENTILATED IN ACCORDANCE WITH SECTION MC403 AND MC CHAPTER 5
   c. UPON COMPLETION OF THE VENTILATION SYSTEM, A TEST SHALL BE CONDUCTED IN THE PRESENCE OF AND UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER OR REGISTERED ARCHITECT QUALIFIED TO CONDUCT SUCH TESTS. FOR SYSTEMS OF OR LESS THAN 5,000 CFM, THE INSPECTION MAY BE BY A PERSON HAVING NOT LESS THAN FIVE YEARS EXPERIENCE SUPERVISING INSTALLATION OF VENTILATING SYSTEMS. THE CONTRACTOR WILL BE REQUIRED TO RETAIN THE SERVICE OF THE PROPER PERSON TO CONDUCT THE TEST. THE TESTS SHALL SHOW COMPLIANCE WITH THE CODE REQUIREMENTS FOR VENTILATION AND THE PROPER FUNCTIONING OF ALL SMOKE DETECTION, FIRE PROTECTION AND OPERATING DEVICES BEFORE THE SYSTEM IS APPROVED.
   d. THE LICENSED PROFESSIONAL ENGINEER OR REGISTERED ARCHITECT WHO CONDUCTS THE TESTS SHALL FILE A CERTIFICATE AS TO WHETHER THE SYSTEM COMPLIES WITH THE APPLICABLE LAWS. HE SHALL ALSO FILE WITH THIS CERTIFICATION A REPORT OF THE TEST. THE TEST AND REPORT SHALL BE MADE IN A MANNER SATISFACTORY TO THE SUPERINTENDENT.
   e. A STATEMENT SHALL BE FILED BY THE OWNER OR TENANT IN POSSESSION THAT THE VENTILATING SYSTEM WILL BE KEPT IN CONTINUOUS OPERATION AT ALL TIMES DURING THE NORMAL OCCUPANCY OF THE STRUCTURE AS REQUIRED BY CODE BC 1704–15

3. CERTIFICATION:
   a. THESE PLANS ARE APPROVED ONLY FOR THE WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT TO BE RELIED UPON OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES.
   b. TO THE BEST OF THE APPLICANT'S KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGEMENT, THESE PLANS ARE IN COMPLIANCE WITH THE NEW YORK STATE ENERGY CONSERVATION CONSTRUCTION CODE PART 7810 THROUGH 7816.

4. SPECIAL INSPECTIONS
   a. CONTRACTOR SHALL ENGAGE THE SERVICES OF A LICENSED PROFESSIONAL ENGINEER AUTHORIZED BY THE NEW YORK CITY BUILDING DEPARTMENT TO PERFORM SPECIAL INSPECTIONS FOR THE FOLLOWING ITEMS:
      I. – INSULATION

AUTOMATIC TEMPERATURE CONTROLS

MECHANICAL CONTRACTOR TO RETAIN THE SERVICES OF A QUALIFIED AUTOMATIC CONTROLS CONTRACTOR. THE INTENT OF THIS SECTION IS TO DESCRIBE THE COMPLETE FUNCTIONAL CONTROL OF ALL MECHANICAL EQUIPMENT, SYSTEMS AND DEVICES OF THE PROJECT. THIS CONTRACTOR IS TO FURNISH AND INSTALL AS REQUIRED ELECTRIC/ELECTRONIC CONTROLS, ALL NECESSARY COMPONENTS, CONTROL WIRING, INTERLOCK WIRING, WIRING CONTACTORS, THERMOSTATS, RELAYS, P.E.S, CONTROL TRANSFORMERS, STARTERS, ALARMS, CONTROL VALVES, ETC. TO ACHIEVE THE DESIRED CONTROL OPERATION FOR THE AIR CONDITIONING SYSTEMS.

ROOFTOP AC UNITS

THE SYSTEM THERMOSTAT CONTROLS SHALL BE CAPABLE OF THE FOLLOWING:

1. CAPABLE OF SETTING BACK TEMPERATURE TO 55°F DURING HEATING AND SETTING UP TO 85°F DURING COOLING.
2. CAPABLE OF AUTOMATICALLY SETTING BACK OR SHUTTING DOWN SYSTEMS DURING UNOCCUPIED HOURS USING 7 DIFFERENT DAY SCHEDULES,
3. HAVE AN ACCESSIBLE 2–HOUR OCCUPANT OVERRIDE.
4. HAVE A BATTERY BACK–UP CAPABLE OF MAINTAINING PROGRAMMED SETTINGS FOR AT LEAST 10 HOURS WITHOUT POWER.
5. MAINTAINING A 5°F DEADBAND (A RANGE OF TEMPERATURE WHERE NO HEATING OR COOLING IS PROVIDED).
6. HAVE A TWO STAGE HEAT FUNCTION.

MECHANICAL NOTES

1. EXPOSED DUCTWORK:
   a. DUCTWORK SHALL BE 1" ACCUSTICALLY LINED.
   b. DUCT SHALL BE PAINTED AS PER ARCHITECTS PLANS.
   c. NO EXPOSED TABS.
   d. ALL SHEETMETAL TO HAVE MATCHING COLOR/TEXTURE.
   e. ALL DUCTWORK TO BE CLEANED AFTER INSTALLATION AND FREE OF ALL GREASE, GRIME AND AXCESS SEALANT.
   f. ALL HEIGHT TRANSITION OF THE DUCTWORK TO REMAIN BOTTOM OF THE DUCT ELEVATION.
   g. ALL DUCT SIZES ARE CLEAR INSIDE DIMENSIONS. FOR OUTER DIMENSION ADD 2" TO EACH SIZE.

APPENDIX E

BLANK SYSTEM INSPECTION FORM

SYSTEM INSPECTION FORM

PROJECT: 514 Union Street	**PROJECT NO.:** 170361307
LOCATION: Brooklyn, New York	
INSPECTOR(s):	**DATE:**
REASON FOR INSPECTION (I.E., QUARTERLY, NON-ROUTINE):	
DATE OF LAST INSPECTION AND OUTSTANDING ITEMS:	
CURRENT SITE CONDITIONS:	
WEATHER CONDITIONS: Temperature: Wind Speed and Direction: Precipitation: Pressure:	

A. SVI MITIGATION SYSTEM

	Yes	No	Is the Condition Normal?	Remarks
Is the blower skid in operation and exhausting air at the discharge point?				
Does all visible SVI Mitigation system piping appear intact and undamaged?				
Does the inlet filter at the blower skid need replacement?				
Is there any evidence of moisture within the SVI mitigation system components?				
Was the blower skid alarm successfully triggered?				
When were the ERVs last serviced by an HVAC contractor?				
Are the ERVs in operation and delivering fresh air into the building?				
Was the ERV alarm successfully triggered?				
How much fresh air (CFM) is being delivered to the office?				

B. VENTILATION POINTS

Ventilation Point	Flow (CFM)	Differential Pressure (IWC)	PID Reading (ppm)	Smoke Entering (Pass/Fail)
VP-01				
VP-02				
VP-03				
VP-04				

C. BUILDING SLAB

	Yes	No	Is the Condition Normal?	Remarks
Are there any indications of a breach in the finished floor?				
Are there any cracks in the finished floor?				
Is there any indication of construction activity since the last inspection that included breaching of the finished floor?				

D. ADDITIONAL REMARKS

CFM = Cubic feet per minute
SVI = Soil vapor intrusion
PID = Photoionization detector
ppm = Parts per million
IWC = Inches of water column
HVAC = heating, ventilation, and air conditioning
ERV = Energy recovery ventilator
