1.0 EXECUTIVE SUMMARY

BEB Capital (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 731 4th Avenue in Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject site. RECs are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The subject property consists of one parcel located at 731 4th Avenue in the Greenwood Heights neighborhood of Brooklyn, NY. The site is located in Kings County. The property is identified in the Brooklyn Tax Map as Block 652, Lot 7.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the site are included in **Appendix A**.

The subject property measures approximately 5,017 square feet and is improved with a commercial retail shop with three units and an auto body shop with two bays. There are no landscaped areas.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 Code of Federal Regulations (CFR) Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

PWGC evaluated the findings associated with the subject property and identified two RECs, no HRECs and no CRECs with respect to the subject property. Conditions determined to be RECs are detailed below:

- The site was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds and chemical solvents are typically associated with these activities. A limited soil vapor investigation

1

was conducted to determine if a potential volatile organic source of contamination existed beneath the subject property; the results of the investigation did not reveal a significant vapor threat. Based upon housekeeping practices within the autobody shop, it is still possible that shallow impacted soils exist beneath the building that may require proper handling if excavated; therefore, the site's historic and current use is a REC.

- Several off-site properties have been identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence is considered a REC.

Based on the identified RECs, PWGC recommends preparation of a Site Materials and Management Plan to document proper procedures to manage on-site soils if they are to be excavated in the future.

Although not a part of the ASTM E1527-13 scope, the following additional site concerns must be considered:

- Based on the apparent age of the buildings at the site, it is possible that ACM and lead-based paint are present within the structure. PWGC recommends that, prior to demolition or renovation of the building, a proper asbestos and lead survey be performed, and identified ACM and/or lead based paint be properly abated.

2.0 INTRODUCTION

2.1 Purpose

BEB Capital (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 731 4th Avenue in Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject site. RECs are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

2.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Shelton, Connecticut provided the following: a database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical aerial photograph search and a historical telephone directory search.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

2.3 Definitions

1. RECs are the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property: (1) due to any release to the environment; (2) under the conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.
2. Historic RECs (HREC) are identified as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity or use limitations (AULs), institutional controls, or engineering controls).
3. Controlled RECs (CREC) are identified as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a No Further Action (NFA) letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).
4. A *de minimus* condition generally does not present a threat to human health or of the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimus* conditions are not RECs nor CRECs.

2.4 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

1. Groundwater Flow Direction – Based upon regional groundwater elevation maps, local topography, and environmental reports for the surrounding area, regional groundwater flow direction appears to be toward the northwest. The presence of the adjacent subway line along 4th Avenue may have an impact on the groundwater flow and depth to groundwater.
2. Regulatory Records Information - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate, and current.
3. Other - PWGC assumes that all information provided through interviews is complete and unbiased.

2.5 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.6 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between BEB Capital and PWGC.

2.7 User Reliance

This report was prepared for the exclusive use of BEB Capital and Totem. PWGC assumes no liability for use of this report by any person or entity other than those for which it was prepared.

2.8 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify RECs in connection with the subject property and do not alter the conclusions of this report.

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject property consists of one parcel located at 731 4th Avenue in the Greenwood Heights neighborhood of Brooklyn, NY. The site is located in Kings County. The property is identified in the Brooklyn Tax Map as Block 652, Lot 7.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the site are included in **Appendix A**.

3.2 Site Description and Improvements

The subject property measures approximately 5,017 square feet and is improved with a commercial retail shop with three units and an auto body shop with two bays. There are no landscaped areas.

3.2.1 Municipal Services and Utilities

Utility services are provided to the property as follows:

- Heating/Cooling System – The property is heated via natural gas supplied by Consolidated Edison.
- Water Supply – The property is connected to the municipal water supply system.
- Sanitary System – The property is connected to the municipal sewer system.
- Electric – The property is provided electricity by Consolidated Edison.

3.3 Physical Setting

The topography of the site and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn quadrangle. The property elevation is approximately 36 feet above the National Geodetic Vertical Datum (NGVD). Regional physiographic conditions are summarized below.

3.3.1 Regional Geology / Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel; abundant lignite and pyrite; and gray, red or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy and, therefore, is hydraulically connected to the Magothy Aquifer.

3.3.2 Local Hydrogeology

Based upon the extensive number of reports related to spills in the area, the depth to groundwater beneath the site is approximately 22 feet below existing grade. Regional groundwater flow is estimated to be toward the northwest. The presence of an adjacent subway line along 4th Avenue may impact the groundwater flow and depth to groundwater.

Based upon information contained within the EDR report, there are no public water supply wells within a one-mile radius of the subject property.

3.3.3 Flood Potential

PWGC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) to determine if the subject property is located within the 100-year or 500-year flood zones. Based upon FIRM data, it appears that the subject property is not located within the 100 or 500-year flood zone (FEMA Map Panel ID: 3604970211F).

3.3.4 Direction and Distance to Nearest Surface Water

Based on topographic maps, it appears that the nearest permanent surface water body is the Gowanus Bay, located approximately ¼ mile west of the subject property.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The subject property is currently occupied with a MetroPCS store, a restaurant, a bagel store, and an automotive repair shop. There are no landscaped areas or on-site parking.

4.2 Current Usage of Adjoining/Surrounding Properties

A summary of the surrounding properties is as follows:

Table 4-1 - Surrounding Property Usage

Direction	Property Description
North	24 th Street, mixed use commercial and residential building
South	Dunkin' Donuts, 25 th Street
East	Non-specific commercial/industrial buildings with two loading bays.
West	4 th Ave, R subway line, auto repair, mail center, various retail shops

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

Sanborn Fire Insurance Maps - EDR was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years available between 1888 and 2007. Review of the maps is summarized in Table 4-2. A copy of the historical Sanborn report is included in **Appendix B**.

Historical Topographic Maps - Historical topographic maps for the subject property and surrounding area were reviewed for the years available between 1891 and 2013. Review of the maps is summarized in Table 4-2. Copies of historical topographic maps are included as **Appendix C**.

Historical Aerial Photographs - PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available between 1924 and

2017. Review of the photos is summarized in Table 4-2. A copy of the aerial photograph search is included in **Appendix D**.

City Directory Listings - EDR was retained to provide a directory of historical telephone listings at the subject property and surrounding properties. City directories were reviewed for the years available between 1928 and 2014. A copy of the city directory report is included as **Appendix E**.

Table 4-2 - Subject Property Historical Usage

Date(s)	Source	Issues Noted	Description
1888 - 1900	SB, TM	No	The property appears to be developed with two small dwellings, one located at the intersection and the other along 24 th Street.
1906 – 1940	SB, AP, TM	Yes	The dwelling at the intersection has been converted to a shop and another building labeled junk has been constructed adjacent to it along 4 th Avenue. By 1926, a small shed was constructed adjacent to the neighboring property to the southwest. The other small dwelling along 24 th St is still present with the remainder of the property identified as “full of junk.”
1949 – 1974	SB, CD	Yes	The building labeled junk has been removed, the remaining buildings are still present. A new building identified as metal products manufacturing and later as storage is present along 24 th Street.
1976 - 2009	SB, CD	Yes	The metal products manufacturing is now identified as an auto repair shop and used car sales. There are no other buildings present until 1987 when a 2 story commercial building is constructed adjacent to the repair shop (southeast side).
2013 - 2017	AP	No	The used car lot has been replaced with the present day retail shop. The overall site configuration is consistent with present day conditions.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Historical usage of the subject property indicates that it was first developed prior to 1888 as a residential property and was converted to industrial uses by 1906 which included the following uses indicative of potential RECs: a junk yard, metal manufacturer, and an auto repair shop.

Table 4-2 – Surrounding Area Historical Usage

Date(s)	Source	Issues Noted	Description
1888 to 1906	SB, TM, AP	No	North: 24 th Street, undeveloped lots South: Undeveloped lots, 25 th Street East: stone cutting West: 4 th Avenue, undeveloped lots
1924 to 2014	SB, TM, AP, CD	Yes	North: 24 th Street South: Auto garage, gasoline station 25 th Street until ~2003, commercial use afterwards. East: Many industrial uses, including metal and non-descript manufacturing, woodworking, stone cutting, warehouses, laundry, filling stations, x-ray products West: 4 th Avenue, retail shops, auto repair facility, filling station/auto repair with gasoline tank, printing shops as of 1965
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Review of historical information reviewed for the properties surrounding the subject property indicate that the area has been sparsely developed since at least 1888 and nearly fully developed since at least 1924. Surrounding properties have been used primarily as retail or industrial uses. The industrial usage of the properties in the surrounding area are indicative of potential RECs.

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I ESA report, in accordance with the USEPA All Appropriate Inquiries (AAI) Rule and ASTM E1527-13 has certain responsibilities which include providing the following information, if available, to PWGC to be included within the Phase I Report. Additionally, PWGC provided the user of the report a User Questionnaire form. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identify if RECs are present at the subject property. A copy of the User Questionnaire and any provided documents are included in **Appendix F**; relevant information has been incorporated into this report.

5.2 Title Records

Title records for the site may contain information about past owners and uses of the subject property. The title report may also contain site information such as restrictive declarations which are limitations on site uses based upon known environmental conditions. As of the date of this report the user has not provided PWGC with a title search or requested that PWGC perform a title search.

5.3 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. As of the date of this report the user has not provided PWGC with a lien search or requested that PWGC perform a lien search.

The EDR database did identify a lien listed under 731 Fourth Avenue with a site name of Susan Guarino; however, this lien has been previously identified as associated with the adjacent property at 737 4th Avenue.

5.4 Specialized Knowledge

The user provided no specialized information about the property to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

The user provided no commonly known information about the property to PWGC.

5.6 Valuation Reduction for Environmental Issues

The user provided no information regarding price adjustments to the subject parcel's value due to environmental issues.

5.7 Owner, Property Manager and Occupant Information

The property is currently owned by Fourth Avenue 731, LLC as of July 23, 2019.

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed to evaluate potential RECs prior to a refinancing of the property.

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

EDR of Shelton, Connecticut was retained to provide a database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**).

In order to evaluate the potential for a site to have an adverse impact to the subject site, the migration pattern of contaminants in media such as groundwater or soil vapor is considered. Based upon the presumed regional flow towards the northwest, the following is assumed:

- Sites located southeast of the subject site are considered to have the highest potential to impact the subject site and are referred to as “upgradient.”
- Sites located northwest of the subject site, which are not neighboring or adjacent to the subject site are considered to have the least potential to impact the subject site and are referred to as “downgradient.”
- The presence of the adjacent subway line (R line) along 4th Avenue, west of the subject property, may have an impact on the groundwater flow and depth to groundwater, as well as soil vapor migration.
- All other sites not adjacent to or neighboring the subject property are referred to as “cross-gradient” and are considered to have minimal potential to impact the subject site.

A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
USEPA	National Priority List	NPL	1.0 mile	No	0
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile	No	0

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
USEPA	Superfund Enterprise Management System	SEMS	0.5 mile	No	0
USEPA	Superfund Enterprise Management System Archive	SEMS-ARCHIVE	0.5 mile	No	2
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile	No	1
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile	No	1
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG/CESQG/Non-Gen	Subject Property and Adjoining	No	1
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Subject Property	No	N/A
USEPA	Emergency Response Notification System	ERNS	Subject Property	No	N/A
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile	No	0
USEPA	Records of Decision	ROD	1.0 mile	No	0
USEPA	Mines Master Index	MINES	0.25 mile	No	0

Review of the EDR Radius Map Report indicates that the subject property is not listed in Federal environmental databases searched. The nearby properties identified within the ASTM standard federal database search radii are detailed below.

SEMS-Archive – SEMS Archive tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other

considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be a potential NPL site.

The subject property is not identified as a SEMS-Archive site. A total of two properties within the search radius are identified as SEMS-Archive sites. Each of the two identified SEMS-Archive sites are located down or cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

RCRA CORRACTS - The RCRA Corrective Actions (CORRACTS) database is the EPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

The subject property is not identified as a CORRACTS site. One property within the search radius is identified as a CORRACTS site. The identified CORRACTS site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

RCRA Treatment, Storage and Disposal - The EPA Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Treatment, Storage and Disposal (TSD) database is a compilation of reporting facilities that treat, store or dispose of hazardous waste.

The subject property is not identified as a RCRA TSD site. One property within the search radius is identified as a RCRA TSD site. The identified RCRA TSD site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A Small Quantity Generator (SQG) is a site which generate more than 100 and less than 1000 kg of hazardous waste during any one calendar month and accumulates less than 6000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1000 kg of hazardous waste at any time. Large Quantity Generators (LQG) generate more

than 1000 kg of hazardous waste per month. A Conditionally Exempt SQG (CESQG) generates less than 100 kg of waste a month. A RCRA non-generator (RCRA Non-Gen) no longer produces hazardous waste.

The subject property is not identified as a RCRA Generator site. The adjacent property to the southeast is listed as Apple Auto Body, a RCRA Non-Gen site with no violations; however, the date of the form is 2007 which is when the property was already converted to a Dunkin Donuts. This site may have been mislabeled as the subject property; however, based on the information available in the database report, this listing still does not appear to represent an environmental concern.

6.1.2 State and Local Databases

The table below summarizes the State databases that were searched.

Table 6-2 - New York State and Local Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile	No	9
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile	No	1
NYSDEC	Solid Waste Facility Register	SWF/LF	0.5 mile	No	3
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile	No	1
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile	No	0

Review of the EDR Radius Map Report indicates that the subject property is not listed in State environmental databases searched. The nearby properties identified within the ASTM standard State database search radii are detailed below.

New York State Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

The subject property is not identified as a SHWS site. A total of nine properties within the search radius are identified as SHWS sites. Each of the nine identified SHWS sites are located down or cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

Hazardous Substance Waste Disposal Site Study - The Hazardous Substance Waste Disposal Site Study (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the SHWS registry and non-registry sites that EPA Preliminary Assessment reports or Site Investigation reports were prepared.

The subject property is not identified as a HSWDS site. One property within the search radius is identified as a HSWDS site. The HSWDS sites is located cross-gradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

Solid Waste Facility Register - The NYSDEC Solid Waste Facility Register (SWF) records contain an inventory of solid waste disposal facilities or landfills in New York State.

The subject property is not identified as a SWF site. Three properties within the search radius are identified as SWF sites. Each of the identified SWF sites are located downgradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

The subject property is not identified as a SWRCY site. One property within the search radius is identified as a SWRCY site. The identified SWRCY site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

The subject property is not identified as a LTANKS site.

A total of 27 sites were identified as LTANKS sites, one of which is adjacent to the subject property. The adjacent site (737 4th Avenue) and the area adjacent to the this site, along 25th Street and 4th Avenue, is identified as a spill site with several spills, each of which have since been closed. Spill #94-02784 was opened on May 26, 1994 due to a tank overfill. The material spilled was identified as gasoline; a volume spilled was not listed. The spill was remediated and closed by the NYSDEC on the same day; therefore, this listing is not considered a REC. Spill #95-05109 was opened on February 1, 1995 as a result of oil seepage into the subway tunnel believed to have originated from the former gasoline station at the adjacent site (737 4th Ave). The spill was closed on August 11, 1995 and was referred to spill #93-05122 (discussed in the NYSPILLS section). Spill #96-07556, located at 4th Avenue and 25th Street, was opened on September 16, 1996 as a result of a tank test failure. The site is identified as a Citgo station and is believed to be one of the names of the service station that operated at the adjacent site (737 4th Ave). The UST that failed the test was identified as a 550-gallon UST containing #2 fuel oil; the volume of the spill was not listed and it is not clear if any material actually spilled from the UST. The NYSDEC comment

for the spill was “wouldn’t fill to grade.” The spill was eventually closed on March 3, 2003. Based upon the limited information from this listing and from other information obtained via a NYSDEC FOIL request discussed in Section 6.3.1, it appears that little to no oil leaked from the UST; therefore, this listing is not considered a REC.

An additional 26 properties within the search radius are identified as LTANKS sites. Of the 26 identified LTANKS sites, six appear to be located up-gradient to the subject property. The remaining LTANK sites are located cross-gradient or downgradient of the subject property and as such, are unlikely to affect the subject property.

Spill #16-10374, located at 207 25th Street, was opened on February 16, 2017, but the spill date was listed as September 10, 1993 due to notification of a tank test failure of a 550 gallon diesel UST on that date. This spill has recently been determined to be the likely source of the petroleum spill along 25th Street that impacted the subway tunnel and the NYSDEC remediation of this spill has been transferred from spill #93-05122 to this spill number. The extent that this spill may have spread along the 4th Avenue subway line. This spill will be further discussed in Section 6.3.1 due to the response of a NYSDEC FOIL request.

Spill #02-10214 is located at 276-280 24th St, was opened on January 9, 2003, and is identified as a tank test failure of a 10,000-gallon tank. The tank was reportedly abandoned in 1999. In 2006, soil analytical data was provided indicating that there were minor hits below the TAGM guidelines and the spill was closed; however, additional information obtained via a NYSDEC FOIL request, discussed further in Section 6.3.1, revealed that an investigation conducted by the NYSDEC in 2016 around this heating oil tank was inconclusive as to whether or not this site was contributing to the plume associated with spill #93-05122 as the soil borings did not reach the necessary depths. Based upon the 2016 investigation, this site cannot be ruled out as having the potential to impact the subject property.

Spill #87-03559 was opened on July 31, 1987 due to a tank test failure resulting in a gasoline spill. The spill is located upgradient of the subject property at 740 5th Avenue which was an ExxonMobil gas station. The spill was further investigated in December 2006 when three existing on-site groundwater monitoring wells related to another nearby spill were sampled. While one well was dry, the remaining two wells exhibited concentrations of MTBE that exceeded NYSDEC standards; routine quarterly sampling ensued. It was determined that there was a total of twelve 550 gallon USTs on site which were eventually removed in 2015. A pilot test of an air sparging / soil vapor extraction system was conducted which failed. Off-site delineation of the spill shows high

levels of BTEX, but little MTBE contamination. Spill number 87-03559 remains open as monitoring of installed wells and remediation continues. Based on the information available in the database report, this site cannot be ruled out as a potential environmental concern to the subject property, particularly related to gasoline contaminants in the groundwater. Spill #98-06222, listed in the NYSPILLS database, is also located at this site. The spill was reported on August 19, 1998 and was eventually closed on September 17, 2007 and referred to spill #87-03559.

Spill #97-02464 was opened on May 28, 1997 due to a tank test failure. The site is identified as a ConEd substation located at the intersection of 25th Street and 5th Avenue; however, information regarding the spill referred to a gasoline service station that did not coincide with the station located at the opposite corner; therefore, NYSDEC closed the spill on November 28, 2014. As the spill appears to be mapped incorrectly, it is unlikely to affect the subject property.

A site identified as the actual ConEd substation located at the intersection of 24th Street and 5th Avenue is up-gradient of the subject property and contains a total of 12 NYSDEC spills identified in the LTANKS and NYSPILLS databases. Each of the spills were related to dielectric/hydraulic oil, were remediated, and closed. Based upon the nature of these spills and their closed statuses, they are unlikely to affect the subject property.

Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage (PBS) - UST database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - AST database lists facilities with registered ASTs.

The subject property is not identified as a PBS site. The adjacent property to the southwest (737 4th Ave) is a PBS site, the PBS listing is 2-601564 and it is listed as unregulated/closed with a site type of Retail Gasoline Sales. The facility owner is identified as Susan Guarino, the previous owner of the property. Twelve 550-gallon gasoline USTs and two 550-gallon waste oil tanks (as per one of the PBS applications included in the NYSDEC FOIL Response in Section 6.3.1) are identified as being installed on December 1, 1947 and removed on July 1, 1999. The last date of the tank tests were listed as July 1, 1993. The presence of USTs alone does not constitute a REC; however, these USTs will be further discussed in the NYSPILLS section under Spill #93-05122. The adjacent property to the northeast (725 4th Ave) is also listed as a PBS site, listing 2-155020 which is active. The site

contains one 5,000 gallon heating oil AST. A spill was identified at the site which will be further discussed in the NYSPILLS section.

Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies brownfield sites undergoing private sector cleanup as part of redevelopment.

The subject property is not identified as a VCP site. Six sites are identified as VCP sites within the search radius. Each of these sites is located cross-gradient of the subject property; therefore, they are unlikely to affect the subject property.

Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

The subject property is not identified as a MOSF site. Three properties within the search radius are identified as MOSF sites. Each of the identified MOSF sites are located downgradient of the subject property, at the Gowanus Canal. The presence of tanks alone does not necessarily represent an environmental concern. Sites with spills or releases will be addressed in the appropriate section.

New York State Spills - The New York State Spills Information Database (NYSPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

The subject property is not identified as a NYSPILLS site.

A total of 28 properties within the search radius are identified as NYSPILLS sites. Of the 27 identified NYSPILLS sites, four are adjacent to the subject property. Spill #93-05122, which encompasses a large area between 4th Avenue and 5th Avenue and 24th Street to 25th Street was opened on July 19, 1993 following a discovery of oil leaking into the subway station. This spill will be further discussed in the NYSDEC FOIL response in Section 6.3.1. Spill #06-05711 was opened on August 16, 2006, occurred in a manhole and was a release of 2 gallons of an unknown petroleum. The spill was remediated and closed in December 2006. Spill #05-10375 was opened on December 2, 2005 as a result of an overfill of a tank. The spill on the sidewalk and in the secondary containment within the basement was remediated and closed three days later. Spill #99-10038 was opened on November

18, 1999 as a result of a manhole blowing its cover. A source of the spill was not identified, but it was attributed to a possible one-time dumping event and the spill was closed in February 2003.

Seven NYSPILLS sites are identified up-gradient of the subject property. Two of the NYSPILLS site are identified as the ConEd substation and the ExxonMobil station, previously discussed in the LTANKS section. Spill #00-09398 was opened on November 15, 2000 as a result of a bus accident at 24th Street and 5th Avenue; the spill was remediated and closed the following April. Spill #02-04232 was opened on July 23, 2002 and was located in a manhole along 24th Street. Approximately 1 gallon of an unknown petroleum was identified on 1,000 gallons of water; the spill was remediated and closed in November 2002. Spill #02-08220 was opened on November 7, 2002 and was also located in a manhole along 24th Street. Approximately 1 gallon of an unknown petroleum was observed on 500 gallons of water; the spill was remediated and closed the following day. Spill #08-05570 was opened on August 13, 2008 at 276 24th Street as a result of a dumped 55 gallon drum and 5 gallon buckets. The drum and buckets were believed to contain #2 fuel oil and leaked onto the sidewalk. The spill was remediated and closed the following week. Based upon the nature of these spills, they are unlikely to affect the subject property.

Of the remaining NYSPILLS sites, each are located cross-gradient or downgradient of the subject property and are unlikely to affect the subject property.

6.1.3 EDR Databases

The table below summarizes the EDR databases that were searched.

Table 6-3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	1
EDR	Historical Drycleaners	HDC	0.25 mile	No	0
EDR	Historical Auto Station	HAS	0.125 mile	Yes	8

Review of the EDR Radius Map Report indicates that the subject property is listed in EDR proprietary databases searched. The subject property and nearby properties identified within the EDR proprietary database search radii are detailed below.

Manufactured Gas Plants - The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The subject property is not identified as a MGP site. One property within the search radius is identified as a MGP site. The identified MGP site is located cross-gradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

EDR US Historical Auto Stations – EDR has searched national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers.

The subject property is identified as a HAS site; however, the site name is identified as 737 4th Ave Inc which is the address for the adjacent property which was also used as an auto body shop. Both addresses of 737 and 747 4th Avenue include historical auto stations. From approximately 1988 to 2005, 737 4th Avenue operated as an auto repair shop under different owners. No violations or issues are reported in the database. Brown's Friendly Service, located at 747 4th Avenue, operated as an auto repair shop from approximately 1969 to 1976. No violations or issues are reported in the database. Five other properties within the search radius are identified as HAS sites. Three identified HAS sites (two appear to be the same site) are located upgradient of the subject property and consist of an active and a former gasoline service station adjacent to each other along 5th Avenue; one of the sites contains an open spill #87-03559. The presence of the spill was discussed in the LTANKS section. Based on the information available in the database report, these sites cannot be ruled out as potential environmental concerns to the subject property. The remaining two HAS sites appear to be located cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

6.1.4 Orphan Sites

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons; no street number or street name in address given; the street address is given only as a P.O. Box; or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

A total of 14 orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. A neighboring property to the subject site, the subway station located at 4th Avenue and 25th Street, appears to be identified in the Orphans Summary as a RCRA NON-GEN/NLR site for chromium and lead. The site had previously been listed as a RCRA SQG in September 2006. No further information was provided in the database. The remaining 13 orphan sites do not appear to be located at or near the subject property.

6.2 Vapor Encroachment

PWGC performed a Tier 1 Vapor Encroachment Screening for the subject property in accordance with ASTM E2600-15, Vapor Encroachment Screening on Property Involved in Real Estate Transactions. In accordance with ASTM E2600-15, the default Area of Concern (AOC), adjusted to account for the groundwater flow direction in the vicinity of the subject property, is defined as follows:

Direction Relative to Subject Property	Petroleum Impacted Sites AOC Radius	Contaminants of Concern Impacted Sites AOC Radius
Up Gradient	528 feet	1760 feet
Cross Gradient	165 feet (LNAPL) 95 feet (dissolved)	365 feet
Down Gradient	100 feet (LNAPL) 30 feet (dissolved)	100 feet

PWGC evaluated sites identified in Federal, State, and EDR databases (see Section 6.1) located within the adjusted AOC radii for the potential for petroleum impact and or contaminants of concern (such as tetrachloroethene) to be present. The following sites were identified within the adjusted AOC:

- Several LTANKS and NYSPILLS sites adjacent to and up-gradient of the subject property
- Several EDR Historic Auto sites adjacent to and up-gradient of the subject property

Each of these sites was evaluated for the potential for a vapor encroachment condition (VEC) to be present. PWGC identified the following sites within the AOC radii that may represent potential VECs:

- 737 4th Avenue
- 207 25th Street
- 276-280 24th Street
- 740 5th Avenue
- 745 5th Avenue
- 748 5th Avenue

A copy of the Tier 1 Vapor Encroachment Screening is included as **Appendix H**.

6.3 Additional Environmental Record Sources

6.3.1 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA), the New York State Department of Environmental Conservation, Region 2 (NYSDEC), the New York City Department of Environmental Protection (NYCDEP), and the New York City Mayor's Office of Environmental Remediation (OER). Copies of FOIA requests are included in **Appendix I**.

As of the date of this report, responses to FOIA requests have not been received, except as noted below. As responses were not provided within the allotted due diligence period, the records were deemed not to be "reasonably ascertainable" at this time. Should records become available at a later date, pertinent information will be forwarded as an addendum upon receipt.

The USEPA indicated that there were no records available for the subject property. The following information was obtained from the NYSDEC related to several spills in the area, including the large spill underlying the adjacent property, 25th Street, and adjacent to the subway tunnel along 4th Avenue, #93-05122.

NYSDEC Spill Files

PWGC requested files related to the following spills: 87-03559, 93-05122, 95-05109, 97-02464, 98-06222, 02-10214, and 16-10374. There is significant overlap between these spill files; therefore, they will largely be summarized as a whole instead of individual spills, where appropriate.

- Spill #87-03559 is related to the former ExxonMobil gasoline station on 24th Street and 5th Avenue. The spill is related to twelve 550-gallon USTs, mostly containing gasoline, that were removed in 2014. The spill was opened as the result of a gasoline tank test failure. Significantly elevated concentrations of MTBE and BTEX compounds were observed in on-site soils and on-site and off-site groundwater. A pilot test for an AS/SVE system failed. Remediation has largely been through source material removal when the USTs were removed. During the off-site investigation of this spill, a monitoring well was installed to the north of the gasoline station on the opposite side of 24th Street. Analytical results from this well showed a high concentration of BTEX (20,000 µg/L in 2010) with little MTBE, while the majority of on-site contamination was from MTBE. Groundwater flow at this site is identified as towards the north which may indicate that the site is cross-gradient from the subject property; however, if there is localized groundwater pumping, particularly near the subway tunnel, this may affect the groundwater flow direction. A pilot test for a soil vapor extraction (SVE) system was conducted in 2011 which failed. Additional sampling of wells contained BTEX concentrations exceeding 80,000 µg/L.
- A Con-Ed substation located on the NE corner of 24th Street and 5th Avenue was considered as a potential source for spill #93-05122, but was ruled out due to fingerprint analysis of the 93-05122 spill indicating diesel fuel whereas the Con-Ed substation contained cable oil in ASTs and a 1,000-gallon fuel oil UST. The UST is currently listed as closed in place as of 1998 and no further information has been provided.
- An investigation for spill #02-10214, located at 276-280 24th Street was previously discussed in the LTANKS section.
- On February 15, 2017, the NYSDEC conducted a subsurface investigation at 207 25th Street. Petroleum contamination was found in the soil, as shallow as 7 feet below grade, as well as in the groundwater. This spill, #16-10374, has been recently identified in 2018 as the likely source of the petroleum plume identified under spill #93-05122.
- Spill #93-05122, located at 25th street and 4th avenue (the R Line subway station), was opened on July 19, 1993 when oil was observed dripping onto the R Line subway platform under 4th avenue and between 25th and 26th streets. The oil had also drained from the platform and onto the tracks. The NYSDEC initially estimated spill #93-05122 to be greater than 100,000 gallons, but NYSDEC contractors later determined that the pool is much smaller. As part of the ongoing investigation and remediation of this spill, over 90 monitoring wells and even more soil borings have been installed to delineate the spill and identify potential responsible parties. Over the years of remediating this spill, NYSDEC contractors collected several petroleum samples for forensics analysis. The light non-aqueous phase liquid (LNAPL)

was identified as diesel or diesel/#2 fuel oil; samples were collected over several years from several different monitoring wells, a holding tank related to the remediation system, and directly from the diesel dispenser when the gasoline service station was still active at 737 4th Avenue. Comparison of the diesel from the dispenser and from the other LNAPL samples were contradictory. Age date samples indicated that the spill may have started between 1982 and 1992. The NYSDEC had considered the 737 4th Avenue property as a potential source, as well as several other properties in the area and conducted several investigations which have ruled out some properties and confirmed other properties as responsible parties. In 2001, red-dyed oil was observed in several monitoring wells on the southeastern side of the adjacent property and along 25th Street near 4th Avenue, including up-gradient of the subject property. Red dyed oil is indicative of high-sulfur fuels for off-road use or heating oil which use the same dye; however, heating oil dye is used in a fivefold concentration for heating oil. Several pictures were taken of dark red dyed oil removed from the spill area. LNAPL removal was conducted through an apparent groundwater pump and treat system with a holding tank for LNAPL recovery, manual bailing of LNAPL, and vacuum enhanced fluid recovery. As of 1999, over 34,000 gallons of LNAPL had been declared removed; however, it is unclear if that is pure LNAPL or a LNAPL/water mixture. At an unknown time, the LNAPL recovery system was no longer effective and shut down. At times, there have been lulls in the thickness of LNAPL observed in the wells, including low points in the 2000's and at other times, up to 6 to 7 feet of LNAPL have been recorded. Groundwater analytical results have contained elevated concentrations of volatile organic compounds consistent with gasoline while soil samples collected were determined to be from gasoline produced prior to 1985, including leaded gasoline. Following the NYSDEC investigation at 207 N 25th Street (Spill #16-10374), NYSDEC determined that the plume likely originated from 207 N 25th Street and not from 737 4th Avenue. Spill #93-05122 was closed on September 24, 2018.

- The USTs at 737 4th Avenue were removed in July 1999. The NYSDEC contractor overseeing the UST removal noted that contamination was only observed above the USTs, not below them. Soil samples collected beneath a waste oil UST and a fuel oil UST revealed little to no contamination. Following demolition of the gasoline station on the subject property in 2000, the site was excavated for the construction of the current Dunkin Donuts. Photographs from the excavation revealed that the excavation was approximately 10 to 12 feet below sidewalk grade and little to no staining was observed within the excavation or the stockpile of soil. A rainbow sheen was observed in one picture and appeared to be consistent with minor gasoline impact. Darker staining was also observed in a puddle in

one picture; however, NYSDEC reports indicate that little to no oil impact was observed in soils and some gasoline impact was observed in shallower soils, particularly near the pump islands located in the center and western portions of the property. Historic site plans indicate that the USTs were located along the northeastern property boundary, at a significant distance from the wells containing the thickest and most consistent measurements of LNAPL, but closest to the subject property.

6.3.2 Publicly Available Information

Information regarding the subject property available on the commercial real estate website www.propertyshark.com (an aggregator of publicly available real estate information) was reviewed to identify pertinent information. Review of publicly available information identified the following property information and/or potential environmental issues:

- The building was built in approximately 1960.
- Carstar Auto Body Repair is located at the property.
- A violation was identified by NYCDEP on August 9, 2017 with a description of chemical spill (iac). No additional information was provided.

Information regarding the subject property available on the New York City Department of Buildings (NYCDOB) database was reviewed to identify pertinent information. Review of publicly available information identified the following information:

- A certificate of occupancy dated January 22, 1965 for a public parking lot for 9 motor vehicles.
- A certificate of occupancy dated September 9, 2013 listing an auto vehicle repair shop and three retail stores.
- A permit was approved on September 26, 2003 for installation of an auto paint spray booth.
- Demolition permits were filed in 1959 and 1973. New building permits were filed in 1935, 1938, and 1973.

Copies of publicly available information are included in **Appendix I**.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

Mr. Steven Labrecque of PWGC performed the site inspection on Thursday, July 25, 2019. Weather conditions during the inspection were partly cloudy with a light breeze and a temperature of approximately 84° Fahrenheit.

The site inspection consisted of an inspection of the interior portions of the existing building, followed by inspection of the exterior portions of the property. Backroom areas in each of the four tenant spaces were not accessible and portions of the floor in the automotive shop were not visible due to the presence of cars and materials.

7.2 Aboveground Storage Tanks (AST)

PWGC did not identify ASTs at the site.

7.3 Underground Storage Tanks (UST)

PWGC did not identify evidence of USTs, such as fill ports or vent lines at the site.

7.4 Hazardous and Non-Hazardous Chemical Storage

Autobody Shop

PWGC observed chemical storage consisting of typical chemicals utilized at an automotive repair shop including paints, paint thinners, grease removers, other miscellaneous paint related chemicals – storage was within 5-gallon containers or smaller and in good condition, but overall, housekeeping conditions were poor with many containers left open and poorly stacked. A closet was identified with several chemicals and paints with spills within the closet – the concrete around the closet was in good condition.

Bagel Shop

Typical cleaning chemicals.

Restaurant

Typical cleaning chemicals.

MetroPCS

No chemical storage identified.

7.5 Waste Generation, Storage, and Disposal

PWGC did not identify evidence of waste generation, storage, or disposal at the site.

7.6 Polychlorinated Biphenyls (PCBs)

PWGC did not identify potentially PCB containing equipment such as electrical transformers or hydraulic lifts at the site. Current lifts for the automobiles in the automotive body shop appeared to be electric lifts.

7.7 Additional Site Conditions

The following is a summary of visual and/or physical observations made by PWGC at the time of the site inspection. Photographs of pertinent observations are included in **Appendix A**.

Table 7-1 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	Yes ¹
Interior stains or corrosion	Yes ²
Unusual odors	Yes ³
Interior pools of liquid	No
Stained Soils or Pavement	No
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater or storm water discharge/disposal	No
Oil water separators/clarifiers	Yes ⁴
Septic Systems/Cesspools	No
Wells (Drinking water, monitoring wells, agricultural/irrigation wells, or process water wells)	No
Petroleum or natural gas pipelines or easements	No
Other	No

1 – A drain was observed in the autobody shop. The operator of the shop indicated that the drain was connected to the municipal sewer system, but did not drain because it was clogged.

2 - Some petroleum staining was observed on the floor of the automotive shop. Staining was not observed at cracks in the concrete slab. This is considered a *de minimus* condition.

3 – A paint-like odor was emanating from the automotive shop

4 – Grease traps were observed in the bagel store and restaurant and were connected to the municipal sewer system.

7.8 Neighboring Properties

PWGC performed a cursory inspection of the neighboring properties from the subject site and public right of ways. The neighboring properties are used for residential, industrial, and retail purposes. Potential environmental concerns observed at neighboring properties included:

- An automotive shop located on the opposite side of 4th Avenue

8.0 INTERVIEWS

8.1 Current Owner/Occupant

PWGC was not granted access to the property; therefore, interviews with the current owner/occupants were not conducted.

8.2 Previous Environmental Reports

PWGC was provided with a Phase I ESA completed by Middleton Environmental Inc. on April 3, 2013. PWGC also conducted a Phase I ESA in January 2019 and a limited Phase II ESA in the sidewalk adjacent to the subject property in March 2019. Relevant information included in the reports that has not already been discussed is summarized below. A copy of the reports is included in **Appendix F**.

8.2.1 Phase I ESA – April 2013

- The existing buildings do not contain basements.
- The retail shops were constructed around 2012 and the rear building was constructed around 1960. The retail shops were not yet completed by the time the Phase I was prepared, an auto body shop was located in the rear building.
- The heating fuel source was natural gas, not oil. USTs and ASTs were not observed.
- A floor drain was observed inside one of the buildings and it was reportedly connected to the municipal sewer system. There was no sign of staining around the drain.

8.2.2 Phase I ESA – January 2019

- RECs for the Phase I ESA included:
 - The site was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds and chemical solvents are typically associated with these activities. Based upon the long history of industrial uses and the likely presence of these chemicals, the usage of the site represents a REC.
 - Several off-site properties have been identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence is considered a REC.

8.2.3 Limited Phase II ESA – March 2019

- To address the on-site REC from the PWGC Phase I, a Limited Phase II ESA was conducted. Due to site access limitations, this investigation included the installation of five soil vapor probes with 2 hour regulators – three were installed on the neighboring property to the southwest (Dunkin Donuts) and two were installed in the adjacent sidewalk along 24th Street.
- Analytical results were compared to the USEPA sub-slab Vapor Intrusion Screening Levels (VISLs) for commercial spaces. Two compounds exceeded their respective VISLs, 1,3-butadiene and chloroform. Typical uses of these compounds are not known to have occurred at the subject property and were likely the result of off-site migration. Although PWGC could not rule out impact immediately beneath the subject property, the shallow soil vapor samples collected immediately adjacent to the property do not reflect that a significant source of VOCs exists in the immediate area.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-13

9.1 Wetland Delineation

Based on review of the EDR Radius Map Report, which includes State and Federal wetlands, it appears that State and/or Federal wetlands are not present on the subject property. Based on review of the NYSDEC Environmental Resources Mapper, the site does not appear to be located within a wetlands checkzone.

Based on review of the EDR Radius Map Report, it appears that the nearest State or Federal wetland is the Gowanus Bay, located approximately ¼ mile west of the subject property.

9.2 Radon Risk Evaluation

Radon is a colorless, radioactive; inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's "Map of Radon Zones for New York State", September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that the average result for sites tested in Kings County is 0.750 Pico curies per liter (pCi/L) in the living area, which is below the USEPA radon action level of 4 pCi/L, and 100% of sites tested in Kings County were below the action level of 4 pCi/L in the living area.

9.3 Asbestos

The front portion of the site was built between 2012 and 2013 after restrictions have been placed on the use of ACM; however, the rear building was likely constructed around 1960. Floor tiles observed in the upstairs portion of the autobody shop may contain asbestos, as well as other materials. If the property is to be redeveloped or renovated, the NYCDOB may require an asbestos inspection.

9.4 Lead-Based Paint (LBP)

The front portion of the site was built between 2012 and 2013 after restrictions have been placed on the use of lead-based paint; however, the rear building was likely constructed around 1960. If the property is to be redeveloped or renovated, the NYCDOB may still require a lead-based paint inspection.

9.5 Mold

PWGC observed mold in upstairs portion of the autobody shop due to rain water damage.

10.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following potential RECs have been identified:

Onsite

- The current and historic industrial usage of the property.

Offsite

- Historic and current usage of auto repair stations, gasoline service stations, and other industrial uses at several nearby properties.

Potential RECs identified at the subject property were evaluated to determine whether items initially suspected to be RECs are in fact RECs. Evaluation of potential RECs are as follows:

- The site was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds and chemical solvents are typically associated with these activities. A limited soil vapor investigation was conducted to determine if a potential volatile organic source of contamination existed beneath the subject property; the results of the investigation did not reveal a significant vapor threat. Based upon housekeeping practices within the autobody shop, it is still possible that shallow impacted soils exist beneath the building that may require proper handling if excavated; therefore, the site's historic and current use is a REC.
- Several off-site properties have been identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence is considered a REC.

11.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 for the subject property. There were no exceptions to, or deletions from, this practice except as noted in Section 12.0 of this report. PWGC evaluated the findings associated with the subject property and identified two RECs with respect to the subject property.

Based on the identified RECs, PWGC recommends preparation of a Site Materials and Management Plan to document proper procedures to manage on-site soils if they are to be excavated in the future.

Although not a part of the ASTM E1527-13 scope, the following additional site concerns must be considered:

- Based on the apparent age of the buildings at the site, it is possible that ACM and lead-based paint are present within the structure. PWGC recommends that, prior to demolition or renovation of the building, a proper asbestos and lead survey be performed, and identified ACM and/or lead based paint be properly abated.

12.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the ASTM Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding data gaps identified in Section 2.8 and additional services outlined in Section 9.0, there were no deviations or deletions from this practice.

13.0 REFERENCES

All Appropriate Inquiry, Final Rule, 40 CFR Part 312.

Standard practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Standard E 1527-13.

14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Jennifer Lewis, PG

APPENDIX A SITE PHOTOGRAPHS

A view of the subject property, looking towards the northeast.

A view of the bathroom in the auto body shop.

A view of the concrete slab within the auto body shop. Generally, the concrete slab appeared to be in good condition with some puddling and staining.

Another view within the auto body shop.

A clogged floor drain that reportedly is connected to the municipal sewer system.

The paint room within the auto body shop.

Paint containers with paint splattered on the walls.

Additional paint materials with splattering on the concrete floor. There were no signs of cracks where the splattering was.

Additional view of poor housekeeping within the auto body shop.

A view of the upstairs portion of the auto body shop.

Typical cleaning materials observed in the food establishment units.

A view of the neighboring property on the opposite side of 24th Street.

A view of the neighboring properties on the opposite side of 4th Avenue, including an auto body shop.

A view of the adjacent property to the southeast.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	TOT1803	Latitude:	40.660725 40° 39' 39" North

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Client Questionnaire

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I investigation will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 1527-13 which documents certain user responsibilities, we are submitting this questionnaire to assist you in meeting those responsibilities. If you could please complete this questionnaire and return it via email within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

Date: 12/27/18

Name of person completing questionnaire: Lee Brodsky

Company: BEB Capital, LLC

Length of association with property: N/A

Phone #: 516 207-7406

Property Name/Address: 731 4th Avenue, Brooklyn, NY

PWGC Project #:

Directions: Please read and answer all questions very carefully, to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Supplemental details necessary to explain any yes or unknown responses should be provided in the "Comments" column. Note: U/NR indicates "Unknown" or "No Response," and "N/A" indicates not applicable. If "Comment" box proves too small to fit your comment please attach an additional form with your full response.

		Question	Y	N	U/NR	Comment
1		Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?			x	
2		Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?			x	
3		Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			x	
4		Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			x	
5		Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			x	

6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or previous occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		x	
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?			x
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?			x
8(a)	Do you know past uses of the property?			
8(b)	Do you know of specific chemicals that are present or once were present at the property?		x	x
8(c)	Do you know of any spills or other chemical releases that have taken place at the property?			x
8(d)	Do you know of any environmental cleanups that have taken place at the site?			x
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?			x

In addition, are you aware of any of the following documents, and if so, please forward copies of the document(s) to P.W. Grosser Consulting at 630 Johnson Ave, Ste 7, Bohemia, NY 11716-2618 (along with a copy of this form):

<p align="center">Helpful Documents to be forwarded to PWGC:</p> <p><input checked="" type="checkbox"/> Environmental site assessment reports (i.e. Phase I or II, tank testing results, radon, lead paint, or asbestos testing, etc.)</p> <p><input type="checkbox"/> Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs)</p> <p><input type="checkbox"/> Environmental permits (i.e. solid waste disposal, hazardous waste disposal, wastewater, NPDES, etc.)</p> <p><input type="checkbox"/> Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs)</p> <p><input type="checkbox"/> Registrations for underground injection systems</p> <p><input type="checkbox"/> Material safety data sheets</p> <p><input type="checkbox"/> Community right to know plan</p> <p><input type="checkbox"/> Safety plans; preparedness and prevention plans; spill prevention, countermeasure/control plans, etc.</p> <p><input type="checkbox"/> Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area</p> <p><input type="checkbox"/> Notices/correspondence from any agency relating to past or current violations of environmental laws, or liens encumbering the property</p> <p><input type="checkbox"/> Hazardous waste generator notices or reports</p> <p><input type="checkbox"/> Other:</p>

MEI Project #: 13-323

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-2005 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at 631 321 4300.

Respectfully submitted,

Middleton Environmental Incorporated

1.0 EXECUTIVE SUMMARY

At the request of Signature Bank, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 731 4th Avenue in Brooklyn, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **recognized environmental conditions** in connection with the Subject Property, defined in ASTM Practice E 1527-05 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-05. This assessment has revealed no evidence of REC's in connection with the Subject Property.

The Subject Property includes one (1) rectangular-shaped parcel totaling approximately 0.12-acres. The Subject Property is currently improved with one (1) one-story commercial building with no basement or below grade areas and one (1) one and two-story commercial building with no basement or below grade areas. The buildings total 4,317 square feet and 3,500 square feet in size and contain three (3) commercial units that are in the process of being completed (front building) as well as the remains of an auto body shop with second story office space (rear building). A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. The buildings occupy the entire parcel, with no areas of exposed grounds or landscaped areas observed.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

ASSESSMENT SUMMARY TABLE			
Assessment Component	Section(s)	Recommended Actions	Estimated Cost
Historical Review	5.3, 5.4 & 5.5	No Further Action	
Current Occupants / Operations	3.3	No Further Action	
Hazardous Substances / Petroleum Products	7.2	No Further Action	
Drains, Sumps & Storm Water Drywells	7.2	No Further Action	
Storage Tanks	7.2	No Further Action	
PCBs	7.2	No Further Action	
Regulatory Agency / Database Review	5.1	No Further Action	
Asbestos Containing Materials	9.1	No Further Action	
Lead-Based Paint	9.2	No Further Action	
Lead in Drinking Water	9.3	No Further Action	
Radon	9.4	No Further Action	
Mold	9.5	No Further Action	
Wetlands	9.6	No Further Action	

2.0 INTRODUCTION

2.1 Purpose

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of property located at 731 4th Avenue in Brooklyn, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify recognized environmental conditions associated with the Subject Property and/or surrounding property. Recognized environmental conditions, as defined in the ASTM Standard Practice E 1527-05, including the following:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's)*, may also include the presence or likely presence of other conditions as noted in the Scope of Services.

2.2 Scope of Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-05: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property.

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-05. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold or Wetlands was conducted.

2.4 Special Terms and Conditions

This Phase I Environmental Site Assessment (the report) has been prepared to assist Signature Bank in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI's liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI's contract and report extends to Signature Bank only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

2.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

3.0 SITE DESCRIPTION

3.1 Ownership and Location

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance identified the Subject Property as Block 652, Lot 7 and the property is owned by 128 Merrick Realty LLC.

The property is located at 731 4th Avenue in Brooklyn, New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

3.2 Improvements

The Subject Property includes one (1) rectangular-shaped parcel totaling approximately 0.12-acres. The Subject Property is currently improved with one (1) one-story commercial building with no basement or below grade areas and one (1) one and two-story commercial building with no basement or below grade areas. A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. The buildings occupy the entire parcel, with no areas of exposed grounds or landscaped areas observed.

3.3 Current Use of the Subject Property

The buildings total 4,317 square feet and 3,500 square feet in size and contain three (3) commercial units that are in the process of being completed (front building) as well as the remains of an auto body shop with second story office space (rear building).

3.4 Services, Utilities and Roadways

Street Address(es): 731-735 4th Avenue and 250-258 24th Street

City and State: Brooklyn, New York

County: Kings

Owner: 128 Merrick Realty LLC

Property Size: 0.12 acres

Access Roadway to site: 4th Avenue to the west and 24th Street to the north of the Subject Property

Site Use: One (1) one-story commercial building and one (1) one and two-story commercial/office building

Occupants: The front building will contain three (3) commercial units with the rear building housing the remains of an auto body shop and office space.

Electricity Provider: Consolidated Edison

Natural Gas Provider: National Grid

Fuel Oil Provider: Not applicable

Potable Water: Municipal Water Supply

Sewer Services: Municipal Sewer System

Heating System: The building will be heated by a roof-top natural gas-fired HVAC system.

3.5 Adjoining Properties

The current use of the adjoining properties is commercial and mixed use. The Subject Property borders are as follows:

North - The property is bordered to the north by 24th Street, followed by a mixed use building with a driving school, checks cashed, business services, barber, pizza parlor, restaurant, deli, office, coffee house, and dry cleaner on the first floor.

South - The property is bordered to the south by a Dunkin Donuts / Baskin Robbins.

East - The property is bordered to the east by an office/light-industrial building.

West - The property is bordered to the west by 4th Avenue, then commercial buildings occupied by Asiana Limousine and C&H Auto Repair.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Pre-Survey Questionnaire

Pursuant to ASTM E 1527-05, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided by Signature Bank with regard to this Phase I Environmental Site Assessment.

ITEM	PROVIDED BY USER	NOT PROVIDED BY USER	DISCUSSED BELOW	DOES NOT APPLY
4.1 Environmental Pre-survey Questionnaire		X		
4.2 Title Records		X		
4.3 Environmental Liens or Activity and Use Limitation		X		
4.4 Specialized Knowledge		X		
4.5 Commonly Known or Reasonably Ascertainable Information		X		
4.6 Valuation Reduction for Environmental Issues		X		
4.7 Identification of Key Site Manager		X		
4.8 Reason for Performing Phase 1 ESA	X			
4.9 Prior Environmental Reports		X		

4.2 Title Records

Title record information associated with the Subject Property has not been provided to MEI by Signature Bank. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3 Environmental Liens or Activity and Use Limitation

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party does reveal the presence of an environmental related lien on the Subject Property, this information should be forwarded to MEI for review, and any significant findings will be added to this assessment as an addendum to this report.

4.4 Specialized Knowledge

Signature Bank provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3 of this report.

4.5 Commonly Known or Reasonably Ascertainable Information

Signature Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

4.6 Valuation Reduction for Environmental Issues

Signature Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

4.7 Identification of Key Site Manager

Signature Bank provided contact information for the Subject Property owner, manager and/or occupants. The Contact person for site access was Mr. Paul Greenbaum.

4.8 Reason for Performing Phase I ESA Report

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-05) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-05 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

4.9 Prior Environmental Reports

No previous environmental reports were supplied with regard to the Subject Property.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through Environmental Data Resources (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Site.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Site, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Site from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal CERCLIS Sites	0.5 mile	No	0
Federal CERCLIS NFRAP Sites	0.5 mile	No	1
Federal RCRA CORRACTS Sites	1.0 mile	No	1
Federal RCRA Generators Sites	Property & Adjoining	No	1
Federal RCRA Non-CORRACTS TSD Sites	0.5 mile	No	1
Federal Engineering / Institutional Control Sites	Property & Adjoining	No	0
Federal ERNS Sites	Subject Property	No	0
State and Tribal equivalent NPL Sites	1.0 mile	No	4
State and Tribal equivalent CERCLIS Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	27
State and Tribal Spills Sites	Subject Property	No	0
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	3
State and Tribal Registered Storage Tank Sites	Property & Adjoining	No	2
State and Tribal Engineering / Institutional Control Sites	Property & Adjoining	No	0
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	0
State and Tribal Brownfield Sites	0.5 mile	No	0

- ***Federal National Priority List (NPL) Sites***

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No Federal NPL sites are located within a mile radius of the Subject Property.

- ***Federal Delisted National Priority List (NPL) Sites***

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites are located within a mile radius of the Subject Property.

- ***Federal CERCLIS Sites***

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. The Subject Property is not listed as a Federal CERCLIS site. No Federal CERCLIS sites are listed within a half mile radius of the Subject Property.

- ***Federal CERCLIS NFRAP Sites***

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment. The Subject Property is not listed as a Federal CERCLIS-NFRAP site. One (1) Federal CERCLIS NFRAP site is listed within a half mile radius of the Subject Property. US Information Agency at 29th Street and 3rd Avenue is almost one-third mile west-southwest and downgradient of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Property and direction of groundwater flow.

- ***Federal RCRA CORRACTS Sites***

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. The Subject Property was not identified on the RCRA CORRACTS site list. One (1) RCRA CORRACTS site is listed within a mile radius of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***Federal RCRA Hazardous Waste Generators Sites***

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as a Federal RCRA Hazardous Waste Generator site. The former Apple Auto Body at 737 4th Avenue is identified as a RCRA Non-Generator with no violations found. As such, this listing would not have an apparent adverse impact on the Subject Property.

- ***Federal RCRA non-CORRACTS TSD Sites***

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD Site. One (1) Federal RCRA non-CORRACTS TSD site is listed within a half mile radius of the Subject Property. Debevoise Co. at 74 20th Street is approximately three-tenths mile north-northwest and downgradient of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***Federal Engineering Control / Institutional Control Sites***

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a Federal Engineering Control or Institutional Control Site. No Federal Engineering Control or Institutional Control Sites are listed within a half mile radius of the Subject Property.

- ***Federal Emergency Response Notification System (ERNS) Sites***

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- ***State and Tribal equivalent NPL Sites***

State and Tribal equivalent NPL databases were searched for sites located within 1.0 mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent NPL Site. Four (4) State and Tribal equivalent NPL sites are listed within a mile radius of the Subject Property. Each are located at least three-tenths mile cross-gradient or downgradient of the Subject Property, and as such, these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal equivalent CERCLIS Sites***

State and Tribal equivalent CERCLIS databases were searched for sites located within 0.5 mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are listed within a half mile radius of the Subject Property.

- ***State and Tribal Leaking Storage Tank Sites***

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not identified as a State and Tribal Leaking Storage Tank site.

There were twenty-seven (27) sites located within 0.5 mile of the Subject Property that were identified as State and Tribal Leaking Storage Tank Sites. Of the listed sites, 20 of the sites are located greater than 0.125 mile from the Subject Property and based on the distance from the Subject Property and the dense urban environment surrounding the Subject Property, these sites are considered unlikely to represent an existing release, past release or material threat of release of hazardous substances or petroleum products on the Subject Property.

Five of the seven remaining sites located within 0.125 mile of the Subject Property have been fully remediated and the spill files have been closed by the NYSDEC (and no further remedial action is warranted). Therefore, none of these sites would have an apparent adverse impact on the Subject Property based upon case status, the distance to the Subject Property, and direction of groundwater flow.

One of the closed incidents abuts the Subject Property to the south (NYSDEC Bureau of Spills at 737 4th Avenue). Regulatory database information indicates that a spill resulted from a tank overflow on May 26, 1994, with the spill subsequently closed that same day. Although no further information was provided regarding this former gasoline station (now a Dunkin Donuts / Baskin Robbins) evidence of a remediation system as well as monitoring wells were observed on this abutting property. Based on a presumed westerly direction of groundwater flow toward the Gowanus Bay, this former station would not have an apparent adverse impact on the Subject Property.

The remaining site (Private Home at 720 4th Avenue) is located approximately 300 feet north and downgradient of the Subject Property. Regulatory database information indicates that a suspect release was reported in July of 2007 following the failure of a tank tightness test. Although no further information was provided regarding any identified contamination, this site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Spills Sites***

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a State and Tribal Spills site, with three adjoining Spills incidents. 4th Avenue / 24th Street at the intersection of 4th Avenue and 24th Street, is the intersection of the Subject Property. Regulatory database information indicates that a spill was reported in 1999 following a manhole cover “blowing” at the intersection. The FDNY responded and did not discover any elevated petroleum vapors. Based on a lack of vapors, the NYSDEC closed the case on February 13, 2003. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

Apartment at 725 4th Avenue is across 24th Street to the north of the Subject Property. Regulatory database information indicates that a spill was reported on December 2, 2005 following a tank overfill which resulted in a release of fuel oil onto the sidewalk. The spill was cleaned and the case subsequently closed on December 5, 2005. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

249 24th Street at 249 24th Street is across 24th Street to the north of the Subject Property. Regulatory database information indicates approximately 20 gallons of fuel oil was released during a tank fill that was contained on the sidewalk in front of this property. The spill was cleaned, with the case subsequently closed on June 7, 1995. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

- ***State and Tribal Landfill Sites and Solid Waste Disposal Sites***

The State and Tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal landfill and solid waste disposal site. Three (3) State and Tribal landfill and solid waste disposal sites are listed within 0.5 mile of the Subject Property. Each are located at least 950 feet downgradient of the Subject Property, and as such, these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Registered Storage Tank Sites***

The Subject Property is not listed as a State and Tribal Registered Storage Tank site. The attached EDR database indicates that the Subject Property is identified as a registered AST facility under PBS Number 2-305057. However, the listing is for 7311 4th Avenue, not 731 4th Avenue, and as such, this listing is not associated with the Subject Property. The property to the south is identified as a State and Tribal Registered Storage Tank site due to the former presence of fourteen (14) 550-gallon USTs that were removed in 1999. In addition, the adjoining property to the north across 24th Street is identified as a State and Tribal Registered Storage Tank site due to the presence of an aboveground heating oil tank.

- ***State and Tribal Engineering Control / Institutional Control Sites***

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a State and Tribal Engineering Control or Institutional Control Sites. Four (4) State and Tribal Engineering Control or Institutional Control Sites are listed within 0.5 mile of the Subject Property. None are adjoining the Subject Property, and these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Voluntary Cleanup Sites***

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. No State and Tribal Voluntary Cleanup Sites are listed within 0.5 mile of the Subject Property.

- ***State and Tribal Brownfield Sites***

The Subject Property is not listed as a State and Tribal Brownfield site. No State and Tribal Brownfield sites are listed within 0.5 mile of the Subject Property.

5.2 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Building Department, the New York City Department of Finance and the New York City Fire Department. MEI did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property in the information provided by these agencies. Similarly, MEI did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property in the information provided by these agencies.

New York City Building Department

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, <http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp>. According to information viewed on the New York City Building Department's website, a variety of interior renovations, building improvements and system upgrades have occurred throughout its history, which is not uncommon for a property of this age and type. A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. A Certificate of Occupancy was issued in 1965 for a parking lot at the Subject Property.

New York City Department of Finance

MEI reviewed information provided by the New York City Department of Finance. Specific information provided by the New York City Department of Finance includes lot sizes and dimensions, building sizes, building zoning and use, and the approximate date of construction. The information provided by New York City Department of Finance did not identify any conditions or reported events that would indicate the presence of a recognized environmental condition in connection with the Subject Property.

New York City Fire Department

MEI reviewed information provided by the New York City Fire Department (NYCFD). Specific information obtained from the NYCFD includes any active storage tank permits for the Subject Property. A review of the NYCFD storage tank files did not indicate the presence of any registered storage tanks on the Subject Property.

5.3 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1888	No	Subject Property: The 1888 Sanborn Map shows the Subject Property as developed with a dwelling in the western portion of the site.
		Surrounding Area: The 1888 Sanborn Map shows the surrounding area as undeveloped with scattered dwellings. Stone cutters are present to the east.
1906	No	Subject Property: The 1906 Sanborn Map shows the presence of a commercial building that includes junk storage in the western portion of the lot with a dwelling in the eastern portion of the Subject Property.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1888 Sanborn Map.
1926	No	Subject Property: The 1926 Sanborn Map shows the Subject Property as a junk yard.
		Surrounding Area: The 1926 Sanborn Map shows a garage with gasoline tanks to the south, dwellings and shops to the east, and shops across 4 th Avenue to the west.
1951	No	Subject Property: The 1951 Sanborn Maps shows the existing commercial building in the eastern portion of the property (identified as a metal shop), with a dwelling in the western portion of the site.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1926 Sanborn Map.
1965	No	Subject Property: The 1965 Sanborn Map shows the existing commercial building at the Subject Property, with the dwelling no longer in place in the western portion of the site.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1951 Sanborn Map, with a filling station now identified to the south.
1979	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1965 Sanborn Map.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1965 Sanborn Map.
1988	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1979 Sanborn Map, with the commercial building identified as an auto repair shop.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1979 Sanborn Map.

5.5 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from www.historicaerials.com and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table.

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1954	No	Subject Property: The 1954 photograph shows the presence of the existing building and parking lot on the Subject Property.
		Surrounding Area: The 1954 photograph shows the presence of apartment, commercial, and warehouse buildings to the east, west, north and south of the Subject Property.
1966	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1954 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1954 photograph.
1980	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1966 photograph.
		Surrounding Area: Conditions on the Subject Property appear to be similar to those depicted on the 1966 photograph, with what appears to be a gasoline station in place to the south.
1987	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1980 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1980 photograph.
2004	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1980 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1980 photograph, with the existing Dunkin Donuts building in place to the south.
2006	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 2004 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 2004 photograph.

5.5 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and Environmental Data Resources (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix 12.6.

Year	Occupants
1935	No listing
1945	K&H Welding
1949	S&L Metal Products
1955	S&L Metal Products, Howard Malliband
1960	No listing
1973	Big Time Auto Body Shop
1976	Big Time Auto Body Shop
1980	Felix Used Car Sales
1985	Park Slope Auto Body, Glass Wide Auto
1992	TNT Collision
2000	M Almaca, Car Star Plus II
2005	Car Star Plus II
2012	Car Star Plus, Island Auto Club, 3M Accounting, Downtown Automotive Repair

6.0 PHYSICAL SETTING

6.1 Topography

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 34 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and there were no slopes, depressions or rolling hills observed on the Subject Property and slopes on the Subject Property range from 0 to 3 percent. The Subject Property has been graded for commercial usage.

6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest surface water body is Gowanus Bay.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the west. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

7.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Michael Fiscina on March 21, 2013. Mr. Fiscina was accompanied by and interviewed the Property Manager.

7.1 Methodology and Limited Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. The building interiors of the new commercial spaces, partially demolished building, and first floor of the auto body shop were observed during the site inspection. There was no access to the second floor of the rear building or either roof.

7.2 Physical Observations

Underground Storage Tanks

MEI did not observe any fill port or vent pipes for any underground storage tanks on the Subject Property. A review of the New York City Fire Department (NYCFD), storage tank files and the New York State Department of Environmental Conservation (NYSDEC), Petroleum Bulk Storage Tank database did not indicate the presence of any registered underground storage tanks at the Subject Property. Available Sanborn Fire Insurance Maps did not indicate the presence of any underground storage tanks at the Subject Property.

Aboveground Storage Tanks

MEI did not observe any aboveground heating oil storage tanks inside the basement of the building.

Hazardous Substances and Petroleum Products

MEI did not observe any hazardous substances or petroleum products at the Subject Property.

Non-Hazardous Substances and Petroleum Products

MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

Unidentified Substances Containers

MEI did not observe any unidentified substances containers at the Subject Property.

Drains or Storm Water Drywells

MEI observed the presence of one (1) floor drain inside the building. MEI did not observe any signs of chemical staining in the vicinity of the floor drains. It was reported that these floor drains lead to the municipal sewer system. MEI did not observe any floor drains inside the other accessible areas of the building. MEI did not observe any storm water drywells at the Subject Property.

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979 before being banned by Congress. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. MEI did not observe any PCB-containing equipment at the Subject Property.

Stains or Corrosion

MEI did not observe any stains or corrosion at the Subject Property.

Odors

MEI did not observe any strong, pungent or noxious odors at the Subject Property.

Pools of Liquid

MEI did not observe any pools of liquid at the Subject Property.

Stressed Vegetation

MEI did not observe any stressed vegetation at the Subject Property.

Stained Soil or Pavement

MEI did not observe any stained soil or pavement at the Subject Property.

Wells

MEI did not observe any irrigation wells or groundwater monitoring wells at the Subject Property.

Sumps, Pits, Ponds or Lagoons

MEI did not observe any sumps, pits, ponds or lagoons at the Subject Property.

Waste Water

MEI did not observe any improper disposal of waste water into drains, ditches or streams at the Subject Property.

Solid Wastes Disposal

All solid wastes generated on-site are carted away by a licensed waste hauler to an approved solid waste facility and are not disposed at on-site.

8.0 INTERVIEWS

8.1 Interview With Property Owner and/or Property Manager

The property manager was interviewed during the site reconnaissance on March 21, 2013 and the property manager did not indicate the presence of any environmental liens or was unaware of any contamination concerns regarding the Subject Property.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-05

9.1 Asbestos Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the buildings would have been thoroughly surveyed and sampled. MEI did not observe any ACM in any accessible areas of the building. There were no signs of ACM spray-on fireproofing noticed inside the building.

9.2 Lead Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the buildings were in good condition, free of obvious chipping, flaking or peeling. Given the commercial use of the Subject Property, there are no lead based paint violations on file with the New York City Department of Housing Preservation and Development's (NYCHPD), Code Enforcement Database.

9.3 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). Based on the date of construction, the presence of lead in drinking water is unlikely and not considered to be a potential non-scope business environmental risk issue. MEI did not observe any brass fixtures or lead fixtures at the Subject Property.

9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only. Commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

9.5 Mold

Molds are a class of fungi, and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold, nor did MEI observe obvious indications of significant water damage inside the accessible areas of the building.

9.6 Wetlands

MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-05. This assessment has not identified evidence of recognized environmental conditions (RECs) in connection with the Subject Property.

The site reconnaissance, interviews and review of records have not found the presence or possible presence of hazardous substances or petroleum related products that could indicate an existing release, past release or significant threat of a release into structures on the property, into ground, groundwater or surface water.

No conditions outside of ASTM E 1527-05 were identified in connection with the Subject Property. It is the opinion of MEI that no further testing (subsurface or otherwise), is warranted on the Subject Property.

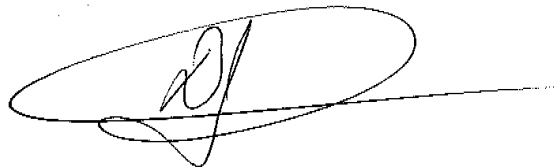

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-05.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
SUSAN GUARINO 731 FOURTH AVENUE BROOKLYN, NY	LIENS	N/A
PARK SLOPE AUTO BODY 735 4TH AVENUE BROOKLYN, NY 11232	FINDS	N/A
7311 4TH AV 731 4TH AVE BKLYN, NY 11209	HIST AST	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

1.0 INTRODUCTION

Totem Group, LLC (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Limited Phase II Environmental Site Assessment (ESA) for the property located at 731 4th Avenue in Brooklyn NY. The purpose of the Limited Phase II ESA was to further evaluate recognized environmental conditions (RECs) identified in a Phase I ESA to obtain sound, scientifically valid data concerning actual property conditions.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1903-11 (Standard Practices for Environmental Site Assessment: Phase II Environmental Site Assessment Process) and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation, May 2010 (DER-10).

2.0 BACKGROUND

2.1 Site Description and Features

The subject property consists of one parcel located at 731 4th Avenue in the Greenwood Heights neighborhood of Brooklyn, NY. The property is identified in the Brooklyn Tax Map as Block 652, Lot 7. The subject property measures approximately 5,017 square feet and is improved with a commercial retail shop with three units and an auto body shop with two bays. There are no landscaped areas. A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**.

2.2 Physical Setting

The topography of the site and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn quadrangle. The property elevation is approximately 36 feet above the National Geodetic Vertical Datum (NGVD). Regional physiographic conditions are summarized below.

2.3 Site History and Land Use

Historical usage of the subject property indicates that it was first developed prior to 1888 as a residential property and was converted to industrial uses by 1906 which included the following uses indicative of potential recognized environmental concerns (RECs): a junk yard, metal manufacturer, and an auto repair shop.

2.4 Adjacent Property Land Use

Review of historical information reviewed for the properties surrounding the subject property indicate that the area has been sparsely developed since at least 1888 and nearly fully developed since at least 1924. Surrounding properties have been used primarily as retail or industrial uses. The industrial usage of the properties in the surrounding area are indicative of potential RECs.

2.5 Summary of Previous Assessments

PWGC was provided with a Phase I ESA completed by Middleton Environmental Inc. on April 3, 2013. There were no RECs identified as part of this Phase I ESA.

PWGC conducted a Phase I ESA in January 2019 which identified two RECs: the current and historic industrial usage of the subject property (metals manufacturer, junk yard, auto repair shop) and the historic industrial usage of the neighboring properties.

3.0 WORK PERFORMED AND RATIONALE

3.1 Scope of Assessment

As access to the property was not granted, the Limited Phase II ESA included the following tasks:

- Soil Vapor Quality Evaluation

3.2 Soil Vapor Quality Evaluation

To evaluate if historic usage of the property has resulted in impact to the soil vapor immediately adjacent to the property, a soil vapor investigation was performed. As access to the property was not granted, five soil vapor probes were installed on the neighboring property to the southwest (currently a Dunkin Donuts) and on the adjacent sidewalk along 24th Street, as shown on **Figure 3**. An ambient air control sample had also been setup up-wind during the soil vapor sampling; however, the manager of the Dunkin Donuts moved the summa canister inside the Dunkin Donuts during the collection process, so this sample was discarded. The objective of this soil vapor quality evaluation is an attempt to provide an indication if impact exists beneath the subject property given the restricted access to the site. The soil vapor probes were installed on February 24, 2019. Weather during this sampling event was overcast with periods of light rain, wind, and a temperature of approximately 50° Fahrenheit.

3.2.1 Sampling Protocol

Soil vapor samples were collected into 2.7-liter Summa[®] vacuum canisters fitted with 2-hour flow controllers. The samplers were batch certified clean by the laboratory. Proper quality assurance (QA) / quality control (QC) protocol was followed during the collection of soil gas samples to ensure that cross-contamination in the field did not occur. The samples were submitted under proper chain of custody procedures to Alpha Analytical Laboratories of Westboro, MA for analysis of VOCs by USEPA Method TO-15.

Temporary soil vapor probes were installed approximately 2 inches below the asphalt drive-thru and concrete sidewalk. Vapor sampling points consisted of dedicated polyethylene tubing to grade; the annulus around the tubing was filled with clean sand, and the sampling point was sealed with bentonite grout. Prior to sampling the integrity of the sampling port seals was tested using tracer gas analysis. The environment surrounding the seal was enriched with the tracer gas, helium, as readings were collected through the sampling probe with a portable helium detector. Tracer gas readings collected from each soil vapor probe were acceptable indicating the seals were intact and the sampling probes were acceptable for sample collection.

After the initial tracer gas test was performed, one to three volumes of the sample tubing was purged prior to collecting samples. Flow rates for both purging and collecting did not exceed 0.2 liters per minute to minimize potential indoor air infiltration during sampling.

3.2.2 Analytical Results

As New York State has not developed standards or guidance levels for soil vapor concentrations, soil vapor sample analytical data were compared to the USEPA Vapor Intrusion Screening Levels (VISLs) specified at <https://www.epa.gov/vaporintrusion/vapor-intrusion-screening-level-calculator>.

Two compounds in different soil vapor samples exceeded their respective VISLs. Sample VP001 contained an exceedance of 1,3-Butadiene ($5.66 \mu\text{g}/\text{m}^3$) exceeding its VISL of $3.12 \mu\text{g}/\text{m}^3$. The compound 1,3-Butadiene is utilized in industry as a monomer in the production of synthetic rubber which is not known to have occurred at this site. It is also commonly found in ambient air in urban and suburban areas as a consequence of emissions from vehicles. Sample VP005 contained an exceedance of Chloroform ($21.7 \text{ } 5.66 \mu\text{g}/\text{m}^3$) exceeding its VISL of $4.07 \mu\text{g}/\text{m}^3$. Chloroform may be released to the air as a result of its formation in the chlorination of drinking water and wastewater or from use/disposal at pulp and paper mills, hazardous waste sites, or sanitary landfills. These activities are also not known to have occurred at the subject property.

Analytical results for the sub-slab vapor samples are shown on **Table 1**. The laboratory data report is included as **Appendix A**.

4.0 CONCLUSIONS

Based upon the recommendations of a January 2019 Phase I ESA prepared by PWGC, a Limited Phase II was conducted. The Phase II ESA included an evaluation of soil vapor quality. The field work was conducted February 24, 2019 and included the installation of five soil vapor probes were installed immediately beneath the asphalt parking lot southwest of the subject building and the sidewalk northeast of the subject building. Analytical results indicated that VOCs, including chlorinated solvents and petroleum related compounds, were detected; however, based on a comparison of the detectable concentrations to the USEPA Vapor Intrusion Screening Levels and our analysis described above, these detections do not appear to be related to the subject property or require action. Although PWGC cannot rule out impact beneath the subject property; shallow soil gas immediately adjacent to the site does not reflect that a significant source of VOCs exists in the immediate area.

5.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

7.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections and examination of records prepared by others. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
5. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

1.0 EXECUTIVE SUMMARY

Totem (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 731 4th Avenue in Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject site. RECs are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The subject property consists of one parcel located at 731 4th Avenue in the Greenwood Heights neighborhood of Brooklyn, NY. The site is located in Kings County. The property is identified in the Brooklyn Tax Map as Block 652, Lot 7.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the site are included in **Appendix A**.

The subject property measures approximately 5,017 square feet and is improved with a commercial retail shop with three units and an auto body shop with two bays. There are no landscaped areas.

Work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 Code of Federal Regulations (CFR) Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

PWGC evaluated the findings associated with the subject property and identified two RECs, no HRECs and no CRECs with respect to the subject property. Conditions determined to be RECs are detailed below:

- The site was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds

and chemical solvents are typically associated with these activities. Based upon the long history of industrial uses and the likely presence of these chemicals, the usage of the site represents a REC.

- Several off-site properties have been identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence is considered a REC.

Based on the identified RECs, PWGC recommends a Phase II ESA be performed at the site to determine if the historic usage of the property has resulted in impact to the subsurface and to determine if off-site spills have impacted groundwater or soil vapor beneath the site.

2.0 INTRODUCTION

2.1 Purpose

Totem (Client) retained P.W. Grosser Consulting, Inc. (PWGC) to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 731 4th Avenue in Brooklyn, NY. The purpose of the Phase I ESA was to identify and evaluate the presence of Recognized Environmental Conditions (RECs) at the subject site. RECs are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

2.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and aerial photographs, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Shelton, Connecticut provided the following: a database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, historical aerial photograph search and a historical telephone directory search.

PWGC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the subject property or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). PWGC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule) and PWGC's proposal for services.

2.3 Definitions

1. RECs are the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property: (1) due to any release to the environment; (2) under the conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.
2. Historic RECs (HREC) are identified as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity or use limitations (AULs), institutional controls, or engineering controls).
3. Controlled RECs (CREC) are identified as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a No Further Action (NFA) letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).
4. A *de minimus* condition generally does not present a threat to human health or of the environment, and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimus* conditions are not RECs nor CRECs.

2.4 Significant Assumptions

PWGC has made the following significant assumptions in the preparation of this report:

1. Groundwater Flow Direction – Based upon regional groundwater elevation maps, local topography, and environmental reports for the surrounding area, regional groundwater flow direction appears to be toward the northwest. The presence of the adjacent subway line along 4th Avenue may have an impact on the groundwater flow and depth to groundwater.
2. Regulatory Records Information - PWGC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate, and current.
3. Other - PWGC assumes that all information provided through interviews is complete and unbiased.

2.5 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by PWGC.
4. PWGC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. PWGC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to PWGC by third-party sources. While efforts have been made to substantiate this third-party information, PWGC cannot attest to the completeness or accuracy of information provided by others.

2.6 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Totem and PWGC.

2.7 User Reliance

This report was prepared for the exclusive use of Totem. PWGC assumes no liability for use of this report by any person or entity other than those for which it was prepared.

2.8 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify RECs in connection with the subject property and do not alter the conclusions of this report.

One data gap was identified as an inspection of the site was limited – backrooms of each of the tenant spaces were not accessible. Based upon the known recent uses of the property and the historic uses of the property, it is unlikely that this data gap will alter the conclusions and recommendations from this report.

3.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 Location and Legal Description

The subject property consists of one parcel located at 731 4th Avenue in the Greenwood Heights neighborhood of Brooklyn, NY. The site is located in Kings County. The property is identified in the Brooklyn Tax Map as Block 652, Lot 7.

A Site Location Map is included as **Figure 1** and a Site Plan is included as **Figure 2**; photos of the site are included in **Appendix A**.

3.2 Site Description and Improvements

The subject property measures approximately 5,017 square feet and is improved with a commercial retail shop with three units and an auto body shop with two bays. There are no landscaped areas.

3.2.1 Municipal Services and Utilities

Utility services are provided to the property as follows:

- Heating/Cooling System – Unknown.
- Water Supply – The property is likely connected to the municipal water supply system.
- Sanitary System – The property is likely connected to the municipal sewer system.
- Electric – The property is likely provided electricity by Consolidated Edison.

3.3 Physical Setting

The topography of the site and surrounding area was reviewed from the USGS 7.5-minute series topographic map for the Brooklyn quadrangle. The property elevation is approximately 36 feet above the National Geodetic Vertical Datum (NGVD). Regional physiographic conditions are summarized below.

3.3.1 Regional Geology / Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with: few lenses of sand and gravel; abundant lignite and pyrite; and gray, red or white in color.

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy and, therefore, is hydraulically connected to the Magothy Aquifer.

3.3.2 Local Hydrogeology

Based upon the extensive number of reports related to spills in the area, the depth to groundwater beneath the site is approximately 22 feet below existing grade. Regional groundwater flow is estimated to be toward the northwest. The presence of an adjacent subway line along 4th Avenue may impact the groundwater flow and depth to groundwater.

Based upon information contained within the EDR report, there are no public water supply wells within a one-mile radius of the subject property.

3.3.3 Flood Potential

PWGC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) to determine if the subject property is located within the 100-year or 500-year flood zones. Based upon FIRM data, it appears that the subject property is not located within the 100 or 500-year flood zone (FEMA Map Panel ID: 3604970211F).

3.3.4 Direction and Distance to Nearest Surface Water

Based on topographic maps, it appears that the nearest permanent surface water body is the Gowanus Bay, located approximately ¼ mile west of the subject property.

4.0 PROPERTY USAGE

4.1 Current Property Usage

The subject property is currently occupied with a MetroPCS store, a restaurant, a bagel store, and an automotive repair shop. There are no landscaped areas or on-site parking.

4.2 Current Usage of Adjoining/Surrounding Properties

A summary of the surrounding properties is as follows:

Table 4-1 - Surrounding Property Usage

Direction	Property Description
North	24 th Street, mixed use commercial and residential building
South	Dunkin' Donuts, 25 th Street
East	Non-specific commercial/industrial buildings with two loading bays.
West	4 th Ave, R subway line, auto repair, mail center, various retail shops

4.3 Historical Usage of Subject Property and Surrounding Properties

Historical sources researched to determine past usage of the subject property and surrounding properties are as follows:

Sanborn Fire Insurance Maps - EDR was retained to provide historical Sanborn fire insurance maps of the subject and adjacent properties. Historical Sanborn maps for the subject property and surrounding area were reviewed for the years available between 1888 and 2007. Review of the maps is summarized in Table 4-2. A copy of the historical Sanborn report is included in **Appendix B**.

Historical Topographic Maps - Historical topographic maps for the subject property and surrounding area were reviewed for the years available between 1891 and 2013. Review of the maps is summarized in Table 4-2. Copies of historical topographic maps are included as **Appendix C**.

Historical Aerial Photographs - PWGC performed a review of readily available aerial photographs showing the subject property and surrounding area. Photographs were reviewed for the years available between 1924 and

2017. Review of the photos is summarized in Table 4-2. A copy of the aerial photograph search is included in **Appendix D**.

City Directory Listings - EDR was retained to provide a directory of historical telephone listings at the subject property and surrounding properties. City directories were reviewed for the years available between 1928 and 2014. A copy of the city directory report is included as **Appendix E**.

Table 4-2 - Subject Property Historical Usage

Date(s)	Source	Issues Noted	Description
1888 - 1900	SB, TM	No	The property appears to be developed with two small dwellings, one located at the intersection and the other along 24 th Street.
1906 – 1940	SB, AP, TM	Yes	The dwelling at the intersection has been converted to a shop and another building labeled junk has been constructed adjacent to it along 4 th Avenue. By 1926, a small shed was constructed adjacent to the neighboring property to the southwest. The other small dwelling along 24 th St is still present with the remainder of the property identified as “full of junk.”
1949 – 1974	SB, CD	Yes	The building labeled junk has been removed, the remaining buildings are still present. A new building identified as metal products manufacturing and later as storage is present along 24 th Street.
1976 - 2009	SB, CD	Yes	The metal products manufacturing is now identified as an auto repair shop and used car sales. There are no other buildings present until 1987 when a 2 story commercial building is constructed adjacent to the repair shop (southeast side).
2013 - 2017	AP	No	The used car lot has been replaced with the present day retail shop. The overall site configuration is consistent with present day conditions.
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Historical usage of the subject property indicates that it was first developed prior to 1888 as a residential property and was converted to industrial uses by 1906 which included the following uses indicative of potential RECs: a junk yard, metal manufacturer, and an auto repair shop.

Table 4-2 – Surrounding Area Historical Usage

Date(s)	Source	Issues Noted	Description
1888 to 1906	SB, TM, AP	No	North: 24 th Street, undeveloped lots South: Undeveloped lots, 25 th Street East: stone cutting West: 4 th Avenue, undeveloped lots
1924 to 2014	SB, TM, AP, CD	Yes	North: 24 th Street South: Auto garage, gasoline station 25 th Street until ~2003, commercial use afterwards. East: Many industrial uses, including metal and non-descript manufacturing, woodworking, stone cutting, warehouses, laundry, filling stations, x-ray products West: 4 th Avenue, retail shops, auto repair facility, filling station/auto repair with gasoline tank, printing shops as of 1965
Sources: SB – Sanborn Map; TM – Historical Topographic Map; AP – Aerial Photograph; CD – City Directory			

Review of historical information reviewed for the properties surrounding the subject property indicate that the area has been sparsely developed since at least 1888 and nearly fully developed since at least 1924. Surrounding properties have been used primarily as retail or industrial uses. The industrial usage of the properties in the surrounding area are indicative of potential RECs.

5.0 USER PROVIDED INFORMATION

5.1 User Requirements

The user of a Phase I ESA report, in accordance with the USEPA All Appropriate Inquiries (AAI) Rule and ASTM E1527-13 has certain responsibilities which include providing the following information, if available, to PWGC to be included within the Phase I Report. Additionally, PWGC provided the user of the report a User Questionnaire form. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identify if RECs are present at the subject property. A copy of the User Questionnaire and any provided documents are included in **Appendix F**; relevant information has been incorporated into this report.

5.2 Title Records

Title records for the site may contain information about past owners and uses of the subject property. The title report may also contain site information such as restrictive declarations which are limitations on site uses based upon known environmental conditions. As of the date of this report the user has not provided PWGC with a title search or requested that PWGC perform a title search.

5.3 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. As of the date of this report the user has not provided PWGC with a lien search or requested that PWGC perform a lien search.

The EDR database did identify a lien listed under 731 Fourth Avenue with a site name of Susan Guarino; however, this lien has been previously identified as associated with the adjacent property at 737 4th Avenue.

5.4 Specialized Knowledge

The user provided no specialized information about the property to PWGC.

5.5 Commonly Known or Reasonably Ascertainable Information

The user provided no commonly known information about the property to PWGC.

5.6 Valuation Reduction for Environmental Issues

The user provided no information regarding price adjustments to the subject parcel's value due to environmental issues.

5.7 Owner, Property Manager and Occupant Information

The property is currently owned by 731 4th Ave LLC.

5.8 Reason for Performing Phase I ESA

The Phase I ESA was performed to evaluate potential RECs prior to a potential property transaction.

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

EDR of Shelton, Connecticut was retained to provide a database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. PWGC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix G**).

In order to evaluate the potential for a site to have an adverse impact to the subject site, the migration pattern of contaminants in media such as groundwater or soil vapor is considered. Based upon the presumed regional flow towards the northwest, the following is assumed:

- Sites located southeast of the subject site are considered to have the highest potential to impact the subject site and are referred to as “upgradient.”
- Sites located northwest of the subject site, which are not neighboring or adjacent to the subject site are considered to have the least potential to impact the subject site and are referred to as “downgradient.”
- The presence of the adjacent subway line (R line) along 4th Avenue, west of the subject property, may have an impact on the groundwater flow and depth to groundwater, as well as soil vapor migration.
- All other sites not adjacent to or neighboring the subject property are referred to as “cross-gradient” and are considered to have minimal potential to impact the subject site.

A summary of standard environmental record sources researched is as follows:

6.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Table 6-1 - Federal Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
USEPA	National Priority List	NPL	1.0 mile	No	0
USEPA	National Priority List Deletions	Delisted NPL	0.5 mile	No	0

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
USEPA	Superfund Enterprise Management System	SEMS	0.5 mile	No	0
USEPA	Superfund Enterprise Management System Archive	SEMS-ARCHIVE	0.5 mile	No	2
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile	No	1
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile	No	1
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG/CESQG/Non-Gen	Subject Property and Adjoining	No	1
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Subject Property	No	N/A
USEPA	Emergency Response Notification System	ERNS	Subject Property	No	N/A
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile	No	0
USEPA	Records of Decision	ROD	1.0 mile	No	0
USEPA	Mines Master Index	MINES	0.25 mile	No	0

Review of the EDR Radius Map Report indicates that the subject property is not listed in Federal environmental databases searched. The nearby properties identified within the ASTM standard federal database search radii are detailed below.

SEMS-Archive – SEMS Archive tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other

considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be a potential NPL site.

The subject property is not identified as a SEMS-Archive site. A total of two properties within the search radius are identified as SEMS-Archive sites. Each of the two identified SEMS-Archive sites are located down or cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

RCRA CORRACTS - The RCRA Corrective Actions (CORRACTS) database is the EPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

The subject property is not identified as a CORRACTS site. One property within the search radius is identified as a CORRACTS site. The identified CORRACTS site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

RCRA Treatment, Storage and Disposal - The EPA Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Treatment, Storage and Disposal (TSD) database is a compilation of reporting facilities that treat, store or dispose of hazardous waste.

The subject property is not identified as a RCRA TSD site. One property within the search radius is identified as a RCRA TSD site. The identified RCRA TSD site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A Small Quantity Generator (SQG) is a site which generate more than 100 and less than 1000 kg of hazardous waste during any one calendar month and accumulates less than 6000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1000 kg of hazardous waste at any time. Large Quantity Generators (LQG) generate more

than 1000 kg of hazardous waste per month. A Conditionally Exempt SQG (CESQG) generates less than 100 kg of waste a month. A RCRA non-generator (RCRA Non-Gen) no longer produces hazardous waste.

The subject property is not identified as a RCRA Generator site. The adjacent property to the southeast is listed as Apple Auto Body, a RCRA Non-Gen site with no violations; however, the date of the form is 2007 which is when the property was already converted to a Dunkin Donuts. This site may have been mislabeled as the subject property; however, based on the information available in the database report, this listing still does not appear to represent an environmental concern.

6.1.2 State and Local Databases

The table below summarizes the State databases that were searched.

Table 6-2 - New York State and Local Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile	No	9
NYSDEC	Hazardous Substance Waste Disposal Site Study	HSWDS	0.5 mile	No	1
NYSDEC	Solid Waste Facility Register	SWF/LF	0.5 mile	No	3
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile	No	1
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile	No	0
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile	No	27
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Subject Property and Adjoining	No	2
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Subject Property and Adjoining	No	0
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Subject Property	No	N/A
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile	No	6
NYSDEC	Brownfield sites	Brownfields	0.5 mile	No	0
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile	No	3

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
NYSDEC	New York State Spills	NYSPILLS	0.125 mile	No	27
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile	No	0
NYC	E-Designation	E-DES	Subject Property	No	N/A

Review of the EDR Radius Map Report indicates that the subject property is not listed in State environmental databases searched. The nearby properties identified within the ASTM standard State database search radii are detailed below.

New York State Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites.

The subject property is not identified as a SHWS site. A total of nine properties within the search radius are identified as SHWS sites. Each of the nine identified SHWS sites are located down or cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

Hazardous Substance Waste Disposal Site Study - The Hazardous Substance Waste Disposal Site Study (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the SHWS registry and non-registry sites that EPA Preliminary Assessment reports or Site Investigation reports were prepared.

The subject property is not identified as a HSWDS site. One property within the search radius is identified as a HSWDS site. The HSWDS sites is located cross-gradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

Solid Waste Facility Register - The NYSDEC Solid Waste Facility Register (SWF) records contain an inventory of solid waste disposal facilities or landfills in New York State.

The subject property is not identified as a SWF site. Three properties within the search radius are identified as SWF sites. Each of the identified SWF sites are located downgradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

The subject property is not identified as a SWRCY site. One property within the search radius is identified as a SWRCY site. The identified SWRCY site is located downgradient of the subject property and as such, appears unlikely to represent an environmental concern to the subject property.

Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

The subject property is not identified as a LTANKS site.

A total of 27 sites were identified as LTANKS sites, one of which is adjacent to the subject property. The adjacent site (737 4th Avenue) and the area adjacent to the this site, along 25th Street and 4th Avenue, is identified as a spill site with several spills, each of which have since been closed. Spill #94-02784 was opened on May 26, 1994 due to a tank overfill. The material spilled was identified as gasoline; a volume spilled was not listed. The spill was remediated and closed by the NYSDEC on the same day; therefore, this listing is not considered a REC. Spill #95-05109 was opened on February 1, 1995 as a result of oil seepage into the subway tunnel believed to have originated from the former gasoline station at the adjacent site (737 4th Ave). The spill was closed on August 11, 1995 and was referred to spill #93-05122 (discussed in the NYSPILLS section). Spill #96-07556, located at 4th Avenue and 25th Street, was opened on September 16, 1996 as a result of a tank test failure. The site is identified as a Citgo station and is believed to be one of the names of the service station that operated at the adjacent site (737 4th Ave). The UST that failed the test was identified as a 550-gallon UST containing #2 fuel oil; the volume of the spill was not listed and it is not clear if any material actually spilled from the UST. The NYSDEC comment

for the spill was “wouldn’t fill to grade.” The spill was eventually closed on March 3, 2003. Based upon the limited information from this listing and from other information obtained via a NYSDEC FOIL request discussed in Section 6.3.1, it appears that little to no oil leaked from the UST; therefore, this listing is not considered a REC.

An additional 26 properties within the search radius are identified as LTANKS sites. Of the 26 identified LTANKS sites, six appear to be located up-gradient to the subject property. The remaining LTANK sites are located cross-gradient or downgradient of the subject property and as such, are unlikely to affect the subject property.

Spill #16-10374, located at 207 25th Street, was opened on February 16, 2017, but the spill date was listed as September 10, 1993 due to notification of a tank test failure of a 550 gallon diesel UST on that date. This spill has recently been determined to be the likely source of the petroleum spill along 25th Street that impacted the subway tunnel and the NYSDEC remediation of this spill has been transferred from spill #93-05122 to this spill number. The extent that this spill may have spread along the 4th Avenue subway line This spill will be further discussed in Section 6.3.1 due to the response of a NYSDEC FOIL request.

Spill #02-10214 is located at 276-280 24th St, was opened on January 9, 2003, and is identified as a tank test failure of a 10,000-gallon tank. The tank was reportedly abandoned in 1999. In 2006, soil analytical data was provided indicating that there were minor hits below the TAGM guidelines and the spill was closed; however, additional information obtained via a NYSDEC FOIL request, discussed further in Section 6.3.1, revealed that an investigation conducted by the NYSDEC in 2016 around this heating oil tank was inconclusive as to whether or not this site was contributing to the plume associated with spill #93-05122 as the soil borings did not reach the necessary depths. Based upon the 2016 investigation, this site cannot be ruled out as having the potential to impact the subject property.

Spill #87-03559 was opened on July 31, 1987 due to a tank test failure resulting in a gasoline spill. The spill is located upgradient of the subject property at 740 5th Avenue which was an ExxonMobil gas station. The spill was further investigated in December 2006 when three existing on-site groundwater monitoring wells related to another nearby spill were sampled. While one well was dry, the remaining two wells exhibited concentrations of MTBE that exceeded NYSDEC standards; routine quarterly sampling ensued. It was determined that there was a total of twelve 550 gallon USTs on site which were eventually removed in 2015. A pilot test of an air sparging / soil vapor extraction system was conducted which failed. Off-site delineation of the spill shows high

levels of BTEX, but little MTBE contamination. Spill number 87-03559 remains open as monitoring of installed wells and remediation continues. Based on the information available in the database report, this site cannot be ruled out as a potential environmental concern to the subject property, particularly related to gasoline contaminants in the groundwater. Spill #98-06222, listed in the NYSPILLS database, is also located at this site. The spill was reported on August 19, 1998 and was eventually closed on September 17, 2007 and referred to spill #87-03559.

Spill #97-02464 was opened on May 28, 1997 due to a tank test failure. The site is identified as a ConEd substation located at the intersection of 25th Street and 5th Avenue; however, information regarding the spill referred to a gasoline service station that did not coincide with the station located at the opposite corner; therefore, NYSDEC closed the spill on November 28, 2014. As the spill appears to be mapped incorrectly, it is unlikely to affect the subject property.

A site identified as the actual ConEd substation located at the intersection of 24th Street and 5th Avenue is up-gradient of the subject property and contains a total of 12 NYSDEC spills identified in the LTANKS and NYSPILLS databases. Each of the spills were related to dielectric/hydraulic oil, were remediated, and closed. Based upon the nature of these spills and their closed statuses, they are unlikely to affect the subject property.

Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage (PBS) - UST database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - AST database lists facilities with registered ASTs.

The subject property is not identified as a PBS site. The adjacent property to the southwest (737 4th Ave) is a PBS site, the PBS listing is 2-601564 and it is listed as unregulated/closed with a site type of Retail Gasoline Sales. The facility owner is identified as Susan Guarino, the previous owner of the property. Twelve 550-gallon gasoline USTs and two 550-gallon waste oil tanks (as per one of the PBS applications included in the NYSDEC FOIL Response in Section 6.3.1) are identified as being installed on December 1, 1947 and removed on July 1, 1999. The last date of the tank tests were listed as July 1, 1993. The presence of USTs alone does not constitute a REC; however, these USTs will be further discussed in the NYSPILLS section under Spill #93-05122. The adjacent property to the northeast (725 4th Ave) is also listed as a PBS site, listing 2-155020 which is active. The site

contains one 5,000 gallon heating oil AST. A spill was identified at the site which will be further discussed in the NYSPILLS section.

Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies brownfield sites undergoing private sector cleanup as part of redevelopment.

The subject property is not identified as a VCP site. Six sites are identified as VCP sites within the search radius. Each of these sites is located cross-gradient of the subject property; therefore, they are unlikely to affect the subject property.

Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

The subject property is not identified as a MOSF site. Three properties within the search radius are identified as MOSF sites. Each of the identified MOSF sites are located downgradient of the subject property, at the Gowanus Canal. The presence of tanks alone does not necessarily represent an environmental concern. Sites with spills or releases will be addressed in the appropriate section.

New York State Spills - The New York State Spills Information Database (NYSPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

The subject property is not identified as a NYSPILLS site.

A total of 27 properties within the search radius are identified as NYSPILLS sites. Of the 27 identified NYSPILLS sites, four are adjacent to the subject property. Spill #93-05122, which encompasses a large area between 4th Avenue and 5th Avenue and 24th Street to 25th Street was opened on July 19, 1993 following a discovery of oil leaking into the subway station. This spill will be further discussed in the NYSDEC FOIL response in Section 6.3.1. Spill #06-05711 was opened on August 16, 2006, occurred in a manhole and was a release of 2 gallons of an unknown petroleum. The spill was remediated and closed in December 2006. Spill #05-10375 was opened on December 2, 2005 as a result of an overfill of a tank. The spill on the sidewalk and in the secondary containment within the basement was remediated and closed three days later. Spill #99-10038 was opened on November

18, 1999 as a result of a manhole blowing its cover. A source of the spill was not identified, but it was attributed to a possible one-time dumping event and the spill was closed in February 2003.

Seven NYSPILLS sites are identified up-gradient of the subject property. Two of the NYSPILLS site are identified as the ConEd substation and the ExxonMobil station, previously discussed in the LTANKS section. Spill #00-09398 was opened on November 15, 2000 as a result of a bus accident at 24th Street and 5th Avenue; the spill was remediated and closed the following April. Spill #02-04232 was opened on July 23, 2002 and was located in a manhole along 24th Street. Approximately 1 gallon of an unknown petroleum was identified on 1,000 gallons of water; the spill was remediated and closed in November 2002. Spill #02-08220 was opened on November 7, 2002 and was also located in a manhole along 24th Street. Approximately 1 gallon of an unknown petroleum was observed on 500 gallons of water; the spill was remediated and closed the following day. Spill #08-05570 was opened on August 13, 2008 at 276 24th Street as a result of a dumped 55 gallon drum and 5 gallon buckets. The drum and buckets were believed to contain #2 fuel oil and leaked onto the sidewalk. The spill was remediated and closed the following week. Based upon the nature of these spills, they are unlikely to affect the subject property.

Of the remaining NYSPILLS sites, each are located cross-gradient or downgradient of the subject property and are unlikely to affect the subject property.

6.1.3 EDR Databases

The table below summarizes the EDR databases that were searched.

Table 6-3 - Additional Databases Searched

Agency	Listing Name or database Searched	Abbreviation	Search Distance	Target Property Identified	Nearby Properties Identified
EDR	Manufactured Gas Plants	MGP	1.0 mile	No	2
EDR	Historical Drycleaners	HDC	0.25 mile	No	0
EDR	Historical Auto Station	HAS	0.125 mile	Yes	8

Review of the EDR Radius Map Report indicates that the subject property is listed in EDR proprietary databases searched. The subject property and nearby properties identified within the EDR proprietary database search radii are detailed below.

Manufactured Gas Plants - The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The subject property is not identified as a MGP site. Two properties within the search radius are identified as MGP sites. Both of the identified MGP sites are located cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

EDR US Historical Auto Stations – EDR has searched national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers.

The subject property is identified as a HAS site; however, the site name is identified as 737 4th Ave Inc which is the address for the adjacent property which was also used as an auto body shop. Both addresses of 737 and 747 4th Avenue include historical auto stations. From approximately 1988 to 2005, 737 4th Avenue operated as an auto repair shop under different owners. No violations or issues are reported in the database. Brown's Friendly Service, located at 747 4th Avenue, operated as an auto repair shop from approximately 1969 to 1976. No violations or issues are reported in the database. Five other properties within the search radius are identified as HAS sites. Three identified HAS sites (two appear to be the same site) are located upgradient of the subject property and consist of an active and a former gasoline service station adjacent to each other along 5th Avenue; one of the sites contains an open spill #87-03559. The presence of the spill was discussed in the LTANKS section. Based on the information available in the database report, these sites cannot be ruled out as potential environmental concerns to the subject property. The remaining two HAS sites appear to be located cross-gradient of the subject property and as such, appear unlikely to represent an environmental concern to the subject property.

6.1.4 Orphan Sites

Orphan sites are properties, that due to an inadequate or incomplete address in government databases or in base map files, are not able to be geographically located (i.e. mapped or geocoded). This can occur for several reasons; no street number or street name in address given; the street address is given only as a P.O. Box; or when inconsistencies exist in the address (street number does not exist in the city / zip code given).

A total of 14 orphan sites were identified in the EDR report. PWGC performed a cursory review of the addresses listed. A neighboring property to the subject site, the subway station located at 4th Avenue and 25th Street, appears to be identified in the Orphans Summary as a RCRA NON-GEN/NLR site for chromium and lead. The site had previously been listed as a RCRA SQG in September 2006. No further information was provided in the database. The remaining 13 orphan sites do not appear to be located at or near the subject property.

6.2 Vapor Encroachment

PWGC performed a Tier 1 Vapor Encroachment Screening for the subject property in accordance with ASTM E2600-15, Vapor Encroachment Screening on Property Involved in Real Estate Transactions. In accordance with ASTM E2600-15, the default Area of Concern (AOC), adjusted to account for the groundwater flow direction in the vicinity of the subject property, is defined as follows:

Direction Relative to Subject Property	Petroleum Impacted Sites AOC Radius	Contaminants of Concern Impacted Sites AOC Radius
Up Gradient	528 feet	1760 feet
Cross Gradient	165 feet (LNAPL) 95 feet (dissolved)	365 feet
Down Gradient	100 feet (LNAPL) 30 feet (dissolved)	100 feet

PWGC evaluated sites identified in Federal, State, and EDR databases (see Section 6.1) located within the adjusted AOC radii for the potential for petroleum impact and or contaminants of concern (such as tetrachloroethene) to be present. The following sites were identified within the adjusted AOC:

- Several LTANKS and NYSPILLS sites adjacent to and up-gradient of the subject property
- Several EDR Historic Auto sites adjacent to and up-gradient of the subject property

Each of these sites was evaluated for the potential for a vapor encroachment condition (VEC) to be present. PWGC identified the following sites within the AOC radii that may represent potential VECs:

- 737 4th Avenue
- 207 25th Street
- 276-280 24th Street
- 740 5th Avenue
- 745 5th Avenue
- 748 5th Avenue

A copy of the Tier 1 Vapor Encroachment Screening is included as **Appendix H**.

6.3 Additional Environmental Record Sources

6.3.1 Freedom of Information Act Requests

Freedom of Information Act (FOIA) requests were sent to the United States Environmental Protection Agency, Region 2 (USEPA), the New York State Department of Environmental Conservation, Region 2 (NYSDEC), the New York City Department of Environmental Protection (NYCDEP), and the New York City Mayor's Office of Environmental Remediation (OER). Copies of FOIA requests are included in **Appendix I**.

As of the date of this report, responses to FOIA requests have not been received, except as noted below. As responses were not provided within the allotted due diligence period, the records were deemed not to be "reasonably ascertainable" at this time. Should records become available at a later date, pertinent information will be forwarded as an addendum upon receipt.

The USEPA indicated that there were no records available for the subject property. The following information was obtained from the NYSDEC related to several spills in the area, including the large spill underlying the adjacent property, 25th Street, and adjacent to the subway tunnel along 4th Avenue, #93-05122.

NYSDEC Spill Files

PWGC requested files related to the following spills: 87-03559, 93-05122, 95-05109, 97-02464, 98-06222, 02-10214, and 16-10374. There is significant overlap between these spill files; therefore, they will largely be summarized as a whole instead of individual spills, where appropriate.

- Spill #87-03559 is related to the former ExxonMobil gasoline station on 24th Street and 5th Avenue. The spill is related to twelve 550-gallon USTs, mostly containing gasoline, that were removed in 2014. The spill was opened as the result of a gasoline tank test failure. Significantly elevated concentrations of MTBE and BTEX compounds were observed in on-site soils and on-site and off-site groundwater. A pilot test for an AS/SVE system failed. Remediation has largely been through source material removal when the USTs were removed. During the off-site investigation of this spill, a monitoring well was installed to the north of the gasoline station on the opposite side of 24th Street. Analytical results from this well showed a high concentration of BTEX (20,000 µg/L in 2010) with little MTBE, while the majority of on-site contamination was from MTBE. Groundwater flow at this site is identified as towards the north which may indicate that the site is cross-gradient from the subject property; however, if there is localized groundwater pumping, particularly near the subway tunnel, this may affect the groundwater flow direction. A pilot test for a soil vapor extraction (SVE) system was conducted in 2011 which failed. Additional sampling of wells contained BTEX concentrations exceeding 80,000 µg/L.
- A Con-Ed substation located on the NE corner of 24th Street and 5th Avenue was considered as a potential source for spill #93-05122, but was ruled out due to fingerprint analysis of the 93-05122 spill indicating diesel fuel whereas the Con-Ed substation contained cable oil in ASTs and a 1,000-gallon fuel oil UST. The UST is currently listed as closed in place as of 1998 and no further information has been provided.
- An investigation for spill #02-10214, located at 276-280 24th Street was previously discussed in the LTANKS section.
- On February 15, 2017, the NYSDEC conducted a subsurface investigation at 207 25th Street. Petroleum contamination was found in the soil, as shallow as 7 feet below grade, as well as in the groundwater. This spill, #16-10374, has been recently identified in 2018 as the likely source of the petroleum plume identified under spill #93-05122.
- Spill #93-05122, located at 25th street and 4th avenue (the R Line subway station), was opened on July 19, 1993 when oil was observed dripping onto the R Line subway platform under 4th avenue and between 25th and 26th streets. The oil had also drained from the platform and onto the tracks. The NYSDEC initially estimated spill #93-05122 to be greater than 100,000 gallons, but NYSDEC contractors later determined that the pool is much smaller. As part of the ongoing investigation and remediation of this spill, over 90 monitoring wells and even more soil borings have been installed to delineate the spill and identify potential responsible parties. Over the years of remediating this spill, NYSDEC contractors collected several petroleum samples for forensics analysis. The light non-aqueous phase liquid (LNAPL)

was identified as diesel or diesel/#2 fuel oil; samples were collected over several years from several different monitoring wells, a holding tank related to the remediation system, and directly from the diesel dispenser when the gasoline service station was still active at 737 4th Avenue. Comparison of the diesel from the dispenser and from the other LNAPL samples were contradictory. Age date samples indicated that the spill may have started between 1982 and 1992. The NYSDEC had considered the 737 4th Avenue property as a potential source, as well as several other properties in the area and conducted several investigations which have ruled out some properties and confirmed other properties as responsible parties. In 2001, red-dyed oil was observed in several monitoring wells on the southeastern side of the adjacent property and along 25th Street near 4th Avenue, including up-gradient of the subject property. Red dyed oil is indicative of high-sulfur fuels for off-road use or heating oil which use the same dye; however, heating oil dye is used in a fivefold concentration for heating oil. Several pictures were taken of dark red dyed oil removed from the spill area. LNAPL removal was conducted through an apparent groundwater pump and treat system with a holding tank for LNAPL recovery, manual bailing of LNAPL, and vacuum enhanced fluid recovery. As of 1999, over 34,000 gallons of LNAPL had been declared removed; however, it is unclear if that is pure LNAPL or a LNAPL/water mixture. At an unknown time, the LNAPL recovery system was no longer effective and shut down. At times, there have been lulls in the thickness of LNAPL observed in the wells, including low points in the 2000's and at other times, up to 6 to 7 feet of LNAPL have been recorded. Groundwater analytical results have contained elevated concentrations of volatile organic compounds consistent with gasoline while soil samples collected were determined to be from gasoline produced prior to 1985, including leaded gasoline. Following the NYSDEC investigation at 207 N 25th Street (Spill #16-10374), NYSDEC determined that the plume likely originated from 207 N 25th Street and not from 737 4th Avenue. Spill #93-05122 was closed on September 24, 2018.

- The USTs at 737 4th Avenue were removed in July 1999. The NYSDEC contractor overseeing the UST removal noted that contamination was only observed above the USTs, not below them. Soil samples collected beneath a waste oil UST and a fuel oil UST revealed little to no contamination. Following demolition of the gasoline station on the subject property in 2000, the site was excavated for the construction of the current Dunkin Donuts. Photographs from the excavation revealed that the excavation was approximately 10 to 12 feet below sidewalk grade and little to no staining was observed within the excavation or the stockpile of soil. A rainbow sheen was observed in one picture and appeared to be consistent with minor gasoline impact. Darker staining was also observed in a puddle in

one picture; however, NYSDEC reports indicate that little to no oil impact was observed in soils and some gasoline impact was observed in shallower soils, particularly near the pump islands located in the center and western portions of the property. Historic site plans indicate that the USTs were located along the northeastern property boundary, at a significant distance from the wells containing the thickest and most consistent measurements of LNAPL, but closest to the subject property.

6.3.2 Publicly Available Information

Information regarding the subject property available on the commercial real estate website www.propertyshark.com (an aggregator of publicly available real estate information) was reviewed to identify pertinent information. Review of publicly available information identified the following property information and/or potential environmental issues:

- The building was built in approximately 1960.
- Carstar Auto Body Repair is located at the property.
- A violation was identified by NYCDEP on August 9, 2017 with a description of chemical spill (iac). No additional information was provided.

Information regarding the subject property available on the New York City Department of Buildings (NYCDOB) database was reviewed to identify pertinent information. Review of publicly available information identified the following information:

- A certificate of occupancy dated January 22, 1965 for a public parking lot for 9 motor vehicles.
- A certificate of occupancy dated September 9, 2013 listing an auto vehicle repair shop and three retail stores.
- A permit was approved on September 26, 2003 for installation of an auto paint spray booth.
- Demolition permits were filed in 1959 and 1973. New building permits were filed in 1935, 1938, and 1973.

Copies of publicly available information are included in **Appendix I**.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

Mr. Steven Labrecque of PWGC performed the site inspection on Thursday, January 24, 2019. Weather conditions during the inspection were rainy with a temperature of approximately 50° Fahrenheit.

The site inspection consisted of an inspection of the interior portions of the existing building, followed by inspection of the exterior portions of the property. Backroom areas in each of the four tenant spaces were not accessible and portions of the floor in the automotive shop were not visible due to the presence of cars and materials.

7.2 Aboveground Storage Tanks (AST)

PWGC did not identify ASTs at the site.

7.3 Underground Storage Tanks (UST)

PWGC did not identify evidence of USTs, such as fill ports or vent lines at the site.

7.4 Hazardous and Non-Hazardous Chemical Storage

PWGC observed chemical storage consisting of typical chemicals utilized at an automotive repair shop. In addition, a paint-like odor was emanating from the automotive repair shop.

7.5 Waste Generation, Storage, and Disposal

PWGC did not identify evidence of waste generation, storage or disposal at the site.

7.6 Polychlorinated Biphenyls (PCBs)

PWGC did not identify potentially PCB containing equipment such as electrical transformers or hydraulic lifts at the site. Current lifts for the automobiles in the automotive body shop appeared to be electric lifts.

7.7 Additional Site Conditions

The following is a summary of visual and/or physical observations made by PWGC at the time of the site inspection. Photographs of pertinent observations are included in **Appendix A**.

Table 7-1 - Additional Site Conditions

Condition	Identified
Interior drains, trenches or sumps.	No
Interior stains or corrosion	Yes ¹
Unusual odors	Yes ²
Interior pools of liquid	No
Stained Soils or Pavement	No
Stressed Vegetation	No
Indications of solid waste disposal	No
Exterior ponds, pits, or lagoons	No
Wastewater or storm water discharge/disposal	No
Oil water separators/clarifiers	No
Septic Systems/Cesspools	No
Wells (Drinking water, monitoring wells, agricultural/irrigation wells, or process water wells)	No
Petroleum or natural gas pipelines or easements	No
Other	No

1 – Some petroleum staining was observed on the floor of the automotive shop. Staining was not observed at cracks in the concrete slab. This is considered a *de minimus* condition.

2 – A paint-like odor was emanating from the automotive shop

7.8 Neighboring Properties

PWGC performed a cursory inspection of the neighboring properties from the subject site and public right of ways. The neighboring properties are used for residential, industrial, and retail purposes. Potential environmental concerns observed at neighboring properties included:

- An automotive shop located on the opposite side of 4th Avenue

8.0 INTERVIEWS

8.1 Current Owner/Occupant

PWGC was not granted access to the property; therefore, interviews with the current owner/occupants were not conducted.

8.2 Previous Environmental Reports

PWGC was provided with a Phase I ESA completed by Middleton Environmental Inc. on April 3, 2013. Relevant information included in the report that has not already been discussed is summarized below.

8.2.1 Phase I ESA – April 2013

- The existing buildings do not contain basements.
- The retail shops were constructed around 2012 and the rear building was constructed around 1960. The retail shops were not yet completed by the time the Phase I was prepared, an auto body shop was located in the rear building.
- The heating fuel source was natural gas, not oil. USTs and ASTs were not observed.
- A floor drain was observed inside one of the buildings and it was reportedly connected to the municipal sewer system. There was no sign of staining around the drain.

A copy of the Phase I ESA is included in **Appendix F**.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM 1527-13

9.1 Wetland Delineation

Based on review of the EDR Radius Map Report, which includes State and Federal wetlands, it appears that State and/or Federal wetlands are not present on the subject property. Based on review of the NYSDEC Environmental Resources Mapper, the site does not appear to be located within a wetlands checkzone.

Based on review of the EDR Radius Map Report, it appears that the nearest State or Federal wetland is the Gowanus Bay, located approximately ¼ mile west of the subject property.

9.2 Radon Risk Evaluation

Radon is a colorless, radioactive; inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's "Map of Radon Zones for New York State", September 1993 indicates that Kings County is not a radon risk area. The EDR report provides information from the New York State Department of Health radon survey which indicates that the average result for sites tested in Kings County is 0.750 Pico curies per liter (pCi/L) in the living area, which is below the USEPA radon action level of 4 pCi/L, and 100% of sites tested in Kings County were below the action level of 4 pCi/L in the living area.

9.3 Asbestos

The front portion of the site was built between 2012 and 2013 after restrictions have been placed on the use of ACM; however, the rear building was likely constructed around 1960. If the property is to be redeveloped or renovated, the NYCDOB may require an asbestos inspection.

9.4 Lead-Based Paint (LBP)

The front portion of the site was built between 2012 and 2013 after restrictions have been placed on the use of lead-based paint; however, the rear building was likely constructed around 1960. If the property is to be redeveloped or renovated, the NYCDOB may still require a lead-based paint inspection.

9.5 Mold

PWGC did not observe mold in the portions of the building that access was granted.

10.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, the following potential RECs have been identified:

Onsite

- The current and historic industrial usage of the property.

Offsite

- Historic and current usage of auto repair stations, gasoline service stations, and other industrial uses at several nearby properties.

Potential RECs identified at the subject property were evaluated to determine whether items initially suspected to be RECs are in fact RECs. Evaluation of potential RECs are as follows:

- The site was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds and chemical solvents are typically associated with these activities. Based upon the long history of industrial uses and the likely presence of these chemicals, the usage of the site represents a REC.
- Several off-site properties have been identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence is considered a REC.

11.0 CONCLUSIONS AND RECOMMENDATIONS

PWGC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 for the subject property. There were no exceptions to, or deletions from, this practice except as noted in Section 12.0 of this report. PWGC evaluated the findings associated with the subject property and identified two RECs with respect to the subject property.

Based on the identified RECs, PWGC recommends a Phase II ESA be performed at the site to determine if the historic usage of the property has resulted in impact to the subsurface and to determine if off-site spills have impacted groundwater or soil vapor beneath the site.

12.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the ASTM Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding data gaps identified in Section 2.8 and additional services outlined in Section 9.0, there were no deviations or deletions from this practice.

13.0 REFERENCES

All Appropriate Inquiry, Final Rule, 40 CFR Part 312.

Standard practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Standard E 1527-13.

14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Jennifer Lewis, PG

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by P.W. Grosser Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	TOT1803	Latitude:	40.660725 40° 39' 39" North

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SITE QUESTIONNAIRE

AND RELEVANT DOCUMENTS

Client Questionnaire

P.W. Grosser Consulting Inc. (PWGC) has been contracted to perform a Phase I Environmental Site Assessment (ESA) of the property listed below. The Phase I investigation will include site observations, interviews, and review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 1527-13 which documents certain user responsibilities, we are submitting this questionnaire to assist you in meeting those responsibilities. If you could please complete this questionnaire and return it via email within one business day of receipt it will allow us to complete the Phase I ESA in a timely and efficient manner.

Date: 12/27/18

Name of person completing questionnaire: Lee Brodsky

Company: BEB Capital, LLC

Length of association with property: N/A

Phone #: 516 207-7406

Property Name/Address: 731 4th Avenue, Brooklyn, NY

PWGC Project #:

Directions: Please read and answer all questions very carefully, to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Supplemental details necessary to explain any yes or unknown responses should be provided in the "Comments" column. Note: U/NR indicates "Unknown" or "No Response," and "N/A" indicates not applicable. If "Comment" box proves too small to fit your comment please attach an additional form with your full response.

		Question	Y	N	U/NR	Comment
1		Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?			x	
2		Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?			x	
3		Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?			x	
4		Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?			x	
5		Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?			x

6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or previous occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?		x	
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?			x
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?			x
8(a)	Do you know past uses of the property?			
8(b)	Do you know of specific chemicals that are present or once were present at the property?		x	x
8(c)	Do you know of any spills or other chemical releases that have taken place at the property?			x
8(d)	Do you know of any environmental cleanups that have taken place at the site?			x
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?			x

In addition, are you aware of any of the following documents, and if so, please forward copies of the document(s) to P.W. Grosser Consulting at 630 Johnson Ave, Ste 7, Bohemia, NY 11716-2618 (along with a copy of this form):

MEI Project #: 13-323

In accordance with our agreement, Middleton Environmental Incorporated (MEI), has performed a Phase I Environmental Assessment of the above referenced property in accordance with ASTM E 1527-2005 Scope of Work. Please find a copy of the report enclosed.

We declare that to the best of our knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR and, we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for choosing MEI as your consultant for this project. If you have any questions, or if we can be of additional service, please contact us at 631 321 4300.

Respectfully submitted,

Middleton Environmental Incorporated

1.0 EXECUTIVE SUMMARY

At the request of Signature Bank, Middleton Environmental Incorporated (MEI) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 731 4th Avenue in Brooklyn, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify **recognized environmental conditions** in connection with the Subject Property, defined in ASTM Practice E 1527-05 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-05. This assessment has revealed no evidence of REC's in connection with the Subject Property.

The Subject Property includes one (1) rectangular-shaped parcel totaling approximately 0.12-acres. The Subject Property is currently improved with one (1) one-story commercial building with no basement or below grade areas and one (1) one and two-story commercial building with no basement or below grade areas. The buildings total 4,317 square feet and 3,500 square feet in size and contain three (3) commercial units that are in the process of being completed (front building) as well as the remains of an auto body shop with second story office space (rear building). A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. The buildings occupy the entire parcel, with no areas of exposed grounds or landscaped areas observed.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. MEI's Findings and Opinions and Recommendations for further action or investigation (if any), are presented in Section 10.0.

ASSESSMENT SUMMARY TABLE			
Assessment Component	Section(s)	Recommended Actions	Estimated Cost
Historical Review	5.3, 5.4 & 5.5	No Further Action	
Current Occupants / Operations	3.3	No Further Action	
Hazardous Substances / Petroleum Products	7.2	No Further Action	
Drains, Sumps & Storm Water Drywells	7.2	No Further Action	
Storage Tanks	7.2	No Further Action	
PCBs	7.2	No Further Action	
Regulatory Agency / Database Review	5.1	No Further Action	
Asbestos Containing Materials	9.1	No Further Action	
Lead-Based Paint	9.2	No Further Action	
Lead in Drinking Water	9.3	No Further Action	
Radon	9.4	No Further Action	
Mold	9.5	No Further Action	
Wetlands	9.6	No Further Action	

2.0 INTRODUCTION

2.1 Purpose

MEI has performed a Phase I Environmental Site Assessment (Phase I ESA) of property located at 731 4th Avenue in Brooklyn, New York (Subject Property). The purpose of this Phase I Environmental Site Assessment (Phase I ESA) is to investigate and identify recognized environmental conditions associated with the Subject Property and/or surrounding property. Recognized environmental conditions, as defined in the ASTM Standard Practice E 1527-05, including the following:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

For the purpose of this Phase I ESA, *recognized environmental conditions (REC's)*, may also include the presence or likely presence of other conditions as noted in the Scope of Services.

2.2 Scope of Services

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
 - Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
 - Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
 - Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
 - Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
 - Past ownership through a review of available prior reports and local municipal file review.
- The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-05: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, radon, mold, and wetlands.

2.3 Assumptions and Limitations

There is a possibility that even with the proper application of these methodologies there may exist on the Subject Property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. MEI believes that the information obtained from the record review and the interviews concerning the Subject Property is reliable. However, MEI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide the User with information relating to the Subject Property.

The findings, opinions and conclusions of this report contain the limitations inherent in these methodologies that are referred to in ASTM E 1527-05. Specific limitations and exceptions to this ESA are set forth below:

Historical and environmental information pertaining to the Subject Property has been included in this report to the extent that such information is "reasonably ascertainable" as defined in the above-referenced standard practice and in accordance with the project specific timeframes.

MEI reviewed an environmental database search report. MEI's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, MEI's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the Subject Property.

With respect to conditions outside the scope of the ASTM Standard, MEI's observations are limited to physical observations and a review of published data. Unless otherwise stated, no sampling for Asbestos Containing Materials, Lead Based Paint, Drinking Water, Radon, Mold or Wetlands was conducted.

2.4 Special Terms and Conditions

This Phase I Environmental Site Assessment (the report) has been prepared to assist Signature Bank in its underwriting of a proposed mortgage loan or financing on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. MEI's liability to a purchaser wishing to use this report is limited to the cost of the report. Amendments to MEI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and MEI's contract and report extends to Signature Bank only, in accordance with MEI Terms and Condition and the MEI Scope of Work.

2.5 Data Gaps

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

3.0 SITE DESCRIPTION

3.1 Ownership and Location

According to the Automated City Register Information System (ACRIS) operated by the New York City Department of Finance identified the Subject Property as Block 652, Lot 7 and the property is owned by 128 Merrick Realty LLC.

The property is located at 731 4th Avenue in Brooklyn, New York. MEI did not identify any prior owners or occupants of potential environmental concern in the property records obtained from the NYC Department of Finance.

3.2 Improvements

The Subject Property includes one (1) rectangular-shaped parcel totaling approximately 0.12-acres. The Subject Property is currently improved with one (1) one-story commercial building with no basement or below grade areas and one (1) one and two-story commercial building with no basement or below grade areas. A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. The buildings occupy the entire parcel, with no areas of exposed grounds or landscaped areas observed.

3.3 Current Use of the Subject Property

The buildings total 4,317 square feet and 3,500 square feet in size and contain three (3) commercial units that are in the process of being completed (front building) as well as the remains of an auto body shop with second story office space (rear building).

3.4 Services, Utilities and Roadways

Street Address(es): 731-735 4th Avenue and 250-258 24th Street

City and State: Brooklyn, New York

County: Kings

Owner: 128 Merrick Realty LLC

Property Size: 0.12 acres

Access Roadway to site: 4th Avenue to the west and 24th Street to the north of the Subject Property

Site Use: One (1) one-story commercial building and one (1) one and two-story commercial/office building

Occupants: The front building will contain three (3) commercial units with the rear building housing the remains of an auto body shop and office space.

Electricity Provider: Consolidated Edison

Natural Gas Provider: National Grid

Fuel Oil Provider: Not applicable

Potable Water: Municipal Water Supply

Sewer Services: Municipal Sewer System

Heating System: The building will be heated by a roof-top natural gas-fired HVAC system.

3.5 Adjoining Properties

The current use of the adjoining properties is commercial and mixed use. The Subject Property borders are as follows:

North - The property is bordered to the north by 24th Street, followed by a mixed use building with a driving school, checks cashed, business services, barber, pizza parlor, restaurant, deli, office, coffee house, and dry cleaner on the first floor.

South - The property is bordered to the south by a Dunkin Donuts / Baskin Robbins.

East - The property is bordered to the east by an office/light-industrial building.

West - The property is bordered to the west by 4th Avenue, then commercial buildings occupied by Asiana Limousine and C&H Auto Repair.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Pre-Survey Questionnaire

Pursuant to ASTM E 1527-05, MEI requested the following site information from the User of this report and from the site contact. The following section summarizes information provided by Signature Bank with regard to this Phase I Environmental Site Assessment.

ITEM	PROVIDED BY USER	NOT PROVIDED BY USER	DISCUSSED BELOW	DOES NOT APPLY

4.8 Reason for Performing Phase 1 ESA	X			
4.9 Prior Environmental Reports		X		

4.2 Title Records

Title record information associated with the Subject Property has not been provided to MEI by Signature Bank. Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3 Environmental Liens or Activity and Use Limitation

The property owner/user/key site personnel did not report any Environmental Liens or Activity/Use Limitations on the site. An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party does reveal the presence of an environmental related lien on the Subject Property, this information should be forwarded to MEI for review, and any significant findings will be added to this assessment as an addendum to this report.

4.4 Specialized Knowledge

Signature Bank provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. MEI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3 of this report.

4.5 Commonly Known or Reasonably Ascertainable Information

Signature Bank has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

4.6 Valuation Reduction for Environmental Issues

Signature Bank has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

4.7 Identification of Key Site Manager

Signature Bank provided contact information for the Subject Property owner, manager and/or occupants. The Contact person for site access was Mr. Paul Greenbaum.

4.8 Reason for Performing Phase I ESA Report

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-05) in connection with the Subject Property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E-1527-05 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

4.9 Prior Environmental Reports

No previous environmental reports were supplied with regard to the Subject Property.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Information from standard Federal and state environmental record sources was provided through Environmental Data Resources (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/-300 feet.

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the unmappables section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the Site.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the Site, was reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the Site from the listed facilities (see appendix 12.5 for Environmental Database Report).

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal CERCLIS Sites	0.5 mile	No	0
Federal CERCLIS NFRAP Sites	0.5 mile	No	1
Federal RCRA CORRACTS Sites	1.0 mile	No	1
Federal RCRA Generators Sites	Property & Adjoining	No	1
Federal RCRA Non-CORRACTS TSD Sites	0.5 mile	No	1
Federal Engineering / Institutional Control Sites	Property & Adjoining	No	0
Federal ERNS Sites	Subject Property	No	0
State and Tribal equivalent NPL Sites	1.0 mile	No	4
State and Tribal equivalent CERCLIS Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	27
State and Tribal Spills Sites	Subject Property	No	0
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	3
State and Tribal Registered Storage Tank Sites	Property & Adjoining	No	2
State and Tribal Engineering / Institutional Control Sites	Property & Adjoining	No	0
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	0
State and Tribal Brownfield Sites	0.5 mile	No	0

- ***Federal National Priority List (NPL) Sites***

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. The Subject Property is not listed as a Federal NPL site. No Federal NPL sites are located within a mile radius of the Subject Property.

- ***Federal Delisted National Priority List (NPL) Sites***

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Subject Property is not listed as a Federal Delisted NPL site. No Federal Delisted NPL sites are located within a mile radius of the Subject Property.

- ***Federal CERCLIS Sites***

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. The Subject Property is not listed as a Federal CERCLIS site. No Federal CERCLIS sites are listed within a half mile radius of the Subject Property.

- ***Federal CERCLIS NFRAP Sites***

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment. The Subject Property is not listed as a Federal CERCLIS-NFRAP site. One (1) Federal CERCLIS NFRAP site is listed within a half mile radius of the Subject Property. US Information Agency at 29th Street and 3rd Avenue is almost one-third mile west-southwest and downgradient of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Property and direction of groundwater flow.

- ***Federal RCRA CORRACTS Sites***

RCRA Corrective Action Tracking System (CORRACTS) is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies Transportation, Storage or Disposal (TSD), facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The Subject Property was not identified on the RCRA CORRACTS site list. The Subject Property was not identified on the RCRA CORRACTS site list. One (1) RCRA CORRACTS site is listed within a mile radius of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***Federal RCRA Hazardous Waste Generators Sites***

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). A RCRA-LQG is a facility that generates over 1,000 kilograms (Kg) of hazardous waste. A RCRA-SQG is a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month while a RCRA-CESQG generates less than 100 Kg of hazardous waste per month. The Subject Property is not listed as a Federal RCRA Hazardous Waste Generator site. The former Apple Auto Body at 737 4th Avenue is identified as a RCRA Non-Generator with no violations found. As such, this listing would not have an apparent adverse impact on the Subject Property.

- ***Federal RCRA non-CORRACTS TSD Sites***

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) sites are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD site. The Subject Property is not listed as a Federal RCRA non-CORRACTS TSD Site. One (1) Federal RCRA non-CORRACTS TSD site is listed within a half mile radius of the Subject Property. Debevoise Co. at 74 20th Street is approximately three-tenths mile north-northwest and downgradient of the Subject Property. This site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***Federal Engineering Control / Institutional Control Sites***

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a Federal Engineering Control or Institutional Control Site. No Federal Engineering Control or Institutional Control Sites are listed within a half mile radius of the Subject Property.

- ***Federal Emergency Response Notification System (ERNS) Sites***

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a Federal ERNS site.

- ***State and Tribal equivalent NPL Sites***

State and Tribal equivalent NPL databases were searched for sites located within 1.0 mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent NPL Site. Four (4) State and Tribal equivalent NPL sites are listed within a mile radius of the Subject Property. Each are located at least three-tenths mile cross-gradient or downgradient of the Subject Property, and as such, these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal equivalent CERCLIS Sites***

State and Tribal equivalent CERCLIS databases were searched for sites located within 0.5 mile of the Subject Property. The Subject Property is not listed as a State and Tribal equivalent CERCLIS Site. No State and Tribal equivalent CERCLIS sites are listed within a half mile radius of the Subject Property.

- ***State and Tribal Leaking Storage Tank Sites***

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property is not identified as a State and Tribal Leaking Storage Tank site.

There were twenty-seven (27) sites located within 0.5 mile of the Subject Property that were identified as State and Tribal Leaking Storage Tank Sites. Of the listed sites, 20 of the sites are located greater than 0.125 mile from the Subject Property and based on the distance from the Subject Property and the dense urban environment surrounding the Subject Property, these sites are considered unlikely to represent an existing release, past release or material threat of release of hazardous substances or petroleum products on the Subject Property.

Five of the seven remaining sites located within 0.125 mile of the Subject Property have been fully remediated and the spill files have been closed by the NYSDEC (and no further remedial action is warranted). Therefore, none of these sites would have an apparent adverse impact on the Subject Property based upon case status, the distance to the Subject Property, and direction of groundwater flow.

One of the closed incidents abuts the Subject Property to the south (NYSDEC Bureau of Spills at 737 4th Avenue). Regulatory database information indicates that a spill resulted from a tank overflow on May 26, 1994, with the spill subsequently closed that same day. Although no further information was provided regarding this former gasoline station (now a Dunkin Donuts / Baskin Robbins) evidence of a remediation system as well as monitoring wells were observed on this abutting property. Based on a presumed westerly direction of groundwater flow toward the Gowanus Bay, this former station would not have an apparent adverse impact on the Subject Property.

The remaining site (Private Home at 720 4th Avenue) is located approximately 300 feet north and downgradient of the Subject Property. Regulatory database information indicates that a suspect release was reported in July of 2007 following the failure of a tank tightness test. Although no further information was provided regarding any identified contamination, this site would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Spills Sites***

A review of the State and Tribal Spills database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property is not listed as a State and Tribal Spills site, with three adjoining Spills incidents. 4th Avenue / 24th Street at the intersection of 4th Avenue and 24th Street, is the intersection of the Subject Property. Regulatory database information indicates that a spill was reported in 1999 following a manhole cover “blowing” at the intersection. The FDNY responded and did not discover any elevated petroleum vapors. Based on a lack of vapors, the NYSDEC closed the case on February 13, 2003. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

Apartment at 725 4th Avenue is across 24th Street to the north of the Subject Property. Regulatory database information indicates that a spill was reported on December 2, 2005 following a tank overfill which resulted in a release of fuel oil onto the sidewalk. The spill was cleaned and the case subsequently closed on December 5, 2005. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

249 24th Street at 249 24th Street is across 24th Street to the north of the Subject Property. Regulatory database information indicates approximately 20 gallons of fuel oil was released during a tank fill that was contained on the sidewalk in front of this property. The spill was cleaned, with the case subsequently closed on June 7, 1995. Therefore, this incident would not have an apparent adverse impact on the Subject Property.

- ***State and Tribal Landfill Sites and Solid Waste Disposal Sites***

The State and Tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property is not listed as a State and Tribal landfill and solid waste disposal site. Three (3) State and Tribal landfill and solid waste disposal sites are listed within 0.5 mile of the Subject Property. Each are located at least 950 feet downgradient of the Subject Property, and as such, these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Registered Storage Tank Sites***

The Subject Property is not listed as a State and Tribal Registered Storage Tank site. The attached EDR database indicates that the Subject Property is identified as a registered AST facility under PBS Number 2-305057. However, the listing is for 7311 4th Avenue, not 731 4th Avenue, and as such, this listing is not associated with the Subject Property. The property to the south is identified as a State and Tribal Registered Storage Tank site due to the former presence of fourteen (14) 550-gallon USTs that were removed in 1999. In addition, the adjoining property to the north across 24th Street is identified as a State and Tribal Registered Storage Tank site due to the presence of an aboveground heating oil tank.

- ***State and Tribal Engineering Control / Institutional Control Sites***

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property is not listed as a State and Tribal Engineering Control or Institutional Control Sites. Four (4) State and Tribal Engineering Control or Institutional Control Sites are listed within 0.5 mile of the Subject Property. None are adjoining the Subject Property, and these sites would not have an apparent adverse impact on the Subject Property based upon the distance to the Subject Property and direction of groundwater flow.

- ***State and Tribal Voluntary Cleanup Sites***

The Subject Property is not listed as a State and Tribal Voluntary Cleanup site. No State and Tribal Voluntary Cleanup Sites are listed within 0.5 mile of the Subject Property.

- ***State and Tribal Brownfield Sites***

The Subject Property is not listed as a State and Tribal Brownfield site. No State and Tribal Brownfield sites are listed within 0.5 mile of the Subject Property.

5.2 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the New York City Building Department, the New York City Department of Finance and the New York City Fire Department. MEI did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property in the information provided by these agencies. Similarly, MEI did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property in the information provided by these agencies.

New York City Building Department

MEI reviewed information listed in the online NYC Building Information System (BIS) provided by the New York City Building Department's website, <http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp>. According to information viewed on the New York City Building Department's website, a variety of interior renovations, building improvements and system upgrades have occurred throughout its history, which is not uncommon for a property of this age and type. A review of the New York City Building Department property profile overview indicates construction of the front building began in 2012, with the rear building constructed in approximately 1960. A Certificate of Occupancy was issued in 1965 for a parking lot at the Subject Property.

New York City Department of Finance

MEI reviewed information provided by the New York City Department of Finance. Specific information provided by the New York City Department of Finance includes lot sizes and dimensions, building sizes, building zoning and use, and the approximate date of construction. The information provided by New York City Department of Finance did not identify any conditions or reported events that would indicate the presence of a recognized environmental condition in connection with the Subject Property.

New York City Fire Department

MEI reviewed information provided by the New York City Fire Department (NYCFD). Specific information obtained from the NYCFD includes any active storage tank permits for the Subject Property. A review of the NYCFD storage tank files did not indicate the presence of any registered storage tanks on the Subject Property.

5.3 Sanborn Fire Insurance Maps

Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix 12.6.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1888	No	Subject Property: The 1888 Sanborn Map shows the Subject Property as developed with a dwelling in the western portion of the site.
		Surrounding Area: The 1888 Sanborn Map shows the surrounding area as undeveloped with scattered dwellings. Stone cutters are present to the east.
1906	No	Subject Property: The 1906 Sanborn Map shows the presence of a commercial building that includes junk storage in the western portion of the lot with a dwelling in the eastern portion of the Subject Property.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1888 Sanborn Map.
1926	No	Subject Property: The 1926 Sanborn Map shows the Subject Property as a junk yard.
		Surrounding Area: The 1926 Sanborn Map shows a garage with gasoline tanks to the south, dwellings and shops to the east, and shops across 4 th Avenue to the west.
1951	No	Subject Property: The 1951 Sanborn Maps shows the existing commercial building in the eastern portion of the property (identified as a metal shop), with a dwelling in the western portion of the site.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1926 Sanborn Map.
1965	No	Subject Property: The 1965 Sanborn Map shows the existing commercial building at the Subject Property, with the dwelling no longer in place in the western portion of the site.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1951 Sanborn Map, with a filling station now identified to the south.
1979	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1965 Sanborn Map.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1965 Sanborn Map.
1988	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1979 Sanborn Map, with the commercial building identified as an auto repair shop.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1979 Sanborn Map.

5.5 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from www.historicaerials.com and other available resources. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table.

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1954	No	Subject Property: The 1954 photograph shows the presence of the existing building and parking lot on the Subject Property.
		Surrounding Area: The 1954 photograph shows the presence of apartment, commercial, and warehouse buildings to the east, west, north and south of the Subject Property.
1966	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1954 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1954 photograph.
1980	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1966 photograph.
		Surrounding Area: Conditions on the Subject Property appear to be similar to those depicted on the 1966 photograph, with what appears to be a gasoline station in place to the south.
1987	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1980 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1980 photograph.
2004	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 1980 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1980 photograph, with the existing Dunkin Donuts building in place to the south.
2006	No	Subject Property: Conditions on the Subject Property appear to be similar to those depicted on the 2004 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 2004 photograph.

5.5 City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by MEI and Environmental Data Resources (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix 12.6.

Year	Occupants
1935	No listing
1945	K&H Welding
1949	S&L Metal Products
1955	S&L Metal Products, Howard Malliband
1960	No listing
1973	Big Time Auto Body Shop
1976	Big Time Auto Body Shop
1980	Felix Used Car Sales
1985	Park Slope Auto Body, Glass Wide Auto
1992	TNT Collision
2000	M Almaca, Car Star Plus II
2005	Car Star Plus II
2012	Car Star Plus, Island Auto Club, 3M Accounting, Downtown Automotive Repair

6.0 PHYSICAL SETTING

6.1 Topography

The Subject Property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the Subject Property. The Subject Property is located at an elevation of approximately 34 feet above mean sea level (msl). The topography of the Subject Property is relatively flat and there were no slopes, depressions or rolling hills observed on the Subject Property and slopes on the Subject Property range from 0 to 3 percent. The Subject Property has been graded for commercial usage.

6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Near-surface geology in heavily developed areas such as the Subject Property and vicinity is considered "urban land" and is characterized by a non-homogeneous distribution of soil and fill types. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest surface water body is Gowanus Bay.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the west. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

7.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Michael Fiscina on March 21, 2013. Mr. Fiscina was accompanied by and interviewed the Property Manager.

7.1 Methodology and Limited Conditions

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. The building interiors of the new commercial spaces, partially demolished building, and first floor of the auto body shop were observed during the site inspection. There was no access to the second floor of the rear building or either roof.

7.2 Physical Observations

Underground Storage Tanks

MEI did not observe any fill port or vent pipes for any underground storage tanks on the Subject Property. A review of the New York City Fire Department (NYCFD), storage tank files and the New York State Department of Environmental Conservation (NYSDEC), Petroleum Bulk Storage Tank database did not indicate the presence of any registered underground storage tanks at the Subject Property. Available Sanborn Fire Insurance Maps did not indicate the presence of any underground storage tanks at the Subject Property.

Aboveground Storage Tanks

MEI did not observe any aboveground heating oil storage tanks inside the basement of the building.

Hazardous Substances and Petroleum Products

MEI did not observe any hazardous substances or petroleum products at the Subject Property.

Non-Hazardous Substances and Petroleum Products

MEI did not observe any non-hazardous substances or petroleum products at the Subject Property.

Unidentified Substances Containers

MEI did not observe any unidentified substances containers at the Subject Property.

Drains or Storm Water Drywells

MEI observed the presence of one (1) floor drain inside the building. MEI did not observe any signs of chemical staining in the vicinity of the floor drains. It was reported that these floor drains lead to the municipal sewer system. MEI did not observe any floor drains inside the other accessible areas of the building. MEI did not observe any storm water drywells at the Subject Property.

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979 before being banned by Congress. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. MEI did not observe any PCB-containing equipment at the Subject Property.

Stains or Corrosion

MEI did not observe any stains or corrosion at the Subject Property.

Odors

MEI did not observe any strong, pungent or noxious odors at the Subject Property.

Pools of Liquid

MEI did not observe any pools of liquid at the Subject Property.

Stressed Vegetation

MEI did not observe any stressed vegetation at the Subject Property.

Stained Soil or Pavement

MEI did not observe any stained soil or pavement at the Subject Property.

Wells

MEI did not observe any irrigation wells or groundwater monitoring wells at the Subject Property.

Sumps, Pits, Ponds or Lagoons

MEI did not observe any sumps, pits, ponds or lagoons at the Subject Property.

Waste Water

MEI did not observe any improper disposal of waste water into drains, ditches or streams at the Subject Property.

Solid Wastes Disposal

All solid wastes generated on-site are carted away by a licensed waste hauler to an approved solid waste facility and are not disposed at on-site.

8.0 INTERVIEWS

8.1 Interview With Property Owner and/or Property Manager

The property manager was interviewed during the site reconnaissance on March 21, 2013 and the property manager did not indicate the presence of any environmental liens or was unaware of any contamination concerns regarding the Subject Property.

9.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-05

9.1 Asbestos Containing Material (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable ACM are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the buildings would have been thoroughly surveyed and sampled. MEI did not observe any ACM in any accessible areas of the building. There were no signs of ACM spray-on fireproofing noticed inside the building.

9.2 Lead Based Paint (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

MEI observed that the painted surfaces inside the buildings were in good condition, free of obvious chipping, flaking or peeling. Given the commercial use of the Subject Property, there are no lead based paint violations on file with the New York City Department of Housing Preservation and Development's (NYCHPD), Code Enforcement Database.

9.3 Lead in Drinking Water

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, the USEPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing such as lead solder, brass, bronze, and other lead containing alloys. The USEPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L). Based on the date of construction, the presence of lead in drinking water is unlikely and not considered to be a potential non-scope business environmental risk issue. MEI did not observe any brass fixtures or lead fixtures at the Subject Property.

9.4 Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The USEPA has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in New York State. The U.S. Environmental Protection Agency's Map of Radon Zones identified the Subject Property as a radon zone Level 3. Level 3 signifies that the average predicted radon level indoors is less than 2 pico-Curies per liter and this is the lowest level in the state. This level compares favorably with the EPA action level of 4.0 pico-Curies per liter as the guideline (it should be noted that current radon information and EPA Action Levels are designated for residential spaces only. Commercial and industrial facilities are not subject to EPA's Action Level of 4 pico-Curies per liter as the guideline and definitive information concerning radon gas in an individual building can only be obtained through long term testing).

9.5 Mold

Molds are a class of fungi, and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

As part of this assessment, MEI performed a limited visual inspection for the conspicuous presence of mold. MEI observed the accessible interior areas of the Subject Property structure(s), including interior walls and ceilings of the building for the presence of conspicuous mold or observed water intrusion or accumulation. This evaluation did not include a review of pipe chases or areas behind enclosed walls and ceilings. MEI did not observe conspicuous visual or olfactory indications of the presence of mold, nor did MEI observe obvious indications of significant water damage inside the accessible areas of the building.

9.6 Wetlands

MEI reviewed available information regarding wetlands on the Subject Property, including National Wetlands Inventory online GIS mapping. MEI additionally made general site observations for readily observable potential wetland characteristics. MEI did not observe surface water bodies or any evidence of potential wetlands on or adjacent to the Subject Property.

10.0 FINDINGS, OPINIONS AND RECOMMENDATIONS

MEI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-05. This assessment has not identified evidence of recognized environmental conditions (RECs) in connection with the Subject Property.

The site reconnaissance, interviews and review of records have not found the presence or possible presence of hazardous substances or petroleum related products that could indicate an existing release, past release or significant threat of a release into structures on the property, into ground, groundwater or surface water.

No conditions outside of ASTM E 1527-05 were identified in connection with the Subject Property. It is the opinion of MEI that no further testing (subsurface or otherwise), is warranted on the Subject Property.

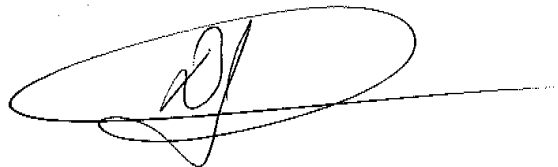

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of MEI to identify recognized environmental conditions using the scope and limitations of ASTM Standard E 1527-05.

CERTIFICATE OF OCCUPANCY

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

This certificate supersedes C. O. No.

THIS CERTIFIES that the ~~building~~ altered ~~building~~ premises located at

731 - 4th Avenue

Block 652 Lot 7

That the zoning lot and premises above referred to are situated, bounded and described as follows:

BEGINNING at a point on the southeast

~~corner~~

corner formed by the intersection of

running thence East 100 feet; thence South 50'2" feet;
 thence West 100 feet; thence North 50'2" feet;
 running thence feet; thence feet;

to the point or place of beginning, conforms substantially to the approved plans and specifications, and to the requirements of the Building Code, the Zoning Resolution and all other laws and ordinances, and of the rules of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646e of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

No. Alt. 2538-63

Construction classification—vacant land

Occupancy classification—Public Parking lot

Height — — — stories, — — — feet

Date of completion—const. 1-12-65

Located in M1 - 1 Zoning District

at time of issuance of permit. plans. 1-12-65

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals:
 and The City Planning Commission:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
SUSAN GUARINO 731 FOURTH AVENUE BROOKLYN, NY	LIENS	N/A
PARK SLOPE AUTO BODY 735 4TH AVENUE BROOKLYN, NY 11232	FINDS	N/A
7311 4TH AV 731 4TH AVE BKLYN, NY 11209	HIST AST	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 11/14/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 9 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2018 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 27 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 19 NY UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 84 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 08/21/2018 has revealed that there are 4 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
LOT 1,TAXBLOCK 643	691 4 AVENUE	NE 0 - 1/8 (0.111 mi.)	F89	206

LOT 70,TAXBLOCK 643	185 22 STREET	NE 0 - 1/8 (0.116 mi.)	K96	212
LOT 3,TAXBLOCK 643	687 4 AVENUE	NE 0 - 1/8 (0.120 mi.)	K99	214

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 10/01/2018 has revealed that there are 110 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within

EXECUTIVE SUMMARY

approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

BU-METROPOLITAN MGP	124-136 SECOND AVE	NNE 1/2 - 1 (0.764 mi.)	AP305	699

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 11/18/99 12:10 Spoke to Tasha at DEP She indicated that a sewer manhole blew at 10:57 11/18/99 12:15 Albert Gorden from DEP called. The FDNY responded and took readings. By the time the city got there, there were no more obvious vapors in the manhole and they weren't getting any hits on the LEL meter. They are attributing the incident to a one-time dumping and are inspecting area service stations. They do not feel it is associated with the DEC PIN job. 11/18/99 12:17 Attempted to call Kieth Williams (DEP who inspected site) on his cell phone 917-769-0859. 2/13/2003 - Austin, As per directive to closeout spills with no recent history, closed out."
Remarks: "caller reporting a high level of hydrocarbons in the above manhole which lead to manhole blowing caller was unsure who the responsible spiller was and states that dec maybe monitoring this location "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008
. Waste name: LEAD

Violation Status: No violations found

FINDS:

Registry ID: 110004505278

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Phone: (212) 810-0932
Spiller Extension: Not reported
DEC Region: 2
DER Facility ID: 494958
DEC Memo: "2/16/17 - Obligado - As part of an off-site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impacted area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/5/17 - Obligado - I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994. 5/19/17 - Obligado - Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank. 6/12/17 - Obligado - I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine. 8/21/17 - Obligado - I reviewed the UST Investigation Findings submitted by Gallinger Environmental on behalf of PSJC LLC. GEM installed three soil borings in the utility closet, using a jackhammer, shovel, and portable electroc hammer driven Geoprobe Soil sampler. The soil borings were targeted in the approximate location of the suspected former fuel oil access port observed in the 1993 photograph and immediately surrounding areas. Elevated field screening readings were detected in the soils collected from soil boring S2 starting at a depth of 7-9 feet below the surface. GEM found what appeared to be a UL listing tank tag and other debris (i.e. rags, paper and plastic) in the hand excavated soils at the location S3. The presence of these backfilled materials confirms past excavation work at this location that may be related to a previous tank removal. GEM concluded they did not encounter a UST beneath the site. Elevated field screenings and odors were observed at 7-9 ft, at a depth consisted with a tank grave for a small fuel oil UST. Evidence of possible former tank removal activities were observed. Based on the GEM report it appears the LUST at 207 25th St was

previously removed by others. 7/2/18 - Obligado - After Project Review conference call with RSE Randall Austin and Kevin Hale, Chief of Spill Response and Coordination Section in Central Office on 6/26/18, it was determined that former LUST at 207 25th Street is a more likely source for the oil observed in the 4th and 25th Street Site monitoring wells. As such PIN #07960 has been opened and O&M activities will continue under this PIN/Spill number. Call out number 134930 has been issued to EAR. "

Remarks: "Subsurface investigation identified soil and groundwater contamination."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 8/00 transferred from tomasello to tipple see also 9108033, 9313792, 9505109, 9705158, 9814652. MCT 2/19/2002 Tipple found this spill inadvertently closed out in this database today and immediately re-opened it. This is currently one of the region's most active remediations today. 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought. 09/02/2005 - Transferred to Mark Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 9/29/11 - Raphael Ketani. Case transferred from O'Connell to Ketani. 12/21/11 - Raphael Ketani. I reactivated the spill/PIN case. There are 5 other associated cases, but only #9108033 has any documentation. All of these cases have been closed and referred back to this one. There are 3 full file draws with documentation. However, very little of it has been e-doc'd. The case started when oil (diesel fuel) was found to be dripping onto the R Line subway platform under 4th Avenue and between 25th Street and 26th Street, Brooklyn. The oil had also drained from the platform and onto the tracks. The DEC was notified by the NYCTA about the spill. The FDNY responded and put down absorbent sand. The date of the spill is 7/19/93. However, it wasn't called in until 7/24/93. A fingerprint analysis indicated that the oil was a mix of weathered diesel and/or #2 oil between 10 and 15 years old. The pool of oil was initially estimated to be greater than 100,000 gals. and was mostly being held in place by the subway wall. However, subsequent DEC contractors have indicated that the oil pool is much smaller. The recovery system was extensively damaged during the construction of the Dunkin Donuts. Mobile Hi-Vacs were used to collect the oil. Bright red #2 oil was detected entering the pool of oil from upgradient. So it is believed that there is an ongoing source of unknown origin. Recent excavation beneath the surface of the site revealed that the soil is free of diesel with only minor gasoline contamination. The sources of the #2 oil may be a warehouse that is directly upgradient or other locations. A knee wall was installed on the subway platform to catch the seepage, but is sometimes overwhelmed during rain events. The source was eventually traced to the Eagle Service Station at 737 4th Avenue, Brooklyn, 11232. The site is owned by Ralph and Susan Guarino. Mr. Guarino bought the property during 1987. Though the new

tanks that were installed by Mr. Guarino were not believed to be the source. The source was believed to be the old diesel tanks that were in existence when MOBIL owned the site up until 1987. Initially, Mr. Guarino was cooperative with the DEC contractors regarding the spill investigation. According to an August 5, 2001 NY Daily News article, Ralph and Susan Guarino were determined to be the responsible parties. Mr. Guarino was an FBI informant. He twice turned off the recovery system, which resulted in diesel leaking onto the platform. He threatened to pour concrete down the monitoring wells and for 8 months prevented remediation staff from coming onto his property to do their work. Eventually in 1999, the Attorney General went to court to get an emergency injunction against Mr. Guarino to prevent him from interfering. In 1999, Mr. Guarino agreed to let the remediation staff onto his property. The gas station was demolished and the site is now a Dunkin Donuts. According to the September 26, 2001 Second Demand Letter, Susan Guarino (128 Maitland Avenue, Altamonte Springs, FL, 32701-4902) is being held liable by the AG's office for \$1,924,150.68. Though, \$2,121,183 had been spent on the project by the DEC up to 2002. One of the previous DEC case managers, Mark Tibbe, sent me an e-mail regarding the history of the spill case. He wrote that nothing significant happened between 2001 and 2011. The DEC contractors were monitoring and bailing wells because the recovery system wasn't working. It was too old to repair and replacing it was too expensive. The subway was being monitored to make sure that product wasn't showing up. In the early 2000s there wasn't much product, but it showed up again. It was believed that the former service station was the primary source and that there was a fresh source of #2 oil. Later, I found the latest site report. It was written by Environmental Assessment and Remediations. The report was dated August 18, 2006 and covered the period from January 2006 to June 2006. Groundwater was generally found at 22 feet below grade. It was believed that the subway tunnel was affecting groundwater flow. The groundwater was moving through a layer of glacial till and outwash sediments. The outwash sediments contained sand and gravel. Discontinuous thin clay lenses were also present. During 2001, several wells showed increasing amounts of product. On 4/24/01, red oil appeared in well MW10A. Wells MW82, MW90, MW32B, and MW13A also had red oil at this time. At this time, MW9 showed signs of dark oil with sludge. There were several oil tanks in the neighborhood. The tank at 220 25th Street was a 2,500 gal. #2 oil UST. The system was tested and found to be sound. The property at 225 25th Street had a 10,000 gal. #6 oil AST. One private building at 228 25th Street had a 275 gal. oil tank, but nothing else was known. There was a 1,000 gal. UST at 217 25th Street, directly upgradient from the site, but it was never investigated. From 2002 and 2004, EAR continued to maintain the remediation system. In 2004, EAR received permission from the DEC to abandon 17 wells that weren't providing useful data. The wells were abandoned from April to June of 2004. Throughout 2005, EAR continued to maintain the remediation system. During August 2005, renovations were made to the subway oil containment system. Weekly visits were made and spent absorbent was removed and replaced. The wells continued to be monitored on a weekly basis. On April 20, 2006, the recovery system was shut down to see how much product would appear. The recovery system remained off during the reporting period. Wells MW9, MW10, MW13, MW13A, MW23, MW23A, MW31, MW32B and MW82 showed a rebound of product. From January to April, a total of 26.99 gals. of liquids were recovered from all of the wells during. thickness on 6/22/06 was much less than 1 foot in the wells that were exhibiting oil. 12/22/11 - Raphael Ketani. Today I spoke to Dave Lorthioir of EnviroTrac (631) 924-3001, the DEC's consultant, regarding the project. He said that they have been monitoring and bailing wells on a weekly basis. However, they only deal with the wells in and immediately around the site. The water table is high right now and they haven't seen any product. However, in the spring of 2011, there had been a good amount of product. Before EnviroTrac took over the project a few years ago, they spoke to the previous DEC consultants. These consultants told them that there hadn't been any oil in the subway for some time. Mr. Lorthioir said that EnviroTrac hadn't seen oil in the subway, either. A report will be sent to the DEC soon. Later, Mr. Lorthioir sent me the 2011 groundwater monitoring data tables. Very few of the wells had shows of oil. Wells MW-8, MW-8A, MW-9 and MW-31 all had periods of from 2 to 7 consecutive months during which there were weekly shows of oil during 2011. A small number of other wells had sporadic shows of oil consisting of about several weeks during which oil was seen, but the weeks were not consecutive. Wells MW-8, MW-8A, MW-9 and MW-31 are all in the southern corner of the Dunkin Donuts property. MW-9 is directly over a rectangular figure in the well location diagram. Wells MW-40 and MW-41 were abandoned earlier. According to the case notes, seventeen wells were abandoned some time ago. Mr. Lorthioir also included a DRAFT 10/29/10 Status Report for the site. The report covered the years 2009 to 2010. I reviewed the report. The data inside indicated that the same wells that had oil in 2011 had oil during 2009 and 2010. There were also some other wells that had oil shows in and around the Dunkin Donuts store. 1/4/12 - Raphael Ketani. I received CAP 31 for EnviroTrac. The bill is DC2023.01-32 for the period 10/31/11 to 11/27/11. The date of the invoice is 12/13/11. The work consisted of project management, project coordination, generate internal work order, revise internal work order, prepare for monitoring event, travel to and from site, calls to technician at site, gauge 36 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 1/30/12 - Raphael Ketani. I received CAP 32 for EnviroTrac. The bill is DC2023.01-33 for the period 11/28/11 to 1/1/12. The date of the invoice is 1/16/12. The work consisted of project management, review data from last monitoring event, generate internal work order, revise internal work order, prepare for monitoring event, project management communication with DEC, calls to technician at site, decontaminate equipment, gauge 34 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, travel to and from site, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 2/21/12 - Raphael Ketani. I received CAP 33 for EnviroTrac. The bill is DC2023.01-34 for the period 1/2/11 to 1/29/12. The date of the invoice is 2/13/12. The work consisted of project management and coordination, prepare internal work order, do budget projections, project management communication with DEC, travel to and from site, calls to technician at site, well gauging and product recovery, tabulate gauging data from December 30, 2011 field activities, review and tabulate gauging and product recovery data from field activities during January 12, 2012, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I

found the pay package to be acceptable and notified Steve Karwiel by e-mail. 4/10/12 - Raphael Ketani. I received CAP 35 for EnviroTrac. The bill is DC2023.01-35 for the period 2/1/12 to 2/26/12. The date of the invoice is 3/15/12. The work consisted of project coordination. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/26/12 - Raphael Ketani. I received a request to abandon 16 wells at the site. I asked Mr. Lorthioir where the oil had appeared and what it had looked like. He said that it was NOT red oil, but looked weathered. He added that the oil sometimes appears in well MW-46, in the alleyway behind 753 4th Avenue. This is across the street and to the south (side gradient) of the site. Mr. Lorthioir said that it is hard to get to this well as the alleyway is usually locked and so he hadn't been back in a long time. Getting in involves getting ahold of the owner, which is difficult. One time he went through the back of a store in order to get to the well. 8/8/12 - Raphael Ketani. I sent an e-mail to Sandy Camacho of the NYFD requesting his help in finding any oil tanks at 751, 753 and 755 4th Avenue, and at 204, 214-216 and 220 25th Street. 10/1/12 - Raphael Ketani. I received CAP 41 for EnviroTrac. The bill is DC2023.01-36 for the period 7/30/12 to 8/26/12. The date of the invoice is 9/13/12. The work consisted of project management, produce work order, create monitoring schedule, review results of site inspection, obtain DOT permits for well abandonment, gauge wells, replace socks, product recovery, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/25/12 - Raphael Ketani. I received CAP 42 for EnviroTrac. The bill is DC2023.01-37 for the period 8/27/12 to 9/30/12. The date of the invoice is 10/12/12. The work consisted of project management, calls to technician in the field, produce work order, review results of site inspection, compile and review data, gauge 37 wells, 1 well product recovery, hand bail wells as required, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 11/29/12 - Raphael Ketani. I received CAP 43 for EnviroTrac. The bill is DC2023.01-38 for the period 10/1/12 to 10/28/12. The date of the invoice is 11/15/12. The work consisted of project management, prepare work order, obtain NYC DOT permits, prepare for well abandonment, travel to and from site, well gauging, product recovery, review and tabulate gauging and product recovery data, review latest monitoring data, abandon 11 wells, sidewalk restoration, calls to crew at site, use of light and heavy duty vehicles, low value equipment, sonic interface probe, generator, jack hammer, concrete cutter, concrete mixer and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/24/12 - Raphael Ketani. I received CAP 44 for EnviroTrac. The bill is DC2023.01-39 for the period 10/29/12 to 11/25/12. The date of the invoice is 12/11/12. The work consisted of project management, project coordination, tabulation of gauging data, review latest data from monitoring event, travel to and from site, well gauging, product recovery, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 1/22/13 - Raphael Ketani. I received CAP 45 for EnviroTrac. The bill is DC2023.01-40 for the period 11/26/12 to 12/30/12. The date of the invoice is 1/14/13. The work consisted of project management, project

coordination for upcoming activities, work order, generate internal work order, call to technician in the field, tabulation of gauging and product recovery data, review latest data from monitoring event, generate internal report, travel to and from site, gauging of 36 wells, product recovery from 3 wells, replaced 7 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and subcontractors and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 2/27/13 - Raphael Ketani. I received CAP 46 for EnviroTrac. The bill is DC2023.01-41 for the period 12/31/12 to 1/31/13. The date of the invoice is 2/11/13. The work consisted of project management, call to technician in the field, well gauging and product recovery, tabulation of gauging and product recovery data, review latest data and data from last 3 monitoring events, generate internal work order, travel to and from site, gauging of 34 wells, product recovery from 2 wells, replaced 6 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 3/22/13 - Raphael Ketani. I received CAP 47 for EnviroTrac. The bill is DC2023.01-42 for the period 2/1/13 to 2/24/13. The date of the invoice is 3/13/13. The work consisted of project management, prepare internal work order, calls to technician in the field, well gauging and product recovery, calls regarding full drums, calculate product thickness for wells during 2011 and 2012, review and tabulate gauging and product recovery data, review 2011 and 2012 data, edit and prepare site map, generate internal work order, load vehicle, travel to and from site, gauging of 37 wells, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/1/13 - Raphael Ketani. I received CAP 48 for EnviroTrac. The bill is DC2023.01-43 for the period 2/25/13 to 3/31/13. The date of the invoice is 4/15/13. The work consisted of project management, generate internal work order, well gauging, bailing wells, install socks, calls to technician in the field, review and tabulate gauging and product recovery data, respond to emergency call - leaking drum enclosure, calls for removal of drums, load vehicle, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/23/13 - Raphael Ketani. I received CAP 49 for EnviroTrac. The bill is DC2023.01-44 for the period 4/1/13 to 4/28/13. The date of the invoice is 5/14/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from 3 wells, calls to technician in the field, calls to manager of Dunkin Donuts regarding possible garbage issue at the site, calls regarding drum removal, review and tabulate gauging and product recovery data, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 6/27/13 - Raphael Ketani. I received CAP 50 for EnviroTrac. The bill is DC2023.01-45 for the period 4/29/13 to 5/26/13. The date of the invoice is 5/26/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, calls to technician in the field, call to Dunkin Donuts tenant, review and tabulate gauging and product recovery data, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, use of AARCO

Environmental subcontractor for product collection services, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/29/13 - Raphael Ketani. I received CAP 51 for EnviroTrac. The bill is DC2023.01-46 for the period 5/27/13 to 6/30/13. The date of the invoice is 7/15/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, PID meter, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 8/29/13 - Raphael Ketani. I received CAP 52 for EnviroTrac. The bill is DC2023.01-47 for the period 7/1/13 to 7/28/13. The date of the invoice is 8/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/2/13 - Raphael Ketani. I received CAP 53 for EnviroTrac. The bill is DC2023.01-48 for the period 7/29/13 to 8/25/13. The date of the invoice is 9/13/13. The work consisted of project management, generate internal work order, gauged 39 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/28/13 - Raphael Ketani. I received CAP 54 for EnviroTrac. The bill is DC2023.01-49 for the period 8/26/13 to 9/29/13. The date of the invoice is 10/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from 3 wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/4/13 - Raphael Ketani. I received CAP 55 for EnviroTrac. The bill is DC2023.01-50 for the period 9/30/13 to 10/27/13. The date of the invoice is 11/12/13. The work consisted of project management, generate internal work order, gauged 34 wells, bailed product from 1 well, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/19/13 - Raphael Ketani. Mr. Lorthioir sent me two pictures of the cover for well MW-87. The cover had been damaged during the snow plowing of the Dunkin Donuts property. He wrote that he would like to fill in the void below ground which used to house equipment for the recovery system and then replace the large well cover with a small round one. I responded back that he should do this. 1/6/14 - Raphael Ketani. I received CAP 56 for EnviroTrac. The bill is DC2023.01-51 for the period 10/28/13 to 11/24/13. The date of the invoice is 12/13/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, use of light duty vehicle, low value equipment, sonic interface probe,

U001839490

and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 1/17/14 - Raphael Ketani. Donna Amoscato of EnviroTrac sent an e-mail with pictures describing and showing a leaking drum. Speedi Dri was applied to the liquid (combination of water and product) which leaked in the drum storage area and which had spread to the sidewalk outside. Ms. Amoscato wrote that the spill was contained. Two pictures show Speedi Dri on the ground. The drum had leaked because it had become frozen. In the future, Ms. Amoscato wrote, the drums will be removed during the winter months. Some of the liquid had entered a vault nearby. I sent an e-mail to Ms. Amoscato stating that the vault had to be opened if it is not a Con Ed vault and cleaned out. If it is a Con Ed vault, then Con Ed must be notified about the incident. 2/4/14 - Raphael Ketani. I received CAP 57 for EnviroTrac. The bill is DC2023.01-52 for the period 11/25/13 to 12/29/13. The date of the invoice is 1/15/14. The work consisted of project management, generate internal work order for monitoring event, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, arrangements for repair of well cover, installed new well pad, cleaned up containment area, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 2/11/14 - Raphael Ketani. I reviewed the EnviroTrac Project Status Report dated 2/10/14 for the year 2013. During 2013, the product impacts to the wells were as follows: MW-8A - product during all but 3 weekly visits; product thickness from 0.02' to 1.31'; MOST IMPACTED well of the monitoring array MW-8 - product during all but 11 weekly visits; product thickness 0.01' to 0.41' MW-9 - product during 9 visits; 0.01' to 0.07' MW-10A - product during 11 visits; 0.01' to 0.07' MW-31 - product during 11 visits; 0.01' to 0.65' MW-6A - product during 6 visits; 0.01' to 0.47' MW-46 - product during 2 visits (due to locked gate); 0.08' to 0.09' MW-82 - product during 1 visit; 0.02' The other 29 wells never had product and MW-15 was always dry during the year. During 2013, gauging took place at 37 select wells. Wells MW-8A, MW-8 and MW-9 are located a little east of 4th Avenue and along the northern sidewalk for 25th Street. They are the main area for the occurrence of product. EnviroTrac recommends a trial period for EFRing wells MW-8A, MW-8 and MW-9. There would be EFR events every other week for 2 months (a total of 4 events). Then the wells would be gauged for the following 2 months and the data would be evaluated to see whether EFRing is effective in removing the product. Weekly gauging and product removal would continue for the other select wells. 3/4/14 - Raphael Ketani. I received CAP 58 for EnviroTrac. The bill is DC2023.01-53 for the period 12/30/13 to 1/31/14. The date of the invoice is 2/11/14. The work consisted of project management, project coordination, generate internal work order, gauged 33 wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, update CADD figures, draft 2013 summary letter, draft portions of 2013 Annual Report, travel to and from site, calls to field staff at site, call to landlord, e-mail to DEC and upload pictures, cleaned up containment area, use of light duty vehicle, use of heavy duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 3/26/14 - Raphael

Ketani. I received CAP 59 for EnviroTrac. The bill is DC2023.01-54 for the period 2/1/14 to 2/28/14. The date of the invoice is 3/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, complete 2013 Annual Report and submit for internal review, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/5/14 - Raphael Ketani. I received CAP 60 for EnviroTrac. The bill is DC2023.01-55 for the period 3/1/14 to 3/31/14. The date of the invoice is 4/17/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/21/14 - Raphael Ketani. I received an e-mail from Mr. Lorthioir regarding the sudden increase in the thickness of product in well MW-31. Mr. Lorthioir wrote: The attached scan has three items. The first is a hydrograph showing product thickness in well MW-31 for 2013, the second for 2014 (to date). The last is a site plan showing the location of MW-31 and general groundwater flow direction. There was not much product observed in MW-31 in 2013. Only intermittently at the beginning of the year and a small amount (0.2 feet) in October. Since the beginning of 2014, however, and has twice been observed to be 10 inches or thicker. This re-appearance of product in MW-31 is what lead EnviroTrac to request the performance of EFR at the site. It is too early to tell if the EFR events have had the desired effect. If you look at the site plan, you can see that MW-31 is located in a slightly upgradient part of the site. The other wells which have been exhibiting product are MW-8, MW-8A and MW-9. These wells are all located in the sidewalk along 25th Street. These wells, especially MW-8 and MW-8A, have been exhibiting varying amounts of product for the last several years. Wells MW-8, 8A and 9 were located near the former tank locations and, given this, I can understand why they might still exhibit product. But MW-31 is farther away from the former tanks and there was no product observed for quite a while. I know a rising and falling groundwater table can cause the re-appearance of free product, but to go from no product to over 10 inches is, in my opinion, fairly extreme. Also of note, the change in water table elevation has not caused the re-appearance of free product in any of the wells near MW-31. Some of these wells are less than 10 feet away and they should, in my opinion, also be exhibiting free product. My concern is that there could be another site impacting upon the Dunkin Donuts property. I am proposing that we collect product samples from MW-31 and MW-8 and have them analyzed for composition and age. We have been monitoring the upgradient wells on the street (MW-10, 10A and 11), and no product has been observed in them. The possibility exists, however, that petroleum is entering the site from underneath the building adjacent to the site, where there are no upgradient wells. 5/23/14 - Raphael Ketani. Mr. Lorthioir sent me an e-mail today. He stated that well VEFRing is

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

PACIFIC BRANCH (Continued)

U001839490

taking place today. He remarked that well MW-31 had been free of product most of the year. So, it was surprising that 10 inches of product should suddenly appear. However, MW-8 (next to the subject well) has also often had some product. So Mr. Lorthioir does not believe this is a dumping incident. He added that his staff will knock on doors in order to find out whether someone has a fuel system problem nearby. 6/5/14 - Raphael Ketani. I received CAP 61 for EnviroTrac. The bill is DC2023.01-56 for the period 4/1/14 to 4/27/14. The date of the invoice is 5/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, VEFR product from wells, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 6/10/14 - Raphael Ketani. Mr. Lorthioir called again (631) 924-3001. He said that they checked the wells last week that had shown the presence of product and found thick product again in some of the wells. The product was bailed. Mr. Lorthioir commented that he wanted to do two things to help resolve the sudden appearance of the product. One is to contact Mr. Comacho from the NYFD and find out whether the commercial facilities next door have or had fuel oil tanks. The other is to do Kryzinski tests on the wells with product in order to find out how thick the product may be outside the well bores. This test involves bailing out the product from a well and then measuring it every 30 seconds or so to see how fast it comes back. The results are put into a formula and the outside the well thickness measurement is generated. I told Mr. Lorthioir to go ahead with both tasks. Later, Mr. Lorthioir sent me an e-mail as a carbon copy. The e-mail was addressed to Mr. Camacho of the NYFD and asked for his assistance in locating any fuel oil tanks that may be in buildings next to the site. 6/12/14 - Raphael Ketani. Mr. Camacho responded to Mr. Lorthioir by e-mail with a list of other places that have tanks near the site. Later, Mr. Lorthioir sent me an e-mail with an attached map highlighting the addresses that Mr. Camacho had included in his list. The highlighted map showed a location at 209 25th Street which was only two properties upgradient from the site. Mr. Lorthioir stated that he thought this property may be the source of the newly appeared product in well MW-31 and the others. 6/13/14 - Raphael Ketani. I researched the following properties that are on 25th Street via the Spills database in order to see whether they had or do have spills: 207; 209; 217; 220; and 225. None of these properties appeared in the Spills database. So, all I could assume was that they never had a spill or that they had a spill, but it was unknown to the DEC. Next, I checked the PBS database. The location of 207 25th Street was not listed. As it was not listed on Mr. Camacho's list as ever having had a tank, I assumed that there was little likelihood of a spill coming from this location. I found that the tanks for the locations 220 and 225 25th Street were both registered in the PBS database. However, the tanks at the locations 209 and 217 25th Street had never been registered. I sent an e-mail to Mr. Lorthioir stating that the DEC will knock on doors and see what we can find out about the tank systems at the unregistered properties. Presently, 209 and 217 25th Street are in violation of the PBS regulations. I let Leszek Zielinski, EE II and

U001839490

head of the PBS Unit, know about the unregistered tanks. He said that he will send someone out to inspect the properties in the very near future. 6/19/14 - Raphael Ketani. I spoke with Mr. Zielinski today. He stated that yesterday he had inspected the four facilities in question at 209, 217, 220 and 225 25th Street. He reported that the 220 and 225 25th Street facilities looked fine. Though, the 225 25th Street site may have more USTs than are listed on their PBS registration. So, he will have the owner come in for a meeting to settle this potential PBS violation. However, he told me that the 209 and 217 25th Street facilities have just a complete concrete floor. Mr. Zielinski did not see any remote fill ports, nor any piping that would lead him to believe that USTs were present. The owners stated that they never knew of any USTs below their buildings (though the NYFD records show that tanks were present at least at some time). The DEC doesn't have any spill or PBS violations pertaining to the 209 and 217 locations. So, there doesn't appear to be any leverage that the DEC can use to get the owners to do GPR or electromagnetic surveys in order to possibly find any tanks. I sent an e-mail to Mr. Lorthioir with this information and told him to just continue to collect the product that appears. 7/1/14 - Raphael Ketani. Today I received a non-hazardous waste manifest for the disposal of oil contaminated debris at Republic Environmental Systems in Hatfield, Pennsylvania. The representative from the receiving facility signed the document on 6/10/14. 7/3/14 - Raphael Ketani. I received CAP 62 for EnviroTrac. The bill is DC2023.01-57 for the period 4/28/14 to 5/25/14. The date of the invoice is 6/11/14. The work consisted of project management, project coordination, generate internal work order, load vehicle, mobilization to site, gauged wells, VEFR product from wells, review and tabulate gauging, product recovery and EFR data, create data tables and enter data into them, create 2013 and 2014 hydrographs for select wells and complete hydrographs, travel to and from site, calls to field staff at site, call to lab regarding doing age dating, e-mail to DEC regarding proposed work, review old reports from DEC regarding product history, review proposal of Triassic Labs regarding age dating oil, e-mail to DEC regarding doing age dating of newly appeared product, generate internal work order and e-mail to DEC, coordinate drum pickup for full absorbent drums, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/15/14 - Austin - This PIN project is being transferred from Ketani to Vought, for project consolidation and review purposes - end 8/5/14-Vought-Contract Payment Package (EnviroTrac)-(6/18/14 thru 6/29/14. Work performed included working on baildown test graphics/data entry and report writing, well monitoring and bailing, sock replacement, review and tabulation of gauging and EFR data, project coordination. 8/12/14-Vought-Called and spoke to NYSOAG Karpen and noted that DEC was performing full file review. NYSOAG noted a prior meeting with DEC where there was discussion of possible sources in addition to the Guarino site and the need for investigation of those possible additional sources. NYSOAG noted that Guarino still may be responsible for current onsite contamination if DEC still remediating that same contamination and as such no ISR was needed until additional responsible parties (if any) were found. 9/17/14-Vought-Contractor Application for Payment (EnviroTrac)-(6/30/14 thru 7/27/14). Gauged wells and bailed product,

replaced absorbent socks, review and tabulation of gauging data, project coordination. 10/6/14-Vought-Contractor Application For Payment(EnviroTrac)- (7/28/14 thru 8/31/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, File review by EnviroTrac at DEC offices from 8/11 thru 8/15, assembly of older data for submission to DEC, review of timeline generated by DEC, project management. 11/18/14-Vought-Contractor Application For Payment(EnviroTrac)- (9/1/14 thru 9/28/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, project management. 12/9/14-Vought-Contractor Application For Payment(EnviroTrac)- (9/29/14 thru 10/26/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data. 12/9/14-Vought-Contractor Application For Payment(EnviroTrac)- (10/27/14 thru 11/30/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, removing broken sock and other debris from MW8 1/26/15-Vought-Contractor Application For Payment(EnviroTrac)- (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination. 3/10/15-Vought-Contractor Application For Payment(EnviroTrac)- (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination. 4/7/15-Vought-Contractor Application For Payment(EnviroTrac)- (2/1/14 thru 2/28/15). Work performed included: Site travel, monitoring and bailing of wells, replaced socks, review and tabulation of product recovery data, project coordination. 4/30/15-Vought-Contractor Application For Payment(EnviroTrac)- (2/1/14 thru 2/28/15). Work performed included: Site travel, Replacing vault cover with manhole cover and cleaning enclosure area, filled vault with concrete, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination. 5/28/15-Vought-Contractor Application For Payment(EnviroTrac)- (3/30/14 thru 4/26/15). Work performed included: Site travel, monitoring and bailing of wells, changing absorbent socks, project management and coordination. 6/19/15 - Obligado - Spill reassigned from Vought to Obligado. 7/7/15-Vought-Contractor Application for Payment(EnviroTrac)- (4/27/15 thru 5/31/15). Work performed included: Site travel, monitoring and bailing of wells, bailed and drummed product , changing absorbent socks, project management and coordination. 8/5/15 - Obligado - Sent payment approval for CAP #75 for weekly monitoring and bailing of wells. 8/12/15 - Obligado - I spoke to Dave Lorthior and requested gauging and product bailing be reduced to biweekly, due to minimal product recovery. 9/15/15 - Obligado - I sent an email to David Lorthior requesting that based on minimal product thickness less than 0.03 ft, monitoring be reduced to monthly. 11/17/15 - Obligado - Email from David Lorthior on 11/16/15. Almost one foot of product found in MW31. Picture included. I called David and asked him to collect a product sample for forensics during the next visit. 11/20/15 - Obligado - Email to Lorthior approving the workplan for repair of 4 damaged on-site well vaults. Corroded 2x2 Steel Vault covers to be removed. The vaults are to be filled with cement and a circular 10 Inch manhole to be installed around the well. 12/10/15 -

U001839490

Obligado - I inspected a potential source UST site at 276-280 24th Street. This site had a prior TTF failure, closed spill #0210214. According to the spill file, a 10k #2 fuel oil UST (empty since at least 1999) was abandoned in place in 2003. 3 soil samples were collected and below standards and the spill closed in 2006. The tank was never registered. I met Simon Liu, who is the current property owner. He runs a art supply warehouse/woodworking shop at the location. He recently purchased the property in 2013 and had no knowledge of any tanks at his property. Mr. Liu allowed me to inspect the basement, where I was able to discover an approx. 3 x 3 steel covered vault in the floor located towards the back of the basement of 276 24th St. MR. Liu had his workers open it for me with a crow bar. This vault was partially filled with concrete but contained piping which appeared to be remnants of a top of UST piping system. An apparent fill pipe was observed approximately 3 ft away from the sump. The fill pipe likely ran vertically to the ceiling than across the ceiling along the dividing/foundation wall between 276 and 280 24th St building parcels to the fill in the building wall. I informed Mr. Liu that the DEC would like to perform a geoprobe investigation in his basement around the suspect tank area. He had no objection and said the DEC could do whatever investigation we need to do. He signed a DEC access agreement form. 1/29/16 - Obligado - Conducted geoprobe investigation at 276-280 24th Street in vicinity of the 3 x 3 manhole. Prior to geoprobe a geophysical was done. Pipe runs which appeared to be related to fill piping were identified, however, no signal of the former tank was apparent in the basement. I inspected the vault and cleared out some of the debris in the vault and was able to more clearly see the piping components for the former tanks system. There were 2 transfer pumps inside the vault, which indicates that this 10k tank likely pumped product into 2 smaller tanks at some other location. No other tanks were identified on the premises. 4 geoprobe borings were conducted in the general area around the identified structures over the course of 2 days, however, no evidence of petroleum impact was encountered in the subsurface. All soils were free of any odors, staining, or PID readings. Due to the limited power of the small geoprobe rig we were using in the basement, all borings met with refusal due to very tight soils at approximately 10 ft bgs. However, absence of any apparent petroleum impacts in the shallow soil in this area of the basement suggest no spill occurred at this location. 4/25/16 - Obligado - I was provided with the Product Recovery and Gauging Results by EnviroTrack. 1/29 through 3/18/16 - Max LNAPL thickness MW8 - 0.14 ft (bailed 1.5 gallons LNAPL, replaced sock) MW8A - 0.32 ft (Bailed 1 gallon, replaced sock) MW9 - 0.02 ft (Bailed 1 gallon, replaced sock) MW31 - 0.14 ft (Bailed 1.5 gallons) 6/17/16- Obligado - I was provided with an updated Product Recovery and Gauging Results table by Envirotrac: April to May 2016 maximum LNAPL thickness MW8 - 0.10 ft MW8A - 0.74 ft MW9 - 0.05 ft MW31 - ND 6/24/16 - Obligado - I re-reviewed the file to identify other potential sources. According to the file, 207 25th Street also had a 550 gal UST which failed a tank tightness test on 9-10-93. I looked further into this issue and found the actual tank tightness test report by Tanknology which was included in the April 11, 1994 Unico Subsurface Investigation Report. According to the test report, both bubble ingress and ullage ingress were detected. Bubble ingress indicates there was a leak below the tank product level and is indicative of a leaking tank. I tried to find additional information regarding investigation into this tank failure and

EPA ID Number

PACIFIC BRANCH (Continued)

U001839490

identified a letter from State Environmental Services dated February 5, 1994 stating On February 5, 1994 State Environmental Services, Inc. permanently closed (1) 1000 gallon fuel oil storage tank. All work was done in accordance with DEC Regulations . No supporting documentation was included with the letter. It is not clear why this TTF was not investigated further. The file contained a correspondence between Unico and the DEC Project Manager proposing 3 monitoring wells around the suspect UST. No follow up to this correspondence could be found in the file. I also found photos of the 207 25th Street property taken on August 30, 1993 which show the location of the tank and 2 remote fills and 1 vent port. Red #2 heating oil spillage from overfills can be seen around and below the fill port on the wall and sidewalk. I searched the file for additional references to the 207 25th Street site and I found a Status Report dated May 1996-May 1997 prepared by F&N which documented an inspection performed by F&N personnel of up-gradient properties in search of potential sources. According to that report, 207 25th Street contained no UST on the property . I found another reference to 207 25th in a F&N Status Report dated December 28, 1999 which stated An inspection performed on February 28, 1997 identified that the properties located at 205, 207, and 215 25th Street did not contain fuel oil tanks and are therefore also not contributors to the contamination . These reports are clearly incorrect based on the photo documentation of the UST system in the file. The presence of this historic failed tank on the property and absence of any tank closure assessment warrants further investigation. I sent a letter to the current property owner requiring a GPR survey to identify the tank location and a subsurface investigation consisting of a minimum of 4 soil borings around the abandoned tank. A work plan is due to the Department within 30 days. Letter sent to the property owner listed on Acris: PSJC LLC, 207 25th Street, Brooklyn, NY via Certified Mail Receipt #7001 0320 0003 7416 8275. 6/27/16 - Obligado - Per USPS website, the item was delivered to an individual at the address at 12:40 pm on June 27, 2016 in BROOKLYN, NY 11232. 6/28/16 - Obligado - I received a phone call from Sandi Fung of PSJC who is the property owner of 207 25th Street, Brooklyn, NY in response to my letter. She said they purchased the property in 2008 and they had a phase 1 and phase II reports. She said she was unaware of any tanks. She said she will send me the reports tomorrow. She inquired about the 30 day deadline. I told her I would review the reports and let her know if any thing else needed to be done. 6/29/16 - Obligado - I received an email from Sandi Fung. She will send me the Phase 1. She doesn't have a Phase II and she doesn't know if one was prepared. I received Product Gauging Results from Envirotrac for June 2016 June 2016 LNAPL thickness MW8 - 0.02 ft MW8A - 0.03 ft 7/1/16- Obligado - I reviewed the invoice for the May gauging and bailing event provided by Envirotrac and found billing errors, which I relayed to Steve Karwiel. They billed us for a Hydrogeologist when the work was performed by a tech. Steve will make the adjustment on the payment. 7/13/16 - Obligado - I met Sandi Fung on the site. She provided me with access to the building. While the locations of the former fill ports were still apparent in the building exterior wall, no evidence of a UST could be seen inside the building. I provided her with the pictures of the tank and the failed tank tightness result from 1993. She said she had no knowledge of any tank when she purchased the property and the Phase 1 report did not identify any potential tanks or any need to do further investigation. We agree that she would

PACIFIC BRANCH (Continued)

U001839490

provide access for the DEC to do a subsurface investigation around the former tank. 7/18/16 - Obligado - I met Dave Lorthior at the site to discuss the planned investigation. 4 soil borings will be installed around the 550 UST area. 2 in the driveway, 1 in the sidewalk, and 1 downgradient on the D&D property. I provided Sandi with an access agreement. 7/25/16 - Obligado - I received the signed access agreement with Sandi. 7/26/16 - Obligado - Conference call with John Urda and Guarino's attorney Mr. Peterson. We requested access to put a well on the Guarino Property. Peterson said he saw no issues and would advise his client to sign and return the agreement. We discussed the status of the remediation and investigation. I told him there was residual free phase product in several wells in the southeast portion of the site which the DEC is removing via manual bailing once per month. He asked how long it would take to remove all the product, and I told him it would be impossible to know. He asked if it was ok if his client removed the former system enclosure. I told him the remedial system has been removed so there is no reason why they couldn't removed the fencing and the shed. I told him we just need a place to store one or two drums on the D&D property, which he said should not be a problem. I made another site visit with Dave Lorthior and his markout sub contractor for the geophysical survey. According to the tech, it was not possible to survey the suspect UST area in the utility closet do to physical constraints. He marked out all the subsurface utility lines and we discuss proposed well locations. 8/10/16 - Obligado - I continue to investigate the other remaining potential source UST. I reviewed a Phase 1 Investigation Report and a Vapor Investigation Report for 213-219 25th Street. The reports were prepared by AKRF on behalf of NYCSCA who is planning to build a pre-K at the site. the reports document the presence of petroleum VOCs in soil vapor as well as TCE and recommends installation of a SSDS system. The phase 1 found no evidence of a tank at the site, which is not correct, based on DEC Records which document the presence of at least 1 1000 gal tank. I sent a property access letter request to the property owner Buono Enterprises to perform investigation of their former 1000 gallon #2 fuel oil UST. Sent via certified mail #70142870000006085169. I emailed NYCSCA and recommended they submit SSDS plans to the DEC/DOH for review prior to construction. 8/22/16 - Letter returned undelivered. 8/29/16 - Obligado - Field Work - Met Envirotrac and Associated on site to install 4 borings/wells at and around the abandoned UST at 207 25th street. I observed evidence of petroleum impacted soil (based on odors and elevated PID readings) in all soil borings as shallow as 10 ft below grade and extending to the water table at ~23 ft. Envirotrac will install the 4 wells on the following day 8/30/16 - Obligado - I spoke to dave who said one of the 3 borings the hit refusal at 13 ft when trying to install the well. They will try again tomorrow 8/31/16 - Obligado - They hit refusal again at 13 ft. This well location will be abandoned. 9/8/16 - Obligado - Met Dave Lorthior on the site. Envirotrac was developing and sampling the 3 wells and repairing the sidewalk flag in front of 207 25th Street. Dave and I also met with Frank Buono at 217 25th Street. Representatives from SCA (MR. Ellis) were also at 217 25 to discuss issues related to their school construction. We looked at the former tank location went over potential boring locations. According to Frank, a tank closure assessment was performed in 1999 when he purchased the property, but he was unable to provide the soil boring results or the tank tightness testing results. He was only able to

U001839490

provide a tank closure affidavit and invoices of the work. Frank Buono signed the access agreement to allow DEC on site to perform soil boring investigation. I also requested SCA provide the SSDS plans. 9/9/16 - Obligado - I called Marisol at Riteway/PTC to inquire if they had any of the documentation of closure from 1999 for the 217 25th street site. They responded that all those files had been lost/purged when Riteway acquired PTC. I also sent an email to Frank Buono requesting the SSDS plans, at the request of SCA. 9/21/16 - Obligado - I met Envirotrac at 217 25th street site for the geoprobe investigation. At the time of the inspection, they were boring the location at the former UST. No evidence of contaminated soil (PID, odor, staining) was apparent in the vadose zone at B2 next to the tanks. Elevated PIDs and odors were apparent at the water table at 30 ft bgs. Based on the absence of contamination in the vicinity of the tank, this UST does not appear to be the source of Spill No. 9305122. 9/22/16 - Obligado - I sent an email to Frank Buono with cc to SCA notifying him that the UST at 217 25 this not the source of the spill. I still requested he provide the SSDS plans for the proposed school. 2/16/17 - Obligado - I completed my review of the data form the 207 25th street investigation. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil contamination above Soil Clean UP Guidance was found in all borings. Soil contamination was found as shallow as 8 ft bgs. Groundwater contamination above TOGs was found in all wells. Free phase product was not encountered. The soil data and groundwater confirm that the 1993 tank test failure of the heating oil tank at 207 25th street resulted in a petroleum discharge to soil and groundwater. As such, a new spill was opened for the 207 25th street site - Spill No. 1610374. 2/17/17 - Obligado - I sent an email to Sandi Fung notifying him that based on the soil data, the tank at her property did leak and may have contributed to the spill. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. With regards to the 276 -280 24th street building the subsurface investigation was inconclusive because although no evidence of soil contamination was observed, the soil probes were not installed deep enough to confirm the absence of soil contamination below the suspect tank. This was because the investigaiton was done with a small geoprobe due to access limitations which could not penetrate the tight clay formation below 10-12 ft. With regards to the 213th 25th Street site the report concludes that based on the absence of contamination in the shallow 213 B-1 boring, the abandoned 1000 gallon #2 fuel UST had not leaked prior to its abandonment 3/17/17 - Obligado - I received a DRAFT Remediation Alternatives Feasibility Study dated March 2017 which provides cost to closure estimates on various remedial alternatives to address the residual free product beneath the 4th and 25th Street site. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical

U001839490

or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/4/17 - Obligado - I sent an email to Erin Quell requesting EAR monitor and bail the product wells. 4/24/17 - Obligado - I received gauging results. Product thicknesses: MW9 - 0.01 MW94 - 0.27 MW-31 - 1.53 MW-9 - 0.11 MW-8 - 1.73 MW-8a - 1.16 4/27/17 - Obligado - I got an email from Erin Quell that D&D complained of rats in the former equipment shed. After discussion with Randall Austin, DEC will remove the shed and fencing. I issued an amended callout to EAR with an increased budget to remove the system enclosure. 5/16/17 - Obligado - Erin Quell provided gauging results for May 5, 2017 MW-91 - 0.02 MW-94 - 0.31 MW-31 - 1.08 MW-9 - 0.08 MW-8 - 0.93 MW-8A - 1.23 Absorbent socks were placed in the wells. 6/18/17 - Obligado - Erin Quell provided Case Studies in support of the applicability of KAPSDIDS injection at this site. 8/21/17 - Obligado - 207 25th Street UST investigation findings submitted. The report concludes evidence of tank removal activities were found but no tank was found. The report concludes the tank was previously removed by others. See Spill #1610374. 8/25/17 - Obligado - I received an email from Erin Quell. The system shed, fence, coned disconnection, and sidewalk restoration has been completed. 9/7/17 - Obligado - I received an email with gauging summaries from Erin Quell from 8/28/17 MW-7 - 0.27 ft LNAPL MW-8 - 0.61 ft LNAPL MW-8A - No Data MW-31 - 1.10 ft LNAPL MW32-A - 0.02 ft LNAPL MW87 - 0.19 ft LNAPL MW-82 - 0.02 ft LnAPL 9/27/17 - Obligado - I received an estimate for continuing site O&M bailing. 10/4/17 - Obligado - I sent an amended authorization for continued site monitoring and free product bailing. EAR will continue bailing product on a biweekly basis. 2/9/18 - Obligado - I reviewed a Field Activity Summary letter. The letter summarizes recent onsite activities, including gauging and recovery, system enclosure and well maintenance. The letter documents the removal of the former remediation system compound. All electrical service was disconnected and components removed. All remedial piping was cut below grade and capped. The vault for MW9 was replaced with 8 manhole. 9/24/18 - Obligado - Spill No. 9305122 is closed out. Remediation and monitoring to resume under Spill No. #1610374 / PIN #07960. "

Remarks: "FOUND LEAK ON PLATFORM THROUGH PLATFORM WALL, TA ON SCENE, FD. UNICO CLEANING PLATFORM, LEAKING INTO MANHOLE, CALL BACK - REPONDED BETWEEN 2:00 AND 730PM, SEE FIELD NOTES. CHRIS TOMASELLO NOTIFY TO AL"

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: 001
Contact Name: RAY ADAMS
DEC Memo: "6/10/99 @ 2:20PM CALL STATION # 718 499-8788 PUMPS ARE SLOW SPOKE TO JUNIOR - STAND- IN MANAGER REPAIRS TOMORROW. 11/24/03 Reassigned from Vought to Foley. 12/1/03 Received Feasibility report for Soil Vapor Extraction. 12/3/03 Received Feasibility report for Multi-Phase Extraction. 4/6/04 Received RAP. SVE not an option due to low permeability soils limiting air movement. Multi-phase extraction is best option. LNAPL has consistently been identified since May 2002. Substantial contaminant mass remains in the vadose and saturated zones. Area of concern is located to the west and north of the kiosk building(area of former USTs) from approx 10'bgs to the water table at 20'bgs. This is likely to be the source of continued groundwater contamination. 19 Hg resulted in 90scfm over 43ft radius (ROI) from extraction well MW-3. In depressing water table, air flow and thus volatilization and subsequent extraction of VOCs will be achieved. Average liquid recovery rate of 1.33gpm for GW extraction and 0.04gpm for LNAPL. Based on 87,088ft3 of soil (radius=43ft, depth=15ft), and an average concentration of 310,255ppb total VOCs, an estimated mass is 2007lbs total VOCs in soil. Based on 0.77ft of LNAPL over 2,826ft2 at an avg porosity of 0.35 and conservative LNAPL saturation of 0.5, the estimated mass of LNAPL is 18,999lbs. Estimated that the proposed MPE can be installed and running by April 2004 upon approval. 4/7/04 Stip emailed and mailed to C. Wein and A. Lapine for use of multi-phase extraction system. 4/8/04 A. Lapine - trenching to begin as early as next week. 4/28/04 Copy of signed stipulation received with request to extend deadline to 90days from effective date to install multi-phase extraction system. 4/29/04 Stip fully executed by T. Kunkel. 5/7/04 During portfolio meeting it was discussed that this site is under redevelopment. Potential buyers will be building a self-storage facility. Dual phase system installation is in progress. Citgo station adjacent to property(now a Dunkin Donuts). 1Q04- 0.98' LNAPL in MW-1, 1.83' in MW-3 and 1.4' in MW-9. BTEX from ND(MW-11) to 121500ppb(MW-9). MTBE from 12ppb(MW-6) to 36600ppb(MW-8). 2Q04- 0.91' LNAPL in MW-1, 0.89' in MW-3, 0.45' in MW-9, 0.23' in MW-14. BTEX from ND(MW-5,6,11,12) to 90750ppb(MW-13). MTBE from 2ppb(MW-2) to 79200ppb(MW-15). 3Q04- 0.30' LNAPL in MW-1. BTEX from ND(MW-5,6,11,12) to 42520ppb(MW-7). MTBE from 3ppb(MW-6) to 63800ppb(MW-8). 4Q04- 0.75' LNAPL in MW-1. BTEX from ND(MW-11,12) to 9830ppb(MW-7). MTBE from 91ppb(MW-11)to 47900ppb(MW-10). 4/27/05 Portfolio meeting- MPE system running. 5 extraction wells on-site. Currently running 4 of 5 due to the cat-ox treatment being overwhelmed. 11/9/05 Reviewed the quarterly reports dated October 3 and 17,2005. Nine wells were sampled on 1/26/05 and ten on 4/26/05. MPE system operating. 0.38 ft LNAPL in MW1 during first quarter, but no free product present during the second quarter. Max BTEX 48096ppb(MW-1) and max MTBE 32900ppb(MW-10). 11/25/06 3Q05- DTW

16.3-22.75' bgs. BTEX from ND(MW-11) to 55029ppb(MW-1). MTBE from 1ppb(MW-11) to 17800ppb(MW-2). 3/16/06 Met with BP and Delta. Source removed 2002. MPE active. Estimated 14000lbs total VOCs with 2368lbs removed so far. 5/1/06 4Q05 - DTW 15.42-22.35' bgs. BTEX from ND(MW-11, MW-12) to 14106ppb(MW-1). MTBE from 0.4ppb(MW-4) to 8340ppb(MW-2). MW-3,9,13,14,15 were not sampled b/c of system operation. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 7/27/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 5/25/2006, submitted by Delta. The site is former BP Station. As of sampling on 1/24/2006, groundwater flows to west-northeast at the depth of 15.94' to 22.63' bg. 10 monitoring wells were gauged and sampled. W-1, 8,001 ppb BTEX (8.2J ppb B, 203 ppb T, 1,220 ppb E, 6,570 ppb X), 72.6 ppb MTBE. W-2, 307 ppb BTEX (167 ppb B, 49.2 ppb T, 40.9 ppb E, 50.2 ppb X), 391 ppb MTBE. W-4, BTEX ND, 2.1 ppb MTBE. W-5, BTEX ND, 20.3 ppb MTBE. W-6, BTEX ND, less than 1 ppb MTBE. W-7, 140 ppb BTEX (10.3 ppb B, 5.9 ppb T, 44.5 ppb E, 78.8 ppb X), 514 ppb MTBE. W-8, 13.42 ppb BTEX, 452 ppb MTBE. W-10, 4,236 ppb BTEX (219 ppb B, 1,330 ppb T, 847 ppb E, 1,840 ppb X), 2,780 ppb MTBE. W-11, BTEX ND, 19.2 ppb MTBE. W-12, BTEX ND, 5.5 ppb MTBE. Noted that MPE is running. (RJF) 9/19/2006 - Feng - Meet with Delta, FPM Group and lawyers for current and new owner of the property. The site will be developed as a 4-story hotel and construction will be started sometime in year 2007. There will be no basement. The excavation will be down to 3' to 5' bg for foundation. A siteplan of the proposed area that the future hotel will be occupied was submitted. When the construction starts, MW-4, MW-11 and MW-12 will be destroyed. 3 new monitoring wells will be installed outside the footprint of the building. And the system will be relocated to northeast of the property. During the relocation of the system, DEC requires continue monitoring of groundwater. DEC suggest that during the excavation for re-piping, cover the soil and excavation. FPM Group did 7 test pits within the new hotel footprint area and took soil samples down to 5', no smell, no VOCs detected and no tanks have been found. Vapor barrier will be installed. DEC requires active venting system to be installed too. DEC also requires 2 soil borings include soil and groundwater samples to be collected from the former pump islands within the new building footprint area. (RJF) 1/4/2007 - Feng - 2Q2006, 11/28/2006, by Delta. Groundwater sampled and gauged 5/8/2006. 10/15 monitoring wells. DTW 14.29' to 25.26' bg. Flows west-northwest. No LNAPL. MW-1, 13,064 ppb BTEX, 1,600 ppb MTBE. MW-2, 7,275 ppb BTEX, 4,270 ppb MTBE. MW-4, ND BTEX, 1.7 ppb MTBE. MW-5, 3.89 ppb BTEX, 27 ppb MTBE. MW-6, ND BTEX, 511 00b MTBE. MW-7, 3,228 ppb BTEX, 1,910 ppb MTBE. MW-8, 2,237 ppb BTEX, 2,600 ppb MTBE. MW-10, 120 ppb BTEX, 512 ppb MTBE. MW-11, BTEX ND, 49 ppb MTBE. MW-12, ND BTEX, 0.64 ppb MTBE. (RJF) 1/4/2007 - Feng - 3Q2006, 11/20/2006, by Delta. Groundwater sampled and gauged 8/1/2006. 10/15 monitoring wells. DTW 15.23' to 21.74' bg. Flows West-northwest. No LNAPL. MW-1, 1,194 ppb BTEX, 7.5 ppb MTBE. MW-2, 560 ppb BTEX, 734 ppb MTBE. MW-4, ND BTEX, 0.52 ppb MTBE. MW-5, ND BTEX, 4.7 ppb MTBE. MW-6, 25.1 ppb BTEX, 52.7 ppb MTBE. MW-7, 5.91 ppb BTEX, 11.2 ppb MTBE. MW-8, 2.5 ppb BTEX, 91.6 ppb MTBE. MW-10, 5,240 ppb BTEX, 361 ppb MTBE. MW-11, ND BTEX, 0.83 ppb MTBE. MW-12, ND BTEX, 5.5 ppb MTBE. (RJF) 5/11/2007 - Feng - 4Q2006, 3/6/2007. Groundwater sampled and gauged 10/25/2006. 9/15 monitoring wells. DTW 16.19' to 22.19' bg. Flows to north. No LNAPL. MW-1, BTEX ND, 4.6 ppb MTBE. MW-2, 28.7 ppb BTEX, 111 ppb MTBE. MW-4 was not sampled. MW-5, BTEX ND, 1.4 ppb MTBE. MW-6, BTEX ND, 1.3 ppb MTBE. MW-7, 1.8 ppb BTEX, 2.5 ppb MTBE. MW-8, BTEX ND, 51.4 ppb MTBE. MW-10, 33.1 ppb

BTEX, 26.1 ppb MTBE. MW-11, BTEX ND, less than 1 ppb MTBE. MW-12, BTEX ND, 7.7 ppb MTBE. 5/11/2007 - Feng - MPE O&M, 1Q2006, 1/9/2007. Influent Air sample 960 mg/m3 BTEX, recovery rate 0.183 lbs/hr. MTBE 57 mg/m3, recovery rate 0.0109 lbs/hr. Total recovered 287 lbs of total BTEX, 15.9 lbs of MTBE and 1,456 lbs of TPH after 422 hours of MPE system operation. 5/11/2007 - Feng - MPE O&M, 2Q2006, 1/9/2007. Influent Air sample 4/7/2006, 802 mg/m3 BTEX, recovery rate 0.171 lbs/hr, MTBE 74.3 mg/m3, recovery rate 0.0159 lbs/hr. Influent air sample 5/2/2006, 693 mg/m3 BTEX, recovery rate 0.122 lbs/hr, MTBE 50.8 mg/m3, recovery rate 0.00894 lbs/hr. Total recovered 319 lbs of total BTEX, 18.3 lbs of MTBE and 1,646 lbs of TPH after 581 hours of MPE system operation. 5/11/2007 - Feng - Reviewed the Comprehensive Environmental Site Assessment Report dated 3/7/2007, and the Exposure Assessment Report dated 3/20/2007, submitted by HydroTech on behalf of Reda Group. Groundwater samples indicated low contamination and no significant receptors of environmental concern were identified within the immediate site vicinity. HydroTech requested spill closure. The request of spill closure is denied for the reasons: 1) The MPE system is still running and recovering. DEC usually will need 4-8 quarters of monitoring after the remedial system is shutdown to show no rebounds. 2) The monitoring reports (4Q2006) indicated BTEX concentration trend is fluctuating, the downward trend is not stable yet. (RJF) 7/23/2007 - Feng - 1Q2007, 6/13/2007. Groundwater sampled 1/8/2007. 9/15 monitoring wells were sampled. DTW 10.82' to 27' bg. Flows to north. No LNAPL. MW-1, 0.75 ppb BTEX, 4.1 ppb MTBE. MW-2, 356 ppb BTEX, 119 ppb MTBE. MW-4, not accessible. MW-5, ND. MW-6, ND. MW-7, 107 ppb BTEX, 12 ppb MTBE. MW-8, 3.6 ppb BTEX, 27.3 ppb MTBE. MW-10, 0.46 ppb BTEX, less than 1 ppb MTBE. MW-11, BTEX ND, 6.1 ppb MTBE. MW-12, BTEX ND, 4 ppb MTBE. (RJF) 11/13/2007 - Feng - Replied to Yash Saha (HydroTech) inquiry. There is still MPE system running onsite and it is still recovering, and it will need to have 1-2 years of monitoring after the shutdown of the system. So the site is not closing based on this condition. If the site will be developed. Then a RAP addressing all the remaining contamination (soil, soil gas, gw) will be submitted for approval. The approved RAP will be implemented prior to or during the construction. (RJF) 12/17/2007 - Feng - 2Q2007, 8/23/2007. Vacant. The monitoring well network was gauged and sampled on 4/5/2007. The site is being remediated via the execution of Multi Phase Extraction events. Remediation events occurs at the site on a regular basis. 9/15 wells were gauged. DTW 17.12' to 21.44' bg. Flows to northwest. No LNAPL. 9/15 monitoring wells were sampled. BTEX range ND to 135 ppb (MW-2). MTBE range ND to 58.1 ppb (MW-2). (RJF) 1/8/2008 - Feng - Mark Robbin (HydroTech, 631-462-5866) called. The site will be developed. RAP with alternative groundwater remediation, soil excavation, and vapor mitigation design(vapor barrier and sub-slab venting system) will be submitted shortly. (RJF) 1/9/2008 - Feng - 3Q2007, 11/26/2007. Vacant. The monitoring well network was gauged and sampled on 7/17/2007. The site is being remediated via the execution of MPE events. 9/17 monitoring wells were gauged. DTW 16.73' to 20.31' bg. Flows to north. No LNAPL. 9 wells were sampled. BTEX range ND to 135 ppb (MW-2). MTBE range ND to 58.1 ppb (MW-2). (RJF) 3/7/2008 - Feng - Reviewed the architectural plans for the new building. The design for vapor mitigation effort wasn't located. Email to P. Stewart (ACT) for vapor mitigation design and the basement information. (RJF) 3/7/2008 - Feng - Spoke to D. Greffenius (Delta). BP wanted to make sure the developer has enough finance support for the development before they would pull out the existing

MPE system. P. Steward (ACT) has informed Delta that they got the demolition permit already. The MPE system would be pulled out in the next few weeks. BP will come up with remedial option for soil management and groundwater treatment. And may conduct EFR events on the MW-3 to remove product for a short term remediation. (RJF) 3/20/2008 - Feng - eDoc Quarterly Monitoring Report 4Q2007 and 1Q2008. (RJF) 6/16/2008 - Feng - 4Q2008, 2/28/2008, by Delta. Vacant site. The monitoring wells network was gauged and sampled on 10/2/2007. The site is being reemdiated via the execution of MPE events. 10 out of 15 monitoring wells were gauged and sampled. DTW 17.1' to 21.03' bg. Flows to north. No LNAPL. BTEX range ND to 4,326 ppb (MW-2). MTBE range ND to 211 ppb (MW-2). 1Q2008, 3/6/2008, by Delta. Vacant. The monitoring wells network was gauged and sampled on 1/30/2008. The site is being remediated via the execution of the MPE events. 10 monitoring wells were gauged and sampled. DTW 15.54' to 21.1' bg. Flows to north. No LNAPL. BTEX range ND to 824 ppb (MW-2). MTBE range ND to 110 ppb (MW-2). (RJF) 6/18/2008 - Feng - Portfolio meeting with BP and Delta. The MPE system is pulled out and the station building and canopy are removed. Delta is submitting the IRAP within next 3 weeks. BP/Delta will contact Paul Steward (ACT) in preparing the IRAP. (RJF) 11/18/2008 - Meeting with developer, Levenbaum, ACT, Delta and BP (called in). Agreed on: 1) review historical data to where contamination was, what have been remediated, what will be left behind after the construction and what remediation should be planned. 2) make sure the vapor barrier is compatible with hydrocarbon. (RJF) 11/25/2008 - Met with David Greffenius (Delta). Delta reviewed the historical data and calcuated out that the contaminated soil found former SB-3 at 24 feet has been removed. Post excavation samples were taken B-1 to B-7. Lab results indicate soil contamination remains. Delta will excavate more on B-6 and B-7, the two middle sections. Delta will lay the infiltration pipes in the B-1 to B-5 area for future nutrients addition. 6 soil boring were proposed in the 1-story area and will go down 11 to 16 feet from what it is. Monitoring wells will be installed in the parking lot area. Delta will submit a letter plan for all these. (RJF) 12/3/2008 - Reviewed the memo from In-Line Plastics, LC and the MSDS from Chevron Phillips Chemical Company LP that Paul Steward sent via email regarding the vapor barrier proposed for the new building. The vapor barrier is acceptable. Email to ACT, BP and Delta reminding them the MSDS of the vapor barrier indicating it may react with oxygen and strong oxidazing agents and this should be taken into account when consider post remediation options. (RJF) 12/17/2008 - Spoke with David Greffenius. The infiltration pipes were layed in the B-1 to B-5 sections and vapor barrier installed. Plan to pour foundation next week. The B-6 and B-7 sections were over excavated deeper down and endpoint samples were collected. Lab results are expected in a few days. (RJF) 12/18/2008 - visited the site and met with David Greffenius from Delta. Four schedule 40 PVC pipes were layed beneath the vapor barrier in the 2 sections near the back and the foundation was poured already. Half of the 2 middle sections was poured too. David said the middle 2 sections were over excavated 4-6 feet deeper and endpoint samples were taken, the results shall be back in a few days. 4 soil borings were done in the 1-story area. The portion near 4th Ave has not been excavated yet, but it might started in 3 weeks or 1 month. (RJF) 7/21/2009 - DEC received and reviewed the soil sampling results from the area of the site slated for construction of the one-story building portion. Analytical data

indicated no VOCs exceeding criteria. DEC required installation of monitoring wells to implement groundwater quality monitoring during and post-construction. Site plan with wells location will be submitted shortly. (RJF) 9/30/2009 - email from Delta. attached a PBS registration form for the discovered 12 abandoned USTs. 12/17/2009 - Investigation Work Plan, dated 12/17/2009, by ARCADIS. ARCADIS proposes 2 wells and 1 soil borings in the parking lot, 2 wells at the sidewalk of 26th Street. The utility survey initial result indicate that underground utilities beneath the sidewalk along 4th Ave would likely preclude the installation of borings and monitoring wells in that sidewalk. 3/18/2010 - Project Status letter, dated 3/18/2010, by ARCADIS. The Construction schedule has been delayed and that access to the 26th Street sidewalk to install 2 of 3 remaining proposed wells may not be possible until May. ARCADIS requests extension for completion of the site characterization report until 7/2010. 6/12/2010 - email from ARCADIS Mark - during our meeting a couple of weeks ago, you asked us to look into why no soil samples were collected beyond 15 feet (final well depth was 22 feet) at MW-17A. The drillers encountered cobbles from 10 to 15 feet and broke a part on the GeoProbe. A field decision was made to continue to auger to final depth and install the well. 10/29/10: This spill case transferred from R. Feng to J. Kolleeny. - JK 12/15/10: Reviewed Subsurface Hydrocarbon Assessment Rpt by ARCADIS, dated 9/30/10 (in eDocs). Rpt summarizes install'n of add'l on- and off-site wells with soil & GW sampling. On-site wells MW-16A, MW-17A and MW-18A were installed in Jan. 2010; sidewalk wells MW-19A, MW-20A and MW-21A were installed in August 2010. Significant soil & GW contam were detected in wells MW-16A and MW-18A. Rpt concludes there are residual impacts beneath central & eastern portion of parking lot. Based on results, ARCADIS recommends ongoing quarterly GW monitoring, plus evaluation of remedial technologies, preparation of feasibility study and remedial action plan, and subsequent aggressive, targeted remediation. Due to limited space at site, they anticipate that remediation may involve injection of reagents into monitoring wells and infiltration lines installed under hotel foundation slab during construction. - J. Kolleeny 02/03/11: Reviewed 4th Quarter 2010 GW Monitoring Rpt by ARCADIS dated 1/19/11 (in eDocs). Rpt presents GW data for Oct 2010 showing residual GW contam in two wells: MW-16A had 29,000 ug/L total BTEX (up from 2,830 ug/L tBTEX when last sampled, in May 2010); MW-18A had 769 ug/L tBTEX (down from 3,050 ug/L when last sampled in May 2010). Rpt states that quarterly GW monitoring will continue, with next sampling event in Jan. 2011; also states that RAP is being prepared and will be submitted to DEC by end of Feb. 2011. After reviewing rpt, in late Jan. 2011 I spoke with Andrew Korik of ARCADIS about remedial options, he asked if chem ox injections into well MW-16A (since it's most upgradient contam well) would be acceptable; I said DEC would prefer that they not inject into monitoring well, as this could compromise future GW data from well. Andrew concurred after checking with his technical staff, that injecting into monitoring well is not acceptable. They will see if they can install injection well upgradient of MW-16A, in parking lot ramp; if not, they will explore other options. - JK 04/08/11: Reviewed 1st Quarter 2011 GW Mon & Analysis Rpt by ARCADIS, dated 3/9/11 (in eDocs). Rpt presents results of Jan. 2011 GW sampling, showing well MW-16A had 8,180 ug/L total BTEX (down from 29,000 ug/L (J) in Oct. 2010), MW-18A had 25,000 ug/L tBTEX and 470 ug/L MTBE (from 769 ug/L and 14 ug/L, resp.), and MW-21A had 1,600 ug/L MTBE

(down from 2,400 ug/L in Oct. 2010). Rpt states that quarterly GW mon will continue, and that a RAP is in preparation and will be submitted to DEC in March 2011. - J. Kolleeny 4/11/2011 - Spill transferred back to JFeng. 04/19/11: Reviewed Remedial Action Work Plan for Anaerobic Biological Oxidation, by ARCADIS dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate to address residual GW contam at site, using 3 infiltration galleries installed beneath hotel foundation slab plus 3 new injection wells - one upgrade of well MW-16A in sidewalk along 4th Ave. and 2 on either side of MW-21A, in sidewalk along 25th Street. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik and Gene Choquette of ARCADIS. - J. Kolleeny 5/25/2011 - email from Andy Korik Here is notification that injection wells were installed at 764 4th Ave. Brooklyn. eDoc the report. JF 5/31/2011 - received quarterly report 2Q2011. eDoc. JF 7/12/2011 - Sulfate Injection Well Installation Notification, dated May 25, 2011, by ARCADIS. As per the approved RAWP, 2 sulfate injection wells IW-05 and IW-06 were installed during the week of May 16, 2011. IW-07 was not installed due to the proximity of subway infrasture beneath 4th Ave, the NYMTA would not permit installation of an injection well in the sidewalk along 4th Ave. Injection volumes at the previously installed injection gallery (IW-01 through IW-04) will be adjusted to compensate for the absence of IW-07. They submitted the Inventory of Injection Wells package to EPA on 5/5/2011. Will notify DEC a week prior any field work. JF 7/14/2011 - 2Q2011, 5/31/2011, by ARCADIS. The report summarize some details of the excavation for the development. The majority of the site footprint was over-excavated to approximately 20-25 feet below its previous grade at street level, and all previously existing on-site monitoring wells were destroyed. The northern portion of the site coinciding with the parking garage was backfilled to 8 feet below street level. During the excavation, 12 unregistered 550-gallon USTs were found. These tanks were promptly registered with NYSDEC, closed and removed. Approximately 592 tons of petroleum-impacted soil were excavated and disposed off site as part of the tank removal. A total of approximately 10,000 tons of soil was removed during the development. The developer installed vapor barrier and SSDS. In addition, 4 horizontal injection pipes were installed beneath the building foundation. These injection pipes are connected to vertical risers, which along the west side of the new hotel building. The wells were gauged on April 4, 2011. NO LNAPL. DTW 12.16' to 20.63' bg. Fluctuation +/- less than one feet. Max BTEX 27,000 ug/L, MTBE 4,100 ug/L (MW-18A). Will continue quarterly monitoring. Remedial injection wells were installed in May and a report will be submitted. JF 5/8/12 - Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC. In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate. Mr. Hussein approved the letter and it was sent out today. 5/30/12 - Raphael Ketani. Earlier, Mr. Korik had sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter regarding the use

S103938231

of sodium nitrate in place of sodium persulfate. I reviewed the response letter which addressed the 7 comments the Department had made. Their responses were as follows: 1) ARCADIS sent a letter dated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of the sodium persulfate. However, they haven't had a response from the EPA. 2) The amounts of sodium nitrate that will be on site will be less than the 400 pound limit. For this site, 180 lbs. of the material will be stored on site at any given time. 3) Dosing information was presented and was deemed appropriate. 4) Quantitative polymerase chain reaction was used to evaluate the presence of Dichloromonas species bacteria. 5) By using appropriate amounts of the sodium nitrate chemical, the nitrate concentrations will be maintained in order to keep the groundwater environment anoxic. 6) The push pull method will be used to extract any groundwater. This method doesn't cause the reorientation of the soil grains which would result in a loss of the efficiency of the injections. They state that there will be minimal groundwater displacement. 7) The nitrate concentrations will decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater under the site will have to travel 16 feet in order to reach CP-51 levels. Later today, a conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself. The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate proposal, the Department's comments in our 5/7/12 response letter and the information in the ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby BP, had adequately responded to the Department's comments with the exception of item #7, monitoring nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #05082, there were monitoring wells downgradient of the injection locations. I stated that this was sufficient for monitoring the groundwater. The ARCADIS 5/23/12 response letter was found to be acceptable with the only comment being that they will have to frequently sample the groundwater in order to be sure that it does not exceed the CP-51 standards. If they find that the standards are exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit. 5/31/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/19/2012 - meeting with ARCADIS. The downward trend of the groundwater is believed to be associated with the massive soil soil at the site. The owner of the site was reached for possibility of wells installation at the parking garage, but there is a layer of the stone and a impermeable layer, it will be hard to get a well in there. ARCADIS will do the pilot and then design the injection system for approval. 2 quarters of gw sampling to see the gw after the injection. Aim for TOG gw standard until reach the extent of feasible. 6/26/2012 - Reviewed Supplemental Letter Work Plan for Nitrate Injections, dated 6/19/2012, by ARCADIS. The Work Plan is intended to fulfill the Department s requirement of specific information (i.e. monitoring, reporting and injection

S103938231

details) regarding the injections as part of the Department's approval of the proposal to use sodium nitrate to treat the contamination on May 30, 2012. ARCADIS proposes to inject 5,300 gallons, 8,000 gallons, and 5,300 gallons of sodium nitrate solution at a concentration of 0.3% by weight into the injection wells for Site 654, Site 5082, and Site 17782, respectively. A groundwater monitoring program will be implemented subsequent to the application. Approves the Work Plan after discussed with Raphael Ketani. Report by 12/2012. 7/18/2012 - reviewed 1Q2012, 3/27/2012, by ARCADIS. The groundwater was gauged and sampled on 1/24/2012. DTW 11.38 (MW-17A) and 20.20 (MW-21A). NO LNAPL. MW-18A, 340 BTEX, 21 MTBE. MW-21A, BTEX ND, 960 MTBE. 8/27/2012 - site visit and met with Ryan McKinney and his partner. Saw them purging wells, baseline sampling, taking field parameters and mixing the nitrate. 2 bags of calcium nitrate, 50 lbs each, was mixed in the small tank before the the solution was pumped into the large tank mixing with rest of the water. The tanks were outside the building. 9/26/2012 - 2Q2012, 6/22/2012, by ARCADIS. The groundwater was gauged and sampled on April 10, 2012. DTW 12.08 (MW-16A) to 20.70 (MW-21A) below the top of casing. Water table is 0.5 to 1.27 feet lower than last quarter. MW-21A, BTEX ND, 1,100 MTBE. MW-16A, 41 BTEX, 1 MTBE. MW-18A, 3,800 BTEX, 140 MTBE. The next sampling will be in July 2012. ARCADIS plans to conduct a pilot injection into MW-18A during the 3rd quarter of 2012. 12/20/2012 - 3Q2012, 10/9/2012, by ARCADIS. The groundwater was sampled on July 16, 2012. DTW 11.74 (MW-16A) to 20.44 (MW-21A). The water table is 0.2 to 0.34 feet higher than the last quarter. NO LNAPL. Flows to northwest at hydraulic gradient of 0.005 feet per foot. Over the period of August 27 to August 30, 2012, approx 8,042 gallons of calcium nitrate solution (200 lbs calcium nitrate and 2.64 lbs of fluorescein dye) were injected into MW-18A. Post-injection response monitoring is on-going and will continue through early November. MW-16A, 240 BTEX. MW-18A, 510 BTEX, 10 MTBE. 5/13/2013 - 4Q2012, 1/16/2013, by ARCADIS. Monitoring was conducted on 10/11/2012. DTW 12.20 (MW-16A) to 20.81 (MW-21A). MW-16A, 3,200 BTEX. MW-18A, 750 BTEX, 37 MTBE. MW-21A, 1,200 MTBE. 1Q2013, 4/16/2013. Monitoring was conducted on 1/14/2013. DTW 12.59 (MW-16A) to 21.13 (MW-21A). MW-16A, 210 BTEX, 33 MTBE. MW-18A, 233J BTEX, 76 MTBE. MW-21A, 1,400 MTBE. The calcium nitrate injection pilot is almost in completion and a report will be presented under separate cover. 8/21/2013 - met with ARCADIS. Rebound of BTEX concentration has been observed. Will do another round of injection of Calcium Nitrate. If not working, then another alternative. 8/13/2014 - A site visit was conducted by J. Vought and J. Feng and met with ARCADIS technician and Peter Reyes, the general manager of the hotel. PID reading survey was conducted from the floor drains, sumps/drain pump-outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed. 5/27/2015 - Spill history has been reviewed and as per previous discussion with J. Vought on 7/29/2014, spill is closed based on: 1) Source removal has been done. Tanks included (4) 4,000-gallon gasoline USTs and (6) pump islands were removed and a total of 256.88 tons of petroleum impacted soil from UST excavations was transported offsite and disposed. During site development, (12) 550-gallon USTs were removed and 592 tons of impacted soil was removed and disposed. 2) Additional soil excavation was done during the site development activities in 2008. Soil was excavated down to 15 to 25 feet and endpoint samples were collected. Over-excavation was conducted in the B-3, B-6 and B-7 area due to the

AMOCO STATION #5082 (Continued)

S103938231

high level of VOCs concentration at 19-19.5 feet. B-8, B-9, B-10 and B-11 were collected at 21.5-23 feet and the sampling results indicated the removal of the petroleum impacted soil. The sampling results did indicate the detection of VOCs but at levels that do not warrant further concerns. 3) Soil boring installed in the southwest portion of the site, i.e. the one one-story building portion of the hotel and the soil samples show minimal detection. The groundwater in MW-19A and MW-20A which located at the sidewalk of 26th Street show very low level of MTBE and do not warrant further action. 4) Before site development, there was a Multi Phase Extraction System operated from 5/2005 to mid 2007. The MPE removed 1,347 lbs of TPH and treated 6,182 gallons of groundwater. 5) The site has been developed into a 10-story Best Western Hotel with 2-story basement. Vapor barrier and SSDS have been installed to protect the occupants from possible soil vapor exposure. 6) No complaint of soil vapor has been received. A site visit was conducted on 8/13/2014. PID reading survey was conducted from the floor drains, sumps/drain pump-outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed. 7) Monitoring wells network was re-established onsite and the sidewalk in 2010. In August 2012, 8,042 gallons of calcium nitrate solution were injected into MW-18A. Monitoring of the well network following the injection show downward trend in MW-16A and MW-18A. The data suggest residual contamination would be reduced or attenuated before reaching to the downgradient wells MW-18A and MW-17A via attenuation and source removal and remedy effectiveness. 8) Groundwater flows toward northwest to north and at depth of 20 feet below street level. MW-17A in the downgradient shows very minimal detection of BTEX and MTBE but most of the its monitoring quarters were non-detected which suggested the groundwater plume is contained in the northwest direction. Another sidegradient/downgradient MW-21A never show any detection of BTEX but MTBE. The MTBE concentration shows downward trend which suggested possible natural attenuation has occurred and the effectiveness of the implemented remedy. 9) Inclusion of remaining contamination language in the spill closure letter in case site is redeveloped. Spill closure letter to BP/ARCADIS. Spill is closed."

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 04/27/05- Bureau B, unassigned, due to low priority. Transferred from R-2. 12/20/06- reassigned to Chris Milack, Central Office (Milack) 12/29/06- Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93-05122.

(Milack) 5/24/07- GW investigation report was received 5/18/07. Two wells were sampled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue. 7/2/08 - Haggerty: assumed project management from Chris Milack 9/19/08 - Haggerty: approved SI workplan 11/25/08 - Haggerty: SI workplan altered due to the presence of oil-cooled high pressure gas mains along 24th Street. See email and revised figure in edocs 4/20/09 - Haggerty: approved SIR with the following comments: 1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol. 2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email. 3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow-up May 2010 - Due to various underground utilities, off-site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of delineation at this time. Discontinued EFT events due to poor recovery, really tight soil July 2010 - EM granted access to off-site location to complete delineation August 2010 - Offsite well well installed 8/3 February 2011 - offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On-site contamination predominately MTBE June 2011 - SSUR overdue July 2011 - reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss August 2011 - sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11) Sept. 2011 - approved Feasibility study work plan for SVE/AS January 2012 - EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb) February 2012 - discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in April 2012 - EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over-excavation is the only viable solution to source removal. EM states they won't remove the tanks because some were sold to the owner. PM needs assistance from OGC August 2012 - With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks December 2012 - Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM. January 2, 2012 - according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13 May 2013 - OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to excavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test October 28 2013 - ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days December 2013 - PM sent comment letter to ExxonMobil. The work plan was revised and

Remarks: resubmitted. Currently under review January 6, 2014 - revised workplan approved April 2014 - Excavation work plan approved in January but we are still waiting on the access agreement with the property owner September 2014 - Haggerty: excavation per the RAP complete January 2015 - Haggerty: post-excavation MWs installed. PM required 4 quarters of performance groundwater monitoring."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LEAKED APPROX 1-1/2 GALLONS OF UNKNOWN OIL ON SWICTH GEAR 2B21-2-NORTH. IT APPEARS TO BE CONTAINED AT THIS TIME NO SEWERS OR WATERWAYS EFFECTED AT THIS TIME. NO FIRE OR SMOKE. WILL GET BACK TO TELL US WHO WILL TAKE SAMPLE AND CLEANUP. ENVIR TAG #040-0111 PLACED. AREA CORDIN OFF. Update - 0520hrs - Hurley reports chem lab has been contacted to come and take sample. 4/18/03 15:15, Lab Sequence Number: 01-06169-001, <1ppm PCB 4/25/2003 13:05 As per confirmation from. P. Vieira, the station supervisor at the time of the spill, he confirms that the unknown was cable pulling grease, a water based substance similar to gojo. The Spill was cleaned up that day by the station operator who called it in Hurley # 18883. He used pads and placed marriage roll down until a crew would be able to get to the conduit and wrap all the joints. The leak occurred at the joint of two sections of a non-oil filled conduct and was a result of extreme temperatures. On June 5 all the joints were wrapped as a preventative measure of any more grease leaking during extreme temperature days. No repairs are required. The incident may be closed and submitted to the DEC."

TEXACO SERVICE STATION - TTF (Continued)

S102618896

Spiller Phone: (800) 646-3161
Spiller Extension: Not reported
DEC Region: 2
DER Facility ID: 136233
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/2/2004 Reassigned from Tomasello to Sun. Austin - 3/3/10 - Reassigned from Sun to Krimgold for investigation of this TTF to ascertain the nature and status of this spil event - end 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo. 10/10/14-Hiralkumar Patel. reviewed available information for DEC DeMeo. alternate address for 735 5th Ave: 725-737 5th Avenue, 738 6th Avenue, 236-282 23rd Street, 333-415 24th Street the site is occupied by ConEd's Greenwood Substation. PBS #: 2-452769. as per PBS record, the site has/had following tanks: - one (1) 1,080 gal diesel UST, closed-in-place in Sep. 1998 - one (1) 550 gal diesel AST on legs, installed in Sep. 1998 - one (1) 50 gal diesel AST on legs, installed in Dec. 1981 the subject spill report was filed on 05/28/1997 for a Texaco Service Station, due to tank test failure of 4,000 gal tank. there is no information about material type in the spill report. the site is occupied by ConEd substation and not a service station. also as per PBS record, there is no record of 4,000 gal tank at 735 5th ave. information does not match. 10/6/14 TJD Site inspection - address not found (based upon reported address the site is either a Con Edison sub-station or a Cemetery). A Citgo S/S is operating at 745 5th Avenue, this location was inspected and onsite representative (Bernard Mays) was interviewed. He states station currently operating as a Citgo was formerly a Shell, Pronto & Texaco is reverse chronological order. The station operator states that no paperwork is available prior to changing to Citgo as the operator has changed multiple times. The onsite representqtative was able to provide passing tank tightness testing records for all (5) tanks in operation at site - dates of test reports available for review onsite were 7/23/13 and 7/7/14. A review of PBS records (EDOCS) reveal multiple passing tank test reports for the same (5) UST's are part of the PBS (2-332720) file. As the address is incorrect and current passing tightness tests are available - no further action is required. Spill is administratively closed."
Remarks: "TANK TEST FAILURE "

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D006

. Waste name: CADMIUM

Violation Status: No violations found

Tank Info:

Tank Number: 001
Tank ID: 33738
Tank Status: Closed - In Place
Material Name: Closed - In Place
Capacity Gallons: 3000
Install Date: Not reported
Date Tank Closed: 10/01/2000
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: 21
Date Test: 10/24/2000
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: TRANSLAT
Last Modified: 04/14/2017

Equipment Records:

H00 - Tank Leak Detection - None
I00 - Overfill - None
C02 - Pipe Location - Underground/On-ground
G00 - Tank Secondary Containment - None
B00 - Tank External Protection - None

DEC Memo: "08/18/09 - See eDocs for Con Ed report detailing cleanup and closure. 2/5/04 - 1902hrs - Leo Gerace # 37876 Sr. Station Operator, Central Station reports while Maintenance was performing work on Transformer # 2 Conservator Tank, the top blow-off overflowed 20 gallons of non-pcb dielectric oil onto side of transformer, concrete and bluestone underneath in Greenwood Station. No fire/smoke involved. No sewers or waterways were affected but bluestone was affected. Pigs and bolognies placed and clean up is in progress. Spill is contained at this time. Maintenance is on location and will be barreling clean up materials and affected bluestone along with washing down side of transformer. No sampling necessary. UPDATE 2/9/04 1500 Hours Mechanics Chang and Garzino were onsite to pickup affected bluestone. The cleanup was completed at 2100 hours the same day. UPDATE 8/12/04 T.Hunter #20132 notified me that the ELAN valve has been inverted on TR#2. I inspected TR#2 and found no leaking at this time. Leak Closed. - J. Suarez"

Remarks: "overflow of 20 gallons from conservator tank on transformer #2. Cleanup in progress. Note that this is NON-PCB oil."

DEC Memo: "5/25/15 TJD Feeder leak location identified. Piper dispatched for inspection. Initial EMIS report uploaded to DECDOCS. DEC Piper responded to location of leak on 19th St b/w 9th and 10th Ave in Brookklyn. Leak was in manhole. Contained to concrete structure. Leak was against wall and therefore structure had to be cut to allow barrel and perm repair on feeder line. Crews on site digging out street and sidewall of structure. Total of approx 1000 gal lost and recovered via vac truck. No release to subsurface. line repaired, spill closed. Final Emis to be mass uplaoded. "
Remarks: "clean up pending repair - unknown amount of oil found in man hole #6620/feeder #38B11, tanker dispatched to location to pump out the man hole"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 8/24/00 Foley responded to three spills associated with one feeder at Greenwood Substation in Brooklyn. Repairs pending an outage to complete repairs. Equipment leaks contained with pads. Con Ed e2mis #132987: 8/22/00 1347hrs 0.5oz dielectric fluid on feeder 42231 isolation valve A Phase Buckholts Relay. Onto bluestone. Pads are down. Sample to be taken. 10/6/00 1040hrs Hardcopy documentation provided by Thomas Kennison indicates cleanup completed on 8/22/00 at 1800hrs by removing/recovering liquids/solids, excavating contaminated bluestone, and using absorbants to remove residual fluids. 4/18/03 1105hrs As per written confirmation from Tom Kennison, the only leaks on the feeder are from isolation valves. The mention of Buckholts Relay is a mistake. 4/25/03 As per written confirmation from Vernon Shaefer a transmission operations group could have went to Greenwood S/S for some other inspection/repair and also took care of this problem. On visual inspection 4/16/03 by Al Butler and J. Rivera there was no evidence of any leak coming from the isolation valve. It was dry and functioning properly. There was no evidence of any oil on bluestone or around the feeder. "

Remarks: "faulty isolation valve caused 1/2 ounce product to spill - sample taken clean up pending results - con ed 132987"

Remarks: mention of Buckholts Relay is a mistake. 4/25/03 As per written confirmation from Vernon Shaefer a transmission operations group could have went to Greenwood S/S for some other inspection/repair and also took care of this problem. On visual inspection 4/16/03 by Al Butler and J. Rivera there was no evidence of any leak coming from the isolation valve. It was dry and functioning properly. There was no evidence of any oil on bluestone or around the feeder."

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
